This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Preface

This preface contains the following sections:

Documentation accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Related resources

All documentation and other supporting materials are available on the [Oracle Help Center](#).

Diversity and Inclusion

Oracle is fully committed to diversity and inclusion. Oracle respects and values having a diverse workforce that increases thought leadership and innovation. As part of our initiative to build a more inclusive culture that positively impacts our employees, customers, and partners, we are working to remove insensitive terms from our products and documentation. We are also mindful of the necessity to maintain compatibility with our customers' existing technologies and the need to ensure continuity of service as Oracle's offerings and industry standards evolve. Because of these technical constraints, our effort to remove insensitive terms is ongoing and will take time and external cooperation.

1

Oracle Health Immunization Management Cloud Service

The 14.0.0 release of Oracle Health Immunization Management Cloud Service (Oracle Health Immunization Management) provides new enhancements. It also resolves a range of issues. See the following sections for details.

New in this release

The following table includes enhancements to Oracle Health Immunization Management and Oracle Health Immunization Management Patient Portal.

**Note:**

Oracle Health Immunization Management Cloud Service (Oracle HIMCS) Mobile only applies to users in Senegal.

Table 1-1 Enhancements

Number	Category	Description
HCOHMS-3045, 3399, 6027	Oracle HIMCS Mobile	Oracle Health Immunization Management Cloud Service (Oracle HIMCS) Mobile detects the language setting of your phone and opens the mobile application in English or French.
HCOHMS-3179	Oracle HIMCS Mobile	You can only select Senegal as the country location when setting up your device in Oracle HIMCS Mobile.
HCOHMS-3770	Oracle HIMCS Mobile	When you add patient details in Oracle HIMCS Mobile and select Email or Text Message as the contact method, the system automatically checks that you enter a valid email address or mobile number when the file automatically uploads to Oracle Health Immunization Management (main system). If the record includes any errors, you can review them through the Administration options in Oracle Health Immunization Management and fix them. Once fixed, the system adds the record to the list of patient records already in the system.

Table 1-1 (Cont.) Enhancements

Number	Category	Description
HCOHMS-5052, 5951	Oracle HIMCS Mobile	<p>Oracle Health Immunization Management ensures that the list of values set for procedure fields matches the list of values set in Oracle HMICS Mobile.</p> <p>When you select a product for a procedure, the Disease field automatically populates with the name of the primary disease for the product. You cannot change it. And, if only one manufacturer makes the product, the Manufacturer Name field automatically populates with the appropriate manufacturer name (for example, AstraZeneca). If many manufacturers make the product, you must select the manufacturer name.</p>
HCOHMS-6533	Oracle HIMCS Mobile	<p>You can share your mobile device for other users to create records in Oracle HIMCS Mobile. They just need to create an account and set a PIN for security.</p>

 **Note:**

You must enter your Support ID when you create an account in Oracle HIMCS Mobile. To find this number, sign in to Oracle Health Immunization Management and look for the number next to your account name on the Home page. Or, ask your Oracle Health Immunization Management administrator to look up your account details and give you your Install ID.

Table 1-1 (Cont.) Enhancements

Number	Category	Description
HCOHMS-6534, 6757, 6881	Oracle HIMCS Mobile	<p>If you create a patient record without a wi-fi connection, the record remains stored in a secure area within the mobile application until you reconnect to the network. Then, the application automatically uploads the record (one or more) to Oracle Health Immunization Management. If it finds any errors (for example, the Created By field contains a Support ID not associated with the main Oracle Health Immunization Management system), it flags the file with an error. An administrator can review the file (through Administration > Manage Mobile Devices > Manage Mobile Records) and make any necessary changes before adding the record to the system. (For example, for an invalid Support ID, the administrator can find the correct first and last name of the user, check the associated Support ID number for that person, and update the Support ID in the file.)</p> <p>You can quickly see if any uploaded records contain errors by looking at the Manage Mobile Records tab in Oracle Health Immunization Management. The tab name includes an exclamation point (!) icon (with an Error tooltip) to alert you to uploaded patient files that you need to review and correct before the system can add them.</p>
HCOHMS-6542	Oracle HIMCS Mobile	<p>When Oracle HIMCS Mobile uploads the first patient record to Oracle Health Immunization Management, the system assigns a location code of MOBILE to the record that you cannot change. All records uploaded from Oracle HIMCS Mobile appear under the location code of MOBILE.</p>
HCOHMS-6620	Oracle Health Immunization Management	<p>If you review uploaded mobile records with errors through Administration > Manage Mobile Devices > Manage Mobile Records in Oracle Health Immunization Management, you can see validation errors under the field with the issue or an error message with details on the problem. For example, if a required field needs an entry, you see an error message under the empty field. But, if someone entered an invalid Support ID, you see a message that the system failed to validate <i><user name and Support ID></i>.</p>
HCOHMS-6648, HCOHMS-6975	Oracle HIMCS Mobile	<p>When you first open Oracle HIMCS Mobile, you see a splash screen with the name of the application as it loads and opens.</p>

Table 1-1 (Cont.) Enhancements

Number	Category	Description
HCOHMS-6664	Oracle HIMCS Mobile	You can edit and delete user accounts through the Edit Account and Advanced options under the account profile (person) icon at the top of the mobile app. You can recreate accounts at any time if necessary. And, if you delete an account, any offline records that user created remain on the device until the application reconnects to Oracle Health Immunization Management and uploads them.
HCOHMS-6877	Oracle HIMCS Mobile	Patients and their records added through Oracle HIMCS Mobile show up in Oracle Health Immunization Management with a Source of MOBILE LOAD when you review their patient details and view their procedures.
HCOHMS-6930	Oracle HIMCS Mobile	The Date Administered field automatically populates with today's date for Administered and Self-Reported procedure outcomes. However, you can manually change the date to an earlier date if you need to enter a previously administered procedure.
HCOHMS-5162	Oracle Health Immunization Management	When trying to locate a patient through the Patients tab, you can enter some search criteria (for example, full or partial registrant code, last name, or date of birth), the system lists the matching patients when you select Search or press the Enter key.

Fixed in this release

The following table includes the 14.0 fix for Oracle Health Immunization Management and Oracle Health Immunization Management Patient Portal.

Table 1-2 Fixed 14.0 issue

Number	Category	Description
HCOHMS-4510	Procedure details	For procedures where you need to select Unable to Administer , Oracle Health Immunization Management now requires you to enter a reason in the Reason for not administering section. If necessary, you can add notes in the Notes section, but they are not required.
HCOHMS-7074	REST API	The GET method for the <code>/v1/registrants</code> endpoint now contains an <code>external_id</code> parameter. This parameter enforces a uniqueness constraint when you query on registrant data.

Table 1-2 (Cont.) Fixed 14.0 issue

Number	Category	Description
HCOHMS-7098	REST API	When you create a new registrant using the <code>POST</code> method for the <code>/v1/registrants</code> endpoint, if you provide an invalid parameter value for <code>document_type</code> , the system now returns an HTTP 500 internal server error.
HCOHMS-7104	REST API	The <code>GET</code> method for the <code>/v1/lookups</code> endpoint now returns an <code>active</code> flag for each individual code in a list of values.
