Preface

The Distribution Shop and Book API enables real-time, dynamic discovery, pricing, and booking of hotel inventory (rooms, rates, and offers) through direct, third-party, or interconnected digital channels. It powers the commercial engine of hotel distribution by delivering seamless guest experiences and maximizing revenue opportunities.

Audience

This guide is intended for customers and partners who develop applications with the Oracle Hospitality Integration Platform.

Documentation

Oracle Hospitality product documentation is available on the Oracle Help Center at <https://docs.oracle.com/en/industries/hospitality/>.

Revision History

Date	Description of Change
October 2025	Initial publication

1

Business Context

The Shop and Book API enables real-time, dynamic discovery, pricing, and booking of hotel inventory (rooms, rates, and offers) through direct, third-party, or interconnected digital channels. It powers the commercial engine of hotel distribution by delivering seamless guest experiences and maximizing revenue opportunities.

OPERA Cloud Distribution is a layer on top of OPERA Cloud and OPERA Cloud Central that channels (booking engines or others) can use to search for rates and book directly in OPERA Cloud from one single URL. The following APIs are available:

1. Distribution Channel Authentication API
2. Content API
3. Shop API
4. Book API

This guide covers common use cases and workflows that represent industry standards and expectations.

Use Case	Description
Distribution Channel Authentication	Retrieve and renew a token for a given channel user.
Content API	Retrieve a list of properties and property static information.
Shop API	Search for hotels based on date range, occupancies, rate filters, amenities, negotiated rates, special offers, and other preferences.
Book API	Create, retrieve, modify, and cancel booking in OPERA Cloud for a given channel code.

2

Prerequisites - Required Tools

Tool	Description	Links
Github	A repository containing both Oracle Hospitality Property API specifications and accompanying Postman Collections.	GitHub Repository
Postman Collection	You can download and use the Postman Collections associated to the use cases explained in this guide.	Postman Collection

3

Environment

OPERA Cloud Platform Module	Description	Version
OPERA Cloud Services	The customer must have a subscription to OPERA Cloud Distribution or OPERA Cloud Central.	25.1
Oracle Hospitality Integration Platform (OHIP)	For customers, OHIP is included in the subscription to OPERA Cloud Distribution or OPERA Cloud Central.	The latest released version. OHIP is a single version product.
OPERA Cloud Identity Management (OCIM)	OPERA Cloud must be using OCIM.	The latest released version. OCIM is a single version module.
OPERA Cloud Distribution	Properties must be provisioned in the Distribution platform and have channels configured.	25.1

4

Getting Started

To get started, you must perform the following tasks:

- – [Onboarding to the Oracle Hospitality Integration Cloud Service](#)
- Oracle will create the Channel Code before calling the Shop and Book APIs.
 - Customers can request the channel code for the Booking Engine Distribution API through their Oracle representative.
- Once the channel code is created, Customer can [Register an OHIP Application](#) and [Subscribe to Oracle Hospitality APIs](#), which includes Distribution APIs.
- Customer finally configures the Channel in the OPERA Cloud Distribution user interface.
 - Hotel Distribution Property Controls
 - Hotel descriptions following Distribution industry standards
 - Guest rooms content
 - Channel room type mapping
 - Rate Plan Default Distribution Attributes (rate plan types, meal plans, descriptions)
 - Channel Rate Plan mapping
 - Map OPERA Cloud reservation types, payment types, and card types to Distribution industry standards
 - Assign Tax types to Distribution industry standard OTA tax types in OPERA Cloud transaction codes.
- For more information, refer to [Oracle Hospitality Distribution APIs](#) in the Oracle Hospitality Integration Platform User Guide.

5

Using the OPERA Cloud Distribution APIs

When utilizing the OPERA Cloud APIs, you can choose from the following options based on your specific use cases:

Content Properties Summary	List of properties assigned to a channel code.
Property search	List the availability status and rate range at multiple properties for a given list of properties for given stay criteria.
Property offers	List available offers for a single property for given stay criteria.
Property get offer	Retrieve a single offer by room type and rate plan or booking code.
Property Calendar	List available offers as a calendar for a single property for a maximum of 62 arrival days.
Create reservation	Create a new reservation.
Modify reservation	Modify a reservation.
Retrieve reservation	Fetch a reservation (outside of create or modify flow).
Cancel reservation	Cancel a reservation.
Commit/Ignore an on hold reservation	Commit/ignore an on hold reservation (optional).

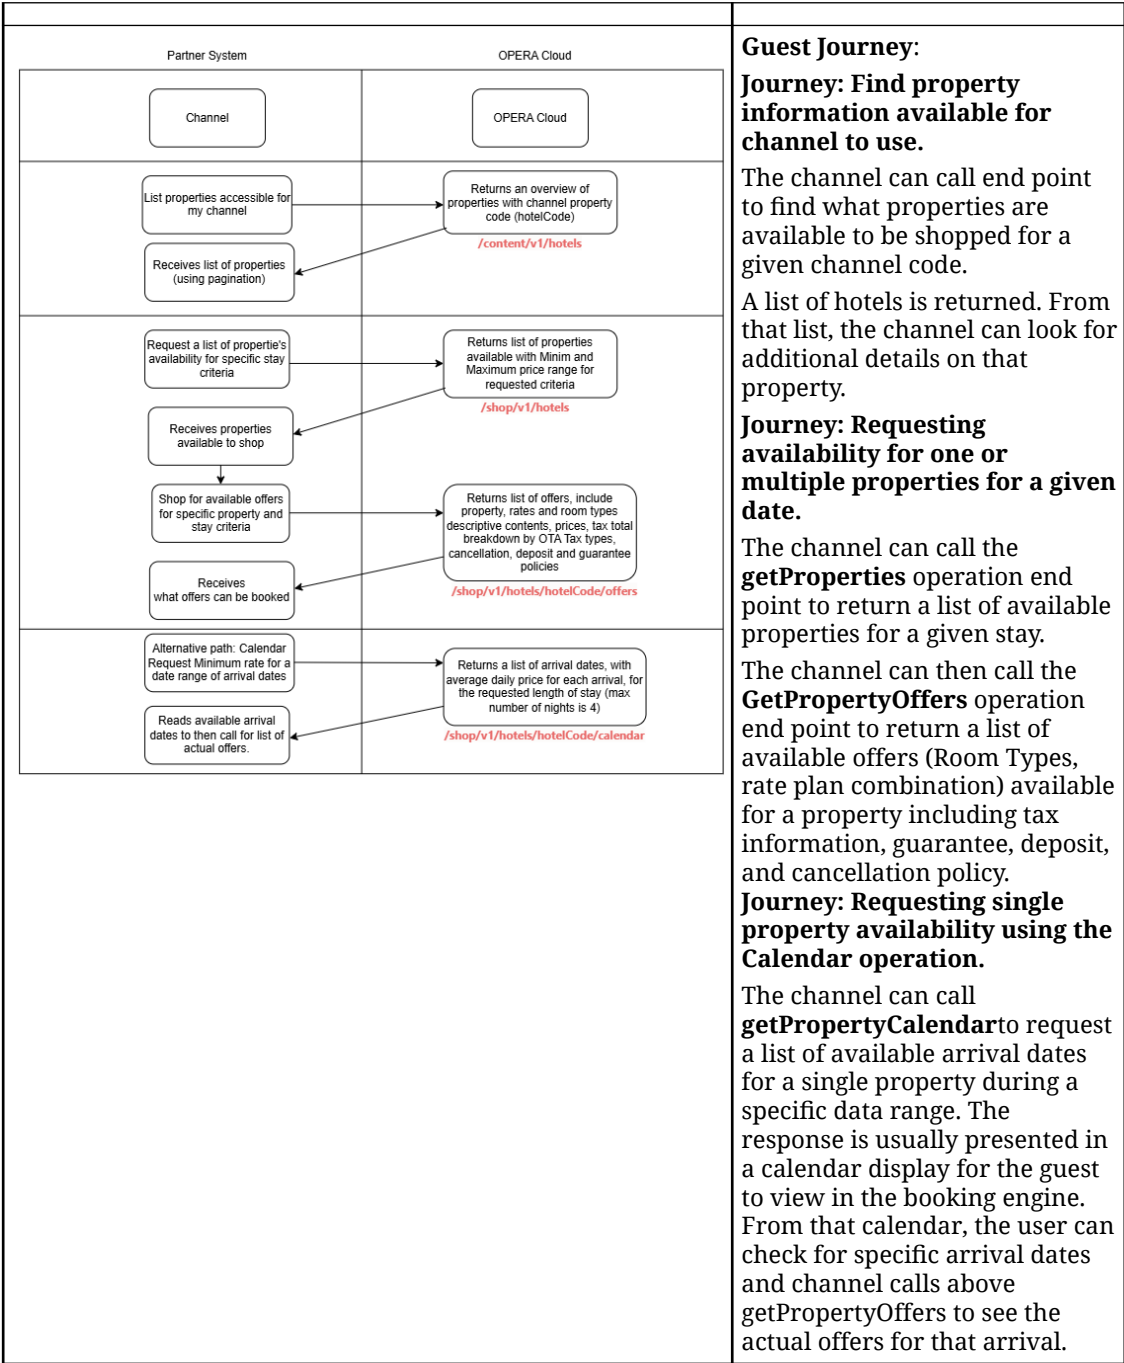

6

Workflows

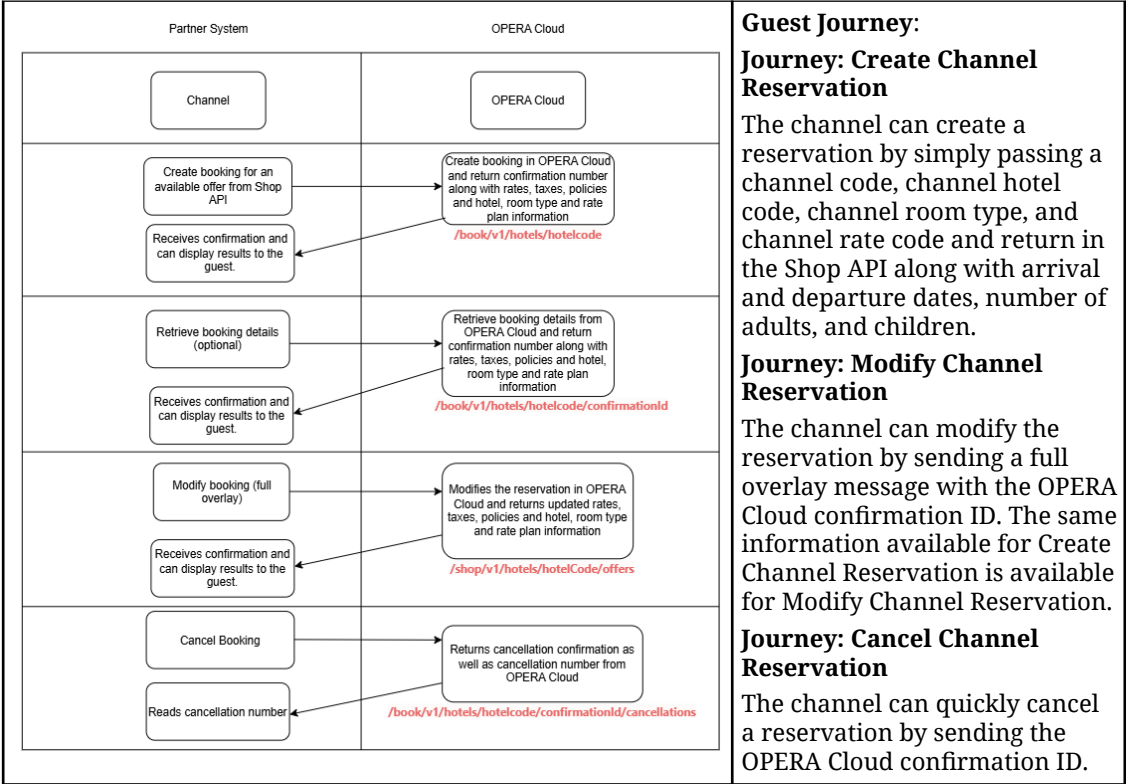

Overview

There are two main flows for booking a room as a channel. First, channels call for availability and then channels create and manage reservations.

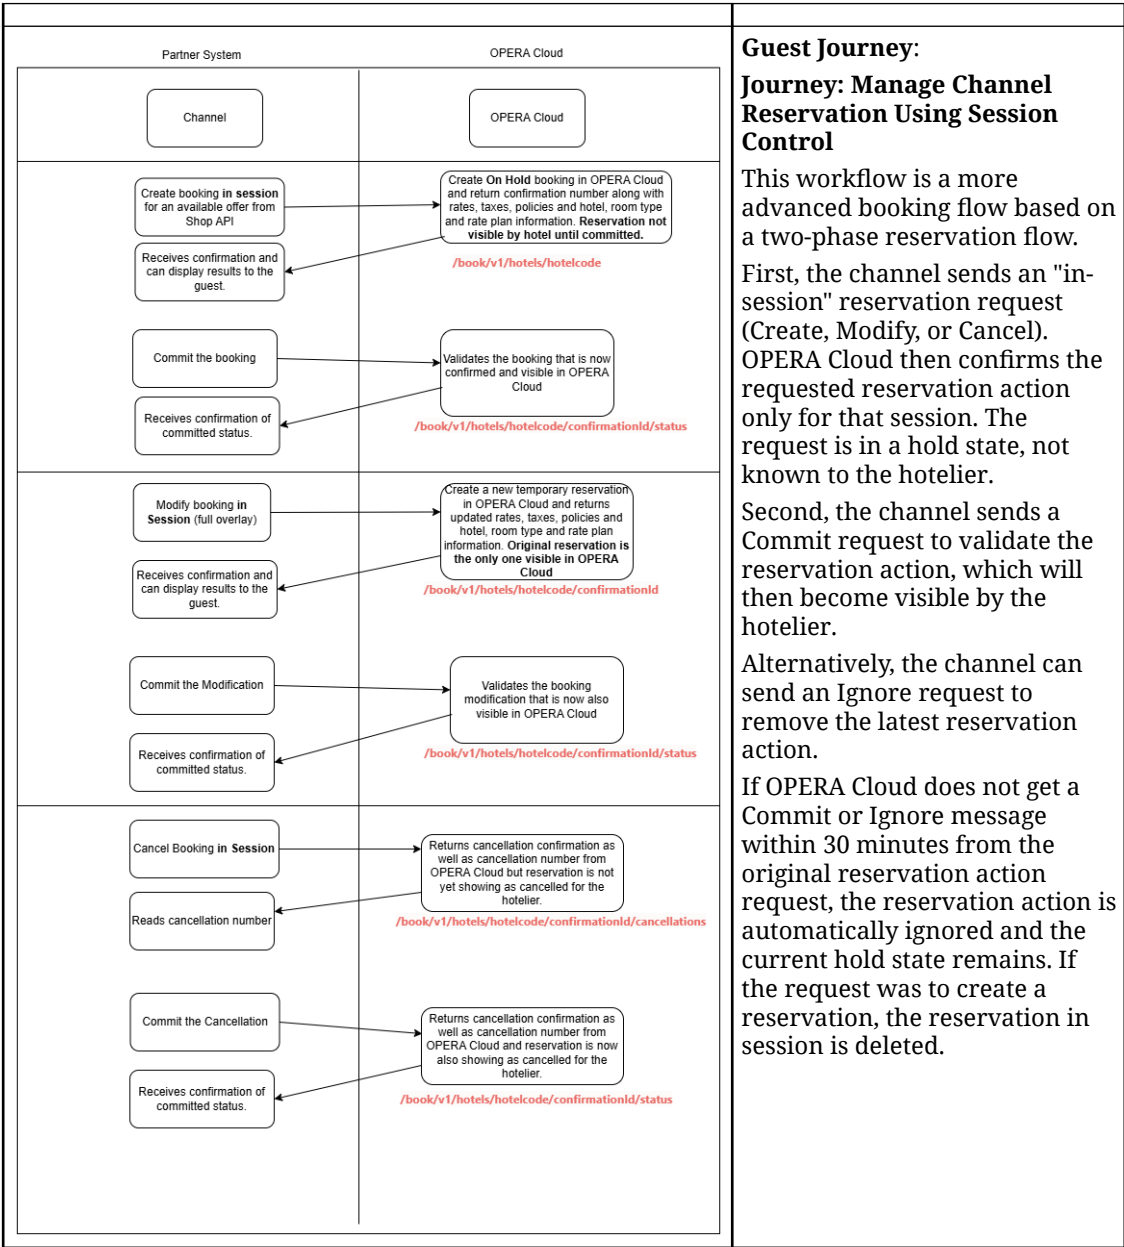

1. Shop (Fetch Property Content and Shop for Available Room/Rates):

2. Book

3. Book Using Session Control

Guest Journey:
Journey: Manage Channel Reservation Using Session Control

This workflow is a more advanced booking flow based on a two-phase reservation flow.

First, the channel sends an "in-session" reservation request (Create, Modify, or Cancel). OPERA Cloud then confirms the requested reservation action only for that session. The request is in a hold state, not known to the hotelier.

Second, the channel sends a Commit request to validate the reservation action, which will then become visible by the hotelier.

Alternatively, the channel can send an Ignore request to remove the latest reservation action.

If OPERA Cloud does not get a Commit or Ignore message within 30 minutes from the original reservation action request, the reservation action is automatically ignored and the current hold state remains. If the request was to create a reservation, the reservation in session is deleted.

Shop and Book Use Cases

- 1. Shop
See [Distribution Shop Operations and Error Codes](#).
- 2. Book
See [Distribution Book Operations and Error Codes](#).

References

Reference	Description	Link
Oracle Hospitality APIs	You can access examples of the currently supported Shop and Book in the provided Postman collection.	Github
Channel Code Creation	The channel code must be requested to Oracle during Distribution onboarding in OHIP. Currently, this cannot be created by hotels.	Channel Code Creation
OPERA Cloud Distribution Channel Content	The hotelier can add Industry/OTA standard external facing Hotel and Guest rooms descriptive information to the OPERA Cloud property and room type.	Distribution Channel Content
OPERA Cloud Distribution Channel Configuration, Channel Rates and Logs	The hotelier must decide which room types and rate plans can be retrieved by a given channel. The hotelier can also test distribution using the Channel Availability screen to see what specific channels can view based on the configured channel mapping. The hotelier can also review logs for reservation requests coming from channels.	Distribution Channel Management
Manage Channel Negotiated Rates	The hotelier can define access codes for the Shop and Book channel to shop for a negotiated rate.	Channel Negotiated Rates
Manage Promotion Codes	The channel can shop for promotion codes defined by the hotelier.	Promotion Codes Configuration
OHIP Digital Learning	The learning path provides an overview of the benefits and highlight features of OHIP and provides instruction on the fundamentals of OHIP.	Oracle Hospitality Integration Platform (OHIP) for Integrators Learning Path

8

Key Terminologies

Term	Description
Channel Code	A channel code in hotel distribution is a unique identifier that represents the source of a booking or where a booking offer is being made available — like an OTA, GDS, or brand website.
Hotel Code	Hotel Code is the hotel globally unique identifier for a property. It can be same from OPERA Cloud property code or different if the external system is sending its own hotel code.
On Hold	An On-hold reservation in the hotel industry refers to a booking that has been temporarily reserved but not fully confirmed — typically because it is waiting for some additional action before becoming a finalized reservation.
Application Key	A unique application key is created for each application upon registering an application in the Oracle Hospitality Developer Portal.
Token	A header authorization that includes the oAuth token obtained through authenticating to Oracle Hospitality Shop and Book APIs.

Distribution Book Operations and Error Codes

A typical reservation book workflow process is as follows:

Book a reservation:

1. Book a reservation: The book service receives a request to create a reservation (**postReservation**) using the information received in the Shop Availability response.
2. The book service responds with a central confirmation number in OPERA Cloud.

Get a reservation:

1. The book service receives a GET reservation call (**getReservation**) using the central confirmation number received during the create reservation process.
2. The book service responds with a payload including all reservation details.

Modify a reservation:

1. The book service receives a modify reservation call (**putReservation**) using the central confirmation number received during the create reservation process and the modified reservation payload.
2. The book service responds with a payload including all modified reservation details.

Cancel a reservation:

1. The book service receives a cancel reservation call (**postCancelReservation**) using the central confirmation number received during the create reservation process and the cancel reservation payload.
2. The book service responds with a payload including the cancellation number.

On Hold (Session controlled) reservation creation / modification / cancellation:

Session Controlled Reservations are reservations that return a successful response marked as 'pending' and require a follow-up message to either commit or ignore (rollback) the reservation.

Create Session Controlled Reservation:

1. The book service receives a request to create a session controlled reservation (**postReservation**) using the information received in the Shop Availability Response.
2. The book service responds with a central confirmation number and the status as 'Pending.'
- **Option 1:**
 1. a. Commit the reservation.
 - b. The book service responds with the central confirmation number and the status as 'Commit.'
- **Option 2:**
 1. a. Ignore the reservation. The reservation will be removed from OPERA.
 - b. The book service responds with the central confirmation number and the status as 'Ignore.'

Modify Session Controlled Reservation

1. The book service receives a request to Modify the reservation as session controlled (**putReservation**) using the central confirmation number received during the create reservation process and the modified reservation payload.
2. The book service responds with a central confirmation number and the status as 'Pending.'
- **Option 1:**
 1. a. Commit the reservation modification.
 - b. The book service responds with the central confirmation number and the status as 'Commit.'
- **Option 2:**
 1. a. Ignore the reservation modification. The reservation modification will be roll backed from OPERA.
 - b. The book service responds with the central confirmation number and the status as 'Ignore.'

Cancel Session Controlled Reservation

1. The book service receives a request to Cancel the reservation as session controlled (**postCancelReservation**) using the central confirmation number received during the create reservation process and the cancel reservation payload.
2. The book service responds with a cancellation number and the status as 'Pending.'
- **Option 1:**
 1. a. Commit the reservation Modification.
 - b. The book service responds with the cancellation number and the status as 'Commit.'
- **Option 2:**
 1. a. Ignore the reservation cancellation. The reservation cancellation will be roll backed from OPERA.
 - b. The book service responds with the cancellation number and the status as 'Ignore.'

Sample API calls:

Create a reservation

Limitations and constraints:

- An on hold reservation / modification / cancellation is kept on hold based on the configuration in OPERA Cloud controls. If it is not committed or ignored within that time frame, the reservation is removed from OPERA Cloud.

Distribution Shop Operations and Error Codes

Shop Steps:

getProperties parameters:

Parameters	Short description
hotelCodes	Required. List of property Codes.
arrivalDate	Required. Arrival/Check-in Date Example: 2021-06-01.
departureDate	Required. Departure/Check-out Date Example: 2021-06-07.
adults	Number of adults Default: 1.
children	Number of children.
childrenAges	List of Age of the children. Element count must match the number of children.
ratePlanCodes	List of Rate Plan codes.
accessCode	Access code such as Company and Travel Agent special program rate codes.
numberOfUnits	Number of units Default: 1.
rateMode	The rate mode to be applied. It represents a shown rate is highest, average, first night, or most frequent one when there are rate changes during the stay duration. Example: Average. Default: Highest. Possible values: Highest, Average, Arrival, and MostFrequent.
ratePlanCodeMatchOnly	If true, only specified rate plan codes, otherwise, public rate plan codes are also returned.
ratePlanType	Rate Plan type. OTA RPT code list.
availableOnly	If true, only properties with availability will be returned (except if all of them are unavailable) Example: true.
minRate	Minimum base rate in an offer Example: 24.12
maxRate	Maximum base rate in an offer Example: 24.12
alternateOffers	Applicable if ratePlanCodeMatchOnly flag is false: Always - Return alternate offers WhenRequestedNotAvailable - return alternate rates if requested rates are not available. Default: Always
commissionableStatus	The offers to show based on their Commissionable Status. Example: Both. Default: Both.
promotionCodes	List of Promotion codes

getPropertyOffers parameters:

Parameters	Description
hotelCode	Property code
arrivalDate	Arrival/Check-in Date Example: 2021-06-01.
departureDate	Departure/Check-out Date Example: 2021-06-07.

Parameters	Description
adults	Number of adults Example: 1. Default: 1.
children	Number of children.
childrenAges	List of Age of the children. Element count must match the number of children.
roomTypes	List of room types.
ratePlanCodes	List of Rate Plan codes.
accessCode	Access code
numberOfUnits	Number of units. Default: 1.
roomTypeMatch Only	If true, only specified room types will be returned, otherwise, all available room types are returned.
rateMode	Rate mode. Default: Highest.
ratePlanCodeMatchOnly	If true, only specified rate plan codes, otherwise, public rate plan codes are also returned.
roomAmenity	Room amenity per OTA list RMA.
roomAmenityQuantity	Number of room amenities.
includeAmenities	Include property amenities in response.
ratePlanType	Rate Plan type per OTA list RPT.
minRate	Minimum base rate in an offer Example: 24.12.
maxRate	Maximum base rate in an offer Example: 24.12.
alternateOffers	Applicable if ratePlanCodeMatchOnly flag is false: Always - return alternate offers WhenRequestedNotAvailable - return alternate rates if requested rates are not available Default: Always
commissionable Status	What offers to show based on their Commissionable Status. Default: Both.
promotionCodes	List of Promotion codes
blockCode	A code to retrieve price and availability from OPERA Cloud business block.

getPropertyOffer parameters (Single Offer):

Parameters	Short description
hotelCode	Hotel Code for a channel Example: XUSXXYY99.
arrivalDate	Arrival/Check-in Date Example: 2021-06-01.
departureDate	Departure/Check-out Date Example: 2021-06-07.
adults	Number of adults Example: 1. Default: 1.
children	Number of children Example: 2.
childrenAges	List of Age of the children. Element count must match the number of children.
roomType	Room Type Example: XA1K.
ratePlanCode	Rate Plan code Example: XDAILY.
numberOfUnits	Number of rooms to be searched for this availability. Example: 1. Default: 1.
includeAmenities	Indicates to include property amenities in the response. Example: true.

Parameters	Short description
blockCode	A code to retrieve price and availability from OPERA Cloud business block. The search parameters ratePlanCodes, accessCode, ratePlanType, and ratePlanCodeMatchOnly will be ignored when blockCode is present. Example: ABCEVENT0516.

getPropertyCalendar:

Parameters	Description
hotelCode	property Code
arrivalDateFrom	Arrival/Check-in Date From Example: 2021-06-01
arrivalDateTo	Arrival/Check-in Date To Example: 2021-06-20
lengthOfStay	Length of stay Default: 1.
adults	Number of adults Default: 1.
children	Number of children Example: 2.
childrenAges	List of Age of the children. Element count must match the number of children
ratePlanCodes	List of Rate Plan codes
numberOfUnits	Number of units Default: 1.
rateMode	Rate mode Example: Average (recommended). Default: Highest

Limitations and constraints:

The distribution API **getPropertyCalendar** currently supports the following:

Provides availability status for a single property for up to 62 arrival dates.

The search can be returned for 1 stay up to a maximum of 4 nights stay.

Error responses:

Error Code	Description
DPAR00001	{0}: Minimum Occupancy cannot be higher than Maximum Occupancy
DPAR00020	{0} is exceeded the maximum limit {1}.
DPAR00021	{0} is required
DPAR20000	Invalid Property
DPAR20001	Property not active
DPAR20002	Invalid check-in date
DPAR20003	Invalid check-out date
DPAR20004	Invalid - max number of nights exceeded
DPAR20005	Invalid start/end date combination

Error Code	Description
DPAR20006	Invalid number of adults
DPAR20007	Error during processing, please retry
DPAR20008	Invalid children ages
DPAR20009	No rooms available for requested dates
DPAR20010	No rates offered for this sell request
DPAR20011	Room or rate not found
DPAR20012	Rate not loaded
DPAR20013	Either bookingCode or ratePlanCode and roomTypeCode combination is required.
DPAR20014	Invalid minRate and maxRate combination

Anti-patterns:
