Chapter 10

Currency Conversion

Topics:

- Prerequisites
- Bill Segment Generation
- Adjustment Creation
- Payment and Tender Creation
- Transaction Aggregation
- FT GL Creation
- Currency Conversion Algorithms
- Exchange Rate (Used for Searching)
- Exchange Rate (Used for Viewing)

Oracle Revenue Management and Billing supports currency conversion using an exchange rate. The currency conversion feature is used only when the multi-currency accounts feature is enabled. In other words, you can use the currency conversion feature when the **Allow Multi-Currency Accounts** option type of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration is set to **Y**.

The currency conversion can take place during the following business processes which are configured in the system:

- Bill Segment Generation
- Adjustment Creation
- Payment and Tender Creation
- FT GL Creation
- Transaction Aggregation

To enable the currency conversion feature, you need to attach the currency conversion algorithm at the division level. The system facilitates you to define different conversion currency algorithm for each business process. The currency conversion feature functions when the appropriate exchange rate is available in the system. Otherwise, erroneous results might occur.

The system allows you to define date or date and time based global and division-specific exchange rates. The date based exchange rate mean that the exchange rate is applicable throughout the day. However, the date and time based exchange rate mean that the exchange rate is applicable from that date and time onwards.

Note: At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

While converting the amount from the source currency to the target currency (i.e. FROM CCY to TO CCY), the system uses the precision (i.e. decimal positions) of the target currency (i.e. TO CCY). For example, if you set the decimal positions for USD and INR to 1 and 2, respectively, the system uses 1 decimal position during currency conversion from INR to USD.

The system provides you with a facility to define whether you want to enable or disable the currency conversion feature for a rate component. If the currency conversion feature is enabled for a rate component, the currency conversion will take place while generating bill segments for the rate (i.e. rate component) based billable charges.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Prerequisites

To setup the currency conversion feature, you need to do the following:

- Define the required divisions and currencies in the system
- Define the values for the **CONV_TYPE_FLG** and **EXCH_RATE_SRC_FLG** lookup fields
- Define the Determine Business Object algorithm using the **F1-MOBO** algorithm type and attach it to the **C1_EXCHRATE** maintenance object

  Note: The **C1-ExchangeRate** and **C1_EXCHRATE_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1_EXCHRATE_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.
- Define the required exchange rates for currency conversion
- Set the following option types of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration:
  - Allow Multi-Currency Accounts
  - Transfer Adjustment Type
- Set the **Allow Currency Conversion** field for each rate component to either **Yes** or **No** depending on whether you want to enable the currency conversion feature for the rate (i.e. rate component) based billable charges
- Create an algorithm of the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division when you want to enable currency conversion during:
  - Bill Segment Generation
  - FT GL Creation for Bill Segments

  Note: The **C1_CURALGBS** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTBS** algorithm type uses date and time based exchange rate during currency conversion.
- Create an algorithm of the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division when you want to enable currency conversion during:
  - Adjustment Creation
  - FT GL Creation for Adjustments

  Note: The **C1_CURALGAD** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTAD** algorithm type uses date and time based exchange rate during currency conversion.
- Create an algorithm of the **C1_CURALGPY** or **C1_EXCRTPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division when you want to enable currency conversion during:
  - Payment and Tender Creation
  - FT GL Creation for Payments

  Note: The **C1_CURALGPY** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTPY** algorithm type uses date and time based exchange rate during currency conversion.
- Create an algorithm of the **C1_CURALGTFM** or **C1_EXCRTTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division when you want to enable currency conversion during transaction aggregation

  Note: The **C1_CURALGTFM** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTTFM** algorithm type uses date and time based exchange rate during currency conversion.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to create FT GL extension

Bill Segment Generation

The system allows you to generate bill segments using the following:

- **Pass through billable charges** - If the pass through billable charges have a bill line currency which is different from the account's invoice currency, the bill line amount is converted into the account's invoice currency during the bill segment generation.
- **Rate based billable charges** - If the rate based billable charges have a pricing currency which is different from the account's invoice currency, the amount is converted into the account's invoice currency during the bill segment generation.

In addition, during the post processing bill segment generation, if the pricing currency is different from the account's invoice currency, then the amount is converted into the account's invoice currency. The currency conversion is done when you have an algorithm of the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. In addition, the currency conversion is done for rate based billable charges when the **Allow Currency Conversion** field in the respective rate component is set to **Yes**. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the bill segment will change to **Error**.

C1_CURALGBS algorithm type	C1_CURALGBS on page 858
C1_EXCRTBS algorithm type	C1_EXCRTBS on page 865

Adjustment Creation

There might be situations when the adjustment currency is different from the account's invoice currency. The system enables you to determine whether currency conversion must be done during adjustment creation or during bill completion. If you clear the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during adjustment creation. However, if you select the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during bill completion and not during adjustment creation. A transfer adjustment is created in the account's invoice currency and the reverse adjustment is created against the original adjustment in the adjustment currency when you complete the next bill of the account. The system creates the transfer and reverse adjustments using the adjustment type specified in the **Transfer Adjustment Type** option type of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration.

The currency conversion is done when you have an algorithm of the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the transfer adjustment will not be created.

Related Topics

For more information on...	See...
C1_CURALGAD algorithm type	C1_CURALGAD on page 860
C1_EXCRTAD algorithm type	C1_EXCRTAD on page 867

Payment and Tender Creation

If the payment currency is different from the account's invoice currency, the amount is converted into the account's invoice currency during payment and tender creation. The currency conversion is done when you have an algorithm of the **C1_CURALGPY** or **C1_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the payment and tenders will not be created.

Note:

The currency conversion feature is available when the payment currency (i.e. tender currency) is different from the payor account's invoice currency and not when the payor account's invoice currency is different from the payee account's invoice currency.

The currency conversion feature for payments is currently not supported from the **Payment Portal** screen and while uploading payment data from an external source.

C1_CURALGPY algorithm type	C1_CURALGPY on page 861
C1_EXCRTPY algorithm type	C1_EXCRTPY on page 869

Transaction Aggregation

If the transaction or user defined (UDF) currency is different from the pricing currency, the amount is converted into the pricing currency when you are aggregating transactions based on the transaction or UDF amount. The currency conversion is done when you have an algorithm of the **C1_CURALGTFM** or **C1_EXCRTTFM** algorithm type attached on the **TFM - Currency Conversion** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the transaction will change to **Error**.

C1_CURALGTFM algorithm type	C1_CURALGTFM on page 863
C1_EXCRTTFM algorithm type	C1_EXCRTTFM on page 871

FT GL Creation

During FT GL creation, the system creates an FT GL extension when the account's invoice currency is different from the division's base currency. The FT GL extension is created for the following financial transaction (FT) types:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

The FT GL extension is created for bill segments when you have an algorithm of the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments when you have an algorithm of the **C1_CURALGPY** or **C1_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments when you have an algorithm of the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen and the FT GL extension will not be created. In addition, if the required exchange rate is not available during currency conversion, the FT GL extension will not be created.

C1_CURALGBS

The **C1_CURALGBS** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

Copyright © 2009, 2025, Oracle and/or its affiliates.

You need to attach an algorithm of the **C1_CURALGBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1_CURALGBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. **Note:** The parameter value must be already defined as a value in the **CONV_TYPE_FLG** lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the **Division First** search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

C1_CURALGAD

The **C1_CURALGAD** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1_CURALGAD** algorithm type contains the following parameters:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. **Note:** The parameter value must be already defined as a value in the **CONV_TYPE_FLG** lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the **Division First** search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

C1_CURALGPY

The **C1_CURALGPY** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-

Copyright © 2009, 2025, Oracle and/or its affiliates.

specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1_CURALGPY** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. **Note:** The parameter value must be already defined as a value in the **CONV_TYPE_FLG** lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: • Direct Rate First • Division First	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter	Description	Mandatory (Yes or No)
	If you do not specify the value for this parameter, by default, the system uses the **Division First** search order.	
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

C1_CURALGTFM

The **C1_CURALGTFM** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)

Copyright © 2009, 2025, Oracle and/or its affiliates.

7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1_CURALGTFM** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. **Note:** The parameter value must be already defined as a value in the **CONV_TYPE_FLG** lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the **Division First** search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter	Description	Mandatory (Yes or No)
	If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.

C1_EXCRTBS

The **C1_EXCRTBS** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **C1_EXCRTBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. **Note:** The parameter value must be already defined as a value in the **CONV_TYPE_FLG** lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the **Division First** search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. **Note:** The parameter value must be already defined as a value in the **EXCH_RATE_SRC_FLG** lookup field.	No

C1_EXCRTAD

The **C1_EXCRTAD** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1_EXCRTAD** algorithm type contains the following parameters:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. **Note:** The parameter value must be already defined as a value in the **CONV_TYPE_FLG** lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the **Division First** search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. **Note:** The parameter value must be already defined as a value in the **EXCH_RATE_SRC_FLG** lookup field.	No

C1_EXCRTPY

The **C1_EXCRTPY** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1_EXCRTPY** algorithm type contains the following parameters:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. **Note:** The parameter value must be already defined as a value in the **CONV_TYPE_FLG** lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the **Division First** search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. **Note:** The parameter value must be already defined as a value in the **EXCH_RATE_SRC_FLG** lookup field.	No

C1_EXCRTTFM

The **C1_EXCRTTFM** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1_EXCRTTFM** algorithm type contains the following parameters:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. **Note:** The parameter value must be already defined as a value in the **CONV_TYPE_FLG** lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the **Division First** search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter	Description	Mandatory (Yes or No)
	Note: A sample algorithm type named **C1_EXCRTOVRD** is shipped with the product. It is used to fetch the exchange rate which is available corresponding to the transaction in the **CI_TXN_DETAIL** table. The exchange rate is then used by the algorithm which is created using the **C1_EXCRTTFM** algorithm type to convert the transaction amount from the transaction currency to the pricing currency. You must specify the column from where the exchange rate must be picked during currency conversion in the **Transaction Detail Field for Exchange Rate** parameter.	
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. **Note:** The parameter value must be already defined as a value in the **EXCH_RATE_SRC_FLG** lookup field.	No

FTFREZGLEXTN

The **FTFREZGLEXTN** algorithm type is used to create FT GL extension for the following financial transaction (FT) types when the account's invoice currency is different from the division's base currency:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

You need to attach an algorithm of the **FTFREZGLEXTN** algorithm type on the **FT Freeze** system event of the customer class. The FT GL extension is created for bill segments when you have an algorithm of the **C1_CURALGBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments when you have an algorithm of the **C1_CURALGPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments when you have an algorithm of the **C1_CURALGAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **FTFREZGLEXTN** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Adjustments with Freeze At Will	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the **Freeze At Will** option. The valid values are: • **A (Accounting Date)** - Used to search for an exchange rate which is effective on the accounting date. • **R (Arrears Date)** - Used to search for an exchange rate which is effective on the arrears date. • **F (FT Freeze Date)** - Used to search for an exchange rate which is effective on the FT freeze date. • **C (FT Create Date)** - Used to search for an exchange rate which is effective on the FT creation date.	Yes
Exchange Rate Date Type for Adjustments with Freeze At Bill Completion	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the **Freeze At Bill Completion** option. The valid values are: • **A (Accounting Date)** - Used to search for an exchange rate which is effective on the accounting date. • **R (Arrears Date)** - Used to search for an exchange rate which is effective on the arrears date. • **F (FT Freeze Date)** - Used to search for an exchange rate which is effective on the FT freeze date. • **C (FT Create Date)** - Used to search for an exchange rate which is effective on the FT creation date.	Yes
Exchange Rate Date Type for Payments (Valid Values: A, R, F, C)	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for payments. The valid values are: • **A (Accounting Date)** - Used to search for an exchange rate which is effective on the accounting date. • **R (Arrears Date)** - Used to search for an exchange rate which is effective on the arrears date. • **F (FT Freeze Date)** - Used to search for an exchange rate which is effective on the FT freeze date. • **C (FT Create Date)** - Used to search for an exchange rate which is effective on the FT creation date.	Yes
Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C, E)	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for bill segments. The valid values are: • **A (Accounting Date)** - Used to search for an exchange rate which is effective on the accounting date. • **R (Arrears Date)** - Used to search for an exchange rate which is effective on the arrears date. • **F (FT Freeze Date)** - Used to search for an exchange rate which is effective on the FT freeze date. • **C (FT Create Date)** - Used to search for an exchange rate which is effective on the FT creation date.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter	Description	Mandatory (Yes or No)
	• **E (Bill Segment End Date)** - Used to search for an exchange rate which is effective on the bill segment end date. **Note:** If you set the **Exchange Rate Date Type for Bill Segments** parameter to **R**, ensure that you set the **Bill Segment Freeze Option** to **Freeze At Bill Completion** in the **Billing** tab of the **Installation Options** screen. Otherwise, erroneous results might occur.

C1_EXCRTOVRD

The **C1_EXCRTOVRD** algorithm type is used to fetch the exchange rate which is available corresponding to the transaction in the **CI_TXN_DETAIL** table. The exchange rate is then used by the algorithm which is created using the **C1_EXCRTTFM** algorithm type to convert the transaction amount from the transaction currency to the pricing currency. If you want to fetch exchange rate from the **CI_TXN_DETAIL** table, you need to create an algorithm using the **C1_EXCRTOVRD** algorithm type and attach it to the **Exchange Rate Override Algorithm** parameter in the algorithm which is created using the **C1_EXCRTTFM** algorithm type.

The **C1_EXCRTOVRD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Transaction Detail Field for Exchange Rate	Used to indicate the column of the **CI_TXN_DETAIL** table from where the exchange rate must be picked during currency conversion.	Yes

C1_EXCRTTFM algorithm type	C1_EXCRTTFM on page 871

Exchange Rate (Used for Searching)

You can define date or date and time based global and division-specific exchange rates. The date based exchange rate means that the exchange rate is applicable throughout the day. However, the date and time based exchange rate means that the exchange rate is applicable from that date and time onwards. The global exchange rate can be used for all divisions, whereas the division-specific exchange range can only be used for the division for which the exchange rate is defined.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note: At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

The **Exchange Rate** screen allows you to search for date or date and time based global and division-specific exchange rate using various search criteria. It also allows you to define, edit, and delete an exchange rate. This screen consists of the following zones:

- Search Exchange Rate on page 876

Search Exchange Rate

The **Search Exchange Rate** zone allows you to search for an exchange rate using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search date or date and time based exchange rates. The valid values are: • Date/Time and Exchange Rate Source • Date **Note:** By default, the **Date/Time and Exchange Rate Source** option is selected.	Yes
From Currency	Used to search exchange rates with a particular source currency.	No
To Currency	Used to search exchange rates with a particular target currency.	No
Division	Used to search exchange rates which are defined for a particular division. **Note:** You can only view those divisions to which you have access in the **Division** list.	No
Conversion Type	Used to search exchange rates which are defined using a particular conversion type.	No
Effective Start Date/ Time	Used to search exchange rates which are effective from a particular date and time onwards.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Date/ Time and Exchange Rate Source** option from the **Search By** list.	
Effective End Date/ Time	Used to search exchange rates which are effective till a particular date and time. **Note:** This field appears when you select the **Date/ Time and Exchange Rate Source** option from the **Search By** list.	No
Effective Start Date	Used to search exchange rates which are effective from a particular date onwards. **Note:** This field appears when you select the **Date** option from the **Search By** list.	No
Effective End Date	Used to search exchange rates which are effective till a particular date. **Note:** This field appears when you select the **Date** option from the **Search By** list.	No
Exchange Rate Source	Used to search exchange rates which are received from a particular source. **Note:** This field appears when you select the **Date/ Time and Exchange Rate Source** option from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for an exchange rate.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Exchange Rate ID	Displays the exchange rate ID. **Note:** It has a link. On clicking the link, the **Exchange Rate** screen appears with the details of the respective exchange rate.
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Division	Indicates the division for which the exchange rate is defined. **Note:** The data does not appear in this column when the exchange rate is a global exchange rate.
Exchange Rate Source	Indicates the source from where the exchange rate is received.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column appears when you select the **Date/Time and Exchange Rate Source** option from the **Search By** list.
Conversion Type	Indicates the conversion type of the exchange rate.
Effective Start Date/ Time	Displays the date and time from when the exchange rate is effective.
	Note: This column appears when you select the **Date/Time and Exchange Rate Source** option from the **Search By** list.
Effective End Date/Time	Displays the date and time till when the exchange rate is effective.
	Note: This column appears when you select the **Date/Time and Exchange Rate Source** option from the **Search By** list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.
Effective Start Date	Displays the date from when the exchange rate is effective.
	Note: This column appears when you select the **Date** option from the **Search By** list.
Effective End Date	Displays the date till when the exchange rate is effective.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column appears when you select the **Date** option from the **Search By** list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.
Inverse Rate	Displays the reverse exchange rate.
Edit	On clicking the **Edit** (✎) icon, the **Add/Edit Exchange Rate** screen appears where you can edit the details of the exchange rate.
Delete	On clicking the **Delete** (🗑) icon, you can delete the exchange rate.

Note:

If you specify the effective start date and time while searching for an exchange rate, the system searches exchange rates which are effective from the specified date and time onwards. Let us understand this with the help of an example. The following table lists the exchange rates which are defined in the system where the From Currency is USD, To Currency is INR, and Division is D1:

Exchange Rate	Effective Start Date and Time	Effective End Date and Time
RT1	01-01-2014 12:00:00 PM	-
RT2	02-01-2014 12:00:00 PM	-
RT3	03-01-2014 12:00:00 PM	-

Now, when you search for exchange rates using the following search criteria, the system accordingly displays the search results:

Search Criteria	Search Results
Effective Start Date and Time: 01-01-2014 12:00:00 PM	All three exchange rates - RT1, RT2, and RT3 - will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 31-01-2014 22:00:00 PM	RT1 will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 02-01-2014 22:00:00 PM	RT1 and RT2 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM	RT2 and RT3 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM; Effective End Date and Time: 02-28-2014 22:00:00 PM	RT2 will appear in the search results.
Effective Start Date and Time: 03-01-2014 12:00:00 PM	RT3 will appear in the search results.

Searching for an Exchange Rate

Prerequisites

To search for an exchange rate, you should have:

- Currencies and divisions defined in the application
- Conversion types defined in the **CONV_TYPE_FLG** lookup field
- Exchange rate sources defined in the **EXCH_RATE_SRC_FLG** lookup field

Procedure

To search for an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.
   A sub-menu appears.
3. Click the **Search** option from the **Exchange Rate** sub-menu.
   The **Exchange Rate** screen appears.
4. Select the required option from the **Search By** list depending on whether you want to search date or date and *t*ime based exchange rates.
5. Enter the search criteria in the **Search Exchange Rate** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all the input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
6. Click **Search**.
   A list of exchange rates that meet the search criteria appears in the **Search Results** section.

Defining an Exchange Rate

Prerequisites

Copyright © 2009, 2025, Oracle and/or its affiliates.

To define an exchange rate, you should have:

- Determine Business Object algorithm defined using the **F1-MOBO** algorithm type and attached to the **C1_EXCHRATE** maintenance object

  Note: The **C1-ExchangeRate** and **C1_EXCHRATE_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1_EXCHRATE_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.
- Currencies and divisions defined in the application
- Conversion types defined in the **CONV_TYPE_FLG** lookup field
- Exchange rate sources defined in the **EXCH_RATE_SRC_FLG** lookup field

Procedure

To define an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.
   A sub-menu appears.
3. Click the **Add** option from the **Exchange Rate** sub-menu.

   The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the business object using which you are defining an exchange rate.	Not applicable
From Currency	Used to indicate the currency that you want to translate. In other words, it is used to indicate the source currency.	Yes
To Currency	Used to indicate the currency in which you want to translate the source currency. In other words, it is used to indicate the target currency.	Yes
Conversion Type	Used to indicate the conversion type for the exchange rate.	Yes
Division	Used to indicate the division for which you want to define the exchange rate. **Note:** You can only view those divisions to which you have access in the **Division** list. You must leave this field blank while defining a global exchange rate.	Yes (Conditional) **Note:** This field is required when you are defining a division-specific exchange rate.
Exchange Rate Source	Used to indicate the source from where the exchange rate is received.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are defining a date and time based exchange rate.	
Effective Start Date/ Time	Used to specify the date and time from when the exchange rate is effective. **Note:** This field appears when you are defining a date and time based exchange rate. By default, the time is set to 12:00 AM. You can change the time, if required.	Yes
Effective End Date/ Time	Used to specify the date and time till when the exchange rate is effective. **Note:** The effective end date and time cannot be earlier than the effective start date and time. You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date and time. This field appears when you are defining a date and time based exchange rate. By default, the time is set to 12:00 AM. You can change the time, if required.	Yes (Conditional) **Note:** If the **End Date Required for Division Override** option type of the **C1_EXCHRATE** feature configuration is set to **Y**, this field is required when you are defining a division-specific exchange rate.
Effective Start Date	Used to specify the date from when the exchange rate is effective. **Note:** This field appears when you are defining a date based exchange rate.	Yes
Effective End Date	Used to specify the date till when the exchange rate is effective. **Note:** The effective end date cannot be earlier than the effective start date. You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date. This field appears when you are defining a date based exchange rate.	Yes (Conditional) **Note:** If the **End Date Required for Division Override** option type of the **C1_EXCHRATE** feature configuration is set to **Y**, this field is required when you are defining a division-specific exchange rate.
Exchange Rate	Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).	
Spread	Used to specify the spread for the exchange rate.	No

Tip: Alternatively, you can access the **Add/Edit Exchange Rate** screen by clicking the **Add Exchange Rate** button in the **Page Title** area of the **Exchange Rate** screen.

4. Enter the required details in the **Add/Edit Exchange Rate** screen.
5. Define characteristics for the exchange rate, if required.

Note: You can define characteristics when you are defining a date and time based exchange rate.

6. Click **Save**.

   The exchange rate is defined in the system.

Note: If an exchange rate is already defined with a source and conversion type combination on a given date and time, the system will not allow you to define another exchange rate with the same specifications.

Defining a Characteristic for an Exchange Rate

Prerequisites

To define a characteristic for an exchange rate, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Exchange Rate**)

Procedure

To define a characteristic for an exchange rate:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an exchange rate.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the exchange rate.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are defining a characteristic for the exchange rate.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Exchange Rate**.	**Note:** This field is required when you are defining a characteristic for the exchange rate.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the exchange rate.

Note: The **Characteristics** section appears when you are defining or editing a date and time based exchange rate.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the exchange rate, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a characteristic from the exchange rate, click the **Delete** (🗑) icon corresponding to the characteristic.

Exchange Rate (Used for Viewing)

The **Exchange Rate** screen allows you to:

- Edit the details of the exchange rate
- Delete the exchange rate
- View the details of the exchange rate
- View the log of the exchange rate

It consists of the following tabs:

- Exchange Rate - Main on page 887
- Exchange Rate - Log on page 889

Exchange Rate - Main

The **Main** tab displays information about the exchange rate. It contains the following zones:

- Exchange Rate on page 887

Exchange Rate

The **Exchange Rate** zone displays the details of the exchange rate. This zone contains the following sections:

- **Main** - This section provides basic information about the exchange rate. It contains the following fields:

Field Name	Field Description
Exchange Rate ID	Displays the exchange rate ID.
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Conversion Type	Indicates the conversion type of the exchange rate.
Division	Indicates the division for which the exchange rate is defined.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: The data does not appear corresponding to this field when the exchange rate is a global exchange rate. It has a link. On clicking the link, the **Division** screen appears with the details of the respective division.
Exchange Rate Source	Indicates the source from where the exchange rate is received.
	Note: This field appears when you are viewing the details of a date and time based exchange rate.
Effective Start Date/ Time	Displays the date and time from when the exchange rate is effective.
	Note: This field appears when you are viewing the details of a date and time based exchange rate.
Effective End Date/ Time	Displays the date and time till when the exchange rate is effective.
	Note: This field appears when you are viewing the details of a date and time based exchange rate. The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.
Effective Start Date	Displays the date from when the exchange rate is effective.
	Note: This field appears when you are viewing the details of a date based exchange rate.
Effective End Date	Displays the date till when the exchange rate is effective.
	Note: This field appears when you are viewing the details of a date based exchange rate. The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.

- **Characteristics** - This section lists the characteristics of the exchange rate. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the exchange rate.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Note: The **Characteristics** section appears when you are viewing the details of a date and time based exchange rate.

- **Record Actions** - This section contains the following buttons:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Button Name	Button Description
Edit	Used to edit the details of the exchange rate.
Delete	Used to delete the exchange rate.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the exchange rate is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the exchange rate is created.

The **Log** tab contains the following zone:

- Exchange Rate Log on page 889

Exchange Rate Log

The **Exchange Rate Log** zone lists the complete trail of actions performed on the exchange rate. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the exchange rate.
Details	Displays the details about the action performed on the exchange rate.
User	Indicates the user who has performed the action on the exchange rate.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the exchange rate. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status was changed.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: At present, no data appears in this column. The implementation team can create a custom exchange rate business object with the status lifecycle.

Viewing the Exchange Rate Details

Procedure

To view the details of an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.
2. In the **Search Results** section, click the link in the **Exchange Rate ID** column corresponding to the exchange *r*ate whose details you want to view.

   The **Exchange Rate** screen appears. It contains the following zones:

   - **Exchange Rate** - Displays the details of the exchange rate.
   - **Exchange Rate Log** - Lists the complete trail of actions performed on the exchange rate.
3. View the details of the exchange rate in the **Exchange Rate** zone.
4. View the log of the exchange rate in the **Exchange Rate Log** zone.

Chapter 11

Transaction Feed Management

Topics:

- Prerequisites
- Transaction Rating Before Billing
- Transaction Aggregation
- Transaction Aggregation Batch Processing
- Transaction Disaggregation
- Transaction Disaggregation Batch Processing
- Transaction Cancellation
- Transaction Cancellation Batch Processing
- Transaction Rollback
- Feed Status Transition
- Transaction Status Transition
- Transaction Leg Status Transition
- Transaction Data File
- Error List
- Alert Notification for Transaction Feed Management
- Feed Management Dashboard
- Transaction Details
- Transaction Source
- Transaction Record Type
- Transaction Aggregation Rule
- Schedule
- Disaggregation Request

Oracle Revenue Management and Billing provides you with a facility to upload banking and Administrative Services Only (ASO) transactions received from various product processors or applications for billing. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

For more information on how to upload the data using the **File Upload Interface** feature, refer to the respective feature documentation. Once the transaction data is uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Product
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price item can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. During the transaction feed management process, each transaction goes through various statuses until it is billed to the person. For more information about the transaction statuses, see Transaction Status Transition on page 939.

The transaction feed management process includes the following sub-processes:

- Transaction Aggregation on page 899
- Transaction Disaggregation on page 924
- Transaction Cancellation on page 932
- Transaction Rollback on page 936

Prerequisites

To setup the transaction feed management process, you need to do the following:

- Define the required transaction sources in the system
- Define the required transaction record types for each transaction source
- Associate the required SQIs with a price item -division combination
- Define the required transaction aggregation rule for each SQI
- Define the aggregation schedules in the system
- Define the required rules in the system to determine initial price item for transactions
- Attach a validation algorithm to each account identifier type (to ensure that the account identifier type and account identifier combination is unique in or across divisions)
- Attach the **Price Assignment Search** algorithm to each division
- Define the **TFM - Processing Date** characteristic for each division
- Create an algorithm of the **C1_CURALGTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature
- Define the required exchange rates for currency conversion
- Define values for the PAGE_NUMBER lookup field
- Create an algorithm of the **C1_RTCL_POPC** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the required division

Besides this, you need to setup the following feature configurations:

- Setting the C1_RLENG Feature Configuration on page 4298
- Setting the C1-TXNDMYID Feature Configuration on page 4299
- Setting the C1_PPARM_FLG Feature Configuration on page 4292
- Setting the C1_FM Feature Configuration on page 4277

Transaction Rating Before Billing

The system provides the flexibility to rate the transaction legs either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price items can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. This will help to reduce the performance issues which are caused when large volume of transactions are rated at the time of billing.

The system offers the following ways in which a transaction leg can be priced, rated and billed:

1. **Rate the Transaction Leg During Billing** - In this approach, you can use either of the following ways:
   a. Determine effective pricing for a transaction leg, create a billable charge for the transaction leg, and then determine the rate during billing.
   b. Determine effective pricing for a transaction leg, create a billable charge for aggregated transaction legs, and then determine the rate during billing.
2. **Rate the Transaction Leg Prior to Billing** - In this approach, you can use either of the following ways:
   a. Determine effective pricing and rate for a transaction leg, and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.
   b. Determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.

Copyright © 2009, 2025, Oracle and/or its affiliates.

c. Determine effective pricing and rate for a transaction leg and create a pass through billable charge for the transaction leg which is billed during billing.

3. **Ignore the Transaction Leg for Billing** - In this approach, you can use either of the following ways:

a. Determine effective pricing for a transaction leg, but the billable charge is not created for the transaction leg.

b. Determine effective pricing and rate for a transaction leg, but the billable charge is not created for the transaction leg.

Note:

Once the rate is determined for transaction legs, a set of rate component characteristics and their values are grouped. For example, if a price assignment has the following rate components, the system creates two groups - Group A and Group B:

- RC1, Char1=Y, Char2=Y
- RC2, Char1=N, Char2=Y
- RC3, Char1=Y, Char2=Y

Group A contains Char1=Y, Char2=Y and Group B contains Char1=N, Char2=Y. These groups are used for accumulating pre-calculated charges. A unique aggregation parameter group ID is generated for each group. If a group with a set of rate component characteristics and their values already exists in the system, a new group is not created. Instead, the existing group is used for accumulating pre-calculated charges. The aggregation parameter group ID is created when you attach an algorithm of the **C1_RTCL_POPC** algorithm type on the **TFM - Rate Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

While defining a price item pricing, you need to specify the rating criteria which indicates how and when you want to the rate the transaction legs. The valid values are:

- Do Not Rate Transactions (DNRT)
- Aggregate transactions and then rate aggregated SQs (AGTR)
- Rate individual transactions and aggregate calc lines across transactions (RITA)
- Rate Transactions (RITX)

Along with the **Rating Criteria** field, the **Ignore Transaction** and **Aggregate Transaction** fields help the system to determine how and when the corresponding transaction leg must be rated. The following table indicates how to configure the system in order to use the above mentioned ways:

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3a	Yes	Not applicable	Do Not Rate Transactions (DNRT)	Not applicable because ignored transactions are not considered for billing.
3b	Yes	Not applicable	Rate Transactions (RITX)	Update Status (C1-TXNEX)
1b	No	Yes	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2b	No	Yes	Aggregate transactions and then rate	Service Quantity Calculation (C1-TXNSQ)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
			aggregated SQs (AGTR)	
2a	No	Yes	Rate individual transactions and aggregate calc lines across transactions (RITA)	Update Status (C1-TXNEX)
1a	No	No	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2c	No	No	Rate Transactions (RITX)	Service Quantity Calculation (C1-TXNSQ)

Let us understand the following transaction rating ways with the help of an example:

- 2a
- 2b
- 2c

The following table lists the account, price item, and price item parameters combination to which transaction T1 and T2 are mapped:

Transaction	Transaction Volume	Transaction Date	Account	Price Item	Price Item Parameter Group ID	Price Assignment ID	Aggregation Schedule
T1	300	01/01/2015	A1	P1	PG1	PA1	Monthly
T1	300	01/01/2015	A2	P1	PG1	PA2	Monthly
T2	200	15/01/2015	A1	P1	PG1	PA1	Monthly
T2	200	15/01/2015	A3	P1	PG1	PA3	Monthly

The following table lists the rate components available on the PA1, PA2, and PA3 price assignments:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Transaction	Price Assignment ID	Rate Component	Currency Code	Distribution Code	Description on Bill	Aggregation Parameter Group ID (Rate Component's Characteristics)
T1	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T1	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T1	PA2	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T1	PA2	RC4-0.2*Transaction Volume	USD	BK-AR4	ABC	Char2=Y
T2	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T2	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T2	PA3	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T2	PA3	RC4-0.2*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y

Now, if you use **RITA (2a)** approach, the system will rate a transaction leg and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge ($)	Comments
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1, T2-A1P1PG1-PA1	RC1	300*0.1 = 30, 200*0.1 = 20	30+20 = 50	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate

Copyright © 2009, 2025, Oracle and/or its affiliates.

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge ($)	Comments
							components are same.
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1, T2-A1P1PG1-PA1	RC2	300*0.2 = 60, 200*0.2 = 40	60+40 = 100	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC3	300*0.3 = 90	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC4	300*0.2 = 60	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A3P1PG1-PA3	RC3, RC4	200*0.3 = 60, 200*0.2 = 40	60+40 = 100	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Now, if you use **RITX (2c)** approach, the system will rate a transaction leg and calculate charges for each transaction leg in a separate pass through billable charge, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge ($)	Comments
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC1	300*0.1 = 30	30	The pass through charge

Copyright © 2009, 2025, Oracle and/or its affiliates.

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge ($)	Comments
							is calculated for the transaction leg.
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC2	300*0.2 = 60	60	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC3	300*0.3 = 90	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC4	300*0.2 = 60	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC1	200*0.1 = 20	20	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC2	200*0.2 = 40	40	The pass through charge is calculated for the transaction leg.
BC4	01/01/2015	31/01/2015	T2-A3P1PG1-PA3	RC3, RC4	200*0.3 = 60, 200*0.2 = 40	60+40 = 100	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1, BC2, and BC3 will have two pass through lines, whereas the BC4 will have one pass through line.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Now, if you use **AGTR (2b)** approach, the system will determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics), as shown in the following table:

Account-Price Item-Price Item Parameter Group-Price Assignment-Aggregation Schedule	**Total Transaction Volume**	**Billable Charge**	**Start Date**	**End Date**	**Rate Component**	**Calculation Details**	**Pass Through Charge ($)**	**Comments**
A1P1PG1-PA1-Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC1	500*0.1 = 50	50	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.
A1P1PG1-PA1-Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC2	500*0.2 = 100	100	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated

Account-Price Item-Price Item Parameter Group-Price Assignment-Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge ($)	Comments
								service quantities.
A2P1PG1-PA2-Monthly	300	BC2	01/01/2015	31/01/2015	RC3	300*0.3 = 90	90	The pass through charge is calculated for the transaction leg.
A2P1PG1-PA2-Monthly	300	BC2	01/01/2015	31/01/2015	RC4	300*0.2 = 60	60	The pass through charge is calculated for the transaction leg.
A3P1PG1-PA3-Monthly	200	BC3	01/01/2015	31/01/2015	RC3, RC4	200*0.3 = 60, 200*0.2 = 40	60+40 = 100	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

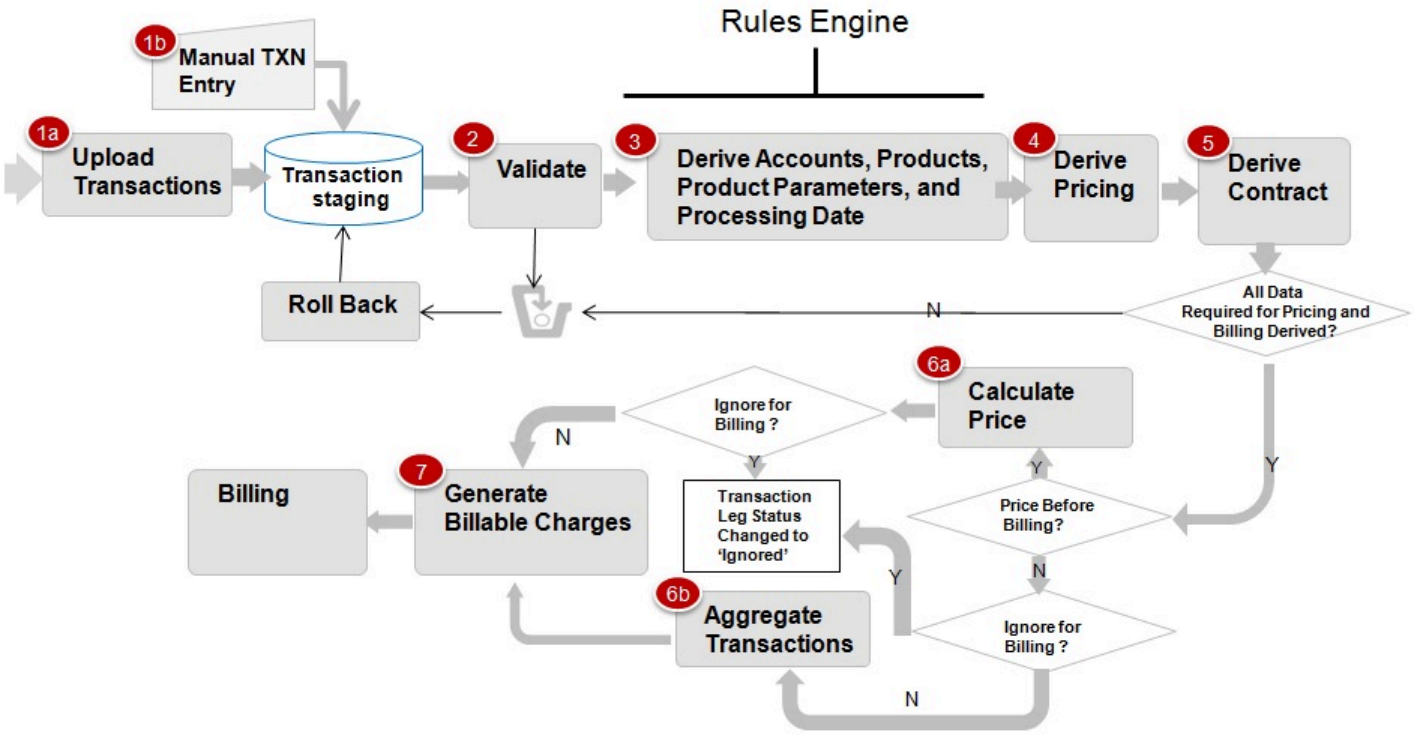
Transaction Aggregation

The transaction aggregation process includes the following sub-processes:

- Header Validation on page 900
- Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain) on page 902
- Price Item Pricing Verification on page 911
- Aggregation on page 915
- Clean Up on page 919

Copyright © 2009, 2025, Oracle and/or its affiliates.

The following figure graphically explains the transaction aggregation process:



Header Validation

Once the file is uploaded in the system, you can execute the **Header Validation (C1-TXNHV)** batch to validate the file or header level information. It checks whether:

- Transaction Header ID and Transaction Source is available in the header.
- At least one transaction record is available in the file.
- The number of transaction records in the file matches the total transaction records in the header.
- The sum of transaction amount matches the total transaction amount in the header.
- The sum of transaction volume matches the total transaction volume in the header.
- File with the same header date and transaction header ID is not available in the system.
- External reference number is specified in each transaction record of the file.

If the file or header information is validated successfully, the status of the file or feed is changed to **Validated (VALI)** and the status of all transactions in the feed remains as **Uploaded (UPLD)**. However, if the header validation fails, the status of the feed and all transactions in the feed is changed to **Invalid (INVL)**.

The **Header Validation (C1-TXNHV)** batch is a multi-threaded batch. You can specify either of the following parameters while executing this batch:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to validate a particular transaction feed.	No
Transaction Source	Used when you want to validate the transaction feeds which are received from a particular transaction source.	No
Checksum Validation Required	Used to indicate whether the following should be validated: • The number of transaction records in the file matches the total transaction records in the header. • The sum of transaction amount matches the total transaction amount in the header. • The sum of transaction volume matches the total transaction volume in the header. The valid values are: • Y • N	No
Duplicate Check Required	Used to indicate whether the following should be validated: • File with the same header date and external header ID is not available in the system. The valid values are: • Y • N **Note:** The duplicate check is done only against the transaction feeds which are in the **Validated (VALI)** status and not against the transaction feeds which are in the **Uploaded (UPLD)** status.	No
Allow Positive Transaction Volume in Header	Used to indicate whether you want to allow positive value in the total transaction volume which is specified in the header record. The valid values are: • Y • N **Note:** By default, the parameter value is set to **Y**.	Yes
Allow Negative Transaction Volume in Header	Used to indicate whether you want to allow negative value in the total transaction volume which is specified in the header record. The valid values are: • Y • N **Note:** By default, the parameter value is set to **N**.	Yes
Allow Zero Transaction Volume in Header	Used to indicate whether you want to allow zero value in the total transaction volume which is specified in the header record. The valid values are:	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
	• Y • N **Note:** By default, the parameter value is set to **N**.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Validation and Initial Price Item Determination (Specific to Financial Services Domain)

This process includes the following three sub-processes:

- **Transaction Validation** - In this sub-process, the transaction records are validated. The transaction level validations are done to check the integrity of the data. During the transaction validation, the system checks whether:
  - Transaction source is defined in the system.
  - Transaction record type is defined for the transaction source in the system.
  - Division and currencies are defined in the system.
  - The account with the specified account identifier, account identifier type and division exists in the system.

    Note: This validation is done when the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration is set to **Y**. If you set the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration to **N**, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.
  - User ID (if available in the transaction information) is defined in the system.
  - The value other than ‘Y’ or ‘N’ is not specified in the **Manual Switch** column.
  - The value other than ‘+’ or ‘-’ is not specified in the **Credit/Debit Indicator** column.
  - Transaction Amount is specified when Transaction Currency is specified, and vice versa.
  - Additional Amount 1 is specified when Amount 1 Currency Code is specified, and vice versa.
  - Additional Amount 2 is specified when Amount 2 Currency Code is specified, and vice versa.
  - Additional Amount 3 is specified when Amount 3 Currency Code is specified, and vice versa.
  - Additional Amount 4 is specified when Amount 4 Currency Code is specified, and vice versa.
  - Additional Amount 5 is specified when Amount 5 Currency Code is specified, and vice versa.
  - Additional Amount 6 is specified when Amount 6 Currency Code is specified, and vice versa
  - Additional Amount 7 is specified when Amount 7 Currency Code is specified, and vice versa
  - Additional Amount 8 is specified when Amount 8 Currency Code is specified, and vice versa
  - Additional Amount 9 is specified when Amount 9 Currency Code is specified, and vice versa
  - Additional Amount 10 is specified when Amount 10 Currency Code is specified, and vice versa

  If the transaction information is invalid or incorrect (for example, division is invalid), the status of the transaction is changed to **Error (EROR)**. But, if the transaction information is not available, the status of the transaction is changed to **Invalid (INVL)**.
- **Initial Price Item Determination** - Once the transaction records are validated, the account which will bear the charges for the transaction and the price item and variance parameter or price item parameters to which the transaction will be mapped are determined using certain business rules. These business rules are invoked through a rule type. Depending on the transaction record type, a rule type is invoked for each transaction. The effective rules with the specified rule type are executed, starting with the rule having highest priority, until a rule is satisfied. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note: The system determines rules which are effective based on the **Processing Date for Transaction Feed Management** characteristic defined for the division to which the transaction belongs. The system uses the **Processing Date for Transaction Feed Management** characteristic which is effective on the transaction date. If the **Processing Date for Transaction Feed Management** characteristic type is set to `BATCH_DT`, the system executes rules which are effective on the batch business date. However, if the **Processing Date for Transaction Feed Management** characteristic type is set to `TXN_DT`, the system executes rules which are effective on the transaction date. Note that the transaction date must be earlier than or equal to the batch business date. And, if the **Processing Date for Transaction Feed Management** characteristic is not defined for the division to which a transaction belongs, the system, by default, executes rules which are effective on the transaction date.

Each rule contains one or more conditions or criteria. For example, Rule A states that if the transaction record type is R001 and the division is New York, then set the following output parameters:

- ACCT_NO1_Val - Account 1
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X

Here, Transaction Record Type = R001 and Division = New York are two conditions. If these two conditions in the rule are satisfied, then set three output parameters - ACCT_NO1_Val, DIVISION1_VAL and PRODUCT1_1_Val. Now, when this rule is executed and the transaction satisfies this criteria, the transaction is mapped to Price Item X and Account 1 which belongs to D1 bears the charges for the transaction. In case, the rule has four output parameters (ACCT_NO1_Val set to Account 1, DIVISION1_VAL set to D1, PRODUCT1_1 Val set to Price Item X, and PRODUCT1_2_Val set to Price Item Y), the transaction will be mapped to both the price items (i.e. Price Item X and Price Item Y) and Account 1 which belongs to D1 bears the charges for the transaction. A transaction can be mapped to one or more price items or to one or more price item and TOU (variance parameter) combinations. If the multi parameter based pricing feature is enabled, you can map a transaction to one or more price item and price item parameters combinations. Let us understand this with the help of an example.

Rule B states that if the transaction is performed in US and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - US
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country
- PVL1_2_1_VAL - US
- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, Account A which belongs to D1 bears the charges for the transaction which is mapped to the following price item and price item parameters combinations:

- Price Item X, Country - US, Currency - USD
- Price Item Y, Country - US, Currency - USD

More than one account can bear the charges for a transaction and each account can belong to a different division. You can map a transaction to one or more price items, to one or more price item and TOU (variance parameter) combinations, or to one or more price item and price item parameters combinations. The system allows you to map price items for each account. For example, Rule C states that if the transaction is performed in UK and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1

Copyright © 2009, 2025, Oracle and/or its affiliates.

- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - UK
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country
- PVL1_2_1_VAL - UK
- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD
- ACCT_NO2_Val - Account B
- DIVISION2_VAL - D2
- PRODUCT2_1_Val - Price Item A
- PCD2_1_1_VAL - Country
- PVL2_1_1_VAL - US
- PCD2_1_2_VAL - Currency
- PVL2_1_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, the transaction is mapped to the following price item and price item parameters combinations:

Charges Borne By	**Division to which the account belongs...**	**Price Item**	**Country**	**Currency**
Account A	D1	Price Item X	UK	USD
Account A	D1	Price Item Y	UK	USD
Account B	D2	Price Item A	US	USD

You can limit the maximum accounts that can bear the charges for a transaction, maximum price item that can be mapped to a transaction, and maximum parameters that can be used with each price item to determine price item pricing. For more information, see Defining a Transaction Record Type on page 1023. You can also define rules to ignore transactions based on the transaction attributes. If the rule returns the **IGNORE_SW** equal to **Y**, the status of the transaction is changed to **Ignored (IGNR)** and no further processing takes place on the transaction.

You can use the following output parameters while defining rules in the system:

Output Parameter	**Naming Convention**	**Example**	**Description**
Account Identifier	ACCT_NOX_Val	ACCT_NO1_Val, ACCT_NO2_Val, ACCT_NO3_Val, ...	Used to indicate the account which must bear the charges for the transaction.
Account Identifier Column Name	ACCT_NOX_Col	ACCT_NO1_Col, ACCT_NO2_Col, ACCT_NO3_Col, ...	Used to indicate the column from where the account identifier corresponding to the transaction (in the transaction details) must be picked.
Account Identifier Type	ACCT_NO_TYPEX_Val	ACCT_NO_TYPE1_Val, ACCT_NO_TYPE2_Val, ACCT_NO_TYPE3_Val, ...	Used to indicate the type of account identifier.
Account Identifier Type Column Name	ACCT_NO_TYPEX_Col	ACCT_NO_TYPE1_Col, ACCT_NO_TYPE2_Col, ACCT_NO_TYPE3_Col, ...	Used to indicate the column from where the account identifier type

Copyright © 2009, 2025, Oracle and/or its affiliates.

Output Parameter	Naming Convention	Example	Description
			corresponding to the transaction (in the transaction details) must be picked.
Account Division	DIVISIONX_VAL	DIVISION1_VAL	Used to indicate the division to which the account belongs.
Account Division Column Name	DIVISIONX_COL	DIVISION1_COL	Used to indicate the column from where the division corresponding to the transaction (in the transaction details) must be picked.
Price Item Name	PRODUCTX_Y_Val **Note:** Here, X represents the account and Y represents the price item.	PRODUCT1_1_Val, PRODUCT2_1_Val, PRODUCT2_2_Val, ...	Used to indicate the price item to which the transaction must be mapped.
Price Item Column Name	PRODUCTX_Y_Col **Note:** Here, X represents the account and Y represents the price item.	PRODUCT1_1_Col,, PRODUCT2_1_Col, PRODUCT2_2_Col, ...	Used to indicate the column from where the price item corresponding to the transaction (in the transaction details) must be picked.
TOU	TOUX_Y_Val **Note:** Here, X represents the account and Y represents the price item.	TOU1_1_Val, TOU2_1_Val, TOU2_2_Val, ...	Used to indicate the variance parameter which you want to use along with the price item for price determination. **Note:** This output parameter appears when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **False**.
TOU Column Name	TOUX_Y_Col **Note:** Here, X represents the account and Y represents the price item.	TOU1_1_Col, TOU2_1_Col, TOU2_2_Col, ...	Used to indicate the column from where the variance parameter corresponding to the transaction (in the transaction details) must be picked. **Note:** This output parameter appears when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **False**.
Parameter Code	PCDX_Y_Z_VAL	PCD1_1_1_VAL, PCD1_2_1_VAL, PCD2_1_1_VAL, ...	Used to indicate the parameter which you want to use along with the price item for price determination.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Output Parameter	Naming Convention	Example	Description
Note: At present, the system does not support the Parameter Code Column output parameter.	**Note:** Here, X represents the account, Y represents the price item, and Z represents the parameter.		**Note:** This output parameter appears when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**. You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to **Error (EROR)**.
Parameter Value	PVLX_Y_Z_VAL **Note:** Here, X represents the account, Y represents the price item, and Z represents the parameter.	PVL1_1_1_VAL, PVL1_2_1_VAL, PVL2_1_1_VAL, ...	Used to specify the value for the parameter. **Note:** This output parameter appears when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**. The parameter value must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to **Error (EROR)**.
Parameter Value Column Name	PVLX_Y_Z_COL **Note:** Here, X represents the account, Y represents the price item, and Z represents the parameter.	PVL1_1_1_COL, PVL1_2_1_COL, PVL2_1_1_COL, ...	Used to indicate the column from where the parameter value corresponding to the transaction (in the transaction details) must be picked. **Note:** This output parameter appears when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**. The column from where the parameter value is picked must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to **Error (EROR)**.
Processing Date Type	PRCS_DTX_Y_TYP **Note:** Here, X represents the account and Y represents the price item.	PRCS_DT1_1_TYP, PRCS_DT1_2_TYP, PRCS_DT2_1_TYP, ...	Used to indicate the date type using which you want to determine the effective price item parameters, pricing, and exchange rate. The valid values are:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Output Parameter	Naming Convention	Example	Description
			• **TXN_DT** - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the transaction date. • **Batch_DT** - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the batch business date. **Note:** Based on the **Processing Date for Transaction Feed Management** characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_TYP output parameter. In other words, the PRCS_DTX_Y_TYP output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.
Processing Date	PRCS_DTX_Y_VAL **Note:** Here, X represents the account and Y represents the price item.	PRCS_DT1_1_VAL, PRCS_DT1_2_VAL, PRCS_DT2_1_VAL, ...	Used to specify a custom date on which you want to determine the effective price item parameters, pricing, and exchange rate.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Output Parameter	Naming Convention	Example	Description
			Note: The custom date must be a date other than the transaction or batch business date. Based on the **Processing Date for Transaction Feed Management** characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_VAL output parameter. In other words, the PRCS_DTX_Y_VAL output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.
Ignore Transaction	IGNORE_SW		Used to ignore transactions based on the transaction attributes. The valid values are: • Y • N

Once the transaction satisfies any rule (invoked through the rule type), one transaction leg is created for each account, division, price item, and variance parameter or price item parameters combination. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1, T2, and T3 are mapped:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Transaction	Charges Borne By	Division to which the account belongs...	Price Item	Variance Parameter	Price Item Parameters
T1	A1	D1	P1	-	Country - US, Currency - USD
T1	A1	D1	P2	-	Country - Germany, Currency - USD
T1	A2	D2	P3	USD	-
T2	A1	D1	P1	-	Country - US, Currency - USD
T2	A2	D2	P2	USD	-
T3	A1	D1	P3	-	Country - Germany, Currency - USD

In such case, the system will create three legs for T1, two legs for T2, and one leg for T3. Each transaction leg will have its own status. The status of the transaction legs and transaction is changed to **Initial Price Item Determined (INPD)**. However, if a transaction does not satisfy any rule, the status of the transaction is changed to **Error (EROR)**.

Note:

During this sub-process, the system validates the following:

- Whether the price item parameters specified in the output parameters are effective for the price item on the processing date.
- Whether the mandatory price item parameter which is effective on the processing date is specified in the output parameter.
- Whether the parameter value is specified for all mandatory price item parameters which are effective on the processing date.

If any of the above validation fails, the status of the transaction is changed to **Error (EROR)** and no transaction legs are created.

- **Parameter Group Creation** - Once the transaction legs are created, the price item parameters of each transaction leg are grouped. For example, when a transaction is mapped to the following price item and price item parameters combinations, the system creates three groups - Group A, Group B, and Group C:

  - Account A, Price Item X, Country - US, Currency - USD
  - Account A, Price Item Y, Country - Germany, Currency - USD
  - Account B, Price Item X, Country - England, Currency - USD

  Group A contains Country - US, Currency - USD; Group B contains Country - Germany, Currency - USD; and Group C contains Country - England, Currency - USD.

  A set of price item parameters are grouped when the multi parameter based pricing feature is enabled. A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

You can execute this process through a multi-threaded batch named **Validate Transaction and Derive Price Item (C1-TXNIP)**. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Batch Business Date	Used to identify the transactions for which you want to perform validation and determine price item. The system	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
	considers the transactions whose transaction date is earlier than or equal to the batch business date. **Note:** If you do not specify any date, the batch business date is set to the current date. The batch business date used while executing the **C1-TXNIP** batch is stamped in the database. It is then used while executing all other consequent batches in the transaction aggregation cycle.	
Transaction Header ID	Used when you want to validate and derive price item for the transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to validate and derive price item for the transactions which are received from a particular transaction source.	No
Division	Used when you want to validate and derive price item for the transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: • Y • N **Note:** By default, the parameter value is set to **N**.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

A log is generated if the **Logging Rules for Transaction Feed** option type in the **Rule Engine (C1_RLENG)** feature configuration is set to **True**. This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note:

You can aggregate transaction legs in a billable charge using aggregation parameters other than account ID, price item code, variance or price item parameters, aggregation start date, and aggregation end date. The additional aggregation parameters can be stamped in the form of aggregation parameter group ID while performing post-processing activities for each transaction leg. This aggregation parameter group ID will be used in subsequent batches during the transaction aggregation cycle. If you want to perform some post-processing activities on the transaction legs, you need to attach a post-processing algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs. This algorithm is triggered only for transactions which are in the **Initial Price Item Determined (INPD)** status. It is triggered before the price item parameter group is created.

A sample post-processing algorithm type named **C1_PRDR_POPC** is shipped with the price item. It does not have any business logic. If you want to undertake some post-processing activities for a transaction leg, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Price Item Derivation Post-Processing** algorithm spot of the respective division. You can refer to the **C1_PRDR_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch is executed, the processing date is stamped against each transaction leg in the database. If a custom processing date is specified for a particular account and price item combination, the custom processing date is stamped against the respective transaction leg. Otherwise, the processing date defined for the division to which a transaction belongs is stamped against the legs of the respective transaction. The processing date which is stamped against a transaction leg in the database is used while executing all subsequent batches in the transaction aggregation cycle.

How to define a rule	Defining a Rule on page 817

Price Item Pricing Verification

In this process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or TOU combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm (which is defined for the division to which the account belongs). If the price item belongs to a regular bundle and the effective pricing is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the regular bundle, the system checks whether the effective pricing is available for the parent bundle (if assigned) at the account level. If the effective pricing is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to **Error (EROR)**. If the effective pricing is not

Copyright © 2009, 2025, Oracle and/or its affiliates.

If the Multi Parameter Based Pricing feature is...	Then...
	available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to **Error (EROR)**.
Enabled	The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs)and/or price item parameters (parameter group) combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm (which is defined for the division to which the account belongs). The system searches for a price with exact match at all levels defined in the search order. If the exact match is available at two or more levels, the price assignment at the higher precedence level is considered for calculating the charges. But, if the system does not find the exact match at any level, it searches for the best fit match at all levels. For more information about best fit match, see Multi Parameter Based Pricing on page 203. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered for calculating the charges. If the price item belongs to a regular bundle and the exact or best fit price is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the regular bundle, the system checks whether the exact or best fit price is available for the parent bundle (if assigned) at the account level. If the exact or best fit price is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to **Error (EROR)**. If the exact or best fit price is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to **Error (EROR)**.

Note:

The processing date which is stamped against a transaction leg is used to determine effective pricing for the transaction leg.

The order in which the system searches effective pricing for the price item, regular bundle, or parent (regular) bundle at the same level depends on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

In addition, the status of the transaction and transaction leg is changed to **Error (EROR)** when:

- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.

Once the effective pricing is determined for the initial or final price item, the values of the following pricing attributes are retrieved:

- Ignore Transaction
- Aggregate Transaction
- Aggregation Schedule
- Rating Criteria
- Price Assignment ID
- Account ID (in case of account agreed and price list pricing)
- Person ID (in case of customer agreed and price list pricing)
- Price List ID (in case of price list pricing)
- Contract ID
- Regular Bundle Code
- Pricing Currency

You can execute this process through a multi-threaded batch named **Price Item Pricing Verification (C1-TXNVP)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to find the price item pricing for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to find the price item pricing for transactions which are received from a particular transaction source.	No
Division	Used when you want to find the price item pricing for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note that the **Price Item Pricing Verification (C1-TXNVP)** batch does not change the status of the transaction and its legs. You need to execute the **Update Status (C1-TXNEX)** batch to update the status of the transaction and its legs. Besides updating the status, the **Update Status (C1-TXNEX)** batch determines the rate for transaction legs whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see Transaction Rating Before Billing on page 892.

You can specify either of the following parameters while executing this batch:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: • Y • N **Note:** By default, the parameter value is set to **N**.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

You must specify same parameters in the **Product Pricing Verification (C1-TXNVP)** and **Update Status (C1-TXNEX)** batches. Otherwise, erroneous results might occur.

If you want to do some preprocessing activities before invoking the rates engine, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities before invoking the rates engine, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

If a transaction leg is ignored and not considered for billing, the status of the transaction leg is changed to **Ignored (IGNR)**, whereas the status of the transaction remains as **Initial Price Item Determined (INPD)**. However, if all legs of a transaction are ignored and not considered for billing, the status of the transaction and transaction legs is changed to **Ignored (IGNR)**.

You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the product pricing information in the following tables:

- CI_PRC_AGRD
- CI_PRC_PL
- CI_PRC_INH_PL

But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the product pricing information in the above mentioned tables. If there are any pricing changes, you will have to update these tables before executing the **Price Item Pricing Verification (C1-TXNVP)** batch. You can update the product pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch. Ideally, you must

Copyright © 2009, 2025, Oracle and/or its affiliates.

execute the **Refresh Pricing (C1-TXNRP)** batch after you execute the **Flush All Caches (F1-FLUSH)** batch in the transaction aggregation cycle. You can specify the following parameters while executing the **Refresh Pricing (C1-TXNRP)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to update the price item pricing information of accounts belonging to a particular division.	No
Chunk Size	Used to specify the number of persons whose regular and post-processing price item pricing information you want to update in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Aggregation

Once the price item pricing verification is complete, you can aggregate the transaction legs, create a billable charge, and update the SQI values in the billable charge. In the aggregation process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	The system checks the value defined in the **Aggregate Transaction** field. If the **Aggregate Transaction** field is set to **No**, the system creates one billable charge (with the **Billable** status) for each transaction leg. However, if the **Aggregate Transaction** field is set to **Yes**, the system creates one billable charge (with the **Billable** status) for all transactions legs having the same price item and TOU combination and whose transaction date falls between the aggregation schedule.

Copyright © 2009, 2025, Oracle and/or its affiliates.

If the Multi Parameter Based Pricing feature is...	Then...
	Note: During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to **Error (EROR)**. If the aggregated billable charge already exists for the account, price item and TOU combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.
Enabled	The system checks the value defined in the **Aggregate Transaction** field. If the **Aggregate Transaction** field is set to **No**, the system creates one billable charge (with the **Billable** status) for each transaction leg. However, if the **Aggregate Transaction** field is set to **Yes**, the system creates one billable charge (with the **Billable** status) for all transaction legs having the same price item and price item parameters (parameter group) combination and whose transaction date falls between the aggregation schedule.
	Note: During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to **Error (EROR)**. If the aggregated billable charge already exists for the account, price item and price item parameters combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.

The transaction aggregation is done based on the aggregation schedule defined in the price item pricing. You can use the following standard schedules or you can create your own custom schedules for aggregation:

- Daily
- Weekly
- Monthly

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Quarterly
- Yearly

Once the billable charge is created, the system aggregates the SQIs defined for the price item - division combination using the aggregation function and then updates the billable charge with the respective SQI values. If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

Once the SQI values are updated in the billable charge, the rate is determined for the transaction leg whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see Transaction Rating Before Billing on page 892.

Note: If you want to do some preprocessing activities while determining rate, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the price item. It does not have any business logic. If you want to undertake some preprocessing activities while determining rate for transaction legs, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the billable charge is created and updated successfully, the status of the transaction leg is changed to **Completed (COMP)**. However, if the SQIs are not defined for the price item - division combination, the transaction aggregation rule is not defined for the SQI, or if the exchange rate is not available during currency conversion, the status of the transaction leg is changed to **Error (EROR)**. If all legs of a transaction are in the **Completed (COMP)** status, the status of the transaction is changed to **Completed (COMP)**. But, if any of the transaction leg is in the **Error (EROR)** status, the status of the transaction is changed to **Error (EROR)**.

You can execute this process through a multi-threaded batch named **Service Quantity Calculation (C1-TXNSQ)**. You can specify either of the following parameters while executing this batch:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to create the billable charges for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to create the billable charges for transactions which are received from a particular transaction source.	No
Division	Used when you want to create the billable charges for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

The **Service Quantity Calculation (C1-TXNSQ)** batch does not change the status of the transaction and its legs. You need to execute the **Mark Completion (C1-TXNCM)** batch to update the status of the transaction and its legs. Besides updating the status, the **Mark Completion (C1-TXNCM)** batch does the following with other legs when billable charge is not created for one or more transaction legs:

Rate for other transaction leg is determined using the following set of pricing attributes...	Then....
Ignore Transaction is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**	The corresponding calculation lines of the transaction leg are deleted.
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**	The corresponding billable charge and calculation lines of the transaction leg are deleted.
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**	The corresponding calculation lines of the transaction leg are deleted.
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**	The corresponding billable charge and calculation lines are not deleted.
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Do Not Rate Transactions**	The corresponding non-aggregated billable charge is deleted.

You can specify either of the following parameters while executing the **Mark Completion (C1-TXNCM)** batch:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

You must specify same parameters in the **Service Quantity Calculation (C1-TXNSQ)** and **Mark Completion (C1-TXNCM)** batches. Otherwise, erroneous results might occur.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

For more information on...	See...
Transaction Leg Status Transition	Transaction Leg Status Transition on page 940

Clean Up

There might be situations when a transaction is mapped to one or more price items and due to some reasons a billable charge could not be created for one of the price item. And, therefore the status of the transaction is changed to **Error (EROR)**. In such case, you need to either recalculate SQIs in the aggregated billable charge or delete the aggregated billable charge depending on whether the aggregated billable charge includes transaction legs in the **Completed (COMP)** status. You can perform this clean up process through a multi-threaded batch named **Clean Up (C1-TXNCU)**.

When the transaction legs in the **Error (EROR)** and **Completed (COMP)** statuses are aggregated together in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Billable charge contain transaction legs with the following set of pricing attributes...	**Then....**
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Do Not Rate Transactions**	The SQIs are recalculated in the billable charge.
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**	The SQIs are recalculated in the billable charge and the rate is determined for aggregated service quantities. Once the rate is determined, pass through charges are calculated and accumulated accordingly.
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**	The pass through charges are recalculated and accumulated accordingly.

However, when the transaction legs in the **Error (EROR)** status are only aggregated in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	**Then....**
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Do Not Rate Transactions**	The aggregated billable charge is deleted.
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**	The aggregated billable charge and the corresponding calculation lines are deleted.
Ignore Transaction is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**	The aggregated billable charge is deleted.

Note:

If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

The SQIs in an aggregated billable charge are recalculated only when the **SQ Recalculation Required** option type in the **C1_FM** feature configuration is set to **Y**. If you set the **SQ Recalculation Required** option type in the **C1_FM** feature configuration to **N**, the SQIs are not recalculated in an aggregated billable charge. We recommend you to recalculate SQIs in an aggregated billable charge when more than one account bears the charges for a transaction.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Besides the transaction aggregation process, the **Clean Up (C1-TXNCU)** batch is also used during the following sub-processes:

- **Cancellation** - During the cancellation process, it deletes non-aggregated billable charges and recalculates SQIs in aggregated billable charges.
- **Disaggregation** - During the disaggregation process, it deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation.

You can specify either of the following parameters while executing the **Clean Up (C1-TXNCU)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to update or delete billable charges created for transactions which are received in a particular transaction feed. **Note:** This parameter should not be used during the disaggregation process.	Yes (Conditional) **Note:** This parameter is required when you set the request type to **CNCL**.
Transaction Source	Used when you want to update or delete billable charges created for transactions which are received from a particular transaction source. **Note:** This parameter should not be used during the cancellation and disaggregation processes.	No
Division	Used when you want to update or delete billable charges created for transactions belonging to a particular division. **Note:** This parameter should not be used during the cancellation process.	No
Account ID	Used when you want to update or delete billable charges created for transactions of a particular account. **Note:** This parameter should be used only during the disaggregation process.	No
Bill Cycle	Used when you want to update or delete billable charges created for transactions of accounts having a particular bill cycle. **Note:** This parameter should be used only during the disaggregation process.	No
Disaggregate Transactions From Date	Used when you want to update or delete billable charges created for transactions which were performed from a particular date onwards. **Note:** You must specify the date in the YYYY-MM-DD format. This parameter should be used only during the disaggregation process.	Yes (Conditional) **Note:** This parameter is required when you set the request type to **DISAGG**.
Request Type	Used to indicate the process during which you want to execute the batch. The valid values are:	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
	• CNCL • EROR • DISAGG	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Leg Status Transition	Transaction Leg Status Transition on page 940
How to set the **C1_FM** feature configuration	Setting the C1_FM Feature Configuration on page 4277

Transaction Aggregation Batch Processing

During the transaction aggregation process, you need to execute the following batches in the specified order:

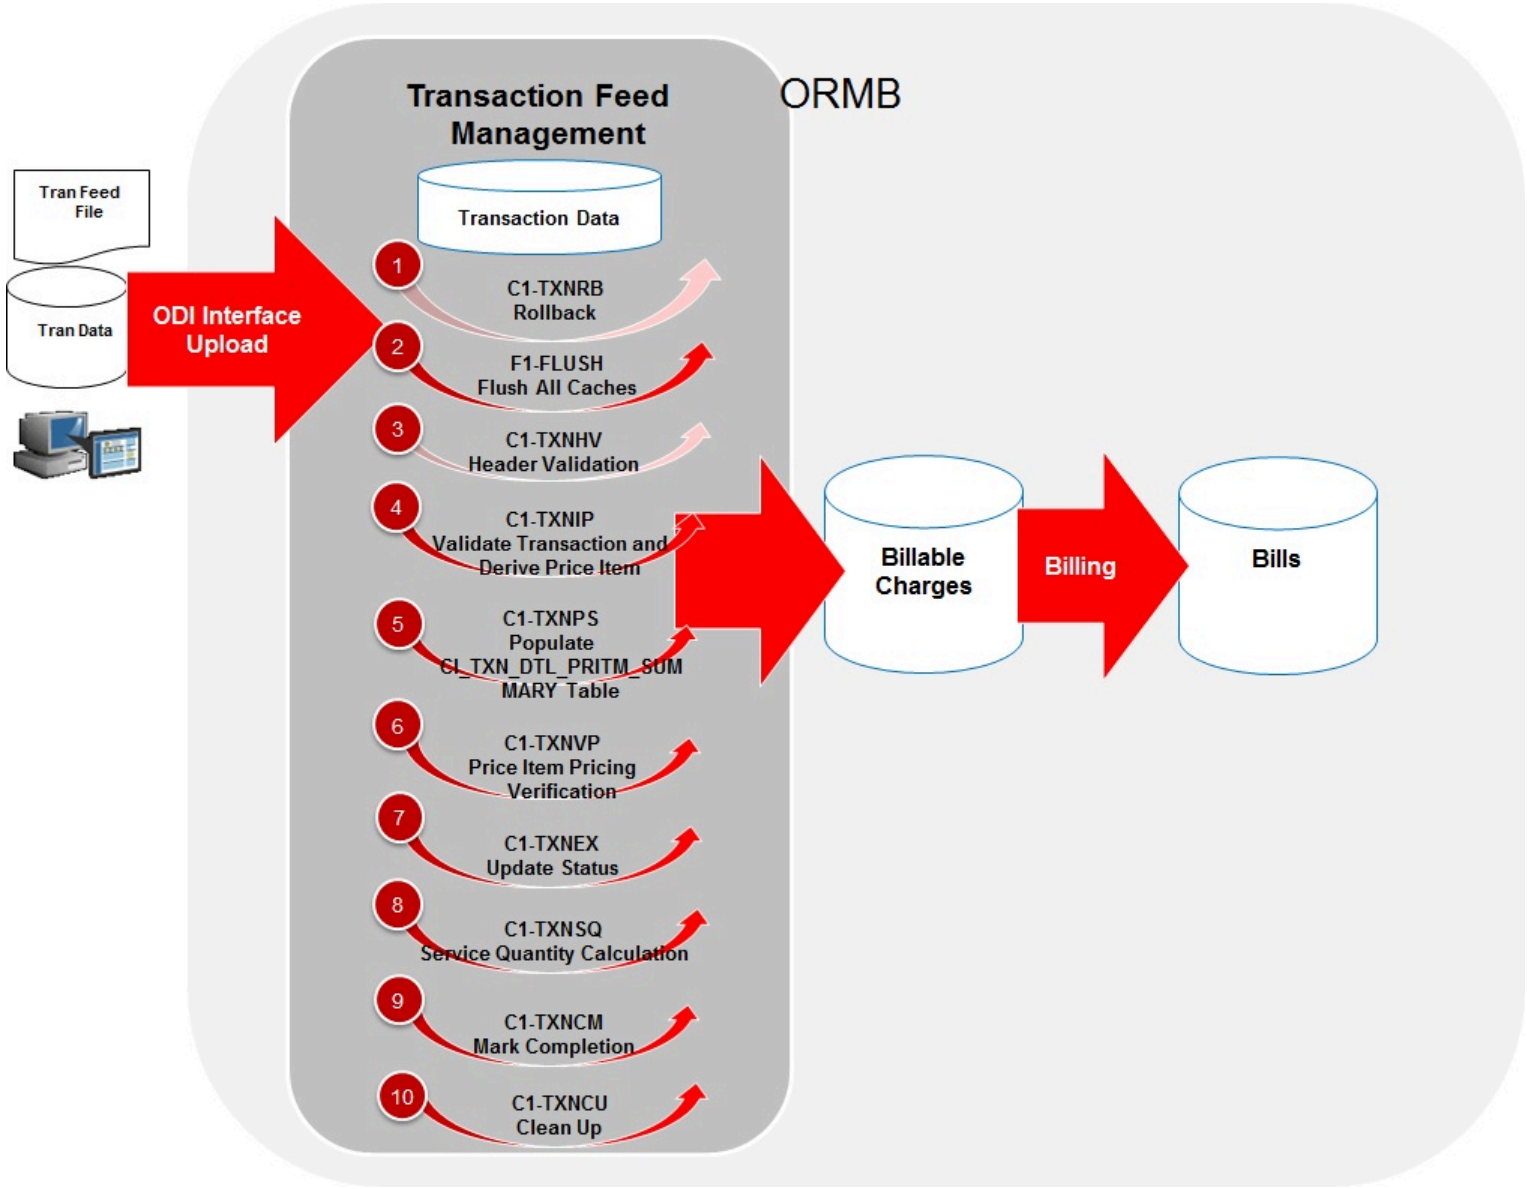
1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Price Item Pricing Verification (C1-TXNVP)
6. Update Status (C1-TXNEX)
7. Service Quantity Calculation (C1-TXNSQ)
8. Mark Completion (C1-TXNCM)
9. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch locks the **CI_TXN_DTL_PRITM_SUMMARY** table before inserting records to ensure that only unique records are inserted in this table. The locking mechanism results in performance issue when there is no or very little aggregation of transactions. Therefore, we recommend you to use an alternative transaction aggregation process when the aggregation ratio is low. You can enable the alternative transaction aggregation process by setting the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration to **true**. In this alternative transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)
6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

Copyright © 2009, 2025, Oracle and/or its affiliates.

The following figure graphically explains the sequence in which you need to execute the batches during the transaction aggregation process:



Copyright © 2009, 2025, Oracle and/or its affiliates.

Note:

You need to remember the following points during the transaction aggregation process:

- Before you start the transaction aggregation process, you need to execute the **Flush All Caches (F1-FLUSH)** batch to clean the cache. This batch has one parameter named **Thread Pool** which allows you to clean cache of a particular thread pool. In case you want to reprocess the error transactions from the earlier cycle, you need to execute the **Rollback (C1-TXNRB)** batch.
- You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the price item pricing information in the following tables:
  - CI_PRC_AGRD
  - CI_PRC_PL
  - CI_PRC_INH_PL

  But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the price item pricing information in the above mentioned tables. If there are any pricing changes, you can update the price item pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch.
- The **Header Validation (C1-TXNHV)** batch is optional. You can directly execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch once the transactions are uploaded in the system.
- The system allows you to execute each batch consecutively. You can execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and same parameters, or with the different division and different parameters. But, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and different parameters. For example, once you execute this batch with division as D1 and transaction source as S1, you cannot execute this batch again with division as D1 and transaction source as S2 until the former transaction aggregation cycle is complete.
- Once the **Price Item Pricing Verification (C1-TXNVP)** batch is executed, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. Similarly, once the **Service Quantity Calculation (C1-TXNSQ)** batch is executed, you cannot execute the **Price Item Pricing Verification (C1-TXNVP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. This rule is applicable to all subsequent batches in the transaction aggregation cycle.
- During the transaction aggregation process, you must specify the same division and same parameters across each batch. Otherwise, erroneous results might occur.
- If you have already executed the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch without any division, then you cannot execute this batch once again with a division unless and until the transaction aggregation cycle is complete.

Transaction Disaggregation

As the aggregation cycle is different from the billing cycle, there might be situations when due to pricing changes, the billable charges are no longer valid. In such cases, you need to disaggregate the transactions. In the following scenarios, the system automatically creates a disaggregation request in the CI_TXN_DISAGG_REQ table:

If...	**Then**
A price item is assigned to an account	A disaggregation request is created for the account.
The following values in the price item pricing assigned to an account is changed: • Effective Start Date • Effective End Date • Aggregation Schedule	A disaggregation request is created for the account.

Copyright © 2009, 2025, Oracle and/or its affiliates.

If...	Then
• Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter	
A price item is assigned to a person	A disaggregation request is created for each account of the person and its child person.
The following values in the price item pricing assigned to a person is changed: • Effective Start Date • Effective End Date • Aggregation Schedule • Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter	A disaggregation request is created for each account of the person and its child person.
A price list is assigned to an account.	A disaggregation request is created for the account.
The following values in the price list assigned to an account is changed: • Effective Start Date • Effective End Date • Priority • Price List Inheritance	A disaggregation request is created for the account.
A price list is assigned to a person.	A disaggregation request is created for each account of the person and its child person.
The following values in the price list assigned to a person is changed: • Effective Start Date • Effective End Date • Priority • Price List Inheritance	A disaggregation request is created for each account of the person and its child person.

However, there are various other scenarios for which you have to disaggregate the transactions. But, at the moment, the system does not automatically create a disaggregation request for these scenarios in the CI_TXN_DISAGG_REQ table. You will have to create an appropriate disaggregation request in this table. The system allows you to create a disaggregation request manually through the **Disaggregation Request** screen or through a batch named **Disaggregation Request Creation (C1-DISTG)**.

In the following scenarios, you have to create an appropriate disaggregation request for the account or person, respectively:

- Effective price item pricing assigned to an account is overridden.
- Variance parameter in the price item pricing assigned to an account is changed.
- A price list assignment has expired or a price list is no longer available to an account.
- Effective price item pricing assigned to a person is overridden.
- Variance parameter in the price item pricing assigned to a person is changed.
- A price list assignment has expired or a price list is no longer available to a person.
- A price item is added to a price list.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- The following details in the price item pricing assigned to a price list is changed:
  - Variance Parameter
  - Effective Start Date
  - Effective End Date
  - Aggregation Schedule
  - Ignore Transaction
  - Rating Criteria
  - Aggregate Transaction
- A new bundle is created.
- A price item is added to a bundle.
- A price item is removed from a bundle.
- A bundle is eliminated (that is, all its price item are removed).
- A price item is added.
- A price list hierarchy is changed.
- SQIs associated with a price item - division combination are changed.
- Transaction aggregation rule defined for an SQI is changed or deleted.
- Business rules used for initial price item mapping are changed.

At present, the system disaggregates transactions at the account level and not at the price item level. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1 is mapped:

Transaction	**Account**	**Price Item**
T1	A1	P1
T1	A1	P2
T1	A2	P1
T1	A2	P2

Now, if the pricing of P1 assigned to A1 changes, the system creates a disaggregation request for A1 and identifies all transaction legs which are mapped to A1 for disaggregation. In this example, the system will consider the first two transaction legs - T1-A1-P1 and T1-A1-P2 - for disaggregation even if the pricing of P2 assigned to A1 has not changed.

The **Disaggregation Request Creation (C1-DISTG)** batch creates a disaggregation request for an account. When you create a disaggregation request for an account, the transactions mapped to the account are disaggregated. This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. You can specify either of the following parameters while executing this batch:

Parameter Name	**Description**	**Mandatory (Yes or No)**
Division	Used when you want to create disaggregation request for accounts belonging to a particular division.	No
Person ID	Used when you want to create disaggregation request for accounts belonging to a particular person.	No
Bill Cycle	Used when you want to create disaggregation request for accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to create disaggregation request for accounts for which transactions were performed from a particular date onwards.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
	Note: You must specify the date in the YYYY-MM-DD format.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Before you proceed with the disaggregation process, you need to ensure that there are no pending bills for the accounts whose transactions need to be disaggregated. If there are pending bills for these accounts, you need to first execute the **Pending Bill Segments Deletion (C1-BSEGD)** batch and then execute the **Pending Bill Deletion (C1-PNBD)** batch. While executing these batches in the specified order, ensure that you specify the same parameters in both these batches. For more information about these batches, see *Oracle Revenue Management and Billing Batch Execution Guide*.

Note: The **Pending Bill Deletion (C1-PNBD)** batch deletes those pending bills which are generated through the billing batches (i.e. **BILLING** or **C1-PNDBL**). It does not delete pending bills which are generated through the user interface. Also, it deletes regular pending bills and not adhoc pending bills.

Once a disaggregation request is either manually or automatically created for an account, you need to execute the following batches in the specified order to disaggregate transactions:

- **Identify Transactions for Disaggregation (C1-IDENT)** - This batch fetches disaggregation requests which are created for accounts from the CI_TXN_DISAGG_REQ table. It identifies the transactions and the corresponding aggregated and non-aggregated billable charges for disaggregation. If the bill segment of a billable charge is in the **Pending Cancel** or **Frozen** status, the system will not identify the billable charge for deletion. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to identify the transactions of accounts belonging to a particular division for disaggregation.	No
Account ID	Used when you want to identify the transactions of a particular account for disaggregation.	No
Bill Cycle	Used when you want to identify the transactions of accounts having a particular bill cycle for disaggregation.	No
Disaggregate Transactions From Date	Used when you want to identify the transactions which were performed from a particular date onwards for disaggregation.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
	Note: You must specify the date in the YYYY-MM-DD format. The aggregated billable charge, which is affected, should not contain a transaction leg whose transaction date is earlier than the date specified in this parameter. Otherwise, erroneous results will occur. Therefore, ensure that you specify the appropriate value for the **Disaggregate Transactions From Date** parameter.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Post-Processing Algorithm	Used to attach a post-processing algorithm. This algorithm is triggered once the transactions and corresponding billable charges are identified for disaggregation.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to exclude the aggregated and non-aggregated billable charges which are in the **Canceled** status during the disaggregation process. The valid values are: • Y • N **Note:** If you do not specify any value, by default, the parameter value is set to **N**.	No
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

- **Process Non-Aggregated Transactions (C1-PDTXN)** - This batch processes the identified transactions, deletes the required transaction legs, and changes the status of the transaction to **Uploaded (UPLD)**. If a non-aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The corresponding transaction leg and calculation lines (if any) are deleted.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

  However, if a non-aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, the corresponding calculation lines (if any), and transaction leg are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If a non-aggregated billable charge is in the **Cancel** status, then the corresponding transaction leg and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. If the rate is determined for a transaction leg which is in the **Ignored (IGNR)** status, the calculation lines are deleted along with the transaction leg during disaggregation.

  If aggregated billable charge exists for a transaction leg, then the corresponding transaction legs and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. You can specify either of the following parameters while executing this batch:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to disaggregate the transactions of accounts belonging to a particular division.	No
Account ID	Used when you want to disaggregate the transactions of a particular account.	No
Bill Cycle	Used when you want to disaggregate the transactions of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to disaggregate the transactions which were performed from a particular date onwards. **Note:** You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process, you need to attach a preprocessing algorithm on the **TFM - Disaggregation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Process Non-Aggregated Transactions (C1-PDTXN)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_DSAG_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the disaggregation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Disaggregation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_DSAG_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

- **Clean Up (C1-TXNCU)** - This batch deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation. If an aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

  However, if an aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, and the corresponding calculation lines (if any) are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If an aggregated billable charge is in the **Cancel** status, then the corresponding calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

  While executing the **Clean Up (C1-TXNCU)** batch during disaggregation, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters that you can specify while executing this batch, refer to Clean Up on page 919.
- **Update Disaggregation Request Status (C1-DRSUA)** - This batch changes the status of the disaggregation request in the CI_TXN_DISAGG_REQ table to **COMPLETE**. You can specify either of the following parameters while executing this batch:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
Account ID	Used when you want to update the disaggregation requests' status of a particular account.	No
Division	Used when you want to update the disaggregation requests' status of accounts belonging to a particular division.	No
Bill Cycle	Used when you want to update the disaggregation requests' status of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to update the disaggregation requests' status of accounts whose transactions were performed from a particular date onwards and the bill segments created for these transactions are in the **Pending Cancel** or **Frozen** status. **Note:** You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Update Status Algorithm	Used to attach a custom algorithm which indicates when the status of the disaggregation request in the CI_TXN_DISAGG_REQ table must be changed to **COMPLETE**. **Note:** If an algorithm is specified in this parameter, the system uses the custom logic and not the in-built logic for updating the status of the disaggregation requests.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to change the status of the disaggregation request to **COMPLETE** when the canceled billable charges are excluded during the disaggregation process. The valid values are: • Y • N **Note:** If you do not specify any value, by default, the parameter value is set to **N**. You must specify the same value for this parameter while executing the **Identify Transactions for Disaggregation (C1-IDENT)** and **Update Disaggregation Request Status (C1-DRSUA)** batches during the disaggregation process. Otherwise, erroneous results will occur.	No
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

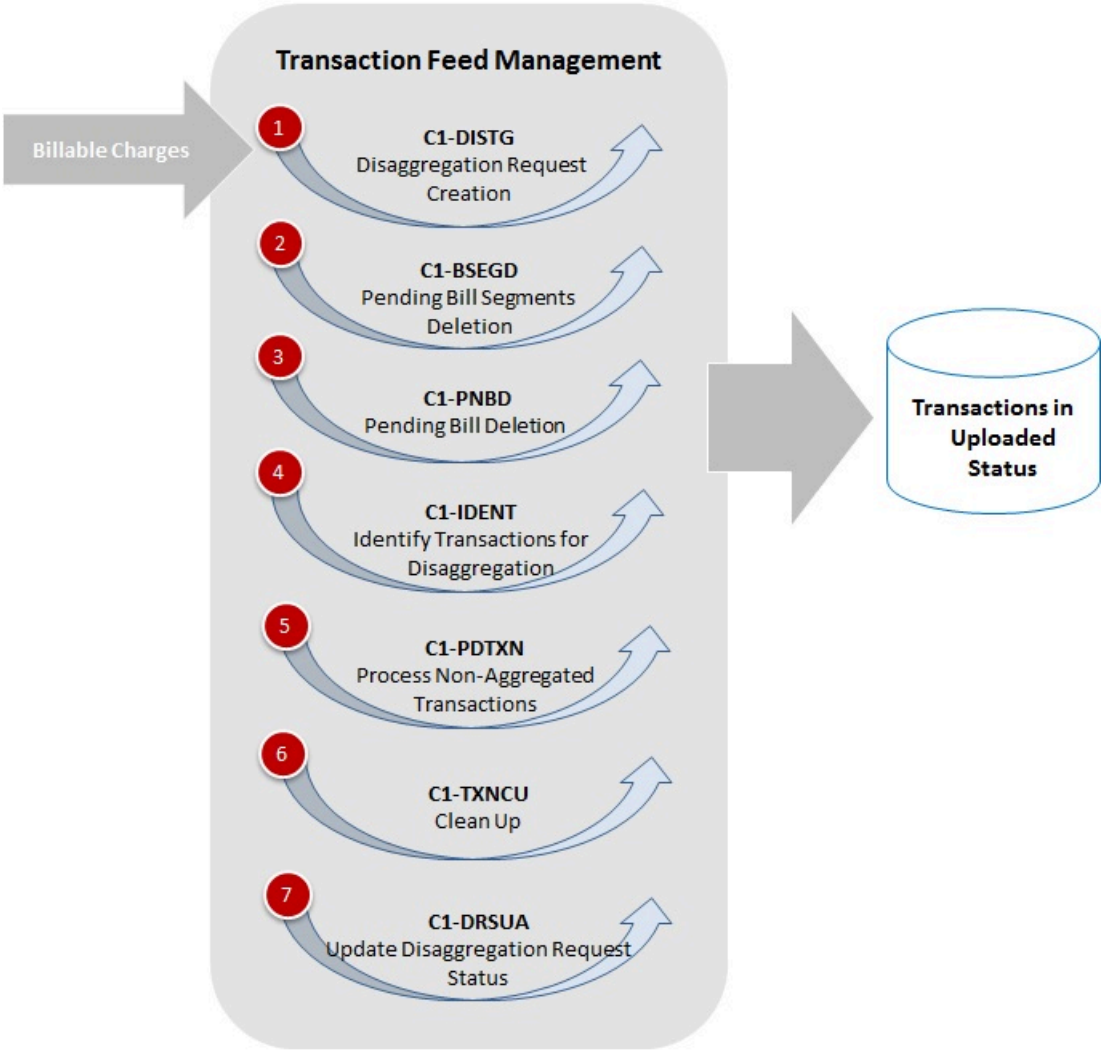
Transaction Disaggregation Batch Processing

During the transaction disaggregation process, you need to execute the following batches in the specified order:

1. Disaggregation Request Creation (C1-DISTG)
2. Pending Bill Segments Deletion (C1-BSEGD)
3. Pending Bill Deletion (C1-PNBD)
4. Identify Transactions for Disaggregation (C1-IDENT)
5. Process Non-Aggregated Transactions (C1-PDTXN)
6. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
7. Update Disaggregation Request Status (C1-DRSUA)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction disaggregation process:

Copyright © 2009, 2025, Oracle and/or its affiliates.



Transaction Cancellation

There might be situations when incorrect transaction data file is uploaded in the system. In such cases, the system provides you with an ability to cancel the whole transaction feed. You can cancel a transaction feed either before the transaction aggregation process starts (that is, before executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch) or after the transaction aggregation process ends (that is, after executing the **Clean Up (C1-TXNCU)** batch). In other words, you cannot cancel a transaction feed during the transaction aggregation process. Once the transaction feed is cancelled, the status of the feed and all transactions in the feed is changed to **Cancelled (CNCL)**.

The following table explains how the system behaves:

When you cancel a transaction feed for which...	Then
A bill (with the **Pending** status) is already generated in the system	The corresponding billable charges, bill segments, and bill are deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to **Cancelled (CNCL)**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

When you cancel a transaction feed for which...	Then
	Note: If a pending bill has a bill segment in the **Frozen** or **Pending Cancel** status, the system does not allow you to cancel the transaction feed. If a pending bill has a bill segment in the **Cancel** status, the system behaves in the following manner: • Deletes all other bill segments which are not in the **Cancel** status. • The billable charge corresponding to the bill segment which is not in the **Cancel** status is deleted if the billable charge is in the **Billable** status and if the billable charge only includes transactions from the feed that you want to cancel. • The billable charge corresponding to the bill segment which is not in the **Cancel** status is not deleted or recalculated if the billable charge is in the **Cancelled** status. • The billable charge corresponding to the bill segment which is in the **Cancel** status is cancelled if the billable charge only includes transactions from the feed that you want to cancel. • The SQIs in the billable charge are recalculated if the billable charge includes transactions from multiple feeds. If a bill is created for transactions which are uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then: • The bill and their corresponding bill segments are deleted. • The SQIs are recalculated in the corresponding billable charges. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to **Cancelled (CNCL)**. • The status of Feed A is changed to **Cancelled (CNCL)**. • The status of the transactions uploaded through Feed B remains the same (i.e. **Completed (COMP)**).
A bill (with the **Complete** status) already exists in the system	The system does not allow you to cancel the transaction feed.
A bill (with the **Complete** status) has all bill segments in the **Cancelled** status	The corresponding billable charges are cancelled. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to **Cancelled (CNCL)**.
A billable charge (with the **Billable** status) exists in the system	The billable charge is deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to **Cancelled (CNCL)**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

When you cancel a transaction feed for which...	Then
	Note: In case a billable charge is created for transactions uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then: • The SQIs are recalculated in the billable charge. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to **Cancelled (CNCL)**. • The status of Feed A is changed to **Cancelled (CNCL)**. • The status of the transactions uploaded through Feed B remains the same (i.e. **Completed (COMP)**).
A billable charge (with the **Cancelled** status) exists in the system	The billable charge is not deleted. However, the corresponding transaction legs and their calculation lines (if any) are deleted and the status of the transactions is changed to **Cancelled (CNCL)**.

To cancel a transaction feed, you need to execute the following batches in the specified order:

1. **Pending Bill Deletion (C1-DELBL)** - This batch deletes the bills (with the **Pending** status) and their corresponding bill segments. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to delete bills which include charges for transactions which are received in a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

2. **Clean Up (C1-TXNCU)** - This batch deletes non-aggregated and aggregated billable charges. An aggregated billable charge is deleted when it includes legs of transactions from the feed that you want to cancel. If an aggregated billable charge includes legs of transactions from multiple feeds, the SQIs and calculation lines (if any) are recalculated in the aggregated billable charge. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**, is cancelled or deleted during the cancellation process. Note that while executing this batch, the **Request Type** parameter must be set to **CNCL**. For more information about the parameters that you can specify while executing this batch, refer to Clean Up on page 919.
3. **Cancellation (C1-TXCNC)** - This batch deletes the transaction legs. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)** or **Rate Transactions (RITX)**, is cancelled or deleted during the cancellation process. Finally, this batch changes the status of the feed and all transactions in the feed to **Cancelled (CNCL)**. You can specify either of the following parameters while executing this batch:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to cancel a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process, you need to attach a preprocessing algorithm on the **TFM - Cancellation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Cancellation (C1-TXCNC)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_CNCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the cancellation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Cancellation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_CNCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

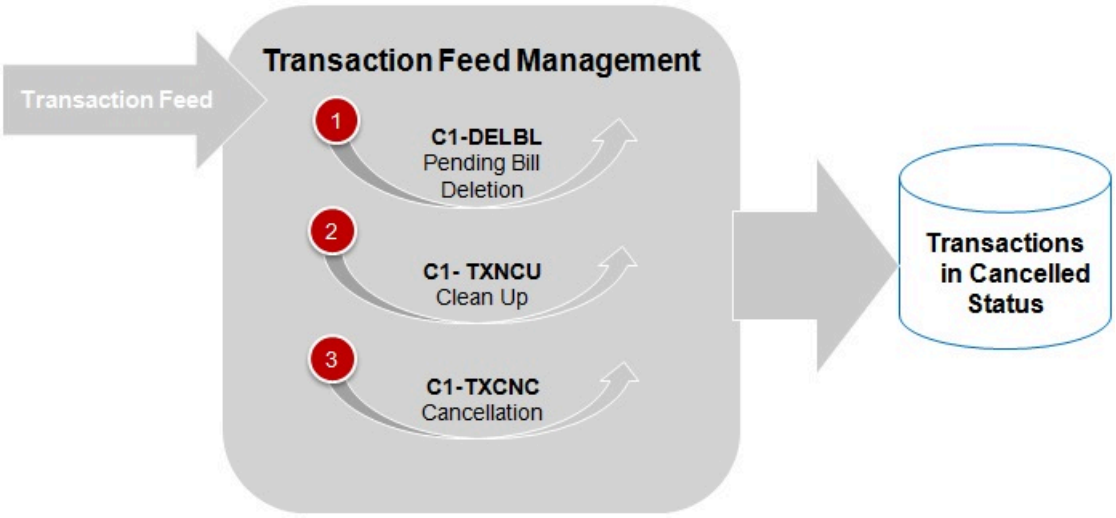
Transaction Cancellation Batch Processing

During the transaction cancellation process, you need to execute the following batches in the specified order:

1. Pending Bill Deletion (C1-DELBL)
2. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **CNCL**
3. Cancellation (C1-TXCNC)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction cancellation process:

Copyright © 2009, 2025, Oracle and/or its affiliates.



Transaction Rollback

In the transaction aggregation process, an error occurs when:

- Transaction validation fails.
- Transaction does not satisfy any rule invoked through the rule type.
- Effective pricing is not available for one or more price items to which a transaction is mapped.
- SQIs are not defined for the price item - division combination.
- Transaction aggregation rule is not defined for the SQI.
- Exchange rate is not available during currency conversion.
- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.
- Price Item parameters specified in the output parameters are not effective for the price item on the processing date.
- Mandatory price item parameter which is effective on the processing date is not specified in the output parameter.
- Parameter value is not specified for all mandatory price item parameters which are effective on the processing date.

In such cases, the status of the transaction is changed to **Error**. You can configure the required setup and then execute the following batches once again in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)

> **Note:** You must execute the **Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)** batch when the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration is set to **true**.

6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)

Copyright © 2009, 2025, Oracle and/or its affiliates.

9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU)

But, before you execute these batches, you need to rollback the transaction status to **Uploaded (UPLD)**. The system allows you to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. When you rollback a transaction, the corresponding transaction legs are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. On rolling back a transaction leg whose effective pricing has the **Ignore Transaction** field set to **Yes** and the **Rating Criteria** field set to **Rate Transactions (RITX)**, the corresponding calculation lines are also deleted along with the transaction leg. If you rollback a partially disaggregated transaction which is in the **Error (EROR)** status, the transaction legs which are in the **Error (EROR)** status are only deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

You need to execute the **Rollback (C1-TXNRB)** batch to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. You can specify the following parameters while executing this batch:

Parameter Name	**Description**	**Mandatory (Yes or No)**
Transaction Status	Used to indicate whether you want to rollback transactions which are in the **Ignored** or **Error** status. The valid values are: • IGNR • EROR	Yes
Transaction Header ID	Used when you want to rollback transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to rollback transactions which are received from a particular transaction source.	No
Division	Used when you want to rollback transactions belonging to a particular division.	No
Rollback From Date	Used when you want to rollback transactions which were performed from a particular date onwards. **Note:** You must specify the date in the YYYY-MM-DD format. The rollback from date cannot be later than the rollback to date.	No
Rollback To Date	Used when you want to rollback transactions which were performed till a particular date.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Description	Mandatory (Yes or No)
	Note: You must specify the date in the YYYY-MM-DD format. The rollback to date cannot be earlier than the rollback from date.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process, you need to attach a preprocessing algorithm on the **Transaction Feed Management Rollback Preprocessing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Rollback (C1-TXNRB)** batch. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_ROBK_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the rollback process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rollback Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_ROBK_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

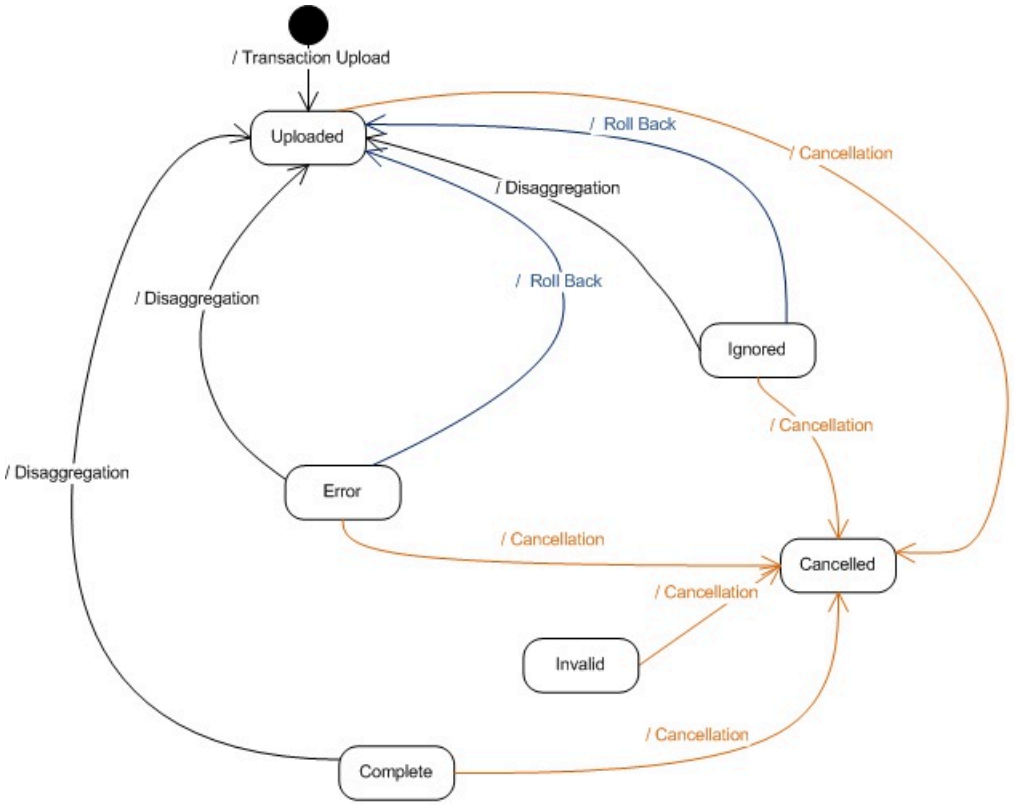
Disaggregation, Rollback, and Cancellation

The following figure graphically indicates how a transaction moves from one status to another during the disaggregation, rollback, and cancellation processes:



Transaction Leg Status Transition

This section explains how a transaction leg moves from one status to another during the following sub-processes:

- Transaction Aggregation

  Note: This is the aggregation process for transactions that are recently uploaded or reaggregated after being fully disaggregated.

- Transaction Rollback
- Transaction Cancellation
- Transaction Disaggregation
- Transaction Reaggregation

  Note: This is the aggregation process for transactions that are reaggregated after being partially disaggregated.

Transaction Aggregation

The following table indicates how a transaction leg moves from one status to another during the aggregation process:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNIP	Transaction validation fails due to incomplete transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	INVALID	Not applicable as the transaction legs are not yet created
2	C1-TXNIP	Transaction validation fails due to invalid or incorrect transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
3	C1-TXNIP	Transaction validation is successful but no product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
4	C1-TXNIP	Transaction validation is successful and product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
5	C1-TXNIP	Transaction validation is successful and the transaction is ignored by the rule based on the transaction attributes	UPLOADED	Not applicable as the transaction legs are not yet created	IGNORED	Not applicable as the transaction legs are not yet created
6	C1-TXNVP and C1-TXNEX	Effective pricing is not found for any of the transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
7	C1-TXNVP and C1-TXNEX	**Ignore Transaction** flag is set to **Y** in the effective pricing for one or more transaction legs but not for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED (when **Ignore Transaction** flag is set to **Y** in the effective pricing) INITIAL PRODUCT DETERMINED (when **Ignore Transaction** flag is set to **N** in the effective pricing)
8	C1-TXNVP and C1-TXNEX	**Ignore Transaction** flag is set to **Y** in the effective pricing	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED	IGNORED

Copyright © 2009, 2025, Oracle and/or its affiliates.

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
		for all transaction legs				
9	C1-TXNVP and C1-TXNEX	**Ignore Transaction** flag is set to **N** in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
10	C1-TXNSQ and C1-TXNCM	SQIs are not defined for the product - division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	COMPLETED	COMPLETED

Transaction Rollback

The following table indicates how a transaction leg moves from one status to another during the rollback process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNRB	Transactions with the Error (EROR) status are rolled back	ERROR	ERROR	UPLOADED	Not applicable as the transaction legs are not yet created
2	C1-TXNRB	Transactions with the Ignored (IGNR) status are rolled back	IGNORED	IGNORED	UPLOADED	Not applicable as the transaction legs are not yet created

Transaction Cancellation

The following table indicates how a transaction leg moves from one status to another during the cancellation process:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXCNC	Transactions in any status are cancelled	UPLOADED, INITIAL PRODUCT DETERMINED, ERROR, COMPLETED, INVALID, or IGNORED	INITIAL PRODUCT DETERMINED, ERROR, IGNORED, or COMPLETED	CANCELLED	CANCELLED

Transaction Disaggregation

The following table indicates how a transaction leg moves from one status to another during the disaggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-DISTG	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED **Note:** The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status
2	C1-DISTG	Transactions in the INVALID or CANCELLED status cannot be disaggregated. In addition, the newly uploaded transactions and fully disaggregated transactions which are in the UPLOADED status cannot be disaggregated.	CANCELLED, INVALID, or UPLOADED	Not applicable as the transactions will not have any legs in these statuses	No change in the status	Not applicable as the transactions will not have any legs in these statuses
3	C1-IDENT	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status

Copyright © 2009, 2025, Oracle and/or its affiliates.

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
			Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation.			
4	C1-IDENT	Transaction has already been disaggregated and is in the UPLOADED status. The transaction legs which were not affected are moved in the staging table and the transaction legs which were affected are deleted. Now, if the effective pricing is changed for the account to which the transaction leg in the staging table is mapped, then that transaction leg must be disaggregated. Thus, disaggregation is done even though the transaction is in the UPLOADED status.	UPLOADED	UPLOADED	No change in the status	No change in the status
5	C1-PDTXN	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED **Note:** The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	UPLOADED	Transaction legs which are affected during disaggregation are deleted and the other legs which are not affected are moved to the staging table.

Transaction Reaggregation

The following table indicates how a transaction leg moves from one status to another during the reaggregation process:

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
1	C1-TXNIP	Transaction in the COMPLETED status was	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED

Transaction Data File

You can upload a transaction data file in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Before uploading a transaction data file, you need to ensure that it contains the following:

- **File Header** - Every file must have one header record. It should contain the following details:

Header Data	Description	Mandatory (Yes or No)
Transaction Source	Used to specify the source from where the transactions are received.	Yes
Header Date (YYYYMMDD)	Used to specify the header date.	Yes
Transaction Header ID	Used to specify the external transaction header ID.	Yes
File Name	Used to specify the file name.	Yes
Number of Transactions	Used to specify the total number of transaction records in the file.	Yes
Total Transaction Volume	Used to specify the total transaction volume.	Yes
Total Transaction Amount	Used to specify the total transaction amount.	Yes

- **Transaction Record** - Every file must have one or more transaction records. It should contain the following details:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Record Data	Description	Mandatory (Yes or No)
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Source	Used to specify the source from where the transaction is received.	Yes
Transaction Date (YYYYMMDD)	Used to specify the date when the transaction was performed.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	Yes
Customer Reference Number	Used to indicate the customer who has performed the transaction.	No
Division	Used to specify the division to which the transaction belongs.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to specify the currency in which the transaction was performed. **Note:** If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	Yes
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction. The valid values are: • Plus (+) • Minus (-)	Yes
Account Identifier Type	Used to indicate the account identifier type.	Yes
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes
UDF_NUM_1, UDF_NUM_2, UDF_NUM_3, ..., UDF_NUM_20	Used to specify additional information about the transaction.	No
UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10	Used to specify additional transaction amount.	Yes (Conditional) **Note:** The UDF_AMT_N is required when the corresponding UDF_CCY_N is specified.
UDF_CCY_1, UDF_CCY_2,	Used to specify additional transaction currency.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Record Data	Description	Mandatory (Yes or No)
UDF_CCY_3, ..., UDF_CCY_10	**Note:** If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	**Note:** The UDF_CCY_N is required when the corresponding UDF_AMT_N is specified.
UDF_DTTM_1, UDF_DTTM_2, ..., UDF_DTTM_5	Used to specify additional information about the transaction.	No
UDF_CHAR_1, UDF_CHAR_2, UDF_CHAR_3, ..., UDF_CHAR_50	Used to specify additional information about the transaction. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	No

Error List

The following table lists the errors that may occur while executing various batches in the transaction feed management process. It also indicates how you can resolve these errors.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	102	{Checksum Validation Required} field invalid.	11001	The possible issues could be: • The value other than 'Y', 'y', 'N' or 'n' is specified for the **Checksum Validation Required** parameter.
C1-TXNHV	102	{Duplicate Check Required} field invalid.	11001	The possible issues could be: • The value other than 'Y', 'y', 'N' or 'n' is specified for the **Duplicate Check Required** parameter.
C1-TXNHV	1314	The Transaction Source is mandatory.	17000	The possible issues could be: • The data is not available in the **Transaction Source** column.
C1-TXNHV	1332	Sum of transaction records in the header does not match the total number of records in the file.	17000	The possible issues could be: • Inappropriate file is uploaded in the system.
C1-TXNHV	1333	Sum of transaction volume in the header does not match the total transaction volume in the file.	17000	The possible issues could be: • Inappropriate file is uploaded in the system.
C1-TXNHV	1334	Sum of transaction amount in the header does not match the	17000	The possible issues could be:

Batch Name	Message Number	Error Message	Message Category	Possible Issues
		total transaction amount in the file.		• Inappropriate file is uploaded in the system.
C1-TXNHV	1338	The Transaction Header ID already exists in the system. Please enter unique header ID.	17000	The possible issues could be: • The same file is uploaded multiple times in the system.
C1-TXNHV	1341	Exception occurred during the transaction header validation.	17000	The possible issues could be: • The data is not available in the required format.
C1-TXNHV	1421	Transaction records does not exist in the file. Please check.	17000	The possible issues could be: • Inappropriate file is uploaded in the system.
C1-TXNHV	1422	Sum of transaction records in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: • The value available in the **Number of Transactions** column is less than or equal to zero.
C1-TXNHV	1423	Sum of transaction volume in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: • The value available in the **Total Transaction Volume** column is less than or equal to zero.
C1-TXNHV	1663	Transaction Header External Id is missing.	17000	The possible issues could be: • The data is not available in the **Transaction Header ID** column.
C1-TXNHV	1664	Header Transaction Amount should be greater than 0.	17000	The possible issues could be: • The value available in the **Total Transaction Amount** column is less than or equal to zero.
C1-TXNIP	102	{Chunk Size} field invalid	11001	The possible issues could be: • The value specified for the **Chunk Size** parameter is less than or equal to one.
C1-TXNIP	102	{ Maximum Batch Size } field invalid	11001	The possible issues could be: • The value specified for the **Maximum Batch Count** parameter is greater than the value specified for the **Chunk Size** parameter.
C1-TXNIP	106	Value { Given Transaction Header Id } too long for field { transactionHeaderId }. Maximum length: 14. Found:	11001	The possible issues could be: • The value specified for the **Transaction Header ID** parameter exceeds the maximum length of 14 characters.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
		{ Length of given Transaction Header Id}		
C1-TXNIP	106	Value { Given Transaction Source Code } too long for field { transactionSource }. Maximum length: 30. Found: { Length of given Transaction Source Code}	11001	The possible issues could be: • The value specified for the **Transaction Source** parameter exceeds the maximum length of 30 characters.
C1-TXNIP	106	Value { Given Transaction Division } too long for field { division }. Maximum length: 5 Found: { Length of given Transaction Division}	11001	The possible issues could be: • The value specified for the **Division** parameter exceeds the maximum length of 5 characters.
C1-TXNIP	1301	The account with the specified identifier does not exist in the system. Enter a valid identifier.	17000	The possible issues could be: • The account with the specified account identifier is not found in the system.
C1-TXNIP	1302	UDF_CURRENCY_1 is mandatory when UDF_AMT_1 is non-zero. Enter a valid currency code.	17000	The possible issues could be: • The currency is not available in the **UDF_CURRENCY_CD_1** column of the **CI_TXN_DETAIL** table.
C1-TXNIP	1303	UDF_AMT_1 is mandatory when UDF_CURRENCY_1 is specified. Enter the amount.	17000	The possible issues could be: • The amount is not available in the **UDF_AMT_1** column of the **CI_TXN_DETAIL** table.
C1-TXNIP	1304	UDF_CURRENCY_2 is mandatory when UDF_AMT_2 is non-zero. Enter a valid currency code.	17000	The possible issues could be: • The currency is not available in the **UDF_CURRENCY_CD_2** column of the **CI_TXN_DETAIL** table.
C1-TXNIP	1305	UDF_AMT_2 is mandatory when UDF_CURRENCY_2 is specified. Enter the amount.	17000	The possible issues could be: • The amount is not available in the **UDF_AMT_2** column of the **CI_TXN_DETAIL** table.
C1-TXNIP	1306	UDF_CURRENCY_3 is mandatory when UDF_AMT_3 is non-zero. Enter a valid currency code.	17000	The possible issues could be: • The currency is not available in the **UDF_CURRENCY_CD_3** column of the **CI_TXN_DETAIL** table.
C1-TXNIP	1307	UDF_AMT_3 is mandatory when UDF_CURRENCY_3 is specified. Enter the amount.	17000	The possible issues could be: • The amount is not available in the **UDF_AMT_3** column of the **CI_TXN_DETAIL** table.

				the value specified for the **Chunk Size** parameter.
C1-TXNEX	106	Value { Given Transaction Header Id } too long for field { transactionHeaderId }. Maximum length: 14. Found: { Length of given Transaction Header Id}	11001	The possible issues could be: • The value specified for the **Transaction Header ID** parameter exceeds the maximum length of 14 characters.
C1-TXNEX	106	Value { Given Transaction Source Code } too long for field { transactionSource }. Maximum length: 30. Found: { Length of given Transaction Source Code}	11001	The possible issues could be: • The value specified for the **Transaction Source** parameter exceeds the maximum length of 30 characters.
C1-TXNEX	106	Value { Given Transaction Division } too long for field { division }. Maximum length: 5 Found: { Length of given Transaction Division}	11001	The possible issues could be: • The value specified for the **Division** parameter exceeds the maximum length of 5 characters.
C1-TXNEX	790	The selected Member account does not have active Contracts.	17000	The possible issues could be: • There are no contracts for the account in **Active**, **Pending Stop**, or **Stop** status on the transaction date.
C1-TXNEX	1336	Effective pricing is not available for the product. Please check.	17000	The possible issues could be: • The effective pricing is not available for the product.
C1-TXNEX	1392	Invalid configuration of Price Search Algorithm Parameters or Contracts or Schedule Periods.	17000	The possible issues could be: • The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm (which is associated with the division). • The period in which the transaction date falls is not defined in the aggregation schedule. • There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
C1-TXNEX	1556	{Maximum Batch Size} field should be greater than zero	17000	The possible issues could be: • The value specified for the **Maximum Batch Count** parameter is less than or equal to zero.
C1-TXNEX	1588	No Schedule Period found for the transaction date.	17000	The possible issues could be:

Batch Name	Message Number	Error Message	Message Category	Possible Issues
				• The period in which the transaction date falls is not defined in the aggregation schedule.
C1-TXNEX	1611	Division specific Price Search Algorithm is not configured.	17000	The possible issues could be: • The **Price Assignment Search** algorithm is not defined for the division.
C1-TXNEX	1612	Price Search Algorithm parameters are not set or are invalid.	17000	The possible issues could be: • The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm (which is associated with the division).
C1-TXNEX	1613	Multiple contracts in Active, Pending Stop, Stop status exists for same contract type.	17000	The possible issues could be: • There are multiple effective contracts of the same contract type in **Active**, **Pending Stop**, or **Stop** status on the transaction date.
C1-TXNEX	1636	Invalid batch run [%1] for [%2] division(s). %3 **Note:** [%1] stands for batch code; [%2] stands for division; [%3] stands for expected batch code	17000	The possible issues could be: • You are trying to execute the C1-TXNEX batch before executing the C1-TXNIP batch (which is first mandatory batch in the transaction aggregation cycle). • You are trying to execute the C1-TXNEX batch in between the C1-TXNCM and C1-TXNCU batches during the transaction aggregation cycle.
C1-TXNEX	1638	Transaction Feed Management cycle for individual division(s) is not yet complete. Please complete pending batch runs before starting new cycle for processing [ALL] divisions.	17000	The possible issues could be: • You are trying to execute this batch for all divisions before completing the transaction aggregation cycle which is initiated for a particular division.
C1-TXNEX	1639	Transaction Feed Management cycle for [ALL] divisions is not yet complete. Please complete pending batch runs before starting new cycle for individual division [%1]. **Note:** [%1] stands for division	17000	The possible issues could be: • You are trying to execute this batch for a particular division before completing the transaction aggregation cycle which is initiated for all divisions.
C1-TXNEX	1644	Transaction Feed Management cycle for division(s) [%1] is already in progress with filter [Source= %2, Header= %3]	17000	The possible issues could be: • You are trying to execute this batch once again with the same division and different parameters.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
				• The value specified for the **Maximum Batch Count** parameter is less than or equal to zero.

Alert Notification for Transaction Feed Management

Oracle Revenue Management and Billing enables you to configure alert notification for the **Transaction Feed Management** feature. At present, the system supports the following two alert notifications:

- To Do Creation
- Email Notification

The objective of these notifications is to create an alert for the records which are in the **Ignored** or **Error** status. Once a To Do is created, it indicates the number of records which are in the **Ignored** or **Error** status. However, the email notification provides the error summary statistics.

A new batch named **C1-ERRAL** is introduced in this release. While executing the **C1-ERRAL** batch, you need to set the **To Do Created For** parameter to **TFM**. In addition, you need to specify the transaction status (for example, EROR or IGNR) for which you want to create an alert notification. On executing the **C1-ERRAL** batch, the system creates a To Do using the **C1-TXNER** To Do type.

The **C1-ERRAL** batch must be executed only after all the transaction feed management batches are executed successfully. If the **C1-ERRAL** batch is executed for the first time, the system considers all the transactions whose **CURR_SYS_PRS_DT** is earlier than or equal to the batch business date. However, in the subsequent execution, the system considers only those transactions whose **CURR_SYS_PRS_DT** is later than the last To Do generation date and earlier than or equal to the batch business date.

On clicking the To Do notification in the **To Do List** screen, you can view the error records in the **Feed Management Dashboard** screen. Note that the system will not create a new To Do when the To Do for the same drill key combination already exists in the **Open** status.

To create an email notification, you need to attach an algorithm which is created using the **C1-TFMERREML** algorithm type to the **To Do Post-Processing** system event of the **C1-TXNER** To Do type. On creating a To Do, the batch creates an email outbound message which contains the error summary statistics.

Feed Management Dashboard

The **Feed Management Dashboard** screen allows you to view the details of a transaction feed. It allows you to drill down and view:

- Transaction volume details of a feed at the division level
- Transactions in a feed which belong to a division
- Legs of a transaction
- SQIs which are associated with the price item-division combination to which a transaction is mapped
- Calculation lines generated for a transaction leg
- Characteristics of each calculation line

The **Feed Management Dashboard** screen contains the following zones:

- Search on page 985
- Division Level Information on page 991
- Transaction Level Information on page 992

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Transaction Leg Information on page 993
- Transaction Leg Service Quantity on page 995
- Transaction Leg Calculation Lines on page 995
- Transaction Leg Calc Line Characteristics on page 997

Search

The **Search** zone allows you to search for a transaction feed using various search criteria. It also allows you to view the details of a transaction feed which is already uploaded in the system. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the transaction volume details of a feed at the division level or transaction level. The valid values are: • **Feed Level Details** - Used to indicate that you want to search for the transaction volume details of a feed at the division level. • **Transaction Level Details** - Used to indicate that you want to search for the transaction volume details of a feed at the transaction level. **Note:** By default, the **Feed Level Details** option is selected.	Yes (Conditional) **Note:** This field is required for searching the transaction volume details at the division or transaction level.
Feed Header Date From	Used to search for transaction feeds having header date later than or equal to the specified date.	No
Transaction Source	Used to search for transaction feeds received from a particular transaction source.	No
Feed Header Date To	Used to search for transaction feeds having header date earlier than or equal to the specified date.	No
File Name	Used to search for a transaction feed based on the file name.	No
Feed Load Date From	Used to search for transaction feeds which are uploaded on or later than the specified date.	No
Transaction Header ID	Used to search for a transaction feed based on the header ID.	No
Feed Load Date To	Used to search for transaction feeds which are uploaded on or earlier than the specified date.	No
Account Identifier Type	Used to indicate the identifier type based on which you want to search transaction feed details of an account.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Transaction Level Details** option from the **Search By** field.	**Note:** If you enter the primary account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used to search transaction feed for a particular account. **Note:** This field appears when you select the **Transaction Level Details** option from the **Search By** field.	Yes (Conditional) **Note:** If you select the account identifier type as a search criteria, you have to enter the primary account identifier.
Transaction Record Type	Used to search transaction feeds for transactions with a particular record type. **Note:** This field appears when you select the **Transaction Level Details** option from the **Search By** field.	No
Transaction Source	Used to search transaction feeds received from a particular transaction source. **Note:** This field appears when you select the **Transaction Level Details** option from the **Search By** field.	No
Transaction ID	Used to search for a particular transaction feed. **Note:** This field appears when you select the **Transaction Level Details** option from the **Search By** field.	No
Transaction Date From	Used to search transaction feeds for transactions which are performed on or later than the specified date. **Note:** This field appears when you select the **Transaction Level Details** option from the **Search By** field.	Yes (Conditional) **Note:** This field is required while searching for transactions which are in the **Error** status.
External Reference Number	Used to search transaction feed with a particular external reference number. **Note:** This field appears when you select the **Transaction Level Details** option from the **Search By** field.	No
Transaction Date To	Used to search transaction feeds for transactions which are performed on or earlier than the specified date.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Transaction Level Details** option from the **Search By** field. If you do not specify the date in the **Transaction Date To** field, the system by default sets it to the system date.	
Transaction Status	Used to search transaction feeds for transactions which are in a particular status. The valid values are: • Cancelled • Completed • Error • Ignored • Initial Product Derived • Invalid • Uploaded **Note:** This field appears when you select the **Transaction Level Details** option from the **Search By** field.	No
Division	Used to search transaction feeds that belong to a particular division. **Note:** This field appears when you select the **Transaction Level Details** option from the **Search By** field. You can view only those divisions to which you have access in the **Division** list.	No
Error Code/Message	Used to search transaction feeds for transactions which are in the **Error** status and with a particular error message or error code. **Note:** This field appears when you select the **Transaction Level Details** option from the **Search By** field.	No
Error Category	Used to search transaction feeds for transactions which are in the **Error** status and which belong to a particular error category.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Transaction Level Details** option from the **Search By** field.	

Note: You must specify at least one search criterion while searching for a transaction feed.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the file from where the transaction feed is uploaded.
Transaction Source	Displays the transaction source from where the transaction feed is received.
Transaction Header ID	Displays the transaction header ID. **Note:** The transaction header ID is generated automatically when the file is uploaded.
Transaction Header External ID	Displays the ID mentioned in the file header.
Feed Header Date	Displays the date mentioned in the file header.
Feed Load Date	Displays the date when the transaction feed was uploaded in the system.
Feed Status	Displays the status of the transaction feed. The valid values are: • **Uploaded** - Indicates that the transaction feed is uploaded. • **Validated** - Indicates that the file header is validated. • **Cancelled** - Indicates that the transaction feed is cancelled. • **Invalid** - Indicates that the file header validation failed.
Error Message	Indicates the reason why the file header validation failed.
Total Volume	Displays the total transaction volume of the feed.
Total Amount	Displays the total amount of the transaction feeds.
Uploaded	Displays the total transactions which are uploaded in the system.
Price Item	Displays the total transactions which are validated and for which price items are determined in the system.
Completed	Displays the total transactions for which the billable charges are created and completed in the system.
Error Message	Displays the total transactions which could not pass through the validation, price item determination, or billable charge creation process.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: If a transaction has only one transaction leg, the error message is displayed from the **CI_TXN_DETAIL_EXCP** table instead of the **CI_TXN_DETAIL** table. The objective is that the user should be able to view the transaction leg level error instead of the transaction level error.
Cancelled	Displays the total transactions which are cancelled in the system.
Ignored	Displays the total transactions which are ignored in the system.
Invalid	Displays the total transactions which are invalid.
Transactions Archived	Displays the total transaction volume which is archived in the system.
Transaction ID	Displays the transaction record number for which the transaction information is saved in the system. **Note:** This column appears when you select the **Transaction Level Details** option from the **Search By** field.
External Reference Number	Displays the external reference number of the transaction. **Note:** This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Division	Indicates the division to which the transaction belongs. **Note:** This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Transaction Record Type	Displays the record type of the transaction. **Note:** This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Transaction Date	Displays the date when the transaction is performed. **Note:** This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Processing Date	Displays the date when the transaction is processed in the system. **Note:** This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Account Information	Displays the concatenated string of information about the account for which the transaction is performed separated by a comma (,).

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Account Identifier Type	Indicates the identifier type based on which the transaction is created for the account.
	Note: This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Primary Account Identifier	Indicates the account for which the transaction is performed.
	Note: This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Transaction Volume	Displays the total transaction volume of the account.
	Note: This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Transaction Amount	Displays the total transaction amount of the account.
	Note: This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.
	Note: This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Customer Reference Number	Indicates the customer who has performed the transaction.
	Note: This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Transaction Status	Indicates the status of the transaction.
	Note: This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Rule	Indicates the rule which was met while determining the initial price item for the transaction.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Rule** window appears where you can view the details of the rule that was applied while determining the initial price item for the transaction. This column appears when you select the **Transaction Level Details** option from the **Search By** field.
Transaction Information	Displays the concatenated string of information about the transaction separated by a comma (,).
	Note: It has a link. On clicking the link, the **Transaction Detail View** window appears where you can view the details of the respective transaction. This column appears when you select the **Transaction Level Details** option from the **Search By** field.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (ᯤ) icon corresponding to the transaction feed in the **Search Results** section, the **Division Level Information** zone or the **Transaction Leg Information** zone appears depending on whether you select the **Feed Level Details** or the **Transaction Level Details** option from the **Search By** field respectively.

Division Level Information

The **Division Level Information** zone allows you to drill down and view the transaction volume details of a feed at the division level. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used when you want to view the transaction volume details of a particular division received through the feed. **Note:** You can only view those divisions to which you have access in the **Division** list.	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Division	Indicates the division.
Total Volume	Displays the total transaction volume of the division.
Uploaded Volume	Displays the total transaction volume (of the division) which is uploaded in the system.
Price Item Determined	Displays the total transaction volume (of the division) which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume (of the division) for which billable charges are created and completed in the system.
Error Volume	Displays the total transaction volume (of the division) which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume (of the division) which is cancelled in the system.
Ignored Volume	Displays the total transaction volume (of the division) which is ignored in the system.
Invalid Volume	Displays the total transaction volume (of the division) which is invalid.

By default, the **Division Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears when you select the **Feed Level Details** option from the **Search By** field and click the **Broadcast** (📡) icon corresponding to the transaction feed in the **Search Results** section of the **Search** zone.

Transaction Level Information

The **Transaction Level Information** zone lists the transactions in a feed which belong to a particular division. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
External Reference Number	Displays the external reference number of the transaction.
Division	Indicates the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Account Information	Displays the account for which the transaction is performed.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account** screens appears where you can view the details of the respective account.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction is performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.
Customer Reference Number	Indicates the customer who performed the transaction.
Transaction Status	Indicates the status of the transaction.
Error Message	Indicates the reason why the validation, price item determination, or billable charge creation process failed.
Rule	Indicates the rule which was met while determining initial price item for the transaction. **Note:** It has a link. On clicking the link, the **Rule** screen appears where you can view the details of the respective rule.
Transaction Information	Displays additional information about the transaction. **Note:** It has a link. On clicking the link, the **Transaction Details** screen appears where you can view the details of the respective transaction.

By default, the **Transaction Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast** (ᯤ) icon corresponding to a division in the **Division Level Information** zone.

On clicking the **Broadcast** (ᯤ) icon corresponding to a transaction, the **Transaction Leg Information** zone appears where you can view a list of transaction legs of a particular transaction.

You can filter the list using various search criteria (such as, **External Reference Number**, **Primary Account Identifier**, **Account Identifier Type**, **Transaction Source**, **Transaction Record Type**, and **Transaction Status**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon available in the upper right corner of this zone.

Transaction Leg Information

The **Transaction Leg Information** zone lists the legs of a transaction. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Transaction ID	Indicates the transaction to which the transaction leg belongs.
Display Sequence	Displays the sequence number of transaction leg.
Account Identifier Type	Indicates the type of account identifier to which the transaction is mapped.
Primary Account Identifier	Indicates the account which will bear the charges for the transaction.
Error Message	Indicates the reason why the validation, price item determination, or billable charge creation process failed.
Price Item	Indicates the price item to which the transaction is mapped. **Note:** It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Billable Charge ID	Indicates the billable charge which is created for the transaction leg. **Note:** The data appears in this column when the billable charge is created for the transaction leg. It has a link. On clicking the link, the **Billable Charge** screen appears where you can view the details of the billable charge.
Transaction Calculation ID	Displays the transaction calculation ID. **Note:** The data appears in this column when the transaction leg is rated before billing.
Initial Price Item Code	Indicates the initial price item to which the transaction was mapped.
Bill ID	Indicates the bill in which the transaction leg of the billable charge is included for billing.
Bill Segment ID	Indicates the bill segment to which the bill belongs.
Variance	Indicates the variance parameter which is used along with the price item for determining price item pricing. **Note:** This column appears when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **False**.
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing. **Note:** This column appears when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Transaction Leg Calculation Lines

During the pass through charge calculation, a calculation line is created for each rate component. The **Transaction Leg Calculation Lines** zone lists the calculation lines created for a transaction leg. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line is created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate Information	Displays the rate which is used for calculation.
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off. This amount appears in the invoice currency.
Description on Bill	Displays the summarized information about the calculation line that will be printed on the bill.
Precise Calculated Amount	Displays the calculated charge amount. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line is then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: • Y • N
Distribution Code	Indicates the distribution code associated with the rate component.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Feed Management Dashboard** screen. It appears when you click the **Broadcast** (ᯤ) icon corresponding to a transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Searching for a Transaction Feed

Procedure

To search for a transaction feed:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Feed Management Dashboard**.
   The **Feed Management Dashboard** screen appears.
3. Enter the search criteria in the **Search** zone.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of transaction feeds that meet the search criteria appears in the **Search Results** section.

Viewing Division Level Details of a Transaction Feed

Procedure

To view the division level details of a transaction feed:

1. Ensure that the **Feed Level Details** option is selected from the **Search By** field in the **Search** zone of the **Feed Management Dashboard** screen for viewing the division level details of a transaction feed.
2. Click **Search**.
   The search results appear based on the specified search criteria.
3. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction feed whose *d*ivision level details you want to view.
   The **Division Level Information** zone appears.
4. View the transaction volume details of each division in the **Division Level Information** zone.

Viewing Transactions that Belong to a Division

Procedure

To view the transactions that belong to a division:

1. Ensure that the **Feed Level Details** option is selected from the **Search By** field in the **Search** zone of the **Feed Management Dashboard** screen for viewing the transactions that belong to a division.
2. Click **Search**.
   The search results appear based on the specified search criteria.
3. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction feed whose *d*etails you want to view.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Division Level Information** zone appears.

4. Click the **Broadcast** (ᯤ) icon corresponding to the division whose transaction details you want to view.
   The **Transaction Level Information** zone appears.
5. View the list of the transactions that belong to the division in the **Transaction Level Information** zone.

Viewing the SQIs Calculated for a Transaction Leg

Copyright © 2009, 2025, Oracle and/or its affiliates.

Procedure

To view the SQIs calculated for a transaction leg:

1. Ensure that the **Transaction Leg Information** zone is expanded in the **Feed Management Dashboard** screen.
2. Click the **Broadcast** (ᯤ) icon corresponding to the transaction leg (which is rated before billing) whose SQIs *y*ou want to view.
   The **Transaction Leg Service Quantity**, **Transaction Leg Calculation Lines**, and **Transaction Leg Calc Line Characteristics** zones appear.
3. View the SQIs calculated for the transaction leg in the **Transaction Leg Service Quantity** zone.

Viewing the Calculation Lines of a Transaction Leg

Procedure

To view the calculation lines of a transaction leg:

1. Ensure that the **Transaction Leg Information** zone is expanded in the **Feed Management Dashboard** screen.
2. Click the **Broadcast** (ᯤ) icon corresponding to the transaction leg (which is rated before billing) whose *c*alculation lines you want to view.
   The **Transaction Leg Service Quantity**, **Transaction Leg Calculation Lines**, and **Transaction Leg Calc Line Characteristics** zones appear.
3. View the list of calculation lines generated for the transaction leg in the **Transaction Leg Calculation Lines** zone.

Transaction Details

The **Transaction Details** screen allows you to search for a transaction using various search criteria. It also allows you to add and copy an existing transaction. It contains the following zones:

- Search on page 1002
- Transaction Legs on page 1005
- Transaction Error Messages on page 1008

Copyright © 2009, 2025, Oracle and/or its affiliates.

Search

The **Search** zone allows you to search for a transaction using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search transactions based on their current status. The valid values are: • **Uploaded** - Used to search transactions which are uploaded in the system. • **Initial Price Item Determined** - Used to search transactions for which a price item is determined. • **Ignored** - Used to search transactions which are ignored in the system. • **Error** - Used to search transactions with an error. • **Cancelled** - Used to search for transactions which are cancelled. • **Completed** - Used to search for transactions whose billable charge is completed. • **Invalid** - Used to search for invalid transactions. **Note:** By default the **Uploaded** option is selected.	Yes (Conditional) **Note:** This field is required for searching transactions which are in a particular status.
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division. **Note:** You can only view those divisions to which you have access in the **Division** list.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	Yes (Conditional) **Note:** If you enter the primary account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used to search transactions which are performed for a particular account.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: If you select the account identifier type as a search criteria, you have to enter the primary account identifier.
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed. **Note:** This field appears when you select the **Uploaded**, **Ignored**, **Error**, **Cancelled**, or **Invalid** options from the **Search By** field.	No
Price Item	Used to search transactions which are mapped to a particular price item. **Note:** This field appears when you select the **Initial Price Item Determined** option from the **Search By** field.	No
Billable Charge ID	Used to search transactions which are included in a particular billable charge. **Note:** This field appears when you select the **Completed** option from the **Search By** field.	No
Disaggregated	Used to indicate whether you want to search transactions which are disaggregated. The valid values are: • Yes • No	No

Note: You must specify at least one search criterion while searching for a transaction.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. **Note:** It has a link. On clicking the link, the **Transaction Detail View** screen appears where you can view the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction is received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction is uploaded in the system.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column appears when you select the **Uploaded**, **Initial Price Item Determined**, **Ignored**, **Error**, **Cancelled**, or **Invalid** options from the **Search By** list.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system. **Note:** This column appears when you select the **Uploaded**, **Ignored**, **Cancelled**, or **Invalid** options from the **Search By** list.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Displays the reference number of the customer for the particular transaction. **Note:** This column appears when you select the **Error** option from the **Search By** field.
Disaggregation Status	Indicates whether the transaction was disaggregated or not. The valid values are: • Yes • No
Manual Entry	Indicates whether the transaction is manually added in the system. The valid values are: • Yes • No **Note:** This column appears when you select the **Uploaded** or **Cancelled** options from the **Search By** list.
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Error Message	Displays the reason why the validation, price item determination, or billable charge creation process failed. **Note:** This column appears when you select the **Error**, or **Invalid** options from the **Search By** list.
Account Information	Displays the concatenated string of information about the account for which the transaction is performed separated by a comma (,). The string includes the account identifier type and account identifier.
Rule	Indicates the rule which was met while determining initial price item for the transaction.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Rule** screen appears where you can view the details of the respective rule. This column appears when you select the **Initial Price Item Determined**, **Ignored**, **Error**, or **Completed** options from the **Search By** list.
Transaction Information	Displays additional information about the transaction.
	Note: It has a link. On clicking the link, the **Transaction Detail View** screen appears where you can view the details of the respective transaction.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (ᯤ) icon corresponding to a transaction in the **Search Results** section, the **Transaction Legs** or the **Transaction Error Messages** zone appears based on the status of the transaction.

Note: The **Broadcast** (ᯤ) icon does not appear for transactions which are in the **Cancelled** status.

Transaction Legs

The **Transaction Legs** zone allows you to view the legs of a transaction. It contains the following columns:

Column Name	Column Description
Transaction ID	Indicates the transaction to which the transaction leg belongs.
Transaction Leg Status	Indicates the status of the transaction leg. The valid values are: • Uploaded • Initial Price Item Derived • Ignored • Error • Cancelled • Completed • Invalid

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column appears only when you select the **Initial Price Item Determined**, **Ignored**, or **Completed** options from the **Search By** list.
Initial Price Item Code	Indicates the initial price item to which the transaction is mapped. **Note:** This column appears only when you select the **Initial Price Item Determined**, **Ignored**, or **Completed** options from the **Search By** list.
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the final price item for determining price item pricing. **Note:** This column appears only when you select the **Initial Price Item Determined**, **Ignored**, or **Completed** options from the **Search By** list and when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**.
Final Price Item Code	Indicates the final price item to which the transaction is mapped. **Note:** This column appears only when you select the **Initial Price Item Determined**, **Ignored**, or **Completed** options from the **Search By** list.
Pricing Rule Information	**Note:** This column appears only when you select the **Initial Price Item Determined** option from the **Search By** list and when the transaction is uploaded for the health care domain.
Price Assignment ID	Indicates the effective pricing which is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or variance parameter or price item parameters (parameter group) combination on the processing date. **Note:** This column appears only when you select the **Initial Price Item Determined**, **Ignored**, or **Completed** options from the **Search By** list.
Aggregate Transaction	Indicates whether the transaction leg is aggregated. The valid values are: • Yes • No **Note:** This column appears only when you select the **Initial Price Item Determined**, **Ignored**, or **Completed** options from the **Search By** list.
Billable Charge ID	Indicates the billable charge in which the transaction leg is included for billing.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column appears only when you select the **Initial Price Item Determined**, **Ignored**, or **Completed** options from the **Search By** list.
Transaction Source	Displays the transaction source from where the transaction is received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction is uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Displays the reference number using which the error message is created for the transaction performed by particular customer. **Note:** This column appears only when you select the **Error** option from the **Search By** list.
Disaggregation Status	Indicates whether the transaction is disaggregated or not. The valid values are: • Yes • No
Transaction Date	Displays the date when the transaction is performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the total transaction volume.
Division	Indicates the division to which the derived account belongs. The derived account means the account which will bear the charges for the transaction.
Sequence	Displays the sequence number of the transaction leg. **Note:** This column appears only when you select the **Initial Price Item Determined**, **Ignored**, or **Completed** options from the **Search By** list.
Error Message	Indicates the reason why the price item pricing verification or billable charge creation process failed. **Note:** This column appears only when you select the **Initial Price Item Determined**, **Ignored**, **Error**, or **Completed** options from the **Search By** list.
Account Information	Displays the concatenated string of information about the account which bears the charges for the transaction separated by a comma (,). The string includes the account identifier type, account identifier, and division (to which the derived account belongs). **Note:** This column appears only when you select the **Initial Price Item Determined**, **Ignored**, **Error**, or **Completed** options from the **Search By** list.
Rule	Indicates the rule which was met while determining the initial price item for the transaction.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Rule** screen appears where you can view the details of the respective rule. This column appears only when you select the **Ignored**, **Error**, or **Completed** options from the **Search By** list and when the transaction is uploaded for the financial services domain.
Transaction Information	Displays the concatenated string of information about the transaction separated by a comma (,). **Note:** It has a link. On clicking the link, the **Transaction Detail View** screen appears where you can view the details of the respective transaction.

Note:

The **Transaction Legs** zone does not appear for transactions which are in the **Uploaded**, **Cancelled**, or **Invalid** status.

However, the **Transaction Legs** zone appears for transactions which are in the **Uploaded** status and partially disaggregated.

Transaction Error Messages

The **Transaction Error Messages** zone allows you to view the reason why the transaction is in the **Error** or **Invalid** status. It contains the following column:

Column Name	Column Description
Error Message	Displays the reason why the transaction is in the **Error** or **Invalid** status.

Note: The **Transaction Error Messages** zone appears for transactions which are in the **Invalid** status only when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

Searching for a Transaction

Procedure

To search for a transaction:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Details**.
   The **Transaction Details** screen appears.
3. Enter the search criteria in the **Search** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

   A list of transactions that meet the search criteria appears in the **Search Results** section.

Viewing the Transaction Legs

Procedure

To view the legs of a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the transaction whose legs you want to view.

   The **Transaction Legs** zone appears.

> **Note:**
>
> The **Broadcast** (📡) icon appears corresponding to a transaction which is in the **Uploaded**, **Initial Price Item Determined**, **Ignored**, **Error**, and **Completed** status. This is because you can only view legs of an uploaded, initial price item determined, ignored, error, or completed transaction
>
> You can only view the legs of an uploaded transaction which is partially disaggregated.

3. View the details of the transaction legs in the **Transaction Legs** zone.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Viewing Error Messages

Procedure

To view the error messages logged for a transaction:

1. Search for the transaction which is in the **Invalid** or **Error** status in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast** () icon corresponding to the transaction whose error *m*essages you want to view.
   The **Transaction Error Messages** zone appears.
3. View the error messages in the **Transaction Error Messages** zone.

> **Note:** The **Transaction Error Messages** zone appears for transactions which are in the **Invalid (INVL)** status only when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

Adding a Transaction

Prerequisites

To add a transaction manually, you should have:

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To add a transaction manually:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Details**.
   The **Transaction Details** screen appears.
3. Click the **Add** button in the upper right corner of the **Transaction Details** screen.

   The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction is received.	Yes
Division	Used to specify the division to which the transaction belongs. **Note:** You can only view those divisions to which you have access in the **Division** list.	Yes
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction is performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Customer Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional) **Note:** If you enter the account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used to indicate the account for which the transaction is performed.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction is performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional)
	Note: These fields appear when you select the transaction source and record type from the respective list.	**Note:** This field is required when you are specifying the currency in the corresponding field.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional)
	Note: These fields appear when you select the transaction source and record type from the respective list.	**Note:** This field is required when you are specifying the amount in the corresponding field.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	**Note:** These fields appear when you select the transaction source and record type from the respective list.	
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ..., Additional Numeric Data 20	Used to specify additional information about the transaction.	No
	Note: These fields appear when you select the transaction source and record type from the respective list.	

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50 **Note:** If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Used to specify additional information about the transaction. **Note:** These fields appear when you select the transaction source and record type from the respective list.	No

4. Enter the required details in the **Transaction Details** screen.
5. Click **Save**.

   The transaction is added in the system.

Note:

If the following option types are set in the **Dummy Header (C1-TXNDMYID)** feature configuration, the header details including the header ID are generated automatically for the manually added transaction:

- Dummy File Name
- Dummy Header ID
- Dummy Transaction Source
- Dummy Header Date

The header ID remains same for all transactions which are manually created on a particular date. You can cancel manually added transactions using the Transaction Header ID.

Copying a Transaction

Instead of creating a manual transaction from scratch, you can create a manual transaction using an existing transaction. This is possible through copying a transaction. On copying a transaction, the details including the division, account identifier type, primary account identifier, transaction source, transaction record type, external reference number, and customer reference number are also copied to the new transaction. You can then edit the details, if required.

Prerequisites

To copy a transaction, you should have:

- Transaction (whose copy you want to create) available in the application

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To copy a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** or the **Transaction Information** column corresponding to the transaction whose copy you want to create.

   The **Transaction Details** screen appears.

   Note: The fields are in the read-only mode.

3. Click the **Copy** button available in the lower right corner of this screen.

   The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction is received.	Yes
Division	Used to specify the division to which the transaction belongs. **Note:** You can only view those divisions to which you have access in the **Division** list.	Yes
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction is performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Customer Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional) **Note:** If you enter the account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used to indicate the account for which the transaction is performed.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction is performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10 **Note:** If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Used to specify additional information about the transaction. **Note:** These fields appear when you select the transaction source and record type from the respective list.	Yes (Conditional) **Note:** This field is required when you are specifying the currency in the corresponding field.
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code **Note:** If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Used to specify additional information about the transaction. **Note:** These fields appear when you select the transaction source and record type from the respective list.	Yes (Conditional) **Note:** This field is required when you are specifying the amount in the corresponding field.
Additional Date 1, Additional Date 2, ..., Additional Date 5 **Note:** If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Used to specify additional information about the transaction. **Note:** These fields appear when you select the transaction source and record type from the respective list.	No
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ..., Additional Numeric Data 20	Used to specify additional information about the transaction. **Note:** These fields appear when you select the transaction source and record type from the respective list.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50 **Note:** If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Used to specify additional information about the transaction. **Note:** These fields appear when you select the transaction source and record type from the respective list.	No

4. Enter the required details in the **Transaction Details** screen.
5. Click **Save**.
   The new transaction is added in the system.

Transaction Source

The **Transaction Source** screen allows you to define, edit, delete, and copy a transaction source. It contains the following zone:

- Search Transaction Source on page 1016

Search Transaction Source

The **Search Transaction Source** zone allows you to search for a transaction source using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search for a particular transaction source.	No
Description	Used to search transaction sources having a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Transaction Source	Displays the transaction source.
Description	Displays the description of the transaction source.
Account Identifier Type	Indicates the type of account identifier that will be received from the transaction source.
Edit	On clicking the **Edit** (✎) icon, the **Transaction Source** screen appears where you can edit the details of the existing transaction source.
Delete	On clicking the **Delete** (🗑) icon, you can delete the transaction source. **Note:** You can delete a transaction source only when it is not yet used in the system.
Copy	On clicking the **Copy** (⧉) icon, the **Transaction Source** screen appears where you can define a new transaction source using an existing transaction source.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon available in the upper right corner of this zone.

Searching for a Transaction Source

Procedure

To search for a transaction source:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.
   The **Transaction Source** screen appears.
3. Enter the search criteria in the **Search Transaction Source** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of transaction sources that meet the search criteria appears in the **Search Results** section.

Defining a Transaction Source

Prerequisites

To define a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To define a transaction source:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Source**.
   The **Transaction Source** screen appears.
3. Click the **Add** button in the upper right corner of the **Transaction Source** screen.

   The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source. **Note:** You cannot specify any special character except underscore (_) in the **Transaction Source** field.	Yes
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

4. Enter the required details in the **Transaction Source** screen.
5. Click **Save**.
   The transaction source is defined.

Editing a Transaction Source

Prerequisites

To edit a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To edit a transaction source:

Copyright © 2009, 2025, Oracle and/or its affiliates.

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the transaction source whose details you want to edit.

   The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Displays the transaction source.	Not applicable
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

3. Modify the required details in the **Transaction Source** screen.
4. Click **Save**.
   The changes made to the transaction source are saved.

Copying a Transaction Source

Instead of creating a transaction source from scratch, you can create a new transaction source using an existing transaction source. This is possible through copying a transaction source. On copying a transaction source, the details including the description and account identifier type are also copied to the new transaction source. You can then edit the details, if required.

Prerequisites

To copy a transaction source, you should have:

- Transaction source (whose copy you want to create) defined in the application
- Account identifier types defined in the application

Procedure

To copy a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Copy** (⧉) icon in the **Copy** column corresponding to the transaction source whose copy you want to create.

   The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify any special character except underscore (_) in the **Transaction Source** field.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

3. Enter the required details in the **Transaction Source** screen.
4. Click **Save**.
   The new transaction source is defined.

Deleting a Transaction Source

Procedure

To delete a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the transaction source that you want to delete.
   A message appears confirming whether you want to delete the transaction source.
3. Click **OK**.
   The transaction source is deleted.

Note: You can delete a transaction source only when it is not yet used in the system.

How to search for a transaction source	Searching for a Transaction Source on page 1017

Transaction Record Type

The **Transaction Record Type** screen allows you to define, edit, delete, and copy a transaction record type. While defining a transaction record type, you need to define a rule type. This rule type is invoked for transactions with the transaction source and record type combination. While defining a rule type, you can select the transaction detail fields that you want to use as input or output parameters in a rule.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Besides using the transaction detail fields, the system allows you to use fields which are not part of the standard transaction details. These fields are referred to as temporary fields and are defined similar to other fields, but are not associated with any ORMB tables. You need to associate temporary fields with the rule type while defining a transaction record type. Once associated, you can use the temporary field as input or output parameter while defining a rule using the rule type.

Note: At present, you can only associate a temporary field with a rule type, but cannot use the temporary field in a rule which is created using the rule type. The latter part of the functionality will be available in a future release of Oracle Revenue Management and Billing.

The **Transaction Record Type** screen consists of the following zones:

- Search Transaction Record Type on page 1021

Search Transaction Record Type

The **Search Transaction Record Type** zone allows you to search for a transaction record type. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search transaction record types defined for a particular transaction source.	No
Transaction Record Type	Used to search a particular transaction record type.	No
Description	Used to search transaction record types with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Record Type	Displays the transaction record type.
Description	Displays the description of the transaction record type.
Transaction Source	Indicates the transaction source for which the transaction record type is defined.
Rule Type	Indicates the rule type that is invoked for the transaction record type. **Note:** It has a link. On clicking the link, the **View Rule Type** screen appears where you can view the details of the respective rule type.
Edit	On clicking the **Edit** (✎) icon, the **Transaction Record Type** screen appears where you can edit the details of the transaction record type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the transaction record type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: You can delete a transaction record type when: • It is not yet used. • Rules are not yet defined using the rule type which is invoked by the transaction source and record type combination.
Copy	On clicking the **Copy** (⧉) icon, the **Transaction Record Type** screen appears where you can create a new transaction record type using an existing transaction record type.

You can create a new transaction record type by clicking the **Add** link in the upper right corner of this zone.

Defining a Transaction Record Type

Prerequisites

To define a transaction record type, you should have:

- Transaction sources defined in the application
- Validation algorithm defined using the **C1-RULE-VAL** algorithm type
- Transaction Information String algorithm defined using the **C1-TXDETINFO** algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To define a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.
   The **Transaction Record Type** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Transaction Record Type** zone.

   The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Search Transaction Source** window appears.	Yes
Transaction Record Type	Used to specify the transaction record type. **Note:** You cannot specify any special character except underscore (_) in the transaction record type.	Yes
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type. **Note:** You cannot specify any special character except underscore (_) in the rule type.	Yes
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This algorithm checks whether: • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	
Info String Algorithm	Used to specify the algorithm that will generate the information string which appears in the **Transaction Information** column throughout the application. **Note:** This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	No
Maximum Accounts to be charged	Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are: • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 **Note:** At present, the system supports maximum 10 accounts which can bear the charges for a transaction.	Yes
Maximum Price Items to be mapped	Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are: • 01 • 02 • 03 • 04 • 05 • 06 • 07	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• 08 • 09 • 10 **Note:** At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.	
Maximum Price Item Parameters	Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are: • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 **Note:** At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.	Yes

In addition, this screen contains the following two sections:

- **Input/Output Parameters** - Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	Used to specify a business label for the user defined fields.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The business label appears when you add, copy, or view a transaction in the **Transaction Details** screen. The label changes depending on the transaction source and record type combination that you have selected.	

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule - Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Temporary Fields** - Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Transaction Record Type Tempo Field Search** window appears.	No

4. Enter the required details.

Note: You can search for a transaction source and algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

5. Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
6. If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** *s*ection.

Note:

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon *a*nd then repeat step 7. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑) icon corresponding to the temporary field.

7. Click **Save**.
   The transaction record type is defined.

- **Temporary Fields** - Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Transaction Record Type Tempo Field Search** window appears.	No

3. Modify the required details.

Note:

You can search for an algorithm and field by clicking the **Search** (🔍) icon corresponding to the respective field.

You can edit and remove an input or output parameter from a rule type when it is not yet used in a rule (which is created using the rule type).

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon *a*nd then specify the details in the **Temporary Fields** section. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑) icon corresponding to the temporary field.

4. Click **Save**.
   The changes made to the transaction record type are saved.

Deleting a Transaction Record Type

Procedure

To delete a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the transaction *r*ecord type that you want to delete.
   A message appears confirming whether you want to delete the transaction record type.
3. Click **OK**.
   The transaction record type is deleted.

Note: You can delete a transaction record type only when it is not yet used in the system.

How to search for a transaction record type	Searching for a Transaction Record Type on page 1022

Copying a Transaction Record Type

Instead of creating a transaction record type from scratch, you can create a new transaction record type using an existing transaction record type. This is possible through copying a transaction record type. On copying of a transaction record type, the details including the input or output parameters and temporary fields are also copied to the new transaction record type. You can then edit the details, if required.

Prerequisites

To copy a transaction record type, you should have:

- Transaction record type (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1-RULE-VAL** algorithm type
- Transaction Information String algorithm defined using the **C1-TXDETINFO** algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To copy a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Copy** (⧉) icon in the **Copy** column corresponding to the transaction *r*ecord type whose copy you want to create.

   The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Search Transaction Source** window appears where you can search for the required transaction source.	Yes
Transaction Record Type	Used to specify the transaction record type. **Note:** You cannot specify any special character except underscore (_) in the transaction record type.	Yes
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type. **Note:** This algorithm checks whether: • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears where you can search for the required algorithm.	No
Info String Algorithm	Used to specify the algorithm that will generate the information string which appears in the **Transaction Information** column throughout the application. **Note:** This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears where you can search for the required algorithm.	No
Maximum Accounts to be charged	Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are: • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 **Note:** At present, the system supports maximum 10 accounts which can bear the charges for a transaction.	Yes
Maximum Price Items to be mapped	Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 **Note:** At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.	
Maximum Price Item Parameters	Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are: • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 **Note:** At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.	Yes

In addition, this screen contains the following two sections:

- **Input/Output Parameters** - Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	Used to specify a business label for the user defined fields.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The business label appears when you add, copy, or view a transaction in the **Transaction Details** screen. The label changes depending on the transaction source and record type combination that you have selected.	

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule - Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Temporary Fields** - Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Transaction Record Type Tempo Field Search** window appears.	No

3. Enter the required details.

Note: You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

4. Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
5. If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** *s*ection.

Note:

You can search for a field by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add** (+) icon *a*nd then repeat step 5. However, if you want to remove a temporary field from the transaction record type, click the **Delete** (🗑) icon corresponding to the temporary field.

6. Click **Save**.
   The new transaction record type is defined.

Transaction Aggregation Rule

The **Transaction Aggregation Rule** screen allows you to define transaction aggregation rule for an SQI. You can also edit and delete the transaction aggregation rule of an SQI. This screen consists of the following zones:

- Transaction Aggregation Rules on page 1038

Transaction Aggregation Rules

The **Transaction Aggregation Rules** zone lists transaction aggregation rules that are already defined in the system. You can define, edit, and delete a transaction aggregation rule through this zone.

This zone contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
SQI Description	Displays the description of the service quantity identifier (SQI).
Aggregation Function	Indicates the formula used in the transaction aggregation rule defined for the SQI.
Function	Indicates the function used for aggregation.
Transaction Parameter	Indicates the transaction parameter used for aggregation.
Edit	On clicking the **Edit** (✎) icon, the **Transaction Aggregation Rule** screen appears where you can edit the aggregation rule.
Delete	On clicking the **Delete** (🗑) icon, you can delete the transaction aggregation rule.

You can define transaction aggregation rule for an SQI by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4254.

Defining Transaction Aggregation Rule for an SQI

Prerequisites

To define transaction aggregation rule for an SQI, you should have:

- SQI defined in the application

Procedure

To define transaction aggregation rule for an SQI:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
   The **Transaction Aggregation Rule** screen appears.
3. Click the **Add** link in the upper right corner of the **Transaction Aggregation Rules** zone.

   The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI for which you want to define the transaction aggregation rule.	Yes
Function	Used to indicate the function that you want to use for aggregation. The valid values are: • SUM() • MIN()	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• MAX() • COUNT()	
Transaction Parameter	Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: • TXN_AMT • TXN_VOL • UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 • UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20	Yes

4. Enter the required details.
5. Click **Save**.
   The transaction aggregation rule is defined for the SQI.

Schedule

The **Schedule** screen allows you to view, define, edit, and delete a schedule. It contains the following zone:

- Search Schedule on page 1042

Copyright © 2009, 2025, Oracle and/or its affiliates.

Search Schedule

The **Search Schedule** zone allows you to search for a schedule using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to search for a particular schedule.	No
Description	Used to search schedules with a particular description	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Aggregation Schedule	Displays the schedule.
Description	Displays the description of the schedule.
View	On clicking the **View** (🔗) icon, the **View Schedule UI Map** screen appears where you can view the details of the schedule.
Edit	On clicking the **Edit** (🔗) icon, the **Edit Schedule** screen appears where you can edit the details of the schedule.
Delete	On clicking the **Delete** (🗑) icon, you can delete the schedule. **Note:** You can delete a schedule only when it is not yet used in the system.

By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon available in the upper right corner of this zone.

Searching for a Schedule

Procedure

To search for a schedule:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Schedule** screen appears.

3. Enter the search criteria in the **Search Schedule** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of schedules that meet the search criteria appears in the **Search Results** section.

Defining a Schedule

Prerequisites

To define a schedule, you should have:

- Schedule types defined in the application.

Procedure

To define a schedule:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.
   The **Schedule** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Schedule** zone.

   The **Add/Edit Schedule UI Map** screen appears. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to specify the schedule code.	Yes
Description	Used to specify the description for the schedule.	Yes

In addition, the **Add/Edit Schedule UI Map** screen contains the following two sections:

- **Schedule Periods** - Used to specify schedule periods for the schedule. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the start date of the schedule period. **Note:** The start date cannot be later than the end date.	Yes
End Date	Used to specify the end date of the schedule period. **Note:** The end date cannot be earlier than the start date.	Yes

Note: At least one schedule period must be defined for the schedule. Also, ensure that the schedule periods do not have overlapping days.

- **Schedule Types** - Used to associate schedule types with the schedule. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Type	Used to indicate the functionality where you want to use the schedule. **Note:** You can associate multiple schedule types with a schedule.	Yes

4. Enter the required details in the **Add/Edit Schedule UI Map** screen.
5. If you want to define more than one schedule period for the schedule, click the **Add** (+) icon corresponding to the schedule period and then specify the *d*etails.

Note: However, if you want to remove a schedule period from the schedule, click the **Delete** (🗑) icon corresponding to the schedule period.

6. Similarly, If you want to associate more than one schedule type with the schedule, click the **Add** (+) icon corresponding to the schedule type and then specify the *d*etails.

Note: However, if you want to remove a schedule type from the schedule, click the **Delete** (🗑) icon corresponding to the schedule type.

7. Click **Save**.
   The schedule is defined.

Editing a Schedule

Prerequisites

To edit a schedule, you should have:

- Schedules (which you want to edit) defined in the application
- Schedule types defined in the application.

Procedure

To edit a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the schedule whose details you want to edit.

   The **Add/Edit Schedule UI Map** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Displays the schedule code.	Not applicable
Description	Used to specify the description for the schedule.	Yes

   In addition, this screen contains the following two sections:

   - **Schedule Periods** - Used to add, edit, or delete the schedule periods from the schedule. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the start date of the schedule period. **Note:** The start date cannot be later than the end date.	Yes
End Date	Used to specify the end date of the schedule period. **Note:** The end date cannot be earlier than the start date.	Yes

   - **Schedule Types** - Used to associate or disassociate schedule types from the schedule. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Type	Used to indicate the functionality where you want to use the schedule.	Yes

3. Modify the required details in the **Add/Edit Schedule UI Map** screen.
4. Click **Save**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The changes made to the schedule are saved.

How to search for a schedule	Searching for a Schedule on page 1042

Deleting a Schedule

Procedure

To delete a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the schedule that you want to delete.
   A message appears confirming whether you want to delete the schedule.

   Note: You can delete a schedule only when it is not yet used in the system.
3. Click **OK**.
   The schedule is deleted.

Disaggregation Request

Oracle Revenue Management and Billing allows you to create disaggregation request of a person, account, price item, price assignment, billable charge, and parent accumulation group. You can create disaggregation request through either of the following:

- Disaggregation Request from User Interface
- Disaggregation Request through the C1-DISTG Batch
- Disaggregation Request through Audit Event

Disaggregation Request from User Interface

Oracle Revenue Management and Billing enables you to manually create a disaggregation request for an account from the user interface in various ways. For more information, refer to Disaggregation Request on page 1048.

Disaggregation Request through the C1-DISTG Batch

Oracle Revenue Management and Billing enables you to manually create a disaggregation request for an account through the **Disaggregation Request Creation (C1-DISTG)** batch. For more information about the batch, refer to *Oracle Revenue Management and Billing Transaction Feed Management (TFM) - Batch Execution Guide*.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Disaggregation Request through Audit Event

Until now, the system enabled you to disaggregate transactions when a disaggregation request was created for an account. The system enabled you to manually create a disaggregation request for an account from the user interface. Now, the system enables you to automatically create a disaggregation request for an account through an audit event. The system enables you to create an automatic disaggregation request in the following scenarios:

- While changing the person's attributes (i.e. when a person's fields or characteristics are updated)
- While changing the account's attributes (i.e. when an account's fields or characteristics are updated)
- While adding or updating a price list
- While assigning a price list to a person or an account
- While updating the price list assignment of a person or an account
- While assigning a price item to a person, account, or price list
- While updating the price assignment of a person, account, or price list

To enable the automatic disaggregation request creation, you need to do the following:

- Attach the **C1-REAUDEVNT** algorithm to the **Audit** system event of the **C1_PERSON_BO**, **C1_PLASGNEDIT**, **C1_PRICEASGN_BO**, **C1_F_ADDPLBO**, or **C1-AccountBO** business object, respectively
- Set the **Eligible for Audit Event** option type of the entity business object to **Y**
- Define an active audit event type for the entity business object in the system

For more information on how to create an audit event type, refer to the **Entity Audit** section in *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide.*

If the **C1-REAUDEVNT** algorithm is attached to the **Audit** system event of a business object, it is invoked whenever you create, edit, or delete the respective entity. It checks whether an active audit event type exists for the entity business object. If so, it considers the active audit event type and creates the audit event using the respective audit event type. The system creates the audit event while:

- Creating an entity when the **Add Action** option is selected in the audit event type
- Editing an entity when the **Update All** option is selected in the audit event type or when the updated element is listed in the **Audit Elements for Entity Update** section
- Deleting an entity when the **Delete Action** option is selected in the audit event type

The entity type and entity ID for which an audit event is created are added corresponding to the audit event in the **C1_AUDIT_EVENT** table. In addition, the effective date is stamped corresponding to the audit event in the **C1_AUDIT_EVENT** table. Note that if the entity has a start date, then the effective date is set to the entity's start date. But, if the entity does not have a start date, then the effective date is set to the system date.

Note: Before creating an audit event, the system checks whether an audit event for the entity ID with the same effective date already exists in the **Pending** or **Error** status for the respective action. If so, the system does not create a new audit event for the entity. Instead, the system adds a new log entry in the existing audit event.

Once the audit event is created in the **Pending** status, you need to execute the **Disaggregation Request through Audit Event (C1-DISTA)** batch. Until now, the **Disaggregation Request through Audit Event (C1-DISTA)** batch was used to process audit events which are created for a self-funded pricing rule. Now, this batch is used to process the audit events which are created for the persons, accounts, self-funded pricing rules, price lists, price list assignments, and price assignments.

Once a disaggregation request is created for an audit event, you need to execute the following batches in the specified sequence:

1. Pending Bill Segments Deletion (C1-BSEGD)
2. Pending Bill Deletion (C1-PNBD)
3. Identify Transactions for Disaggregation (C1-IDENT)
4. Process Non-Aggregated Transactions (C1-PDTXN)
5. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**

Copyright © 2009, 2025, Oracle and/or its affiliates.

6. Update Disaggregation Request Status (C1-DRSUA)

Disaggregation Request

Through the **Disaggregation Request Creation (C1-DISTG)** batch, you can only create a disaggregation request for an account. However, from the **Disaggregation Request** screen, you can create a disaggregation request for a person, account, price item, price assignment, billable charge, and parent accumulation group. When you create a disaggregation request for a person, the system does not create the disaggregation request for the person. Instead, the system creates the disaggregation request for all accounts of the person (where the person is the main customer) and its child persons.

The **Disaggregation Request** screen allows you to search for disaggregation requests using various search criteria. It also allows you to create and delete a disaggregation request. It contains the following zone:

- Search Disaggregation Request on page 1048

Search Disaggregation Request

The **Search Disaggregation Request** zone allows you to search for a disaggregation request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a disaggregation request using the person, account, or accumulation group details. The valid values are: • Person • Account • Accumulation Group **Note:** By default, the **Person** option is selected.	Yes
Person ID	Used to search disaggregation requests which are created for accounts of a particular person. **Note:** This field appears only when the **Person** option is selected from the **Search By** list.	No
Division	Used to search disaggregation requests which are created for accounts belonging to a particular division. **Note:** You can only view those divisions to which you have access in the **Division** list. This field appears only when the **Person** or **Account** option is selected from the **Search By** list.	Yes (Conditional) **Note:** This field is required while searching for a disaggregation request using the account details.
Person Name	Used to search disaggregation requests which are created for accounts belonging to persons with a particular name.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when the **Person** option is selected from the **Search By** list.	
Request Source	Used to search disaggregation requests which are created using a particular process. The valid values are: • AUTOMATIC • BATCH • MANUAL	No
Person Identifier Type	Used to indicate the person identifier type based on which you want to search disaggregation requests created for a person. **Note:** This field appears when the **Person** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type based on which you want to search disaggregation requests created for a person. **Note:** This field appears only when the **Person** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the person identifier type as a search criteria, you have to specify the person identifier.
Request Created From	Used to search disaggregation requests which are created from a particular date onwards.	Yes (Conditional) **Note:** This field is required while searching for a disaggregation request using the person or account details.
Request Created Until	Used to search disaggregation requests which are created till a particular date.	Yes (Conditional) **Note:** This field is required while searching for a disaggregation request using the person or account details.
From Processing Date	Used to search disaggregation requests which are processed from a particular date onwards.	No
To Processing Date	Used to search disaggregation requests which are processed till a particular date.	No
Request Type	Used to search disaggregation requests with a particular request type. The valid values are: • **Account** - Used to search disaggregation requests which are created for accounts. • **Billable Charge** - Used to search disaggregation requests which are created for billable charges.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Person** - Used to search disaggregation requests which are created for all the accounts of a person. • **Price Assignment** - Used to search disaggregation requests which are created for price assignments. • **Price Item** - Used to search disaggregation requests which are created for price items. **Note:** This field appears only when the **Person** or **Account** option is selected from the **Search By** list.	
Request Status	Used to search disaggregation requests which are in a particular status. The valid values are: • COMPLETE • PENDING	No
Price Item	Used to search disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned. **Note:** This field appears only when the **Person** or **Account** option is selected from the **Search By** list.	No
Billable Charge ID	Used to search disaggregation request for an account for which a particular billable charge is created. **Note:** This field appears only when the **Person** or **Account** option is selected from the **Search By** list.	No
Price Assignment ID	Used to search disaggregation request for an account with a particular price assignment. **Note:** This field appears only when the **Person** or **Account** option is selected from the **Search By** list.	No
Account ID	Used to search disaggregation requests which are created for a particular account. **Note:** This field appears only when you select the **Account** option from the **Search By** list.	No
Account Identifier Type	Used to indicate the account identifier type based on which you want to search disaggregation requests created for an account.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Account** option from the **Search By** list.	**Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value for the account identifier type based on which you want to search disaggregation requests created for an account. **Note:** This field appears only when you select the **Account** option from the **Search By** list.	Yes (Conditional) **Note:** If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Accumulation Type	Used to indicate the accumulation type based on which you want to search disaggregation requests created for an accumulation group. **Note:** This field appears only when you select the **Accumulation Group** option from the **Search By** list.	No
Parent Accumulation Group ID	Used to search disaggregation requests created for a particular parent accumulation group. **Note:** This field appears only when you select the **Accumulation Group** option from the **Search By** list.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Request ID	Displays the disaggregation request ID.
Request Creation Date	Displays the date when the disaggregation request is created.
Status	Indicates the status of the disaggregation request. The valid values are: • COMPLETE • PENDING
Account ID	Indicates the account for which the disaggregation request is created.
Person ID	Indicates the person for whom the disaggregation request is created.
Person Information	Displays the concatenated string of information about the person separated by a comma (,). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears with the details of the respective person.
Account Information	Displays the concatenated string of information about the account separated by a comma (,). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account** screen appears with the details of the respective account. This column appears only when you select the **Account** option from the **Search By** list.
Processing Date	Displays the date when the disaggregation request is processed.
Request Type	Displays the request type based on which the disaggregation request is processed. The valid values are: • **Account** - Indicates that the disaggregation request is created for an account. • **Billable Charge** - Indicates that the disaggregation request is created for a billable charge. • **Person** - Indicates that the disaggregation request is created for a all the accounts of a person. • **Price Assignment** - Indicates that the disaggregation request is created for a price assignment. • **Price Item** - Indicates that the disaggregation request is created for a price item.
Price Item Information	Displays the concatenated string of information about the price item for which the disaggregation request is created separated by a comma (,). **Note:** It has a link. On clicking the link, the **Price Item** screen appears where you can view the details of the respective price item. The information in this column appears only when the disaggregation request is created for a price item
Pricing Information	Displays the pricing details using which the disaggregation request is processed. **Note:** It has a link. On clicking the link, the **Pricing** screen appears where you can view the details of the respective pricing.
Billable Charge ID	Displays the charge id billable for the processed disaggregation request. **Note:** It has a link. On clicking the link, the **Billable Charge ID** screen appears where you can view the details of the respective billable charge.
Delete	On clicking the **Delete** (🗑) icon, you can delete the disaggregation request. **Note:** You can delete a disaggregation request only when it is in the **Pending** status.
Accumulation Information	Displays the accumulation information. **Note:** This column appears only when you select the **Accumulation Group** option from the **Search By** list.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Disaggregation Request

Procedure

To search for a disaggregation request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.
   The **Disaggregation Request** screen appears.
3. Enter the search criteria in the **Search Disaggregation Request** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.

   A list of disaggregation requests that meet the search criteria appears in the **Search Results** section.

Creating a Disaggregation Request for a Person

Prerequisites

To create a disaggregation request for a person, you should have:

- Person (for whom you want to create the disaggregation request) defined in the application
- Person associated with the division to which the user belongs
- Price list assigned to the person (in case you want to search a person based on an assigned price list)

Procedure

To create a disaggregation request for a person:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.
   The **Disaggregation Request** screen appears.
3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

   The **Add Disaggregation Request** screen appears. It contains the following field:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Disaggregation Request Type	Used to indicate the entity for which you want to create a disaggregation request. The valid values are: • **Account** - Used to create a disaggregation request for an account. **Note:** In this case, the system will disaggregate all billable charges of the account. • **Billable Charge** - Used to create a disaggregation request for an account for which a particular billable charge is created. **Note:** In this case, the system will disaggregate a specific billable charge of the account. • **Parent Accumulation Group** - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement). **Note:** The **Parent Accumulation Group** option is used to create reseeding requests for accounts which belong to the healthcare domain. • **Person** - Used to create a disaggregation request for one or more accounts of a person and its child persons. **Note:** In this case, the system will disaggregate all billable charges of the account. • **Price Assignment** - Used to create a disaggregation request for an account with a particular price assignment. **Note:** In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment. • **Price Item** - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item.	

4. Select the **Person** option from the **Disaggregation Request Type** list.
5. Click **OK**.

The **Add Disaggregation Request For Person** screen appears. It contains the following two sections:

- **Search Criteria** - Used to search for a person and its child persons for whose accounts you want to create a disaggregation request. It contains the following fields:

Filed Name	Field Description	Mandatory (Yes or No)
Request Type	Indicates the entity for which you want to create the disaggregation request. The valid value is: • Person	Not applicable
Division	Used to search persons which belong to a particular division. **Note:** You can view only those divisions to which you have access in the **Division** list.	Yes
Person ID	Used to search for a particular person. **Note:** The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears where you can search for the person.	No
Person Name	Used to search persons having a particular name.	No
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value of the person identifier type using which you want to search for a person.	Yes (Conditional) **Note:** If you select the person identifier type as a search criteria, you have to specify the person identifier.
Price List Assignment Start Date	Used to search for a person based on an assigned price list which is effective from a particular date onwards.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Filed Name	Field Description	Mandatory (Yes or No)
		Note: If you specify the price list assignment end date or the assigned price list as a search criteria, you have to specify the price list assignment start date.
Price List Assignment End Date	Used to search for a person based on an assigned price list which is effective till a particular date.	Yes (Conditional) **Note:** If you specify the price list assignment start date or the assigned price list as a search criteria, you have to specify the price list assignment end date.
Assigned Price List	Used when you want to search for a person to which a particular price list is assigned. **Note:** The **Search** (🔍) icon appears corresponding to the **Assigned Price List** field. On clicking the **Search** icon, the **Price List Search** window appears where you can search for the price list.	Yes (Conditional) **Note:** If you specify the price list assignment start date or the price list assignment end date as a search criteria, you have to specify the assigned price list.
Price Assignment ID	Used to search for a person to whom a particular price item pricing is assigned.	No
Price Item	Used to search for persons to whom a particular price item is assigned. **Note:** The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears where you can search for the price item. On specifying the price item, the details of the price item appears corresponding to the **Price Item** field.	No
Billable Charge ID	Used to search for a person for whose accounts a particular billable charge is created.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Filed Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Billable Charge ID** field. On clicking the **Search** icon, the **Billable Charge Search** window appears where you can search for the billable charge. On specifying the billable charge, the details of the billable charge appears corresponding to the **Billable Charge ID** field.	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type using which the account is defined in the system. **Note:** The data appears in this column when you search for an account.
Account Identifier	Displays the value of the account identifier type. **Note:** The data appears in this column when you search for an account.
Division	Displays the division to which the person belongs.
Person Identifier Type	Indicates the person identifier type using which the person is defined in the system.
Person Identifier	Displays the value of the person identifier type.
Person Name	Displays the name of the person.
Assigned Price List	Displays the price list assigned to the person. **Note:** The data appears in this column when you search for a person based on an assigned price list.
Price List Assignment Start Date	Displays the date from when the price list is assigned to the person. **Note:** The data appears in this column when you search for a person based on an assigned price list.
Price List Assignment End Date	Displays the date till when the price list is assigned to the person. **Note:** The data appears in this column when you search for a person based on an assigned price list.
Account Information	Displays the concatenated string of information about the account separated by a comma (,). **Note:** The data appears in this column when you search for an account.
Bill Cycle	Indicates the bill cycle defined for the account.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data appears in this column when you search for an account.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page from the **Page Limit** list, if required.

The**Page Limit** list includes only those values which are defined in the **PAGE_NUMBER** lookup field.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Do either of the following:

If you want to...	Then...
Create disaggregation request for one or more persons	**a.** In the **Search Results** section, select the check box corresponding to the person for which you want to create a disaggregation request. **b.** Click **Disaggregate**. A message appears confirming that the disaggregation request is created successfully. **c.** Click **OK**. The disaggregation request is created for each account of the person (where the person is the main customer) and its child persons.
Create disaggregation request for all persons that meet the search criteria	**a.** Click **Disaggregate All**. The **Disaggregate All Confirmation** window appears confirming whether you want to create disaggregation requests for all records. **b.** Click **OK**. The disaggregation request is created for each account of the person (where the person is the main customer) and its child persons.

Creating a Disaggregation Request for an Account

Prerequisites

To create a disaggregation request for an account, you should have:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Account (for whom you want to create the disaggregation request) defined in the application
- Account associated with the division to which the user belongs
- Price list assigned to the account (in case you want to search an account based on an assigned price list)

Procedure

To create a disaggregation request for an account:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.
   The **Disaggregation Request** screen appears.
3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

   The **Add Disaggregation Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Disaggregation Request Type	Used to indicate the entity for which you want to create a disaggregation request. The valid values are: • **Account** - Used to create a disaggregation request for an account. **Note:** In this case, the system will disaggregate all billable charges of the account. • **Billable Charge** - Used to create a disaggregation request for an account for which a particular billable charge is created. **Note:** In this case, the system will disaggregate a specific billable charge of the account. • **Parent Accumulation Group** - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement). **Note:** The **Parent Accumulation Group** option is used to create reseeding requests for accounts which belong to the healthcare domain. • **Person** - Used to create a disaggregation request for one or more accounts of a person and its child persons. **Note:** In this case, the system will disaggregate all billable charges of the account. • **Price Assignment** - Used to create a disaggregation request for an account with a particular price assignment.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment. • **Price Item** - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned. **Note:** In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item.	

4. Select the **Account** option from the **Disaggregation Request Type** list.
5. Click **OK**.

   The **Add Disaggregation Request For Account** screen appears. It contains the following two sections:

   - **Search Criteria** - Used to search for an account for whose billable charges you want to create a disaggregation request. It contains the following fields:

Filed Name	Field Description	Mandatory (Yes or No)
Request Type	Indicates the entity for which you want to create the disaggregation request. The valid value is: • Account	Not applicable
Division	Used to search accounts which belong to a particular division. **Note:** You can view only those divisions to which you have access in the **Division** list.	Yes
Account ID	Used to search for a particular account. **Note:** The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears where you can search for the account.	No
Bill Cycle	Used to search accounts having a particular bill cycle.	No
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Filed Name	Field Description	Mandatory (Yes or No)
		Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type using which you want to search for an account.	Yes (Conditional) **Note:** If you select the account identifier type as a search criteria, you have to specify the account identifier.
Invoice Currency	Used to search accounts whose billable charges are defined using a particular invoice currency.	No
Assigned Price List	Used when you want to search for an account to which a particular price list is assigned. **Note:** The **Search** (🔍) icon appears corresponding to the **Assigned Price List** field. On clicking the **Search** icon, the **Price List Search** window appears where you can search for the price list.	Yes (Conditional) **Note:** If you specify the price list assignment start date or the price list assignment end date as a search criteria, you have to specify the assigned price list.
Price List Assignment Start Date	Used to search for an account based on an assigned price list which is effective from a particular date onwards.	Yes (Conditional) **Note:** If you specify the price list assignment end date or the assigned price list as a search criteria, you have to specify the price list assignment start date.
Price List Assignment End Date	Used to search for an account based on an assigned price list which is effective till a particular date.	Yes (Conditional) **Note:** If you specify the price list assignment start date or the assigned price list as a search criteria, you have to specify the price list assignment end date.
Price Assignment ID	Used to search for an account to which a particular price item pricing is assigned.	No
Price Item	Used to search for accounts to which a particular price item is assigned.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Filed Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears where you can search for the price item. On specifying the price item, the details of the price item appears corresponding to the **Price Item** field.	
Billable Charge ID	Used to search for an account for which a particular billable charge is created. **Note:** The **Search** (🔍) icon appears corresponding to the **Billable Charge ID** field. On clicking the **Search** icon, the **Billable Charge Search** window appears where you can search for the billable charge. On specifying the billable charge, the details of the billable charge appears corresponding to the **Billable Charge ID** field.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type using which the account is defined in the system.
Account Identifier	Displays the value of the account identifier type.
Division	Displays the division to which the account belongs.
Person Identifier Type	Indicates the person identifier type using which the person is defined in the system. **Note:** The data appears in this column when you search for a person.
Person Identifier	Displays the value of the person identifier type. **Note:** The data appears in this column when you search for a person.
Person Name	Displays the name of the person to whom the account belongs.
Assigned Price List	Displays the price list assigned to the account. **Note:** The data appears in this column when you search for an account based on an assigned price list.
Price List Assignment Start Date	Displays the date from when the price list is assigned to the account.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data appears in this column when you search for an account based on an assigned price list.
Price List Assignment End Date	Displays the date till when the price list is assigned to the account.
	Note: The data appears in this column when you search for an account based on an assigned price list.
Account Information	Displays the concatenated string of information about the account separated by a comma (,).
Bill Cycle	Indicates the bill cycle defined for the account.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page from the **Page Limit** list, if required.

The**Page Limit** list includes only those values which are defined in the **PAGE_NUMBER** lookup field.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Do either of the following:

If you want to...	Then...
Create disaggregation request for one or more accounts	**a.** In the **Search Results** section, select the check box corresponding to the account for which you want to create a disaggregation request. **b.** Click **Disaggregate**. A message appears confirming that the disaggregation request is created successfully. **c.** Click **OK**. The disaggregation request is created for the selected account.
Create disaggregation request for all accounts that meet the search criteria	**a.** Click **Disaggregate All**. The **Disaggregate All Confirmation** window appears confirming whether you want to create disaggregation requests for all records. **b.** Click **OK**. The disaggregation request is created for all the accounts.

Creating a Disaggregation Request for a Price item

Prerequisites

To create a disaggregation request for a price item, you should have:

- Price item (for which you want to create the disaggregation request) defined in the application
- Price item associated with the division to which the user belongs
- Person or accounts defined in the application (in case you want to search for a price item associated to a person or an account)
- Price item associated with the price list (in case you want to search a price item based on an assigned price list)

Procedure

To create a disaggregation request for a price item:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Transaction and Audit Event Management** and then click **Disaggregation Request**.
   The **Disaggregation Request** screen appears.
3. Click the **Add** button available in the upper right corner of the **Disaggregation Request** screen.

   The **Add Disaggregation Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Disaggregation Request Type	Used to indicate the entity for which you want to create a disaggregation request. The valid values are: • **Account** - Used to create a disaggregation request for an account. **Note:** In this case, the system will disaggregate all billable charges of the account. • **Billable Charge** - Used to create a disaggregation request for an account for which a particular billable charge is created. **Note:** In this case, the system will disaggregate a specific billable charge of the account. • **Parent Accumulation Group** - Used to create reseeding requests for the accounts using a parent accumulation group and by specifying the accumulation type (i.e. whether it is stop-loss or discount arrangement).	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Parent Accumulation Group** option is used to create reseeding requests for accounts which belong to the healthcare domain. • **Person** - Used to create a disaggregation request for one or more accounts of a person and its child persons. **Note:** In this case, the system will disaggregate all billable charges of the account. • **Price Assignment** - Used to create a disaggregation request for an account with a particular price assignment. **Note:** In this case, the system will disaggregate only those billable charges of the account which are created using the respective price assignment. • **Price Item** - Used to create a disaggregation request for an account or for one or more accounts of a person and its child persons where a particular price item is assigned. **Note:** In this case, the system will disaggregate only those billable charges of the accounts which are created for the respective price item.	

4. Select the **Price Item** option from the **Disaggregation Request Type** list.
5. Click **OK**.

The **Add Disaggregation Request For Price Item** screen appears. It contains the following two sections:

- **Search Criteria** - Used to search for a price item assigned to an account for whose billable charges want to create a disaggregation request. It contains the following fields:

Filed Name	Field Description	Mandatory (Yes or No)
Request Type	Indicates the entity for which you want to create the disaggregation request. The valid value is: • Price Item	Not applicable
Division	Used to search price items which belong to a particular division. **Note:** You can view only those divisions to which you have access in the **Division** list.	Yes
Account ID	Used to search price items which are assigned to a particular account.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Filed Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears where you can search for the account.	**Note:** This field is required when you specify the price item in the **Price Item** field as a search criteria.
Person ID	Used to search price items which are assigned to a particular person.	Yes (Conditional)
	Note: The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears where you can search for the person.	**Note:** This field is required when you specify the price item in the **Price Item** field as a search criteria.
Account Identifier Type	Used to search price items assigned to accounts which are created using a particular identifier type.	Yes (Conditional) **Note:** If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) **Note:** If you select the account identifier type as a search criteria, you have to specify the account identifier.
Person Identifier Type	Used to search price items assigned to persons which are created using a particular identifier type.	Yes (Conditional) **Note:** If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value of the person identifier type.	Yes (Conditional) **Note:** If you select the person identifier type as a search criteria, you have to specify the person identifier.
Bill Cycle	Used to search price items assigned to accounts or accounts of a person having a particular bill cycle.	No
Invoice Currency	Used to search price items assigned to accounts or accounts of a person whose billable charges are defined using a particular invoice currency.	No
Price Item	Used to search for a particular price item.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Filed Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, the **Price Item Search** window appears where you can search for the price item. On specifying the price item, the details of the price item appears corresponding to the **Price Item** field.	
Assigned Price List	Used to search price items which belong to a price list assigned to accounts or accounts of a person. **Note:** The **Search** (🔍) icon appears corresponding to the **Assigned Price List** field. On clicking the **Search** icon, the **Price List Search** window appears where you can search for the price list.	Yes (Conditional) **Note:** If you specify the price list assignment start date or the price list assignment end date as a search criteria, you have to specify the assigned price list.
Price List Assignment Start Date	Used to search for price items based on an assigned price list which is effective from a particular date onwards.	Yes (Conditional) **Note:** If you specify the price list assignment end date or the assigned price list as a search criteria, you have to specify the price list assignment start date.
Price List Assignment End Date	Used to search for price items based on an assigned price list which is effective till a particular date.	Yes (Conditional) **Note:** If you specify the price list assignment start date or the assigned price list as a search criteria, you have to specify the price list assignment end date.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type using which the account is defined in the system. **Note:** The data appears in this column when you search for a price item which is assigned to an account.
Account Identifier	Displays the value of the account identifier type.

Deleting a Disaggregation Request

Procedure

To delete a disaggregation request:

1. Search for the disaggregation request in the **Disaggregation Request** screen.
2. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the disaggregation request that you want to delete.
   A message appears confirming whether you want to delete the disaggregation request.
3. Click **OK**.
   The disaggregation request is deleted.

> **Note:**
>
> You can only delete a disaggregation request which is in the **Pending** status.
>
> If the disaggregation process is already started for a disaggregation request, we recommend you not to delete the disaggregation request from the system. Otherwise, erroneous results might occur.

Chapter 12

On Demand Billing

Oracle no longer supports the Off Cycle Billing feature introduced in Oracle Revenue Management and Billing Version 2.2.4.2. Instead, the On Demand Billing feature has been introduced to facilitate adhoc billing. Earlier, you were only able to carry out billing based on the bill cycle (defined for the account). In other words, you were able to generate a bill for a bill cycle using the billable charges whose start and end dates fall within the bill cycle. However, there might be situations where you have received certain billing information after the bill is generated for the bill cycle. In such scenarios, you would like to generate a separate bill for the newly created billable charges. The system now allows you to generate an adhoc bill. However, note that you cannot generate adhoc bills through the **Bill** screen.

A bill is generated using the billable charges. Now, in order to differentiate between the normal and adhoc billable charges, you need to set the **Adhoc Bill** flag for the billable charges. If the value of the **Adhoc Bill** flag is set to **Y**, the system will consider the billable charge during adhoc billing. And, if the value of the **Adhoc Bill** flag is set to **N**, the system will consider the billable charge during regular billing based on the bill cycle.

A new batch named **Adhoc Billing (C1-FABL)** is created which generates adhoc bills. Both, automatically generated and manually created billable charges (with the **Adhoc Bill** flag set to **Y**) are considered during adhoc billing.

With Oracle Revenue Management and Billing V2.4.0.0.0, the On Demand Billing feature has been enhanced to facilitate billing for multiple usage data files in one go. Till now you were only able to create billable charges and bill for only one usage data file at a time using the using the **On Demand Billing** screen. However, there might be situations where you want to upload multiple usage data files and generate billable charges for the usage records (of a single or multiple accounts) that you may want to group together based on certain criteria. For example, you may want to generate billable charges for all debit transactions of one or more accounts. In such scenarios, you can now upload multiple usage data files using a file group and create billable charges for the records uploaded through the **Usage Data Processing** screen. You can create file groups based on various criteria to upload multiple usage data files. For example, you may want to create a file group for uploading usage data files of accounts that need to be billed for the services to be charged for using the credit card facility. You can create a file group using the **On Demand Billing** screen. You can then upload one or more usage data files using the file group through the **Usage Data Processing** screen. Oracle Revenue Management and Billing provides you with a facility to upload usage data received from various product processors or banking applications for billing. You can upload a usage data file in the CSV format. The **Usage Data Processing** screen allows you to upload usage data files for both banking and insurance modules. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format,

see CSV File Format for Banking and CSV File Format for Insurance. When you upload a usage data file, mapping algorithm parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The status of each usage record is changed to Valid or Invalid depending on whether the usage record was validated successfully or not. Once a usage record is successfully validated, you can submit the valid records and create billable charges for them. Once the usage data files are uploaded and billable charges are generated through the **Usage Data Processing** screen, you can then create and freeze the bills using the **On Demand Billing** screen.

You can optionally configure the system to use the approval workflow process for a usage data file. On submitting a valid record, the approval workflow process routes the usage record to the approver for approval. The approver receives a notification to approve the valid records. The approver can either approve or reject one or more valid records. Once the approver approves a valid record, a billable charge is created for the usage record. However, if the approver rejects a valid record, a notification is sent to the submitter to resolve the usage record. The submitter can then correct the existing data or add missing data (based on the review comments), and can again submit the valid record for approval. Once the valid record is approved, a billable charge is created for the usage record.

The system generates the bills based on the Bill After Date. The Bill After Date indicates the date after which adhoc or normal bills must be generated. In case of adhoc billing, the Bill After Date is specified for a file group using which you can upload one or more usage data files.

While uploading usage data files for adhoc billing, you may or may not specify the Bill After Date for a file group. The system behaves in the following manner when:

- **Bill After Date - Specified:** Adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.
- **Bill After Date - Not Specified:** During the upload process, the Bill After Date is set to the current date. And, adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.

In case of regular billing, you may or may not specify the Bill After Date while uploading a usage data file. The system behaves in the following manner when:

- **Bill After Date - Specified:** Normal bill is generated for the account in the bill cycle in which the bill after date falls.
- **Bill After Date - Not Specified:** Normal bill is generated for the account based on the bill cycle defined for the account.

Once the adhoc or normal bills are generated for a usage data file, you can freeze and complete the bills. Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a usage data file from the **On Demand Billing** screen.

During the on demand billing process, each usage record of a file goes through various statuses until it is billed to the person. For more information about the usage record statuses, see Usage Record Status Transition.

Chapter 13

Upload Validated Payment Data

Topics:

- Payment Upload Process
- Prerequisites
- CSV File Format
- Sample CSV
- Payment Data File Status Transition
- Payment Record Status Transition
- Error Messages
- Payment Upload

Oracle Revenue Management and Billing until now provided you with an ability to interface payments from an external source, such as remittance processor. The system supported two mechanisms to upload payment data - one using which you can populate payment upload staging records and another using which you can populate payment event upload staging records. The system now enables you to validate the payment records before you move them to the staging area. The system provides the pre-staging area where you can upload and validate the payment records. The system provides a user interface which helps you to upload a payment data file in the pre-staging area. It also helps you to perform various tasks, such as:

- Track the status of the payment records and the payment data file
- Move the payment records to the staging area
- Cancel a payment data file
- View the log of a payment data file
- Apply payments on the unpaid bills of an account or a statement

You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see CSV File Format on page 1085. At present, the system supports only the CSV file format. This is because the payment data mapping algorithm type shipped with the product is designed to support the CSV format. If you want to use any other file format, you need to define custom mapping algorithm type that supports the required file format.

The file type using which you upload a payment data file indicates the mapping and validation algorithms that you want to use for the payment data file. On uploading a payment data file, the mapping algorithm parses the CSV file and uploads the payments records in the pre-staging area. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. Once the validation process is complete, you can move the payment records from the pre-staging to staging area. Once the payment records are moved to the staging area, the system creates payment events, tenders, payments and payment segments through a batch process. For more information about the payment upload process, see Payment Upload Process on page 1082.

During the payment upload process, a payment data file and each record of the file goes through various statuses until the payment events and payments are created. For more information about the payment data file and payment record statuses, see Payment Data File Status Transition on page 1087 and Payment Record Status Transition on page 1088, respectively.

Payment Upload Process

The payment upload process includes the following sub-processes:

- Upload Payment Records in the Pre-Staging Area on page 1082
- Move Payment Records to the Staging Area on page 1083
- Create Payment Events and Payments on page 1083

Upload Payment Records in the Pre-Staging Area

Oracle Revenue Management and Billing allows you to validate the payment records before you move them to the staging area. You can upload and validate the payment records in the pre-staging area. You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see CSV File Format on page 1085.

While uploading a payment data file, you need to specify the file type using which you want to upload the payment data file. The file type indicates the mapping and validation algorithms that you want to use for the payment data file. Therefore, while defining a file type using which you want to upload a payment data file, you need to:

- Set the feed type to **Payment Upload Data**
- Attach mapping algorithm which is created using the **C1-CSVUPLPAY** algorithm type
- Attach validation algorithm which is created using the **C1-PUPLVALID** algorithm type

On uploading a payment data file, the mapping algorithm does the following:

1. Validates whether the file is in the CSV format
2. Validates whether at least one payment record is available in the CSV file
3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database
4. Uploads the payments records in the pre-staging area

The validation process starts immediately after the payment data file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The system checks whether:

- The data is available in the **Tender ID**, **Tender Amount**, **Payment Amount**, **Date Received**, **Bank Account**, and **Payment Type** columns in the CSV file.
- The data is available in the **Match Type** and **Match Value** columns in the CSV file.

  Note: This validation is done when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.
- The payee and payor accounts specified in the payment record exists in the system.
- The payee account with the specified account identifier type and account identifier combination exists in the system.
- A valid currency code is specified in the payment record.

  Note: If the currency code is not specified, the currency is set to the payor account's invoice currency.
- The payment type (i.e. tender type) specified in the payment record exists in the system.
- The account identifier type specified in the payment record exists in the system.

  Note: This validation is done when the payee account ID is not specified in the payment record.
- The match type specified in the payment record exists in the system.

  Note: This validation is done when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.
- The characteristic type specified in the payment record exists in the system.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- The characteristic value matches any predefined value when the characteristic value type is set to **Predefined Value**.
- The characteristic value is specified in the payment record when the characteristic type is specified and vice-versa.

You can upload a file by clicking the **Upload** link in the **Payment Upload** screen. On uploading a payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see Payment Record Status Transition on page 1088.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. Once the payment records are uploaded and validated in the pre-staging area, you can do either of the following:

- Move the payment records to the staging area
- Cancel a payment data file
- Replace the existing payment data file

Note: If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Move Payment Records to the Staging Area

Once the payment records are uploaded and validated in the pre-staging area, you can move the records to the staging area. The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area. In such scenario, you need to correct the invalid payment records and upload the same file once again in the system. In addition, if you have cancelled a payment data file, you cannot move any records (including valid and error records) of the payment data file to the staging area.

You can move the payment records to the staging area by clicking the **Move to Staging** (⎘) icon corresponding to the payment data file in the **Payment Upload** screen. The **Move to Staging** (⎘) icon appears when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

On clicking the **Move to Staging** (⎘) icon, the payment records are copied (and not moved) from the pre-staging to staging area and the status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**. Once you move the payment records to the staging area, you can edit the payment staging records, if required.

Create Payment Events and Payments

Once the payment records are moved to the staging area, the system creates payment events for the payment data file in the background when the **Payment Upload (PUPL)** batch is invoked. You can configure the **Payment Upload (PUPL)** batch such that it is executed at regular intervals. When the **Payment Upload (PUPL)** batch is invoked, the system checks whether there are any deposit control, tender control, payment tender, and payment staging records in the **Pending** status. If there are staging records in the **Pending** status, the system creates the following entities:

- Deposit Control
- Tender Control
- Payment Events

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Payment Tenders
- Payments
- Payment Segments
- Financial Transactions (when the payments are frozen)

The status of the deposit control, tender control, payment tender, and payment staging records is changed to **Complete**. If any error occurs while creating payment event for a payment record, the status of the deposit control, tender control, payment tender, and payment staging records is changed to **Error**. In addition, the status of the payment record in the pre-staging area is changed to **Error in Staging**.

Traditionally, the **Payment Upload (PUPL)** batch considered staging records which are in the **Error** or **Pending** status. If a staging record is in the **Error** status, the system used to reset the status to **Pending** and then further processed the staging record. This system behavior still exists for staging records which are not uploaded through the **Payment Upload** process. If the staging records are uploaded through the **Payment Upload** process, you need to manually correct the staging records and change the status of deposit control, tender control, payment tender, and payment staging records to **Pending**. The corrected staging records will then be processed when the **Payment Upload (PUPL)** batch is invoked at subsequent interval.

Prerequisites

To setup the payment upload process, you need to do the following:

- Define the required match types with the appropriate payment distribution override and manual distribution algorithms.
- Define the required tender types in the system.
- Define the required currency codes in the system.
- Define the required tender sources in the system.
- Define the required characteristic types where the characteristic entity is set to **Payment**.
- Create a mapping algorithm using the **C1-CSVUPLPAY** algorithm type.
- Create a validation algorithm using the **C1-PUPLVALID** algorithm type.
- Define the required file types where the feed type is set to **Payment Upload Data**.
- Assign the **PUPL** To Do type to a To Do role whose users must receive the To Do generated while executing the **Payment Upload (PUPL)** batch.
- Set the batch control type of the **Payment Upload (PUPL)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Note: If you want to use the **Payment Upload** feature in an ORMB Cloud Service Premium Edition environment, you need to set the **Payment Upload Extendable Lookup and Bucket** option type of the **C1-CFS** feature configuration.

How to set the **C1-CFS** feature configuration	Setting the C1-CFS Feature Configuration on page 4301

CSV File Format

Before uploading a payment data file, you need to ensure that the CSV file contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Account ID	Used to specify the payee account ID.	Yes
Match Type	Used to specify the match type using which you want to match the payment.	Yes (Conditional) **Note:** This data is required when the match value is specified.
Match Value	Used to specify the entity (such as bill, contract, and so on) against which you want to match the payment. **Note:** If you specify a match type where the entity type is set to **Account**, the match value should not be provided. The payee account ID is derived from the payment data record. If the payee account ID is not available in the payment data record, it is derived using the payee account identifier type and identifier value. The system then derives the unpaid bills of the payee account using the manual distribution algorithm attached to the respective match type. If you specify a match type where the entity type is set to **Statement**, the match value should not be provided. The statement ID is derived from the payment data record. The system then derives the unpaid bills of the statement using the manual distribution algorithm attached to the respective match type.	Yes (Conditional) **Note:** This data is required when the match type is specified.
Tender ID	Used to specify the payment tender ID. **Note:** If the tender ID is same for two or more payment records, the system will create multiple payments against one tender. In other words, there will be multiple payments which are created through the payment event.	Yes
Tender Amount	Used to specify the tender amount.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	
Payment Amount	Used to specify the amount paid through the tender. **Note:** You must not specify the value less than or equal to 0. The precision specified for the payment amount must not exceed the decimal places defined for the currency in the system.	Yes
Date Received	Used to specify the date when the payment is made. **Note:** You must specify the date in the MM/DD/YYYY format.	Yes
Bank Account	Used to specify the external source ID which is associated with the tender source.	Yes
Payment Type	Used to specify the type of tender through which the payment is made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Currency	Used to specify the currency in which the payment is made. **Note:** If the currency is not specified, it is set to the payor account's invoice currency.	No
External Reference Id	Used to specify the external reference ID which is associated with the tender source.	No
Account ID Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the account identifier is specified.
Account Identifier	Used to specify the account for which the payment is made.	Yes (Conditional) **Note:** This data is required when the account identifier type is specified.
Payment Char Type1, Payment Char	Used to indicate the characteristic that must be defined for the payment.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Type2, ..., Payment Char Type5		**Note:** This data is required when the characteristic value is specified.
Payment Char Value1, Payment Char Value2, ..., Payment Char Value5	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when the characteristic type is specified.
MICR ID	Used to specify the MICR code.	No
Payor ID	Used to specify the payor account ID. **Note:** If the payor account ID is not specified, the payor account ID is set to the payee account ID assuming that the payor and payee are the same.	No
Statement ID	Used to specify the statement ID for applying payments at the statement level.	Yes (Conditional) **Note:** This data is required when the Statement ID is specified.

Note:

If a payment data file contains column names other than those mentioned in the above table, the system will not upload the payment data file.

The system considers the payment data file for upload only when the payment data file is parsed without any errors and contains less than 1000 payment records.

Sample CSV

```
1640731871,STMTPAY,344749531005,0100232,500.85,500.85,08/1/2022,TEST_EXT_SRC,

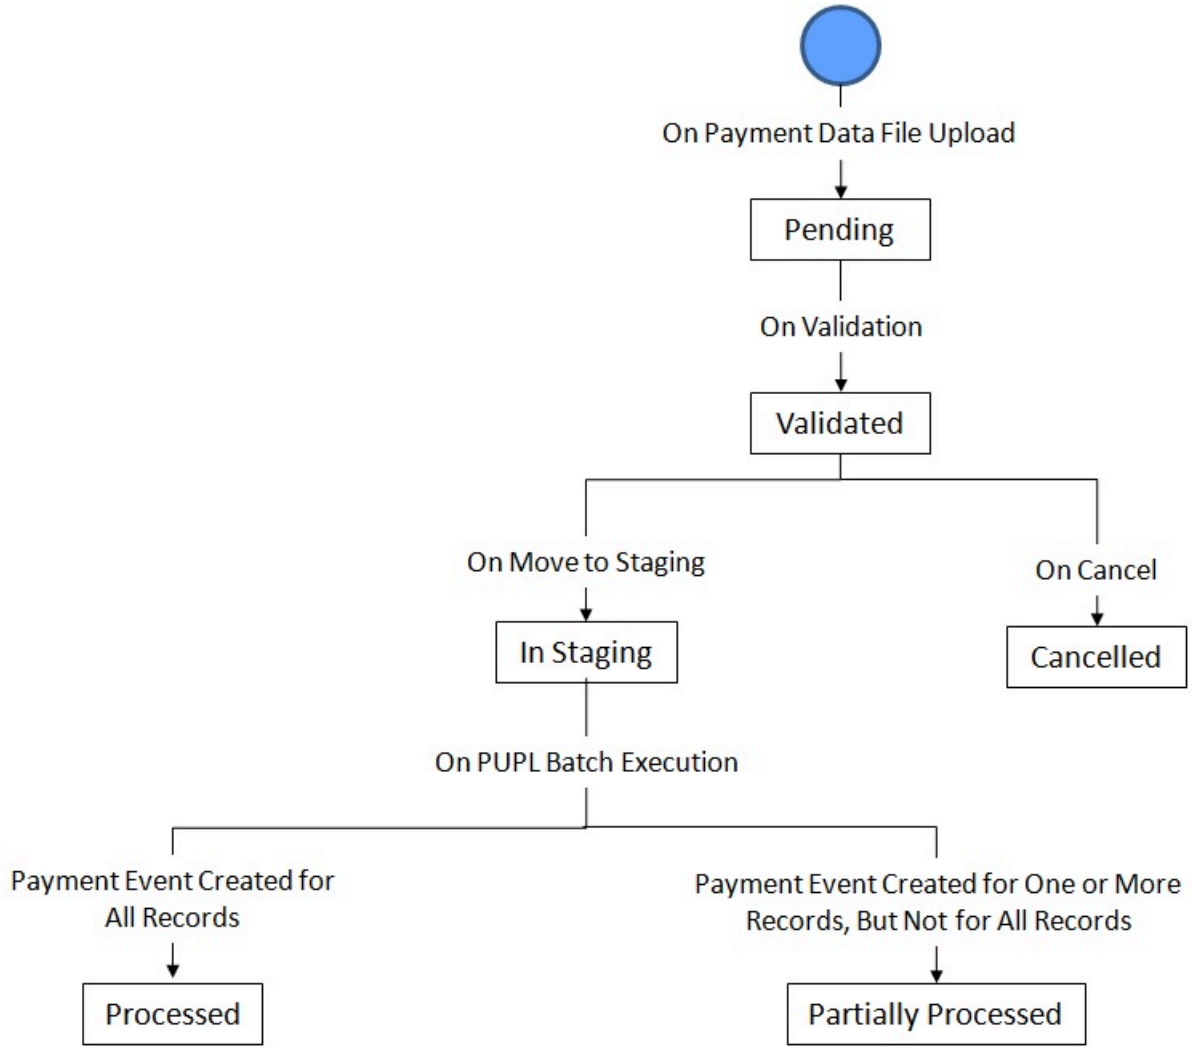
```

Payment Data File Status Transition

The following figure graphically indicates how a payment data file moves from one status to another during the payment upload process:

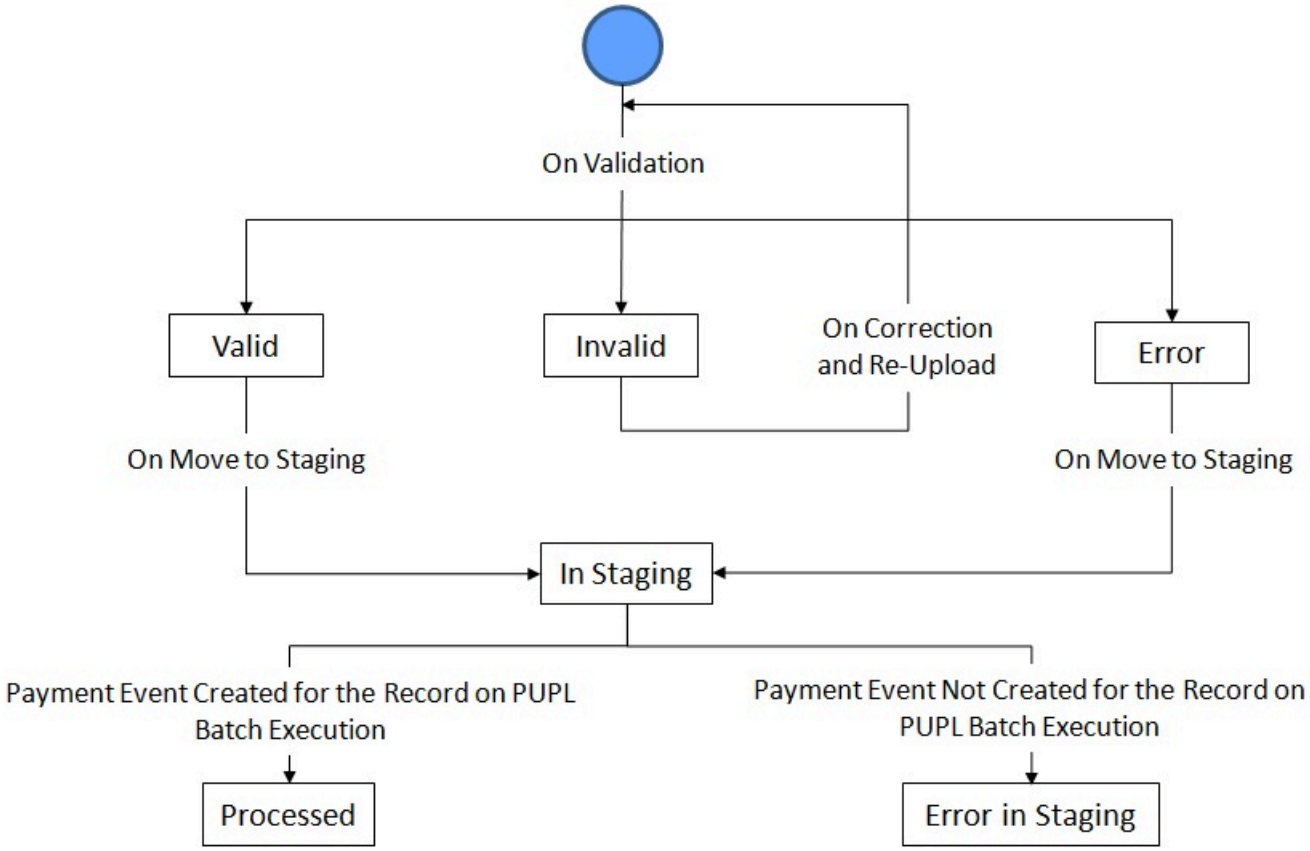
Copyright © 2009, 2025, Oracle and/or its affiliates.



Payment Record Status Transition

The following figure graphically indicates how a payment record moves from one status to another during the payment upload process:

Copyright © 2009, 2025, Oracle and/or its affiliates.



The following table lists the scenarios when a payment record is set to **Invalid** or **Error** status:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Scenario	Payment Record Status
The system could not find the payee account ID for a given account identifier type and account identifier combination when the payee account ID is not specified in the payment record.	Invalid
The payee account ID specified in the payment record does not exist in the system.	Invalid
The payee account ID, account identifier type, or account identifier are not specified in the payment record.	Invalid
The match type is not specified in the payment record.	Invalid
The match type specified in the payment record does not exist in the system.	Error
The match value is not specified in the payment record.	Invalid
The currency code does not exist in the system.	Invalid
The tender amount is either zero or not specified in the payment record.	Invalid
The payment amount is either zero or not specified in the payment record.	Invalid
The bank account is not specified in the payment record.	Invalid
The payment type (i.e. tender type) does not exist in the system.	Invalid
The payment type is not specified in the payment record.	Invalid
The tender ID is not specified in the payment record.	Invalid
The date received is not specified in the payment record.	Invalid
The payor account ID specified in the payment record does not exist in the system.	Invalid
The characteristic type specified in the payment record does not exist in the system.	Invalid
If a characteristic type is specified, but the characteristic value is not specified in the payment record.	Invalid
If a characteristic value is specified, but the characteristic type is not specified in the payment record.	Invalid
The characteristic value does not match any predefined value when the characteristic value type is set to **Predefined Value**.	Invalid

Note: The system does the match type and match value related validations when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

Error Messages

The following table lists the errors that may occur during the payment upload process. It also indicates how you can resolve these errors.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Message Number	Error Message	Message Category	Possible Issues
80110	File cannot be reuploaded as some records have already been processed.	11111	The possible issues could be: • You are trying to replace an existing file whose payment records are already moved to the staging area and/or for which payment events are already created.
1463	This file already exists in the system. Please check.	17000	The possible issues could be: • You are trying to upload a file which is already uploaded in the system without selecting the **Replace Existing File** check box.
1465	Please upload a file in the CSV format.	17000	The possible issues could be: • You are trying to upload a file which is not in the CSV format.
80113	Duplicate Header for column %1 in file.	11111	The possible issues could be: • The file has two or more columns with the same header.
80111	Length of value %1 too long for Field %2. Maximum length: %3 Found %4.	11111	The possible issues could be: • The length of value specified in the column exceeds the maximum field length. The following table lists the maximum length of each field:

Message Number	Error Message	Message Category	Possible Issues
			tenders specified in the tender control staging record.
13607	Suspense Contract does not exist for External Source ID (%1)	11	The possible issues could be: • The suspense contract is not defined for the tender source.
13608	Many Tender Sources found for External Source ID (%1)	11	The possible issues could be: • There are multiple tender sources in the system with the same external source ID.
13701	Pay Tender (%1/%2/%3/%4) Amount not equal to sum of Pay Amounts	11	The possible issues could be: • The sum of payment staging amount does not match the total amount specified in payment tender staging record.
13705	Payment (%1/%2/%3/%4) Person ID (%5) exists on multiple accounts.	11	The possible issues could be: • There are multiple payment records having contracts with the same old account ID but their payee account ID is different.
80194	File has no records to upload	11111	The possible issues could be: • You are trying to upload a file without any payment records.
80195	Incorrect header: %1	11111	The possible issues could be: • One or more column names in the payment data file are incorrect.
80196	Maximum file name size allowed is 60 characters	11111	The possible issues could be: • The file name contains more than 60 characters.
80199	Missing value for column %1	11111	The possible issues could be: • The match type is not specified in the payment record. • The match value is not specified in the payment record. • The payment type is not specified in the payment record.

Payment Upload

The **Payment Upload** screen allows you to search for a payment data file using various search criteria. Through this screen, you can:

- Upload a payment data file
- Cancel a payment data file

Copyright © 2009, 2025, Oracle and/or its affiliates.

- View the records uploaded through a payment data file
- View the staging records of a payment data record
- View the log of a payment data file
- Move the payment records to the staging area
- Edit a payment staging record
- Replace an existing payment data file
- View the reasons why the payment record is in the **Error** or **Invalid** status

This screen consists of the following zones:

- Search Payment Data File on page 1095
- Payment Data Records on page 1097
- Payment Staging Records on page 1099
- Payment Data File Log on page 1100

Search Payment Data File

The **Search Payment Data File** zone allows you to search for a payment data file which is uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to search a particular payment data file.	No
User ID	Used to search payment data files which are uploaded by a particular user.	No
File Type	Used to search payment data files which are uploaded using a particular file type.	No
Upload From Date	Used to search payment data files which are uploaded from a particular date onwards. **Note:** By default, the date is set to the current date minus 7 days. You can change the date, if required.	No
File Status	Used to search payment data files with a particular status. The valid values are: • Cancelled • In Staging • Partially Processed • Pending • Processed • Validated	No
Upload To Date	Used to search payment data files which are uploaded till a particular date. **Note:** By default, the date is set to the current date. You can change the date, if required.	No

Note: You must specify at least one search criterion while searching for a payment data file.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the payment data file.
File Type	Indicates the type of the payment data file.
Upload Date	Displays the date and time when the payment data file was uploaded in the system.
Status	Indicates the status of the payment data file. The valid values are: • Cancelled • In Staging • Partially Processed • Pending • Processed • Validated
Total	Displays the total number of records that are uploaded through the payment data file.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Error	Displays the number of records where the data is incorrect.
In Staging	Displays the number of records which are copied from the pre-staging to staging area.
Processed	Displays the number of records for which payment events are created.
Staging Error	Displays the number of records for which payment events could not be created.
Cancel	On clicking the **Cancel** (⊘) icon, you can cancel the payment data file. **Note:** The **Cancel** icon appears when the status of the payment data file is **Validated**. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.
Move to Staging	On clicking the **Move to Staging** (⧉) icon, you can move the valid and error records of the payment data file to the staging area. **Note:** The **Move to Staging** icon appears when: • The status of the payment data file is **Validated**. • There are no invalid records in the payment data file. • The **Disable Move to Staging** check box is not selected in the respective file type.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Copyright © 2009, 2025, Oracle and/or its affiliates.

You can upload a payment data file by clicking the **Upload** button in the **Page Title** area of the **Payment Upload** screen. On clicking the **Broadcast** (((•))) icon corresponding to the payment data file, the **Payment Data Records** and **Payment Data File Log** zones appear.

Payment Data Records

The **Payment Data Records** zone lists the records of the payment data file. This zone contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Payor Account ID	Indicates the account through which the payment is made.
Payee Account ID	Indicates the account for which the payment is made.
Statement ID	Indicates the statement for which the payment is made.
Match Type	Indicates the match type using which the payment must be matched.
Match Value	Indicates the entity (such as bill, contract, and so on) against which the payment must be matched.
Entity Type	Indicates the entity type.
Pay Tender ID	Displays the payment tender ID.
Tender Amount	Displays the tender amount.
Payment Amount	Displays the amount paid through the tender.
Currency	Indicates the currency in which the payment is made.
Date Received	Displays the date when the payment is made.
Bank Account	Displays the bank account from which the payment is made.
Tender Type	Indicates the type of tender through which the payment is made.
Check Number	Displays the check number if the payment is made through check.
MICR ID	Displays the MICR code.
Status	Indicates the status of the payment record. The valid values are: • Valid • Invalid • Error • In Staging • Processed • Error in Staging
Payment Event Information	Displays information about the payment event which is created for the payment record. **Note:** It has a link. On clicking the link, the **Payment Event** screen appears with the details of the respective payment event. The data appears in this column when the status of the payment record is **Processed**.
Messages	On clicking the **View** (🔗) icon, the **Error Messages** window appears where you can view the reasons why the status of the payment record is **Invalid** or **Error**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The **View** icon appears when the payment data record is in the **Error** or **Invalid** status.

Note:

Pagination is used to display limited number of records in the **Payment Data Records** zone. By default, 20 records are displayed in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status** and **Check Number**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

By default, the **Payment Data Records** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

Payment Staging Records

The **Payment Staging Records** zone lists the staging records of the payment data file. This zone contains the following columns:

Column Name	Column Description
View	On clicking the **View** (🔗) icon, you can view the payment upload staging details.
External Source ID	Displays the external source ID which is associated with the tender source.
External Reference ID	Displays the external reference ID which is associated with the tender source.
External Transmission ID	Displays the external transmission ID which is associated with the tender source.
External Batch ID	Displays the batch of payments in a transmission.
Payee Account ID	Indicates the account for which the payment is made.
Match Type	Indicates the match type using which the payment is matched.
Match Value	Indicates the entity (such as bill, contract, and so on) against which the payment is matched.
Payment Amount	Displays the amount paid through the tender source.

By default, the **Payment Staging Records** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the payment data record in the **Payment Data Records** zone.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Payment Data File Log

The **Payment Data File Log** zone lists the complete trail of actions performed on the payment data file. This zone contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action is performed on the payment data file.
Log Details	Displays the details of the action performed on the payment data file.
User	Indicates the user who performed the action on the payment data file.

By default, the **Payment Data File Log** zone does not appear in the **Payment Upload** screen. It appears when you click the **Broadcast** (ᯤ) icon corresponding to the payment data file in the **Search Payment Data File** zone.

Searching for a Payment Data File

Prerequisites

To search for a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)

Procedure

To search for a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.
   The **Payment Upload** screen appears.
3. Enter the search criteria in the **Search Payment Data File** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of payment data files that meet the search criteria appears in the **Search Results** section.

Uploading a Payment Data File

Prerequisites

To upload a payment data file, you should have:

- File types defined in the application (where the feed type is set to **Payment Upload Data**)
- Payment data in the required CSV file format

Procedure

To upload a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.
   The **Payment Upload** screen appears.
3. Click the **Upload** button in the **Page Title** area of the **Payment Upload** screen.

   The **Upload Payment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to indicate the type of payment data file. **Note:** The list includes only those file types where the feed type is set to **Payment Upload Data**.	Yes
File Name	Used to specify the name and path of the payment data file that you want to upload. **Note:** You can also click the **Browse** button corresponding to this field to browse to the location where the payment data file is available in the system.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No

4. Select the type of payment data file from the **File Type** list.
5. Click the **Browse** button corresponding to the **File Name** field.

   The **Choose File to Upload** dialog box appears.
6. Browse to the location where the payment data file that you want to upload is available.
7. Click **Open**.

   The payment data file name and path appears in the **File Name** field.
8. Click **Upload**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

Note: The system considers the payment data file for upload only when the payment data file is parsed without any errors and contains less than 1000 payment records.

9. Click **OK**.

   Once the payment data file is successfully uploaded, the status of the payment data file is changed to **Pending**. The system changes the status of the payment data file based on the following conditions:

   - If a payment record is successfully validated, the status of the payment record is changed to **Valid**.
   - If a payment record is incorrect or contains missing information, the status of the payment record is either changed to **Invalid** or **Error**. For more information on various payment record statuses, see the Payment Record Status Transition on page 1088.

   Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing information in the CSV file and then re-upload the file once again. Unless and until, a payment data file has no invalid records, you cannot move any record to the staging area. You can view the details of the payment data file in the **Payment Upload** screen.

Replacing an Existing File

Prerequisites

To replace an existing payment data file, you should have:

- File types defined in the application (where the feed type is set to **Payment Upload Data**)
- Payment data in the required CSV file format

Procedure

To replace an existing payment data file:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Upload**.
   The **Payment Upload** screen appears.
3. Click the **Upload** button in the **Page Title** area of the **Payment Upload** screen.

   The **Upload Payment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to indicate the file type for uploading the payment data file.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those file types where the feed type is set to **Payment Upload Data**.	
File Name	Used to indicate the name and path of the payment data file that you want to upload. **Note:** You can also click the **Browse** button corresponding to this field to browse the location of the payment data file available in the system.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. **Note:** You must select this check box only when you want to upload the same file once again. You can replace an existing file when the payment data file is in the **Validated** status. In other words, you cannot replace a file whose payment records are already moved to the staging area and/or for which payment events are already created.	No

4. Select the type of payment data file from the **File Type** list.
5. Click the **Browse** button corresponding to the **File Name** field.

   The **Choose File to Upload** dialog box appears.
6. Browse to the location where the payment data file that you want to replace is available.
7. Click **Open**.

   The payment data file name and path appears in the **File Name** field.
8. Click **Upload**.

   A message appears indicating that the payment data file is uploaded successfully.

Note: The system considers the payment data file for upload only when the payment data file is parsed without any errors and contains less than 1000 payment records.

9. Click **OK**

   Once the payment data file is successfully uploaded, the status of the payment data file is changed to **Pending**. The system changes the status of the payment data file based on the following conditions:

   - If a payment record is successfully validated, the status of the payment record is changed to **Valid**.
   - If a payment record is incorrect or contains missing information, the status of the payment record is either changed to **Invalid** or **Error**. For more information on various payment record statuses, see the Payment Record Status Transition on page 1088.

   Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing information in the CSV file and then re-upload the file once again. Unless and until, a payment data file has no invalid records, you cannot move any record to the staging area. You can view the details of the payment data file in the **Payment Upload** screen.

Cancelling a Payment Data File

There might be situations when incorrect payment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel a payment data file when it is in the **Validated** status. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.

Procedure

To cancel a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Cancel** (⊘) icon in the **Cancel** column corresponding to the payment *d*ata file that you want to cancel.
   A message appears confirming whether you want to cancel the payment data file.

   Note: The **Cancel** icon appears when the status of the payment data file is **Validated**.
3. Click **OK**.
   The status of the payment data file is changed to **Cancelled**.

Moving the Payment Records to the Staging Area

Procedure

To move the payment records to the staging area:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Move to Staging** (⧉) icon in the **Move to Staging** column *c*orresponding to the payment data file whose records you want to move to the staging area.

   A message appears confirming whether you want to move all payment records to the payment upload staging area.

   Note:

   The **Move to Staging** icon appears when:

   - The status of the payment data file is **Validated**.
   - There are no invalid records in the payment data file.
   - The **Disable Move to Staging** check box is not selected in the respective file type.

   The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. Click **OK** in the message box.
   A message appears indicating that the payment records are successfully copied from the pre-staging to staging area.
4. Click **OK** in the message box.
   The status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**.

Editing a Payment Staging Record

You can edit a payment record when it is moved from the pre-staging to staging area. On editing a payment record in the staging area, the system does not reflect the changes in the pre-staging area. It only reflects the changes in the staging area.

Procedure

To edit a payment staging record:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the payment data file whose staging records you want to edit.
   The **Payment Data Records** and **Payment Data File Log** zones appear.
3. In the **Payment Data Records** section, click the **Broadcast** (📡) icon corresponding to the payment data file whose staging records you want to edit.
   The **Payment Staging Records** zone appear.
4. In the **Payment Staging Records** zone, click the **View** (🔗) icon in the **Payment Staging Record** column corresponding to the payment staging record whose details you want to edit.
   The **Payment Upload Staging** screen appears. It contains the following tabs:
   - **Tender Details** - Enables you to view and edit the tender control staging details.
   - **Payment Advice** - Enables you to view and edit the payment staging details.
   - **Payment Characteristics** - Enables you to view and edit the payment characteristic staging details.
5. Edit or remove the tender details, if required.
6. Edit or remove the payment advice details, if required.
7. Edit or remove the payment characteristics, if required.
8. Click the **Save** button in the **Page Title** area of the **Payment Upload Staging** screen.
   The changes made to the payment staging record are saved.

Chapter 14

Freeze Payments on Notification

Topics:

- Freeze Payments on Notification Process
- Prerequisites
- Automatic Payment or Refund Clearing Staging Record Status Transition
- EDI 824 File Format
- Sample EDI 824 File Format
- Automatic Payment and Refund Upload Reason
- Automatic Payment and Refund Clearing Staging

Oracle Revenue Management and Billing facilitates you to create automatic payments and refunds when the automatic payment option is enabled for an account. A clearing record is created for each automatic payment and refund in the system. You can then send the automatic payment and refund clearing records to the auto clearing house for verification. The system provides the mechanism to extract the automatic payment clearing records in a flat file. You can then send the flat file to the auto clearing house for verification. However, the implementation team will have to write the custom logic to extract the automatic refund clearing records in a file which you can then send to the auto clearing house for verification.

Once the auto clearing house reviews the automatic payment clearing records, the system allows you to upload review comments received in the EDI 824 file format. On uploading an EDI 824 file, an automatic payment clearing staging record is created for each valid automatic payment clearing ID. The data received from the auto clearing house is stored in the following staging tables:

- CI_APAY_STAGE_UP
- CI_APAY_STAGE_UP_REM
- CI_APAY_STGUP_CHAR

The implementation team will have to write the custom logic to upload review comments for automatic refund clearing records in the above mentioned staging tables. The review comments for automatic payment clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. payment cancelation reason or NOC reason) which will help you to determine whether the automatic payment must be frozen or cancelled in the system. Similarly, the review comments for automatic refund clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) which will help you to determine whether the refund request must be voided and refund adjustments must be cancelled in the system.

Once the review comments are received from the auto clearing house, you can do the following:

- Freeze or cancel the automatic payments
- Void the refund requests and cancel the refund adjustments

For more detailed information about the freeze payments on notification process, see Freeze Payments on Notification Process on page 1111.

The system allows you to define upload reasons, payment cancelation reasons, NOC reasons, and void status reasons. The system also allows you to edit and delete the automatic payment and refund clearing staging records through the user interface. However, you can edit an automatic payment or refund clearing staging record when it is in the **Pending** or **Error** status, and you can delete an automatic payment or refund clearing staging record when it is in the **Pending** status. During the freeze payments on notification process,

the automatic payment and refund clearing staging records go through various statuses in its lifecycle. For more information about the statuses, see Automatic Payment or Refund Clearing Staging Record Status Transition on page 1116.

For more information on how to setup the freeze payments on notification process, see Prerequisites on page 1114.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Freeze Payments on Notification Process

The Freeze Payments on Notification process includes the following sub-processes:

1. Creating Automatic Payments and Refunds on page 1111
2. Generating a Flat File on page 1111
3. Uploading Response from Auto Clearing House (ACH) on page 1112
4. Retry Automatic Payment on page 1112
5. Freezing or Canceling Automatic Payments on page 1113
6. Voiding Refund Requests and Canceling Refund Adjustments on page 1113
7. Generating To Do Entries on page 1114
8. Creating Tender Controls on page 1114

Note that during the freeze payments on notification process, you need to execute the following batches in the specified order:

1. Create Automatic Payments and Refunds (APAYCRET)
2. Activate Automatic Payments (ACTVTAPY)
3. Extract Automatic Payments (APAYACH)
4. Maintain Additional Information for Staging Record (C1-APRCH)
5. Upload Response from Auto Clearing House (C1-APACK)
6. Freeze or Cancel Automatic Payments (APAYRA)
7. Cancel Automatic Refunds (AREFRA)
8. To Do Creation for Automatic Payment Exception Records (APAYUPTD)
9. Create Tender Controls for Automatic Payments (BALAPY)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Creating Automatic Payments and Refunds

If you have configured the automatic payment option for an account, the system calculates the automatic payment amount and extract date during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. The **Create Automatic Payments and Refunds (APAYCRET)** batch allows you to create automatic payment and refund request depending on whether the automatic payment amount is in debit or credit. It also creates a clearing record for each automatic payment and refund in the **CI_APAY_CLR_STG** and **CI_ADJ_CLR_STG** tables, respectively. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Generating a Flat File

Unless you activate a clearing record, you cannot extract the clearing record in a flat file. The **Activate Automatic Payments (ACTVTAPY)** batch allows you to activate a clearing record. It stamps the **APAYACH** batch control and incremental batch run number on the clearing record.

Once the clearing records are activated, you can extract the clearing records in a flat file. The **Extract Automatic Payments (APAYACH)** batch allows you to extract the clearing records with the latest batch run number in a flat file. The flat file is then sent to the auto clearing house for review. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, you cannot activate and extract the automatic refund clearing records using the **Activate Automatic Payments (ACTVTAPY)** and **Extract Automatic Payments (APAYACH)** batches, respectively. The implementation team will have to write the custom logic to activate and extract automatic refund clearing records in a flat file.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Uploading Response from Auto Clearing House (ACH)

Once the auto clearing house reviews the automatic payment clearing records, the review comments can be shared in the EDI 824 file format. An EDI 824 file may contain the review comments for one or more automatic payment clearing records. You can upload these EDI 824 files and store the review comments in the staging area using the **Upload Response from Auto Clearing House (C1-APACK)** batch.

On uploading an EDI 824 file, the system checks whether the automatic payment clearing ID specified in each record exists in the system. If so, it creates an automatic payment clearing staging record for the automatic payment clearing ID in the **CI_APAY_STAGE_UP** table. If the acknowledgement code in the record is set to **TE** or **TR**, the system considers that the auto clearing house has rejected the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Reject Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. payment cancelation reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table.

However, if the acknowledgement code is blank or if the acknowledgement code is set to a value other than **TE** or **TR**, the system considers that the auto clearing house has accepted the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Success Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. NOC reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In this case, the record may contain more than one error code.

The status of the automatic payment clearing staging record is set to **Pending**. If the error code (i.e. payment cancelation reason or NOC reason) is invalid, the status of the automatic payment clearing staging record is set to **Error**. An exception is logged in the **CI_APAY_STGUP_EXC** table. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is set to **Error** and an exception is logged in the **CI_APAY_STGUP_EXC** table.

The system sets the automatic payment distribution and freeze date (i.e. **APAY_DIST_FRZ_DT**) for each automatic payment clearing record (for which automatic payment clearing staging record is added in the system) to the payment date (which is stored on the payment event). For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note: An additional table named **CI_APAY_STGUP_CHAR** is available which the implementation team can use to store additional information about the automatic payment clearing staging record in the form of characteristics.

To ensure that the EDI 824 files are uploaded successfully, you need to set the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:

- **Line Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of line.
- **Field Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of data record.
- **Reject Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has rejected the automatic payment clearing record.
- **Success Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has accepted the automatic payment clearing record with or without Notice to Change (NOC).

Note: You must specify an upload reason which is already defined in the system.

For more information about the EDI 824 file format, see EDI 824 File Format on page 1116.

Retry Automatic Payment

In the Freeze Payments on Notification feature, the system enables you to freeze or cancel the automatic payment based on the review comments received from the auto clearing house. Until now, the system did not allow to resend the

Copyright © 2009, 2025, Oracle and/or its affiliates.

automatic payment clearing records to the auto clearing house for review in case of rejection. Now, the system enables you to resend the rejected automatic payment clearing records to the auto clearing house for review.

To enable this feature, you need to set the **C1-APMSG** characteristic type for the required divisions. Here, you must set the maximum automatic payment reattempts allowed while using the Freeze Payments on Notification feature.

A new batch named **C1-APRCH** is introduced in this release. You need to execute this batch in between the following two batches - **C1-APACK** and **APAYRA**. The **C1-APRCH** batch considers the automatic payment clearing staging records which are in the **Pending** status from the **CI_APAY_STAGE_UP** table. The system then checks whether the **APAY_UPL_RSN_TYPE** column corresponding to the automatic payment clearing staging record is set to **SUCC** or **CANC**. If the **APAY_UPL_RSN_TYPE** column corresponding to the automatic payment clearing staging record is set to **SUCC**, the system updates the last extract date of the automatic payment clearing staging record to the extract date which is available corresponding to the clearing record in the **CI_APAY_CLR_STG** table. However, if the **APAY_UPL_RSN_TYPE** column corresponding to the automatic payment clearing staging record is set to **CANC**, the system checks whether the number of automatic payment clearing staging records for the clearing record is equal to or greater than one. If the number of automatic payment clearing staging records for the clearing record is equal to or greater than one, the system increments the retry count of the clearing ID. If the retry count is greater than zero and less than the maximum automatic payment reattempt limit defined for the division, the system does the following:

- Recalculates the extract date and stamps it against the corresponding clearing record in the **SCHED_EXTRACT_DT** column of the **CI_APAY_CLR_STG** table
- Clears the **BATCH_NBR** column of the corresponding clearing record in the **CI_APAY_CLR_STG** table
- Clears the **APAY_DIST_FRZ_DT** column of the corresponding clearing record in the **CI_APAY_CLR_STG** table

Finally, the status of the automatic payment clearing staging record is set to **RETR**. A To Do is created using the **C1-APRET** To Do type to notify that the status of an automatic payment clearing staging record is changed to **RETR**.

Freezing or Canceling Automatic Payments

Once the review comments are received in the form of reason and error codes for an automatic payment clearing record, you need to freeze or cancel the automatic payment based on the reason code. You can freeze or cancel automatic payments through the **Freeze or Cancel Automatic Payments (APAYRA)** batch.

On executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, the system checks whether the reason code (i.e. upload reason) and error code (i.e. payment cancelation reason or NOC reason) specified in the automatic payment clearing staging record exist in the system. This batch considers only those automatic payment clearing staging records which are in the **Pending** status and for which payment freeze date is specified in the automatic payment clearing record. If the reason code and error code exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm cancels the automatic payment and payment event. If the type of reason code is **Success**, the attached algorithm freezes the automatic payment on the payment freeze date. However, if the type of reason code is **Success** and the error code is specified along with the reason code, the attached algorithm freezes the automatic payment on the payment freeze date, stores error codes (i.e. NOC reasons) as payment tender characteristics and then creates a To Do entry to notify user about these NOC reasons. Finally, the status of the automatic payment clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, payment cancelation reason, or NOC reason) specified in the automatic payment clearing staging record does not exist in the system, the status of the automatic payment clearing staging record is changed to **Error**. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is changed to **Error**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Voiding Refund Requests and Canceling Refund Adjustments

Once the auto clearing house reviews the automatic refund clearing records and shares the review comments, the implementation team will have to store the review comments in the following staging tables:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **CI_APAY_STAGE_UP** - Used to store the automatic payment or refund clearing staging record for an automatic payment or refund clearing record, respectively. The status of the automatic payment or refund clearing staging record must be set to **Pending**.
- **CI_APAY_STAGE_UP_REM** - Used to store the reason and error codes of each automatic payment or refund clearing staging record.
- **CI_APAY_STGUP_CHAR** - Used to store additional information about the automatic payment or refund clearing staging record in the form of characteristics.

The review comments must be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) for an automatic refund clearing record. On executing the **Cancel Automatic Refunds (AREFRA)** batch, it checks whether the reason and error codes specified in the automatic refund clearing staging record exist in the system. If the reason and error codes exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm changes the status of the refund request to **Voided** and the corresponding refund adjustments are canceled. If the type of reason code is **Success**, no changes are made to the refund request and refund adjustments. Finally, the status of the automatic refund clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, void status reason) specified in the automatic refund clearing staging record does not exist in the system, the status of the automatic refund clearing staging record is changed to **Error**.

Generating To Do Entries

If an exception occurs while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, you can notify the user about such exception. The **To Do Creation for Automatic Payment Exception Records (APAYUPTD)** batch allows you to create a To Do using the **APAYUPTD** To Do type when an exception is logged for an automatic payment clearing staging record in the **CI_APAY_STGUP_EXC** table. The system creates one To Do entry for all exceptions that have occurred for an automatic payment clearing staging record. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, a To Do is not created when an exception is logged for an automatic refund clearing staging record in the **CI_APAY_STGUP_EXC** table while executing the **Cancel Automatic Refunds (AREFRA)** batch.

Creating Tender Controls

Once you freeze the automatic payments, you need to create tender and deposit controls. The **Create Tender Controls for Automatic Payments (BALAPY)** batch allows you to create tender and deposit controls for each automatic payment which is frozen, but not yet linked to any tender control. One tender control is created for the **APAYACH** batch control and batch run number combination. The payment tenders of these automatic payments are then linked to the tender control.

This batch also balances the open tender control records and changes the status of the tender and deposit controls, accordingly. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the freeze payments on notification process, you need to do the following:

- Define the automatic payment instructions for the account for which you want to enable the automatic payment option.

  Note: You can either define non-rule based effective dated automatic payment instructions in the **Auto Pay** tab of the **Account** screen or define rule based effective dated automatic payment instructions through the **Auto Pay Rule** screen.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Set the **Autopay Creation Option** field to **Freeze Payment on Notification** in the **Billing** tab of the **Installation Options** screen.
- Create an automatic payment creation algorithm using the **APAY-CREATE** algorithm type and attach it to the **Automatic Payment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create an automatic refund creation algorithm using the **C1-AREF-CRET** algorithm type and attach it to the **Automatic Adjustment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create a date calculation algorithm using the **APAY-DTCALC** algorithm type and attach it to the **Autopay Date Calculation Alg** spot of the auto pay route type which is specified on the account's automatic payment instruction.
- Define the required upload reasons in the system.
- Define the required payment cancelation reasons in the system.
- Define values for the **APAY_UPL_NOC_LOOKUP** lookup field.

  Note: The **APAY_UPL_NOC_LOOKUP** lookup field is used to define NOC reasons. The NOC reason specified in the automatic payment clearing staging record must exists in this lookup field and its status must be **Active**. Otherwise, the status of the automatic payment clearing staging record is changed to **Error**.
- Define voided status reasons for the **C1-RefundReq** business object.
- Create an automatic payment success algorithm using the **C1-APAY-SUCC** algorithm type and attach it to the reason code where the reason type is set to **Success**.

  Note: You must attach the automatic payment success algorithm to an upload reason which you want to use while freezing automatic payments.
- Create an automatic payment cancel algorithm using the **C1-APAY-CAN** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

  Note: You must attach the automatic payment cancel algorithm to an upload reason which you want to use while canceling automatic payments.
- Create a void automatic refund algorithm using the **C1-AREF-VOID** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

  Note: You must attach the void automatic refund algorithm to an upload reason which you want to use while voiding automatic refunds.
- Create a characteristic type where the characteristic entity is set to **Payment Tender**. And, then specify this characteristic type as the value for the **Tender Characteristic Type** parameter in an algorithm which is created using the **C1-APAY-SUCC** algorithm type.
- Assign the **C1-ACH** To Do type to a To Do role whose users must receive the To Do entries generated when automatic payments are frozen with a Notice to Change (NOC).
- Assign the **APAYUPTD** To Do type to a To Do role whose users must receive the To Do entries generated when exceptions have occurred while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch.
- Define values for the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:
  - Line Separator
  - Field Separator
  - Reject Upload Reason
  - Success Upload Reason

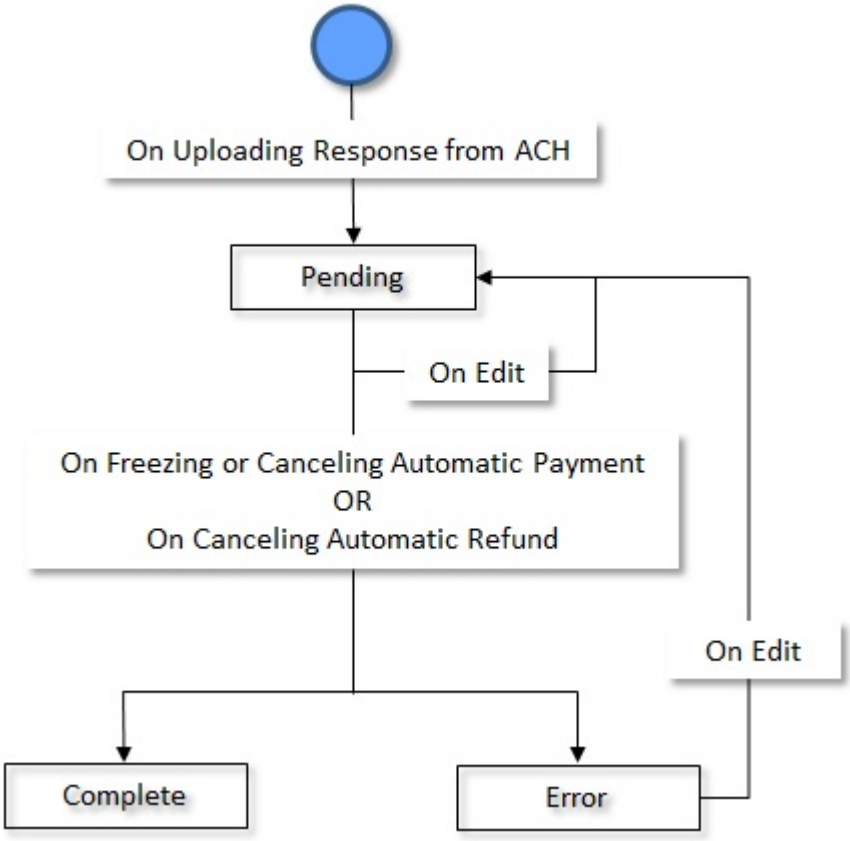
Automatic Payment or Refund Clearing Staging Record Status Transition

The following figure graphically indicates how an automatic payment or refund clearing staging record moves from one status to another during the freeze payments on notification process:



EDI 824 File Format

Before uploading the EDI 824 file, you need to ensure that the file contains the following tags and attributes:

Tag	Attribute	Description	Mandatory (Yes or No)
OTI	Reference Number	Used to specify the automatic payment clearing ID. It indicates the automatic payment clearing record for which the review comments are received from the auto clearing house.	Yes
OTI	Acknowledgement Code	Used to indicate whether the automatic payment clearing record is accepted or rejected by the auto clearing house. If you want to reject the automatic payment clearing record, you must specify **TE** or **TR** as the acknowledgement code. However, if you want to approve the automatic payment clearing record, you can	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Tag	Attribute	Description	Mandatory (Yes or No)
		either specify any value other than **TE** or **TR** or leave this attribute blank.	
TED	Error Code	Used to indicate either of the following: • The payment cancelation reason when the automatic payment clearing record is rejected by the auto clearing house. **Note:** You must specify a payment cancelation reason which is already defined in the system. • The Notice to Change (NOC) reason when the automatic payment clearing record is accepted by the auto clearing house with a Notice to Change (NOC). **Note:** You must specify a NOC reason which is already defined in the **APAY_UPL_NOC_LOOKUP** lookup field.	Yes (Conditional) **Note:** This attribute is required when the automatic payment clearing record is rejected by the auto clearing house.
TED	Error Description	Used to specify the reason why the automatic payment clearing record is either rejected or accepted with a Notice to Change (NOC).	No

Sample EDI 824 File Format

OTI*TR*TN*411302586842\

TED*WA01*WRONG ACCOUNT\

OTI*TF*TN*411302525641\

OTI*TO*TN*806152348038\

TED*BR01*Bill Reopened\

OTI*TO*TN*806152307159\

OTI*TE*TN*806152307229\

TED*WA01*WRONG ACCOUNT\

Here, TR, TF, TO, and TE are acknowledgement codes. TR and TE indicate that the automatic payment clearing records are rejected. And, TF and TO indicate that the automatic payment clearing records are accepted with or without a Notice to Change (NOC).

Here, 411302586842, 411302525641, 806152348038, 806152307159, and 806152307229 are automatic payment clearing records, and WA01 and BR01 are error codes. WA01 is a payment cancelation reason and BR01 is a NOC reason. The string "WRONG ACCOUNT" and "Bill Reopened" are error descriptions.

For more information about the EDI 824 file format, see EDI 824 File Format on page 1116.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Automatic Payment and Refund Upload Reason

Once the auto clearing house reviews the automatic payment and refund clearing records, an appropriate upload reason must be received for each clearing record. The upload reason indicates the following:

- Whether the automatic payment must be frozen or cancelled in the system
- Whether the automatic refund must be canceled in the system (i.e. the refund request must be voided and refund adjustments must be canceled)

The **Automatic Payment and Refund Upload Reason** screen allows you to define, edit, and delete an upload reason. It contains the following zone:

- Upload Reasons on page 1118

Upload Reasons

The **Upload Reasons** zone lists upload reasons that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Reason	Displays the upload reason.
Reason Type	Indicates the type of upload reason. The valid values are: • Cancel • Success
Eligible for Processing	Indicates whether the algorithms attached to the upload reason must be triggered while executing the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch. The valid values are: • Y • N
Description	Displays the description of the upload reason.
Edit	On clicking the **Edit** (✎) icon, the **Automatic Payment and Refund Upload Reason** screen appears where you can edit the details of the upload reason.
Delete	On clicking the **Delete** (🗑) icon, you can delete the upload reason.

You can define an upload reason by clicking the **Add** link in the upper right corner of this zone.

Related Topics

For more information on...	See...
How to define an upload reason	Defining an Upload Reason on page 1118
How to edit an upload reason	Editing an Upload Reason on page 1120
How to delete an upload reason	Deleting an Upload Reason on page 1122

Defining an Upload Reason

Prerequisites

Copyright © 2009, 2025, Oracle and/or its affiliates.

To define an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To define an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
   The **Automatic Payment and Refund Upload Reason** screen appears.
3. Click the **Add** link in the upper right corner of the **Upload Reasons** zone.

   The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason.	Yes
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: • **Cancel** - This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. • **Success** - This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the **C1-ACH** To Do type for all NOC reasons specified in the automatic payment clearing staging record.	Yes
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
		Note: This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to **Success**, you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to **Cancel**, you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation.	Yes (Conditional)
		Note: This field is required when you are attaching an algorithm to the upload reason.
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Code Search** window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the **Algorithm** field.	

4. Enter the required details in the **Automatic Payment and Refund Upload Reason** screen.

Note: If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑) icon corresponding to the algorithm.

5. Click **Save**.
   The upload reason is defined.

Editing an Upload Reason

Prerequisites

To edit an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To edit an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
   The **Automatic Payment and Refund Upload Reason** screen appears.
3. In the **Upload Reasons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the upload reason *w*hose details you *w*ant to edit.

   The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Displays the upload reason.	Not applicable
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: • **Cancel** - This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. • **Success** - This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the **C1-ACH** To Do type for all NOC reasons specified in the automatic payment clearing staging record.	Yes
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional) **Note:** This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to **Success**, you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to **Cancel**, you must attach either automatic payment	Yes (Conditional) **Note:** This field is required when you are attaching an algorithm to the upload reason.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation.	
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Code Search** window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the **Algorithm** field.	

4. Modify the required details in the **Automatic Payment and Refund Upload Reason** screen.

> **Note:** If you want to attach more than one algorithm to the upload reason, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete** (🗑) icon corresponding to the algorithm.

5. Click **Save**.
   The changes made to the upload reason are saved.

Automatic Payment and Refund Clearing Staging

The **Automatic Payment and Refund Clearing Staging** screen allows you to search for automatic payment or refund clearing records using various search criteria. In addition, you can:

- View the automatic payment or refund clearing staging records associated to a clearing record
- View the upload reason and payment cancelation reason or NOC reason specified in the automatic payment clearing staging record
- View the upload reason and void status reason specified in the automatic refund clearing staging record
- View the characteristics of the automatic payment or refund clearing staging record
- Edit an automatic payment or refund clearing staging record
- Delete an automatic payment or refund clearing staging record

This screen contains the following zones:

- Search Clearing Record on page 1123
- Associated Clearing Staging Records on page 1125
- Clearing Staging Upload Reasons on page 1126
- Clearing Staging Characteristics on page 1127

Search Clearing Record

The **Search Clearing Record** zone allows you to search for automatic payment and refund clearing records using various search criteria. It contains the following two sections:

- **Search Criteria** - the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the automatic payment or refund clearing records. The valid values are: • Automatic Payment • Automatic Refund	Yes
Clearing ID	Used to search a particular clearing record.	No
Account ID	Used to search clearing records which are created for a particular account.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	
Person Name	Used to search clearing records which are created for accounts of a particular person.	No
Extract From Date	Used to search clearing records that are extracted on or after a particular date.	No
Extract To Date	Used to search clearing records that are extracted on or before a particular date.	No
Bill ID	Used to search clearing records which are created against a bill.	No
Alternate Bill ID	Used to search clearing records which are created against a bill with the specified alternate bill ID.	No
Batch Control	Used to search clearing records where the **APAYACH** batch control is stamped. The valid value is **APAYACH**.	No
Batch Run Number	Used to search clearing records which are activated in a particular batch run.	No

Note: You must specify at least one search criterion while searching for a clearing record.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Clearing ID	Displays the clearing ID.
Account Information	Indicates the account for which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears with the details of the respective account.
Bill Information	Indicates the bill against which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Payment Amount	Displays the payment amount.
	Note: This column appears only when you select the **Automatic Payment** option from the **Search By** list.
Pay Tender ID	Displays the payment tender ID.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Payment Event** screen appears where you can view the details of the respective tender. This column appears when you select the **Automatic Payment** option from the **Search By** list.
Tender Status	Indicates the current status of the payment tender. The valid values are: • Valid • Canceled **Note:** This column appears when you select the **Automatic Payment** option from the **Search By** list.
Extract Date	Displays the date when the clearing record is extracted in a flat file.
Payment Freeze Date	Displays the date when the automatic payment must be frozen in the system. **Note:** This column appears when you select the **Automatic Payment** option from the **Search By** list.
External Source ID	Indicates the tender source through which the payment was remitted.
Entity Type	Indicates the type of entity which is created for automatic refund. The valid value is: • Refund Request **Note:** This column appears when you select the **Automatic Refund** option from the **Search By** list.
Entity ID	Displays the entity ID. **Note:** This column appears when you select the **Automatic Refund** option from the **Search By** list.
Account Number	Indicates the bank account through which the automatic payment is made.
Batch Control	Indicates the batch control which is stamped on the clearing record.
Batch Run Number	Indicates the batch run in which the clearing record was activated.
Alternate Bill ID	Indicates the bill against which the clearing record is created.

Associated Clearing Staging Records

The **Associated Clearing Staging Records** zone lists the automatic payment or refund clearing staging records which are added corresponding to the clearing record. You can edit and delete an automatic payment or refund clearing staging record through this zone. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Status	Indicates the status of the clearing staging record. The valid values are: • Pending • Complete • Error
Edit	On clicking the **Edit** (✎) icon, the **Edit Clearing Staging Record** screen appears where you can edit the details of the clearing staging record. **Note:** You can edit a clearing staging record when it is in the **Pending** or **Error** status.
Delete	On clicking the **Delete** (🗑) icon, you can delete the clearing staging record. **Note:** You can delete a clearing staging record when it is in the **Pending** status.

By default, the **Associated Clearing Staging Records** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the clearing record in the **Search Clearing Record** zone.

Clearing Staging Upload Reasons

The **Clearing Staging Upload Reasons** zone lists the reason code (i.e. upload reason) and error code (i.e. payment cancelation reason, Notice to Change (NOC) reasons, or void status reason) specified in the automatic payment or refund clearing staging record. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence in which the upload reason should be considered while freezing or canceling the automatic payment or while canceling the automatic refund.
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Upload Reason	Indicates whether the auto clearing house has accepted or rejected the clearing record.
Cancel Reason	Indicates the reason why the auto clearing house has rejected the clearing record. If the clearing record is created for an automatic payment, the payment cancelation reason

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	appears in this column. However, if the clearing record is created for an automatic refund, the void status reason appears in this column.
NOC Reason	Indicates the reason why the auto clearing house has accepted the clearing record with a Notice to Change (NOC).
NOC Reason Description	Displays the description of the NOC reason.

By default, the **Clearing Staging Upload Reasons** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears when you click the **Broadcast** ( ) icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

Searching for a Clearing Record

Procedure

To search for a clearing record:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Payments** and then click **Automatic Payment and Refund Clearing Staging**.
   The **Automatic Payment and Refund Clearing Staging** screen appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. Enter the search criteria in the **Search Clearing Record** zone depending on whether you want to search for *a*utomatic payment or refund clearing records.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of clearing records that meet the search criteria appears in the **Search Results** section.

Editing a Clearing Staging Record

Prerequisites

To edit a clearing staging record, you should have:

- Upload reasons defined in the application
- NOC reasons defined in the **APAY_UPL_NOC_LOOKUP** lookup field.
- Payment cancelation reasons defined in the application
- Reasons defined for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen

Note: You can edit a clearing staging record when it is in the **Pending** or **Error** status. On editing a clearing staging record which is in the **Error** status, the status of the clearing staging record is changed to **Pending**. Also, the exceptions logged for the clearing staging record are deleted from the **CI_APAY_STGUP_EXC** table.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Procedure

To edit a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the clearing record whose *a*ssociated clearing staging record you want to edit.
   The **Associated Clearing Staging Records** zone appears.
3. In the **Associated Clearing Staging Records** zone, click the **Edit** (✎) icon in the **Edit** column corresponding *t*o the clearing staging record whose details you want to edit.

   The **Edit Clearing Staging Record** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Clearing Staging ID	Displays the clearing staging ID.	Not applicable
Clearing ID	Indicates the clearing record against which the clearing staging record is added.	Not applicable
Status	Indicates the status of the clearing staging record. The valid values are: • Pending • Complete • Error	Not applicable
Upload Date	Used to specify the date when the clearing staging record was uploaded or added in the system.	Yes

In addition, this screen contains the following two sections:

- **Upload Reasons** - Used to add, edit, or remove the reason code (i.e. upload reason) and error (sub reason) codes from the clearing staging record. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason. It indicates whether the auto clearing house has accepted or rejected the clearing record.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: • Cancel • Success	Yes
Sub Reason Code	Used to specify either of the following: • Payment cancelation reason or void status reason (for automatic refund) when the reason type is set to **Cancel**	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Notice to Change (NOC) reason when the reason type is set to **Success**	
Sub Reason Description	Used to specify the description of the NOC reason.	No

Note: The upload reason, payment cancelation reason, void status reason, and NOC reasons must be already defined in the system. If you specify an invalid reason and sub reason codes, the status of the clearing staging record is changed to **Error** when you execute the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch.

- **Characteristics** - Used to define the characteristics for the clearing staging record.

4. Modify the required details in the **Edit Clearing Staging Record** screen.

Note: If you want to add more than one reason or sub reason code, click the **Add** (+) icon in the **Upload Reasons** section and then specify the required details. However, if you want to remove a reason or sub reason code, click the **Delete** (🗑) icon corresponding to the reason.

5. Define characteristics for the clearing staging record, if required.
6. Click **Save**.
   The changes made to the clearing staging record are saved.

Defining a Characteristic for a Clearing Staging Record

Prerequisites

To define a characteristic for a clearing staging record, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Payment Upload**)

Procedure

To define a characteristic for a clearing staging record:

1. Ensure that the **Characteristics** section is expanded when you are editing a clearing staging record.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the clearing staging record.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Auto Payment Upload**.	**Note:** This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the clearing staging record.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the clearing staging record, click the **Add** (+) icon and *t*hen repeat step 2.

Note: However, if you want to remove a characteristic from the clearing staging record, click the **Delete** (🗑) icon corresponding to the characteristic.

Deleting a Clearing Staging Record

Procedure

To delete a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the clearing record whose *a*ssociated clearing staging record you want to delete.
   The **Associated Clearing Staging Records** zone appears.
3. In the **Associated Clearing Staging Records** zone, click the **Delete** (🗑) icon in the **Delete** column *c*orresponding to the clearing staging record that you want to delete.
   A message appears confirming whether you want to delete the clearing staging record.

Note: You can delete a clearing staging record when it is in the **Pending** status.

4. Click **OK**.
   The clearing staging record is deleted.

Chapter 15

Construct

Topics:

- Prerequisites
- Construct Status Transition
- Template
- Construct (Used for Searching)
- Construct (Used for Viewing)
- Billing and Settlement Hierarchy

Oracle Revenue Management and Billing provides you with a flexible way to define the billing hierarchy using the construct based billing feature. In a construct, you can include:

- **Usage Accounts** - A set of usage accounts of different persons whose charges and/or adjustments must be billed through an invoice account. These persons need not belong to the same person hierarchy. The system allows you to select a set of usage accounts based on the criteria using the account selection template. The persons' and their child persons' usage accounts that meet the specified criteria are included in the construct.
- **Billable Charges** - A set of billable charges that you want to bill through an invoice account. The system will only consider billable charges of those usage accounts for which the construct is defined. The system allows you to select a set of billable charges based on the criteria using the billable charge selection template.
- **Adjustments** - A set of adjustments that you want to bill through an invoice account. The system will only consider adjustments of those usage accounts for which the construct is defined. The system allows you to select a set of adjustments based on the criteria using the adjustment selection template.

You can bill the charges and adjustments of usage accounts on the same invoice account. Or, you can bill the charges of usage accounts on one invoice account and the adjustments on another invoice account. Or, you can bill the charges or adjustments of the usage accounts on more than one invoice account. You can define different types of constructs. At present, the system supports only invoice and settlement construct. Here, settlement includes receivables and payables.

One usage account can belong to only one active construct and not to multiple active constructs at the same time. The system also allows you to exclude some usage accounts when you do not want to include all usage accounts that satisfy the criteria in the construct. While defining a construct, you can use an existing invoice account. The contracts for the invoice account are created when you activate the construct. One contract is created for every target contract type set on usage accounts' contracts' contract type.

You can use a construct during the construct based billing process when the construct is in the **Active** status. The following batches are designed to support the construct based billing process:

- **Construct Based - Pending Bill Generation (BILLOPEN)** - This batch is used to generate pending bills for accounts that meet the criteria.
- **Construct Based - Bill Segment Generation (BSGENREG)** - This batch is used to generate the bill segments on the pending bills.
- **Construct Based - Bill Completion (POSTPROC)** - This batch is used to generate post processing bill segments during the bill completion process. It changes the status of the bill to **Complete**.

During the bill generation process, all accounts that meet the criteria are considered for billing. These accounts may be usage or invoice accounts. All billable charges (with the **Adhoc** flag set to **No**) whose start date is earlier than or equal to the batch business date are considered during bill segment generation. If a billable charge satisfies the rule defined on any active construct, the bill segment is generated on the respective invoice account. And, if a billable charge does not satisfy the rule defined on any active construct, the bill segment is generated on the usage account. The post-processing bill segments, if any, are generated on the invoice or usage account depending on the type of price assignment.

Note: The construct based billing batches are currently not designed to consider billable charges whose end date is earlier than or equal to the batch business date.

For more information on how to setup the construct based billing process, refer to Prerequisites on page 1137.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Prerequisites

To setup the construct based billing process, you need to do the following:

- Define the Target Contract Type characteristic for usage accounts' contracts' contract type.
- Set the **C1-INCT** feature configuration.
- Create a default account creation algorithm using the C1-ACTCR-IC algorithm type.
- Create a default contract creation algorithm using the C1-CTMP-IC algorithm type.
- Create a usage account construct mapping algorithm using the C1-UACM-IC algorithm type.
- Associate the usage account construct mapping algorithm to a division whose usage accounts you want to include in any existing active construct.

  Note: There might be situations when a usage account is created after the construct is activated. If you want to include such usage account in any existing active construct, you need to associate the usage account construct mapping algorithm to a division in which you are creating the usage account. If the usage account satisfies the criteria specified in any active construct, it is included in the construct once the usage account is created.
- Define the required templates, profiles and constructs in the application.
- Define values for the PAGE_NUMBER lookup field.
- Define approval workflow group, approval workflow chain, approval workflow criteria, and approval workflow group chain linkage for construct.
- Configure the approval workflow settings for construct.
- Define approval workflow reasons which are required while rejecting a construct.
- Assign the **C1-IC_AC** To Do type to a To Do role whose users must receive the To Do entries generated when the new invoice account is created while activating a construct.
- Transfer adjustments algorithm defined using the **C1-IC-AD-XFR** algorithm type.
- Define an algorithm of the BS-CRE-INVCN algorithm type and attach it on the **Create Algorithm** spot of the bill segment type.

  Note: If you want to use the regular billing process, you need to attach an algorithm of the BS-CRE-PRICE algorithm type on the **Create Algorithm** spot of the bill segment type. However, if you want to use the construct based billing process, you need to attach an algorithm of the BS-CRE-INVCN algorithm type on **Create Algorithm** spot of the bill segment type.

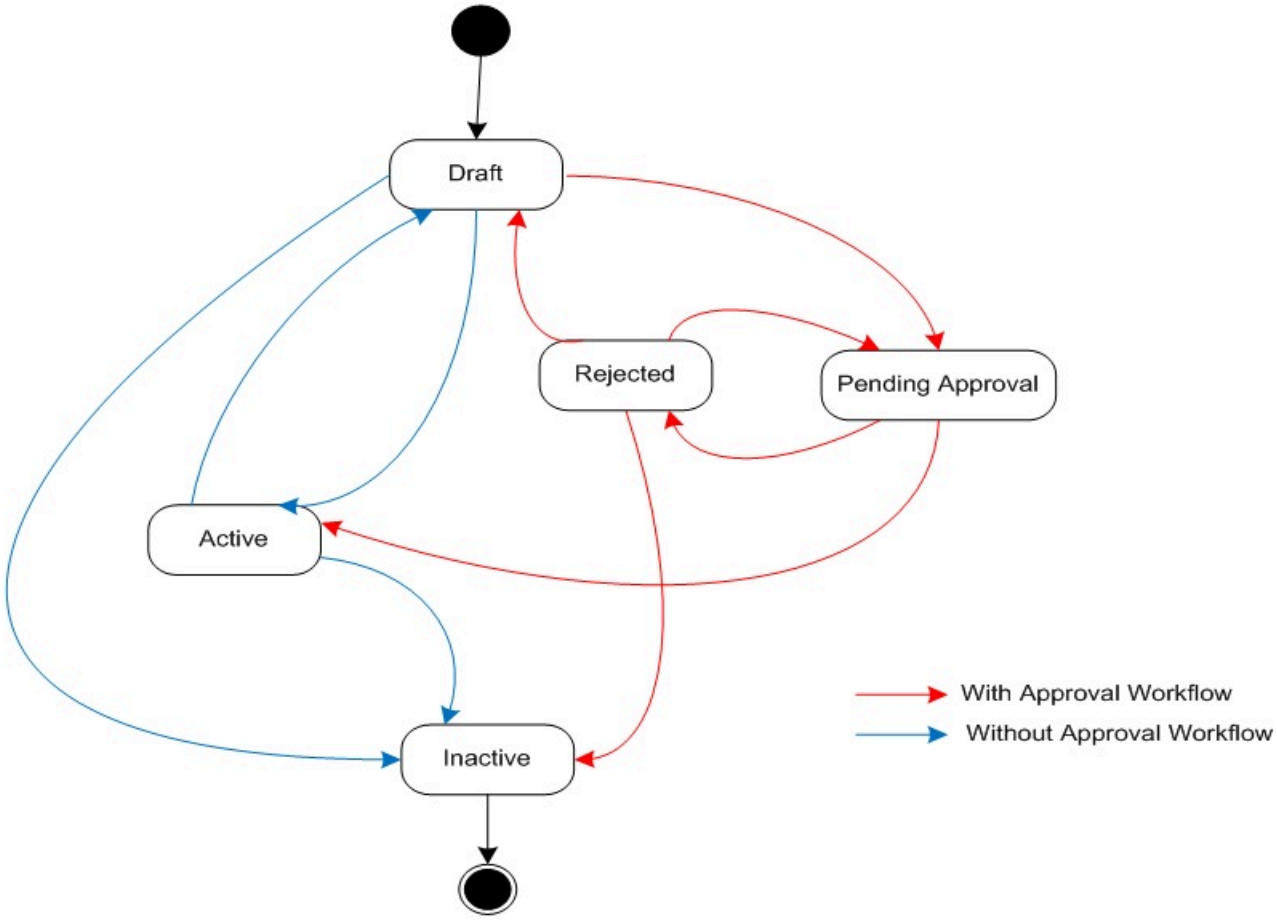
How to set the **C1-INCT** feature configuration	Setting the C1-INCT Feature Configuration on page 4282

Construct Status Transition

The following figure graphically indicates how a construct moves from one status to another during its lifecycle:

Copyright © 2009, 2025, Oracle and/or its affiliates.



Template

Template is used to select a set of usage accounts, billable charges, or adjustments based on the criteria. In a template, you can define a SELECT statement to retrieve data from a table or view based on a condition. You can use the bind variables in the where clause (condition). The bind variables must be alphanumeric and prefixed with the colon (:). The values for these bind variables are specified while defining a construct.

You can validate the syntax of the SELECT statement. If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

You can define the following three types of templates:

- **Account Selection** - Used for selecting a set of usage accounts based on the criteria.
- **Adjustment Selection** - Used for selecting a set of adjustments based on the criteria.
- **Billable Charge Selection** - Used for selecting a set of billable charges based on the criteria.

You can only use templates which are active while defining or editing a construct. The **Template** screen allows you to define, edit, and delete a template. You can edit a template even if it is used in any construct. However, any changes made to a template will not be reflected in a construct where the template is already used unless you use the latest template in the construct. This screen consists of the following zones:

- Search Template on page 1139

Copyright © 2009, 2025, Oracle and/or its affiliates.

Search Template

The **Search Template** zone allows you to search for a template using various search criteria. This zone contains the following two sections:

- **Search Criteria** - Used to search by different search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the template name.	No
Description	Used to specify the description for the template.	No
Purpose	Used to indicate the purpose of the template. The valid values are: • **Adjustment Selection** - Used for selecting a set of adjustments based on the criteria. • **Bill Segment Selection** - Used for selecting a set of bill segments based on the criteria. • **Billable Charge Selection** - Used for selecting a set of billable charges based on the criteria. • **Usage Account Selection** - Used for selecting a set of usage accounts based on the criteria. • **Usage and Invoice Account Selection** - Used for selecting a set of usage and invoice accounts based on the criteria.	No
Status	Used to indicate the status of the template. The valid values are: • Active • Inactive	No

Note: You must specify at least one search criterion while searching for a template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Template	Displays the name of the template.
Description	Displays the description of the template.
Purpose	Indicates the purpose of the template. The valid values are: • Adjustment Selection • Billable Segment Selection • Billable Charge Selection • Usage Account Selection • Usage and Invoice Account Selection
Status	Indicates the status of the template. The valid values are: • Active

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Inactive
View	On clicking the **View** (🔗) icon, the **View Template** screen appears where you can view the details of the template.
Edit	On clicking the **Edit** (✎) icon, the **Template** screen appears where you can edit the details of the template.
	Note: If a template is used in any construct, a message appears confirming whether you want to edit the template.

You can create a new template by clicking the **Add** button in the upper right corner of this zone.

Searching for a Template

Procedure

To search for a template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.
   The **Template** screen appears.
3. Enter the search criteria in the **Search Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of templates that meet the search criteria appears in the **Search Results** section.

Defining a Template

Procedure

To define a template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.
   A sub-menu appears.
3. Click the **Add** option from the **Template** sub-menu.

   The **Template** screen appears. It consists of the following zone:

   - **Search Template** - Used to specify basic details about the template. It consists of the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the template name.	Yes
Description	Used to search for a template by it's description.	Yes
Purpose	Used to indicate the purpose of the template. The valid values are: • **Adjustment Selection** - Used for selecting a set of adjustments based on the criteria. • **Bill Segment Selection** - Used for selecting a set of bill segments based on the criteria. • **Billable Charge Selection** - Used for selecting a set of billable charges based on the criteria. • **Usage Account Selection** - Used for selecting a set of usage accounts based on the criteria. • **Usage and Invoice Account Selection** - Used for selecting a set of usage and invoice accounts based on the criteria.	Yes
Status	Used to specify additional information about the template.	Yes

   In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bind Variable	Used to specify the bind variable (which is used in the where clause).	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are defining a bind variable.
Data Type	Used to indicate the type of data that you want to store in the bind variable. The valid values are: • Date • Numeric • String	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.
Label	Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges.	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.
Zone	Used to specify the zone for the template.	Yes (Conditional)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Zone/Code Description** window appears.	**Note:** This field is required when you are defining a bind variable.

4. Enter the required details in the **Main** tab.
5. If you want to define more than one bind variable, click the **Add** (+) icon in the **Bind Variables** section and *t*hen enter the required details.

> **Note:** However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑) icon corresponding to the bind variable.

6. If required, click **Validate** to validate the syntax of the SELECT statement.

> **Note:** If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

7. Define characteristics for the template, if required.
8. Click **Validate and Save**.
   The system validates the syntax of the SELECT statement and then accordingly saves the template.

How to define a characteristic for a template	Defining a Characteristic for a Template on page 1142

Defining a Characteristic for a Template

Prerequisites

To define a characteristic for a template, you should have:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Characteristic types defined in the application (where the characteristic entity is set to Template)

Procedure

To define a characteristic for a template:

1. Click the **Characteristics** tab in the **Template** screen when you are creating or editing a template.

   The **Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the template.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the template.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the template.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the template.

2. Enter the required details.
3. If you want to define more than one characteristic for the template, click the **Add** (+) icon and then repeat step *2*.

   Note: However, if you want to remove a characteristic from the template, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Validate and Save**.
   The characteristics are defined for the template.

Editing a Template

Procedure

To edit a template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.
   The **Template** screen appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the template *w*hose details you want to edit.

Note: If a template is used in any construct, a message appears confirming whether you want to edit the template. You must click **OK** if you want to edit the template. Any changes made to a template will not be reflected in any construct where the template is already used unless you use the latest template in the construct.

The **Template** screen appears. It consists of the following tabs:

- **Main** - Used to specify basic details about the template.
- **Characteristics** - Used to define the characteristics for the template.

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to indicate the template name.	Not applicable
Description	Used to specify the description for the template.	Yes
Detailed Description	Used to specify additional information about the template.	No
Purpose	Used to indicate the purpose of the template. The valid values are: • **Account Selection** - Used for selecting a set of usage accounts based on the criteria. • **Adjustment Selection** - Used for selecting a set of adjustments based on the criteria. • **Billable Charge Selection** - Used for selecting a set of billable charges based on the criteria. • **Usage Account Selection** - Used for selecting a set of usage accounts based on the criteria. • **Usage and Invoice Account Selection** - Used for selecting a set of usage and invoice accounts based on the criteria.	Yes
Status	Used to indicate the status of the template. The valid values are: • Active • Inactive	Yes
Select	Used to specify the column name. It indicates the data that you want to retrieve using the SELECT statement. The default value appears in this field when you select the purpose of the template. However, the default value changes depending on the purpose of template. You can edit the column name whenever required.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	If you have set the purpose of the template to.... / **Then, the default value is...** Account Selection / ACCT_ID Adjustment Selection / ADJ_ID Billable Charge Selection / BILLABLE_CHG_ID	
From	Used to specify the table or view name. It indicates the table or view from which you want to retrieve the data.	Yes
Where	Used to specify the condition based on which you want to retrieve the data from the table or view. You can use the bind variables in the where clause using the following syntax: `{column_name}{operator}:{bind_variable}` The bind variables must be alphanumeric and prefixed with the colon (:). There should not be any space between the column name, operator, and the bind variable. For example, CURRENCY_CD=:CURRENCY. All bind variables used in the where clause must be defined in the **Bind Variables** section.	No

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bind Variable	Used to specify the bind variable (which is used in the where clause).	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.
Data Type	Used to indicate the type of data that you want to store in the bind variable. The valid values are: • Date • Numeric • String	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.
Label	Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges.	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.
Zone	Used to indicate a zone for the template. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Zone/Code Description** window appears.	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.

4. Modify the details in the **Main** tab, if required.

Copyright © 2009, 2025, Oracle and/or its affiliates.

5. If you want to define more than one bind variable, click the **Add** (+) icon in the **Bind Variables** section and *t*hen enter the required details.

> **Note:** However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑) icon corresponding to the bind variable.

6. If required, click **Validate** to validate the syntax of the SELECT statement.

> **Note:** If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

7. Define, edit or remove characteristics of the template, if required.
8. Click **Validate and Save**.
   The system validates the syntax of the SELECT statement and then accordingly saves the changes Defining a Characteristic for a Template on page 1142 made to the template.

Deleting a Template

Procedure

To delete a template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.
   The **Template** screen appears.
3. In the **Search Results** section, click the **Delete** (🗑) icon in the **Delete** column corresponding to the template *t*hat you want to delete.
   A message appears confirming whether you want to delete the template.

> **Note:** You can only delete a template which is not yet used in any construct.

4. Click **OK**.
   The template is deleted.

Construct (Used for Searching)

The **Construct** screen allows you to search for a construct using various search criteria. Through this screen, you can define, edit, view, copy, inactivate a construct. It contains the following zones:

- Search Construct on page 1147

Search Construct

The **Search Construct** zone allows you to search for a construct using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Construct ID	Used to specify the construct ID.	No
Description	Used to specify the description for the construct.	No
Construct Type	Used to indicate the type of the construct. The valid values are: • Invoice Only • Invoice and Settlement • Settlement Only	No
Status	Used to indicate the status of the construct. The valid values are: • Active • Draft • Inactive • Pending Approval • Rejected	No
Effective Start Date	Used to specify the date from when the construct is effective.	No
Effective End Date	Used to specify the date till when the construct is effective.	No
Usage Account Identifier Type	Used to indicate the usage account's identifier type based on which you want to search for a construct.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Invoice Only** or **Invoice and Settlement** option from the **Construct Type** list.	
Usage or Invoice Account Identifier Type	Used to indicate the usage or invoice account's identifier type based on which you want to search for a construct. **Note:** This field appears when you select the **Settlement Only** option from the **Construct Type** list.	No
Usage Account Identifier	Used to indicate the usage account which belongs to the construct. **Note:** This field appears when you select the **Invoice Only** or **Invoice and Settlement** option from the **Construct Type** list.	No
Usage or Invoice Account Identifier	Used to indicate the usage or invoice account which belongs to the construct. **Note:** This field appears when you select the **Settlement Only** option from the **Construct Type** list.	No
Invoice Account Identifier Type	Used to indicate the invoice account's identifier type based on which you want to search for a construct. **Note:** This field appears when you select the **Invoice Only** or **Invoice and Settlement** option from the **Construct Type** list.	No
Settlement Account Identifier Type	Used to indicate the settlement account's identifier type based on which you want to search for a construct. **Note:** This field appears when you select the **Settlement Only** option from the **Purpose** list.	No
Invoice Account Identifier	Used to indicate the invoice account which is used in the construct. **Note:** This field appears when you select the **Invoice Only** or **Invoice and Settlement** option from the **Construct Type** list.	No
Settlement Account Identifier	Used to indicate the settlement account which is used in the construct. **Note:** This field appears when you select the **Settlement Only** option from the **Construct Type** list.	No

Note: You must specify at least one search criterion while searching for a construct.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Construct ID	Displays the construct ID.
Description	Displays the description of the construct.
Construct Type	Indicates the purpose of the construct. The valid values are: • Invoice Only • Invoice and Settlement • Settlement Only
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Status	Indicates the status of the construct. The valid values are: • Active • Draft • Inactive • Pending Approval • Rejected
Copy	On clicking the **Copy** (⎘) icon, the **Construct** screen appears where you can create a construct using an existing construct.
View	On clicking the **View** (🔗) icon, the **Construct** screen appears where you can view the details of the construct.
Edit	On clicking the **Edit** (✎) icon, the **Construct** screen appears where you can edit the details of the construct.
Inactivate	On clicking the **Inactivate** icon (⊘), in the **Inactivate** column, the **Inactivate** window appears confirming whether you want to inactivate the selected construct. **Note:** You can only inactivate the construct which is in **Active** status. The **Inactivate** icon appears in the **Inactivate** column, only in front of the construct which is in **Active** status.

You can create a new construct by clicking the **Add** button in the upper right corner of the **Construct** screen.

Searching for a Construct

Procedure

To search for a construct:

Copyright © 2009, 2025, Oracle and/or its affiliates.

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select the **Billing Management** and then click **Construct**.
   A sub-menu appears.
3. Click the **Search** option from the **Construct** sub-menu.
   The **Construct** screen appears.
4. Enter the search criteria in the **Search Construct** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of constructs that meet the search criteria appears in the **Search Results** section.

Defining a Construct

Procedure

To define a construct:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Construct**.
   A sub-menu appears.
3. Click the **Add** option from the **Construct** sub-menu.

   The **Construct** screen appears. It consists of the following sections:

   - **Main** - Used to specify basic details about the construct.
   - **Characteristics** - Used to define the characteristics for the construct.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Construct Description	Used to specify the description for the construct.	Yes
Construct Type	Used to indicate the type of the construct. The valid values are: • **Invoice** - Indicates that you want to use the construct for billing. • **Invoice and Settlement** - Indicates that you want to use the construct for billing and settlement. • **Settlement** - Indicates that you want to use the construct for settlement.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Here, settlement includes receivables and payables	
Status	Used to indicate the status of the construct. By default, the **Draft** option is selected from the list.	Not applicable
Effective Start Date	Used to specify the date from when the construct is effective. **Note:** The effective from date cannot be later than the effective end date.	Yes
Effective End Date	Used to specify the date till when the construct is effective. **Note:** The effective to date cannot be earlier than the effective start date.	No

Tip: Alternatively, you can access the **Construct** screen by clicking the **Add** button on the top-right of the **Construct** screen.

4. Enter the required details in the **Main** section.
5. Define characteristics for the construct, if required.
6. Do either of the following:

If you want to...	Then...
Save the construct in the draft version	**a.** Click **Save as Draft**. The construct is created and the status of the construct is set to **Draft**. The construct ID is generated automatically when the construct is created.
Activate the construct	**a.** Click **Activate**. The construct is created and the status of the construct is set to **Active**. The construct ID is generated automatically when the construct is created. **Note:** The **Activate** button appears while defining a construct when the approval workflow process is not configured for construct.
Send the construct for approval	**a.** Click **Send for Approval**. The construct is created and the approval workflow request is raised for the construct. The status of the construct is set to **Pending Approval**. In addition, the construct ID is generated automatically when the construct is created. **Note:** The **Send for Approval** button appears while defining a construct when the approval workflow process is configured for construct.

Defining a Characteristic for a Construct

Prerequisites

To define a characteristic for a construct, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Construct)

Procedure

To define a characteristic for a construct:

1. Ensure that the **Characteristics** section is expanded in the **Construct** screen when you are creating or editing *a* construct. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the construct.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the construct.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the construct.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the construct.

2. Enter the required details.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the construct, click the **Add** (+) icon and then repeat *s*tep 2.

> **Note:** However, if you want to remove a characteristic from the construct, click the **Delete** (🗑) icon corresponding to the characteristic.

Related Topics

For more information on...	See...
How to define a construct	Defining a Construct on page 1150
How to edit a construct	Editing a Construct on page 1153

Editing a Construct

You can only edit a construct in the **Draft**, **Active**, or **Rejected** status. If a bill is already generated through a construct and it is in the **Pending** status, you cannot edit the details of the construct. You can only edit the effective to date of a construct when all bills generated through the construct are in the **Completed** status. The effective to date must be later than the last completed bill's bill date. Otherwise, the system will not allow you to edit the effective to date of the construct.

Procedure

To edit a template:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Construct**.
   A sub-menu appears.
3. Click on **Search**.
   The **Construct** screen appears.
4. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the **Construct ID** *w*hose details you want to edit.

> **Note:** If a template is used in any construct, a message appears confirming whether you want to edit the template. You must click **OK** if you want to edit the template. Any changes made to a template will not be reflected in any construct where the template is already used unless you use the latest template in the construct.

The **Template** screen appears. It consists of the following tabs:

- **Main** - Used to specify basic details about the template.
- **Characteristics** - Used to define the characteristics for the template.

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to indicate the template name.	Not applicable
Description	Used to specify the description for the template.	Yes
Detailed Description	Used to specify additional information about the template.	No
Purpose	Used to indicate the purpose of the template. The valid values are:	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>• Account Selection - Used for selecting a set of usage accounts based on the criteria.
• Adjustment Selection - Used for selecting a set of adjustments based on the criteria.
• Billable Charge Selection - Used for selecting a set of billable charges based on the criteria.
• Usage Account Selection - Used for selecting a set of usage accounts based on the criteria.
• Usage and Invoice Account Selection - Used for selecting a set of usage and invoice accounts based on the criteria.</td><td></td></tr>
<tr><td>Status</td><td>Used to indicate the status of the template. The valid values are:
• Active
• Inactive</td><td>Yes</td></tr>
<tr><td>Select</td><td>Used to specify the column name. It indicates the data that you want to retrieve using the SELECT statement.
The default value appears in this field when you select the purpose of the template. However, the default value changes depending on the purpose of template. You can edit the column name whenever required.
<table>
<tr><th>If you have set the purpose of the template to....</th><th>Then, the default value is...</th></tr>
<tr><td>Account Selection</td><td>ACCT_ID</td></tr>
<tr><td>Adjustment Selection</td><td>ADJ_ID</td></tr>
<tr><td>Billable Charge Selection</td><td>BILLABLE_CHG_ID</td></tr>
</table></td><td>Yes</td></tr>
<tr><td>From</td><td>Used to specify the table or view name. It indicates the table or view from which you want to retrieve the data.</td><td>Yes</td></tr>
<tr><td>Where</td><td>Used to specify the condition based on which you want to retrieve the data from the table or view. You can use the bind variables in the where clause using the following syntax:
<code>{column_name}{operator}:{bind_variable}</code>
The bind variables must be alphanumeric and prefixed with the colon (:). There should not be any space between the column name, operator, and the bind variable. For example, CURRENCY_CD=:CURRENCY. All bind variables used in the where clause must be defined in the Bind Variables section.</td><td>No</td></tr>
</table>

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bind Variable	Used to specify the bind variable (which is used in the where clause).	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.
Data Type	Used to indicate the type of data that you want to store in the bind variable. The valid values are: • Date • Numeric • String	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.
Label	Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges.	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.
Zone	Used to indicate a zone for the template. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Zone/Code Description** window appears.	Yes (Conditional) **Note:** This field is required when you are defining a bind variable.

5. Modify the details in the **Main** tab, if required.

Note: If you want to define more than one bind variable, click the **Add** (+) icon in the **Bind Variables** section and then enter the required details. However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑) icon corresponding to the bind variable.

6. If required, click **Validate** to validate the syntax of the SELECT statement.

Note: If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

7. Define, edit or remove characteristics of the template, if required.
8. Click **Validate and Save**.
   The system validates the syntax of the SELECT statement and then accordingly saves the changes made to the template.

Copying a Construct

Instead of creating a construct from scratch, you can create a new construct using an existing construct. This is possible through copying a construct. On copying a construct, the usage accounts, billable charges, and adjustments' selection criteria and characteristics are copied to the new construct. You can then edit the details, if required.

Prerequisites

To copy a construct, you should have:

- Construct (whose copy you want to create) defined in the application

Procedure

To copy a construct:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Construct**.
   A sub-menu appears.
3. Click on **Search**.
   The **Construct** screen appears.
4. In the **Search Results** section, click the **Copy** (⧉) icon in the **Copy** column corresponding to the *c*onstruct whose copy you want to create.

   The **Construct** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Construct Description	Used to specify the description for the new construct.	Yes
Effective From	Used to specify the date from when the new construct is effective. **Note:** The effective from date cannot be later than the effective to date.	Yes
Effective To	Used to specify the date till when the new construct is effective. **Note:** The effective to date cannot be earlier than the effective from date.	No

5. Enter the required details in the **Main** section and the **Characteristics** section.
6. Click **Save and Next**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Construct** screen appears.

7. Edit the details of the new construct, if required.

Viewing the Construct Details

Procedure

To view the details of a construct:

1. Search for the construct in the **Construct** screen.
2. In the **Search Results** section, click the **View** (🔗) icon in the **View** column corresponding to the construct *w*hose details you want to view.

   The **Construct** screen appears. It contains the following sections:

   - **Construct Information** - Displays basic details about the construct.
   - **Include Usage/Invoice Accounts** - Indicates the persons and their usage accounts or the Invoice accounts for which the construct is defined.
   - **Include Bill Segments** - Indicates the bill segments of the usage accounts
   - **Include Billable Charges** - Indicates the billable charges of the usage accounts which are billed through a settlement account.
   - **Exclude Usage/Invoice Accounts** - Indicates the usage accounts of the persons to which this construct is not applicable.
   - **Include Adjustments** - Indicates the adjustments of the usage accounts which are billed through an invoice account.
   - **Linked Accounts** - Indicates the linked accounts which are included in the construct.
3. View the basic details of the construct in the **Construct Information** section.

Construct (Used for Viewing)

The **Construct** screen allows you to view the details of the construct as well as the log entries. Through this screen, you can define, edit, delete various details of a construct and add log entries. It consists of the following tabs:

- Construct - Main on page 1158
- Construct - Log on page 1163

Copyright © 2009, 2025, Oracle and/or its affiliates.

Construct - Main

The **Main** tab displays the details of the construct. It contains the following zones:

- Construct Information on page 1158
- Include Usage/Invoice Accounts on page 1159
- Include Billable Charges on page 1160
- Include Adjustments on page 1160
- Include Bill Segments on page 1161
- Linked Accounts on page 1162
- Exclude Usage/Invoice Accounts on page 1162

Construct Information

The **Construct Information** zone displays the basic details of the construct. It contains the following sections:

- **Main** - The **Main** section contains the following fields:

Field Name	Field Description
Construct ID	Displays the construct ID.
Description	Displays the description of the construct.
Construct Type	Displays the type of the construct.
Status	Displays the status of the construct.
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays date till when the construct is effective.

- **Characteristics** - The **Characteristics** section contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the construct.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the construct. **Note:** The **Edit** button appears when the construct is in the **Draft** status.
Delete	Used to delete the construct. **Note:** The **Delete** button appears when the construct is in the **Draft** status.
Submit	Used to submit the details of the construct. **Note:** The **Submit** button appears when the construct is in the **Draft** status.

- **Record Information** - The **Record Information** section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the construct is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the construct business object.
Status Date Time	Displays the date and time when the construct status is updated
Create Date Time	Displays the date and time when the construct is created.

Include Usage/Invoice Accounts

The **Include Usage/Invoice Accounts** zone displays the details of usage and invoice accounts. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria Description	Displays the description of the criteria.
Criteria	Indicates the bind variable for which you need to define the value. **Note:** The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Edit	On clicking the **Edit** (✎) icon in the **Edit** column, the **Selection Criteria** screen appears where you can edit the details of the usage and invoice accounts.
Delete	On clicking the **Delete** (🗑) icon in the **Delete** column, you can delete the usage and invoice accounts.

Including Usage Accounts in a Construct

While defining a construct, you need to indicate the persons and their usage accounts for which you want to define the construct. The system allows you to select a set of usage accounts based on the criteria using the account selection template. You need to ensure that all usage and invoice accounts in the construct should have the same bill cycle. Otherwise, erroneous results might occur.

Note: One usage account can belong to only one active construct and not to multiple active constructs at the same time.

Prerequisites

To include usage accounts in a construct, you should have:

- Persons, usage accounts, and account selection templates defined in the application

Procedure

To include usage accounts in a construct:

1. Ensure that **Include Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a *c*onstruct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria Description	Displays the description of the criteria.
Criteria	Indicates the bind variable for which you need to define the value.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Edit	On clicking the **Edit** (✎) icon in the **Edit** column, the **Payment Request Type** screen appears where you can edit the details of the payment request type.
Delete	On clicking the **Delete** (🗑) icon in the **Delete** column, you can delete the payment request type.

2. Click the **Add** link at the top-right side of the **Include Usage/Invoice Accounts** zone.
   The **Selection Criteria** screen appears.
3. Enter the required details and click **Save**.
4. If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 3.
5. The **Usage Accounts** are included in the construct.

Excluding Usage Accounts from a Construct

The system will determine the usage accounts based on the criteria defined in the **Exclude Usage Accounts** section. There might be situations when you do not want to include all usage accounts that satisfy the criteria in the construct. In such cases, you can list the usage accounts that should be excluded from the construct.

Procedure

To exclude usage accounts from a construct:

1. Ensure that **Exclude Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a *c*onstruct on the **Construct** screen. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Account ID	Displays the account ID.
Account Information	Displays the information of the account. In addition, this column has a **Context Menu** (▾) which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Edit	On clicking the **Edit** (✎) icon in the **Edit** column, the **Selection Criteria** screen appears where you can edit the construct.
Delete	On clicking the **Delete** (🗑) icon in the **Delete** column, you can delete the construct.

2. Click the **Add** link at the top-right side of the **Exclude Usage/Invoice Accounts**zone.
   The **Exclude Usage Accounts** screen appears.
3. Search for the usage account that you want to exclude from the construct.

> **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.

4. If you want to exclude more than one usage account, click the **Add** (+) icon and then repeat the step 3.

> **Note:** However, if you do not want a usage account to be excluded from the construct, click the **Delete** (🗑) icon corresponding to the excluded usage account.

5. Enter the required details and click **Save**.
   The **Usage Accounts** are excluded from the construct.

Including Adjustments in a Construct

While defining a construct, you need to indicate the adjustments that you want to bill through an invoice or settlement account. You can use an existing invoice or settlement account. The system allows you to select a set of adjustments based on the criteria using the adjustment selection template.

Prerequisites

To include adjustments in a construct, you should have:

- Adjustment selection templates defined in the application
- Invoice or settlement account defined in the application (in case you want to use an existing invoice account)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Procedure

To include adjustments in a construct:

1. Ensure that **Include Adjustments** zone is expanded while defining, editing, viewing or copying a construct in *t*he **Construct** screen. It contains the following fields:

Column Name	Column Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value.
	Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Invoice Account Information	Displays the information of the invoice account. In addition, this column has a context menu (▾) which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Edit	On clicking the **Edit** (✎) icon in the **Edit** column, the **Selection Criteria** screen appears where you can edit the construct.
Delete	On clicking the **Delete** (🗑) icon in the **Delete** column, you can delete the construct.

2. Click the **Add** link at the top-right side of the **Include Adjustments** zone.
   The **Selection Criteria** screen appears.
3. Search for the adjustment selection template that you want to use for selecting a set of adjustments.
4. Enter the required details and click **Save**.
5. If you want to include more than one usage adjustments, click **Save and Add New** button in the **Selection *C*riteria** screen and repeat step 4.
   The **Adjustments** are included in the construct.

Activating a Construct

Only active constructs which are effective are used during the construct based billing process. Therefore, you need to activate a construct.

Prerequisites

To activate a construct, you should have:

- Target contract type (characteristic type) defined on usage accounts' contracts’ contract type

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Default account creation algorithm defined using the C1-ACTCR-IC algorithm type
- Default contract creation algorithm defined using the C1-CTMP-IC algorithm type
- Assign the **C1-IC_AC** To Do type to a To Do role whose users must receive the To Do entries generated when the new invoice account is created while activating a construct

Procedure

To activate a construct:

1. Search for the draft construct in the **Construct** screen.
2. In the **Search Results** section, click**View** (🔗) icon in the **View** column corresponding to the construct that you *w*ant to activate.
   The **Construct** screen appears.
3. Click **Submit** button in the **Construct Information** zone.

   A message appears confirming whether you want to activate a construct.

   Note: If you click on **Edit** (✎) icon or **Copy** icon (⧉) in the respective columns while searching for a construct, click on **Save and Next** button and then click **Submit** button in the **Construct Information** zone.
4. Click **OK**.

   The construct is activated.

Billing and Settlement Hierarchy

The **Billing and Settlement Hierarchy** screen allows you to search for a person/account hierarchy using various search criteria. Through this screen, you can search and view person/account hierarchy. It contains the following zones:

- Search Hierarchy on page 1172
- Linked Accounts on page 1162
- Criteria on page 1175

Search Hierarchy

The **Search Hierarchy** zone allows you to search for a person or an account with its billing/settlement hierarchy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account with person's billing or settlement hierarchy or account's billing or settlement hierarchy. The valid values are: • **Person-Billing Hierarchy** • **Person-Settlement Hierarchy** • **Account-Billing Hierarchy**	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Account-Settlement Hierarchy**	
Person ID	Used to search for accounts which belong to a particular person. **Note:** This field appears when you select the **Person-Billing Hierarchy** and **Person-Settlement Hierarchy** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	Yes
As on Date	Used to search for billing information which is effective on the specified date.	No
Person Name	Used to search for accounts which belong to a particular person. **Note:** This field appears when you select the **Person-Billing Hierarchy** and **Person-Settlement Hierarchy** option from the **Search By** list.	Yes
View Option	Used to indicate whether you want to view invoice or usage account billing details. The valid values are: • **Invoice Account** - Used when you want to view the usage accounts billed through an invoice account. • **Usage Account** - Used when you want to view the invoice accounts through which a usage account is billed. **Note:** This field appears when you select the **Account-Billing Hierarchy** and **Account-Settlement Hierarchy** option from the **Search By** list.	No
Account ID	Used to specify the invoice or usage account ID. **Note:** This field appears when you select the **Account-Billing Hierarchy** and **Account-Settlement Hierarchy** option from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for a person or an account.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Invoice Account Information	Displays the information of the invoice account.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This field appears when you select the **Person-Billing Hierarchy** and **Account-Billing Hierarchy** (if **View Option** is selected as **Settlement Account**) option from the **Search By** list.
Settlement Account Information	Displays the information of the settlement account.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This field appears when you select the **Account-Billing Hierarchy** and **Account-Settlement Hierarchy** option from the **Search By** list.
Construct Information	Displays additional information about the construct.
	Note: It has a link. On clicking the link, the **Construct** screen appears where you can view the details of the respective construct.
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.

On clicking the **Broadcast** icon (📡) corresponding to the account, **Linked Accounts** zone and **Criteria** zone appears with the details of the respective account.

Viewing Person Billing Hierarchy Details

Procedure

To view the details of a construct with person billing hierarchy:

1. Search for the hierarchy in the **Billing and Settlement Hierarchy** screen.
2. Select **Account-Billing Hierarchy** option from the **Search By** list and **Usage Account** option from the **View *O*ption** list in the **Search Hierarchy** zone.
3. Enter **Person Name** or **Person ID** and click **Search** button.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Copyright © 2009, 2025, Oracle and/or its affiliates.

4. In the **Search Results** section, click the **Broadcast** (📡) icon corresponding to the construct whose details you *w*ant to view. The **Linked Accounts** and **Criteria** zones appear.
   The details of all the active constructs with invoice only or invoice and settlement purposes are displayed.
5. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

Viewing Usage Accounts Billed through an Invoice Account

Procedure

To view the usage accounts billed through an invoice account:

1. Click the **Menu** link in the **Actions/Navigation** area.
   A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Billing and Settlement *H*ierarchy**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Billing and Settlement Hierarchy** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account with person's billing or settlement hierarchy or account's billing or settlement hierarchy. The valid values are: • **Person-Billing Hierarchy** • **Person-Settlement Hierarchy** • **Account-Billing Hierarchy** • **Account-Settlement Hierarchy**	Yes
Person ID	Used to search for accounts which belong to a particular person. **Note:** This field appears when you select the **Person-Billing Hierarchy** and **Person-Settlement Hierarchy** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	Yes
As on Date	Used to search for billing information which is effective on the specified date.	No
Person Name	Used to search for accounts which belong to a particular person. **Note:** This field appears when you select the **Person-Billing Hierarchy** and **Person-Settlement Hierarchy** option from the **Search By** list.	Yes
View Option	Used to indicate whether you want to view invoice or usage account billing details. The valid values are: • **Invoice Account** - Used when you want to view the usage accounts billed through an invoice account. • **Usage Account** - Used when you want to view the invoice accounts through which a usage account is billed. **Note:** This field appears when you select the **Account-Billing Hierarchy** and **Account-Settlement Hierarchy** option from the **Search By** list.	No
Account ID	Used to specify the invoice or usage account ID. **Note:** This field appears when you select the **Account-Billing Hierarchy** and **Account-Settlement Hierarchy** option from the **Search By** list.	No

4. Select the **Invoice Account** option from the **View Option** list.
5. Enter the date and invoice account ID in the respective fields.

Copyright © 2009, 2025, Oracle and/or its affiliates.

6. Click **Search**.

   A list of usage accounts which are billed through the invoice account appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Usage Account	Indicates the usage account which is billed through the invoice account.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Construct Description	Indicates the construct in which the usage account is included.
	Note: It has a link. On clicking the link, the **Construct** screen appears where you can view the details of the respective construct.
Selection Criteria	Indicates the criteria used to select a set of usage account's charges or adjustments.

Chapter 16

Trial Billing

Topics:

- Prerequisites
- Trial Bill (Used for Searching)
- Trial Bill (Used for Viewing)

Oracle Revenue Management and Billing facilitates you to generate trial bills before actual bill is generated for an account. This helps to review the trial bill and make the required corrections before the actual bill is generated. The Trial Billing feature is currently designed and developed for open item accounting and not for balance forward accounting.

The process of trial and actual billing is identical. The only difference is that you cannot freeze and complete the trial bills. Also, during trial billing, the account balance is not updated. It is updated when the actual bill is generated. You can generate trial bill only in case of regular billing, and not in case of adhoc billing. The trial bills can be generated only through the batch process. To generate trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** - This batch is used to generate pending trial or actual bills for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** - This batch is used to generate bill segments for pending trial or actual bills.
3. **Bill Completion (C1-BLPPR)** - This batch is used to generate post-processing bill segments in the pending trial or actual bills during the bill completion process. The adjustments, if any, created on the accounts are swept onto the pending trial or actual bills. In addition, the bill routing information and bill messages are stamped on the pending trial or actual bills. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. However, in case of pending trial bill, the currency conversion for adjustments is done, but the transfer adjustments are not created. Finally, the status of the actual bill is set to **Complete**, whereas the status of the trial bill remains as **Pending**.

Note: The adjustments which are in the **Freezable** status are not swept onto the trial bills. Only adjustments which are in the **Frozen** status are swept onto the trial bills.

The **Trial Bill** check box is added in the **Main** tab of the **Account** screen. If you leave the **Process All or Selected Accounts** parameter blank while executing the above batches, all accounts (that meet the criteria) irrespective of whether the **Trial Bill** check box is selected or not are considered for generating the trial bills. However, if the **Process All or Selected Accounts** parameter is set to **Y**, then only those accounts that meet the criteria and where the **Trial Bill** check box is selected are considered for generating the trial bills.

You can create an actual bill using a trial bill. While creating actual bills using trial bills, you need to specify the trial billing batch run number whose trial bills you want to convert to the actual bills. To create actual bills using trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** - This batch generates pending actual bill for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** - This batch copies regular bill segments which are generated for the trial bill and stamps them onto the pending actual bill. It also copies the corresponding financial transactions (FTs).
3. **Bill Completion (C1-BLPPR)** - This batch copies post-processing bill segments which are generated for the trial bill and stamps them onto the pending actual bill. The bill routing information and bill messages are copied from the trial bill to the pending actual bill. The adjustment, if any, created on the account are swept onto the pending actual bill. They are not copied from the respective trial bill. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. Finally, the status of the actual bill is set to **Complete**.

The actual bill ID, bill segment ID and FT ID are different from the trial bill ID, bill segment ID and FT ID, respectively. If an actual bill is created using a trial bill, the system will stamp the trial bill ID on the actual bill. This helps you to track the trial bill of an actual bill.

The system allows you to view a trial bill through a user interface. It also allows you to print the trial bill in the PDF format. You can print a trial bill when Oracle Documaker is integrated with Oracle Revenue Management and Billing. For more information about the batches, see *Oracle Revenue Management and Billing Batch Guide*.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Prerequisites

To setup the trial billing feature, you need to do the following:

- Set the **Trial Bill Characteristics Conversion** option type of the **C1_FINTRANOP** feature configuration.

Trial Bill (Used for Searching)

The **Trial Bill** screen allows you to search for a trial bill using various search criteria. It contains the following zone:

- Search Trial Bill on page 1183

Through this screen, you can navigate to the following screen:

- Trial Bill (Used for Viewing) on page 1186

Search Trial Bill

The **Search Trial Bill** zone allows you to search for trial bills using various search criteria. It contains the following two sections:

- **Search Criteria** - The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter the criteria in the Account ID and Trial Bill Description fields (which are in different criteria groups), the system searches for trial bills using the account ID. The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a trial bill using the trial bill details. The valid value is: • Trial Bill Details **Note:** By default, the **Trial Bill Details** option is selected.	Yes
Person ID	Used to search trial bills which are generated for a particular person.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	
Trial Bill ID	Used to search for a particular trial bill.	No
Account ID	Used to search trial bills which are generated for a particular account. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	No
Division	Used to search trial bills which are generated for accounts belonging to a particular division.	No
From Trial Bill Date	Used to search trial bills which are generated from a particular date onwards.	No
Invoice Currency	Used to search trial bills which are generated in a particular invoice currency.	No
To Trial Bill Date	Used to search trial bills which are generated till a particular date.	No
Batch Run Date	Used to search trial bills which are generated on a particular batch run date.	No
Trial Bill Description	Used to search trial bills which are generated in a particular batch run.	Yes (Conditional) **Note:** This field is required when you are searching for trial bills using the batch run date.

Note: You must specify at least one search criterion while searching for a trial bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Information	Displays additional information about the trial bill. **Note:** It has a link. On clicking the link, the **Trial Bill** screen appears where you can view the details of the respective trial bill.
Current Charges	Displays the trial bill amount.
Account Information	Indicates the account for which the trial bill is generated. In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account** screen appears with the details of the respective account.
Person Name	Indicates the person for whom the trial bill is generated.
Division	Indicates the division to which the account belongs.
Batch Run Date	Displays the date when the batch is executed to generate the trial bill.
Batch Run Number	Indicates the batch run in which the trial bill is generated.

Searching for a Trial Bill

Prerequisites

To search for a trial bill, you should have:

- Divisions and currencies defined in the application

Procedure

To search for a trial bill:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Billing Management** and then click **Trial Bill**.
   The **Trial Bill** screen appears.
3. Enter the search criteria in the **Search Trial Bill** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of trial bills that meet the search criteria appears in the **Search Results** section.

Viewing the Trial Bill Details

Copyright © 2009, 2025, Oracle and/or its affiliates.

Procedure

To view the details of a trial bill:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial *b*ill whose details you want to view.
   The **Trial Bill** screen appears.
3. View the basic details of the trial bill in the **Trial Bill** zone.
4. View the segments of the trial bill in the **Trial Bill Segments** zone.
5. View the calc lines of a trial bill segment in the **Trial Bill Segment Calc Lines** zone.
6. View the service quantity details of a trial bill segment in the **Trial Bill Segment SQ Details** zone.
7. View the financial details of a trial bill segment in the **Trial Bill Segment Financial Details** zone.

Trial Bill (Used for Viewing)

The **Trial Bill** screen allows you to:

- View the details of a trial bill, such as the trial bill summary, trial bill messages, and trial bill characteristics
- View the segments of a trial bill
- View the calculation lines, service quantity details, and financial details of a trial bill segment
- View the details of the policy, plan, and membership for which a trial bill segment is created

It contains the following zones:

- Trial Bill on page 1187
- Trial Bill Segments on page 1188
- Trial Bill Segment Calc Lines on page 1189
- Trial Bill Segment SQ Details on page 1190
- Trial Bill Segment Financial Details on page 1191
- Policy Details on page 1191

Copyright © 2009, 2025, Oracle and/or its affiliates.

Trial Bill

The **Trial Bill** zone displays the details of the trial bill. It contains the following sections:

- **Main** - This section provides basic information about the trial bill. It contains the following fields:

Field Name	Field Description
Trial Bill ID	Displays the trial bill ID.
Trial Bill Information	Displays additional information about the trial bill.
Trial Bill Description	Displays the description of the batch run in which the trial bill is generated.
Account Information	Indicates the account for which the trial bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

- **Trial Bill Summary** - This section summarizes the financial impact of the bill. It contains the following fields:

Field Name	Field Description
New Charges	Displays the total amount of frozen bill segment financial transactions which are linked to the trial bill.
Adjustments	Displays the total amount of frozen and/or canceled adjustment financial transactions which are linked to the trial bill.
Corrections	Displays the total amount of canceled and/or rebilled bill segment financial transactions which are linked to the trial bill.
Total	Displays the sum of new charges, adjustments, and corrections.
No. of Bill Segments in Error	Indicates the number of bill segments in the trial bill which are in the **Error** status.

- **Trial Bill Messages** - This section lists the bill messages that are stamped on the trial bill. It contains the following columns:

Column Name	Column Description
Message Code	Displays the code that uniquely identifies the bill message.
Message on Bill	Displays the bill message.
Priority	Indicates the priority which determines the order in which the bill message must be printed on the trial bill.
Insert Code	Indicates whether the bill message must be sent separately along with the trial bill.

- **Characteristics** - This section lists characteristics of the trial bill. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

In addition, this zone contains a button named **Display Trial Bill** which allows you to print a trial bill in the PDF format.

Trial Bill Segments

The **Trial Bill Segments** zone lists the segments of the trial bill. You can filter the trial bill segments using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search trial bill segments which are generated for a particular usage account. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	No
Contract Type	Used to search trial bill segments which are generated against a particular type of contract. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Type Search** window appears.	No
Trial Bill Segment Type	Used to search for a particular type of trial bill segments. The valid values are: • Post Processing • Regular	No
Price Item	Used to search trial bill segments which are generated for a particular price item. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Price Item Search** window appears.	No
Trial Bill Segment Status	Used to search trial bill segments in a particular status. The valid values are: • Error • Freezable	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Segment ID	Displays the trial bill segment ID.
Status	Indicates the status of the trial bill segment. The valid values are: • Error

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Freezable
Start Date	Displays the start date of the trial bill segment.
End Date	Displays the end date of the trial bill segment.
Calculated Amount (Pricing Currency)	Displays the trial bill segment amount in the pricing currency.
Price Item	Indicates the price item for which the trial bill segment is generated.
Pricing Parameters	Indicates the price item parameters which are used along with the price item for determining the price item pricing.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Price Assignment ID	Indicates the price item pricing which is used during calculation.
Billable Charge ID	Indicates the billable charge for which the trial bill segment is generated. **Note:** It has a link. On clicking the link, the **Billable Charge** screen appears where you can view the details of the respective billable charge.
Construct ID	Indicates the construct through which the trial bill segment is generated. **Note:** It has a link. On clicking the link, the **Construct** screen appears where you can view the details of the respective construct.

On clicking the **Broadcast** (📡) icon corresponding to the trial bill segment, the **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, **Trial Bill Segment Financial Details**, and **Policy Details** zones appear with the details of the respective trial bill segment.

Trial Bill Segment Calc Lines

The **Trial Bill Segment Calc Lines** zone lists the calculation lines which indicate how the system calculated the trial bill segment amount. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Sequence No.	Indicates the sequence in which the calculation line is created while calculating the trial bill segment amount.
Description on Bill	Displays the summarized information about the calculation line that will be printed on the trial bill.
Calculated Amount (Pricing Currency)	Displays the calculated charge amount associated with the calculation line in the pricing currency.
Calculated Amount (Invoice Currency)	Displays the calculated charge amount associated with the calculation line in the invoice currency.
Print	Indicates whether information about the calculation line will be printed on the person' trial bill. The valid values are: • Yes • No
Appears in Summary	Indicates whether the calculation line amount will appear in the summary of the trial bill. The valid values are: • Yes • No
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Price Component ID	Indicates the price component which is used during calculation.
Service Quantity Identifier	Indicates the service quantity identifier (SQI) of the service quantity which is priced on the calculation line.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Base Amount	Displays the total amount derived from the cross-referenced lines that the current line then used to calculate the charge amount.
Rate Component Sequence	Indicates the sequence of the rate component on the effective rate version which is used while calculating the line.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Distribution Code	Indicates the distribution code associated with the rate component.

By default, the **Trial Bill Segment Calc Lines** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (ᯤ) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Trial Bill Segment Financial Details

The **Trial Bill Segment Financial Details** zone lists the distribution codes which indicate the GL accounts that will be affected by the trial bill segment financial transaction. It contains the following columns:

Column Name	Column Description
Sequence No.	Indicates the sequence in which the distribution code will be considered for deriving the GL account.
Distribution Code	Indicates the distribution code associated with the rate component used for calculating the trial bill segment amount.
Amount	Displays the amount that will be debited or credited to the GL account.

By default, the **Trial Bill Segment Financial Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Policy Details

The **Policy Details** zone lists the policy, plan, and membership for which the trial bill segment is created. It contains the following columns:

Column Name	Column Description
Policy Information	Displays the information about the policy.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Policy** screen appears where you can view the details of the respective policy.
External Membership ID	Indicates the membership in which the member is included.
Member's Primary Identifier	Displays the concatenated string consisting of primary identifier type and primary identifier of the member which are separated by a colon (:).
Member Name	Indicates the member for whom the trial bill segment is generated.
Plan Information	Displays information about the policy plan.
	Note: It has a link. On clicking the link, the **Policy Plan** screen appears where you can view the details of the respective policy plan.

By default, the **Policy Details** zone does not appear in the **Trial Bill** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Printing a Trial Bill in the PDF Format

Prerequisites

To print a trial bill in the PDF format, you should have:

- Oracle Documaker integrated with Oracle Revenue Management and Billing

Procedure

To print a trial bill in the PDF format:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial *b*ill that you want to print in the PDF format.
   The **Trial Bill** screen appears.
3. Click the **Display Trial Bill** button in the **Trial Bill** zone.
   The trial bill is printed in the PDF format.

Viewing the Segments of a Trial Bill

Procedure

To view the segments of a trial bill:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial *b*ill whose details you want to view.
   The **Trial Bill** screen appears.
3. View the segments of the trial bill in the **Trial Bill Segments** zone.
4. If required, you can filter the trial bill segments using various search criteria.

Related Topics

Filtering the Trial Bill Segments

Prerequisites

To filter the trial bill segments, you should have:

- Usage accounts, contract types, and price items defined in the application

Procedure

To filter the trial bill segments:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial *b*ill whose details you want to view.
   The **Trial Bill** screen appears.
3. Enter the search criteria in the **Trial Bill Segments** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   The search results are filtered based on the specified criteria.

Chapter 17

Bill Tolerance

Topics:

- Prerequisites

Oracle Revenue Management and Billing allows you to define tolerance limit for the bill amount. If the difference between the previous and current bill amount exceeds either positive or negative tolerance limit, a To Do entry is generated when you initiate the bill completion process. In addition, a To Do entry is generated for the first bill of an account during the bill completion process. Until you review and close the To Do entry, you cannot complete the bill. After you close the To Do entry, you need to initiate the bill completion process once again to freeze and complete the bill. Note that the To Do entries are generated only for regular bills and not for adhoc bills.

The **Bill Tolerance** feature is supported when you freeze and complete the regular bills through the user interface and through the charge based billing batch named **Bill Completion (C1-BLPPR)**. It is not yet supported when you freeze and complete the bill through the **BILLING** batch. In addition, this feature is not yet designed to work when bills are generated through the construct based billing batches.

For more information on how to setup the bill tolerance feature, refer to Prerequisites on page 1198.

Prerequisites

To setup the bill tolerance feature, you need to do the following:

- Define an algorithm of the C1-BILL_TOLR algorithm type and attach it to the **Pre-Bill Completion Review** system event on the respective customer class. This algorithm type has the following parameters:
  - **Positive Tolerance Percentage** - Used to specify the positive tolerance limit in percentage.
  - **Negative Tolerance Percentage** - Used to specify the negative tolerance limit in percentage.
  - **Positive Tolerance Amount** - Used to specify the positive tolerance limit in amount.
  - **Negative Tolerance Amount** - Used to specify the negative tolerance limit in amount.
  - **Tolerance To Do Type** - Used to indicate that To Do entry of the specified To Do type must be created when the bill amount difference exceeds either positive or negative tolerance limit. This parameter is mandatory.
  - **First Bill To Do Type** - Used to indicate that To Do entry of the specified To Do type must be created when the first bill is generated for an account. This parameter is mandatory.
  - **Tolerance To Do Role** - Used to indicate that users with the specified To Do role can only view the "%1 Bill Tolerance Limit Exceeded" To Do entry. This parameter is mandatory.
  - **First Bill To Do Role** - Used to indicate that users with the specified To Do role can only view the "%1 To-do generated for First Bill" To Do entry. This parameter is mandatory.

  For example, if you set the **Positive Tolerance Percentage** parameter to 10 and the **Negative Tolerance Percentage** parameter to 15 in the algorithm, then in the following scenarios:

Current Bill Amount (USD)	**Previous Bill Amount (USD)**	**Tolerance Amount Calculation**	**To Do Entry Generated (Yes or No)**	**Reason**
120	100	100+(100*10)/100=110	Yes	Current Bill Amount is above Positive Tolerance Limit
115	105	105+(105*10)/100=115.5	No	Current Bill Amount is within Positive Tolerance Limit
80	100	100-(100*15)/100=85	Yes	Current Bill Amount is below Negative Tolerance Limit
95	110	110-(110*15)/100=93.5	No	Current Bill Amount is within Negative Tolerance Limit

If the tolerance limit is specified in both percentage and amount, the system calculates the tolerance amount using percentage and amount, considers the minimum value, and then creates the To Do entry accordingly. For example, if you set the **Positive Tolerance Percentage** parameter to 10, the **Positive Tolerance Amount** parameter to 15, the **Negative Tolerance Percentage** parameter to 5, and the **Negative Tolerance Amount** parameter to 25 in the algorithm, then in the following scenarios:

Current Bill Amount (USD)	**Previous Bill Amount (USD)**	**Tolerance Amount Calculation**	**To Do Entry Generated (Yes or No)**	**Reason**
120	100	100+(100*10)/100=110 (Derived using positive tolerance percentage) 100+15=115 (Derived using positive tolerance amount)	Yes	Current Bill Amount is above Positive Tolerance Limit

Copyright © 2009, 2025, Oracle and/or its affiliates.

Current Bill Amount (USD)	Previous Bill Amount (USD)	Tolerance Amount Calculation	To Do Entry Generated (Yes or No)	Reason
		Minimum Value is 110 in Positive Scenario		
180	200	200-(200*5)/100=190 (Derived using negative tolerance percentage) 200-25=175 (Derived using negative tolerance amount) Minimum Value is 190 in Negative Scenario	Yes	Current Bill Amount is below Negative Tolerance Limit

During the tolerance amount calculation, the system checks whether the **Multi-Currency Accounts** feature is enabled or disabled. If the **Multi-Currency Accounts** feature is enabled, the system converts the previous and current bill amount in the division's base currency when the invoice currency is different from the division's base currency. Once the currency conversion is done, the tolerance amount is calculated and To Do entry is generated accordingly.

- Set the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration to **True** if you want to enable the currency conversion feature during tolerance amount calculation
- Define the Tolerance and First Bill To Do types using the following information:
  - **Navigation Option** - billMaint
  - **Priority** - Priority 10 - Highest
  - **Message Category** - 11105
  - **Message Number** - 11009
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Bill ID	Yes	Ascending

  - **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
CI_BILL	BILL_ID

Chapter 18

GL Account Validation

Topics:

- Static GL Account Validation
- Dynamic GL Account Validation

Oracle Revenue Management and Billing allows you to validate the GL account statically and dynamically. The static GL account validation means you can validate the GL account while creating or editing a distribution code. And, the dynamic GL account validation means you can validate the GL account while assigning it to trial and actual financial transactions through the batch process.

For more information about static GL account validation and dynamic GL account validation, refer to Static GL Account Validation on page 1202 and Dynamic GL Account Validation on page 1202, respectively.

Static GL Account Validation

If you want to validate the GL account while creating or editing a distribution code, you need to select the **Validate GL Account** check box in the **Distribution Code** screen. If the GL account is valid, the following string appears below the check box while saving the distribution code:

"GL Account is validated on YYYY-MM-DD"

And, if the GL account is invalid, the following string appears below the check box while saving the distribution code:

"GL Account is invalid"

If you want to enable the static GL account validation feature on the **Distribution Code** screen, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to the **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen. Both these algorithm types have one parameter named **GL Account Length**. You need to set the value of this parameter while creating the algorithm using the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type. If you attach an algorithm of the **C1-GLVAL** algorithm type, the system checks whether the length of GL account is greater than or equal to the value defined in the **GL Account Length** parameter. If the length is greater than or equal to the specified length, the GL account is considered as valid. And, if the length is less than the specified length, the GL account is considered as invalid.

And, if you attach an algorithm of the **C1-GLVAL-COB** algorithm type, the system checks whether the length of GL account is equal to the value defined in the **GL Account Length** parameter. If the length is equal to the specified length, the GL account is considered as valid. And, if the length is less than or greater than the specified length, the GL account is considered as invalid.

Dynamic GL Account Validation

If you want to validate GL account while assigning it to trial and actual financial transactions, you need to set the **Validate GL Account** parameter to **Y** while executing the batch. If the GL account is valid, the date when the GL account is validated is added in the GLA_VAL_DT column of the CI_TRL_FT_GL or CI_FT_GL table, respectively, depending on whether the GL account is assigned to a trial or actual financial transaction.

If you want to enable the dynamic GL account validation feature in the C1-GLASN or GLASSGN2 batch, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to either of the following:

- The **GL Account Validation** algorithm entity in the **Algorithms** tab of the **Division** screen
- The **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen

If the GL account validation algorithm is defined at both these algorithm spots, the algorithm defined at the division level always takes precedence over the algorithm defined in the installation options during dynamic GL account validation.

Chapter 19

Upload Validated Adjustment Data

Topics:

- Prerequisites
- CSV File Format
- Adjustment Upload Request (Without Approval) Status Transition
- Adjustment Upload Request (With Approval) Status Transition
- Algorithms Used in C1-ADJUPLD
- Upload Request Type
- Adjustment Upload Request (Used for Searching)
- Adjustment Upload Request (Used for Viewing)

Oracle Revenue Management and Billing until now provided you with an ability to upload adjustment data received from an external source system and create adjustments using the **C1-ADUP1** and **C1-ADUP2** batches. However, there was no user interface available through which you can upload an adjustment data file and create adjustments from the adjustment records. Now, the system provides a user interface which helps you to upload an adjustment data file.

You can upload an adjustment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. At present, the system supports only the CSV file format. For more information about the CSV file format, see CSV File Format on page 1205.

While uploading an adjustment data file, you need to specify the upload request type using which you want to upload the adjustment data file. It is the upload request type which helps the system to determine:

- Whether adjustments must be created in the real time (i.e. immediately) or in the deferred mode (i.e. in the background)
- Whether the size of the adjustment data file exceeds the maximum file size defined in the upload request type
- Whether the adjustment data file must be approved by the approver before creating adjustments

All records are validated before uploading an adjustment data file. During the validation process, the system and custom validations (if any) are executed. If there is any invalid record, the system does not allow you to upload the adjustment data file. The system indicates the reason why the adjustment record could not pass through the validation process. You need to first correct the adjustment record in the CSV file and then upload the adjustment data file.

An upload request of the specified upload request type is created when an adjustment data file is successfully uploaded in the system. You can track an adjustment data file through an upload request. During the adjustment upload process, an adjustment upload request goes through various statuses in its lifecycle. For more information about the adjustment upload request statuses, see Adjustment Upload Request (Without Approval) Status Transition on page 1207 and Adjustment Upload Request (With Approval) Status Transition on page 1208.

Note that the lifecycle of an adjustment upload request is driven by the business object using which the adjustment upload request is created. An adjustment upload request business object named **C1-ADJUPLD** is shipped with the product. The adjustment upload feature explained in this section is documented based on the lifecycle and logic defined in the **C1-ADJUPLD** business object. If required, the implementation team can create a custom adjustment upload request business object.

Once the adjustment upload request is created, you can perform various tasks, such as:

- Track the status of an adjustment upload request
- View the details of an adjustment upload request
- View all records of an adjustment data file
- Cancel an adjustment data file
- Create adjustments for an adjustment data file
- Submit the adjustment data file for approval
- Approve or reject an adjustment data file based on the observations

Copyright © 2009, 2025, Oracle and/or its affiliates.

Prerequisites

To setup the adjustment upload process, you need to do the following:

- Define the required upload request types in the system
- Create a defer algorithm using the **C1-UPLDEFEVL** algorithm type
- Create an algorithm using the **C1-MTCIALG** algorithm type if you want to create adjustments using the Contract match type
- Create an algorithm using the **C1-MTCTALG** algorithm type if you want to create adjustments using the Contract Type match type
- Define the required characteristic types where the characteristic entity is set to Upload Request Type
- Define cancellation and rejection reasons for the **C1-ADJUPLD** business object
- Assign the **C1-ADJUP** To Do type to a To Do role whose users must receive To Do entries generated while submitting an upload request (i.e. an adjustment data file) for approval
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

CSV File Format

Before uploading an adjustment data file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the match type is Contract Type and account ID is not specified.
Account Identifier	Used to specify the account identifier.	Yes (Conditional) **Note:** This data is required when the match type is Contract Type and account ID is not specified.
Account ID	Used to indicate the account for which the adjustment must be created.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the match type is Contract Type and the account identifier type and account identifier are not specified.
Match Type	Used to indicate the match type using which the adjustment must be created.	Yes
Match Value	Used to indicate the entity (such as contract, contract type, and so on) against which the adjustment must be created.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created. **Note:** The adjustment type must be included in the adjustment type profile which is attached to the contract type.	Yes
Adjustment Amount	Used to specify the adjustment amount. **Note:** The adjustment amount precision must match the precision (decimal positions) defined for the currency.	Yes
Currency Code	Used to indicate the currency in which the adjustment must be created.	Yes
Comments	Used to specify additional information about the adjustment.	No
Bill ID	Used to indicate the bill on which the adjustment must be created.	No
Arrears Date	Used to specify the date from when the amount is outstanding on the bill.	No
Char Type 1, Char Type 2, ..., Char Type 5	Used to indicate the characteristic that must be defined for the adjustment.	Yes (Conditional) **Note:** This data is required if the characteristic value is specified.
Char Value 1, Char Value 2, ..., Char Value 5	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required if the characteristic type is specified.

Note: If an adjustment data file contains column names other than those mentioned in the above table, the system will not upload the adjustment data file.

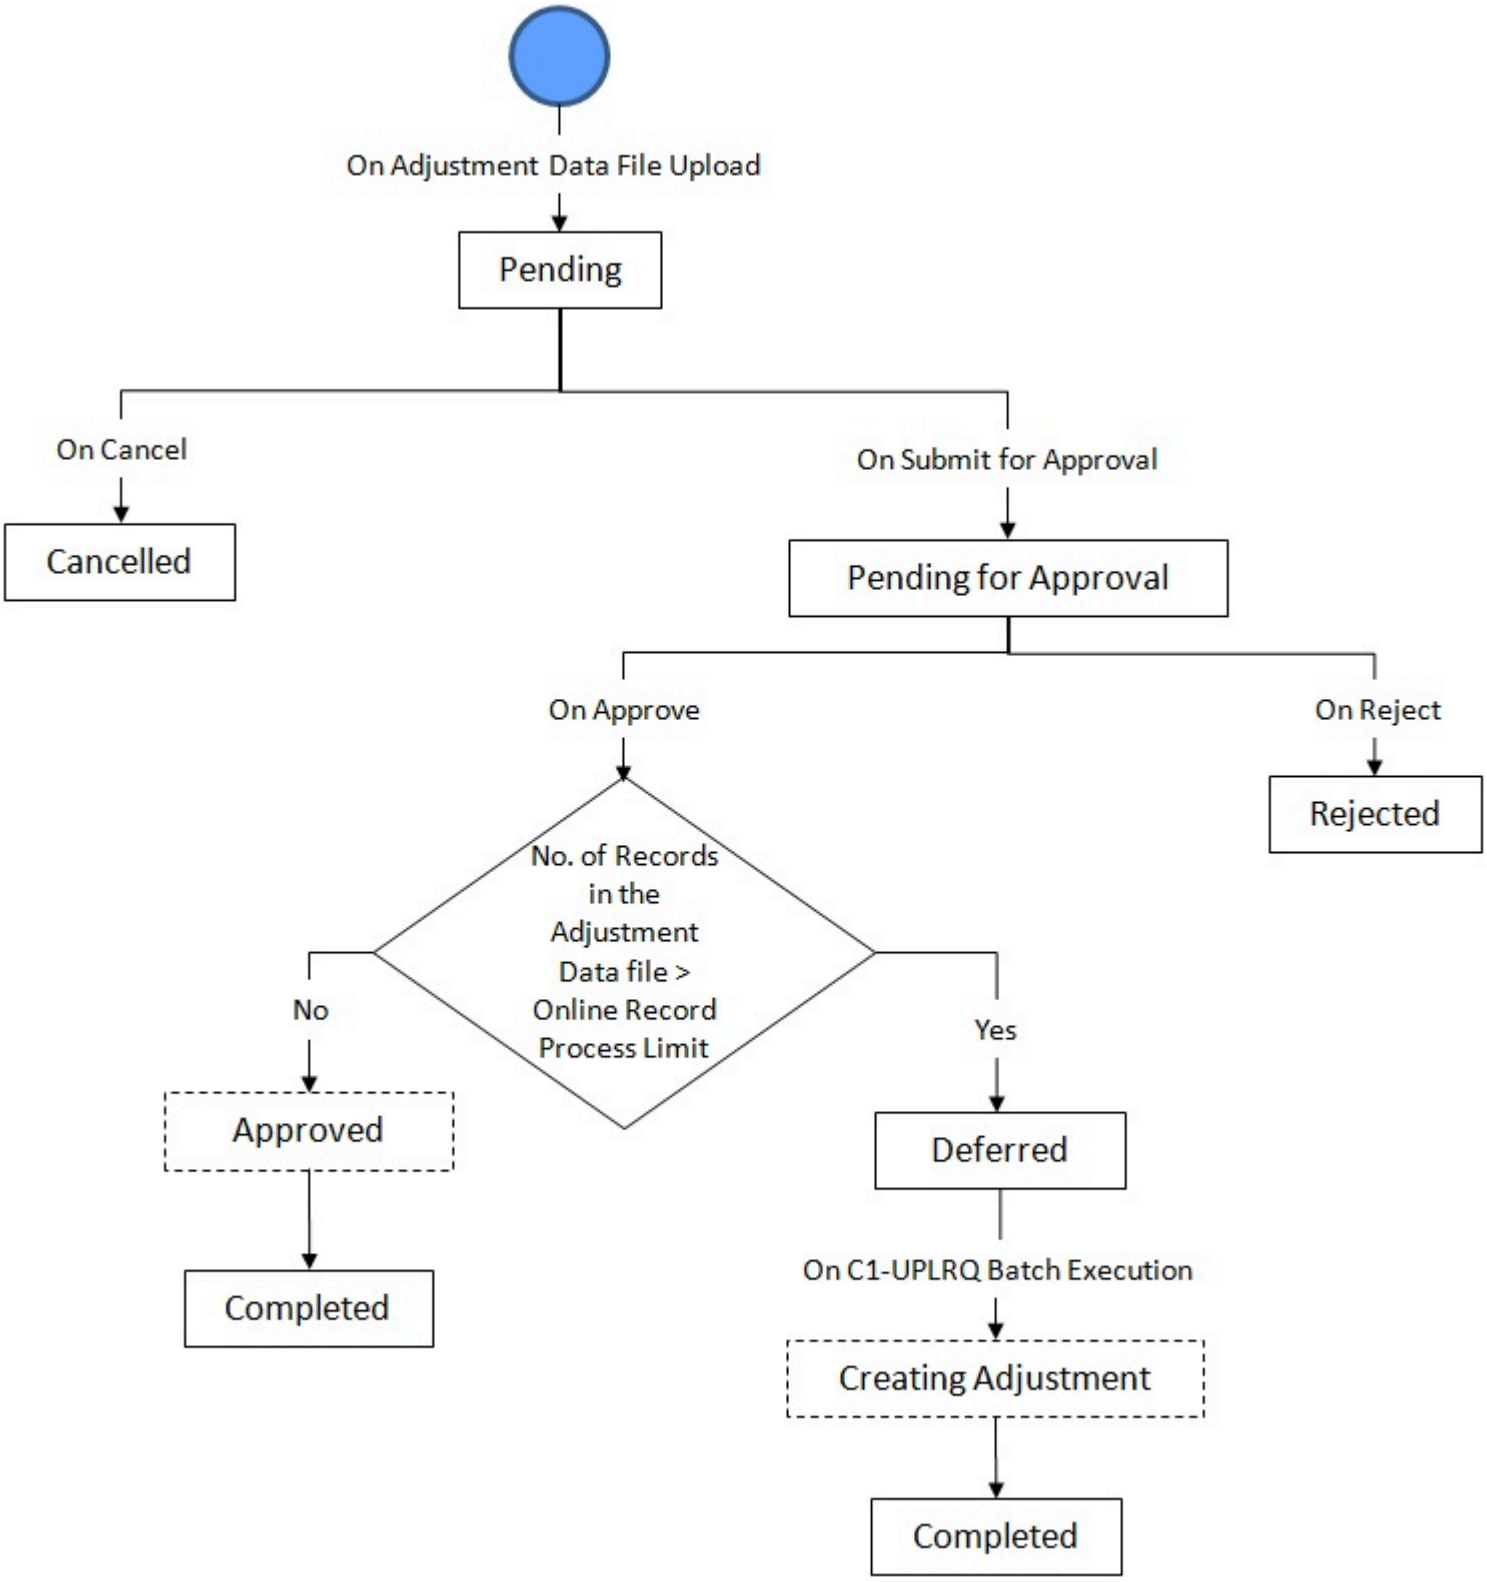
Adjustment Upload Request (With Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is on:

Copyright © 2009, 2025, Oracle and/or its affiliates.



Algorithms Used in C1-ADJUPLD

The following table lists the algorithms which are attached to the **C1-ADJUPLD** business object:

Copyright © 2009, 2025, Oracle and/or its affiliates.

System Event	Algorithm	Algorithm Type	Description
Information	C1-FLREQ-INF	C1-FLREQ-INF	This algorithm formats the upload request information that appears throughout the system for the BO. The algorithm formats the information as follows: Upload Request type description, Status description, ID. This algorithm generates the upload request information string which appears throughout the application. This algorithm concatenates the following fields: • Upload Request Type Description • Upload Request Description • Upload Request ID
Validation	C1-ADVALREQ	C1-ADVALREQ	This algorithm will be called from a business service and is responsible for validating the uploaded CSV file and identify if any records are invalid. The validations to be performed are mentioned below: 1. Mandatory column data checks 2. Check for valid values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. 3. This algorithm will also call the match type algorithm linked to the request type to derive and validate the value for contract ID. This algorithm validates the uploaded CSV file and identifies invalid records, if any. The validations performed are as follows: • Validating mandatory column data • Validating values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. • Invoke the match type algorithm linked to the request type to derive and validate the value for contract ID.

The following table lists the algorithms which are used in the lifecycle of the **C1-ADJUPLD** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Cancelled	-	-	-	-
Create Adjustment	Enter	C1-ADJUPLDEF	C1-ADJUPLDEF	This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or "APPROVED' status. This algorithm evaluates and creates adjustment. It evaluates, if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the **Enter** status algorithm when the

Copyright © 2009, 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				request object is changed to **Create** or **Approved** status.
Deferred	Monitor	C1-ADJ-MNTR	C1-ADJ-MNTR	This algorithm will be invoked from the Upload Request Monitor batch. This will be responsible for BO transition from 'Deferred' to 'Creating' status. This algorithm is triggered from the **Upload Request Monitor** batch. This algorithm transitions the business object status from **Deferred** to **Creating**.
Pending for Approval	Enter	C1-ADJUPAPVL	C1-ADJUPAPVL	This algorithm will be responsible of creating To Do for the approver to approve or reject the uploaded file data. To Do will be created using the To Do Type linked to the request type to the approver(s) who are associated with the To Do Role linked to the request type. This will be invoked by the Enter Status algorithm when the Request object enters 'SUBMITTED - Pending For Approver' status. This algorithm creates the To Do using the To Do Type for the approver to approve or reject the uploaded file data. This To Do Type is linked to the request type to the approver(s) associated with the To Do Role linked to the request type. This algorithm is triggered by the **Enter** status algorithm when the request object enters **Submitted - Pending For Approver** status.
Approved	Enter	C1-ADJUPLDEF	C1-ADJUPLDEF	This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or "APPROVED' status. This algorithm evaluates if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the **Enter** status algorithm when the request object is changed to **Create** or **Approved** status.
Rejected	-	-	-	-
Completed	-	-	-	-
Creating Adjustment	Enter	C1-ADJCRTION	C1-ADJCRTION	This algorithm is responsible for creating Adjustment for the uploaded file. The adjustment ID will be updated back in the request table to link the

Copyright © 2009, 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
				request with the adjustments. This algorithm creates an adjustment for the uploaded file. In addition, the adjustment ID is stamped on the adjustment and on the corresponding financial transaction.

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

The **Adjustment Upload Request Type (C1-AdjRequestType)** business object is used for the maintainance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. If you are going to upload adjustment data files using an upload request type, you need to specify the match types (using which the adjustments must be created) in the upload request type. At present, the following two match types are shipped with the product:

- Contract
- Contract Type

You can also define custom match types, if required. You must use the **ADJ_MATCH_TYPE** lookup field to add a new match type. You need to attach an algorithm to each match type to determine the contract against which the adjustment must be created. At present, the following algorithm types and sample algorithms are shipped with the product:

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to **Contract (CONT)**.
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to **Contract Type (CNTY)**. If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintainance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- Upload Request Type List on page 1213
- Upload Request Type on page 1214

Upload Request Type List

The **Upload Request Type List** zone lists upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the **Edit** (✎) icon, the **Upload Request Type** screen appears where you can edit the details of the upload request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Upload Request Type** screen appears where you can define an upload request type using an existing upload request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the upload request type.
	Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Mapping	On clicking the **Mapping** (🔗) icon, the mapping screen appears where you can map the columns of CSV file with the upload request type.
Status	On clicking the **Status** icon, you can see the status of the upload request type. The valid values are: • Active • Inactive

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. This zone contains the following sections:

- **Main** - This section provides basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object that will be used to create the upload request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	Indicates the status of the upload request type. The valid values are: • Active • Inactive
File Size (KB)	Displays the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. **Note:** This field appears when you create upload request type using **Adjustment Upload Request Type** business object.
Defer Algorithm	Indicates the algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.
	Note: This field appears when you create upload request type using **Adjustment Upload Request Type** business object. It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm. In **Upload Request Type**, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from **Validated** to **Deferred Processing** else the status is changed to **Processed**.
Approval Required	Indicates whether approval is required for a file which is uploaded using the upload request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when you submit the upload request for approval.
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve or reject the upload request submitted for approval.
	Note: This field appears when the **Approval Required** check box is selected. On selecting the **To Do Type**, the **To Do Roles** configured on the **To Do Type** is populated. It has a link. On clicking the link, the **To Do Role** screen appears with the details of the respective To Do role.
FK Reference	Indicates the foreign key reference which specifies the created upload request type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when you create upload request type using **Upload Request Type** business object. It has a link. On clicking the link, the **Foreign Key Reference** screen appears with the details of the respective foreign key.

In addition, this section has the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are: • Contract • Contract Type
	Note: The **Match Type** column is displayed for **Adjustment Upload Request** Business Object.
Algorithm	Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.
	Note: It has a link. On clicking the link, the **Algorithm** screen appears with the details of the respective algorithm. The **Algorithm** column is displayed for **Adjustment Upload Request** Business Object.

- **Characteristics** - This section lists the characteristics of the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request type.
Delete	Used to delete the upload request type.
	Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval
- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval
- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object that you want to use to create the upload request type. The valid values are: • Adjustment Upload Request Type (**C1-AdjRequestType**) • Upload Request Type (**C1-UplRequestType**)	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

   The **Upload Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the upload request type.
   - **Characteristics** - Used to define the characteristics for the upload request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request. When you create upload request type using upload request business object, the valid values are: • Bill Cycle Update Upload • Bill Group Derivation & Pricing Parameter • Bill Group Sorting Upload Request	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Billable Charge Upload • Billable Charge Upload for Fully Insured • Contract Rider Upload • Hold Request Upload • Refund Request Upload • Reinstatement Upload Request • Tender Cancelation Upload Request • Write Off Request Upload	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. **Note:** This field appears when **Adjustment Upload Request Type** business object (**C1-AdjRequestType**) is selected.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any upload requests in the **Deferred** status. If there is an upload request in the **Deferred** status, the system creates the entities (for example, adjustments). This field appears when **Adjustment Upload Request Type** business object (**C1-AdjRequestType**) is selected. In **Upload Request Type**, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from **Validated** to **Deferred Processing** else the status is changed to **Processed**. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	
Entity Business Object	Used to indicate for creating Business Object of the entity using the upload request type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when **Upload Request Type** business object (**C1-UplRequestType**) is selected.	No
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 1222

Defining a Characteristic for an Upload Request Type

Prerequisites

To define a characteristic for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload *r*equest type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to Upload Request Type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then *r*epeat step 2.

Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing an Upload Request Type

Prerequisites

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *u*pload request type whose details you want to edit.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the upload request type.
- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.When you create upload request type using upload request business object, the valid values are: • Bill Cycle Update Upload • Bill Group Derivation & Pricing Parameter • Bill Group Sorting Upload Request • Billable Charge Upload • Billable Charge Upload for Fully Insured • Contract Rider Upload • Hold Request Upload • Refund Request Upload • Reinstatement Upload Request • Tender Cancelation Upload Request • Write Off Request Upload	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. **Note:** This field appears when the business object (**C1-AdjRequestType**) is **Adjustment Upload Request Type**.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the	Yes

How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 1222

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate**(⧉) icon in the **Duplicate** column *c*orresponding to the upload request type whose copy you want to create.

   The **Upload Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the upload request type.
   - **Characteristics** - Used to define the characteristics for the upload request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type (whose copy you want to create).	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.When you create upload request type using upload request business object, the valid values are: • Bill Cycle Update Upload • Bill Group Derivation & Pricing Parameter • Bill Group Sorting Upload Request • Billable Charge Upload • Billable Charge Upload for Fully Insured • Contract Rider Upload • Hold Request Upload • Refund Request Upload • Reinstatement Upload Request • Tender Cancelation Upload Request	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Write Off Request Upload	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. **Note:** This field appears when the business object (**C1-AdjRequestType**) is **Adjustment Upload Request Type**.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any upload requests in the **Deferred** status. If there is an upload request in the **Deferred** status, the system creates the entities (for example, adjustments). This field appears when the business object (**C1-AdjRequestType**) is **Adjustment Upload Request Type**.	
Entity Business Object	Used to indicate to create the copy of Business Object of the entity using the upload request type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when the business object (**C1-UplRequestType**) is **Upload Request Type**.	No
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note:
The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.
The following table lists the To Do type using which the To Do must be generated for the different upload requests:
<table><tr><th>Upload Request</th><th>To Do Type</th></tr><tr><td>Adjustment</td><td>C1-ADJUP</td></tr><tr><td>Bill Cycle Update</td><td>C1-BCUUR</td></tr><tr><td>Billable Charge</td><td>C1-BCUR</td></tr><tr><td>Contract Rider Update</td><td>C1-CRUUR</td></tr><tr><td>Hold Request</td><td>C1-HLDUR</td></tr><tr><td>Refund Request</td><td>C1-REFUR</td></tr><tr><td>Write Off Request</td><td>C1-WOUR</td></tr><tr><td>Policy Reinstatement</td><td>C1-RPUR</td></tr><tr><td>Bill Group Sorting</td><td>C1-BGSRT</td></tr><tr><td>Bill Group Derivation and Pricing Parameters</td><td>C1-BGDVP</td></tr><tr><td>Tender Cancellation Request Upload</td><td>C1-TndrCnclUploadRequest</td></tr><tr><td>Billable Charge Upload for Fully Insured</td><td>C1-BillableChargeUploadFI</td></tr></table></td><td>Note: This field is required when the Approval Required check box is selected.</td></tr>
<tr><td>Approval To Do Role</td><td>Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.</td><td>Yes (Conditional)
Note: This field is required when the Approval Required check box is selected.</td></tr>
<tr><td>FK Reference</td><td>Used to indicate the FK Reference code to display the entity information.</td><td>No</td></tr>
</table>

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Foreign Key Search** window appears. This field appears when the business object (**C1-UplRequestType**) is **Upload Request Type**.	

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

4. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑) icon corresponding to the match type.

5. Define, edit, or remove characteristics of the upload request type, if required.
6. Define a match type for an adjustment upload request type.
7. Click **Save**.
   The new upload request type is defined.

Configuring Filters for the Data Records Zone

Prerequisites

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

Note: Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

Procedure

To map an upload request type:

Copyright © 2009, 2025, Oracle and/or its affiliates.

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping**(🔗) icon in the **Mapping** column corresponding *t*o the upload request type whose columns you want to map with the CSV file.

   The **Upload Request Type Mapping** screen appears. It contains the following field:

   Note: The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type.	Not applicable

   The **Upload Request Type Mapping** screen also contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the rows correspond to the columns in CSV file.	Yes (Conditional) **Note:** This column is required when you search the **Data Records** zone in the **Upload Request** screen.
Use for Searching	Used to indicate whether the defined CSV Column Header is searchable. **Note:** Upto 10 rows can be selected as searchable rows.	Yes (Conditional) **Note:** This column is required to be selected to be shown in the **Data Records** zone in the **Upload Request** screen
Sequence Number	Used to specify the sequence of the searchable fields. **Note:** Searchable rows should have sequence less than or equal to 10.	Yes (Conditional) **Note:** This column is required to be selected to be shown sequentially in the **Data Records** zone in the **Upload Request** screen

4. Enter the required details.

   Note: If you want to add more than one column names mapped to the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete** (🗑) icon corresponding to the column header.

5. Click **Save**.
   The columns are mapped to the CSV files for upload request type.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *u*pload request type that you want to delete.
   A message appears confirming whether you want to delete the upload request type.

   Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.

   Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.
4. Click **OK**.
   The upload request type is deleted.

Adjustment Upload Request (Used for Searching)

The **Adjustment Upload Request** screen allows you to search for an adjustment upload request using various search criteria. Through this screen, you can:

- Upload an adjustment data file
- Cancel an adjustment data file
- View the details of an adjustment upload request
- View all adjustment records which are uploaded through an adjustment data file
- Create adjustments for an adjustment data file
- Submit an adjustment data file for approval
- Approve or reject an adjustment data file
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

This screen consists of the following zones:

- Search Adjustment Upload Request on page 1235
- Adjustment Upload Request on page 1244
- Adjustment Data Records on page 1246

Search Adjustment Upload Request

The **Search Adjustment Upload Request** zone allows you to search for an adjustment upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The fields in the **Search Criteria** section change depending on the query option selected. At present, there is only one query option named **Upload Request**. On selecting the **Upload Request** query option, the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to search adjustment upload requests which are created using a particular upload request type.	No
Status	Used to search adjustment upload requests with a particular status. The valid values are: • Approved • Cancelled	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Completed • Create Adjustment • Creating Adjustment • Deferred • Pending • Rejected • Pending For Approval	
Upload From Date	Used to search adjustment upload requests which are created from a particular date onwards. **Note:** By default, the current date appears in this field.	No
To	Used to search adjustment upload requests which are created till a particular date. **Note:** By default, the current date appears in this field.	No
File Name	Used to search an adjustment upload request which is created while uploading an adjustment data file.	No

Note: You must specify at least one search criterion while searching for an adjustment upload request.

- **Search Results** - On clicking the **Refresh** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the adjustment data file is uploaded in the system.
Upload Request Information	Displays information about the adjustment upload request. **Note:** It has a link. On clicking the link, the **Adjustment Upload Request** screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the adjustment upload request.
Upload Request Type	Indicates the upload request type using which the adjustment data file is uploaded in the system.
File Name	Displays the name of the adjustment data file.

You can upload an adjustment data file by clicking the **Upload** link in the upper right corner of this zone.

Searching for an Adjustment Upload Request

Prerequisites

To search for an adjustment upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an adjustment upload request:

1. Click the **Menu** link in the **Actions/Navigation** area.
   A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.
   The **Adjustment Upload Request** screen appears.
4. Enter the search criteria in the **Search Adjustment Upload Request** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of adjustment upload requests that meet the search criteria appears in the **Search Results** section.

Uploading an Adjustment Data File

Prerequisites

To upload an adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To upload an adjustment data file:

Copyright © 2009, 2025, Oracle and/or its affiliates.

1. Click the **Menu** link in the **Actions/Navigation** area.
   A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.
   The **Adjustment Upload Request** screen appears.
4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

   The **Upload Adjustment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file. **Note:** The list includes only those upload request types which are in the **Active** status.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. **Note:** You can replace an existing file when the adjustment upload request is in the **Pending** or **Cancelled** status.	No
File Name	Used to specify the name and path of the adjustment data file that you want to upload. **Note:** You can also click the **Browse** button corresponding to this field to browse to the location where the adjustment data file is available in the system.	Yes

5. Select the upload request type using which you want to upload the adjustment data file.
6. Click the **Browse** button corresponding to the **File Name** field.
   The **Choose File to Upload** dialog box appears.
7. Browse to the location where the adjustment data file that you want to upload is available.
8. Click **Open**.
   The adjustment data file name and path appears in the **File Name** field.
9. Click **Submit**.

   A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description
Errors	Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column appears when you click the **Save** button.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Match Type	Indicates the match type using which the adjustment must be created.
Match Value	Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Currency Code	Indicates the currency in which the adjustment must be created.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1	Indicates the characteristic that must be defined for the adjustment.
Char Value 1	Displays the value of the characteristic type.
Char Type 2	Indicates the characteristic that must be defined for the adjustment.
Char Value 2	Displays the value of the characteristic type.
Char Type 3	Indicates the characteristic that must be defined for the adjustment.
Char Value 3	Displays the value of the characteristic type.
Char Type 4	Indicates the characteristic that must be defined for the adjustment.
Char Value 4	Displays the value of the characteristic type.
Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 5	Displays the value of the characteristic type.

Note: If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

10. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

Replacing an Adjustment Data File

Prerequisites

To replace an existing adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To replace an existing adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.
   A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Billing Management** and then click **Adjustment Upload Request**.
   The **Adjustment Upload Request** screen appears.
4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

   The **Adjustment Upload Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file. **Note:** The list includes only those upload request types which are in the **Active** status.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again. **Note:** You can replace an existing file when the adjustment upload request is in the **Pending** or **Cancelled** status.	No
File Name	Used to specify the name and path of the adjustment data file that you want to upload.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You can also click the **Browse** button corresponding to this field to browse to the location where the adjustment data file is available in the system.	

5. Select the upload request type using which you want to upload the adjustment data file.
6. Select the **Replace Existing File** check box to indicate that you want to replace an existing adjustment data file.
7. Click the **Browse** button corresponding to the **File Name** field.
   The **Choose File to Upload** dialog box appears.
8. Browse to the location where the adjustment data file that you want to upload is available.
9. Click **Open**.
   The adjustment data file name and path appears in the **File Name** field.
10. Click **Submit**.

    A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description

-

Adjustment Upload Request - Main

The **Main** tab displays information about the adjustment upload request. It contains the following zones:

- Adjustment Upload Request on page 1244
- Adjustment Data Records on page 1246

Adjustment Upload Request

The **Adjustment Upload Request** zone displays the details of the adjustment upload request. This zone contains the following sections:

- **Header** - This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the adjustment upload request. The information string contains the following comma-separated values: • Upload Request Type Description • Status Description

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Upload Request ID **Note:** This information string is generated using the **C1-FLREQ-INF** algorithm which is attached to the **Information** system event in the adjustment upload request business object. If you want to display a different information string, you need to define a custom algorithm type and attach the algorithm in the adjustment upload request business object.
Status	Indicates the status of the adjustment upload request. The valid values are: • Approved • Cancelled • Completed • Create Adjustment • Creating Adjustment • Deferred • Pending • Rejected • Pending for Approval
Status Reason	Indicates the reason why the adjustment data file is cancelled or rejected. **Note:** This field appears when the adjustment upload request is in the **Cancelled** or **Rejected** status.
File Name	Displays the name of the adjustment data file for which the adjustment upload request is created.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Cancel File	Used to cancel an adjustment data file. **Note:** The **Cancel File** button appears when the adjustment upload request is in the **Pending** status.
Create Adjustment	Used to create adjustments for the records which are uploaded through the adjustment data file. **Note:** The **Create Adjustment** button appears when: • The adjustment upload request is in the **Pending** status. • The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.
Submit for Approval	Used to submit the adjustment data file for approval. **Note:** The **Submit for Approval** button appears only when: • The adjustment upload request is in the **Pending** status. • The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.
Approve	Used to approve the adjustment data file.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Approve** button appears when: • The adjustment upload request is in the **Pending for Approval** status. • A user with the approval To Do role is reviewing the adjustment data file.
Reject	Used to reject the adjustment data file.
	Note: The **Reject** button appears when: • The adjustment upload request is in the **Pending for Approval** status. • A user with the approval To Do role is reviewing the adjustment data file.

Note: The **Record Actions** section does not contain buttons when the status of the adjustment upload request is **Cancelled**, **Completed**, **Deferred**, or **Rejected**.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the adjustment upload request is created.
	Note: It has a link. On clicking the link, the **Business Object** screen appears with the details of the respective business object.
Status Date/Time	Displays the date and time when the adjustment upload request status is updated.
Create Date/Time	Displays the date and time when the adjustment upload request is created.

Adjustment Data Records

The **Adjustment Data Records** zone lists the adjustment records which are uploaded through the adjustment data file. This zone contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the adjustment that is created using the adjustment record.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The data appears in this column when the status of the adjustment upload request is **Completed**. It has a link. On clicking the link, the **Adjustment** screen appears with the details of the respective adjustment. The information string appears when an algorithm of the **C1-ADI-INFO** algorithm type is attached to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Adjustment Match Value	Indicates the contract against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1, Char Type 2, ..., Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 1, Char Value 2, ..., Char Value 5	Displays the value of the characteristic type.

Adjustment Upload Request - Log

The **Log** tab contains the following zone:

- Adjustment Upload Request - Log on page 1247

Adjustment Upload Request Log

The **Upload Request Log** zone lists the complete trail of actions performed on the adjustment upload request. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the funding request.
Details	Displays the details of the action performed on the funding request.
User	Indicates the user who has performed the action on the funding request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the funding request. **Note:** At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the funding request was rejected by the approver. **Note:** The data appears in this column when the funding request is in the **Rejected** status.

Note: You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Adjustment Upload Request Log** zone.

Cancelling an Adjustment Data File

There might be situations when incorrect adjustment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel an adjustment data file when the adjustment upload request is in the **Pending** status.

Prerequisites

To cancel an adjustment data file, you should have:

- Cancellation reasons defined in the application

Note: While cancelling an adjustment data file, you need to specify the reason why you want to cancel the adjustment data file. You can select the appropriate cancellation reason when you have defined the reasons for the **Cancelled** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

Procedure

To cancel an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to cancel) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *a*djustment data file that you want to cancel.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** - This tab contains the following two zones:
  - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
  - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.

3. Click **Cancel File** in the **Adjustment Upload Request** zone.

   The **Cancellation Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancellation Reason	Used to indicate the reason why you want to cancel the adjustment data file.	Yes

Note: The **Cancel File** button appears when the adjustment upload request is in the **Pending** status.

4. Select the cancellation reason from the list.
5. Click **Save**.
   The adjustment data file is cancelled. In addition, the status of the adjustment upload request is changed to **Cancelled**.

Creating Adjustments for an Adjustment Data File

Procedure

To create adjustments for an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file for which you want to create *a*djustments) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *a*djustment data file for which you want to create adjustments.

   The **Adjustment Upload Request** screen appears. It contains the following two tabs:

   - **Main** - This tab contains the following two zones:
     - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
     - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
   - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Create Adjustment** in the **Adjustment Upload Request** zone.

   The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records

Copyright © 2009, 2025, Oracle and/or its affiliates.

in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Note:

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Create Adjustment** button appears when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.

Submitting an Adjustment Data File for Approval

Procedure

To submit an adjustment data file for approval:

1. Search for the adjustment upload request (which is created while uploading the file that you want to submit for *a*pproval) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *a*djustment data file that you want to submit for approval.

   The **Adjustment Upload Request** screen appears. It contains the following two tabs:

   - **Main** - This tab contains the following two zones:
     - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
     - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
   - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Submit for Approval** in the **Adjustment Upload Request** zone.
   The status of the adjustment upload request is changed to **Pending for Approval**. A To Do is created using the **C1-ADJUP** To Do type. Users having a To Do role to which the **C1-ADJUP** To Do type is associated can view the To Do from the **To Do List** screen. On clicking the **Submitted Message** link corresponding to the To Do, the **Adjustment Upload Request** screen appears where you can review the records of the adjustment data file.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note:

The **Submit for Approval** button appears when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.

Approving an Adjustment Data File

Procedure

To approve an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in *t*he **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *a*djustment data file that you want to review.

   The **Adjustment Upload Request** screen appears. It contains the following two tabs:

   - **Main** - This tab contains the following two zones:
     - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
     - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
   - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
4. If the adjustment data file is appropriate, then click **Approve** in the **Adjustment Upload Request** zone.

   The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Rejecting an Adjustment Data File

Prerequisites

To reject an adjustment data file, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an adjustment data file, you need to specify the reason why you want to reject the adjustment data file. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

The system does not allow the submitter to approve or reject the adjustment data file.

Procedure

To reject an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in *t*he **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *a*djustment data file that you want to review.

   The **Adjustment Upload Request** screen appears. It contains the following two tabs:

   - **Main** - This tab contains the following two zones:
     - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
     - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
   - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
4. If the adjustment data file is not appropriate, then click **Reject** in the **Adjustment Upload Request** zone.

   The **Rejection Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rejection Reason	Used to indicate the reason why you want to reject the adjustment data file.	Yes

Note:

The **Reject** button appears when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

5. Select the rejection reason from the list.
6. Click **Save**.
   The adjustment data file is rejected. In addition, the status of the adjustment upload request is changed to **Rejected**.

Viewing the Log of an Adjustment Upload Request

Procedure

To view the log of an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *a*djustment upload request whose log you want to view.

   The **Adjustment Upload Request** screen appears. It contains the following two tabs:

   - **Main** - This tab contains the following two zones:
     - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
     - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
   - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click the **Log** tab.

   The **Upload Request Log** zone in the **Log** tab contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the adjustment upload request.
Details	Displays the details about the action performed on the adjustment upload request.
User	Indicates the user who has performed the action on the adjustment upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the adjustment upload request.
Status Reason	Indicates the reason why the adjustment upload request was rejected or cancelled.

Note: You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Adding a Log Entry for an Adjustment Upload Request

Procedure

To add a log entry for an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *a*djustment upload request whose log you want to edit.

   The **Adjustment Upload Request** screen appears. It contains the following two tabs:

   - **Main** - This tab contains the following two zones:
     - **Adjustment Upload Request** - Displays the details of the adjustment upload request.
     - **Adjustment Data Records** - Lists the adjustment records which are uploaded through the adjustment data file.
   - **Log** - This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

   The **Add Request Log** window appears. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the adjustment upload request.	Not applicable
Log Details	Used to specify additional comments for the adjustment upload request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Upload Request Log** zone.

Chapter 20

Foreign Exchange Gain Loss

Topics:

- Foreign Exchange Gain Loss Calculation
- Prerequisites
- Foreign Exchange Gain Loss Scenarios

In a multi-currency environment, financial transactions such as payments and adjustments created for an account can result in loss or gain due to fluctuations in the exchange rate at different point in time. This loss or gain is booked under the Foreign Exchange Gain Loss in the General Ledger and does not impact the account balance of the person.

The Foreign Exchange Gain or Loss might occur when:

- Exchange Rate for Invoice Currency to Division' Base Currency is different on Bill Completion Date and Payment Freeze Date

  Assumption: In this case, the Invoice Currency and Payment Currency are same.
- Exchange Rate for Adjustment Currency to Division's Base Currency is different on Bill Completion Date and Adjustment Freeze Date

  Assumption: In this case, the Adjustment Currency and Invoice Currency are same, but they are different from the Division's Base Currency.
- Exchange Rate for Adjustment Currency to Division's Base Currency is different on Bill Completion Date and Payment Freeze Date

  Assumption: In this case, the Adjustment Currency, Payment Currency, and Invoice Currency are same, but they are different from the Division's Base Currency.

Oracle Revenue Management and Billing facilitates you to calculate the foreign exchange gain or loss and book it against an FXLG distribution code. However, you can calculate the foreign exchange gain or loss when you have enabled the FT GL Extension feature. For more information on how the system calculates the foreign exchange gain loss, see Foreign Exchange Gain Loss Calculation on page 1258. For more information on how to setup the Foreign Exchange Gain Loss feature, see Prerequisites on page 1258.

Note: The system can calculate the foreign exchange gain or loss appropriately when the Division's Base Currency is same on Bill Completion Date and Adjustment/Payment Freeze Date. Otherwise, erroneous results might occur.

Foreign Exchange Gain Loss Calculation

During the Foreign Exchange Gain Loss calculation, the system considers the following types of financial transactions:

- Payments (i.e. Pay Segments)
- Credit adjustments which are created against a bill after the bill completion
- Write-off adjustments which are created against a bill
- Write Up adjustments which are automatically created when you match a payment against a bill using the Bill Weighted match type
- Write Down adjustments which are automatically created when you match a payment against a bill using the Bill Weighted match type

Note: The system does not considers financial transactions which are created due to payment and adjustment cancellation.

To understand how foreign exchange gain or loss is calculated, see Foreign Exchange Gain Loss Scenarios on page 1259.

You can calculate the foreign exchange gain loss when you have enabled the FT GL Extension feature. Oracle Revenue Management and Billing provides you a batch named **Foreign Exchange Loss Gain (C1-FXLG)** which calculates the foreign exchange gain loss. This batch considers payment and adjustment FTs when:

- Division's Base Currency is different from the Payment or Adjustment Currency
- Payment or Adjustment Freeze Date is different from the Bill Completion Date
- Match Event ID exists in the financial transaction
- FXLG_CALC_STATUS column corresponding to the financial transaction in the CI_FT table is set to N or NULL

Once the foreign exchange gain or loss is calculated, two entries are added corresponding to each financial transaction in the CI_FT_GL and CI_FT_GL_EXT tables. One entry for foreign exchange gain loss is booked against the distribution code for FXLG and another entry for foreign exchange gain loss is booked against the distribution code which is used for contract balancing. The foreign exchange loss is recorded as positive entry and the foreign exchange gain is recorded as negative entry. In the CI_FT_GL table, the foreign exchange gain loss is recorded in the financial transaction currency. And, in the CI_FT_GL_EXT table, the foreign exchange gain loss is recorded in the division's base currency.

You must execute the **Foreign Exchange Loss Gain (C1-FXLG)** batch prior to the **Assign GL Account to Financial Transaction (C1-GLASN)** or **Insert Records in CI_FTTEMP (GLASSGN1)** batch. For more information about these batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the Foreign Exchange Gain Loss feature, you need to do the following:

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to enable FT GL extension feature
- Set the following parameters of an algorithm which is created using the **FTFREZGLEXTN** algorithm type to **R** (i.e. arrears date):
  - Exchange Rate Date Type for Adjustments with Freeze At Will Option (Valid Values: A, R, F, C)
  - Exchange Rate Date Type for Adjustments with Freeze At Bill Completion Option (Valid Values: A, R, F, C, E)
  - Exchange Rate Date Type for Payments (Valid Values: A, R, F, C)
  - Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C)
- Create an algorithm of the **C1_CURALGBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Create an algorithm of the **C1_CURALGAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature
- Create an algorithm of the **C1_CURALGPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature
- Set the **Bill Segment Freeze Option** to **Freeze At Bill Completion** in the **Billing** tab of the **Installation Options** screen
- Define the required exchange rates for currency conversion
- Define the distribution code against which you want to book the foreign exchange gain loss
- Set the **Adjustment Freeze Option** to **Freeze At Bill Completion** for adjustment types whose adjustments are presented and impacts the next bill of an account

C1_CURALGPY algorithm type	C1_CURALGPY on page 861

Foreign Exchange Gain Loss Scenarios

To understand how foreign exchange gain loss is calculated, refer to the following different scenarios:

- Payment Scenarios on page 1259
- Credit Adjustment Scenarios on page 1264
- Write Off Adjustment Scenarios on page 1266
- Write Up/Down Adjustment Scenarios on page 1267

Payment Scenarios

The following scenarios indicate how foreign exchange gain or loss is calculated for payments which are matched against bills:

- Scenario 1 - Payment Freeze Date = Bill Completion Date; Payment Amount = Invoice Amount

Copyright © 2009, 2025, Oracle and/or its affiliates.

	Bill Completion Date (01-01-2001)	**Payment Freeze Date (01-01-2001)**
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	50
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-
Payment Amount	-	1000
Payment Amount in Base Currency on Bill Completion Date	-	1000*50 = 50000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	1000*50 = 50000
Foreign Exchange Gain or Loss	-	Not applicable

Observation: In the Scenario 1, the foreign exchange gain or loss is not applicable because Bill Completion Date and Payment Freeze Date are same.

- Scenario 2 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Same; Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	**Payment Freeze Date (01-02-2001)**
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	50
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-
Payment Amount	-	1000
Payment Amount in Base Currency on Bill Completion Date	-	1000*50 = 50000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	1000*50 = 50000
Foreign Exchange Gain or Loss	-	50000-50000 = 0

Observation: In the Scenario 2, there is no foreign exchange gain or loss because the exchange rate is same on the Bill Completion Date and Payment Freeze Date.

- Scenario 3 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Amount = Invoice Amount

Copyright © 2009, 2025, Oracle and/or its affiliates.

	Bill Completion Date (01-01-2001)	**Payment Freeze Date (01-02-2001)**
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	51
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-
Payment Amount	-	1000
Payment Amount in Base Currency on Bill Completion Date	-	1000*50 = 50000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	1000*51 = 51000
Foreign Exchange Gain or Loss	-	50000-51000 = -1000

Observation: In the Scenario 3, there is foreign exchange gain of 1000 INR on 01-02-2001 because of difference in exchange rate.

- Scenario 4 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Same; Partial Payments; Total Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	**First Partial Payment Freeze Date (01-02-2001)**	**Second Partial Payment Freeze Date (01-03-2001)**
Exchange Rate From	USD	USD	USD
Exchange Rate To	INR	INR	INR
Exchange Rate	50	50	50
Invoice/Payment Currency	USD	USD	USD
Invoice Amount	1000	-	-
Base Currency	INR	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-	-
Payment Amount	-	500	500
Payment Amount in Base Currency on Bill Completion Date	-	500*50 = 25000	500*50 = 25000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	500*50 = 25000	500*50 = 25000
Foreign Exchange Gain or Loss	-	25000-25000 = 0	25000-25000 = 0

Observation: In the Scenario 4, there is no foreign exchange gain or loss because the exchange rate is same on the Bill Completion Date and Payment Freeze Date.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Scenario 5 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Payments; Total Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	**First Partial Payment Freeze Date (01-02-2001)**	**Second Partial Payment Freeze Date (01-03-2001)**
Exchange Rate From	USD	USD	USD
Exchange Rate To	INR	INR	INR
Exchange Rate	50	51	48
Invoice/Payment Currency	USD	USD	USD
Invoice Amount	1000	-	-
Base Currency	INR	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-	-
Payment Amount	-	800	200
Payment Amount in Base Currency on Bill Completion Date	-	800*50 = 40000	200*50 = 10000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	800*51 = 40800	200*48 = 9600
Foreign Exchange Gain or Loss	-	40000-40800 = -800	10000-9600 = 400

Observation: In the Scenario 5, there is foreign exchange gain of 800 INR on 01-02-2001 and foreign exchange loss of 400 INR on 01-03-2001.

- Scenario 6 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Amount > Invoice Amount (i.e. Overpayment)

Copyright © 2009, 2025, Oracle and/or its affiliates.

	Bill Completion Date (01-01-2001)	**Payment Freeze Date (01-02-2001)**
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	49
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-
Payment Amount	-	1200
Payment Amount in Base Currency on Bill Completion Date	-	1000*50 = 50000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	1000*49 = 49000
Foreign Exchange Gain or Loss	-	50000-49000 = 1000

Observation: In the Scenario 6, there is foreign exchange loss of 1000 INR on 01-02-2001 because of difference in exchange rate. Note that the foreign exchange gain or loss is not calculated on the overpayment amount (i.e. 200 USD).

- Scenario 7 - Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Payments; Total Payment Amount > Invoice Amount (i.e. Overpayment)

Copyright © 2009, 2025, Oracle and/or its affiliates.

	Bill Completion Date (01-01-2001)	**First Partial Payment Freeze Date (01-02-2001)**	**Second Partial Payment Freeze Date (01-03-2001)**
Exchange Rate From	USD	USD	USD
Exchange Rate To	INR	INR	INR
Exchange Rate	50	49	52
Invoice/Payment Currency	USD	USD	USD
Invoice Amount	1000	-	-
Base Currency	INR	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-	-
Payment Amount	-	800	400
Payment Amount in Base Currency on Bill Completion Date	-	800*50 = 40000	200*50 = 10000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	800*49 = 39200	200*52 = 10400
Foreign Exchange Gain or Loss	-	40000-39200 = 800	10000-10400 = -400

Observation: In the Scenario 7, there is foreign exchange loss of 800 INR on 01-02-2001 and foreign exchange gain of 400 INR on 01-03-2001. Note that the foreign exchange gain or loss is not calculated on the overpayment amount (i.e. 200 USD).

Note: If a payment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Credit Adjustment Scenarios

An adjustment which is posted against a bill after the bill completion is treated as payment towards the bill. The following scenarios indicate how foreign exchange gain or loss is calculated for credit adjustments which are created against a bill after the bill completion:

- Scenario 1 - Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different

Copyright © 2009, 2025, Oracle and/or its affiliates.

	Bill Completion Date (04-30-2015)	**Adjustment Freeze Date (05-10-2015)**
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	40
Invoice/Adjustment Currency	INR	INR
Invoice Amount	1000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	1000/50 = 20	-
Adjustment Amount	-	400
Adjustment Amount in Base Currency on Bill Completion Date	-	400/50 = 8
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	400/40 = 10
Foreign Exchange Gain or Loss	-	8-10 = -2

Observation: In the Scenario 1, there is foreign exchange gain of 2 USD on 05-10-2015 because of difference in exchange rate.

- Scenario 2 - Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different

	Bill Completion Date (04-11-2014)	**Adjustment Freeze Date (04-30-2014)**
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	55	60
Invoice/Adjustment Currency	INR	INR
Invoice Amount	2000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	2000/55 = 36.36	-
Adjustment Amount	-	200
Adjustment Amount in Base Currency on Bill Completion Date	-	200/55 = 3.63
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	200/60 = 3.33
Foreign Exchange Gain or Loss	-	3.63-3.33 = 0.30

Observation: In the Scenario 2, there is foreign exchange loss of 0.30 USD on 04-30-2014 because of difference in exchange rate.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note:

Multi-currency is not supported while creating credit adjustments against a bill after the bill completion. Therefore, the credit adjustment's currency must be same as the invoice currency.

If the amount of credit adjustment exceeds the bill amount, you need to match the excess amount against another bill while freezing the adjustment. Otherwise, the adjustment is not considered during foreign exchange gain loss calculation.

If a credit adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Write Off Adjustment Scenarios

The following scenarios indicate how foreign exchange gain or loss is calculated for write off adjustments which are created against a bill:

- Scenario 1 - Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Full Bill Amount is Written Off

	Bill Completion Date (04-30-2015)	**Adjustment Freeze Date (05-10-2015)**
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	60
Invoice/Adjustment Currency	INR	INR
Invoice Amount	1000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	1000/50 = 20	-
Adjustment Amount	-	1000
Adjustment Amount in Base Currency on Bill Completion Date	-	1000/50 = 20
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	1000/60 = 16.67
Foreign Exchange Gain or Loss	-	20-16.67 = 3.33

Observation: In the Scenario 1, there is foreign exchange loss of 3.33 USD on 05-10-2015 because of difference in exchange rate.

- Scenario 2 - Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Bill Amount is Written Off

Copyright © 2009, 2025, Oracle and/or its affiliates.

	Bill Completion Date (01-30-2014)	**Adjustment Freeze Date (03-03-2015)**
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	60	55
Invoice/Adjustment Currency	INR	INR
Invoice Amount	1000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	1000/60 = 16.67	-
Adjustment Amount	-	600
Adjustment Amount in Base Currency on Bill Completion Date	-	600/60 = 10
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	600/55 = 10.91
Foreign Exchange Gain or Loss	-	10-10.91 = -0.91

Observation: In the Scenario 2, there is foreign exchange gain of 0.91 USD on 03-03-2015 because of difference in exchange rate.

Note: If a write off adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Write Up/Down Adjustment Scenarios

If the lower or upper tolerance limit defined in the Bill Weighted Payment Distribution algorithm is met when a payment is matched against a bill using the Bill Weighted match type, the Write Up or Write Down adjustment is automatically created. The following scenarios indicate how foreign exchange gain or loss is calculated for write up or write down adjustments:

- Scenario 1 - Payment/Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Matched against a Bill with Two Bill Segments (BS1 - 50 INR; BS2 - 50 INR)

Copyright © 2009, 2025, Oracle and/or its affiliates.

	Bill Completion Date (04-30-2015)	Payment Freeze Date (05-14-2015)	Write Up/Down Adjustment (Against BS1) Freeze Date (05-14-2015)	Write Up/Down Adjustment (Against BS2) Freeze Date (05-14-2015)
Exchange Rate From	USD	USD	USD	USD
Exchange Rate To	INR	INR	INR	INR
Exchange Rate	50	45	45	45
Invoice/Payment/ Adjustment Currency	INR	INR	INR	INR
Invoice Amount	100	-	-	-
Base Currency	USD	USD	USD	USD
Booked Revenue in Base Currency	100/50 = 2	-	-	-
Payment/ Adjustment Amount	-	95	2.5	2.5
Payment/ Adjustment Amount in Base Currency on Bill Completion Date	-	95/50 = 1.9	2.5/50 = 0.05	2.5/50 = 0.05
Realized Revenue (Payment/ Adjustment Amount) in Base Currency on Payment/ Adjustment Freeze Date	-	95/45 = 2.11	2.5/45 = 0.056	2.5/45 = 0.056
Foreign Exchange Gain or Loss	-	1.9-2.11 = -0.21	0.05-0.056 = -0.006	0.05-0.056 = -0.006

Observation: In the Scenario 1, two Write Up adjustments are created - one against BS1 and another against BS2. While freezing the payment which is matched against the bill, there is foreign exchange gain of 0.21 USD on 05-14-2015. However, while freezing the Write Up adjustments which are created against BS1 and BS2, there is foreign exchange gain of 0.006 and 0.006 USD, respectively, on 05-14-2015.

Note: If a write up or write down adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Chapter 21

Payment Request

Topics:

- Prerequisites
- Payment Creation Request (Without Approval) Status Transition
- Payment Creation Request (With Approval) Status Transition
- Payment Transfer Request (Without Approval) Status Transition
- Payment Transfer Request (With Approval) Status Transition
- Algorithms Used in C1-PaymentRequest
- Algorithms Used in C1-PaymentTransferRequest
- Payment Request Type
- Payment Request (Used for Searching)
- Payment Request (Used for Viewing)
- Payment Event Summary

Oracle Revenue Management and Billing facilitates you to create and transfer payments through a payment request. While creating a payment creation or transfer request, you need to specify the payment request type using which you want to create the payment request. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing the payments

While creating a payment creation request, you need to specify the tender amount and match type details. However, while creating a payment transfer request, you need to specify the transfer amount and match type details. The **Payment Request** feature supports the following match types :

- By Bill Regular (Match Entity: Account)
- By Bill (Match Entity: Bill)
- By Bill Weighted (Match Entity: Account)
- By Bill Segments (Match Entity: Account)
- By Suspense Contract (Match Entity: Account)
- By Settlement ID (Match Entity: Account)

You can specify multiple match types along with the entity (such as account or bill) in the payment request. Depending on the match type and match entity selected, the entities (such as unpaid bills, bill segments, or contracts) of the account are considered against which you can match the tender or transfer (payment) amount. Once you update the payment amount against the required entities, you can distribute the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tender are created. The payments are created in the **Freezable** status. If any error occurs while creating a payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating a new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

The system allows you to view the pay segments of a payment and edit the pay segment amount, if required. You can edit the pay segment amount before submitting the payment request for approval or before freezing the payments.

If the approval is not required for the payment request, you can directly freeze the payments created through the payment request. However, if the approval is required for the payment request, you need to submit the payment request for approval. Based on the observations, the approver might approve or reject the payment request. On approving a payment creation request or freezing the payments, the status of the payments is changed from **Freezable** to **Frozen**. However, on approving a payment transfer request or freezing the payments, the system does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

On rejecting a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, on rejecting a payment transfer request, the new payments which are created through the payment transfer request are deleted.

During the payment request process, a payment creation or transfer request goes through various statuses in its lifecycle. For more information about the payment request statuses, see Payment Creation Request (Without Approval) Status Transition on page 1272 and Payment Creation Request (With Approval) Status Transition on page 1273.

Note that the lifecycle of a payment creation and transfer requests is driven by the respective business object using which the payment creation and transfer requests are created. The **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects are shipped with the product. The payment request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects.

For more information on how to setup the payment request process, see Prerequisites on page 1271.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Prerequisites

To setup the payment request process, you need to do the following:

- Define the following match types:

Match Type	Description	Payment Distribution Override Algorithm	Manual Distribution Algorithm	Entity Type	Match Type Search Zone	Entity Flag
BILLR	By Bill Regular	C1-PDOV-PYBL	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILLW	By Bill Weighted	C1-PDOV-WTBS	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILL-WO	By Bill Weighted Outstanding Amount	C1-PDOV-WTOA		Account	C1_ACCT_SRCH	Bill
BILLSEG	By Bill Segment	C1-PDOV-PYBS	C1-MD-BSEG	Account	C1_ACCTSRCH	Bill Segment
BYSATY	By Suspense Contract	C1-PDOV-SATY	C1-MD-ONSA	Account	C1_ACCTSRCH	Contract
SETT-ID	By Settlement ID	C1-PDOV-PYSL	C1-MD-SID	Account	C1_ACCTSRCH	Settlement
BYBILL	By Bill	C1-PDOV-PYBL or C1-PDOV-WTBS	C1-MDBYBILL	Bill	CI_BILL	Bill
BILL-BS	By Bill - Pay By Bill Segment Oldest	C1-PDOV-BSDT		Account	C1_ACCT_SRCH	Bill

Note: The **C1-PDOV-BSDT** algorithm for the bill match type BILL-BS is used to distribute the amount among the bill segments of the bill in the order of bill segment start date.

Note: The **C1-PDOV-WTOA** algorithm for the bill match type BILL-WOA performs the bill weighted calculation based on the unpaid amount on the bill segment.

- Create a defer algorithm using the **C1-PAY-COUNT** algorithm type
- Define the required payment request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Request Type**
- Define the required characteristic types where the characteristic entity is set to **Payment Tender**
- Define rejected status reasons for the **C1-PaymentRequest** business object
- Define rejected status reasons for the **C1-PaymentTransferRequest** business object
- Define payment cancelation or transfer reasons through the **Payment Cancel Reason** screen
- Assign the **C1-PAYRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a payment request for approval
- Set the **Payment Portal Configuration (C1-PAYPORTAL)** feature configuration

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Set the **Payment Request-Sort Distribution data (C1-PYREQSRT)** feature configuration
- Set the batch control type of the **Payment Request Periodic Monitor (C1-PAYRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

C1-PAYRQ-INF

This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields:

- Payment Request Type Description
- Payment Request Status Description
- Payment Request ID

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-PAYREQPOS

This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the **C1_PAY_DISTRIBUTION** table when you remove a match type while editing a payment request.

C1-PAYREQVAL

This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the **Generate Auto Pay** option is selected. This algorithm is triggered when you click the **Manual Distribution** button.

Note: You do not specify the tender and auto pay details while creating a payment transfer request.

C1-PAY-DFT

This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.

C1-PAYDFTEXT

This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the **Distribute** button.

C1-PAY-PFA

This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.

C1-PAYPFAEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-PAY-APP

This algorithm changes the status of the payment request to **Freezing** when the approver clicks the **Approve** button.

C1-PAY-DIST

This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to **Distributed**. However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to **Deferred Distribution**.

C1-PAY-MONT

This algorithm is invoked from the **Payment Request Periodic Monitor (C1-PAYRQ)** batch. It changes the status of the payment request from **Deferred Distribution** to **Distributed**.

C1-PAYCREATE

This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the **C1_PAY_DISTRIBUTION** table where the payment amount is greater than or less than zero. The status of the payments is set to **Freezable**. If any error occurs while creating a payment, the status of the payment is set to **Error**. The payment event ID is updated corresponding to the payment request in the **C1_PAY_REQ** table. Finally, the status of the payment request is changed to **Distributed**.

C1-FRZ-VALID

This algorithm is triggered when you click the **Submit for Approval** or **Freeze** button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.

C1-PAY-V-FRZ

This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity.

C1-PAY-FRZ

This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:

- Changes the status of the payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

However, if you are freezing the payments of a payment transfer request, this algorithm does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-PAY-RJT

This algorithm is triggered when the approver clicks the **Reject** button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.

C1-ISFREEZE

This algorithm invokes the distribute algorithm and set Flag in the payment request clob.

Algorithms Used in C1-PaymentTransferRequest

The following table lists the algorithms which are attached to the **C1-PaymentTransferRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PAYRQ-INF	C1-PAYRQ-INF	Refer to C1-PAYRQ-INF on page 1279
Post-Processing	C1-PAYREQPOS	C1-PAYREQPOS	Refer to C1-PAYREQPOS on page 1280
Validation	C1-PAYREQVAL	C1-PAYREQVAL	Refer to C1-PAYREQVAL on page 1280

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentTransferRequest** business object:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-PYTRDF	C1-PYTRDF	Refer to C1-PYTRDF on page 1283
Draft	Enter	C1-PAY-DFT	C1-PAY-DFT	Refer to C1-PAY-DFT on page 1280

C1-PYTRDF

This algorithm invokes manual distribution algorithm of the match types that you have selected while creating a payment transfer request. It checks whether the payment transfer count exceeds the defer processing count. If the payment transfer

Copyright © 2009, 2025, Oracle and/or its affiliates.

count exceeds the defer processing count, the system changes the status of the payment transfer request to **Payment Derivation Pending**.

C1-PAY-DFT

This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.

C1-PAYDFTEXT

This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the **Distribute** button.

C1-PYTR-MONT

This algorithm is invoked from the **Payment Transfer Deferred Periodic Monitor (C1-PAYTR)** monitor batch. The system fetches the list of payments depending on whether payment transfer is done at the payment event or payment level. It then considers the payments which are eligible for transfer from the payment list based on the following transfer priority:

1. Payments created on the suspense contract (if any)
2. Payments created on the on account contract (if any)
3. Payments created on the excess credit contract (if any)
4. Payments created against bills in the descending order of bill date followed by the descending order of payment amount (when there two or more bills with the same bill date)

Once the system identifies the payments for transfer from the payment list, the payment transfer request is created and the status is changed from **Payment Derivation Pending** to **Draft**. A payment transfer record is created in the **C1_PAY_DETAILS** table along with the transfer priority and cancel switch.

C1-PYTR-UPDT

This algorithm is invoked when you click the **Update Transfer Amount** button. The system allows you to change the transfer amount, if required. On changing the transfer amount, system determines the payments which are eligible for transfer and changes the status of the payment transfer request to **Payment Derivation Pending** or **Draft**.

C1-PAY-PFA

This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.

C1-PAYPFAEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the

Copyright © 2009, 2025, Oracle and/or its affiliates.

Exclude To Do Entries From Auto Completion (F1-EXLTD) characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-PAY-APP

This algorithm changes the status of the payment request to **Freezing** when the approver clicks the **Approve** button.

C1-PAY-DIST

This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to **Distributed**. However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to **Deferred Distribution**.

C1-PAY-MONT

This algorithm is invoked from the **Payment Request Periodic Monitor (C1-PAYRQ)** batch. It changes the status of the payment request from **Deferred Distribution** to **Distributed**.

C1-PAYCREATE

This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the **C1_PAY_DISTRIBUTION** table where the payment amount is greater than or less than zero. The status of the payments is set to **Freezable**. If any error occurs while creating a payment, the status of the payment is set to **Error**. The payment event ID is updated corresponding to the payment request in the **C1_PAY_REQ** table. Finally, the status of the payment request is changed to **Distributed**.

C1-FRZ-VALID

This algorithm is triggered when you click the **Submit for Approval** or **Freeze** button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.

C1-PAY-V-FRZ

This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity.

C1-PAY-FRZ

This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Changes the status of the payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

However, if you are freezing the payments of a payment transfer request, this algorithm does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

C1-PAY-RJT

This algorithm is triggered when the approver clicks the **Reject** button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.

C1-ISFREEZE

This algorithm invokes the distribute algorithm and set Flag in the payment request clob.

Payment Request Type

Oracle Revenue Management and Billing allows you to define a payment request type using which you can create a payment request. A payment request of the specified payment request type is created when you manually distribute the tender or payment amount. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing payments

The **Payment Request Type** screen allows you to define, edit, copy, and delete a payment request type. This screen consists of the following zones:

- Payment Request Type List on page 1286
- Payment Request Type on page 1287

Payment Request Type List

The **Payment Request Type List** zone lists payment request types that are already defined in the system. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Payment Request Type	Displays the payment request type.
Description	Displays the description of the payment request type.
Edit	On clicking the **Edit** (✎) icon, the **Payment Request Type** screen appears where you can edit the details of the payment request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Payment Request Type** screen appears where you can define a payment request type using an existing payment request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the payment request type.
	Note: You can delete a payment request type when you have not created a payment request using the payment request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment request type, the **Payment Request Type** zone appears with the details of the respective payment request type.

Payment Request Type

The **Payment Request Type** zone displays the details of the payment request type. This zone contains the following sections:

- **Main** - This section provides basic information about the payment request type. It contains the following fields:

Field Name	Field Description
Payment Request Type	Displays the payment request type.
Payment Request Business Object	Indicates the business object that will be used to create the payment request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the payment request type.
Detailed Description	Displays additional information about the payment request type.
Status	Indicates the status of the payment request type. The valid values are: • Active • Inactive
Defer Algorithm	Indicates the algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.
	Note: Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm) It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.
Approval Required	Indicates whether approval is required while freezing payments of the payment requests which are created using the payment request type.
Approval To Do Type	Indicates that To Do of the specified To Do type must be created when you submit the payment request for approval.
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve the payment request submitted for approval.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Transfer	Indicates whether the payment request type will be used to create payment transfer or payment creation request.
Defer Payment Processing Count	Indicates whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceed the defer processing count.
	Note: This field appears when the **Transfer** option is selected.

- **Characteristics** - This section lists the characteristics of the payment request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment request type.
Delete	Used to delete the payment request type. **Note:** You can delete a payment request type when you have not created a payment request using the payment request type.
Duplicate	Used to create a new payment request type using an existing payment request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Payment Request Type** zone does not appear in the **Payment Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to a payment request type in the **Payment Request Type List** zone.

Defining a Payment Request Type

Prerequisites

To define a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To define a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Payment Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type Business Object	Used to indicate the business object that you want to use to create the payment request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple payment request type business objects defined in the application. If there is only one payment request type business object defined in the application, the **Payment Request Type** screen appears.

4. Select the required payment request type business object from the respective field.
5. Click **OK**.

   The **Payment Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment request type.
   - **Characteristics** - Used to define the characteristics for the payment request type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Payment Request Type	Used to specify the payment request type.	Yes
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: • Active • Inactive	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm) Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes tender or payment amount and accordingly creates payment event and payments. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No
Defer Payment Processing Count	Used to indicate whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceed the defer processing count.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Transfer** option is selected. You cannot specify a negative value in the **Defer Payment Processing Count** field. If you do not specify the defer payment processing count, by default, it is set to zero (0). Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. For more information about the **Payment Request Periodic Monitor (C1-PAYRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of bills in a payment request does not exceed the defer processing count, the system will process the payment request in real time (i.e. immediately).	

6. Enter the required details.

Note: You can search for an algorithm and To Do type by clicking the **Search** (🔍) icon corresponding to the respective field.

7. Define characteristics for the payment request type, if required.
8. Click **Save**.
   The payment request type is defined.

How to define a characteristic for a payment request type	Defining a Characteristic for a Payment Request Type on page 1293

Defining a Characteristic for a Payment Request Type

Prerequisites

To define a characteristic for a payment request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Request Type**)

Procedure

To define a characteristic for a payment request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment *r*equest type.

   The **Characteristics** section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Payment Request Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment request type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment request type, click the **Add** (+) icon and *t*hen repeat step *2*.

Note: However, if you want to remove a characteristic from the payment request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Payment Request Type

Prerequisites

To edit a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To edit a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

A sub-menu appears.

3. Click the **Search** option from the **Payment Request Type** sub-menu.
   The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *p*ayment request type whose details you want to edit.

   The **Payment Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment request type.
   - **Characteristics** - Used to define the characteristics for the payment request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Displays the payment request type.	Not applicable
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: • Active • Inactive	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.	Yes

How to define a characteristic for a payment request type	Defining a Characteristic for a Payment Request Type on page 1293

Copying a Payment Request Type

Instead of creating a payment request type from scratch, you can create a new payment request type using an existing payment request type. This is possible through copying a payment request type. On copying a payment request type, the details including the characteristics are copied to the new payment request type. You can then edit the details, if required.

Prerequisites

To copy a payment request type, you should have:

- Payment request type (whose copy you want to create) defined in the application

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To copy a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Payment Request Type** sub-menu.
   The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Duplicate**(⧉) icon in the **Duplicate** column *c*orresponding to the payment request type whose copy you want to create.

   The **Payment Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment request type.
   - **Characteristics** - Used to define the characteristics for the payment request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to specify the payment request type.	Yes
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: • Active • Inactive	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm) Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes tender or payment amount and accordingly creates payment event and payments. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval. **Note:** This field appears when the **Approval Required** check box is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** check box is selected.
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No
Defer Payment Processing Count	Used to indicate whether a payment request must be processed in the deferred mode (i.e. in the background) when the number of payments in the payment request exceeds the defer processing count.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Transfer** option is selected. You cannot specify a negative value in the **Defer Payment Processing Count** field. If you do not specify the defer payment processing count, by default, it is set to zero (0). Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. For more information about the **Payment Request Periodic Monitor (C1-PAYRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of bills in a payment request does not exceed the defer processing count, the system will process the payment request in real time (i.e. immediately).	

Tip: Alternatively, you can click the **Duplicate** button in the **Payment Request Type** zone to create a copy of the payment request type.

5. Enter the required details.

Note: You can search for an algorithm and To Do type by clicking the **Search** (🔍) icon corresponding to the respective field.

6. Define, edit, or remove characteristics of the payment request type, if required.
7. Click **Save**.
   The new payment request type is defined.

Deleting a Payment Request Type

Procedure

To delete a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.
   A sub-menu appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. Click the **Search** option from the **Payment Request Type** sub-menu.
   The **Payment Request Type** screen appears.
4. In the **Payment Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *p*ayment request type that you want to delete.
   A message appears confirming whether you want to delete the payment request type.

   Note: You can delete a payment request type when you have not created a payment request using the payment request type.

   Tip: Alternatively, you can click the **Delete** button in the **Payment Request Type** zone to delete the payment request type.
5. Click **OK**.
   The payment request type is deleted.

Payment Request (Used for Searching)

The **Payment Request** screen allows you to search for a payment creation or transfer request using various search criteria. It also allows you to create payment creation and transfer requests. It contains the following zone:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Search Payment Request on page 1302

Through this screen, you can navigate to the following screen:

- Payment Request (Used for Viewing) on page 1306

Search Payment Request

The **Search Payment Request** zone allows you to search for a payment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment request using request or payment details. The valid values are: • Request Details • Payment Details **Note:** By default, the **Request Details** option is selected.	Yes
Created From	Used to search payment requests which are created from a particular date and time onwards. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Payment Request Status	Used to search payment requests with a particular status. The valid values are: • Approval In Progress • Deferred Distribution • Discarded • Distribute And Freeze • Distributed • Draft • Processed • Rejected **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Created To	Used to search payment requests which are created till a particular date and time. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
User ID	Used to search payment requests which are created by a particular user.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Request Details** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **User Search** window appears.	
Payment Request Type	Used to search payment requests which are created using a particular payment request type. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Payment Request ID	Used to search a particular payment request. **Note:** This field appears when you select the **Request Details** option from the **Search By** list.	No
Payment Event ID	Used to search a payment request through which a payment event is created. **Note:** This field appears when you select the **Payment Details** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Payment Event Search** window appears.	No
Payor Account ID	Used to search payment requests which are created for a particular payor account. **Note:** This field appears when you select the **Payment Details** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	No
Payment Date	Used to search payment requests through which payments are created on a particular date. **Note:** This field appears when you select the **Payment Details** option from the **Search By** list.	No
Payor Name	Used to search payment requests which are created for a particular payor.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Payment Details** option from the **Search By** list.	

Note: You must specify at least one search criterion while searching for a payment request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the payment request was created in the system.
Payment Request Information	Displays information about the payment request. **Note:** It has a link. On clicking the link, the **Payment Request** screen appears where you can view the details of the respective payment request.
Status	Indicates the status of the payment request. The valid values are: • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected
Payment Event Information	Displays information about the payment event which is created through the payment request. **Note:** It has a link. On clicking the link, the **Payment Event** screen appears with the details of the respective payment event.
Created By	Indicates the user who has created the payment request.
Payor Account Information	Displays information about the payor's account for which the payment request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Payment Request

Prerequisites

To search for a payment request, you should have:

- Payment request types defined in the application

Procedure

To search for a payment request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Payment Request** sub-menu.
   The **Payment Request** screen appears.
4. Enter the search criteria in the **Search Payment Request** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
5. Click **Search**.
   A list of payment requests that meet the search criteria appears in the **Search Results** section.

Viewing the Payment Request Details

Procedure

To view the details of a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment request whose details you want to view.

   The **Payment Request** screen appears. It consists of the following tabs:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Main** - This tab contains the following three zones:
  - **Payment Request** - Displays the details of the payment request.
  - **Payment Details** - Displays the payments transferred through the payment request.
  - **Payment Distribution** - Lists the payment distribution records of the payment request.
- **Log** - This tab lists the complete trail of actions performed on the payment request.

3. View the details of the payment request in the **Payment Request** zone.
4. View the payments transferred through the payment request in the **Payment Details** zone.
5. View the payment distribution records of the payment request in the **Payment Distribution** zone.

Payment Request (Used for Viewing)

Once you create a payment creation or transfer request, the **Payment Request** screen allows you to:

- Edit the details of a payment request
- Edit the payment amount against each entity
- Delete a payment request
- View the details of a payment request
- Distribute the tender or payment amount
- Edit the amount of a payment segment
- Freeze the payments created through a payment request
- Submit a payment request for approval before freezing payments
- Approve or reject a payment request
- View the log of a payment request
- Add a log entry for a payment request
- View the payments transferred through a payment request
- Update the transfer amount against each entity
- Redistribute the tender or payment amount of a payment segment

It consists of the following tabs:

- Payment Request - Main on page 1306
- Payment Request - Log on page 1315

Payment Request - Main

The **Main** tab displays information about the payment request. It contains the following zones:

- Payment Request on page 1307
- Payment Details on page 1312

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Payment Distribution on page 1312

Payment Request

The **Payment Request** zone displays the details of the payment request. This zone contains the following sections:

- **Main** - This section provides basic information about the payment request. It contains the following fields:

Field Name	Field Description
Payment Request Information	Displays information about the payment request.
Payment Request Type	Indicates the payment request type using which the payment request is created. **Note:** It has a link. On clicking the link, the **Payment Request Type** screen appears where you can view the details of the payment request type.
Payment Request Status	Indicates the status of the payment request. The valid values are: • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected
Status Reason	Indicates the reason why the payment request is rejected. **Note:** This field appears when the payment request is in the **Rejected** status. It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the rejected reason.
Payor Account Information	Displays information about the payor's account for which the payment request is created. **Note:** This field appears when you are viewing the details of a payment creation request. It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Payment Date	Displays the date when the payment event and payments are created.
Payment Event Information	Displays information about the payment event. If you are viewing the details of a payment creation request, this field displays information about the payment event which is created through the payment creation request. However, if you are viewing the details of a payment transfer request, this field displays information about the payment event whose payments you want to transfer.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field does not appear when the payment request is in the **Rejected** status. If you are viewing the details of a payment creation request, this field does not appear when the payment creation request is in the **Draft** status. It has a link. On clicking the link, the **Payment Event** screen appears where you can view the details of the respective payment event.
Maximum Transfer Amount	Displays the maximum amount which can be transferred. **Note:** This field appears when you are viewing the details of a payment transfer request.
Transfer Amount	Displays the total payment amount which you want to transfer. **Note:** This field appears when you are viewing the details of a payment transfer request.
Transfer Reason	Indicates the reason why you want to transfer the payment amount. **Note:** This field appears when you are viewing the details of a payment transfer request.

- **Tender Details** - This section provides details about the tender used in the payment request. This section appears when you are viewing the details of a payment creation request. It contains the following fields:

Field Name	Field Description
Tender Type	Indicates the type of tender through which the payment was made.
Tender Amount	Displays the tender amount.
Currency	Indicates the currency in which the payment was made.
Check Number	Displays the cheque number if the payment is made through the cheque.
Auto Pay Route Type Code	Indicates when and how automatic payment request of the account is routed to a financial institution. **Note:** This field appears when you select a tender type where the **Generate Auto Pay** checkbox is selected in the **Tender Type** screen.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution. **Note:** This field appears when you select a tender type where the **Generate Auto Pay** checkbox is selected in the **Tender Type** screen.
Auto Pay Source Code	Indicates the financial institution that receives the automatic payment request. **Note:** This field appears when you select a tender type where the **Generate Auto Pay** checkbox is selected in the **Tender Type** screen.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and freezed in the system.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when you select a tender type where the **Generate Auto Pay** checkbox is selected in the **Tender Type** screen.
Account Number	Indicates the bank account number through which the automatic payment was made. **Note:** This field appears when you select a tender type where the **Generate Auto Pay** checkbox is selected in the **Tender Type** screen.
Expires On	Displays the date when the tender type will expire. **Note:** This field appears when you select a tender type where the **Generate Auto Pay** checkbox is selected in the **Tender Type** screen.
Name	Displays the name of the person as maintained in the financial institution's system. **Note:** This field appears when you select a tender type where the **Generate Auto Pay** checkbox is selected in the **Tender Type** screen.
Tender Control Information	Displays information about the tender control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** This field appears only when the payment request is in the **Distributed**, **Approval In Progress**, **Processed** , or **Rejected** status. It has a link. On clicking the link, the **Tender Control** screen appears where you can view the details of the respective tender control.
Deposit Control Information	Displays information about the deposit control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** This field appears only when the payment request is in the **Distributed**, **Approval In Progress**, **Processed**, or **Rejected** status. It has a link. On clicking the link, the **Deposit Control** screen appears where you can view the details of the respective deposit control.
Pay Tender ID	Displays the payment tender ID. **Note:** This field appears only when the payment request is in the **Processed** status.
Tender Status	Indicates the current status of the tender. The valid values are: • Valid • Cancelled

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the payment request is in the **Processed** status.
MICR ID	Displays the MICR code on the payment.
Ext. Reference ID	Displays the external reference number of the payment as it appears in the payment upload interface record.
Person ID	Indicates the person's account ID as it appears in the payment upload interface record.
Name	Indicates the person name as it appears in the payment upload interface record.

- **Characteristics** - This section lists the characteristics of the payment tender. It appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the payment request.
	Note: The **Edit** button appears when the payment request is in the **Draft** status.
Delete	Used to delete the payment request.
	Note: The **Delete** button appears when the payment request is in the **Draft** status.
Update Transfer Amount	Used to update the transfer amount.
	Note: The **Update Transfer Amount** button appears when the payment transfer request is in the **Draft** status. It is used for changing the transfer process from full to partial payment.
Update Tender Details	Used to update the tender details.
	Note: The **Update Tender Details** button appears when the payment transfer request is in the **Processed** status.
Distribute	Used to distribute the tender or payment amount.
	Note: The **Distribute** button appears when the payment request is in the **Draft** status.
Submit for Approval	Used to submit the payment request for approval.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The **Submit for Approval** button appears when: • The payment request is in the **Distributed** status. • The **Approval Required** check box is selected in the payment request type using which the payment request is created.
Freeze	Used to freeze the payments which are created through the payment request.
	Note: The **Freeze** button appears when: • The payment request is in the **Distributed** status. • The **Approval Required** check box is not selected in the payment request type using which the payment request is created.
Approve	Used to approve the payment request.
	Note: The **Approve** button appears when: • The payment request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the payment request.
Reject	Used to reject the payment request.
	Note: The **Reject** button appears when: • The payment request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the payment request.
Back to Draft	Used to change the status of the payment request to **Draft**.
	Note: The **Back to Draft** button appears when the payment request is in the **Distributed** status.
Discard	Used to discard the payment creation or transfer request.
	Note: The **Discard** button appears when the payment request is in the **Distributed** status.
Distribute And Freeze	Used to distribute and freeze the payments at the same time.
	Note: The **Distribute And Freeze** button appears only when the payment request is in the **Draft** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the payment request status is updated
Create Date/Time	Displays the date and time when the payment request is created.

- **Match Types** - This section lists the match type details of the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which you want to match the payment.
Match By	Indicates the bill or account (whose entities, such as unpaid bills, unpaid bill segments, settlement IDs, or contracts) must be considered while matching the payment.

Payment Details

The **Payment Details** zone lists the payments which are transferred through the payment request. This zone contains the following column:

Column Name	Column Description
Payment Information	Displays the concatenated string consisting of payment information which is separated by a comma (,). In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Payment** screen appears where you can view the details of the respective payment. This zone appears only when the following conditions are met: • Partial payment transfer is done at the payment event level • Full or partial payment transfer is done at the payment level

Related Topics

For more information on...	See...
How to view the payment details of a payment transfer request	

Payment Distribution

The **Payment Distribution** zone lists the payment distribution records of the payment request. This zone contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the payment was matched.
Payee Account ID	Indicates the account for which the payment was made.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Match Value	Indicates the entity (such as bill ID, bill segment ID, contract ID, or settlement ID) against which the payment was matched.
Match Entity	Indicates the type of entity against which the payment was matched. The valid values are: • Bill • Bill Segment • Contract • Settlement
Original Bill Amount	Displays the entity amount. **Note:** In case of contract, the original bill amount would be zero (0).
Write Off Adjustment Amount	Indicates the amount which is either write up or down when the payment against the bill is within the tolerance limit. **Note:** The data appears in this column when the match type is **Bill Weighted** and the payment amount is within the underpayment or overpayment tolerance limit. This column does not appear when the payment request is in the **Draft** or **Rejected** status.
Paid Amount	Displays the amount which is already paid against the entity. **Note:** This column appears when the payment request is in the **Draft** or **Rejected** status.
Unpaid Amount	Displays the amount which is eligible for payment against the entity. **Note:** This column appears when the payment request is in the **Draft** or **Rejected** status.
Payment Amount	Displays the payment amount. If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type while creating the payment request, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can edit the payment amount, if required.
Payment Currency	Indicates the currency in which the payment was made.
Payment ID	Displays the payment ID. **Note:** It has a link. On clicking the link, the **Payment** screen appears with the details of the respective payment. This column does not appear when the payment request is in the **Draft** or **Rejected** status.
Payment Status	Indicates the status of the payment. The valid values are:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Canceled • Error • Freezable • Frozen • Incomplete
	Note: This column does not appear when the payment request is in the **Draft** or **Rejected** status.
Error Message	Indicates the reason why the payment is in the **Error** status.
	Note: This column does not appear when the payment request is in the **Draft** or **Rejected** status.
Detail	On clicking the **Detail** button, the **Edit Payment Segment Amount** screen appears where you can edit the payment segment amount.
	Note: This column does not appear when the payment request is in the **Draft** or **Rejected** status. The **Detail** button appears in the **Detail** column when: • The payment request is in the **Distributed** or **Approval In Progress** status • The payment is in the **Freezable** status. However, a user with the approval To Do role will not be able to edit the payment segment amount.
Redistribute	On clicking the **Redistribute** button, you can redistribute the payment amount among the payment segments.
	Note: This column appears when the payment request is in the **Distributed** or **Distribute and Freeze** status. The **Redistribute** button appears in the **Redistribute** column when: • The payment request is in the **Distributed** or **Approval In Progress** status

You can edit the payment amount by clicking the **Update Payment Amount** link in the upper right corner of this zone.

Note: The **Update Payment Amount** link appears when the payment creation or transfer request is in the following status:

- Differed Distribution
- Discarded
- Distribute And Freeze
- Draft
- Rejected

Payment Request - Log

The **Log** tab contains the following zone:

- Payment Request Log on page 1315

Payment Request Log

The **Payment Request Log** zone lists the complete trail of actions performed on the payment request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the payment request.
Details	Displays the details about the action performed on the payment request.
User	Indicates the user who has performed the action on the payment request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the payment request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the payment request is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the payment request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

Creating a Payment Creation Request

Prerequisites

To create a payment creation request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is not selected)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Procedure

To create a payment creation request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Payments** and then click **Payment Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Payment Request** sub-menu.

   The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment creation request. **Note:** The list includes only those payment request types where the **Transfer** check box is not selected.	Yes

Tip: Alternatively, you can access the **Select Payment Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request** screen.

4. Select the required payment request type from the respective field.
5. Click **OK**.

   The **Payment Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment request.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment request. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears. On specifying the account ID, the information about the account appears corresponding to the **Payor Account Information** field.	Yes
Payment Date	Used to specify the date when the payment was made. **Note:** By default, the current date appears in this field.	Yes

   - **Tender Details** - Used to specify the tender details in the payment creation request. This section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment is made.	Yes
Tender Amount	Used to specify the tender amount. **Note:** By default, this field is disabled. It is enabled when you specify the payor account information. You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	Yes
Currency	Used to indicate the currency in which the payment is made. **Note:** By default, this field is disabled. It is enabled when you specify the payor account information.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution. **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Auto Pay Route Type Search** window appears. On specifying the auto pay route type, the description of the auto pay route type appears corresponding to the **Auto Pay Route Type Code** field.	Yes (Conditional) **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution. **Note:** The data appears only when you: • Select a tender type where the **Generate Auto Pay** check box is selected. • Specify the values for **Auto Pay Route Type Code** and **Auto Pay Source Code** fields.	Not applicable
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Auto Pay Source Search** window appears. On specifying the auto pay source code, the description of the auto pay source code appears corresponding to the **Auto Pay Source Code** field.	**Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and freezed in the system. **Note:** The data appears only when you: • Select a tender type where the **Generate Auto Pay** check box is selected. • Specify the values for **Auto Pay Route Type Code** and **Auto Pay Source Code** fields.	Not applicable
Account Number	Used to indicate the bank account number through which the automatic payment is made. **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.	Yes (Conditional) **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.
Expires On	Used to specify the date till when the tender is effective. **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.	No
Name	Used to specify the name of the person as maintained in the financial institution's system.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected. By default, the payor name appears in this field.	
MICR ID	Used to specify the MICR code on the payment.	No
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to specify the person's account ID mentioned in the payment upload interface record.	No
Name	Used to specify the name of the person as it appears in the payment upload interface record.	No
Tender Control ID	Used to indicate the tender control ID. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Tender Control Search** window appears. On specifying the tender control ID, the description of the tender control ID appears corresponding to the **Tender Control ID** field.	No
Deposit Control Information	Used to indicate the deposit control ID. **Note:** It is a read-only field. The data appears in this field when the tender control ID is specified.	No

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define the characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Payment Tender**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. On specifying the business object, the description of the business object appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the payment tender.

- **Match Types** - Used to define match types for the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities. **Note:** By default, the **Show Default** check box is selected when you select the match type.	No
Entity	Indicates the match type entity. The valid values are: • **Account** - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • **Bill** - Enables you to select the unpaid bill against which you want to match the payment. • **Statement** - Enables you to select the statement against which you want to match the payment.	Not applicable
Entity ID	Used to specify the account, bill ID, or statement ID depending on the match type entity. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, based on the selected match type, the relevant entity **Search** window appears. On specifying the entity, the description of the entity appears corresponding to the **Entity ID** field.	Yes

6. Enter the required details.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note:

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑) icon corresponding to the match type.

7. Define characteristics for the payment tender, if required.
8. Click **Manual Distribution**.

   The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account **Note:** Only contracts of the contract type where the **Eligible for Billing** flag is set to **No** and **Special Role** flag is set to **Suspense** are listed in the **Payment Distribution** zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the **Eligible for Billing** flag is set to **No** and **Special Role** flag is set to **Suspense**) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in **Payment Distribution** zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped
By Statement	Statement	Unpaid bills of the statement

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note:

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

Defining a Characteristic for a Payment Tender

Prerequisites

To define a characteristic for a payment tender, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Tender**)

Procedure

To define a characteristic for a payment tender:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a payment request.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Payment Tender**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment tender.

2. Enter the required details.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment tender, click the **Add** (+) icon and then *r*epeat step *2*.

> **Note:** However, if you want to remove a characteristic from the payment tender, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing the Payment Amount

Procedure

To edit the payment amount against each entity:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment creation or transfer request whose details you want to edit.
   The **Payment Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Update Payment Amount** link in the upper right corner of the **Payment Distribution** zone.

   The **Payment Request - Edit Payment Amount** screen appears. It contains the following sections:

   - **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description
Match Type	Used to search the entities which are considered using a particular match type. **Note:** By default, the **All** option is selected.
Sort By	Used to indicate the entity based on which the search result is sorted. **Note:** By default, the **All** option is selected.
Sort By	Used to indicate the entity fields based on which the search result is sorted. **Note:** By default, the **All** option is selected. The data in this field appears when the match type is selected.
Match Value	Used to search for a particular entity (such as bill, bill segment, contract, or settlement ID).
Order	Used to indicate the sequence for the search result. The valid values are: • Ascending

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Descending

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the entity is considered.
Payee Information	Displays information about the account for which the payment was made.
Entity Information	Displays information about the entity against which the payment was matched.
Original Bill Amount	Displays the entity amount. **Note:** In case of contract, the entity amount would be zero (0).
Paid Amount	Displays the amount which is already paid against the entity.
Unpaid Amount	Displays the amount which is eligible for payment against the entity.
Payment Amount	Used to specify the payment amount. **Note:** If the **Allow Overpayment** option type of the **C1-PAYPORTAL** feature configuration is set to **true**, you can specify the payment amount greater than the unpaid amount. In other words, you can make overpayment against an entity.
Payment Currency	Indicates the currency in which the payment is made.

In addition, the **Search Results** section contains the following fields:

Field Name	Field Description
Total Amount	Displays the tender or transfer amount.
Running Total	Displays the total payment amount which is specified against each entity.
Running Balance	Displays the difference between the total amount and running total. **Note:** The running balance is highlighted in the red color when the difference amount is non-zero.

Note: Pagination is used to display limited number of records in the **Edit Payment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

5. Modify the payment amount against an entity, if required.

Note: The sum of payment amount should be equal to the tender or transfer (payment) amount.

6. Click **Save**.
   The changes made in the payment amount are saved.
7. Click **Close**.
   The payment amount is updated in the **Payment Distribution** zone.

Editing a Payment Creation Request

Procedure

To edit a payment creation request:

1. Search for the payment creation request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment creation request whose details you want to edit.
   The **Payment Request** screen appears.
3. Click the **Edit** button in the **Payment Request** zone.

   The **Payment Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment creation request.	Not applicable
Payment Request Type	Indicates the payment request type using which the payment creation request is created.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment creation request. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** screen appears. On specifying the payor account, the description of the payor account appears corresponding to the **Payor Account Information** field.	Yes
Payment Date	Used to specify the date when the payment is made.	Yes

   - **Tender Details** - Used to specify the tender details in the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment is made.	Yes
Tender Amount	Used to specify the tender amount.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	
Currency	Used to indicate the currency in which the payment is made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution. **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Auto Pay Route Type Search** window appears. On specifying the auto pay route type, the description of the auto pay route type appears corresponding to the **Auto Pay Route Type Code** field.	Yes (Conditional) **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution. **Note:** The data appears only when you: • Select a tender type where the **Generate Auto Pay** check box is selected. • Specify the values for **Auto Pay Route Type Code** and **Auto Pay Source Code** fields.	Not applicable
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Auto Pay Source Search** window appears. On specifying the auto pay source code, the description of the auto pay source code appears corresponding to the **Auto Pay Source Code** field.	**Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and freezed in the system. **Note:** The data appears only when you: • Select a tender type where the **Generate Auto Pay** checkbox is selected in the **Tender Type** screen. • Specify the values for **Auto Pay Route Type Code** and **Auto Pay Source Code** fields.	Not applicable
Account Number	Used to indicate the bank account number through which the automatic payment is made. **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.	Yes (Conditional) **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.
Expires On	Used to specify the date till when the tender is effective. **Note:** This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.	No
Name	Used to specify the name of the person as it appears in the financial institution's system.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears only when you select a tender type where the **Generate Auto Pay** check box is selected.	
MICR ID	Used to specify the MICR code on the payment.	No
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to specify the person's account ID mentioned in the payment upload interface record.	No
Name	Used to specify the name of the person as it appears in the payment upload interface record.	No
Tender Control ID	Used to indicate the payment tender ID. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Tender Control Search** window appears. On specifying the tender control ID, the description of the tender control ID appears corresponding to the **Tender Control ID** field.	No
Deposit Control Information	Used to indicate the deposit control ID. **Note:** It is a read-only field. The data appears in this field when the tender control ID is specified.	No

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to edit the characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Payment Tender**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. On specifying the business object, the description of the business object appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the payment tender.

- **Match Types** - Used to edit match types for the payment creation request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities. **Note:** By default, the **Show Default** check box is selected when you select the match type.	No
Entity	Indicates the match type entity. The valid values are: • **Account** - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • **Bill** - Enables you to select the unpaid bill against which you want to match the payment. • **Statement** - Enables you to select the statement against which you want to match the payment.	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity. **Note:** This field appears as read-only while you are viewing the match types which are added for the payment creation request. If you want to edit the entity ID, you need to first remove the row and then add it again with the updated information. In that case, the **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, based on the selected match type, the relevant entity **Search** window appears. On specifying the entity, the description of the entity appears corresponding to the **Entity ID** field.	Yes

Note: The **Edit** button appears when the payment creation request is in the **Draft** status.

4. Modify the details of the payment creation request, if required.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:**
>
> You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search** (🔍) icon corresponding to the respective field.
>
> If you want to specify more than one match type within the payment request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete** (🗑) icon corresponding to the match type.
>
> You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

5. Define, edit, or remove characteristics of the payment request, if required.
6. Click **Manual Distribution**.
   The changes made to the payment request are saved. Depending on the information specified in the **Match Types** section, the entities are listed in the **Payment Distribution** zone. You can edit the payment amount against each entity, if required.

Deleting a Payment Creation or Transfer Request

Procedure

To delete a payment creation or transfer request:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment creation or transfer request that you want to delete.
   The **Payment Request** screen appears.
3. Click the **Delete** button in the **Payment Request** zone.
   A message appears confirming whether you want to delete the payment creation or transfer request.

> **Note:** The **Delete** button appears when the payment creation or transfer request is in the **Draft** status.

4. Click **OK**.
   The payment creation or transfer request is deleted.

Payment Request zone	Payment Request on page 1307

Distributing the Tender or Payment Amount

Procedure

To distribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute.
   The **Payment Request** screen appears.
3. Click the **Distribute** button in the **Payment Request** zone.

   The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes the tender or payment amount in the deferred mode.

   Note:

   Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

   Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

   On distributing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Freezable** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

   Once the tender or payment amount is successfully distributed, the status of the payment request is changed to **Distributed**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note:

The **Distribute** button appears when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Distributing and Freezing the Tender or Payment Amount

Procedure

To distribute and freeze the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment request whose tender or payment amount you want to distribute and freeze.
   The **Payment Request** screen appears.
3. Click the **Distribute And Freeze** button in the **Payment Request** zone.

   The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes and freezes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes and freezes the tender or payment amount in the deferred mode.

   Note:

   Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

   Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

   On distributing and freezing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Frozen** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Frozen** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments

Copyright © 2009, 2025, Oracle and/or its affiliates.

are created in the **Frozen** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed and frozen, the status of the payment request is changed to **Processed**.

Note:

The **Distribute And Freeze** button appears when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Redistributing the Tender or Payment Amount

Procedure

To redistribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment request whose tender or payment amount you want to redistribute.
   The **Payment Request** screen appears.
3. In the **Payment Distribution** zone, click the **Redistribute** button in the **Redistribute** column corresponding to *t*he payment distribution whose tender or payment amount you want to redistribute.
   The required payment gets redistributed among the account's contracts.

Note: The **Redistribute** button appears when the payment status is in **Incomplete**, **Error**, or **Freezable** status.

Editing the Payment Segment Amount

Before you freeze the payments, the system allows you to edit the pay segment amount of the payments which are in the **Freezable** status. You can edit the amount when there are multiple pay segments in a payment.

Procedure

To edit the payment segment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment request whose details you want to edit.
   The **Payment Request** screen appears.
3. Click the **Detail** button in the **Payment Distribution** zone.

   The **Edit Payment Segment Amount** screen appears. It contains the following fields:

Field Name	Field Description
Payment Event Information	Displays information about the payment event which is created through the payment request.
Payment Information	Displays information about the payment which is created through the payment event.
Payee Account Information	Displays information about the account for which the payment is made.
Match Value	Displays information about the entity against which the payment is matched.
Payment Amount	Displays the total payment amount.
Running Total	Displays the sum of payment amount specified against each pay segment.
Running Balance	Displays the difference between total payment amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero.

In addition, this section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sr No	Indicates the sequence number of the pay segment.	Not applicable
Entity Information	Displays information about the entity (such as bill segment or contract) against which the pay segment is created.	Not applicable
Total Amount	Displays the entity amount. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total bill segment amount.	Not applicable
Unpaid Amount	Displays the amount which is eligible for payment. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total unpaid bill segment amount.	Not applicable
Payment Amount	Used to specify the payment amount that you want to distribute against the pay segment.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: This field is non-editable when: • There is only one pay segment in a payment. • A user with the approval To Do role is reviewing the pay segment amount.	
Payment Currency	Indicates the currency in which the payment was made.	Not applicable
Pay Segment ID	Displays the pay segment ID.	Not applicable

Note:

The **Detail** button appears in the **Detail** column when:

- The payment request is in the **Distributed** or **Approval In Progress** status
- The payment is in the **Freezable** status.

Pagination is used to display limited number of records in the **Edit Payment Segment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and**Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

4. Modify the payment amount against a pay segment, if required.

Note: The sum of payment segment amount should be equal to the payment amount.

5. Click **Redistribute**.
   The payment amount is redistributed among the pay segments.

Note: The **Redistribute** button is disabled when the **Payment Amount** field is non-editable.

6. Click **Close**.

Freezing Payments Created Through a Payment Request

Procedure

To feeeze the payments created through a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment request whose payments you want to freeze.
   The **Payment Request** screen appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. If required, you can edit the amount of a payment segment before freezing the payments.
4. Click the **Freeze** button in the **Payment Request** zone.

   The system behaves in the following manner:

If you are...	Then
Freezing the payments created through a payment creation request	The status of the payments which are in the **Freezable** status is changed to **Frozen**. In addition, the status of the payment request is changed to **Processed**.
Freezing the payments created through a payment transfer request	The status of the old payments which are in the **Frozen** status is changed to **Cancelled**. The old payments which are in the **Error** status are deleted. The status of the new payments which are in the **Freezable** status is changed to **Frozen**. The status of the payment event is changed to **Balanced** when there are no new payments in the **Error** status. In addition, the status of the payment request is changed to **Processed**.

Note:

The **Freeze** button appears when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is not selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to freeze the payments created through the payment request.

Submitting a Payment Creation or Transfer Request for Approval

Procedure

To submit a payment creation or transfer request for approval:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment creation or transfer request that you want to submit for approval.
   The **Payment Request** screen appears.
3. If required, you can edit the amount of a payment segment before submitting the payment creation or transfer request for approval.
4. Click the **Submit for Approval** button in the **Payment Request** zone.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The status of the payment creation or transfer request is changed to **Approval In Progress**. A To Do is created using the**C1-PAYRQ** To Do type. Users having a To Do role to which the **C1-PAYRQ** To Do type is associated can view the To Do from the **To Do List** screen.

Note:

The **Submit for Approval** button appears when:

- The payment creation or transfer request is in the **Distributed** status.
- The **Approval Required** check box is selected in the payment request type using which the payment creation or transfer request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to submit the payment creation or transfer request for approval.

Approving a Payment Creation or Transfer Request

You can view the number of payment creation or transfer requests which are pending for approval in the **Payment Request** screen. The approver can review, and accordingly approve or reject the payment creation or transfer request based on the observations.

Note: The system will not allow you to approve or reject a payment creation or transfer request submitted by you.

Procedure

To approve a payment creation or transfer request:

1. Do either of the following:

If you want to	Then
Approve a payment creation or transfer request through the Payment Request screen	**a.** Search for the payment creation or transfer request in the **Payment Request** screen. **b.** In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request which you want to review.
Approve a payment creation or transfer request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-PAYRQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field.

Copyright © 2009, 2025, Oracle and/or its affiliates.

If you want to	Then
	The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the payment creation or transfer request that you want to review.

The **Payment Request** screen appears.

2. Review the payment creation or transfer request details.
3. Click the **Approve** button in the **Payment Request** zone.

The system behaves in the following manner:

If you are...	Then
Approving a payment creation request	The status of the payments which are in the **Freezable** status is changed to **Frozen**. In addition, the status of the payment creation request is changed to **Processed**.
Approving a payment transfer request	The status of the old payments which are in the **Frozen** status is changed to **Cancelled**. The old payments which are in the **Error** status are deleted. The status of the new payments which are in the **Freezable** status is changed to **Frozen**. The status of the payment event is changed to **Balanced** when there are no new payments in the **Error** status. In addition, the status of the payment transfer request is changed to **Processed**.

Note: The **Approve** button appears when:

- The payment creation or transfer request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment creation or transfer request.

Rejecting a Payment Creation or Transfer Request

Prerequisites

To reject a payment creation or transfer request, you should have:

- Rejection reasons defined in the application

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note:

While rejecting a payment creation or transfer request, you need to specify the reason why you want to reject the payment creation or transfer request. If you are rejecting a payment creation request, you can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentRequest** business object in the **Status Reason** screen. However, if you are rejecting a payment transfer request, you can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-PaymentTransferRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment creation or transfer request submitted by you.

Procedure

To reject a payment creation or transfer request:

1. Do either of the following:

If you want to...	Then...
Reject a payment creation or transfer request through the Payment Request screen	**a.** Search for the payment creation or transfer request in the **Payment Request** screen. **b.** In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment creation or transfer request which you want to review.
Reject a payment creation or transfer request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-PAYRQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the payment creation or transfer request that you want to review.

   The **Payment Request** screen appears.
2. Review the payment creation or transfer request details.
3. If required, you can review the payment segment amount of each payment by clicking the **Detail** button in the **Detail** column corresponding to the payment in the **Payment Distribution** zone.
4. Click the **Reject** button in the **Payment Request** zone.

   The **Status Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment creation or transfer request.	Yes

Note: The **Reject** button appears when:

- The payment creation or transfer request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment creation or transfer request.

5. Select the rejection reason from the **Status Reason** list.

Copyright © 2009, 2025, Oracle and/or its affiliates.

6. Click **Save**.
   If the approver rejects a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver rejects a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Rejected**.

Discarding a Payment Creation or Transfer Request

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment creation or transfer request which you want to discard.
3. Click the **Discard** button in the **Payment Request** zone.

> **Note:**
>
> The **Discard** button appears only when the payment creation or transfer request is in **Distributed** status.
>
> If the approver discards a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver discards a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Discarded**.
>
> Discarding a payment creation or transfer request is similar to rejecting a payment creation or transfer request. However, you can only reject a payment creation or transfer request, when the approval workflow is on while creating a payment creation or transfer request but discarding a payment creation or transfer request can be done in both the cases, when the approval workflow is on or off.

Viewing the Log of a Payment Creation or Transfer Request

Procedure

To view the log of a payment creation or transfer request:

1. Search for the payment creation or transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment creation or transfer request whose log you want to view.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** - This tab contains the following two zones:
  - **Payment Request** - Displays the details of the payment creation or transfer request.
  - **Payment Distribution** - Lists the payment distribution records of the payment creation or transfer request.
- **Log** - This tab lists the complete trail of actions performed on the payment creation or transfer request.

3. Click the **Log** tab.

   The **Payment Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment creation or transfer request.
Details	Displays the details about the action performed on the payment creation or transfer request.
User	Indicates the user who has performed the action on the payment creation or transfer request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment creation or transfer request.
Status Reason	Indicates the reason why the payment creation or transfer request was rejected.

Note: You can manually add a log entry for the payment creation or transfer request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

Payment Event Summary

The **Payment Event Summary** screen allows you to search for a payment event using various search criteria. Through this screen, you can:

- View the payments created through a payment event
- View payment segments of a payment
- Transfer one or more payments of a payment event to another payee account
- Cancel a payment event
- Delete a payment event
- Cancel a payment of a payment event
- Delete a payment of a payment event
- Refund a payment which is matched against the suspense or excess credit contract

This screen consists of following zones:

- Search Payment Event on page 1342
- Payments on page 1345
- Payment Segments on page 1347

Search Payment Event

The **Search Payment Event** zone allows you to search for a payment event using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment event using the payor, payment event, tender, or contract details. The valid values are: • Payor Account/Payment Event	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Tender Details • Suspense/Excess Credit Contract **Note:** By default, the **Payor Account/Payment Event** option is selected.	
Payment Event ID	Used to search a particular payment event. **Note:** This field appears when you select the **Payor Account/ Payment Event** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Payment Event Search** window appears.	No
Payor Account ID	Used to search payment events which are created for a particular payor account. **Note:** This field appears when you select the **Payor Account/ Payment Event** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	No
Payor Name	Used to search payment events which are created for a particular payor. **Note:** This field appears when you select the **Payor Account/Payment Event** option from the **Search By** list.	No
Payment Date	Used to search payment events which are created on a particular date. **Note:** This field appears when you select the **Payor Account/Payment Event** option from the **Search By** list.	No
Tender Type	Used to search payment events where a particular tender type is used. **Note:** This field appears when you select the **Tender Details** option from the **Search By** list.	No
Check Number	Used to search a payment event which includes payments made through a particular check. **Note:** This field appears when you select the **Tender Details** option from the **Search By** list.	No
MICR ID	Used to search payment events which include payments made with a particular MICR code.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Tender Details** option from the **Search By** list.	
Contract ID	Used to search payment events which include payments made against a particular suspense or excess credit contract. **Note:** This field appears when you select the **Suspense/Excess Credit Contract** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Contract Search** window appears.	No

Note: You must specify at least one search criterion while searching for a payment event.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Payment Event Information	Displays additional information about the payment event. **Note:** It has a link. On clicking the link, the **Payment Event** screen appears where you can view the details of the respective payment event.
Transfer	On clicking the **Transfer** button, you can transfer all payments (which are in either **Frozen** and **Error** status) of the payment event to another payee account. **Note:** The **Transfer** button appears when: • One or more payments of the payment event are in the **Frozen** or **Error** status. • There is no payment transfer request which is currently in progress for the payment event.
Cancel	On clicking the **Cancel** button, you can cancel all payments (which are in the **Frozen** status) of the payment event. **Note:** The **Cancel** button appears when: • One or more payments of the payment event are in the **Frozen** status. • One or more payments of the payment event are not in the **Freezable** or **Error** status. • There is no payment transfer request which is currently in progress for the payment event.
Delete	On clicking the **Delete** button, you can delete the payment event.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The **Delete** button appears when the payments of a payment event are in the **Freezable**, **Error** or **Incomplete** status.
Additional Information	Displays information about the status of the payment event.
Payment Date	Displays the date when the payment was made.
Payor Name	Indicates the person who has made the payment. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Payor Account ID	Indicates the account which made the payment. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Tender Amount	Displays the tender amount.
Payment Event ID	Displays the payment event ID.

Payments

The **Payments** zone lists all payments created through the payment event. This zone contains the following columns:

Column Name	Column Description
Payment ID	Displays the payment ID. **Note:** It has a link. On clicking the link, the **Payment** screen appears with the details of the respective payment.
Payee Account Information	Displays information about the account for which the payment was made. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears with the details of the respective account.
Payment Amount	Displays the amount paid through the tender.
Payment Currency	Indicates the currency in which the payment was made.
Payment Status	Indicates the status of the payment. The valid values are:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Incomplete • Error • Freezable • Frozen • Canceled
Match Type	Indicates the match type using which the payment was matched.
Match Value	Indicates the entity (such as bill, bill segment, or contract) against which the payment was matched.
Error Message	Indicates the reason why the payment is in the **Error** status.
Payor Account ID	Indicates the account which made the payment.
Refund Amount	Displays the amount which is already refunded to the payor account.

In addition, this zone contains the following buttons:

Button Name	Button Description
Transfer	Used to transfer the payment to another payee account. **Note:** You can transfer a payment when it is in the **Frozen** or **Error** status.
Cancel	Used to cancel the payment. **Note:** You can cancel a payment when it is in the **Frozen** status.
Delete	Used to delete the payment. **Note:** You can delete a payment when it is in the **Freezable** or **Error** status.
Refund	Used to refund the payment amount to the payor account. **Note:** You can refund the payment amount to the payor account when: • The payment is matched against the suspense or excess credit contract. • The payment is in the **Frozen** status.

Payment Segments

The **Payment Segments** zone lists payment segments of a payment. This zone contains the following columns:

Column Name	Column Description
Pay Segment ID	Displays the payment segment ID.
	Note: It has a link. On clicking the link, the **Pay Segments** tab of the **Payment** screen appears where you view the details of the payment segment.
Contract Information	Displays information about the contract against which the payment segment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Payment Amount	Displays the payment segment amount.
Match Event ID	Indicates the match event which is created for the payment segment.
	Note: It has a link. On clicking the link, the **Match Event** screen appears where you can view the details of the respective match event.

Searching for a Payment Event

Prerequisites

To search for a payment event, you should have:

- Tender types defined in the application

Procedure

To search for a payment event:

1. Click the **Menu** link in the **Actions/Navigation** area.

Copyright © 2009, 2025, Oracle and/or its affiliates.

A list appears.

2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Payments** and then click **Payment Event Summary**.
   The **Payment Event Summary** screen appears.
4. Enter the search criteria in the **Search Payment Event** zone.

> **Note:**
>
> You can search for a payment event and payor account by clicking the **Search** (🔍) icon corresponding to the respective field.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of payment events that meet the search criteria appears in the **Search Results** section.

Creating a Payment Transfer Request

The system allows you to transfer payments through a payment request. You can transfer all payments or individual payment of a payment event. You can only transfer payments which are in the **Frozen** or **Error** status.

Prerequisites

To create a payment transfer request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is selected)
- Payment cancel reasons defined in the application (where the **Payment Transfer** check box is selected)

Procedure

To create a payment transfer request:

1. Search for the payment event (whose payments you want to transfer) in the **Payment Event Summary** screen.
2. Do either of the following:

If you want to...	Then...
Transfer all payments of a payment event	**a.** In the **Search Results** section, click the **Transfer** button in the **Transfer** column corresponding to the payment event whose payments you want to transfer.
	Note: The **Transfer** button appears only when: • One or more payments of the payment event are in the **Frozen** or **Error** status. • There is no payment transfer request which is currently in progress for the payment event.

Copyright © 2009, 2025, Oracle and/or its affiliates.

If you want to...	Then...
Transfer one or more payments of a payment event	**a.** In the **Search Results** section, click the **Broadcast** (ᯤ) icon corresponding to the payment event whose payments you want to view. The **Payments** zone appears. **b.** Select the check box corresponding to the payments that you want to transfer. **c.** Click the **Transfer** button in the **Payments** zone. **Note:** You can transfer a payment when it is in the **Frozen** or **Error** status.

The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment transfer request. **Note:** The list includes only those payment request types where the **Transfer** check box is selected.	Yes

3. Select the required payment request type from the respective field.
4. Click **OK**.

- **Main** - Used to specify basic details about the payment transfer request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment transfer request.	Not applicable
Payment Event Information	Displays information about the payment event whose payments you want to transfer.	Not applicable
Maximum Transfer Amount	Displays the maximum payment amount which you can transfer. **Note:** This is a read-only field.	Not applicable
Transfer Amount	Used to specify the total payment amount which you want to transfer. **Note:** By default, the maximum transfer amount appears in this field.	Yes
Payment Date	Used to specify the date when the payment is transferred. **Note:** By default, the current date appears in this field. This field appears when you want to transfer all the payments of a payment event.	Yes
Transfer Reason	Used to indicate the reason why you want to transfer the payments.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those payment cancel reasons where the **Payment Transfer** check box is selected.	

- **Match Types** - Used to define match types for the payment transfer request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities. **Note:** The **Show Default** check box is selected when you select the match type.	No
Entity	Indicates the match type entity. The valid values are: • **Account** - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • **Bill** - Enables you to select the unpaid bill against which you want to match the payment. • **Statement** - Enables you to select the statement against which you want to match the payment. **Note:** By default, this is a read-only field.	Not applicable
Entity ID	Used to indicate the account, bill ID, or statement ID depending on the match type entity. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, based on the selected match type, the relevant entity **Search** window appears.	Yes

5. Enter the required details.

Note: If you want to specify more than one match type within the payment transfer request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment transfer request, click the **Delete** (🗑) icon corresponding to the match type.

6. Click **Manual Distribution**.

The payment transfer request is created and the status of the payment transfer request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment transfer request, the following entities are listed in the **Payment Distribution** zone:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account **Note:** Only contracts of the contract type where the **Eligible for Billing** flag is set to **No** and **Special Role** flag is set to **Suspense** are listed in the **Payment Distribution** zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the **Eligible for Billing** flag is set to **No** and **Special Role** flag is set to **Suspense**) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in **Payment Distribution** zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped
By Statement	Statement	Unpaid bills of the statement

If the **Show Default** check box is not selected against a match type while creating the payment transfer request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Note:

If a payment transfer request is already created for a payee account and is currently in progress, the system will not allow you to create another payment transfer request for the payee account until the previous payment transfer request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment transfer request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

If the entire refund amount is already processed for the payee account, the system will not allow you to create a payment transfer request.

Editing a Payment Transfer Request

Procedure

To edit a payment transfer request:

1. Search for the payment transfer request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to *t*he payment transfer request whose details you want to edit.
   The **Payment Request** screen appears.
3. Click the **Edit** button in the **Payment Request** zone.

   The **Payment Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the payment transfer request. This section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment transfer request.	Not applicable
Payment Request Type	Indicates the payment request type using which the payment transfer request is created.	Not applicable
Payment Event Information	Displays information about the payment event.	Not applicable
Maximum Transfer Amount	Displays the maximum payment amount which you can transfer.	Not applicable
Transfer Amount	Displays the total payment amount which can be transferred. **Note:** This is a read-only field.	Not applicable
Transfer Reason	Used to indicate the reason why you want to transfer the payments. **Note:** The list includes only those payment cancel reasons where the **Payment Transfer** check box is selected.	Yes
Payment Date	Displays the date when the payment is made.	Yes

- **Match Types** - Used to edit match types for the payment transfer request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Indicates the match type using which you want to match the payment. **Note:** This field appears as read-only while you are viewing the match types which are added for the payment transfer request.	Yes
Show Default	Indicates whether the default payment amount should be displayed against the match type entities. **Note:** This field appears as read-only while you are viewing the match types which are added for the payment transfer request. The **Show Default** check box is selected when you select the match type.	No
Entity	Indicates the match type entity. The valid values are: • **Account** - Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • **Bill** - Enables you to select the unpaid bill against which you want to match the payment.	Not applicable

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Statement** - Enables you to select the statement against which you want to match the payment. **Note:** By default, this is a read-only field.	
Entity ID	Used to indicate the account or bill ID depending on the match type entity. **Note:** This field appears as read-only while you are viewing the match types which are added for the payment transfer request. If you want to edit the entity ID, you need to first remove the row and then add it again with the updated information. In that case, the **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, based on the selected match type, the relevant entity **Search** window appears. On specifying the entity, the description of the entity appears corresponding to the **Entity ID** field.	Yes

4. Modify the details of the payment transfer request, if required.

Note:

If you want to specify more than one match type within the payment transfer request, click the **Add** (+) icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment transfer request, click the **Delete** (🗑) icon corresponding to the match type.

You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

5. Click **Manual Distribution**.

The changes made to the payment transfer request are saved. The **Payment Request** screen appears. Depending on the information specified in the **Match Types** section, the following entities are listed in the **Payment Distribution** zone.

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account

Copyright © 2009, 2025, Oracle and/or its affiliates.

Match Type	Match Entity	Entities
		Note: Only contracts of the contract type where the **Eligible for Billing** flag is set to **No** and **Special Role** flag is set to **Suspense** are listed in the **Payment Distribution** zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the **Eligible for Billing** flag is set to **No** and **Special Role** flag is set to **Suspense**) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in **Payment Distribution** zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped
By Statement	Statement	Unpaid bills of the statement

If the **Show Default** check box is not selected against a match type while creating the payment transfer request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Cancelling a Payment Tender

Prerequisites

To cancel a payment tender, you should have:

- Payment cancel reasons defined in the application

Procedure

To cancel a payment tender:

1. Search for the payment tender in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Tender Cancel** link in the **Cancel** column corresponding to the payment *t*ender that you want to cancel.

   The **Payment Event** screen appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:** The **Tender Cancel** link appears when:
>
> - One or more payments of the payment event are in the **Frozen** status.
> - One or more payments of the payment event are not in the **Freezable** or **Error** status.
> - There is no payment transfer request which is currently in progress for the payment event.

3. Ensure that the **Tenders** tab is selected.
4. Click the **Cancel** button in the **Tender Cancel** row.

   The **Tender Cancel** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the payment tender.	Yes
Bank Account To Charge	Used to specify the bank details for cancellation charge purposes. **Field Name** / **Field Description** Bank Code: Used to indicate the bank code which should be charged for cancellation. Bank Account Key: Used to indicate the bank account which should be charged for cancellation.	Yes

5. Click **OK**.
   The payment tender and all payments in the payment event are cancelled.

Deleting a Payment Event

You can delete a payment event when the payment(s) of the payment event are in the **Freezable**, **Error**, or **Incomplete** status. On deleting a payment event, the payment event, payments, payment segments, and payment tender are deleted.

Procedure

To delete a payment event:

1. Search for the payment event in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Delete** button in the **Delete** column corresponding to the payment *e*vent that you want to delete.
   A message appears confirming whether you want to delete the payment event.

> **Note:** The **Delete** button appears when the payments of a payment event are in the **Freezable**, **Error**, or **Incomplete** status.

3. Click **OK**.
   The payment event is deleted.

Chapter 22

Account Receivable Central

Topics:

- Single Offset
- Mass Offset
- Cross Currency Offset
- Hold
- Refund
- Write Off
- Dispute
- Account Receivable Central

The Account Receivable Central is a portal which facilitates user to perform Single/Mass/Cross Currency offset operation for a bill's outstanding amount with another bill or multiple bills. You can also refund/write off amount to the account using refund requests and write off requests respectively.

Account Receivable Central also enables to put bill(s) on hold for the funding purpose. It allows you to have a complete overview of the bills. Based on the search criteria, the system returns a list of bills that meet the search criteria.

Account Receivable Central is used for:

- **Single Offset** - Enables single debit bill to be offset against multiple credit bills in the same currency and vice versa.
- **Mass Offset** - Enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.
- **Cross Currency Offset** - Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa.
- **Hold** - Enables bill(s) to be put on hold fully (the bill outstanding amount) or partially (the bill outstanding amount in partial) for a specific period for funding.
- **Refund** - Enables you to refund amount of credit bill or bill line item (credit bill segment or adjustment) to the account through a refund request.
- **Write Off** - Enables you to write off amount to the account through a write off request.
- **Dispute** - Enables you to dispute amount of credit/debit bill or bill item (credit/debit bill segment or adjustment) to the account through a dispute request.

The bill(s) for offsetting can belong to the same person or multiple persons depending upon the option **Allow Offsetting across Persons** set in the feature configuration **C1-OFFSETREQ** which allows offsetting in the system.

Single Offset

Single Offset enables you to search and add bill to an offset request from the **Account Receivable Central** screen. Single Offset enables single debit bill to be offset against multiple credit bills in the same currency and vice versa. The offset request is created and an offset request ID is generated for the request.

You can search and select credit/debit bills (with outstanding amount) for offsetting belonging to the same or different person. All the selected bills with their outstanding balance are displayed. The display of bills is controlled by **C1-OFFSETREQ** feature configuration. The feature configuration identifies whether offsetting is allowed for bills across persons. To offset bills belonging to different persons, set the **Allow Offsetting Across Persons** option type to **Y**. The bills are displayed having same currency with the default offset amount on the offset request after adding the bills. You can select one or multiple or all the bills displayed and add to the offset request. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request.

Upon adding a bill to the offset request, the default offset amount algorithm **C1-OFST-AMT** configured in the offset request type is invoked. The bills in the offset request are processed based on the logic of oldest bill first. The default offset amount is populated against the selected debit and credit bills. You can also edit the offset amount from the offset request, if required. The offset adjustments for offset requests are created and distributed based on the match type set in the offset distribution algorithm.

You can configure the offset request type to be submitted for offset distribution with or without approval. Upon submitting the offset request for approval, a To Do type is created and sent to the approver for offset request approval. The status of the offset request changes from **Submitted** to **Approval In Progress** in case of offset request with approval and in case of offset request without approval it changes to **Processed**. The approver can either approve or reject the offset request. Once the approver approves the offset request, selected bills are offset and adjustments are created for the bills. The status of the offset request changes from **Approval In Progress** to **Processed**. You can also view the details of the adjustment(s) created. However, if the approver rejects an offset request, a rejection reason should be provided.

A log maintained for offset requests logs complete trail of actions performed on offset request except the actions performed while editing the offset request. On submitting, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type and the **Unapply** button is enabled which cancels the adjustments. Upon cancelling the adjustments, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Note: The **Unapply** button appears when the offset request is in the **Processed** status

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	$1200	-$800	$400	Bill 1 amount $1200 is offset against Bill 2.
Bill 2	-$1000	$500	-$500	From Bill 2, $500 is offset against from Bill 1.
Bill 3	-$300	$300	0	From Bill 3, $300 is offset against from Bill 1.

Mass Offset

Mass offset functions is similar to single offset, the only difference is that mass offset enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.

Upon selection of a debit/credit bill from **Account Receivable Central**, you can add more credit/debit bill(s) from the search bills result in offset request. You can filter the bills using the **Bill Type** filter on the bill search zone to select debit/credit bills to be added to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

Copyright © 2009, 2025, Oracle and/or its affiliates.

A log maintained for offset requests logs complete trail of actions performed on offset request. Once you submit the offset request, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type. When the offset request status changes to **Processed** adjustments are created and the **Unapply** button is enabled which cancels the adjustments. Upon unapplying the offset request, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	$2000	-$700	$1300	The Offset amount $400 is offset against Bill 2.
Bill 2	-$400	$400	0	Bill 2 is offset against $400 from Bill Outstanding amount of Bill 1 i.e. $2000.
Bill 3	-$300	$300	0	Bill 3 is offset against $300 from Bill Outstanding amount of Bill 1 i.e. $1600.

Cross Currency Offset

Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa. Cross-currency offset enables you to offset credit/debit bills with different currencies. You can add credit/debit bills to the debit/credit bill added from **Account Receivable Central**. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

The **C1-OFFSUBENT** algorithm validates whether the sum of debit offset amount is equal to sum of credit offset amount for all bills selected in the offset request. After validation, status of the offset request changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type.

Bill Information	Outstanding Amount	Outstanding Amount (in Offset currency)	Offset Amount	Remaining Bill Balance	Comments
Bill 1	$300	$300	-$130.1	$169.9	Outstanding amount $300 is offset against $130.1 (£100). (Exchange rate: 1£=1.3$)
Bill 2	-£100	-$130.1	$130.1	0	Outstanding amount £100 ($130.1) of Bill 2 is offset against $300 from Bill 1.

Note: In case of multiple exchange rates with same date and different timestamps, the latest timestamp is considered.

Note: The adjustments are created in the currency of the bill.

Hold

Account Receivable Central enables bill(s) to be put on hold which belongs to a person's account or all accounts of a particular person. When a bill is put on hold, specific reason must be specified; no funding related activities can be performed for the specified period.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Funding related activities are put on hold from the start date of the hold request. The hold exists till the hold request release date; however you can also release individual bills.

You can only put bills on hold which has **Completed** status. When a person/account is on hold, all the subsequent bills under them are also on hold irrespective of bill status. You can select the bill amount in a bill to be put on hold i.e. you can put the particular bill on hold with partial or full bill amount.

Hold request type is used to define the hold request. In the hold request type, the **Hold Process** is set to **Funding**, which puts hold on only the funding activities of the selected bill belonging to a person or account.

Refund

Enables you to refund amount of credit bill to account through a refund request. For creating a refund request you need to specify the refund request type using which you want to create the refund request. The refund request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the refund request type, the adjustment type should be defined for creating refund adjustments.

Write Off

Enables you to write off the amount to the account through a write off request. For creating a write off request you need to specify the write off request type. The write off request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the write off request type, the adjustment type should be defined for creating write off adjustments.

Dispute

Enables you to dispute amount of credit/debit bill to an account through a dispute request. For creating a dispute request you need to specify the dispute request type using which you want to create the dispute request. The dispute request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the dispute request type, the adjustment type should be defined for creating dispute adjustments.

Account Receivable Central

The **Account Receivable Central** screen allows you to search for bills using various search criteria. This screen consists of the following zones:

- Search Bill on page 1367

Through the **Account Receivable Central** screen, you can navigate to the following screens:

- Offset Request (Used for Viewing) on page 1424
- Hold Request (Used for Viewing) on page 1605
- Refund Request on page 2477
- Write Off Request on page 2509
- Dispute Request (Used for Viewing) on page 1958

Copyright © 2009, 2025, Oracle and/or its affiliates.

Search Bill

The **Search Bill** zone allows you to search for bills in the **Accounts Receivable Central** screen using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search bills using bill details, using account details or using person details whose account is linked to a particular bill. The valid values are: • **Person Details** • **Account Details** • **Bill Details** **Note:** By default, the **Person Details** option is selected.	Yes
Person ID	Used to select the person ID based on which you want to search for bills of a person. **Note:** This field appears when you select the **Person Details** option from the **Search By** list. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.	No
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill. **Note:** This field appears when you select the **Person Details** option from the **Search By** list.	No
Person Identifier Type	Used to select the identifier type based on which you want to search for bills of a person. **Note:** This field appears when you select the **Person Details** option from the **Search By** list.	Yes (Conditional) **Note:** If you enter the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value of the person identifier type. **Note:** This field appears when you select the **Person Details** option from the **Search By** list.	Yes (Conditional) **Note:** If you enter the person identifier type as a search criteria, you have to select the person identifier.
Bills on Hold	Used to indicate whether the bill is on hold. The valid values are: • No	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Yes	
Bill Balance	Used to search bills with a particular balance amount. The valid values are: • Equal to Zero • Greater Than Zero • Less Than Zero • Not Equal to Zero	No
Pending Bills	Used to indicate whether the bill is pending.	No
Account ID	Used to search for bills of a particular account. **Note:** This field appears when you select the **Account Details** option from the **Search By** list.	No
Account Identifier Type	Used to specify the account identifier type of the account whose bill you want to search. **Note:** This field appears when you select the **Account Details** option from the **Search By** list.	No
Account Identifier	Used to select the account identifier based on which you want to search for bills of a particular account. **Note:** This field appears when you select the **Account Details** option from the **Search By** list.	No
Bill ID	Used to search a particular bill. **Note:** This field appears when you select the **Bill Details** option from the **Search By** list.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID. **Note:** This field appears when you select the **Bill Details** option from the **Search By** list.	No
Invoice Currency	Used to search for bills which are billed in a particular currency.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Bill Details** option from the **Search By** list.	
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No
Bill Outstanding Amount From	Used to search bills with a particular minimum outstanding amount.	
To	Used to search bills with a particular maximum outstanding amount.	

Note: You must specify at least one search criterion while searching for a bill when you select the **Person Details** or **Account Details** option from the **Search By** list.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Bill** screen appears with the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Outstanding Amount	Displays the current bill balance amount.
Bill Date	Used to specify the date on which the bill was generated.
Hold Amount	Displays the amount from the bill that is on hold.
Account Information	Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. A tool tip appears when you hover over this column corresponding to the bill. It indicates the Current Balance, Excess Payment and Unapplied Payments and their values.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective bill.
Person Information	Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears with the details of the respective bill.

This zone contains following buttons:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Button Name	Button Description
Single Offset	Used to add the selected bill with same currency to an offset request.
Mass Offset	Used to add the selected bills with same currency to an offset request.
Cross Currency Offset	Used to add the selected bills with different currency to an offset request.
Hold	Used to add the selected bill to hold request to be put on hold.
Write Off	Used to add the selected bill to a write off request.
Refund	Used to add the selected bill to a refund request.
Dispute	Used to add the selected bill to a dispute request.

Bill Information

The **Bill Information** screen allows you to view detail information of a particular bill.

This screen consists of the following zones:

- Hold Details on page 1370
- Offset Details on page 1370
- Garnishment Details on page 1371
- Bill Line Items on page 1371

Offset Details

The **Offset Details** zone displays details of the offset request. This zone contains following columns:

Column Name	Column Description
Offset Request Information	Displays additional information about the offset request. **Note:** It has a link. On clicking the link, the **Offset Request** screen appears where you can view the details of the respective offset request.
Offset Amount	Displays the total offset amount.
Creation Mode	Displays the mode of creation for offset request . The valid values are: • Automatic • Manual

Hold Details

The **Hold Details** zone displays details of the hold request on a bill. This zone contains following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request. **Note:** It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request.
Entity	Displays the type of entity.
Hold Entity	Displays additional information about the bill which is put on hold. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Start Date	Displays the start date of the hold request.
End Date	Displays the end date of the hold request.

Garnishment Details

The **Garnishment Details** zone displays details garnishment details of the offset request. This zone contains following columns:

Column Name	Column Description
Garnishment Contract	Displays additional information about the contract created against the garnishment adjustments. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Garnishment Amount	Displays the total garnishment amount.

Bill Line Items

The **Bill Line Items** zone displays information about the selected bill's bill line item. This zone contains the following fields:

Field Name	Field Description
Bill Line Item	Displays the bill line item (bill segment/adjustment) of the selected bills.
Bill Line Item Information	Displays the information about the bill line item. **Note:** It has a link. On clicking the link, the **Bill Segment** screen or **Adjustments** screen appears with the details of the respective bill line item or adjustments.
Amount	Displays the amount of the bill line item.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**.
   The **Account Receivable Central** screen appears.
3. Enter the search criteria in the **Search Bill** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

   Note: The wild card search for searching bill in the **Search Bill** zone is applicable when you select the **Bill Details** option from the **Search By** list.
4. Click **Search**.
   A list of bills that meet the search criteria appears in the **Search Results** section.

Viewing the Bill Details

Procedure

To view the details of a bill:

1. Search for the bill in the **Account Receivable Central** screen.
2. In the **Search Results** section, click the **Show Context Menu** (▾) icon corresponding to the bill whose details you want to view.
   A menu appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. Click the **Go To Bill Information** menu option.
   The **Bill Information** screen appears.
4. View the details of the bills in the **Bill Information** screen.

Chapter 23

Offset Request

Topics:

- Single Offset
- Mass Offset
- Cross Currency Offset
- Prerequisites
- Offset Request (Without Approval) Status Transition
- Offset Request (With Approval) Status Transition
- Bill Line Items Level Offset
- Internal Offsetting of Zero Balance Bill
- Automatic Offset of Debit and Credit Bill Line Items
- Algorithms Used in C1-OffsetRequest
- Additional Algorithms Used in Offset Request
- Offset Request Type
- Offset Request (Used for Searching)
- Offset Request (Used for Viewing)

Oracle Revenue Management and Billing allows you to offset the credit and debit bills across accounts of the person and/or its hierarchy. However, you can offset bills across person's hierarchy when the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration is set to **Y**.

You can offset a credit bill with a debit bill and vice-versa. You can offset one or more credit bills with one or more debit bills and vice-versa. You can offset the credit and debit bills in the same currency or in the different currencies. The system enables you to offset bills through an offset request. You can create an offset request from the following screens:

- Account Receivable Central on page 1366
- Offset Request (Used for Searching) on page 1418

You can create the following types of offset request from both the above screens:

- Single Offset on page 1377
- Mass Offset on page 1378
- Cross Currency Offset on page 1380

While creating an offset request, you need to specify an offset request type using which you want to create the offset request. It is the offset request type which helps the system to determine:

- The business object using which the offset request should be created in the system.
- The default adjustment type using which the transfer or offset adjustment should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately)
- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether the transfer or offset adjustments should be created while offsetting bills through an offset request.

In addition, while creating an offset request, you need to specify a primary bill for which you want to create the offset request. A primary bill can be a debit or credit bill. Once the primary bill is added to an offset request, you can never remove it from the offset request.

Once you specify an offset request type and primary bill, the offset request is created in the **Draft** status. You can then add one or more debit or credit bills in the same or different currencies to the offset request depending on whether you want to create single, mass, or cross currency offset request. These bills

are called as secondary bills. You can remove a secondary bill from the offset request when it is in the **Draft** status.

Once both the debit and credit bills are added to an offset request, the default offset amount is calculated for each bill. You can then update the offset amount of a bill, if required. Once the offset amount is specified for each bill, you can submit the offset request. On submitting an offset request, the system checks whether the number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type). If the number of financial transactions does not exceed the defer processing count, the system creates the transfer or offset adjustments in the **Frozen** status. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Deferred Processing** status. The batch then creates the transfer or offset adjustments for these offset requests in the **Frozen** status.

You can optionally configure the approval process for the offset request. The approver can either approve or reject an offset request based on the observations. The system also enables you to unapply (i.e. cancel) an offset request. On canceling an offset request, the transfer or offset adjustments created for bills through the offset request are canceled.

An offset request goes through various statuses in its lifecycle. For more information about the offset request statuses, see Offset Request (Without Approval) Status Transition on page 1383 and Offset Request (With Approval) Status Transition on page 1384. Note that the lifecycle of an offset request is driven by business object using which the offset request is created. An offset request business object named **C1-OffsetRequest** is shipped with the product. The offset request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-OffsetRequest** business object.

For more information on how to setup the offset request feature, see Prerequisites on page 1382.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Single Offset

Single offset means you can offset one credit bill against multiple debit bills and vice-versa in the same currency. Let us understand this with the help of an example.

The following table lists the bills of a customer which are available for single offset:

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segment
A1	Bill 1	06-18-2018	BS1	10	-$100
	Bill 2	06-12-2018	BS2	10	$30
			BS3	20	$20
	Bill 3	06-22-2018	BS4	10	$30
	Bill 4	06-28-2018	BS5	20	$30
			BS6	30	$10

The system enables you to offset these bills through a single offset request. While creating a single offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills - Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

```
(-$100-(-$20))= (-$100+$20)=-$80
```

Sum of debit bills' amount which is available for offsetting:

```
(($30-$10)+($30-$10)+($40))=$80
```

The system considers the credit or debit bills' total whichever is less as the default offset amount. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a single offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status.

The following table lists the transfer adjustments that are created during the single offset with respect to the above example:

Transfer	Transfer Adjustments
1	• $20 transfer adjustment is created for Bill 1 and matched to -$100 bill segment ca • -$20 transfer adjustment is created for Bill 2 and matched to $30 bill segment (BS
2	• $20 transfer adjustment is created for Bill 1 and matched to -$100 bill segment ca

Copyright © 2009, 2025, Oracle and/or its affiliates.

Transfer	Transfer Adjustments
	• -$20 transfer adjustment is created for Bill 3 and matched to $30 bill segment (BS
3	• $30 transfer adjustment is created for Bill 1 and matched to -$100 bill segment car • -$30 transfer adjustment is created for Bill 4 and matched to $30 bill segment (BS
4	• $10 transfer adjustment is created for Bill 1 and matched to -$100 bill segment car • -$10 transfer adjustment is created for Bill 4 and matched to $10 bill segment (BS

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- $80 offset adjustment is created for Bill 1 and matched to -$100 Bill Segment Cancellation (BS1) FT 1
- -$20 offset adjustment is created for Bill 2 and matched to $30 bill segment (BS2) FT 2
- -$20 offset adjustment is created for Bill 3 and matched to $30 bill segment (BS4) FT 4
- -$30 offset adjustment is created for Bill 4 and matched to $30 bill segment (BS5) FT 5
- -$10 offset adjustment is created for Bill 4 and matched to $10 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see C1-OFST-DIST on page 1393.

You can create a single offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a single offset request, see Creating an Offset Request on page 1422.

Mass Offset

Mass offset means you can offset one or more credit bills against one or more debit bills and vice-versa in the same currency. Let us understand this with the help of an example.

The following table lists the bills of a customer which are available for mass offset:

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segm
A11	Bill 1	01-15-2019	BS1	10	-$50
			BS2	20	-$50
	Bill 2	01-20-2019	BS3	10	-$50
	Bill 3	01-18-2019	BS4	10	$30
			BS5	10	$20
A12	Bill 4	01-21-2019	BS6	10	$30
	Bill 5	01-25-2019	BS7	20	$30
			BS8	30	$10
A13	Bill 6	01-29-2019	BS9	10	$20

The system enables you to offset these bills through a mass offset request. While creating a mass offset request, you can add the Bill 1 as the primary bill. Once the offset request is created, you can add another credit bill (i.e. Bill 2) and the debit bills - Bill 3, Bill 4, Bill 5, and Bill 6. Note that you can only add completed bills to an offset request. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Sum of credit bills' amount which is available for offsetting:

```
(-$100+(-$50))= (-$100-$50)=-$150
```

Sum of debit bills' amount which is available for offsetting:

```
($50+$30+$40+$20)=$140
```

The system considers the credit or debit bills' total whichever is less as the default offset amount. In this case, the default offset amount is set to $140. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a mass offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status.

The following table lists the transfer adjustments that are created during the mass offset with respect to the above example:

Transfer	Transfer Adjustments
1	• $30 transfer adjustment is created for Bill 1 and matched to -$50 bill segment cancellat • -$30 transfer adjustment is created for Bill 3 and matched to $30 bill segment (BS4) FT
2	• $20 transfer adjustment is created for Bill 1 and matched to -$50 bill segment cancellat • -$20 transfer adjustment is created for Bill 3 and matched to $20 bill segment (BS5) FT
3	• $30 transfer adjustment is created for Bill 1 and matched to -$50 bill segment cancellat • -$30 transfer adjustment is created for Bill 4 and matched to $30 bill segment (BS6) FT
4	• $20 transfer adjustment is created for Bill 1 and matched to -$50 bill segment cancellat • -$20 transfer adjustment is created for Bill 5 and matched to $30 bill segment (BS7) FT
5	• $10 transfer adjustment is created for Bill 2 and matched to -$50 bill segment cancellat • -$10 transfer adjustment is created for Bill 5 and matched to $30 bill segment (BS7) FT
6	• $10 transfer adjustment is created for Bill 2 and matched to -$50 bill segment cancellat • -$10 transfer adjustment is created for Bill 5 and matched to $10 bill segment (BS8) FT
7	• $20 transfer adjustment is created for Bill 2 and matched to -$50 bill segment cancellat • -$20 transfer adjustment is created for Bill 6 and matched to $20 bill segment (BS9) FT

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- $50 offset adjustment is created for Bill 1 and matched to -$50 Bill Segment Cancellation (BS1) FT 1
- $50 offset adjustment is created for Bill 1 and matched to -$50 Bill Segment Cancellation (BS2) FT 2

Copyright © 2009, 2025, Oracle and/or its affiliates.

- $40 offset adjustment is created for Bill 2 and matched to -$50 Bill Segment Cancellation (BS3) FT 3
- -$30 offset adjustment is created for Bill 3 and matched to $30 bill segment (BS4) FT 4
- -$20 offset adjustment is created for Bill 3 and matched to $20 bill segment (BS5) FT 5
- -$30 offset adjustment is created for Bill 4 and matched to $30 bill segment (BS6) FT 6
- -$30 offset adjustment is created for Bill 5 and matched to $30 bill segment (BS7) FT 7
- -$10 offset adjustment is created for Bill 5 and matched to $10 bill segment (BS8) FT 8
- -$20 offset adjustment is created for Bill 6 and matched to $20 bill segment (BS9) FT 9

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see C1-OFST-DIST on page 1393.

You can create a mass offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a mass offset request, see Creating an Offset Request on page 1422.

Cross Currency Offset

Cross currency offset means you can offset one credit bill against multiple debit bills and vice-versa in the different currencies. Let us understand this with the help of an example.

The following table lists the bills of a customer which are available for cross currency offset:

Account	Bill	Due Date	Bill Segment	Contract Type Priority	Bill Segment Amount	Outst Amou
A1	Bill 1	09-18-2018	BS1	10	-$250	-$250
	Bill 2	09-12-2018	BS2	10	€10	€30
		BS3	20	€20		
	Bill 3	09-22-2018	BS4	10	€50	€50
	Bill 4	09-28-2018	BS5	20	€30	€70
			BS6	30	€40	

The system enables you to offset these bills through a cross currency offset request. While creating a cross currency offset request, you can add the Bill 1 as the primary bill against which you can offset the debit bills - Bill 2, Bill 3, and Bill 4. Note that you can only add completed bills to an offset request. In a cross currency offset request, you can offset the bills which are in the currency different from the primary bill. For example, if you have added a primary bill with credit balance in USD, you can only add the debit bills in the currency other than USD. The system then calculates the total credit and debit bill amount which is available for offsetting, as shown below:

Sum of credit bills' amount which is available for offsetting:

```
-$250
```

Sum of credit bills' amount which is available for offsetting (in offset currency):

```
-€227
```

Sum of debit bills' amount which is available for offsetting:

```
(30€+50€+70€)=€150
```

Copyright © 2009, 2025, Oracle and/or its affiliates.

Sum of debit bills' amount which is available for offsetting (in offset currency):

```
$33+$55+$77=$165
```

The system considers the credit or debit bills' total (in the primary bill's currency) whichever is less as the default offset amount. In this case, the default offset amount is set to $165. You can change the offset amount of a bill, if required. However, you need to ensure the following:

- Offset amount of the selected bill is not equal to zero
- Total debit offset amount is equal to total credit offset amount in the offset request
- Negative offset amount is specified for the debit bill and positive offset amount is specified for the credit bill
- Offset amount is less than or equal to the current outstanding amount of the bill

Note: If you add or remove a bill from the offset request after updating the offset amount, the system overrides the offset amount with the default offset amount. In such scenarios, you have to update the offset amount of the bills once again.

On submitting or approving a cross currency offset request, the system creates the transfer or offset adjustments using the adjustment type which is specified in the offset request. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments in the **Frozen** status.

The following table lists the transfer adjustments that are created during the cross currency offset with respect to the above example:

Transfer	Transfer Adjustments
1	• $11 transfer adjustment is created for Bill 1 and matched to -$250 bill segment cancellation • -€10 transfer adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2
2	• $22 transfer adjustment is created for Bill 1 and matched to -$250 bill segment cancellation • -€20 transfer adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3
3	• $55 transfer adjustment is created for Bill 1 and matched to -$250 bill segment cancellation • -€50 transfer adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4
4	• $33 transfer adjustment is created for Bill 1 and matched to -$250 bill segment cancellation • -€30 transfer adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5
5	• $44 transfer adjustment is created for Bill 1 and matched to -$250 bill segment cancellation • -€40 transfer adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6

However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments in the **Frozen** status. Considering the above example, the system will create the following offset adjustments for the offset request:

- $165 offset adjustment is created for Bill 1 and matched to -$250 Bill Segment Cancellation (BS1) FT 1
- -€10 offset adjustment is created for Bill 2 and matched to €10 bill segment (BS2) FT 2
- -€20 offset adjustment is created for Bill 2 and matched to €20 bill segment (BS3) FT 3
- -€50 offset adjustment is created for Bill 3 and matched to €50 bill segment (BS4) FT 4
- -€30 offset adjustment is created for Bill 4 and matched to €30 bill segment (BS5) FT 5
- -€40 offset adjustment is created for Bill 4 and matched to €40 bill segment (BS6) FT 6

Similarly, the transfer or offset adjustments are created when the bills are offset across accounts of the person and its hierarchy. The system distributes the amount from the credit bill starting with the oldest due date. For more information on how the offset amount is distributed, see C1-OFST-DIST on page 1393.

To use the cross currency offset request feature, you need to do the following:

- Define the required exchange rates in the system.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Define a currency conversion algorithm for bill segments using the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.

You can create a cross currency offset request through the **Account Receivables Central** and **Offset Request** screens. For more information on how to create a cross currency offset request, see Creating an Offset Request on page 1422.

Prerequisites

To setup the offset request feature, you need to do the following:

- Define the required offset adjustment types where the **A/P Request Type Code** field is not set to **REFUND**.
- Define a default offset amount algorithm using the **C1-OFST-AMT** algorithm type.
- Assign the **C1-OFSRQ** To Do type to a To Do role whose users must receive a To Do while submitting an offset request for approval.
- Assign the **C1-OFSSB** To Do type to a To Do role whose users must not approve an offset request.
- Define the required offset request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Offset Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Offset Request**.
- Define the values for the **CAN_RSN_CD_FLG** lookup field.
- Set the parameters of the **C1-UPD-FUND**, **C1-DFRUNAPLY**, **C1-WTBS-CRBL**, and **C1-OFST-DIST** algorithms.
- Define the status reasons for the **Rejected** and **Unapplied Offset** statuses of the **C1-OffsetRequest** business object in the **Status Reason** screen.
- Set the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration.
- Define the required exchange rates in the system.
- Define a currency conversion algorithm for bill segments using the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions.
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type.
- Attach a currency conversion algorithm to the **Currency Conversion For Adjustments** algorithm spot of the required divisions.
- Set the batch control type of the **Offset Request Periodic Monitor (C1-OFSRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

  For more information about the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, see *Oracle Revenue Management and Billing Batch Guide*.

Bill Line Items Level Offset

Until now, while offsetting two or more bills through an offset request, the system did not allow to consider a debit bill with a credit line item as a credit bill while offsetting. In addition, the system did not allow to add a bill with zero balance having debit and credit line items in an offset request.

Now, a new option named **Bill Line Items Level Offset** is available while defining an offset request type. If you select the **Bill Line Items Level Offset** option in an offset request type, the system allows you to do the following:

- Consider a debit bill with a credit line item as a credit bill while offsetting through an offset request
- Add a bill with zero balance having debit and credit line items in an offset request

For example, if you include a debit bill (BILL1) with the following line items in an offset request which is created using an offset request type where the **Bill Line Items Level Offset** option is selected:

Bill Line Item	**Amount**
BS1	100$
BS2	100$
BS3	200$
AD1	-200$

The system allows you add BILL1 as a credit bill in the offset request. Earlier, the system used to internally offset the bill and the outstanding bill amount was then available for offsetting with another bills in an offset request. Now, if you consider a debit bill with a credit line item as a credit bill for offsetting in an offset request, the system will not internally offset the bill and the credit line items would be available for offsetting with another bills in the offset request. However, if you do not consider a debit bill with a credit line item as a credit bill for offsetting in an offset request, the system will first internally offset the bill and then outstanding amount would be available for offsetting against another bills in the offset request.

If you select the **Bill Line Items Level Offset** option in an offset request type, you need to ensure that **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter in the **C1-OFST-DIST** algorithm (which is attached to the **Creating Adjustment** status in the lifecycle of the **C1-OffsetRequest** business object) is set to **BSEG**. Otherwise, erroneous results might occur.

If you create an offset request using an offset request type where the **Bill Line Items Level Offset** option is selected, then:

- The following columns are additionally available in the **Offset Details** section while editing the offset request:
  - **Debit Balance** - Displays the sum of the unpaid debit line items of a bill
  - **Credit Balance** - Displays the sum of the open credit line items of a bill
  - **Credit Bill** - Used to indicate whether you want to consider a debit bill with a credit line item as a credit bill in the offset request. By default, this option is selected for a bill with the credit or zero balance and it is not editable. Note that you cannot select this option for a debit bill which no credit line item and therefore, in such case, this option is disabled.
- The default offset amount is set either to the sum of open credit balance of all credit bills in the offset request or to the sum of outstanding amount of all debit bills in the offset request whichever is less. While editing the offset amount, the system validates the following:
  - Offset amount is not greater than the outstanding amount of the debit bill
  - Offset amount is not greater than the open credit balance of the credit bill
- The **Debit Balance**, **Credit Balance**, and **Credit Bill** columns appear in the **Selected Bills** zone of the **Offset Request** screen.

As mentioned earlier, the system now allows you to add a bill with zero balance having debit and credit line items in an offset request. You can add a bill with zero balance from the following screens:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Offset Request
- Account Receivable Central

While creating an offset request for a zero balance bill from the **Account Receivable Central** screen or while adding a zero balance bill to an offset request, the system validates the following:

- The **Bill Line Items Level Offset** option is selected the respective offset request type.
- The selected bill with zero balance is not fully matched.

We recommend you to add maximum 4 to 5 bills while offsetting the bills through an offset request using the **Bill Line Items Level Offset** feature.

Internal Offsetting of Zero Balance Bill

Oracle Revenue Management and Billing provides a new option type named **Avoid internal match event creation for zero dollar bill** in the **C1_FINTRANOP** feature configuration. You can set the value of this option type to:

- **Y** - Used when you do not want the system to internally match the debit and credit line items of a zero balance bill on the bill completion.
- **N** - Used when you want the system to internally match the debit and credit line items of a zero balance bill on the bill completion.

If you want to consider a zero balance bill for offsetting against another bills in an offset request, you should set the **Avoid internal match event creation for zero dollar bill** option type of the **C1_FINTRANOP** feature configuration to **Y**.

Automatic Offset of Debit and Credit Bill Line Items

The fully insured individual business do come across various scenarios wherein the customers would need a facility to automatically offset the debit and credit bill line items of an account. For example:

- An individual enrolls for a health plan. But the individual fails to pay the binder payment before the membership start date. Such individual memberships are canceled once the appropriate inbound message is received to cancel the individual membership. On canceling the individual membership, an adhoc invoice is generated in the system and the premium billed for the individual membership is reversed. In this scenario, you may want to automatically offset the debit and credit bill line items of the individual member's account.
- An individual enrolls for a health plan having subsidy. The subsidy fully covers the premium, and therefore a zero balance bill is generated. If you internally offset a zero balance bill, the system matches the debit and credit line items of a zero balance bill on the bill completion. But, in this case, the match events are not created at the bill line item level. In such scenario, you may want to automatically offset the debit and credit bill line items of the individual member's account such that match events are created at the bill line item level.

Oracle Revenue Management and Billing facilitates you with the auto maintenance process for accounts wherein the system will automatically offset the debit and credit bill line items of the accounts. The auto maintenance process is driven using the **Offset Request** feature ensuring that the match events are created at the bill line item level. Note that, at present, the auto maintenance process for accounts is only tested and certified for the different lines of business in the health insurance domain.

While running the auto maintenance process for an account, the system creates an auto maintenance offset request for the account when either of the following criteria is met:

- Total amount of the open and unmatched items of the account is equal to zero. For example, an A1 account has two bills - B1 for Jan 2023 with the open balance 200 and B2 for Feb 2023 with the open balance -200 and thereby the A1 account balance is zero.
- Total amount of the open and unmatched items of the account in a specific coverage period is equal to zero. For example, an A2 account has three bills - B1 for Jan 2023 with the open balance 300, B2 for Feb 2023 with the open balance 300, and B3 for Feb 2023 with the open balance -300. Here, the overall account balance of A2 is not zero, but the account balance of A2 for Feb 2023 is zero.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note: While running the auto maintenance process for an account, the system does not consider the payments applied on the On Account, Excess Credit, and Suspense contracts of the account.

The system creates an auto maintenance offset request for an account using an offset request type where the offset category is set to **Auto Maintenance**. A new field named **Offset Category** is available while defining an offset request type. It helps to differentiate between the traditional (i.e. manual) offset requests and automatic offset requests. If you want to create a manual offset request using an offset request type, you must set the offset category in the offset request type to **Regular**. However, if you want to create an automatic offset request using an offset request type, you must set the offset category in the offset request type to **Auto Maintenance**. By default, the offset category is set to **Regular**. Note that you cannot edit the offset category in an offset request type when an offset request is already created using the offset request type.

The system enables you to skip a set of accounts for which auto maintenance is not required. A new field named **SKIP_AUTOM_SW** is added in the **CI_ACCT** table. It indicates whether you want to skip auto maintenance for the account. At present, you can provide the skip auto maintenance information for an account through a healthcare inbound message and not from the user interface. The system then displays the skip auto maintenance information of an account in the **Main** section of the **Account Information** zone on the **Account** tab of the **Customer 360° Information** screen. Note that the **Skip Auto Maintenance** field appears in the **Main** section for the account only when it is set to **Y**.

To use the auto maintenance feature for accounts, you need to do the following:

- Create an offset request type where the offset category is set to **Auto Maintenance**

  Note: While creating an offset request type for auto maintenance of accounts, you need to ensure that the **Bill Line Items Level Offset** option is selected and the **Transfer Adjustment** option is not selected.
- Set the **Avoid internal match event creation for zero dollar bill** option type of the **C1_FINTRANOP** feature configuration to **Y**

A new batch named **C1-AUTOM** is introduced in this release. It considers those accounts for auto maintenance where the **Skip Auto Maintenance** field is set to **N**. It then checks whether either of the following criteria is met for the account:

- Total amount of the open and unmatched items of the account is equal to zero
- Total amount of the open and unmatched items of the account in a specific coverage period is equal to zero

Here, the system considers the eligible accounts with zero and non-zero balance. If the eligible account has zero balance, the system considers the bills with zero and non-zero balance where the open and unmatched debit and credit line items can be offset. If the eligible account has non-zero balance, the system considers the bills with zero and non-zero balance where the open and unmatched debit and credit line items of the same coverage period can be offset.

If either of the above two criteria is met, the system creates and processes an auto maintenance offset request. The auto maintenance offset request automatically closes the open and unmatched bill line items of the account that amounts to zero balance. To close an open and unmatched bill line item of the account, the system creates an offset request adjustment against each such debit or credit financial transaction. If the match event is present on any financial transaction, the same match event is stamped on the offset request adjustment. However, if the match event does not exist on any financial transaction, the system creates a new match event and stamps it against the financial transaction and its corresponding offset request adjustment.

This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. This batch contains the following parameters:

Parameter Name	Mandatory (Yes or No)	Description
Division	Yes (Conditional)	Used when you want to run the auto maintenance process for the accounts which belong to a particular division.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		Note: This parameter is required when you specify a customer class while executing this batch.
Customer Class	No	Used when you want to run the auto maintenance process for the accounts which belong to a particular customer class.
Offset Request Type	Yes	Used to indicate the offset request type using which you want to create auto maintenance offset requests for the accounts. **Note:** Here, you must specify an offset request type where the offset category is set to **Auto Maintenance**.
Freeze Number of Days	Yes	Used to specify the number of days. The system considers those accounts for auto maintenance whose financial transactions are frozen in the last specified number of days. **Note:** The parameter value must be greater than or equal to zero.
Skip Auto Maintenance for Accounts with Open Refund or Write Off Request (Y/N)	Yes	Used to indicate whether you want to skip auto maintenance for those accounts for which the refund or write off request is still in the non-final status. The valid values are: • Y • N **Note:** By default, the parameter value is set to **Y**.
Skip Auto Maintenance for Accounts with Open Payment, Payment Transfer Request (Y/N)	Yes	Used to indicate whether you want to skip auto maintenance for those accounts for which the payment creation or payment transfer request is still in the non-final status. The valid values are: • Y • N **Note:** By default, the parameter value is set to **Y**
Skip Auto Maintenance for Accounts with Open Offset Request (Y/N)	Yes	Used to indicate whether you want to skip auto maintenance for those accounts for which the manual offset request is still in the non-final status. The valid values are: • Y • N

Copyright © 2009, 2025, Oracle and/or its affiliates.

Parameter Name	Mandatory (Yes or No)	Description
		Note: By default, the parameter value is set to **Y**
Account ID	No	Used when you want to run the auto maintenance process for a particular account.
Fetch Only Open Overdue Bills	Yes	Used to indicate whether you want to consider the overdue bills or all the open bills of the account for auto maintenance. The valid values are: • **Y** - Used when you want to consider only the overdue bills of the account for auto maintenance. • **N** - Used when you want to consider all the open bills of the account for auto maintenance. **Note:** By default, the parameter value is set to **Y**.
Thread Pool Name	No	Used to specify the thread pool on which you want to execute the batch.

On successful completion of this batch, the system creates and processes an auto maintenance offset request for an account that meets the criteria. You can view the details of an auto maintenance offset request through the **Offset Request** screen.

While viewing the details of an auto maintenance offset request, the system displays the **Auto Maintenance Financial Transactions** zone instead of the **Selected Bills** and **Offset Request Adjustments** zones in the **Main** tab of the **Offset Request** screen. The system also displays the account information in the **Main** section of the **Offset Request** zone. The **Auto Maintenance Financial Transactions** zone lists the financial transactions of the account for which the corresponding offset request adjustments are created during the auto maintenance process.

To design the auto maintenance process for accounts, the following algorithms are enhanced:

- **C1-OFFSUBENT** - Here, some of the existing validations are skipped for an auto maintenance offset request and few new validations are introduced for an auto maintenance offset request.
- **C1-OFST-DIST** - Here, additional logic is added to handle the offset category and to create auto maintenance offset requests for accounts that meet the criteria. Note that the **Match Type**, **Match Type Entity**, and **Credit Bill Distribution Algorithm** parameters are not applicable while creating offset request adjustments for an auto maintenance offset request.

The system enables you to cancel an auto maintenance offset request, if required, through the **Unapply** button. While canceling an offset request, you need to specify a reason why you want to cancel an offset request. On canceling an auto maintenance offset request, the system cancels the offset request adjustments and opens the corresponding bill line items which were offset during auto maintenance of the account.

Algorithms Used in C1-OffsetRequest

The following table lists the algorithm which is attached to the **C1-OffsetRequest** business object:

System Event	Algorithm	Algorithm Type	Description

C1-OFFST-INF

This algorithm generates the offset request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Offset Request Type Description
2. Offset Request Status Description
3. Offset Request ID

Copyright © 2009, 2025, Oracle and/or its affiliates.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-OFFSUBENT

This algorithm is invoked when you click the **Submit** button. It validates the following:

- Whether the outstanding amount of the selected bills is not zero
- Whether the selected bills are in the **Complete** status
- Whether the overridden offset amount of a bill is not zero
- Whether the sum of the debit bills' offset amount is equal to the sum of the credit bills' offset amount
- Whether at least one debit and credit bills are selected in the offset request

If the validation is successful, it checks whether the **Approval Required** option is selected in the respective offset request type. If the **Approval Required** option is selected in the respective offset request type, it changes the status of the offset request to **Approval In Progress**. However, if the **Approval Required** option is not selected in the respective offset request type, it checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

C1-OFFAPPENT

This algorithm is invoked when the status of the offset request is changed to **Approval In Progress**. It creates a To Do using the approval To Do type which is specified in the respective offset request type. Once a To Do is created, it is assigned to all users with the approval To Do role which is specified in the respective offset request type. In addition, it creates a log entry for the offset request when the To Do is created.

C1-OFFAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role which is specified in the respective offset request type. If so, it allows the approver to approve or reject the offset request. It also ensures that the submitter does not approve or reject the offset request.

C1-OFSAPRENT

This algorithm is invoked when you click the **Approve** button. It checks whether the number of financial transactions created for the bills, which are selected in the offset request, exceeds the defer processing count. If the number of

Copyright © 2009, 2025, Oracle and/or its affiliates.

financial transactions does not exceed the defer processing count, the system changes the status of the offset request to **Creating Adjustment**. However, if the number of financial transactions exceeds the defer processing count, the system changes the status of the offset request to **Deferred Processing**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-OFST-DIST

This algorithm is invoked when the status of the offset request is changed to **Creating Adjustment**. It creates offset adjustments using the adjustment type specified in the offset request and sets the status of the offset adjustments to **Frozen**. If the **Transfer Adjustment** option is selected in the respective offset request type, it creates transfer adjustments in the **Frozen** status.

This algorithm distributes the offset amount of a bill in the following manner:

1. **Internal Offsetting Within Each Bill** - This happens when a bill contains both debit and credit line items. The internal offsetting happens either at the bill segment or contract level depending on the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. If the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BILL** or **SA**, the internal offsetting happens at the contract level. However, if the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter is set to **BSEG**, the internal offsetting happens at the bill segment level. In the bill, the internal offsetting is done starting from a credit contract with highest payment priority against a debit contract with highest payment priority by creating transfer adjustments. This continues until the sum of credit or debit amount within a bill is exhausted.
2. **Offsetting Across Debit and Credit Bills** - This offsetting is always done from the credit bills to the debit bills with the objective to reduce the debit bill balance. This algorithm checks whether any match event is created for the bill. If so, it creates the offset adjustments against the bill using the existing match event. If there are no match events created for the bill, this algorithm creates match events using the value specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter. It distributes the amount from the credit bill starting with the oldest due date. This continues until the credit bill balance is exhausted.

It contains the following parameters:

- **Match Type** - Used to specify the match type using which you want to distribute the offset amount. You must specify a match type where the payment distribution override algorithm is attached.

  Note: If a bill which is offset is partially paid using a match type, this algorithm uses the same match type for offset distribution. However, if no payment is received for a bill which is offset, this algorithm uses the match type which is specified in the **Match Type** parameter for offset distribution.

- **Match Type Entity (Valid Values: BILL, BSEG, SA)** - Used to indicate the entity, such as bill, bill segment, or contract, against which you want to create match event. It is used to create match events for bills which are unpaid. The valid values are:
  - **BILL** - Used when you want to stamp same match event on all financial transactions of the bill.
  - **BSEG** - Used when you want to stamp unique match event on each bill segment or adjustment financial transaction.

Copyright © 2009, 2025, Oracle and/or its affiliates.

  - **SA** - Used when you want to stamp same match event on all financial transactions which are created for the same contract.
- **Credit Bill Distribution Algorithm** - Used to specify an algorithm which helps to create offset adjustments for a credit bill at the bill segment level. This parameter is required when the **Transfer Adjustment** option is not selected in the respective offset request type.

> **Note:** The **C1-WTBS-CRBL** algorithm type is shipped with the product. You can attach an algorithm created using the **C1-WTBS-CRBL** algorithm type to the **Credit Bill Distribution Algorithm** parameter. For more information, see C1-WTBS-CRBL on page 1395.

C1-UPD-HOLD

This algorithm updates the hold request whenever a bill on hold is offset through an offset request. If the remaining outstanding amount of a bill after offsetting is not zero and is less than the current hold amount, this algorithm updates the hold amount to the current hold amount plus remaining outstanding bill balance. For example, if the original outstanding amount is 80$, hold amount is 40$, offset amount is 20$, then the remaining outstanding amount (i.e. 80-40-20$=20$) is less than the current hold amount (i.e. 40$). Therefore, this algorithm updates the hold amount of the bill in the hold request to 60$ (i.e. 40$+20$).

However, if the remaining outstanding amount of a bill after offsetting is zero and the bill is included in any active hold request, the hold end date of the bill in the hold request is changed to the system date.

In both the above scenarios, this algorithm creates a log entry for the offset and hold requests. The bill whose hold details (i.e. either hold amount or hold end date) are updated through the offset request is maintained in its log. Similarly, the old and updated hold amount and hold end date of the bill are maintained in the respective hold request log.

C1-UPD-FUND

If a bill which is offset through an offset request is present in a funding request which is in the **Draft** status, this algorithm updates the funding amount of the bill in the funding request. If entire sum of the funding and garnishment amount of a bill is offset through the offset request, the bill is excluded from the funding request.

It contains the following parameter:

- **Funding Exclusion Reason Code** - Used to indicate the reason why you want to exclude the bill from the funding request. This parameter is mandatory while excluding a bill from a funding request. You must specify a value which is already defined in the **CAN_RSN_CD_FLG** lookup field.

C1-DFRUNAPLY

This algorithm is invoked when you click the **Unapply** button. It checks whether the number of transfer or offset adjustments created through the offset request exceeds the online record process limit defined in this algorithm. If the number of transfer or offset adjustments does not exceed the online record process limit, the system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to **Unapplied Offset**. However, if the number of transfer or offset adjustments exceeds the online record process limit, the system changes the status of the offset request to **Defer Unapplied**.

It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of transfer or offset adjustments you can process in the real time (i.e. immediately).

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-UNAPOFST

This algorithm is invoked when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is executed. It cancels all transfer or offset adjustments created through the offset request and then changes the status of the offset request to **Unapplied Offset**.

C1-UPDT-FUND

Once the transfer or offset adjustments of a bill are canceled, it checks whether the bill is included in any funding request which is in the **Draft** status. If so, it updates the funding amount of the bill in the respective funding request.

C1-WTBS-CRBL

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** - Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
  - **F** - Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
  - **C** - Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option when the coverage start date is stamped corresponding to the financial transactions in the **C1_FT_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

Additional Algorithms Used in Offset Request

Besides using the algorithms attached to the lifecycle, the system uses the following algorithms for the **Offset Request** feature:

- C1-OFST-AMT on page 1395
- C1-WTBS-CRBL on page 1395

C1-OFST-AMT

This algorithm calculates the default offset amount whenever a bill is added to the offset request. The default offset amount is equal to the sum of outstanding amount of the debit or credit bills whichever is less. For example, if the following bills are added to the offset request:

- Bill 1 (-100$) where due date is set to 01-01-2018
- Bill 2 (-100$) where due date is set to 01-01-2019
- Bill 3 (25$) where due date is set to 01-01-2018
- Bill 4 (25$) where due date is set to 06-01-2018

In such case, the system sets the default offset amount of Bill 1 to 50$.

Note: This algorithm does not calculate the default offset amount until both the debit and credit bills are added to the offset request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-WTBS-CRBL

THIS ALGORITHM IS ONLY USED IF YOU PRACTICE OPEN-ITEM ACCOUNTING AND THE ACCOUNT'S CUSTOMER CLASS INDICATES OPEN-ITEM ACCOUNTING IS PRACTICED.

This algorithm is used to offset the bill segments of a credit bill. It considers the bill segments of a credit bill for offsetting based on the following parameter:

- **Bill Segment Date Type** - Used to indicate whether the system should consider the bill segments of a credit bill based on the freeze date or coverage start date. The valid values are:
  - **F** - Used when you want to consider the bill segments of a credit bill based on the order of the freeze date.
  - **C** - Used when you want to consider the bill segments of a credit bill based on the order of the coverage start date. Note that you can use this option when the coverage start date is stamped corresponding to the financial transactions in the **C1_FT_EXT** table.

It creates a unique match event for each bill segment and adjustment financial transaction.

Offset Request Type

Oracle Revenue Management and Billing allows you to define an offset request type using which you can create an offset request. It is the offset request type which helps the system to determine the following:

- The business object using which the offset request should be created in the system.
- Whether automatic offset is required for the debit and credit bill line items of an account.

  Note: This process for accounts is only tested and certified for the different lines of business in the health insurance domain.
- Whether automatic offset request is required to settle the unpaid bill amount of a person or an account using the advance deposit available at the parent customer or policy level through a delinquency process.

  Note: This process for accounts is only tested and certified for the different lines of business in the health insurance domain.
- The default adjustment type using which the transfer or offset adjustments should be created in the system.
- The algorithm which helps to calculate default offset amount when a bill is added to the offset request.
- Whether approval is required while offsetting bills through an offset request.
- Whether an offset request must be processed in the deferred mode or in real time (i.e. immediately).
- The maximum search period (in days) that you want to allow while searching bills in an offset request.
- Whether transfer or offset adjustments should be created while offsetting bills through an offset request.
- Whether a debit bill with credit line item as a credit bill should be created in an offset request.

The **Offset Request Type** screen allows you to define, view, edit, copy, and delete an offset request type. It contains the following zones:

- Offset Request Type List on page 1396
- Offset Request Type on page 1397

Offset Request Type List

The **Offset Request Type List** zone lists the offset request types that are already defined in the system. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Edit	On clicking the **Edit** (✎) icon, the **Offset Request Type** screen appears where you can edit the details of the offset request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Offset Request Type** screen appears where you can define a new offset request type using an existing offset request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the offset request type.
	Note: You can delete an offset request type only when an offset request is not yet created using the offset request type.

On clicking the **Broadcast** (📡) icon corresponding to an offset request type, the **Offset Request Type** zone appears with the details of the respective offset request type.

Offset Request Type

The **Offset Request Type** zone displays the details of the offset request type. It contains the following sections:

- **Main** - Displays basic information about the offset request type. It contains the following fields:

Field Name	Field Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Offset Request Business Object	Indicates the business object using which the offset request is created in the system. In addition, a context menu (⌄) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the offset request type.
Status	Indicates the status of the offset request type. The valid values are: • Active

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Inactive
Offset Category	Indicates the category to which the offset request type belongs. The valid values are: • Advance Deposit **Note:** This option for accounts is only tested and certified for the different lines of business in the health insurance domain. • Auto Maintenance **Note:** This option for accounts is only tested and certified for the different lines of business in the health insurance domain. • Regular
Adjustment Type	Indicates the adjustment type using which the transfer or offset adjustments should be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Default Offset Amount Algorithm	Indicates the algorithm using which the default offset amount should be calculated while adding a bill in an offset request. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.
Defer Processing FT Count	Displays the count which helps to determine whether an offset request must be processed in the deferred mode (i.e. in the background) or in the online mode (i.e. immediately).
Approval Required	Indicates whether approval is required while offsetting bills (created using the offset request type) for an entity.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do Type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve an offset request which is submitted for approval.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Approval Required** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do Role.
Submitter To Do Type	Indicates that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit an offset request for approval. **Note:** It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit an offset request for approval. **Note:** It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Bill Search Period	Displays the maximum search period (in days) which is allowed while searching bills in an offset request.
Transfer Adjustment	Indicates whether transfer adjustments should be created while offsetting bills through an offset request.
Bill Line Items Level Offset	Indicates the following: • Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request • Whether a bill with zero balance having debit and credit line items should be created in an offset request

- **Characteristics** - Lists the characteristics defined for the offset request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the offset request type.
Delete	Used to delete the offset request type. **Note:** You can delete an offset request type only when an offset request is not yet created using the offset request type.
Duplicate	Used to create a new offset request type using an existing offset request type.

- **Record Information** - This section contains the following field:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
Business Object	Indicates the business object using which the offset request type is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Offset Request Type** zone does not appear in the **Offset Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an offset request type in the **Offset Request Type List** zone.

Defining an Offset Request Type

Prerequisites

To define an offset request type, you should have:

- Offset request type business objects defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To define an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Offset Request Type** sub-menu.

   The **Offset Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the offset request type.
   - **Characteristics** - Used to define a list of characteristics for the offset request type.

   The **Main** section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Business Object	Indicates the business object using which you are defining the offset request type.	Not applicable
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object using which you want to create the respective offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of an offset request type to **Inactive** when the corresponding offset request is in a status other than **Processed**, **Rejected**, or **Unapplied Offset**.	Yes
Offset Category	Used to indicate the category of the offset request type. The valid values are: • **Advance Deposit** - The advance deposit offset requests are automatic offset requests. You can create an advance deposit offset request using an offset request type where the offset category is set to **Advance Deposit**. **Note:** This option for accounts is only tested and certified for the different lines of business in the health insurance domain. • **Auto Maintenance** - The auto maintenance offset requests are automatic offset requests. You can create an auto maintenance offset request using an offset request type where the offset category is set to **Auto Maintenance**. **Note:** This option for accounts is only tested and certified for the different lines of business in the health insurance domain. • **Regular** - The regular or traditional offset requests are manual offset requests. You can create a manual offset request using an offset request type where the offset category is set to **Regular**. **Note:** By default, the **Regular** option is selected.	Yes
Adjustment Type	Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type** field. You can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Default Offset Amount Algorithm	Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request. **Note:** The **Search** (🔍) icon appears corresponding to the **Default Offset Amount Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Default Offset Amount Algorithm** field. You must specify an algorithm which is created using the **C1-OFST-AMT** algorithm type in the **Default Offset Amount Algorithm** field.	Yes
Defer Processing FT Count	Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify a negative value in this field. Deferred mode means in the background when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is invoked. You can configure the **Offset Request Periodic Monitor (C1-OFSRQ)** batch such that it is executed at regular intervals. For more information about the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If you set the defer processing count to zero (0), the system resets the default value to 50.	
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. The **C1-OFSRQ** To Do type is shipped with the product. You can use the **C1-OFSRQ** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request which is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated with the approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit an offset request for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The **C1-OFSSB** To Do type is shipped with the product. You can use the **C1-OFSSB** To Do type or a custom To Do type, if required.	**Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit an offset request for approval. **Note:** The list includes only those To Do roles which are associated with the submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Bill Search Period	Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request. **Note:** If you do not specify any value, by default, it is set to **30**. If you specify a date range that exceeds the maximum search period, the system will not you to search and add bills in the offset request.	No
Transfer Adjustment	Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request. **Note:** By default, the **Transfer Adjustment** option is selected. This impacts the system performance when the match type entity is set to **BSEG** and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the **Transfer Adjustment** option is not selected in the respective offset request type.	No
Bill Line Items Level Offset	Used to indicate the following: • Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request • Whether a bill with zero balance having debit and credit line items should be created in an offset request	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select the **Bill Line Items Level Offset** option, you need to ensure that **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter in the **C1-OFST-DIST** algorithm (which is attached to the **Creating Adjustment** status in the lifecycle of the **C1-OffsetRequest** business object) is set to **BSEG**.	

Tip: Alternatively, you can access the **Offset Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Offset Request Type** screen.

4. Enter the required details in the **Main** section.
5. Define characteristics for the offset request type, if required.
6. Click **Save**.
   The offset request type is defined.

Defining a Characteristic for an Offset Request Type

Prerequisites

To define a characteristic for an offset request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request Type**).

Procedure

To define a characteristic for an offset request type:

1. Ensure that the **Characteristics** section is expanded when you *a*re defining, editing, or copying an offset request type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Offset Request Type**.	**Note:** This field is required when you are defining a characteristic for the offset request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the offset request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the offset request type, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a characteristic from the offset request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing an Offset Request Type

Prerequisites

To edit an offset request type, you should have:

- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To edit an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
   The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the offset request type whose details you want to edit.

   The **Offset Request Type** screen appears. It contains the following sections:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define the characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Displays the offset request type.	Not applicable
Business Object	Indicates the business object using which you are defining the offset request type.	Not applicable
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object using which you want to create the respective offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of an offset request type to **Inactive** when the corresponding offset request is in a status other than **Processed**, **Rejected**, or **Unapplied Offset**.	Yes
Offset Category	Used to indicate the category of the offset request type. The valid values are: • **Advance Deposit** - The advance deposit offset requests are automatic offset requests. You can create an advance deposit offset request using an offset request type where the offset category is set to **Advance Deposit**. **Note:** This option for accounts is only tested and certified for the different lines of business in the health insurance domain. • **Auto Maintenance** - The auto maintenance offset requests are automatic offset requests. You can create an auto maintenance offset request using an offset request type where the offset category is set to **Auto Maintenance**. **Note:** This option for accounts is only tested and certified for the different lines of business in the health insurance domain. • **Regular** - The regular or traditional offset requests are manual offset requests. You can create a manual offset request using an offset request type where the offset category is set to **Regular**. **Note:** By default, the **Regular** option is selected.	Yes
Adjustment Type	Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	can then change the adjustment type, if required, while editing an offset request. **Note:** The **Search** (🔍) icon appears corresponding to the **Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type** field. You can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Default Offset Amount Algorithm	Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request. **Note:** The **Search** (🔍) icon appears corresponding to the **Default Offset Amount Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Default Offset Amount Algorithm** field. You must specify an algorithm which is created using the **C1-OFST-AMT** algorithm type in the **Default Offset Amount Algorithm** field.	Yes
Defer Processing FT Count	Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify a negative value in this field. Deferred mode means in the background when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is invoked. You can configure the **Offset Request Periodic Monitor (C1-OFSRQ)** batch such that it is executed at regular intervals. For more information about the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If you set the defer processing count to zero (0), the system resets the default value to 50.	
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. The **C1-OFSRQ** To Do type is shipped with the product. You can use the **C1-OFSRQ** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request which is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated with the approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit an offset request for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The **C1-OFSSB** To Do type is shipped with the product. You can use the **C1-OFSSB** To Do type or a custom To Do type, if required.	**Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit an offset request for approval. **Note:** The list includes only those To Do roles which are associated with the submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Bill Search Period	Used to specify the maximum search period (in days) that you want to allow while searching bills in an offset request. **Note:** If you do not specify any value, by default, it is set to **30**. If you specify a date range that exceeds the maximum search period, the system will not you to search and add bills in the offset request.	No
Transfer Adjustment	Used to indicate whether transfer adjustments should be created while offsetting bills through an offset request. **Note:** By default, the **Transfer Adjustment** option is selected. This impacts the system performance when the match type entity is set to **BSEG** and volume of bill segments in the selected bills is high. Alternatively, the system enables you to create offset adjustments while offsetting bills through an offset request whenever the volume of bill segments in the selected bills is high. To create the offset adjustments while offsetting bills through an offset request, you need to ensure that the **Transfer Adjustment** option is not selected in the respective offset request type.	No
Bill Line Items Level Offset	Used to indicate the following: • Whether a debit bill with a credit line item as a credit bill should be considered while offsetting through an offset request • Whether a bill with zero balance having debit and credit line items should be created in an offset request	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select the **Bill Line Items Level Offset** option, you need to ensure that **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter in the **C1-OFST-DIST** algorithm (which is attached to the **Creating Adjustment** status in the lifecycle of the **C1-OffsetRequest** business object) is set to **BSEG**.	

Tip: Alternatively, you can edit an offset request type by clicking the **Edit** button in the **Offset Request Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the offset request type, if required.
7. Click **Save**.
   The changes made to the offset request type are saved.

Deleting an Offset Request Type

Procedure

To delete an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
   The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *o*ffset request type that you want to delete.

   A message appears confirming whether you want to delete the offset request type.

Note: You can delete an offset request type only when an offset request is not yet created using the offset request type.

Tip: Alternatively, you can delete an offset request type by clicking the **Delete** button in the **Offset Request Type** zone.

5. Click **OK**.
   The offset request type is deleted.

Copying an Offset Request Type

Instead of creating an offset request type from scratch, you can create a new offset request type using an existing offset request type. This is possible through copying an offset request type. On copying an offset request type, the details including the characteristics are copied to the new offset request type. You can then edit the details, if required.

Prerequisites

To copy an offset request type, you should have:

- Offset request type (whose copy you want to create) defined in the application
- Offset request business objects defined in the application
- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- Default offset amount algorithm defined using the **C1-OFST-AMT** algorithm type
- Required To Do role assigned to the **C1-OFSRQ** and **C1-OFSSB** To Do types in the application
- Required match type entity specified in the **Match Type Entity (Valid Values: BILL, BSEG, SA)** parameter of the **C1-OFST-DIST** algorithm

Procedure

To copy an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
   The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the offset request type whose copy you want to create.

   The **Offset Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the offset request type.
   - **Characteristics** - Used to define the characteristics for the offset request type.

   The **Main** section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Business Object	Indicates the business object using which you are defining the offset request type.	Not applicable
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object using which you want to create the respective offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of an offset request type to **Inactive** when the corresponding offset request is in a status other than **Processed**, **Rejected**, or **Unapplied Offset**.	Yes
Offset Category	Used to indicate the category of the offset request type. The valid values are: • **Advance Deposit** - The advance deposit offset requests are automatic offset requests. You can create an advance deposit offset request using an offset request type where the offset category is set to **Advance Deposit**. **Note:** This option for accounts is only tested and certified for the different lines of business in the health insurance domain. • **Auto Maintenance** - The auto maintenance offset requests are automatic offset requests. You can create an auto maintenance offset request using an offset request type where the offset category is set to **Auto Maintenance**. **Note:** This option for accounts is only tested and certified for the different lines of business in the health insurance domain. • **Regular** - The regular or traditional offset requests are manual offset requests. You can create a manual offset request using an offset request type where the offset category is set to **Regular**. **Note:** By default, the **Regular** option is selected.	Yes
Adjustment Type	Used to indicate the adjustment type using which transfer or offset adjustments should be created. By default, the specified adjustment type appears when you create an offset request. You can then change the adjustment type, if required, while editing an offset request.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type** field. You can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Default Offset Amount Algorithm	Used to attach an algorithm using which you want to calculate default offset amount while adding a bill in an offset request. **Note:** The **Search** (🔍) icon appears corresponding to the **Default Offset Amount Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears. On specifying the algorithm, the description of the algorithm appears corresponding to the **Default Offset Amount Algorithm** field. You must specify an algorithm which is created using the **C1-OFST-AMT** algorithm type in the **Default Offset Amount Algorithm** field.	Yes
Defer Processing FT Count	Used to indicate whether an offset request must be processed in the deferred mode or in real time (i.e. immediately). If the number of financial transactions created for the bills which are selected in the offset request exceeds the defer processing count, the system will process the offset request in the deferred mode. However, if the number of financial transactions created for the bills which are selected in the offset request does not exceed the defer processing count, the system will process the offset request in real time (i.e. immediately).	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify a negative value in this field. Deferred mode means in the background when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is invoked. You can configure the **Offset Request Periodic Monitor (C1-OFSRQ)** batch such that it is executed at regular intervals. For more information about the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If you set the defer processing count to zero (0), the system resets the default value to 50.	
Approval Required	Used to indicate whether approval is required while offsetting bills through an offset request.	No
Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when an offset request is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Approval To Do Type** field. The **C1-OFSRQ** To Do type is shipped with the product. You can use the **C1-OFSRQ** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve an offset request which is submitted for approval. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated with the approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit an offset request for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Offset Request (Used for Searching)

The **Offset Request** screen allows you to search for an offset request using various search criteria. It also allows you to define an offset request. It contains the following zone:

- Search Offset Request on page 1418

Through this screen, you can navigate to the following screen:

- Offset Request (Used for Viewing) on page 1424

Search Offset Request

The **Search Offset Request** zone allows you to search for an offset request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an offset request using the offset request details or the bill details. The valid values are: • Request Details • Bill Details **Note:** By default, the **Request Details** option is selected.	Yes
Offset Request ID	Used to search a particular offset request. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Creation From Date	Used to search offset requests which are created from a particular date onwards. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
User ID	Used to search offset requests which are created by a particular user. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Created To	Used to search offset requests which are created till a particular date.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Request Details** option is selected from the **Search By** list.	
Status	Used to search offset requests which are in a particular status. The valid values are: • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Person ID	Used to search offset requests which include bills of a particular person. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears where you can search for a particular person.	No
Offset Request Type	Used to search offset requests which are created using a particular offset request type. **Note:** The list includes only those values which are present in the **C1_OFFSET_REQ-TYPE** table. This field appears when the **Request Details** option is selected from the **Search By** list.	No
Account ID	Used to search offset requests which include bills of a particular account.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Request Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears where you can search for a particular account.	
Bill ID	Used to search offset requests which include a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears where you can search for a particular bill.	No
Bill Date From	Used to search offset requests which include bills created from a particular date onwards. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Alternate Bill ID	Used to search offset requests which include a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Bill Date To	Used to search offset requests which include bills created till a particular date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No

Note: You must specify at least one search criterion while searching for an offset request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the offset request is created.
Offset Request Information	Displays information about the offset request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Offset Request** screen appears where you can view the details of the respective offset request.
Offset Amount	Displays the total amount which is offset through the offset request.
Status	Indicates the status of the offset request. The valid values are: • Approval In Progress • Defer Unapplied • Deferred Processing • Draft • Processed • Rejected • Unapplied Offset
Created By	Indicates the user who has created the offset request.
Creation Mode	Indicates whether the offset request is created manually or automatically. The valid values are: • Automatic • Manual
Primary Bill	Indicates the bill for which the offset request is created. In addition, a context menu (⊙) icon appears corresponding to this column which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for an Offset Request

Prerequisites

To search for an offset request, you should have:

- Offset request types defined in the application

Procedure

To search for an offset request:

1. Click the **Menu** link in the **Application** toolbar.

Copyright © 2009, 2025, Oracle and/or its affiliates.

A list appears.

2. From the **Main** menu, select **Accounting and Receivable** and then click **Offset Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Offset Request** sub-menu.
   The **Offset Request** screen appears.
4. Enter the search criteria in the **Search Offset Request** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of offset requests that meet the search criteria appears in the **Search Results** section.

Creating an Offset Request

Prerequisites

To create an offset request, you should have:

- Offset request types defined in the application
- Bills created in the application

Procedure

To create an offset request:

1. Do either of the following:

If you want to...	Then...
Create a single offset request from the Account Receivable Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. The **Account Receivable Central** screen appears. **c.** Search for the required bill in the **Search Bill** zone. **d.** In the **Search Results** section, select the check box corresponding to the bill which you want to offset through a single offset request. **e.** Click **Single Offset**.
Create a mass offset request from the Account Receivable Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**.

If you want to...	Then...
	The **Account Receivable Central** screen appears. **c.** Search for the required bill in the **Search Bill** zone. **d.** In the **Search Results** section, select the check box corresponding to the bill which you want to offset through a mass offset request. **e.** Click **Mass Offset**.
Create a cross currency offset request from the Account Receivable Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. The **Account Receivable Central** screen appears. **c.** Search for the required bill in the **Search Bill** zone. **d.** In the **Search Results** section, select the check box corresponding to the bill which you want to offset through a cross currency offset request. **e.** Click **Cross Currency Offset**.
Create a single, mass, or cross currency offset request from the Offset Request screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Offset Request**. A sub-menu appears. **c.** Click the **Add** option from the **Offset Request** sub-menu.

The **Add Offset Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to indicate the offset request type using which you want to create the offset request.	Yes
Bill	Used to indicate the bill which you want to offset through the offset request. **Note:** The **Search** (🔍) icon appears corresponding to the **Bill** field. On clicking the **Search** icon, the **Bill Search** window appears. On specifying the bill, the information about the bill appears corresponding to the **Bill** field. This field is automatically populated by the bill ID for an offset request created from the **Account Receivable Central** screen.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Offset Request** screen.

2. Enter the required details in the **Add Offset Request** screen.
3. Click **OK**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The offset request is created in the **Draft** status. The **Offset Request** screen appears where you can view the details of the offset request. By default, the adjustment type specified in the respective offset request type is used while creating the offset request. You can then change the adjustment type, if required.

4. Add debit and/or credit bills in the offset request.
5. Define characteristics for the offset request, if required.

Viewing the Offset Request Details

Procedure

To view the details of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request whose details you want to view.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the offset request in the **Offset Request** zone.

Offset Request (Used for Viewing)

The **Offset Request** screen allows you to:

- View the details of the offset request
- Search for a debit or credit bill based on bill, account, or person details
- View the debit and credit bills which are added to the offset request
- View the offset or transfer adjustments which are created through the offset request

Copyright © 2009, 2025, Oracle and/or its affiliates.

- View the financial transactions of an auto maintenance offset request type
- Add a debit or credit bill to the offset request
- Edit the details of the offset request
- Define, edit, or remove the characteristics from the offset request
- Edit the offset amount for each debit and credit bill
- Remove a debit or credit bill from the offset request
- Delete the offset request
- Submit the offset request for approval
- Approve or reject the offset request
- Unapply (i.e. cancel) the offset request
- View the log of the offset request
- Add a log entry for the offset request

It consists of the following tabs:

- Offset Request - Main on page 1425
- Offset Request - Log on page 1436

Offset Request - Main

The **Main** tab displays information about the offset request. It contains the following zones:

- Offset Request on page 1425
- Selected Bills on page 1428

> **Note:** This zone appears when you are viewing the debit and credit bills added to the offset request.

- Search Bill on page 1429
- Offset Request Adjustments on page 1433

> **Note:** This zone appears when you are viewing the offset or transfer adjustments created for the bill through the offset request.

- Auto Maintenance Financial Transactions on page 1434

> **Note:** This zone appears when you are viewing the details of an auto maintenance offset request.

Offset Request

The **Offset Request** zone displays the details of the offset request. It contains the following sections:

- **Main** - Displays basic information about the offset request. It contains the following fields:

Field Name	Field Description
Offset Request Information	Displays information about the offset request.
Offset Request Type	Indicates the offset request type using which the offset request is created. **Note:** It has a link. On clicking the link, the **Offset Request Type** screen appears where you can view the details of the respective offset request type.
Status	Indicates the status of the offset request. The valid values are: • Approval In Progress • Defer Unapplied • Deferred Processing

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Draft • Processed • Rejected • Unapplied Offset
Status Reason	Indicates the reason why the offset request is rejected or unapplied (i.e. canceled). **Note:** It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective status reason. This field appears when the offset request is in the **Rejected**, **Defer Unapplied**, or **Unapplied Offset** status.
Adjustment Type	Indicates the adjustment type using which the offset or transfer adjustments should be created through the offset request. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Offset Amount	Displays the total amount which is offset through the offset request.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This field appears when you are viewing the details of an auto maintenance offset request.
Comments	Displays additional details specified while rejecting or unapplying (i.e. canceling) the offset request. **Note:** This field appears when the offset request is in the **Rejected**, **Defer Unapplied**, or **Unapplied Offset** status.

- **Characteristics** - Lists the characteristics defined for the offset request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the offset request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the offset request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Edit** button appears when the offset request is in the **Draft** status.
Delete	Used to delete the offset request.
	Note: The **Delete** button appears when the offset request is in the **Draft** status.
Submit	Used to submit the offset request.
	Note: The **Submit** button appears when the offset request is in the **Draft** status.
Approve	Used to approve the offset request.
	Note: The **Approve** button appears when: • The offset request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the offset request.
Reject	Used to reject the offset request.
	Note: The **Reject** button appears when: • The offset request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the offset request.
Unapply	Used to unapply (i.e. cancel) the offset request.
	Note: The **Unapply** button appears when the offset request is in the **Processed** status.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the offset request is created. n addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the offset request status is updated
Create Date/Time	Displays the date and time when the offset request is created.

Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added to the offset request. It contains the following columns:

Column Name	Column Description
Bill Information	Indicates the debit or credit bill which is added to the offset request. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the debit or credit bill is created.
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.
Debit Balance	Displays the sum of unpaid debit line items of a bill.
Credit Balance	Displays the sum of open credit line items of a bill.
Credit Bill	Indicates whether you want to consider a debit bill with a credit line item as a credit bill in the offset request.
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through a hold request.
Offset Amount	Displays the amount which you want to offset from the debit or credit bill.
Remaining Bill Balance	Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount). **Note:** This column does not appear when the offset request is in the **Processed** or **Unapplied Offset** status.
Updated Hold Amount	Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount. **Note:** This column does not appear when the offset request is in the **Processed** or **Unapplied Offset** status.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Bill ID	Displays the bill ID.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a bill, the **Offset Request Adjustments** zone appears where you can view the offset or transfer adjustments created for the bill through the offset request.

Note: The **Broadcast** (📡) icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

You can filter the list using various search criteria (such as, **Bill Balance**, **Bill ID**, and **Account ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see Changing the Layout on page 4254.

Search Bill

The bills listed in the **Search Bill** zone varies depending on the following scenarios:

If...	Then...
The single offset request is created through the **Account Receivable Central** screen and the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration is set to **Y**	The **Search Bill** zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed bills of all accounts of its effective child persons. If the primary bill is a debit bill, it lists credit bills of the main customer and its child persons. However, if the primary bill is a credit bill, it lists debit bills of the main customer and its child persons. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer and its child persons which are in USD.
The single offset request is created through the **Account Receivable Central** screen and the **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration is set to **N**	The **Search Bill** zone lists completed bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request). If the primary bill is a debit bill, it lists credit bills of the main customer. However, if the primary bill is a credit bill, it lists debit bills of the main customer. Note that it lists only those bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists all completed bills of the main customer which are in USD.
The mass offset request is created through the **Account Receivable Central** screen and the **Allow Offsetting Across Persons** option	The **Search Bill** zone lists completed debit and credit bills of all accounts of the main customer (whose bill is added as the primary bill in the offset request) and completed debit and credit bills of all accounts of its effective child persons. Note that it lists only those debit and credit bills which are in the same currency as that of the primary bill. For example, if the primary bill is in USD, then this zone lists

It also allows you to filter the bills using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a completed bill using the person, account, or bill details. The valid values are: • Person Details	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Account Details • Bill Details **Note:** By default, the **Person Details** option is selected.	
Person ID	Used to search completed bills of a particular person. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears.	No
Bill Date From	Used to search completed bills which are created from a particular date onwards. **Note:** By default, it is set to a date which is calculated as follows: `Bill Date To -- Bill Search Period ' (Specified in Offset Request Type)`	Yes
Bills on Hold	Used to indicate whether you want to search completed bills which are partially kept on hold. The valid values are: • No • Yes	No
Bill Date To	Used to search completed bills which are created till a particular date. **Note:** By default, it is set to the current date.	Yes
Bill Balance	Used to indicate whether you want to search completed bills with a particular balance amount. The valid values are: • Equal to Zero • Greater Than Zero • Less Than Zero • Not Equal to Zero	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note:

</table>

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Display information about the completed debit or credit bill. In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Bill Date	Displays the date when the debit or credit bill is created.
Due Date	Displays the date when the debit or credit bill is due for payment.
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through an hold request.
Outstanding Amount (Offset Currency)	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset.
	Note: This column appears when the offset request is a cross-currency offset request.
Account Information	Indicates the account for which the debit or credit bill is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the offset request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the offset request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the offset request.

Auto Maintenance Financial Transactions

The **Auto Maintenance Financial Transactions** zone lists the financial transactions which are added to the offset request for auto maintenance. It contains the following columns:

Column Name	Column Description
Coverage Start Date	Displays the date of the financial transaction from where the coverage starts.
Coverage End Date	Displays the date of the financial transaction till where the coverage ends.
Financial Transaction ID	Displays the financial transaction ID added to the offset request for auto maintenance.
	Note: It has a link. On clicking the link, the **Financial Transaction** screen appears where you can view the details of the respective financial transaction.
Amount	Displays the bill amount added in the offset request for auto maintenance.
Entity Information	Displays additional information about the bill segment. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Bill Segment** screen appears where you can view the details of the respective bill segment on clicking the link.
Adjustment Information	Displays additional information about the adjustment.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Auto Maintenance Amount	Displays the amount automatically offset against the corresponding bill amount.

Note:

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The **Auto Maintenance Financial Transactions** zone appears only when you are viewing the details of an auto maintenance offset request.

Adjustment

The **Adjustment** zone lists the advance deposit details of an offset request. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays additional information about the adjustment.
	Note: It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Adjustment Type	Indicates the adjustment type using which the offset or transfer adjustments should be created through the offset request.
	Note: It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Creation Date	Displays the date when the adjustment is created.
Offset Amount	Displays the total amount which is offset through the offset request.
Account Information	Indicates the account for which the adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** ( ) icon corresponding to an adjustment, the **Offset Request Adjustments** zone appears where you can view the offset or transfer adjustments created for the bill through the offset request.

Note: The **Broadcast** () icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.

Viewing the Adjustments Created Through an Offset Request

Procedure

To view the adjustments created through an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request whose details you want to view.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. In the **Selected Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to the bill whose offset or transfer adjustments you want to view.
   The **Offset Request Adjustments** zone appears.

   Note: The **Broadcast** (ᯤ) icon appears corresponding to a bill when the offset request is in the **Processed** or **Unapplied Offset** status.
5. View the offset or transfer adjustments created for the bill through the offset request in the **Offset Request Adjustments** zone.

Viewing the Advance Deposit Adjustment created through a Delinquency Process

Procedure

To view the advance deposit adjustments created through a delinquency process:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request whose details you want to view.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the advance deposit adjustment created through a delinquency process in the **Adjustment** zone.

Adding a Debit or Credit Bill to an Offset Request

Prerequisites

To add a debit or credit bill to an offset request, you should have:

- Completed bills for accounts of the main customer (whose bill is added as the primary bill in the offset request)
- Completed bills for effective child persons of the main customer (whose bill is added as the primary bill in the offset request)
- The **Allow Offsetting Across Persons** option type of the **C1-OFFSETREQ** feature configuration set to **Y** or **N** based on the business requirements

Procedure

To add a debit or credit bill to an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request whose details you want to edit.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:**
>
> The **Search Bill** zone appears when the offset request is in the **Draft** status.
>
> The date range specified in the **Bill Date From** and **Bill Date To** fields should not exceed the number of days specified in the **Bill Search Period** field of the respective offset request type.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of completed bills that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to a completed bill that you want to add to the offset request.
7. Click the **Add** button in the **Search Bill** zone.
   A message appears indicating that the bill is added to the offset request.

> **Note:** You can only add a completed bill to an offset request when its outstanding amount is not equal to zero.

8. Click **OK**.
   The completed bill is added to the offset request. You can view the completed bills which are added to the offset request in the **Selected Bills** zone.

> **Note:** The default offset amount is calculated for each bill using the algorithm which is attached in the respective offset request type. For more information on how the default offset amount is calculated, see C1-OFST-AMT on page 1395.

Editing an Offset Request

Prerequisites

To edit an offset request, you should have:

- Adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit an offset request:

1. Search for the offset request in the **Offset Request** screen.

Copyright © 2009, 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request whose details you want to edit.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Offset Request** zone.

   The **Offset Request** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details about the offset request.
   - **Characteristics** - Used to define the characteristics for the offset request.
   - **Offset Details** - Used to edit the offset amount of the bills which are added to the offset request. It also allows you to remove a bill from the offset request.

   Note: You can only remove secondary debit or credit bills from the offset request. And, you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

   The **Main** section contains the following fields:

Field Name	**Field Description**	**Mandatory (Yes or No)**
Offset Request Information	Displays information about the offset request.	Not applicable
Offset Request Type	Indicates the offset request type using which the offset request is created.	Not applicable
Adjustment Type	Used to indicate the adjustment type using which transfer or offset adjustments must be created through the offset request. **Note:** The **Search**(🔍) icon appears corresponding to the **Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the **Adjustment Type** field.	Yes
Comments	Used to specify additional information about the offset request.	No

   Note: The **Edit** button appears when the offset request is in the **Draft** status.
5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics of the offset request, if required.
7. Edit the offset amount of a debit or credit bill, if required.
8. Remove a debit or credit bill from the offset request, if required.
9. Click **Save**.
   The changes made to the offset request are saved.

Defining a Characteristic for an Offset Request

Prerequisites

To define a characteristic for an offset request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request**)

Procedure

To define a characteristic for an offset request:

1. Ensure that the **Characteristics** section is expanded when you are editing an offset request.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the offset request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the offset request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Offset Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the offset request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the offset request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the offset request, click the **Add** (+) icon and then *r*epeat step 2.

Note: However, if you want to remove a characteristic from the offset request, click the **Delete** (🗑) icon corresponding to the characteristic.

4. Click **Save**.
   The characteristics are defined for the offset request.

Editing the Offset Amount of a Debit or Credit Bill

Prerequisites

To edit the offset amount of a debit or credit bill, you should have:

- Required debit or credit bill added in the offset request

Procedure

To edit the offset amount of a debit or credit bill:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.

   The **Offset Details** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Total Debit Offset Amount	Displays the total offset amount of all debit bills which are included in the offset request.	Not applicable
Total Credit Offset Amount	Displays the total offset amount of all credit bills which are included in the offset request.	Not applicable
Total Offset Amount	Displays the sum of the total debit and credit offset amount.	Not applicable

   In addition, this section contains the following fields in a grid:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Indicates the debit or credit bill which is added to the offset request.	Not applicable
Outstanding Amount	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill.	Not applicable
Due Date	Displays the date when the debit or credit bill is due for payment.	Not applicable
Debit Balance	Displays the sum of the unpaid debit line items of a bill.	Not applicable
Credit Balance	Displays the sum of the open credit line items of a bill	Not applicable
Credit Bill	Used to indicate whether you want to consider a debit bill with a credit line item as a credit bill in the offset request. By default, this option is selected for a bill with the credit or zero balance and it is not editable. **Note:** You cannot select this option for a debit bill for which no credit line item exists, and therefore, in such case, this option is disabled.	No
Hold Amount	Displays the amount of the debit or credit bill which is kept on hold through an hold request.	Not applicable
Outstanding Amount (Offset Currency)	Displays the outstanding amount (i.e. unpaid amount) of the debit or credit bill in the currency in which the bill amount would be offset. **Note:** This field appears when the offset request is a cross-currency offset request.	Not applicable
Offset Amount	Used to specify the amount which you want to offset from the debit or credit bill.	Yes
Remaining Bill Balance	Displays the remaining outstanding amount of the debit or credit bill (i.e. Outstanding Amount - Hold Amount - Offset Amount).	Not applicable
Updated Hold Amount	Displays the new hold amount (i.e. Current Hold Amount + Remaining Bill Balance) for the debit or credit bill which is derived when the remaining bill balance is less than the current hold amount.	Not applicable

The **Delete** ( ) icon appears corresponding to the secondary debit or credit bills in the **Offset Details** section. It allows you to remove the respective bill from the offset request.

2. Modify the offset amount of the required debit or credit bill in the **Offset Details** section.
3. Click **Save**.
   The changes made to the offset request are saved.

Removing a Debit or Credit Bill from an Offset Request

Procedure

To remove a debit or credit bill from an offset request:

1. Ensure that the **Offset Details** section is expanded when you are editing an offset request.
2. Click the **Delete** (🗑) icon corresponding to the debit or credit bill that you want to remove from the offset request.
   A message appears confirming whether you want to delete the bill.

> **Note:** The **Delete** (🗑) icon appears corresponding to the secondary debit or credit bills. It does not appear corresponding to the primary debit or credit bill. This is because you cannot remove a primary debit or credit bill from the offset request throughout its lifecycle.

3. Click **OK**.
   The debit or credit bill is removed from the offset request.

Submitting an Offset Request

Prerequisites

To submit an offset request, you should have:

- At least one debit and credit bills added to the offset request
- Offset amount of each bill not equal to zero
- Total debit offset amount equal to total credit offset amount in the offset request
- Negative offset amount for each debit bill and positive offset amount for each credit bill
- Offset amount less than or equal to the current outstanding amount of the bill

Procedure

To submit an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request which you want to submit.
   The **Offset Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit** button in the **Offset Request** zone.

   The system behaves in the following manner:

If...	Then
The **Approval Required** option is selected in the respective offset request type	A To Do of the **C1-OFSRQ** To Do type is created and sent to the approver. The status of the offset request is then changed to **Approval In Progress**.
The **Approval Required** option is not selected in the respective offset request type and the number of financial transactions created for the bills (which are selected in the offset request) exceeds the defer processing count (defined in the respective offset request type)	The status of the offset request is changed to **Deferred Processing**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Deferred Processing** status. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to **Frozen**. However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to **Frozen**. Finally, the status of the offset request is changed to **Processed**.

Approving an Offset Request

You can view the number of offset requests which are pending for approval in the **Offset Request** screen. The approver can review, and accordingly approve or reject the offset request based on the observations.

Note: The system will not allow you to approve or reject an offset request submitted by you.

Prerequisites

To approve an offset request, you should have:

- Approval To Do role assigned in the system

Procedure

To approve an offset request:

1. Do either of the following:

If you want to...	Then...
Approve an offset request through the Offset Request screen	**a.** Search for the offset request in the **Offset Request** screen. **b.** In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request which you want to review.
Approve an offset request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-OFSRQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the offset request that you want to review.

   The **Offset Request** screen appears.
2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is accurate, click the **Approve** button in the **Offset Request** zone.

   The system behaves in the following manner:

If...	Then
The number of financial transactions created for the bills (which are selected in the offset request)	The status of the offset request is changed to **Deferred Processing**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests

Copyright © 2009, 2025, Oracle and/or its affiliates.

If...	Then
exceeds the defer processing count (defined in the respective offset request type)	which are in the **Deferred Processing** status. If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to **Frozen**. However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to **Frozen**. Finally, the status of the offset request is changed to **Processed**.
	Note: If a match event exists for the match type entity (i.e. bill, bill segment, or contract), the existing match event is stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. However, if a match event does not exist, a new match event is created and stamped on the offset or transfer adjustment and on the corresponding bill segment or bill segment cancelation financial transaction. In case of partial offset, the status of the corresponding match event is set to **Open**. However, if the entire match type entity amount is offset, the status of the corresponding match event is set to **Balanced**. For more information on how the offset amount is distributed, see C1-OFST-DIST on page 1393.
The number of financial transactions created for the bills (which are selected in the offset request) does not exceed the defer processing count (defined in the respective offset request type)	If the **Transfer Adjustment** option is selected in the respective offset request type, the system creates the transfer adjustments using the adjustment type which is specified in the offset request. The status of the transfer adjustments is set to **Frozen**. However, if the **Transfer Adjustment** option is not selected in the respective offset request type, the system creates the offset adjustments using the adjustment type which is specified in the offset request. The status of the offset adjustments is set to **Frozen**. Finally, the status of the offset request is changed to **Processed**.

Rejecting an Offset Request

Prerequisites

To reject an offset request, you should have:

- Reasons defined for the **Rejected** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Note: The system will not allow you to approve or reject an offset request submitted by you.

Procedure

To reject an offset request:

1. Do either of the following:

If you want to...	Then...
Reject an offset request through the Offset Request screen	**a.** Search for the offset request in the **Offset Request** screen. **b.** In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request which you want to review.
Reject an offset request through the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

If you want to...	Then...
	The **To Do Type for User Search** window appears. **c.** Enter **C1-OFSRQ** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the offset request that you want to review.

The **Offset Request** screen appears.

2. Review the details in the **Offset Request** screen.
3. If the information in the offset request is incorrect, click the **Reject** button in the **Offset Request** zone.

   The **Reject Offset Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the offset request.	Yes
Comments	Used to specify additional information while rejecting the offset request.	No

Note: The **Reject** button appears when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

4. Select the reason for rejecting the offset request from the **Status Reason** list.
5. Click **Save**.
   The status of the offset request is changed to **Rejected**.

Related Topics

For more information on...	See...
How to search for an offset request	Searching for an Offset Request on page 1421

Unapplying an Offset Request

There might be situations when an incorrect offset request is processed in the system. In such case, the system provides you with an ability to unapply (i.e. cancel) the offset request. However, note that you can cancel an offset request when the offset request is in the **Processed** status.

Prerequisites

To cancel an offset request, you should have:

- Reasons defined for the **Unapplied Offset** status of the **C1-OffsetRequest** business object in the **Status Reason** screen

Copyright © 2009, 2025, Oracle and/or its affiliates.

Procedure

To cancel an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request that you want to cancel.
   The **Offset Request** screen appears.
3. Click the **Unapply** button in the **Offset Request** zone.

   The **Unapply Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Unapply Reason	Used to indicate the reason why you want to cancel the offset request.	Yes
Comments	Used to specify additional information while canceling the offset request.	No

Note: The **Unapply** button appears when the offset request is in the **Processed** status.

4. Select the reason for canceling the offset request from the **Unapply Reason** list.
5. Click **Save**.

   The system behaves in the following manner:

If...	Then...
The number of transfer or offset adjustments does not exceed the online record process limit (which is defined in the **C1-DFRUNAPLY** algorithm)	The system cancels the frozen transfer or offset adjustments immediately and then changes the status of the offset request to **Unapplied Offset**.
The number of transfer or offset adjustments exceeds the online record process limit (which is defined in the **C1-DFRUNAPLY** algorithm)	The system changes the status of the offset request to **Defer Unapplied**. On executing the **Offset Request Periodic Monitor (C1-OFSRQ)** batch, the system considers the offset requests which are in the **Defer Unapplied** status. The system then cancels the frozen transfer or offset adjustments of the offset request and changes the status of the offset request to **Unapplied Offset**.

Adding a Log Entry for an Offset Request

Procedure

To add a log entry for an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the *o*ffset request for which you want to add a log entry.
   The **Offset Request** screen appears.
3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

   The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the offset request.	Not applicable
Log Details	Used to specify additional comments for the offset request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Offset Request Log** zone.

Chapter 24

Funding Request

Topics:

- Prerequisites
- Funding Request (Without Approval) Status Transition
- Funding Request (With Approval) Status Transition
- Algorithms Used in C1-FundingReq
- Funding Request Type
- Funding Request (Used for Searching)
- Funding Request (Used for Viewing)

Oracle Revenue Management and Billing provides the automatic payment facility for an account. The system automatically calculates the automatic payment amount during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. However, there might be situations when you would like to do the following before stamping the automatic payment amount against the bill in the **CI_BILL_ACH** table:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

The system enables you to change the automatic payment amount through the funding process. The funding process supports all three automatic payment creation options (i.e. Create At Bill Completion, Create On Extract Date, and Freeze Payment on Notification).

While creating a funding request, you need to specify a funding request type using which you want to create the funding request. It is the funding request type which helps the system to determine:

- The business object using which the funding request should be created in the system.
- The currency in which the total debit and credit amount should be calculated.
- The account funding currency characteristic type which must be defined on the account. This characteristic indicates that the funding amount of the account's bills should be calculated in the specified currency.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill.

  Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.
- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.

  Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.
- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

- The currency conversion algorithms which must be used while determining the approval hierarchy for the funding request.

Note: The **Funding Request (C1-FundingReq)** business object is shipped with the product.

Once you specify a funding request type, the funding request is created in the **Draft** status. You can then add one or more debit or credit bills in the funding request. Note that you can only add bills of those accounts for which the **Defer Auto Pay** option is selected on the customer class. Once the bills are added, you can submit a funding request. Before you submit a funding request, you can do the following:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

The system calculates the funding amount in the following manner:

Bill Type	Funding Amount for the Bill
Debit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)
Credit Bill	Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in the funding request)

You can delete, cancel, or submit a funding request which is in the **Draft** status. On canceling a funding request, the status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. On submitting a funding request, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**.

Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

You can optionally configure the approval process for the funding request. If the **Approval Required** option is selected in the funding request type, the status of the funding request is changed to **Approval In Progress** on submitting the funding request. The system calculates the sum of total debit and credit amount

Copyright © 2009, 2025, Oracle and/or its affiliates.

in the funding request. Depending on whether the sum total is debit or credit, the system uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount, the system automatically approves the funding request and changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the system creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy.

Once the approver at the first level in the approval hierarchy approves the funding request, the system checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

If an approver rejects a funding request, the status of the funding request is changed to **Rejected**. And, if an approver requests to resubmit a funding request for approval, the status of the funding request is changed to **Draft**. You can then edit the funding request and resubmit it for approval. The system allows the submitter to withdraw the funding request when it is in the **Approval In Progress** status. On withdrawing a funding request, the status of the funding request is changed to **Draft**.

If a funding request is created automatically through a custom batch, the system allows you to manually exclude some bills from the funding request when it is in the **Draft** status. You can exclude a bill from a funding request by changing its status to **Excluded**.

For more information on how to setup the funding request process, see Prerequisites on page 1456.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Prerequisites

To setup the funding request process, you need to do the following:

- Define the required funding request types in the system
- Define the required funding adjustment types where the **A/P Request Type Code** field is set to **REFUND**
- Define the required garnishment adjustment types where the **A/P Request Type Code** field is not set to **REFUND**
- Define the required characteristic types where the characteristic entity is set to **Funding Request Type**
- Define the required characteristic types where the characteristic entity is set to **Funding Request**
- Define the required approval profiles with the debit and credit approval hierarchy in the system
- Specify the **C1-FNDAP** To Do type in the approval profile which you want to use in the funding request's approval process
- Specify the **C1-FNDSB** as the submitter To Do type in the funding request types
- Define the status reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen
- Assign the **C1-FNDAP** To Do type to a To Do role whose users must receive a To Do while submitting a funding request for approval
- Assign the **C1-FNDSB** To Do type to a To Do role whose users must receive a To Do when an approver requests to resubmit the funding request for approval
- Select the **Defer Auto Pay** option on the customer class of the accounts for which you want to use the funding process
- Define the values for the **CAN_RSN_CD_FLG** lookup field
- Define the **Funding Currency** characteristic type where the characteristic entity is set to **Account**
- Define a currency conversion algorithm for payments using the **C1_CURALGPY** algorithm type
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** algorithm type
- Attach the currency conversion algorithms to the **Currency Conversion For Adjustments** and **Currency Conversion For Payments** algorithm spots to the required divisions
- Set the batch control type of the **Funding Request Periodic Monitor (C1-FNDRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Funding Request (Without Approval) Status Transition

C1-FUNDINFO

This algorithm generates the funding request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Funding Request Type Description
2. Funding Request Status Description
3. Funding Request ID

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-FUNDSUBMT

This algorithm is invoked when you submit a funding request. If the approval process is not configured in the funding request type, it changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. If the approval process is configured in the funding request type, it calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount in the approval hierarchy, the funding request is automatically approved by the system and the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

C1-FUNDAPP

This algorithm is invoked when the status of the funding request is changed to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, a log entry is created for the funding request when the To Do is created.

Note: If a funding request needs approval from the subsequent level in the approval hierarchy, this algorithm creates a To Do and assigns it to the users with the To Do role defined at the subsequent level in the approval hierarchy.

C1-FUNDAPRVD

This algorithm is invoked when you approve a funding request. It checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

Copyright © 2009, 2025, Oracle and/or its affiliates.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-FNDRESUBM

This algorithm is invoked when the status of the funding request is changed to **Return to Submitter**. It changes the status of the funding request to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. In addition, it creates a To Do using the submitter To Do type which is specified in the funding request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the funding request type.

C1-FUNDVAL

This algorithm is invoked when the status of the funding request is changed to **Create Funding**. It checks whether the funding amount of a debit bill is equal to the bill outstanding amount minus hold and offset amount set on the bill (i.e. Funding Amount = Outstanding Bill Amount - Hold Amount - Offset Amount). Similarly, it checks whether the funding amount of a credit bill is equal to the bill outstanding amount minus hold, offset, and garnishment amount set on the bill (i.e. Funding Amount = Outstanding Bill Amount - Hold Amount - Offset Amount - Garnishment Amount). If so, it executes the next algorithm. However, if the funding amount is incorrect, the status of the record in the funding request is changed to **Error**.

C1-FUNDAPAY

If the funding amount of a bill is in debit, it stamps the funding amount as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

It considers the records in the funding request which are in the **Pending** status. Once the **CI_BILL_ACH** table is updated, the status of the record in the funding request is changed to **Processed**. If any error occurs while updating the **CI_BILL_ACH** table, the status of the record in the funding request is changed to **Error**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-FUNDADJCR

If the funding amount of a bill is in credit, it creates the A/P adjustments using the funding adjustment type. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account.

It considers the records in the funding request which are in the **Pending** status. Once the adjustments are created, the status of the record in the funding request is changed to **Processed**. If any error occurs while creating the adjustments, the status of the record in the funding request is changed to **Error**.

Points to Note:

- The system uses the funding and garnishment adjustment types from the funding request.
- The main customer's address is used while creating the A/P adjustment for a credit bill.
- The garnishment adjustments are created against the garnishment contracts of the account. A garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.
- The system allows you to transfer funding amount to multiple garnishment contracts of the account. Accordingly, the number of non A/P adjustments will be created using the garnishment adjustment type.

It contains the following parameters:

- **Adjustment Type** - Used to indicate the adjustment type using which the adjustment should be created against the credit bill for internal offsetting.
- **Match Type Entity Flag** - Used to indicate the match type entity on which a new match event must be created when no payment exists for the credit bill. The valid values are:
  - **BILL** - Used when you want to create the same match event on all financial transactions of a bill.
  - **BSEG** - Used when you want to create a unique match event for each bill line item (such as, bill segment or adjustment).
  - **SA** - Used when you want to create the same match event on the bill line items which are created against the same contract.

C1-FUNDCANCL

This algorithm is invoked when you cancel a funding request. It excludes all debit and credit bills from the funding request and changes the status of each record in the funding request to **Excluded**. In addition, the status of the funding request is changed to **Canceled**.

Funding Request Type

Oracle Revenue Management and Billing allows you to define a funding request type using which you can create a funding request. It is the funding request type which helps the system to determine the following:

- The business object using which the funding request should be created in the system.
- The currency in which the funding amount should be calculated.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.

> **Note:** In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is moved to the garnishment contract of the account.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:** In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

The **Funding Request Type** screen allows you to define, edit, delete, and copy a funding request type. It contains the following zones:

- Funding Request Type List on page 1463
- Funding Request Type on page 1463

Funding Request Type List

The **Funding Request Type List** zone lists the funding request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Edit	On clicking the **Edit** (✎) icon, the **Funding Request Type** screen appears where you can edit the details of the funding request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Funding Request Type** screen appears where you can define a new funding request type using an existing funding request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the funding request type.
	Note: You can delete a funding request type when you have not created a funding request using the funding request type.

On clicking the **Broadcast** (📡) icon corresponding to a funding request type, the **Funding Request Type** zone appears with the details of the respective funding request type.

Funding Request Type

The **Funding Request Type** zone displays the details of the funding request type. It contains of the following sections:

- **Main** - Displays the basic information about the funding request type. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Funding Request Business Object	Indicates the business object that will be used to create the funding request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the funding request type.
Status	Indicates the status of the funding request type. The valid values are: • Active • Inactive
Funding Amount Currency	Indicates the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the **Statistics** section of the **Funding Request** zone.
Account Funding Currency Characteristic Type	Indicates the characteristic type which should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.
Default Funding Adjustment Type	Indicates the adjustment type using which the funding adjustments must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Default Garnishment Adjustment Type	Indicates the garnishment adjustment type using which the garnishment adjustments must be created. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears with the details of the respective adjustment type.
Threshold Range Algorithm	Indicates the threshold range for a bill based on the payments done for the bill. **Note:** It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm.
Defer Processing Count	Displays the number of bills to determine if the funding request will be processed in deferred mode. **Note:** If the number of bills is less than the **Defer Processing Count**, the funding request will be processed in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while creating the funding adjustments using the funding request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the funding request type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: The **Approval Profile** field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **Approval Profile** screen appears where you can view the details of the respective approval profile.
Submitter To Do Type	Indicates the To Do type for the submitter when the funding request type is resubmitted by the approver.
	Note: The **Submitter To Do Type** field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the To Do role for the submitter when the funding request type is resubmitted by the approver.
	Note: The **Submitter To Do Role** field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Currency Conversion Adjustment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.
Currency Conversion Payment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.

- **Characteristics** - The **Characteristics** section lists the characteristics of the funding request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request type.
Delete	Used to delete the funding request type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: You can delete a funding request type when you have not created a funding request using the funding request type.
Duplicate	Used to create a new funding request type using an existing funding request type.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Funding Request Type** zone does not appear in the **Funding Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the funding request type in the **Funding Request Type List** zone.

Defining a Funding Request Type

Prerequisites

To define a funding request type, you should have:

- Funding request type business objects defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

Copyright © 2009, 2025, Oracle and/or its affiliates.

To define a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Funding Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type Business Object	Used to indicate the business object using which you want to create the funding request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Funding Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple funding request type business objects defined in the application. If there is only one funding request type business object defined in the application, the **Funding Request Type** screen appears.

4. Select the required funding request type business object from the respective field.
5. Click **OK**.

   The **Funding Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the funding request type.
   - **Characteristics** - Used to define the characteristics for the funding request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: • Active • Inactive	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot change the status of a funding request type to **Inactive** when the corresponding funding request is in a status other than **Processed** or **Rejected**.	
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the **Statistics** section of the **Funding Request** zone. **Note:** The list includes only those currencies which are defined in the system. If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	Yes
Account Funding Currency Characteristic Type	Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Account Funding Currency Characteristic Type** field. On clicking the **Search** icon, the **Characteristic Type Search** window appears. You must specify a characteristic type where the characteristic entity is set to **Account**. The converted amount appears in the **Funding Currency Amount** column of the **Selected Bills** zone in the **Funding Request** screen. If the funding amount is in debit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	
Default Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request. **Note:** The **Search** (🔍) icon appears corresponding to the **Default Funding Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.	Yes
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Default Garnishment Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Threshold Range Algorithm	Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period. **Note:** You must specify an algorithm which is created using the **C1-FDRTTR** algorithm type in the **Threshold Range Algorithm** field. The **Search** (🔍) icon appears corresponding to the **Threshold Range Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	No
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify a negative value in the **Defer Processing Count** field. Deferred mode means in the background when the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is invoked. You can configure the **Funding Request Periodic Monitor (C1-FNDRQ)** batch such that it is executed at regular intervals. For more information about the **Funding Request Periodic Monitor (C1-FNDRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).	
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit. **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify the **C1-FNDSB** To Do type in the **Submitter To Do Type** field. The **Search** icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. This field appears when the **Approval Required** option is selected.	
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Adjustment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional) **Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Payment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	

6. Enter the required details in the **Main** section.
7. Define characteristics for the funding request type, if required.
8. Click **Save**.
   The funding request type is defined.

How to define a characteristic for a funding request type	Defining a Characteristic for a Funding Request Type on page 1473

Defining a Characteristic for a Funding Request Type

Prerequisites

To define a characteristic for a funding request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request Type**)

Procedure

To define a characteristic for a funding request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a funding *r*equest type.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Funding Request Type**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the funding request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the funding request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the funding request type, click the **Add** (+) icon and *t*hen repeat step *2*.

> **Note:** However, if you want to remove a characteristic from the funding request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Funding Request Type

Prerequisites

To edit a funding request type, you should have:

- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To edit a funding request type:

Copyright © 2009, 2025, Oracle and/or its affiliates.

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
   The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *f*unding request type whose details you want to edit.

   The **Funding Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the funding request type.
   - **Characteristics** - Used to define the characteristics for the funding request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Displays the funding request type.	Not applicable
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a funding request type to **Inactive** when the corresponding funding request is in a status other than **Processed** or **Rejected**.	Yes
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the **Statistics** section of the **Funding Request** zone.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those currencies which are defined in the system. If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	
Account Funding Currency Characteristic Type	Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Account Funding Currency Characteristic Type** field. On clicking the **Search** icon, the **Characteristic Type Search** window appears. You must specify a characteristic type where the characteristic entity is set to **Account**. The converted amount appears in the **Funding Currency Amount** column of the **Selected Bills** zone in the **Funding Request** screen. If the funding amount is in debit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	
Default Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request. **Note:** The **Search** (🔍) icon appears corresponding to the **Default Funding Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.	Yes
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Default Garnishment Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Threshold Range Algorithm	Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period. **Note:** You must specify an algorithm which is created using the **C1-FDRTTR** algorithm type in the **Threshold Range Algorithm** field. The **Search** (🔍) icon appears corresponding to the **Threshold Range Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	No
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify a negative value in the **Defer Processing Count** field. Deferred mode means in the background when the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is invoked. You can configure the **Funding Request Periodic Monitor (C1-FNDRQ)** batch such that it is executed at regular intervals. For more information about the **Funding Request Periodic Monitor (C1-FNDRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).	
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit. **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify the **C1-FNDSB** To Do type in the **Submitter To Do Type** field. The **Search** icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. This field appears when the **Approval Required** option is selected.	
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request. **Note:** This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency. **Note:** This field appears when the **Approval Required** option is selected. The **Search** icon appears corresponding to the **Currency Conversion Adjustment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	Yes (Conditional) **Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional) **Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Payment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	

Tip: Alternatively, you can edit the details of a funding request type by clicking the **Edit** button in the **Funding Request Type** zone.

5. Modify the details in the **Main** section, if required.
6. Define, edit, or remove characteristics of the funding request type, if required.
7. Click **Save**.
   The changes made to the funding request type are saved.

Deleting a Funding Request Type

Procedure

To delete a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
   The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *f*unding request type that you want to delete.

   A message appears confirming whether you want to delete the funding request type.

Note: You can delete a funding request type when you have not created a funding request using the funding request type.

Tip: Alternatively, you can delete a funding request type by clicking the **Delete** button in the **Funding Request Type** zone.

Copyright © 2009, 2025, Oracle and/or its affiliates.

5. Click **OK**.
   The funding request type is deleted.

Copying a Funding Request Type

Instead of creating a funding request type from scratch, you can create a new funding request type using an existing funding request type. This is possible through copying a funding request type. On copying a funding request type, the details including the characteristics are copied to the new funding request type. You can then edit the details, if required.

Prerequisites

To copy a funding request type, you should have:

- Funding request type (whose copy you want to create) defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To copy a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
   The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Duplicate** (⎘) icon in the **Duplicate** column *c*orresponding to the funding request type whose copy you want to create.

   The **Funding Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the funding request type.
   - **Characteristics** - Used to define the characteristics for the funding request type.

   The **Main** section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a funding request type to **Inactive** when the corresponding funding request is in a status other than **Processed** or **Rejected**.	Yes
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the **Statistics** section of the **Funding Request** zone.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those currencies which are defined in the system. If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	
Account Funding Currency Characteristic Type	Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Account Funding Currency Characteristic Type** field. On clicking the **Search** icon, the **Characteristic Type Search** window appears. You must specify a characteristic type where the characteristic entity is set to **Account**. The converted amount appears in the **Funding Currency Amount** column of the **Selected Bills** zone in the **Funding Request** screen. If the funding amount is in debit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.	
Default Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request. **Note:** The **Search** (🔍) icon appears corresponding to the **Default Funding Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.	Yes
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Default Garnishment Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Threshold Range Algorithm	Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period. **Note:** You must specify an algorithm which is created using the **C1-FDRTTR** algorithm type in the **Threshold Range Algorithm** field. The **Search** (🔍) icon appears corresponding to the **Threshold Range Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	No
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You cannot specify a negative value in the **Defer Processing Count** field. Deferred mode means in the background when the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is invoked. You can configure the **Funding Request Periodic Monitor (C1-FNDRQ)** batch such that it is executed at regular intervals. For more information about the **Funding Request Periodic Monitor (C1-FNDRQ)** batch, refer to *Oracle Revenue Management and Billing Batch Guide*. If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).	
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit. **Note:** This field appears when the **Approval Required** option is selected.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify the **C1-FNDSB** To Do type in the **Submitter To Do Type** field. The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. This field appears when the **Approval Required** option is selected.	
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional) **Note:** This field is required when the **Approval Required** option is selected.
	Note: This field appears when the **Approval Required** option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	Yes (Conditional) **Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.
	Note: This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Adjustment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional) **Note:** This field is required when the **Currency Conversion Required** option is selected in the approval profile.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Approval Required** option is selected. The **Search** (🔍) icon appears corresponding to the **Currency Conversion Payment Algorithm** field. On clicking the **Search** icon, the **Algorithm Search** window appears.	

Tip: Alternatively, you can copy a funding request type by clicking the **Duplicate** button in the **Funding Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics of the funding request type, if required.
7. Click **Save**.
   The new funding request type is defined.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Bill Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears.	
Bill Date From	Used to search funding requests which include bills that are created from a particular date onwards. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Alternate Bill ID	Used to search funding requests which include a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Bill Date To	Used to search funding requests which include bills that are created till a particular date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Division	Used to search funding requests which includes bills of accounts which belong to a particular division. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can only view those divisions to which you have access in the **Division** list.	No

Note: You must specify at least one search criterion while searching for a funding request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date Time	Displays the date and time when the funding request is created.
Funding Request Information	Displays information about the funding request. **Note:** It has a link. On clicking the link, the **Funding Request** screen appears where you can view the details of the respective funding request.
Status	Indicates the status of the funding request. The valid values are: • Approval In Progress

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Deferred Processing • Draft • Processed • Rejected
Total Debit Amount	Displays the total amount of the debit bills which are added in the funding request.
Total Credit Amount	Displays the total amount of the credit bills which are added in the funding request.
Created By	Indicates the user who has created the funding request.
Creation Mode	Indicates how the funding request is created. The valid values are: • Automatic • Manual

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Funding Request

Prerequisites

To search for a funding request, you should have:

- Funding request types defined in the application

Procedure

To search for a funding request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Funding Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Funding Request** sub-menu.
   The **Funding Request** screen appears.
4. Enter the search criteria in the **Search Funding Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of funding requests that meet the search criteria appears in the **Search Results** section.

Creating a Funding Request

Prerequisites

To create a funding request, you should have:

- Funding request types defined in the application

Procedure

To create a funding request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Funding Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Funding Request** sub-menu.

   The **Add Funding Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to indicate the funding request type using which you want to create the funding request.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Funding Request** screen.

4. Select the required funding request type from the respective field.
5. Click **OK**.
   The funding request is created in the **Draft** status.

Funding Request (Used for Viewing)

The **Funding Request** screen allows you to:

- Edit the details of a funding request
- Delete or cancel a funding request
- View the details of a funding request
- Submit a funding request for processing
- Approve or reject a funding request
- Request the submitter to resubmit a funding request for approval
- Withdraw a funding request
- View the log of a funding request
- Add a log entry for a funding request

It consists of the following tabs:

- Funding Request - Main on page 1495
- Funding Request - Bills on page 1503
- Funding Request - Log on page 1507

Funding Request - Main

The **Main** tab displays information about the funding request. It contains the following zones:

- Funding Request on page 1495
- Search Bill on page 1499

Funding Request

The **Funding Request** zone displays the details of the funding request. It contains the following sections:

- **Main** - Displays basic information about the funding request. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
Funding Request Information	Displays information about the funding request.
Funding Request Type	Indicates the funding request type using which the funding request is created. **Note:** It has a link. On clicking the link, the **Funding Request Type** screen appears where you can view the details of the respective funding request type.
Status	Indicates the status of the funding request. The valid values are: • Approval In Progress • Deferred Processing • Draft • Processed • Rejected
Status Reason	Indicates the reason why the funding request is rejected. **Note:** This field appears when the funding request is in the **Rejected** status. It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective status reason.
Funding Adjustment Type	Indicates the adjustment type using which the A/P adjustment is created against a credit bill. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Garnishment Adjustment Type	Indicates the adjustment type using which the garnishment adjustment is created when the amount from the credit bill is transferred to the garnishment contract of the account. **Note:** It has a link. On clicking the link, the **Adjustment Type** screen appears where you can view the details of the respective adjustment type.
Comments	Displays additional information entered while rejecting the funding request. **Note:** This field appears when the funding request is in the **Rejected** status.
Creation Mode	Indicates whether the funding request is created automatically or manually. The valid values are: • Automatic • Manual

- **Statistics** - Displays analytical information about the funding request. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
Total Records	Displays the total number of debit or credit bills which are added in the funding request.
Total Records Processed	Displays the total number of debit or credit bills for which payments or adjustments are successfully created in the system.
Total Records Excluded	Displays the total number of debit or credit bills which are excluded from the automatic funding request.
Total Records In Error	Displays the total number of debit or credit bills for which payments or adjustments was not successfully created in the system.
Total Payment Incoming Events Created	Displays the total number of payment events created against the debit bills in the funding request.
Total Adjustments Created	Displays the total number of adjustments created against the credit bills in the funding request.
Total Credit Funding Amount	Displays the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. The sum total is calculated in the funding amount currency which is specified in the funding request type. **Note:** If the credit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the **Currency Conversion For Adjustments** algorithm spot of the account's division.
Total Debit Funding Amount	Displays the sum of funding amount of all bills whose funding amount is in debit. The sum total is calculated in the funding amount currency which is specified in the funding request type. **Note:** If the debit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the **Currency Conversion For Payments** algorithm spot of the account's division.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request. **Note:** The **Edit** button appears when the funding request is in the **Draft** status.
Delete	Used to delete the funding request. **Note:** The **Delete** button appears when the funding request is in the **Draft** status.
Submit	Used to submit the funding request. **Note:** The **Submit** button appears when the funding request is in the **Draft** status.
Cancel	Used to cancel the funding request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Cancel** button appears when the funding request is in the **Draft** status.
Approve	Used to approve the funding request.
	Note: The **Approve** button appears when: • The funding request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the funding request.
Reject	Used to reject the funding request.
	Note: The **Reject** button appears when: • The funding request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the funding request.
Re Submit	Used to request for resubmitting the funding request.
	Note: The **Re Submit** button appears when: • The funding request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the funding request.
Withdraw	Used to withdraw the funding request.
	Note: The **Withdraw** button appears when: • The funding request is in the **Approval In Progress** status. • A user with the submitter To Do role is viewing the funding request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the funding request status is updated
Create Date/Time	Displays the date and time when the funding request is created.

- **Characteristics** - Lists the characteristics defined for the funding request. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the funding request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Search Bill

The **Search Bill** zone allows you to search for a bill using various search criteria. It appears when the funding request is in the **Draft** status and the creation mode is set to **Manual**. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using the person, account, or bill details. The valid values are: • Bill Details • Account Details • Person Details **Note:** By default, the **Bill Details** option is selected.	Yes
Bill ID	Used to search a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Bill Details** option is selected from the **Search By** list. By default, the current date appears in this field.	
Alternate Bill ID	Used to search a particular bill. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Bill Date To	Used to search bills which are created till a particular date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. By default, the current date appears in this field.	Yes
Bill Balance	Used to indicate whether you want to search bills with debit or credit balance. The valid values are: • Credit • Debit **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Bill Due Date From	Used to search bills which are due from a particular date onwards. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Division	Used to search bills of accounts which belong to a particular division. **Note:** You can only view those divisions to which you have access in the **Division** list. This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Bill Due Date To	Used to search bills which are due till a particular date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list.	No
Account ID	Used to search bills of a particular account.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Account Details** option is selected from the **Search By** list.	**Note:** This field is required when the **Account Details** option is selected from the **Search By** list.
Person ID	Used to search bills which belong to a particular person.	Yes (Conditional)
	Note: This field appears when the **Person Details** option is selected from the **Search By** list.	**Note:** This field is required when: • The **Person Details** option is selected from the **Search By** list. • The person name is not specified in the search criteria.
Person Name	Used to search bills which are created for accounts of a particular person.	Yes (Conditional)
	Note: This field appears when the **Person Details** option is selected from the **Search By** list.	**Note:** This field is required when: • The **Person Details** option is selected from the **Search By** list. • The person ID is not specified in the search criteria.
Country	Used to search bills of persons who reside in a particular country.	No
	Note: This field appears when the **Person Details** option is selected from the **Search By** list.	

Note: You must specify at least one search criterion while searching for a bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Due Date	Displays the date when the bill is due for payment.
Outstanding Amount	Displays the unpaid amount of the bill.
Hold Amount	Displays the amount of the bill which is kept on hold through a hold request.
Funding Amount	Displays the bill amount which can be used for the funding process. It is calculated in the following manner: **Bill Type** / **Funding Amount for the Bill** Debit Bill: Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) Credit Bill: Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)
Person Name	Indicates the person to whom the bill belongs. In addition, this column has a context menu which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person.
Bill ID	Displays the bill ID.
Defer Auto Pay	Indicates whether the **Defer Auto Pay** option is selected on the customer class of the account for which the bill is created. The valid values are: • N • Y

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the funding request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the funding request.

How to add a debit or credit bill to a funding request	Adding a Debit or Credit Bill to a Funding Request on page 1508

Funding Request - Bills

The **Bills** tab lists the bills which are added in the funding request. It contains the following zones:

- Currency Statistics on page 1503
- Selected Bills on page 1503
- Funding Payment Details on page 1507

  Note: This zone appears when the funding request is in the **Processed** status and the funding amount of the bill is in debit.
- Funding Adjustments on page 1507

  Note: This zone appears when the funding request is in the **Processed** status and the funding amount of the bill is in credit.

Currency Statistics

A funding request might include bills in different currencies. The **Currency Statistics** zone lists the sum total of various amount of bills which are created in the same currency. It contains the following columns:

Column Name	Column Description
Currency Code	Indicates the currency in which the sum total is calculated. **Note:** Here, the system lists those currencies in which the bills added to the funding request are created.
Total Outstanding Amount	Displays the sum of outstanding amount of all bills which are created in the respective currency.
Total Hold Amount	Displays the sum of hold amount of all bills which are created in the respective currency.
Total Garnishment Amount	Displays the sum of garnishment amount of all bills which are created in the respective currency.
Total Debit Funding Amount	Displays the sum of funding amount (which is in debit) of all bills which are created in the respective currency.
Total Credit Funding Amount	Displays the sum of funding amount (which is in credit) of all bills which are created in the respective currency.

Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added to the funding request. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

<table>
<tr><th>Column Name</th><th>Column Description</th></tr>
<tr><td>Bill Date</td><td>Displays the date when the bill is created.</td></tr>
<tr><td>Person Identifier</td><td>Displays the primary identifier of the person for whom the bill is created.</td></tr>
<tr><td>Person Country</td><td>Indicates the country where the person is located.</td></tr>
<tr><td>Invoice Account Identifier</td><td>Displays the primary identifier of the account for which the bill is created.</td></tr>
<tr><td>Funding Amount</td><td>Displays the bill amount which can be used for the funding process. It is calculated in the following manner:
<table>
<tr><th>Bill Type</th><th>Funding Amount for the Bill</th></tr>
<tr><td>Debit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)</td></tr>
<tr><td>Credit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)</td></tr>
</table>
Note: The funding amount is calculated in the bill's currency.</td></tr>
<tr><td>Currency Code</td><td>Indicates the currency in which the funding amount is calculated.</td></tr>
<tr><td>Hold Amount</td><td>Displays the amount of the bill which is kept on hold through a hold request.</td></tr>
<tr><td>Offset Amount</td><td>Displays the amount of the bill which is offset against another bill through an offset request.</td></tr>
<tr><td>Garnishment Amount</td><td>Displays the amount of the credit bill which is transferred to the garnishment contracts of the account through the funding request.</td></tr>
<tr><td>Original Outstanding Amount</td><td>Displays the original outstanding amount when the bill was added in the funding request.</td></tr>
<tr><td>Bill ID</td><td>Displays the bill ID.
Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.</td></tr>
<tr><td>Open Bills</td><td>Indicates whether there are any unpaid bills of the person. The valid values are:
• Y
• N</td></tr>
<tr><td>Garnishment Contract</td><td>Indicates whether the garnishment contract exists for the account. The valid values are:
• Y
• N</td></tr>
</table>

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column appears when the funding request is in the **Draft** status. The data appears in this column when a credit bill is added to the funding request. It has a link. On clicking the link, the **Edit Garnishment Details** screen appears where you can transfer the funding amount from the credit bill to one or more garnishment contracts of the account.
Garnishment	On clicking the **View** (🔗) icon, the **View Garnishment Details** screen appears where you can view the funding amount transferred to the different garnishment contracts of the account.
	Note: This column does not appear when the funding request is in the **Draft** status. The **View** (🔗) icon appears in this column when the funding request is in the **Processed** status.
Record Status	Indicates the status of the bill record in the funding request. The valid values are: • Excluded • Invalid • Masked • Pending • Processed • Valid • Error
Threshold Range	Indicates the threshold range for a bill which is calculated based on the number of payments made for the bill in the specified period.
Person Name	Indicates the person whose bill is added in the funding request.
Bill Information	Displays the information about the bill.
Split Banking	Indicates whether the split automatic payment feature is used for the account. The valid values are: • Y • N
Funding Currency Amount	Displays the funding amount which is converted in the funding currency defined on the account.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Delete	Used to delete a bill from the funding request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Delete** button appears when the funding request is created manually and it is in the **Draft** status.
Edit	Used to exclude a debit or credit bill from the funding request.
	Note: The **Edit** button appears when the funding request is created automatically and it is in the **Draft** status.
Hold	Used to create a hold request for one or more bills. However, you cannot select more than 20 bills. On activating or releasing a hold request, the funding amount is automatically updated in the funding request.
	Note: The **Hold** button appears only when the funding request is in the **Draft** status.
Offset	Used to create an offset request for a bill. On processing or unapplying an offset request, the funding amount is automatically updated in the funding request.
	Note: The **Offset** button appears when the funding request is in the **Draft** status.

A check box appears corresponding to each bill when the funding request is in the **Draft** status. On selecting the check box, you can delete the bill from the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all bills listed in the respective page from the funding request.

On clicking the **Broadcast** (📡) icon corresponding to a debit or credit bill, the **Funding Payment Details** or **Funding Adjustments** zone appears, respectively.

Note: The **Broadcast** icon does not appear when the funding request is in the **Draft** status.

You can filter the list using various search criteria (such as, **Bill ID**, **Alternate Bill ID**, **Record Status**, **Bill Balance**, **Funding Amount From**, **Person ID**, **Funding Amount To**, **Currency**, **Funding Amount Threshold Range**, and **Country**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (▽) icon in the upper right corner of this zone.

Funding Payment Details

The **Funding Payment Details** zone lists the payment events which are created for a debit bill through the funding request. It appears when the funding request is in the **Processed** status. It contains the following columns:

Column Name	Column Description
Payment Event Information	Displays information about the payment event. **Note:** It has a link. On clicking the link, the **Payment Event** screen appears where you can view the details of the respective payment event.
Payment Amount	Displays the amount for which automatic payment is created.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Funding Adjustments

The **Funding Adjustments** zone lists the funding and garnishment adjustments which are created for a credit bill through the funding request. It appears when the funding request is in the **Processed** status. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the funding or garnishment adjustment. **Note:** It has a link. On clicking the link, the **Adjustment** screen appears where you can view the details of the respective adjustment.
Adjustment Amount	Displays the adjustment amount.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Funding Request - Log

The **Log** tab contains the following zone:

- Funding Request Log on page 1508

Copyright © 2009, 2025, Oracle and/or its affiliates.

Funding Request Log

The **Funding Request Log** zone lists the complete trail of actions performed on the funding request. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the funding request.
Details	Displays the details of the action performed on the funding request.
User	Indicates the user who has performed the action on the funding request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the funding request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the funding request was rejected by the approver.
	Note: The data appears in this column when the funding request is in the **Rejected** status.

Note: You can manually add a log entry for the funding request by clicking the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

Adding a Debit or Credit Bill to a Funding Request

In a funding request, you can only add the debit or credit bills of the accounts for which the **Defer Auto Pay** option is selected on the respective customer class.

Procedure

To add a debit or credit bill to a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:**
>
> The **Search Bill** zone appears when the funding request is in the **Draft** status.
>
> ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of bills that meet the search criteria appears in the **Search Results** section.
6. Select the check box corresponding to a bill that you want to add to the funding request.
7. Click the **Add** button in the **Search Bill** zone.
   A message appears indicating that the bill is added to the funding request.

> **Note:** You can only add a debit or credit bill of an account for which the **Defer Auto Pay** option is selected on the respective customer class.

8. Click **OK**.
   The bill is added to the funding request. The status of the bill record in the funding request is set to **Pending**.

Deleting a Debit or Credit Bill from a Funding Request

Procedure

To delete a debit or credit bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want *t*o delete from the funding request.
5. Click the **Delete** button in the **Selected Bills** zone.
   A message appears confirming whether you want to delete the bill from the funding request.

> **Note:** The **Delete** button appears when the funding request is in the **Draft** status.

6. Click **OK**.
   The debit or credit bill is deleted from the funding request.

Excluding a Bill from a Funding Request

If the funding request is manually created through the user interface, you add or delete bills from the funding request when it is in the **Draft** status. However, if the funding request is automatically created through a custom logic, the system allows you to exclude the required bills from the funding request when it is in the **Draft** status. In such case, the status of the record in the funding request is changed to **Excluded**. The excluded bills can then be included in some other funding request.

Prerequisites

To exclude a bill from a funding request, you should have:

- Values defined for the **CAN_RSN_CD_FLG** lookup field

Procedure

To exclude a bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want *t*o exclude from the funding request.
5. Click the **Edit** button in the **Selected Bills** zone.

   The **Edit Funding Request Details** screen appears. It contains the following field:

Field Name	Field Description
Funding Request Information	Displays the information about the funding request.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Information	Displays the information about the bill.	Not applicable
Garnishment Amount	Displays the funding amount which is transferred to the garnishment contracts of the account.	Not applicable
Funding Amount	Displays the bill amount which can be used for the funding process. It is calculated in the following manner:	Not applicable

Copyright © 2009, 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td><table><tr><th>Bill Type</th><th>Funding Amount for the Bill</th></tr><tr><td>Debit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request)</td></tr><tr><td>Credit Bill</td><td>Outstanding Bill Amount - Hold Amount (set on the bill in a hold request) - Offset Amount (set on the bill in an offset request) - Garnishment Amount (set on the bill in a funding request)</td></tr></table></td><td></td></tr>
<tr><td>Status</td><td>Used to indicate the status of the record in the funding request. The valid values are:
Excluded
Invalid
Masked
Pending
Processed
Valid</td><td>Yes</td></tr>
<tr><td>Cancel Reason</td><td>Used to indicate the reason why you want to exclude the bill from the funding request.

Note: The list includes only those values which are defined in the CAN_RSN_CD_FLG lookup field.</td><td>Yes (Conditional)

Note: This field is required when you want to exclude the bill from the funding request.</td></tr>
</table>

Note: The **Edit** button appears when the creation mode of the funding request is set to **Automatic** and the funding request is in the **Draft** status.

6. Select the **Excluded** option from the **Status** field.
7. Select the required cancel reason from the respective field.
8. Click **Save**.
   The bill is excluded from the funding request. The status of the bill record in the funding request is set to **Excluded**.

Editing a Funding Request

Prerequisites

Copyright © 2009, 2025, Oracle and/or its affiliates.

To edit a funding request, you should have:

- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Click the **Edit** button in the **Funding Request** zone.

   The **Edit Funding Request** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the funding request.
   - **Characteristics** - Used to define the characteristics for the funding request.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Information	Displays information about the funding request.	Not applicable
Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill. **Note:** The **Search** (🔍) icon appears corresponding to the **Funding Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.	Yes (Conditional) **Note:** This field is required while creating an A/P adjustment against a credit bill.
Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes (Conditional) **Note:** This field is required while creating garnishment adjustments for a credit bill.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Garnishment Adjustment Type** field. On clicking the **Search** icon, the **Adjustment Type Search** window appears. In the **Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.	
Comments	Used to specify additional information about the funding request.	No

Note: The **Edit** button appears when the funding request is in the **Draft** status.

4. Modify the details of the funding request, if required.
5. Define, edit, or remove characteristics of the funding request, if required.
6. Click **Save**.
   The changes made to the funding request are saved.

How to define a characteristic for a funding request	Defining a Characteristic for a Funding Request on page 1513

Defining a Characteristic for a Funding Request

Prerequisites

To define a characteristic for a funding request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request**)

Procedure

To define a characteristic for a funding request:

1. Ensure that the **Characteristics** section is expanded when you are editing a funding request.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the funding request.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required when you are defining a characteristic for the funding request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Funding Request**.	**Note:** This field is required when you are defining a characteristic for the funding request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the funding request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the funding request, click the **Add** (+) icon and then *r*epeat step *2*.

Note: However, if you want to remove a characteristic from the funding request, click the **Delete** (🗑) icon corresponding to the characteristic.

Cancelling a Funding Request

Prerequisites

To cancel a funding request, you should have:

- Reasons defined for the **Canceled** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Procedure

To cancel a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request that you want to cancel.
   The **Funding Request** screen appears.
3. Click the **Cancel** button in the **Funding Request** zone.

   The **Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the funding request. **Note:** The list includes only those reasons which are defined for the **Canceled** status of the **C1-FundingRequest** business object in the **Status Reason** screen.	Yes

Note: The **Cancel** button appears when the funding request is in the **Draft** status.

4. Select the cancelation reason from the **Status Reason** list.
5. Click **Save**.
   The status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. The excluded bills can then be included in some other funding request.

Submitting a Funding Request

Prerequisites

To submit a funding request, you should have:

- At least one debit or credit bill in the funding request
- Funding and garnishment adjustment types defined in the funding request
- Funding adjustment type defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment type defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To submit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request that you want to submit.
   The **Funding Request** screen appears.
3. Click the **Submit** button in the **Funding Request** zone.

   The system behaves in the following manner:

<table>
<tr><th>If...</th><th>Then...</th></tr>
<tr><td>The Approval Required option is selected in the funding request type using which the funding request is created</td><td>It calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. Depending on the sum total amount, the system behaves in the following manner:
<table>
<tr><th>If...</th><th>Then...</th></tr>
<tr><td>The sum total is less than the minimum threshold amount in the approval hierarchy</td><td>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</td></tr>
<tr><td>The sum total is equal to or greater than the threshold amount specified at the</td><td>The system changes the status of the funding request to Approval In Progress. It creates a To</td></tr>
</table></td></tr>
</table>

Copyright © 2009, 2025, Oracle and/or its affiliates.

<table>
<tr><th>If...</th><th>Then...</th></tr>
<tr><td></td><td>
<table>
<tr><th>If...</th><th>Then...</th></tr>
<tr><td>first level in the approval hierarchy</td><td>Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.</td></tr>
</table>
</td></tr>
<tr><td>The Approval Required option is not selected in the funding request type using which the funding request is created</td><td>The system changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.

Once the Funding Request Periodic Monitor (C1-FNDRQ) batch is executed, it checks whether there are any funding requests in the Deferred Processing status. If so, it changes the status of the funding request to Create Funding.

Once the status of a funding request is changed to Create Funding, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the CI_BILL_ACH table. Then, on executing the Create Automatic Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.

Note: The funding and garnishment adjustments are created in the Frozen status.</td></tr>
</table>

Note: The **Submit** button appears when the funding request is in the **Draft** status.

Approving a Funding Request

You can view the number of funding requests which are pending for approval in the **Funding Request** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the funding request based on the observations.

Note: The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To approve a funding request:

1. Do either of the following:

If you want to...	Then...
Approve a funding request through the Funding Request screen	**a.** Search for the funding request in the **Funding Request** screen. **b.** In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request which you want to review.
Approve a funding request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-FNDAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the funding request that you want to review.

   The **Funding Request** screen appears.
2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is accurate, then click the **Approve** button in the **Funding Request** zone.

   The system behaves in the following manner:

If...	Then...
The sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy	The system changes the status of the funding request to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the next level in

Copyright © 2009, 2025, Oracle and/or its affiliates.

If...	Then...
	the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.
The sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy	The system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**. Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill. **Note:** The funding and garnishment adjustments are created in the **Frozen** status.

Note: The **Approve** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

Rejecting a Funding Request

Prerequisites

To reject a funding request, you should have:

- Reasons defined for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note:

While rejecting a funding request, you need to specify the reason why you want to reject the funding request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen.

The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To reject a funding request:

1. Do either of the following:

If you want to...	Then...
Reject a funding request through the Funding Request screen	**a.** Search for the funding request in the **Funding Request** screen. **b.** In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request which you want to review.
Reject a funding request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-FNDAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the funding request that you want to review.

   The **Funding Request** screen appears.
2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incorrect, then click the **Reject** button in the **Funding Request** zone.

   The **Reject Funding Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the funding request. **Note:** The list includes only those reasons which are defined for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen.	Yes
Comments	Used to specify additional information while rejecting the funding request.	No

Note: The **Reject** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Select the rejection reason from the **Status Reason** list.

Copyright © 2009, 2025, Oracle and/or its affiliates.

5. Click **Save**.
   The status of the funding request is changed to **Rejected**.

Requesting to Resubmit a Funding Request

Procedure

To request for resubmitting a funding request:

1. Do either of the following:

If you want to...	Then...
Request for resubmitting a funding request through the Funding Request screen	**a.** Search for the funding request in the **Funding Request** screen. **b.** In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request which you want to review.
Request for resubmitting a funding request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-FNDAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the funding request that you want to review.

   The **Funding Request** screen appears.
2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incomplete and you want the submitter to make the required changes and resubmit the funding request for approval, then click the **Re Submit** button in the **Funding Request** zone.

   The **Resubmit Funding Request** window appears. It contains the following field:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the funding request before resubmitting it for approval.	Yes

Note: The **Re Submit** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Enter the comments in the respective field and then click **Save**.
   A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the funding request type. In addition, the status of the funding request is changed to **Draft**.

Withdrawing a Funding Request

Prerequisites

To withdraw a funding request, you should have:

- Submitter To Do role (which is specified in the funding request type) associated with the **C1-FNDAP** To Do type

Procedure

To withdraw a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request that you want to withdraw.
   The **Funding Request** screen appears.
3. If you want to make some changes in the funding request which is already sent for approval, click the **Withdraw** button in the **Funding Request** zone.
   The status of the funding request is changed to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. The To Do for approver is automatically closed when the submitter withdraws the funding request. Note that the To Do for approver is automatically closed when the submitter To Do role is associated with the To Do type specified in the approval profile.

Note: The **Withdraw** button appears when:

- The funding request is in the **Approval In Progress** status.
- A user with the submitter To Do role is viewing the funding request.

Transferring the Funding Amount of a Credit Bill to a Garnishment Contract

Prerequisites

To transfer the funding amount of a credit bill to a garnishment contract, you should have:

- At least one garnishment contract on the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

Procedure

To transfer the funding amount of a credit bill to a garnishment contract:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to edit.
   The **Funding Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. In the **Selected Bills** zone, click the link on the value **Y** in the **Garnishment Contract** column corresponding *t*o a credit bill whose funding amount you want to transfer to a garnishment contract of the account.

   The **Edit Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Information	Indicates the credit bill whose funding amount you want to transfer to a garnishment contract of the account.

   In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Garnishment Contract	Used to indicate the garnishment contract of the account.	Yes
Garnishment Amount	Used to specify the amount that you want to transfer to the garnishment contract.	Yes

5. Enter the required details in the **Edit Garnishment Details** screen.
6. If you want to transfer the funding amount of the credit bill to more than one garnishment contract of the account, click the **Add** (+) icon and *t*hen repeat step *5*.

   Note: However, if you want to remove a garnishment record from the funding request, click the **Delete** (🗑) icon corresponding to the garnishment record.

7. Click **Save**.
   The changes made to the funding request are saved.

Viewing the Garnishment Details of a Credit Bill

Procedure

To view the garnishment details of a credit bill:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to view.
   The **Funding Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. In the **Selected Bills** zone, click the **Broadcast** icon in the **Garnishment** column corresponding *t*o the credit bill whose garnishment details you want to view.

   The **View Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Info	Indicates the credit bill whose garnishment details you are viewing.

   In addition, this screen contains the following columns:

Column Name	Column Description
Garnishment Contract	Indicates the garnishment contract of the account against which amount from the credit bill is transferred.
Garnishment Amount	Displays the amount which is transferred to the garnishment contract.

Note:

The **Garnishment** column does not appear when the funding request is in the **Draft** status.

The **View** () icon appears in the **Garnishment** column only when the funding request is in the **Processed** status.

Viewing the Payments Created Through a Funding Request

Procedure

To view the payments created through a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to *t*he funding request whose details you want to view.
   The **Funding Request** screen appears.
3. Click the **Bills** tab.
   The **Bills** tab appears.
4. In the **Selected Bills** zone, click the **Broadcast** (ᯤ) icon corresponding to a debit bill whose payment details you want to view.
   The **Funding Payments Details** zone appears.

   Note: The **Broadcast** (ᯤ) icon appears when the funding request is in the **Processed** status.
5. View the payments created for the debit bill through the funding request in the **Funding Payments Details** zone.

   Note: The data appears in the **Funding Payments Details** zone when the **Create Automatic Payments and Refunds (APAYCRET)** batch is executed to create the automatic payment and payment event for the debit bill. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Chapter 25

Hold Request

Topics:

- Prerequisites
- Approval Process for Hold Request Release
- Hold Refund
- Hold Mass Accounts Using Selection Criteria
- Hold Mass Persons Using Selection Criteria
- Hold Request (Without Approval) Status Transition
- Hold Request (With Approval) Status Transition
- Algorithms Used in C1-HoldRequest
- Hold Request Type
- Hold Request (Used for Searching)
- Hold Request (Used for Viewing)

Oracle Revenue Management and Billing allows you to hold the amount for Person, Account or Bills. Hold is a way to prevent certain types of activities from taking place for a customer over a given period of time. The activities that need to be on Hold vary according to the reason for hold, such as due to a climate disaster the collection activity remains on Hold until disaster period is over.

Hold Request is a object which contains list of processes to be kept on hold for certain entities such as account, person, and bill for certain period of time The hold period is defined as the duration between Hold Request Start Date and End Date. Each Hold Request contains an entity and processes on hold. There could exists multiple hold requests for an entity for different hold reasons and processes.

Following are the hold request entities:

- **Person:** If the person is on hold then all entities linked to that person where the person is financially responsible, such as accounts and its bills will be on hold.
- **Account:** If the account is on hold then all the bills of that account will be on hold.
- **Bill:** A bill will be on complete or partial hold.

In Hold Request, following mentioned processes can be on hold:

- **Auto Pay** - If the auto payment process is on hold then, then auto pay for the bills of the account added in hold request will be on hold till the request is released. However, you can do the manual payments. On activation of the hold request, **Defer Auto Pay Date** field (in Account screen) is populated with some future date. If billing process is on hold then auto payment process would also go on hold.
- **Bill Generation** - If the bill generation process is on hold then, then new bills will not be created for the account added in hold request till request is released. On activation of the hold request, **Bill After** date field (in Account screen) is populated with either hold request end date or some future date until that date billing is kept on hold. Whenever hold request is released for billing process then **Bill After** date field will be populated as system date.

  Note: During the tenure of a hold request if customer does not require pending bills to be used for bill generation, bill in pending for accounts under hold are identified during activation of hold request which can be deleted by execution of the **C1-DELBI** batch . For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*
- **Overdue** - If the overdue process is on hold then bills associated with accounts in the hold request will be on hold for overdue process. It means existing overdue will be cancelled. New overdue process will get created once hold request is released. On activation of the hold request, **Postpone**

Credit Review field (in Account screen) is populated with either hold request end date or some future date. When hold request is released, **Postpone Credit Review** field would be set as system date. If the overdue process is on hold then request for policy termination due to non payment will be on hold.

- **Funding** - A list of bills identified for a full bill amount or a partial bill amount will be kept on hold for a funding process.

> **Note:**
>
> For Funding process, Person, Bill, and Account entities can be put on hold. However, for processes like Auto pay, Bill Generation, and Overdue, only Account entity can be put on hold.
>
> Processes and Entities start dates and end dates are expected to be with in the limit of Hold Request Start Date and End Date.

You need to specify the hold request type while creating a hold request. Hold request type helps the system to determine:

- Whether to allow the partial hold for bill or not
- Whether hold request must be approved by the approver before keeping entities and processes on hold

It is possible for a given entity, such as a person or account, to be affected by hold request with differing periods or at differing levels. For example, if there is a hold request added for a person manually and another hold request is there due to some other reason for an account belongs to the person who is already on hold. The system assumes that both hold requests are in effect for the account and that the period of accounts starts from the start of the earlier hold request record (for the account) until the later of the two release dates.

During the hold request process, a hold request goes through various statuses in its lifecycle. For more information about the hold request statuses, see Hold Request (Without Approval) Status Transition and Hold Request (With Approval) Status Transition

Note that the lifecycle of a hold request is driven by the business object using which the hold request is created. A hold request business object named **C1-HoldRequest** is shipped with the product. The hold request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-HoldRequest** business object. In addition, you can configure the search feature by setting **Fkref** feature configuration for each entity, such as person, account and bill.

For more information on how to setup the hold request processes, see Prerequisites on page 1531.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Prerequisites

To setup the hold request process, you need to do the following:

- Define the release status reasons for the **C1-HoldRequest** business object
- Define the required hold reasons in the system
- Define rejected status reasons for the **C1-HoldRequest** business object
- Assign the **C1-HLDAP** To Do type to a To Do role whose users must receive To Do generated while submitting a hold request for approval
- Assign the **C1-HOLSB** To Do type to a To Do role whose users must receive To Do generated while resubmitting a hold request
- Define the required hold request types in the system
- Define the required characteristic types where the characteristic entity is set to **Hold Request**
- Define the required characteristic types where the characteristic entity is set to **Hold Request Type**
- Set the batch control type of the **Hold Request Periodic Monitor (C1-HLDRQ)** and **Hold Request Monitor (C1-HLMON)** batches to Timed and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Note: For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*

Approval Process for Hold Request Release

Earlier, you were able to configure the approval process for activating a hold request. Now, you can configure the approval process for activating and/or releasing a hold request. To introduce this feature, the following changes are made in the system:

- The **Approval Required**, **Approval To Do Type**, and **Approval To Do Role** fields in the **Hold Request Type** screen are renamed to **Activation Approval**, **Activation Approval To Do Type**, and **Activation Approval To Do Role**, respectively.
- The **Release Approval**, **Release Approval To Do Type**, and **Release Approval To Do Role** fields are newly added in the **Hold Request Type** screen.
- The description of the **APPRPROGRESS** status in the **C1-HoldRequest** business object is changed to **Activation Approval In Progress**.
- The following new statuses are introduced in the **C1-HoldRequest** business object:
  - Release Approval in Progress
  - Release Request Approved
  - Return Release Request to Submitter

If you want to configure the approval process for hold request activation, you need to set the following fields in the respective hold request type - **Activation Approval**, **Activation Approval To Do Type**, and **Activation Approval To Do Role**. However, if you want to configure the approval process for hold request release, you need to set the following fields in the respective hold request type - **Release Approval**, **Release Approval To Do Type**, and **Release Approval To Do Role**. You can set the same or different approval configuration for hold request activation and release.

On clicking the **Release** button, the system does the following:

Copyright © 2009, 2025, Oracle and/or its affiliates.

If…	Then…
The **Release Approval** option is selected in the respective hold request type	A To Do is created using the To Do type specified in the **Release Approval To Do Type** field and sent to the approver having a To Do role specified in the **Release Approval To Do Role** field. The status of the hold request is then changed to **Release Approval in Progress**. The approver can review, and accordingly approve or resubmit the hold request based on the observations. On clicking the **Approve** button, the system updates the hold entity, hold process, and hold request end dates and then changes the status of the hold request to **Released**.
	Note: If the hold request is created for an account, the system also updates the following dates - **Bill After Date**, **Postpone Credit Review Until**, **Defer Auto Pay Date**, and **Hold Request Until**.
	However, on clicking the **Resubmit** button, the system enables you to enter the reason why you want to reject the hold release request. Once you specify the reason, the system changes the status of the hold request to **Active**. In addition, a To Do is created using the To Do type specified in the **Submitter To Do Type** field and sent to the approver having a To Do role specified in the **Submitter To Do Role** field.
The **Release Approval** option is not selected in the respective hold request type	The system then changes the hold entity, hold process, and hold request end dates. Finally, the status of the hold request is changed to **Released**.
	Note: If the hold request is created for an account, the system also updates the following dates - **Bill After Date**, **Postpone Credit Review Until**, **Defer Auto Pay Date**, and **Hold Request Until**.

Hold Refund

Until now, you were able to hold the bill generation, auto pay, funding, and overdue process for an account through a hold request. Now, in addition, the system enables you to hold the refund process for an account through a hold request. If the refund process is kept on hold for an account, the system does not process the refund requests (if any) created for the account. However, the system does not stop you from creating A/P adjustments for an account from the **Adjustment** screen when the refund process is kept on hold for the account.

While adding the refund process in a hold request, you need to specify the date range for which you want to hold the refund process for the accounts. The system enables you to add the refund process in a hold request from the user interface or through the upload request feature. If you want to create a hold request for an account through the upload request feature, you need to specify the following details in the CSV file:

- Whether you want to hold the refund process for the accounts (the valid values are Y or N)
- Hold refund start date (required if the hold refund is set to Y)
- Hold refund end date

On activating a hold request, the system stamps the hold refund until date corresponding to each account in the hold request. The hold refund until date is set to the hold entity end date or refund process end date whichever is earlier. This means that the system will allow to process the refund request of the account only after hold refund until date. If the number of accounts in a hold request is less than the defer processing count specified in the respective hold request type, the system stamps the hold refund until date immediately for each account in the hold request. In addition, the system changes the status of the refund request (if any) for respective accounts to **Hold**.

However, if the number of accounts in a hold request is equal to or greater than the defer processing count specified in the respective hold request type, the system stamps the hold refund until date for each account in the hold request

Copyright © 2009, 2025, Oracle and/or its affiliates.

when the **C1-HLMON** batch is executed. In addition, the **C1-HLMON** batch changes the status of the refund request (if any) for respective accounts to **Hold**.

When you manually release a hold request from the user interface, the system sets the hold request, hold entities, and hold processes end dates (which are later than or equal to the system date) to the system date and then changes the status of the hold request to **Released**. In addition, if the number of accounts in a hold request is less than the defer processing count specified in the respective hold request type, the system immediately sets the hold refund until date (which is later than or equal to the system date) to the system date for the account in the hold request. In addition, the system immediately changes the status of the refund request (if any) for respective accounts from **Hold** to its previous status.

However, if the number of accounts in a hold request is equal to or greater than the defer processing count specified in the respective hold request type, the system sets the hold refund until date (which is later than or equal to the system date) to the system date for the account in the hold request when the **C1-HLMON** batch is executed. In addition, the **C1-HLMON** batch changes the status of the refund request (if any) for respective accounts from **Hold** to its previous status.

Hold Mass Accounts Using Selection Criteria

Until now, you were able to add multiple accounts in a hold request by specifying their respective account ID. Now, this feature is extended wherein you can specify a selection criteria to derive the list of accounts which you want to add in a hold request. A new option named **Use Selection Criteria** is available when you set the entity to **Account** while creating a hold request. On selecting the **Use Selection Criteria** option, the **Hold Entities** section is removed from the **Hold Request** screen. Instead, a new section named **Account Selection Criteria** appears in the **Hold Request** screen. This section enables you to specify the criteria for deriving accounts using the account, person, policy, or individual membership details. You can specify the criteria for deriving accounts using the policy or individual membership details only when the **Environment Type** option type of a feature configuration which is created using the **General System Configuration** feature type is set to **H**.

A new status named **Entity Derivation Pending** is added in the lifecycle of the **C1-HoldRequest** business object. While saving a hold request with account selection criteria, the system creates the hold request in the **Entity Derivation Pending** status. However, while saving a hold request without account selection criteria, the system creates the hold request in the **Draft** status.

A new batch named **C1-HLDET** is introduced in this release. It checks whether there are any hold requests in the **Entity Derivation Pending** status. The system considers those hold requests whose start date is earlier than or equal to batch business date. If there are is a hold request in the **Entity Derivation Pending** status, the batch derives the accounts for the hold request and then changes the status of the hold request from **Entity Derivation Pending** to **Draft**.

You can then add more accounts (if required) manually from the user interface. You can also edit or delete the accounts derived through the criteria from the hold request.

Hold Mass Persons Using Selection Criteria

Information will be available soon!

Hold Request (Without Approval) Status Transition

The following figure graphically indicates how a hold request moves from one status to another when the approval process is not configured in the hold request type:

C1-HOLD-INF

This algorithm generates the hold request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

Copyright © 2009, 2025, Oracle and/or its affiliates.

1. Hold Request Type Description
2. Entity Level (i.e., Account, Person, or Bill)
3. Hold Request Status Description
4. Hold Request ID

C1-HLDVALDN

This algorithm validates the following while creating or editing a hold request:

- At least one process is selected for the hold request. (**Note:** Entity selection is optional.)
- No duplicate entity and process are selected for the hold request.
- The same entity is not kept on hold with the same hold reason in multiple hold requests.
- The hold request end date is specified.
- The process start date is not earlier than the hold request start date.
- The entity start date is not earlier than the hold request start date.
- The process end date is not later than to the hold request end date.
- The entity end date is not later than the hold request end date.
- At least one process start date is earlier than or equal to the entity start date.
- At least one process end date is later than or equal to the entity end date.
- The **Overdue**, **Auto Pay**, and **Refund** processes are not valid when the entity level is set to **Person**.
- The **Bill Generation**, **Overdue**, **Auto Pay**, **Refund**, and **Delinquency** processes are not valid when the entity level is set to **Bill**.
- Both **Overdue** and **Delinquency** processes cannot be selected in the hold request.

> **Note:** The **Overdue** process is valid for the financial services domain and the **Delinquency** process is valid for the health insurance domain.

- A bill that you want to add in the hold request has non-zero outstanding bill amount.
- Each entity's start and end dates should fall within at least one process's start and end dates.
- The hold amount is less than or equal to the outstanding amount when the entity level is set to **Bill**.

In addition, this algorithm validates the following for an active hold request:

- An existing process or entity is not deleted from the hold request.
- Any process details other than the end date is not modified in the hold request.
- The start date of the hold request, hold entity, or hold process is not modified in the hold request.
- The hold reason in the hold request is not modified.
- The end date of the hold request, hold entity, or hold process is not set to the date which is earlier than or equal to the system date.
- A new process is added with the start date later than or equal to the system date.
- A new entity is not added to an active hold request.
- A past end date of an entity or process in the hold request is not changed.

C1-HLDARCTRN

This algorithm is invoked when you create a hold request. If the hold request is created through the **Account Receivable Central** or **Delinquency Central** screen or through an inbound web service, it changes the status of the hold request to **Active**. However, if the hold request is created through the **Hold Request** screen, it changes the status of the hold request to **Draft**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-CKMSHLD

This algorithm is invoked when the hold request is created in the **Draft** status. If the **massHoldSw** field is set to **Y** for the hold request, this algorithm changes the status of the hold request from **Draft** to **Entity Derivation Pending**.

Note: The system sets the **massHoldSw** field to **Y** when the **Use Selection Criteria** option is selected while creating a hold request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

  Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-MASSHOLD

This algorithm is invoked when the **C1-HLDET** batch is executed. If the **massHoldSw** field is set to **Y** for the hold request, this algorithm derives the filter criteria specified in the hold request. It then creates a dynamic SQL query to fetch the list of accounts or persons that meets the filter criteria depending on whether the entity level is set to **Account** or **Person**. The derived accounts or persons are then stored as the hold entities for the hold request in the **C1_HOLD_REQ_DTLS** table. This algorithm sets the start date of all the hold entities to the system date and end date to null. Once the hold request is updated, it then sets the **massHoldSw** field of the hold request to **N** and changes the status of the hold request from **Entity Derivation Pending** to **Draft**.

Note:

The system sets the **massHoldSw** field to **Y** when the **Use Selection Criteria** option is selected while creating a hold request.

The filters are stored in the XML format in the **BO_DATA_AREA** column of the **C1_HOLD_REQ** table. If the entity level is set to **Person**, the filter values are stored within the <personFilter> and </personFilter> tags. However, if the entity level is set to **Account**, the filter values are stored within the <acctFilter> and </acctFilter>, <policyFilter> and </policyFilter>, <personFilter> and </personFilter>, or <indMembershipFilter> and </indMembershipFilter> tags, respectively, depending on the search option used in the hold request.

Once the status of the hold request is changed to **Draft**, you can modify the required details of the hold request expect the filter criteria. You can add more accounts (if required) manually from the user interface. You can also edit or delete the accounts derived through the filter criteria from the hold request.

C1-HOLDSUBMT

This algorithm is invoked when you click the **Submit** button. It checks whether the **Activation Approval** option is selected in the respective hold request type. If the **Activation Approval** option is selected in the respective hold request type, it changes the status of the hold request to **Activation Approval In Progress**. However, if the **Activation Approval**

Copyright © 2009, 2025, Oracle and/or its affiliates.

option is not selected in the respective hold request type, it checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, this algorithm changes the status of the hold request to **Active**. However, if the number of entities added in the hold request exceeds the defer processing count, this algorithm changes the status of the hold request to **Deferred Processing**.

In addition, it displays a warning message while activating the hold request if the start date of hold request, hold process, or hold entity is earlier than the system date.

Note that if the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HOLDAPP

This algorithm is invoked when the status of the hold request is changed to **Activation Approval In Progress**. It creates a To Do using the activation approval To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the activation approval To Do role that is specified in the respective hold request type. In addition, it creates a log entry for the hold request when the To Do is created for the approver.

C1-HOLDAPRVD

This algorithm is invoked when you click the **Approve** button. It checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, this algorithm changes the status of the hold request to **Active**. In addition, it changes the start date of the hold request, hold entities, and the hold processes to the system date. However, if the number of entities added in the hold request exceeds the defer processing count, this algorithm changes the status of the hold request to **Deferred Processing**.

Note that if the **Delinquency** process is added in the hold request, this algorithm derives the entity level of the hold request. If the entity level is set to **Account**, it checks whether any individual or group membership is billed to the account. If an individual membership is billed to the account, it determines whether the number of entities in the hold request exceeds the defer processing count and accordingly changes the status of the hold request to either **Deferred Processing** or **Active**. However, if a group membership is billed to the account, this algorithm does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**. Similarly, if the entity level is set to **Person**, it does not use the defer processing count. It directly changes the status of the hold request to **Deferred Processing**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-HLDRESUBM

This algorithm is invoked when you click the **Re Submit** button. It changes the status of the hold request to **Draft**. The submitter can then make the required changes and resubmit the hold activation request for approval.

In addition, it creates a To Do using the submitter To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the submitter To Do role that is specified in the respective hold request type. Note that the To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

Note:

While requesting a submitter to resubmit a hold activation request, the approver needs to specify the comments so that the submitter can make the required changes in the hold request.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

C1-HOLDACTV

This algorithm is invoked when the status of the hold request is changed to **Active**. It validates the following on activation:

- The entity start date is not earlier than the hold request start date.
- The entity end date is not later than the hold request end date.
- The hold amount is less than or equal to the outstanding amount when the entity level is set to **Bill**.
- A bill with non-zero outstanding bill amount is added in the hold request.
- The entity end date or process end date is not earlier than the system date.

It also does the following (in the online mode):

- If the start date of the hold request, hold entity, or hold process is earlier than the system date, it sets the respective start date to the system date.
- If an active overdue process (if any) exists for the account which is kept on hold, it cancels the respective overdue process of the account.

In addition, it does the following in the online or deferred (i.e., when the **C1-HLMON** batch is executed) mode depending on the defer processing count:

- If the hold request is created for the **Account** entity, the **Bill Generation** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the bill after date to the hold entity end date or bill generation process end date whichever is earlier.
- If the hold request is created for the **Account** entity, the **Overdue** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the postpone credit review until date to the hold entity end date or overdue process end date whichever is earlier.
- If the hold request is created for the **Account** entity, the **Delinquency** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the postpone credit review until date to the hold entity end date or delinquency process end date whichever is earlier.
- If the hold request is created for the **Person** entity, the **Delinquency** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the postpone credit review until date to the hold entity end date or delinquency process end date whichever is earlier. (**Note**: This happens only in the deferred mode.)
- If the hold request is created for the **Account** entity, the **Auto Pay** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the defer auto pay date to the hold entity end date or auto pay process end date whichever is earlier.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- If the hold request is created for the **Account** entity, the **Auto Pay** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date or batch business date, it updates the automatic payment details in the **CI_BILL_ACH** table.
- If the hold request is created for the **Account** entity, the **Refund** process is on hold, and the entity start date in the hold request is earlier than or equal to the system date or batch business date, it sets the hold refund until date to the hold entity end date or refund process end date whichever is earlier.

Note:

If the hold entity end date is not specified, the system will consider the respective process end date while deriving the above dates. If both the hold entity end date and respective process end date are not specified, the system will consider the hold request end date while deriving the above dates.

This algorithm does not change the start date of the hold request, hold entity, or hold process when it is a future date.

If the **Hierarchy** option is selected for the person, this algorithm sets the postpone credit review until date for the person, its immediate accounts, its child persons, and for the child persons' accounts.

This algorithm contains the following parameter:

- **Alert Type** – Used to indicate the alert type using which the alerts should be created in the dashboard whenever an account is kept on hold. You can then click on the hyperlink and navigate to the **Alerts** tab of the **Account** screen. Note that the start and end dates of the alert is set to the hold request start and end dates, respectively. This parameter is optional.

C1-RELAPP

This algorithm is invoked when the status of the hold request is changed to **Release Approval in Progress**. It creates a To Do using the release approval To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the release approval To Do role that is specified in the respective hold request type. In addition, it creates a log entry for the hold request when the To Do is created for the approver.

C1-HRQ-TRANS

This algorithm is invoked when you click the **Approve** button. It changes the status of the hold request to **Released**.

C1-RELRESUBM

This algorithm is invoked when you click the **Re Submit** button. It changes the status of the hold request to **Active**. The submitter can then make the required changes and resubmit the hold release request for approval.

In addition, it creates a To Do using the submitter To Do type that is specified in the respective hold request type. Once a To Do is created, it is assigned to all the users with the submitter To Do role that is specified in the respective hold request type. Note that the To Do is created for the submitter only when the submitter To Do type and submitter To Do role are specified in the respective hold request type.

Note:

While requesting a submitter to resubmit a hold release request, the approver needs to specify the comments so that the submitter can make the required changes in the hold request.

The **Re Submit** button is not available to the approver when the hold request is created through the **Upload Request** feature or through an inbound web service.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-RELENTITY

This algorithm is invoked when you click the **Release** button. It checks whether the **Release Approval** option is selected in the respective hold request type. If the **Release Approval** option is selected in the respective hold request type, it changes the status of the hold request to **Release Approval in Progress**. However, if the **Release Approval** option is not selected in the respective hold request type, it checks whether the number of entities added (either manually or via filter criteria) in the hold request exceeds the defer processing count. If the number of entities added in the hold request does not exceed the defer processing count, this algorithm does the following (in the online mode):

- If the hold request is created for the **Account** entity and the **Bill Generation** process is on hold, the bill after date is set to the system date for each account.
- If the hold request is created for the **Account** entity and the **Auto Pay** process is on hold, the defer auto pay until date is set to the system date for each account.
- If the hold request is created for the **Account** entity and the **Overdue** process is on hold, the postpone credit review until date is set to the system date for each account.
- If the hold request is created for the **Account** entity and the **Delinquency** process is on hold, the postpone credit review until date is set to the system date for each account. (**Note**: This happens only in the deferred mode when the **C1-HLMON** batch is executed.)
- If the hold request is created for the **Account** entity and the **Refund** process is on hold, the hold refund until date is set to the system date for each account. In addition, the status of the refund request (if any) for the respective accounts is changed from **Hold** to its previous status.
- If the hold request is created for the **Person** entity and the **Bill Generation** process is on hold, the bill after date is set to the system date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not.
- If the hold request is created for the **Person** entity and the **Delinquency** process is on hold, the postpone credit review until date is set to the system date either for all the accounts in the person's hierarchy or only for the persons' immediate accounts depending on whether the **Hierarchy** option is selected or not. (**Note**: This happens only in the deferred mode when the **C1-HLMON** batch is executed.)

Note: The above dates are updated to the system date only when the entity end date or respective process end date is not earlier than the system date.

In addition, if the hold request is created for the **Account** entity, the **Auto Pay** process is on hold, and the entity end date in the hold request is earlier than or equal to the system date, this algorithm updates the automatic payment details in the **CI_BILL_ACH** table.

However, if the number of entities added in the hold request exceeds the defer processing count, a log entry is created indicating that the hold request is manually released but the above-mentioned release process would be completed when the **C1-HLMON** batch is executed.

This algorithm also updates the alert end date on the respective account to the system date irrespective of whether the number of entities added in the hold request exceeds the defer processing count or not.

This algorithm contains the following parameter:

- **Alert Type** – Used to indicate the alert type. The system then considers the alerts of the respective alert type on the account and updates its end date when the hold request is released. This parameter is optional.

C1-RLSHOLD

This algorithm is invoked when you click the **Release** button. If the hold entity end date and hold process end date is later than the system date, this algorithm sets the hold entity end date and hold process end date to the system date. In addition, it sets the hold request end date to the system date. Finally, it changes the status of the hold request to **Released**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Hold Request Type

Oracle Revenue Management and Billing allows you to define a hold request type using which you can create a hold request. It is the hold request type which helps the system to determine the following:

- Business object using which the hold request should be created in the system
- Whether you can partially hold a bill through a hold request
- Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time).
- Whether approval is required while activating or releasing a hold request
- Processes that you can keep on hold for an entity through a hold request

The **Hold Request Type** screen allows you to define, edit, delete, and copy a hold request type. It contains the following zones:

- Hold Request Type List on page 1556
- Hold Request Type on page 1557

Hold Request Type List

The **Hold Request Type List** zone lists the hold request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.
Edit	On clicking the **Edit** (✎) icon, the **Hold Request Type** screen appears where you can edit the details of the hold request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Hold Request Type** screen appears where you can define a new hold request type using an existing hold request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the hold request type.
	Note: You can delete a hold request type only when a hold request is not yet created using the hold request type.

Note: Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to a hold request type, the **Hold Request Type** zone appears with the details of the respective hold request type.

Hold Request Type

The **Hold Request Type** zone displays the details of the hold request type. It contains the following sections:

- **Main** - Displays the basic information about the hold request type. It contains the following fields:

Field Name	Field Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.
Hold Request Business Object	Indicates the business object using which a hold request should be created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application. **Note:** It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the hold request type.
Status	Indicates the status of the hold request type. The valid values are: • Active • Inactive
Allow Partial Hold for Bill	Indicates whether partial hold is allowed for a bill. **Note:** This field is applicable when you create a hold request (using the hold request type) where the entity level is set to **Bill**.
Defer Processing Count	Displays the count which helps to determine the following: • Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). • Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. • Whether the automatic payment details must be updated in the **CI_BILL_ACH** table in the deferred or online mode.
Activation Approval	Indicates whether approval is required while activating a hold request (created using the hold request type) for an entity.
Activation Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Activation Approval** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do Type.
Activation Approval To Do Role	Indicates that users with the specified To Do role can only approve a hold activation request which is submitted for approval.
	Note: This field appears when the **Activation Approval** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Release Approval	Indicates whether approval is required while releasing a hold request (created using the hold request type) of an entity.
Release Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval.
	Note: This field appears when the **Release Approval** option is selected. It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do Type.
Release Approval To Do Role	Indicates that users with the specified To Do role can only approve a hold release request which is submitted for approval.
	Note: This field appears when the **Release Approval** option is selected. It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.
Submitter To Do Type	Indicates that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.
	Note: It has a link. On clicking the link, the **To Do Type** screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval.
	Note: It has a link. On clicking the link, the **To Do Role** screen appears where you can view the details of the respective To Do role.

- **Hold Processes** - Lists the processes that you can keep on hold for an entity while creating a hold request. The valid values are:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Auto Pay
- Bill Generation
- Delinquency
- Funding
- Overdue
- Refund

- **Record Actions** - Enables you to perform various actions on the hold request type. It contains the following buttons:

Button Name	**Button Description**
Edit	Used to edit the details of the hold request type.
Delete	Used to delete the hold request type.
	Note: You can delete a hold request type when a hold request is not yet created using the hold request type.
Duplicate	Used to create a new hold request type using an existing hold request type.

- **Record Information** - This section contains the following field:

Field Name	**Field Description**
Business Object	Indicates the business object using which the hold request type is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics of the hold request type. It contains the following columns:

Column Name	**Column Description**
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Hold Request Type** zone does not appear in the **Hold Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the hold request type in the **Hold Request Type List** zone.

Defining a Hold Request Type

Prerequisites

To define a hold request type, you should have:

- Hold request type business objects defined in the application
- Hold request business objects defined in the application
- Required To Do role assigned to the **C1-HLDAP** and **C1-HOLSB** To Do types in the application

Procedure

To define a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Hold Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type Business Object	Used to indicate the business object using which you want to create the hold request type. The valid value is: • **Hold Request Type (i.e., C1-HoldRequestType)** - Enables you to maintain a hold request type. **Note:** The above business object is shipped with the product. The list includes those business objects which are created using the **Hold Request Type** (i.e., **C1-HOLDRQTY**) maintenance object.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple hold request type business objects defined in the application. If there is only one hold request type business object defined in the application, the **Hold Request Type** screen appears.

4. Select the required hold request type business object from the respective field.

Copyright © 2009, 2025, Oracle and/or its affiliates.

5. Click **OK**.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the hold request type.
- **Hold Processes** - Used to lists the processes that you can keep on hold for an entity while creating a hold request.
- **Characteristics** - Used to define the characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the business object using which you are defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create the respective hold request. The valid values are: • **Hold Request - Display (i.e., C1-HoldReqDisplay)**- Enables you to display the details of a hold request. • **Hold Request - Maintenance (i.e., C1-HoldRequest)** - Enables you to maintain a hold request. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Hold Request** (i.e., **C1-HOLDREQ**) maintenance object.	Yes
Detailed Description	Used to specify additional information about the hold request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the hold request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a hold request type to **Inactive** when the corresponding hold request is in a status other than **Discarded**, **Rejected**, or **Released**.	Yes
Allow Partial Hold for Bill	Used to indicate whether partial hold is allowed for a bill.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field is applicable when you create a hold request (using the hold request type) where the entity level is set to **Bill**.	
Defer Processing Count	Used to specify the count which helps to determine the following: • Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). • Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. • Whether the automatic payment details must be updated in the**CI_BILL_ACH** table in the deferred or online mode. **Note:** You must specify an integer value in this field. By default, the value is set to 0. If you do not change the value, the system will consider the defer processing count as 50. The **Deferred** mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is executed. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. For more information about this batch, refer to *Oracle Revenue Management and Billing Batch Guide*.	No
Activation Approval	Used to indicate whether approval is required while activating a hold request (created using the hold request type) for an entity.	No
Activation Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Activation Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Activation Approval To Do Type** field. This field appears when the **Activation Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	**Note:** This field is required when the **Activation Approval** option is selected.
Activation Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold activation request which is submitted for approval. **Note:** The list includes only those To Do roles which are associated with the activation approval To Do type. This field appears when the **Activation Approval** option is selected.	Yes (Conditional) **Note:** This field is required when the **Activation Approval** option is selected.
Release Approval	Used to indicate whether approval is required while releasing a hold request (created using the hold request type) of an entity.	No
Release Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Release Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Release Approval To Do Type** field. This field appears when the **Release Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.
Release Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold release request which is submitted for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Release Approval** option is selected. The list includes only those To Do roles which are associated with the release approval To Do type.	**Note:** This field is required when the **Release Approval** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.	No
	Note: The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The**C1-HOLSB** To Do type is shipped with the product. You can use the **C1-HOLSB** To Do type or a custom To Do type, if required.	
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval.	Yes (Conditional)
	Note: The list includes only those To Do roles which are associated with the submitter To Do type.	**Note:** This field is required when the submitter To Do type is specified in the respective field.

6. Enter the required details in the **Main** section.
7. Add the processes that you can keep on hold for an entity while creating the corresponding hold request.
8. Define characteristics for the hold request type, if required.
9. Click **Save**.
   The hold request type is defined.

Adding a Hold Process in a Hold Request Type

Prerequisites

To add a hold process in a hold request type, you should have:

- Values defined in the **HOLD_PROCESS_FLG** lookup field

Procedure

To add a hold process in a hold request type:

1. Ensure that the **Hold Processes** section is expanded when you are defining, editing, or copying a hold request type.

   The **Hold Processes** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that you want keep on hold for an entity through a hold request. The valid values are: • **Auto Pay** - Used when you want to hold the automatic payment process of an entity through a hold request. • **Bill Generation** - Used when you want to hold the bill generation process of an entity through a hold request. • **Delinquency** - Used when you want to hold the delinquency process of an entity through a hold request. • **Funding** - Used when you want to hold the funding process of an entity through a hold request. • **Overdue** - Used when you want to hold the overdue process of an entity through a hold request. • **Refund** - Used when you want to hold the refund process of an entity through a hold request. **Note:** When you create a hold request using a hold request type, the system will derive only those hold processes that are added in the hold request type in the respective list of the **Hold Request** screen. The list includes only those processes which are added in the **HOLD_PROCESS_FLG** lookup field. You must select at least one hold process while defining a hold request type.	Yes

2. Enter the required details in the **Hold Processes** section.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. If you want to add more than one hold process for the hold request type, click the **Add** (+) icon and then repeat *s*tep 2.

> **Note:** However, if you want to remove a hold process from the hold request type, click the **Delete** (🗑) icon corresponding to the hold process. Note that you cannot remove a process from the hold request type when one or more hold requests with the hold process is in a status other than **Discarded**, **Rejected**, or **Released**.

Defining a Characteristic for a Hold Request Type

Prerequisites

To define a characteristic for a hold request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request Type**)

Procedure

To define a characteristic for a hold request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a hold *r*equest type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Hold Request Type**.	**Note:** This field is required when you are defining a characteristic for the hold request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the hold request type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the hold request type, click the **Add** (+) icon and then *r*epeat step *2*.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note: However, if you want to remove a characteristic from the hold request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing a Hold Request Type

Prerequisites

To edit a hold request type, you should have:

- Hold request business objects defined in the application
- Required To Do role assigned to the **C1-HLDAP** and **C1-HOLSB** To Do types in the application

Procedure

To edit a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.
   The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the hold *r*equest type whose details you want to edit.

   The **Hold Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the hold request type.
   - **Hold Processes** - Used to lists the processes that you can keep on hold for an entity while creating a hold request.
   - **Characteristics** - Used to define the characteristics for the hold request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Displays the hold request type.	Not applicable
Business Object	Indicates the business object which is used while defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create the respective hold request. The valid values are: • **Hold Request - Display (i.e., C1-HoldReqDisplay)**- Enables you to display the details of a hold request.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Hold Request - Maintenance (i.e., C1-HoldRequest)** - Enables you to maintain a hold request. **Note:** The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Hold Request** (i.e., **C1-HOLDREQ**) maintenance object.	
Detailed Description	Used to specify additional information about the hold request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** ( ) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the hold request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a hold request type to **Inactive** when the corresponding hold request is in a status other than **Discarded**, **Rejected**, or **Released**.	Yes
Allow Partial Hold for Bill	Used to indicate whether partial hold is allowed for a bill. **Note:** This field is applicable when you create a hold request (using the hold request type) where the entity level is set to **Bill**.	Yes
Defer Processing Count	Used to specify the count which helps to determine the following: • Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). • Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. • Whether the automatic payment details must be updated in the**CI_BILL_ACH** table in the deferred or online mode.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify an integer value in this field. By default, the value is set to 0. If you do not change the value, the system will consider the defer processing count as 50. The **Deferred** mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is executed. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. For more information about this batch, refer to *Oracle Revenue Management and Billing Batch Guide*.	
Activation Approval	Used to indicate whether approval is required while activating a hold request (created using the hold request type) for an entity.	No
Activation Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Activation Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Activation Approval To Do Type** field. This field appears when the **Activation Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Activation Approval** option is selected.
Activation Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold activation request which is submitted for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those To Do roles which are associated with the activation approval To Do type. This field appears when the **Activation Approval** option is selected.	**Note:** This field is required when the **Activation Approval** option is selected.
Release Approval	Used to indicate whether approval is required while releasing a hold request (created using the hold request type) of an entity.	No
Release Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Release Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Release Approval To Do Type** field. This field appears when the **Release Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.
Release Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold release request which is submitted for approval. **Note:** This field appears when the **Release Approval** option is selected. The list includes only those To Do roles which are associated with the release approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The**C1-HOLSB** To Do type is shipped with the product. You can use the **C1-HOLSB** To Do type or a custom To Do type, if required.	
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval. **Note:** The list includes only those To Do roles which are associated with the submitter To Do type.	Yes (Conditional) **Note:** This field is required when the submitter To Do type is specified in the respective field.

Tip: Alternatively, you can click the **Edit** button in the **Hold Request Type** zone to edit the details of the hold request type.

5. Modify the required details in the **Main** section.
6. Add or remove the hold processes from the hold request type, if required.

Note: You cannot remove a process from the hold request type when one or more hold requests with the hold process is in a status other than **Discarded**, **Rejected**, or **Released**.

7. Define, edit, or remove characteristics of the hold request type, if required.
8. Click **Save**.
   The changes made to the hold request type are saved.

Copying a Hold Request Type

Instead of creating a hold request type from scratch, you can create a new hold request type using an existing hold request type. This is possible through copying a hold request type. On copying a hold request type, the details including the hold processes and characteristics are copied to the new hold request type. You can then edit the details, if required.

Prerequisites

To copy a hold request type, you should have:

- Hold request type (whose copy you want to create) defined in the application
- Hold request business objects defined in the application
- Required To Do role assigned to the **C1-HLDAP** and **C1-HOLSB** To Do types in the application

Procedure

To copy a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.
   The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Duplicate** (⧉) icon in the **Duplicate** column *c*orresponding to the hold request type whose copy you want to create.

   The **Hold Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify the basic details for the hold request type.
   - **Hold Processes** - Used to lists the processes that you can keep on hold for an entity while creating a hold request.
   - **Characteristics** - Used to define the characteristics for the hold request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the business object using which you are defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create the respective hold request. The valid values are: • **Hold Request - Display (i.e., C1-HoldReqDisplay)**- Enables you to display the details of a hold request. • **Hold Request - Maintenance (i.e., C1-HoldRequest)** - Enables you to maintain a hold request.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The above mentioned business objects are shipped with the product. The list includes those business objects which are created using the **Hold Request** (i.e., **C1-HOLDREQ**) maintenance object.	
Detailed Description	Used to specify additional information about the hold request type. **Note:** You can resize the text box depending on your requirement by clicking the **Resize Handle** (⇲) icon at the bottom right corner of the text box.	No
Status	Used to indicate the status of the hold request type. The valid values are: • Active • Inactive **Note:** You cannot change the status of a hold request type to **Inactive** when the corresponding hold request is in a status other than **Discarded**, **Rejected**, or **Released**.	Yes
Allow Partial Hold for Bill	Used to indicate whether partial hold is allowed for a bill. **Note:** This field is applicable when you create a hold request (using the hold request type) where the entity level is set to **Bill**.	Yes
Defer Processing Count	Used to specify the count which helps to determine the following: • Whether a hold request must be activated or released in the deferred mode (i.e. in the background) or in the online mode (i.e. real time). • Whether the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date must be calculated in the deferred or online mode. • Whether the automatic payment details must be updated in the**CI_BILL_ACH** table in the deferred or online mode.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: You must specify an integer value in this field. By default, the value is set to 0. If you do not change the value, the system will consider the defer processing count as 50. The **Deferred** mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is executed. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. For more information about this batch, refer to *Oracle Revenue Management and Billing Batch Guide*.	
Activation Approval	Used to indicate whether approval is required while activating a hold request (created using the hold request type) for an entity.	No
Activation Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold activation request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Activation Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Activation Approval To Do Type** field. This field appears when the **Activation Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Activation Approval** option is selected.
Activation Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold activation request which is submitted for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those To Do roles which are associated with the activation approval To Do type. This field appears when the **Activation Approval** option is selected.	**Note:** This field is required when the **Activation Approval** option is selected.
Release Approval	Used to indicate whether approval is required while releasing a hold request (created using the hold request type) of an entity.	No
Release Approval To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when a hold release request is submitted for approval. **Note:** The **Search** (🔍) icon appears corresponding to the **Release Approval To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Release Approval To Do Type** field. This field appears when the **Release Approval** option is selected. The**C1-HLDAP** To Do type is shipped with the product. You can use the **C1-HLDAP** To Do type or a custom To Do type, if required.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.
Release Approval To Do Role	Used to indicate that users with the specified To Do role can only approve a hold release request which is submitted for approval. **Note:** This field appears when the **Release Approval** option is selected. The list includes only those To Do roles which are associated with the release approval To Do type.	Yes (Conditional) **Note:** This field is required when the **Release Approval** option is selected.
Submitter To Do Type	Used to indicate that the To Do entry of the specified To Do type must be created when the approver requests the submitter to resubmit a hold activation or release request for approval.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Submitter To Do Type** field. On clicking the **Search** icon, the **To Do Type Search** window appears. On specifying the To Do type, the description of the To Do type appears corresponding to the **Submitter To Do Type** field. The**C1-HOLSB** To Do type is shipped with the product. You can use the **C1-HOLSB** To Do type or a custom To Do type, if required.	
Submitter To Do Role	Used to indicate that users with the specified To Do role can only receive the To Do that is created when the approver requests the submitter to resubmit a hold activation or release request for approval. **Note:** The list includes only those To Do roles which are associated with the submitter To Do type.	Yes (Conditional) **Note:** This field is required when the submitter To Do type is specified in the respective field.

Tip: Alternatively, you can click the **Duplicate** button in the **Hold Request Type** zone to create a copy of the hold request type.

5. Enter the required details in the **Main** section.
6. Add or remove the hold processes from the hold request type, if required.
7. Define, edit, or remove characteristics of the hold request type, if required.
8. Click **Save**.
   The new hold request type is defined.

Deleting a Hold Request Type

Procedure

To delete a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
   A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.
   The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *h*old request type that you want to delete.

   A message appears confirming whether you want to delete the hold request type.

   Note: You can delete a hold request type only when a hold request is not yet created using the hold request type.

   Tip: Alternatively, you can click the **Delete** button in the **Hold Request Type** zone to delete the hold request type.
5. Click **OK**.
   The hold request type is deleted.

Hold Request (Used for Searching)

The **Hold Request** screen allows you to search for a hold request using various search criteria. It also allows you to create a hold request. It contains the following zone:

- Search Hold Request on page 1578

Through this screen, you can navigate to the following screen:

- Hold Request (Used for Viewing) on page 1605

Search Hold Request

The **Search Hold Request** zone allows you to search for a hold request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a hold request using the hold request or bill details. The valid values are: • Request Details • Bill Details **Note:** By default, the **Request Details** option is selected.	Yes
Hold Request Type	Used to search hold requests which are created using a particular hold request type. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those hold request types which are already defined in the system.	No
Entity	Used to search hold requests which are created at a particular entity level. The valid values are: • Account • Bill • Person **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **HOLD_ENTITY_LVL_FLG** lookup field.	No
Hold Process	Used to search hold requests which are created to hold a particular process of an entity. The valid values are: • Auto Pay	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Bill Generation • Delinquency • Funding • Overdue • Refund **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those values which are added in the **HOLD_PROCESS_FLG** lookup field.	
User ID	Used to search hold requests which are created by a particular user. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Hold Reason	Used to search hold requests which are created due a particular reason. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	No
Start Date	Used to search hold requests which are created from a particular date onwards. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Status	Used to search hold requests with a particular status. The valid values are: • Active • Activation Approval In Progress • Deferred Processing • Discarded • Draft • Entity Derivation Pending • Rejected • Released • Release Approval in Progress	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Release Request Approved • Return Release Request to Submitter **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	
End Date	Used to search hold requests which are created till a particular date. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Account ID	Used to search hold requests which are created for a particular account. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The **Search** ( ) icon appears corresponding to the **Account ID** field. On clicking the **Search** icon, the **Account Search** window appears.	No
Person ID	Used to search hold requests which are created for a particular person. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list. The **Search** ( ) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears.	No
Hold Request ID	Used to search a particular hold request. **Note:** This field appears when the **Request Details** option is selected from the **Search By** list.	No
Bill ID	Used to search hold requests which are created for a particular bill.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Bill Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Bill ID** field. On clicking the **Search** icon, the **Bill Search** window appears.	
Bill Date From	Used to search hold requests which are created for bills from a particular date onwards. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No
To	Used to search hold requests which are created for bills till a particular date. **Note:** This field appears when the **Bill Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	No

Note: You must specify at least one search criterion while searching for a hold request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the hold request is created.
Hold Request Information	Displays information about the hold request. **Note:** It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request. The valid values are: • Active • Activation Approval In Progress • Deferred Processing • Discarded • Draft • Entity Derivation Pending • Rejected • Released

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Release Approval in Progress • Release Request Approved • Return Release Request to Submitter
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective. **Note:** The data appears in this column only when the end date is specified for the hold request.
Hold Processes	Indicates the processes which are kept on hold for the entity through the hold request. If multiple processes are selected in a hold request, the system concatenates and displays the hold processes separated by the **Comma** (,) symbol.
Hold Reason	Indicates the reason why the hold request is created for the entity.
Created By	Indicates the user who has created the hold request.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Hold Request

Prerequisites

To search for a hold request, you should have:

- Hold request types defined in the application
- Values defined in the **HOLD_REASON_FLG** lookup field

Procedure

To search for a hold request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Accounting and Receivable** and then click **Hold Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Hold Request** sub-menu.
   The **Hold Request** screen appears.
4. Enter the search criteria in the **Search Hold Request** zone.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of hold requests that meet the search criteria appears in the **Search Results** section.

Creating a Hold Request

Prerequisites

To create a hold request, you should have:

- Hold request types defined in the application.
- Values defined in the **HOLD_REASON_FLG** lookup field

Procedure

To create a hold request:

1. Do either of the following:

If you want to...	Then...
Hold a bill through a hold request from the Account Receivable Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Account Receivable Central**. The **Account Receivable Central** screen appears. **c.** Search for a bill that you want to keep on hold in the **Search Bill** zone. A list of bills that meet the search criteria appears in the search results. **d.** In the **Search Results** section, select the check box corresponding to the required bill that you want keep on hold and then click **Hold**.
	Note: You can select only one bill at a time while creating a hold request from the **Account Receivable Central** screen. You can only select a bill with non-zero outstanding balance.
Hold an account through a hold request from the Delinquency Central screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**. The **Delinquency Central** screen appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

If you want to...	Then...
	c. Search for the overdue process of an account in the **Search Overdue Process** zone. A list of overdue processes that meet the search criteria appears in the search results. **d.** In the **Search Results** section, select the check box corresponding to the required overdue process of an account whose processes you want to keep on hold and then click **Create Hold Request**. **Note:** You can select only one overdue process at a time while creating a hold request for an account from the **Account Receivable Central** screen.
Create a hold request for a person, account, or bill from the Hold Request screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **Accounting and Receivable** and then click **Hold Request**. A sub-menu appears. **c.** Click the **Add** option from the **Hold Request** sub-menu.

The **Add Hold Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to indicate the hold request type using which you want to create the hold request. **Note:** The list includes only those hold request types which are already defined in the system.	Yes

Tip: Alternatively, you can access the **Add Hold Request** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request** screen.

2. Select the required hold request type from the respective field.
3. Click **OK**.

The **Hold Request** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details for the hold request.
- **Hold Entities** - Used to indicate the entity (such as, person, account, or bill depending on the specified entity level) that you want to keep on hold. This section appears only when the **Use Selection Criteria** option is not selected while creating a hold request for an account or a person.
- **Account Selection Criteria** - Used to specify a selection criteria to derive the list of accounts that you want to add in the hold request. This section appears only when the following conditions are met:
  - The **Account** option is selected from the **Entity** list.
  - The **Use Selection Criteria** option is selected.
- **Person Selection Criteria** - Used to specify a selection criteria to derive the list of persons that you want to add in the hold request. This section appears only when the following conditions are met:
  - The **Person** option is selected from the **Entity** list.
  - The **Use Selection Criteria** option is selected.
- **Hold Processes** - Used to indicate one or more processes of the entity that you want to keep on hold for a particular period.
- **Characteristics** - Used to define the characteristics for the hold request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Indicates the hold request type using which you want to create the hold request.	Not applicable
Start Date	Used to specify the date from when the hold request is effective. **Note:** The hold request start date cannot be later than the hold request end date. By default, this field is set to the system date. You can specify a future date, if required. However, when you specify a past date, the system will automatically reset it to the system date.	Yes
End Date	Used to specify the date till when the hold request is effective. **Note:** The hold request end date cannot be earlier than the hold request start date.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity. **Note:** The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	Yes
Entity	Used to indicate the type of entity for which you want to create the hold request. The valid values are: • Account • Bill • Person **Note:** The list includes only those values which are defined in the **HOLD_ENTITY_LVL_FLG** lookup field. If you are creating a hold request for a bill via the **Account Receivable Central** screen, the system, by default, sets the entity to **Bill** and the field is non-editable. If you are creating a hold request for an account via the **Delinquency Central** screen, the system, by default, sets the entity to **Account** and the field is non-editable.	Yes
Use Selection Criteria	Used to indicate whether you want to specify a selection criteria to derive the list of accounts or persons that you want to add in the hold request.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Account** or **Person** option is selected from the **Entity** list.	
Comments	Used to specify additional information about the hold request.	No

4. Enter the required details in the **Main** section.
5. Add the entities (such as, persons, accounts, or bills) that you want to keep on hold through the hold request.
6. Define the account or person selection criteria to derive the list of accounts or persons, respectively, that you want to add in the hold request.

Note: This step is required only when the **Use Selection Criteria** option is selected while creating a hold request for an account or a person.

7. Add the processes of the entity that you want to keep on hold through the hold request.
8. Define characteristics for the hold request, if required.
9. Click **Save**.
   The hold request is created.

Note:

If you create a hold request for a bill via the **Account Receivable Central** screen, the system sets the status of the hold request to either **Activation Approval In Progress** or **Active** depending on whether the approval process is configured in the respective hold request type.

If you create a hold request for an account via the **Delinquency Central** screen, the system sets the status of the hold request to either **Activation Approval In Progress** or **Active** depending on whether the approval process is configured in the respective hold request type.

If you create a hold request for an account, person, or bill directly from the **Hold Request** screen, the system sets the status of the hold request to **Draft**. Note that if you create a hold request for an account or a person using the account selection criteria or person selection criteria, respectively, the system sets the status of the hold request to **Entity Derivation Pending**. For more information, see Hold Mass Accounts Using Selection Criteria on page 1533 and Hold Mass Persons Using Selection Criteria on page 1533.

Adding an Entity in a Hold Request

Procedure

To add an entity in a hold request:

1. Ensure that the **Hold Entities** section is expanded when you are creating or editing a hold request.

   The **Hold Entities** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Entity ID	Used to indicate the entity (such as, person, account, or bill depending on the specified entity level) that you want to keep on hold.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to the **Hold Entity ID** field. Depending on the entity level selected, the system behaves in the following manner on clicking the **Search** icon: • If the entity level is set to **Account**, the **Account Search** window appears. • If the entity level is set to **Person**, the **Person Search** window appears. • If the entity level is set to **Bill**, the **Bill Search** window appears. If you are creating a hold request for a bill via the **Account Receivable Central** screen, the system, by default, displays the selected bill ID and the field is non-editable. You cannot remove this selected bill from the hold request throughout its lifestyle. If you are creating a hold request for an account via the **Delinquency Central** screen, the system, by default, displays the account ID (of the selected overdue process) and the field is non-editable. You cannot remove this account from the hold request throughout its lifestyle. If the entity level is set to **Bill**, you must specify a bill with non-zero outstanding bill amount and which is in the **Complete** status.	
Start Date	Used to specify the date from when you want to hold the entity. **Note:** The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date. You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	Yes
End Date	Used to specify the date till when you want to hold the entity.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	
Hold Amount	Used to specify the outstanding bill amount that you want to keep on hold. **Note:** This field appears when the **Bill** option is selected from the **Entity** list. This field is editable only when the **Allow Partial Hold for Bill** option is selected in the respective hold request type. By default, the system displays the amount which is outstanding on the bill. If the field is editable, you can change the hold amount, if required. However, you must ensure that you specify a positive value in this field.	Yes
Hierarchy	Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer. **Note:** This field appears when the **Person** option is selected from the **Entity** list.	No

Note: The **Hold Entities** section appears only when the **Use Selection Criteria** option is not selected while creating a hold request for an account or a person.

2. Enter the required details in the **Hold Entities** section.
3. If you want to add more than one entity in the hold request, click the **Add** (+) icon and then repeat *s*tep 2.

Note: However, if you want to remove an entity from the hold request, click the **Delete** ( ) icon corresponding to the hold entity.

How to create a hold request	Creating a Hold Request on page 1583

Defining an Account Selection Criteria for a Hold Request

Prerequisites

To define an account selection criteria for a hold request, you should have:

- Divisions, bill cycles, customer classes, states, health plans, membership identifier types, and policy types defined in the application
- Values defined in the **BILL_ADDR_SRCE_FLG**, **PRODUCT_TYPE_FLG**, **PRODUCT_HC_CAT_FLG**, **PRODUCT_LOB_FLG**, and **PRODUCT_LOB_CAT_FLG** lookup fields
- Required characteristic types defined in the application (where the characteristic entity is set to **Account**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Membership**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Health Plan**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Product**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Person**)
- Required characteristic types defined in the application (where the characteristic entity is set to **Policy**)

Procedure

To define an account selection criteria for a hold request:

1. Ensure that the **Account Selection Criteria** section is expanded when you are creating or editing a hold request.

   The **Account Selection Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account using the account, individual membership, person, or policy details. The valid values are: • Account Details • Individual Membership Details • Person Details • Policy Details **Note:** The **Individual Membership Details** and **Policy Details** options appear in the **Search By** list only when the **Environment Type** option type of the **SYSDT** feature configuration is set to **H**. For more information, see Setting the SYSDT Feature Configuration.	Yes

Note:

The **Account Selection Criteria** section appears only when the following conditions are met in the **Main** section:

- The **Account** option is selected from the **Entity** list.
- The **Use Selection Criteria** option is selected. Note that this option appears only when the **Account** or **Person** option is selected from the **Entity** list.

2. Select the required option depending on which you want to search for the accounts from the **Search By** list.

   The following fields appear in the **Account Selection Criteria** section:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Address Source	Used to search for accounts where a particular address source is used to route the account's bills and/or quotes via the postal service. The valid values are: • Account Override • Bill • Main • Multiple Account Override • Person **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **BILL_ADDR_SRCE_FLG** lookup field.	No
Division	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts which belong to a particular division. • **Individual Membership Details** - This field enables you to search for individual member persons' accounts that belong to a particular division. • **Policy Details** - This field enables you to search for policy persons' accounts that belong to a particular division. **Note:** This field appears when the **Account Details**, **Individual Membership Details**, or **Policy Details** option is selected from the **Search By** list. Note that in case of the latter two options (i.e., **Individual Membership Details** and **Policy Details**), this field appears only when you click the **Advanced Search** link available in the right side of the **Account Selection Criteria** section. The list includes only those divisions which are already defined in the system.	No
State	You can use this field while searching for an account using the account, individual membership, person, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a specific state. Note that this field is enabled while searching using the account details only when an option is selected from the **Address Source** list.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular state. • **Person Details** - This field enables you to search for accounts belonging to persons (i.e., main customer) who reside in a particular state. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in a particular state. **Note:** The **Search** (🔍) icon appears corresponding to the **State** field. On clicking the **Search** icon, the **State Search** window appears.	
Bill Cycle	Used to search for accounts with a particular bill cycle. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those bill cycles which are already defined in the system.	No
County	You can use this field while searching for an account using the account, individual membership, person, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a specific county. Note that this field is enabled while searching using the account details only when an option is selected from the **Address Source** list. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular county. • **Person Details** - This field enables you to search for accounts belonging to persons (i.e., main customer) who reside in a particular county. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in a particular county. **Note:** You can specify comma-separated values in this field.	No
Customer Class	You can use this field while searching for an account using the account, individual membership, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list:	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• **Account Details** - This field enables you to search for accounts which belong to a particular customer class. • **Individual Membership Details** - This field enables you to search for individual member persons' accounts that belong to a particular customer class. • **Policy Details** - This field enables you to search for policy persons' accounts that belong to a particular customer class. **Note:** This field appears when the **Account Details**, **Individual Membership Details**, or **Policy Details** option is selected from the **Search By** list. Note that in case of the latter two options (i.e., **Individual Membership Details** and **Policy Details**), this field appears only when you click the **Advanced Search** link available in the right side of the **Account Selection Criteria** section. The list includes only those customer classes which are already defined in the system.	
Postal	You can use this field while searching for an account using the account, individual membership, person, or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a specific postal or zip code. Note that this field is enabled while searching using the account details only when an option is selected from the **Address Source** list. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in an area with a particular postal or zip code. • **Person Details** - This field enables you to search for accounts belonging to persons (i.e., main customer) who reside in an area with a particular postal or zip code. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in an area with a particular postal or zip code. **Note:** You can specify comma-separated values in this field.	No
Product Type	Used to search for accounts of persons that are linked to individual memberships of a particular health product type. The valid values are: • Exclusive Provider Organization • Health Maintenance Organization • Point-of-Service Plan	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Preferred Provider Organization **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **PRODUCT_TYPE_FLG** lookup field.	
Product Category	Used to search for accounts of persons that are linked to individual memberships of a particular health product category. The valid value is: • Medical **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **PRODUCT_HC_CAT_FLG** lookup field.	No
Health Plan	Used to search for accounts of persons that are linked to individual memberships of a particular health plan. **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. You must specify a health plan which is already defined in the system.	No
Start Date	You can use this field while searching for an account using the individual membership or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Individual Membership Details** - This field enables you to search for accounts of persons that are linked to individual memberships with a particular start date. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies with a particular start date.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** or **Policy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	
End Date	You can use this field while searching for an account using the individual membership or policy details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Individual Membership Details** - This field enables you to search for accounts of persons that are linked to individual memberships with a particular end date. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies with a particular end date. **Note:** This field appears when the **Individual Membership Details** or **Policy Details** option is selected from the **Search By** list. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Membership Identifier Type	Used to search for accounts of persons that are linked to individual memberships using a particular membership identifier type. **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those membership identifier types which are already defined in the system.	Yes (Conditional) **Note:** If you specify the membership identifier as a search criteria, you have to select the membership identifier type.
Membership Identifier	Used to search for accounts of persons that are linked to a particular individual membership. **Note:** This field appears when the **Individual Membership Details** option is selected from the **Search By** list.	Yes (Conditional) **Note:** If you specify the membership identifier type as a search criteria, you have to enter the membership identifier.
Product LOB	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** option is selected from the**Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. The list includes only those values which are defined in the **PRODUCT_LOB_FLG** lookup field.	
Product LOB Category	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB category. The valid values are: • Commercial • Government • State Programs **Note:** This field appears when the **Individual Membership Details** option is selected from the**Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. The list includes only those values which are defined in the **PRODUCT_LOB_CAT_FLG** lookup field.	No
Person ID	Used to search for accounts where a particular person is the main customer. **Note:** The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears. This field appears when the **Person Details** option is selected from the **Search By** list. If you specify the person ID along with any other search criteria, the system gives high precedence to the person ID and ignores the other account selection criteria except **Include Person Hierarchy**.	Yes (Conditional) **Note:** This field is required when the **Include Person Hierarchy** option is selected.
Person Name	Used to search for accounts where the main customer have a particular name. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	No
Include Person Hierarchy	Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	person's hierarchy and then derives the accounts where the child person is the main customer. **Note:** This field appears when the **Person Details** option is selected from the **Search By** list.	
Policy Type	Used to search for accounts of persons that are linked to policies created using a particular policy type. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The list includes only those policy types which are already defined in the system.	No
Policy Plan Number	Used to search for accounts of persons that are linked to policies having a particular policy plan. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Policy Number	Used to search for accounts of persons that are linked to a particular policy. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	No
Source System	Used to search for accounts of persons that are linked to policies originated from a particular external system. **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list. The list includes only those source system which are already defined in the system.	No
Status	Used to search for accounts of persons that are linked to policies with a particular status. The valid values are: • Activate • In Force/Active • Cancel • Canceled • Pending Cancelation • Pending • Pending Reinstatement • Pending Termination • Post Run out • Reinstated • Renewed • Run out	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Terminated **Note:** This field appears when the **Policy Details** option is selected from the **Search By** list.	

In addition, the following sub-sections appear in the **Account Selection Criteria** section:

- **Characteristics** - This section appears when the **Account Details**, **Person Details**, or **Policy Details** option is selected from the **Search By** list. Note that in case of the latter option (i.e., **Policy Details**), this section appears only when you click the **Advanced Search** link available in the right side of the **Account Selection Criteria** section. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts with a particular type of characteristic. **Note:** The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Characteristic Value** window appears.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for accounts with a particular characteristic.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

- **Membership Characteristics** - This section appears when the **Individual Membership Details** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts of persons that are linked to individual memberships with a particular type of characteristic. **Note:** The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Characteristic Value** window appears.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for accounts of persons that are linked to individual memberships with a particular characteristic.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

- **Health Product Characteristics** - This section appears when the **Individual Membership Details** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts of persons that are linked to individual memberships of a health product with a particular type of characteristic. **Note:** The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Characteristic Value** window appears.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for accounts of persons that are linked to individual memberships of a health product with a particular characteristic.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

- **Health Plan Characteristics** - This section appears when the **Individual Membership Details** option is selected from the **Search By** list and the **Advanced Search** link available in the right side of the **Account Selection Criteria** section is clicked. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for accounts of persons that are linked to individual memberships of a health plan with a particular type of characteristic. **Note:** The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Characteristic Value** window appears.	Yes (Conditional) **Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for accounts of persons that are linked to individual memberships of a health plan with a particular characteristic.	Yes (Conditional) **Note:** If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

Note: You can specify multiple characteristics in the account selection criteria by clicking the **Add** (+) icon corresponding to the **Characteristic Type** field. If you specify multiple characteristics in the account selection criteria, the system uses the **AND** operator to derive the list of accounts that have all the specified characteristics. However, note that you cannot specify more than five characteristics in the account selection criteria.

3. Enter the required search criteria in the **Account Selection Criteria** section.

Note:

You must specify at least one search criterion while defining an account selection criteria for a hold request.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Defining a Person Selection Criteria for a Hold Request

Prerequisites

To define a person selection criteria for a hold request, you should have:

- States defined in the application
- Required characteristic types defined in the application (where the characteristic entity is set to **Person**)

Procedure

To define a person selection criteria for a hold request:

1. Ensure that the **Person Selection Criteria** section is expanded when you are creating or editing a hold request.

> **Note:**
>
> The **Person Selection Criteria** section appears only when the following conditions are met in the **Main** section:
>
> - The **Person** option is selected from the **Entity** list.
> - The **Use Selection Criteria** option is selected. Note that this option appears only when the **Account** or **Person** option is selected from the **Entity** list.

The **Person Selection Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for a particular person. **Note:** The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Person Search** window appears.	No
Person Name	Used to search for persons with a particular name.	No
State	Used to search for persons who reside in a particular state. **Note:** The **Search** (🔍) icon appears corresponding to the **State** field. On clicking the **Search** icon, the **State Search** window appears.	No
County	Used to search for persons who reside in a particular county. **Note:** You can specify comma-separated values in this field.	No
Postal	Used to search for persons who reside in an area with a particular postal or zip code. **Note:** You can specify comma-separated values in this field.	No

In addition, the following sub-section appears in the **Person Selection Criteria** section:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Characteristics** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to search for persons with a particular type of characteristic.	Yes (Conditional)
	Note: The **Search** (🔍) icon appears corresponding to the **Characteristic Type** field. On clicking the **Search** icon, the **Search Person Characteristic Value** window appears.	**Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for persons with a particular characteristic.	Yes (Conditional)
		Note: If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

Note: You can specify multiple characteristics in the person selection criteria by clicking the **Add** (+) icon corresponding to the **Characteristic Type** field. If you specify multiple characteristics in the person selection criteria, the system uses the **AND** operator to derive the list of persons that have all the specified characteristics. However, note that you cannot specify more than five characteristics in the person selection criteria.

2. Enter the required search criteria in the **Person Selection Criteria** section.

Note:

You must specify at least one search criterion while defining a person selection criteria for a hold request.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Adding a Process in a Hold Request

Prerequisites

To add a process in a hold request, you should have:

- Required applicable processes added in the respective hold request type

Procedure

To add a process in a hold request:

1. Ensure that the **Hold Processes** section is expanded when you are creating or editing a hold request.

   The **Hold Processes** section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that you want to keep on hold. The system then holds the selected process of those entities whose start and end dates fall with the process's start and end dates. **Note:** The list includes only those processes which are selected in the respective hold request type. Depending on the entity level selected, the system enables you to select the following processes: • If the entity level is set to **Account**, you can select the **Auto Pay**, **Bill Generation**, **Delinquency**, **Funding**, **Overdue**, and/or **Refund** option (if available) from the **Hold Process** list. However, note that you cannot select both the **Overdue** and **Delinquency** processes at a time in the hold request. **Note:** The **Overdue** process is valid for the financial services and health insurance domains but the **Delinquency** process is valid only for the health insurance domain. • If the entity level is set to **Person**, you can select the **Bill Generation**, **Delinquency**, and/or **Funding** option (if available) from the **Hold Process** list. • If the entity level is set to **Bill**, you can only select the **Funding** option from the **Hold Process** list.	Yes
Start Date	Used to specify the date from when the process of an entity is kept on hold. **Note:** The hold process start date must be between the hold request start and end dates. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes
End Date	Used to specify the date till when the process of an entity is kept on hold. **Note:** The hold process end date must be between the hold request start and end dates. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No

2. Enter the required details in the **Hold Processes** section.

Copyright © 2009, 2025, Oracle and/or its affiliates.

> **Note:** You must specify at least one process while creating a hold request.

3. If you want to add more than one process in the hold request, click the **Add** (+) icon and then repeat *s*tep 2.

> **Note:** However, if you want to remove a process from the hold request, click the **Delete** (🗑) icon corresponding to the hold process.

Defining a Characteristic for a Hold Request

Prerequisites

To define a characteristic for a hold request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request**)

Procedure

To define a characteristic for a hold request:

1. Ensure that the **Characteristics** section is expanded when you are creating or editing a hold request.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional)
	Note: You can either manually specify the date or select it using the **Date Picker** (📅) icon corresponding to the field.	**Note:** This field is required when you are defining a characteristic for the hold request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to **Hold Request**.	**Note:** This field is required when you are defining a characteristic for the hold request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, the **Predefined Characteristic Search** window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	**Note:** This field is required when you are defining a characteristic for the hold request.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the hold request, click the **Add** (+) icon and then repeat *s*tep 2.

Note: However, if you want to remove a characteristic from the hold request, click the **Delete** (🗑) icon corresponding to the characteristic.

Viewing the Hold Request Details

Procedure

To view the details of a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to view.

   The **Hold Request** screen appears. It contains following tabs:

   - Hold Request - Main on page 1605
   - Hold Request - Log on page 1624
3. Ensure that the **Main** tab is selected.
4. View the details of the hold request in the **Hold Request** zone.
5. View the entities (such as persons, accounts, or bills) whose processes are kept on hold through the hold request in the **Hold Entities** zone.

Hold Request (Used for Viewing)

Once you create a hold request, the **Hold Request** screen allows you to:

- Add entities in a hold request
- Add processes in a hold request
- Edit the details of a hold request
- Edit the hold amount against each entity. This is valid for only bill.
- Delete a hold request
- View the details of a hold request
- Submit a hold request for approval
- Approve or reject a hold request
- Resubmit a hold request for approval
- Activate and Release a hold request
- Search for an account, bill, and person in a hold request
- Edit the end dates of all the entities in a hold request
- Delete all the entities in a hold request
- View the log of a hold request
- Add a log entry for a hold request

This screen consists of the following tabs:

- **Main** - Displays information about the hold request. It contains the following zones:
  - **Hold Request** - Displays the details of the hold request.
  - **Hold Entities** - Lists the entities, such as person, accounts, or bills that are on hold request.
  - **Search Account** - Searches the accounts to be put on hold.

    Note: This zone appears when hold request is for an **Account** and its status is **Draft**.
  - **Search Bill** - Searches the bills to be put on hold.

    Note: This zone appears when hold request is for **Bill** and its status is **Draft**.
  - **Search Person** - Searches the persons to be put on hold.

    Note: This zone appears when hold request is for **Person** and its status is **Draft**.
- **Log** - Lists complete trail of actions performed on the hold request. This tab contains the following zone:
  - **Hold Request Log** - Displays the actions performed on the hold request.

Hold Request - Main

The **Main** tab on the **Hold Request** contains the following zones:

- Hold Request on page 1606

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Hold Entities on page 1609
- Search Account on page 1611

  Note: This zone appears when the hold request for an **Account** is in the **Draft** status.
- Search Bill on page 1620

  Note: This zone appears when hold request for a **Bill** is in the **Draft** status.
- Search Person on page 1622

  Note: This zone appears when hold request is for a **Person** is in the **Draft** status.

Hold Request

The **Hold Request** zone displays the details of the hold request. It contains the following sections:

- **Main** - Displays the basic information about the hold request. It contains the following fields:

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Hold Request Type	Indicates the hold request type using which the hold request is created. **Note:** It has a link. On clicking the link, the **Hold Request Type** screen appears where you can view the details of the respective hold request type.
Status	Indicates the status of the hold request. The valid values are: • Active • Activation Approval In Progress • Deferred Processing • Discarded • Draft • Entity Derivation Pending • Rejected • Released • Release Approval in Progress • Release Request Approved • Return Release Request to Submitter
Status Reason	Indicates the reason why the hold request is rejected or released. **Note:** This field appears when the hold request is in **Rejected** or **Released** status. It has a link. On clicking the link, the **Status Reason** screen appears where you can view the details of the respective status reason.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.
Hold Reason	Indicates the reason why the entity is kept on hold.
Entity	Indicates the type of entity for which the hold request is created. The valid values are:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	• Account • Bill • Person
Comments	Displays additional information about the hold request. **Note:** This field appears when the comments are provided while adding or editing a hold request.

- **Hold Processes** - Lists the processes which are kept on hold for an entity through the hold request. It contains the following columns:

Column Name	Column Description
Hold Process	Indicates the process which is kept on hold. The valid values are: • Auto Pay • Bill Generation • Delinquency • Funding • Overdue • Refund
Start Date	Displays the date from when the process of an entity is kept on hold.
End Date	Displays the date till when the process of an entity is kept on hold.

- **Characteristics** - Lists the characteristics of the hold request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - Enables you to perform various actions on the hold request. It contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request. **Note:** The **Edit** button appears when the hold request is in the **Draft** or **Active** status.
Delete	Used to delete the hold request. **Note:** The **Delete** button appears when the hold request is in the **Draft** status.
Submit	Used to submit the hold request. **Note:** The **Submit** button appears when the hold request is in the **Draft** status.
Re Submit	Used to re-submit the hold activation or release request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Re Submit** button appears when the following conditions are met: • The hold request is in the **Activation Approval In Progress** or **Release Approval in Progress** status. • A user with the approval To Do role is reviewing the hold request.
Approve	Used to approve the hold activation or release request.
	Note: The **Approve** button appears when the following conditions are met: • The hold request is in the **Activation Approval In Progress** or **Release Approval in Progress** status. • A user with the approval To Do role is reviewing the hold request.
Reject	Used to reject the hold activation request.
	Note: The **Reject** button appears when the following conditions are met: • The hold request is in the **Activation Approval In Progress** status. • A user with the approval To Do role is reviewing the hold request.
Release	Used to release the hold request.
	Note: The **Release** button appears when the hold request is in the **Active** status.
Discard	Used to discard the future dated hold request.
	Note: The **Discard** button appears when the following conditions are met: • The hold request is future dated (i.e. when the hold request start date is later than the system date). • The hold request is in the **Active** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the hold request is created. In addition, a context menu (⊙) icon appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the hold request status is updated.
Create Date/Time	Displays the date and time when the hold request is created.

Hold Entities

The **Hold Entities** zone lists the entities which are added in the hold request. It contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Person** screen appears where you can view the details of the respective person. This column appears when the entity level in the hold request is set to **Person**.
Account Information	Displays information about the account. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account. This column appears when the entity level in the hold request is set to **Account**.
Bill Information	Displays information about the bill. In addition, this column has a context menu (⊙) icon which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill. This column appears when the entity level in the hold request is set to **Bill**.
Entity ID	Indicates the entity which is kept on hold through the hold request.
Start Date	Displays the date from when the entity is on hold.
End Date	Displays the date till when the entity is on hold. **Note:** Once the hold request is either manually or automatically released, the system updates the hold entity end date to the system date.
Hold Amount	Displays the bill amount which is kept on hold through the hold request. **Note:** This column appears when the entity level in the hold request is set to **Bill**.
Bill After Date	Displays the date after which bills can be generated for the account. **Note:** This column appears when the entity level in the hold request is set to **Account**. Once the hold request is either manually or automatically released, the bill after date is cleared (i.e., set to NULL) for the respective account.
Postpone Credit Review Until	Displays the date after which overdue debt can be monitored for the entity either through the **Overdue** or **Delinquency Management** process. **Note:** This column appears when the entity level in the hold request is set to **Account** or **Person**.
Defer Auto Pay Date	Displays the date till when you want to hold the automatic payment process for the account. **Note:** This column appears when the entity level in the hold request is set to **Account**.
Hierarchy	Indicates whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold through the hold request. The valid values are: • Y • N

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This column appears when the entity level in the hold request is set to **Person**. The system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer.
Hold Refund Until	Displays the date after which the refund request can be processed for the account.
	Note: This column appears when the entity level in the hold request is set to **Account**. The system does not stop you from creating A/P adjustments for an account from the **Adjustment** screen when the refund process is kept on hold for the account.

In addition, this zone contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold entity.
Delete	Used to delete the hold entity from the hold request.

Note:

The **Edit** and **Delete** buttons appear only when the hold request is in the **Draft** or **Active** status.

A check box appears corresponding to each hold entity. To update the details of a hold entity, select the check box corresponding to the hold entity and then click the **Edit** button. You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to update the details of all the hold entities listed in the respective page. For more information, see Editing the Entity Details of a Hold Request on page 1630.

You can also mass update the end date of the hold entities in a hold request at once by clicking the **Edit All** link available in the upper right corner of this zone. The link appears only when the hold request is in the **Draft** or **Active** status. For more information, see Updating the End Date of all the Hold Entities on page 1632.

To delete a hold entity, select the check box corresponding to the hold entity and click the **Delete** button. You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the hold entities listed in the respective page. For more information, see Deleting an Entity from a Hold Request on page 1634.

You can filter the list using the **Entity ID** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (⩛) icon in the upper right corner of this zone.

Search Account

The **Search Account** zone allows you to search for accounts using various search criteria. It also allows you to add the accounts in a hold request. It contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account using the account, policy and individual membership details. The valid values are: • Account Details • Policy Details • Individual Membership Details **Note:** By default, the **Account Details** option is selected.	Yes
Account ID	Used to search hold requests which are created for a particular account. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The **Search** (🔍) icon appears corresponding to the **Person ID** field. On clicking the **Search** icon, the **Account Search** window appears. This description has a link, on clicking the link the **Person** screen appears where you can view the details of the respective person.	No
Division	You can use this field while searching for an account using the account, or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts which belong to a particular division. • **Individual Membership Details** - This field enables you to search for individual member persons' accounts that belong to a particular division. **Note:** This field appears when the **Account Details**, **Individual Membership Details** option is selected from the **Search By** list. The list includes only those divisions which are already defined in the system.	No
Address Source	Used to search for accounts where a particular address source is used to route the account's bills and/or quotes via the postal service. The valid values are: • Account Override • Bill • Main • Multiple Account Override • Person	Yes (Conditional) **Note:** This field is required if you are searching for accounts using the state, country, or postal as a search criteria.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **BILL_ADDR_SRCE_FLG** lookup field.	
Bill Cycle	Used to search for accounts with a particular bill cycle. **Note:** This field appears when the **Account Details** option is selected from the **Search By** list. The list includes only those bill cycles which are already defined in the system.	No
State	You can use this field while searching for an account using the account, policy, or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts whose billing address belongs to a particular state. • **Policy Details** - This field enables you to search for accounts of persons that are linked to policies issued in a particular state. • **Individual Membership Details** - This field enables you to search for accounts that belong to the individual membership's member persons who resides in a particular state. **Note:** The **Search** (🔍) icon appears corresponding to the **State** field. On clicking the **Search** icon, the **State Search** window appears.	No
Customer Class	You can use this field while searching for an account using the account, or individual membership details. The context of this field changes depending on the respective option selected from the **Search By** list: • **Account Details** - This field enables you to search for accounts which belong to a particular customer class. • **Individual Membership Details** - This field enables you to search for individual member persons' accounts that belong to a particular customer class.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Account Details**, or **Individual Membership Details** option is selected from the **Search By** list. The list includes only those customer classes which are already defined in the system.	
County	You can use this field while searching for an account using the account, policy, or individual membership details. Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when the **Individual Membership Details** option is selected from the**Search By** list. The list includes only those values which are defined in the **PRODUCT_LOB_FLG** lookup field.	
Product Category	Used to search for accounts of persons that are linked to individual memberships of a particular health product category. The valid value is: • Medical	No
	Note: This field appears when the **Individual Membership Details** option is selected from the **Search By** list. The list includes only those values which are defined in the **PRODUCT_HC_CAT_FLG** lookup field.	
Product LOB Category	Used to search for accounts of persons that are linked to individual memberships belonging to a particular health product LOB category. The valid values are: • Commercial • Government • State Programs	No
	Note: This field appears when the **Individual Membership Details** option is selected from the**Search By** list. The list includes only those values which are defined in the **PRODUCT_LOB_CAT_FLG** lookup field.	
Characteristic Type	Used to search for accounts with a particular type of characteristic.	Yes (Conditional)
	Note: The list includes only those characteristic types which are already defined in the system.	**Note:** If you specify the characteristic value as a search criteria, you have to select the characteristic type.
Characteristic Value	Used to search for accounts with a particular characteristic.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: If you specify the characteristic type as a search criteria, you have to enter the characteristic value.

Note:

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class. Similarly, one more search criterion is required when you are searching for an account (associated with the policies) using the policy type and/or source system.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria.

  The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays additional information about the account. In addition, this column has a context menu (⊙) which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Account** screen appears where you can view the details of the respective account.
Country	Displays the country name.
State	Displays the state where the county is located.
County	Displays the county name.
Postal	Displays the postal or zip code.
Customer Class	Indicates the customer class to which the account belongs.
Division	Indicates the division to which the account belongs.
Account ID	Displays the account ID.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add an account to the hold request.

A check box appears corresponding to each account. On selecting the check box, you can add the account to the hold request. You can also select multiple accounts at the same time. In addition, you can select the check box

Copyright © 2009, 2025, Oracle and/or its affiliates.

corresponding to the column header. This allows you to add all the accounts listed in the respective page to the hold request.

Editing a Hold Request

Prerequisites

To edit a hold request, you should have:

- Hold request type defined in the application
- Hold request entity defined in the application

Procedure

Copyright © 2009, 2025, Oracle and/or its affiliates.

To edit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Hold Request** zone.

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

The **Hold Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Hold Request Type	Displays the hold request type using which the hold request is created.	Not applicable
Start Date	Displays the date from when the hold request is effective. **Note:** The hold request start date cannot be later than the hold request end date. By default, this field is set to the system date. You can specify a future date, if required. However, when you specify a past date, the system will automatically reset it to the system date.	Not applicable
End Date	Used to specify the date till when the hold request is effective. **Note:** The hold request end date cannot be earlier than the hold request start date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity.	Yes **Note:** This field cannot be edited if hold request is in **Active** status.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The list includes only those values which are defined in the **HOLD_REASON_FLG** lookup field.	
Entity	Displays the type of entity for the hold request.	Not applicable
Comments	Used to specify the additional information about hold request.	No
	Note: You can resize the text box depending on your requirement by clicking the **Resize Handle** ( ) icon at the bottom right corner of the text box.	

- **Hold Processes** - Used to specify the process that you want keep on hold for an entity through a hold request.
- **Characteristics** - Used to define the characteristics for the hold request.

5. Modify the required details in the **Main** section.
6. Add or remove the hold processes from the hold request type, if required.
7. Define, edit, or remove characteristics of the hold request, if required.
8. Click **Save**.
   The changes made to the hold request are saved.

Editing the Entity Details of a Hold Request

Procedure

To edit the entity details of a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Select the check box corresponding to the hold entity that you want to edit in the **Hold Entities** zone.

   Note: You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to update the details of all the hold entities listed in the respective page.

4. Click **Edit**.

   The **Edit Hold Request Entities** screen appears. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Start Date	Displays the date from when the hold request is effective.
End Date	Displays the date till when the hold request is effective.

In addition, this screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Entity ID	Displays the entity ID.	Not applicable
Entity Information	Displays the information about the entity.	Not applicable
Start Date	Used to specify the date from when you want to hold the entity. **Note:** This field is editable only when the hold request is in the **Draft** status. The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes
End Date	Used to specify the date till when you want to hold the entity. **Note:** The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date or system date. You cannot update a past dated end date of a hold entity. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	No
Hold Amount	Used to specify the outstanding bill amount that you want to keep on hold.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
	Note: This column appears when the **Bill** option is selected from the **Entity** list. This field is editable only when the **Allow Partial Hold for Bill** option is selected in the respective hold request type. You must specify a positive value in this field.	
Hierarchy	Used to indicate whether all the accounts in the person's hierarchy or only the persons' immediate accounts should be kept on hold. Note that the system considers only the child persons and not the grand child persons from the person's hierarchy and then derives the accounts where the child person is the main customer.	No
	Note: This column appears when the **Person** option is selected from the **Entity** list. This column is editable only when the hold request is in the **Draft** status.	

Note: The **Edit** button appears when the hold request is in the **Draft** or **Active** status.

5. Modify the details of the hold entities, if required.
6. Click **Save**.
   The changes made to the hold request are saved.

Note: After updating the end date of a hold entity, you need to execute the **Hold Request Monitor** (**C1-HLMON**) batch. On executing the batch, the system will accordingly update the bill after date, postpone credit review until date, defer auto pay date, and hold refund until date, if required, for the respective entity.

Updating the End Date of all the Hold Entities

Procedure

To update the end date of all the hold entities:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. Select the entities that you want to edit in the **Hold Entities** zone and click the **Edit All** link available in the upper right corner of this zone.

Note: The link appears only when you are viewing the details of a hold request which is in the **Draft** or **Active** status.

The **Hold Request Information** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Displays the date from when the hold request is effective.	Not applicable
End Date	Displays the date till when the hold request is effective.	Not applicable
Hold Entity End Date	Used to specify the end date for all the hold entities. **Note:** The hold entity end date must be between hold request start and end dates and between at least one process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date or system date. You cannot update a past dated end date of a hold entity. You can either manually specify the date or select it using the **Date Picker** ( ) icon corresponding to the field.	Yes

Note:

- While updating the end date of a hold entity, the system checks whether the existing hold entity end date is earlier than the new hold entity end date. If the existing hold entity end date is earlier than the new hold entity end date, the system does not consider and update the end date of such hold entities. However, if the existing hold entity end date is later than the new hold entity end date, the system considers and updates the end date of such hold entities.
- Similarly, the system checks whether the existing hold process end date is earlier than the new hold entity end date. If the existing hold process end date is earlier than the new hold entity end date, the system does not consider and update the end date of such hold processes. However, if the existing hold process end date is later than the new hold entity end date, the system considers and updates the end date of such hold processes.

4. Click **Save**.
The end date of the hold entities in a hold request is updated to the specified date.

For example, a hold request exists with the following hold processes and hold entities:

	Original Start Date	Original End Date
Hold Request	01-01-2021	12-31-2021
Hold Process: Billing	01-01-2021	12-31-2021
Hold Process: Auto Pay	01-01-2021	06-30-2021
Account 1	01-01-2021	12-31-2021
Account 2	01-20-2021	03-31-2021
Account 3	04-04-2021	10-30-2021

Now, if you want to mass update the hold entity end date to 09-30-2021 on 04-01-2021, the system updates the hold entity, hold process, and hold request end dates as shown in the following table:

Copyright © 2009, 2025, Oracle and/or its affiliates.

	Original Start Date	Original End Date
Hold Request	01-01-2021	09-30-2021
Hold Process: Billing	01-01-2021	09-30-2021
Hold Process: Auto Pay	01-01-2021	06-30-2021
Account 1	01-01-2021	09-30-2021
Account 2	01-20-2021	03-31-2021
Account 3	04-04-2021	09-30-2021

Deleting an Entity from a Hold Request

Procedure

To delete an entity from a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Select the check box corresponding to the hold entity that you want to delete in the **Hold Entities** zone.

> **Note:** You can also select multiple hold entities at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all the hold entities listed in the respective page.

4. Click **Delete**.
   A message appears confirming whether you want to delete the hold entity.

> **Note:** The **Delete** button appears when the hold request is in the **Draft** or **Active** status. However, the system enables you to delete an entity from the hold request only when it is in the **Draft** status. Also, the entity (i.e., bill or account) added from the **Account Receivable Central** or **Delinquency Central** screen, respectively, cannot be deleted from the hold request even when it is in the **Draft** status.

5. Click **OK**.
   The hold entities are deleted from the hold request.

Submitting a Hold Request

Prerequisites

To submit a hold request, you should have:

- Hold Request Types, Hold Processes and Hold Entities defined in the request.

Procedure

To submit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request that you want to submit.
   The **Hold Request** screen appears.
3. Click the **Submit** button in the **Hold Request** zone.
   The system behaves in the following manner:

If...	Then...
The **Approval Required** check box is selected in the hold request type using which the hold request is created.	A To Do of the **C1-HLDAP** To Do type is created and sent to the approver and the status of the hold request is changed to **Approval In Progress**.
The **Approval Required** check box is not selected in the hold	The hold request is created using the specified hold request types and the status of the hold request is changed to **Active** or **Deferred Processing** as specified in the hold request type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

If...	Then...
request type using which the hold request is created.	

Note:

The **Submit** button appears when the hold request is in the **Draft** status.

Once the request is activated, the **Release** button appears in the **Record Actions** section.

If the hold request is in the **DRAFT** status and the start date is past dated, then on the activation of the hold request the start date is changed to the system date.

If an hold request is in the **Active** status, the **C1-DELBI** batch will delete all the pending bill segments and bills under the account for the bill generation process. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

On submitting a hold request, the system checks whether the number of entities is less than or equal to the defer processing count. If the number of entities is less than or equal to the defer processing count the system does the following:

If…	Then...
The hold request is created for an account, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set in the **Bill After** field for the respective account.
	Note: The **Bill After** field appears in the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set in the **Postpone Credit Review Until** field for the respective account.
	Note: The **Postpone Credit Review Until** field appears in the **C & C** tab of the **Account** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set in the **Defer Auto Pay Date** field for the respective account.
	Note: The **Defer Auto Pay Date** field appears in the **Auto Pay** tab of the **Account** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than the batch business date	The automatic payment details are updated in the **CI_BILL_ACH** table.
The hold request end date is earlier than the batch business date	The status of the hold request is changed to **Released**. In addition, the entity end date and process end date is set to the hold request end date when the entity end date or process end date is either not specified or is a future date.

Approving a Hold Activation Request

You can view the number of hold requests which are pending for approval in the **Hold Request** screen. The approver can review, and accordingly approve, reject or resubmit the hold request based on the observations.

Note: The system will not allow you to approve, reject or resubmit a hold request submitted by you.

Procedure

To approve a hold request:

1. Do either of the following:

If you want to...	Then...
Approve a hold request through the Hold Request screen	**a.** Search for the hold request in the **Hold Request** screen. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.
Approve a hold request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-HLDAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

   The **Hold Request** screen appears.
2. Review the hold request details.
3. Click the **Approve** button in the **Hold Request** zone.

   The system behaves in the following manner:

Copyright © 2009, 2025, Oracle and/or its affiliates.

If you are...	Then...
Approving a Hold request	The status of the hold request is changed to **Active** or **Deferred Processing** as specified in the hold request type.

Note:

The **Approve** button appears when the hold request is in the **Approval In Progress** status.

You can also resubmit the hold request if any changes are required in the hold request. Upon clicking the **Re Submit** button, provide the comments to make the required changes for the hold request.

On approving a hold request, the system checks whether the number of entities is less than or equal to the defer processing count. If the number of entities is less than or equal to the defer processing count the system does the following:

If…	Then...
The hold request is created for an account, the bill generation process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set in the **Bill After** field for the respective account. **Note:** The **Bill After** field appears in the **Main** tab of the **Account** screen.
The hold request is created for an account, the overdue process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set in the **Postpone Credit Review Until** field for the respective account. **Note:** The **Postpone Credit Review Until** field appears in the **C & C** tab of the **Account** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity start date in the hold request is earlier than or equal to the batch business date	The entity end date or process end date whichever is earlier is set in the **Defer Auto Pay Date** field for the respective account. **Note:** The **Defer Auto Pay Date** field appears in the **Auto Pay** tab of the **Account** screen.
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than the batch business date	The automatic payment details are updated in the **CI_BILL_ACH** table.
The hold request end date is earlier than the batch business date	The status of the hold request is changed to **Released**. In addition, the entity end date and process end date is set to the hold request end date when the entity end date or process end date is either not specified or is a future date.

Approving a Hold Release Request

Procedure

To approve a hold release request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.
   The **Hold Request** screen appears.
3. Click the **Approve** button in the **Hold Request** zone.
   The status of the hold request is changed to **Released**.

> **Note:**
>
> The **Release** button appears only when the hold request is in the **Release Approval in Progress** status.
>
> Once the hold request is in the **Released** status, the **End Date** of various hold processes and entities gets updated.

On releasing a hold request, the system checks whether the number of entities is less than or equal to the defer processing count. If the number of entities is less than or equal to the defer processing count the system does the following:

If…	Then…
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The automatic payment details are updated in the **CI_BILL_ACH** table.

Releasing a Hold Request

Procedure

To release a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request whose details you want to edit.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **Hold Request** screen appears.

3. Click the **Release** button in the **Hold Request** zone.
   The **Release Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Release Reason	Used to indicate the reason for releasing the hold request.	Yes
Comments	Used to specify additional information while releasing the hold request.	No

Note: The **Release** button appears when:

- The **Release** button appears only when the hold request is in the **Active** status.
- Once the hold request is in the **Released** status, the **End Date** of various hold processes and entities gets updated.

4. Select the release reason from the **Release Reason** list.
5. Click **Save**.
   The status of the hold request is changed to **Released**.

   On releasing a hold request, the system checks whether the number of entities is less than or equal to the defer processing count. If the number of entities is less than or equal to the defer processing count the system does the following:

If…	Then…
The hold request is created for an account, the auto pay process is on hold, and the entity end date in the hold request is earlier than or equal to the batch business date	The automatic payment details are updated in the **CI_BILL_ACH** table.

Rejecting a Hold Activation Request

Prerequisites

To reject a hold activation request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a hold request, you need to specify the reason why you want to reject the hold request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-HoldRequest** business object in the **Status Reason** screen.

The system will not allow you to approve, reject or resubmit a hold request submitted by you.

Procedure

Copyright © 2009, 2025, Oracle and/or its affiliates.

To reject a hold request:

1. Do either of the following:

If you want to	Then
Reject a hold request through the Hold Request screen	**a.** Search for the hold request in the **Hold Request** screen. **b.** In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request which you want to review.
Reject a hold request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-HLDAP** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the hold request that you want to review.

   The **Hold Request** screen appears.
2. Review the hold request details.
3. Click the **Reject** button in the **Hold Request** zone.

   The **Reject Hold Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the hold request.	Yes
Comments	Used to specify additional information while rejecting the hold request.	No

Note: The **Reject** button appears when:

- The hold request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the hold request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the hold request is changed to **Rejected**.

Related Topics

Discarding a Hold Request

Prerequisites

To discard a hold request, you should have:

- Reasons defined for the **Discarded** status of the **C1-HoldRequest** business object in the **Status Reason** screen

Procedure

To discard a hold request:

1. Search for a future dated active hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request that you want to discard.
   The **Hold Request** screen appears.
3. Click the **Discard** button in the **Hold Request** zone.

   The **Discard Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discard Reason	Used to indicate the reason why you want to discard the hold request. **Note:** The list includes only those reasons which are defined for the **Discarded** status of the **C1-HoldRequest** business object through the **Status Reason** screen.	Yes
Comments	Used to specify additional information while discarding the hold request.	No

Note:

The **Discard** button appears when the following conditions are met:

- The hold request is future dated (i.e. when the hold request start date is later than the system date).
- The hold request is in the **Active** status.

4. Select the reason for rejecting the hold request from the **Discard Reason** list.
5. Enter the comments (if any) while discarding the hold request in the respective field.
6. Click **Save**.
   The status of the hold request is changed to **Discarded**. Note that the hold request end date, hold entity end date, and the hold process end date are not changed to the date when the hold request is discarded.

Resubmitting a Hold Activation Request

Prerequisites

To resubmit a hold activation request, you should have:

- Entities added in the hold request which is submitted for approval.

While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the hold request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

Procedure

To resubmit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *h*old request that you want to resubmit.
   The **Hold Request** screen appears.
3. Click the **Re Submit** button in the **Hold Request** zone.

   The **Resubmit Hold Request** screen appears.

   Note:

   The **Re Submit** button appears when the hold request is in the **Approval In Progress** status.

   A To Do of the **C1-HOLSB** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the hold request is changed to **Active**.

4. Enter the comments in the **Release Reason** window and click **Save**.
   The hold activation request is resubmitted.

Chapter 26

Delinquency Central

Topics:

- Prerequisites
- Delinquency Central (Used for Viewing)
- Overdue Process Information for Account: {Account ID}

Oracle Revenue Management and Billing provides a complete overview of the overdue bills belonging to the delinquent accounts of a particular person using the **Delinquency Central**. User can review the overdue bills and perform following actions from the delinquency central:

- Initiate customer contact
- Initiate hold on overdue process
- Create payment arrangement for an account
- Create promise to pay for person's account

The Delinquency Central assists you in identifying all the overdue processes, overdue bills & delinquent accounts using an overdue monitoring process.

For more information on how to setup the delinquency central, see Prerequisites on page 1648.

Related Topics

Delinquency Central screen	Delinquency Central (Used for Viewing) on page 1648
Overdue Process Information for Account: {Account ID}	Overdue Process Information for Account: {Account ID} on page 1655

Prerequisites

To setup delinquency central, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to overdue event.
- Define the overdue event type and overdue process template in the system.
- Promise To Pay type defined in the application.
- Customer contact type defined in the application.
- Hold request type defined in the application.

Delinquency Central (Used for Viewing)

The **Delinquency Central** screen allows you to:

- Search for an overdue process
- View the details of an overdue process
- View the details of an overdue event
- Create customer contact
- Create a hold request for an overdue process
- Create a payment arrangement for an account
- Create a promise to pay for a person's account
- Create a payment agreement request for an account

This screen consists of the following zones:

- Search Overdue Process on page 1648
- Overdue Events on page 1653

Search Overdue Process

The **Search Overdue Process** zone allows you to search for overdue processes using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for overdue processes using person, account, bill or overdue process. The valid values are: • Person • Account • Bill • Overdue Process **Note:** By default, the **Person** option is selected.	No
Person ID	Used to search for overdue processes which belong to a particular person.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Person** option from the **Search By** list.	
Person Identifier Type	Used to search for overdue processes with a particular person identifier type. **Note:** This field appears when you select the **Person** option from the **Search By** list.	Yes (Conditional) **Note:** If you enter the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search for overdue processes with a specific value of the person identifier type. **Note:** This field appears when you select the **Person** option from the **Search By** list.	Yes
Account ID	Used to search for overdue processes created for a particular account. **Note:** This field appears when you select the **Account** option from the **Search By** list.	No
Account Identifier Type	Used to search for overdue processes with a particular account identifier type. **Note:** This field appears when you select the **Account** option from the **Search By** list.	Yes (Conditional) **Note:** If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search for overdue processes with a particular account identifier. **Note:** This field appears when you select the **Account** option from the **Search By** list.	Yes
Bill ID	Used to search for overdue processes with a particular bill. **Note:** This field appears when you select the **Bill** option from the **Search By** list.	No
Alternate Bill ID	Used to search for overdue processes using an alternate bill ID. **Note:** This field appears when you select the **Bill** option from the **Search By** list.	No
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and its value.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Bill** option from the **Search By** list.	
Overdue Process Template	Used to search for overdue processes with a particular overdue process template. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
Start Date	Used to search for overdue processes with a particular start date. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	Yes
End Date	Used to search overdue process with a particular end date. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	Yes
Status	Used to search for overdue processes with a particular status. The valid values are: • Active • Inactive **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
On Hold	Used to search for overdue processes that are on hold. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
Overdue Amount From	Used to search for overdue processes with a particular lower limit of the overdue amount. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
To	Used to search for overdue processes with a particular higher limit of the overdue amount. **Note:** This field appears when you select the **Overdue Process** option from the **Search By** list.	No
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and value.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you select the **Overdue Process** option from the **Search By** list.	

- In addition to above search parameters, the screen consists of following fields in the **Person Details** or **Account Details** section:

Column Name	Column Description
Main Customer	Displays the name of the main customer to whom the account belongs. **Note:** This field appears when you select the **Account** option from the **Search By** list.
Person Name	Displays the name of the person to whom the account belongs. **Note:** This field appears when you select the **Person** option from the **Search By** list.
Person Identifier Type	Displays the person identifier type. **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Person Identifier	Displays the value of the person identifier type. **Note:** This field appears when you select the **Person** or **Account**option from the **Search By** list.
Account Identifier Type	Displays the account identifier type. **Note:** This field appears when you select the **Account** option from the **Search By** list.
Account Identifier	Displays the value of the account identifier type. **Note:** This field appears when you select the **Account** option from the **Search By** list.
Overdue	Displays whether the person account(s)/bill(s) are overdue. The valid values are: • Yes • No **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Active Overdue processes	Displays the number of overdue processes linked to the person's account that are in active status. **Note:** This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Hold(s) on Account(s)	Displays the number of hold requests on the particular account.
Number of Overdue Bills	Displays the total number of bills that are overdue.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Total Overdue Amount	Displays the total overdue amount for an account.
Last Payment Date	Displays date of the last payment made by the person.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Last Payment Amount	Displays the amount last paid by the person.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number Of Payment Arrangements	Displays the number of payment arrangements for the person's account.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Total Number of Overdue Process on Hold	Displays the total number of overdue process that are on hold.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Promise To Pay	Displays the number of promise to pay belonging to the person.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.
Number of Broken Promise To Pay	Displays the total number of promise to pay that are broken.
	Note: This field appears when you select the **Person** or **Account** option from the **Search By** list.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Overdue Process	Display additional information about the overdue process.
	Note: It has a link. On clicking the link, the **Overdue Process** screen appears where you can view the details of the overdue process.
Overdue Process Template	Displays the template that was used to create overdue process's events.
Account Information	Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.

Searching for an Overdue Process

Prerequisites

To search for an overdue process, you should have:

- Overdue process defined in the application.

Procedure

To search for an overdue process:

1. Click the **Menu** link in the **Application** toolbar
2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.
   The **Delinquency Central** screen appears.
3. Enter the search criteria in the **Search Overdue Process** zone.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of overdue processes that meet the search criteria appear in the **Search Results** section.

Person Information

The **Person Information** zone displays details of the person whose account is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Person Name	Displays the name of the person whose account is linked to the overdue process.
Phone Number	Displays the phone number of the person.
Address	Displays the address of the person.

Account Information

The **Account Information** zone displays the details of the account that is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Last Payment Date	Displays the date of the last payment made from the account that is linked with the overdue process.
Last Payment Amount	Displays the amount last paid from the account.

Customer Contact Details

The **Customer Contact Details** zone displays the contact details of the customer whose account is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Contact Date/Time	Displays the date and time when the customer was contacted.
Customer Contact Information	Displays additional information about the customer contact.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Customer Contact** screen appears where you can view the details of the respective customer contact.
Preferred Contact Method	Displays the preferred method of contacting the customer.
Comments	Displays the comments that are placed against each customer.

Promise To Pay

The **Promise To Pay** zone displays promise to pay created for an account which is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Promise To Pay Information	Displays additional information of promise to pay.
	Note: It has a link. On clicking the link, the **Promise To Pay** screen appears where you can view the details of promise to pay.
Scheduled Amount	Displays the amount to be paid on the **Scheduled Date**.
Scheduled Date	Displays the date when the payment is expected as per promise to pay.
Status	Displays the status of promise to pay.
Created By	Displays the user ID who has created the promise to pay.

Hold Details

The **Hold Details** zone displays the details of the person whose account is linked to the overdue process. This zone contains the following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request.
	Note: It has a link. On clicking the link, the **Hold Request** screen appears where you can view the details of the hold request.
Status	Displays the status of the hold request.
Entity	Displays the hold request entity.
Entity Information	Displays the information about the entity on hold.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **Account**, **Bill** or **Person** screen appears, where you can view details of the respective account, bill or person.
Start Date	Displays the date when the hold request is created.
End Date	Displays the end date of the hold request.

Overdue Bills

The **Overdue Bills** zone displays details of the overdue bills. This zone contains following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill.
	Note: It has a link. On clicking the link, the **Bill** screen appears where you can view the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Due Date	Displays the due date of the bill.
Overdue Amount	Displays the amount that is overdue in the bill.
Days Past Due	Displays the number of days past after the bill date.

Payment Arrangement

The **Payment Arrangement** zone displays the details of the payment arrangement that is created for an account linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Contract Information	Displays the payment arrangement contract information . In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Contract** screen appears where you can view the details of the respective contract.
Payoff Balance	Displays the total amount that is paid against the payment arrangement contract.
Arrange Amount	Displays the amount that is paid in installments as per the payment arrangement contract.
Number of Installments	Displays the number of installments used to calculate the **Arrange Amount**.

Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following fields:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the name of the person for whom the bill is generated.	No
Person ID	Used to specify the person ID.	No
Bills of Persons in Hierarchy	Used to indicate whether you want to search for a bills generated against a person's hierarchy.	No
Bill Cycle	Used to indicate bills where a particular bill cycle is defined.	No
Bill Currency	Used to indicate the bill currency.	No
Billing Method	Used to indicate the billing method. The valid values are: • Ad-Hoc Billing • Regular Billing	No
Bill ID	Used to specify the bill ID.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Account ID	Used to indicate the account against which the bill is generated.	No
On or After Bill Date	Used to specify the date when the bill was completed.	No
Account Identifier Type	Used to search for bills where the account against which it is generated, a particular account identifier type is defined.	No
Account Identifier	Used to search for a bill generated against an account with a particular account identifier.	No

Note: You must specify at least one search criterion while searching for the bill.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Name	Displays the name of the person against whom the bill is generated.
Bill ID	Displays the bill ID.
Bill Status	Displays the status of the bill. The valid values are: • Pending

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	• Complete
Bill Date	Displays the date when the bill was completed.
Due Date	Displays the due date of the bill.
Current Charges	Displays the bill amount.
Bill Information	Displays additional information about the bill.

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Delinquency Management** and then click **Delinquency Central**.
   The **Delinquency Central** screen appears.
3. Select the **Bill** option from the **Search By** list.

> **Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
   A list of bills that meet the search criteria appear in the **Search Results** section.

Chapter 27

Upload Request

Topics:

- Prerequisites
- Upload Request (Without Approval) Status Transition
- Upload Request (With Approval) Status Transition
- Defer Upload Request Validation
- Billable Charge Upload for Fully Insured Group and Individual Business
- Algorithms Used in C1-BillCycleUpdateUplReq
- Algorithms Used in C1-ContractRiderUpdateUplReq
- Algorithms Used in C1-HoldUploadRequest
- Algorithms Used in C1-RefundUploadRequest
- Algorithms Used in C1-WriteOffUploadRequest
- Algorithms Used in C1-BillableChargeUploadRequest (Financial Services)

- Algorithms Used in C1-ReinstatementUploadRequest
- Algorithms Used in C1-BillGrpSortUploadRequest
- Algorithms Used in C1-BillLevelUploadRequest
- Algorithms Used in C1-TndrCnclUploadRequest
- CSV File Format for Account Bill Cycle Upload Request
- Sample CSV File for Account Bill Cycle Upload Request

Oracle Revenue Management and Billing provides a generic upload feature which enables you to upload various types of data. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

While uploading data for the above supported entities, you need to specify the upload request type using which you want to upload the file. It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can upload a data file in the CSV format. You cannot upload data for more than one entity type through the same CSV file. For example, you cannot upload data for billable charges and hold requests using a single CSV file. An upload request of the specified upload request type is created when the file is successfully uploaded in the system. You can track a file through an upload request.

Once an upload request is created, the status of the upload request is set to **Draft**. The status of each record uploaded through an upload request is set to **Pending**. However, if the mandatory data is not available or data required for deriving mandatory data is incorrect in the record, the status of record is set to **Invalid**. You can then edit, delete, or validate the upload request. During the validation process, the system and custom validations (if any) are executed. The status of each record is changed to **Valid** or **Invalid** depending on whether the record was validated successfully or not.

- CSV File Format for Contract Rider Upload Request
- Sample CSV File for Contract Rider Upload Request File
- CSV File Format for Billable Charge Creation (Financial Services)
- Sample CSV File for Billable Charge Creation (Financial Services)
- CSV File Format for Hold Request Creation
- Sample CSV File for Hold Request Creation
- CSV File Format for Refund Request Creation
- Sample CSV File for Refund Request Creation
- CSV File Format for Write Off Request Creation
- Sample CSV File for Write Off Request Creation
- CSV File Format for Reinstatement Upload Request
- Sample CSV File for Reinstatement Upload Request
- CSV File Format for Bill Group Sorting Upload Request
- Sample CSV File for Bill Group Sorting Upload Request
- CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request
- Sample CSV File for Bill Group Derivation and Pricing Parameters Upload Request
- CSV File Format for Billable Charge Creation (Fully Insured Individual)
- Sample CSV File for Billable Charge Creation (Fully Insured Individual)
- CSV File Format for Billable Charge Creation (Fully Insured Group)
- Sample CSV File for Billable Charge Creation (Fully Insured Group)
- CSV File Format for Payment Tender Cancellation

Once the upload request is validated, you can either cancel or submit the upload request for further processing. On submitting an upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked).

You can optionally configure the system to use the approval workflow process for an upload request. If the **Approval Required** flag is set to **Yes** in an upload request type, then on submitting the respective upload request, the approval workflow process creates a To Do for the approver to review the upload request. Once the approver approves the upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. However, if the approver rejects the upload request, the status of the upload request is set to **Rejected**.

During the upload process, an upload request goes through various statuses in its lifecycle. Note that the lifecycle of an upload request is driven by the business object using which the upload request is created. In this release, we have shipped the following upload request business objects:

- Update Bill Cycle Upload Request (C1-BillCycleUpdateUplReq)
- Billable Charge Upload Request (C1-BillableChargeUploadRequest)
- Update Contract Rider Upload Request (C1-ContractRiderUpdateUplReq)
- Hold Request Upload Request (C1-HoldUploadRequest)
- Refund Request Upload Request (C1-RefundUploadRequest)
- Write Off Request Upload Request (C1-WriteOffUploadRequest)
- Reinstatement Upload Request (C1-ReinstatementUploadRequest)
- Bill Group Sorting Upload Request (C1-BillGrpSortUploadRequest)
- Bill Group Derivation and Pricing Parameters Upload Request(C1-BillLevelUploadRequest)

During the upload request process, an upload request creation goes through various statuses in its lifecycle. For more information about the upload request statuses, see Upload Request (Without Approval) Status Transition on page 1667 and Upload Request (With Approval) Status Transition on page 1668.

Note: The lifecycle of an upload request creation is driven by the respective business object using which the request is created. The upload request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the upload request process, see Prerequisites on page 1666.

Prerequisites

To setup the upload request process, you need to do the following:

- Define the required upload request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the values for the following parameters in the **C1-REN-VALID** algorithm:
  - Policy Status after Processing Reinstatement Upload Request
  - Policy Reinstatement Status for Reason Verification
- Define the value for the **Online Record Process Limit** parameter in the **C1-DEFERUPLD** algorithm.
- Define the value for the **Policy Status after Processing Reinstatement Upload Request** parameter in the **C1-REN-PROC** algorithm.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive the To Do for approving a bill cycle update upload request.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive the To Do for approving a contract rider update upload request.
- Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive the To Do for approving a hold upload request.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive the To Do for approving a refund upload request.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive the To Do for approving a write off upload request.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive the To Do for approving a billable charge upload request.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive the To Do for approving a reinstatement upload request.
- Create a To Do type named **C1-BGSRT** using the following information:
  - **Navigation Option** - c1upldrqTabMenu
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

  - **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive the To Do for approving a bill group sorting upload request.
- Create a To Do type named **C1-BGDVP** using the following information:
  - **Navigation Option** - c1upldrqTabMenu
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

  - **Drill Keys** - Define the following drill keys for the To Do type:

Copyright © 2009, 2025, Oracle and/or its affiliates.

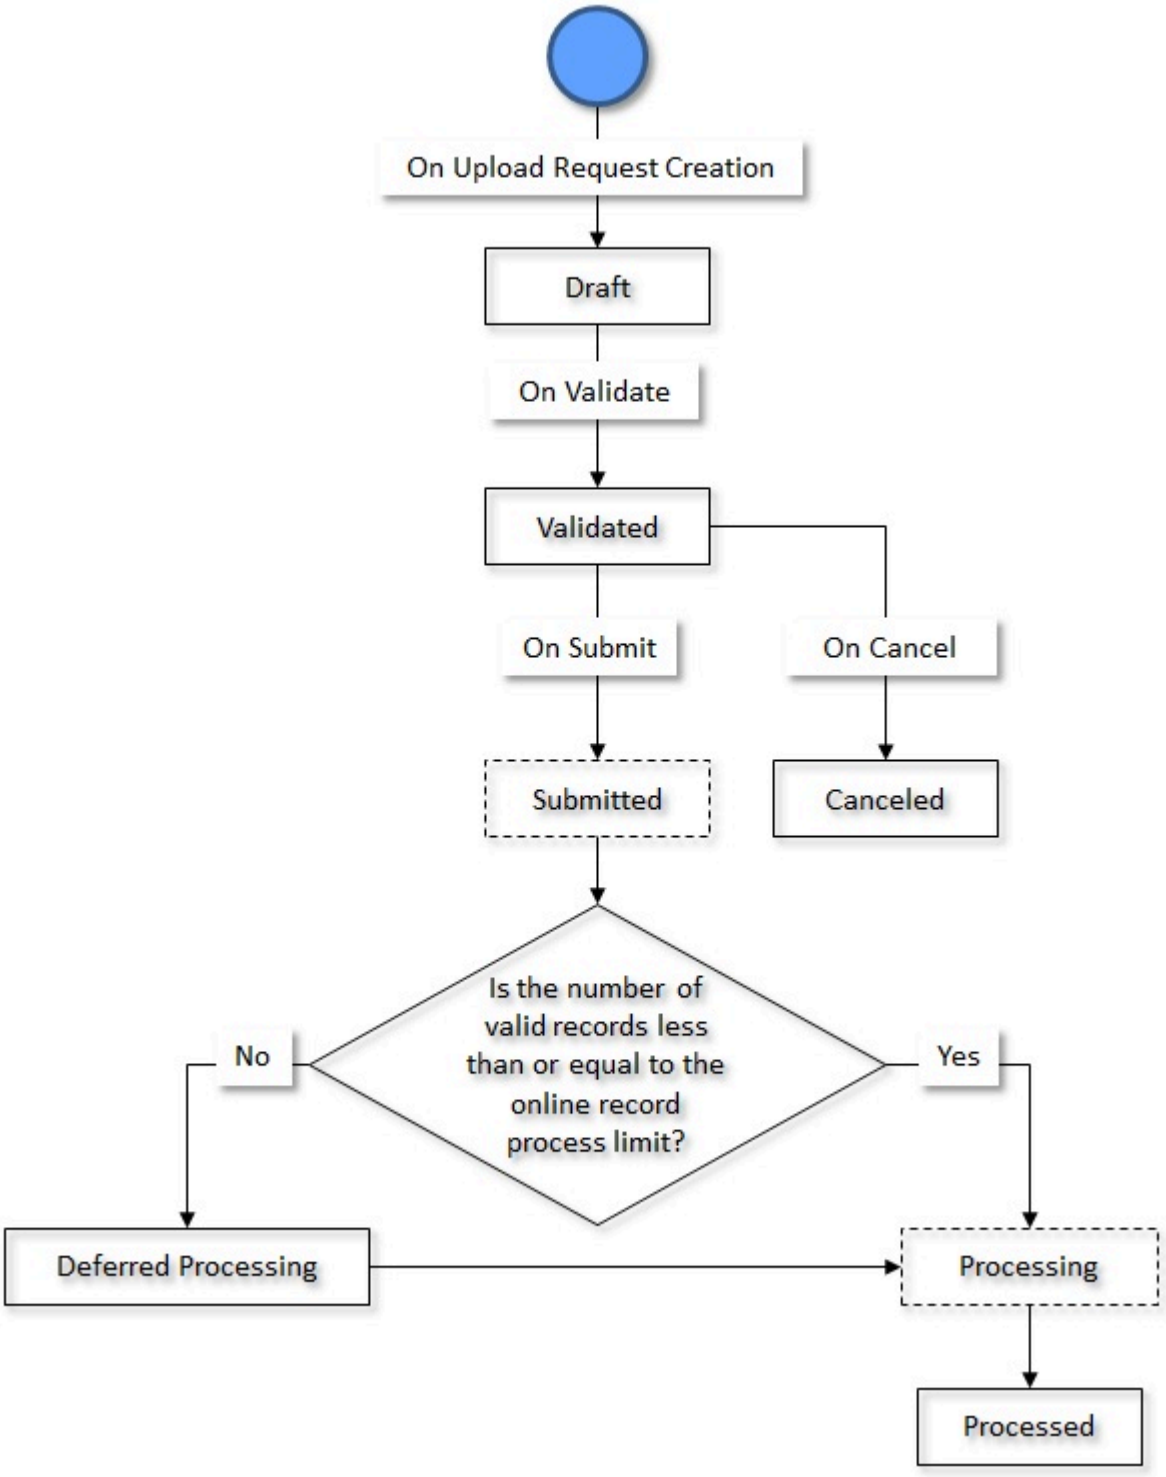
Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive the To Do for approving a bill group derivation and pricing parameters upload request.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is off:

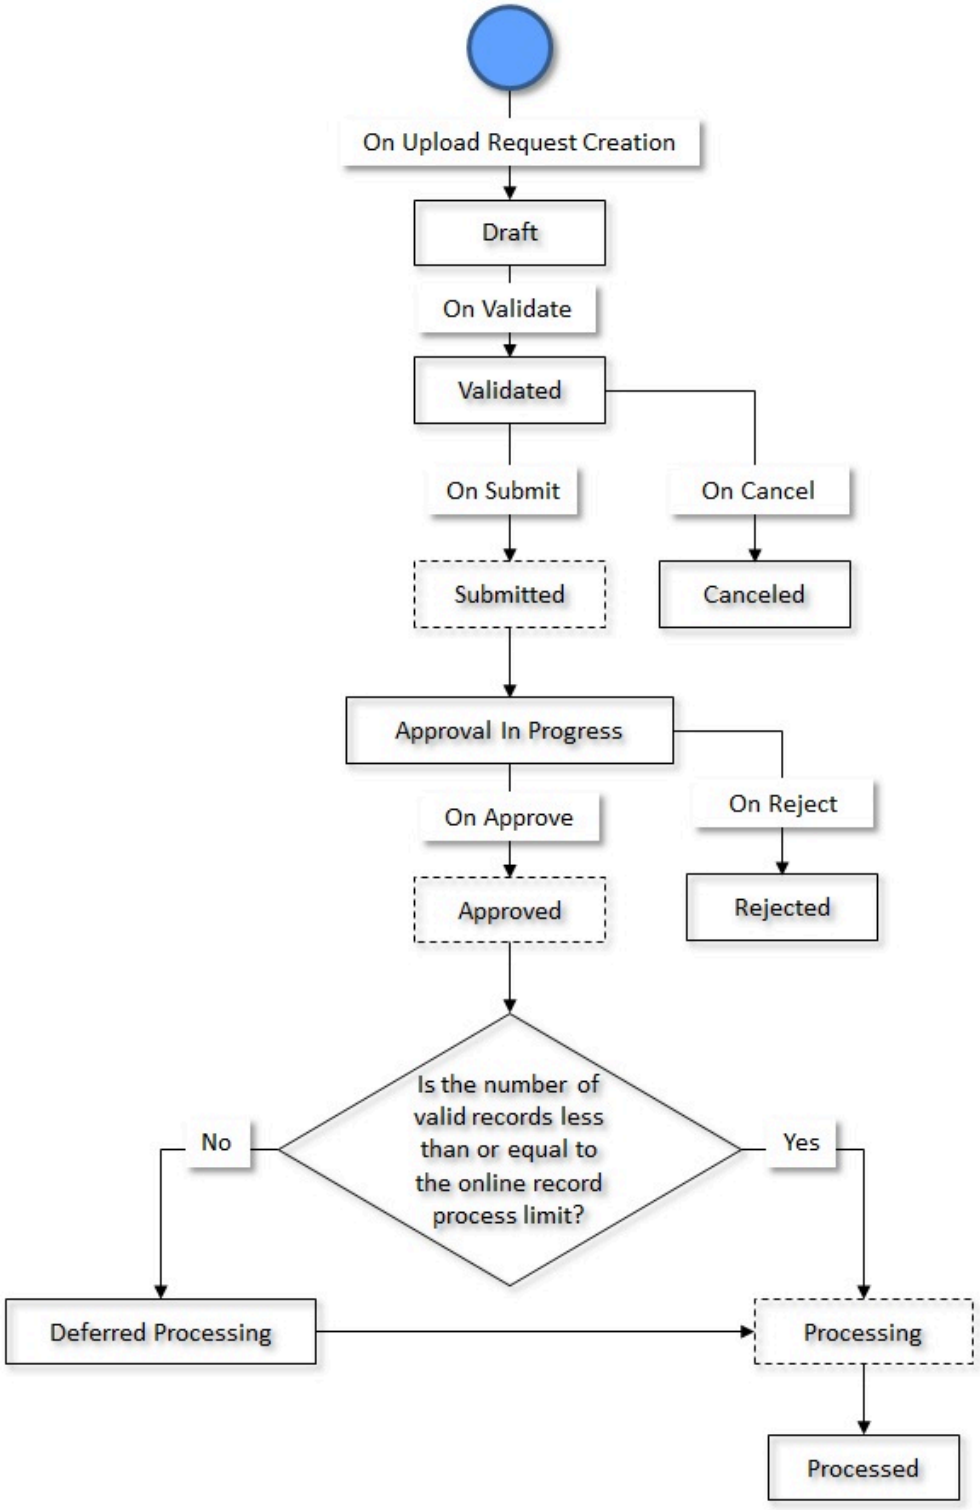
Copyright © 2009, 2025, Oracle and/or its affiliates.



Upload Request (With Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is on:

Copyright © 2009, 2025, Oracle and/or its affiliates.



Defer Upload Request Validation

Until now, the system enabled you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Refund Request
- Write Off Request
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

The system faced performance issues while validating a CSV file uploaded through the Upload Request feature when the CSV file had voluminous records. Therefore, now the system has introduced defer processing mechanism while validating a CSV file. The defer processing mechanism for the validation process is introduced for the following business objects:

- C1-BillableChargeUploadRequest
- C1-HoldUploadRequest
- C1-RefundUploadRequest
- C1-WriteOffUploadRequest
- C1-BillLevelUploadRequest

Two new statuses named **Validating** and **Deferred Validation** are added in the lifecycle of the above business objects. Now, when you click the **Validate** button, the system changes the status of the upload request to **Validating**. The system then invokes the **C1-DEFERVALD** algorithm which is attached to the **Validating** status. It checks whether the total number of records in the upload request exceeds the online record validate limit defined in the **C1-DEFERVALD** algorithm. If the total number of records in the upload request does not exceed the online record validate limit, all records in the upload request are validated immediately and its record status is changed to **Valid** or **Invalid** depending on whether it is successfully validated or not. Finally, the status of the upload request is changed to **Validated**.

However, if the total number of records in the upload request exceeds the online record validate limit, the status of the upload request is changed to **Deferred Validation**. On executing the **C1-UPLRQ** batch, the system checks whether there are any upload requests in the **Deferred Validation** status. If there is an upload request in the **Deferred Validation** status, all records in the upload request are validated in the deferred mode and its record status is changed to **Valid** or **Invalid** depending on whether it is successfully validated or not. Finally, the status of the upload request is changed to **Validated**.

Billable Charge Upload for Fully Insured Group and Individual Business

Until now, the system enabled you to create an upload request for billable charge creation using the **C1-BillableChargeUploadRequest** business object. However, this business object was not supported to create billable charges at the policy plan, health plan, group membership, and individual membership levels.

A health insurance customer may want to adjust revenue through billable charges at the membership or plan level. Also, for a bill group, there can be multiple contracts of the same contract type for each policy plan on the bill group's accounts. Therefore, until now, the billable charges were manually created from the user interface as the above business object was not supported to create mass billable charges for the fully insured group and individual lines of business. Now, a new business object named **C1-BillableChargeUploadFI** is introduced in this release. It enables you to create billable charges at the policy plan, health plan, group membership, and individual membership levels. In addition, the system now derives the appropriate contract against which the billable charge should be created at the membership or plan level.

You need to create an upload request type for the **C1-BillableChargeUploadFI** business object. You can then upload a billable charge creation file in the CSV format using the respective upload request type. The billable charge creation file should contain records with the following additional information apart from the basic details – Source System, Policy Number, Plan Number, Health Plan Code, Subscriber Identifier Type, Subscriber Identifier, Membership Type, External Membership ID.

When the contract ID is not specified, the system uses the source system, policy number, plan number combination to derive the contract against which the billable charge should be created for the policy plan. Similarly, the system uses the health plan code to derive the contract against which the billable charge should be created for the health plan. And, when the **C1MMBRSH** characteristic is not specified in the record, the system uses either of the following to derive the group or individual membership against which the billable charge should be created:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Subscriber Identifier Type and Subscriber Identifier
- Membership Type
- External Membership ID

Once you upload a billable charge creation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. If the mandatory data is missing in any record, the corresponding data record is created in the **Invalid** status. In addition, if the system could not derive the account ID, policy plan ID, and contract ID, the corresponding data record is created in the **Invalid** status. Once the pending records are validated, the status of the data record is changed to either **Valid** or **Invalid**. On processing a valid record, the system does the following:

- Create a billable charge for the membership or plan.
- Stamps the respective membership ID or plan ID as a characteristic on the billable charge.

If the data record is successfully processed, the status of the data record is changed to **Processed**. However, if any error occurs while creating a billable charge, the status of the data record is changed to **Error**.

Algorithms Used in C1-BillCycleUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-BillCycleUpdateUplReq** business object:

C1-BCU-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**. It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BCU-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the account ID and bill cycle specified in the record are valid. If the account ID and bill cycle are valid and if the bill cycle is associated with the division to which the account belongs, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the account ID is invalid, it derives the account ID

Copyright © 2009, 2025, Oracle and/or its affiliates.

using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill cycle is invalid, or if the bill cycle is not associated with the division to which the account belongs, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It also checks whether there are two or more records with the same account ID. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BCU-PROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record, the system reads the account ID and bill cycle, and updates the bill cycle information of the account using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Algorithms Used in C1-ContractRiderUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-ContractRiderUpdateUplReq** business object:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CR-DERIV	C1-CR-DERIV	Refer to C1-CR-DERIV on page 1675.

Processed	-	-	-	-

C1-CR-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**. It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-CR-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the account ID, contract ID, contract type, and bill factor specified in the record are valid. If the account ID, contract ID, contract type, and bill factor are valid, if the specified contract belongs to the account, and if the **Contract Rider Applicability** flag on the bill factor is set to **Y**, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the

Copyright © 2009, 2025, Oracle and/or its affiliates.

account ID using the account identifier type and account identifier combination, or if the bill factor is invalid, or if the specified contract does not belong to the account, or if the **Contract Rider Applicability** flag on the bill factor is set to **N**, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It also checks whether there are two or more records with the same account ID and contract type combination. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-CR-PROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record, the system reads the account ID and contract ID, and updates the contract rider information of the contract using the entity business object defined in the upload request type. If the contract ID is not specified in the record, then the system derives the active contract of the specified contract type on the account, and then updates the contract rider information of the contract. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Algorithms Used in C1-HoldUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldUploadRequest** business object:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description

C1-HLD-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.If the hold entity is **ACCT** and the entity ID is not specified in the record, it derives the account ID using the account identifier type and account identifier combination. Similarly, if the hold entity is **PERS** and the entity ID is not specified in the record, it derives the person ID using the person identifier type and person identifier combination. Once the account ID or person ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-HLD-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is **valid**. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**.If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the **person ID** using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to Invalid. It also checks whether there are two or more records with the same entity ID. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background).

Copyright © 2009, 2025, Oracle and/or its affiliates.

If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-HLD-PROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the hold request type, start date, end date, hold reason, hold entity, hold entity start date, hold entity end date, comments, hold process details, and hold characteristic details, it creates one hold request using the entity business object defined in the upload request type. However, if there are multiple entity IDs with the same combination, all are added in the same hold request. The hold request is created in the **Draft** status and then transitioned to **Submit**. From the **Submit** status, the status of the hold request is either changed to **Approval In Progress** or **Active** depending on whether the **Approval Required** flag is set to **Yes**. If the number of bills of the entities which are kept on hold through the hold request does not exceed the defer processing count (defined in the hold request type), the status of the hold request is changed to **Active**. However, if the number of bills of the entities which are kept on hold through the hold request exceeds the defer processing count, the status of the hold request is changed to **Deferred Processing**. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

C1-RF-DERIV

This algorithm reads the **BO_DATA_AREA** in the request's primary table, derives additional data that is required for creating refund requests and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-RF-VALID

This algorithm validates the data uploaded in an upload request for creating refund requests before the request is submitted for processing.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-RF-PROC

This algorithm fetches the list of records that are in **Valid** status for a given request ID and invokes the entity business object for creating the refund requests. If successfully processed, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Algorithms Used in C1-WriteOffUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-WriteOffUploadRequest** business object:

C1-WO-DERIV

This algorithm reads the **BO_DATA_AREA** in the request's primary table, derives additional data that is required for creating write off requests and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-WO-VALID

Information will be available shortly.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

  Note: The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-WO-PROC

This algorithm fetches the list of records that are in **Valid** status for a given request ID and invokes the entity business object for creating the write off requests. If successfully processed, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Algorithms Used in C1-BillableChargeUploadRequest (Financial Services)

C1-CRTUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-BC-DERIV

This algorithm reads the **BO_DATA_AREA** in the request's primary table, derives additional data that is required for creating billable charges and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BC-VALID

This algorithm validates the data upload in an upload request for creating billable charges before the request is submitted for processing.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Copyright © 2009, 2025, Oracle and/or its affiliates.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-BC-PROC

This algorithm fetches the list of records that are in **Valid**status for a given request ID and invokes the entity business object for creating billable charge on the contract. If successfully created, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

C1-CRTUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-BC-FIDER

This algorithm reads the **BO_DATA_AREA** in the request's primary table; derives additional data that is required for creating billable charges and inserts the records in **C1_UPLOAD_REQ_DTLS** table.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don’t specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-BCFI-VAL

This algorithm validates the data upload in an upload request for creating billable charges before the request is submitted for processing.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BC-PROC

This algorithm fetches the list of records that are in **Valid**status for a given request ID and invokes the entity business object for creating billable charge on the contract. If successfully created, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Algorithms Used in C1-ReinstatementUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-ReinstatementUploadRequest** business object:

C1-CRTUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-REN-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the policy ID using the source system and policy number combination whenever the policy ID is not specified in the record. Once the policy ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the policy ID using the source system and policy number combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-REN-VALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks whether the policy ID and reinstatement reason specified in the record is valid. If the policy ID and reinstatement reason are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the policy ID is invalid, it derives the policy ID using the source system and policy number combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the policy ID using the source system and policy number combination, or if the reinstatement reason is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It also checks whether there are two or more policies with the same policy ID. If so, it validates and changes the status of one record to **Valid** and the status of the remaining records is changed to **Invalid**. It contains the following parameters:

- **Policy Status after Processing Reinstatement Upload Request** - Used to specify the status to which you want to transition the policy when the reinstatement upload request is processed.
- **Policy Reinstatement Status for Reason Verification** - Used to validate the reinstatement reason. The reason should be a valid reason for the specified status.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BC-PROC

This algorithm fetches the list of records that are in **Valid**status for a given request ID and invokes the entity business object for creating billable charge on the contract. If successfully created, then the record status will be updated to **Processed**, otherwise the record status will be updated to **Error** and error details will be logged in the exception table.

Algorithms Used in C1-BillGrpSortUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillGrpSortUploadRequest** business object:

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-BLSRTUPLD

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLSRTDERV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill

Copyright © 2009, 2025, Oracle and/or its affiliates.

group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLSRTVALD

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group sort record.
- The end date is not earlier than the start date and the start date is not later than the end date.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group sort record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_BILL_LVL** table.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don’t specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background).

Copyright © 2009, 2025, Oracle and/or its affiliates.

If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-BLSRTPROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the bill group (person) ID and sort ID, it creates one bill group sort record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Algorithms Used in C1-BillLevelUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillLevelUploadRequest** business object:

C1-BLVUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-BLVLDERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLVLVALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group derivation and pricing parameters record.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group derivation and pricing parameters record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- The number of characters specified in each field does not exceed the maximum field length.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_BILL_LVL** table.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.
- The source system exists in the extendable lookup which is specified in the **Source System Extendable Lookup** parameter.
- The bill group sort record with the bill group ID and sort ID combination already exists in the system.
- The effective date specified in the record is within the date range of the effective bill group sort record.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It contains the following parameter:

- **Source System Extendable Lookup** - Used to specify the source system extendable lookup business object. The bill group derivation and pricing parameters records should contain the source system which is already defined in this extendable lookup.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

Copyright © 2009, 2025, Oracle and/or its affiliates.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-BLVLVLPRO

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date, it creates one bill group derivation and pricing parameters record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Algorithms Used in C1-TndrCnclUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-TndrCnclUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-TND-DERIV	C1-TND-DERIV	Refer to C1-TND-DERIV.
Validating	Enter	C1-DEFERVALD	C1-DEFERVALD	Refer toC1-DEFERVALD.
Deferred Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer toF1-AT-RQJ on page 1393.
Validated	Enter	C1-TND-VALID	C1-TND-VALID	Refer toC1-TND-VALID.
Canceled	-	-	-	-
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	Refer toC1-UPLSUBENT.
	Enter	C1-DEFERUPLD	C1-DEFERUPLD	Refer toC1-DEFERUPLD.
	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer toF1-AT-RQJ on page 1393.
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	Refer toC1-UPLAPPENT.
	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	Refer toC1-UPLAPPEXT.
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer toF1-TODOCOMPL on page 1280.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	Refer toC1-DEFERUPLD.
	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer toF1-AT-RQJ on page 1393.
Rejected	-	-	-	-
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer toF1-AT-RQJ on page 1393.
Processing	Enter	C1-TND-PROC	C1-TND-PROC	Refer toC1-TND-PROC .
	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to F1-AT-RQJ on page 1393.
Processed	-	-	-	-

C1-TND-DERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

C1-DEFERVALD

This algorithm is invoked when the user clicks the **Validating** button. It validates the records which are in the **Pending** status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. If the hold entity is **ACCT** and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is **PERS** and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the **C1_UPLOAD_REQ_DTLS** table to **Valid**. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-TND-VALID

This algorithm is invoked when the user clicks on the Validate button on a tender cancelation upload request. For each row in 'Pending' status in the child table, this algorithm validates if the derived Payment Event and **Tender Cancel Reason** code that is provided are valid.

Validations are put to check whether the derived payment event i.e. pay tender is not already canceled, whether the payment/s associated with the payment event is not canceled or not partially/fully refunded, whether payment/s associated with derived are not in the freezable or error status. Such kinds of validations are to be checked.

If the validation fails, then record status will be updated to **'Invalid'** (INVL) and the error details will be inserted in **C1_UPLOAD_REQ_EXCP** table.

If there are no records in **'Pending'** status, then user gets an error message 'There are no records to be validated'. In this case, user can only delete the upload request.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background).

Copyright © 2009, 2025, Oracle and/or its affiliates.

If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**. It contains the following parameter:

- **Online Record Process Limit** - Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes the To Do entries that are linked to an object when the object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion (F1-EXLTD)** characteristic is set to **Y** for a To Do type, the system does not automatically complete the respective To Do entry.

This algorithm contains the following parameter:

- **'Do Not Complete To Do Type' Char Type** – Used to specify the characteristic type that indicates whether the To Do entries should be automatically completed or not.

> **Note:** The **F1-EXLTD** characteristic type is shipped with the product. You can either use the **F1-EXLTD** characteristic type or a custom characteristic type, if required. Note that you must specify a predefined characteristic type where the characteristic entity is set to **To Do Type** and the predefined values are set to **Y** or **N**.

C1-TND-PROC

This algorithm fetches the list of records that are in **'Valid'** status for a given request **ID** and for derived payment events' respective payment tender is canceled. If successfully done, then the record status will be updated to **'Processed'**, otherwise the record status will be updated to **'Error'** and error details will be logged in the exception table.

CSV File Format for Account Bill Cycle Upload Request

Before uploading the account bill cycle file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the account ID is not specified.
Account Identifier	Used to specify the identifier of the account whose bill cycle you want to update.	Yes (Conditional) **Note:** This data is required when the account ID is not specified.
Account ID	Used to indicate the account whose bill cycle you want to update. **Note:** If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination.	No
Bill Cycle	Used to specify the bill cycle. **Note:** You must specify a valid bill cycle which is associated with the division to which the account belongs.	Yes

Sample CSV File for Account Bill Cycle Upload Request

```
ACCTNM,Demo_Individual_A1,4907254926,BK01,,1124824886,BK02,,5887989898,BK03
```

CSV File Format for Contract Rider Upload Request

Before uploading a contract rider file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified.
Account Identifier	Used to specify the identifier of the account whose contract you want to update.	Yes (Conditional) **Note:** This data is required when the account ID and contract ID are not specified.
Account ID	Used to indicate the account whose contract you want to update.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the account identifier type, account identifier, and contract ID are not specified.
Contract Type	Used to indicate the type of the contract whose details you want to update. **Note:** You must specify a contract type which already exists in the system.	Yes (Conditional) **Note:** This data is required when the contract ID is not specified.
Contract ID	Used to indicate the contract whose contract rider information you want to update. **Note:** If you do not specify the contract ID, the system derives the active contract using the account ID and contract type combination.	No
Start Date	Used to specify the date from when the bill factor is effective for the contract. **Note:** The start date cannot be later than the end date.	Yes
End Date	Used to specify the date till when the bill factor is effective for the contract. **Note:** The end date cannot be earlier than the start date.	No
Bill Factor	Used to specify the bill factor. **Note:** You must specify a valid bill factor where the **Contract Rider Applicability** flag is set to **Y**.	Yes

Sample CSV File for Contract Rider Upload Request File

```
ACCTNM,Demo_Individual_A1,5122509743,ANU_CT,,03-01-2024,3/31/2024,CM_BILLF
,,1778883101,,6787697779,03-01-2024,3/31/2024,NB
```

CSV File Format for Billable Charge Creation (Financial Services)

Before uploading a billable charge file, you need to ensure that the CSV file contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account Identifier Type** and **Account Identifier** is not specified.
Contract ID	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when you want to create the billable charge against a specific contract on the account. If this data is not specified then billable charge is created against a contract with highest priority.
Start Date	Used to specify the start date of billable charge.	Yes
End Date	Used to specify the end date of billable charge.	Yes
Charge Type	Used to specify the charge type for which you want to create a billable charge.	No
Description On Bill	Used to specify description for a billable charge.	Yes
Recurring Flag	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set policy invoice frequency. The valid values are: • BP • FR	Yes (Conditional) **Note:** This data is required if **Frequency** or **Bill Period** is specified.
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) **Note:** This data is required if **Recurring Flag** is FR.
Bill Period	Used to specify the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required if **Recurring Flag** is BP.
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No
Description on Bill1, Description on Bill2, ..., Description on Bill5	Used to specify description for the billable charge lines.	Yes (Conditional) **Note:** This data is required when the charge amount is specified.
Currency1, Currency2, ..., Currency5	Used to specify the currency in which the amount is charged. **Note:** If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional) **Note:** This data is required when the charge amount is specified.
Amount1, Amount2, ..., Amount5	Used to specify the charge amount.	Yes (Conditional) **Note:** This data is required when the description on bill or currency is specified.
Show On Bill1, Show on Bill2, ..., Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: • true • false **Note:** By default, the value will be set to **true** if the column does not contain any value.	No
Summary1, Summary2, ..., Summary5	Used to indicate whether the charge should be included in the summary line or not. The valid value are: • true • false **Note:** By default, the value will be set to **true** if the column does not contain any value.	No
Memo Only1, Memo Only2, ..., Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: • true • false **Note:** By default, the value will be set to **false** if the column does not contain any value.	No
GL Distribution Code1, GL Distribution	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
Code2, ..., GL distribution Code5		**Note:** This data is required when **false** is specified in the **Memo Only** column corresponding to the bill line description.
Price Item	Used to specify the price item code.	Yes (Conditional) **Note:** This data is required when **Variance Parameter** or, **Price Item Parameter** and **Price Item Parameter Value** is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Price Item Parameter** and **Price Item Parameter Value** are not specified.
Price Item Parameter1, Price Item Parameter2, ..., Price Item Parameter15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Variance Parameter**is not specified.
Price Item Parameter Value1, Price Item Parameter Value2, ..., Price Item Parameter Value15	Used to specify the parameter value. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Variance Parameter**is not specified.
SQI1, SQI2, ..., SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) **Note:** This data is required when the service quantity is specified.
SQI Value1, SQI Value2, ..., SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional) **Note:** This data is required when the SQI is specified.
Effective Date1, Effective Date2, ..., Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when **Char Type** or **Char Val** is specified.
Char Type1, Char Type2, ..., Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Val** is specified.
Char Value1, Char Value2, ..., Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Type** is specified.

Sample CSV File for Billable Charge Creation (Financial Services)

```
,,4907254926,4907254693,01-07-2024,31-07-2024,,Bill for the Month of July -
2024,,,,,N,,,,,
```

Column Name	Description	Mandatory (Yes or No)
	Note: The hold request end date cannot be earlier than the hold request start date.	
Hold Reason	Used to indicate the reason why you want to hold the entity. **Note:** The hold reason must exists in the **HOLD_REASON_FLG** lookup field and its status must be **Active**.	Yes
Hold Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: • ACCT • BILL • PERS	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the hold entity is **ACCT** and the entity ID is not specified.
Account Identifier	Used to specify the identifier of the account for which you want to create the hold request.	Yes (Conditional) **Note:** This data is required when the hold entity is **ACCT** and the entity ID is not specified.
Person Identifier Type	Used to specify the person identifier type.	Yes (Conditional) **Note:** This data is required when the hold entity is **PERS** and the entity ID is not specified.
Person Identifier	Used to specify the identifier of the person for which you want to create the hold request.	Yes (Conditional) **Note:** This data is required when the hold entity is **PERS** and the entity ID is not specified.
Hold Entity ID	Used to specify the entity ID.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: If the hold entity is **ACCT**, you must specify the account ID in this field. If the hold entity is **PERS**, you must specify the person ID in this field. And, if the hold entity is **BILL**, you must specify the bill ID in this field. If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination. Similarly, if you do not specify the person ID, the system derives the person ID using the person identifier type and person identifier combination.	**Note:** This data is required when the hold entity is **BILL**.
Comments	Used to specify additional information about the hold request.	No
Hold Entity Start Date	Used to specify the date from when you want to hold the entity. **Note:** The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates. The hold entity start date cannot be later than the hold entity end date.	Yes
Hold Entity End Date	Used to specify the date till when you want to hold the entity. **Note:** The hold entity end date must be between hold request start and end dates and between the process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date.	No
Hold Funding	Used to indicate whether you want to hold the funding process for the entity. The valid values are: • Y • N **Note:** You can hold the funding process when the hold entity is **PERS** or **BILL**.	No
Hold Funding Start Date	Used to specify the date from when you want to hold the funding process.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: The hold funding start date must be between the hold request start and end dates. The hold funding start date cannot be later than the hold funding end date.	**Note:** This data is required when the funding process must be kept on hold.
Hold Funding End Date	Used to specify the date till when you want to hold the funding process. **Note:** The hold funding end date must be between the hold request start and end dates. The hold funding end date cannot be earlier than the hold funding start date.	No
Hold Overdue	Used to indicate whether you want to hold the overdue process for the entity. The valid values are: • Y • N	No
Hold Overdue Start Date	Used to specify the date from when you want to hold the overdue process. **Note:** The hold overdue start date must be between the hold request start and end dates. The hold overdue start date cannot be later than the hold overdue end date.	Yes (Conditional) **Note:** This data is required when the overdue process must be kept on hold.
Hold Overdue End Date	Used to specify the date till when you want to hold the overdue process. **Note:** The hold overdue end date must be between the hold request start and end dates. The hold overdue end date cannot be earlier than the hold overdue start date.	No
Hold Bill Generation	Used to indicate whether you want to hold the bill generation process for the entity. The valid values are: • Y • N	No
Hold Bill Generation Start Date	Used to specify the date from when you want to hold the bill generation process.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: The hold bill generation start date must be between the hold request start and end dates. The hold bill generation start date cannot be later than the hold bill generation end date.	**Note:** This data is required when the bill generation process must be kept on hold.
Hold Bill Generation End Date	Used to specify the date till when you want to hold the bill generation process. **Note:** The hold bill generation end date must be between the hold request start and end dates. The hold bill generation end date cannot be earlier than the hold bill generation start date.	No
Hold Auto Pay	Used to indicate whether you want to hold the automatic payment process for the entity. The valid values are: • Y • N	No
Hold Autopay Start Date	Used to specify the date from when you want to hold the automatic payment process. **Note:** The hold autopay start date must be between the hold request start and end dates. The hold autopay start date cannot be later than the hold autopay end date.	Yes (Conditional) **Note:** This data is required when the automatic payment process must be kept on hold.
Hold Autopay End Date	Used to specify the date till when you want to hold the automatic payment process. **Note:** The hold autopay end date must be between the hold request start and end dates. The hold autopay end date cannot be earlier than the hold autopay start date.	No
Hold Refund	Used to indicate whether you want to hold the refund process for the entity. The valid values are: • Y • N	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: You can hold the refund process when the hold entity is **ACCT**.	
Hold Refund Start Date	Used to specify the date from when you want to hold the refund process. **Note:** The hold refund start date must be between the hold request start and end dates. The hold refund start date cannot be later than the hold refund end date.	Yes (Conditional) **Note:** This data is required when the refund process must be kept on hold.
Hold Refund End Date	Used to specify the date till when you want to hold the refund process. **Note:** The hold refund end date must be between the hold request start and end dates. The hold refund end date cannot be earlier than the hold refund start date.	No
Hold Delinquency	Used to indicate whether you want to hold the delinquency process for the entity. The valid values are: • Y • N **Note:** You can hold the delinquency process when the hold entity is **PERS** or **ACCT**.	No
Hold Delinquency Start Date	Used to specify the date from when you want to hold the delinquency process. **Note:** The hold delinquency start date must be between the hold request start and end dates. The hold delinquency start date cannot be later than the hold delinquency end date.	Yes (Conditional) **Note:** This data is required when the delinquency process must be kept on hold.
Hold Delinquency End Date	Used to specify the date till when you want to hold the delinquency process.	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	Note: The hold delinquency end date must be between the hold request start and end dates. The hold delinquency end date cannot be earlier than the hold delinquency start date.	
Effective Date1, Effective Date2, ..., Effective Date5	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional) **Note:** This data is required when the characteristic type or characteristic value is specified.
Char Type1, Char Type2, ..., Char Type5	Used to indicate the characteristic that must be defined for the hold request. **Note:** You must specify a characteristic type where the characteristic entity is set to **Hold Request**.	Yes (Conditional) **Note:** This data is required when the effective date or characteristic value is specified.
Char Val1, Char Val2, ..., Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional) **Note:** This data is required when the effective date or characteristic type is specified.

CSV File Format for Refund Request Creation

Before uploading a refund request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Refund Request Type	Used to specify the refund request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the refund request.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account ID	Used to specify the account for which you want to create the refund request.	Yes (Conditional) **Note:** This data is required when the **Account Identifier Type** and **Account Identifier** are not specified.
Entity Type	Used to specify the entity type. The valid values are: • ADID - Used when you want to create refund request against an adjustment. • BLID - Used when you want to create refund request against the bill. • BSID - Used when you want to create refund request against bill segement. • PEID - Used when you want to create refund request against payment event. • PYID - Used when you want to create refund request against payment.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the refund adjustments are created.	No
Refund Amount	Used to specify the amount that you want to refund.	Yes
Comments	Used to specify the comments which are added on the refund request.	No
Effective Date1, Effective Date2, ..., Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when **Char Type** or **Char Val** is specified.
Char Type1, Char Type2, ..., Char Type5	Used to indicate the characteristic that must be defined for the refund request.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Val** is specified.
Char Val1, Char Val2, ..., Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Type** is specified.

CSV File Format for Write Off Request Creation

Before uploading a write off request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Write Off Request Type	Used to specify the write off request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the write off request.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account ID	Used to specify the account for which you want to create the write off request.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the **Account Identifier Type** and **Account Identifier** are not specified.
Entity Type	Used to specify the entity type. The valid values are: • ADID - Used when you want to create write off request against an adjustment. • BLID - Used when you want to create write off request against the bill. • BSID - Used when you want to create write off request against bill segement. • PEID - Used when you want to create write off request against payment event. • PYID - Used when you want to create write off request against payment.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the write off adjustments are created.	No
Write Off Amount	Used to specify the amount that you want to write off.	Yes
Comments	Used to specify the comments which are added on the write off request.	No
Effective Date1, Effective Date2, ..., Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) **Note:** This data is required when **Char Type** or **Char Val** is specified.
Char Type1, Char Type2, ..., Char Type5	Used to indicate the characteristic that must be defined for the write off request.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Val** is specified.
Char Val1, Char Val2, ..., Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Type** is specified.

CSV File Format for Reinstatement Upload Request

Before uploading a policy reinstatement file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Policy ID	Used to indicate the policy which you want to reinstate. **Note:** If you do not specify the policy ID, the system derives the policy ID using the source system and policy number combination.	No
Source System	Used to indicate the external system from where the policy is originated.	Yes (Conditional) **Note:** This data is required when the policy ID is not specified.
Policy Number	Used to indicate the policy number.	Yes (Conditional) **Note:** This data is required when the policy ID is not specified.
Reinstatement Reason	Used to indicate the reason why you want to reinstate the policy. **Note:** You must specify a reason which is defined for the status specified in the **Policy Reinstatement Status for Reason Verification** parameter of the **C1-REN-VALID** algorithm.	Yes

Sample CSV File for Reinstatement Upload Request

```
DGSSY1,Demo_Group_BG1_Policy,ZZ-PAYMENT-RECEIVED
```

CSV File Format for Bill Group Sorting Upload Request

Before uploading a bill group sorting file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Sr. No.	Value	Description	Mandatory (Yes or No)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group sorting upload request. In addition, note that you must specify a child person whose person type is set to **Bill Group** and who is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.	**Note:** This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.
2	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional) **Note:** This data is required when the bill group (i.e. person) ID is not specified.
3	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional) **Note:** This data is required when the bill group (i.e. person) ID is not specified.
4	Sort ID	Used to specify the sort ID.	Yes
5	Description	Used to specify the description for the sort ID.	Yes
6	Start Date	Used to specify the date from when the sort ID is effective for the bill group. **Note:** The start date cannot be later than the end date.	Yes
7	End Date	Used to specify the date till when the sort ID is effective for the bill group. **Note:** The end date cannot be earlier than the start date.	No

Sample CSV File for Bill Group Sorting Upload Request

```
1887432126,Social security -
number,"342-23-5469",1111,"bg",01-07-2024,31-07-2024
```

CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request

Before uploading a bill group derivation and pricing parameters file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Source System	Used to indicate the source system from where the claim and enrollment transactions are received. **Note:** You must specify a source system which already exists in the extendable lookup which is specified in the **Source System Extendable Lookup** parameter of the **C1-BLVLVALID** algorithm.	Yes
2	Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the parameter 1.	Yes
3	Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the parameter 2.	No
4	Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the parameter 3.	No
5	Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group. **Note:** You must not specify the ampersand (&) character in the parameter 4.	No
6	Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination. **Note:** The effective date must be within the date range of the sort ID defined for the bill group.	Yes
7	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Sr. No.	Value	Description	Mandatory (Yes or No)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group derivation and pricing parameters upload request. In addition, note that you must specify a child person whose person type is set to **Bill Group** and who is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.	**Note:** This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.
8	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional) **Note:** This data is required when the bill group (i.e. person) ID is not specified.
9	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional) **Note:** This data is required when the bill group (i.e. person) ID is not specified.
10	Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes

Sample CSV File for Bill Group Derivation and Pricing Parameters Upload Request

```
Prime,MPP11,MPP12,"MPP13",01-07-2024,1887432126,Social security -
number,"342-23-5469",1111
```

CSV File Format for Billable Charge Creation (Fully Insured Individual)

Before uploading a billable charge file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the **Account ID** is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account ID** is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when the **Account Identifier Type** and **Account Identifier** is not specified.
Health Plan Code	Used to specify the health plan code.	Yes (Conditional) **Note:** This data is required when the **Contract ID** is not specified.
Contract Id	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional) **Note:** This data is required when EITHER the **(Source System, Policy Number** and **Plan Number)** OR the **Health Plan Code** is not specified
Start Date	Used to specify the start date of billable charge.	Yes (Conditional)
End Date	Used to specify the end date of billable charge.	Yes (Conditional)
Charge Type	Used to indicate the charge type.	Yes (Conditional)
Description On Bill	Used to specify description for a billable charge.	Yes (Conditional)
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) **Note:** This data is required if **Recurring Flag** is FR.
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No
Description On Bill1, Description On Bill2, Description On Bill3, Description On Bill4, Description On Bill5	Used to specify description for the billable charge lines.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when the charge amount is specified.
Currency1, Currency2, Currency3, Currency4, Currency5	Used to specify description for the billable charge lines.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Amount1, Amount2, Amount3, Amount4, Amount5	Used to specify the charge amount.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Show On Bill1, Show On Bill2, Show On Bill3, Show On Bill4, Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: • True • False **Note:** By default, the value will be set to **True** if the column does not contain any value.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Appears In Summary1, Appears in Summary2, Appears in Summary3, Appears in Summary4, Appears in Summary5	Used to indicate whether the charge should be included in the summary line or not. The valid value are: • True • False **Note:** By default, the value will be set to **True** if the column does not contain any value.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Memo Only1, Memo Only2, Memo Only3, Memo Only4, Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are:	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
	• True • False **Note:** By default, the value will be set to **False** if the column does not contain any value.	**Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Distribution Code1, Distribution Code2, Distribution Code3, Distribution Code4, Distribution Code5	Used to specify the distribution code which indicates the account associated with the charge.	Yes (Conditional) **Note:** This data is required when charge amount for bill line is specified. This data provided for **Distribution Code** column is required when **N** is specified in the **Memo Only** column corresponding to the bill line description.
Subscriber Identifier Type	Used to derive the group or individual membership against which the billable charge should be created.	Yes (Conditional) **Note:** This data is required when the **Membership ID** is not specified.
Subscriber Identifier	Used to derive the group or individual membership against which the billable charge should be created.	Yes (Conditional) **Note:** This data is required when the **Membership ID** is not specified.
Membership Type	Used to derive the group or individual membership against which the billable charge should be created.	No **Note:** This data is required when the **Membership ID** is not specified.
External Membership ID	Used to specify the external membership ID. **Note:** Here, you need to specify a membership ID which is maintained in the external source system.	No **Note:** This data is required when the **Membership ID** is not specified.
Price Item	Used to specify the price item code.	Yes (Conditional) **Note:** This data is required when **Variance Parameter** or, **Price Item Parameter** and **Price Item Parameter Value** is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when **Price Item** is specified and **Price Item Parameter** and **Price Item Parameter Value** are not specified.
Price Item Parameter1, Price Item Parameter2, ..., Price Item Parameter15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Variance Parameter** is not specified.
Price Item Parameter Value1, Price Item Parameter Value2, ..., Price Item Parameter Value15	Used to specify the parameter value. **Note:** If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) **Note:** This data is required when **Price Item** is specified and **Variance Parameter** is not specified.
SQI1, SQI2, SQI3, SQI4, SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) **Note:** This data is required when the service quantity is specified.
SQI Value1, SQI Value2, SQI Value3, SQI Value4, SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional) **Note:** This data is required when the SQI is specified.
Effective Date1, Effective Date2, ..., Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional) **Note:** This data is required when either one of the field - **Effective Date** or **Characteristic Type** or **Characteristic Value** is specified. This data is for User defined Fields, keeping as optional we can expand it if required.
Char Type1, Char Type2, ..., Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) **Note:** This data is required when **Effective Date** or **Char Val** is specified.
Char Value1, Char Value2, ..., Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Description	Mandatory (Yes or No)
		Note: This data is required when **Effective Date** or **Char Type** is specified.

for the Month of Jan 2024,,,N,Demo Charge -
1,USD,100,Y,Y,N,CASH,SSN,987-65-4320 -,,,
```

Column Name	Column Description	Mandatory (Yes or No)
	Note: If the tender type is same for two or more payment records, the system will create multiple payments against one tender. In other words, there will be multiple payments which are created through the payment event.	**Note:** This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Tender Amount	Used to specify the tender amount.	Yes (Conditional)
	Note: You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	**Note:** This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Cancel Reason	Used to indicate the reason why you want to cancel the payment tender.	Yes (Conditional)
		Note: This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Bank Code	Used to indicate the bank code which should be charged for cancellation.	Yes (Conditional)
		Note: This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Bank Account	Indicates the bank account through which automatic payment is made.	Yes (Conditional)
		Note: This field is required for uploading **Payment Tender Cancellation** using the inbound message details.
Char Type1, Char Type2, Char Type3, Char Type4, Char Type5	Used to indicate the characteristic that must be defined for the payment tender cancellation.	Yes (Conditional)
		Note: This data is required when **Effective Date** or **Char Val** is specified.
Char Val1, Char Val2, Char Val3, Char Val4, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
		Note: This data is required when **Effective Date** or **Char Type** is specified.

Note: Once you upload a payment tender cancellation file, the system creates an upload request in the **Draft** status. The data records are created in the **Pending** status. If the mandatory data is missing in any record, the corresponding data record is created in the **Invalid** status.

```

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

The **Adjustment Upload Request Type (C1-AdjRequestType)** business object is used for the maintainance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. If you are going to upload adjustment data files using an upload request type, you need to specify the match types (using which the adjustments must be created) in the upload request type. At present, the following two match types are shipped with the product:

- Contract
- Contract Type

You can also define custom match types, if required. You must use the **ADJ_MATCH_TYPE** lookup field to add a new match type. You need to attach an algorithm to each match type to determine the contract against which the adjustment must be created. At present, the following algorithm types and sample algorithms are shipped with the product:

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to **Contract (CONT)**.
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to **Contract Type (CNTY)**. If there are multiple active contracts of the

Copyright © 2009, 2025, Oracle and/or its affiliates.

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
			specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintainance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- Upload Request Type List on page 1213
- Upload Request Type on page 1214

Upload Request Type List

The **Upload Request Type List** zone lists upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the **Edit** (✎) icon, the **Upload Request Type** screen appears where you can edit the details of the upload request type.
Duplicate	On clicking the **Duplicate** (⧉) icon, the **Upload Request Type** screen appears where you can define an upload request type using an existing upload request type.
Delete	On clicking the **Delete** (🗑) icon, you can delete the upload request type.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Mapping	On clicking the **Mapping** (🔗) icon, the mapping screen appears where you can map the columns of CSV file with the upload request type.
Status	On clicking the **Status** icon, you can see the status of the upload request type. The valid values are: • Active • Inactive

On clicking the **Broadcast** (📡) icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. This zone contains the following sections:

- **Main** - This section provides basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object that will be used to create the upload request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	Indicates the status of the upload request type. The valid values are: • Active • Inactive
File Size (KB)	Displays the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.
	Note: This field appears when you create upload request type using **Adjustment Upload Request Type** business object.
Defer Algorithm	Indicates the algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.
	Note: This field appears when you create upload request type using **Adjustment Upload Request Type** business object. It has a link. On clicking the link, the **Algorithm** screen appears where you can view the details of the respective algorithm. In **Upload Request Type**, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from **Validated** to **Deferred Processing** else the status is changed to **Processed**.
Approval Required	Indicates whether approval is required for a file which is uploaded using the upload request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when you submit the upload request for approval.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
	Note: This field appears when the **Approval Required** check box is selected. It has a link. On clicking the link, the **To Do Type** screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve or reject the upload request submitted for approval.
	Note: This field appears when the **Approval Required** check box is selected. On selecting the **To Do Type**, the **To Do Roles** configured on the **To Do Type** is populated. It has a link. On clicking the link, the **To Do Role** screen appears with the details of the respective To Do role.
FK Reference	Indicates the foreign key reference which specifies the created upload request type.
	Note: This field appears when you create upload request type using **Upload Request Type** business object. It has a link. On clicking the link, the **Foreign Key Reference** screen appears with the details of the respective foreign key.

In addition, this section has the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are: • Contract • Contract Type
	Note: The **Match Type** column is displayed for **Adjustment Upload Request** Business Object.
Algorithm	Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.
	Note: It has a link. On clicking the link, the **Algorithm** screen appears with the details of the respective algorithm. The **Algorithm** column is displayed for **Adjustment Upload Request** Business Object.

- **Characteristics** - This section lists the characteristics of the upload request type. It contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request type.
Delete	Used to delete the upload request type.
	Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears when you click the **Broadcast** (📡) icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

Copyright © 2009, 2025, Oracle and/or its affiliates.

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval
- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval
- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval
- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

   The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object that you want to use to create the upload request type. The valid values are: • Adjustment Upload Request Type (**C1-AdjRequestType**) • Upload Request Type (**C1-UplRequestType**)	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.

Copyright © 2009, 2025, Oracle and/or its affiliates.

5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the upload request type.
- **Characteristics** - Used to define the characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request. When you create upload request type using upload request business object, the valid values are: • Bill Cycle Update Upload • Bill Group Derivation & Pricing Parameter • Bill Group Sorting Upload Request • Billable Charge Upload • Billable Charge Upload for Fully Insured • Contract Rider Upload • Hold Request Upload • Refund Request Upload • Reinstatement Upload Request • Tender Cancelation Upload Request • Write Off Request Upload	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. **Note:** This field appears when **Adjustment Upload Request Type** business object (**C1-AdjRequestType**) is selected.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode. **Note:** Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any upload requests in the **Deferred** status. If there is an upload request in the **Deferred** status, the system creates the entities (for example, adjustments). This field appears when **Adjustment Upload Request Type** business object (**C1-AdjRequestType**) is selected. In **Upload Request Type**, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from **Validated** to **Deferred Processing** else the status is changed to **Processed**. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	
Entity Business Object	Used to indicate for creating Business Object of the entity using the upload request type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when **Upload Request Type** business object (**C1-UplRequestType**) is selected.	No
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note:
The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.
The following table lists the To Do type using which the To Do must be generated for the different upload requests:

How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 1222

Defining a Match Type for an Adjustment Upload Request Type

In addition, this section contains the following fields in the grid:

> **Note:** This field appears when **Adjustment Upload Request Type** business object is selected.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: • Contract • Contract Type	Yes (Conditional) **Note:** This field is required when you select the **Adjustment Upload Request** option from the **Upload Request Business Object** list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Algorithm Search** window appears.	Yes (Conditional) **Note:** This field is required when you select the match type from the respective field.

Defining a Characteristic for an Upload Request Type

Prerequisites

To define a characteristic for an upload request type, you should have:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

Procedure

To define a characteristic for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload *r*equest type.

   The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to Upload Request Type.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details.

   Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add** (+) icon and then *r*epeat step 2.

   Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** (🗑) icon corresponding to the characteristic.

Editing an Upload Request Type

Prerequisites

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the *u*pload request type whose details you want to edit.

   The **Upload Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the upload request type.
   - **Characteristics** - Used to define the characteristics for the upload request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.When you create upload request type using upload request business object, the valid values are: • Bill Cycle Update Upload • Bill Group Derivation & Pricing Parameter • Bill Group Sorting Upload Request • Billable Charge Upload • Billable Charge Upload for Fully Insured • Contract Rider Upload • Hold Request Upload • Refund Request Upload • Reinstatement Upload Request • Tender Cancelation Upload Request • Write Off Request Upload	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are:	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Active • Inactive	
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. **Note:** This field appears when the business object (**C1-AdjRequestType**) is **Adjustment Upload Request Type**.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode. **Note:** Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any upload requests in the **Deferred** status. If there is an upload request in the **Deferred** status, the system creates the entities (for example, adjustments). How to define a characteristic for an upload request type	Defining a Characteristic for an Upload Request Type on page 1222

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Prerequisites

Copyright © 2009, 2025, Oracle and/or its affiliates.

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate**(⧉) icon in the **Duplicate** column *c*orresponding to the upload request type whose copy you want to create.

   The **Upload Request Type** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the upload request type.
   - **Characteristics** - Used to define the characteristics for the upload request type.

   The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type (whose copy you want to create).	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.When you create upload request type using upload request business object, the valid values are: • Bill Cycle Update Upload • Bill Group Derivation & Pricing Parameter • Bill Group Sorting Upload Request • Billable Charge Upload • Billable Charge Upload for Fully Insured • Contract Rider Upload • Hold Request Upload • Refund Request Upload • Reinstatement Upload Request • Tender Cancelation Upload Request	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Write Off Request Upload	
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: • Active • Inactive	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. **Note:** This field appears when the business object (**C1-AdjRequestType**) is **Adjustment Upload Request Type**.	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any upload requests in the **Deferred** status. If there is an upload request in the **Deferred** status, the system creates the entities (for example, adjustments). This field appears when the business object (**C1-AdjRequestType**) is **Adjustment Upload Request Type**.	
Entity Business Object	Used to indicate to create the copy of Business Object of the entity using the upload request type. **Note:** The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Business Object Search** window appears. This field appears when the business object (**C1-UplRequestType**) is **Upload Request Type**.	No
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

<table>
<tr><th>Field Name</th><th>Field Description</th><th>Mandatory (Yes or No)</th></tr>
<tr><td></td><td>Note:
The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.
The following table lists the To Do type using which the To Do must be generated for the different upload requests:
<table><tr><th>Upload Request</th><th>To Do Type</th></tr><tr><td>Adjustment</td><td>C1-ADJUP</td></tr><tr><td>Bill Cycle Update</td><td>C1-BCUUR</td></tr><tr><td>Billable Charge</td><td>C1-BCUR</td></tr><tr><td>Contract Rider Update</td><td>C1-CRUUR</td></tr><tr><td>Hold Request</td><td>C1-HLDUR</td></tr><tr><td>Refund Request</td><td>C1-REFUR</td></tr><tr><td>Write Off Request</td><td>C1-WOUR</td></tr><tr><td>Policy Reinstatement</td><td>C1-RPUR</td></tr><tr><td>Bill Group Sorting</td><td>C1-BGSRT</td></tr><tr><td>Bill Group Derivation and Pricing Parameters</td><td>C1-BGDVP</td></tr><tr><td>Tender Cancellation Request Upload</td><td>C1-TndrCnclUploadRequest</td></tr><tr><td>Billable Charge Upload for Fully Insured</td><td>C1-BillableChargeUploadFI</td></tr></table></td><td>Note: This field is required when the Approval Required check box is selected.</td></tr>
<tr><td>Approval To Do Role</td><td>Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.</td><td>Yes (Conditional)
Note: This field is required when the Approval Required check box is selected.</td></tr>
<tr><td>FK Reference</td><td>Used to indicate the FK Reference code to display the entity information.</td><td>No</td></tr>
</table>

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Foreign Key Search** window appears. This field appears when the business object (**C1-UplRequestType**) is **Upload Request Type**.	

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

4. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete** (🗑) icon corresponding to the match type.

5. Define, edit, or remove characteristics of the upload request type, if required.
6. Define a match type for an adjustment upload request type.
7. Click **Save**.
   The new upload request type is defined.

Configuring Filters for the Data Records Zone

Prerequisites

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

Note: Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

Procedure

To map an upload request type:

Copyright © 2009, 2025, Oracle and/or its affiliates.

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping**(🔗) icon in the **Mapping** column corresponding *t*o the upload request type whose columns you want to map with the CSV file.

   The **Upload Request Type Mapping** screen appears. It contains the following field:

   Note: The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type.	Not applicable

   The **Upload Request Type Mapping** screen also contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the rows correspond to the columns in CSV file.	Yes (Conditional) **Note:** This column is required when you search the **Data Records** zone in the **Upload Request** screen.
Use for Searching	Used to indicate whether the defined CSV Column Header is searchable. **Note:** Upto 10 rows can be selected as searchable rows.	Yes (Conditional) **Note:** This column is required to be selected to be shown in the **Data Records** zone in the **Upload Request** screen
Sequence Number	Used to specify the sequence of the searchable fields. **Note:** Searchable rows should have sequence less than or equal to 10.	Yes (Conditional) **Note:** This column is required to be selected to be shown sequentially in the **Data Records** zone in the **Upload Request** screen

4. Enter the required details.

   Note: If you want to add more than one column names mapped to the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete** (🗑) icon corresponding to the column header.

5. Click **Save**.
   The columns are mapped to the CSV files for upload request type.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
   A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the *u*pload request type that you want to delete.
   A message appears confirming whether you want to delete the upload request type.

   Note: You can delete an upload request type when you have not uploaded a file (i.e. created an upload request) using the upload request type.

   Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.
4. Click **OK**.
   The upload request type is deleted.

Upload Request (Used for Searching)

The **Upload Request** screen allows you to upload, validate and process the transaction data. Through this screen, you can navigate to the following screen:

- Upload Request (Used for Viewing) on page 1765

This screen consists of the following zone:

- Search Upload Request on page 1759

Search Upload Request

The **Search Upload Request** zone allows you to search for a upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an upload request using **Request Details**.	Yes
Upload Date From	Used to search upload requests which are created from a particular date.	No
Status	Used to search upload requests with a particular status. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Validated	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	• Validating	
To	Used to search upload requests which are created till a particular date.	No
User ID	Used to search upload requests which are created by a particular user.	No
Upload Request Type	Used to search upload requests which are created using a particular upload request type.	No
File Name	Used to search a particular file name.	No
Upload Request ID	Used to search a particular upload request.	No

Note: You must specify at least one search criterion while searching for an upload request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the upload request was created in the system.
Upload Request Information	Displays information about the upload request. **Note:** It has a link. On clicking the link, the **Upload Request** screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the upload request. The valid values are: • Approval In Progress • Canceled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Validated • Validating
Upload Request Type	Displays the upload request type using which the upload request is created.
Entity Business Object	Displays the business object code of the entity. In addition, a context menu appears, corresponding to this field, which helps in navigating to other screens in the application.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
File Name	Displays the uploaded file name.
Total Records	Displays the total number of records in the uploaded csv file.
Created By	Indicates the user who has created the upload request.

Note: Pagination is used to display limited number of records in the Search Results section. You can use the navigation links, such as Previous and Next to navigate between pages.

Searching for an Upload Request

Prerequisites

To search for an upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an upload request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
   A sub-menu appears.
3. Click the **Search** option from the **Upload Request** sub-menu.
   The **Upload Request** screen appears.
4. Enter the search criteria in the **Search Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
   A list of upload requests that meet the search criteria appears in the **Search Results** section.

Viewing the Upload Request Details

Procedure

To view the details of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request whose details you want to view.

   The **Upload Request** screen appears. It consists of the following tabs:

   - **Main** - This tab contains the following two zones:
     - **Upload Request** - Displays the details of the upload request.
     - **Data Records** - Lists the details of data records uploaded in the csv file.
   - **Log** - This tab lists the complete trail of actions performed on the upload request.
3. View the details of the upload request in the **Upload Request** zone.
4. View the data records in the csv file of the upload request in the **Data Records** zone.

Creating an Upload Request

Prerequisites

To create an upload request, you should have:

- Upload request types defined in the application

Procedure

To create an upload request:

1. Click the **Menu** link in the **Application** toolbar.
   A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
   A sub-menu appears.
3. Click the **Add** option from the **Upload Request** sub-menu.

   The **Select Upload Request Type** screen appears. It contains the following field:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request. **Note:** The following upload request types are shipped with the product: • ADJ_UPL_REQ_TYPE_APVL • ADJ_UPL_REQ_TYPE_WO_APVL • BC_UPL_REQ_TYPE • BILL_CYCLE_UPD_UPL_REQ_TYPE • BILL_LVL_UPL_REQ_TYPE • BILL_SRT_UPL_REQ_TYPE • HOLD_UPL_REQ_TYPE • REFUND_UPL_REQ_TYPE • REIN_UPL_REQ_TYPE • SA_RIDER_UPD_UPL_REQ_TYPE • WO_UPL_REQ_TYPE	Yes

Tip: Alternatively, you can access the **Select Upload Request Type** screen by clicking the **Upload** button in the **Page Title** area of the **Upload Request** screen.

Note: The **Select Upload Request Type** screen appears when there are multiple upload request types defined in the application. If there is only one upload request type defined in the application, the **{XXX} Upload Request** screen appears.

4. Select the required upload request type from the respective field.
5. Click **OK**.

The **{XXX} Upload Request** screen appears. Here, {XXX} changes depending on the upload request type that you have selected. It contains the following sections:

- **Main** - Used to specify basic details about the upload request.
- **Characteristics** - Used to define the characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting or bill group derivation and pricing parameters upload request.	Yes

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	Note: This field appears when you are creating an upload request using an upload request type where the upload request business object is set to **C1-BillGrpSortUploadRequest** or **C1-BillLevelUploadRequest**. The system allows you to create a bill group sorting or bill group derivation and pricing parameters upload request for a person whose person type is set to **Parent Customer**. The **Search** (🔍) icon appears corresponding to this field. On clicking the **Search** icon, the **Person Search** window appears.	
File Name	Used to specify the name and path of the file that you want to upload. **Note:** You can also click the **Choose File** button corresponding to this field to browse to the location where the file is available in the system.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

6. Click the **Choose File** button corresponding to the **File Name** field.
7. Browse to the location where the file that you want to upload is available in the system.
8. Click **Open**.
   The file name along with the path appears in the **File Name** field.
9. Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
10. Define characteristics for the upload request, if required.
11. Click **Save**.
    A message appears indicating the number of records which are successfully uploaded. Then, an upload request is created in the **Draft** status. If the required identifier (such as account ID, person ID, policy ID, or bill group ID) is available in the record, the status of the record is set to **Pending**. However, if the required identifier could not be derived from the system, the status of the record is set to **Invalid**.

How to define a characteristic for an upload request	Defining a Characteristic for an Upload Request on page 1764

Defining a Characteristic for an Upload Request

Prerequisites

Copyright © 2009, 2025, Oracle and/or its affiliates.

To define a characteristic for an upload request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request**)

Procedure

To define a characteristic for an upload request:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an upload request.

   The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Upload Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request.

2. Enter the required details in the **Characteristics** section.

   Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request, click the **Add** (+) icon and then *r*epeat step *2*.

   Note: However, if you want to remove a characteristic from the upload request, click the **Delete** (🗑) icon corresponding to the characteristic.

Upload Request (Used for Viewing)

Once you create an upload request, the **Upload Request** screen allows you to:

- Edit the details of an upload request

Copyright © 2009, 2025, Oracle and/or its affiliates.

- Delete an upload request
- View the details of an upload request
- Validate an upload request
- Cancel an upload request
- Submit an upload request
- Approve or reject an upload request
- View the data uploaded to a request
- View the log of an upload request
- Add a log entry for an upload request

This screen consists of the following tabs:

- **Main** - This tab contains the following two zones:
  - **Upload Request** - Displays the details of the upload request.
  - **Data Records** - Lists the data records of the upload request.
- **Log** - This tab lists the complete trail of actions performed on the upload request.

Upload Request - Main

The **Main** tab contains the following zones:

- Upload Request on page 1766
- Data Records on page 1768

Upload Request

The **Upload Request** zone displays the details of the upload request. This zone contains the following sections:

- **Main** - This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the upload request.
Upload Request Type	Indicates the upload request type using which the upload request is created. **Note:** It has a link. On clicking the link, the **Upload Request Type** screen appears where you can view the details of the upload request type.
Status	Indicates the status of the payment request. The valid values are: • Approval In Progress • Approved • Cancelled • Deferred Processing • Deferred Validation • Draft • Processed • Rejected • Submitted • Validated • Validating
File Name	Displays name of the uploaded file.

- **Statistics** - This section lists the statistics of records in the upload request. It contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description
Total Records	Displays total number of records in CSV file.
Valid Records	Displays the count of valid data records.
Error Records	Displays the count of data records in error status.
Pending Records	Displays the count of data records pending after successful derivation.
Invalid Records	Displays the count of data records after unsuccessful derivation.
Processed Records	Displays the count of data records after processing.

- **Characteristics** - This section lists the characteristics of the upload request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the upload request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the upload request. **Note:** The **Edit** button appears when the upload request is in the **Draft** or **Validated** status.
Delete	Used to delete the upload request. **Note:** The **Delete** button appears when the upload request is in the **Draft** status.
Validate	Used to validate the upload request. **Note:** The **Validate** button appears when the upload request is in the **Draft** status.
Cancel	Used to cancel the upload request. **Note:** The **Cancel** button appears when the upload request is in the **Validated** status.
Submit	Used to submit the upload request for approval. **Note:** The **Submit** button appears when: • The upload request is in the **Validated** status. • The **Approval Required** check box is selected in the upload request type using which the upload request is created.
Approve	Used to approve the upload request.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: The **Approve** button appears when: • The upload request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the upload request.
Reject	Used to reject the upload request.
	Note: The **Reject** button appears when: • The upload request is in the **Approval In Progress** status. • A user with the approval To Do role is reviewing the upload request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the upload request status is updated
Create Date/Time	Displays the date and time when the upload request is created.

Data Records

The **Data Records** zone lists the data records of the upload request. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search Criteria 1, Search Criteria 2, ...,Search Criteria 10	Used to search for data from the CSV file with respect to the field.	No
Note: We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.		
Record Status	Used to indicate whether you want to search data records for an upload request. The valid values are: • Error • Invalid • Pending • Processed • Valid	No

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
	.	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
View	On clicking the **View** (🔗) icon, the **Data Record Details** window appears where you can view the details of the data records.
Search Result 1, Search Result 2, ..., Search Result 10 **Note:** We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	Displays data from the CSV file.
Record Status	Indicates the status of the data record. The valid values are: • Error • Invalid • Pending • Processed • Valid
Message(s)	Displays message for the data record respective to it's status.
Entity ID	Displays entity ID of the upload request. **Note:** The entity ID is displayed only for data records with **Processed** status.
Entity Information	Displays entity information for the **FK Reference Code** selected in **Upload Request Type** screen. **Note:** The entity information is displayed only for data records with **Processed** status.

Note: By default the **Search Results** section displays data records for all the statuses though data is not added or selected to any of the fields and are searched through the **Search Criteria** section.

Upload Request - Log

The **Log** tab contains the following zone:

- Upload Request Log on page 1770

Copyright © 2009, 2025, Oracle and/or its affiliates.

Upload Request Log

The **Upload Request Log** zone on the **Upload Request** screen lists the complete trail of actions performed on the upload request. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Displays the status reason of action performed on the upload request.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. Enter **Log Details** and click **Save**. The upload request log is added.

Editing an Upload Request

Procedure

To edit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request whose details you want to edit.
   The **Upload Request** screen appears.
3. Click the **Edit** button in the **Upload Request** zone.

Note: The **Edit** button appears when the upload request is in the **Draft** or **Validated** status.

The entity **Upload Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the upload request. This section contains the following fields:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type using which the upload request is created.	Not applicable
File Name	Displays name of the uploaded CSV file.	Not applicable
Comments	Used to indicate the comments for upload request.	No

- **Characteristics** - Used to define the characteristics for the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type. **Note:** The list includes only those characteristic types where the characteristic entity is set to **Upload Request**.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the Upload request.
Characteristic Value	Used to specify the value for the characteristic type. **Note:** On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the **Characteristic Value** field.	Yes (Conditional) **Note:** This field is required when you are defining a characteristic for the Upload request.

4. Modify the details of the upload request, if required.
5. Define, edit, or remove characteristics of the upload request, if required.
6. Click **Save**.
   The changes made to the upload request are saved.

Deleting an Upload Request

Procedure

To delete an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request that you want to delete.
   The **Upload Request** screen appears.
3. Click the **Delete** button in the **Upload Request** zone.
   A message appears confirming whether you want to delete the upload request.

   Note: The **Delete** button appears when the upload request is in the **Draft** status.
4. Click **OK**.
   The upload request is deleted.

Validating an Upload Request

Prerequisites

To validate an upload request, you should have:

- Upload Request Types defined in the request.

Procedure

To validate an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request that you want to validate.
   The **Upload Request** screen appears.
3. Click the **Validate** button in the **Upload Request** zone.

   Note: The **Validate** button appears when the upload request is in the **Draft** status.

   For more information about the **Upload Request Periodic Monitor (C1-UPLRQ)** batch, refer to Oracle Revenue Management and Billing Batch Guide.

   The status of the upload request is changed to **Validated**.

Cancelling an Upload Request

Prerequisites

To cancel an upload request, you should have:

- Cancelation reasons defined in the application

Note: While cancelling an upload request, you need to specify the reason why you want to cancel the upload request. You can select the appropriate cancellation reason when you have defined the reasons for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Procedure

To cancel an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to cancel.
   The **Upload Request** screen appears.
3. Click the **Cancel** button in the **Upload Request** zone.

   The **Cancel Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the upload request.	Yes
Comments	Used to specify additional information while cancelling the upload request.	No

Note: The **Cancel** button appears when the upload request is in the **Validated** status.

4. Select the cancellation reason from the **Cancel Reason** list.
5. Click **Save**.
   The status of the upload request is changed to **Canceled**.

Submitting an Upload Request

Procedure

To submit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to *t*he upload request that you want to submit.
   The **Upload Request** screen appears.
3. Click the **Submit** button in the **Upload Request** zone.

   The system behaves in the following manner:

Approving an Upload Request

You can view the number of upload requests which are pending for approval in the **Upload Request** screen. The approver can review, and accordingly approve or reject the upload request based on the observations.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Note: The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To approve an upload request:

1. Do either of the following:

If you want to...	Then...
Approve an upload request through the Upload Request screen	**a.** Search for the upload request in the **Upload Request** screen. **b.** In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request which you want to review.
Approve an upload request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter the required To Do type in the respective field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the upload request that you want to review.

   The **Upload Request** screen appears.
2. Review the upload request details.
3. Click the **Approve** button in the **Upload Request** zone.

   The system behaves in the following manner:

If...	Then...
The number of valid records in the upload request does not exceed the online record process limit defined in the **C1-DEFERUPLD** algorithm	The following table lists the behavior for the different upload requests:

Rejecting an Upload Request

Prerequisites

To reject an upload request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an upload request, you need to specify the reason why you want to reject the upload request. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the ***C*1-UplRequestType** business object in the **Status Reason** screen.

The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To reject an upload request:

1. Do either of the following:

If you want to	Then
Reject an upload request through the Upload Request screen	**a.** Search for the upload request in the **Upload Request** screen. **b.** In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request which you want to review.
Reject an upload request from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter the required To Do type in the respective field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the upload request that you want to review.

   The **Upload Request** screen appears.
2. Review the upload request details.

Copyright © 2009, 2025, Oracle and/or its affiliates.

3. Click the **Reject** button in the **Upload Request** zone.

   The **Reject Upload Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the upload request.	Yes
Comments	Used to specify additional information while rejecting the upload request.	No

> **Note:** The **Reject** button appears when:
>
> - The upload request is in the **Approval In Progress** status.
> - A user with the approval To Do role is reviewing the upload request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the upload request is changed to **Rejected**.

Viewing the Data Record Details

Procedure

To view the details of a data record:

1. Search for the data record in the **Data Records** zone in the **Upload Request** screen.
2. In the **Search Results** section, click the **View** (🔗) icon in the **View** column corresponding to the data record whose details you want to view.

   The **Data Record Details** window appears. It contains the following fields:

Field Name	Field Description
Sr. No.	Displays the sequential number of data.
CSV Column Header	Displays name of the column in uploaded CSV file.
CSV Column Value	Displays value in the column in uploaded CSV file.

3. View the details of the data record in the **Data Record Details** window.

Viewing the Log of an Upload Request

Procedure

To view the log of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *u*pload request whose log you want to view.

   The **Upload Request** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the upload request. It contains the following zones:
     - **Upload Request** - Displays the details of the upload request.
     - **Data Records** - Lists the data records of the upload request.
   - **Log** - Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
     - **Upload Request Log** - Displays the trail of actions performed on the particular upload request.
3. Click the **Log** tab.

   The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Indicates the reason why the upload request was rejected.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Adding a Log Entry for an Upload Request

Procedure

To add a log entry for an upload request:

1. Search for the upload request in the **Upload Request** screen.

Copyright © 2009, 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the *u*pload request whose log you want to edit.

   The **Upload Request** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the upload request. It contains the following zones:
     - **Upload Request** - Displays the details of the upload request.
     - **Data Records** - Lists the data records of the upload request.
   - **Log** - Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
     - **Upload Request Log** - Displays the trail of actions performed on the particular upload request.

3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

   The **Add Upload Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Information	Displays information about the upload request.	Not applicable
Log Details	Used to specify additional comments for the upload request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **Upload Request Log** zone.

Chapter 28

General Ledger (GL) Accounting Template

Topics:

- GL Accounting Template (Without Approval) Status Transition
- GL Accounting Template (With Approval) Status Transition
- Algorithms Used in C1- GLAT
- Prerequisites
- GL Accounting Template (Used for Searching)
- GL Accounting Template (Used for Viewing)

Oracle Revenue Management and Billing until now created FT GL entries while generating the financial transactions for adjustments, payments, and bill segments. The FT GL entries were created using the distribution codes from the adjustment type, rate component, billable charge pass through line, or contract type depending on the type of financial transaction. Now, the system enables you to override the distribution code used for creating FT GL entries using the GL Accounting Template feature.

The system allows you to define a GL Accounting template for each process and sub processes combination for a date range. Based on the parameters defined in the **FT Generation** algorithms, the system either uses the standard process or GL Accounting Template for FT GL creation. The GL Accounting template for the specified process and sub processes combination which is effective on the accounting date is used for FT GL creation.

There should be at least one debit and credit lines in the GL Accounting template. You can define maximum 10 lines in the GL Accounting template. Each line should contain the following information:

- Whether the line should be used to create a debit FT GL entry or credit FT GL entry
- Conditional algorithm (created using the **C1-GLATLC** algorithm type) to indicate whether the line should be used to create the FT GL entry or not
- Distribution code to indicate the GL Account against which the FT GL entry should be created
- User defined amount, such as Amount 01, Amount 02, or Amount 03

The line with the Amount 01 user defined amount is used to create balancing FT GL entry against the contract type. The line with the Amount 02, Amount 03, …, and Amount 10 user defined amount is used to create FT GL entries for bill segment calculation lines, non-calculated adjustments, adjustment calculation lines, or payments. In case of bill segments and calculated adjustments, the lines with the Amount 02, Amount 03, …, Amount 10 user defined amount are mapped to calculation line amounts based on the rate component sequence.

You can optionally configure the system to use the approval workflow process while activating or deactivating the GL Accounting templates. If you want to enable the approval workflow process, you need to define algorithms using the following algorithm types:

- C1-GLATAPPEN
- C1-GLATSUB

If the **Approval Required (Y or N)** parameter in an algorithm created using the **C1-GLATSUB** algorithm type is set to **Y**, then on submitting or deactivating the GL Accounting template, the approval workflow process creates a To Do for the approver to review the GL Accounting template. Once the approver approves

a GL Accounting template, the status of the GL Accounting template is set to **Active** or **Inactive**.

We are supporting the following process and sub processes combinations while creating the GL Accounting template:

Process	**BS**	**AD**	**PS**
Sub Process 1	Contract Type	Adjustment Type	Bank Account
Sub Process 2	Division	Contract Type	Contract Type
Sub Process 3	Rate Schedule	Division	Division
Sub Process 4	-	-	-
Sub Process 5	-	-	-

For example, you can define the following the GL Accounting templates using the above supported process and sub processes combinations:

GL Accounting Template	**Process**	**Sub Process 1**	**Sub Process 2**	**Sub Process 3**
GLAT1	BS	CT1	D1	RS1
GLAT2	BS	CT2	D1	RS1
GLAT3	BS	CT3	D2	RS2
GLAT4	PS	BA1	CT1	D1
GLAT5	PS	BA2	CT2	D2
GLAT6	AD	AT1	CT1	D1
GLAT7	AD	AT1	CT2	D2

While creating the GL Accounting template for BS and AD processes, you need to ensure that the line with the Amount 1 user defined amount is a debit line. However, while creating the GL Accounting template for PS process, you need to ensure that the line with the Amount 1 user defined amount is a credit line.

Based on the customer requirements, you can define GL Accounting template for various custom process and sub processes combinations.

The **Create Additional FT GL Entries** parameter is added in the **Assign GL Account to Financial Transaction (C1-GLASN)** and **Assign GL Account to Financial Transaction (GLASSGN2)** batches. If you set this parameter to **Y**, the **C1-GLCE** algorithm is invoked. Based on the parameters defined in the algorithm, the system checks whether there is a GL Accounting template which is effective on the accounting date for the specified process and sub processes combination. If the effective GL Accounting template is available, the system creates additional FT GL entries for the financial transactions. If the financial transaction's currency is different from the division's base currency, the algorithm will create FT GL extension for the respective financial transaction.

Two new parameters are added in the **ADJT-NM**, **ADJT-AC**, **ADJT-TA**, **ADJT-TC**, **ADJT-AD**, **ADJT-GL**, **PSEG-NM**, **PSEG-AC**, **PSEG-CA**, **BSBF-BA**, **BSBF-LO** algorithm types:

Copyright © 2009, 2025, Oracle and/or its affiliates.

- **Use GL Accounting Template (Y or N)** - Indicates whether the FT GL entries should be created using the lines in the GL Accounting template. The valid values are **Y** and **N**.
- **Show the GL Accounting Template Error When Header Record Not Found (Y or N)** - Indicates whether you want to show error message when the effective GL Accounting template is not available for the process and sub processes combination. If you set the value of this parameter to **N**, the algorithm uses the standard process for FT GL creation when the effective GL Accounting template is not available.

The following table explains how the algorithms created using the following algorithm types create FT GL entries:

Algorithm Type	**Use GL Accounting Template (Y or N)**	**Calculated Adjustment Distribution Code Source (AT - Adjustment Type, CL - Calc Lines)**	**Algorithm Behaviour**
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	CL	Creates FT GL for the adjustment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	CL	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	AT	Creates FT GL for the adjustment using the distribution code on the respective adjustment type and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	AT	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **PSEG-NM**, **PSEG-AC**, and **PSEG-CA** algorithm types, the system creates FT GL for the payment segment using the distribution code on the respective payment segment type and the balancing FT GL using the distribution code on contract type. However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y**, the system creates debit and credit FT GL entries using the lines in the GL Accounting template.

Copyright © 2009, 2025, Oracle and/or its affiliates.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	**Then, the system...**
Created from a billable charge with SQI and/or price item details	Creates FT GL for the bill segment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
Created from a pass through billable charge	Creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... • FT GL for the bill segment calculation line using the distribution code on the respective rate component • FT GL for the pass through line using the distribution code on the respective pass through line • Balancing FT GL using the distribution code on contract type
A post processing bill segment	Creates FT GL for the post processing FT using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.

However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	**Then, the system...**
Created from a billable charge with SQI and/or price item details	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
Created from a pass through billable charge	Does not use the GL Accounting template. It creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... • FT GL for bill segment calculation line using the lines in the GL Accounting template. • FT GL for the pass through line using the distribution code on the respective pass through line.

Algorithms Used in C1- GLAT

The following table lists the algorithms which are attached to the **C1-GLAT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-GLAT-INF	C1-GLAT-INF	This algorithm generates the GLAT information string which appears throughout the application. This algorithm concatenates the following fields: • GLAT Description • GLAT Status Description • GLAT ID

The following table lists the algorithms which are used in the lifecycle of the **C1-GLAT** business object:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: • If soft parameter value is set to Y then approval workflow will be triggered.
Approval in Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Approval in Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the **C1-GLATAAPEN** Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Approval in Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Active	-	-	-	-
Deactivation Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: • If soft parameter value is set to Y then approval workflow will be triggered.
Deactivation Approval In Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Deactivation Approval In Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the **C1-GLATAAPEN** Algorithm. It

Rejected	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Inactive	-	-	-	-

Prerequisites

To setup the GL Accounting Template, you need to do the following:

- Define rejected status reasons for the **C1-GLAT** business object
- Define deactivated status reasons for the **C1-GLAT** business object
- Assign the **C1-GLAT** To Do type to a To Do role whose users must receive To Do generated while submitting a template for approval
- Define the required algorithms, for approval and To Do type role and configurations

GL Accounting Template (Used for Searching)

The **GL Accounting Template** screen allows you to search for a template using various search criteria. It also allows you to create template. Through this screen, you can navigate to the following screen:

- GL Accounting Template (Used for Viewing) on page 1799

This screen consists of the following zones:

- Search GL Accounting Template on page 1794
- GL Accounting Template Lines on page 1795

Copyright © 2009, 2025, Oracle and/or its affiliates.

Search GL Accounting Template

The **Search GL Accounting Template** zone allows you to search for GL accounting templates using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template ID	Used to search a particular template.	No
Description	Used to specify the description of a template.	No
Status	Used to indicate the status of the template. The valid values are: • Draft • Approval In Progress • Deactivation Approval In Progress • Active • Inactive • Rejected	No
Process	Used to search a particular process.	No
Sub Process 1	Used to search a particular Sub Process 1.	No
Sub Process 2	Used to search a particular Sub Process 2.	No
Sub Process 3	Used to search a particular Sub Process 3.	No
Sub Process 4	Used to search a particular Sub Process 4.	No
Sub Process 5	Used to search a particular Sub Process 5.	No
Effective Start Date	Used to search templates which are effective from a particular date.	No
Effective End Date	Used to search templates which are effective till a particular date.	No

Note: You must specify at least one search criterion while searching for a template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Process	Displays the process.
GL Accounting Template Request Information	Displays information about the template.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
	Note: It has a link. On clicking the link, the **GL Accounting Template** screen appears where you can view the details of the respective template.
Description	Displays the description of process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.
Status	Displays the status of template.

GL Accounting Template Lines zone	GL Accounting Template Lines on page 1795

GL Accounting Template Lines

The **GL Accounting Template Lines** zone displays the details of the template lines. This zone contains the following columns:

Column Name	Column Description
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

Note: By default, the **GL Accounting Template Lines** zone does not appear in the **GL Accounting Template** screen. It appears when you click the **Broadcast** (📡) icon corresponding to the template in the **Search Results** section.

Searching for a GL Accounting Template

Procedure

To search for a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
   The **GL Accounting Template** screen appears.
3. Enter the search criteria in the **Search GL Accounting Template** zone.

   Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.
4. Click **Search**.
   A list of templates that meet the search criteria appears in the **Search Results** section.

Creating a GL Accounting Template

Prerequisites

To create a GL Accounting template, you should have:

- Conditional Algorithms and Distribution codes defined in the application.

Procedure

To create a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
   A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

The **GL Accounting Template** screen appears.

3. Click the **Add** button in the **Page Title** area of the **GL Accounting Template** screen.

   The **GL Accounting Template** screen appears. It contains the following sections:

   - **Main** - Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments.**
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

   - **GL Accounting Template Lines** -Used to specify the template lines in a GL accounting template. This section contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

4. Enter the required details

> **Note:**
>
> You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.
>
> At least one credit and one debit line is required while defining a template.
>
> System will not allow to add a template having same set of process, sub processes and effective date. If there is a template already created and its status is Inactive, then only template can be created with same set of process, sub processes and effective date.
>
> Each conditional line must have unique User Defined Amount Field value.

5. Add template lines for a template defined.
6. Click **Save**.
   The GL Accounting template is created and the status of the template is set to **Draft**. The **GL Accounting Template** screen appears with the details of template.

Viewing the GL Accounting Template Details

Procedure

To view the details of a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to view.

   The **GL Accounting Template** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the template. It contains the following zone:

Copyright © 2009, 2025, Oracle and/or its affiliates.

    - **GL Accounting Template** - Displays the details of the template.
- **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
    - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.

3. View the details of the template in the **GL Accounting Template** zone.

GL Accounting Template (Used for Viewing)

Once you create a template, the **GL Accounting Template** screen allows you to:

- View the details of a template
- Edit the details of a template
- Delete a template
- Submit a template for approval
- Approve or reject a template
- Deactivate a template

This screen consists of the following tabs:

- **Main** - Displays information about the template. It contains the following zone:

Copyright © 2009, 2025, Oracle and/or its affiliates.

    - **GL Accounting Template** - Displays the details of the template.
- **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
    - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.

GL Accounting Template - Main

The **Main** tab on the **GL Accounting Template** contains the following zone:

GL Accounting Template on page 1800

GL Accounting Template

The **GL Accounting Template** zone displays the details of the template. This zone contains the following sections:

- **Main** - This section provides basic information about the GL Accounting template. It contains the following fields:

Field Name	Field Description
GL Accounting Template Information	Displays information about the template
Status	Indicates the status of the template.
Process	Displays the process.
Description	Displays the description of the process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.

- **GL Accounting Template Lines** - Lists the GL Accounting template lines. It contains the following columns:

Column Name	Column Description
Sequence No	Displays the sequence number.
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the template.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Button Name	Button Description
	Note: The **Edit** button appears when the template is in the **Draft** or **Rejected** status.
Delete	Used to delete the template.
	Note: The **Delete** button appears when the template is in the **Draft** or **Rejected** status.
Submit	Used to activate the template.
	Note: The **Submit** button appears when the template is in the **Draft** or **Rejected** status.
Approve	Used to approve the template.
	Note: the **Approve** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
Reject	Used to reject the template.
	Note: the **Reject** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
Deactivate	Used to deactivate the active template.
	Note: The **Deactivate** button appears when the template is in the **Active** status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the **Business Object** screen appears where you can view the details of the respective business object.

GL Accounting Template - Log

The **Log** tab on the **GL Accounting Template** screen contains the following zone:

GL Accounting Template Log on page 1801

GL Accounting Template Log

The **GL Accounting Template Log** zone on the **GL Accounting Template** screen lists the complete trail of actions performed on the GL Accounting template. This zone contains the following columns:

Copyright © 2009, 2025, Oracle and/or its affiliates.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Displays the status reason of action performed on the template.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. Enter **Log Details** and click **Save**. The GL Accounting Template log is added.

Editing a GL Accounting Template

Procedure

To edit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to edit.
   The **GL Accounting Template** screen for editing appears.
3. Click the **Edit** button in the **GL Accounting Template** zone.

Note: The **Edit** button appears when the template is in the **Draft** or **Rejected** status.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional)

Copyright © 2009, 2025, Oracle and/or its affiliates.

Field Name	Field Description	Mandatory (Yes or No)
		Note: This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments**
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) **Note:** This field is required if **Process** is **Bill Segment or Payment Segment or Adjustments.**
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** - Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

Note:

If you want to specify more than one template lines, click the **Add** (+) icon corresponding to the sequence No and then specify the details.

However, if you want to remove a template line from the template, click the **Delete** (🗑) icon corresponding to the sequence No.

You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

4. Modify the details of the template, if required.
5. Click **Save**.
   The changes made to the GL Accounting template are saved.

Submitting a GL Accounting Template

Prerequisites

To submit a GL Accounting Template, you should have:

- Process and GL Accounting template lines defined in the template.

Procedure

To submit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.

Copyright © 2009, 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template that you want to submit.
   The **GL Accounting Template** screen appears.
3. Click the **Submit** button in the **GL Accounting Template** zone.
   The system behaves in the following manner:

If...	Then...
Approval Required Flag is set to Yes in the **C1-GLATSUB** algorithm.	A To Do of the **C1-GLAT** To Do type is created and sent to the approver and the status of the template is changed to **Approval In Progress**.
Approval Required Flag is set to No in the **C1-GLATSUB** algorithm.	The template is created using the specified process and the status of the template is changed to **Active** .

Note:

The **Submit** button appears when the template is in the **Draft** or **Rejected** status.

Approving a GL Accounting Template

You can view the number of GL Accounting templates which are pending for approval in the **GL Accounting Template** screen. The approver can review, and accordingly approve or reject the template based on the observations.

Note: The system will not allow you to approve or reject a template submitted by you.

Procedure

To approve a template:

1. Do either of the following:

If you want to...	Then...
Approve a GL Accounting Template through the GL Accounting template screen	**a.** Search for the template in the **GL Accounting template** screen. **b.** In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template which you want to review.
Approve a GL Accounting Template from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**.

Copyright © 2009, 2025, Oracle and/or its affiliates.

If you want to...	Then...
	The **To Do Type for User Search** window appears. **c.** Enter **C1-GLAT** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the GL Accounting template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Approve** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If you are...	Then...
Approving a GL Accounting template	The status of the template is changed to **Active** as specified in the GL Accounting template.

Note: The **Approve** button appears when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.

Rejecting a GL Accounting Template

Prerequisites

To reject a GL Accounting template, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a GL Accounting template, you need to specify the reason why you want to reject the template. You can select the appropriate rejection reason when you have defined the reasons for the **Rejected** status of the **C1-GLAT** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a template submitted by you.

Procedure

To reject a GL Accounting template

1. Do either of the following:

Copyright © 2009, 2025, Oracle and/or its affiliates.

If you want to	Then
Reject a GL Accounting template through the GL Accounting Template screen	**a.** Search for the template in the **GL Accounting Template** screen. **b.** In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template which you want to review.
Reject a GL Accounting template from the To Do List screen	**a.** Click the **Menu** link in the **Application** toolbar. A list appears. **b.** From the **Main** menu, select **To Do** and then click **To Do List**. The **To Do Type for User Search** window appears. **c.** Enter **C1-GLAT** in the **To Do Type** field. **d.** Click the **Search** button corresponding to the **To Do Type** field. The **To Do List** screen appears. **e.** Select the **Open** option from the **Filter by** list to view all unassigned To Dos. **f.** Click the link in the **Message** column corresponding to the To Do of the template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Reject** button in the **GL Accounting Template** zone.

   The **Reject GLAT Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the template	Yes
Comments	Used to specify additional information while rejecting the template.	No

Note: The **Reject** button appears when:

- The template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
- A user with the approval To Do role is reviewing the template.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.
   The status of the template is changed to **Rejected**.

Deactivating a GL Accounting Template

Prerequisites

To deactivate a GL Accounting template, you should have:

- Deactivation reasons defined in the application.

Note:

While deactivating a GL Accounting template, you need to specify the reason why you want to deactivate the template. You can select the appropriate deactivation reason when you have defined the reasons for the deactivation status of the **C1-GLAT** business object in the **Status Reason** screen.

Procedure

To deactivate a GL Accounting template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template that you want to deactivate.
   The **GL Accounting Template** screen appears.
3. Click the **Deactivate** button in the **GL Accounting Template** zone.

   Note: The **Deactivate** button appears when the template is in the **Active** status.

   The **Deactivate GLAT Request** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason for deactivating a template	Yes
Comments	Used to specify the additional comments for the deactivation of template.	No

4. Click **OK**.
   The GL Accounting template status is changed to **Deactivation Approval In Progress** .

Viewing the Log of a GL Accounting Template

Procedure

To view the log of a GL Accounting template:

1. Search for the template in the **GL Accounting template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose log you want to view.

   The **GL Accounting Template** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the template. It contains the following zone:
     - **GL Accounting Template** - Displays the details of the template.
   - **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
     - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.
3. Click the **Log** tab.

   The **GL Accounting Template Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Indicates the reason why the template was rejected or voided.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

Adding a Log Entry for a GL Accounting Template

Procedure

To add a log entry for a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.

Copyright © 2009, 2025, Oracle and/or its affiliates.

2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column *c*orresponding to the template whose log you want to edit.

   The **GL Accounting Template** screen appears. It consists of the following tabs:

   - **Main** - Displays information about the template. It contains the following zone:
     - **GL Accounting Template** - Displays the details of the template.
   - **Log** - Lists the complete trail of actions performed on the template. This tab contains the following zone:
     - **GL Accounting Template Log** - Displays the trail of actions performed on the particular template.

3. Click the **Log** tab.
   The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

   The **Add GL Accounting Template Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
GL Accounting Template Information	Displays information about the template.	Not applicable
Log Details	Used to specify additional comments for the template.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.
   The log entry is added in the **GL Accounting Template Log** zone.

- Accrual Type (Used for Viewing)
- Accrual (Used for Searching)
- Accrual (Used for Viewing)

Oracle Revenue Management and Billing enables you to calculate and create accrual for accounts. An accrual allows an entity to record expenses and revenues for which it expects to expend cash or receive cash, respectively, in a future reporting period.

The accrual is an adjustment which is created for the following:

- Revenues that have been earned but are not yet recorded in the books of accounts.
- Expenses that have been incurred but are not yet recorded in the book of accounts.

The system also enables you to reverse the accrual for accounts. You need to define whether the accounts belonging to a division are eligible for accrual or not. If a division is eligible for accrual, by default, all accounts belonging to the division are eligible for accrual. However, you can exclude an account from accrual, if required. To enable the accruals feature, you need to define the following:

- **Accrual Cycle** - You must specify the following information in the accrual cycle:
  - Dates when accrual should be calculated and created for the accounts where the accrual cycle is defined.
  - Accrual reversal period for each accrual date.

  If a division is eligible for accrual, you need to specify the accrual cycle for the division. By default, all accounts belonging to a division will inherit the accrual cycle of the division. However, you can override the accrual cycle of an account
- **Accrual Type** - You must specify the following information in the accrual type:
  - Type of the accrual object that you want to create for posting the accrual amount. At present, the product enables you to create adjustments to record accruals for accounts in the system.
  - Whether you want to calculate the accrual based on the historical or actual data. If you want to calculate the accrual based on the historical data, you need to specify the number of historical bills that you want to consider for accrual calculation. The system will only consider the completed historical bills during accrual calculation. Besides specifying the historical bill count, you also need to specify the type of day (i.e. Business Day or Calendar Day) which is used to calculate the accrual amount. However, if you want to calculate the accrual based on the actual data, you need to specify whether trial bill or unbilled pass through billable charges created through the Transaction Feed Management process should be considered to calculate the accrual amount.

- Whether you want to calculate accrual at the bill or bill segment level.
- Cancel reason that you want to use while reversing the accrual
- Algorithms that you want to use during the accrual calculation, creation, and reversal
- Whether any objects, such as adjustments created using a particular adjustment type, bill segments created for a particular price item, or adjustments' or bill segments' financial transactions where a particular distribution code is used, must be excluded during the accrual calculation.
- Divisions to which you want to associate the accrual type.

The accrual process includes the following sub-processes:

- **Accrual Calculation** - In this process, accounts that are eligible for accrual will have its accrual amount calculated on the basis of the accrual type configuration.
- **Accrual Creation** - In this process, on the basis of the calculated accrual amount and information configured on the accrual type, the accrual adjustment will be created.
- **Accrual Reversal** - In this process, reversal of accrual adjustments will be done to prevent double posting of revenue, once billing is done. On the basis of the accrual reversal schedule, an account with accrual adjustments will be selected for accrual reversal processing. For every frozen adjustment, a cancellation is done in order to reverse journal entries.

During the accrual process, an accrual goes through various statuses in its lifecycle. You can execute accrual process either using user interface (UI), or batch. For more information about the accrual statuses, see, Accrual Created through UI (Without Approval) Status Transition on page 1813, Accrual Created through UI (With Approval) Status Transition on page 1813, Accrual Created through Batch (Without Approval) Status Transition on page 1814, and Accrual Created through Batch (With Approval) Status Transition on page 1815

Note that the lifecycle of an accrual is driven by the business object using which the accrual is created. An accrual business object named **C1_ACCRUALS** is shipped with the product. The accrual feature explained in this document is articulated based on the lifecycle and logic defined in the **C1_ACCRUALS** business object.

Accrual Processes

An accrual allows an entity to record expenses and revenues for which it expects to expend cash or receive cash, respectively, in a future reporting period. Following are the accrual processes to implement accrual in the application:

- Account's Eligibility Check for Accrual on page 1817
- Accrual Calculation on page 1817
- Accrual Creation on page 1818
- Accrual Reversal on page 1819

Copyright © 2009, 2025, Oracle and/or its affiliates.

Account's Eligibility Check for Accrual

The accrual eligibility process checks a number of account attributes to ensure that the accounts are eligible for accrual. The following table lists the internal process that identifies an account's eligibility for accrual. There will be a switch/ indicator in the division and account levels that captures the information as given below:

Division Accrual (Yes/ No)	Account Accrual (Yes/ No)	Eligibility for Accrual (Yes/No)	Description
Yes	No	No	Account has the highest priority over division.
Yes	Blank	Yes	Division has the highest priority in the absence of account information.
Yes	Yes	Yes	Account has the highest priority over division.
No	Yes	No	If the division is set to no, ignore the account level switch.
No	No	No	If the division is set to no, ignore the account level switch.
No	Blank	No	If the division is set to no, ignore the account level switch.

Following accounts are considered for accrual eligibility:

1. The Invoicing Group's (IG) Master Account is the only account which is eligible for accrual.
2. The Invoice Construct Usage Account is not eligible for accrual.
3. You can only process the accrual eligible accounts for calculation purposes.

Accrual Calculation

The accrual calculation process calculates the accrual amount of only those accounts that are eligible for accrual. Depending upon the accrual type of those eligible accounts, an algorithm is created to calculate the accrual amount that is based on the following parameters:

- Calculate Accrual at the Bill Level Based on Historical Data on page 1817
- Calculate Accrual at the Price Item Level Based on Historical Data on page 1818
- Calculate Accrual at the Bill Level Based on Actual Data on page 1818
- Calculate Accrual at the Price Item Level Based on Actual Data on page 1818

Note: By default, all the adjustments (for bill level and bill segment level) are included in the accrual calculation. However, some adjustments from the calculation lines are excluded, through the look up references provided in the application.

Calculate Accrual at the Bill Level Based on Historical Data

The accounts eligible for accrual have their accrual amount calculated at the bill level based on the historical data. The number of historical bills to be considered for accrual calculation is based on the value configured in the accrual type of the eligible account.

For example, if there are two historical bills, the system considers the last two completed bills for accrual calculation. The accrual amount is the average of the bill segments and frozen adjustments on the last two bills. If the option from the Type of Day field is set as Business Day, the system does not consider the weekends and holidays during the accrual calculation. However, if the option from the Type of Day field is set as Calendar Day, the system considers the weekends and holidays during the accrual calculation.

Copyright © 2009, 2025, Oracle and/or its affiliates.

Calculate Accrual at the Price Item Level Based on Historical Data

The accounts eligible for accrual have their accrual amount calculated at the price item level based on the historical data. The number of historical bills to be considered for accrual calculation is based on the value configured in the accrual type of the eligible account.

For example, if there are two historical bills, then the system considers the last two completed bills for accrual calculation. The accrual amount is the average of price items on the last two bills. If the option from the **Type of Day** field is set as **Business Day**, the system does not consider the weekends and holidays during the accrual calculation. However, if the option from the **Type of Day** is set as **Calendar Day**, the system considers the weekends and holidays during the accrual calculation.

Calculate Accrual at the Bill Level Based on Actual Data

The accounts eligible for accrual have their accrual amount calculated at the bill level based on the actual data. The actual data can be sourced from a trial bill or rated Transaction Feed Management transaction. The accrual source to be considered is based on the value configured in the accrual type of the account.

Following scenarios indicate how the accrual amount is calculated:

- If the accrual source is transaction feed and accrual amount is calculated at bill level; the accrual amount is the sum of unbilled pass through billable charges created for the account either manually or automatically through the Transaction Feed Management process and frozen adjustments of the account.
- If the accrual source is transaction feed and accrual amount is calculated at bill segment level; the accrual amount is the sum of unbilled pass through billable charges created for the account automatically through the Transaction Feed Management process.

Calculate Accrual at the Price Item Level Based on Actual Data

The accounts eligible for accrual have their accrual amount calculated at the price item level based on the actual data. The actual data can be sourced from a trial bill or rated Transaction Feed Management transaction. The accrual source to be considered is based on the value configured in the accrual type of the account.

Following scenarios indicate how the accrual amount is calculated:

- If the accrual source is trial bill and accrual amount is calculated at bill level; the accrual amount is the sum of price items and frozen adjustments on the latest trial bill.
