

Oracle Hospitality OPERA Cloud Services User Guide

Release 22.5
F73199-05
March 2023

The Oracle logo, consisting of a solid red square with the word "ORACLE" in white, uppercase, sans-serif font centered within it.

ORACLE®

Copyright © 2016, 2023, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Contents

Preface

1 Getting Started

Prerequisites for Getting Started	1-1
Prerequisites for Viewing Recently Accessed Records	1-1
Prerequisites for Performance Meter	1-1
Prerequisites for OPERA Cloud Digital Assistant	1-2
Browser Setup	1-2
Setting Up the Mozilla Firefox Browser	1-3
Setting Up the Google Chrome Browser	1-4
Setting Up the Microsoft Edge Browser	1-5
Setting Up the Apple Safari Browser	1-6
Signing In and Logging Out	1-7
Changing Your Password	1-8
Updating Your Challenge Questions	1-9
Changing Your Location in Multi-Property Operations	1-9
Enterprise Administrator Access and Chain Selection	1-10
Common Actions, Icons, and Navigation	1-10
Application Navigation	1-10
Side Menu	1-11
Notifications	1-12
Search Screens	1-13
Viewing Recently Accessed Records	1-14
Search Using Basic Criteria	1-14
Presentation Pages	1-19
Icons	1-20
Keyboard Navigation	1-21
Using Deep Links to Presentations Pages	1-23
Managing Application Settings	1-24
Quick Launch	1-25
Managing My Quick Links	1-25
Viewing the Property Brochure from Quick Launch	1-27

Quick Links	1-27
Advance Checked In Screen	1-28
Home Dashboard	1-28
Managing Dashboard Pages	1-29
Managing Dashboard Tiles	1-30
Advance Check In Tile	1-47
Using the Rich Text Editor	1-48
Page Composer	1-52
Adding Custom Business Logic using Expression Language	1-55
Customizing or Personalizing a Screen with Page Composer	1-59
Page Composer Field Property Descriptions	1-61
Performance Meter	1-64
Using the Performance Meter	1-66
OPERA Cloud Digital Assistant	1-67
Using OPERA Cloud Digital Assistant	1-72
Accessing the Oracle Hospitality Integration Platform Developer Portal	1-73

Part I OPERA Cloud

2 Client Relations

Prerequisites for Client Relations	2-1
Prerequisites for Activities	2-1
Prerequisites for Activity Attachments	2-1
Prerequisites for Membership (Loyalty)	2-2
Prerequisites for Creating a Guest or Contact Profile	2-2
Prerequisites for Profile Lookup from External Systems	2-2
Prerequisites for Enrolling Guests in External Loyalty Programs	2-3
Prerequisites for Managing Sales Account Forecast	2-3
Prerequisites for Managing Profile Scheduled Activities	2-4
Prerequisites for Profile Additional Information	2-4
Prerequisites for Managing Profile Delivery Types	2-4
Prerequisites for Managing Sales Information	2-4
Prerequisites for Credit Ratings	2-5
Prerequisites for Managing Sales Account Keywords	2-5
Prerequisites for Managing Profile AR Accounts	2-5
Prerequisites for Managing Profile e-Certificates	2-6
Prerequisites for Profile Memberships	2-6
Prerequisites for Managing Profile Membership (Loyalty Cloud Service)	2-6
Prerequisites for Managing Profile Negotiated Rates	2-7
Prerequisites for Managing Profile Routing	2-7

Prerequisites for Manage Profile Relationships	2-7
Prerequisites for Managing Profile Identification and Personal Details	2-8
Prerequisites for Profile Correspondence and Privacy Options	2-8
Prerequisites for Profile Attachments	2-8
Prerequisites for Managing External Emails	2-9
Prerequisites for Merging Profiles	2-9
Prerequisites for Profile Anonymization	2-9
Activities	2-10
Managing Activities	2-10
Linking Multiple Profiles to Activities	2-13
Linking Multiple Blocks to Activities	2-14
Inviting Multiple Owners to Activities	2-15
Managing Activity Attachments	2-15
Viewing Recently Accessed Activities	2-16
Membership (Loyalty Cloud Service)	2-16
Managing Membership Tiers	2-17
Calculating or Expiring Membership Points and Issuing Award	2-19
Managing Membership Claims	2-20
Profiles	2-22
Creating a Guest or Contact Profile	2-23
Creating a Sales Account Profile	2-25
Using Profile Lookup and Download with Integrated Solutions	2-26
Enrolling Guests in External Loyalty Programs	2-27
Managing Profiles	2-31
Managing a Guest or Contact Profile	2-31
Managing a Sales Account Profile	2-34
Managing Sales Account Contacts	2-37
Managing Sales Account Forecast	2-37
Generating the Guest or Contact Details Report	2-39
Managing Profile Scheduled Activities (External Leisure)	2-40
Managing Profile Additional Information	2-41
Managing Profile Delivery Types	2-41
Converting Sales Account Profile Types	2-42
Filtering Profile Search by Accounts	2-43
Managing Sales Information	2-43
Managing Profile Channel Negotiated Rates	2-44
Managing Travel Agent / Source Commission Details	2-46
Managing Profile Credit Ratings	2-47
Managing Sales Account Keywords	2-47
Managing Profile AR Accounts	2-48
Managing Profile e-Certificates	2-49

Managing Profile Subscription	2-52
Managing Profile Memberships	2-53
Managing Profile Negotiated Rates	2-61
Managing Profile Default Routing Instructions	2-63
Managing Profile Relationships	2-64
Managing Profile Identification and Personal Details	2-66
Managing Profile Preferences	2-72
Managing Profile Communication	2-73
Managing Profile Correspondence and Privacy Options	2-75
Viewing Profile Future and Past Stays	2-76
Viewing Profile Future and Past Blocks	2-77
Managing Profile Attachments	2-78
Managing Profile Notes	2-79
Managing External Emails	2-80
Viewing Guest Stay Statistics	2-81
Merging Profiles	2-81
Profile Anonymization	2-82
Viewing Recently Viewed Profiles	2-84

3 Bookings

Prerequisites for Booking	3-1
Prerequisites for Reservation Turnaways	3-1
Prerequisites for Closing Script	3-1
Prerequisites for Converting a Multi-Room Reservation to a Block	3-2
Prerequisites for Reservations Quick Book	3-2
Prerequisites for Redeeming Loyalty Awards	3-2
Prerequisites for Redeeming Promotional e-Certificates	3-3
Prerequisites for Viewing Guestware Preferences and Incidents	3-3
Prerequisites for Reinstating Reservations	3-3
Prerequisites for Reservation Additional Information	3-4
Prerequisites for Managing Custom Charge Exemption	3-4
Prerequisites for Managing Reservation Prepaid (Gift) Cards	3-4
Prerequisites for Managing Reservation eCoupons	3-4
Prerequisites for Managing Reservation Upgrade Offers	3-5
Prerequisites for Managing Reservation Scheduled Activities	3-5
Prerequisites for Managing Linked Reservations	3-6
Prerequisites for Managing Reservations Shares	3-6
Prerequisites for Managing Waitlist Reservation	3-6
Prerequisites for Merging Reservations	3-6
Prerequisites for Viewing Reservation Delivery History	3-7

Prerequisites for Managing Reservation Call History	3-7
Prerequisites for Managing Reservation Tickets	3-7
Prerequisites for Reservation (Guest) Locators	3-8
Prerequisites for Managing Reservation Transportation	3-8
Prerequisites for Reservation External References	3-8
Prerequisites for Setting a Reservation to Do Not Move Status	3-9
Prerequisites for Copying Reservations	3-9
Prerequisites for Managing Reservation Traces	3-9
Prerequisites for Manage Reservation Routing Instructions	3-10
Prerequisites for Managing Reservation Housekeeping and Task Schedule	3-10
Prerequisites for Managing Reservation Deposit and Cancellation	3-11
Prerequisites for Managing Reservation Cancellation	3-11
Prerequisites for No Show and Cancellation Deposits and Charges	3-11
Prerequisites for Reservation Fixed Charges	3-11
Prerequisites for Reservation Alerts	3-12
Prerequisites for Managing Reservation Linked Profiles	3-12
Prerequisites for Reservation Packages	3-12
Prerequisites for Reservation Inventory Items	3-13
Prerequisites for Reservation Memberships	3-13
Prerequisites for Reservation Attachments	3-14
Prerequisites for Reservation Transaction Diversion	3-14
Prerequisites for Managing All Reservation and Block Traces	3-14
Prerequisites for Blocks	3-15
Prerequisites for Master and Sub Blocks	3-15
Prerequisites for Master and Sub-Allocations	3-15
Prerequisites for Managing Opportunities	3-15
Prerequisites for Simple Events	3-16
Prerequisites for Creating a Tour Series	3-16
Prerequisites for Shift Block	3-17
Prerequisites for Block Attachments	3-17
Prerequisites for Managing Block Restrictions	3-17
Prerequisites for Managing Block Inventory Items	3-18
Prerequisites for Managing Block Wash Schedule	3-18
Prerequisites for Block Sell Message	3-18
Prerequisites for Block Traces	3-19
Prerequisites for Events	3-19
Prerequisites for Creating Events from a Template	3-20
Prerequisites for Using Quick Events	3-20
Prerequisites for Managing Alternate Space Events	3-21
Prerequisites for Managing Sub Events	3-21
Prerequisites for Managing Events Revenue Summary	3-21

Prerequisites for Posting Charges for Events	3-21
Prerequisites for Managing Catering Package on Blocks	3-22
Prerequisites for Event Resources	3-22
Prerequisites for Applying Discounts to Event Resources	3-23
Prerequisites for Managing Event Waitlist	3-23
Prerequisites for Editing Multiple Events	3-23
Prerequisites for Managing Custom Menu Items	3-24
Prerequisites for Managing Custom Items	3-24
Reservations	3-24
Booking a Reservation	3-27
About Turn-away	3-33
Closing Scripts	3-33
Overriding a Closed Rate	3-34
Converting a Multi-Room Reservation to a Block	3-35
Creating Reservations Using Quick Book	3-35
Redeeming Loyalty Awards	3-39
Redeeming Loyalty Awards for Package	3-39
Redeeming Loyalty Awards for Payment (Pay with Points)	3-41
Redeeming Loyalty Awards for Rate	3-43
Redeeming Loyalty Awards for Upgrade	3-44
Redeeming Promotional e-Certificate	3-47
Managing Reservations	3-49
Credit Card Authorization Reversals	3-49
Viewing Recently Viewed Reservations	3-50
Viewing Reservation Rate Information	3-50
Viewing Guestware Preferences and Incidents	3-51
Viewing Reservation Stay Revenue	3-51
Editing a Reservation	3-51
Managing Reservation Confirmations	3-60
Reinstating Reservations	3-63
Managing Reservation Additional Information	3-64
Assigning a Room to a Reservation	3-64
Managing Reservation Prepaid (Gift) Cards	3-65
Managing Custom Charge Exemption	3-66
Managing Reservation eCoupons	3-67
Managing Reservation Upgrade Offers	3-68
Managing Reservation Scheduled Activities (External Leisure)	3-69
Managing Linked Reservations	3-71
Managing Reservations Shares	3-74
Managing Waitlist Reservations	3-77
Merging Matched Reservations	3-78

Viewing Reservation Delivery History	3-80
Managing Reservation Call History	3-81
Managing Reservation Tickets	3-82
Managing Reservation (Guest) Locators	3-84
Managing Reservation Transportation	3-85
Managing Reservation External References	3-86
Managing Reservation Do Not Move Room Status	3-87
Moving Reservations to Other Properties	3-88
Copying Reservations	3-88
Searching for Reservations Flagged for External Guest Notifications	3-94
Managing Reservation Notes	3-94
Managing Reservation Traces	3-96
Reservation Routing Instructions	3-98
Reservation Housekeeping and Task Schedule	3-102
Managing Reservation Payment Instructions	3-105
Managing Reservation Deposit Payments	3-108
Managing Reservation Deposit Request and Cancellation Policy	3-119
Managing Reservation Cancellation	3-121
Managing No Show and Cancellation Deposits and Charges	3-123
Managing Reservation Fixed Charges	3-124
Managing Reservation Alerts	3-126
Managing Reservation Preferences	3-128
Managing Reservation Linked Profiles	3-128
Reservation Packages	3-130
Reservation Item Inventory	3-136
Managing Reservation Memberships	3-139
Managing Reservation Attachments	3-140
About Reservation Transaction Diversion	3-141
Creating House Posting Accounts	3-143
About the Room Diary	3-144
Using the Room Diary	3-145
Reservations Workspace	3-150
Mass Cancellation	3-150
Property Calendar	3-150
Using the Property Calendar Setup	3-151
Managing All Reservation and Block Traces	3-152
Managing All Reservation Confirmations	3-154
Blocks	3-156
About Master and Sub Blocks	3-156
Managing Non-synchronized Master and Sub Block Status	3-158
Creating Master and Sub Blocks	3-159

Master and Sub-Allocations	3-160
Creating Master and Sub Allocations	3-161
Creating a Block	3-161
Managing Blocks	3-166
Managing Opportunities	3-171
Non-Elastic, Elastic, Sell Limits, and Shoulder Dates	3-175
Simple Events	3-176
Managing Simple Events	3-177
Managing Notes on Simple Events	3-178
Using the Simple Function Diary	3-179
Copying Blocks	3-181
Creating Additional Posting Master Reservation	3-183
Creating a Tour Series	3-184
Viewing Recently Viewed Blocks	3-186
Viewing Stay Statistics	3-187
Viewing Production Changes	3-187
Group Rooming Lists	3-188
Creating Block Reservation Using the Rooming List	3-190
Changing Rooming List Template	3-196
Applying Changes to Multiple Block Reservations	3-197
Creating (Encoding) Room Keys for Block Reservations	3-197
Generating Key Packet Labels for Block Reservations	3-198
Using Group Rooms Control	3-198
Modify/Update Block — Shift Block Date	3-201
Modify/Update Block — Cutoff Block	3-201
Modify/Update Block — Delete Block	3-202
Managing Block Attachments	3-203
Managing Block Status	3-204
Managing Block Reservation Deposits and Cancellations	3-205
Managing Block Linked Profiles	3-208
Managing Block Access Exclusion	3-209
Managing Block Restrictions	3-210
Managing Block Item Inventory	3-212
Managing Block Wash Schedule	3-213
Managing Block Sell Messages	3-214
Managing Blocks Traces	3-215
Managing Block Notes	3-217
Managing Block Room and Rate Grid	3-218
Events	3-223
Creating Events	3-224
Creating Events from a Template	3-227

Using the Function Diary	3-228
Creating an Event for an Existing Block	3-231
Using Quick Events	3-232
Managing Alternate Space Events	3-233
Managing Events	3-235
Editing Multiple Events	3-237
Viewing Recently Accessed Events	3-238
Managing Sub Events	3-239
Copying Events to Other Dates or Other Block	3-239
Managing Event Notes	3-241
Managing Events Revenue Summary	3-242
Generating Reports from Event Search	3-244
Posting Charges for Events	3-245
Viewing Event Production Changes	3-248
Viewing the Events Changes Log	3-249
Managing Catering Packages on Blocks	3-249
About Event Resources	3-252
Managing Event Resources	3-252
Copying/Moving Resources	3-254
Applying Discounts to Event Resources	3-255
Managing Resource Notes	3-257
Editing Event Menu Resources	3-258
Managing Custom Menu Items	3-259
Managing Custom Items	3-261
Managing Multi-Choice Menus	3-263
Managing Event Waitlist	3-265

4 Front Desk

Prerequisites for Front Desk	4-1
Prerequisites for Pre Register Arrival Reservations	4-1
Prerequisites for Hold Rooms	4-1
Prerequisites for Swapping or Shifting Assigned Rooms	4-1
Prerequisites for Managing Reservation Queue Status	4-2
Prerequisites for eSignature Registration Cards	4-2
Prerequisites for Advanced Check In	4-2
Prerequisites for Multiple Reservations (Mass Check In)	4-3
Prerequisites for Managing Welcome Offers	4-3
Prerequisites for Advanced Folio Payment (Prepayment)	4-3
Prerequisites for Reversing (Cancelling) Check-In	4-4
Prerequisites for Checking Out with an Open Folio	4-4

Prerequisites for Scheduling Checkout	4-4
Prerequisites for Reinstating Checked Out Reservation	4-4
Prerequisites for Managing Guest Messages	4-4
Prerequisites for Generating Batch Registration Cards	4-5
Prerequisites for Running AI Room Assignment	4-5
Prerequisites for Wake Up Calls	4-6
Prerequisites for Key Packet Labels	4-6
Arrivals and Check In	4-6
Pre Register Arrival Reservations	4-6
Creating a Walk In Reservation	4-7
Managing Rooms on Hold	4-8
Swapping or Shifting Assigned Rooms	4-9
Managing Reservation Queue Status	4-10
Managing eSignature Registration Cards	4-13
External Guest Notifications	4-14
External Guest Notifications Conditions and Assumptions	4-15
External Guest Notifications Impact	4-15
Flagging a Reservation for External Guest Notifications	4-16
Checking in Reservations	4-17
Advance Checking In Reservations	4-21
Checking In Multiple Reservations (Mass Check In)	4-30
Managing Welcome Offers	4-34
About Advanced Folio Payment (Prepayment)	4-36
In House	4-37
Reversing (Cancelling) Check-In	4-38
Moving an In House Reservation	4-38
Departures and Checkout	4-40
Using Quick Check-Out	4-40
Checking Out Reservations	4-43
Checking Out Reservations with Open Folio	4-44
Closing an Open Folio Reservation	4-45
Scheduling a Checkout	4-45
Checking Out Reservations Early	4-46
Reinstating Checked Out Reservations	4-46
Front Desk Workspace	4-47
Managing Guest Messages	4-47
Generating Batch Registration Cards	4-50
Running AI Room Assignment	4-51
Wake Up Calls	4-52
Managing Guest Wake Up Calls	4-53
(Batch) Room Assignment	4-54

Available Room Search	4-57
Key Packet Labels	4-58

5 Inventory

Prerequisites for Inventory	5-1
Prerequisites for Restrictions	5-1
Prerequisites for Sell Limits	5-1
Prerequisites for Forecasting Housekeeping Services	5-2
Prerequisites for Using the Housekeeping Board	5-2
Prerequisites for Managing Room Discrepancies	5-3
Prerequisites for Managing Maintenance Requests	5-3
Prerequisites for Out of Order	5-3
Prerequisites for Out of Service	5-4
Prerequisites for Managing Room Conditions	5-4
Prerequisites for Using the Attendant Console	5-4
Prerequisites for Task Sheets	5-5
Prerequisites for Using the Task Sheet Companion	5-5
Restrictions	5-6
Managing Restrictions	5-8
Property Availability	5-10
Viewing Property Availability	5-12
Sell Limits	5-13
Setting Sell Limits	5-13
Room Management	5-14
Forecasting Housekeeping Services	5-14
Using the Housekeeping Board	5-15
Managing Room Discrepancies	5-19
Viewing Floor Plans	5-20
Managing Room Maintenance Requests	5-20
Managing Out of Order Rooms	5-22
Managing Out of Service Rooms	5-23
Managing Room Conditions	5-24
Viewing Property Site Plan Images	5-25
Using the Attendant Console	5-26
Task Sheets	5-26
Generating Task Sheets	5-27
Managing Task Sheets	5-30
Generating Task Sheet Reports	5-33
Using the Task Sheet Companion	5-36

6 Financials

Prerequisites for Financials	6-1
Prerequisites for Accounts Receivables	6-1
Prerequisites for Accounts Receivables Fixed Charges	6-2
Prerequisites for Accounts Receivable Traces	6-2
Prerequisites for Viewing and Managing Invoice Details	6-2
Prerequisites for Transferring Invoice Charges	6-2
Prerequisites for Finalizing Invoices	6-3
Prerequisites for Comp AR Accounts	6-3
Prerequisites for Credit Bills For Folios	6-3
Prerequisites for Debit Bills for Folios	6-4
Prerequisites for Generating a ProForma Invoice	6-4
Prerequisites for Redeem Prepaid (Gift) Cards	6-4
Prerequisites for Posting a Comp Redemption	6-4
Prerequisites for Adjusting Custom Charges	6-5
Prerequisites for Posting Service Recovery Adjustment Charges	6-5
Prerequisites for Void Folios	6-5
Prerequisites for Managing Package Allowances and Charges	6-5
Prerequisites for Managing Prepaid (Gift) Cards	6-6
Prerequisites for Auto Folio Settlement	6-6
Prerequisites for Currency Exchange	6-7
Prerequisites for Managing Global Membership Exchange Rates	6-7
Prerequisites for Charging Purchases Using Post It	6-7
Prerequisites for Sending Fiscal Commands	6-8
Prerequisites for Sending Failed Fiscal Payloads	6-8
Prerequisite for Managing Commissions	6-9
Prerequisites for Internal Charge Numbers	6-9
Prerequisites for Comp Accounting	6-9
Prerequisites for Comp Posting Journal	6-9
Prerequisites for Comp Routing Instructions	6-10
Prerequisites for Comp Requests	6-10
Prerequisites for Player Snapshot	6-11
Prerequisites for Player Statistics	6-11
Prerequisites for Working with Comp Windows	6-11
Prerequisites for Settling and Printing Comp Folios	6-12
Prerequisites for Income Audit	6-12
Accounts Receivables	6-12
Managing Accounts Receivables Accounts	6-12

Managing Accounts Receivables Fixed Charges	6-16
Managing Accounts Receivables Notes	6-18
Managing Accounts Receivable Traces	6-19
Managing AR Account Invoices and Payments	6-20
Managing AR Invoice Payments	6-22
Reversing AR Invoice Payments	6-26
Unapplying Payments	6-26
Viewing Payment History	6-27
Compressing Invoices	6-28
Viewing and Managing Invoice Details	6-29
Transferring Invoice Charges	6-31
Finalizing Invoices	6-33
Viewing Accounts Receivable Aging	6-34
Viewing Accounts Receivables Future and Past Stays	6-34
Viewing Accounts Receivables Accounts Changes Log	6-35
Viewing Accounts Receivable Year View	6-36
Generating Accounts Receivable Reminder Letters	6-36
Generating Batch Account Receivable Reminder Letters	6-37
Creating and Generating Accounts Receivable Statements	6-38
Generating Account Receivable Account Batch Statements	6-38
Managing Direct Bill Transfers	6-40
Accounts Receivables Batch Charges	6-42
Using Accounts Receivable Transaction Research	6-42
Accounts Receivables Credit Card Transfer	6-43
Managing AR Credit Card Transfer	6-44
Comp AR Accounts	6-45
Cashiering and Finance	6-45
Using Credit Limit Overage	6-46
Credit Card Limit Overage Processing Prerequisites	6-46
Credit Card Limit Overage Processing	6-47
Setting Up Automatic Processing of Credit Card Limit Overages	6-48
Credit Limit Overages Screen	6-48
Credit Limit Overages Conditions/Assumptions	6-50
Selecting Folio Styles for Viewing, Printing	6-50
Printing Folios for Banquet Charges	6-51
Detailed Folio (Date) (1)	6-52
Transaction Code Summary Per Day (Code) (2)	6-52
Transaction Code Summary Per Stay (Code) (3)	6-53
Arrangement Summary Per Day (Date) (4)	6-53
Arrangement Summary Per Stay (Date) (5)	6-53
One Line Per Day (Date) (6)	6-54

Daily Summary for Groups (Date) (7)	6-54
Person Summary for Groups (Date) (8)	6-54
Detailed Folio (Room) (9)	6-55
Summary by Stay and Check Number. (Date) (10)	6-55
Resort Hotel Folio (Date) (11)	6-55
Daily Plan (Date) (12)	6-56
Arrangement Summary (Date) (13)	6-56
Summary by Check Number (Date) (14)	6-56
Group Folio Subtotal (Date) (15)	6-57
Group Folio Subtotal Per Guest (Date) (16)	6-57
Group Folio Subtotal per Trn Code (Date) (17)	6-58
Group Summary Folio (Room) (18)	6-58
Group Folio Subtotal Per Room (Date) (19)	6-59
Group Summary Folio (Alpha) (20)	6-59
Banquet Folio by Revenue Types (21)	6-60
Banquet Event (Time) (22)	6-60
Daily Plan (Room) (23)	6-60
Detailed Folio (Package) (24)	6-61
Group Folio (Package) (25)	6-62
Detailed Folio (Name) (26)	6-64
Detailed Folio (Generates) (27)	6-64
Managing Historical Folios	6-64
Credit Bills For Folios	6-67
Debit Bills for Folios	6-69
Manage Billing	6-70
Settling a Reservation Account Balance	6-71
Generating a Folio for a Billing Window	6-74
Generating a ProForma Invoice	6-75
Charges Adjustment and Payments	6-75
Viewing a POS Check Image for a Charge	6-91
Cashier Login	6-92
Pre Stay and Post Stay Charging	6-92
Viewing the Billing Summary	6-93
Searching Reservation Transactions	6-93
Void Folios	6-94
Managing Package Allowances and Charges	6-95
Generating Batch Folios	6-96
Auto Folio Settlement	6-98
Posting Batch Charges	6-101
Processing Batch Deposits	6-102
Credit Card Settlement	6-103

Settling Credit Card Transactions	6-103
Managing Prepaid (Gift) Cards	6-103
Managing Currency Exchange	6-107
Managing Currency Exchange Rates	6-108
Managing Global Membership Exchange Rates	6-111
Charging Purchases Using Post It	6-113
Managing Receipt History	6-114
Open Cashiers	6-115
Closing Cashiers	6-115
Generating Cashier Reports	6-120
Viewing Posting Journal	6-122
Sending Fiscal Commands	6-122
Sending Failed Fiscal Payloads	6-122
Commissions	6-123
Detaching Reservations from Travel Agent or Source	6-123
Attaching Travel Agents / Sources to Reservations	6-123
Managing Commission Payment Holds	6-124
Transferring Zero Commissions to History	6-125
Processing Commission Payments	6-125
Internal Charge Number	6-126
Reviewing Postings to the Internal Charge Number in the Posting Journal	6-127
Accessing an Internal Charge Number from the Changes Log	6-127
Internal Charge Number Setup	6-127
Troubleshooting Internal Charge Numbers	6-128
Internal Charge Number Impact	6-128
Internal Charge Number Conditions/Assumptions	6-129
Comp Accounting	6-129
Comp Posting Journal	6-130
Managing Comp Transactions	6-132
Comp Routing Instructions	6-134
Managing Comp Routing Instructions	6-134
Managing Comp Requests	6-137
Player Snapshot	6-137
Viewing a Player's Snapshot	6-138
Viewing Player Statistics	6-139
Searching for and Transferring Comp Postings	6-139
Working with Comp Windows	6-140
Transferring Transactions to Comp Windows	6-142
Settling and Printing Comp Folios	6-143
End of Day Procedures	6-144
Running End of Day	6-146

Income Audit	6-148
Managing Income Audit	6-148
Print Interim Reports	6-149
Update the Business Date	6-149
Post Room and Tax	6-150
Running End of Day Additional Procedures	6-151
End of Day and Reservation Statistics	6-151
Managing End of Day Reports	6-152
Print Final Reports	6-153

7 Channel

Managing Channel Inventory	7-1
Managing Channel Sell Limits	7-1

8 Miscellaneous

Prerequisites for Miscellaneous	8-1
Prerequisites for Property Interface Control	8-1
Prerequisites for Managing Service Requests	8-1

Part II OPERA Cloud Mobile Application

10 Overview

Prerequisites for OPERA Cloud Mobile Application	10-2
Prerequisites for Mobile Task Companion	10-3
Prerequisites for Room Maintenance	10-3
Prerequisites for Room Status	10-3
Prerequisites for Post It	10-4
Prerequisites for Track-It Requests	10-4
Prerequisites for Queue Rooms	10-4
Task Companion (Housekeeping)	10-4
Room Maintenance	10-7
Heartbeat	10-8
Room Status	10-8
Post it	10-9
Track-It Requests	10-9
In House	10-10
Queue Rooms	10-10

Part III Administration

11 Enterprise Administration

Prerequisites for Enterprise Administration	11-1
Prerequisites for Deleting Page Composer Customization	11-1
Prerequisites for Presentation Panel Tabs	11-1
Prerequisites for User Defined Fields and Values	11-1
Prerequisites for Electronic Registration Cards	11-2
Prerequisites for Closing Scripts	11-2
Prerequisites for Configuring Chain	11-2
Prerequisites for Configuring Service Request Priorities	11-3
Prerequisites for Configuring Service Request Codes	11-3
Prerequisites for Configuring Delivery Status	11-3
Prerequisites for Configuring Corporate Information	11-4
Prerequisites for Configuring Images	11-4
Prerequisites for Track It	11-4

Part VIII OPERA Cloud Video Library

34 OPERA Cloud Videos

Preface

Oracle Hospitality OPERA Cloud Services are a cloud-based, mobile-enabled platform for next generation hotel management. OPERA Cloud offers an intuitive user interface, comprehensive functionality for all areas of hotel management, secure data storage, and hundreds of key partner interfaces to meet the needs of hotels of all types and sizes. By moving property management technology to the cloud, OPERA Cloud simplifies the IT infrastructure in properties, allowing hotel management and staff to focus on delivering exceptional guest experiences.

Purpose

This guide explains how to use OPERA Cloud Services features and functionality.

Audience

This document is intended for users of the OPERA Cloud Services application.

Customer Support

To contact Oracle Customer Support, access My Oracle Support at the following URL:

<https://support.oracle.com>

When contacting Customer Support, please provide the following:

- Product version and program/module name
- Functional and technical description of the problem (include business impact)
- Detailed step-by-step instructions to re-create
- Exact error message received
- Screen shots of each step you take

Documentation

Oracle Hospitality product documentation is available on the Oracle Help Center at <http://docs.oracle.com/en/industries/hospitality/>.

Revision History

Table 1 Revision History

Date	Description of Change
March, 2023	Initial Publication

1

Getting Started

The OPERA Cloud web application is accessible through a web browser on a desktop or a browser app on any tablet with an XGA minimum resolution. For more information, see [Browser Setup](#)

Note:

As a web application OPERA Cloud is OS-agnostic.

You can access all areas of OPERA Cloud using the menu options, Site Map search or using Quick Launch. For more information, see [Quick Launch](#).

An example URL for OPERA Cloud is <https://operacloud.oracleindustry.com/OPERA9/opera/operacloud>

OPERA Cloud Mobile, available for smartphones, is a different URL. For more information, see [Overview](#)

Prerequisites for Getting Started

This chapter of the OPERA Cloud User Guide lists the prerequisites for Getting Started.

Prerequisites for Viewing Recently Accessed Records

OPERA Controls

Group: General

Parameters: View Recently Used Records

Prerequisites for Performance Meter

OPERA Cloud Tasks

For customers to access and run the Performance Meter, their user role must be granted the **Performance Meter** task. This task can be added in Role Manager by selecting **Manage Chain/Property Roles** under the **General** tasks group.

Group: General

Tasks: Performance Meter

Prerequisites for OPERA Cloud Digital Assistant

OPERA Cloud Controls

Group: General

Functions: OPERA Cloud Digital Assistant

OPERA Cloud Roles

WS-ACCESS

OPERA Cloud Tasks

Group : General

Tasks: Access OPERA Cloud Digital Assistant

- House Statistics Skill
- Housekeeping Skill
- Reservation Skill
- Block Skill
- In House Skill
- (Sales) Activities Skill

Note:

For this skill to be available, the property must subscribe to the following service:

- Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition
- or
- Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition

Browser Setup

During the application initialization, when switching the application, OPERA Cloud attempts to detect if the browser is running in private mode. If determined that you are using the private browsing mode, a popup with an error message notifying you that it is not recommended to use private browsing mode for the best performance in for OPERA Cloud is displayed.

You can close the Initializing Application Error popup by selecting one of the available action buttons: **Ignore Error** and **Continue** or **Exit Application**.

 **Note:**

Private mode detection is currently not supported when using the Safari browser on iOS mobile devices. The accuracy of detecting private browsing mode for the other browsers might change in the future if the browser providers block or change the current methods of detecting private mode.

Setting Up the Mozilla Firefox Browser

 **Note:**

See <https://support.mozilla.org/en-US/products/firefox>.

Allowing Pop-up Windows

Pop-up blockers prevent pages from loading in the browser. In Firefox, pop-up blocking is turned on by default.

1. In the empty browser URL, type `about:preferences#privacy`.
2. In **Permissions**, click **Exceptions** next to **Block pop-up windows**.
3. In **Address of website**, type or paste in your OPERA Cloud URL. For example, `*.oracleindustry.com`.
4. Click **Allow**.
5. Click **Save Changes**.

Setting Up OPERA Cloud as Home Page

The home page appears in the browser when you select the home button on the toolbar.

1. In the empty browser URL, type `about:preferences#general`.
2. Click **Home**.
3. Find Home page and new windows.
4. Select Custom URL.
5. Enter or paste your OPERA Cloud URL. For example, <https://hgbu-opera.oracleindustry.com>

Turn Off Autofill

1. Open the Mozilla Firefox browser.
2. Click on the **Firefox** menu (3 vertical lines) in the upper right-hand corner of the browser window.
3. From the drop-down menu select **Options**.
4. Select **Privacy & Security**.
5. In the History section choose Firefox will **Use custom settings for history**.

6. Clear the **Remember search and form history** checkbox.

Clear Autofill Data

1. Open the Mozilla Firefox browser.
2. Click on the **Firefox** menu (3 vertical lines) in the upper right-hand corner of the browser window.
3. From the drop-down menu select **Options**.
4. Select **Privacy & Security**.
5. In the History section click **Clear History**.
6. Set the Time range to clear to **Everything**.
7. Click **OK**.

Setting Up the Google Chrome Browser

Note:

See <https://support.google.com/chrome/?hl=en#topic=9796470>.

Allowing Pop-up Windows

Pop-up blockers prevent OPERA Cloud pages from loading in the browser.

1. Click  and select **Setting**.
2. Click **Advanced**.
3. Click **Privacy and Security**.
4. Click **Site Settings**.
5. Click **Popups**.
6. Click **Add** in the Allow section.
7. Enter or paste the OPERA Cloud URL. For example, <https://hgbu-opera.oracleindustry.com/> or *.oracleindustry.com.
8. Click **Add**.

Setting Up OPERA Cloud as Home Page

Google Chrome lets you create a home page and a start page. The home page appears in the browser when you select the home button on the toolbar. The start page is the page that appears when you open Chrome.

1. Click  then click **Settings**.
2. Click **Appearance**.
3. Enable **Show Home Button** switch.
4. Click the **Enter custom web address** button.

5. Enter or paste your OPERA Cloud URL. For example, <https://hgbu-opera.oracleindustry.com/> .
6. Click **On Startup**.
7. Select the **Open a Specific Page**.
8. Click **Add a new page**.
9. In the Site URL field, enter or paste your OPERA Cloud URL.
10. Click **Add**.

Deactivate Payment Autofill

1. Click  then select **Settings**.
2. Click **Autofill**.
3. Click **Payment Methods** and toggle the following settings to **Off**.
 - a. Save and Fill Payment Methods.
 - b. Allow sites to check if you have payment methods saved.

Clear Autofill Data

1. Open the Google Chrome browser.
2. Click **Customize and control Google Chrome** menu (3 vertical dots) in the upper right-hand corner of the browser window.
3. From the drop-down menu, select **More tools**.
4. Select **Clear browsing data**.
5. Set the Time range to **All time**.
6. Select Browsing history, Cookies and other site data, and Cached images and files and click **CLEAR DATA**.

Setting Up the Microsoft Edge Browser

Note:

See <https://support.microsoft.com/en-us/microsoft-edge>.

Allowing Pop-up Windows

Pop-up blockers prevent OPERA Cloud pages from loading in the browser

1. In Microsoft Edge , go to **Settings and more > Settings > Site permissions**.
2. Select **Pop-ups and redirects**.
3. Move the **Block** toggle to **On**.
4. Click **Add** for **Allow**.
5. Enter your domain name for OPERA Cloud. For example, *.oracleindustry.com

6. Click **Add**.

Setting OPERA Cloud as Home Page

The home page appears in the browser when you select the home button on the toolbar.

1. Click the **More Options** icon (three dots) on the browser.
2. Select **Settings**.
3. Click the **Open Microsoft Edge with** drop-down menu.
4. Select **A specific page or pages**.
5. Enter or paste the **OPERA Cloud home page URL** into the text field.
6. Click **OK** to confirm.

Deactivate Payment Autofill

1. In the Edge toolbar, click **Settings**.
2. Select **Profiles**.
3. Select **Payment Info**.
4. Toggle **Save and fill payment info** to **Off**.

Turn Off Autofill

1. Open the Microsoft Edge browser.
2. Click on the **Settings and more** menu (3 horizontal dots) in the upper right-hand corner of the browser window.
3. From the drop-down menu select **Settings**.
4. Scroll down to Advanced settings and click the **View advanced settings** button.
5. In the Privacy and services set **Save form entries** to the off position (grayscale).

Clear Autofill Data

1. Open the Microsoft Edge browser.
2. Click on the **Settings and more** menu (3 horizontal dots) in the upper right-hand corner of the browser window.
3. From the drop-down menu select **Settings**.
4. Click the **Choose what to clear** button under Clear browsing data.
5. In addition to the checkboxes selected as defaults, select the checkbox for **Form data**.
6. Click **Clear**.

Setting Up the Apple Safari Browser

**Note:**

See <https://support.apple.com/safari>.

Allow Pop-up Windows

Click the **Action** menu (looks like a gear and appears near the upper-right corner) and then click **Block Pop-Up Windows** to deselect it (the check mark next to it is removed).

Setting Up OPERA Cloud as Home Page

1. Click the **Action** menu (looks like a gear and appears near the upper-right corner) and then select **Preferences**.
2. Click **General**.
3. In the **Homepage** field, type or paste your OPERA Cloud URL into the text field. For example, <https://hgbu-opera.oracleindustry.com/>

Creating Home Screen Shortcut

You can save OPERA Cloud on the home screen of your iPad or iPhone. Once saved, an icon appears on your home screen and opens OPERA Cloud in Safari when you tap it.

1. Open Safari on your iPad or iPhone and navigate to OPERA Cloud.
2. Tap the **Share** button on the menu bar (the Share button appears as a box with an arrow pointing up).
3. Tap **Add to Home Screen**.
4. Enter **OPERA Cloud** for the shortcut name and confirm the OPERA Cloud URL.
5. Tap **Add** to finish adding the OPERA Cloud shortcut to your home screen.

Turn Off Autofill

1. Open the Safari browser.
2. Click on the **Safari** menu and select **Preferences** from the drop-down options.
3. In the following screen, select **Autofill**. You should now see a window with a number of options enabled for the autofill feature.
4. Uncheck all the options to completely disable autofill.

Clear Autofill Data

1. Open the Safari browser.
2. Click on the **Safari** menu and select **Preferences** from the drop-down options.
3. In the following screen, select **Autofill**. You should now see a window with a number of options enabled for the autofill feature.
4. Click the **Edit** button next to an option and then click on the **Remove All** button.

Signing In and Logging Out

Signing In

1. On the login screen, enter your **User Name** in the User Name field and enter your **Password** in the Password field to input your login credentials.
2. Select **Remember Me** (optional) to save your User Name for future login sessions and then click **Sign In**.

Signing Out

1. From any page, locate your user name (and current location) in the top-right corner panel.
2. Click this panel to display additional options.
3. Click **Sign Out**.

Expiry of User Sessions

When a browser session is idle for 15 minutes OPERA Cloud will automatically log out. You are provided a 2 minute warning prior to OPERA Cloud disconnecting an idle session.

If you are accessing OPERA Cloud through multiple browser tabs

- The session is kept alive in all tabs as long as you are active in one of the tabs.
- If a session becomes idle, then all tabs receive the two minute popup warning that the session is about to expire.
- If a sessions continues to idle, all tabs will show the **Session Expired** popup and will be disconnected.

Note:

A 15-minute idle session time out is implemented according to PCI-DSS Best Practices, Requirement 8.2.8. For more information, see [pcisecuritystandards](#)

Changing Your Password

1. Open the **OPERA Cloud** menu and select the **Identity Management** link. A new browser tab opens for Oracle Identity Manager (OIM).
2. Click the **My Information** tile.
3. In the Change Password section, enter your **Old Password**, enter your **New Password**, and reenter your new password in the **Confirm New Password** field.
4. Click **Apply**. After a password change, you receive a confirmation that your password was successfully updated.

Updating Your Challenge Questions

When you click the **Can't sign in?** link on the OPERA Cloud login page, Oracle Identity Management (OIM) launches and presents a set of challenge questions to confirm your identity. Your challenge questions can be updated in OIM.

1. Open the **OPERA Cloud** menu and select the **Identity Management** link. A new browser tab opens for Oracle Identity Manager (OIM).
2. Click the **My Information** tile.
3. In the Challenge Questions section, select a question for **Question 1** and enter the answer in the **Answer 1** field. Repeat this step for **Question 2** and **Question 3**.
4. Click **Apply**. You receive a confirmation that your questions and answers were successfully updated.

Changing Your Location in Multi-Property Operations

With the OPERA Cloud Multi-property Cloud Service active you can change your location to view and manage data at other properties.

- By selecting a Hub location you are able to view and manage data for the properties linked to the Hub. A hub location is typically used by reservation and sales agents and who need to view room and Event space availability, create Reservations, Blocks and Events in various properties. For more information, see [Configuring Hubs](#).
- By selecting a Property location you are only able to view and manage data for the property only.

Note:

The combination of Hubs, chain and property roles granted to your user account determines which areas of OPERA Cloud can be accessed and what data can be viewed or managed across the multiple properties. For more information, see [Manage Roles](#).

Changing your Location

1. From any screen, locate your user name (and current location) in the top-right corner panel.
2. Click this panel to display additional options.
3. Click **Change Location** to display a Select Location page.
 - a. **Search By:** Select Hub or Property.
 - b. Enter a search text and click **Search**.
 - c. Select the required Hub or Property from the list.
 - d. Click **Select** to change your location.

Your OPERA Cloud session re-initializes and your new location is displayed in the top right.

 **Note:**

When operating from a Hub location you are required to enter or select a property code when conducting searches.

Enterprise Administrator Access and Chain Selection

Enterprise administrators, with access to multiple chains (tenants), must first select a chain on login. The Enterprise organization can be linked to multiple chains (tenants) in different OPERA Cloud environments (Professional or Enterprise) as long as they are managed within the same Shared Security Domain.

Selecting a Chain

1. Enter login [credentials](#).
2. Enter chain code, click **Search**.
3. Select a chain in the result and click ->.

 **Note:**

To logout click your user name in the top-right corner. Click **Logout**.

Switching to a Different Chain

You can switch to a different chain (tenant) by clicking your user name that appears above the OPERA Cloud menu bar.

1. Click your user name in the top left to expand the panel.
2. Click **Switch Chain**.
3. You are taken back to the chain selection screen.

Common Actions, Icons, and Navigation

This section describes some of the common actions, menus, pages, and icons that you see throughout OPERA Cloud to help familiarize you with how to navigate through the application.

Application Navigation

You can quickly access and manage all areas of OPERA Cloud using the following navigation options.

Figure 1-1 Application Navigation

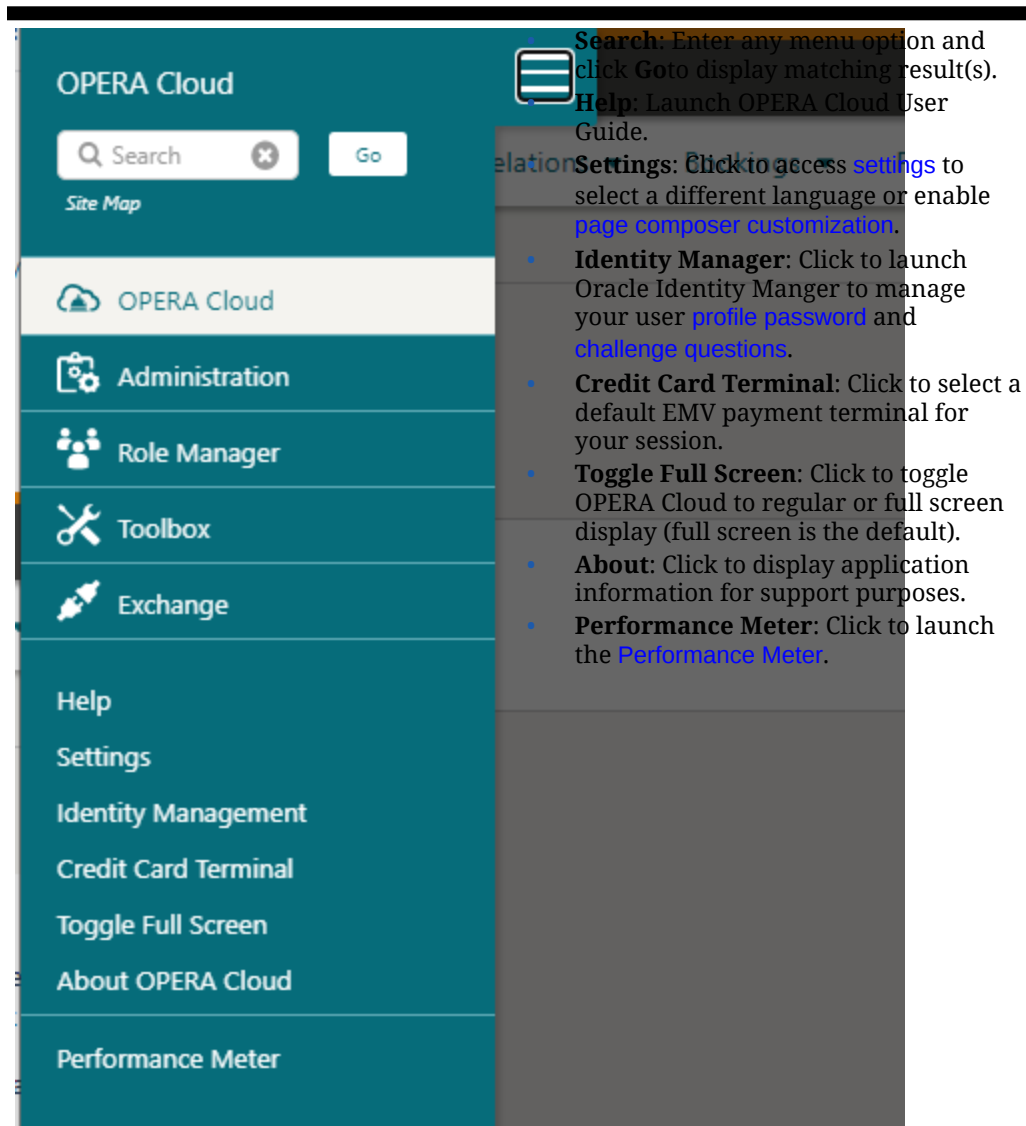

1. **Current Business Date:** Displays the current business date at your property; this could be different to the system (calendar) date.
2. **Current Location:** Property or Hub. Click to Property or Hub. Click to [change your location](#) or to log out of OPERA Cloud.
3. **Quick Launch and Notifications:** Click  or press **F2** to launch [Quick Launch](#).. Click  to view notifications refer Notifications below.
4. **Menu:** The primary application menu; based on the tasks granted to your role(s).
5. **Side Menu:** Click to display the side menu - refer Side Menu below.
6. **Search:** Enter any menu option and click **Go** to display matching result(s)

Side Menu

The side menu displays action links to access the various areas of OPERA Cloud including:

- [Administration](#)
- [Toolbox](#)
- [Exchange](#)
- [Role Manager](#)

Table 1-1 OPERA Cloud Application Menu

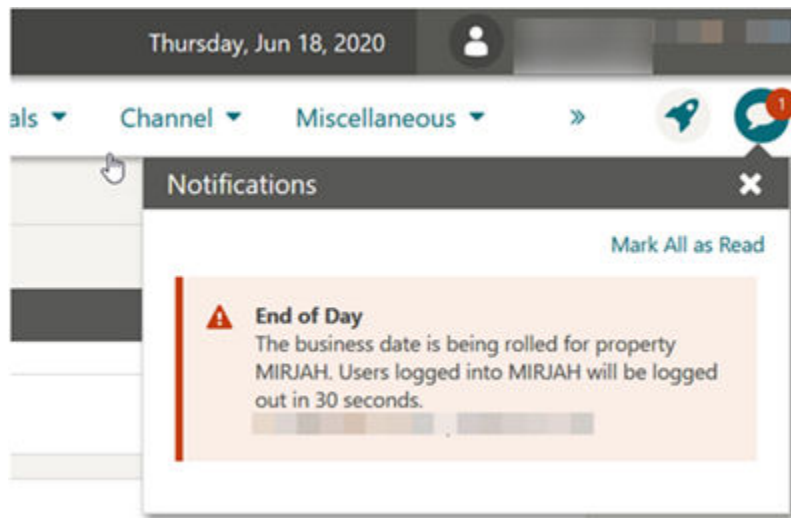

Notifications

Notifications is a component built into OPERA Cloud to alert you of certain events .

When a notification is raised, you will see a number in red indicating a count of unread notices.

1. Click the icon to open the notification panel.

Figure 1-2 Notifications Panel

2. Click **Mark All as Read** to clear the unread count indicator.
3. Click **X** to close the panel.

Search Screens

Search screens can be accessed in multiple ways.

- Application menu
- Dashboard tiles
- Quick Links
- Site map search

You can search for a particular entity by entering or selecting criteria in search panels. Searches can be done using basic criteria, or can be done in advanced mode, which allows additional criteria to be entered. Depending on the Default Search Mode [OPERA Control](#). OPERA Cloud defaults to either basic search or advanced search. You can toggle between the two search methods using the **Go to, Search** action link in the top right.

Advanced search panels can be customized using [Page Composer](#) and can be further personalized to suit your specific needs.

You can toggle between the two search methods using the **Go to, Search** action link in the top right.

Profile search result may display an Inherited Negotiated Rates icon when the Negotiated Rates and Relationships Rate Inherit OPERA Controls are active.

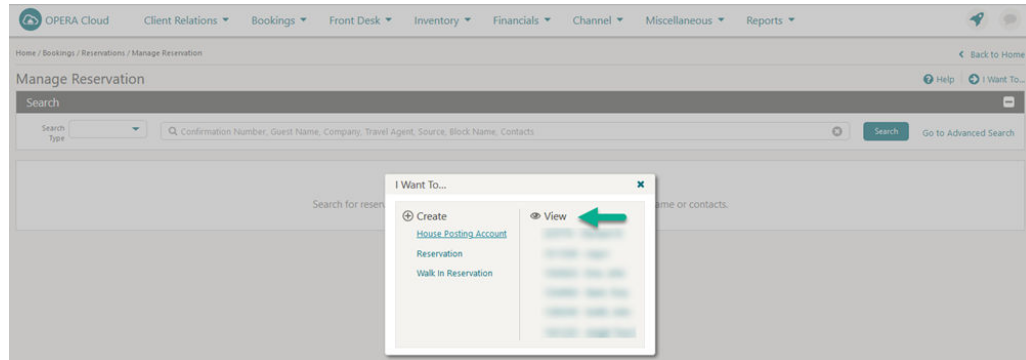

Note:

When the Multi-Language OPERA Control is active you can search for profiles by either the primary or alternate (national character set) name in the **Name** and **First Name** fields.

Viewing Recently Accessed Records

Prerequisites for Viewing Recently Accessed Records

When the View Recently Used Records OPERA Control is active you can quickly navigate to a recently accessed record from the **I Want To...** menu in any search page. Recently accessed records are listed in the **View** column. Click an entry in the list to navigate directly to this record.

Search Using Basic Criteria

Figure 1-3 Basic Reservation Search

1. From a Advanced Search page, click **Go To Basic Search** in the upper right corner of the panel.
2. Enter search value as prompted.
3. Click **Search**. The entities that match the search criteria are displayed in the Results panel.

Using Advanced Search Criteria

Depending on the Cloud services active, the options available within Advanced Search will vary. For example with an active OPERA Cloud Sales and Event Cloud Service, the option to search by Sales Account is added to the View-by list. For more information, see [Filtering Profile Search by Accounts](#). Some fields, such a

Confirmation Number, support search of multiple values - the ghost text within the field indicates the values that can be entered.

1. From a Basic search page, click **Go To Advanced Search** in the upper right corner of the panel.
2. Enter or select one or all of the search criteria displayed.
3. Click **Search**.
4. The entities that match the search criteria are displayed in the Results panel.

Figure 1-4 Advanced Reservation Search

Predefined Searches

Within the Front Desk Workspace menu [Front Desk Workspace](#) there are options for predefined reservation searches; click a menu option and click **Search** to launch the search.

Quick Launch also has [Quick Links](#) to go to a pre-defined search.

Modify Search

The current search criteria is displayed in the search panel. Click **Modify Search Criteria** to open advanced search to change your search criteria.

Figure 1-5 Modify Search Panel

Search Result Panel

Figure 1-6 Search Result Panel

There are various views available for the search result; those available depend on the type of entity being searched. To select multiple entries in the search result, hold down the CNTRL key and click to select records in the Table, Card or Console view. To select all records, select the check box in the header row in List view.

1. **Table:** Displays results in rows and columns. Click  to expand the row to view and access the active Detail Links for the entity.
2. **List:** Displays results in rows. Click  to expand the row to view the details and access all Detail Links for the entity.
3. **Card:** Displays each entity in a card. Click  to expand the card to view more details.

 **Note:**

This is the default view when OPERA Cloud is accessed on a tablet; tap the card to select the entity.

4. **Console:** Displays result as a split view with the search result in the left panel and details for selected entity in the right panel.
5. **Sort By:** Select to change the sort-by order.
6. **Show:** Select a value from list to determine how many results are displayed per page.

From the Search Results, you can manipulate the entity using the actions from within the **I Want To...** menu or selecting one of the entity-level links.

View and Goto Navigation

Values displayed in Cyan in a search result provide a link to view more information or go to the related entity - tap or click the link text to open the related entity or view more details.

For example - for entities listed in a reservation search result:

1. Click the **Guest** or **Contact** name to go to [Manage Profile](#).
2. Click the **Company, Travel Agent** or **Source** name to go to [Managing a Sales Account Profile](#)
3. Click the **Confirmation** to go to [Manage Reservation](#).
4. Click the **Block Code** or **Block ID** to go to [Manage Block](#).
5. Click the **Balance** to go to [Manage Billing](#).
6. Click the **Room type** to open the room type information page.

7. Click the **Rate code** to open the rate code information page.
8. Click the **Rate** column to view [Reservation Rate Information](#).

Actions Menu

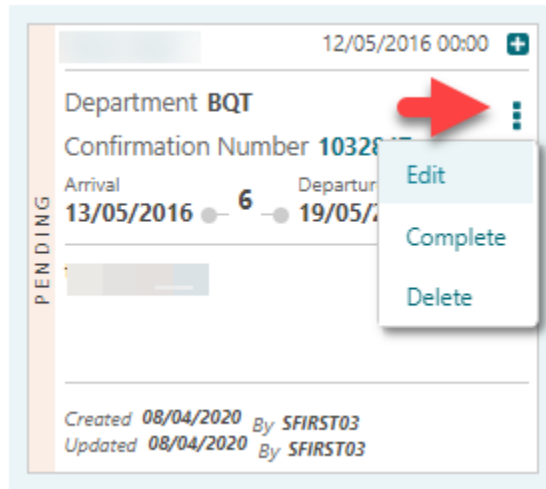

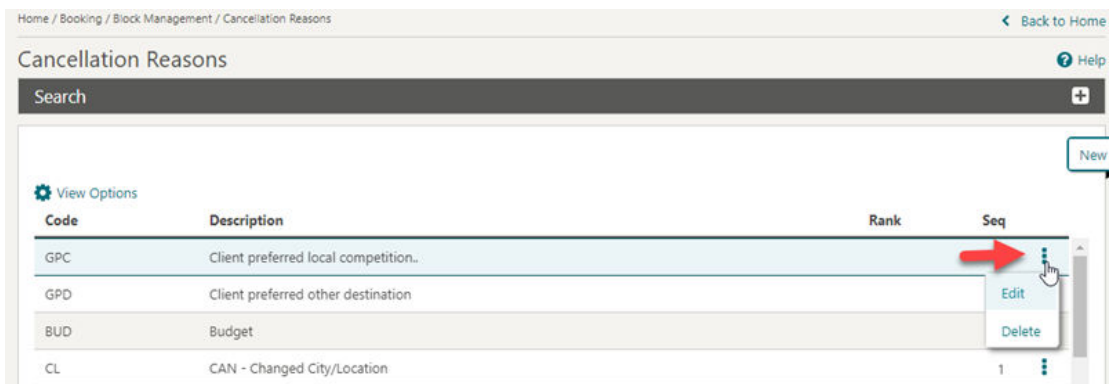

Tap or click the **Actions** menu  to view a list of actions available for the entity.

Figure 1-7 Actions Menu

Throughout Administration search results are listed in a table view with an Actions menu displayed for each entity in the result.

Figure 1-8 Actions Menu in Administration Search Results

I Want to Menu

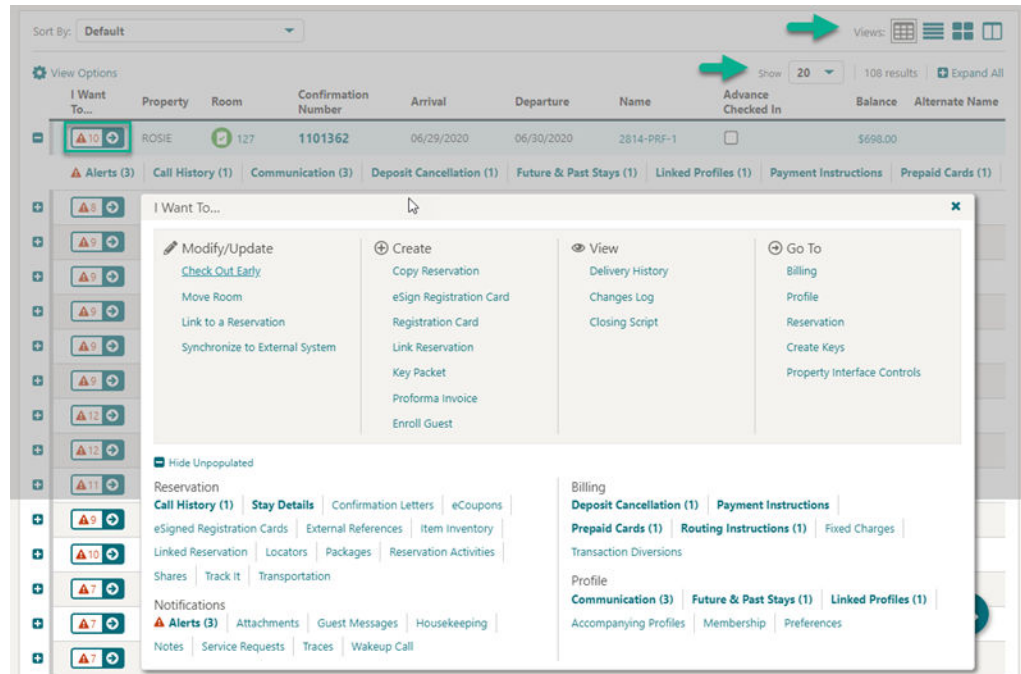

Tap or click  to overlay a page with various actions and detail links for the entity.

Actions are separated into Modify/Update, Create, View and Goto categories. A maximum of 10 action links are listed in each category before a **Show More** is displayed. Tap or click each link to perform the required action.

By default OPERA Cloud displays all Detail Links. Detail Links displayed in **BOLD** contain data (populated) and are listed first; regular text Detail Links do not yet contain data (unpopulated) .

Click **Hide Unpopulated** to only display Detail Links with active data.

Figure 1-9 I Want to Menu

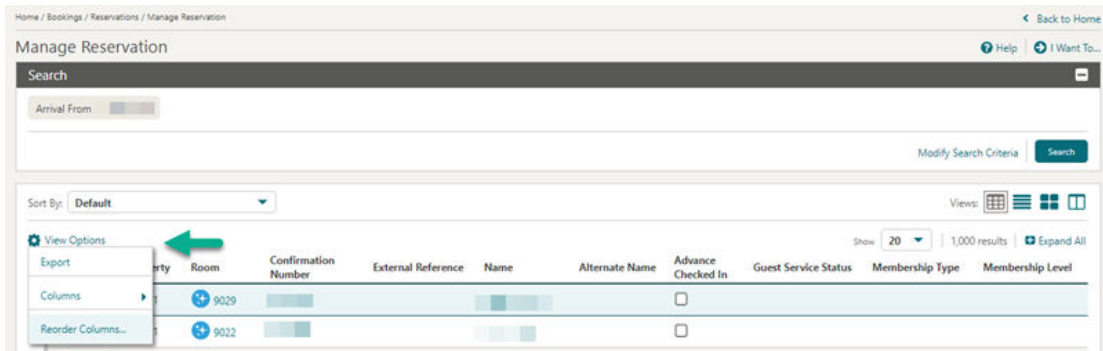

Modifying Column Selection and Sequence

With the Column Options task assigned to your role you can select the columns and their sequence displayed in a table or list view.

1. Click **View Options** and select **Columns >** to view a list of columns. Check items in the list to select the columns to display in the result
2. Click **Reorder Columns** to set the column display sequence - select a column then use the navigation button to move the column up (left) or down (right) through the table.

These modifications are saved for your user.

Figure 1-10 Modifying Column Selection and Sequence

Exporting Search Results

You can export search results that appear in table view to Excel, HTML, and CSV formats. You can export the data from all search pages that offer table view, for example: profiles, reservations, blocks, events and accounts receivable. This helps you to use the exported data externally.

1. Select Table view from Display Options
2. Click the **View Options** at the top of the search result and then click **Export**.
3. Select an option to export search result displayed in table view as Excel, HTML, or CSV file.
 - When Excel HTML is selected, the downloaded file is in HTML format with an XLS filename extension.(Excel is the default application).
 - When CSV is selected, the downloaded file is a delimited text file that uses a comma to separate the values in each column.
4. **Filename:** Enter a File Name.
5. **Document Title:** Enter a title.
6. Click **Export**.

The file is generated and downloaded on your workstation via the web browser.

Presentation Pages

Presentation pages are used in both the application and administration to display the details for an entity and provide links to the related data (Detail Links) and actions (Action Links).

An Overview panel is displayed at the top of the presentation page. As you scroll down the presentation page, the Overview panel collapses and remains persistent at the top of the page as a "business card". You can collapse and expand the business card by using - and + . You can customize the Overview panel using [Page Composer](#).

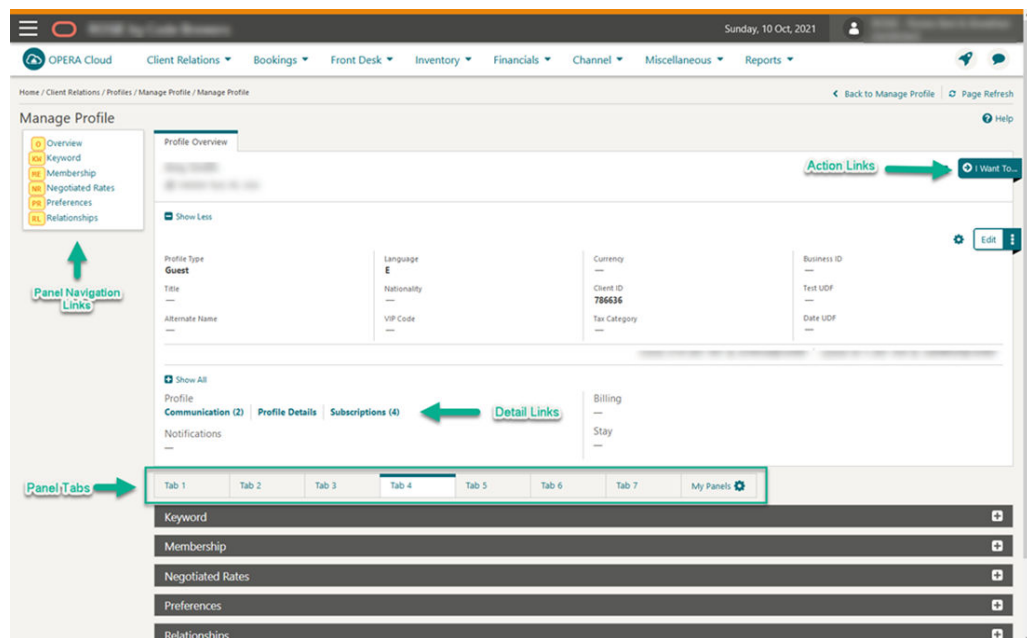

As you scroll down the presentation page, the Overview panel collapses and remains persistent as a "business card" at the top of the page.

Detail Links are displayed in three to four sections below the Overview. Click **Show All** to view all links or click **Hide Unpopulated** to toggle and only display the populated Details. Selecting a link launches the Details panel as an overlay on the presentation page.

A selection of Details panels then appear on the presentation page based on the default or previous panel tab selection. Scroll down the page to access each of the Details panels or navigate directly to a Details panel by clicking the panel name link in the navigation panel displayed in the top-left or press CNTRL and enter the [keyboard access key](#) displayed for the link .

Select a different presentation panel tab to change the Detail panels and navigation links displayed on the presentation page. Your current panel tab selection is remembered for the next time you access the same presentation page. Up to seven panel tabs can be configured for each presentation page, each with a maximum of five Details panels selected. For more information, see [Configuring Presentation Panel Tabs](#). You can also setup a personal panel tab; click **My Panels** to select the up to five Details panels you would prefer to display.

Tap or click  to display the **I Want To . . .** action panel. The actions listed depend on the type and status of the entity. For more information see: [I Want to Menu](#)

Icons

Icons are used to visually indicate information. Common icons displayed throughout OPERA Cloud include

Figure 1-11 Common Icons

Profile		Reservations		Inventory / Rooms Management		Events	
	VIP		First Stay		Component Suite		Combo Space
	Loyalty Member		Returning Guest Stay		Component Room		Combo Element
	Restricted		Share Reservation		Connecting Room		Shareable Event Space
	Incognito		Day Use Reservation		Room Condition		Requires Alternate Space
	Protected		Linked Reservation		Inspected Status		Loud Event
			Do Not Move		Clean Status		Do Not Move Event
			Queued		Pickup Status		Alternate Event
			Adult		Dirty Status		Shared Event
			Child		Out of Order		Sub Event
			Room Move from (departure)		Out of Service		Master Event
			Room Move to (arrival)		Attendant in Room		Exclusive
			Block (Group)		Attendant on break		Out of Service / Order
							Setup/Tear-down Time

Keyboard Navigation

Invoke Actions

You can invoke actions and select navigation links on search, presentation and other types of screens using the keyboard. Press **CTRL** on your keyboard to reveal the keyboard access key(s) available for navigation and action links. The keyboard shortcut is displayed in a yellow square near the link or button - press the corresponding key to select the action.

Watch Video

For example, **CTRL** and then **I** launches the **I Want To...**

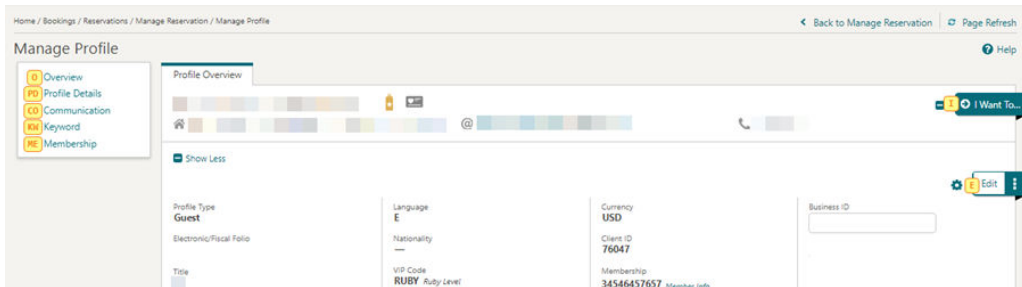

Figure 1-12 Keyboard Access Keys - Search

Or from within a presentation page.

For example, **CTRL** and then **ME** navigates to the Membership panel in Profile Presentation.

Figure 1-13 Keyboard Access Keys - Presentation

Invoke a List Field

List fields are indicated with  or .

Press **F9** to display the list of values .

Invoke a Calendar Field

Note:

This doesn't apply to tablet devices with a native operating system date picker.

To display a calendar for a calendar field press **CTRL + Home**.

The following keys allow you to interact with the calendar:

- **Esc**: Closes the calendar popup.
- **Right Arrow**: Move to next day.
- **Left Arrow**: Move to previous day.

- **Down Arrow:** Move to the next week.
- **Up Arrow:** Move to the previous week.
- **Ctrl + Right Arrow:** Move to next month.
- **Ctrl + Left Arrow:** Move to previous month.
- **Ctrl + Down Arrow:** Move to next year.
- **Ctrl + Up Arrow:** Move to previous year.
- **Enter:** Selects the chosen date.

Adjust Date by Increment

You can update a date incrementally by entering a positive or negative number of days.

For example, entering **+7** will adjust the current date in the field by 7 days. Entering **-3** will adjust the date 3 days prior.

Using Deep Links to Presentations Pages

Deep links allow external applications that are integrated with OPERA Cloud to launch and display a presentation page directly by passing values in the OPERA Cloud URL.

Note:

You must be an authenticated user with the required access to OPERA Cloud and the specific screens to access the URLs.

The following are the deep links for Profile Presentation and Reservation Presentation pages with examples:

Profiles

URL: `https://%OPERA_CLOUD_URL%/bookmarks/profile?nameId=<parameter-value >`

Parameter	Description
nameId	Profile ID

EXAMPLE: To display the Profile Presentation for Profile ID 345356, the URL is: `https://xxxxx.hospitality.oracleindustry.com/OPERA9/opera/operacloud/bookmarks/profile?nameId=345356`

Reservations

URL: `https://%OPERA_CLOUD_URL%/bookmarks/reservation?resvId=<parameter-value>&TPRESORT=<parameter-value>`

Parameter	Description
resvid	Reservation ID
TPRESORT	Property Code

EXAMPLE: To display the Reservation Presentation page for reservation ID 755850 at property ROSIE, the URL is: `https://xxxxxx.hospitality.oracleindustry.com/OPERA9/opera/operacloud/bookmarks/reservation?resvId=755850&TPRESORT=ROSIE`

Managing Application Settings

Access Settings to manage the following for your OPERA Cloud session.

Select a Language for OPERA Cloud

Select a language for your OPERA Cloud user session. Application menu's, field prompts, links, labels and feedback messages are displayed in the language selected.

Note:

Your default language is defined by the **Locale** selected in your Oracle Identity Manager (SSD) user profile.

1. From the **Side** menu, select **Settings**.
2. **Language:** Select a language from the list. For more information, see [About Language Codes](#).
3. Click **Save**.

Note:

OPERA Cloud will re-initialize to display in the selected language.

Refreshing Your Roles

To immediately update your roles following changes in Oracle Identity Manager (SSD)

1. From the **Side** menu, select **Settings**.
2. Click **Refresh My Roles**.

Enabling and Disabling Customization

In order to use [page composer](#) to customise the OPERA Cloud user interface you first need to enable customization.

1. From the **Side** menu, select **Settings**.
2. Customization:
 - a. **Hub/Property:** Select to enable customization for the current Hub or Property location. For more information, see [Changing Your Location in Multi-Property Operations](#).
 - b. **Global:** Select to enable customization for all properties.
 - c. **Off:** Select to disable customization.

3. Click **Save**.

Once customization is enabled you will see a  **Customizing for [location]** indicator in the application title bar.

Disable (Customization=off) customization once you've completed customizing OPERA Cloud.

Set (User) PIN

A PIN is required for user authentication in some areas of OPERA Cloud. This is a 7-12 alpha-numeric PIN distinct from your Oracle Identity Manager or Single Sign-on password. If you forget your PIN, your administrator can reset (clear) your PIN through [Manage Users](#).

To set a new PIN for your user account:

1. From the **Side** menu, select **Settings**.
2. In the Change PIN area:
 - a. **Old PIN**: Enter the current PIN.
 - b. **New PIN**: Enter the new PIN.
 - c. **Confirm PIN**: Repeat entry of the new PIN.
 - d. Click **Save**.

Quick Launch

Quick Launch provides you with a convenient way to access frequently used menu options across the application and administration, as well as predefined reservation searches.

Watch Video

Access Quick Launch by clicking

in the top right of the OPERA Cloud menu or by pressing the F2 function key from anywhere in OPERA Cloud.

The Quick Launch page is divided into two sections: My Quick Links and Quick Links.

Managing My Quick Links

The My Bookmarks area displays links for frequently used menu options in OPERA Cloud as well as custom links for external websites.

Adding Quick Links

1. Click **Quick Launch**

from the OPERA Cloud menu or press **F2**.

2. Click **Manage Quick Links**.

3. Enter search terms for any menu item, for example, Run Reports, and then click **Go**.
4. Highlight the required menu item(s) in the search results and then click **Add (>)** or click **Add All (>>)** to move all items to the selected panel.
5. Click **Save** .

Removing Quick Links

1. Click **Quick Launch**

from the OPERA Cloud menu or press **F2**.
2. Click **Manage Quick Links**.
3. In the Selected panel, locate or search for the quick link you would like to remove, select it in the list, and then click **Remove (<)** or click **Remove all (<<)** to remove all items in the list.
4. Click **Save**.

Adding Custom Links

1. Click **Quick Launch**

from the OPERA Cloud menu or press **F2**.
2. Click **Manage Custom Links** and enter the following details:
 - a. **Name**: Enter a name for the link.
 - b. **URL**: Enter the URL for the website or web application.
3. Click **Add**.
4. Click **Save** .

Editing Custom Links

1. Click **Quick Launch**

from the navigation bar or press **F2**.
2. Click **Manage Custom Links**.
3. Update the Custom Link Details listed in **Edit URLs**.
4. Click **Save** .

Deleting Custom Links

1. Click **Quick Launch**

from the navigation bar or press **F2**.
2. Click **Manage Custom Links**.
3. Click the **Actions** menu and select the link listed in **Edit URLs**.
4. Click **Delete**.

5. Click **Delete** to confirm.

Viewing the Property Brochure from Quick Launch

You can view the Property Brochure from Quick Launch. First, you must add Property Brochure to Quick Launch before you can access it.

Add Property Brochure to Quick Launch

1. From the OPERA Cloud menu, click **Quick Launch**.
2. Click **Manage Quick Links**.
3. In the search field, type **Property Brochure** and click **Go**.
4. Select **Property Brochure** in the Available pane. Click the arrow to move it into the Selected pane.
5. Click **Save**.

Property Brochure is now a bookmarked link in Quick Launch.

View Property Brochure

1. From the OPERA Cloud menu, click **Quick Launch**.
2. Expand the **My Bookmarks** section if needed.
3. Under My Bookmarks, select **Property Brochure** and click the **Go to Screen** button.
4. On the Property Brochure screen, enter your **Property** name and click **Search**.
All the available brochures for the property appear.
5. Expand the section for the brochure you want to view.

 **Note:**

You might need to enter additional search criteria and click **Search** to view information.

Quick Links

The Quick Links section of Quick Launch lists several predefined reservation searches and menu links and provides keyboard access keys to launch the search.

For example:

- From anywhere in OPERA Cloud, you can quickly navigate to Arrivals by clicking  or pressing **[F2]** and the pressing **[A]**.
- To launch the Arrivals search as a new browser session, click  or press **[F2]** then hold down the **[SHIFT]** key and press **[A]**.

**Note:**

The Quick Links available are based on the OPERA Controls active at your property. For example, you may or may not have access to features like Advance Checked In, Open Folios, and Scheduled Check Outs.

Advance Checked In Screen

Path: Quick Launch – Quick Searches - Advance Checked In (F2+V)

The Quick Launch Advance Checked In screen opens to search results filtered on Advance Checked In reservations for the current business date. This search criteria can be modified (select the **Modify Search Criteria** link) to narrow the results to show only Arrival or only Checked In status reservations, by reservation states such as Pre Registered, Open Balance, Day Use, or Queue.

You can also filter on Expected Time of Return (ETR From and ETR To), and sort the results by related criteria:

- Arrival Date and ETR ascending (default).
- Arrival Date and ETR descending.

Advance Checked In Status Filters

- Arrival shows only reservations that are flagged Advance Checked In and not yet checked in to the property for the current business date.
- Checked In shows only reservations that were flagged Advance Checked In and have already been checked in to the property for the current business date.
- Selecting both Arrival and Checked In shows all reservations flagged Advanced Checked In during the current business date, which includes reservations currently flagged Advance Checked In (not yet checked in) as well as Advance Checked In reservations that have already been checked in to the property and Advance Checked In reservations that checked in and checked out of the property on the same day, such as Day Use reservations.

The Advance Checked In reservation status includes both Arrival and Checked In reservations.

This screen is also accessible from the Advance Check In tile, with search results filtered based on the area selected: Current, Checked In, or Total for Today.

Home Dashboard

**Watch Video**

The OPERA Cloud Dashboard displays a series of [tiles](#) across one or more dashboard [pages](#) and is adaptive to the resolution of your device or workstation display.

Dashboard setup is specific to a hub (multi-property) or property location. See [Changing Your Location in Multi-Property Operations](#).

You can configure standard dashboard pages for users at your chain, hub, or property location by activating [Page Composer](#) prior to setting up the dashboard pages and tiles.

In order to view a tile your role(s) must be granted the applicable [user task](#) for the dashboard tile. Some segments of a tile highlight when you hover a mouse over them, indicating that more detailed data is available when you click the area. In order to interact with the tile your roles require the necessary user task(s) granted. For example, to access Manage Blocks (search) from the Block tile your role must be granted the Manage Blocks task.

There are two main steps to setting up your Dashboard:

- Adding pages (maximum of 24)
- Adding tiles to those pages and configuring tile properties

Your personalized Dashboard enables you to group similar tiles together into pages or group tiles for a specific property together on pages if you manage several different locations.

The OPERA Cloud dashboard provides flexibility for you to determine what data organization works best for your property and your role.

You can return to your Home Dashboard from anywhere in the application by clicking **OPERA Cloud** in the Navigation Bar.

Each time you return to the dashboard or access a different dashboard page, the tiles are refreshed. You can also click the  icon in the top right part of the screen to manually refresh all tiles displayed on the dashboard page.

Managing Dashboard Pages

You can add pages to your Home Dashboard to categorize and organize tiles for different roles or other requirements. Each page is given a descriptive name to differentiate it from the other pages. For example, you could have two pages on your Home Dashboard, one called Front Desk for Arrival, Departure and In-house tiles and a second page called Housekeeping for Queue Rooms, Task Sheet, Room Status and Maintenance tiles. If you manage several different properties, you might want to use pages to differentiate between properties when operating from a [Hub location](#).

You can configure standard dashboard pages for your Chain, Hub or Property by activating [Page Composer](#) prior to setting up the dashboard pages and tiles.

OPERA Cloud will auto-create extension pages as needed to accommodate your tile selection for pages; these extension pages cannot be renamed or deleted.

Deleting a primary page will result in the deletion of all associated extension pages.

Renaming a primary page will result in associated extension pages being renamed.

Adding Dashboard Pages

1. From the OPERA Cloud dashboard screen, click the **Add Page** button.
2. Enter a name for the new page and click **Save**.
3. The new page appears in the tabbed page list on the Home Dashboard.

Editing Dashboard Pages

1. Click the vertical ellipsis icon for the page you wish to edit.

2. Click **Edit**.
3. Enter the new page name, and then click **Save**.

Deleting Dashboard Pages

1. Click the vertical ellipsis icon for the page you wish to remove.
2. Click **Delete**.
3. Confirm your removal by clicking **Delete** on the pop-up confirmation window.

Managing Dashboard Tiles

A tile is a snapshot of your data, in graphical format, pinned to a dashboard page. You can drag and drop tiles on the dashboard pages to relocate them to suit your needs.

If your role(s) is granted the Edit Dashboard task you can manage the tiles on your dashboard pages.

Each tile has properties that can be configured via the  icon.

When the Room Class OPERA Control is active you can add multiple instances of the same tile to your dashboard , each configured for a different room class.

In multi-property operations you must select the property location when adding tiles to a dashboard page at a [Hub location](#).

Adding Dashboard Tiles

1. From the **OPERA Cloud Dashboard**, select the **Primary Dashboard** page for the tile, then click **Add New Tiles**.

 **Note:**

You can add a new page by clicking the [Add Page](#) link.

2. Locate the tile in the **Add New Tiles** dialog, enter the number of tiles to add in the Quantity column, and then click **Add to Dashboard**.
3. After the tile appears on the screen, click  icon on the tile and complete the fields and selections to suit your needs . Setup options vary by tile.
4. Click **Save**.

Editing Dashboard Tile

1. Hover over the desired tile and click the  icon to open Settings.
2. Make changes to settings and then click **Save**.

Deleting Dashboard Tile

Hover over the desired tile and click the X icon.

Relocating Tiles on a Dashboard Page

1. Click and hold mouse on the tile you would like to move.

2. Drag the tile to the new location on the dashboard page.
3. Release mouse button to drop the tile at the location; other tiles will rearrange accordingly.

The following table provides a list of tiles available.

Table 1-2 Tile Names and Descriptions

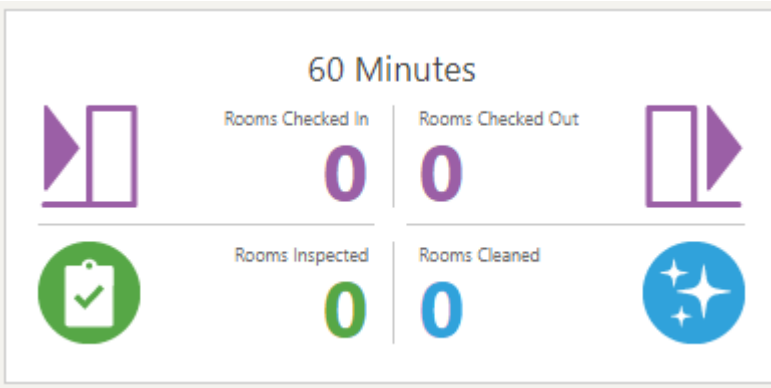

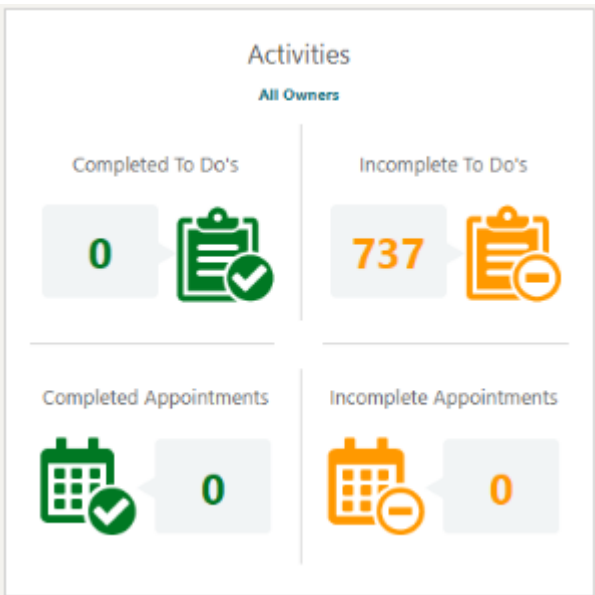

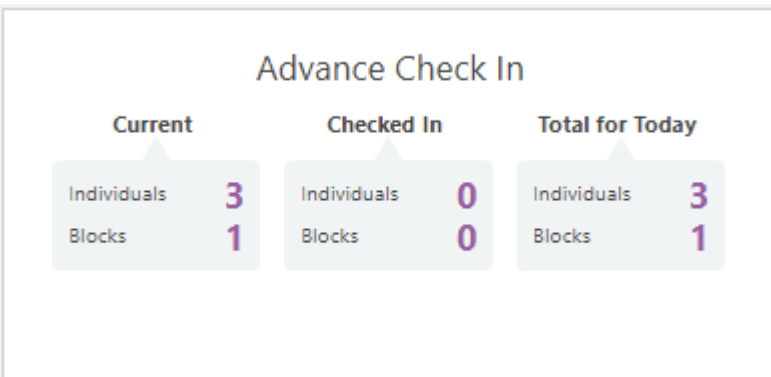

Tile Name	Images															
<p>60 Minutes Activity View check-ins, check-outs, and rooms cleaned totals for the previous 60 minutes.</p>	 <p>The tile displays a 2x2 grid of metrics for the last 60 minutes. Each metric has a zero count and is accompanied by a representative icon: a door for check-ins, a door with an arrow for check-outs, a clipboard with a checkmark for inspections, and a star for cleaning.</p> <table border="1"> <thead> <tr> <th colspan="2">60 Minutes</th> </tr> </thead> <tbody> <tr> <td>Rooms Checked In</td> <td>0</td> </tr> <tr> <td>Rooms Checked Out</td> <td>0</td> </tr> <tr> <td>Rooms Inspected</td> <td>0</td> </tr> <tr> <td>Rooms Cleaned</td> <td>0</td> </tr> </tbody> </table>	60 Minutes		Rooms Checked In	0	Rooms Checked Out	0	Rooms Inspected	0	Rooms Cleaned	0

Table 1-2 (Cont.) Tile Names and Descriptions

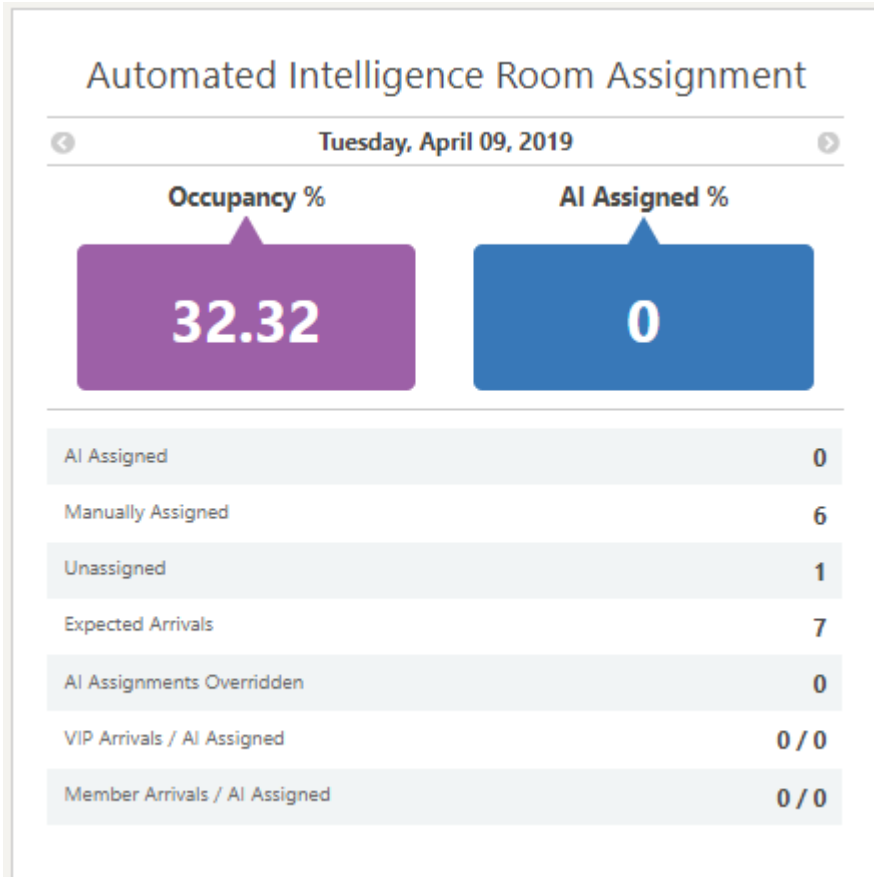

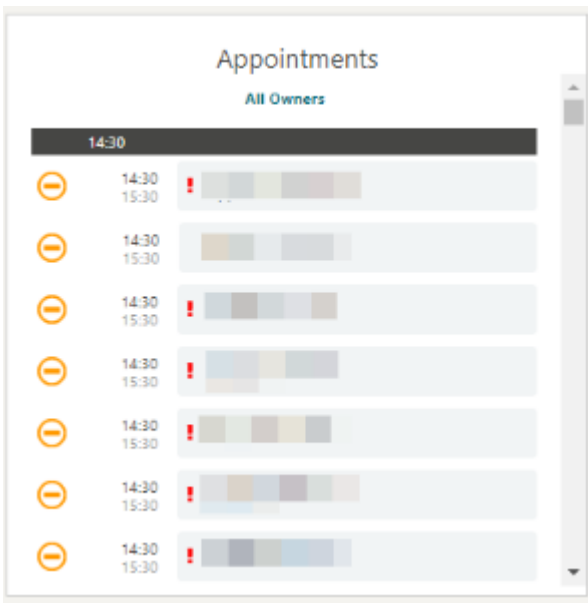

Tile Name	Images
<p>Rooms Sold Summary View summary of rooms sold and availability by room type.</p>	
<p>Task Sheets View totals including room status, percentage of rooms cleaned, and today's task sheet notes, along with details and completion status of task sheets.</p>	

Table 1-2 (Cont.) Tile Names and Descriptions

Tile Name	Images
<p>To Do List View the To Do List for today. (Available with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition or Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition).</p>	
<p>VIP Guests View a snapshot of VIP arrival and departure reservations. (Available when the VIP OPERA Control is active).</p>	

Advance Check In Tile

The Advance Check In tile on the home dashboard page provides statistical information to identify the number of Advance Checked In individual and block reservations for today (the property's current business date), and to differentiate between today's Advance Checked In reservations that are Checked In and those that are still in Advance Checked In state.

The Advance Checked In tile is divided into three areas: Current, Checked In, and Total for Today. Each area links to the Advance Checked In search screen prefiltered for that area:

- **Current** - The number of arrival (due in) individual and block reservations that are in Advance Checked In state.
- **Checked In** - The number of individual and block reservations that were flagged Advance Checked In today and are now checked in to the property.
- **Total for Today** - The total number (current plus checked in) of individual and block reservations for today. This total includes Advance Checked In reservations that were

checked in and checked out of the property on the same day, such as Day Use reservations.

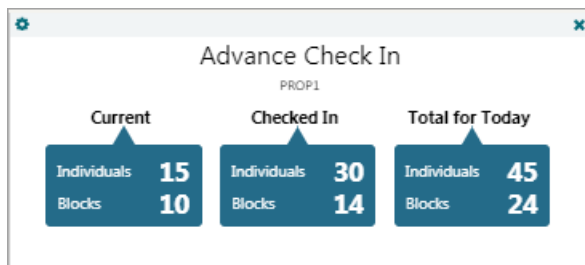

Table 1-3 Advance Check In Tile

Reservation Type	Currently in Advance Checked In State	Previously in Advance Checked In State and now Checked In to the Property	Total for Today
Individual reservations	15	30	45 = 15 Advance Checked In + 30 Checked In reservations
Block reservations	10	14	24 = 10 Advance Checked In + 14 Checked In reservations

Using the Rich Text Editor

The rich text editor is used in various areas of OPERA Cloud. You can enter or paste text into the editor, then format the text according to your needs. You can also insert links, lines, images and conditional blocks of text. Merge codes are also available to dynamically fetch and display values.

When the Multi-language OPERA Control is active you can setup templates in various languages and character sets.

As you setup a template HTML code is generated; this code can be viewed and editing by selecting **Source**. Editing HTML provides additional formatting and layout capabilities not available in the rich text editor.

 **Note:**

The Rich Text Editor doesn't provide edit functionality; components must be deleted and re-inserted.

Figure 1-14 Rich Text Editor Toolbar

Supported HTML tags

Tag	Description
"a"	Hyperlink
"p"	Paragraph
"div"	Divison/Section
"i"	Italic
"b"	Bold
"u"	Underline
"em"	Emphasize / Italic
"blockquote"	Quotation
"tt"	Teletext
"strong"	Strong/Bold
"br"	Line Break
"ul"	Unordered List (Bullet)
"ol"	Order List
"li"	List Item
"h1"	Heading 1
"h2"	Heading 2
"h3"	Heading 3
"h4"	Heading 4
"h5"	Heading 5
"h6"	Heading 6
"table"	Table
"td"	Table Cell
"th"	Table Header
"tr"	Table Row
"html"	Root Container
"body"	Document Body
"hr"	Horizontal Rule
"font"	Font (HTML4)

Tag	Description
"img"	Image
"rpt"	Repeat
"cond"	Conditional

Editing HTML Source

Use **CNTRL+V** to paste code from clipboard. Care must be taken when editing HTML - updates may result in unexpected formatting or runtime issues.

1. Click **Source**.
2. Update the HTML.
3. Click **Save**.

Formatting Text and Fields

Use the Rich Text Editor toolbar to format text and fields according to your needs :

1. **Heading**: Select a text heading size.
2. **Font**: Select the font.
3. **Size**: Select the font size.
4. **Style**: Select the font style, bold, italic.
5. **Color**: Select the font color.
6. **Background Color**: Select the color of background.
7. **Bullet list**: Create a bullet list.
8. **Number list**: Create a numbered list.
9. **Increase Indent**: Move text away from margin.
10. **Decrease Indent**: Move text closer to margin
11. **Text Alignment**: Left, Center, Right.

Inserting Merge Codes

Merge codes fetch and output data from OPERA Cloud.

1. Click **Merge Codes** to open a panel listing all merge codes that can be added to the template.
2. Enter search criteria to update field list.
3. Click the location in the template where you want to insert the merge code.
4. Click the **+** symbol to the right of the merge code to select and insert it at the current cursor location in template.

Inserting Image

1. Click the location in the template where you want to insert the image
2. Click **+** then click  **Image** and enter the following details:

- a. **Image URL:** Enter the URL where image is located.
 - b. **Image Description:** Enter description of image.
 - c. **Width:** Enter desired image width in pixels.
 - d. **Height:** Enter desired image width in pixels.
3. Click **Insert**.

Inserting Hyperlinks

1. Click the location in the template where you want to insert the link.
2. Click + then click  and enter the following details:
 - a. **Link URL:** Enter the URL for the link.
 - b. **Link Text:** Enter the text to display in the document.
3. Click **Insert**.

Inserting Lines

1. Click the location in the template where you want to insert the line.
2. Click + then click  **Horizontal Rule**.

Inserting Conditional Block

Use conditional blocks to generate dynamic content based on a condition evaluating as true.

1. Click the location in the template where you want to insert the conditional block.
2. Click + then click  **Condition** and enter the following details:
 - a. **Merge Code:** Select a merge code from the list.
 - b. **Operator:** Select an operator from the list (options vary according to the merge code selected).
 - c. **Value:** Enter a value to test for the condition.
3. Click **Insert**.
4. Enter text between the **IF** and **END IF** blocks (displayed in red, this text is the output when the condition evaluates as true).

Table 1-4 Available Operators

Operator	Description
=	Equal to
!=	Not equal to
>	Greater than
<	Less than
>=	Greater than or equal to
<=	Less than or equal to
in	In (value1, value2, ...)

Table 1-4 (Cont.) Available Operators

Operator	Description
not in	Not in (value1, value2, ...)
like	Like. Use a percent sign (%) to represent zero, one, or multiple characters.
not like	Not like. Use a percent sign (%) to represent zero, one, or multiple characters.
is null	Is empty
is not null	Is not empty

Insert Initial or Signature Block**Note:**

This is used for the capture of guest initials and/or signature in eSign Registration Card templates only.

1. Click the location in the template where you want to insert the conditional block.

2. Click  to insert initials block.

3. Click  to insert a signature block.

Deleting Components

1. Select **Rich Text**.
2. Click to select the component to be deleted.
3. Press **Delete** key on keyboard.

Page Composer

Page Composer is used to customize the OPERA Cloud user interface; by adding, relocating or removing fields or links in page panels. You can also setup standard [dashboard pages](#) and [Quick Links](#) for your chain or property.

**Watch Video****Customization Inheritance**

Page Composer is enabled at the tenant (global) level or for the current hub / property location. See [Changing Your Location in Multi-Property Operations](#)

- Fields added or removed at a Global (chain) level apply to all Hub or Property locations.

- Fields added or removed at a Hub location apply to the Hub location only.
- Fields added or removed at a Property location apply to the Property only.

With Page Composer, you can do the following:

- Add or remove standard and flex fields
- Change field labels
- Reorder fields
- Change field colors
- Add tooltips
- Reorder search result table columns
- Validate field entries
- Hide or show search result table columns
- Add custom business logic using Expression Language (EL)

User Tasks

Page Composer customization options are based on tasks assigned to a user's role in Role Manager. Tasks for Personalize, Customize Chain, Customize Property/Hub, and Column Options control access to their respective customization option.

- The **Personalize** task enables the user to make changes that are only applicable/visible to the user who made the change. For example, hide/show fields, reorder columns in tables, reorder fields in panels, and search areas where personalization is available.
- The **Customize Chain** task controls access to the Chain Customization Level, which enables users to make changes that affect or apply to all properties in the chain.
- The **Customize Property/Hub** task controls access to the Property/Hub Customization Level. Changes are applied or visible to users when logged in to a specific property or at the hub level based on the login context (Property or Hub).
- The **Column Options** task enables you to reorder and hide or show table columns.

Customizable Pages and Panels

You can customize the following screens and related pages with Page Composer:

Table 1-5 Customizable Pages and Panels

Page	Panel / Section
Create <all type> Profile	Primary Details
Manage Profile (Advanced Search)	
Profile Presentation	<ul style="list-style-type: none"> • Overview • Profile Details
Communication	<ul style="list-style-type: none"> • Address
Caller Info	
Look To Book Sales Screen	<ul style="list-style-type: none"> • Search

Adding Custom Business Logic using Expression Language

On the field properties page, a **Custom** option is available for most properties by clicking  or selecting **Custom** from the properties drop-down list.

The custom option enables you to add Expression Language (EL) code to add custom business logic to the page panel.

For example, rather than a field always being read only or always being mandatory (properties = YES) , expression language can be coded to perform a test and the field properties conditionally set to YES (true) or NO (false).

Expression language can also be used to conditionally set the color properties of a field.

Expression language can also be used to perform specific actions such as displaying a message to a user or setting the value of another field if an expression evaluates as true.

Note:

When the properties of a field have been customized, a reset link appears next to the field property. The reset link helps identify if a field has been customized and you can click this link to remove the customization.

Example 1-1 Example 1

Color Properties — Change the Background color of the member type field based on the membership type = 'OR'

Click  for the **Background** color property for the membership type field and add the following EL expression:

```
{bindings.MembershipType.inputValue == 'OR' ? '#ffff00' : '#ffffff' }
```

- If the statement evaluates as true, then set the background color of the field changes to Hex Color #ffff00 (yellow).
- If the statement evaluates as false (membership type is not = OR), then set the background color to white.

Example 1-2 Example 2

Color Properties — Change the background color of the member type field based on the membership type = 'OR'

Click  for the **Background** color property for the membership type field and add the following EL expression:

```
{bindings.MembershipType.inputValue == 'OR' ? '#0493f2' : '#ffffff' }
```

- If the statement evaluates as true, then set background color of the field changes to Hex Color #0493f2' (blue).
- If the statement evaluates as false (membership type is not = OR), then set the background color to white.

Example 1-3 Example 3

Required Property — Set the Visa Expiry Date field as Required = YES if the Visa Number field has a value (is not null).

Click  for the **Required** property for the Visa Expiry Date field and add the following EL expression:

```
#{bindings.VisaNumber.inputValue== null ? false : true}
```

- If the statement evaluates as true (NULL), then set REQUIRED = NO (false).
- If the statement evaluates as false (not NULL), then set REQUIRED = YES (true).

Example 1-4 Example 4

Required Property — Set the state field as Required = YES if the country code field has a value of either CA, USA, or AU

Click  for the **Required** property for the State field and add the following EL expression:

```
#{bindings.CountryName.inputValue=='CA' ? true :  
bindings.CountryName.inputValue=='USA' ? true :  
bindings.CountryName.inputValue=='AU' :false}
```

- If the statement evaluates as true then set REQUIRED = YES (true).
- If the statement evaluates as false then set REQUIRED = NO (false).

Example 1-5 Example 5

Required Property - Set the UDFC10 field as Required = YES if the UDFC03 field value does not equal the UDFC04 field value

Click  for the **Required** property for the UDFC10 field and add the following EL expression:

```
#{bindings.UDFC03.inputValue != bindings.UDFC04.inputValue ? true :  
false}
```

- If the statement evaluates as true then set REQUIRED = YES (true).
- If the statement evaluates as false then set REQUIRED = NO (false).

Using EL to perform specific actions

Expression Language can also be used to program specific actions to occur based on a condition evaluating as true or false.

Custom actions are programmed from the **Advanced** tab on the field properties page to define an IF THEN ELSE condition.

These expressions can be used to test a value in a field and then set a value in another field, display a message to a user, or both.

The following actions can be selected from the Action drop-down list:

- No Action
- Show Message
- Update Field
- Show Message and Update Field

For Show Message actions, you can select a message type to display a suitable icon in the message text. The following options are available:

- Info
- Error
- Warning
- None

Select **Add Condition** to code EL for a custom action.

- Under the If (condition), select **Custom** to enter an EL expression via `</>`.
- Under **Then (True)**, select the required action.
- Under **Else (False)**, select the required action.

Example 1-6 Example 6

Stay Details — If the room type code = PM and the Print Rate = Y, then show a message to the user.

```
#{bindings.RoomType.inputValue == 'PM' ? true :  
#bindings.PrintRate.inputValue == 'Y' ? true : false}
```

Figure 1-15 Customize screen — Advanced tab

Customize - Room Type - #{bindings.RoomType.inputValue} - STRING

Basic **Advanced** Validator

If (Condition)

</> Custom

Then (True) Else (False)

Action: Show Message No Action

Message Type: Info (Reset)

Message: </> This is a PM room reservation

Save

For more information on EL expressions, refer to the following:

<https://docs.oracle.com/javaee/7/tutorial/jsf-el.htm>

<https://docs.oracle.com/javaee/6/tutorial/doc/gjddd.html>

Global Bindings

The following bindings are available globally for use in EL expressions.

Table 1-6 Global Bindings for use in EL expressions

Value	Binding	Description
Business Date	{PageComposerELsB.businessDate}	The current business date of the Property
Language Code	{PageComposerELsB.languageCode}	The value for Language, configured within Settings of the users current session
Location Name	{PageComposerELsB.locationName}	The value for Name in a Hub or Property. If the user is located at the Hub level, then the Hub Name displays. if the user is located at the Property level, then the Property Name displays.

Table 1-6 (Cont.) Global Bindings for use in EL expressions

Value	Binding	Description
Location Code	{PageComposerELSB.locationCode}	The value for Hub or Property. If the user is located at the Hub level, then the Hub code displays. If the user is located at the Property level, then the Property code displays.
Property	{PageComposerELSB.property}	The value for Property. If the user is located at the Property level, then the Property displays.
System Date	{PageComposerELSB.systemDate}	The value for the current system (clock) date.
User Name	{PageComposerELSB.userName}	The value for User ID of the current User.

Customizing or Personalizing a Screen with Page Composer

The customization options available to a user are controlled by the user tasks assigned to a user's roles in Role Manager.

- **Personalize** - This task enables the user to make changes that are only applicable/visible to the user who made the change. For example, hide/show fields, reorder columns in tables, reorder fields in panels, and search areas where personalization is available.
- **Customize Chain** - This task controls access to the global (all properties) customization level, which enables users to make changes which affect or apply to all properties.
- **Customize Property/Hub** - This task controls access to the Property/Hub customization level. Changes are applied or visible to users when logged in to a specific property or at the hub level.

Customization — Global / Property / Hub

Note:

Only users assigned to roles with either the Customize Chain or Customize Property/Hub tasks have access to this option.

Enabling Page Composer

You enable Page Composer at the chain (global) level or at the hub/property level.

1. In multi-property operations, set your location. See [Changing Your Location in Multi-Property Operations](#)
2. From the **OPERA Cloud** side menu, select [Settings](#).

- a. **Chain Level** - Users can add Flex Fields and modify the properties of components. Customization at the Chain level applies to all properties and users.
 - b. **Hub/Property Level** - Users can add Flex Fields and modify properties of components. Customization at the Hub/Property level applies to the current Hub or Property location the user is logged into.
 - c. **Off** - Customization is inactive. Users can only personalize a screen by hiding and showing fields / reorganizing columns. Personalization at the User level only applies to the currently logged in user. The user can only personalize the screen for his or her user and modifications do not affect other users.
3. Click **Save** and then click **Save** again on the Confirmation screen to save your changes to a panel.

 **Note:**

When you select either **Chain Level** or **Hub/Property Level**, a 'Customizing for (location)' notification appears in the application header adjacent to the current business date.

Figure 1-16 Customizing Notification

 **Note:**

If selecting **Hub/Property**, the customization applies to the location context—either a property or the chosen hub.

Customizing Page Panels

Any panel that supports customization displays a gear icon  Search and edit any record or select an action link to launch the relevant page and begin customization of the panel.

1. Click the gear icon  in the panel to activate customization.
2. To add fields, click the **Add Field** link and select a field from the list.
 - a. To add a flex field, select **Flex Field** from the bottom of the list, select either **Add Text**, **Add Number**, or **Add Date**, and then select the required UDF field in the field properties.
 - b. To add a hyperlink, select **Flex Field** and then select **Add Link**.
3. To edit a fields properties, click the pencil icon  for the field. See [Page Composer Field Property Descriptions](#).

- a. To remove a field, select **No** for the **Displayed** field property
 - b. To make a field mandatory, select **Yes** for **Required** field property
 - c. To make a field read only, select **Yes** for **Read Only** field property
 - d. Click **Save** to close the field properties page.
4. To relocate a field in the panel, hover the mouse over a field until a cross hair cursor appears, hold down the left mouse key, and then drag the field to the required location in the panel. The other fields reorder to accommodate the new location.

 **Note:**

If a field cannot be dropped at the required location, a red crossed circle icon appears under the cursor.

5. To reset a panel to the default layout, select the **Delete Customization** link.
6. Click **Close Customize** to exit the customization mode for the panel.

Disabling Customization

Once all panels and pages have been customized, disable customization via the Settings option on the primary menu. Select the **Off** from the Settings page and then click **Save**.

The session reinitializes and the customizing notification no longer appears.

Customization Inheritance

- Fields added or removed at a Global (chain) level apply to all Hub or Property locations.
- Fields added or removed at a Hub location apply to the Hub location only.
- Fields added or removed at a Property location apply to the Property only.

Personalizing for your User

Users with the Personalize task granted to their role can personalize panels by relocating or removing fields from a panel.

1. Click the **Personalize** icon (appears as a gear icon) in the corner of the panel.
2. To remove (hide) fields in the panel, click the red X for each field you want to remove.
3. To add (unhide) fields, click the **Show Inactive** link and then click the green + sign for each field you want to reactivate in the panel.
4. To relocate a field in the panel, hover the mouse over a field until a cross hair cursor appears, hold down the left mouse key and drag the field to the required location in the panel; the other fields reorder to accommodate the new location.
5. Click **Close Personalize** to exit the customization mode for the panel.

Page Composer Field Property Descriptions

Field properties are available for update when you click the pencil icon for a field.

Table 1-7 Field Properties

Property	Description
Required	Select YES to set the field as mandatory. When saving updated, an error appears if the field is NULL. An asterisk appears to indicate the field is mandatory Select NO to set the field as non-mandatory.
Displayed	Select YES to show the field / link in the panel. Select NO to remove the field / link in the panel.
Read Only	Select YES to prevent the field value from being edited. Select NO to enable the field value to be edited.
Tooltip	Enter a tooltip for the field. When a tooltip is added for a field, a  icon appears to the right of the field . This icon can be clicked to view the tooltip text.
	<div style="border: 1px solid #0070C0; padding: 5px; background-color: #E6F2FF;"> <p> Note: Symbol # is not supported for tooltip.</p> </div>
Label	Enter the name of the label that appears for the field.
	<div style="border: 1px solid #0070C0; padding: 5px; background-color: #E6F2FF;"> <p> Note: Symbol # is not supported for label text.</p> </div>
Charactercase	Enables you to enforce uppercase, lowercase, or mixed use characters for the input text in a field.
Default Value	Defines the default value for new records.
	<div style="border: 1px solid #0070C0; padding: 5px; background-color: #E6F2FF;"> <p> Note: Symbol # is not supported for default value.</p> </div>
Background Color	Sets the background color for the field. Click the small box to launch a color picker and select a color from the chart; a hex value can also be entered.
Label Color	Sets the color for the field label. Click the small box to launch a color picker and select a color from the chart; a hex value can also be entered.
Text Color	Sets the text color for the field. Click the small box to launch a color picker and select a color from the chart; a hex value can also be entered.
Refresh	Select YES to immediately trigger the validation of a value entered by the user (typically set to YES).

For information on HEX Color Picker, refer to this site: https://www.w3schools.com/colors/colors_picker.asp

In addition to YES and NO for field properties, Custom properties are also available. Refer to [Adding Custom Business Logic using Expression Language](#) for more information.

Flex Fields

Flex fields are user-definable fields that you can add to a panel. You can select either text, number, or date for a flex field.

For each record type, there are multiple flex fields available:

Table 1-8 Flex Fields

Record	Character	Date	Number
Profile	UDFC1-40	UDFD1-20	UDFN1-20
Block	UDFC1-40	UDFD1-20	UDFN1-20
Reservation	UDFC1-40	UDFD1-20	UDFN1-20

In addition to the above field properties, Flex fields have the following additional properties:

Table 1-9 Flex Field Properties

Property	Description
Value	Select the UDF flex field to store the value input by the user. For example, if you create a text field on the Reservation screen using the value UDFC10 and make it a required field, then you can also create a text field on the Check-in page referencing the same field value (UDFC10) and set properties as read-only = YES. The information entered into the field on the Reservation page appears as a read-only field on the Check-in page.
Field Length	Determines the size of the field on the form. It does not dictate the number of characters the field accepts.
Enable LOV	Determines if a drop-down list appears for the field input; select YES to enable a list of values.
Allow Multi-select	If a drop-down list is used, this determines if the user can select more than one item in the list; select YES to enable multiple values to be selected from the list.
LOV Group	If Enable LOV = YES, select the LOV group to use for the drop-down list.

User Defined Links (UDL)

User defined links enable you to configure hyperlinks to appear within the panel on the page. The link can be either a static or dynamic URL.

- **Static URL** — A static URL launches a web page where the URL is always the same value.
- **Dynamic URL** — A dynamic URL is variable based on values from fields referenced in the link.

A dynamic URL can be used to launch an external website or web application and pass values from the OPERA Cloud record in the URL parameters.

Example use cases would be an external loyalty system or external gift voucher tracking system developed in Oracle Apex or other web database solution.

For example, you could configure the following dynamic link to append the guest's membership number in the URL:

```
https://myreward.com/#{bindings.MembershipId.inputValue}
```

The following properties are only available for UDL fields (URL Links):

Table 1-10 UDL Properties

Property	Description
Text	Enter the text that appears for the hyperlink.
Destination	Enter the URL (web address).
Append Parameter	The option to attach additional values to a URL that can be parsed on demand, provided the web page is set up to handle the code. The available parameters depend on the screen being customized. Enter the website URL followed by a trailing slash (/), and then select the parameters to append.
Disabled	<ul style="list-style-type: none"> • YES - Link is disabled • NO - Link is not disabled
Displayed	<ul style="list-style-type: none"> • YES - Link is displayed • NO - Link is not displayed
Launch URL in New Tab	<ul style="list-style-type: none"> • If the checkbox is not checked, the specified URL will open in modal window with a non-editable address bar. • If the checkbox is checked, the link will open in a new browser tab.
Automatic Page Refresh	This checkbox is added and enabled by default, it enforces a refresh for OPERA Cloud screen when the new tab or modal window is closed.

Validator

OPERA Cloud provides a number of internal validations, primarily for tax ID fields for specific countries. To add a validator, click **Add Validator**, click **Predefined Validator**, and then select the required validation function from the list of values. Click **Save** to close.

To remove a predefined validator for a field, click the vertical ellipsis and select **Remove**.

A Regular Expression can also be used for pattern matching of string values. To add a Regex Validator, click **Add Validator**, click **Regex Validator**, and then enter the Regex expression into the field. Select **Save** to close.

For more information on Regular Expression pattern matching, refer to this site:

<https://regexr.com/>

Performance Meter

[Prerequisites for Performance Meter.](#)

Watch Video

Overview

The Performance Meter tool enables you to test your local network and browser performance and check if a connectivity performance issue exists between your browser and the OPERA Cloud server. When you complete a performance test, you are presented with a result summary and the recommended actions if the results are not optimal.

When a performance issue is caused by the network or browser performance, you should contact your IT specialist. If the issue is detected on any of the OPERA Cloud servers, you should contact your administrator and provide the generated Result ID.

Performance Results

When you have the Performance Meter task assigned to your user role in Role Manager, the following information appears:

- Performance Score legend
- Browser <browser name>, OPERA Cloud and Overall results displaying a Score (0-100) and Elapsed Time in milliseconds (ms) (appears inside a circle with the appropriate color based on the test score).
- Recommended actions, including Time Stamp and Result ID

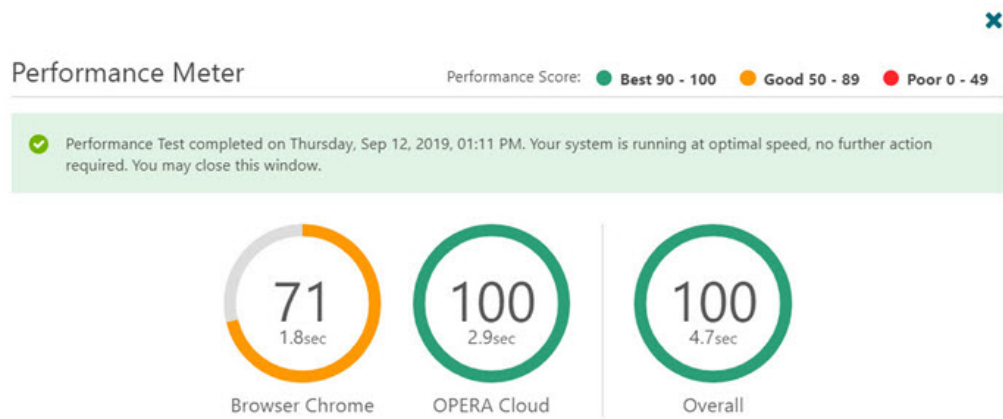

If the performance result is good for both the browser and OPERA Cloud, the following message appears: *Performance Test completed on <Day of the week, Date, Time> Your system is running at optimal speed, no further action required. You may close this window.*

If the performance result is poor for the browser, the following message appears: *Performance Test completed on <Day of the week, Date, Time>. Browser <Name of Browser> is not running at optimal speed, please contact your IT specialist for support.*

If the performance result is poor for OPERA Cloud, the following message appears: *Performance Test completed on <Day of the week, Date, Time>. OPERA Cloud is not running at optimal speed, please contact your administrator with Result ID <Result ID>.*

If the performance result is poor for both OPERA Cloud and the browser, the following message appears: *Performance Test completed on <Day of the week, Date, Time> — Browser <Name of the Browser> is not running at optimal speed, please contact your IT specialist for support. — OPERA Cloud is not running at optimal speed, please contact your administrator with Result ID <Result ID>.*

Figure 1-17 Performance Test Results

Using the Performance Meter

1. From the side menu, select **Performance Meter**.
2. Click the **Start Performance Test** button.
3. The progress meter appears while the test is run.

Figure 1-18 Performance Meter screen — Start Performance Test button

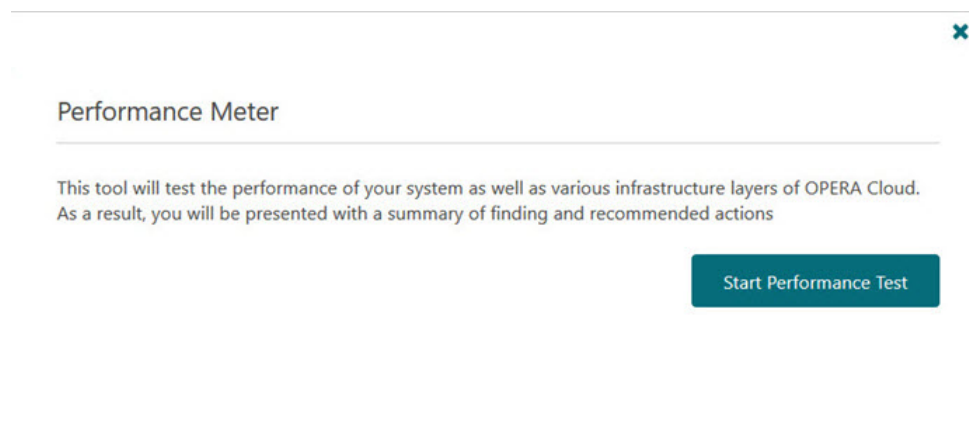

Figure 1-19 Performance Test In Progress

The Performance test measures the response times from the Client (web browser), Database (DB), Web Service (WS), and User Interface (UI) based on the baseline times for a standard operation, such as fetching postal codes (system seed data). When the performance test is complete, you are presented with the results.

OPERA Cloud Digital Assistant

Watch Video

Prerequisites for OPERA Cloud Digital Assistant

The OPERA Cloud Digital Assistant is a chatbot that provides users with an alternate way to accomplish tasks through natural language conversations via a keyboard or microphone (speech to text). Skilled to assist with specific tasks (intents), the chatbot understands terms such as 'Today,' 'Tonight,' and 'Tomorrow' in regards to the current business date at your property.

Once granted the Access OPERA Cloud Digital Assistant task, you can access the OPERA

Cloud Digital Assistant from a [property location](#) by clicking the widget on desktop, tablet and [smartphone devices](#). You can relocate the widget using drag and drop.

Updates made using the digital assistant are tracked with your user name in the [Changes Log](#) and actions performed using the Digital Assistant result in the same outcomes as actions performed using OPERA Cloud natively. For example, a reservation check-in or check-out initiates an update to the property interfaces (for example, PBX, Video, Minibar, WIFI, and so on).

 **Note:**

Your role assignment of [Inventory / Rooms Management](#) and [Booking](#) tasks are not referenced by the Digital Assistant.

 **Note:**

OPERA Cloud Digital Assistant is only available in US English.

Interacting with the OPERA Cloud Digital Assistant

You can use the OPERA Cloud Digital Assistant to help you with the following:

Table 1-11 Use Case Examples

User Intent	Example Utterance	Chatbot Result	Requirements / Limitations / Notes
Greeting			
	<ul style="list-style-type: none"> • Hi • Hello • Hi there • Hey 	Here are some top items I can help you with.	
Premium Opportunity			
	Create Opportunity	<ol style="list-style-type: none"> 1. Prompted for the name of the opportunity. 2. Prompted to select a start date from the Calendar. 3. Prompted to enter a Block Code. 4. Prompted for number of nights. 5. Prompted to enter the number of rooms. 6. Prompted to enter the Room Pools, if active. If Room Pool is not active then user will be prompted to enter Room Type. 7. Returns confirmation with Block ID. 	<ul style="list-style-type: none"> • Opportunities OPERA Control active. • Opportunity Market Code must be populated • Opportunity Source Code must be populated. • Number of nights cannot exceed 30
Sales Activities			
View Today's Activities	<ul style="list-style-type: none"> • Activities • View Today's Activities • Display Activities • My Activities 	Your activities for today are displayed.	A maximum of 30 activities are displayed.
Complete Activity	<ul style="list-style-type: none"> • Display Activities • Complete Activities with Notes 	Your activities for today are displayed with actions to Complete, Complete with Notes or Cancel.	Notes submitted are appended to an existing note if available.
Help

Using OPERA Cloud Digital Assistant

[Prerequisites for OPERA Cloud Digital Assistant](#)

Accessing the Chatbot

Once granted the **Access OPERA Cloud Digital Assistant** task, you can access the

OPERA Cloud Digital Assistant from a [property location](#) by clicking the widget at the bottom-right of the OPERA Cloud application screen on desktop and tablet devices.

Interacting with the Chatbot

1. Open the chatbot and enter text into the chat window or click the  microphone icon to activate the microphone on your device and speak your instruction or question.
2. To activate audio replies, click the  speaker icon in the top-right of the chat window and click again to mute the audio.
3. Click the  icon to clear the chat window.

Closing the Chatbot

1. You can exit from a conversation thread by entering 'exit.'

Accessing the Oracle Hospitality Integration Platform Developer Portal

You can launch the [Oracle Hospitality Integration Platform \(OHIP\) Developer Portal](#) from within OPERA Cloud. A separate browser tab is created for the OHIP Developer Portal.

1. From the side menu, select **Oracle Hospitality Developer Portal**.
2. Enter your OHIP login credentials.

Part I

OPERA Cloud

This part of the OPERA Cloud Help system contains information on working within the OPERA Cloud application menu.

2

Client Relations

From the Client Relations menu, use **Manage Profiles** to create and manage the details for Guest, Contacts Company, Agents and Sources; including addresses, notes, negotiated rates, attachments, and so on. Use **Activities** to manage sales activities: to-do's and appointments for Companies, Agents, Contacts or Blocks (Available with Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition or Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition).

Loyalty Use **Membership** to access batch processing options for your loyalty program

Activities

Prerequisites for Activities

Activities provide you with an account management tool for managing daily tasks such as appointments, sales calls, contact follow-up, and so on. To use Activities, you must first configure various Activity Types. With the Activity Result Control enabled, you must also configure Activity Results that you can select when completing an Activity.

Note:

Completed Activities are purged according to the [Activity Purge Days OPERA Control](#).

The following dashboard [tiles](#) are available specifically for Activities:

- **Activities:** View Activity counts for today.
- **Appointments:** View the number of appointments today.
- **To Do List:** View the To Do List for today.

You can create Activities on Sales Accounts, Contacts, and Blocks. Alternatively, you can use the [auto-trace \(rule\) functionality](#) to automatically create Activities based on defined conditions.

Managing Activities

The Activities feature helps you keep track of upcoming appointments, sales calls, follow-up contact, and other to-do tasks related to sales accounts, contacts, and blocks. You can use Activities to create reminders to send or to follow up on correspondence, make appointments, and establish project planning milestones. You can invite other sales owners to your activities, with each owner receiving a separate copy of the activity. Once an activity is complete, you can edit the activity and mark it as complete and set up a follow-up activity if needed. When the Attachments OPERA Control is active, you can also attach documents, images, and other files to Activities. You can add the **Activities**, **Appointments**, and **To Do List** dashboard tiles to the pages of your [Home Dashboard](#).

You can create Activities from the **I Want To . . .** menu in **Manage Activities** or from the **I Want To . . .** menu of a search result record in **Manage Profile** or **Manage Blocks**.

 **Note:**

If an activity is created from a business block, the sales account and contact linked to the block defaults on the new activity. If an activity associated with a business block is canceled, the activity is automatically marked as Completed, and an activity note is automatically added indicating that the block was canceled.

Adding Sales Activities

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Managing Profiles**.

OR

From the **OPERA Cloud** menu, select **Client Relations** and then select **Activities**.

OR

From the **OPERA Cloud** menu, select **Client Relations**, select **Blocks**, and then select **Manage Blocks**.

2. Enter search criteria and click **Search**.
3. Click **I Want To . . .** and select **Create Activity**.
4. Enter or select the following:
 - a. **Property**: Enter or select the property.
 - b. **Activity Class**: Select to add an Appointment or a To Do.
 - c. **Purpose**: Enter a text explanation of the Activity's purpose
 - d. **Owner**: Enter or select the sales owner responsible for the activity.
 - e. **Type**: Select an activity type from the list. For more information, see [Configuring Activity Types](#)
 - f. **Start Date/Start Time**: Enter the date and time.
 - g. **End Date/End Time**: If the activity is an Appointment, enter or select the end date and time. If the activity is a To Do, the Start Time/End Time options do not appear.
 - h. **Trace Code**: Select an Activity trace code from the list; auto-trace codes should be used for re-tracing an activity based on the activity type or completion date or any of the other activity fields. (Available when the Auto Traces OPERA Control is active). For more information, see [About Sales Activities Auto Traces](#)
 - i. **Account**: Click to search and link a Sales Account (travel agent, company, or source profile) with your Appointment or To Do..
 - j. **Contact**: Click to search and link a contact profile with your Appointment or To Do.
 - k. **Block**: Click to search and link a block your Appointment or To Do.
 - l. **High Priority**: Select the check box to identify the Appointment or To Do as urgent.
 - m. **Notes**: Enter any notes or other the details of the Activity.
5. Click **Save** or, click **Save Activity and Add More Details** to save and edit the Activity.

Editing Sales Activities

1. From the **OPERA Cloud** menu, select **Client Relations** and then select **Activities**.

2. Enter search criteria and click **Search**.
3. Click the **value** in the Type column to open the Activity presentation or click **Activity Details** for the Activity Details panel.
4. Click **Edit**.
5. Make your updates.
6. Click **Save**.

Table 2-1 Activity Detail Links

Activity	Notifications
Invite Owners	Attachments
Linked Blocks	
Linked Profiles	

Deleting Sales Activities

1. From the **OPERA Cloud** menu, select **Client Relations** and then select **Activities**.
2. On the Manage Activities screen, enter or confirm the **Property name**, select an **Owner**, enter any additional search criteria, and then click **Search**.
3. From your search results, select one or more **Activities** the click **Delete**.
4. Click **Delete** to confirm.

Completing Sales Activities **Note:**

If an activity is linked with a business block that is later canceled, the activity is automatically updated to **Completed** status and a note is added to the activity indicating that the linked block has been canceled.

1. From the **OPERA Cloud** menu, select **Client Relations** and then select **Activities**.
2. Enter or confirm the **Property** name, enter an **Owner** and any additional search criteria, and then click **Search**.
3. From Manage Activities search results, select **one or more activities**.
4. Click the **Complete** button.
5. In the Edit Activity Overview screen, ensure the Complete check box is selected.

 **Note:**

When the Activity Results OPERA Controls is active and the Complete check box is selected, a Result field appears on the Activities screen. You can select the appropriate result value from the list and complete the Activity.

6. Click **Save**.

Linking Multiple Profiles to Activities

You can link multiple profiles to an Activity, enabling you to open profiles from the Activity or access the Activity from the linked profiles.

Adding Profile Link to an Activity

1. From the **OPERA Cloud** menu, select **Client Relations**, and then select **Activities**.
2. Select or confirm the Property, select the **Owners** and any additional search criteria, and click **Search**.
3. From search results, click the **I Want To . . .** action and select **Linked Profiles** or open the Activity and select **Linked Profiles** from the Activity Presentation page.
4. Click **Add Account** or click **Add Contact**.
5. Use Quick Profile Search to locate the account or contact, enter **search criteria**, and click **Search**.
6. From search results, select the **Account** and/or **Contact** and click either **Select Account Only** or **Select Account and Contact**.

Updating Primary Profile Link for Activity

When multiple profiles are linked to an Activity, you can specify which linked profile is primary

1. From the **OPERA Cloud** menu, select **Client Relations** and then select **Activities**.
2. Select or confirm the Property, select the **Owners** and any additional search criteria, and click **Search**.
3. From search results, click the **I Want To . . .** action and select **Linked Profiles** or open the Activity and select **Linked Profiles** from the Activity Presentation page.
4. Select the **Profile**, click the **vertical ellipsis**, and select **Make Primary**.

Removing Profile Link from an Activity

1. From the **OPERA Cloud** menu, select **Client Relations** and then select **Activities**.
2. Select or confirm the Property, select the **Owners** and any additional search criteria, and click **Search**.
3. From search results, click the **I Want To . . .** action and select **Linked Profiles** or open the Activity and select **Linked Profiles** from the Activity Presentation page.
4. Select the **Account or Contact** profile, click the vertical ellipsis **Actions** menu, and select **Remove**.
5. Click **Remove** to confirm.

Linking Multiple Blocks to Activities

You can link multiple blocks to an Activity, enabling you to open the block(s) from the Activity or access the Activity from the linked blocks.

Adding Block Link to an Activity

1. From the **OPERA Cloud** menu, select **Client Relations**, and then select **Activities**.
2. Select or confirm the Property, select the **Owners** and any additional search criteria, and click **Search**.
3. From search results, click the **I Want To . . .** action and select **Linked Blocks** or open the Activity and select **Linked Blocks** from the Activity presentation page.
4. On the Linked Blocks dialog, click **Add**.
5. On the Manage Block screen, enter search criteria for the block and click **Search**.
6. From the search result, select the Block(s), and click **Select**.

 **Note:**

You can select multiple blocks by clicking the selection column.

Updating Primary Block Link for an Activity

When multiple blocks are linked to an Activity you can specify which linked block is the primary

1. From the **OPERA Cloud** menu, select **Client Relations**, and then select **Activities**.
2. Select or confirm the **Property**, select the **Owners** and any additional search criteria, and click **Search**.
3. From search results, click the **I Want To . . .** action and select **Linked Blocks** or open the Activity and select **Linked Blocks** from the Activity presentation page.
4. Select the **Profile**, click the **vertical ellipsis**, and select **Make Primary**.

Removing Block Link from an Activity

1. From the **OPERA Cloud** menu, select **Client Relations**, and then select **Activities**.
2. Select or confirm the **Property**, select the **Owners** and any additional search criteria, and click **Search**.
3. From search results, click the **I Want To . . .** action and select **Linked Blocks** or open the Activity and select **Linked Blocks** from the Activity presentation page.
4. Select the **Account or Contact** profile, click the **vertical ellipsis**, and select **Remove**.
5. Click **Remove** to confirm.

Inviting Multiple Owners to Activities

You can invite multiple owners to an Activity. When you do so, your Activity is cloned for each of the other owners and linked to the original Activity.

Inviting Multiple Owners

1. From the **OPERA Cloud** menu, select **Client Relations** and select **Activities**.
 - a. For existing Activities, use search.
 - b. For new Activities, click the page level **I Want To . . .** link and select [Create Activity](#).
2. In the Activity Overview section of the Manage Activity screen, click **Invite Owners**.
3. In the Invite Owners dialog, click **Add**.
4. From the Search and Select Owner dialog, select one or more **Owners** and click **Select**. This generates a cloned activity for each owner you selected. The cloned Activities appear on the Invite Owners dialog.
5. Click the **X** to close the dialog and return to the Manage Activity screen.

Updating Activities

If you update your main Activity, you are prompted to update the linked Activities for the other owners.

1. From the **OPERA Cloud** menu, select **Client Relations** and select **Activities**.
2. Search for and open an activity that has linked activities.
3. Scroll to the appropriate panel and click either **Add** or **Edit**.
4. Make your additions or changes.
5. Click **Save**.
6. When prompted to update linked Activities, click **Yes** or **No**.

Managing Activity Attachments

[Prerequisites for Activity Attachments](#)

You can attach files (less than 10MB in size) to Activities using the Attachments feature.

Adding Activity Attachments

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Activity**, and then select **Manage Activity**.
2. Enter search criteria and click **Search**.
3. From your search results, select the **Activity**, click the **I Want To . . .** action, and select **Attachments** or open the Activity and click the **Attachments** details link.
4. Click **New** to attach a new file.
 - a. Click **Browse** and select a file on your workstation.
 - b. **Filename:** Enter a filename using only alphanumeric characters. No spaces or special characters are accepted.

- c. **Description:** Enter a description of the attachment.
5. Click **Save**.

Downloading Activity Attachments

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Activity**, and then select **Manage Activity**.
2. Enter search criteria and click **Search**.
3. From your search results, select the **Activity**, click the **I Want To . . .** action, and select **Attachments** or open the activity and click the **Attachments** details link.
4. On the Attachments screen, click the vertical ellipsis **Actions** menu and then click **Download**.
5. Select either **Open** or **Save File**.

Deleting Activity Attachments

 **Note:**

Attachments are automatically deleted when an activity is deleted or purged.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Activity**, and then select **Manage Activity**.
2. Enter search criteria and click **Search**.
3. From your search results, select the **Activity**, click the **I Want To . . .** action, and select **Attachments** or open the activity and click the **Attachments** details link.
4. On the Attachments screen, click the vertical ellipsis **Actions** menu and then click **Delete**.
5. Click **Delete** to confirm.

Viewing Recently Accessed Activities

[Prerequisites for Viewing Recently Accessed Records](#)

1. From the **OPERA Cloud** menu, select **Bookings** and then select **Activities**.
2. Click the **I Want To . . .** menu.
3. Recently viewed activities are listed in the **View** column.
4. Click an **Activity** link to [manage Activities](#).

Membership (Loyalty Cloud Service)

[Prerequisites for Membership \(Loyalty\)](#)

With an Oracle Hospitality OPERA Cloud Service, Loyalty subscription you can create and manage loyalty programs at a chain-level, including tier management, point earning (based on nights, stay, revenue or enrollment) and point redemption options.

**Note:**

Profile sharing must be active. For more information, see [Configuring Chain](#)

Included with the Oracle Hospitality OPERA Cloud Service, Loyalty subscription:

- Membership Tiers and Tier Management including Upgrades, Downgrades, Renewals (Calendar or Rolling)
- Points Calculation Rules for Enrollment and Stay (Base and Bonus, Tier and Award points)
- Awards: Rate, Package, Upgrade, Payment and Other (third-party) redemption
- Tier Benefits
- Reporting is available in OPERA Cloud Reporting and Analytics

Managing Your Loyalty Programs

- [Calculating or Expiring Membership Points and Issuing Award](#)
- [Tier Management](#)
- [Managing Profile Membership \(Loyalty Cloud Service\)](#)
- [Profile Stay Records](#)
- [Redeem Awards](#)

Managing Membership Tiers

Loyalty

Use Tier Management to process changes to membership tiers (levels) in batch, based on preconfigured level rules. For more information, see [Configuring Membership Type Point Calculation and Tier Management Rules](#) and [Configuring Membership Type Levels](#). Using this option you can apply Tier Upgrades, Tier Downgrades and Member Card Renewals. This process can also be scheduled (contact Oracle support to have this activated).

Creating and Processing New Tier Batch

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Tier Management**.
2. Click **Tier Processing** and complete the following:
 - a. **Upgrade:** Select check box to upgrade members based on the [Membership Type Level Rules](#) configured.
 - b. **Downgrade:** Select check box to downgrade members based on the [Membership Type Level Rules](#) configured.
 - c. **Renewal:** Select check box to renew the memberships expiration date if the member had activity during the batch period and expire memberships without activity in the period defined in the [Years to Expire](#).

- d. **Membership Type:** Select a membership type from the list.
- e. **Evaluation Date:** Enter or select a date for this batch. Stay transactions through this date, minus the Delay in Days, will be included in the batch.
- f. **Apply Changes Immediately:** Select check box to run the downgrade, upgrade, or renewal batch process and apply your changes. Leave this unchecked if you want to review the proposed changes to memberships before applying the changes. If you select this check box, you will not have the opportunity to review the data (for example, to grant grace periods during a downgrade batch run) before the changes are applied.
- g. Click **OK**.

Viewing Past Tier Management Batches

To display the member profiles considered for batch tier management. You can view the changes to the member level that occurred within a batch, along with the status of those changes.

Note:

you can hover over the log entry to view processing details.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Tier Management**.
2. Enter search criteria, then click **Search**.
3. Select the batch in the search results, then click the vertical ellipsis **Actions** menu and select **View Detail**.
4. Expand the row to view the yearly summary; this displays the Tier Points for each year considered for this batch
 - a. Click the vertical ellipsis and select **Back to Tier Status** to return to previous page.

Deleting Record from Past Tier Management Batches

To delete a record and any un-applied changes from a batch

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Tier Management**.
2. Enter search criteria, then click **Search**.
3. Select the batch in the search results, then click the vertical ellipsis **Actions** menu and select **View Detail**.
 - a. Click **+** to expand a row to view the yearly summary.
 - b. Click the vertical ellipsis **Actions** menu and select **Delete**.

Apply Changes From Past Tier Management Batch

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Tier Management**.
2. Enter search criteria, then click **Search**.

3. Select the batch in the search results, then click the vertical ellipsis **Actions** menu and select **Apply Changes from Batch** .

Purge Past Tier Management Batches

This will purge this batch from the list of batches. Any un-applied changes will also be purged.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Tier Management**.
2. Enter search criteria, then click **Search**.
3. Select the batch in the search results, then click the vertical ellipsis **Actions** menu and select **Purge**.

Calculating or Expiring Membership Points and Issuing Award

Loyalty

The Calculate Membership Points option is used to Calculate Member Points, Expire Award Points, or Issue (Other) Awards to members in a batch process.

Calculating Membership Points

The Calculate Member Points process can be run for any membership type. This process references the [point calculation rules](#) and applies points to the member based on their activity (membership transactions)..

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Calculate Membership Points**.
2. Select **Calculate Points**.
3. **Membership Type**: Select a membership type from the list
4. **Calculate Until**: Enter or select a date.

Note:

This date cannot be greater than the current date, minus the **Delay in Days** specified in the [membership type](#).

5. Click **Submit**.

Expiring Membership Points

The Expire Points process can be run for any membership type. This process references the Award Points Expiry Period and [Expiration Date](#). Expired points are not available for redemption. Membership transactions with a type of Expired are applied. You can check a members points to expire using the **Points to Expire** link in the [profile memberships](#)

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Calculate Membership Points**.
2. Select **Expire Points**.
3. **Membership Type**: Select a membership type from the list

4. **Calculate Until:** Enter or select a date .
5. Click **Submit**.

Issuing Membership Awards

The Issue Awards process can be run to issue [Awards](#) to members, where Award Based On = Other. Members are issued awards of the selected type until their available award point balance is exhausted.

Note:

This process will deduct all points from all members for the selected membership type.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Calculate Membership Points**.
2. Select **Issue Awards**.
3. **Membership Type:** Select a membership type from the list.
4. **Award:** Select an award from the list.
5. Click **Submit**.

Managing Membership Claims

Loyalty Use claims to track inquiries regarding a members account such as missing points or stays, tier inquiries, information requests, new card requests, etc. You can add new claims, manage the details for existing claims or view resolved claims.

Adding Membership Claims

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Manage Membership Claim**.
2. Click **New** and complete the following:
 - a. **Name:** Search for the guest or contact member profile.
 - b. **Membership Number:** Select a membership number for selected profile (name) from the list.
 - c. **Caller Name:** Enter the name of the person making the claim. The caller's name may be different from the name of member on the membership card.
 - d. **Claim Status:** Select a status from the list.
 - e. **Claim Origin:** Select an claim origin from the list. For more information, see [Configuring Membership Claim Origins](#).
 - f. **Owner:** Select an owner (user) from the list.
 - g. **Claim Type:** Select a claim type from the list. For more information, see [Configuring Membership Claim Types](#).
 - h. **Approval Status:** Select an approval status from the list

- i. **Reply By:** Enter or select a reply by date.
 - j. **Caller Information:** Enter details related to this call that may help to resolve the claim.
 - k. **Comments:** .Add any comments about this claim or steps taken to resolve the claim
 - l. **Property:** Enter or select the property.
 - m. **Record Type:** Select a category of claim: Stay, Other, or Limited Adjustment.
 - i. **Adjustment Limit Code:** Select a limited adjustment code from the list. (When Record Type is Limited Adjustment). For more information, see [Configuring Membership Claim Adjustment Limits](#).
 - n. **Arrival Date:** Enter or select an arrival date for the stay associated with this claim.
 - o. **Departure Date:** Enter or select a departure date for the stay associated with this claim .
 - p. **Confirmation No:** Enter the reservation confirmation number for the reservation associated with this claim.
 - q. **External Reference No:** Enter the reservation external reference (confirmation) number associated with this claim.
3. Click **Save**.

Editing Membership Claims

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Manage Membership Claim**.
2. Enter search criteria, then click **Search**.
3. Select the claim in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Viewing and Adding Membership Transactions to a Claim

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Manage Membership Claim**.
2. Enter search criteria, then click **Search**.
3. Select the claim in the search result, then click the vertical ellipsis **Actions** menu and select **Edit** .
4. Click **View Details**.
 - a. To add a membership transaction, select **New Transaction**.
 - b. For more information, see [Managing Profile Membership \(Loyalty Cloud Service\)](#).

Adding Claim Activity to a Claim

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Manage Membership Claim**.
2. Enter search criteria, then click **Search**.
3. Select the claim in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.

4. Click **New** and complete the following:
 - a. **Activity**: Select an activity from the list.
 - b. **Comments**: Enter comments.
5. Click **Save**.

Viewing Claim Activity for a Claim

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Membership**, then select **Manage Membership Claim**.
2. Enter search criteria, then click **Search**.
3. Select the claim in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Select the activity then click the vertical ellipsis **Actions** menu and select **View**.
 - a. Click **Close**.

Profiles

Information about the guests, contacts, companies and agents your property does business with - known as profiles- plays a part in almost all the activities you perform in OPERA Cloud. The OPERA Cloud solution relies on current and accurate profile data, that includes not only names and contact information, but a variety of other details such as language, preferences, loyalty memberships, negotiated rates, and much more. Profiles are also the basis for tracking statistics such as stay histories and revenue totals.

A profile is a collection of data about any of the following entities, each of which is a separate profile "type":

- **Guests**: This profile type is primarily associated with guests, although other persons (such as your employees) can also have an individual profile. Having guest profiles on hand (for repeat guests) allows you to make reservations quickly and accurately because you already have on record many of the details you need to know. Dormant or incomplete guest profiles are purged according to the various profile purge [OPERA Controls](#).
- **Contacts**: Contacts have a dual identity in OPERA Cloud; each Contact is also a Guest type profile. Contacts are the individuals typically linked to a sales account. (Available when the Contacts OPERA Control is active).
- **Sales Accounts**: Sales Accounts are used for businesses with which your property has commercial dealings.
 - **Companies**: These are the businesses who book accommodation or catering events at your property, and so on.
 - **Travel Agents**: Sometimes simply called "agents," these are the professionals who book accommodation at your property for the guests who are their clients. Commission can be paid to Travel Agents.
 - **Sources**: Sources are other persons or organizations who are not travel agents but who are nevertheless responsible for bringing in business. For example, Sources can be, for example, secretaries who make travel arrangements for their companies' executives. Commission can be paid to Sources.

- **Groups:** A group is an affiliation that sponsors business at your property. Group business might include any (typically) one-time affair such as a company conference or a wedding.

When Shared Profiles is enabled in [Chain setup](#) all profiles are shared across all properties.

In the event that duplication of profiles occurs, profiles can be merged to combine the details into a single profile. For more information, see [Merging Profiles](#)

When the Relationships OPERA Control is active you can establish links between various profiles; for example, establishing a parent-subsidary company relationship.

When the Multi-language OPERA Control is active you can add an alternate name in profiles, allowing the name to be entered in the national character set (for example: Japanese Kanji or Hiragana). You can search for profiles using either the primary or alternate name. The alternate name can be generated on stationery for a fully localized document or email.

When OPERA Cloud is integrated with partner solution(s) you can lookup profile data in the external solution and download the details to OPERA Cloud; any changes to the profile are updated in the subscribed solutions. For more information, see [Using Profile Lookup and Download with Integrated Solutions](#) It's also possible to enroll a guest in a Loyalty solution integrated with OPERA Cloud. For more information, see [Enrolling Guests in External Loyalty Programs](#)

When subscribed to the Oracle Hospitality OPERA ID Document Scanning Cloud Service and integrated with the ID scanning partner you can scan identification documents and update the guest profile with the details captured.

Loyalty

With an OPERA Cloud Loyalty Services subscription, you can manage a loyalty program; including membership enrollment, tier management and member transaction options. For more information, see [Membership \(Loyalty Cloud Service\)](#)

Creating a Guest or Contact Profile

[Prerequisites for Creating a Guest or Contact Profile](#)

Maintaining accurate guest details is vital in providing exceptional guest service. Guest profiles are typically shared across properties in multi-property operations, ensuring guest preferences, notes, loyalty membership and other details are available to users in all your properties.

Contact profiles are a variation of guest profiles and are available when the Contacts OPERA Control is active. Contacts are typically linked to [Sales Accounts](#).

[Watch Video](#)

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Click **I Want To . . .** and from the Create column select **Guest Profile** or **Contact Profile**.
3. Complete the following **Primary Details**:
 - a. **Name:** Enter the last name of the guest or contact.

Click the **Alternate Name link** to open the **Alternate Name for** dialog. Complete the following fields:

- b. Click **New** to add additional address details.
 - c. Refer [Managing Profile Communication](#).
6. Click **Save** to save and close or **Save and Add More Details** to save and open the [Manage Profile Presentation](#) page.

Creating a Sales Account Profile

Sales Account Profiles are companies, travel agents, and (booking) sources. When [profile sharing](#) is active in multi-property operations, profiles are shared across all properties, ensuring details, such as negotiated rates, notes, and attachments are available at all properties.

When the Profile Name Validations OPERA Control is active, a check is performed to ensure the correct profile type was selected for the name entered; for example **Oracle** must be created as a Company profile. For more information, see [Configuring Profile Name Validations](#).

Watch Video

Revenue production is tracked against the various profiles linked to a reservation (either guest, or group, and event billing masters).

Note:

If the Company or Travel Agent is greater than 40 characters, use the Name2 and Name3 fields for the additional name details.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Click the **I Want To . . .** action and select **Company Profile**, **Travel Agent Profile**, or **Source Profile**.
3. Complete the **Primary Details** panel.
 - a. **Name:** Enter the company, travel agent, or source name.
 - b. **Alternate Name:** Click to enter an alternate name (non-western characters) for the Sales Account (available when the Multi-language OPERA Control is active). You can search for the profile using the name entered and output this name on stationery.
 - i. **Alternate Name:** Enter the name of the Sales Account in the national character set
 - ii. **Alternate Language:** Select a language from the list
 - iii. Click **Save**.
 - c. **Name2:** Enter additional profile name details.
 - d. **Name3:** Enter additional profile name details.
 - e. **Language:** Select a language from the list. When the Multi-language OPERA Control is active, all stationery is generated in this language.

 **Note:**

When the Multi-Language OPERA Control is active, you can search for profiles by either the primary or alternate (national character set) name in the Name and First Name fields.

Profile lookup search results appear in a separate, named tab in the search results panel. A Subscription column indicates any profiles already subscribed and existing in OPERA Cloud.

 **Note:**

This is one time, one-way download; if the profile is downloaded twice, two records are created.

The display of the results is determined by the External Lookup Behavior OPERA Control. There are three options available:

- **Force:** External Lookup is performed when no matches are found in OPERA Cloud. The Results tab for default external interfaces appears if no local matches are found.
- **Simultaneous:** External lookup is performed regardless of matches found in OPERA Cloud. Tabs for OPERA Cloud local results and external results are populated.
- **Manual:** External Lookup is not automatically performed. You can select a tab for the external system in which you want to see results.

Lookup and Download Profile from an Integrated Solution

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. **View By:** Select a profile type from the list.
3. **Lookup Profile:** Select the external system in which to look up the profile
4. Enter additional search criteria and click **Search**.
5. Select the tab for the external system.
6. Select the profile in the search results, click the vertical ellipse **Actions** menu, and select **Download**
7. You are directed to Profile Presentation to make updates to the profile. See [Managing a Sales Account Profile](#) and [Managing a Guest or Contact Profile](#).

 **Note:**

The external profile ID is displayed on the [Profile Subscriptions panel](#).

Enrolling Guests in External Loyalty Programs

[Prerequisites for Enrolling Guests in External Loyalty Programs](#)

Watch Video

You can enroll a guest in a loyalty or gaming solution integrated with the Oracle Hospitality Integration platform. Once enrolled, the profile is updated with [membership details](#).

There are multiple ways you can enroll a guest:

- Create a new profile and enroll the guest simultaneously.
- Enroll an existing guest.
- Enroll an existing guest with a reservation.

 **Note:**

The Enrollment page can be customized using [Page Composer](#).

The Enrollment Systems that are active OPERA Control determine the integrated solutions that support enrollment:

- For Loyalty Enrollment, set the Default Membership Type OPERA Control. The Default Membership Type selected is the membership that automatically populates when adding a new membership to a profile, enrollment, and the membership used for linking a profile membership to a reservation.
- For Gaming Enrollment, set the Default PTS Membership Type OPERA Control. The Default PTS Membership Type is used for Gaming functionality.

 **Note:**

Ensure that the [Membership Type](#) selected for either of these OPERA Controls is updated with the correct [External Database](#) for the integrated solution.

Creating Guest Profiles and Enrolling Guests in Loyalty Programs

To simultaneously create a guest profile and enroll the guest in a loyalty program, complete the following steps:

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Click the **I Want To. . .** action, select **Enroll Guest**, and complete the following fields:
 - a. **Enrollment Type:** Select an enrollment type from the list.
 - b. **Name:** Enter the last name of the guest.
 - c. **First Name:** Enter the first name of the guest.
 - d. **Middle:** Enter the middle name of the guest.
 - e. **Title:** Select the guest's title from the list of values.
 - f. **Birth Date:** Enter or select the birth date.

- l. Phone and Email section:**
 - i. Click **Add Rows** to add additional rows.
 - ii. Select **Primary** for the primary email and phone contact details.
 - iii. Refer to [Managing Profile Communication](#)
 - m. Address Section:**
 - i. Click **New** to add additional address details.
 - ii. Refer to [Managing Profile Communication](#)
4. Click **Enroll**.
5. The guest is enrolled, the profile created, and the membership details are added to the profile. See [Managing Profile Memberships](#) and [Managing Reservation Memberships](#).

Managing Profiles

Profiles store and display a wide range of information, and there are many ways you can configure them with information about a guest, travel agent, or company. The following sections outline many of the ways you can manage profiles in OPERA Cloud. These options can be found from the **Navigation Bar** by clicking **Client Relations** and then clicking **Profiles**.

Managing a Guest or Contact Profile

Note:

When the Profile Protection OPERA Control is active you might be prevented from updating profile details. Only users with the Override Profile Protection user tasks assigned their roles can override the protection status and update the profile. For more information, see [Configuring Profile Protection](#).

Watch Video

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Click the **View By** field drop-down and select **Guest** or **Contact**.
3. Enter additional search criteria in the available fields and click **Search**.
4. From the search results, locate and click the profile's name to open Manage Profile. Alternatively, you can locate the profile's name, click the **I Want To...** action associated with the profile, and under the Go To section click **Profile**.
5. The Profile Presentation page opens.

 **Note:**

Details panels selected in the default or previously selected Presentation Panel Tab are displayed. For more information, see [Presentation Pages](#).

6. Click the **I Want To. . .** to display various actions for this Profile.
7. **Overview Panel**

 **Note:**

You can customize this panel. The fields available for update may vary.

- a. Click **Edit**.
 - i. Update details.
- b. Click **Save**.

 **Note:**

All Profile detail links are available to view and update related profile details. Refer to the [Guest and Contact Detail Links](#) table below.

8. **Profile Details Panel:**

 **Note:**

You can customize this panel. The fields available for update may vary.

- a. Click **Edit** and update the following:
 - i. **Last name:** Enter the surname of the guest or contact.
 - ii. **Alternate Name:** Click to enter an alternate name (non-western characters) for the profile (available when the multi-language OPERA Control is active).
 - i. **Alternate Last Name:** Enter the last name in local character set.
 - ii. **Alternate First Name:** Enter the first name in local character set.
 - iii. **Alternate Language:** Select the language from the list.
 - iv. **Alternate Title:** Select a title from the list (based on the language selected).
 - v. **Alternate Salutation:** Enter a salutation.
 - vi. **Alternate Envelope Greeting:** Enter name for envelope greeting.
 - vii. Click **Save**.

- xix. **Active:** Deselect the check box to inactivate the profile and exclude it from searches by default. Inactive profiles are purged.
 - xx. **Protected:** Select check box to activate profile protection and prevent updates (Available when the Profile Protection OPERA Control is set to By Profile and the Mark/Unmark Profile as Protected task is assigned to your role(s)). For more information, see [Configuring Profile Protection](#).
 - xxi. **Restricted:** Select check box to identify the guest or contact as restricted from staying at the property. Restricted profiles are indicated in profile search and presentation pages.
 - i. **Reason:** Select a restricted reason from the list NOTE: Restricted profiles are excluded from purge when the Exclude Restricted Profiles From Purge OPERA Control is active.
- b. Click **Save**.

Managing a Sales Account Profile

Sales Account Profiles are companies, travel agents, and (booking) sources shared across all properties in a multi-property operation.

Revenue production is tracked against the various profiles linked to a reservation (either guest, or group, and event billing masters). Using the [relationship feature](#), you

can consolidate sales production statistics from various subsidiary accounts to a master sales account.

Watch Video

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. **View By:** Select Company, Agent, Source from the list.
3. Enter additional search criteria, click **Search**.
4. Select the profile from the search results, click the **Profile Name**, or click **I Want To . . .** and go to the **Profile**.
5. On the Profile Presentation page, click the **I Want To . . .** action to perform additional actions on this profile.

 **Note:**

Details panels selected in the default or previously selected Presentation Panel Tab are displayed. For more information, see [Presentation Pages](#).

6. **Overview Panel:**
 - a. Click **Edit** and update the profile details.
 - b. Click **Save**.

 **Note:**

All Profile detail links are available to view and update related profile details. Refer to the **Sales Account Profile Detail** table below.

7. **Profile Details Panel:** Click **Edit** and enter the following details:

 **Note:**

This panel can be customized; the fields available for update may vary.

- a. **Name1:** Enter Company, Travel Agent, Source name.
- b. **Name2:** Enter second line of account name.
- c. **Name3:** Enter third line of account name.
- d. **Language:** Select a language from the list; when the Multi-language OPERA Control is active stationery such as contracts and invoices are generated in this language.
- e. **Corp ID / IATA Number:** Enter a Corporate ID / IATA Number. IATA number is validated when the IATA Validation OPERA Control is active. When the Allow Duplicate IDs OPERA Control is active, multiple profiles with the same CORD ID or IATA Number are permitted. You can search for Sales Account profiles using this identifier.

- f. **Industry:** Select an industry code from the list. See [Configuring Industry Codes](#).
 - g. **Owner:** Select a Sales Owner from the list (Enabled when the Owner OPERA Control is active).
 - h. **Active:** Uncheck to inactive this Account profile; inactive profiles are excluded from searches by default.
 - i. **Protected:** Select this check box to activate profile protection (Available when the Profile Protection OPERA Control is set to By Profile).
 - j. **Trace Code:** Select an Activity trace code from the list to specify standard sales activities to be created for this sales account. (Available when the Auto Traces OPERA Control is active). For more information, see [About Sales Activities Auto Traces](#).
 - k. **Restricted:** Select this checkbox to mark the guest / contact profile as restricted.
 - i. **Reason:** Select a restricted reason from the list.
8. Click **Save**.

**Note:**

When the Profile Protection OPERA Control is active you may be prevented from updating profile details; only users with the Override Profile Protection user tasks assigned their roles can override the protection status and update the profile. Refer to [Configuring Profile Protection](#).

Managing Sales Account Contacts

Viewing Sales Account Contacts

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria and click **Search..**
3. Select the **profile** in the search result, click the **I Want To . . .** action, click **Contacts** or open the profile, and click the **Contacts** link in the Profile presentation.
4. Click a **Contact Name** to manage the [Contact Profile](#).

Adding New Contacts to a Sales Account

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria and click **Search..**
3. Select the **profile** in the search result, click the **I Want To . . .** action, click **Contacts** or open the profile, and click the **Contacts** link in the Profile presentation.
4. Click **New** and complete the Contact details. For more information refer to [Creating Profiles](#).

Deleting Contacts from a Sales Account

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria and click **Search..**
3. Select the profile in the search result, click the **I Want To . . .** action, click **Contacts** or open the profile, and click the **Contacts** link in the Profile presentation.
4. Select the **contact** in the search result, click the **vertical ellipsis**, and select **Remove**.
5. Click **Remove** to confirm.

Managing Sales Account Forecast

[Prerequisites for Managing Sales Account Forecast](#)

Premium

Use the Sales Account forecast to set up the expected revenue and room nights on sales account profiles for specific periods of time, either by calendar months or [fiscal periods](#) based on the Reporting Period [OPERA Controls](#).

[Watch Video](#)

Adding Sales Account Forecasts (Load Forecast)

Note:

If forecast data exists for a selected date range, you will be prompted to override.

1. From the **OPERA Cloud menu**, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. From View By, select **Company**, **Agent**, or **Source** from the list.
3. Enter additional search criteria and click **Search**.
4. Select the profile in the search results, click the **I Want To . . .** action, select **Forecast**, or click the **Forecast** link in Profile Presentation.
5. Click **New** and complete the following:
 - a. **Property**. Enter or select the property.
 - b. **Future Dates**. Select check box to display future dates when selecting the From / To periods.
 - c. **From Period**. Select a period from the list.
 - d. **To Period**. Select a period from the list.
 - e. **Room Nights**. Enter number of forecasted room nights for the period.
 - f. **Average Rate**. Enter the potential Average rate for the period.
 - g. **Room Revenue**. Enter the potential Room revenue. An amount will populate when an average rate is entered.
 - h. **F and B**. Enter the potential Food and Beverage revenue for the period.
 - i. **Other Revenue**. Enter the potential Other revenue for the period.
6. Click **Save** or click **Save and Add More** to add another.

Editing Sales Account Forecast

1. From the **OPERA Cloud menu**, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. From View By, select **Company**, **Agent**, or **Source** from the list.
3. Enter additional search criteria and click **Search**.
4. Select the profile in the search results, click the **I Want To . . .** action, select **Forecast**, or click the **Forecast** link in Profile Presentation.
5. Enter search criteria and then click **Search**.
6. Select the forecast period, click the vertical ellipsis **Actions** menu, and select **Edit**.
 - a. Update the forecast details.
7. Click **Save**.

Deleting Sales Account Forecast

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. From View By, select **Company**, **Agent**, or **Source** from the list.
3. Enter additional search criteria and click **Search**.
4. Select the profile in the search results, click the **I Want To . . .** action, select **Forecast**, or click the **Forecast** link in Profile Presentation.
5. Enter search criteria and then click **Search**.
6. Select the forecast period, click the vertical ellipsis **Actions** menu, and select **Delete**.
7. Click **Delete** to confirm.

Generating the Guest or Contact Details Report

You can generate a report detailing the profile information recorded for Guest or Contact profiles; providing guests, who request, a copy of their information stored in OPERA Cloud.

With the View Identification Details task granted to role(s) you can unmask personal identification details on the report.

Generating this report is tracked in the [Changes Log](#) with the Profile Data Report activity type.

Note:

The **sample_prof_data_port.rtf** report can be customized using the [Stationery Editor](#) according to your needs; you can setup multiple formats of the report in the [Profile Group](#).

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. From **View By**, select **Guest** or **Contact** from the list of values.
3. Enter additional search criteria and click **Search**.
4. Select the profile from the search results. Click **I Want To. .** and then select **Data Porting**.
 - a. **RTF Template Name:** Select the report template from the list.
 - b. **Show Masked Information:** Select checkbox to unmasked personal identification information.
 - c. Select a report destination.
 - i. **Preview:** Select to preview in PDF.
 - ii. **Email to Print:** Select to print to selected printer. For more information, see [Configuring Printers](#).
 - iii. **Email:** Select to delivery as PDF attachment to email.
 - i. Select an email address from the list.

OR

- ii. Click **Add New** to enter a new email address.
- iv. **Download**: Click to download folio in a variety of formats.
 - i. **Format**: Select a format from the list.
- d. Click **Process**.

Managing Profile Scheduled Activities (External Leisure)

Prerequisites for Managing Profile Scheduled Activities

The Scheduled Activities details link is available when OPERA Cloud is integrated with an activity management solution for the management of leisure activities such as golf or spa appointments, horseback riding, tours and so on. Leisure activity reservation details can be associated with guest or contact profiles and, in turn, their room reservations, so you are aware of the guest's leisure activity schedule during their stay. For more information see, [Managing Reservation \(External\) Activities](#).

The Scheduled Activities panel lists the activities details received from the activity management solution. The following information is displayed for each activity:

1. **Type**: Type of activity.
2. **Location**: Where the activity takes place.
3. **Prs**: Number of persons participating.
4. **Date**: Date when the activity takes place. If the activity spans more than one day, the date when the activity starts..
5. **Start/End Time**: Time when the activity starts and ends.
6. **Duration**: Hours and minutes duration for the activity.
7. **Status**: Current status of the activity.

Detaching Scheduled Activities

When you detach the profile from Activities, no further profile data synchronization take places and no activity information is passed between the External Activity Solution and OPERA Cloud for the current profile.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, then select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select a **Profile** in the search results, click the **I Want To . . .** action, and then select **Scheduled Activities** or click the **Scheduled Activities** link in the Profile presentation.
4. Select the **Activity** and click **Detach**.

Generating Scheduled Activities Report

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, then select **Manage Profile**.
2. Enter search criteria and click **Search**.

3. Select a **Profile** in the search results, click the **I Want To . . .** action, and then select **Scheduled Activities** or click the **Scheduled Activities** link in the Profile presentation.
4. Click the vertical ellipsis and select **Report**.
5. Select a **Destination** and click **Process**.

Managing Profile Additional Information

Prerequisites for Profile Additional Information

The Additional Information panel is available for capturing additional country-specific information required for integration with fiscal partners, e-Invoice solutions, and other similar requirements.

The attributes displayed and enabled for update depend on OPERA Controls and country-specific integration requirements. For further information refer to: [Oracle Hospitality Localization Center for Hotel](#).

Editing Profile Additional Information

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. In the search results click the **I Want To . . .** action and select **Additional Information** or open the profile and click **Additional Information** in the Profile presentation.
4. Click **Edit** and update details.
5. Click **Save**.

Managing Profile Delivery Types

Prerequisites for Managing Profile Delivery Types

Delivery Types define eFolio export delivery methods. You must select one Delivery Type as the primary type.

In multi-property operations, this information is property specific.

Adding Profile Delivery Types

1. From the OPERA Cloud menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Click the **View By** list and select a profile type.
3. Enter search criteria and click **Search**.
4. From the search results, click the **I Want To . . .** action and select **Delivery Types** or click the **Delivery Types** link in the Profile presentation.
5. Click **New** and enter the following details:
 - a. **Property**: Enter or select the property.
 - b. **Delivery Group**: Select EFOLIO_EXPORT from the list.
 - c. **Delivery Type**: Select a delivery type (method) from the list.

- d. **Delivery Value:** Enter the details based on the delivery type, required for Electronic and Email types.
 - e. **Primary:** Select to mark this type (method) as the primary.
 - f. **Sequence:** Enter a display sequence.
6. Click **Save**.

Editing Profile Delivery Types

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Click the **View By** list and select a profile type.
3. Enter search criteria and click **Search**.
4. From the search results, click the **I Want To . . .** action and select **Delivery Types** or click the **Delivery Types** link in the Profile presentation.
5. Enter search criteria and click **Search**.
6. Select a **Delivery Type**, click the **vertical ellipsis**, and select **Edit**.
7. Update details.
8. Click **Save**.

Deleting Profile Delivery Types

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Click the **View By** list and select a profile type.
3. Enter search criteria and click **Search**.
4. From the search results, click the **I Want To . . .** action and select **Delivery Types** or click the **Delivery Types** link in the Profile presentation.
5. Enter search criteria and click **Search**.
6. Select a **Delivery Type**, click the **vertical ellipsis**, and select **Delete**.
7. Click **Delete** to confirm.

Converting Sales Account Profile Types

You can convert Sales Account profiles types between Company, Travel Agent, and Source if there is no history of the profile type associated with the following: reservations/blocks, future reservations/blocks, AR accounts, outstanding commissions payable, and so.

Convert profile type activity is tracked in the [changes log](#).

Note:

The Convert Profile Type action is enabled based on the Edit Profile Details task granted to roles.

Convert Sales Account Profile Type

1. From the OPERA Cloud menu, select **Client Relations**, select **Profiles**, then select **Manage Profiles**.
2. Click the **View By** list and select a **Profile Type**.
3. Enter search criteria and click **Search**.
4. In the search results, click the **I Want To . . .** action and select **Convert Profile Type**.
5. Click the **New Profile Type** drop-down list and select a **Profile Type**.
6. Click **Save**.

Filtering Profile Search by Accounts

Searching for Sales Accounts

With an Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition subscription or an Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition subscription, you can search for profiles using the Account profile type.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profile**.
2. In the Search panel, click **View By** list and select Account.
3. Profile search returns results for Company, Travel Agent, Source, or Contact. It also adds the following search filters to the standard search function:
 - a. **Owner:** The sales owner of the sales account. When you select an Owner you can select the **Primary Only** check box to search profiles with the selected owner as the primary owner. (Available when the Owner OPERA Control is active).
 - b. **Display Linked Contact:** Select the check box to return search results for Contacts linked to their Accounts.

 **Note:**

You can also search sales account by keyword and keyword type (Available when the Keyword OPERA Control is active). For more information, see [Managing Sales Account Keywords](#)

Managing Sales Information

[Prerequisites for Managing Sales Information](#)

Sales information can be added to Company, Travel Agent, Source, and Contact profiles to assist you in decision-making and can be referenced as filters in sales reports.

Editing Sales Information

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.

2. Click the **View By** drop-down and select a profile type, such as a Company, Travel Agent, Source, or Contact.
3. Enter search criteria and then click **Search**.
4. From the search results, click the **I Want To . . .** select **Sales Information** or open the profile and click **Sales Information** in Profile Presentation.
5. On the Sales Information screen, click **Edit** and update the following details. Select a value(s) from the list for each field.

 **Note:**

Fields vary depending on the profile type you select in the search.

- a. **Territory** : Select the sales territory to which the account is assigned.
 - b. **Priority**: Select the business importance of the profile or contact.
 - c. **Business Potential**: Select the importance of the account in drawing accommodations business.
 - d. **Account Type**: Select the type of sales account.
 - e. **Business Segments** : Select the business segments this profile represents for your property.
 - f. **Industry**: Select the industry classifications of the account.
 - g. **Account Source**: Select the origins of the account, such as media ad, website, and so on.
 - h. **Mail Action** : Select the mailing action codes you can assign to identify the account when you want to create mailing lists or reports for other purposes.
 - i. **Influence** : Select the influence the Contact has in the decision-making process.
 - j. **Competition**: Select your properties competition for this account.
 - k. **Scope** : Select the broad geographical areas where the profile or account generates business.
 - l. **Scope City** : Select the city where the profile or account's headquarters is located or the city where one of your properties is located that this profile or account frequently uses.
6. Click **Save**.

Managing Profile Channel Negotiated Rates

When OPERA Cloud is integrated with various distribution systems (GDS, ADS, OTA's, etc) you can setup negotiated rates on Company, Agent and Source profiles for each booking channel.

Adding Channel Negotiated Rates

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.

2. Click the **View By** list and select a profile type, such as a Company, Travel Agent, or Source.
3. Enter search criteria and click **Search**.
4. From the search results, click the **I Want To . . .** action and select **Channel Negotiated Rates** or select the **Channel Negotiated Rates** link in Profile Presentation.
5. Click **New** and enter the following details:
 - a. **Property**: Enter or select the property.
 - b. **Channel**: Select a channel from the list.
 - c. **Channel Rate Code**: Select a rate code from the list.
 - d. **Access Code**: Enter an access code.
 - e. **Start Date**: Enter or select a date when the rate commences.
 - f. **End Date**: Enter or select a date when the rate ends.
 - g. **Sequence**: Enter a display sequence.
6. Click **Save**.

Editing Channel Negotiated Rates

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Click the **View By** list and select a profile type, such as a Company, Travel Agent, or Source.
3. Enter search criteria and click **Search**.
4. From the search results, click the **I Want To . . .** action and select **Channel Negotiated Rates** or click the **Channel Negotiated Rates** link in Profile Presentation.
5. Enter search criteria and click **Search**.
6. Select a negotiated rate, click the **vertical ellipsis**, and select **Edit**.
7. Update details.
8. Click **Save**.

Deleting Channel Negotiated Rates

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Click the **View By** list and select a profile type, such as a Company, Travel Agent, or Source.
3. Enter search criteria and click **Search**.
4. From the search results, click the **I Want To . . .** action and click **Channel Negotiated Rates** or click the **Channel Negotiated Rates** link in Profile Presentation.
5. Enter search criteria and click **Search**.
6. Select a negotiated rate, click the **vertical ellipsis**, and select **Delete**.
7. Click **Delete** to confirm.

Managing Travel Agent / Source Commission Details

You can manage commission details on Travel Agent and Source profiles and identify the profile's commission bank account.

You can also select a default commission code. OPERA Cloud will reference this commission code when calculating commissions and when there is no commission code specified on the reservation rate code or the reservation negotiated rate.

Adding Profile Commission Details

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profile**.
2. Enter search criteria for Agent or Source and click **Search**.
3. Select the Travel Agent or Source profile, click the **I Want To . . .** action, and select **Commission**.
4. Click **New** and enter the following details:
 - a. **Property**: Enter or select the property.
 - b. **Bank**: Select a commission bank account from the list.
 - c. **Commission Code**: Select default commission code for the profile.
5. Click **Save**.

Editing Profile Commission Details

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profile**.
2. Enter search criteria for Agent or Source and click **Search**.
3. Select the Travel Agent or Source profile, click the **I Want To . . .** action, and select **Commission**.
4. Select the commission detail, click the **vertical ellipsis**, and select **Edit**.
5. Update details.
6. Click **Save**.

Deleting Profile Commission Details

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profile**.
2. Enter search criteria for Agent or Source and click **Search**.
3. Select the Travel Agent or Source profile, click the **I Want To . . .** action, and select **Commission**.
4. Select the commission detail, click the **vertical ellipsis**, and select **Delete**.
5. Click **Delete** to confirm.

Distributing Commission Details to Other Properties

From a [hub location](#) you can copy a travel agent / source profile's bank account and commission code detail to other properties.

This requires that the bank account details and commissions code are consistent across properties.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profile**.
2. Enter search criteria for Agent or Source and click **Search**.
3. Select the Travel Agent or Source profile, click the **I Want To . . .** action, and select **Commission**.
4. Enter a property name in the **Property** field and click **Search**.
5. Select a commission record and click **Distribute**.
6. Select one or more destinations properties and click **Select**.

Managing Profile Credit Ratings

[Prerequisites for Credit Ratings](#)

You can set different levels of credit ratings for Company, Source, and Travel Agent profiles. You can use the credit ratings as criteria when configuring deposit/cancellation rule schedules for reservations and business blocks attached to the profile. This enables both guests and travel agents or bookers who make reservations with the property to have these cancellation and deposit rules applied based on the credit rating indicated on their profile.

Reservation types have different credit ratings defined for them under the Reservation Types Schedule. To link the credit rating to the profile, assign a reservation type to the Company, Source, or Travel Agent profile.

Managing Sales Account Keywords

[Prerequisites for Managing Sales Account Keywords](#)

You can set up various [keyword types](#) and add a keyword per keyword type to an account profile as an alternate method of identifying and searching for an Account. Keywords can include the search name abbreviations, tax numbers, corporate ID numbers, stock codes, and so on.

Adding Keywords

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles** and then **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile from the search results, click the **I Want To . . .** action, select **Keywords**, or click the **Keywords** link in Profile Presentation.
4. Click **New** and enter the following details:
 - a. **Keyword Type**: Select a keyword type from the list.
 - b. **Keyword**: Enter the keyword.
5. Click **Save**.

Editing Keywords

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles** and then **Manage Profile**.

2. Enter search criteria, click **Search**.
3. Select the profile from the search results, click the **I Want To . . .** action, select **Keywords**, or click the **Keywords** link in Profile Presentation.
4. Select the keyword, click the vertical ellipsis **Actions** menu, and select **Edit**.
5. Update details.
6. Click **Save**.

Deleting Keywords

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles** and then **Manage Profile**.
2. Enter search criteria, click **Search**.
3. Select the profile from the search results, click the **I Want To . . .** action, select **Keywords**, or click the **Keywords** link in Profile Presentation.
4. Select the keyword, click the vertical ellipsis **Actions**, and select **Delete**.
5. Click **Delete** to confirm.

Managing Profile AR Accounts

Prerequisites for Managing Profile AR Accounts

You can create and manage profile AR Accounts if AR Account Tasks are assigned to your Role.

Viewing AR Accounts for Profile

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria and click **Search**.
3. Select the profile from your search results, click the **I Want To . . .** action, select **Accounts Receivable**, or open the profile and click the **Accounts Receivable** link in the Profile presentation.
4. Enter to select the property and click **Search**.

Creating AR Account for Profile

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria and click **Search**.
3. Select the profile from your search results, click the **I Want To . . .** action, select **Accounts Receivable**, or open the profile and click the **Accounts Receivable** link in the Profile presentation.
4. Click **New**.
5. On the Account Setup panel, enter the details. See [Managing Accounts Receivables Accounts](#) .

Managing AR Account for Profile

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria and click **Search**.
3. Select the profile from your search results, click the **I Want To . . .** action, select **Accounts Receivable**, or open the profile and click the **Accounts Receivable** link in the Profile presentation.
4. Enter to select the property and click **Search**.
5. Select the AR Account in your search results and click **Manage**. See [Managing Accounts Receivables Accounts](#) .

Managing Profile e-Certificates

Prerequisites for Managing Profile e-Certificates

Promotional e-Certificates are available in OPERA Cloud when integrated with the Oracle Hospitality OPERA Customer Loyalty Tracking Cloud Service. Promotional e-Certificates offer a promotional rate when loyalty members redeem them.

For each certificate listed, the following details are available:

1. **Certificate No:** Number assigned to the e-Certificate.
2. **Cert Code:** e-Certificate Code.
3. **Status:** Status of the e-Certificate.
 - a. **Cancelled:** Reservation Cancellation Date is less than or equal to the Reservation Arrival Date and the E-Certificate has never been consumed.
 - b. **Consumed:** e-Certificate Consumption Date equals the Reservation Arrival Date and the Consume button has been selected.
 - c. **Deleted:** e-Certificate has been deleted.
 - d. **Expired:** Expiry Date set for the e-Certificate has been reached or passed.
 - e. **Issued :** e-Certificate has been issued.
 - f. **Reserved:** e-Certificate consumption date equals the reservation arrival date.
4. **Expiry Date:** Date the e-Certificate expires.
5. **Consumed:** Indicates the location where consumed.
6. **Label:** Label for the e-Certificate.
7. **Membership Type:** The Membership type to which the e-Certificate is linked.
8. **Promotion Code:** The Promotion code to which the e-Certificate is attached
9. Click **[+]** to view certificate details.
 - a. **First/Middle Name:** First and Middle name of the guest using the e-Certificate.
 - b. **Last Name:** Last name of the guest using the e-Certificate.
 - c. **Email:** Email address for the guest.

- d. **Reference No:** Reference Number.
- e. **Location Type:** Indicates the location where e-Certificate can be used
- f. **Value:** The value of the e-Certificate to the guest
- g. **Cost:** The cost in membership points to consume the e-Certificate.
- h. **Issue Type:** Issue Type of the E-Certificate. This is either "Assigned," "Opt-In," or "Purchased."
- i. **Date:** Date the E-Certificate was or will be, consumed.
- j. **Property Consumed:** Property where the E-Certificate was consumed.
- k. **Award Code:**The associate Award
- l. **Extend Allowed:**Indicates if date extension is allowed
- m. **Reservation E-Cert:** Checked if the E-Certificate can be consumed against reservations.
- n. **Verify:** Checked if the E-Certificate had to be verified.
- o. **PMS Consumed:** Checked if the e-Certificate can be consumed in PMS.
- p. **Web Consumed:** Checked is e-Certificate consumption allowable on the web.
- q. **Cancel Allowed:** Checked if the e-Certificate can be canceled.
- r. **Gen. in Lieu:** Checked if the e-Certificate was generated in lieu of a canceled e-Certificate.
- s. **Short Description:** Short description for the E-Certificate.
- t. **Long Description:** Long description for the E-Certificate.

Issuing e-Certificates

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, and select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile from your search results, click the **I Want To . . .** action, and select **e-Certificate** or open the profile and click the **E-Certificate** link in Profile Presentation.
4. Click the **vertical ellipsis** and select **Issue**.
 - a. **Certificate Code:** Select a certificate from the list.
 - b. **Issue Type:** Select how the certificate was issued from the list.
 - i. Assigned
 - ii. Opt In
 - iii. Purchased
 - c. Click **Save**.

Consuming e-Certificates

Select to manually consume the e-Certificate and mark it as used. Once consumed, the guest cannot use it again.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, and select **Manage Profile**.

2. Enter search criteria and click **Search**.
3. Select the profile from your search results, click the **I Want To . . .** action, and select **e-Certificate** or open the profile and click the **E-Certificate** link in Profile Presentation.
4. Enter search criteria and click **Search**.
5. Select the e-Certificate, click the **vertical ellipsis**, and select **Consume**.
 - a. **Property**: Enter or select a property from the list.
 - b. **Location Type**: Select the location where the e-Certificate can be consumed from the list.
 - c. **Reference Number**: Enter check number for the supply or service the e-Certificate was consumed against.

 **Note:**

Enter any notes you want to attach to the e-Certificate. As soon as an e-Certificate is consumed, this note will be converted into a trace.

6. Click **Save**.

Extending e-Certificates

To extend the expiration date of the e-Certificates

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile from your search results, click the **I Want To . . .** action, and select **e-Certificate** or open the profile and click the **E-Certificate** link in Profile Presentation.
4. Enter search criteria and click **Search**.
5. Select the e-Certificate, click the **vertical ellipsis**, and select **Extend**.
 - a. **New Expiry Date**: Enter or select an expiry date.
6. Click **OK**.

Printing e-Certificates

To print a hard copy of the e-Certificate to give to the guest

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile from your search results, click the **I Want To . . .** action, and select **e-Certificate** or open the profile and click the **E-Certificate** link in Profile Presentation.
4. Enter search criteria and click **Search**
5. Select the e-Certificate, click the **vertical ellipsis**, and select **Print**.
6. Select the E-Certificate Voucher Issued report.
7. Select a report destination and click **Generate**.

Deleting e-Certificates

To delete an e-Certificate that has been issued to the profile

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria, click **Search**.
3. Select the profile from your search results, click the **I Want To . . .** action, and select **e-Certificate** or open the profile and click the **E-Certificate** link in Profile Presentation.
4. Enter search criteria and click **Search**.
5. Select the e-Certificate, click the **vertical ellipsis**, and select **Delete**.
6. Click **Delete** to confirm.

Managing Profile Subscription

When OPERA Cloud is integrated with an external CRM, Leisure or Loyalty system, the profile details are synchronized between systems based on a subscription.

The Profile Subscriptions panel displays a list of the integrated systems to which the current profile is subscribed. The following information is displayed:

1. **Database:** Name of the external system to which the profile subscribes.
2. **Subscribed Date:** Date when the profile subscribed to the external system.
3. **Profile ID:** Unique ID for this profile in OPERA Cloud and external system.
4. **Last Distributed:** Date when profile updates were last downloaded to OPERA Cloud.
5. **Last Activity:** Date of the last activity for this profile.
6. **Distribute:** Indicates if this profile is set to automatically receive profile updates from the external system.
7. **Force:** Indicated if the profile data will be changed to agree with the external system in the event of a discrepancy.

Subscribing Profile to an External System

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile in the search results, click the **I Want To . . .** action, and select **Subscription** or open the profile and click the **Subscription** link in Profile Presentation.
4. Click **Subscribe** and enter the following:
 - a. **Database:** Click to select the integrated system from the list.
5. Click **Save**.

Editing Subscription to an External System

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile in the search results, click the **I Want To . . .** action, and select **Subscription** or open the profile and click the **Subscription** link in Profile Presentation.
4. Select the external system, click the vertical ellipsis **Actions** menu, and select **Edit**.
 - a. **Distributed**: Select this check box to have profile updated in the external database automatically distributed to the OPERA Cloud profile.
 - b. **Forced**: Select for force updates from external system should the data in the two systems not match.
5. Click **Save**.

Deleting Subscription to an External System

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile in the search results, click the **I Want To . . .** action, and select **Subscription** or open the profile and click the **Subscription** link in Profile Presentation.
4. Select the external system, click the vertical ellipsis **Actions** menu, and select **Delete**.
5. Click **Delete** to confirm.

Re-Subscribing All

To re-subscribe the profile to all of the external systems that are listed, do the following:

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, and select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile in the search results, click the **I Want To . . .** action, and select **Subscription** or open the profile and click the **Subscription** link in Profile Presentation.
4. Click the click the vertical ellipsis **Actions** menu, and select **Re-subscribe All**.

Managing Profile Memberships

Prerequisites for Profile Memberships

You can manage membership details for guests or contacts (available when the Contact OPERA Control is active). Multiple membership details can be added to a profile and selected for [reservations](#).

With an Oracle Hospitality OPERA Cloud Service, Loyalty subscription you can also enroll guests, view and manage membership transactions and awards, view points totals and other details. For more information, see [Managing Profile Membership \(Loyalty Cloud Service\)](#)

**Note:**

To view inactive memberships, click the vertical ellipsis **Actions** menu and select **Show Inactive**.

Adding a Profile Membership

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, and then select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile in the search results, click **I Want To...** and then select **Membership** or click the **Membership** link in Profile Presentation.
4. Click **New** and complete the following fields:
 - a. **Type**. Select the membership type from the list.
 - b. **Card Number**. Enter the membership ID number; the number is validated when the membership type is configured for card number validation. A number is auto-generated and populated to **Card Number** when the membership type is configured for auto-generation. For more information, see [Configuring Membership Type Card Number Details](#)
 - c. **Name on Card**. By default, the profile name appears here. You may edit this information if the membership name is different.
 - d. **Level**. Select a membership level from the list.
 - e. **Enrollment Code**. Select an enrollment code from the list. The enrollment code might indicate, for example, how the guest enrolled in the program. For more information, see [Configuring Membership Enrollment Codes](#)
 - f. **Preferred Card**: Select check box if the membership program is the guest's Preferred Card. A profile can only have one preferred card. When creating a new membership, the first membership associated with a profile will always default as the preferred card. When adding additional memberships to the same profile, or editing existing memberships, you have the option to select the preferred card for that membership. (Available when the Preferred Card OPERA Control is active).
 - g. **Member Since**. Enter or select the date when the guest became a member of this program (that is, the join date).
 - h. **Expiration**. Enter or select a date for membership expiry. The date may default or require a specific format (month/year) based on **Expiry Period** specified in [Configuring Membership Type Point Calculation and Tier Management](#)
 - i. **Sequence**. Enter a sequence number that determines where this membership is listed on the Profile Membership Lists screen. If a sequence number is not entered, the membership is listed alphabetically following any memberships that are assigned a sequence number.

- a. **Type:** Select the membership type from list
- b. **Card Number:** Enter the membership ID number; the number is validated when the membership type is configured for card number validation. A number is auto-generated and populated to **Card Number** when the membership type is configured for auto-generation. For more information, see [Configuring Membership Type Card Number Details](#).
- c. **Name on Card:** By default, the profile name appears here. You may edit this information if the membership name is different.
- d. **Level:** Select a membership level from the list.
- e. **Preferred Card:** Select check box if the membership program is the guest's Preferred Card. A profile can only have one preferred card. When creating a new membership, the first membership associated with a profile will always default as the preferred card. When adding additional memberships to the same profile, or editing existing memberships, you have the option to select the preferred card for that membership. (Available when the Preferred Card OPERA Control is active).
- f. **Benefits:** Select a benefit from the list, which can affect members tier (level). For more information, see [Configuring Membership Type Benefits](#)
- g. **Enrollment Code:** Select an enrollment code from the list to indicate how the guest enrolled in the program. For more information, see [Configuring Membership Enrollment Codes](#).
- h. **Member Since:** Enter or select the date when the guest became a member of this program (the join date).
- i. **Expiration:** Enter or select a date for membership expiry. The date may default or require a specific format (month/year) based on **Expiry Period** specified in [Membership Type Point Calculation and Tier Management Rules](#).
- j. **Member Status:** Select a value from the list to define the current status of the membership. For more information, see [Configuring Membership Status Codes](#).
- k. **Tier Administration:** Select an option from the list to define the level of participation in the tier management portion of the program:
 - i. **Do Not Upgrade:** Do not upgrade this membership. The membership may be downgraded.
 - ii. **Tier Administration Disabled:** Do not manage upgrade, downgrade, or renewal for this membership. For the typical guest, this would be left blank
- l. **Downgrade:** Select an option from the list to define how downgrading will be handled. Leave un-selected for standard upgrade/downgrade processing:
 - i. **Do not Downgrade this time:** Do not downgrade this membership when the next downgrade process runs. When the downgrade process runs, the membership will be automatically set to **Grace**.
 - ii. **Never Downgrade:** Exclude membership from the downgrade process.
 - iii. **Grace:** This membership will not be downgraded when the downgrade process runs. The downgrade report will identify Grace memberships. If you choose, you may at that point take the membership off grace, which will result in the member being downgraded, or you may leave the member on grace, which will result in no downgrade. For more information, see [Tier Management](#)

- m. **Sequence:** Enter a sequence number which will determine where this membership is listed on the Profile Membership Lists screen. If a sequence number is not entered, the membership is listed alphabetically following any memberships that are assigned a sequence number.
 - n. **Player Ranking:** This is the player ranking of the casino player and indicates the casino membership level. This read-only field appears once a value is defined for the Default PTS Membership Type OPERA Control. (Available with an Oracle Hospitality OPERA Comp Accounting Cloud Service or Oracle Hospitality OPERA Cloud Service Casino and Gaming Management subscription)
 - o. **Comments:** Enter any comments as needed.
5. Click **Save**.

Viewing Membership Information

To view a summary of the guest membership details.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the result, then click **I Want To...** and then select **Membership** or open the profile and click the **Membership** link in Profile Presentation.
4. Select the membership, then click the vertical ellipsis **Actions** menu and select **View Details**.
 - a. Click **Member Info**.
 - b. Click **Back to Transactions**.

Viewing Membership Tier Projections

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the result, then click **I Want To...** and then select **Membership** or open the profile and click the **Membership** link in Profile Presentation.
4. Select the membership, then click the vertical ellipsis **Actions** menu and select **Membership Tier Projections**.
5. Click **Close**.

Viewing and Extending Points to Expire

To view a summary of award points issued, by expiration date, based on Expiry Period and Expiry Date. You can extend membership points due to expire, based on the Grace Period (years). For more information, see [Membership Type Point Calculation and Tier Management Rules](#).

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the result, then click **I Want To...** and then select **Membership** or open the profile and click the **Membership** link in Profile Presentation.

4. Select the membership, then click the vertical ellipsis **Actions** menu and select **View Details**.
5. Click **Points to Expire**.
 - a. **Expiration date**: The date the points are due to expire.
 - b. **Total Expire**: The total number of points that will expire on the expiration date.
 - c. **Expire by Date**: The number of points that are eligible for extension. Points previously extended are not eligible.
6. To extend points, select a points record, then click the vertical ellipsis **Actions** menu and select **Extend Points**.

Managing Membership Awards

Issuing Other-Type Awards

To issue an award of type Other in exchange for award points.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the result, then click **I Want To...** and then select **Membership** or open the profile and click the **Membership** link in Profile Presentation.
4. Select the membership, then click the vertical ellipsis **Actions** menu and select **View Details**.
5. Click **Award List**.
 - a. Click **Issue**.
 - i. Select **Other** for **Award Based On** and enter additional search criteria, then click **Search**.
 - ii. Select the Other award in the search result, then click the vertical ellipsis **Actions** menu and select **Issue**.
 - iii. Complete the member information and select **Issue**.

Viewing and Cancelling Awards

To view a list of awards issued via the reservation, redeem awards or manually.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the result, then click **I Want To...** and then select **Membership** or open the profile and click the **Membership** link in Profile Presentation.
4. Select the membership, then click the vertical ellipsis **Actions** menu and select **View Details**.
5. Click **Award List**.
6. Select the membership, then click the vertical ellipsis **Actions** menu and select **View Details**.
7. To cancel an award, select the award then click the vertical ellipsis **Actions** menu and select **Cancel Award** and complete the following:

- a. **Issued Award ID:** Enter the Award ID.
- b. **Reservation Confirmation Number:** Enter the reservation the award was issued to. For Reservation type awards (Rate, Upgrade, Package) you should cancel the associated reservation, which will automatically cancel the award.
- c. **Actual Cancel Points:** Displays the points charged to the member, determined by the cancel penalty specified on the [award](#).
- d. Click **Cancel Award**.

Managing Membership Transactions

Viewing Membership Transactions

Membership Transaction displays the membership points transactions associated with the selected guest membership. Membership points transactions are the events that result in points being awarded or modified for the guest.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the result, then click **I Want To...** and then select **Membership** or open the profile and click the **Membership** link in Profile Presentation.
4. Select the membership, then click the vertical ellipsis **Actions** menu and select **View Details**.
5. Enter search criteria, then click **Search**.
6. Select a transaction in the search result, then click the vertical ellipsis **Actions** menu and select **View Details**.
 - a. Select the **Membership Information** tab to display profile membership and [stay record](#).
 - i. **Name on Card:** The member's name associated to this membership transaction.
 - ii. **Membership Card Number:** The membership number associated to this membership transaction.
 - iii. **Membership Type:** The membership type associated to this membership transaction.
 - iv. **Membership Level:** The membership level associated to this membership transaction.
 - v. **Joined Date:** the date The date the guest joined the membership program.
 - vi. **Property:** The property associated to the membership transaction.
 - vii. **Record Type:** The type of membership transaction (Stay, Stay/Adjustment, Enrollment, Other).
 - viii. **CRS booking number:** The central reservation number, if applicable.
 - ix. **PMS Reservation number:** The reservation confirmation number associated to the stay/reservation.
 - x. **Arrival Date:** The reservation arrival date.
 - xi. **Departure Date:** The reservation departure date.
 - xii. **Transaction Date:** The membership transaction creation date.

- xiii. **Currency:** The property currency of the reservation.
 - xiv. **Nights:** The reservation nights.
 - xv. **Rate Promotion:** The reservation promotion code.
 - xvi. **Point Cost:** The cost of points applied to the [membership transaction](#).
 - xvii. **Points Credit Date:** The date points were applied to the membership transaction.
 - xviii. **Average Rate Amount:** The average rate of the reservation.
 - xix. Click + to expand **Notes** and display any notes that were entered while creating an adjustment (see [Creating Membership Transactions](#))
 - xx. Click + to expand **Points Rejection Reason** and display the points rejection reasons for the transaction. This panel shows the rules used to generate points and the reason points were not awarded (validation failure reasons). For example, "Membership level requirements not met." These reasons are hard coded and cannot be changed.
7. Select the **Award** tab to display the award points issued for the current membership transaction. This panel displays the number of points (Base, Bonus and Total) issued as well as the validated rules used to generate award points, the type of points, number of points, cost per point, rule code for the award points, billing group the points belong to.
 8. Select the **Tier Points** tab to displays the tier points issued for the current membership transaction. This panel displays the number of points (Base, Bonus for Stay, Night and Revenue points)) issued as well as the validated rules used to generate tier points, the type of points, number of points, cost per point, rule code for the award points, billing group the points belong to.
 9. Select the **Revenue** tab to display revenues by [revenue type](#) associated with the current points transaction. This panel displays the date the revenue was recognized, the revenue type, PMS revenue and central revenue. An "X" under the **Qualified** column indicates if this revenue type qualified for points credit.
 10. Select the **Rates** tab to display the rate information for the current points transaction. This panel displays the dates of the stay, the rate code, the PMS rate amount, the central rate amount, the central currency and the market code associated with the membership transaction.
 11. Click **Back to Transactions**.

Creating Membership Transactions

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the result, then click **I Want To...** and then select **Membership** or open the profile and click the **Membership** link in Profile Presentation.
4. Select the membership, then click the vertical ellipsis **Actions** menu and select **View Details**.
5. Click **New Transaction** and complete the following:
 - a. Membership Information
 - i. **Property:** Enter or select the property for the membership transaction.

- ii. **Record Type:** Select a type from the list (Stay/Others).
 - iii. **CRS Booking Number:** Enter the central reservation booking number.
 - iv. **PMS Booking Number:** Enter the reservation confirmation number.
 - v. **Arrival date:** Enter or select the arrival date of the reservation.
 - vi. **Departure Date:** Enter or select the departure date of the reservation.
 - vii. **Rate PromotionS:** Select the promotion code for the reservation.
- b. Award
- i. **Base Points:** Enter the base points to be adjusted, if applicable.
 - ii. **Bonus Points:** Enter the bonus points to be adjusted, if applicable.
 - iii. **Miscellaneous Points:** Enter the miscellaneous points to be adjusted, if applicable.
 - iv. **Expiration Date:** Enter or select a date if points expire, if applicable.
 - v. **Total Points:** Displays a total of Base, Bonus and Miscellaneous points adjusted.
- c. Tier Points
- i. **Base Stay:** Enter the base stay points to be adjusted, if applicable.
 - ii. **Bonus Stay:** Enter the bonus stay points to be adjusted, if applicable.
 - iii. **Base Nights:** Enter the base night points to be adjusted, if applicable.
 - iv. **Bonus Nights:** Enter the bonus night points to be adjusted, if applicable.
 - v. **Base Revenue:** Enter the revenue points to be adjusted, if applicable.
 - vi. **Bonus Revenue:** Enter the bonus revenue points to be adjusted, if applicable.
- d. Notes
- i. Enter the details regarding the membership transaction.
- e. Click **Save**.

Managing Profile Negotiated Rates

Prerequisites for Managing Profile Negotiated Rates

Any profile type can have negotiated rates associated with it, however negotiated rates are typically associated with companies, travel agents or booking sources with an ongoing relationship or agreement with your property. When making a reservation via the [Look to Book Sales](#) screen, reservation agents are presented with the negotiated rate(s) associated with the agent, company or other profile types linked to the reservation; ensuring the correct, contracted rate is quoted to the caller. In multi-property operations negotiated rates selected at one property may be distributed to other properties.

Note:

Up to 150 negotiated rates can be selected per profile per property.

Adding a Profile Negotiated Rate

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile in the search results, click **I Want to. . .** and the click **Negotiated Rates** or click the Negotiated Rates link in the Profile Presentation.
4. Click **New** and enter the following details:
 - a. **Property**: Enter or select a property.
 - b. **Rate Code**: Select a Rate Code from the list
 - c. **Start Date**: Enter or select the start date when this rate code can be selected for reservations linked to this profile..
 - d. **End Date**: (Optional) Enter or select the last date when this rate code can be selected for reservations linked to this profile.
 - e. **Sequence**: Enter a number that determines the display position of this rate code on the Look to Book sales screen.
 - f. **Allow Changes from External System**: Select check box to indicate changes are allowed to the Profile Negotiate Rate. (Available when integrated with a partner solution).
 - i. **External System**: Select an external systems for which the profile has a subscription. Negotiated Rates changes will be accepted from this external system.

 **Note:**

When integrated through OXI, this functionality relates the Interface Control NEGRATES EXT CRS OVER. For more information, see [Profiles Parameters and Settings](#).

5. Click **Save**.

Editing a Profile Negotiated Rate

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile in the search results, click **I Want to. . .** and the click **Negotiated Rates** or click the Negotiated Rates link in the Profile Presentation.
4. Enter search criteria and click **Search**.
5. Select the negotiated rate then click the **vertical ellipsis** and select **Edit**.
6. Update the negotiated rate details.
7. Click **Save**.

Deleting a Profile Negotiated Rate

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile in the search results, click **I Want to. . .** and then click **Negotiated Rates** or click the Negotiated Rates link in the Profile Presentation.
4. Enter search criteria and click **Search**.
5. Select the negotiated rate then click the **vertical ellipsis** and select **Delete**.
6. Click **Delete** to confirm.

Distributing a Profile Negotiated Rate to other Properties

When the OPERA Multi-property Cross Reservation Cloud Service is active, you can distribute negotiated rates to other properties from a [Hub](#) location.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Click **I Want to. . .** next to the record in the search result.
4. Click the Negotiated Rates details link to open the Negotiated Rates panel and view the negotiated rates for the profile.
5. Enter search criteria and click **Search**.
6. Click the **vertical ellipsis** and select **Distribute Negotiated Rate**.
7. Choose one or more properties from the list of values and click **Select**.

Managing Profile Default Routing Instructions

[Prerequisites for Managing Profile Routing](#)

Routing instructions transfer charges to a billing window for the associated profile (a company, agent, source, or contact profile). This transfer happens automatically.

For example, a company books a conference at your property and wants to put employee room and tax charges on its account. You create the company's profile and routing instructions and assign room and tax transaction codes to the routing instructions. As each employee makes a room reservation, you create the employee guest profile, and the routing instructions will be applied when the company profile is attached to the reservation. Routing instructions will be applied to the reservation as soon as the appropriate company, agent, source, or contact profile is attached to the reservation, as long as the Auto Populate Routing check box is selected.

You can associate a company, agent, source, or contact profile with a reservation at the time of booking using the Look To Book sales screen [Look To Book sales screen](#) or later using [Linked Profiles](#).

Adding Default Profile Routing

1. From the **OPERA Cloud** menu, select **Client Relations**, **Profiles**, and then **Manage Profiles**.

2. Enter search criteria, click **Search**.
3. Select the profile in the search result, click **I Want To...** or open the profile and click the **Financials** link in Profile Presentation.
4. Click **New** and then select a property.
 - a. **Property**: Enter or select a property.
 - b. On the Search and Select Routing Instructions screen, search for routing codes and/or transaction codes.
 - c. Select one or more Routing Codes or Transaction Codes from the **Available** list and then click to move to the **Selected** panel.
 - d. **Auto Populate Routing**: Select check box to attach the routing instructions to any new reservations.
 - e. **Payment Method**: Select a payment method from the list.
 - f. **Tax Type**: Select a tax type from the list. (Available when the Tax Types OPERA Control is active).
 - g. Click **Save**.

Editing Default Routing

1. From the **OPERA Cloud** menu, select **Client Relations** , **Profiles** , and then **Manage Profiles**.
2. Enter search criteria, click **Search**.
3. Select the profile in the search result, click **I Want To...** or open the profile and click the **Financials** link in Profile Presentation.
 - a. Enter search criteria and click **Search**.
 - b. Select the routing instruction, then click vertical ellipsis **Actions** menu and select **Edit**.
 - c. Update routing.
 - d. Click **Save**.

Deleting Default Routing

1. From the **OPERA Cloud** menu, select **Client Relations** , **Profiles** , and then **Manage Profiles**.
2. Enter search criteria, click **Search**.
3. Select the profile in the search result, click **I Want To...** or open the profile and click the **Financials** link in Profile Presentation.
 - a. Enter search criteria and click **Search**.
 - b. Select the routing instruction, then click vertical ellipsis **Actions** menu and select **Delete**.
 - c. Click **Delete** to confirm.

Managing Profile Relationships

[Prerequisites for Manage Profile Relationships](#)

Relationships define the associations between individuals, companies, travel agents, sources and contacts. Relationship types can be configured to describe the associations between and among the various profile types (e.g., guest, contact, company, travel agent, source, and group) that may have relationships you want to recognize when working in OPERA Cloud. For more information, see [Relationship Types](#).

Relationships can be used to facilitate the distribution of negotiated rates and for more meaningful statistical reporting. For example, you might want to share negotiated rates created for a parent company with all the subsidiaries companies. Or you might want to report on total revenues associated with all subsidiaries of a company rather than on each subsidiary separately.

Adding a Relationship

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria, click **Search**.
3. Select the profile in the search result, click **I Want To...**, then click **Relationships** or open the profile and click the **Relationships** link in Profile Presentation.

 **Note:**

You might need to select **Show All** to expand all options.

4. Click **New** and complete the following:
 - a. **Target Profile Type:** Select a profile type from the list.
 - b. **Type of Relationship:** Select the type of relationship from the list.
 - c. **Profile:** Search and select a profile to link.
 - i. Enter search criteria and click **Search**.
 - ii. Select a profile in the result and click **Select**.
 - d. **Primary:** Check to mark this as the primary relationship
5. Click **Save**.

Editing a Relationship

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria, click **Search**.
3. Select the profile in the search result, click **I Want To...**, then click **Relationships** or open the profile and click the **Relationships** link in Profile Presentation.
4. Select the relationship, click the vertical ellipsis **Actions** menu, then select **Edit**.
5. Update details
6. Click **Save**.

Deleting a Relationship

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.

2. Enter search criteria, click **Search**.
3. Select the profile in the search result, click **I Want To...**, then click **Relationships** or open the profile and click the **Relationships** link in Profile Presentation.
4. Select the relationship, click the vertical ellipsis **Actions** menu, click **Delete**.
5. Click **Delete** to confirm.

Viewing Relationship Hierarchy

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria, click **Search**
3. Select the profile in the search result, click **I Want To...**, then click **Relationships** or open the profile and click the **Relationships** link in Profile Presentation.
4. Click the vertical ellipsis **Actions** menu, click **View Hierarchy**.
5. Click **View Details** to toggle back to list view.

Managing Profile Identification and Personal Details

Prerequisites for Managing Profile Identification and Personal Details

Multiple identification records can be added to a guest/contact profile. You can either manually enter the details on the profile or scan the guest's identification to auto-populate the details. For more information, see [Desktop ID Document Scanning](#) for more information.

Personal details recorded on the profile include Birth Date, Birth Place, Birth Country, Nationality, and Gender. Once saved, many of these values are masked and require the **View (unmasked) Identification Details** task to view the details.

You can access the Identification panel from the following locations:

1. Select **Client Relations**, selecting **Profile**, selecting **Manage Profile**, searching for a profile, selecting **I Want To...**, and then selecting **Identification**.
2. Select **Front Desk**, selecting **Arrivals**, selecting **Search**, selecting **Check-in**, and then selecting the **Identification** step. For more information, see [Checking in Reservations](#) for more details.

Adding Identification and Personal Details

1. In the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profiles**.
2. Enter search criteria and click **Search**.
3. In the search results, click **I Want To...** and select **Identifications** or open the profile and click **Identifications** in the Profile Presentation.
4. Click **New** to add new Identification details. Complete the following information:
 - a. **ID Type**: Select an identification type for the ID.
 - b. **ID Number**: Enter the number for the ID.
 - c. **Issued Place**: Enter the place where the ID was issued.
 - d. **Issued Country**: Select a Country.

- e. **Issued Date:** Enter the date on which the ID was issued.
 - f. **Expiry Date:** Enter a date by which the ID expires.
 - g. **Primary:** Select to mark this as the primary ID record.
5. Click **Save**.
6. Click **Edit** to edit the Personal Details:
 - a. **Birth Date:** Enter a date of birth.
 - b. **Birth Place:** Enter a place of birth.
 - c. **Birth Country:** Select a country of birth from the list.
 - d. **Nationality:** Select a nationality from the list.
 - e. **Gender:** Select a gender from the list.
7. Click **Save**.

Viewing Identification and Personal Details

Identification fields are masked. You must have the **View (unmasked) Identification Details** task assigned to your role(s) to view unmasked values.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profiles**.
2. Enter search criteria and click **Search**.
3. In the search results, click **I Want To. . .** and then select **Identifications** or open the profile and click **Identifications** in the Profile Presentation.
4. Click **Show Masked Information** to unmask the values. This activity is tracked in the [Changes Log](#).

Editing Identification and Personal Details

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profiles**.
2. Enter search criteria and click **Search**.
3. In the search results, click **I Want To. . .** and then select **Identifications** or open the profile and click **Identifications** in the Profile Presentation.
4. Select the identification detail to update, click the vertical ellipsis **Actions** menu, and then select **Edit**.
5. Update the details.
6. Click **Save**.
7. To update the Personal Details, select **Edit**.
8. Update the details.
9. Click **Save**.

Deleting Identification

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profiles**.
2. Enter search criteria and click **Search**.

3. In the search results, click **I Want To** and then select **Identifications** or open the profile and click **Identifications** in the Profile Presentation.
4. Select the identification detail to delete, click the vertical ellipsis **Actions** menu, and then select **Delete**.
5. Click **Delete** to confirm.

Using the Desktop ID Document Scanner

Prerequisites for Desktop ID Scanning

ID Scanner Operational Conditions

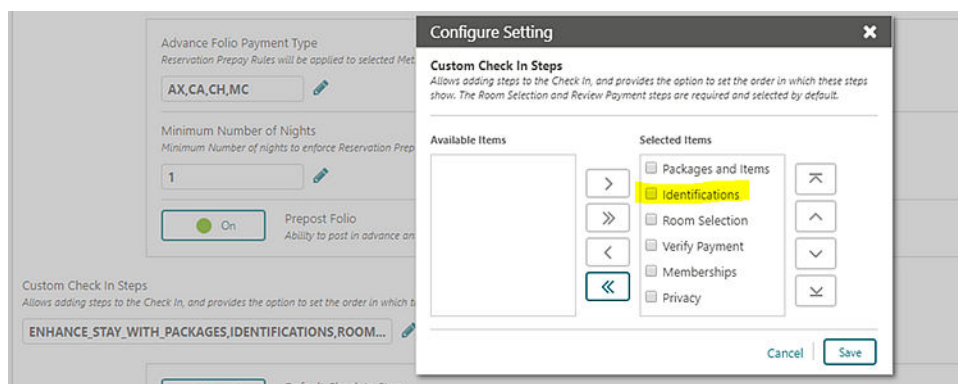

- Access OPERA Cloud from a workstation where the scanner is connected and the scanning hardware and drivers are installed.
- Your location is a [property](#). Identification document scanning is not available from a hub location.
- Identification document scanning is available for Guest and Contact profile types.

Scanning ID Documents During Check In

Note:

The Identifications panel must be selected for the **Custom Check In Step** OPERA Control. For more information, see [OPERA Controls — Front Desk](#)

1. Commence the reservation check in. See [Checking in Reservations](#).
2. Click the **Identifications** link in the status bar.
3. Place a valid ID Document in the scanner.
4. Click **Scan ID Document** to initiate the scanner.
5. A comparison page displays two sections: **Existing Profile Details** and **Compare and Edit Scan Results**. The Existing Profile Details section on the left side displays the existing details for the profile and is read only. The Compare and Edit Scan Results section on the right side displays the details retrieved from the scanned document. You can compare the details and edit scan results if needed.
6. Identification document scanning is available for Guest and Contact profile types.

7. Values in checked fields are updated in the profile when saved.
 - a. If the scanned value is different than the existing profile value, the check box will be checked by default. To draw attention to this value point, a warning icon appears. If you do not want to override the existing value for the specific field, you can manually uncheck the check box next to the field.
 - b. If the scanned value is populated, but the same field in the profile is blank, the check box will be checked by default and the scanned value will be saved. The warning icon appears.
 - c. You can also manually select the check box and update the value in the field, and the update will be saved to the profile details.
8. The **Address** section in the **Existing Profile Details** panel has an **Address Type** to select an address type to display the existing address details.
 - a. The Address Type is populated with the profile primary address by default. You can update the Address Type by selecting a different value from the list.
 - b. The **Add as New** switch allows you to add the scanned address to the existing list of addresses on the profile. When active, the address from the scan does not replace the address that appears in the Existing Profile, instead the address is added into the profile as new.
 - c. To update the existing address with new details, switch the **Add as New** switch Off (default).
 - d. The **Make Primary** switch allows you to set the address from the scanned details as primary for the profile (it does not matter if this is a new address or an address that will override an existing address showing in the profile). This switch is Off by default.
9. Review and click **Save** to update the profile.
 - a. The scanned image of the identification document is saved as a profile attachments when the Stored ID Document Image Type **OPERA Control** is set to Full Image or Face Image.

Scanning ID Document Directly from Identification panel

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profiles**.
2. Enter search criteria and click **Search**.
3. In the search results, click **I Want To. . .** and select **Identifications** or open the profile and click **Identifications** in the Profile Presentation.
4. Place a valid ID Document in the scanner.
5. Click **Scan ID Document** to initiate the scanner
6. A comparison page displays two sections: **Existing Profile Details** and **Compare and Edit Scan Results**. The Existing Profile Details section on the left side displays the existing details for the profile and is read only. The Compare and Edit Scan Results section on the right side displays the details retrieved from the scanned document. You can compare the details and edit scan results if needed.
7. Select the values to update in the profile.
8. Click **Save**.

- a. The scanned image of the identification document is saved as a profile attachments when the Stored ID Document Image Type [OPERA Control](#) is set to Full Image or Face Image.

Using the Mobile ID Document Scanner

Prerequisites for Mobile ID Scanning

ID Scanner Operational Conditions

- Access OPERA Cloud from a tablet with camera available.
- Your location is a [property](#). Identification document scanning is not available from a hub location.
- Identification document scanning is available for Guest and Contact profile types.

Scanning ID Documents During Check In

The Identifications panel must be selected for the **Custom Check In Step** [OPERA Control](#).

1. Commence the reservation check in. For more information, see [Checking in Reservations](#)
2. Click the **Identifications** link in the status bar.
3. Place a valid ID Document in the scanner.
4. Click **Scan ID Document** to initiate the scanner.
5. Click **Choose Image** to display the device camera options and follow the listed tips for taking a good document photo when capturing the image.
6. The captured image is displayed. Review the image to confirm it meets the good document photo criteria. To retake the image, click **Choose Image** again. The new captured image replaces the existing image in the screen.
7. When satisfied with the image, click **Process**. The encrypted image is sent to the ID scanning partner for processing, and the scan results return the guest identification data to the profile comparison screen.
8. A comparison page displays two sections: **Existing Profile Details** and **Compare and Edit Scan Results**. The Existing Profile Details section on the left side displays the existing details for the profile and is read only. The Compare and Edit Scan Results section on the right side displays the details retrieved from the scanned document. You can compare the details and edit scan results if needed.

9. Values in checked fields are updated in the profile when saved.
 - a. If the scanned value is different than the existing profile value, the check box will be checked by default. To draw attention to this value point, a warning icon appears. If you do not want to override the existing value for the specific field, you can manually uncheck the check box next to the field.
 - b. If the scanned value is populated, but the same field in the profile is blank, the check box will be checked by default and the scanned value will be saved. The warning icon appears.
 - c. You can also manually select the check box and update the value in the field, and the update will be saved to the profile details.
10. The **Address** section in the **Existing Profile Details** panel has an **Address Type** to select an address type to display the existing address details
 - a. The Address Type is populated with the profile primary address by default. You can update the Address Type by selecting a different value from the list.
 - b. The **Add as New** switch allows you to add the scanned address to the existing list of addresses on the profile. When active, the address from the scan does not replace the address that appears in the Existing Profile, instead the address is added into the profile as new.
 - c. To update the existing address with new details, switch the **Add as New** switch Off (default).
 - d. The **Make Primary** switch allows you to set the address from the scanned details as primary for the profile (it does not matter if this is a new address or an address that will override an existing address showing in the profile). This switch is Off by default.
11. Review and click **Save** to update the profile.
 - a. The scanned image of the identification document is saved as a profile attachments when the Stored ID Document Image Type **OPERA Control** is set to Full Image or Face Image.

Scanning ID Document Directly from Profile Identification Panel

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profiles**.
2. Enter search criteria and click **Search**.
3. In the search results, click **I Want To...** and select **Identifications** or open the profile and click **Identifications** in the Profile Presentation.
4. Place a valid ID Document in the scanner.
5. Click **Scan ID Document** to initiate the scanner.
6. Click **Choose Image** to display the device camera options and follow the listed tips for taking a good document photo when capturing the image.
7. The captured image is displayed. Review the image to confirm it meets the good document photo criteria. To retake the image, click **Choose Image** again. The new captured image replaces the existing image in the screen.
8. When satisfied with the image, click **Process**. The encrypted image is sent to the ID scanning partner for processing, and the scan results return the guest identification data to the profile comparison screen.
9. A comparison page displays two sections: **Existing Profile Details** and **Compare and Edit Scan Results**. The Existing Profile Details section on the left side displays the existing details for the profile and is read only. The Compare and Edit Scan Results section on the right side displays the details retrieved from the scanned document. You can compare the details and edit scan results if needed.
10. Select the values to update in the profile.
11. Click **Save**.
 - a. The scanned image of the identification document is saved as a profile attachments when the Stored ID Document Image Type **OPERA Control** is set to Full Image or Face Image.

Managing Profile Preferences

You can add preferences to a guest profile to personalize or enhance your guest services.

Adding Profile Preferences

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. Enter search criteria, click **Search**.
3. Select the profile in the result, click **I Want To...** and then select **Preferences** or open the profile and click the **Preferences** link in Profile Presentation.
4. Click **New**.
 - a. Click the preference group **[+]** to expand the list.
 - b. Select one or preferences in the **Available** column, click **>** to move selection to the **Selected** panel.
5. Click **Save**.

Deleting Profile Preferences

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. Enter search criteria, click **Search**.
3. Select the profile in the result, click **I Want To...** and then select **Preferences** or open the profile and click the **Preferences** link in Profile Presentation.
4. Enter search criteria and click **Search**.
5. Select the preference, click the vertical ellipsis **Actions** menu, and then click **Delete**.
6. Click **Delete** to confirm.

Managing Profile Communication

You can add communication types to a profile, such as additional addresses, phone numbers, fax numbers, and email addresses.

Select one entry of each communication type as the primary; the primary address is used on guest and company stationery such as folios and AR invoices.

When the [Address Validation OPERA Control](#) is active, OPERA Cloud communicates with an external address validation solution to verify the address details when saved. If no verified match is found, you are presented with a list of potential matching addresses to choose from (maximum of 25 matches). The Address Validation Country Codes OPERA Control determines the countries, and the Address Validation Profile Types OPERA Control determines the profile types for which address validation is performed. The Validated check box indicates the address is validated.

Note:

In Great Britain you can look up an address by Postal Code, enter the Country and the Postal Code in the address details, then click Save to view a list of potential addresses. Click **Cancel** to retain the original address details entered.

Adding Profile Communications

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. In the search results click **I Want to...**, select **Communications** or open the profile and click **Communications** in Profile Presentation.
4. To add Phone, Email or Fax, click **Edit**.
 - a. Enter a number of rows to create and click **Add Rows**.
 - b. Complete the following
 - c. **Primary**: Click to mark this entry as the primary communication for this communication type.
 - d. **Type**: Select the communication type from the list.

- e. **Value:** Enter the communication details, such as phone number or email address.
 - f. **Sequence:** Enter a sequence value.
5. Click **Save**.
6. To add Address click **New** and enter the following details:
 - a. **Address Type:** Select the address type from the list.
 - b. **Address1:** Enter the street address.
 - c. **Address2:** Enter the street address.
 - d. **Address3:** Enter the street address.
 - e. **Address4:** Enter the street address.
 - f. **City:** Enter the city (suburb).
 - g. **Country:** Select the country from the list.
 - h. **State:** Select the state from the list.
 - i. **Postal Code:** Enter the postal (zip) code.
 - j. **Postal Code Ext:** Enter the postal code extension.
 - k. **Language:** Select a language for the address
 - l. **Primary:** Select the mark the address as the primary address.
 - m. **Validated:** Select the checkbox to bypass external validation (Available when the Bypass Address validation task is assigned to your role). When displayed unchecked the address is not validated. When checked the address is validated or bypassed.
7. Click **Save**.

Updating Profile Communications

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profile**
2. Enter search criteria and click **Search**.
3. In the search results click **I Want to...** , select **Communications** or open the profile and click **Communications** in Profile Presentation.
4. To update click **Edit**.
 - a. Update details.
 - b. To re-validate an address change, uncheck the **Validated** check box.
5. Click **Save**.

Deleting Profile Communications

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. In the search results click **I Want to. . .** , select **Communications** or open the profile and click **Communications** in Profile Presentation.
4. To delete Phone, Email or Fax, click **Edit**.

- a. Select the entry and click the vertical ellipsis **Actions** menu, and click **Delete**.
 - b. Click **Delete** to confirm.
5. To delete an address:
 - a. Select the **Address** tab.
 - b. Click **Delete**.
 - c. Click **Delete** to confirm.
6. Click **Save**.

Managing Profile Correspondence and Privacy Options

Prerequisites for Profile Correspondence and Privacy Options

When the Profile Mailing Privacy OPERA Control is active you can specify whether guests or contacts want to opt-in to receive promotional information, mailings, and so on. These privacy flags are referenced by partner solutions integrated with OPERA Cloud or in the setup of [data exports](#). For new profiles the opt-in defaults are based on the Privacy Defaults [OPERA Control](#) .

Editing Privacy Options

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria, click **Search**.
3. Select the profile in the search result, click **I Want To. . .**, then **Correspondence** or open the profile and click the **Correspondence** link in Profile Presentation.
4. Select the **Privacy** tab.
5. Select **Edit** and update the following:
 - a. **Salutation**: Update the guests salutation (letter greeting).
 - b. **Envelope Greeting**: Enter or update the envelope addressee.
 - c. **Primary Email**: Enter or update the primary e-mail.
 - d. **Include in Promotional Mailings/Email**: Select to indicate the guest wishes to be included on your property's mailing list.
 - e. **Allow contact via phone**: Select to indicate the guest wishes to receive phone calls from your property.
 - f. **Allow contact via SMS / Text Message**: Select to indicate the guest wishes to receive SMS from your property.
 - g. **Send information from Third Parties**: Select to indicate the guest wishes to receive information from third-parties.
 - h. **Participate in Market Research**: Select to indicate the guest wishes to participate in market research.
 - i. **Allow Contact via Email**: Select to indicate the guest wishes to receive marketing emails from your property.
6. Click **Save**.

Editing Mailing Options

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria, click **Search**.
3. Select the profile in the search result, click **I Want To. . .**, then **Correspondence** or open the profile and click the **Correspondence** link in Profile Presentation.
4. Select the **Mailings** tab.
5. Select a property and click **Search**.

 **Note:**

If no property is entered or selected the options are set globally.

6. Click **Edit** and update the following:
 - a. **Business Segments:** Select from list of segments. For more information, see [Configuring Business Segments](#).
 - b. **Mailing Action:** Select from a list of mailing lists. For more information, see [Configuring Mailing Action Codes](#).
7. Click **Save**.

Viewing Profile Future and Past Stays

Future and Past Stays displays a list of the reservations linked to the profile. In multi-property operations you can view reservations at the various properties associated to your current [hub location\(s\)](#).

The reservation details include the following:

- Property Code
- Confirmation number
- Arrival Date, Nights, Departure Date
- Room, Room Type, Rate Code and Amount
- Reservation Status
- Profiles linked to the reservation
- **Primary** check box to indicate if profile is the primary link to reservation (checked) or profile is linked as an accompanying guest. (Available when the Accompanying Guest OPERA Control active).

Future Reservation includes reservations with status of Prospect (non-deduct), Reserved (deduct), Cancelled, Waitlist, where Arrival >= Business Date.

Past Reservations includes reservation with status of Checked In, Checked Out, No Show or (Departure < Business Date and Status = Cancelled).

 **Note:**

The **Future & Past Stays** details link count displays a maximum of (26). The **Future & Past Stays** panel displays a maximum of 50 reservations.

Viewing Future & Past Stays

From a property location you see only view the reservations in that property.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles** and then **Manage Profile**.
2. Enter search criteria, click **Search**.
3. Select the profile in the search result, click **I Want to . . .**, **Future & Past Stays** or click the **Future & Past Stays** link in Profile Presentation.
 - a. The panel displays list of **Future Reservations and Past Reservations**.
 - b. Click **[+]** to expand a reservation and view linked profiles.
 - c. Click **Confirmation** to open Reservation Presentation for the selected reservation. See [Editing a Reservation](#).
 - d. Click **Rate** to view the rate code information.
 - e. Click **Room Type** to view the room type information.

Viewing Profile Future and Past Blocks

You can view a Sales Account's future and past Blocks.

The Block details include the following:

- Block Code and Block Name.
- Arrival, Room Nights, and Departure Date.
- Room and Event Status.

Future and Past Blocks shows the total number of Blocks linked to the guest profile.

In multi-property operations you can view reservations at properties associated to your [hub location](#).

From a property location you see only view the Blocks in that property.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles** and then **Manage Profile**.
2. Click the **View By** list and select a profile type, such as a Company, Travel Agent, or Source.
3. Enter search criteria, click **Search**.
4. Select the profile in the search result, click **I Want to...**, go to **Future & Past** and click **Blocks** or click the **Future & Past Blocks** link in the Profile Presentation.
5. Panel displays the list of Future Blocks and Past Blocks
6. Click a **Block Code** to open [Block Presentation](#) page.

Managing Profile Attachments

Prerequisites for Profile Attachments

You can attach files (less than 10MB) to Profiles using the Attachments feature.

Adding Profile Attachments

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria and click **Search**.
3. Select the profile in search result, click **I Want To. . .**, click **Attachments** or open the profile and click the **Attachments** details link.
4. Click **New** to attach a new file.
 - a. Click **Browse** and select a file on your workstation.
 - b. **Filename**: Enter a filename using only alphanumeric characters, no spaces or special characters are accepted.
 - c. **Description** Enter a description for the attachment.
5. Click **Save**.

Downloading Profile Attachments

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Search for and select a Profile.
3. Select the profile in search result, click **I Want To. . .**, click **Attachments** or open the profile and click the **Attachments** details link.
4. On the Attachments screen, click the vertical ellipsis **Actions** menu, and click **Download**.
5. Select either **Open** or **Save File**.

Deleting Profile Attachments

Note:

Attachments are automatically deleted when a profile is deleted or purged.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Search for and select a Profile.
3. Select the profile in search result, click **I Want To. . .**, click **Attachments** or open the profile and click the **Attachments** details link.
4. On the Attachments screen, click the vertical ellipsis **Actions** menu, and click **Delete**.
5. Click **Delete** to confirm.

Managing Profile Notes

OPERA Cloud enables you to add multiple notes to profiles. Typically, notes that are flagged as internal are not transmitted to external systems and can be excluded on reports.

Watch Video

When the Copy Profile Reservation Notes To Reservation OPERA Control is active, notes of type Reservation will copy to new reservations.

Adding Profile Notes

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then **Manage Profiles**.
2. Enter search criteria, click **Search**.
3. Select the profile in the search result, then click **I Want To. . .**, **Notes** or open the profile and click the **Notes** link in Profile Presentation.
4. Click **New**
 - a. **Type:** Select a note type. For more information, see [Configuring Note Types](#).
 - b. **Internal:** Select this check box if the comment is to be treated as internal..

 **Note:**

Internal notes are not output on stationery or on reports unless the report explicitly allows display of Internal Notes. You can uncheck this check box when Override Internal is selected in the note type configuration.

- c. **Title:** Enter a summary title for the note (is default based on the note type but it can be updated).
 - d. **Available In:**
 - i. **Global:** Note is available in all properties.
 - ii. **Property:** Select the property; note is property-specific.
 - e. **Comment:** Enter or paste the note details; a maximum of 2000 characters (single byte) is supported.
5. Click **Save**.

Viewing and Updating Profile Notes

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then **Manage Profiles**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the search result, then click **I Want To. . .**, **Notes** or open the profile and click the **Notes** link in Profile Presentation.
4. Select the note, click **±** to expand the card and read the note comments.

5. Select the vertical ellipse **Actions** menu and select **Edit**.
6. Update the details.
7. Click **Save**.

Deleting Profile Notes

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then **Manage Profiles**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the search result, then click **I Want To. . .**, **Notes** or open the profile and click the **Notes** link in Profile Presentation.
4. Select the vertical ellipse **Actions** menu and select **Delete**.
5. Click **Delete** to confirm.

Managing External Emails

Prerequisites for Managing External Emails

When integrated with an Email Solution partner it is possible to launch your email client from within OPERA Cloud to view emails received and store some of these emails on the profile for future reference. You can search emails by Date Range, Sender Last Name, Sender First Name, Sender Email Address and Subject.

Note:

Using Chrome browser, you will only have the option to download email. Using Firefox, you will have the option to view or download the email.

Viewing Emails

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. **View By:** Select **Accounts** (company, travel agents, sources) or **Contact** from the list.
3. Enter additional search criteria then click **Search**.
4. Select the profile in search result, then click **I Want To. . .**, and select **Emails** or open the Account profile or Contact profile and click the **Emails** link.
 - a. Search for and select an email by clicking on the **Subject** link
 - b. Select **Open**.

Downloading Emails to a Profile

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. **View By:** Select **Account** or **Contact** from the list.
3. Enter additional search criteria then click **Search**.

4. Select the profile in search result, then click **I Want To . . .**, and select **Emails** or open the Account or Contact profile and click the **Emails** link.
 - a. Search for and select an email by clicking on the **Subject** link
 - b. Select **Save File**.

Viewing Guest Stay Statistics

Use Stay Statistics to view a summary of a guest's reservation, stay and revenue statistics. The statistics detail revenue from reservations as well as revenue from all other sources such as passer-by and revenue posted in accounts receivable accounts after the business date is closed.

With an Oracle Hospitality OPERA Cloud Service, Loyalty subscription you can also view Stay Records - yearly statistics of guest stays, summarized by [Revenue Groups](#) . Stay Records are created by the [Process Guest Stay Data procedure](#) during the end of day routine and are visible from property and [Hub locations](#). Stay Records are the basis for the creation of Membership Transactions, used to calculate member Award and Tier points.

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria, then click **Search**.
3. Select the profile in the search result, then click **I Want To . . .** and select **Stay Statistics**.
 - a. Select the **Reservation Statistics** tab to view the guest's stay details such as number of nights, arrivals, cancels, no shows, and day use. The statistics also show the revenue generated from the reservations.
 - b. Select the **Revenue Statistics** tab to view revenue generated by the profile.
 - c. Select the **Stay Records** tab to view yearly statistics of guest stays, summarized by [Revenue Groups](#) .
 - i. Enter the search criteria, then click **Search**.
 - ii. Click **+** to expand the data to show details by property and year including Nights, Cancels, No Shows, Total Booked, Total Stays, Revenue.
 - iii. Select **View Details** to display the list of Stay Records for the property and year.

Merging Profiles

[Prerequisites for Merging Profiles](#)

In the event duplicate profiles are created, you can merge the multiple profiles into a single profile. Start by searching for the profile you want to keep and select one or more profiles to merge with the main profile. You can then review the resulting profile and choose the attributes to retain on the resulting profile.

Reservation history, statistics and other profile details are updated accordingly. If AR accounts exist on multiple profiles these will be updated / combined on the resulting profile.

Profile merge activity is tracked in the [Changes Log](#).

You cannot merge profiles under the following conditions:

- Outstanding commissions payable

- Anonymized. For more information, see [Profile Anonymization](#)
- Multiple different profile types

Merging Profiles

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profile**, select **Manage Profile**.
2. Enter search criteria and click **Search**.
3. Select the profile in the search result, click **I Want To. . .** then **Merge Profiles**.
4. On the **Merge Profiles** page.
 - a. The **Main Profile** is displayed in the left panel.
 - b. The **Profiles to Merge** panel displays all selected profiles to merge with the Main Profile.
 - i. Click **Add Profiles** to add one or more profiles to merge with the original.
 - i. Enter search criteria then click **Search**.
 - ii. In the search result, select one or more profiles then click **Select**.
 - ii. Use **<** and **>** to scroll between each profile added (Shows **Profiles X of Y**).
 - iii. Click **Remove Profile** to remove the currently displayed profile.
 - iv. Click **Make Main** to make the profile displayed in the center panel the main profile.
 - c. In the **Review Merge Details** panel.
 - i. Select the attributes to retain on main profile by selecting the check boxes
 - ii. Click **Merge** or click **Merge and Goto Profile** to edit the profile.

Profile Anonymization

[Prerequisites for Profile Anonymization](#)

To protect the personal information of guests and contacts the profile details can be anonymized. The Profile Anonymization feature masks or removes personal information from the profile record so the guest or contact can remain anonymous.

Required Conditions for Profile Anonymization

The following conditions are required for a guest or contact profile to be anonymized:

- Number of Days for Anonymization setting requirement must be met. This requirement is met when the defined number of days has passed since the last activity for the profile. For example, if the setting is 5 days, the profile is eligible for anonymization five days after the profile's last activity, such as a stay or transaction.
- Open Folios do not exist for the profile.
- Outstanding Balance does not exist for the profile.
- Routing Instructions do not exist with the guest profile as the payee.

- No Accounts Receivable Invoices (open / closed) exist for the guest profile and none are attached to the profile's Accounts Receivable (AR) account.
- Outstanding Commissions do not exist for the profile.
- Future Reservations do not exist for the profile.

If a profile cannot be anonymized, a message appears indicating the reason. For example, there might be one or more dependencies as described in the Conditions for Profile Anonymization list. If there are multiple validation failures, all reasons are listed in the message to help you better resolve these issues and anonymize the profile.

Anonymized Profile Information

The following information is anonymized for the profile:

Table 2-4 Anonymized Information for the Profile

Profile Element	Anonymization Format	Removed from Database?
Name — This includes the Profile, Reservation Name, Credit Card Names, Membership Card Name, and Room Key Card Name.	XXXXXXXXXXZ	No
Salutation	XXXXXXXXXXZ	No
Envelope Greeting	XXXXXXXXXXZ	No
Alternate Name	XXXXXXXXXXZ	No
Alternate Salutation	XXXXXXXXXXZ	No
Alternate Envelope Greeting	XXXXXXXXXXZ	No
Alias/Incognito	XXXXXXXXXXZ	No
Address (excluding State and Country)	XXXXXXXXXXZ	No
Communication (that is, Email, Phone)	XXXXXXXXXXZ	No
Identification (that is, Driver's License, Passport Number)	XXXXXXXX99	No
Birth Date	Not applicable	Yes, removed
Birth Place	XXXXXXXXXXZ	No
Birth Country	Not applicable	Yes, removed
Gender	Not applicable	Yes, removed
Photographic Images (attachments of any type)	Not applicable	Yes, removed
Tax ID	XXXXXXXXXXZ	No
Comments/Notes	Not applicable	Yes, removed
Membership Card Number	XXXXXXXXXXZ	No
Change Log	Not applicable	Yes, removed
Profile Links/Relationships (including the linked profile's change log)	Not applicable	Yes, removed
Web Accounts (username/password)	Not applicable	Yes, removed
Keywords	Not applicable	Yes, removed
Client ID	XXXXXXXXXXZ	No
Credit Card Number	Not applicable	Yes, removed

Post Profile Anonymization

After you anonymize a profile, the following conditions are true:

- The profile no longer appears in Profile drop-down within the application. However, a search from the Profile Search screen still returns the profile, but the data is anonymized.
- You no longer have access to the folio history for the anonymized profile. All options are hidden when the highlighted folio is linked to an anonymized profile, regardless of the Permanent Folio Storage functionality being active.
- The I Want To. . . actions are hidden for the profile.
- User Log entries are removed, including Join Share/Break Share and Link Profiles/Relationships. This includes all Reservation user logs and Financial user logs.
- Updates to the Profile from external systems are no longer accepted, and a new profile is created.
- Profile match and merge rules are no longer considered. After a profile is anonymized, you cannot merge it into other guest profiles.

Anonymizing (De-Identifying) a Guest or Contact Profile

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles**.
2. Enter search criteria then click **Search**.
3. Select the profile in search result, then click **I Want To. . .**, and select **Anonymize Profile**.
4. Click **Yes** to confirm.

Viewing Recently Viewed Profiles

[Prerequisites for Viewing Recently Accessed Records](#)

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profile**.
2. On the Manage Profile screen, click **I Want To. . .**
3. Recently viewed are listed in the **View** column.
4. Click a **Profile** link to [Managing a Guest or Contact Profile](#) or [Managing a Sales Account Profile](#)

3

Bookings

Bookings provides the ability to create and manage reservations across locations and properties. Easily create and manage all types of reservations, such as individual, group or tour series, travel agency, multi segment (multi-legged), multi-rate, and walk ins. You can find additional reservation and event planning tools within Manage Reservation, Reservations Workspace, Blocks, and Events.

Loyalty. With an OPERA Cloud Loyalty Services subscription, you can manage a loyalty program; including award redemption for reservations. For more information, see [Membership \(Loyalty Cloud Service\)](#)

Reservations

OPERA Cloud reservations provide a complete set of capabilities for creating, updating, copying, and canceling room reservations. Using the Look To Book Sales Screen or Quickbook (Available when the Quickbook OPERA Control is active), you can search, shop, and select available room types and rates and then book the reservation. If the [property brochure](#) is setup, you can view this from Look To Book Sales Screen.

In multi-property operations, you can use Look to Book to view rate and room type availability for multiple properties from a [hub location](#) .

Note:

To create Group Block allocations, see [Creating a Block](#).

Note:

Inventory held for unconfirmed reservations is released after 30 minutes.

Within Reservations, you can:

- Handle advance deposits.

- Access guest, company, agent, and source profiles.
- Perform room assignments.
- Communicate with housekeeping.
- Schedule wake-up calls.
- Search for room availability across properties, and move reservations from one room or property to another.
- Generate confirmation letters and registration cards from the reservation.
- Customize certain screen layouts or fields to streamline the reservation processing.
- Search for reservations quickly by guest name, company, group, block, reservation type, travel agency, or confirmation number.
- Perform complex functions such as shared reservations, linked reservations, multiple room and split reservations.
- Add alerts to the reservations for display prior to check in, when guest is in-house, and when posting to bill. the reservation account.
- Add charge routing instructions by reservation or by profile.
- Setup periodical (fixed) charges to reservations.

Reservations require a profile to be linked, typically a guest profile. The profile identifies the guest's name, address, contact information, and other details. It provides information on billing, membership benefits, service preferences, and more. You can create profiles while booking a reservation or using the Manage Profiles function. If a profile already exists, you can look it up and attach it to the reservation during the reservation booking process.

You can access reservations in multiple ways: from the Bookings menu, by accessing tiles on the Home Dashboard, through Quick Launch, or through confirmation number hyperlinks. You can search for reservations from the Navigation Bar by selecting **Bookings**, selecting **Reservations**, and then selecting **Manage Reservation**. This screen is where you will perform basic and advanced searches to locate existing reservations. You can click **Go to Advanced Search** to perform an advanced search or click **Go to Basic Search** for the basic search if you are on the Advanced Search screen. Many other functions are available in the **Reservations Workspace**.

Reservation search is a process that enables you to select a pre-defined search type, such as Arrivals, Departures, In House, Mass Cancellation, Queue, Quick Check Out, Scheduled Check Out, and so on. This enables you to quickly search for and view reservations at your property that are relevant to the selected search type. The reservation search results have several sorting and viewing options. To sort search results, select the **Sort By** drop-down and make a selection from the list. Additionally, there are several options you can access for viewing search results by selecting the appropriate **Views** icon. These options are table, list, card, or console format. In the search results, you can select the **I Want To..** button for a reservation and choose from several options related to the reservation, such as modify/update, create, view, or go to different screens.

Reservation Terminology

When working with reservations, there are several terms with which you should be familiar. The table below includes some of these terms.

Term	Definition
Pseudo Room Reservation	Pseudo rooms are used for accounting purposes. They can be actual rooms, such as meeting rooms, but they do not have to represent a physical location. Pseudo rooms do not affect the property's guest room inventory. Pseudo rooms are used for posting certain charges, including those from POS Interfaces. For example, a POS Cash Card would have all the days postings and payments for cash from the POS system if interfaced. This would bring all revenue into OPERA Cloud for reporting purposes. Physical Rooms are different from Pseudo Rooms. Physical Rooms are the actual physical rooms configured for the property and do affect inventory availability.
Transient Reservation	An individual reservation (non-group reservation) that can include shares, day use, walk-ins, Company, and Travel Agent reservations.
Block Reservation	A block reservation is a group of rooms held for guests who are attending an event, meeting, or function, such as conferences, catered events, weddings, or conventions. A block reservation can also be used for companies booking rooms for delegates attending a conference or meeting, for travel agents who have groups or a tour series, or for holding room allocations.
No Show Reservation	A reservation in which a guest does not check in on the arrival date specified in the reservation. If the reservation is not canceled by the guest and not canceled during the Night Audit process, the Night Audit procedure turns it into a no show.
Day Use Reservation	A reservation made for zero nights with no overnight stay.
Standard Reservation Types	The reservation policies of the property can be set as required. For example, 6:00 PM Hold, Guaranteed by Credit Card, and Guaranteed by Company.

Term	Definition
Deduct and Non-Deduct	<p>A reservation type can be marked as Deduct or Non-Deduct. A Non-Deduct reservation type does not deduct the room from availability if you select to view Deduct only. For example, a Non-Deduct reservation type could be used for a 4 PM release, which is not classed as a guaranteed reservation and would normally be cancelled at the specified time if the guest does not arrive. If a property wants to automatically deduct all rooms for reservations from availability, the property would not set up Non-Deduct reservation types.</p> <p>Areas of the application in which Deduct and Non-Deduct appear are the Group Rooms Control screen and the Look To Book Sales Screen.</p>
Checked In	A reservation where the guest has checked in. This is a required reservation type and cannot be removed.
VIP Level	This indicator appears on the reservation to show the primary guest's VIP level.
First or Repeat Guest	This indicator appears on the reservation to show the primary guest is either a first time visitor or a repeat guest at the property.
House Posting Account	An account for managing deposits, charges, and other payments that are posted to a pseudo room. You can create a house posting account from the Manage Reservation screen by clicking I Want To... and clicking House Posting Account .

Booking a Reservation

You can book future date or walk-in reservations using Look to Book, which provides you with room type and pricing options for the reservation dates entered. Use the search criteria to narrow your search for specific rate categories / code, room types and features or use **Room** to search property availability for a specific Room. Depending on your [location](#) you can use Look to Book to check room type and rate availability in multiple properties. You can use the Look to Book Trip Composer to create multi-leg reservations for guests requiring multi-rate reservations.

With the OPERA Multi-Property Reservation Cloud Service active, you can search property / rate availability by the packages included in a rate code from a [Hub location](#) . The search result displays a **Selected Package - Associated to Rate Code** display set listing the applicable rate codes and price per room type.

When the Multiple Yield Market Type OPERA Control, you can select a single [Yield Market Type](#) for an availability search. The default value selected in the Yield Market Type opera

control will be pre-populated in the Yield Market field. The default value selected in the Yield Market Type OPERA Control will default in the **Yield Market** field.

When the Award Points Redemption OPERA Control is active, a **Member Award Upgrade Available for this Reservation** link appears when a member upgrade award is available for the dates and the room type booked. For more information, see [Redeeming Loyalty Awards for Upgrade](#).

Watch Video

Book a Reservation

Note:

With the Sell Message OPERA Control you receives sell messages at the top of Look to Book X, click to close. Click **Sell Messages** to view these messages at a later time.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Look To Book Sales Screen**.
2. Enter the caller/contact information and then click **New Reservation**. (Applicable when the Caller Information OPERA Control is active).
3. In the search panel enter search criteria.
 - a. **Single Rate**: Click option to create a single leg reservation with no rate code changes (default).
 - i. **Property**: Enter or select the property. You can select multiple properties from a [hub location](#).
 - b. **Multi-segment**: Click option to create a multi-segment reservation, with rate code changes during the stay.

Note:

Use the Add to Trip Composer action to select the rate code option for each segment (leg).

- i. **Property**. Enter or select the property.
 - ii. Click **Add Leg** to add a segment.
 - iii. Click **Delete Last Leg** to remove the last segment.
- a. **Stay Options**: Enter the details for each segment.
 - i. **Arrival**: Enter or select the arrival date.
 - ii. **Nights**: Enter the number of nights; the departure date is updated.
 - iii. **Departure**: Enter or select the departure date.

- iv. **Rooms:** Enter the number of rooms required; a multi-room reservation needs to be split into separate reservations prior to arrival. For more information, see [Managing Linked Reservations](#)

 **Note:**

If the number of rooms entered equals or exceeds the Block Creation Prompt Threshold Rooms OPERA Control you are prompted to create a reservation or convert the reservation to a block. [Converting a Multi-Room Reservation to a Block](#)

- v. **Adults:** Enter the number of adults in the room.
 - vi. **Children:** Enter the children in the room.
- d. Profile Options
- i. **Name:** Click to search for an existing guest profile.
 - ii. **New Profile:** Click to create a new guest profile. For more information, see [Creating a Guest or Contact Profile](#).
 - iii. **Membership Number:** Click to search for guest profile by membership number.
 - iv. **Company:** Click to search for company profile to link to the reservation.
 - v. **Travel Agent:** Click to search for Travel Agent profile to link to the reservation.
 - vi. **Block Code:** Click to search for a Block to link to the reservation (pickup inventory from the Block allocation).
- e. Rate and Room Options:
- i. **Room Features:** Select one or more room features from the list. Look to Book displays room types with the selected Features. Multiple selection is treated as an "OR" type search. For example, if Bath Tub and Hair Dryer are selected then the search is for room types that have either the Bath Tub or the Hair Dryer as feature.
 - ii. **Room Types:** Select one or more room types from the list. When the Room Type Auto Room Assign OPERA Control is active, and the selected room type is flagged as **Auto Room Assign**, an available room will be automatically assigned to the reservation during creation.

 **Note:**

Only rooms that are not departures on the arrival day of this reservation will be auto-assigned. Only rooms in the highest cleaning status will be auto-assigned if the reservation is for the current business date.

- iii. **Room:** Click to select and search availability for a specific room.
- iv. **Rate Codes:** Select one or more rate codes from the list.
- v. **Rate Category:** Select one or more rate categories from the list.
- vi. **Promotion:** Select a promotion from the list. Look to Book displays rate codes linked to the promotion.

- vii. **Smoking Preference:** Select a smoking preference from the list. Look to Book displays room types with the selected smoking preference.
 - viii. **Include Closed Rates:** Select to include closed rate in the availability search. For more information, see [Overriding a Closed Rate](#).
- f. Click **Search**.

 **Note:**

You can modify the search options at any time, click **Search** to update the Look to Book result.

4. **Minimum Stay Availability** displays each room type and the minimum (including non-deduct) number of available rooms.

 **Note:**

When the Show Profile Discounted Rates OPERA Control is active and you select a profile with a discount in Look to Book Sales Screen search, the negotiated rates that appear in search results are adjusted by the profile discount amount. When the control is inactive, Look To Book returns the profile negotiated rate without the profile discount applied.

For example, the company ABC Corporation has a Negotiated Rate NEGRATE1 (\$100 per adult). There is an additional discount of 20% configured for this profile while associating the negotiated rate code. When Show Profile Discounted Rate OPERA Control is active, the Look to Book search results display a rate of \$80 for the negotiated rate NEGRATE1 when search with the profile ABC Corporation.

When Show Profile Discounted Rate OPERA Control is inactive, the Look To Book search results displays the negotiated rate NEGRATE1 with \$100 when search with the profile ABC Corporation.

 **Note:**

Click the **Property Name** to display the [Property Brochure](#).

5. Rates for each room type available are displayed, grouped by [Display Set](#).
6. Click **More Display Sets** to add all other display sets to the result.

 **Note:**

Closed rates are displayed with a red **X** through the price, for more information, see [Overriding a Closed Rate](#). Rate codes setup as [Suppress Rate](#) are displayed with price strike through as these rates are confidential and not be quoted to the caller.

7. Click a rate and room type cell to view more information about the rate and room type, including package item inclusions.
 - a. Click **View Policies** to view the Deposit and Cancellation Policy per reservation type for the rate.
 - b. Click **Select** to select this rate and room type combination for the new reservation or drag the cell to the Trip Composer panel.
8. Book Now page is displayed.
9. **Stay Information** is displayed in the left side panel.
 - a. Click the **Rate Amount** to view detailed rate information for the reservation.
 - b. Click **Refresh** to update the deposit details
10. Enter the Guest Information.
 - a. **Name**: Click to search for an existing guest profile.
 - b. **New Profile**: Click to create a new guest profile. For more information, see [Creating a Guest or Contact Profile](#).
11. Enter the booking details:

 **Note:**

The fields displayed are based on your chain or property customization.

- a. **Reservation Type**: Select a reservation type from the list to determine if the reservation deducts a room from inventory. For more information, see [Reservation Types](#)
- b. **Market**: Enter or select the market code for the reservation; used for statistical purposes.
- c. **Source**: Enter or select the source code for the reservation; used for statistical purposes.
- d. **Origin**: Select a booking origin from the list; used for statistical purposes. For more information, see [Configuring Origin Codes](#)
- e. **Room Type to Charge**: Select the room type to charge for the reservation; this can be different to the room type allocated for the reservation and used in the event of a complimentary upgrade.
- f. **Rate**: The rate amount per night is displayed; update to modify (override) the rate amount.
- g. **Fixed Rate**: Select checkbox to fix the **Rate** to the specified amount. (Available when the Fixed Rates OPERA Control is active).
- h. **Packages**: Select any package items for the reservation. For more information, see [Managing Reservation Package Items](#).
- i. **Inventory Items**: Select any inventory items for the reservation. (Available when the Item Inventory OPERA Control is active). For more information, see [Managing Reservation Inventory Items](#).
- j. **Discount**: Available when the Reservation Discounts OPERA Control is active and the selected rate code is setup as eligible for discount. [Configuring Rate Code Financial Details](#) .

- i. **Discount Amount:** Enter a fixed amount discount to adjust the nightly rate.
- ii. **Discount Percentage:** Enter a percentage discount to adjust the nightly rate.
- iii. **Discount Reason:** Select a discount reason from the list.

 **Note:**

When the **Rate Code** is updated the discount amount/percentage and reasons values are removed and the fields disabled if the rate code is not eligible for discount.

- k. **Purpose of Stay:** Enter or select the purpose of stay from the list.
 - l. **Room:** Click to search and assign a room to the reservation. For more information, see [Assigning Rooms to a Reservation](#).
 - m. **Specials:** Click to select special requests for the reservation.
 - n. **Room Features:** Click to select room features requested; this field is defaulted with preferences from the selected profile for the reservation.
 - o. **Smoking Preference:** Click to select the smoking preference of the guest; this field is default with the smoking preferences from the selected profile for the reservation.
 - p. **Notes:** Click **More Info** to manage profile and reservation notes. For more information, see [Managing Reservation Notes](#) and [Managing Profile Notes](#).
 - q. **Promotion:** Click to search and select a promotion to link to the reservation. For more information, see [Configuring Promotion Codes](#).
12. Enter Payment Information
- a. For more information, see [Managing Reservation Payment Instructions](#).
 - b. Click **Add Routing Instructions** to setup charge routing. For more information, see [Managing Reservation Routing Instructions](#).
13. Click **Adding Sharing Guest** to create a sharing reservation.
- a. Enter search criteria and click **Search**.
 - b. Select a profile in the result, click **Select**.
 - c. Select a rate share method and enter the number of adults. For more information, see [Shared Reservations](#).
14. Click **Membership** to select a profile membership for the reservation.
- a. For more information, see [Managing Reservation Memberships](#).
15. Once the new reservation details are complete:
- a. If creating a multi-segment reservation, click **Add to Trip Composer** to add the rate selection for the leg and then repeat your rate availability search for the next segment stay dates.
 - b. Click **Book Now** to create and confirm the reservation. You are directed to the Reservation Presentation page to further manage the reservation. For more information, see [Editing a Reservation](#).

- c. Click **Waitlist Now** to add the reservation to Waitlist. For more information, see [Managing Waitlist Reservations](#)

 **Note:**

When the Closing Script OPERA Control is active, you are presented a [closing script](#) to read to the caller, click **Confirm** to proceed with confirming the new reservation.

About Turn-away

[Prerequisites for Reservation Turnaways](#)

The Turn-away feature enables you to record statistical information related to business that is turned-away. Turn-away business is sometimes classified as either regrets (for example, when the guest declines to place a reservation because of price, property features, location of the property, and so on) or as denials (for example, when the property cannot accept the reservation because inventory is sold out, or the desired rate or room type is not available). For example, a guest calls and wants to make a reservation at the corporate rate for July 17. If a review of the Look to Book Sales screen shows that the corporate rate is not available on that date for the property, you may record a turn-away if the guest does not accept an alternate rate room type or date.

When the Turnaway Functionality OPERA Control is active, the Turn-away screen automatically appears when you search for a room type or rate on the Look To Book Sales Screen and select **Exit Booking** without confirming a reservation. On the Turn-away screen, you can select the reason that the guest did not proceed with a reservation, search and select a specific guest profile, and more.

Only users with the Override Turn-away Statistic Collection task assigned to their roles are able to override and skip the entry of a turn-away.

Turn-away statistics are reported as daily total on the [Managers Report](#) and you can create and customize statistical reports in [Reporting and Analytics](#).

Closing Scripts

[Prerequisites for Closing Script.](#)

Closing scripts are displayed for you to read at the end of the reservation process to confirm the reservation and other reservation details to the guest. You can create closing scripts for properties and Hub (Chain) as well as edit closing scripts, copy them to other locations, or delete them. Once a closing script is created, you can assign it to a property at any time. The closing script appears once the reservation information has been confirmed and prior to ending the call and helps you summarize the reservation information at the conclusion of a sales call.

Closing Script Confirmation

Closing scripts are controlled by the Reservations group parameter **Closing Script New and Update Reservation**. When this parameter is set to **On** at the Hub (Chain) level, the closing script appears when you are creating a reservation and are logged in at the Hub (Chain) level. When set to **On** at the property level, the closing script appears when you are creating a reservation and are logged in at the property level. If the property-level parameter is set to

Off and the Hub (Chain) level parameter is **On**, users logged in at the property level do not see the closing script, but users logged in at the Hub (Chain) level see it.

The closing script helps you to summarize and confirm the reservation details to the caller using a predefined script. The Closing Script is displayed once the reservation information has been saved, prior to ending the call.

Language: For multi-lingual reservation agents, select a language from the list for display the closing script.

Overriding a Closed Rate

A rate (price) can be closed and unavailable due to various reasons: [room type maximum occupancy](#), [rate restrictions](#), [room type inventory limits](#), [Block allocation limits](#), or [rate hurdles](#) set by an integrated revenue management system.

When the **Include Closed Rates** check box is selected in the Look to Book search

criteria, closed rate are displayed with a red **X**  in the Look to Book search result.

When selecting a closed rate for a new reservation:

- If you have been granted the required override task, via your assigned role(s), the reservation creation process will continue.
- If you have not been granted the required override task, a login prompt displays for an authorized user, with the appropriate override task granted, to enter their PIN and override the restriction before the reservation creation process can continue.

The various override tasks applicable are:

- Oversell Room Type for a reservation or block At House Level
- Oversell Room Type for a reservation or block At Room Class Level
- Oversell Room Type for a reservation or block At Room Type Level
- Override Maximum Occupancy
- Override LTB and Edit Reservation
- Override Restricted Profiles for Reservation
- Override Rate Code Restriction
- Override Block Availability
- Override Sell Limits

Rate Availability Analysis

The Rate Availability Analysis page displays when a closed rate is selected. This page indicates the restriction type(s) set for the reservations dates and the calendar shows others dates with no or alternate restrictions (alternate dates).

Select **Close** to return to the Look to Book Sales page and change the search criteria or select **Continue Booking** to override the restriction and continue to the Book Now page.

Converting a Multi-Room Reservation to a Block

Prerequisites for Converting a Multi-Room Reservation to a Block

When the number of rooms specified for a reservation is equal or greater than then the Block Creation Prompt Threshold Rooms OPERA Control, you can convert the reservation to a Block. The reservation Rate Code, Market Code, and Source Code are populated to the block and the [room allocation](#) setup based on the room type and number of rooms in the original reservation. In addition to the block created, a block reservation is created for the number of rooms specified, picking up all of the room allocation.

Note:

The initial block status is set according to the first (per sequence) status configured as Allow Pickup and Deduct Inventory. For more information, see [Block and Catering Event Statuses](#)

1. [Create the reservation](#)
2. Click **Book Now** .
3. The following prompt appears: "There are multiple rooms selected for this property. Do you want to convert these reserved rooms into a block?"
 - a. Click **Cancel** to return to Look to Book
 - b. Click **Book Now** - to create a reservation for the number of rooms specified.
 - c. Click **Convert to Block** to convert the reservation to a Block and enter the following details
 - i. **Block Name:** Enter a name for the Block
 - ii. **Block Code:** A Block Code auto generates. The Block code must be unique when the Unique Block Code OPERA Control is active. The Block code format is determined by the Block Code Generation Pattern OPERA Control.
 - iii. Click **Convert to Block**.
 - iv. Update the block details. For more information, see [Managing Blocks](#).

Creating Reservations Using Quick Book

Prerequisites for Reservations Quick Book

Watch Video

Quick Book is available for rapid guest reservation entry and is an alternative to the [Look to Book Sales Screen](#).

Quick Book commences with entry of the reservation details with optional access to an Available Rates screen for room type availability and rate pricing details. An Analyze Rate screen for assessing and overriding closed rates is also available.

 **Note:**

Quick Book does not support the following:

- Promotional Rates
- Negotiated Rates
- Best Available Rates
- Multi-segment reservations
- Closing Script
- Sell Messages
- Upgrade Offers
- Caller Information
- Override Closed Rate Availability (PIN)
- Awards
- Turnaway
- Waitlist
- Auto Attach Elements
- Share Reservations
- Routing/Multi-window payment
- Item Inventory
- Block pickup
- Flex fields (page composer)

Creating a Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, select **Quick Book**.
2. Complete the following:
 - a. Property Search.
 - i. **Property**. Select or confirm the property.
 - ii. **Arrival Date**. Enter or select a start date for the reservation.
 - iii. **Nights**. Enter the duration.
 - iv. **Departure Date**. Enter or select the reservation's end date.
 - v. **Rooms**. Enter the number of rooms to book.
 - vi. **Adults**. Enter the number of adults.
 - vii. **Children**. Enter the number of children.
 - viii. **Ages**. Enter children ages (available when the Child Rates By Defined Buckets OPERA Control is active).
 - b. **Booking Details:**

- i. **Name.** Enter the surname to search for an existing guest profile or click [Create Profile](#) to create a new profile. When the Profile Mailing Privacy OPERA Controls is active, you can update the [privacy options](#) for the new profile.
 - ii. **Rate Code:** Select a rate code from the list. Click the search icon to launch the [Available Rates grid](#). This field is mandatory if the Rate Code Mandatory when OPERA Control is active.
 - iii. **Room Type.** Select a room type for the reservation. Click the search icon to launch the [Available Rates grid](#).
 - iv. **Room Type to Charge (RTC).** Select a room type to charge for the reservation (if different to room type reserved).
 - v. **Rate Amount.** The rate amount will populate based on the selected rate code and room type to charge.
 - i. **Fixed rate.** Click the fix the rate if you manually update the rate amount (available with active Fixed Rates OPERA Control).
 - vi. **Reservation Type:** Select a reservation type from the list to confirm the status of the reservation (deduct from inventory or non-deduct).
 - vii. **Discount Amount:** Enter a rate discount amount if applicable (enabled based on selected rate code and active Reservation Discounts OPERA Control).
 - viii. **Discount Percentage:** Enter a rate discount percentage if applicable (enabled based on selected rate code and active Reservation Discounts OPERA Control).
 - ix. **Discount Reason:** Select a discount reason from the list (enabled based on selected rate code and active Reservation Discounts OPERA Control).
 - x. **Market Code:** Select a market code from the list. This is required for revenue statistics.
 - xi. **Source Code:** Select a source code from the list. This is required for revenue statistics.
 - xii. **Room Features:** Select requested room features from the list; features will default from selected guest profile.
 - xiii. **Specials:** Select requested special requests from the list.
 - xiv. **Smoking Preference:** Select guest smoking preference from the list; preference will default from selected guest profile.
- c. **Add Notes:** Click to add reservation notes. Refer to [Managing Reservation Notes](#).
 - d. **Add Packages:** Click to add package items. Refer to [Reservation Packages](#).
 - e. Complete the Payment Details

 **Note:**

If your property is integrated with a payment partner you can enter card details via a payment terminal using the [Payment Instructions](#) panel from Manage Reservation.

- i. **Method:** Select a payment method from the list.
- ii. **Card Number:** Enter the credit card Primary Account Number (PAN).
- iii. **Expiration:** Enter the credit card expiry date.

- iv. **Card Holder:** Enter the name on the credit card.
3. Click **Save** to create and confirm the reservation. The [Reservation Presentation](#) opens enabling you to make further updates.

Using the Available Rates Grid

Note:

The Default Availability Option OPERA Control is referenced to determine which rates to display by default.

1. On the Rates Grid, you can use the following search options:
 - a. **Display Set:** Select a display set from the list.
 - b. **Rate Code:** Enter or select a rate code.
 - c. **Include Closed Rates:** Select to include a display of closed rates (due to rate or room type availability).
2. Click **Update** to refresh the Rates Grid.
3. Click **Legend** to view details of the color indicators on the Rates Grid.
4. For Rate/Room Type Information, select any room and rate combination rate amount to view detailed information about the room type and rate policies.
 - a. **Room Rate Summary:** Shows room type and rate code information.
 - b. **Rate Information:** Shows the rate detail breakdown by day.
 - c. **Policies:** Shows the available Reservation Type options for the rate and room combination that is selected.
5. Select **Rate/Room Type:**
 - a. Double click any available room and rate combination rate amount to select it for the reservation and return to Quick Book entry.
 - b. If the room type and rate combination has restrictions (closed), you are directed to the **Rate Availability Analysis** screen.

Using the Rate Availability Analysis

Rate availability analysis appears automatically if there are availability restrictions for the reservation details you have entered on the Quick Book screen.

The left panel displays the analysis of the restriction(s) on the room type or rate.

The right panel displays alternate dates for when the restrictions do not apply. Use the calendar or < > navigation to display alternate months.

The following options are available:

1. **Override:** Users with override tasks assigned to their roles can override and proceed with booking the selected room and rate combination.
2. **Goto LTB:** Users without override task assigned to their roles can transfer to the [Look To Book Sales Screen](#) to continue creating the reservation.

3. **Available Rates:** This launches the Available Rates Grid with focus on the selected room and rate combination. Refer to [Rate Restrictions](#).

Redeeming Loyalty Awards

Prerequisites for Redeeming Loyalty Awards

Loyalty

With an Oracle Hospitality OPERA Cloud Service, Loyalty subscription or when the Loyalty Membership Configuration OPERA Control is active and integrated with the OPERA Cloud Customer Loyalty Tracking Cloud Service v5.6, member award points can be redeemed for awards; offered based on specific validity dates, the member's tier or level, and other factors.

The types of awards available are:

- **Rate:** For more information, see [Redeeming Loyalty Awards for Rate](#)
- **Package:** For more information, see [Redeeming Loyalty Awards for Package](#)
- **Room Type Upgrade :** (Requires the Room Type to Charge OPERA Control active). For more information, see [Redeeming Loyalty Awards for Upgrade](#)
- **Payment (Pay with Points):** (Available when the Loyalty Payment Award OPERA Control is active). For more information, see [Redeeming Loyalty Awards for Payment \(Pay with Points\)](#)
- **Other:** For more information, see [Managing Profile Membership \(Loyalty Cloud Service\)](#)

Redeeming Loyalty Awards for Package

Loyalty With an Oracle Hospitality OPERA Cloud Service, Loyalty subscription or when the Loyalty Membership Configuration OPERA Control is active and integrated with the OPERA Cloud Customer Loyalty Tracking Cloud Service, member award points can be redeemed for a package; offered based on specific validity dates, the member's tier or level, and other factors.

Once redeemed, the **Points Available** value in profile membership is updated to show the deduction in points (or increase based on updates/cancellations). An Award record is also created for each night on the profile membership panel. For more information, see [Managing Profile Membership \(Loyalty Cloud Service\)](#)

Adding a Package Award to Reservations

The package offer is based on the available points balance, member level/tier, validity dates, and other criteria. If the member does not have sufficient points, no awards appear.

Note:

Award Packages cannot be added via Look to Book.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservations**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, then click **I Want to . . .**, **Reservation**, or click the confirmation number to open the Reservation Presentation page.
4. Click the **Packages** link.
 - a. For more information, see [Managing Add-on \(Sell Separate\) Packages](#) .
 - b. Select the **Award Packages** check box, the available Award Packages are returned with details on the Calculation Rule, Posting Rhythm and Points required.
 - c. Click **Add** on the package item to select it for the reservation and enter the following details:
 - i. **Quantity**: Update the quantity, if required
 - ii. Click  .
 - d. Click **Save**.

Updating Package Award Reservations

- When increasing the calculation rule values (nights, person, adults, or children), additional points are deducted and an additional award appears for each additional night on the profile membership [Award List](#) .
 - When reducing the calculation rule values (nights, person, adults, or children), the deducted points are credited less any cancellation penalties and the award appears as cancelled on the profile membership Award List
 - When increasing the package dates, additional points are deducted and an additional award appears for each additional night on the profile membership Award List
 - When reducing the package dates, the deducted points are credited less any cancellation penalties and the award appears as cancelled on the profile membership Award List
 - When reducing the package quantity (excluded quantity), the deducted points are credited less any cancellation penalties and the award appears as cancelled on the profile membership Award List
 - When deleting the package, the deducted points are credited less any cancellation penalties and the award appears as cancelled on the profile membership Award List
1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservations**.
 2. Enter search criteria, click **Search**.
 3. Select the reservation in the search result, then click **I Want to . . .**, **Reservation**, or click the confirmation number to open the Reservation Presentation page.
 4. Click the **Packages** link.
 - a. For more information, see [Managing Add-on \(Sell Separate\) Packages](#) .

Canceling Package Award Reservations

When cancelling an Award reservation, the deducted points are credited less any cancellation penalties and the award appears as cancelled on the profile membership type Award List.

1. For more information, see [Managing Reservation Cancellation](#).

Redeeming Loyalty Awards for Payment (Pay with Points)

With an Oracle Hospitality OPERA Cloud Service, Loyalty subscription and the Loyalty Payment Award OPERA Control active or when the Loyalty Membership Configuration and Loyalty Payment Award OPERA Controls are active and integrated with the OPERA Cloud Customer Loyalty Tracking Cloud Service, member award points can be redeemed for payment towards a reservation account balance; offered based on specific validity dates, the member's tier or level, and other factors.

Loyalty Point redemption is posted as a rebate charge on the reservation account. For more information, see [Manage Billing](#).

Once redeemed, the **Points Available** value in profile membership is updated to show the deduction in points. The [global membership exchange rate](#) is used to convert the property currency to the central currency to determine the number of award points deducted. An Award record is also created in the profile membership. For more information, see [Managing Profile Membership \(Loyalty Cloud Service\)](#).

Posting Payment Award to Reservation Accounts

To redeem a payment award, the billing window must be linked to the profile with the primary loyalty membership and an available points balance sufficient to cover the redeemed amount. The points/amount entered cannot exceed the Maximum Points to Pay / Maximum Amount Allowed.

1. From the **OPERA Cloud** menu, select **Front Desk**, then select **In House** or **Departures**.
2. Enter search criteria, then click **Search**.
3. Select the reservation in the search results, then click **I Want To . . .** and select **Billing**.
4. Select the billing window (1-8).
5. Click **Award Points** and complete the following:
 - a. **Award Type**: Select a value from the list.
 - b. The Transaction Code, Maximum Points to Pay, and Maximum Amount Allowed details are updated.
 - c. **Redeem**: Select Points or Amount from the list.
 - i. Select **Points** to redeem a specified number of points.
 - i. **Points**: Enter the number of points to redeem.
 - ii. Select **Amount** to enter an amount in the property currency.
 - i. **Amount**: Enter a currency amount; the points to redeem are calculated based on the award type and currency conversion.
 - iii. Click **Post Redemption**.

Table 3-1 Redemption / Payment Field Explanations

Redemption	Payment Field Explanations
Billing Windows	Billing windows (sub-accounts) where the Payee has a valid primary loyalty membership are enabled for selection.

Redeeming Loyalty Awards for Rate

With an Oracle Hospitality OPERA Cloud Service, Loyalty subscription or when the Loyalty Membership Configuration OPERA Control is active and integrated with the OPERA Cloud Customer Loyalty Tracking Cloud Service, member award points can be redeemed for rate awards; offered based on specific validity dates, the member's tier or level, and other factors. Once redeemed, the **Points Available** value in profile membership is updated to show the deduction in points (or increase based on updates/cancellations). An Award record is also created for each night on the profile membership panel. For more information, see [Managing Profile Membership \(Loyalty Cloud Service\)](#)

Booking Rate Award Redemption Reservations

To redeem a stay, the available points balance must be sufficient to cover all nights. The rates displayed are based on the available points balance, member level/tier, validity dates, and other criteria. If the member does not have sufficient points for any of the available awards, no Awards appear.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Look To Book Sales Screen**.
2. Enter the caller and contact information (Available when the Caller Information OPERA Control is active).
3. Click **New Reservation**.
4. In the search panel, complete the following:
 - a. **Stay Details:** Enter the reservation stay details.
 - b. **Name:** Enter and search for the loyalty member profile.
 - i. Select the profile from the search results and click **Select**.
 - ii. The **Member Number** field is populated automatically when **Auto Populate from Name** is checked in the membership type.
 - c. **Redeem Awards:** Select the check box to indicate an Award reservation. NOTE: The **Rooms** field is set to 1 and disabled.
5. Click **Search**. The Availability panel displays a list of the the available Awards rates and the points per night.
6. Click the rate and room type cell to select for the reservation, then click **Select**
7. Complete the entry of the reservation details. For more information, see [Booking a Reservation](#).

 **Note:**

The **Stay Information** panel displays the Total Points Needed and the Remaining Points Balance.

Updating Rate Award Redemption Reservations

When increasing the length of stay additional points will be deducted and an additional Award will show for each additional night on the profile membership [Award List](#) .

When reducing the length of stay, the deducted points will be credited and the Award will show as cancelled on the profile membership Award List.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Look To Book Sales Screen**.
2. Enter the caller and contact information (Available when the Caller Information OPERA Control is active).
3. Select the reservation in the search result, then click **I Want to . . .**, **Reservation**, or click the confirmation number to open the Reservation Presentation page.
4. Update the stay details as needed.
5. For more information, see [Editing a Reservation](#)

Canceling Rate Award Redemption Reservations

When cancelling an Award reservation the deducted points will be credited and the Award will show as cancelled on the profile membership [Award List](#) .

1. For more information, see [Managing Reservation Cancellation](#)

Redeeming Loyalty Awards for Upgrade

With an Oracle Hospitality OPERA Cloud Service, Loyalty subscription or when OPERA Cloud is integrated with OPERA Customer Loyalty Tracking Cloud Service v5.6 or another loyalty solution, member award points can be redeemed for a room type upgrade; offered based on specific validity dates, the member's tier or level, and other factors.

For room type upgrade awards, a **Search available member upgrade awards** link appears in reservation [Book Now](#) when an upgrade award is available for the dates and the room type booked. The **Search available member upgrade awards** link also appears in [reservation presentation](#) for future or arrival reservations based on the Member Upgrade Award Prompt All Dates OPERA Control.

Note:

The **Search available member upgrade awards** link does not display during reservation check in.

Loyalty

Once redeemed, the **Points Available** value in profile membership is updated to show the deduction in points (or increase based on updates/cancellations). An Award record is also created for each night on the profile membership panel. For more information, see [Managing Profile Membership \(Loyalty Cloud Service\)](#).

Booking a Room Type Upgrade Award Redemption Reservation

 **Note:**

The upgrade offer displayed is based on the available points balance, member level / tier, validity dates and other criteria. If the member doesn't have sufficient points no upgrade award link will be displayed.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Look To Book Sales Screen**.
2. Enter the caller and contact information (Displayed when the Caller Information OPERA Control is active).
3. Click **New Reservation**.
4. In the search panel
 - a. Enter the reservation stay details:
 - b. **Name:** Enter and search for the loyalty member profile.
 - i. Select the profile from the search result and click **Select**.
 - ii. The **Member Number** field is populated.
5. Click **Search**.
6. Click the rate and room type cell to select for the reservation, then click **Select**.
7. The Book Now page is displayed to enter the reservation details.
8. Click the **Search available member upgrade awards** link at the top of the page.

 **Note:**

The upgrade offer displayed is based on the available points balance, member level / tier, validity dates and other criteria. If the member doesn't have sufficient points no upgrade award link will be displayed.

- a. The Member Award Upgrade page displays the details of the upgrade available.
- b. Click **Select** to confirm and proceed with the upgrade.

 **Note:**

The room type is updated and **Room Type to Charge** (RTC) retains the original room type.

9. Complete the entry of the reservation details; For more information, see [Booking a Reservation](#).
10. Click **Book Now**.

Adding an Upgrade Award to an Existing Reservation

To redeem an upgrade, the available points balance must be sufficient to cover all nights and the room type to upgrade to must be available for the reservation dates.

Note:

The upgrade offer is based on the available points balance, member level/tier, validity dates, and other criteria. If the member does not have sufficient points, no awards appear.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservations**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click the **I Want To . . .** and select **Reservation**, or click the confirmation number in the reservation presentation.
4. Click the **Search available member upgrade awards** link at the top of the page.
 - a. The Member Award Upgrade page displays the details of the upgrades available.
 - b. Select the upgrade you would like to apply.
 - c. Click **Select** to confirm and proceed with the upgrade.

Note:

The room type is updated and **Room Type to Charge (RTC)** retains the original room type.

Updating a Room Type Upgrade Award Redemption Reservation

When increasing the length of stay additional points are deducted and an additional award will show for each additional night on the profile membership Award List panel.

When reducing the length of stay, the deducted points are credited less any cancellation penalties and the award appears as cancelled on the profile membership Award List panel.

When changing the room type, the deducted points are credited less any cancellation penalties and the award appears as cancelled on the profile membership Award List panel.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Look To Book Sales Screen**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, then click **I Want to . . .**, **Reservation**, or click the confirmation number to open the Reservation Presentation page.

4. Update the stay details as needed.
5. For more information, see [Editing a Reservation](#).

Canceling a Room Type Upgrade Award Redemption Reservation

When cancelling an Award reservation the deducted points will be credited and the Award will show as cancelled on the profile membership Award List panel.

1. For more information, see [Managing Reservation Cancellation](#).

Redeeming Promotional e-Certificate

Prerequisites for Redeeming Promotional e-Certificates

Promotional e-Certificates are available in OPERA Cloud when integrated with Oracle Hospitality OPERA Customer Loyalty Tracking Cloud Service and are used to offer a promotional rate via redemption of an e-Certificate issued to loyalty members.

Promotional e-Certificates are limited to one promotion per reservation. Multiple e-Certificates for the same promotion can be selected for a reservation.

Applying e-Certificates to New Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Look To Book** Sales Screen.
2. Enter the caller and/or contact information (if applicable) and then click **New Reservation**.
3. In the search panel enter the criteria for the reservation
 - a. In the **Profile** options section
 - i. **Name**: Click to search for the guest/member profile by surname.
 - Enter search criteria and click **Search**.
 - Select the profile in the result and click **Select**.
 - ii. **Membership Number**: Click to search for guest/member profile by membership number.
 - iii. **eCertificate**: Click to view the list of e-Certificates allocated it to the guest profile.
 - i. Select certificate(s) from the Available list and use   to move the selected certificate to the Selected panel (for the same promotion).
 - ii. Click **OK**.
 - b. In the **Rate and Room** options section.
 - i. **Promotion**: The field will populate with the promotion based on the selected e-Certificates (input disabled).
 - c. Click **Search**.
 - d. Select the promotion rate associate with the e-Certificate promotion in the rate grid.
 - e. Select the required room type for the reservation.
 - f. Click **Select**.

 **Note:**

The Stay Information panel in **Book Now** will display the selected e-Certificate number and promotion code.

 **Note:**

In OPERA Customer Loyalty Tracking Cloud Service the selected e-Certificate status is updated to **Reserved**.

For more details on Booking a Reservation See [Booking a Reservation](#).

Applying e-Certificates to Existing Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to . . .** and select **Reservation**, or click the confirmation number to open Reservation Presentation.
4. Select **Stay Details** and then click **Edit**.
 - a. **eCertificate**: Click to view the list of e-Certificates allocated it to the guest profile.
 - i. Select certificate(s) from the Available list and use   to move the selected certificate to the Selected panel (for the same promotion).
 - ii. Click **OK**.
 - b. **Rate Code**: Select the rate code that is associate with the promotion e-Certificate.
5. Click **Save**.

 **Note:**

If the incorrect rate code is selected you will be prompted to launch Look to Book to select the required rate code for promotion.

For more details on updating a Reservation see [Editing a Reservation](#).

 **Note:**

In OPERA Customer Loyalty Tracking Cloud Service the selected e-Certificate status is updated to **Reserved**.

Managing Reservations

Using Manage Reservations you can:

- Search for past, in house or future reservations. You can filter your search by guest name, travel agent, arrival or departure dates, room and other criteria. The search results provide reservation summary information. For more information, see [Search Screens](#).
- Manage reservations. The Manage Reservations screen provides access to reservation stay details, linked profiles, deposits/cancellations, memberships, guest messages, preferences, traces, shares and other details.
- Assign Room. Assign a room to a reservation and view room information.
- Generate a registration card or proforma invoice
- Copy or cancel reservations
- Navigate to Linked Profile. View and manage the primary profile linked to a reservation.
- Navigate to Billing. View billing information for in house reservation, where you can post charges and adjustments, transfer postings (within a folio or to/from other rooms), make payments, generate folios, and so on. You can also access the Billing details for checked out reservations.

Choose from the following that correspond to the groups organized as on the Reservation Overview screen for more detail on each panel.

Credit Card Authorization Reversals

OPERA Cloud allows you to switch the credit or debit card authorized for the reservation to a different credit card or payment method at any time during the guest's stay. For example, the guest uses a Visa card when checking in but decides to use a different card or other payment method at checking out.

If the credit card vendor supports authorization reversal and the card type is configured for Authorization Reversal Allowed in the OPERA Controls Credit Card group, changing a credit card on a reservation triggers OPERA Cloud to send an authorization reversal amount on the card to the credit card vendor for releasing the amount on hold.

Changing an Authorized Credit Card Payment Method

Guests can switch the credit card authorized for their reservation to another payment type. If the Authorization Reversal Allowed setting is configured for the cardholder's card type in the OPERA Controls Credit Card group, OPERA Cloud will send an authorization reversal request to the cardholder's credit card company. Guests can change their card regardless of whether reversal is configured.

1. From the **OPERA Cloud** menu, open the guest's reservation using either **Quick Launch** or by searching for the guest in Manage Reservations.
2. If switching cards prior to checkout, click **I Want To . . .** and then select **Payment Instructions**.

3. Enter the new payment instructions.
4. If switching cards at checkout, click **I Want To . . .** and then select **Check Out**.
You can also use **I Want To . . .** to view credit card authorizations history.
5. Click the payment method drop-down and select a new payment type.
If selecting a different card type, swipe or enter the card number, expiration date, and cardholder name
6. Complete the remaining check out tasks.
7. Click **Check Out Now**.
At checkout, OPERA Cloud sends the credit card authorization reversal to the vendor only after you select **Check Out Now**. If you perform settlement during checkout but leave the checkout process, authorizations will remain on the card until checkout is finalized.

Viewing Recently Viewed Reservations

Prerequisites for Viewing Recently Accessed Records

1. From the **OPERA Cloud** menu, select **Reservations**, and then select **Manage Reservation**.
2. Click **I Want to...**
3. Recently viewed activities are listed in the **View** column.
4. Click a **Reservation** link to [Edit the Reservation](#).

Viewing Reservation Rate Information

You can view a detailed daily breakdown of the rate information for any reservation from reservation search result or from with the Reservation Overview or Stay Details panels. The rate information summary shows a sum for [Fixed Charges](#) setup on the reservation , an estimated total for charges routed on the [reservation](#) and provides a total for deposit [payments](#) posted.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click the **Price** displayed in the **Rate** column to display the Rate Information.

Or

Click **I Want to...** , **Reservation** to open the reservation.

- a. Click **Stay Details**.
- b. Click the Price displayed below **Rate** to display the Rate Information.
- c. Click  to the right of the **Amount** to view a breakdown of packages and taxes for a specific date.
 - i. Click **Back**.

- d. Click the vertical ellipsis and select **View in Currency** to display the reservation pricing in an alternate currency based on the applicable [exchange rate](#). (Available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active).
 - i. Select a currency from the list and click **Select**.
- e. Click **Close**.

Viewing Guestware Preferences and Incidents

Prerequisites for Viewing Guestware Preferences and Incidents

When integrated with [Guestware](#) you can view the guest preferences and incidents reported in Guestware.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . . Preferences** or open the reservation presentation and click the **Preferences** details link.
4. Click the vertical ellipsis **Actions** menu and select **Guestware Preferences and Incidents**.
5. Click **+** to expand each card.

Viewing Reservation Stay Revenue

Reservation (Stay) Revenue summary information is available for checked out reservations.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to . . . Stay Revenue** or open the reservation and select **Stay Revenue**.

Editing a Reservation

The Reservation Presentation page provides you with access to all reservation details, detail links and actions.

With the Sell Message OPERA Control you will receive sell messages at the top of Look to Book, click **X** to close. Click **Sell Messages** to view these messages at a later time.

When the Alerts OPERA Control is active reservation alerts may be displayed, based on the status of the reservation.

An **Additional Reservations** tab is displayed for any linked reservations. For more information, see [Linked Reservations](#).

The Stay Details panel determines the reservation's arrival and departure dates, room type and rate details, and any block associated with the reservation. You can change stay details such as rate codes, room types, and length of stay. When the Reservation Color Definition OPERA Control is set to Reservation you can also select a color to display on various reservation pages.

Loyalty Award rates are not listed when editing Stay Details. Select **Edit with Look To Book** in order to update a reservation with an Award rate code. For more information, see [Redeeming Loyalty Awards for Rate](#)

When the Reservation Upgrade OPERA Control is active you may see a notification regarding upgrade offers; click the notification to view the offers. For more information, see [Managing Reservation Upgrade Offers](#).

When the Enrollment OPERA Control is active, you might receive a notification regarding Enrollment; click link to enroll the guest. For more information, see [Enrolling Guests in External Loyalty Programs](#).

Increasing the nights of an in house reservation may require additional prepayment. For more information, see [About Advanced Folio Payment \(Prepayment\)](#).

Editing a Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to . . .**, **Reservation** or open the reservation by clicking the confirmation number.

Note:

Details panels selected in the default or previously selected Presentation Panel Tab are displayed. For more information, see [Presentation Pages](#).

4. The Guest business card is at the top of the page; click the guest name link to open [profile presentation](#) to update the linked profile.
5. Click  to display various actions for this reservation.
6. **Reservation Overview Panel:**
 - a. When the Reservation Upgrade OPERA Control is active you may see a notification regarding upgrade offers; click the **Room Upgrade Available for this Reservation** link to view the offers. For more information, see [Managing Reservation Upgrade Offers](#).
 - b. When the Enroll OPERA Control is active you may see a notification regarding Enrollment; click link to enroll the guest. For more information, see [Enrolling Guests in External Loyalty Programs](#).

 **Note:**

The fields displayed are based on your chain or property customization and the OPERA Controls active

- c. Click **Edit** to update the fields available in the Overview panel.
- d. Update the details.

 **Note:**

With the Fixed Rates OPERA Control active you can update (override) the rate amount and select the Fixed Rate checkbox to fix the rate to the specified amount.

- f. Click **Save**.

 **Note:**

All reservation detail links are available to view and update related reservation detail. See the Reservation Detail Links table below.

7. Stay Details

- a. Select **Stay Details**.
- b. Select the **Details** tab then click **Edit**.
 - i. **Arrival:** Enter or select the arrival date.
 - ii. **Nights:** Enter the number of nights; the departure date is updated.
 - iii. **Departure:** Enter or select the departure date.
 - iv. **Rooms:** Enter the number of rooms required; a multi-room reservation must be split into separate reservations , for room allocation, prior to check in. For more information, see [Managing Linked Reservations](#).

 **Note:**

If the number of rooms entered equals or exceeds the Block Creation Prompt Threshold Rooms OPERA Control you are prompted to create a reservation or convert the reservation to a block.

- v. **Adults:** Enter the number of adults.
- vi. **Children:** Enter the children

- i. If the Child Rates By Defined Buckets OPERA Control is active, enter the number of children per age range.
- vii. **Room Type:** Select a room type to book from the list. The selected room type is deducted from inventory.
- viii. **Room Type to Charge:** Enter a room type to charge from the list; use this for complimentary upgrades by selecting the room type payable if different to the room type booked. (Available when the Room Type to Charge OPERA Control is active)
- ix. **Rate Code:** Enter or select a rate code from the list
- x. **Rate Amount:** Amount populates based on rate code and room type. Enter an amount to override the price. If you entered zero **Adults**, the single-person rate amount defined for the rate code selected is displayed.
 - i. **Fixed Rate:** Select the check box to fix the **Rate** to the specified amount (available when the Fixed Rates OPERA Control is active).
 - ii. Click **Refresh Rates** to update the Rate Amount and Effective Rate Amount following any changes in the reservation stay details. The Effective Rate Amount considers any add to [rate package items](#).
 - iii. Click **Rate Info** to view detailed rate information. For more information, see [Viewing Reservation Rate Information](#)
- xi. **eCertificates:** Select promotional e-certificates to redeem. For more information, see [Redeeming Promotional e-Certificate](#).
- xii. **Market:** Select a market code from the list
- xiii. **Source:** Select a source code from the list.
- xiv. **Promotion:** Select a promotion code from the list.
- xv. **Update Market Code with Rate Code Change:** Select checkbox to update market code based on the selected rate code.
- xvi. **Update Source Code with Rate Code Change:** Select checkbox to update source code based on the selected rate code
- xvii. **Discount:** (Available when the Reservation Discounts OPERA Control is active and the selected rate code is setup as eligible for discount. For more information, see [Configuring Rate Code Financial Details](#).
 - i. **Discount Amount:** Enter a fixed amount discount to adjust the nightly rate.
 - ii. **Discount Percentage:** Enter a percentage discount to adjust the nightly rate.
 - iii. **Discount Reason:** Select a discount reason from the list.

 **Note:**

When the **Rate Code** is updated the discount amount/percentage and reasons values are removed and the fields disabled if the rate code is not eligible for discount

- xviii Reservation Type:** Select a reservation type from the list to determine if the reservation deducts a room from inventory. For more information, see [Reservation Types](#).
- xix. Origin:** Select a booking origin from the list; used for statistical purposes. For more information, see [Configuring Origin Codes](#).
- xx. Arrival Time:** Enter the expected arrival time.
- xxi. Departure Time:** Enter the expected departure time.
- xxii. Print Rate:** Select checkbox to display the rate amount on stationery such as the registration card and confirmations.
- xxiii. Tax Type:** Select a tax type from the list (Available when the Tax Type OPERA Control is active). For more information, see [Configuring Tax Types](#) .
- xxiv. Display Color:** Select a category from the list to assist in identifying guests with special needs or require special treatment. (Available when the Reservation Color Definition OPERA Control is set to Reservation). For more information, see [Configuring Reservation Colors](#).
- xxv. Purpose of Stay:** Enter or select the purpose of stay from the list. For more information, see [Configuring Purpose of Stay](#) .
- xxvi. Visa Number:** Enter travel visa number.
- xxvii. Visa Issue Date:** Enter or select the issue date of the visa.
- xxviii. Visa Expiry Date:** Enter or select the expiry date of the visa.
- xxix. Custom Reference Number:** Enter a custom reference number. You can search for reservation using this reference number.
- xxx. Adults Tax Free:** Select the number of tax free adults.
- xxxi. Children Tax Free:** Select the number of tax free children.
- xxxii. Guest Type:** Select a guest type from the list. For more information, see [Configuring Guest Types](#).
- xxxiii. Guest Status:** Select a guest status from the list. For more information, see [Configuring Guest Status](#).
- xxxiv. Entry Date:** Enter or select an entry date in country.
- xxxv. Entry Point:** Select an entry point from the list. For more information, see [Configuring Country Entry Points](#).
- xxxvi. Next Destination:** Enter the next destination for the guest.
- xxxvii. Expected Time of Return:** Enter a return time (Available when Advanced Check in OPERA Control is active).
- i. ETR Comments:** Enter any comments related to the guest return.
 - ii. Receive External Notification:** Select checkbox for guest to receive external notifications.
- xxxviii. Click Save.**

8. Daily Details

You can modify a subset of the reservation details for each day of the stay. Use this when there are rate code / pricing changes during the stay. Confirmations generated can include these daily changes.

 **Note:**

The room type booked cannot be changed in daily details.

 **Note:**

The Effective Rate Amount considers any add to [rate package items](#).

- a. Select **Stay Details** and click **Edit**.
- b. Select the **Daily Details** tab to edit the daily rate details.
 - i. Select a date in the table, click the **Vertical Ellipsis**, and select **Edit**.
 - i. **Apply Until:** Enter an end date to apply the changes to - all nights up to the date entered will be updated.
 - ii. **Adults:** Enter the number of adults
 - iii. **Children:** Enter the number of children
 - i. If the Child Rates By Defined Buckets OPERA Control is active, enter the number of children per age range.
 - iv. **Rate Code:** Enter or select a rate code from the list
 - v. **Rate Amount:** The rate amount / price populates based on the rate code and room type selected; enter an amount to override the default price. If you entered zero **Adults** the single-person rate amount defined for the rate code and room type is displayed.
 - i. **Fixed Rate:** Select the check box to fix the Rate to the specified amount (available when the Fixed Rates OPERA Control is active).
 - ii. Click **Rate Info** to view detailed rate information. For more information, see [Viewing Reservation Rate Information](#).
 - vi. **Room Type to Charge:** Enter a room type to charge from the list; use this for complimentary upgrades by selecting the room type payable if different to the room type booked. (Available when the Room Type to Charge OPERA Control is active)
 - vii. **Market:** Select a market code from the list
 - viii. **Source:** Select a source code from the list.
 - ix. **Discount:** (Available when the Reservation Discounts OPERA Control is active and the selected rate code is setup as eligible for discount. For more information, see [Configuring Rate Code Financial Details](#))
 - i. **Discount Amount:** Enter a fixed amount discount to adjust the nightly rate.
 - ii. **Discount Percentage:** Enter a percentage discount to adjust the nightly rate.
 - iii. **Discount Reason:** Select a discount reason from the list.

 **Note:**

When the **Rate Code** is updated the discount amount/percentage and reasons values are removed and the fields disabled if the rate code is not eligible for discount.

- x. **Company / Corp ID:** Click to search and select a company profile.
 - xi. **Travel Agent / IATA:** Click to search and select a travel agent profile.
 - xii. **Source / Source ID:** Click to search and select a source profile.
 - xiii. **Group:** Click to search and select a group profile.
 - xiv. **Reservation Contact:** Click to search and select a contact as the reservation contact.
 - xv. **Billing Contact:** Click to search and select a contact as the billing contact. (Available when the Reservation Contact OPERA Control is active). For more information, see [Managing Reservation Linked Profiles](#)
- ii. Click **Save**.
 - iii. Repeat for other nights as required.
- c. Click **Save**.
- 9. Updating Daily Details (All Dates)**

You can quickly modify a subset of the reservation details for each day of the stay. Use this when there are occupancy, rate code / pricing changes during the stay. Reservation confirmations can include these daily changes.

 **Note:**

Daily Details is read-only for sharing reservations (Applicable when the Sharers OPERA Control is active).

- a. Select **Stay Details** and then click **Edit**.
- b. Click **Edit Daily Details** then update the details for each night of the reservation:
 - i. **Adult:** Enter the number of adults.
 - ii. **Child:** Enter the number of children.
 - iii. **Ages Of Children:** Enter the child ages. (Available when the Child Rates By Defined Buckets OPERA Control is active).
 - iv. **Children Bucket 4:** Enter the child age (Available when the Child Rates By Defined Buckets OPERA Control is active).
 - v. **Children Bucket 5:** Enter the child age. (Available when the Child Rates By Defined Buckets OPERA Control is active).
 - vi. **Rate Code:** Enter or select a rate code from the list. (LOYALTY) To select an Award Rate, edit the reservation in [Look To Book](#) .

zero Adults the single-person rate amount defined for the rate code and room type is displayed.

- viii. **Fixed Rate:** Select check box to fix the rate to the amount entered in **Rate** (Available when the Fixed Rate OPERA Control is active).
- ix. **Room Type (all nights):** Select a room type from the list.
- x. **Room Type To Charge:** Select a room type to charge from the list; use this for complimentary upgrades by selecting the room type to be charged, if different to the room type booked. (Available when the Room Type to Charge OPERA Control is active).
- xi. **Discount Amount:** Enter a fixed amount discount to adjust the nightly rate. (Available when the Reservation Discounts OPERA Control is active and the selected rate code is setup as eligible for discount).
- xii. **Discount Percent:** Enter a percentage discount to adjust the nightly rate (Available when the Reservation Discounts OPERA Control is active and the selected rate code is setup as eligible for discount).
- xiii. **Discount Code:** Select a discount reason from the list. (Available when the Reservation Discounts OPERA Control is active and the selected rate code is setup as eligible for discount).
- xiv. **Market Code:** Select a market code from the list.
- xv. **Source Code:** Select a source code from the list.
- xvi. **Apply To Future Nights:** Select check box to apply the nightly changes to all future nights.
- xvii. Click **Save**.

Changing Stay Dates

In order to change stay dates, room type or rate code you are directed to the Look to Book Sales Screen to confirm availability.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to . . .**, **Reservation** or open the reservation by clicking the confirmation number.
4. Select **Stay Details** and then click **Edit with Look to Book** to launch Look to Book.
 - a. When the [Look To Book Sales](#) screen appears, make changes to stay dates, number of guests, and other details.
 - b. If changing the room type/rate, click and drag a different room type/rate to the Trip Composer and then click **Confirm**.

Assigning a Block to a Reservation

To assign a reservation to an existing block and pickup a room from the [block allocation](#).

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.

2. Enter search criteria, then click **Search**.
3. Select the reservation in the search result, click **I Want to . . .**, then select **Stay Details**.
 - a. **Block Code**: Click **Assign Block**.
 - i. Select a block from the search result then click **Select**

 **Note:**

Click **Modify Search Criteria** to update the default search criteria and search for other block dates.

Unassigning a Reservation from a Block

To remove (release) a reservation from a block allocation and pickup a room from house availability.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, then click **Search**.
3. Select the reservation in the search result, click **I Want to . . .**, then select **Stay Details**.
 - a. **Block Code**: Click **Remove**.

Managing Reservation Confirmations

Reservation confirmations can be generated for any profile type linked to the reservation; including the Caller (available when Caller Info OPERA Control is active).

When the Confirmation Letter for Cancel Reservation OPERA Control is active, you are prompted to generate a cancellation confirmation letter when [cancelling a reservation](#). Select a suitable cancellation confirmation template from the list.

Reservation confirmations can be previewed to print, emailed or delivered via SMS (Available when the Text message OPERA Control and integration to an SMS provider are active). Email and SMS confirmation delivery is configured in [Delivery Management](#). For email delivery, you can choose to embed the confirmation in the email body (HTML) or send as a PDF attachment.

You can setup default confirmation templates for each profile type in OPERA Controls, for more information, see [OPERA Controls — Reservations](#).

When the Multi-language OPERA Control is active the reservation confirmation / cancellation templates listed are based on the language specified in the selected profile to receive the communication. For more information, see [About Stationery Editor](#).

You can also customise a confirmation for a specific reservation using the [Rich Text Editor](#).

Adding a Reservation Confirmation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Confirmations** or click the **Confirmations** link in Reservation Presentation.
4. Click **Email/Print**.
 - a. **Send To:** Select the recipient name; all profiles linked to the reservation are listed.
 - b. **To Email:** Select the recipient email address if the selected profile has more than one email address.
 - i. Click **New/Edit Email** to add an email address.
 - c. **Confirmation Letter:** Select the template to generate from the list.

- d. **Secondary letter**
 - e. **Send To:** Select the recipient name; all profiles linked to the reservation are listed.
 - f. **To Email:** Select the recipient email address if the selected profile has more than one email address.
 - i. Click **New/Edit Email** to add an email address.
 - g. **Confirmation Letter.** Select the template to generate from the list.
5. Click **Send** to generate.
 6. Click **Save** to add to the reservation and transmit at a later time.

Customizing a Reservation Confirmation

Prior to sending you can customise a confirmation for a specific reservation.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Confirmations** or click the **Confirmations** link in Reservation Presentation.
4. Click **Email/Print**.
 - a. **Send To:** Select the recipient name; all profiles linked to the reservation are listed.
 - b. **To Email:** Select the recipient email address if the selected profile has more than one email address.
 - c. **Confirmation Letter:** Select the template to generate from the list.
 - d. Click **Customize** to launch the [Rich Text Editor](#).
 - i. Update details in the confirmation.
 - e. Click **OK** to save changes.
5. Click **Send** to generate.
6. Click **Save** to add to the reservation and transmit at a later time.

Editing a Reservation Confirmation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Confirmations** or click the **Confirmations** link in Reservation Presentation.
4. Select a confirmation from the list, click the vertical ellipsis **Actions** menu, and select **Edit**.
5. Update details.
6. Click **Save**.

Previewing a Reservation Confirmation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.

2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .** then **Confirmations** or click the **Confirmations** link in Reservation Presentation.
4. Select a confirmation from the list, click the vertical ellipsis **Actions** menu, and select **Preview**.

Sending (Generating) a Reservation Confirmation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .** then **Confirmations** or click the **Confirmations** link in Reservation Presentation.
4. Select a confirmation from the list, click the vertical ellipsis **Actions** menu, and select **Send**.

Adding an SMS Reservation Confirmation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .** then **Confirmations** or click the **Confirmations** link in Reservation Presentation.
4. Click **Vertical Ellipsis** and select **Text**.
 - a. **Send To:** Select the recipient name; all profiles linked to the reservation are listed.
 - b. **To Mobile:** Select the recipient mobile number if the selected profile has more than one number.
 - c. **Secondary**
 - d. **Send To:** Select the recipient name; all profiles linked to the reservation are listed.
 - e. **To Mobile:** Select the recipient mobile number if the selected profile has more than one number.
5. Click **Send** to transmit SMS.
6. Click **Save** to add to the reservation and transmit at a later time.

Editing an SMS Reservation Confirmation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .** then **Confirmations** or click the **Confirmations** link in Reservation Presentation.
4. Select a confirmation (text) from the list, click the vertical ellipsis **Actions** menu, and select **Edit**.
5. Update details.

6. Click **Save**.

Sending an SMS Reservation Confirmation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .** then **Confirmations** or click the **Confirmations** link in Reservation Presentation.
4. Select a confirmation (text) from the list, click the vertical ellipsis **Actions** menu, and select **Send**.

View Closing Script

Available when the Closing Script OPERA Control is active. See [Closing Scripts](#).

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Confirmations** or click the **Confirmations** link in Reservation Presentation.
4. Click the vertical ellipsis **Actions** menu and select **Closing Script**.

Reinstating Reservations

Prerequisites for Reinstating Reservations

Reinstating a reservation deducts the specified room type from inventory, based on selection of a deduct from inventory Reservation type selected in the reservation. You must have the required overbooking tasks assigned to your role(s) to override a closed rate code or overbook the room type or property (house).

Loyalty

You cannot reinstate rate, package or upgrade award reservations (Available when the Award Points Redemption OPERA Control is active); these reservations must be re-booked. For more information, see [Redeeming Loyalty Awards](#)

Reinstating Cancelled Reservations

You can reinstate a cancelled reservation with an arrival date the same as or greater than the current business date. When reinstating a share reservation, a prompt is displayed for each share reservation; select **Yes** to reinstate the share reservation.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Select **Cancelled** from the **Reservation Status** list and enter additional search criteria, then click **Search**.
3. Select the cancelled reservation in the search result, then click **I Want to. . .** and select **Reinstate Reservation**.

Reinstating No Show Reservations

You can reinstate a no show reservation with a departure date the same as or greater than the current business date. The arrival date is automatically updated to the business date, and the original departure date remains on the reservation.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Select **No Show** from the **Reservation Status** list and enter additional search criteria, then click **Search**.
3. Select the no show reservation in the search result, then click **I Want to. . .** and select **Reinstate Reservation**.
4. The reservation is reinstated and the assigned room is removed. If the reservation is part of a sharing reservation and one of the share reservations is still assigned this room, then the reservation is reinstated and the room and share are kept.

Managing Reservation Additional Information

Prerequisites for Reservation Additional Information

The Additional Information panel is available to capture additional, country-specific information required for integration with fiscal partner, eInvoice solutions and other similar requirements.

The attributes displayed and enabled for update are dependant on OPERA Controls and country-specific integration requirements. For further information please refer to [Oracle Hospitality Localization Center for Hotel](#).

Editing Profile Additional Information

1. From the **OPERA Cloud** menu, select **Booking**, select **Reservations**, and select **Manage Reservations**.
2. Enter search criteria and click **Search**.
3. In the search results click **I Want to. . .**, select **Additional Information** or open the profile and click **Additional Information** in Profile Presentation.
4. Click **Edit**.
 - a. Update details
5. Click **Save**.

Assigning a Room to a Reservation

You can assign a room to a reservation from the Manage Reservation screen.

From Manage Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.

3. Locate the reservation in the search results and click **Assign Room** .
4. In the Room Search panel enter search criteria and click **Search** . See [Available Room Search](#).
5. In the search results, select a room then click **Select Room** to assign to the reservation.
6. When the Do Not Move Room OPERA Control is active, select the **Do Not Move** check box, then click **Select Room** to assign to the reservation and to set a Do Not Move lock on the reservation. A lock symbol appears to the right of the room to indicate the Do Not Move status.

Overriding Room Selection (if prompted)

In the Room Search, you might be prompted to select another room if the room you assigned is unavailable.

1. Click **Select Another Room** (if prompted) to return to the search results and assign an alternate room.
2. Click **Accept Room Selection** to accept the warning and continue with the room assignment.

Managing Reservation Prepaid (Gift) Cards

[Prerequisites for Managing Reservation Prepaid \(Gift\) Cards](#)

Issuing Reservation Prepaid Card

1. From the **OPERA Cloud** menu, select **Booking**, select **Reservations**, and then select **Manage Reservations**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the results, click **I Want To . . .**, and select **Prepaid Card** or open the reservation presentation, and click **Prepaid Card** details link.
4. Click **Issue Card** and complete the following:
 - a. **Interface**: Select the Stored Value System from the list.
 - b. **Card Number**: Enter the gift card number.
 - c. **Name/First**: Default the primary profile linked to the reservation.
 - d. **PIN**: Enter the PIN (Available when the SVS interface is flagged to Show Prepaid Card PIN).
 - e. **Amount**: Enter the issue amount.
 - f. **Payment Options**:
 - i. **Post to Room**: Select the post issue amount to guest folio (reservation account).
 - ii. **Post Payment**: Select the post payment.
 - i. **Method**: Select a payment method from the list.
 - ii. **Card Number**: Enter credit card number.
 - iii. **Expiration**: Enter credit card expiry date.
 - iv. **Card Holder**: Enter card holder name.
 - g. Click **Issue Card**.

Managing Reservation Prepaid Card

Prepaid (Gift) Cards are managed for reservations on Arrival, Departure, or In house status. The Manage Prepaid link is not available for reservations in Checked Out status. Prepaid cards for No Show or Canceled reservations are managed via Prepaid Cards. [Managing Prepaid \(Gift\) Cards](#).

Note:

Card details are fetched from the Stored Value system.

1. From the **OPERA Cloud** menu, select **Booking**, select **Reservations**, and then select **Manage Reservations**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the results, click **I Want To . . .** and select **Prepaid Card** or open the reservation presentation, and click **Prepaid Card** details link.
4. Select a card, click the vertical ellipsis, and click **Manage**.
5. For further details, see [Managing Prepaid \(Gift\) Cards](#).

Managing Custom Charge Exemption

[Prerequisites for Managing Custom Charge Exemption](#).

Custom Charges are used to post (city) taxes based on number of adults and children occupying the room .The amount of the custom charge is calculated by multiplying a per person price by the number of adults and children in the reservation. For more information, see [Configuring Custom Charges](#)

Use the Additional Information panel to record country-specific information required for integration with fiscal partners, e-Invoice solutions, and other similar requirements. The attributes displayed and enabled for update depend on the OPERA Controls and country-specific integration requirements. For further information refer to: [Oracle Hospitality Localization Center for Hotel](#).

If you add a custom charge exemption then the number of persons eligible for a custom charge is reduced by one for each custom charge exemption added. It is not possible to have more custom charge exemptions than persons on a reservation.

Note:

When reservation stay dates and/or number of persons (Adults and/or Children) are updated a warning message will display "The stay dates and/or number of persons changed. Please verify the Custom Charge exemptions for the reservation."

Editing Custom Charge Exemption

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.

2. Enter search criteria, click **Search**
3. Select the reservation in the search result, click **I Want to. . .** and select **Additional Information** or click the **Additional Information** link in Profile Presentation.
4. Click **Edit**.
5. Update the details.
6. Click **Save**.

Managing Reservation eCoupons

Prerequisites for Managing Reservation eCoupons

eCoupons are complimentary items such as drinks / meals etc offered and redeemed by a guest in POS outlets (bar, cafe or restaurant); the charge for which is posted to a specified posting master room reservation. When the Attach eCoupon Prior to the Arrival Date OPERA Control is active, the eCoupon link and panel is available as soon as the reservation is created and eCoupons can be managed immediately. When the OPERA Control is inactive, the eCoupon panel will only be displayed and accessible from the reservation's arrival date.

If specific rate codes entitle guests to an eCoupon the eCoupon is automatically added (with default quantity) to the reservation. In the event a reservation is updated with different rate code, the eCoupons automatically added will be removed.; any eCoupons applicable to the new rate code will be automatically added to the reservation. See [Configuring Reservation eCoupons](#) .

A Reservation [eCoupon report](#) is available to list Reservation eCoupons.

Adding a Reservation eCoupon

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **eCoupon** or open the reservation presentation and click **eCoupon** details link.
4. Click **New** and enter the following details:
 - a. **Code**: Select an eCoupon from the list
 - b. **Quantity**: Enter a quantity of the eCoupon to add to the reservation; a default quantity will populate.
 - c. **Reason**: Enter the reason for adding the eCoupon to the reservation.
5. Click **Save**.

Editing a Reservation eCoupon

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To...**, click **eCoupon** or open the reservation presentation and click **eCoupon** details link.
4. Select the eCoupon and click the vertical ellipsis **Actions** menu, and click **Edit**.

- a. Update quantity
 - b. Enter additional reason
5. Click **Save**.

Deleting a Reservation eCoupon

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To...**, click **eCoupon** or open the reservation presentation and click **eCoupon** details link.
4. Select the eCoupon and click the vertical ellipsis **Actions** menu, and click **Delete**.
5. Click **Delete** to confirm.

Managing Reservation Upgrade Offers

Prerequisites for Managing Reservation Upgrade Offers

Reservation Upgrade functionality enables the ability to present reservation and guest service agents will room type upgrade opportunities; detailing the available room type(s) and pricing on offer.

Agent upgrade conversion performance is tracked in OPERA Cloud and the details available on the Reservation Upgrade report.

The upgrade charge is posted to a separate transaction code, defined in the upgrade rules. This allows you to route the original room charge separately from the upgrade charge and exclude the upgrade charges from travel agent commission.

An information link appears at the top of the following pages to view upgrade offers available for eligible reservations; based on the selected room type and rate code.

- [Look Book , Book now](#)
- [Reservation Presentation](#)
- [Check-in](#)

Reservation updates via Look to Book (stay dates, room type, rate code amended) will result in the removal of the upgrade offer applied; Look to Book will display new upgrade offers based on the amended stay details.

Reservation updates via Reservation Presentation (Adults etc) will result in you being prompted to manage the upgrade offer accordingly.

Upgrades not available for reservations with following conditions:

- Shared Reservation
- Checked In Reservation
- Block Reservation
- Multi leg Reservation
- Multi rate Reservation
- Reservations with reserved room type <> room type to charge (RTC)

- Suppress Rate Reservation

Viewing and Applying Reservation Upgrade Offer

1. Click the **Room upgrade available for this reservation** link displayed at the top of Reservation Presentation.
2. The upgrade offers are displayed.
3. Click the < > to navigate left and right through the offers.

 **Note:**

During mobile check-in you can present the offers to the guest directly on the tablet.

4. Tap to select an offer
5. Click **Apply Upgrade**.

The room type, room rate and fixed rate checkbox will be updated after applying the upgrade

Viewing Reservation Upgrade Activity

1. From the **OPERA Cloud** menu, select **Booking**, select **Reservations**, and select **Manage Reservations**.
2. Enter search criteria, click **Search**
3. Select the reservation in the result, click **I Want To...** , click **Upgrade** or open the reservation presentation and click **Upgrade** details link.
4. Details of the upgrade as well as the user and date that the upgrade was applied are displayed.

Removing Reservation Upgrade Offer

1. From the **OPERA Cloud** menu, select **Booking**, select **Reservations**, and select **Manage Reservations**.
2. Enter search criteria, click **Search**
3. Select the reservation in the result, click **I Want To...** , click **Upgrade** or open the reservation presentation and click **Upgrade** details link.
4. Click **Remove Upgrade** to revert the reservation to the original room type reserved.

Managing Reservation Scheduled Activities (External Leisure)

Prerequisites for Managing Reservation Scheduled Activities

The Reservation Activities details link is available when OPERA Cloud is integrated with an activity management solution for the management of leisure activity reservations such as golf or spa appointments, horseback riding, tours and so on. Leisure activity reservation details can be associated with [guest or contact profiles](#) and, in turn, their room reservations, so you are aware of the guest's leisure activity schedule during their stay.

Similarly, changes to a guests room reservation details that may impact the activities scheduled (for example, when a guest cancels a reservation, changes the dates of a

reservation, or makes an early departure) can be sent to the integrated activity solution for appropriate action.

The Reservation Activities panel lists the activities, for the current profile, which have been entered in the external activity management solution. The Scheduled Activities section shows other scheduled activities attached to the profile. The Reservation Activities section shows those activities that are associated with the current reservation. By highlighting activities in the Scheduled Activities panel and moving the activity to the Reservation Activities panel you can associate the activity with the current reservation. Only activities that are scheduled between the reservation arrival and departure dates can be associated with the reservation.

The Scheduled Activities can be included in the room reservation confirmation and registration card. For more information, see [About Stationery Editor](#).

Note:

A specific activity may only be associated with a single reservation. Once the activity has been associated with a reservation, it will no longer appear in the Scheduled Activities panel for any other reservations that may be made for the same profile during the time frame of the activity.

Selecting Reservation Activities

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select a reservation in the search results, click **I Want to. . .** and then select **Reservation Activities** or click the **Reservation Activities** link in Reservation Presentation.
4. Select one or more activities in the **Scheduled Activity** panel and click   to move to the **Reservation Activity** panel.
5. Click **Save**.

Deselecting Reservation Activities

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select a reservation in the search results, click **I Want to. . .** and then select **Reservation Activities** or click the **Reservation Activities** link in Reservation Presentation.
4. Select one or more activities in the **Reservation Activity** panel and click   to move to the **Scheduled Activity** panel.
5. Click **Save**.

Generating Scheduled Activities Report

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select a reservation in the search results, click **I Want to. . .** and then select **Reservation Activities** or click the **Reservation Activities** link in Reservation Presentation.
4. Click the **Vertical Ellipsis** and select **Report**.
5. Select a destination and click **Process**.

Canceling a Reservation with Scheduled Activities

When you [cancel a reservation](#) that has scheduled activities associated with it, a series of options are presented allowing you to indicate how you want to treat the scheduled activities.

The **Scheduled Activities Exist** screen appears immediately after you receive the reservation cancellation confirmation.

- Leave Activities Scheduled - Remove the activity links from the reservation but leave the scheduled activities unchanged in the External Activity Solution. This is the default.
- Cancel Activities with the Scheduler System - Remove the activity links from the reservation and instruct the External Activity Solution to cancel the activities.
- Scheduler System to Follow Up on Rescheduling - Remove the activity links from the reservation, leave the activities scheduled and notify the External Activity Solution that follow up is required .

Changing Reservation Dates with Scheduled Activities

When you [change the dates for a reservation](#) that has scheduled activities associated with it so that any of the activities no longer fall within the time frame of the reservation, a message advises you that activities fall outside the reservation dates. OPERA Cloud will remove the activity links from the reservation, leave the activities scheduled in the Activity solution and notify the Activity solution that follow-up is required to reschedule the activity.

Managing Linked Reservations

Prerequisites for Managing Linked Reservations

Linked reservations are a way to identify associated reservations staying at your property. For example, linked reservations could be used if a guest makes reservations for a family celebration or a group of friends traveling on holiday together. Initially, a single multi-room reservation can be created, which is later split into individual reservations, then linked to different guest profiles. The resulting reservations are identical to the original reservation and linked together. When the Unique Confirmation Number for Linked Reservation OPERA Control is active split reservations are assigned a unique confirmation number.

The following details are copied from the original multi-room reservation to the split reservations:

- Stay Details
- Payment methods (prompt to copy credit card information)
- Sell separate packages

- Inventory items
- Specials
- Preferences
- Reservation Membership
- Traces
- Linked Profiles
- Reservation Notes
- Deposit / Cancellation Policy

You can also link existing reservations together to identify an association between them.

In the [Room Diary](#) linked reservations are indicated by .

Splitting a Multi-Room Reservation

Note:

- **Automatically Generated Item Inventory Traces:** When you select inventory items in a reservation through Item Inventory or when you select a package setup with inventory items, OPERA Cloud checks availability of the items for the reservation dates. A message, "Insufficient quantity for some item(s). Please check Traces" appears if there is insufficient inventory for the selected dates. A system generated trace is created for each day of the reservation when inventory is insufficient. (The department associated with the trace is the department assigned to the inventory item in Item configuration). The trace message reads: "Insufficient quantity available for item <item code>".
- **Traces on Multi-Room Reservations:** When a multi-room reservation has a trace and the reservation is split into individual reservations, the trace is copied from the original reservation to each of the reservations created. If the trace setup on the original reservation had been resolved prior to the split, the trace will remain unresolved on each of the reservations created to ensure that the required action has been taken for each individual reservation/room.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations** and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .**, click **Split Reservations**.
 - a. **Split Options:**
 - i. **Split 1 Reservation:** Select to split 1 reservation from the multi-room reservation.

4. For more information, see [Booking a Reservation](#).

Unlinking Reservations

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .** then click **Link Reservation** or click the **Link Reservation** link in Reservation Presentation.
4. Select the reservation, click the **vertical ellipsis** and select **Unlink**.

Note:

You can also unlink reservations in the reservation presentation; select the **Additional Reservations** tab, select the reservation and click the **vertical ellipsis**, and select **Unlink**.

Managing Reservations Shares

Prerequisites for Managing Reservations Shares

Shared reservations support two or more reservations occupying the same room. When the Enforce Same Stay Dates For Sharing Guests OPERA Control is not active, shared reservations are not required to share the same arrival and departure dates, but must share at least one night in common. When the Enforce Same Rate Code For Sharing Guests OPERA Control is not active, shared reservation can have different rate codes and package entitlements. Share reservation can be setup so that one reservation has the entire rate or each reservation may share a portion of the rate amount.

Unlike the [Accompanying Guests feature](#), each share reservation has separate billing and folio details. You can combine existing reservations into a share reservation and add a new reservation to create a share.

Adding New Share Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria for the reservation and click **Search**.
3. Select a reservation in the search results, click **I Want to. . .** and then select **Shares** or click the **Shares** link in Reservation Presentation.
4. Click **Create New Share** and enter the following details:
 - a. **Name:** Click to search for a profile or create a profile.
 - i. Click **Create Guest Profile** to create a new profile. Refer to [Creating Guest or Contact Profile](#).
 - b. **Adults:** Enter the number of adults.
 - c. **Children:** Enter the number of children.
 - d. **Arrival:** Enter or select the arrival date.

- e. **Departure:** Enter or select the departure date.
 - f. **Reservation Type:** Select a reservation type from the list.
 - g. Enter Payment Information.
 - i. Refer to [Managing Reservation Payment Instructions](#).
5. Click **Save**.
 6. Refer to Adjusting Share Rates below.

Combining Existing Reservations into a Share Reservation

To combine existing reservations there must be at least night of the stay in common.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria for the reservation and click **Search**.
3. Select a reservation in the search results, click **I Want to. . .** and then select **Shares** or click the **Shares** link in Reservation Presentation.
4. Click **Combine Existing Reservation**.
 - a. **Name:** Enter surname of the reservation and click the icon to search.
 - b. Select the reservation in the search result and click **Select**.
5. Click **Save**.
6. Refer to Adjusting Share Rates below.

Separating (Breaking) Share Reservations (Reserved Status)

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria for the reservation and click **Search**.
3. Select a reservation in the search results, click **I Want to. . .** and then select **Shares** or click the **Shares** link in Reservation Presentation.
4. Select the reservation(s) to be separated and click the vertical ellipsis and select **Separate Share**.

Note:

When the Enforce Credit Card Entry for Credit Card Guaranteed During Break Share OPERA Control is active a list of credit card guaranteed reservations which does not have credit card details will be presented in addition to the payment screen to enter new credit card details to be attached to those reservations.

Separating (Breaking) Share Reservations (Inhouse Status)

For Inhouse reservations use the Room Move action to separate share reservations.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria for the reservation and click **Search**.

3. Select a reservation in the search results, click **I Want to. . .** and then select **Shares** or click the **Shares** link in Reservation Presentation.
4. Select the reservation(s) to be separated and click the vertical ellipsis **Actions** menu and select **Room Move**. For more information, see [Moving an In House Reservation](#).

Adjusting Shared Rates

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria for the reservation and click **Search**.
3. Select a reservation in the search results, click **I Want to. . .** and then select **Shares** or click the **Shares** link in Reservation Presentation.
4. Click the **vertical ellipsis** and select on the following options:
 - a. **Apply Full Rate**: Select this option to apply the rate in full to each sharing guest.
 - b. **Apply Entire Rate**: Select this option to apply the rate in full for the total number of persons to the first share reservation. First select the reservation for which the entire rate is to be applied.
 - c. **Apply Split Rate**: Select this option to split the rate evenly between all sharing guests.
 - d. **Apply Custom Split Rate**: Select this option to apply a custom split rate between all sharing guests.
 - i. For each date and each reservation enter the rate amount
 - ii. For eligible rate codes you can also enter a discount amount per night and select a discount reason from the list.
 - iii. Click **Save**.
5. Refer to Fixed Rate Share Considerations below.

Managing Share Guests

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria for the reservation and click **Search**.
3. Select a reservation in the search results, click **I Want to. . .** and then select **Shares** or click the **Shares** link in Reservation Presentation.
4. Click the vertical ellipsis and select **Manage Shared Guests**.
5. Drag and drop the Adults and Children icons to move guests between reservations.
6. Click **Save**.

Fixed Rate Share Considerations

This section describes OPERA Cloud shares handling for fixed rate reservations.

When the Share Rate Splitting for Fixed Reservations OPERA Control is inactive the following conditions apply when a sharer has a fixed rate:

- The sharer cannot be designated to pay the full rate (Full option). The sharer pays the fixed rate, regardless of whether it is more or less than the full rate.
- The sharer cannot be designated to assume the total rate charge using the Entire option. Neither will the rate for the sharer be set to zero if another sharer is chosen to assume the total room rate charge. The rate for this sharer remains at the fixed rate.
- If the Split option is selected, the fixed rate will not change for the sharer. The fixed rate will be used as this sharer's portion of the split, and other sharers will equally divide the remainder of the rate. For example, assume a three-way share, with Guest 1, having a fixed rate of 145. If the total rate for the night is 450, the Guest 1 share is 145, while the other two guests split the remainder (305), paying 152.50 each.

When the Share Rate Splitting for Fixed Reservations OPERA Control is active the Entire, Full, and Split options are available and behave the same as for non-fixed rates, provided that:

- All sharer reservations have a fixed rate.
- All sharer reservations have the same rate code.

OPERA Cloud simply adds the fixed rates shown on the reservations. The rate amounts are added together each time Full is selected.

For example, assume that Guest 1, Guest 2 and Guest 3 are sharing, that all three have the same rate code, and all three have a fixed rate.

Table 3-3 Example of Rate Code and Fixed Rates of Guest 1 Guest 2 and Guest 3

Rates	Guest 1	Guest 2	Guest 3
Original Fixed Rate	99	100	109
Rate if Split is applied	102.66	102.66	102.66
Rate if Full is applied* [1]	308	308	308
Rate if Entire is applied to Carson** [2]	308	0	0

- OPERA Cloud simply adds the fixed rates shown on the reservations. The rate amounts are added together each time Full is selected. For example, if one sharer has a fixed rate of 140 and another has a fixed rate of 145, the rate for each sharer will be 285 when Full is selected. If Full is selected again, the rate for each sharer will be 570. The rate is not refreshed (for example, to account for a 3-adults rate that may be specified on the rate detail).
- OPERA Cloud simply adds the fixed rates shown on the reservations. The rate is not refreshed (for example, to account for a 3-adults rate that may be specified on the rate detail)

Managing Waitlist Reservations

[Prerequisites for Managing Waitlist Reservation](#)

At times it is not possible to create and confirm a reservation for the dates requested by the caller; this may be due to the property may be fully occupied, sell limits applied or the particular room type and/or rate code requested by the caller is not be available. In situations

like these, the waitlist feature is available to assign a Waitlist status to a future reservation. A reservation may be moved to Waitlist status at the time it is being created.

When the callers requested room type or rate becomes available for their desired stay dates, the waitlisted reservation can then be accepted and confirmed.

**Note:**

Wait-listed reservations are deleted during **End-of-Day** processing two days after the reservations departure date.

Moving Reservation to Waitlist

A reservation can be moved to Waitlist status at the time it is being created, select **Waitlist** from the [Look to Book](#) sales screen.

Viewing Waitlist Reservation Details

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, select **Waitlist** reservation status from list, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Waitlist Details**.

Accepting (Confirming) Waitlist Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, select **Waitlist** reservation status from list, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Accept Reservation**.
4. You will be directed to Look to Book to confirm room type and rate availability, click **Continue to Look to Book**.
5. For more information, see [Booking a Reservation](#).

Merging Matched Reservations

[Prerequisites for Merging Reservations](#)

[Watch Video](#)

A **Matching Reservations** details link is enabled in reservation search and reservation presentation for current day or future date arrival reservations when there are possible matching reservations identified. The Matching Reservations panel lists the possible matching reservation(s) that have an identical Lastname + Middlename + Firstname match and sequential reservation dates.

When the Allow Merge Reservations For Future Arrivals OPERA Control is inactive, the Matching Reservations details link is enabled only for current day arrivals.

 **Note:**

The Matching Reservations details link is only enabled for reservations reserved for one room.

Reservation details such as Rate Code, Number of Persons, Discount, Linked Profiles, Accompanying Profiles, Linked Reservations, Traces, Guest Messages, Track It, Notes, Locators, Alerts, Routing, Payment Instructions, and Fixed Charges are merged from the matched reservation to the main reservation. If the merged reservation has any deposit payment, the deposit payment is transferred to the main reservation after the merge.

Once the merge of reservations is successful, the original matched reservations are canceled with the cancellation reason code selected in the Cancel Reason Code for Merge Reservations OPERA Control.

The following should be considered when merging reservations:

- If you select reservations that do not have sequential nights, a message prompt is displayed that the merge cannot be completed.
- If you select reservations with multiple nights and room type is different for at least one of the stay nights, a message prompt is displayed that the merge cannot be completed. If the selected multiple night reservation has same room type for all stay nights, but the room type is different than the room type in main reservation, reservations will be merged with the Main Reservation's room type
- If different room types exist on the reservations, a message prompt is displayed as notification that the merge cannot be completed.
- If room numbers have already been assigned to the reservations, the room number assigned to the Main reservation is retained as the room number for the reservation.
- One block reservation can be merged into an individual reservation. When this merge occurs, the block inventory for the room type will only be affected for the dates that the block reservation is for. So any updates to the main reservation will only effect the block reservation if it has a direct effect on the block inventory for those dates. For the selected reservation(s) being merged into the main reservation, they are canceled after the merge has been completed.
- Non-pseudo and pseudo room type reservations cannot be merged.
- Share reservations cannot be merged.
- Day use reservations cannot be merged.
- The deposit and cancellation rule of the main reservation is refreshed with revised deposit / cancellation amount after the reservation is extended due to merge.

Merging Reservations

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.

3. Select and open the reservation in the search result, then click the **Matching Reservations** details link in reservation presentation Note: All matched reservations are listed
4. Select reservations to merge
5. Click **Merge Reservations**.

 **Note:**

Reservation merge activity is recorded in the [Change Log](#) under the Cancel action type for merged reservations and Update Reservation action type for the Main reservation.

Viewing Reservation Delivery History

[Prerequisites for Viewing Reservation Delivery History](#)

Reservation Delivery History details the status of reservation (and profile) message delivery to external systems integrated via OPERA eXchange Interface (OXI).

Users with the Interface Re-synchronization task granted to their role can initiate a re-synchronization of messages to all external systems.

The Delivery History panel displays the following details for each message:

1. **Property:** Property Code
2. **Reservation Name:** Internal Reservation ID
3. **Delivery ID:** Sequence ID generated by OXI
4. **Method:** Delivery method of the OXI message
5. **Delivery Date:** Delivery date of the OXI message
6. **Interface ID:** External system ID
7. **Status:** Message status
8. **Error Description:** Error description
9. **Retry:** Retry count

Viewing Reservation Delivery History

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, then click **Delivery History** or open Reservation Presentation and click **I Want To. . .**.then click **Delivery History**.
4. To refresh the panel, click vertical ellipsis and select **Refresh** to update.

Re-syncing (Resend) Reservation Delivery

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .** , then click **Delivery History** or open Reservation Presentation and click **I Want To. . .** .then click **Delivery History**.
4. Click **Resync**.

Note:

You can also click **I Want To. . .** then **Synchronize to External System** to initiate a re-synchronization.

Managing Reservation Call History

Prerequisites for Managing Reservation Call History

The Call History screen displays information about the phone calls or other contact received by guest or reservation contacts (such as a travel agent) to set up and make changes to reservations.

Viewing Call History

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To...**, click **Call History** or open the reservation presentation and click **Call History** details link.

Adding Call History

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To...**, click **Call History** or open the reservation presentation and click **Call History** details link.
4. Click **New** and enter the following details:
 - a. **Call Date**: Enter the date of the call/contact.
 - b. **Name**: Enter caller Surname.
 - c. **First Name**: Enter caller First name.
 - d. **Email**: Enter caller email address.
 - e. **Phone**: Enter caller phone number.
 - f. **Fax**: Enter caller fax number.
5. Click **Save**.

Managing Reservation Tickets

Prerequisites for Managing Reservation Tickets

The Tickets panel enables you to manage the tickets available and issued for a reservation. This feature utilizes the [reservation package](#) functionality and works in conjunction with an integrated ticketing partner solution.

The following details are listed for each ticket.

1. **Package:** Ticket package code.
2. **Description:** Ticket package description.
3. **Price:** Price of the ticket package.
4. **Ticket Number(s):** Number assigned to the ticket as assigned by the ticket vendor.
5. **Issue Date:** Date the ticket was issued. On the date populated in this column, the Rate Code, Adults, and Child fields are disabled for the reservation as an update to one of these fields would modify the rate code posting. But these fields can be modified for any other date of the stay, except for the date populated in this column.
6. **Status/Description:** Status of the ticket received from the ticket partner.

Note:

Any actions performed in the Tickets panel are recorded in the [Changes Log](#) under the Reservation Activity group and Miscellaneous activity type.

Adding Reservation Tickets

1. From the **OPERA Cloud** menu, select **Bookings** then **Reservations**, and then **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...**, **Tickets** or click the **Tickets** link in Reservation Presentation
4. Click **New**.
 - a. Click **Show Available Packages**.
 - b. Click **Add**.
 - i. **Quantity:** Enter quantity.
5. Click **Save**.

Editing Reservation Tickets

1. From the **OPERA Cloud** menu, select **Bookings** then **Reservations**, and then **Manage Reservation**.
2. Enter search criteria, click **Search**.

3. Select the reservation in the search result, click **I Want to..., Tickets** or click the **Tickets** link in Reservation Presentation
4. Select the ticket in the result, click **Manage**.
5. Update details.
6. Click **Save**.

Deleting Reservation Tickets

1. From the **OPERA Cloud** menu, select **Bookings** then **Reservations**, and then **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to..., Tickets** or click the **Tickets** link in Reservation Presentation
4. Select the ticket in the result, click **Delete**.
5. Click **Delete** to confirm.

Ticket Partner Solution Actions

Inquire Tickets

Sends an inquiry to the ticket partner regarding existing tickets attached to the reservation that have already been printed. An Inquiry to the ticket partner must be performed prior to a Reprint or Refund can be completed. This ensures that all of the tickets associated to a reservation are populated in the Tickets screen.

1. From the **OPERA Cloud** menu, select **Bookings** then **Reservations**, and then **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to..., Tickets** or click the **Tickets** link in Reservation Presentation
4. Enter search criteria, click **Search**.
5. Select the ticket in the list, click **Vertical Ellipsis** and select **Inquiry**.

Issue Tickets

Sends a request to the ticket partner for the selected ticket package to be printed. The ticket vendor creates the ticket numbers and a print command is then sent to the property so the tickets can be printed for the guests.

1. From the **OPERA Cloud** menu, select **Bookings** then **Reservations**, and then **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to..., Tickets** or click the **Tickets** link in Reservation Presentation
4. Enter search criteria, click **Search**.
5. Select the ticket in the list, click **Vertical Ellipsis** and select **Tickets**.

Reprint Tickets

Available for tickets that have already been printed. Sends a request to the ticket partner to verify that the tickets can be reprinted. Upon a successful Reprint response the tickets are reprinted.

1. From the **OPERA Cloud** menu, select **Bookings** then **Reservations**, and then **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...**, **Tickets** or click the **Tickets** link in Reservation Presentation
4. Enter search criteria, click **Search**.
5. Select the ticket in the list, click **Vertical Ellipsis** and select **Reprint**.

Refund Tickets

Sends a request to the ticket partner to verify that a refund can be given for the tickets. Upon a successful Refund response the refund can be granted to the guest.

1. From the **OPERA Cloud** menu, select **Bookings** then **Reservations**, and then **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...**, **Tickets** or click the **Tickets** link in Reservation Presentation
4. Enter search criteria, click **Search**.
5. Select the ticket in the list, click **Vertical Ellipsis** and select **Refund**.

Managing Reservation (Guest) Locators

Prerequisites for Reservation (Guest) Locators

Guest Locators inform hotel personnel, particularly front desk staff and telephone operators, of a guest's location and are setup on the future arrival or inhouse reservation. This feature may, for example, be used when guests request that their phone calls or deliveries be temporarily transferred to an alternate location, such as the conference room or fitness center. A locator can be added to a checked out reservation, but only on the check-out date.

Note:

[Reservation Alerts](#) is an alternate method to handle guest location tracking.

Adding a Reservation (Guest) Locator

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and then click **Search**.
3. Select the reservation in the search result, then click **I Want to...**, **Locators** or open the reservation and click **Locators** in Reservation Presentation.
4. Click **New** and complete the following:

- a. **Begin Date:** Enter or select a start date
- b. **End Date:** Enter or select an end date
- c. **From Time:** Enter a start time
- d. **To Time:** Enter an end time
- e. **Location:** Enter details on the guest location
 - i. Click **Insert Quick Text** to select from a list of default locator texts, click **Select**.
- f. Click **Save**.

Viewing / Editing a Reservation (Guest) Locator

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and then click **Search**.
3. Select the reservation in the search result, then click **I Want to...**, **Locators** or open the reservation and click **Locators** in Reservation Presentation.
4. Select the locator then click **+** to expand the card and view the details.
5. To edit the locator, click the vertical ellipsis **Actions** menu and select **Edit**.
6. Update the details.
7. Click **Save**.

Deleting a Reservation (Guest) Locator

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and then click **Search**.
3. Select the reservation in the search result, then click **I Want to...**, **Locators** or open the reservation and click **Locators** in Reservation Presentation.
4. Select the locator, then click the vertical ellipsis **Actions** menu and select **Delete**.
5. Click **Delete** to confirm.

Managing Reservation Transportation

Prerequisites for Managing Reservation Transportation

Transportation enables you to specify the pick up and drop off transportation information for guests linked to a reservation. These details can be output on the [Transport Requirements](#) report.

1. From the Navigation Bar, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Transportation** or open the reservation and click **Transportation** in Reservation Presentation.
4. Click **Edit** and update the following
 - a. Pickup

- a. **Type:** Select the external system from the list.
 - b. **ID:** Enter the external reference number.
 - c. **Leg:** Enter a leg number.
5. Click **Save**.

Editing Reservation External References

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria for the reservation and click **Search**.
3. Select a reservation in the search results, click **I Want to . . .**, and then select **External References** or click the **External References** link in Reservation Presentation.
4. Select the external reference then click the vertical ellipsis **Actions** menu, and select **Edit**.
5. Update details.
6. Click **Save**.

Deleting Reservation External References

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria for the reservation and click **Search**.
3. Select a reservation in the search results, click **I Want to . . .**, and then select **External References** or click the **External References** link in Reservation Presentation.
4. Select the external reference then click the vertical ellipsis **Actions** menu, and select **Delete**.
5. Click **Delete** to confirm.

Managing Reservation Do Not Move Room Status

[Prerequisites for Setting a Reservation to Do Not Move Status](#)

Once a room is assigned to a reservation, you can prevent the room from being reassigned by setting a do not move status on the reservation. The do not move status is in effect until the reservation is checked in and only other users with the Do Not Move Room task granted are able to reassign the room for the reservation. Once the reservation is in-house the do not move status is cancelled and room moves may be performed by as usual.

Setting a Reservation to Do Not Move Room Status

Once the reservation is in-house the Do Not Move status is cancelled and room moves may be performed.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and select **Manage Reservation**.
2. Enter search criteria then click **Search**.
3. Select the reservation in the search result, click **I Want to . . .** then select **Stay Details**, or open the reservation by clicking the confirmation number link.

4. In the **Stay Details** panel, click the **Room** to open Room Details.
 - a. Click **Mark as Do Not Move Room**.
 - b. A lock symbol appears to the right of the room to indicate the Do Not Move status.

Setting a Reservation to Allow Room Move Status

To remove a Do Not Move, change the status to Allow Room Move.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and select **Manage Reservation**.
2. Enter search criteria then click **Search**.
3. Select the reservation in the search result, click **I Want to . . .** then select **Stay Details**, or open the reservation by clicking the confirmation number link.
4. In the **Stay Details** panel, click the **Room** to open Room Details.
 - a. Click **Mark as Do Not Move Room**.

Moving Reservations to Other Properties

When the OPERA Multi-Property Reservation Cloud Service is active, you can move a reservation to another property from a [Hub location](#) to a property associated with the [Hub](#). You cannot move canceled or no-show reservations or reservations that have incurred financial charges such as no-show charges or payments, such as deposit payments. You cannot move reservations in an Advanced Check in the state; applicable when the Advanced Check In OPERA Control is active.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, select **Manage Reservation**., and then search by property for the reservation.
2. Enter search criteria and then click **Search**.
3. Select the reservation in the search result, click **I Want To . . .** then select **Move Reservation**.
 - a. Look to Book Sales screen displays. For more information, see [Booking a Reservation](#).
 - b. **Property**: Enter or select the destination property from the list, then click **Search**.
 - c. Select an room type and rate code in the search result, then click and drag the new room/rate to the Trip Composer.
 - d. When the Booking Details screen appears, click **Update Trip Composer**.
 - e. Click **Move Reservation**.
 - i. **Reason**: Select a reason for the move from the list. For more information, see [Configuring Property Move Reasons](#).
 - ii. Click **Move Reservation**.

Copying Reservations

[Prerequisites for Copying Reservations](#)

Copying a reservation creates a clone of an existing reservation in any status. Using [Look to Book](#) you can change certain details on the new reservation, including the linked guest profile, the property, and stay details. If you copy a block reservation, you will pick up a room from the block allocation. If all available rooms in the block allocation have already been picked up, you can only copy a reservation if the block is designated as elastic; in this case, the new reservation will increase the allocation of the block.

The following list identifies the details that can be copied to a new reservation created using Copy Reservation. Payment Information can be copied when the Copy Credit Card Payment Methods and Copy (other) Payment Methods tasks are assigned to your role(s).

Table 3-4 Details

Copied	Not Copied
Transportation	Attachments
Reservation Memberships	Room Assignment
Items	Reservation Discount
Comp (101-108) Routing Instructions	eCertificates
Packages	External References
Reservation Notes	Housekeeping / Task Schedule
Payment Information	Service Requests
Linked Profiles	Locators
Reservation Preferences	Accompanying Guests
Specials	Alerts
	Custom Charge Exemption
	Tickets
	Traces
	Transaction Diversion
	Fixed Charges
	eCoupons

Gaming

The following Comp routing attributes are copied to the new reservation:

- Dates
- Authorizer
- Account Number
- Membership Number
- Limit
- Percent
- Comments
- Comp Type

 **Note:**

If a transaction code is removed from the authorizer but is still on the source reservation and now copied, you will receive an error “Transaction Code is not attached with the authorizer” and copy reservation process stops. You can go back to “Select Reservation Information to be copied” pop up screen and uncheck “Comp Routing” check box to complete the Copy Reservation.

 **Note:**

If the Authorizer selected in the source reservation is inactive during the Copy Reservation process, an error “Authorizer is Inactive” is displayed, and the copy reservation process stops. You can go back to the “Select Reservation Information to be Copied” pop-up screen and uncheck the **Comp Routing** check box to complete the Copy Reservation process.

Copying a Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria then click **Search**.
3. Select the reservation in the search result, click **I Want To...** , and then select **Copy Reservation**.
4. Select the reservation information to be copied.
 - a. **Credit Card**: Select checkbox to copy the credit card payment details.
 - b. **Other Payment Methods**: Select checkbox to copy other payment details.
 - c. **Routing**: Select checkbox to copy routing instructions. (Available when the Routing OPERA Control is active).
 - d. **Notes**: Select checkbox to copy reservation notes.
 - e. **Item Inventory**: Select checkbox to copy item inventory. (Available when the Item Inventory OPERA Control is active).
 - f. **Specials**: Select checkbox to copy specials.
 - g. **Package**: Select checkbox to copy sell separate packages.
 - h. Click **Copy Reservation**.
5. See [Booking a Reservation](#).

Copy Credit Card Payment Method

You can copy credit card payment methods from one reservation to another when copying a source reservation that has a credit card payment method. To reduce the potential error of copying a guest’s payment method to the wrong reservation, this feature is controlled by the **Copy Credit Card Payment Method** task in Role Manager.

To use the copy payment method feature, the following requirements must be met:

- The **Reservation Management** task in the Bookings group in Role Manager must be granted to the user. When this task is granted, the Copy Credit Card Payment Method task becomes available.
- The **Copy Credit Card Payment Method** task under the Bookings group in Role Manager must be granted to the user.
- The payment method on the source reservation (that is, the reservation to be copied) must be a credit card.

Use Case Scenarios

This section describes the various scenarios and differences that occur when copying a credit card payment method to a reservation with the Copy Credit Card Payment Method task granted or with it revoked.

When the Copy Credit Card Payment Method task is granted, you can copy a credit card payment method in these scenarios:

- Copying a reservation
- Creating a share reservation
- Splitting a reservation with multiple rooms
- Checking in a reservation with multiple rooms
- Creating a new reservation within a block via the Rooming List option
- Updating the payment method on a block reservation
- Adding a reservation via the Trip Composer

Table 3-5 Tasks / Scenarios

Tasks / Scenarios	Related Screens	Copy Credit Card Payment Method task granted = YES	Copy Credit Card Payment Method task granted = NO
Copying a reservation	Reservation screen	You can select the reservation attributes to copy from the source reservation into the new reservation (that is, the target reservation). The Payment Methods section provides two options (Credit Cards and Non Credit Cards) which are selected by default. When you click Copy Reservation , any selected reservation attributes are automatically copied to the new reservation. All payment methods from all windows of the source reservation are copied to the new reservation.	The credit card payment method under Payment Methods is disabled by default. You are not permitted to copy the payment method of the source reservation into the new reservation when the payment type of the source reservation is a Credit Card. The credit card payment method of the source reservation is not copied into the windows of the new reservation. When you copy the reservation, you must manually add payment information into any window of the new reservation that had a credit card payment method.

Table 3-5 (Cont.) Tasks / Scenarios

Tasks / Scenarios	Related Screens	Copy Credit Card Payment Method task granted = YES	Copy Credit Card Payment Method task granted = NO
Creating a share reservation	Shares screen	<p>When the Create New Share option is selected, the payment methods selected in the Payment Methods section are automatically copied from the payment windows of the source reservation to the windows of the target reservation. You can still change these payment method details before saving the share reservation.</p> <p>If you select the Combine Existing Reservation option, the payment methods from each of the reservations remains unchanged and the Copy Credit Card Payment Method task is not considered in this scenario.</p>	The Payment Methods information is automatically removed from any windows where the payment type of the source reservation is a credit card. You must populate new Payment Method information for the windows of the new share reservation.
Splitting a reservation with multiple rooms	Split Reservation screen	When splitting a reservation, you are presented with the split options for the reservation. In the Copy Options panel on the Split Reservation screen, the Credit Cards and Non-Credit Cards options are selected by default. You can deselect these options before splitting the reservation.	The Credit Cards option is disabled when you open the Split Reservation screen. The Non-Credit Cards option is enabled and selected by default. The reservations are split according to the split option you defined, and the split reservations have the credit card payment methods removed from all windows. You can enter new payment information for each split reservation via the Payment Instructions panel on the Reservation screen.
Checking in a reservation with multiple rooms	Split Reservation screen and Check In Reservation screen	When checking in a reservation with multiple rooms, the Verify Payment panel is automatically populated with the payment method from the source reservation. No further action is required for this panel. Other payment windows can be accessed via the vertical ellipsis button.	The credit card payment methods are removed from all windows and the Verify Payment panel is not populated with payment method information. An “Attention Required” message appears indicating that further information is needed before check-in can be completed. Entering new payment method information for other windows is available via the vertical ellipsis button.

Table 3-5 (Cont.) Tasks / Scenarios

Tasks / Scenarios	Related Screens	Copy Credit Card Payment Method task granted = YES	Copy Credit Card Payment Method task granted = NO
Creating a new reservation within a block via the Rooming List option	Rooming List screen	When you add an additional reservation(s) into a block and payment methods are already defined on the PM Reservation, the payment methods are automatically copied into the new reservation(s).	When you select the Add Rows link from the Rooming List screen to create a new reservation(s) within the block, the credit card payment methods of the windows on the source reservation/PM reservation are not copied to the new reservation. You must add new payment methods using the Payment Information link for the new reservation(s) If the Mandatory Method of Payment parameter is active in OPERA Controls, a payment method is required for each new reservation. The confirmation number is not assigned to the new reservation(s) until their method of payments are entered.
Updating the payment method on a block reservation	Block Reservation screen	When you update the payment method on a block reservation, you are prompted to apply changes to other reservations in the group. Selecting Yes to this prompt enables you to define the criteria for applying changes to these other reservations.	When you update the method of payment on a block reservation to a credit card, the “apply changes to other reservations in the group” prompt does not appear. Updates to the payment method only apply to the selected reservation and do not affect other reservations. If you update another payment method (Cash, Check, or Direct Bill), the prompt appears. If you update the method of payment to a credit card and also update other areas of the reservation (for example, creating routing instructions, adding reservation notes, adding preferences), an “Apply Changes to All” prompt appears. Additionally, a warning message also appears and informs you that the method of payment update cannot be applied to the other reservations.

Table 3-5 (Cont.) Tasks / Scenarios

Tasks / Scenarios	Related Screens	Copy Credit Card Payment Method task granted = YES	Copy Credit Card Payment Method task granted = NO
Adding a reservation via the Trip Composer	Trip Composer	When you add additional reservations into Trip Composer, the payment method on the first reservation is copied to the other reservations placed in Trip Composer. You maintain the ability to click the room/rate combination to access the Book Now screen where you can change the method of payment for the additional reservations. However, if you select a different property (that is, a second leg) for the other reservations, the payment details are not copied.	When you add additional reservations into Trip Composer, the credit card payment method on the first reservation is not copied into the additional reservations placed in Trip Composer. The Book Now screen appears, enabling you to enter the payment method for each additional reservation added to Trip Composer. If the payment method on the first reservation is not a credit card, it is automatically copied into the reservations added to Trip Composer.

Searching for Reservations Flagged for External Guest Notifications

To search for only those reservations that are flagged to receive external notifications, follow one of these procedures.

From the Manage Reservations Advanced Search

You must be in the default (blank) or the Manage Reservation Search Type.

1. From the **OPERA Cloud** menu, select **Bookings, Reservations**, and then **Manage Reservation**.
2. In the **Search** panel, select the Property and Arrival Date, and then check the **Receive External Notifications** check box, and then click **Search**.

From the Room Assignment Search

1. From the **OPERA Cloud** menu, select **Bookings, Reservations**, and then **Room Assignment**.
2. In the **Search** panel, select the **Receive External Notifications** check box, and then click **Search**.

Since this is a predefined search, you might need to show the full search panel by selecting **Modify Search Criteria**.

Managing Reservation Notes

Multiple reservation notes can be added to a reservation; each note is categorized by note type [Configuring Note Types](#) and set to appear in a specific notification area/condition. Reservation notes can be added to a reservation in any reservation status.

When the Copy Profile Reservation Notes To Reservation OPERA Control is active, reservation notes on the profile will copy to new reservations for the selected profile. If travel agent, company, source, group or contact profiles are attached to the

reservation, and these profiles have their own Reservation Notes, the system will prompt the reservation agent with the following message, “Reservation comments exist for this <Company/Travel Agent/Source/Group> profile”. If you wish to copy them to the reservation, select **Yes** or else select **No**.

Adding Reservation Notes

1. From the **OPERA Cloud** menu, select **Bookings** , **Reservations**, and then **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To. . .**, **Notes** or click the **Notes** link in Reservation Presentation.
4. Select **Reservation Notes** tab.
5. Click **New**.
 - a. **Type**: Select a note type. For more information, see [Configuring Note Types](#).
 - b. **Internal**: Select this check box if the comment is to be treated as internal.

 **Note:**

Internal notes are not output on stationery or on reports unless the report explicitly allows display of Internal Notes. You can uncheck this check box when Override Internal is selected in the note type configuration.

- c. **Title**: Enter a summary title for the note (is default based on the note type but it can be updated).
- d. **Notification Area**: Select an area where note should appear.
 - i. **Reservation**: Display prior to check in.
 - ii. **Inhouse**: Display after check in.
 - iii. **Cashier**: Displayed on Billing Screen.
 - iv. **General**: Displayed on Billing Screen, After Check In, Prior to check in.
- e. **Comment**: Enter or paste the note details; a maximum of 2000 characters (single byte) is supported.
- f. Click **Save**.

Viewing and Updating Reservation Notes

1. From the **OPERA Cloud** menu, select **Bookings** , **Reservations**, and then **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To. . .**, **Notes** or click the **Notes** link in Reservation Presentation.
4. Select **Reservation Notes** tab.
5. Select the note, click **±** to expand the card and read the note comments.
6. Select the vertical ellipsis **Actions** menu, and click **Edit**.
7. Update details.

8. Click **Save**.

Deleting Reservation Notes

1. From the **OPERA Cloud** menu, select **Bookings** , **Reservations** , and then **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To. . .**, **Notes** or click the **Notes** link in Reservation Presentation.
4. Select **Reservation Notes** tab.
5. Select the vertical ellipsis **Actions** menu, and click **Delete**.
6. Click **Delete** to confirm.

Managing Reservation Traces

Prerequisites for Managing Reservation Traces

Traces are actionable instructions for a selected department for a specific date and time; once actioned the trace is updated as resolved.

When you attach inventory items to a reservation (for example, when you select items by using the Item Inv. field on the Reservation screen, or when you attach a package containing inventory items to the reservation) OPERA Cloud checks item availability of the items for the dates of the stay. A message will advise you if there is insufficient inventory for the selected dates: "Insufficient quantity for some item(s). Please check Traces." A system generated trace is created for each day of the reservation when inventory is insufficient. (The department associated with the trace is the department assigned to the inventory item in Item configuration.) The trace message reads: "Insufficient quantity available for item <item code>".

When a multi-room reservation has traces added and the reservation is split to individual reservations, the trace is copied from the original reservation to each of the split-off party reservations. If the trace attached to the original reservation had been resolved before the split, the trace will remain unresolved in each of the split-off party reservations to ensure that the required action has been taken for each individual room.

 **Note:**

Reservation traces are purged 30 days after the reservation check out date.

Adding Reservation Traces

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To. . .**, **Traces** or click the **Traces** link in Reservation Presentation.
4. Click **New** and complete the following.
 - a. **Department:** Select a department(s) to receive the trace.

- b. **From Date:** Enter a start date for the trace.
 - c. **To Date:** Enter an end date for the trace; one trace per day is created.
 - d. **Time:** Enter a trace time.
 - e. **Trace Text:** Enter the trace text.
 - f. **Quick Insert:** Click to select from pre-configured trace text for the selected department. For more information, see [Configuring Trace Texts](#)
5. Click **Save**.

Viewing and Updating Reservation Traces

Note:

Only open traces are displayed by default, to view completed traces click **Vertical Ellipsis, Show Completed**.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To. . ., Traces** or click the **Traces** link in Reservation Presentation.
4. Click **+** to expand the card and view trace details
5. Select vertical ellipsis **Actions** menu, and click **Edit**.
6. Update details.
7. Click **Save**.

Completing (Resolving) Reservation Traces

To mark a trace as completed, once it has been actioned:

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To. . ., Traces** or click the **Traces** link in Reservation Presentation.
4. Select vertical ellipsis **Actions** menu, and click **Complete**.

Deleting Reservation Traces

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To. . ., Traces** or click the **Traces** link in Reservation Presentation.
4. Select vertical ellipsis **Actions** menu, and click **Delete**.
5. Click **Delete** to confirm.

Reservation Routing Instructions

Prerequisites for Manage Reservation Routing Instructions

Charge routing enables the automatic transfer of charges to a selected billing folio within the same reservation account or to another reservation account entirely, based on the selection of individual charge codes or routing codes, pre-defined groupings of charge codes.

OPERA Cloud has a total of 8 billing folios for guest settlement; you can route charges to folio windows 2 through to 8; all non-routed charges are posted to billing folio #1, which is associated with the primary profile linked to the reservation.

Note:

Routing Instructions are purged 30 days after the reservation check out date.

When the **Routing Limits** OPERA Control is active you can also set a limit to the amount that can be routed. Refer [Routing Limits](#).

When the **Post Stay Charges** and **Open Folio** OPERA Controls are active, room and folio routing instructions can be set/edited for Open Folio reservations.

When the **Allow Routing Of Tax** OPERA Control is active you can route tax posting independent of the originating charge.

Default Routing can be setup in various ways to avoid billing errors:

- On Company, Agent, Source and Contact profiles so that when the profile is linked to a reservation you are prompted to apply the charge routing to the reservation, for more information, see [Managing Default Profile](#).
On rate codes for a specific profile type; when a profile of that type is linked to the reservation, you can use the default routing for the reservation. Refer [Default Rate Code](#).
- On a promotion. Refer [Managing Promotion codes](#).

Managing Reservation Routing Instructions

Routing instructions are auto-created for a reservation when a Company, Agent, Source, or Contact profile, with the **Auto Populate Routing** check box selected, is linked to the reservation. Routing is auto-created on reservations received through an OXI integration when one sales account (Company, Travel Agent, or Source) with the selected Auto Populate Routing check box is linked to the reservation.

Adding Routing Instructions

Routing Instructions are managed via the Routing Instructions details link on the reservation.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations** select **Manage Reservation**.
2. Enter search criteria, click **Search**.

3. Select the reservation in search result, click **I Want To. . .**, click **Routing Instructions** or open the reservation presentation and click **Routing Instructions** details link.

 **Note:**

You can click **Show All** to display all detail links.

4. Click **New** and add Folio Window Routing Instructions (Same Reservation).
 - a. **Type:** Select Folio.
 - b. **Folio:** Select the folio window to route charges to : 2 through to 8 available.
 - c. **Payee:** Select the payee for the billing window; the list displays all profiles linked to the reservation.
 - d. Click **Profile Search:** to search and select another profile for the folio window.
 - e. **Address:** Select the address for payee - the primary address is selected by default.

 **Note:**

Select an **AR Address** to select a specific AR Account; this applies when the company or agent profile selected has multiple AR accounts.

- f. **Date Range**
 - i. **Entire Stay:** Select when routing applies throughout the reservation dates.
 - ii. **Specific Dates:** Select when routing apply for specific dates only.
 - i. **Begin Date:** Enter or select the start date.
 - ii. **End Date:** Enter or select the end date.
 - g. **Days of Week:** Select days of the week the routing applies to; by default all days are selected.
 - h. Charge Code Selection.
 - i. **Routing Codes:** Select checkbox to view a list of routing codes.
 - ii. **Transaction Codes:** Select checkbox to view a list of charge codes.
 - iii. Use the filter to enter a partial description of routing / charge code and click **Go** to search.
 - iv. Select one or more codes in the **Available** panel and click **>** to move the selected codes to the **Selected** panel.
 - i. To select all codes listed in **Available** panel use **>>**.
 - i. Refer **Routing Limits**.
 - j. Click **Save** or **Save and Refresh** to update the reservation billing and route charges accordingly.
5. Click **New** and add Other Room Reservation Routing Instructions (Other Reservation)
 - a. **Type:** Select Room.
 - b. **Room:** Enter or search and select the room reservation to route charges to.

- c. **Payee:** The payee will populate based on the reservation selected; you can also search for room reservation by name using this field.
- d. **Date Range**
 - i. **Entire Stay:** Select when routing applies throughout the reservation dates.
 - ii. **Specific Dates:** Select when routing apply for specific dates only.
 - i. **Begin Date:** Enter or select the start date.
 - ii. **End Date:** Enter or select the end date.
- e. **Days of Week:** Select days of the week the routing applies to; by default all days are selected.
- f. Charge Code Selection.
 - i. **Routing Codes:** Select checkbox to view a list of routing codes.
 - ii. **Transaction Codes:** Select checkbox to view a list of charge codes.
 - iii. Use the filter to enter a partial description of routing / charge code and click **Go** to search.
 - iv. Select one or more codes in the **Available** panel and click **>** to move the selected codes to the **Selected** panel.
 - i. To select all codes listed in **Available** panel use **>>**.
- g. Refer [Routing Limits](#).
- h. Click **Save** or **Save and Refresh** to update the reservation billing and route charges accordingly.

Viewing and Updating Routing

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations** select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Routing Instructions** or open the reservation presentation and click **Routing Instructions** details link.

 **Note:**

You can click **Show All** to display all detail links.

4. Click the vertical ellipsis **Actions** menu, and click **Edit** and update details.
5. Click **Save** or **Save and Refresh** to update the reservation billing and route charges accordingly.

Deleting Routing

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations** select **Manage Reservation**.
2. Enter search criteria, click **Search**.

3. Select the reservation in search result, click **I Want To. . .**, click **Routing Instructions** or open the reservation presentation and click **Routing Instructions** details link.
4. Click the vertical ellipsis **Actions** menu, and click **Delete**.
5. Click **Delete** to confirm.

Routing Limits

Setting a routing limit enables you to impose a limit on the total value of transactions that can be routed to a folio window. For example, a guest's company might only agree to pay a certain amount or percentage of the bill or only pay certain expenses for their employee. This agreed amount or percentage of the guest's bill can be routed to a specific folio window so that payment is made by the company's credit card and the remaining balance paid by the guest.

Routing limits are defined on the routing instructions as either an amount or a percentage of the guest folio. With percentage, you can route a percentage of the transactions associated with the routing instruction. For example, if 10 is defined for the routing instruction percentage, 10% of each transaction would be routed. Generates such as taxes and service charges are also split by the designated percentage.

With an amount limit, you can specify a maximum amount for the routing instruction. For example, if you set a limit of 200 on a window routing instruction for transaction code 1001, the first 200 charged by the guest to transaction code 1001 would be routed per the instruction to window 2 of the Billing screen. Any overage would automatically be split off and transferred to window 1. If the routing instruction was set up for room routing, the first 200 would go to window 1 of the target room and any overage would automatically be split off and transferred to window 1 on the originating guest's Billing screen.

The following rules govern the behavior of routing limits:

- When the routing instruction is set up for multiple routing codes (or multiple transaction codes or a mix of transaction codes plus routing codes), the routing limit applies to the sum of charges against all transaction codes included in the routing instruction.
- When routing a charge for an inclusive transaction code, the value is routed. This includes the generates (taxes and service charges).
- When routing a charge for an exclusive transaction code, the value of any generates is not routed.
- If the limit is changed after a transaction has been routed, a folio refresh shows an increase or decrease in the routed amount, if appropriate.
- When transferring postings to a target room, the routing limit for the routing instruction is observed. Only an amount up to the routing limit can be transferred to the target folio.
- When moving postings between folio windows, the routing limit for the target window is observed. Only an amount up to the routing limit can be moved to the target window.
- Routing limits and splitting behavior are observed by End of Day and Point of Sale (POS) postings.
- Routing limits can be set up for selected dates of a multi-night stay.
- Routing limits for multi-night stays are based on the business date when the revenue is realized. A pro forma folio or advance bill for a multi-night stay with routing applied separately to each date of the stay reflects routed charges and routing limits by business date. For example, assume a 4-night reservation has a rate code of 100 per night. Routing instructions are configured such that each night's room charge is routed to a

separate window with a 50 limit for each routing instruction. When an advance bill for the entire stay is generated, routing limits are applied by date.

Reservation Housekeeping and Task Schedule

[Prerequisites for Managing Reservation Housekeeping and Task Schedule](#)

To access the housekeeping options for a room reservation click the **Housekeeping Details** link in **I Want To. . .** or from the reservation presentation page. In the Housekeeping panel, you can add the time the guest would like the room serviced each day, which is printed output on the housekeeping task sheet reports and displayed in the [housekeeping task companion](#). Instructions to the housekeeping room attendant can also be added. For example, if you mention a pet is in the room, these instructions are included on the task sheet reports and task companion.

Room instructions will auto-populate from the profile based on the **Housekeeping Profile Note Type OPERA Control**

When you select a Note Type from an Individual/Contact Note Group and create a new reservation for a profile where the note with that Note Type already exists, the note is automatically placed into the Room Instructions on the reservation. This will also occur when you select a profile, which is a primary profile for an existing reservation. After creating the reservation, any changes to the Profile Notes will not get updated in the room instructions. If Room Instructions exist on a reservation and then you update the profile to one with the configured Note Type, the new profile's note will be added to the existing room instructions and separated with a pipe icon (|). For properties with the Share OPERA Control active: When share reservations exist, Room Instructions are copied to show the same on all reservations. Should a share be separated, the Room Instructions remain on all previously shared reservations and can be manually updated if they don't apply after separating the share.

When the **Turndown** OPERA Control is active the Housekeeping panel displays a **Turndown** check box to indicate if a turndown service is required for the room. You can also change the Turndown status and include or exclude the room from the Turndown task by selecting or deselecting the check box.

When the **Guest Service Status** OPERA Control is active, the Housekeeping panel displays the three options for the Guest Service Status (Do Not Disturb, Make Up Room, No Status Selected). The status can be changed and reflect on the Housekeeping Board for further auctioning.

Prioritize: When the **Prioritize** check box is selected the room is prioritized in the [Housekeeping Task Companion](#). For more information, see [Task Companion Auto-Priority](#)

When the **Housekeeping Task Schedule** OPERA Control is active, use the calendar to view and manage the housekeeping task(s) and supplies that are scheduled for each day the reservation is in house. You can add, change or remove a task along with their supplies. For example, if the guest is requesting no service on a particular day, the task can be removed from the calendar and the room is not included in that day's task sheet generation process. Or if the guest only requests light service, the full service task can be removed and the light service task (if configured) can be added instead.

**Note:**

The departure task does not display in the housekeeping task schedule.

Managing Reservation Housekeeping and Task Schedule

Editing Reservation Housekeeping Details

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .**, select **Housekeeping** or click the **Housekeeping** link in Reservation Presentation.
4. Click **Edit** on the housekeeping panel and enter the following details:
 - a. **Service Time:** Enter the requested service time.
 - b. **Turndown:** Click to include this reservation in the Turndown task.
 - c. **Guest Service Request:** Select a status if applicable (Available when the Guest Service Status OPERA Control is active).
 - d. **Prioritize:** Select check box to prioritize the room in the [housekeeping task companion](#) .
 - e. **Room Instructions:** Enter any room instructions to display in the task companion or output on task sheet reports. (Defaults from notes on the primary profile based on the Housekeeping Profile Note Type OPERA Control).
5. Click **Save**.

Creating Reservation Housekeeping Task Schedule

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .**, select **Housekeeping** or click the **Housekeeping** link in Reservation Presentation.
4. Click **New** to add a new schedule, enter the following details:
 - a. **Task:** Select a task from the list.
 - b. **Entire Stay:** Select to perform the task for the entire stay. This check box works with the Every XX Days and the **Starting on Day** fields.
 - c. **Every:** Specify how frequently, in days, the task is to be completed.
 - d. **Day to Start:** Select the day of stay to start the schedule.
5. **Supplies:** Click **New** to add supplies for the task.
 - a. **Code:** Select the supply item.
 - b. **Quantity:** Enter a quantity.
6. Repeat to add additional items.

7. To delete a supply item, highlight the item and click the vertical ellipsis **Actions** menu, and click **Delete**.
8. Click **Save**.

Editing Reservation Housekeeping Task Schedule

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .**, select **Housekeeping** or click the **Housekeeping** link in Reservation Presentation.
4. Select a date in the calendar then click **Edit** to update the scheduled task.
5. Update the scheduled task and supplies.
6. Click **Save**.

Deleting Reservation Housekeeping Task Schedule

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .**, select **Housekeeping** or click the **Housekeeping** link in Reservation Presentation.
4. Click the vertical ellipsis **Actions** menu, and click **Delete**.
5. Click **Delete** to confirm.

Resetting Reservation Housekeeping Task Schedule to Defaults

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .**, select **Housekeeping** or click the **Housekeeping** link in Reservation Presentation.
4. Click **Vertical Ellipsis** and click **Reset**.
5. Click **Reset** to confirm.

Extending the Stay Dates with Customized Task Schedule

When the stay dates for a reservation having a customized task schedule are amended / extended, OPERA Cloud prompts you to indicate how you want to proceed. Choose one of the options and select the **OK** button:

- **Remove Customized Schedule and recreate Default Schedule:** Choose this option if you want to cancel the existing customized task schedule and replace it with the default task schedule for all days (or all remaining days if the guest has checked in) of the stay. The default facility schedule consists of the tasks configured for the room type. The **New** action is available if you later decide to customize the default task schedule.
- **Keep Customized Schedule and Update Additional Nights:** Choose this option if you want to retain the existing customized task schedule and automatically apply

the default tasks to the extra stay dates being added. (The reservation arrival date is used as the basis for determining task frequency scheduling for the added dates.)

- **Keep Customized Schedule and Do Not Update Additional Nights:** Choose this option if you want to retain the existing customized task schedule without automatically setting default facility tasks for the stay dates being added. (This is the default option.) You can manually add, edit and delete tasks for the schedule.

Managing Reservation Payment Instructions

Reservation payment instructions enable you to define the payment method and payment details for each Billing window (folio); used in conjunction with [charge routing instructions](#).

Payment instructions is also used to manage credit card pre-authorizations, credit card transaction history and privileges such a pre and post stay charging authority, video checkout and folio auto-settlement.

When integrated with a payment partner Payment Details input are captured via EMV device and pre-auths automated through to the partner.

New/Edit Payment Instructions

1. From the **OPERA Cloud** menu, select **Bookings** , select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To...**, click **Payment Instructions** or open the reservation presentation and click **Payment Instructions** details link.
4. Click **New/Edit Payment Instructions** to add or edit the payment details for a Billing window.
5. Enter the following details:
 - a. **No Post:** Select this check box to prevent interface charges posting to this reservation account. Users manually posting charges are presented a warning.
 - b. **Always Checked In:** When a user (or the end of day procedure) checks out a pseudo room reservation that is designated as Always Checked In, an End of Day process creates an add-on reservation, with duplicate reservation details, and checks in the new reservation. This is commonly used for 'permanent house accounts' reservations for a pseudo room type. (Available when the Auto Check In Pseudo Rooms after Check Out OPERA Control is active and the [room type](#) is enabled for Always Checked In).
 - c. **Pre-Stay Charging:** Select this check box to allow charges to be posted to this reservation account prior to check in. Payments (guest ledger) may also be made to the reservation when this option is selected (Available when the Pre Stay Charges OPERA Control is active). For more information, see [Setting up Pre Stay Charging Rules](#).
 - d. **Post-stay Charging:** Select this check box to allow charges to be posted to this reservation account after check out and prior to the End of Day. Available when the Post Stay Charges OPERA Control is active. For more information, see [Setting up Post Stay Charging Rules](#).

- e. **Auto-settle (folio):** Select checkbox to enable periodic auto-settlement of the reservation account balance. For more information, see [Auto Folio Settlement](#) (Available when the Auto Settlement Rules OPERA Control is active).
 - i. **Type:** Displays the Auto Folio Settlement Type selected in the [primary profile](#) of the primary profile linked to the reservation.
 - ii. **Days:** Enter a periodic number of days for auto-settlement to occur. OPERA Cloud refers this value when the **Use Days on Reservation** check box is selected on the Auto folio Settlement screen.
- f. **Video Checkout:** Select this check box to indicate the guest is authorized to use the video check out method. (Available when the Video Check Out OPERA Control is active).
- g. **Credit Limit Auto Pay:** Select to auto-settle the account balance exceeds the payment type credit limit. Available when the Credit Limit Overages OPERA Control is active. For more information, see [Using Credit Limit Overage](#)
- h. **Reservation Type:** Select a reservation type from the list to update the reservation type (for future arrival reservation) based on an update to the payment details.
- i. **Payment Details:** Select a Billing window (1-8) to add or update the payment details accordingly.
 - i. **Payment Method:** Select a payment method from the list.
 - ii. **Card Number:** Enter the PAN on credit card.
 - iii. **Expiry:** Enter the expiry date of credit card.

 **Note:**

When integrated with payment partner click **Get Token** to read the card details from an EMV terminal. To view the unmasked PAN and expiry date click . You must have the View Credit Card Details task assigned to your role(s).

 **Note:**

Use the Add/Modify button to manually enter a credit card number and expiry date. An OPERA Pay page is launched for input of card details. Once saved, a token is returned and displayed in OPERA Cloud. (Available when the OPI Credit Card Processing OPERA Control is active and you are granted the CCTRANS role).

- iv. **Card Present:** (Available when the **Payment Services Directive** OPERA Control is active) This check box is deselected by default and remains deselected if you manually enter a credit card number. A 'Credit Card Was Entered Manually' message appears when you manually enter a credit card. This check box is automatically selected if you insert or swipe a credit card in a credit card terminal.
- v. **Card Holder Name:** Enter the cardholder name on credit card.

- vi. **Authorisation Rule:** Select a credit card pre-auth calculation rule. For more information, see [About Credit Card Authorization Rules](#).
 - vii. **Amount/Percentage:** Enter a value based on the pre-auth rule selected.
 - j. **Opt In Email Folio:** Select the opt-it for email delivery of folios on checkout or when generating [Batch Folios](#) or when [auto-settling folios](#). The email address of the linked profile is displayed.
 - i. Click the email address to select a different email address or add a new email address.
 - ii. If no email address is available, click **Add Email** to add an email address for profile linked to the Billing window.
 - k. Repeat payment details entry for other Billing windows.
6. Click **Save**.

Moving Payment Method

To move the payment details for a Billing window to another Billing window.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Payment Instructions** or open the reservation presentation and click **Payment Instructions** details link.
4. Click the vertical ellipsis **Actions** menu and select **Move Payment Method**.
 - a. Select the **From Window** from the list.
 - b. Select the to **Window** from the list.
5. Click **Save**.

Credit Card Authorization

To initiate a pre-authorization of the credit card:

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Payment Instructions** or open the reservation presentation and click **Payment Instructions** details link.
4. Click the vertical ellipsis **Actions** menu and select **Credit Card Authorization**.
 - a. Click **Additional** to obtain additional authorization amount.
 - i. Enter an **Authorization Amount** and click **Run Additional Authorization**.
 - ii. Select an EMV terminal (select a device areas to view list of terminals assigned to the area), click **Select Terminal**.
 - b. Click **Manual** to add an offline authorization and enter the following details:
 - i. **Authorization Amount:** Enter the amount authorized.
 - ii. **Approval Code:** Enter the approval code received.
 - iii. Click **Run Manual Authorization**.

Viewing Credit Card Authorization History

1. From the **OPERA Cloud** menu, select **Bookings** , select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Payment Instructions** or open the reservation presentation and click **Payment Instructions** details link.
4. Click the vertical ellipsis **Actions** menu and click **Credit Card History**.
5. Select search options for Authorizations, Payments, Refunds and Failures, click **Search**.
6. Click **Report** to generate the **CC_Auth_History** report with this information.

Viewing Routing Instructions

To view and manage the reservation routing instructions. Available when the Routing OPERA Control is active.

1. From the **OPERA Cloud** menu, select **Bookings** , select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Payment Instructions** or open the reservation presentation and click **Payment Instructions** details link.
4. Click the vertical ellipsis **Actions** menu and select **View Routing Instruction**.

For more information, see [Reservation Routing Instructions](#).

Managing Reservation Deposit Payments

Reservation deposit payments may be applied against deposit request rules setup on the reservation or posted as an unallocated payment. To refund a deposit post a negative amount and provide details in the reference field, which is mandatory when the Mandatory Reference Negative Payments OPERA Control is active. When the Credit Card Rebate Validation OPERA Control is active a check is performed to ensure the refund amount does not exceed the amount of the original deposit payment.

For pre-paid commission-able travel agent reservations a special TA Commission payment method should be used to post the difference between the net deposit payment received and the commission-able rate amount; OPERA Cloud then tracks the commission as prepaid in the commissions module.

You can also transfer deposit payments to one or more other reservations. The Transfer option is not available for deposit payments created with a deposit folio. Deposit folios are generated for deposit payments when the [Advanced Deposit Handling OPERA Control](#) is set to any of the following: 3, 4, 5, 6, 8, 9, 10, 11, 12, 13, 14, or 15. The maximum amount that can be transferred is (Total Deposit Receipts - Total Deposit Folios). Negative amounts cannot be transferred. For more information, see [About Reservation Advanced Deposit Handling](#)

**Note:**

You are prompted to enter your PIN when the Force Cashier Login OPERA Control is active.

Posting an Allocated Deposit

To post a deposit payment against a specific deposit request rule.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** in Reservation Presentation.
4. In the Deposit section, click the vertical ellipsis **Actions** menu and select **Post Unallocated Deposit** and enter the following details:
 - a. **Payment Method:** Select a payment method from the list.
 - b. **Card Number:** Enter card number if payment method is a credit card.
 - c. **Expiration:** Enter expiry date if the payment method is a credit card.
 - d. **Card Holder:** Enter cardholder name details.
 - e. **Change Payment Method on Reservation:** Select to update the payment method in the reservation.
 - f. **Amount:** Enter the deposit amount.
 - g. **Comments:** Enter any comments.
 - h. **Reference:** Enter any reference details.
 - i. **Reservation Type:** Select a reservation type to update the reservation type based on deposit payment.
5. Click **Post Payment**.
6. Click **Print Receipt** to generate a receipt.
 - a. Select a destination, then click **Process**.

Posting Unallocated Deposit

An unallocated deposit payment is not applied to a specific deposit request rule.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** in Reservation Presentation.
4. In the Deposit section, click the vertical ellipsis **Actions** menu and select **Post Unallocated Deposit** and enter the following details:
 - a. **Payment Method:** Select a payment method from the list.

- b. **Card Number:** Enter card number if payment method is a credit card.
 - c. **Expiration:** Enter expiry date if the payment method is a credit card.
 - d. **Card Present:** (Available when the Payment Services Directive OPERA Control is active) This check box is deselected by default and remains deselected if you manually enter a credit card number. A 'Credit Card Was Entered Manually' message appears when you manually enter a credit card. This check box is automatically selected if you insert or swipe a credit card in a credit card terminal.
 - e. **Card Holder:** Enter cardholder name details.
 - f. **Change Payment Method on Reservation:** Select to update the payment method in the reservation.
 - g. **Amount:** Enter the deposit amount.
 - h. **Comments:** Enter any comments.
 - i. **Reference:** Enter any reference details.
 - j. **Reservation Type:** Select a reservation type to update the reservation type based on deposit payment.
5. Click **Post Payment**.
 6. Click **Print Receipt** to generate a receipt.
 - a. Select a destination, then click **Process**.

Reprinting Deposit Receipts

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** in Reservation Presentation.
4. In the Deposit section, select the deposit rule, then click **+** to expand and view the deposit payments.
5. Select the payment, then click the vertical ellipsis **Actions** menu and select **Receipt**.
6. Select a destination, then click **Process**.

Viewing Deposit Information

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** in Reservation Presentation.
4. In the Deposit section, select the unallocated deposit rule, then click **+** to expand and view the deposit payments.
5. Select the payment, then click the vertical ellipsis **Actions** menu and select **View Deposit Information**.

- a. **Comments:** Enter any comments.
- b. **Reference:** Enter any reference details.
- c. Click **Save**.

Reversing (Refunding) a Deposit Payment

A deposit refund receipt can be generated when the Deposit Refund Receipt OPERA Control is active. A deposit receipt must be setup in the Deposit Refund Receipt [stationery report group](#).

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** in Reservation Presentation.
4. In the Deposit section, select the unallocated deposit rule, then click **+** to expand and view the deposit payments
5. Select the payment, then click the vertical ellipsis **Actions** menu and select **Reverse Payment** enter the following details:
 - a. **Payment Method:** Select a payment method from the list.
 - b. **Card Number:** Enter card number if payment method is a credit card.
 - c. **Expiration:** Enter expiry date if the payment method is a credit card.
 - d. **Card Present:** (Available when the Payment Services Directive OPERA Control is active) This check box is deselected by default and remains deselected if you manually enter a credit card number. A 'Credit Card Was Entered Manually' message appears when you manually enter a credit card. This check box is automatically selected if you insert or swipe a credit card in a credit card terminal.
 - e. **Card Holder:** Enter cardholder name details.
 - f. **Change Payment Method on Reservation:** Select to update the payment method in the reservation.
 - g. **Comments:** Enter any comments.
 - h. **Reference:** Enter any reference details (Mandatory when the Mandatory Reference Negative Payments OPERA Control is active)
 - i. **Reservation Type:** Select a reservation type to update the reservation type based on deposit payment.
 - j. Click **Post Payment**.
 - k. Click **Print Receipt** to generate a receipt.
 - i. Select a destination, then click **Process**.

Detaching Deposit Payments from a Deposit Request

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.

3. Select the reservation in the search result, click **I Want to...**, and then select **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** link in Reservation Presentation.
4. In the Deposit section, select the deposit rule, then click **+** to expand and view the deposit payments.
5. Select a payment then click the vertical ellipsis **Actions** menu and select **Detach Payment from this Rule**.
6. The deposit payment will be listed as an unallocated payment.

Attaching Unallocated Deposit Payment to a Deposit Request

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...**, and then select **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** link in Reservation Presentation.
4. Select a payment then click the vertical ellipsis **Actions** menu and select **Attach Payment To.....**
 - a. The action(s) will display the name and amount of the deposit request; select the required action for the rule.

About Reservation Advanced Deposit Handling

The Advanced Deposit Handling [OPERA Control](#) determines how deposit payments are processed.

The following advanced deposit handling options are available:

Mode 0 - Print Deposit Receipt. This option automatically generates a deposit receipt.

- When the Post Deposit action is selected from the Deposit and Cancellation screen, the Reservation Deposit Payment screen appears with the Print check box selected and disabled (cannot be unchecked). A deposit receipt will always be printed. This is the default setting.

Mode 1 - Print Deposit Receipt Optional. This option allows you to choose whether or not to generate a deposit receipt.

- When the Post Deposit action is selected from the Deposit and Cancellation screen, the Reservation Deposit Payment screen appears with the Print check box enabled and checked. Unselect the check box if you do not want to print a deposit receipt.

Mode 2 - Print Tax on Deposit Receipt. This option allows you to identify a tax invoice number that will appear on the deposit receipt.

- `Sample_payment_tax` must be defined as the deposit receipt template. For more information, see [Stationery Report Groups](#)
- When the Post Deposit action is selected from the Deposit and Cancellation screen, the Reservation Deposit Payment screen appears with the Print check box enabled but unchecked. Select the check box to print a deposit receipt. A separate

field (Manual Tax Invoice Number) is available for manual entry of the tax invoice number if you want to print tax on the deposit receipt.

Mode 3 - Print Folio for Deposit Receipt. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the reservation account (Billing) as Deposit Transfers.

 **Note:**

Folio tax is not updated with consumption changes for the first bill after check in.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, a list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)
- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box enabled but unchecked. Select the check box to print a deposit receipt. A folio will print automatically, with or without the deposit receipt, when you select the OK action form the Reservation Deposit Payment screen.

Mode 4 - Print Folio for Deposit Receipt, Calculate Tax at Bill Generation. . This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the guest's Billing screen as Deposit Transfers.

 **Note:**

The first bill after check-in will update the folio tax based on consumption.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, a list of the profiles linked with the reservation appears. You can select the profile name you want to appear on the folio for pre-posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)
- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box enabled but unchecked. Select the check box to print a deposit receipt. A folio will print automatically, with or without the deposit receipt, when you select **OK** form the Reservation Deposit Payment screen.

Mode 5 - Print Folio for Deposit Receipt, Apply Country Condition for Printing of Folio. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the reservation account (Billing) as Deposit Transfers.

 **Note:**

Folio tax is not updated with consumption changes for the first bill after check in. Folio Type selection (Fattura/Ricevuta) will display for Italy country mode.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, an list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)
- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box enabled but unchecked. Select the check box to print a deposit receipt. A folio will print automatically, with or without the deposit receipt, when you select the OK action form the Reservation Deposit Payment screen.

Mode 6 - Print Folio for Deposit Receipt, Calculate Tax at Bill Generation, Apply Country Condition for Pre-posting. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the guest's Billing screen as Deposit Transfers.

 **Note:**

The first bill after check-in will update the folio tax based on consumption.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, an list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)

 **Note:**

The country mode value is checked and if it is CO, PE, or GT, pre-posting is not allowed if the deposit is being made in the same month as the arrival date.

- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box enabled but unchecked. Select the check box to print a deposit receipt. A folio will print automatically, with or without the deposit receipt, when you select the OK action form the Reservation Deposit Payment screen.

Mode 7 - Print Deposit Receipt, Print Tax on Deposit Receipt. This option allows you to identify a tax invoice number that will appear on the deposit receipt.

- `Sample_payment_tax` must be defined as the deposit receipt templates. For more information, see [Stationery Report Groups](#)
- When the Post Deposit action is selected from the Deposit and Cancellation screen, the Reservation Deposit Payment screen appears with the Print check box selected and enabled. Unselect the check box if you do not want to print a deposit receipt. A separate field (Manual Tax Invoice Number) is available for manual entry of the tax invoice number if you want to print tax on the deposit receipt.

Mode 8 - Print Deposit Receipt, Print Folio for Deposit Receipt. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the reservation account (Billing) as Deposit Transfers.

 **Note:**

Folio tax is not updated with consumption changes for the first bill after check in.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, a list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)
- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box selected and enabled. Unselect the check box if you do not want to print a deposit receipt. A folio will print automatically, with or without the deposit receipt, when you select the OK action form the Reservation Deposit Payment screen.

Mode 9 - Print Deposit Receipt, Print Folio for Deposit Receipt, Calculate Tax at Bill Generation. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the guest's Billing screen as Deposit Transfers.

 **Note:**

The first bill after check-in will update the folio tax based on consumption.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, a list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)
- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box selected and enabled. Unselect the check box if

you do not want to print a deposit receipt. A folio will print automatically, with or without the deposit receipt, when you select the OK action from the Reservation Deposit Payment screen.

Mode 10 - Print Deposit Receipt, Print Folio for Deposit Receipt, Apply Country Condition for Printing of Folio. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the guest's Billing screen as Deposit Transfers.

 **Note:**

Folio tax is not updated with consumption changes for the first bill after check in. Folio Type selection (Fattura/Ricevuta) will display for Italy country mode.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, an list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)
- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box selected. Unselect the check box if you do not want to print a deposit receipt. A folio will print automatically, with or without the deposit receipt, when you select the OK action from the Reservation Deposit Payment screen.

Mode 11 - Print Deposit Receipt, Print Folio for Deposit Receipt, Calculate Tax at Bill Generation, Apply Country Condition for Pre- posting. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the guest's Billing screen as Deposit Transfers.

 **Note:**

The first bill after check-in will update the folio tax based on consumption.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, an list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)

 **Note:**

The country mode value is checked and if it is CO, PE, or GT, pre-posting is not allowed if the deposit is being made in the same month as the arrival date.

- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box selected. Unselect the check box if you do not want to print a deposit receipt. A folio will print automatically, with or without the deposit receipt, when you select the OK action form the Reservation Deposit Payment screen.

Mode 12 - Print Tax on Deposit Receipt, Print Folio for Deposit Receipt. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the reservation account (Billing) as Deposit Transfers. In addition, you can identify a tax invoice number that will appear on the deposit receipt.

 **Note:**

Folio tax is not updated with consumption changes for the first bill after check in.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, an list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)
- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box enabled but unchecked. Select the check box to print a deposit receipt. A separate field (Manual Tax Invoice Number) is available for manual entry of the tax invoice number if you want to print tax on the deposit receipt.
- A folio will print automatically, with or without the deposit receipt, when you select the OK action form the Reservation Deposit Payment screen.

Mode 13 - Print Tax on Deposit Receipt, Print Folio for Deposit Receipt, Calculate Tax at Bill Generation. . This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the guest's Billing screen as Deposit Transfers. In addition, you can identify a tax invoice number that will appear on the deposit receipt.

 **Note:**

The first bill after check-in will update the folio tax based on consumption.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, an list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.

- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)
- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box enabled but unchecked. Select the check box to print a deposit receipt. A separate field (Manual Tax Invoice Number) is available for manual entry of the tax invoice number if you want to print tax on the deposit receipt.
- A folio will print automatically, with or without the deposit receipt, when you select the OK action form the Reservation Deposit Payment screen.

Mode 14 - Print Tax on Deposit Receipt, Print Folio for Deposit Receipt, Apply Country Condition for Printing of Folio. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the guest's Billing screen as Deposit Transfers. In addition, you can identify a tax invoice number that will appear on the deposit receipt.

 **Note:**

Folio tax is not updated with consumption changes for the first bill after check in. Folio Type selection (Fattura/Ricevuta) will display for Italy country mode.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, an list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)
- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box enabled but unchecked. Select the check box to print a deposit receipt. A separate field (Manual Tax Invoice Number) is available for manual entry of the tax invoice number if you want to print tax on the deposit receipt.
- A folio will print automatically, with or without the deposit receipt, when you select the OK action form the Reservation Deposit Payment screen.

Mode 15 - Print Tax on Deposit Receipt, Print Folio for Deposit Receipt, Calculate Tax at Bill Generation, Apply Country Condition for Pre- posting. This option allows you to generate a folio as well as a deposit receipt. It also allows you to pre-post transactions to the guest's Billing screen as Deposit Transfers. In addition, you can identify a tax invoice number that will appear on the deposit receipt.

 **Note:**

The first bill after check-in will update the folio tax based on consumption.

- To use this option, activate the Folio No Reprint OPERA Control.
- When the Post Deposit action is selected from the Deposit and Cancellation screen, an list listing the profiles associated with the reservation appears. You can select the profile name you want to appear on the folio for pre- posted transactions.
- When you have selected a profile from the list, the Transaction Posting screen appears; this screen allows you to pre-post transactions. (These transactions will appear on the reservation account (Billing) as Deposit Transfers.)

 **Note:**

The country mode value is checked and if it is CO, PE, or GT, pre-posting is not allowed if the deposit is being made in the same month as the arrival date.

- When you close the Transaction Posting screen, the Reservation Deposit Payment screen appears with the Print check box selected and enabled. A separate field (Manual Tax Invoice Number) is available for manual entry of the tax invoice number if you want to print tax on the deposit receipt.
- A folio and a deposit receipt will print automatically when you select the OK action form the Reservation Deposit Payment screen.

Managing Reservation Deposit Request and Cancellation Policy

[Prerequisites for Managing Reservation Deposit / Cancellation](#)

[Watch Video](#)

Use the Deposit / Cancellation panel to manage a deposit requests and payments and any cancellation penalty for a reservation:

- Reservation deposit deals with managing the deposit requirements and payment that guests make prior to their stay.
- Reservation cancellation covers the handling of cancellation penalty charges that might involve forfeiture of deposits paid.

You can define and schedule Deposit / Cancellation rules from [Booking Rules and Schedules](#) allowing you to automatically apply the Deposit / Cancellation rules for reservations with a specific rate codes or reservation types. You can also manually add deposit requests and cancellation policies directly to a reservation.

 **Note:**

Only one deposit rule and one cancellation rule is in effect at a time - the rate code rule takes precedence, followed by the reservation type rule, and finally by any rule manually set up on the reservation.

Add Reservation Deposit / Cancellation Details

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To . . .** and select **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** in Reservation Presentation.

 **Note:**

Deposit / Cancellation details appear if the rate code or reservation type selected for the reservation has a deposit and/or cancellation rule.

4. **Add Deposit Request:** Click **New** and enter the following details:
 - a. **Deposit Rule:** Select a deposit rule from the list to setup the deposit requirements or manually enter details. For more information see: [Configuring Deposit Rules](#).
 - b. **Percentage:** If a deposit rule was selected, a percentage of the rate will populate the field. Update the field as required.
 - c. **Deposit Amount:** If a deposit rule was selected, a deposit amount will populate the field. Update the deposit amount as required.
 - d. **Due Date:** If a deposit rule was selected, a due date will populate the field. Update the deposit amount as required.
 - e. **Comments:** Enter any comments applicable.
5. Click **Save**.
6. **Add Cancellation Penalty:** Click **New** and enter the following details:
 - a. **Cancel Rule:** Select a cancel rule from the list to set up the cancellation policy or manually enter the details. For more information see: [Cancel Penalties \(Cancellation Penalty Rules\)](#).
 - b. **% Cancel:** Enter the percent of the total charge for the number of room nights specified in Room Nights that is to be charged as a cancellation penalty (if the Percentage method is used to compute the penalty).
 - c. **Room Nights:** The number of room nights for this reservation.
 - d. **% Due:** Enter the percentage of the cancellation amount due.
 - e. **Cancel Amount:** The amount of the cancellation charge.
 - f. **Cancel Date:** Enter the date on or before the cancellation must take place to avoid application of the cancellation penalty.
 - g. **Comments:** Enter any applicable comments.
7. Click **Save**.

Edit Reservation Deposit / Cancellation Details

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.

2. Enter search criteria, click **Search**.
3. Select the reservation in the search results, click **I Want To . . .** and select **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** in Reservation Presentation.
4. Select the **Deposit Rule** or **Cancellation Penalty**.
5. Click the vertical ellipsis **Actions** menu, and then click **Edit**
6. Update the details.
7. Click **Save**.

Delete Reservation Deposit / Cancellation Details

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search result, click **I Want To . . .** and select **Deposit / Cancellation** or open the reservation and click **Deposit / Cancellation** in Reservation Presentation.
4. Select the **Deposit Rule** or **Cancellation Penalty**.
5. Click the vertical ellipsis **Actions** menu, and then click **Delete**.
6. Click **Delete** to confirm.

Managing Reservation Cancellation

Prerequisites for Managing Reservation Cancellation

You can cancel a reservation at any time prior to the reservation check-in. Cancelling a reservation returns the room type reserved back to inventory.

When the Cancellation Handling OPERA Control is active there is a cancellation policy (rule) on the reservation; informing you of the cancellation penalty. For more information, see [Managing Reservation Deposit and Cancellation](#).

Watch Video.

If required, you can generate a cancellation confirmation detailing the cancellation number. When the Confirmation Letter for Cancel Reservation OPERA Control is active, you are prompted to generate a [cancellation confirmation letter](#).

Note:

You cannot cancel an auto-created event reservation for a guest room reserved as an event space in OPERA Cloud Sales and Event Management **Premium**.

Canceling a Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Cancel Reservation**.
4. Enter the following details:
 - a. **Cancel Reason:** Select a [Cancellation reason](#).
 - b. **Description:** Field defaults based on the reason selected; you can enter more details
 - c. **Delete All Traces:** Select the delete reservation traces on the cancelled reservation.
5. Click **Cancel Reservation**:
6. The cancellation number is displayed in the confirmation panel .
7. To generate a cancellation confirmation click **Email/Print**.
 - a. **Send To:** Select a linked profile from the list.
 - b. **Email To:** Select an email address from the list
 - c. **Confirmation Letter:** Select a cancellation template from the list.
8. Click **Send**.

 **Note:**

If cancelling a share reservation, a message prompts you to indicate whether you want to cancel each of the sharing reservations as well. If you proceed to cancel share reservations, an individual cancellation number is provided for each canceled sharer.

Canceling a Reservation with Deposit Payment

When the Cancel with Deposit OPERA Control is active, a reservation with a deposit payment posted can be canceled; the deposit refund or retention can be managed at a later time.

When the Cancel with Deposit OPERA Controls is inactive you will be prompted to manage refund or retention of the deposit payment.

With the No Show and Cancellation Postings OPERA Control active, the cancelled reservations can be accessed in Billing to post a cancellation fee and refund any remaining deposit.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Cancel Reservation**.

4. Complete the following:
 - a. **Cancel Reason:** Select a [Cancellation reason](#).
 - b. **Description:** Field defaults based on the reason selected; you can enter more details.
 - c. **Delete All Traces:** Select the delete reservation traces on the cancelled reservation.
5. Click **Cancel Reservation**.

Reinstating Cancelled Reservation

For more information, see [Reinstating Reservations](#).

Viewing Cancellation History

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to...** then **Cancel Reason**.

Managing No Show and Cancellation Deposits and Charges

[Prerequisites for No Show and Cancellation Deposits and Charges](#)

When the No Show and Cancellation Postings OPERA Control is active, you can access No Show or Cancelled status reservations in Billing to post charges and payments as you would for any inhouse reservation. This enables you to process the refund of deposit payment(s) or the posting of a cancellation or no show charge and then generate an [interim folio](#) to settle the balance and generate a folio.

If any deposit payments exist on these reservations, OPERA Cloud prompts you to transfer (mature) the deposit balance when accessing the reservation account in Billing. Selecting No to the prompt results in the deposit payments remaining on the deposit ledger; you can transfer the deposit balance to the guest ledger at a later time.

When the Post Revenue To No Shows OPERA Control is active, you can configure rules to automate the posting of a no show charge and the transfer of all deposit payments during End of Day on the arrival date of the no show.

See, [Configuring No Show Posting Rules](#).

Manually Transferring Deposit Balances

1. From the OPERA Cloud menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Select **No Show** or **Cancelled** Reservation Status, enter any other search criteria, and click **Search**.
3. Select the reservation in the search results, click the **I Want To . . .** link, and select **Billing**.
4. Click the **I Want To . . .** link and select **Transfer Deposit**.

Posting a No Show or Cancellation Charge

1. From the OPERA Cloud menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.

2. Select **No Show** or **Cancelled** Reservation Status, enter any other search criteria, and click **Search**.
3. Select the reservation in the search results, click the **I Want To . . .** link, and select **Billing**.
4. Select the billing window.
5. Click **Post Charge**.

For more information, see [Posting Charges to Guest Folios](#).

Posting Settlements (Payment)

1. From the OPERA Cloud menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Select **No Show** or **Cancelled** Reservation Status, enter any other search criteria, and click **Search**.
3. Select the reservation in the search results, click the **I Want To . . .** link, and select **Billing**.
4. Select the **Billing Window** to settle.
5. Click the **Vertical Ellipsis** and select **Interim Folio**.

For more information, see [Settling a Reservation Account Balance](#)

Posting Deposit Refunds (Payment)

A refund payment requires entry of a negative payment amount.

1. From the OPERA Cloud menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Select **No Show** or **Cancelled** Reservation Status, enter any other search criteria, and click **Search**.
3. Select the reservation in the search results, click the **I Want To . . .** link, and select **Billing**.
4. Select the billing window with a deposit balance to refund.
5. Click **Post Payment**.

Refer to: [Applying Payments to Guest Folios](#).

Managing Reservation Fixed Charges

[Prerequisites for Reservation Fixed Charges](#)

Use Fixed Charges to schedule a re-occurring charge to be posted to a reservation periodically and automatically during the End of Day process. Fixed Charges also offers a convenient way to automatically post a one-time charge on a specific date in the future.

Note:

If charge routing is active on the reservation, the fixed charge will route to the billing window or room based on these instructions.

Adding Fixed Charges

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria for the reservation and click **Search**.
3. Select a reservation in the search result then click **I Want To. . .** and select **Fixed Charges** or click the **Fixed Charges** link in Reservation Presentation.
4. Click **New** and enter the following details:
 - a. **Frequency**: Select the frequency with which the fixed charge should be posted.
 - i. **Once**: Post the charge one time. When this option is selected, the **End Date** field becomes unavailable.
 - ii. **Daily**: Post the charge every day.
 - iii. **Weekly**: Post the charge once a week. When this option is selected, the **Day to Execute** field appears. Select the down arrow to choose the day of the week (1 = Sunday, 2 = Monday, 3 = Tuesday, and so on) to have the fixed charge posted.
 - iv. **Monthly**: Post the charge once a month. When this option is selected, the **Day to Execute** field becomes available. Select any number from 1 to 31 or **End**. Numbers 1 through 31 trigger a posting on that date each month. If the date does not fall in that month (for example, some months have fewer than 31 days), no posting occurs for the month. Selecting **End** always posts the fixed charge on the last day of the month.
 - v. **Quarterly**: Post the charge once a quarter. When this option is selected, the **Day to Execute** field becomes available. Fixed charges are posted every quarter, that is, every three months. Select the down arrow to choose the date during the last month in the quarter to have the fixed charge posted. For example, if you select 15, the fixed charges are posted on the 15th of March, the 15th of June, the 15th of September, and the 15th of December. To post the charge on the last day of the quarter, regardless of the date, select **END**.
 - vi. **Yearly**: Post the charge once a year. When this option is selected, the **Date to Execute** field becomes available. Fixed charges always post every year on the month and day you select. The year portion of the date is ignored.
 - b. **Begin Date /End Date**: Select the **Begin Date** and **End Date** to determine the period when the fixed charge will be posted to the reservation.
 - c. **Amount**: Select to post a flat amount
 - i. **Amount (Price)**: Enter the unit price of the charge. A negative amount can be entered.
 - d. **Percentage of Room Rate**: Select to post a percentage of the effective room rate (inclusive of add to rate packages).
 - i. **Percentage**: Enter a % value. For example, 10 for 10%
 - e. **Transaction Code**: Enter or select the charge from the list.
 - f. **Quantity**: Enter the number of units to be charged.

 **Note:**

Fixed charges are always posted in the local/base currency for the property. The posted amount will be the price x quantity.

5. Click **Save**.

Editing Fixed Charges

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and then click **Search**.
3. Select a reservation in the search result then click **I Want To...** and select **Fixed Charges** or click the **Fixed Charges** link in Reservation Presentation.
 - a. Select the **Fixed Charge** then click the vertical ellipsis **Actions** menu and select **Edit**.
 - b. Update the details.
 - c. Click **Save**.

Deleting Fixed Charges

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and then click **Search**.
3. Select a reservation in the search result then click **I Want To...** and select **Fixed Charges** or click the **Fixed Charges** link in Reservation Presentation.
 - a. Select the **Fixed Charge** then click the vertical ellipsis **Actions** menu and select **Delete**.
 - b. Click **Delete** to confirm.

Managing Reservation Alerts

Prerequisites for Reservation Alerts

Alerts are messages for hotel staff that are displayed as a notification when the reservation is accessed at a specific time (status) in the reservation life cycle.

When the **Popup Alerts** control is enabled Alerts appear as a pop-up page, which the user must close to continue. When the control is not enabled Alerts are indicated in a notifications link.

Reservation alerts can also be setup to print to an (email addressable) printer, such a printer in In-room Dining or Concierge and generating a "chit" in the selected template format.

Adding Reservation Alert

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.

3. Select the reservation in the search result, click **I Want to. . .**, then **Alert** or open the reservation and click **Alert** in Reservation Presentation.
4. Click **New** and enter the following details:
 - a. **Code**: Select the [Alert message](#).
 - b. **Area**: Select the area of the alert. The area determines when the alert will be displayed.
 - i. **Reservation**: Alert is triggered whenever the future reservation is accessed.
 - ii. **Inhouse**: Alert is triggered whenever the inhouse reservation is accessed
 - iii. **Check- In**: Alert is triggered at the time the reservation checks in (due in)
 - iv. **Check- Out**: Alert is triggered at the time the reservation checks out (due out)
 - c. **Description**: The text of the alert. Based on the alert code selected , default text is populated and can be edited if required.
 - d. **Display Alert**: Select this check box to display alert as an on-screen notification when the alert is triggered. This check box is selected by default
 - e. **Print Alert**: Select this check box to print the alert notification using a selected alert template to the selected printer.
 - i. **Printer**: Select the printer from list. This printer must be configured as belonging to the alert printing group and be email addressable. See [Configuring Printers](#) for details.
 - ii. **Report**: Select the alert template to be printed . If no alert report is selected, the alphabetically first alert template auto-populates to the field. For more information, see [Stationery Report Groups](#) for details.
5. Click **Save**.

Editing Reservation Alert

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .**, then **Alert** or open the reservation and click **Alert** in Reservation Presentation.
4. Click the vertical ellipsis **Actions** menu, and then click **Edit**.
5. Update the alert details.
6. Click **Save**.

Deleting Reservation Alert

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want to. . .**, then **Alert** or open the reservation and click **Alert** in Reservation Presentation.
4. Click the vertical ellipsis **Actions** menu, and then click **Delete**.
5. Click **Delete** to confirm.

Managing Reservation Preferences

Adding Reservation Preferences

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To...** click **Preferences** or open the reservation presentation and click **Preferences** details link.
4. Click **New**.
 - a. Click the preference group **[+]** to expand the list.
 - b. Select one or preferences in the **Available** column, click **>** to move selection to the **Selected** panel.
5. Click **Save** to save on reservation.
6. Click **Save to Reservation and Profile** to save the preferences on reservation and also update the preferences on the linked profile.

Deleting Reservation Preferences

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To...** click **Preferences** or open the reservation presentation and click **Preferences** details link.
4. Enter search criteria and click **Search**.
5. Select the preference, click the vertical ellipsis **Actions** menu, and select **Delete**.
6. Click **Delete** to confirm.

Managing Reservation Linked Profiles

Prerequisites for Managing Reservation Linked Profiles

The Linked Profile panel is used to link a Company, Travel Agent, Contact, Group or Source profile to a reservation. You can also select a profile as the reservation contact and the billing contact for the reservation.

Use the Linked Profile panel to select a different guest profile for a future reservation (i.e. name change); your role must be granted the Select Another Profile task to access this action.

When the Accompanying Profile OPERA Control is active you can also link guest profile as an accompanying guest, who is someone that also occupies a room but does not require a separate reservation account or has independent stay dates. If the guest requires a separate folio or has staggered arrival or departure dates use the Shares option instead. Using Accompanying Profiles on a reservation ensures that you can locate a guest via Manage Reservation search.

Selecting Another Profile for Reservation

To link a different guest profile to a reservation:

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .** click **Linked Profiles** or open the reservation presentation and click the **Linked Profiles** details link.
4. Click **Select Another Profile**.

 **Note:**

Click **Create Guest Profile** to create a new profile. See [Creating Profiles](#).

5. Enter search criteria and click **Search**.
6. Select a profile in the search result, click **Select**.
7. The **Linked Profiles** panel will update to show the new profile linked to reservation.

 **Note:**

Please be sure to check the reservation preferences based on new profile linked to the reservation.

Managing Associated Profiles

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .** click **Linked Profiles** or open the reservation presentation and click the **Linked Profiles** details link.
4. Click the **Associated Profiles** tab to view any sales account or group profiles linked to the reservation or any accompanying guests added to the reservation.
5. Click **Edit**.
 - a. **Company:** If the reservation is associated with a company and you want to maintain statistics on this company, link the company profile to the reservation.
 - b. **Agent:** If the reservation is made through a travel agency, link the travel agency profile to the reservation in order to maintain statistics for the travel agent and enable commission to be calculated.
 - c. **Group:** If the reservation is associated with a group, link the group profile to the reservation in order to maintain statistics for the group.
 - d. **Source:** If the reservation is made through a reservation service, link the source profile to the reservation in order to maintain statistics for the source.

- e. **Reservation Contact:** Select to link a contact profile to the reservation as the reservation contact. Available when the Reservation Contact OPERA Control is active.
 - f. **Billing Contact:** Select to link a contact profile to the reservation as the billing contact. Available when the Reservation Contact OPERA Control is active.
6. Click **Save**.

Managing Accompanying Profiles

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To...** click **Linked Profiles** or open the reservation presentation and click the **Linked Profiles** details link.
4. Click the **Associated Profiles** tab to view any sales account or group profiles linked to the reservation or any accompanying guests added to the reservation.
5. Click **Attach**.
 - a. Enter search criteria, click **Search**.

 **Note:**

Click **Create Guest Profile** to create a new profile. For more information, see [Creating Profiles](#).

- b. Select a profile in the result and click **Select**.
 - c. Click **Save**.
6. Click the vertical ellipsis **Actions** menu and select **Remove** to delete the link for the selected profile.
7. Click **Save**.

Reservation Packages

[Prerequisites for Reservation Packages](#)

Package items enable you to provide guests with amenities and services as part of their reservation stay. You can link package items to a rate code to create a package rate, sell package items directly on a reservation, or both link them to a rate code and sell them on a reservation.

A "Bed and Breakfast" package rate code is an example of a package item that includes both accommodation and breakfast in the rate amount. A "Honeymoon" package rate code might include items such as champagne, chocolates, dinner, and breakfast in addition to the accommodation.

An extra bed or crib might be required for a specific reservation and sold separately as a package item. A package item can be configured with an item price, which adds it to the rate, thereby increasing the total room rate. When the Item Inventory OPERA Control is active package items can also be configured to deduct inventory items when the package item is added to a reservation.

Other examples of reservation-specific package items are transportation (airport pickup / drop off) and tours sold "on the fly" that must be added to the reservation and posted to the reservation in order for a sales charge to be posted to the reservation account.

The Packages details screen allows you to view a list of all package items that are included in the rate code or manually added (sold) directly on the reservation. When package items are added to the reservation, you may later delete them entirely from the reservation or edit the quantity of the item.

When package items are configured on the reservation rate code, you are unable to delete the package item or change the quantity of package elements. The quantity value shown in the **Quantity** field refers to the number of packages associated with the reservation. This number is determined based on the calculation rules for the package — per person, per adult, per room, per flat rate, and so on. For example, if the Breakfast package is per-person, and two guests are covered by the reservation, the quantity would be 2. However, you can exclude the package item.

With the Override Package Amount task granted, you can also amend the pricing and/or allowance amount of the package item for a specific reservation.

Managing Reservation Packages

Viewing Reservation Packages

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To...** and then select **Packages** or click the **Packages** link in Reservation Presentation.

 **Note:**

The number that appears with the Packages link indicates the number of package items linked to the rate code / reservation.

Packages Tab

1. The **Selected Packages** panel displays a list of the included package items:
 - a. **Price:** Shows the package price.
 - b. **Quantity:** Shows the quantity how often the package element was added to the reservation. (also see Quantity vs Calculated Quantity details).
 - c. **Calculated Quantity:** Considers the calculation rule such as per person, per adult to indicate the total quantity. When the calculated quantity is changing during the package timeframe, the calculated quantity value is displayed with a change indicator that shows the count of the different quantity values.
 - d. **Excluded Quantity:** Quantity Excluded (refer Exclude Package Items topic below).
 - e. **Start Date / End Date:** Dates that define the period during which this package is available.

Daily View Tab

1. The Daily View panel displays a breakdown on package elements and inventory items per date for the reservation, occurring each date based on the posting rhythm set in the item.
2. All reservation dates are shown vertically with the option to scroll.
3. Package details are collapsed by default ; click **Expand** to show additional details for each package item.
4. To update the package price click the package code, see **Edit Package Item Pricing** below.

Excluding Packages Included in Rate Code

Package items are often linked to the reservation as part of the rate code selected for the reservation. (Package items that are attached to the reservation by the rate code display the rate code in the Rate Code column.) You may, however, decide that you do not want to include the package item in the rate code for a specific reservation. For example, an (add to rate) airport pickup package item may be linked to a rate code and certain guests might not require the transportation and can request this package item to be excluded for their reservation. Excluding a package item does not reduce the reservation rate amount; rather the internal revenue split is adjusted accordingly.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To...** and then select **Packages** or click the **Packages** link in Reservation Presentation.
4. In the **Selected Packages** panel, click  for the selected package element and update details.
 - a. **Excluded Quantity:** Enter the number of the package elements to exclude. The Excluded Quantity cannot exceed the Calculated Quantity displayed.

Note:

The Excluded Quantity flag is applied to the entire stay. Once the reservation has checked in and **End of Day** processing has been run, the **Excluded Quantity** field can no longer be edited.

5. Click .
6. Click **Save**.

Note:

Excluding a package item included in the rate does not reduce the reservation rate amount; rather the internal revenue split is adjusted , increasing the room revenue based on the item price of the excluded package item.

Editing Package Pricing

If you have the **Override Package Amount** task granted, you can amend the pricing of a package item for a specific reservation.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To...** and then select **Packages** or click the **Packages** link in Reservation Presentation.
4. Click the **Daily View** tab.
5. Click a package code link and update pricing:
 - a. **Price:** Enter a new item price - this is the amount split from the rate or added to the rate depending on the rate rule of the package item.
 - b. **Allowance:** Enter a new allowance amount - this is the amount the guest is allowed to consume in the outlet before incurring an overage on their account. Available when the Advanced Package OPERA Control is active and the package item is configured as an allowance.
6. Click **Save**.

Managing Add-on (Sell Separate) Packages

In addition to any package items that are attached to the reservation by the reservation rate code, you can manually add additional package items or package item groups to a reservation and edit certain package features.

This is typically used for “on-the-fly” requests from guests for items (to be supplied and charged), such as transportation, extra bed, crib, or a tour.

 **Note:**

The package item must be configured as Sell Separately to be able to add directly to a reservation.

Adding Add-on Packages

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To. . .** and then select **Packages** or click the **Packages** link in Reservation Presentation.
4. Uncheck **Show Selected Only** to view all package items.
5. A list of package items and groups is displayed; use the **Filter by Keyword** search field to refine the search:

- a. **Code:** Package Item Code. Multi-item package groups are indicated with  and displays as a link. Click the link to view the details of items included in the package group.
- b. **Description:** Package item description (hover over field to view the full description).
- c. **Calculation Rule:** How the package amount is calculated:
 - i. **Flat Rate:** The price posted as a flat rate, regardless of the number of guests. The flat rate is per guest sharing the room, that is, each share-with in the room is charged the flat rate amount.
 - ii. **Per Person:** The price times the number of adults plus the number of children.
 - iii. **Per Adult:** The price times the number of adults.
 - iv. **Per Child:** The price times the number of children. With the selection of this calculation rule and the Rates > Rates By Defined Buckets is set to Y, packages can be setup with different amounts per child bucket on the Package Details tab.
 - v. **Per Room:** The price times the number of rooms. The Per Room calculation is applied to the room. If a reservation is shared, instead of applying the package per reservation, it considers the package for that room.
- d. **Posting Rhythm:** Posting frequency of the package.
- e. **Price:** Shows the package item price.
- f. **Incl Rate:** Indicates if package item is included in the rate code.
- g. **Item:** Indicates if there is item inventory linked to the package item (hover mouse over to view full details).

 **Note:**

Only package items with a pricing schedule configured for dates matching the reservation dates are listed.

6. Click **Add** on the package item or group to select it for the reservation and enter the following details:
 - a. **Quantity:** Number of package elements to be attached to the reservation. The default value is 1.

 **Note:**

For Ticket Packages, the Quantity field is the only field that can be edited.

- b. **Begin/End Dates:** Dates that define the period during which this package is to be available. Enter dates manually or use the calendar tool to select dates. The default Begin Date and End Date for a package being attached to a reservation prior to check-in are the reservation arrival date and departure date. Once the reservation is checked in, the default Begin Date is the current

business date and the default End Date is the reservation departure date. Dates cannot be earlier than the arrival date or later than the departure date.

7. Click  .
 - a. You will be informed if package cannot be applied due to restrictions on package element, or due to unavailability of linked item inventory .
 - b. If there is an inventory item attached to the package that is not available. will be considered:
 - i. If you have the **Override item sell control** user task granted to your role(s) you will be able to override the item availability and proceed with adding the package including items.
 - ii. If you do not have the **Override item sell control** user task granted to your role(s), when you click on override, an override login screen is displayed, allowing another user that has the **Override item sell control** task granted to override the item availability .

Once the package element has been confirmed, the calculated quantity for the package is displayed on the package element and the Package element displays **Pending Save**.

- c. Repeat steps to select more package items for the reservation.
8. Click **Save**.

 **Note:**

When a package item that includes inventory items has been manually added to a reservation, the inventory items cannot be edited or deleted via the Item Inventory screen. To remove these inventory items, the manually attached package item must be deleted from the reservation.

Editing Add-on Packages

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To. . .** and then select **Packages** or click the **Packages** link in Reservation Presentation.
4. Click the **Packages** tab.
5. Click  for the selected package element or package group and update details.
 - a. **Start Date / End Date:** Dates that define the period during which this package is to be available. Change dates manually or use the calendar tool to select dates.
 - a. Prior to check-in you can change the package dates within the reservation time frame.
 - b. Once the package element has been confirmed, the calculated quantity for the package is displayed on the package element and the Package element displays **Pending Save**. When the calculated quantity is changing during the package

timeframe, the calculated quantity value is displayed with a change indicator that shows the count of the different quantity values.

6. Click .

7. Click **Save**.

Deleting Add-on Packages

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To . . .** and then select **Packages** or click the **Packages** link in Reservation Presentation.
4. Click the **Packages** tab.
5. Click the  icon on the package item or package group to remove from the reservation.
6. Click **Delete** to confirm.
7. Click **Save**.

Note:

When you proceed with deletion any inventory items that are configured for the package item are also removed.

Reservation Item Inventory

Prerequisites for Reservation Inventory Items

The item inventory feature enables you to manage items required for a reservation; such as extra beds or cribs where a finite number is available on a given day

Other uses for reservation inventory items could be the tracking of limited seating for a special event, limited capacity for a daily tour, boat tickets, or parking spaces at your property.

Once an item is selected for a reservation the availability of the item is reduced for the applicable dates. When the **Allow Inventory Items Outside Of Stay Days** OPERA Control is active, items can be selected for dates outside of the reservation dates, so long as there is at least one overlapping date with the reservation dates.

When the Sell Control Items OPERA Control is active the sale (selection) of the item will be restricted if there is no inventory available for the selected dates. Users with the **Override Item Sell Control** task granted will be able to book items when there is no inventory available for the selected dates. Users without the **Override Item Sell Control** task granted can request a PIN override; other users with the **Override Item Sell Control** task granted can authorize the override of the sell control via input of their PIN

When the Item Inventory Pool OPERA Control is active items can be grouped into item pools that have a single shared inventory level. The items that are part of the pool must be from the same Item Inventory Class and when sold, all of the items included

in the pool are deducted from a single quantity, the maximum quantity of the Item Inventory Pool. When any of the items that are associated to an Item Inventory Pool are sold, the number available will be updated with the new quantity at the pool-level only. Validation for each item booked from the pool will occur when the item itself is reserved. Item Pools are indicated in bold.

An example of the availability of an Item Inventory Pool.

- Item: Adult Tickets - Quantity in Stock 10
- Item: Child Tickets - Quantity in Stock 2

These two items are associated with the Item Inventory Pool called Boat Tickets.

The availability of the Boat Tickets Pool is 10, or the maximum quantity of the items associated with the pool. This means that:

- 10 Adult Tickets can be sold OR
- 2 Child Tickets and 8 Adult Tickets can be sold OR
- 1 Child Ticket and 9 Adult Tickets can be sold

The above scenarios are possible without overselling any Item or the Item Inventory Pool itself. Should the Sell Control attribute be defined for the [items](#) then overbooking of the items and thus the pool itself can be overbooked.

When used in conjunction with reservation [package items](#) a sales charge for an inventory item can be auto-posted to the reservation account during end of day; this is useful for items such as cribs and extra beds for which a charge is incurred.

In the event that reservation dates are amended an automated process will identify and apply the required changes to the dates for selected reservation items. When the Allow Inventory Items Outside Of Stay Days OPERA Control is inactive or the **Outside of Stay Days** check box is not selected for the item, the inventory item will be automatically removed from the updated reservation when it is saved. You will be informed if any item had to be removed due to no item availability, or item dates falling outside of the new reservation stay dates. The same applies to items added via a package item selected for the reservation.

Managing Reservation Inventory Items

Viewing Reservation Inventory Items

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To . . .** and then select **Item Inventory** or click the **Item Inventory** link in Reservation Presentation.

 **Note:**

A number displayed on the **Item Inventory** link indicates the number of inventory items selected for the reservation.

4. The Selected Inventory Item panel appears a list of the items for each item the following is indicated:

- a. **Image:** Click to view an image of the item.
- b. **Code:** The item code for the inventory item.
- c. **Description:** The name of the inventory item.
- d. **Quantity:** Number of items selected for the reservation. When the quantity is changing during the item timeframe, the quantity value is displayed with a change indicator that shows the count of the different quantity values. When the calculated quantity changes during the package timeframe, the calculated quantity value is displayed with a change indicator that shows the count of the different quantity values.
- e. **Start Date / End Date:** Date range for which the item is selected for the reservation.

The **Daily View** tab shows a breakdown of inventory items per reservation date.

Adding an Inventory Item to a Reservation

Note:

When the Allow Inventory Items Outside Of Stay Days OPERA Control is active, eligible items that are selected for dates outside of the reservation stay dates have to overlap at least one night of the reservation stay dates.

Note:

When the Sell Control OPERA Control is active.

1. If your role(s) are granted the Override Item Sell Control task, you can override items that are not available.
 2. If your roles(s) are not granted the Override Item Sell Control, you can request other users with the Override Item Sell Control task granted to authorize the override through input of their PIN.
1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
 2. Enter search criteria and click **Search**.
 3. Select the reservation in the search results, click **I Want To . . .** and then select **Item Inventory** or click the **Item Inventory** link in Reservation Presentation.
 4. From the Item Inventory screen, click **New**.
 - a. Enter search criteria and click **Search**.
 - b. Items and their availability are listed in the Available Inventory Items section.
 - c. To select an item, click the **(Availability) Number** link for the item and applicable start date.
 - d. The item appears in the **Selected Inventory Items** panel. Enter the following details:
 - i. **Quantity:** Enter or select the quantity of items required.

- ii. **Begin Date:** Enter the date for which the item should be linked to the reservation (defaults to arrival).
 - iii. **End Date:** Enter the end date for the item (if left empty, OPERA Cloud assumes the departure date).
 - iv. Click .
 - v. Click  to remove an item.
5. Click **Save**.

Editing an Inventory Item on a Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To . . .** and then select **Item Inventory** or click the **Item Inventory** link in Reservation Presentation.
4. In the **Selected Inventory Items** panel, select the inventory item, click .
5. Update details.
6. Click .
7. Click **Save**.

Deleting an Inventory Item from a Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To . . .** and then select **Item Inventory** or click the **Item Inventory** link in Reservation Presentation.
4. In the **Selected Inventory Items** panel, select the inventory item, click .
5. Confirm by clicking **Yes**.
6. Click **Save**.

Managing Reservation Memberships

[Prerequisites for Reservation Memberships.](#)

You can associate an unlimited number of memberships with a guest's profile. Similarly, you can select multiple memberships, one per membership type and membership class, for a reservation. Loyalty points can then be calculated for the memberships selected for the reservation.

Viewing a Reservation Membership

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.

3. Select the reservation in the search results, click **I Want To...** and then select **Membership** or click the **Membership** link in Reservation Presentation.

 **Note:**

You might need to click **Show All** to view all detail links.

4. To Manage Profile Memberships, click **Manage**. For more information, see [Managing Profile Memberships](#).

Selecting Memberships for a Reservations

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To...** and then select **Membership** or click the **Membership** link in Reservation Presentation.
4. Select a profile membership and then click the down arrow to move the selected membership to the reservation membership panel.
5. Click **Save**.

Deselecting Memberships for a Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search results, click **I Want To...** and then select **Membership** or click the **Membership** link in Reservation Presentation.
4. Select a membership in the reservation membership panel and then click the up arrow to move the selected membership back to the profile membership panel.
5. Click **Save**.

Managing Reservation Attachments

[Prerequisites for Reservation Attachments](#)

You can attach files (less than 10MB) to Reservations using the Attachments feature. Reservation attachments are purged 30 days after the departure date.

Adding Reservation Attachments

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria and click **Search**.
3. Select the reservation in search result, click **I Want To...**, click **Attachments** or open the reservation and click the **Attachments** details link.
4. Click **New** to attach a new file.
 - a. Click **Browse** and select a file on your workstation.

User Activity Logging of Transaction Diversions

A record is entered into the Changes Log (link: [c_logs_changes_log.htm](#)) under the Posting Activity Group : DIVERTED TRN. CODE <transaction code> FOR <amount> <local currency> FROM <guest name> OF ROOM #<room no> CONF. #<confirmation no> TO <guest name> OF ROOM #<room no> CONF. #<confirmation no>

Managing Reservation Transaction Diversion

Adding Reservation Transaction Diversion Rules

Reservation type Threshold rules can be attached to an active reservation on the day of arrival, after check in, or that is arriving in the future.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Transaction Diversion** or open Reservation Presentation and click the **Transaction Diversion** details link.
4. Click **New** and complete the following
 - a. **Code**: Select a transaction diversion code from the list; selection depends on the VIP or Membership details of the primary profile linked to the reservation.
 - b. **Notes**: Enter any notes
5. Click **Save**.

Editing Reservation Transaction Diversion Rules

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To**, click **Transaction Diversion** or open Reservation Presentation and click the **Transaction Diversion** details link.
4. Select the diversion rule, click the vertical ellipsis **Actions** menu and select **Edit**.
 - a. Update details.
 - b. **Inactive**: Click to inactive the rule.
5. Click **Save**.

Deleting Reservation Transaction Diversion Rules

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Transaction Diversion** or open Reservation Presentation and click the **Transaction Diversion** details link.

4. Select the diversion rule, click the vertical ellipsis **Actions** menu, and select **Delete**.
5. Click **Delete** to confirm.

Viewing Transaction Diversion Summary

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Transaction Diversion** or open Reservation Presentation and click the **Transaction Diversion** details link.
4. Select the diversion rule, click + to expand.

Viewing Transaction Diversion Daily Details

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Transaction Diversion** or open Reservation Presentation and click the **Transaction Diversion** details link.
4. Select the diversion rule, click the vertical ellipsis **Actions**, and select **View Daily Details**.

Viewing Transaction Diversion Rule Configuration

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, then select **Manage Reservation**.
2. Enter search criteria, click **Search**.
3. Select the reservation in search result, click **I Want To. . .**, click **Transaction Diversion** or open Reservation Presentation and click the **Transaction Diversion** details link.
4. Select the diversion rule, click the vertical ellipsis **Actions** menu, and select **View Configuration**.
5. See [Configuring Transaction Diversion](#).

Creating House Posting Accounts

House accounts are a pseudo (non-inventory) room type reservation used for managing billing charges of non-residential guest or internal administration purposes such as hotel staff accounts. You can nominate that a house account reservation must "always be checked in" (a permanent house account) by selecting the **Always Checked In** checkbox in [payment details](#).

Creating a House Account

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and select **House Posting Account**.
2. Enter the following details:
 - a. **Property**: Select or confirm the property.
 - b. **Arrival Date**: Enter or select a start date for the account.

- c. **Nights:** Enter the duration.
 - d. **Departure Date:** Enter or select an end date for the account.
 - e. **Adults:** Enter number of adults; if applicable.
 - f. **Name:** Search for an existing profile; select Create Guest Profile from the search page to add a new profile.
 - g. **Room Type:** Select a room type for this account. [Room types](#) designated as Pseudo are available in the list.
 - h. **Room:** Select a room from the list. The Available Rooms Search screen appears, showing rooms of the selected room type.
 - i. **Rate Code:** Select a rate code for the reservation from the list. This field is mandatory if when the Rate Code Mandatory OPERA Control is active.
 - j. **Reservation Type:** Select a reservation type from the list.
 - k. **Market Code:** Select a market code from the list. This is required for revenue statistics.
 - l. **Source Code:** Select a source code from the list. This is required for revenue statistics.
3. Enter the payment details:
 - a. **Method:** Select a payment method from the list.
 - b. **Card Number:** Enter the credit card PAN.
 - c. **Expiration:** Enter the credit card expiry date.
 - d. **Card Holder:** Enter the name on the credit card..
 4. Click **Save** or **Save and Add More Details** to open [Editing a Reservation](#) and more details or check in the house account.

About the Room Diary

The Room Diary provides a chart view of Inventory rooms and the reservations assigned for a selected date range in the past or future. The Room Diary also indicates rooms scheduled for Out of Order or Out of Service status (Available when the Out of Order and/or Out of Service OPERA Controls are active).

Room, room (housekeeping) status and room type are displayed in columns on the left side of the Room Diary chart. Icons display pertinent information about rooms listed; click **Legend** to display an explanation of the icons. Click a **Room** or **Room Type** link to view details such as room description, room attributes, room features, connecting room(s) and images.

-  Component Rooms
-  Component Suites
-  Connecting Rooms

Subsequent columns in the chart reflect a date in a daily sequence. Double clicking on the reservation overlays the reservation overview with I Want to action links available to further manage the reservation.

-  [OOO] Out of Order
-  [OOS] Out of Service
-  Do Not Move
-  Room Condition
-  Shared Reservation
-  Day Use
-  Linked Reservation
-  Reservation moved from room
-  Reservation moved to room

By using drag-n-drop it is possible to also manage a reservation, amending the stay dates or moving (assigning) the reservation to another room. You can change view dates and the range of view days.

From the Room Diary you can:

- Select the start date to view chart.
- View Reservations for a period of 1 day, 7 days, 14 days, 21 days, 28 days.
- Open and edit a reservation overview.
- View and edit the profile business card and other details about the reservation.
- Launch the **I Want To . . .** menu and select **Create Reservation**, **Create Walk-in** or **Manage Out of Order** or **Manage Out of Service**.
- Select the **Legend** link to display a legend of the indicators displayed on the Room Diary.
- Select a value from the **Views** list to increase or decrease the number of days (columns) displayed in the chart. You can view reservation by a range of days spanning periods of 1, 7, 14, 21 and 28 days, depending on your browser resolution.
- Select the **Sort-by** list to change the order of the rooms displayed in the chart.
- Select the **Filter Results** link to further filter rooms by room status , connecting rooms or rooms with a room condition. Select **Apply Filter** to save changes.
- Select the **Statistics** link to overlay occupancy statistics for the selected date.
- Select **Property Calendar** to launch the Property Calendar. For more information, see [Property Calendar Setup](#).
- Scroll to the bottom of the Room Diary and select **Load More Results** to display more results.

Using the Room Diary

[Watch Video](#)

Breaking Sharer Reservations using Drag and Drop

You can drag and drop share reservations from one room to another to break share. You are prompted with a list of all sharing reservations , allowing you to select none, one or multiple share reservations. When dragging a sharing reservation from the original room to new room, any shares not selected in the sharing reservation popup remain allocated to the original room. Break Share can be done for:

- Arrival Reservations,
- Arrival & Checked In Reservations,
- Checked In / In House Reservations

Searching for Room Diary Reservations and Rooms

The Room Diary search panel enables you to search for unassigned rooms and/or reservations assigned to rooms by Property, Start Date, and other optional search criteria. Unassigned rooms or reservations with a room assigned matching the search criteria appear on the Room Diary.

Enter a past date to view the Room Diary for past reservations; a 'CO' indicator is displayed for Checked Out reservations. Select the **Include Room Move History**

check box to display room moves in the Room Diary; these are indicated by  icons.

For properties with the Component Suite OPERA Control active, an **Include (Show) Component Room Block Out Dates** check box is available. When selected, if one of the component rooms is assigned to a reservation or Out of Order, the component suite displays 'Component Suite Blocked (Unavailable)' for the corresponding dates.

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Room Diary**.
2. Search and select a **Property**.
3. Enter a Start Date for which you need to search.
4. Use the optional fields and check boxes to apply additional search criteria to your search.
5. Click **Search**.
6. Rooms and reservations matching your search criteria appear by date on the Room Diary.
7. Blocks with events booked in rooms can also appear in the Room Diary.
8. Hover your cursor over a Reservation for a brief summary of information.

Applying Filters to Search Result

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Room Diary**.
To further refine the results displayed on Room Diary select **Filter Results**.
2. **Assigned Status :**
 - a. **Assigned Rooms:** Select this check box to display rooms that are assigned to guests. This check box is selected by default.
 - b. **Unassigned Rooms:** Select this check box to display rooms that are not assigned to guests. This check box will be selected by default if the Room Plan is called from the Detailed Availability screen with the **Available** option button selected.

 **Note:**

Unassigned rooms do not include rooms that are due out. Select the **Include Departure** check box to display rooms that are due out.

- c. **Partially Assigned Rooms:** This option is available when the Component Rooms OPERA Control is active. Select this check box to display component rooms that have not been assigned to reservations but which have at least one of their individual room elements assigned to a reservation.
- 3. **Room Status:** Select one or more room status options.
- 4. **More Options:**
 - a. **Component Rooms:** This option is available when the Component Rooms OPERA Control is active. Select this check box to display component-room room followed by an indented breakout of the individual room numbers in the component room.
 - b. **Connecting Rooms:** Select this check box to display rooms that interconnect with other rooms
 - c. **Include Departures:** Select this check box to display due out rooms. When this check box is not selected, due out rooms are included in the display along with rooms that meet your other filter criteria. When the **Unassigned Rooms** check box is also selected, unassigned rooms and due out rooms are shown on the grid.
 - d. **Room Conditions:** This option is available when the Room Conditions control is active. Select this check box to list only rooms having a room condition assigned (including those with a room condition that is flagged "Do Not Display in Room Assignment"). When this check box is not selected, rooms having a room condition assigned are included in the display along with rooms that meet your other filter criteria.
 - e. **Advanced Check-in:** Available when the Advanced Check-in control is enabled. Select this check box to list only rooms have a reservation in Advanced Check-in status.
 - f. **Reset Filter:** Click to reset these filter options.
 - g. **Apply Filter:** Click to update the Room Diary chart.

Modifying Reservations from Room Diary

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Room Diary**.
2. Search and select a **Property**.
3. Use the optional fields and check boxes to apply additional search criteria and filters to your search.
4. Click **Search**.
5. Double click an **Reservation** to view or edit Reservation Overview and Profile details.
 - a. Click on the **Edit** button to make changes to reservation.
 - b. Click **Details** to update details.
 - c. Click on the **Profile Name** to launch and edit the profile linked to the reservation.
 - d. Click **I Want To . . .** to display various actions for this reservation.

Using Click, Drag and Drop

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Room Diary**.

Reservations that appear in the Room Diary support click and drag functionality to update. Following are some of the most-used drag and drop activities:

- 2. Room Move:** Click the block representing the reservation and drag it to a vacant room on the chart. OPERA Cloud performs the same availability checks and updates that apply for reservation updates made via Manage Reservations. You cannot move a reservation to a room in Out of Order status. If the reservation is checked in, you are prompted to update the departing room status. For more information, see [Moving an In House Reservation](#)
- 3. Reservation Date Changes:** To change the stay dates for a reservation, click the block representing the guest's reservation and drag it to a vacant block representing a future date (and different room, if desired). Availability checks are performed that also apply for reservation changes made via Manage Reservations. You cannot move a reservation to a room out-of-order in Out of Order status. You can also select the left or right edge of a block to extend or shorten stay dates. You cannot change the arrival date for already checked in reservations; you cannot change the arrival date to a date earlier than the current business date. A prompt asks you to confirm the date change: "Do you want to change the arrival date or departure date from date to date? for guest name?" If fixed charges apply to the reservation, a prompt asks you to "Please verify reservation's fixed charges.". When updating the dates of a reservation that has a specific Routing Instruction attached with a specific Begin and End date for the reservation, the "Reservation Dates have been changed, please verify existing Routing Instructions." message prompt is displayed for verification. When modifying stay dates for a pseudo room type reservation the [Stay Detail](#) panel is displayed, allowing you to update other reservation details as required.

You may also select the left or right edge of a block to extend or shorten stay dates. You cannot change the arrival date for already checked in reservations; you cannot change the arrival date to a date earlier than the current business date. A prompt asks you to confirm the date change: "Do you want to change the arrival date or departure date from date to date? for guest name?" If fixed charges apply to the reservation, a prompt asks you to "Please verify reservation's fixed charges.". When updating the dates of a reservation that has a specific Routing Instruction attached with a specific Begin and End date for the reservation, the "Reservation Dates have been changed, please verify existing Routing Instructions." message prompt is displayed for verification.

- 4. Do Not Move:** (Available when the Do Not Move Room OPERA Control is active). When a reservation is flagged Do Not Move (DNM) the assigned room cannot be changed. In addition, you cannot change the room type, as this would unassign the room. The Do Not Move status is in-effect until the reservation is checked in. Once the reservation has checked in the Do Not Move status is canceled and room moves may be performed for the reservation as usual. If a reservation has the Do Not Move status applied a Do Not Move indicator appears in the reservation block . The drag and drop feature cannot be used to change the room for reservations flagged as Do Not Move.

Creating Room Reservations From Room Diary

It is possible to make a new reservation for a specific room from the Room Diary.

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Room Diary**.
2. Enter search criteria and then click **Search**.
3. Rooms matching your search criteria appear by date on the Room Diary.
4. Navigate to the required room and click the **Arrival Date** and then click the **Departure Date**.

5. From the **I Want to. . .** panel select **Create Reservation**. For more information, see [Booking a Reservation](#).

Creating Walk-in a Reservation From Room Diary

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Room Diary**.
2. Enter search criteria and then click **Search**.
3. Rooms matching your search criteria appear by date on the Room Diary.
4. Navigate to the required room and click the **Arrival Date** (current date) and then click the **Departure Date**.
5. From the **I Want to. . .** panel. For more information, see [Creating a Walk In Reservation](#)

Creating Out of Service or Out Of Order From Room Diary

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Room Diary**.
2. Enter search criteria and then click **Search**.
3. Rooms matching your search criteria appears by date on the Room Diary. You can view reservation by a range of days spanning periods of 1, 7, 14, 21 and 28 days.
4. Navigate to the required room and click the **Arrival Date** and then click the **Departure Date**.
5. From **I Want to. . .**, select [Create Out of Service](#) or [Create Out of Order](#).

Viewing Calendar Events in Room Diary

The Room Diary provides a visual indication of property calendar events such as holidays, city celebrations taking place at or near your property. Refer to: [Property Calendar Setup](#)

An indicator appears above the dates/days of the special event. A **Day Details** panel appears on the right side of Room Diary providing details about the special events.

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Room Diary**.
2. Search and select a **Property** and enter a **Start Date**.
3. Use the optional fields and check boxes to apply additional search criteria to your search.
4. Click **Search**.

Dates with Calendar Events are highlighted with color band above the date.

5. Click **Day Details** to slide open the panel showing details about the calendar events.

Viewing Out of Order / Out of Service Room Indicators on Room Diary

The Room Diary marks rooms scheduled for Out of Order  or Out of Service  with a visual indicator that the room is blocked.

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Room Diary**.
2. Search and select a **Property** and enter a **Start Date**.
3. Use the optional fields and check boxes to apply additional search criteria to your search.
4. Click **Search**.

5. When the Room Diary opens, rooms that are scheduled as out of order or out of service rooms are visually marked for the applicable dates

Reservations Workspace

Reservations Workspace contains options for generating batch confirmation letters; cancelling reservations en-masse; managing events in the property calendar.

Mass Cancellation

Mass cancellation enables you to cancel multiple reservations in a single process. For example, this feature could be used to cancel non-guaranteed reservations with 6PM-hold reservation-type that have not arrived by the agreed time.

Watch Video

To cancel multiple reservations:

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations Workspace**, select **Mass Cancellation**.
2. Enter search criteria, click **Search**.
3. Select one or more reservations in search result.

 **Note:**

Change to table view for multiple selection.

4. Click **Mass Cancellation** and complete the following.
 - a. **Cancel Reason:** Select a [Cancellation reason](#) .
 - b. **Description:** Field defaults based on the reason selected; you can enter more details
 - c. **Delete All Traces:** Select the delete reservation traces on the cancelled reservation.
 - d. **Ignore Cancel Penalty:** Select to ignore the cancellation penalty based on cancellation rule.
 - e. **Cancel Sharers:** Select to also cancel sharing reservations.
5. Click **Cancel Now**.

Property Calendar

The Property Calendar provides a quick overview of the events and day types that were defined for a certain period of time. It is accessed by clicking **Bookings**, selecting **Reservations Workspace**, and then selecting **Property Calendar**. Using the calendar, you can see at a glance a broad view of the daily status of the property. For example, you can view total arrivals and departures, availability, occupancy, events, and daily type.

- Use the Property Calendar to manage events or special periods that can affect rates. Here you can enter certain events which might affect your booking situation. Events can be city-wide festivals, concerts in town, property happenings, and so on. You might use this option, for example, when you are in the Control Panel and see a plus [+] beside the indicated event of the day. This means that there is more than one event on that particular day, but there is no room in the Control Panel to show you the additional events.
- The Property Calendar can also be used to organize the order that your property's rate codes display within a rate query. Day types can be used to increase/decrease existing rates by a certain predefined factor. Day types can also be used to control the sequence of the rates in the rate grid on a daily basis. The date range option allows you to view from one day to a range of days.
- The Property Calendar can be helpful in assisting guests when making reservation stay changes, or informing guests making reservations of the local events happening during their stay.

You can view the Property Calendar in several ways. You can select various view icons to change the view:

- **Day:** Show only one day at a time
- **Week:** Show only one week at a time
- **Month:** Show one month at a time (this is the default view)
- **List:** Show the calendar events as separate lines in a list

Using the Property Calendar Setup

The Property Calendar allows you to view and manage Calendar Events and Day Types (Available when the Day Types OPERA Control is active). Day Types are used to adjust (increase or decrease) the pricing schedule of selected rate codes by a flat amount or percentage on nominated dates. For more information, see [Configuring \(Calendar\) Event Codes](#) and day types. For more information, see [Configuring Day Types](#) for specific dates. Select one of the view icons to change the calendar display.

1. **Day:** Show only one day at a time
2. **Week:** Show only one week at a time (this is the default view)
3. **Month:** Show one month at a time
4. **List:** Show the calendar events as separate lines in a list

For current and future dates the **Maximum Availability** figure is displayed in the top left corner of each date in the monthly and list views of the calendar. Double-click the **Maximum Available** figure to launch the Property Availability. For more information see, [Availability](#) page for the selected date.

Adding Events to the Calendar

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations Workspace**, and then select **Property Calendar**.
2. Click **New** and complete the following:
 - a. **Start Date:** Enter or select a start date- this defaults to the date selected on the calendar.

This reservation workspace option provides access to all reservation and block traces for selected departments and date range.

Adding a Reservation Trace

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, and then select **Traces**.
2. Click **New** and enter the following details:
 - a. **Trace Type**: Select Reservation.
 - b. **Name**: Enter reservation name and search for reservation. Default search is for inhouse reservations.
 - c. **Department**: Select the department(s) for the trace.
 - d. **From Date**: Enter a start date for the trace.
 - e. **To Date**: Enter an end date for the trace (field defaults to same as start date).
 - f. **Time**: Enter a time.
 - g. **Trace text**: Enter the trace text.
 - i. **Quick Insert Text**: Click to select from pre-configured trace text for the selected [department](#).
3. Click **Save**.

Adding a Block Trace

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, and then select **Traces**.
2. Click **New** and enter the following details:
 - a. **Trace Type**: Select Block
 - b. **Block**: Enter block name and search for block.
 - c. **Department**: Select the department(s) for the trace.
 - d. **From Date**: Enter a start date for the trace.
 - e. **To Date**: Enter an end date for the trace (field defaults to same as start date).
 - f. **Time**: Enter a time.
 - g. **Trace text**: Enter the trace text.
 - i. **Quick Insert Text**: Click to select from pre-configured trace text for the selected [department](#).
3. Click **Save**.

Viewing /Updating a Trace

 **Note:**

Only open traces are displayed by default; to view completed traces click the **Vertical Ellipsis** then, **Show Completed**.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, and then select **Traces**.
2. Enter search criteria, click **Search**.
3. Select a trace in the search result, click \pm to expand the card and view trace details.
4. Click the vertical ellipsis **Actions** menu and select **Edit**.
5. Update details.
6. Click **Save**.

Completing a Trace

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, and then select **Traces**.
2. Enter search criteria, click **Search**.
3. Select a trace in the search result, then click the vertical ellipsis **Actions** menu and select **Complete**.

Deleting a Trace

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, and then select **Traces**.
2. Enter search criteria, click **Search**.
3. Select a trace in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Managing All Reservation Confirmations

Use this option to display a list of reservations for which confirmation letters have not been generated. By default, reservations created from the current business date, with a pending confirmation, are displayed.

You can also setup a confirmation for reservations without a pending confirmation by searching for 'No Letter Attached' reservations and using the **Manage** link to add a confirmation. When the Text Message Handling OPERA Control is active and [Delivery Management](#) is configured with an SMS gateway, confirmations can be sent via SMS to a mobile phone.

Generating Pending Reservation Confirmations

Note:

Pending is selected by default in the search criteria.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, then select **Confirmation Letters**.
2. Enter search criteria, then click **Search**.

3. Select reservations in the search result.
4. Click **Process Selected**.
5. Select **Leave Destination as Selected** on the Batch Reports page.
6. Click **Process**.

Updating Reservation Confirmation Delivery Details

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, then select **Confirmation Letters**.
2. Enter search criteria, then click **Search**.
3. Select a reservation in the search result, then click the delivery method link displayed **Print, Email, Text, Manage**.
 - a. Select a confirmation from the list, then click the vertical ellipsis **Actions** menu and select **Edit**.
 - b. Update details.
 - c. Click **Save**.

Adding a Reservation Confirmation

You may setup new or additional confirmation for a reservation.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, then select **Confirmation Letters**.
2. Enter search criteria, then click **Search**.
3. Select a reservation in the search result, then click the delivery method link displayed **Print, Email, Text, Manage**.
4. Click **Email/Print** to add a confirmation.
 - a. **Send To**: Select the recipient name; all profiles linked to the reservation are listed.
 - b. **To Email**: Select the recipient email address if the selected profile has more than one email address.
 - i. Click **New/Edit Email** to add an email address.
 - c. **Confirmation Letter**: Select the template to generate from the list.
 - d. Secondary letter.
 - e. **Send To**: Select the recipient name; all profiles linked to the reservation are listed.
 - f. Click **Send** to generate.
 - g. Click **Save** to add to the reservation and send at a later time.

Adding an SMS (Text Message) Reservation Confirmation

You may setup new or additional confirmation for a reservation. (Available when the Text Message Handling OPERA Control is active).

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, then select **Confirmation Letters**.
2. Enter search criteria, then click **Search**.

3. Select a reservation in the search result, then click the delivery method link displayed **Print, Email, Text, Manage**.
4. Click vertical ellipsis **Actions** menu and select **Text** and complete the following:
 - a. **Send To**: Select the recipient name; all profiles linked to the reservation are listed.
 - b. **To Mobile**: Select the recipient mobile number if the selected profile has more than one number.
 - c. Secondary letter.
 - d. **Send To**: Select the recipient name; all profiles linked to the reservation are listed.
 - e. **To Mobile**: Select the recipient mobile number if the selected profile has more than one number.
 - f. Click **Send** to transmit SMS.
 - g. Click **Save** to add to the reservation and transmit at a later time.

Blocks

Prerequisites for Blocks

A block is an allocation of rooms for multiple room types, reserved for a specific date period, that does not require you to create individually named reservations. Blocks are used to reserve multiple rooms for events such as weddings or conferences, inbound tour groups or airline crews, or for long-term allocations such as airline allotments.

You can set blocks to not deduct rooms from inventory (non-deduct status) or to deduct rooms from inventory (deduct status) as needed. If the block is canceled or lost, the block status is updated to a value that returns the inventory held back to house availability. You can quickly create recurring blocks, such as inbound tour groups, using the [Group Tour Series](#) functionality. Once a block is confirmed, individual named reservations are created closer to the arrival date, deducting inventory from the block allocation rather from the house availability. Reservation pickup can be either through entry or import of a [Group Rooming Lists](#), through individual reservation pickup from the [Look To Book](#) sales screen or from a web booking engine (website) or other third-party reservation system. As reservations have their own reservation status (reservation type), this allows you to have a non-deduct block in pickup-status (for example, airline allotment) that only deducts rooms from inventory after a deduct reservation is created. With the Simple Diary OPERA Control or Sales and Event Management Cloud Service active, you can link catering events to a block with the block then indicating projected revenue for rooms and catering. See [Simple Events](#) (PMS). [Events](#) and [Function Diary](#) for further details.

About Master and Sub Blocks

Prerequisites for Master and Sub Blocks

Master Blocks and Sub Blocks have a variety of uses.

- You can split sleeping rooms of one group across different properties within a [hub](#) using a master and sub block booking structure.

- You could use sub blocks when a room type has different rate amounts for different quantities of rooms (Example: 10 King rooms at the staff rate of \$99.00 and 100 king rooms at convention rate of \$200.00).
-  Indicates a master block.
-  Indicates a sub block.

When the Synchronize Master Sub Blocks OPERA Control is active, the Synchronize check box is selected by default when creating a [Master Block](#).

When the **Synchronize** check box is selected, and a change is made to a master block, the following sub block details are updated automatically and cannot be modified independently.

- Overview
- [Block Details](#)
- [Block Status](#)

When the **Synchronize** check box is selected and a change is made to a master block, the following sub block details are updated automatically and can be modified.

- [Linked Profiles](#)

When the **Synchronize** check box is unchecked on the master block, the check box is disabled on the sub blocks, and the status of master and sub blocks are managed independently. When updating the status of a master block, you are prompted to select whether to apply to the status change to one or more sub blocks. See [Managing Non-synchronized Master and Sub Block Status](#)

Note:

Room Grid (allocation) and Catering Events cannot be associated to a Master Block.

Master / Sub Block tab

The Master/Sub Block tab on the [Block Presentation](#) screen provides the following details:

Master Block

1. **Master Block icon**  You can hover your mouse over the icon to view a description.
2. **Block Name:** The block name.
3. **Block ID:** The block ID.
4. **Block Code:** The block code.
5. **Block Dates:** The dates for the block.
6. **Property:** The property for the master block.
7. **Room Status:** The current room status (appears when the Catering Events OPERA Control is active and the Use Single Block Status OPERA Control is set to No).
8. **Catering Status:** The current catering status (appears when the Catering Events OPERA Control is active and the Use Single Block Status OPERA Control is set to No).
9. **Block Status:** The current status of the block.

10. **Total Room Nights Booked:** The total number of nights booked from all of the sub blocks.
11. **Total Room Nights Picked Up:** The total number of nights picked up from all of the sub blocks.

Sub Blocks

Sort By: Click to select a sort order for the sub block listed.

1. **Property.** . The property for the sub block.
2. **Mode:** Displays an icon to indicate a sub block. You can hover your mouse over the icon to view a description.
3. **Block Code:** The sub-block code. Select the link to manage the sub block. For more information, see: [Managing Blocks](#)
4. **Start and End Dates:** The start and end dates for the sub block or sub allocation.
5. **Block Name:** The block name.
6. **Block Status:** The current status of the block.
7. **Catering Status:** The current catering status (appears when the OPERA Cloud Sales and Event Management Standard Cloud Service subscription is active and Catering Events is active in OPERA Controls).
8. **Room Nights Booked:** Displays the number of room nights booked for the specific sub block or sub allocation.
9. **Room Nights Picked Up:** Displays the number of room nights picked up for the specific sub block or sub allocation.

Note:

From a property location, the Total Room Nights Booked and Total Room Nights Picked Up values are calculated based on all sub blocks in the hub, however, only the sub blocks created for the property appear in the sub-block listing.

Managing Non-synchronized Master and Sub Block Status

When changing the Room or Catering Status of a master block, you are prompted to select whether to apply the status change to one or more sub blocks. If the sub block status change results in inventory being oversold at the room type, room class, or house level, and you have the applicable overbooking tasks granted to your role, you are prompted to over book the inventory. You can select to over book, and the status change is applied to the master and selected sub blocks. If you select Cancel, the status of the master and selected sub blocks remains unchanged.

When the Sales Allowance OPERA Control is active, you are prompted to over book the allowance if the inventory requested exceeds the available rooms in the allowance and if you have the Overbook Sales Allowance task granted to your role.

When updating the Catering Status of a sub block, an availability check is performed and the associated events are updated. If there is a conflict with one or more events, and the Waitlist OPERA Control is inactive, the status change is not applied to the

master and selected sub blocks. If the Waitlist OPERA Control is active, then the master and selected sub blocks are updated, and the event where there is a conflict is waitlisted.

You can manage the status of sub block across multiple properties from a [hub location](#).

Managing Non-synchronized Block Status

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria for the master block and click **Search**.
3. Select the **master block** in the search results, click **I Want To**, select **Change Block Status** or click the **Block Status** link in Block presentation, and click **Change Block Status**.
4. Select one of the following options:
 - a. **Rooms**: Update the status for accommodation rooms allocated to the block.
 - b. **Catering (Events)**: Update the status for Events linked to the Block.
5. **Status**: Select a status from the options available. The statuses available are based on the block status flow configured at your property. For more information, see [Managing Block Status](#).
6. Click **Save** to update the Master Block or click **Save and Apply to Sub Blocks** to update status on selected sub blocks.
 - a. Select the **sub blocks** to update.
7. Click **Save**.

Creating Master and Sub Blocks

Creating a Master Block

Master blocks are indicated by this icon: 

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Click **I Want To** . . . and select **(Create) Master Block**.
3. Complete the details for the master block. For more information, see: [Creating a Block](#)
4. After saving the master block, an initial sub block is auto-created.
5. Click **Save** or click **Save and Go to Presentation** to view the Master Block. For more information, see: [Managing Blocks](#)
6. Select the **Master/Sub Block** tab in Block Presentation to view the sub block.
7. You can now [allocate rooms](#) and set up [catering events](#).

Creating a Sub Block

Sub blocks are indicated by this icon: 

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria for the master block and click **Search**.

3. Select the master block in the search result, click **I Want To . . .**, and select **(Create) Sub Block**.
4. On the sub block page, enter the following details:
 - a. **Property**. Enter or select the property.
 - b. **Block Name**. Enter the name of the sub-block.
 - c. **Start Date**. Enter the sub block start (arrival) date.
 - d. **Night**. Enter the number of nights.
 - e. **End Date**. Enter the sub block end (departure) date.
 - f. **Block Code**. Enter a block code. Click **Get Default Block Code** to generate a block code.
5. Click **Save** or click **Save and Go to Presentation** to view the sub block.

Master and Sub-Allocations

Prerequisites for Master and Sub-Allocations

Master and Sub-Allocations provide a way for hotels to hold room inventory for wholesale reservations throughout the year based on past demand.

- The Master Allocation holds inventory that the property wants to protect for certain customers such as tour operators and other groups.
- The Sub Allocation takes rooms from the Master Allocation and marks them for reservations.

EXAMPLE: Based on experience, a property decides to set aside 50 rooms a night for tour groups. The property creates a Master Allocation and sets aside 50 rooms a night. When a tour company requests 20 rooms for a tour stay, the property creates a Sub Allocation and takes 20 of the 50 rooms from the Master Allocation. When a second tour company requests 10 rooms, the property creates another Sub Allocation and takes the 10 rooms from the Sub Allocation. The property can create additional Sub Allocations until the Master Allocation inventory is empty.

Master / Sub Allocation Rules:

- The Elastic flag on a Master Allocation allows you to borrow room inventory from the House.
- The Elastic flag on a Sub Allocation allows you to borrow room inventory from the Master Allocation (Sub Allocations cannot borrow inventory from each other).
- If the Master Allocation inventory status is set to Definite, set all Sub Allocations to Definite.
- If the Master Allocation inventory status is set to Tentative, set the Sub Allocations to either Tentative or Definite.
- You can apply Sell limits to the Master Allocation or Sub Allocation. For the Master Allocation, the Sell Limit indicates the maximum number of rooms that can be part of the Master Allocation. For Sub Allocations, the Sell Limit indicates the maximum number of reservations that can be made on the Sub Allocation.
- Shoulder Dates on a Sub Allocation must fall within the Master Allocation dates. Reservations against a Sub Allocation can extend to the Shoulder Dates on the Sub Allocation.

- Wash Schedules on Sub Allocations return the rooms to the Master Allocation. Wash Schedules on Master Allocations return the rooms to house availability.

Creating Master and Sub Allocations

Creating Master Block Allocation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Click **I Want To . . .** and select **(Create) Master Allocation**.
3. Complete the details. For more information, see [Creating Blocks](#).
4. Click **Save and go to Presentation** to view the Master Allocation. For more information, see [Managing Blocks](#).

Creating Sub Block Allocation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria for the master allocation, and then click **Search**.
3. Select the master allocation in the search results, click **I Want To . . .**, and select **(Create) Master Allocation**.
4. Complete the details. For more information, see [Creating Blocks](#).
5. Click **Save and go to Presentation** to view the Master Allocation. For more information, see [Managing Blocks](#).
6. Click the **Master/Sub** tab to view the Sub-Allocation.

Creating a Block

When creating a block, you are presented with two or three panels to complete: Block Definition, Room Details, and Catering Details.

Note:

The Catering Details panel is available when the Simple Events or Catering Events OPERA Control is active.

After entering the preliminary information in these panels and saving the block, you can proceed to add more details via [Block Presentation](#).

Watch Video

Creating a Block

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.

2. Click **Create Block** and enter the following details:

 **Note:**

Click **I Want to . . .** to create a [Master Block](#) or [Master Allocation](#).

a. Block Definition Panel

- i. **Property** : Enter or select the property.
- ii. **Account**: Select a sales account (company, travel agent, or source) to link to the block.
 - i. The Account magnifier opens the **Quick Profile Search** screen where you can search for a **Company, Travel Agent**, and related Contact Profiles to associate with the Block. Or, you can select **I Want to . . .** and create a new profile. See [Creating a Sales Account Profile](#).
 - ii. Search results display account profiles and account contacts. After selecting an account, click **Select Account Only** or click **Select Account and Contact**. If you select Account and Contact, the system auto fills the Account field and the Contact field on the Create Block screen.
 - iii. While on the Quick Profile Search screen, you can add a contact to an account by clicking the **Account Actions** ellipsis and selecting **Create Linked Contact**. Click **Save and Select** on the Create Linked Profile screen to auto populate the selected account and the newly created contact in the relevant fields on the Create Block screen.
- iii. **Synchronize**. Enabled for a Master Block. Select the check box to update sub blocks details automatically when a change is made to the master block details. When the Synchronize Master Sub Blocks OPERA Control is active, this is selected by default (available when the Master Sub Blocks OPERA Control is active).
- iv. **Start Date** : Enter or select the start date for the Block; this may vary from reservation arrival date if Events occur on the day prior. Field is blank when the Blank Business Block Start Date OPERA Control is active.
- v. **Nights**: Enter the number of nights for the block. The Maximum Number of Block Days OPERA Control determines the maximum value that can be entered.
- vi. **End Date**: If you enter a number of nights in the Nights field, OPERA Cloud automatically updates the End Date.
- vii. **Block Name**: Enter a block name; field auto fills from your Account field selection.
- viii. **Sub Block Code**. Enter a sub block code. Enabled for a Master Block (available when the Master Sub Blocks OPERA Control is active).
- ix. **Block Code**: Enter a Block Code. After Block Name and Block Dates fields are populated, the Block Code field auto generates. The Block code must be unique when the Unique Block Code OPERA Control is active. Block code format is determined by the Block Code Generation Pattern OPERA Control.

- x. **Block Status** : Select a Block Status from the list . Field defaults based on Default New Block Status OPERA Control.
- xi. **Market** : Select a market from the list; used for statistical purposes.
- xii. **Source** : Select a source code from the list; used for statistical purposes.
- xiii. **Reservation Type**: Select the Reservation Type from the list. The Res Type affects how the individual reservations are made.
 - i. If the selected Block Status is Non-Deduct, only Non-Deduct Reservation Types are available.
 - ii. If the selected Block Status is Deduct, only Deduct Reservation Types are available.
 - iii. If the Block Status is configured with a default Res Type, the default Res Type is automatically populated when you select the Status Code.
- xiv. **Inventory Control**: Select an Inventory Control value from the list. Options available determined by the Elastic Block OPERA Control.
 - i. Non Elastic prohibits you from extending a guest from the Allotment for a room type within the Block or selecting another room type outside the block.
 - ii. Elastic allows you to extend a guest who is a part of the block room allotment to a future date even if rooms are not available in the Allotment for a future date.
 - iii. Sell Limit enables you to define a set number of rooms per room type that can be borrowed from house availability after the total rooms within the block are picked up.
 - iv. Refer to [Non-Elastic, Elastic, Sell Limits, and Shoulder Dates](#).
- xv. **Block Owner**: Select a sales owner. You can search for blocks assigned to a specific sales owner. Available when the Owner OPERA Control is active.
- xvi. **Decision Date**: Enter or select a date when the group organizer must make a decision to proceed with booking.
- xvii. **Followup Date**: Enter or select a follow-up date for this block. This date could be used to confirm room requirements or confirm block status.
- xviii. **Trace Code** : Select an Activity Trace Code o specify the standard Activities to be created for this block. (Available when the Auto Traces OPERA Control is active). For more information, see [About Sales Activities Auto Traces](#)
- xix. **Catering Only** : Select the check box if the Block is for Events only (no guest room allotment is required).
 - i. When the Catering Only OPERA Control is active and this check box is selected the Room Details section is hidden on the Create Block screen and the Save and Go To Grid button is disabled. The check box is used in reports to identify Events-only blocks.
 - ii. When the Catering Only OPERA Control is inactive and the check box is checked the **Room Details** panel and **Save and Go To Grid** button remain available.
- xx. **Origin** : Select a booking origin from the list to identify where this block originated; used for statistical purposes.
- xxi. **Type** : Select a block type from the list to categorize the block for reporting purposes. Available when the Business Block Type OPERA Control is active.

b. Room Details Panel

- i. **Room Owner:** Select a sales owner responsible for the Rooms (accommodation) portion of the block. Available when the Owner OPERA Control is active .
- ii. **Rate Code:** Select a rate code from the list. You can select multiple rate codes when the Multi Block Rates OPERA Controls is active. The field is mandatory when the Rate Code Mandatory Block Header OPERA Controls is activate. When profiles linked to the block have negotiated rates selected, these rate codes are listed by default. Select the **All Rates Codes** option to display all rate codes.
- iii. **Currency :** Displays the rate code currency. Available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active.
- iv. **Print Rate :** Defaults from the rate code select for the block; this becomes the default Print Rate setting for all reservations created for the block. See [Group Rooming Lists](#).
- v. **Suppress Rate :** Defaults from the rate code select for the block when selected the rate will displayed strike-through to indicate the price should not be quoted to any caller. Available when the Suppress Rate OPERA Control is active.
- vi. **Cutoff Date:** Enter or select a cutoff date. Rooms not picked up by this date are returned to inventory . This field is only accessible if the Cutoff Days field is empty or 0. Available when the Cutoff OPERA Control is active.
- vii. **Cutoff Days:** Enter a value indicating a "rolling" cutoff days cycle. Instead of fixing one date to release all available rooms for the block, the value in Cutoff Days is used to release one night at a time. This field is only editable if the Cutoff Date field is empty. Available when the Cutoff OPERA Control is active.
- viii. **Persons Per Room:** Enter the average number of persons per room.
- ix. **Premium**

When the Quick Room Grid OPERA Control is active you will see additional fields to populate the initial room grid:

- i. **Room Type/Room Pool:** Select a room type or room pool from the list. (Room Pool is available when the Room Pool OPERA Control is active) .

 **Note:**

When Rate Code is selected for block:

- i. The Room Pools that have at least one Room Type with rate details for the selected rate code, appear in Room Pool list.
- ii. When the Room Pools are not configured, only the room types that have rate details for the selected rate code appear in the Room Type list.

- ii. **Number of Rooms:** Enter the number of rooms for the selected room type or room pool.
- iii. **Rate Amount:** Enter price per night for the selected room type or room pool, this field is enabled when no rate code has been selected for the block.

 **Note:**

When the Occupancy Split Per Room Type OPERA Control is active you will see fields for Occupancy 1, Rate 1, Occupancy 2, Rate 2 to enter the number of rooms and rate amount for single and double occupancy levels.

c. Catering (Events) Details Panel **Note:**

The Catering Details Panel is available when the Simple Events or Catering Events OPERA Control is active.

- i. **Catering Owner:** Select a sales owner responsible for the Events. Available when the Owner OPERA Control is active
 - ii. **Catering Status :** Select an initial status for catering events associated with the block. Field is enabled when the Use single Block status for Rooms and Catering OPERA Control is inactive.
 - iii. **Event Attendees :** Enter the expected number of attendees. Each time a new event is created for this Block, the value in this field will be the default in the Attendees field . The field becomes mandatory after you populate the Catering Status field. Updating the Event Attendees field activates the Save and Create Event, the Save and Add Template, and the Save and Add Catering Package buttons.
 - iv. **Onsite Name :** Enter the client's in-house representative name or contact who will be at the event.
 - v. **Function Type:** Enter the type of event. For example, Trade Show, Meeting, or Annual Convention.
 - vi. **Post As :** Enter name/information about the event for posting outside the function space or on a reader board.
3. Click **Save** or
- a. Click **Save and Manage Block** to open [Block Presentation](#) and add more details.
 - b. Click **Save and Go To Room Grid** to open the [Room & Rate Grid](#) where you can allocate rooms and rates for the block dates.

These additional actions are available when the Catering Events OPERA Control is active

- a. **Save and Create Event** – opens the [Create Event](#) screen where you can attach events and sub events to the block.
- b. **Save and Add Template** – opens the Select [Catering Templates](#) screen where you can select templates containing Item and Menu resources configured for events.

- c. **Save and Add Catering Package** – opens the [Select Catering Packages](#) screen where you can select packages containing Items and Menu resources for events. Packages also provide pricing.

Managing Blocks

The Block Presentation page provides you with access to all block details, detail links, and actions.

With the Block Sell Message OPERA Control active, you can receive sell messages at the top of the page and click **X** to close. Click **Sell Messages** to view these messages.

Editing Blocks

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the block in the search result, click **I Want To . . .**, click **Block** or open the Block by clicking the **Block ID** or **Block Code**.
4. The Block Presentation page opens.

Note:

Details panels selected in the default or previously selected Presentation Panel Tab are displayed. For more information, see [Presentation Pages](#).

5. The Block business card is at the top of the page. Click the **Block Name** link to open the [Profile Presentation](#) and update the linked profile.
6. Click  to view various actions available for this Block.
7. **Block Overview**

Note:

This panel can be customized; the fields available for update might vary. Room and revenue details will not be automatically calculated and displayed for blocks with nights exceeding the Calculate Block Statistics OPERA Control. Click **Calculate** to display the Room and Revenue details in the panel.

- a. Click **Edit**.
 - i. Update details.
 - ii. **Synchronize**. Enabled for a Master Block. Select the check box to update sub block details automatically when a change is made to the master block details. When the Synchronize Master Sub Blocks OPERA Control is active, this is selected by default (available when the Master Sub Blocks OPERA Control is active).

b. Click **Save**.

8. Block Details

 **Note:**

You can customize this panel, so the fields available for update may vary.

a. Click **Edit** and update the following:

- i. **Block Name:** Enter a name for the Block and related events.
- ii. **Start Date:** Enter or select the start date for the Block; this might vary from the reservation arrival date if Events occur on the day prior.
- iii. **Nights:** Enter the number of nights.
- iv. **End Date:** The End Date is calculated based on the Nights entered.
- v. **Inventory Control**
 - i. **Non-elastic:** Prevents you from extending Block reservations for a room type within the Block or selecting another room type outside the block.
 - ii. **Elastic:** Allows you to extend a Block reservation to a future date even if rooms are not available in the Allotment for a future date.
 - iii. **Sell Limit:** Enables you to define a set number of rooms per room type that can be borrowed from house availability after the total rooms within the block are picked up.
 - iv. For more information, see: [Non-Elastic, Elastic, Sell Limits, and Shoulder Dates](#).
- vi. **Shoulder Start/ End:** Once the block is saved and marked as Elastic or Sell Limit in the Inventory Control field, you can use these fields define a shoulder period start date and shoulder period end date. The start shoulder period will run from the shoulder start date until the start date of the business block. The shoulder end period runs from the end date of the business block to the shoulder end date. The Max Shoulder Days OPERA Control allows you to restrict the number of shoulder days to a maximum number before the booking arrival date and after the booking departure date. You cannot make reservations or events for dates outside of the shoulder start and shoulder end dates (available when the Should Dates OPERA Control is active).
- vii. **Catering Only:** Select this to indicate the block is for catering events only. The room grid will not be accessible.
- viii. **Decision Date:** Enter the date when the group must make a decision and confirm the block.
- ix. **Follow-up Date:** Enter a follow-up date for reminder purposes.
- x. **Reservation Type:** Select a value from the list. If the Block Status is configured with a default Res Type, the default value is populated when you select a status code.
- xi. **Market:** Select a market from the list used for statistical purposes.
- xii. **Source.** Select a source of booking from the list for statistical purposes.

- xiii. **Type:** Select a block type from the list. For more information, see: [Configuring Booking Types](#).
- xiv. **Origin:** Select an origin from the list for statistical purposes.
- xv. **Trace Code.** Select an Activity Trace Code to specify the standard Activities to be created for this block. (Available when the Auto Traces OPERA Control is active). For more information, see [About Sales Activities Auto Traces](#).
- xvi. **Conversion:** Select a conversion rating from the list (available when the Conversion OPERA Control is active). For more information, see: [Configuring Block Conversions](#).
- xvii. **Ranking:** Select a priority ranking from the list (available when the Block Ranking OPERA Control is active). For more information, see: [Configuring Block Rankings](#).
- xviii. **Block Owner:** Defaults to the Sales Manager (Owner) who is the primary owner of the Sales Account profile linked to the block. Select to add additional owners and change the primary owner of the block (available when the Owner OPERA Control is active).
- xix. **Travel Agent Record Locator:** Travel Agent reservation identifier number.
- xx. **Wholesale Block:** Select the check box to identify this block as a wholesale block.
- xxi. **Block Type:** Select a block type value from the list. The block type is used to categorize the block for reporting/statistical purposes (available when the Business Block Type OPERA Control is active).
- xxii. **Rate Protect:** Rate protect is an indicator that no other groups should be booked using rates lower than those assigned to the block that is flagged as rate protect. You can apply the rate protect flag to all or selected dates of the flagged block (OPERA Cloud does not enforce this restriction). The Group Rooms Control screen and the Function Diary display an indicator for any date that has a rate protect booking (available when the Lowest Rate Guaranteed OPERA Control is active).
- xxiii. **Non Compete:** Use the Non Compete flag on a business block to indicate that no competing accounts (accounts having the designated NC Industry code) should be booked at the same time as this block. You can apply the non compete flag to all or selected dates on the flagged block (OPERA Cloud does not enforce this restriction). The Group Rooms Control screen and the Function Diary display an indicator for any date that has a non compete booking (available when the Lowest Rate Guaranteed OPERA Control is active).
- xxiv. **Quote Reference Number:** Displays the quote reference number on the SC Quote Report. For more information, see [Quote Report \(sample_sc_quote\)](#). The quote reference number is generated using the first three characters of the block name + the creation date. The quote reference number is updated with .01 increment when the **Increase Quote Reference Number** check box is selected on the SC Quote Report parameters. (Available when the Use Quote Reference Number OPERA Control is active).
- xxv. **Tax Type:** Select the tax type to be applied to the posting master reservation associated to the block and utilized when generating the

Proforma Invoice to determine the tax and service charge calculations (Available when the Tax Type OPERA Control is active).

- b. The following fields can be added to the Room Details section of the Block Details panel using [Page Composer](#).

In customization mode, click the **Customize** gear icon, and then click **Add Field**.

 **Note:**

These fields have no specific functionality in OPERA Cloud but can be exchanged with external systems through Oracle Hospitality Integration Platform (OHIP).

- Days Deposit Required
- Advance Cancel Days
- Return One Day at Time
- Commissionable
- Secured from DI Display
- All Description DD Secured

- Housing Information Secured

9. Room Details

- a. **Room Owner:** Select an Owner from the list (available when the Owner OPERA Control is active).
- b. **Rate Code:** Select a rate code from the list. You can select multiple rate codes if the Multi Block Rates OPERA Controls is active. The rate code field is mandatory when the Rate Code Mandatory Block Header OPERA Controls is active. When profiles linked to the block have negotiated rates selected, these rate codes are listed by default. Select the **All Rates Codes** option to display all rate codes.
- c. **Shoulder Start/ End:** Once the block is saved and marked as Elastic or Sell Limit in the Inventory Control field, you can use these fields to define a shoulder period start date and shoulder period end date. The start shoulder period runs from the shoulder start date until the start date of the business block. The shoulder end period runs from the end date of the business block to the shoulder end date. The Max Shoulder Days OPERA Control allows you to restrict the number of shoulder days to a maximum number before the booking arrival date and after the booking departure date. Reservations or events cannot be made for dates outside of the shoulder start and shoulder end dates (available when the Shoulder Dates OPERA Control is active).
- d. **Payment:** Select a method of payment for this business block's charges from the list.
- e. **Reservation Method:** Select a method to indicate how the individual reservations will be handled (for example, Individual Call In, Rooming List, and so on).
- f. **Rooming List Due:** Enter the due date of the rooming list. Field is enabled when the value selected for Reservation Method matches the Rooming List Reservation Methods OPERA Control.

- g. **Currency:** Select a currency from the list.
 - h. **Arrival Time:** Enter the approximate check-in time for the group.
 - i. **Departure Time:** Enter the approximate checkout time for the group.
 - j. **Cut-off Date:** Enter the date that you want any rooms not picked up (reservation entered) to be released back to inventory. You can edit this when the **Cutoff Days** field is empty or zero.
 - k. **Cut-off Days:** Instead of fixing one date to release all non-picked rooms, enter a value to release one night at a time as a rolling cutoff. You can edit this field only if the Cutoff Date field is empty.
 - l. **Print Rate:** Defaults from the rate code selected for the block. This becomes the default Print Rate setting for all reservations picked up from the block.
 - m. **Suppress Rate:** Defaults from the rate code selected for the block. When selected, the rate displays a strike-through to indicate it should not be quoted to the caller.
 - n. **Breakfast Included:** Select this check box if the room rate quoted includes breakfast. If you select the check box, the following **Price** field becomes disabled (enabled with Simple Diary or Catering Events OPERA Control active).
 - **Breakfast Description**
 - **Breakfast Price**
 - o. **Porterage Included:** Select this box if the room rate quoted includes any porterage cost. If you select the check box, the **Porterage Price** field becomes disabled (enabled with Simple Diary or Catering Events OPERA Control active).
 - p. **Persons Per Room:** Enter the persons per room (enabled with Occupancy Split Per Room Type OPERA Control active).
 - q. **Room Revenue Transaction Code:** Select the room revenue charge code (Enabled when the Room Transaction Code On Block OPERA Control is active).
10. **Catering Details:**

 **Note:**

Enabled when Simple Diary or Catering Event OPERA Control is active.

- a. **Catering Owner:** Select a catering owner from the list (available when the Owner OPERA Control is active).
- b. **Catering Status:** Select an initial event status from the list.
- c. **Event Attendees:** Enter the maximum number of attendees for catering events. Each time a new event is created for this Block, the value in this field is the default in the Attendees field. When this field is updated, you are prompted if the attendees on each event should also be updated.
- d. **Resource Discount (%):** Enter a discount percentage for event resources. You will be prompted to apply the discount. (Available when the Resource

Discount OPERA Control is active). For more information, [Applying Discounts to Event Resources](#).

- e. **Attendees Guaranteed:** Select the check box to note that the number in the Event Attendees field is the minimum guaranteed by the client. When this field is selected and saved, you are prompted if the Min. Guaranteed number on the events should also be updated.
- f. **Function Type:** Enter the type of event, for example, Trade Show, Meeting, or Annual Convention.
- g. **Onsite Name:** Enter the name of the client's in-house representative or contact on the day of the event. The name entered will generate on the Banquet Event Order.
- h. **Post As:** Enter name/information about the event for posting outside the function space or on a reader board.
- i. **Distributed:** Select this check box to indicate if the Banquet Event Orders have been distributed.

11. Click **Save**.

Canceling a Block

To cancel a block, update the block status to return the block room allocation to house availability. For more information, see: [Managing Block Status](#).

Managing Opportunities

[Prerequisites for Managing Opportunities](#)

Premium

Watch Video

You can use Opportunities to track qualified sales leads. You can create Opportunities from the I Want To menu in [Manage Profiles](#), [Manage Blocks](#), [Function Diary](#), or the [Group Room Control](#). A Created as Opportunity field is available in the Reporting and Analytics Bookings - Block Subject Area for custom reporting.

**Note:**

Ensure the OPP block status code is updated with a default reservation type and display color.

Creating Opportunities

You can create Opportunities using the following steps:

1. From the **OPERA Cloud** menu, select **Client Relations**, select **Profiles**, and then select **Manage Profiles** or
2. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Blocks** or
3. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Group Rooms Control** or
4. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Function Diary**.
5. Click **I Want To . . .**, select **Create Opportunity**, and complete the following:
6. **Block Definition Panel:**
 - a. **Property:** Enter or select the property.
 - b. **Account:** Select a sales account (company, travel agent, or source) to link to the opportunity.
 - The Account magnifier opens the Quick Profile Search screen where you can search for a Company, Travel Agent, and related Contact Profiles to associate with the Block. Or, you can select **I Want To . . .** and create a new profile. For more information, see: [Creating a Sales Account Profile](#).
 - Search results display account profiles and account contacts. After selecting an account, click **Select Account Only** or click **Select Account and Contact**. If you select **Account and Contact**, the system auto fills the Account field and the Contact field on the Create Opportunity screen.
 - While on the Quick Profile Search screen, you can add a contact to an account by clicking the **Account Actions** ellipsis and selecting **Create Linked Contact**. Click **Save** and select the **Create Linked Profile** screen to auto populate the selected account and the newly created contact in the relevant fields on the Create Opportunity screen.
 - c. **Start Date:** Enter or select the start date for the Block. The date might vary from the reservation arrival date if events occur on the day prior. The field is blank when the the Blank Business Block Start Date OPERA Control is active.
 - d. **Nights:** Enter the number of nights for the block. The Maximum Number of Block Days OPERA Control determines the maximum value you can enter.
 - e. **End Date:** If you enter a number of nights in the Nights field, OPERA Cloud automatically updates the End Date.
 - f. **Block Name:** Enter a block name. The field auto fills from your Account field selection.
 - g. **Block Code:** Enter a Block Code. The Block code must be unique when the Unique Block Code OPERA Control is active. The Block code format is determined by the Block Code Generation Pattern OPERA Control.

3. Select the **Opportunity block** in the search result and then click **I Want To . . .** and select **Block** or open the block by clicking the **Block ID** or **Block Code**.
4. See Creating Opportunities.
5. Click **Save**.

Confirming Opportunities

To convert an opportunity to a confirmed block:

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Select the **Opportunity** check box, enter additional search criteria, and click **Search**.
3. Select the **Opportunity block** in the search results, click **I Want To . . .**, and select **Convert To Block**.

Note:

The Convert Opportunity to Block Status OPERA Control determines the default status of the block. Events associated with the block automatically update to the same status.

Releasing Opportunities

To update the status of an opportunity to Lost:

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Select the **Opportunity** check box, enter additional search criteria, and click **Search**.
3. Select the **opportunity block** in the search result, click **I Want To . . .**, and select **Release Opportunity**.
4. Complete the following Cancellation Details:
 - a. **Block Cancel/Lost Reason:** Select a cancellation reason from the list.
 - b. **Destination:** Select a destination from the list if the opportunity is booked elsewhere.
 - c. **Property:** Enter the property name if the opportunity is booked elsewhere.
 - d. **Description:** Enter a description.
 - e. **Cancel PM Resv:** Click to cancel any pseudo room reservations created for the block.

Note:

The cancellation number is recorded in the [Viewing Changes Log Details](#).

5. Click **Save**.

Note:

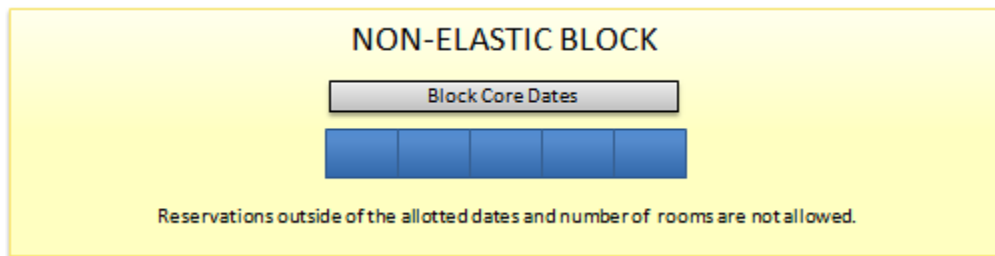

The Release Opportunity Status OPERA Control determines the lost status.

Non-Elastic, Elastic, Sell Limits, and Shoulder Dates

Non-Elastic, Elastic, Sell Limits, and Shoulder Dates settings allow you to control if block reservations can be made beyond the allotted number of rooms and/or beyond the number of days outside of the block's core (start and end) dates.

Non-Elastic Block

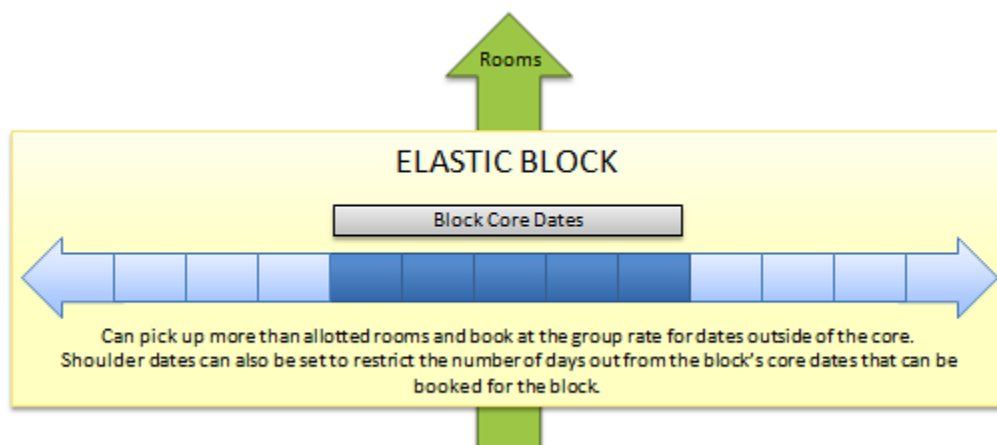

Reservations outside of the allotted dates and number of rooms are not allowed.

Elastic Block

(In the Blocks group, the Elastic Block controls must be active.)

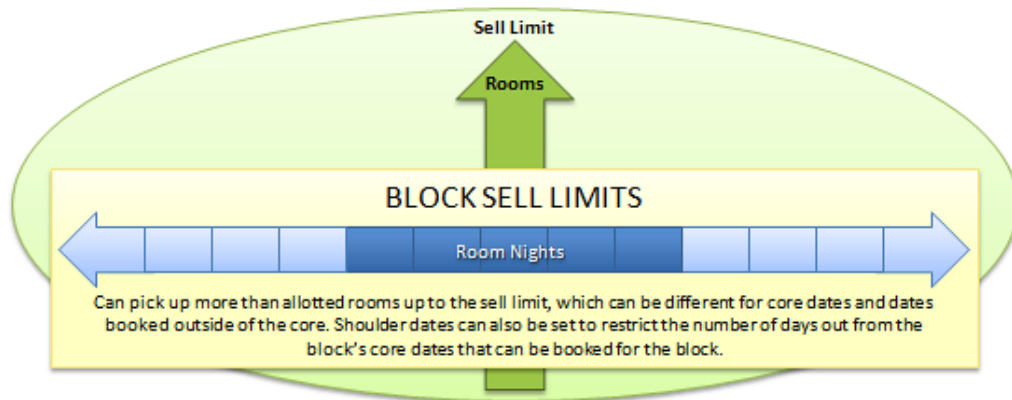

Elastic means that the block can be stretched to accommodate reservation demand, having the ability to pick up more than the block's allotted rooms and to book outside of the block's core dates. You can use shoulder dates in conjunction with Elastic to set restrictions on how many days outside of the block's core dates that reservations can be booked (see Shoulder Dates).

Sell Limits

(In the Blocks group, the Sell Limits controls must be active.)

With Sell Limits, you can specify a maximum number of rooms that can be borrowed from house availability for the block beyond the allotted number of rooms or room types. You can use Shoulder Dates in conjunction with Sell Limits to set restrictions on how many days outside of the block's core dates that reservations can be booked (see Shoulder Dates). You can set Sell limits separately for core dates and for shoulder periods.

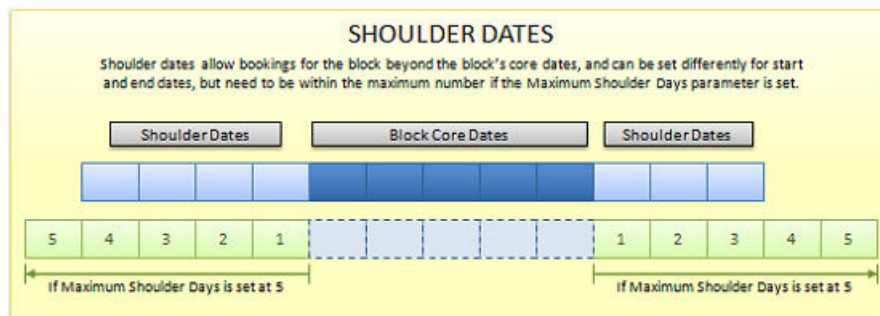

Shoulder Dates

(In the Blocks group, the Shoulder Dates controls and the Maximum Shoulder Days controls must be active.)

Shoulder Dates are available with both Elastic and Sell Limit options. Shoulder Dates define a period of time before and/or after the block core dates where reservations can be made against the block during the reservation pickup process. You can set different rates for the shoulder start period and the shoulder end period.

The Maximum Shoulder Days group level setting allows you to restrict the number of shoulder days to a maximum number before and after the block's core dates.

Simple Events

Prerequisites for Simple Events

The Simple Events feature enables you to create and manage basic catering events on block reservations. You can schedule an event for a specific date, time period, and

number of attendees, assign an Event space and specify the Event Type and Setup Style. You can also add event notes to track various resource requirements for the event.

These events then appear on the Function Diary, which shows scheduled events by date, time of day, and Event space.

You can also use the customizable contract merge template [Contract Merge Report \(Based on Sample_Cont_Merge.RTF with Rep_Cont_Merge.FMX\)](#) to generate a pseudo Banquet Event Order for the events.

Managing Simple Events

You can add basic events to blocks if your property has activated the Simple Events functionality. To create events ensure the [Event Attendees](#) field has a value set.

Events are then displayed in the [Function Diary](#).

Adding Simple Events

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks** and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want to. . .** then select **Events** or click the **Events** link in Block Presentation .
4. Click **New** and enter the following information in the Events panel.
 - a. **Event Type**: Select the Event Type, such as wedding, lunch buffet, or so on. Completing this field automatically populates the Event Name field.
 - b. **Status**: Select the Event Status, such as inquiry, definite, or so on. The field defaults to the current block status.
 - c. **Attendees**: This is the number of expected attendees for the event. The field defaults from the Event Attendees from Block Details, Catering Details.
 - d. **Set Attendees**: Specifies the set number of attendees for the event.
 - e. **Event Name**: Add or update the name of the event.
 - f. **Start Date / Time**: Enter the event start date and time.
 - g. **End Date / Time**: Enter the event End Date and Time.
 - h. **Space**: Select the Event Space.
 - i. **Setup Style**: Select a setup style for the event space.
 - j. **Rental**: Enter a price for the event space rental.
 - k. **Setup Time/Tear Down Time**: Enter the amount of time allotted for staff to set up the room or return it to normal.
 - l. **Do Not Move**: Select the check box to prevent other from moving the event to a different space.
5. Click **Save**. Or click **Save and Continue** to add more events.

Editing Simple Events

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.

2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want to. . .** then select **Events** or click the **Events** link in Block Presentation .
4. Enter search criteria and click **Search**.
5. Select the Event, then click the vertical ellipsis **Actions** menu and select **Edit**.
6. Update the event. details.
7. To cancel the event, select **Cancelled** from the Status field list.
8. Click **Save**.

Deleting Simple Events

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want to. . .** then select **Events** or click the **Events** link in Block Presentation .
4. Enter search criteria and click **Search**.
5. Select the Event, then click the vertical ellipsis **Actions** menu and select **Delete**.
6. Click **Delete** to confirm.

Managing Notes on Simple Events

Adding Notes

1. From the **OPERA Cloud** menu, select **Bookings**, select **Block**, and then select **Manage Blocks**.
2. Search for the block.
3. From search results, click the **I Want To . . .** menu and select **Events**. Or, from the block presentation screen, click **Events**.
4. Search for the event.
5. Click the row level vertical ellipsis **Actions** menu and select **Add Notes**.
 - a. The Note Type defaults to the Event Title.
 - b. Enter a **Note Title**.
 - c. Select the **Internal** check box if you want only internal staff to see the note.
 - d. Enter a **Sequence** number to rank the order of appearance of the note in lists.
 - e. Enter **Notes** in the Comments field.
6. Click **Save**.

Editing Notes

1. From the **OPERA Cloud** menu, select **Bookings**, select **Block**, and then select **Manage Blocks**.
2. Search for the block.

3. From search results, click the **I Want To . . .** menu and select **Events**. Or, from the block presentation screen, click **Events**.
4. Search for the event.
5. Click the **Notes** icon in the row.
6. Click the vertical ellipsis **Actions** and select **Edit** for the notes to edit.
7. Click **Save**.

Deleting Notes

1. From the **OPERA Cloud** menu, select **Bookings**, select **Block**, and then select **Manage Blocks**.
2. Search for the block.
3. From search results, click the **I Want To . . .** menu and select **Events**. Or, from the block presentation screen, click **Events**.
4. Search for the event.
5. Click the **Notes** icon in the row.
6. Click the vertical ellipsis **Actions** and select **Delete** for the notes to delete.
7. Click **Delete** to confirm your decision.

Using the Simple Function Diary

Use the Function Diary to view the availability of event spaces and view the events scheduled to occur in each space on a selected date / time. The diary displays events by date, function space, and time of day.

The events displayed on the diary are colored coded according to the block status they are linked to. Refer to: [Configuring Block Status](#).

A function space that is out of order or out of service for a period is indicated by an icon in the chart for the respective dates.

Viewing the Function Diary

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Function Diary**.
2. Enter or select the **Property**, enter a **Start date**, and enter any other search criteria.
 - a. **View**: Select the number of days to display on the Diary from the list.
 - b. **Sort By**: Select a sort order from the list.
3. Click **Search**.

Note:

Click **Include Hidden** to show function spaces configured not to appear in the Function Diary. Click **Legend** to view a legend.

Changing Event Label Display

By default, each event displays the Booking Name as the event label that appears in the chart. Other choice include:

1. **Booking Name:** displays the business block name to which the event is linked.
2. **Event Type:** displays the type of event that it is.
3. **Set Up Style:** displays the style of setup to be used for the event.
4. **Attendees:** displays the number of attendees for the event.
5. **Attendees and Setup Style:** displays the number of attendees and the setup style for the event.
6. **Event Name:** displays the name of the event.

To change the event label display:

1. From the Function Diary, click **Modify Search Criteria** to open the Search panel.
2. Click the **Event Label** list and select an option.
3. Click **Search**.

Viewing Guest Room Availability

To view a summary of property availability above the Function Diary, click **Show Rooms**.

The panel displays a summary of deduct and non-deduct blocks and reservations and the Maximum Available Rooms per date.

Note:

Select a multi-day view to display room availability.

Viewing Function Space Information

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Function Diary**.
2. Select the **Property**, **Start date**, and **Number of Days** to view; enter any other search criteria, and then click **Search**.
3. To view the details of a function space, click the **Function Space** name on the far left of the chart. The details of function space appear across the following three tabs:
 - a. **Overview tab:** displays details of the space, the setup styles, and capacities supported per style.
 - b. **Image Gallery tab:** displays images of the function space.
 - c. **Dimensions tab:** displays the room dimensions in imperial and metric measurements.

Viewing Event Information

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Function Diary**.
2. Select the **Property**, **Start date**, and **Number of Days** to view; enter any other search criteria, and then click **Search**.
3. Hover your mouse over the event in the chart to view the details.

Copying Blocks

Use the Block Copy feature to clone a block and its associated room allocation and catering events to new dates in the current property. The original block serves as a template for the new block, and you are provided options to select which attributes to copy to the new block. In multi-property operations, you can copy a block to another property from a [hub location](#).

The original block serves as a template for the new block, and you are provided options to select which attributes to copy to the new block. The status of the block created defaults according to the Copy Booking Status OPERA Control. The status of events created default according to the Catering Status when Copying an Event OPERA Control.

Note:

The following items will not be copied from the business block:

- Cutoff Date
- Rate Guaranteed
- Item Discount
- Rate Protect
- Non Compete
- NC Industry
- Ranking
- Conversion
- CXL Penalty
- Lost to Destination
- Lost to Property

Copying a Block and Events (Current Property)

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria, then click **Search**.
3. Select a block in the search results, click **I Want To . . .**, and then select **Copy Block**.
4. Complete the following on the Copy Block page:
 - a. **(New Block) Start Date**: Enter an arrival date for the block.

- b. **(New Block) End Date:** Enter a departure date for the block.
 - c. **Copy Date Range From:** Enter a date from within the Start and End dates of the source block to limit copy range.
 - d. **Copy Date Range To:** Enter a date from within the Start and End dates of the source block to limit copy range.
 - e. **Block Code:** Enter a block code.
 - i. Click **Get Default Block Code** to generate the block code.
 - f. **Include Booking Note:** Select the check box to copy block notes to the new block.
 - g. **Keep Same Group Profile:** Select check box to link a new block to the same group profile.
 - h. **Adjust Decision and Follow-up Dates:** Select check box to adjust the decision and follow-up dates for the new block by the same number of days before or after the New Start Date as applied to the source block. The value of the new dependent dates will not be less than the current business date. If no date was specified for any of these fields on the source block, the field will remain null (empty) on the new block. If this check box is not selected, the dependent dates from the source block will be copied to the new block
 - i. **Room Block:** Select check box to copy room block allocation to the new block. If the source block has a room allocation set up, this option will be selected by default.
 - j. **Grid Type:** Select a grid type from the list to copy.
 - k. **Contract Grid:** Select to copy the contract grid to the new block. .
 - l. **Events and Space:** Select the check box to copy events and function space allocation to the new block.
 - i. **Include Event Notes:** Select check box to copy event notes to the new events.
 - i. **Include Change Notes:** Select check box to copy event change notes to the new events
 - ii. **Other Event Resources:** Select the check box to copy the menu and item resources to the new block. Available when events are set up on the source block:
 - i. **Resource Prices:** Select the check box to copy the price and discount percentage from the source event resources to the new events
 - ii. **Include Resource Notes:** Select the check box to copy resource notes to the new events.
 - iii. **Keep Same Number of Attendees:** Select the check box to copy the same number of attendees to the new business block. All of the new events will be copied with the same number of attendees as the source events. If not selected, enter the number of attendees.
 - iv. **Number of Attendees:** Enter a number of attendees.
5. Click **Copy Block**.

Copying a Block to Another Property

You can copy a block to another property from a [hub location](#).

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria, then click **Search**.
3. Select a **Block** in the search results, click **I Want To . . .**, and then select **Copy Block**.
4. Complete the following on the Copy Block page for the new block:
 - a. **Copy to Property**: Select the check box to copy the block to another property.
 - b. **Property**: Enter or select the property from the list.
 - c. **(New Block) Start Date**: Enter an arrival date for the block.
 - d. **(New Block) End Date**: Enter a departure date for the block.
 - e. **(New Block) Block Code**: Enter a block code.
 - i. Click **Get Default Block Code** to generate the block code.
 - f. **Include Booking Note**: Select the check box to copy block notes to the new block.
 - g. **Keep Same Group Profile**: Select the check box to link the new block to the same group profile.
 - h. **Adjust Decision and Follow-up Dates**. Select the check box to adjust the decision and follow-up dates for the new block by the same number of days before or after the New Start Date as applied to the source block. The value of the new dependent dates will not be less than the current business date. If no date was specified for any of these fields on the source block, the field will remain null (empty) on the new block. If this check box is not selected, the dependent dates from the source block will be copied to the new block.
 - i. **Market Code**: Select a market code from the list.
 - j. **Source Code**: Select a source code from the list.
 - k. **Rate Code**: Select a rate code from the list.
5. Click **Copy Block**.
6. Click **Go to the New Block** to manage the new block for the destination property. For more information, see: [Managing Blocks](#).

Creating Additional Posting Master Reservation

Additional posting master (PM room type) reservations can be created for a block as needed.

Block Posting Master reservations are used for two purposes:

1. **Billing** : where various sales charges need to be routed or transferred from individual block room reservation accounts to a 'Block master account' for settlement.
2. **Rooming List**: where the selected Posting Master reservation is used as a template for reservations created via rooming list. Reservations created inherit their attributes from the selected post master reservation You can create multiple PM templates reservations according to your needs.

 **Note:**

The rate code(s) selected for the block require a 0.00 price schedule for the PM room type.

Creating Block Posting Master Reservation

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select a Block in the search result, click **I Want To . . .**, and then click **Posting Master**.
4. The message **You are about to create an additional PM reservation. Do you wish to continue?** is displayed.
5. Click **Yes**.
6. Click **Go to Posting Master** to launch [Reservation Presentation](#) and update the PM reservation details.

Creating a Tour Series

Prerequisites for Creating a Tour Series

A Tour Series is a reoccurring block. You can easily copy and repeat the original block for each time the group plans to revisit your property

For example, you might create a Tour Series for an inbound tour group that needs to book 30 rooms Monday through Wednesday every two weeks during the season.

You can create two types of Tour Series:

1. **Custom Tour Series:** Use for block reservations returning at varied or specific arrival dates
2. **Periodic Tour Series:** Use for block reservations returning at regular date intervals and arriving on the same day of the week (such as every Wednesday through Friday every 4 weeks).

 **Note:**

Periodic Tour Series can only be selected when the Auto Assign Sub Block Codes OPERA Control is active.

To create a Tour Series, open an existing (original) block; use the **Create Tour Series** action from the **I Want To . . .** menu.

Creating Custom Tour Series

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.

2. Enter search criteria and click **Search**
3. From the search result select the block and click **I Want To. . .**, then click **Tour Series** and enter the following details:
 - a. Types and Codes
 - i. **Type**: Select Custom.
 - ii. **Tour Code**: Enter a tour code - this field is available in Block search .
 - iii. Select the **Vertical Ellipsis** and select **Initiate** .
 - b. Tour Blocks
 - i. **Arrival**: Enter the arrival date.
 - ii. **Start Status**: Select a block status from the list.
 - iii. **Block Name**: Enter a block name.
 - iv. **Block Code**: Enter a block code. When the Unique Block Code Opera Control is active the same block code cannot be used for multiple blocks.
 - v. Click **New** to add another tour series.
 - vi. Click **Next** to continue.
 - c. Attributes
 - i. **Copy Block Rooms**: Select to copy room block allocation from the source block to the new blocks created. If the source block has a room allocation, this option will be checked by default.
 - ii. **Include Booking Notes**: Select to copy booking (block) notes from the source block to the new blocks created.
 - iii. **Keep Same Group Profile**: Select to retain the group profile linked on the source block on the new blocks created.
 - iv. **Adjust the Decision and Follow-up Dates to the New Arrival Date**: Select to adjust the decision and follow up dates for the new blocks created by the same number of days before or after the New Start Date, as applied to the source block. The value of the new dependent dates will not be less than the current date. If no date was specified for either of these fields on the source block, the field will remain null (empty) on the new blocks. If this check box is not selected, the dependent dates from the source block will be copied to the new blocks.
4. Click **Next**.
5. Review the details.
6. Click **Save**.

Creating Periodic Tour Series

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**
3. From the search result select the block and click **I Want To. . .**, then click **Tour Series** and enter the following details:
 - a. Type
 - i. **Type**: Select Periodic.

- ii. **Tour Code:** Enter a tour code - this field is available in Block search.
 - iii. **Tour Start Date:** Enter first arrival date of tour series.
 - iv. **Tour Frequency:** Enter the frequency (interval).
 - v. **Number of Blocks:** Enter the quantity of blocks to create.
 - vi. Select the **Vertical Ellipsis** and select **Initiate** .
 - b. Tour Blocks - dates will populate according to the frequency and quantity
 - i. **Arrival:** Enter the arrival date.
 - ii. **Start Status:** Select a block status from the list.
 - iii. **Block Name:** Enter a block name.
 - iv. **Block Code:** Enter a block code. When the UNIQUE BLOCK CODE OPERA Control is active the same block code cannot be used for multiple blocks.
 - v. Click **New** to add another tour series.
 - vi. Click **Next** to continue.
 - c. Attributes
 - i. **Copy Block Rooms:** Select to copy room block allocation from the source block to the new blocks created. If the source block has a room allocation, this option will be checked by default.
 - ii. **Include Booking Notes:** Select to copy booking (block) notes from the source block to the new blocks created.
 - iii. **Keep Same Group Profile:** Select to retain the group profile linked on the source block on the new blocks created.
- Adjust the Decision and Followup Dates to the New Arrival Date:**
Select to adjust the decision and follow up dates for the new blocks created by the same number of days before or after the New Start Date, as applied to the source block. The value of the new dependent dates will not be less than the current date. If no date was specified for either of these fields on the source block, the field will remain null (empty) on the new blocks. If this check box is not selected, the dependent dates from the source block will be copied to the new blocks.
- 4. Click **Next**.
 - 5. Review the details.
 - 6. Click **Save**.

Viewing Recently Viewed Blocks

Prerequisites for Viewing Recently Accessed Records

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks** and then select **Manage Blocks**.
2. Click **I Want to...**
3. A list of recently viewed blocks appears under the **View** section.
4. Click a **Block** link to [Edit the Block](#).

Viewing Stay Statistics

The View Stay Statistics screen shows detailed stay information for the block for the date range selected. It is an overview of the rooms and revenue of the block.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, then click **I Want To...** then **Stay Statistics** or open the block and click **I Want To...** then **Stay Statistics**.
4. Click **Potential vs Actual** tab to view the Room and Revenue statistics. A graphical representation shows the statistics for Potential Rooms, Actual Rooms, Potential Revenue, and Actual Revenue.
5. Click **Daily Block Summary** tab. The Daily Block Summary displays consolidated information of the entire Business Block.
 - a. Enter the **Date** and **Range** and click **Search**.
 - b. Click **View Options** to select values to display. Select or Deselect the Statistics Types and click **Apply**.

Viewing Production Changes

The Production Changes display a view only Search screen that will take you to the revenue and status changes screens.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want to...** then **Production Changes** or open the block and click **I Want to...** then **Production Changes**.
4. Click **Status Changes** tab.
 - a. Enter search criteria and click **Search**.
 - b. The Block number is there by default. Search for the **Current Status**.
 - c. If looking for changes that have been made from one specific date onwards, select the dates in **Change Date From** and **Change Date To** in the calendar button, and then click **Search**. You can view the following Revenue Changes:

Table 3-7 Status Changes

View Options	Description
Change Date	Change of date that took place.
Prior Status	Status of the event before the change.
Current Status	Status of the event after the change.
Rooms	Number of rooms blocked at time of status change.
Avg. Rate	The average room rate for blocked and picked-up room nights.

Table 3-7 (Cont.) Status Changes

View Options	Description
Room Revenue	The net Rooms revenue calculated at the moment of status change.
FB Revenue	The net F&B revenue calculated at the moment of status change.
Other Revenue	The net Other revenue calculated at the moment of status change.
Non-Revenue	Non-revenue generating figures calculated at the moment of status change.

5. Click **Revenue Changes** tab.
 - a. Enter search criteria and click **Search**.
 - b. The Block number is there by default. Search for the **Status**.
 - c. If looking for changes that have been made from one specific date onwards, select the dates in **Change Date From** and **Change Date To** in the calendar button, and then click **Search**. You can view the following Revenue Changes:

Table 3-8 Revenue Changes

View Options	Description
Change Date	Change of date that took place.
Stay Date	The stay date for the booking. The Stay Date is any date between the Arrival and Departure Date of the Block.
Room Nights	The number room nights, added or removed, for the business block stay date.
Room Revenue	The revenue type that was affected by the change and the amount the revenue for the specified type was changed by. This can be either positive or negative amounts.
Status	Displays the status of the business event (Inquiry, Definite, Tentative, Cancelled).

Group Rooming Lists

Block rooming list is used to quickly enter or import the profile and reservations details needed to create block reservations. You can also create share reservation while entering the rooming list details. Reservations created will be linked to the block and will deduct inventory from the available rooms in the block allocation. The block must be in a status which allows for pickup. For more information, see [Managing Block Status](#).

Watch Video

The following profile and reservation fields are available for the Block rooming list entry and import.

Note:

Fields available are based on the OPERA Controls active at your property.

Table 3-9 Profile and Reservation Fields

Entity	Field	Note	Mandatory
Profile	Name	Lastname, Firstname	Yes
Profile	Title	Select from list	
Resv	Arrival	Arrival Date	Yes
Resv	Departure	Departure Date	Yes
Resv	Room Type	Select from list	Yes
Resv	Room	Room Assigned	
Resv	Adults	Number of Adults	
Resv	Child	Number of Child	
Resv	Rooms	Number of Rooms	
Resv	Rate Code	Select from list	Determined by OPERA Control
Resv	Specials	Select from list	
Resv	Room Feature Preference	Select from list	
Resv	Smoking Preference	Select from list	
Resv	Notes	Click View to view existing notes on profile	
Resv	Payment	Click Add Payment Information to add payment details per folio window	Yes
Profile	Email Type	Select from list	
Profile	Email Address		
Profile	ID Type	Select from list	
Profile	ID Number		
Profile	VIP	Select from list	
Profile	Language	Select from list

Profile	Alt Name Language	Select from list	
Resv	Accompanying Guests	Enter names with pipe delimiter. Example AccLastname1, AccFirstname1 AccLastname2, AccFirstname2 AccLastname3, AccFirstname3	

Creating Block Reservation Using the Rooming List

Use the Rooming List option to create Block reservations en-masse. You can manually enter the profile and reservation details or import the rooming list details from an external file or use a combination of the two methods.

Prior to processing a rooming list, ensure the block allocation has sufficient rooms available and that the [room status of the block](#) allows for pickup; click [View Room/Rate Grid](#) to view the available rooms in the block.

The PM reservation created for the block is used as a template; reservations entered will inherit attributes from the PM reservation. You can create multiple PM reservations (templates) for a Block. See [Creating Additional Posting Master Reservation](#).

Use the **Change Template** action link to select a different PM/template reservation for the rooming list. See [Changing Template](#).

When the Rate Code Mandatory for Block Pickup OPERA Control is active a rate code must selected for each reservation (value will default from the template reservation).

Click **View Options** to select the rooming list columns and their display order.

Entering Rooming List Reservations

Note:

To combine reservations into a share, reference the line number of the primary reservation in the **Shares** field of the reservation(s) you want to combine. Available when the Shares OPERA Control is active.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To. . .** and then click **Rooming List**.
4. Enter the number of rows to add to the rooming list page and click **Add Rows**.
5. Enter the profile and reservation details in each row - mandatory values:
 - a. **Name:** Enter a guest name to create a new profile or click to search for an existing profile.
 - b. **Arrival Date:** Enter or select the arrival date.
 - c. **Departure Date:** Enter or select the departure date.
 - d. **Shares:** Enter the line number of the first (primary) reservation in this field of the secondary reservations. Available when the Shares OPERA Control is active.
 - e. **Room Type:** Enter or select the room type (from block allocation).
 - f. **Rate Code:** Enter or select the rate code.
 - g. **Payment:** Click to enter payment details.

6. Click **Save** to process.
7. On the Shared Room Rate prompt select a Rate Share Type to specify the rate share method:
 - a. **Split**: Splits the rate evenly between all sharing reservations.
 - b. **Entire**: Applies the rate in full to one sharing reservations.
 - c. **Full**: Applies the rate in full to each sharing reservations.
8. Click **Save** to process.
9. Select **Yes** on the Confirmation prompt to launch OPERA Cloud in a new browser session; selecting **No** will require you to wait while the rooming list is processed.
10. Reservation processing commences; the **Status** column indicates the result of each reservation processed.
 - a. A Success  icon indicates successful processing of the reservation. Confirmation number is displayed for the successful reservation.
 - b. A Failed  icon indicates processing failed for the reservation.
 - i. Hover your mouse over the icon to display the details.
 - ii. When there is insufficient quantity of a room type allocated, a **Borrow** action is displayed to deduct a room from an alternate room type in the allocation or deduct a room from house inventory when the Block is setup as elastic. (Available when the Elastic Block OPERA Control is active).
 - iii. To delete any failed reservation, select the reservation(s) then click **Delete**.
 - i. Click **Delete** to confirm.
 - c. Once corrections to reservations with errors is complete, select **Save** to process.

Importing Rooming List Reservations

Using Excel or equivalent software you can produce a .xls or .xlsx data file containing profile and reservation details for import as a Block rooming list. See [Using Block Room List Import](#).

Note:

It is recommended to limit rooming list entry or import to a maximum of 1000 reservations per batch.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To. . .** and then click **Rooming List**.
4. Click **Import Rooming List**.
 - a. Select and upload the rooming list file, then map the fields to columns in the file. See [Using the Rooming List Import](#).
 - b. Click **Add Reservations**.
5. Review and update reservations with any additional details.

6. Click **Save** to process.
7. On the Shared Room Rate prompt select a Rate Share Type to specify the rate share method:
 - a. **Split**: Splits the rate evenly between all sharing reservations.
 - b. **Entire**: Applies the rate in full to one sharing reservations
 - c. **Full**: Applies the rate in full to each sharing reservations
8. Select **Yes** on the Confirmation prompt to launch OPERA Cloud in a new browser session; selecting **No** will require you to wait while the rooming list is processed.
9. Reservation processing commences; the **Status** column indicates the result of each reservation processed
 - a. A Success  icon indicates successful processing of the reservation. Confirmation number is displayed for the successful reservation.
 - b. A Failed  icon indicates processing failed for the reservation
 - i. Hover your mouse over the icon to display the details.
 - ii. When there is insufficient quantity of a room type allocated, a **Borrow** action is displayed to deduct a room from an alternate room type in the allocation or deduct a room from house inventory when the Block is setup as elastic. (Available when the Elastic Block OPERA Control is active).
 - iii. To delete any failed reservation, select the reservation(s) then click **Delete**.
 - i. Click **Delete** to confirm.
 - c. Once corrections to reservations with errors is complete, select **Save** to process.

Generating the Group Rooming List Report

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To. . .** and then click **Rooming List**.
4. Click **Generate Report**.
 - a. Update the report parameters.
 - b. Select a report destination.
 - i. Click **Select Printer** and select a printer from the list.
 - ii. Click **Preview /Download**: A PDF file is generated and displayed in a separate browser window.
 - i. To Print the PDF, select the **print icon** or press **[CNTRL] [P]** to launch the print dialogue for your browser.
 - ii. To download the PDF to your workstation click the **Download** option in your browser.
 - iii. Click **Download As**.

- i. Select a file format from the list. File formats available are HTML, RTF, XML,
- ii. Click **Download**.
- iv. Click **Email** and then enter the email address or addresses of the recipient(s). You can enter separate email addresses for multiple recipients with a comma (,) or semi-colon (;).
 - i. Select a file format from the list. File formats available are HTML, RTF, PDF, XML.
 - ii. Click **Email**.

Attributes Inherited from Template

When new reservations are made via the Block Rooming List screen, the following attributes in the template posting master reservation (or the reservation that is currently selected as the template) and the group profile are carried over to new reservations and new profiles created via rooming list:

Template (PM) Reservation	Template (PM) Reservation Details	Template (Group) Profile
<ul style="list-style-type: none"> • Purpose of Stay • Reservation Type • Print Rate Status • Rate Code(s) • Specials • Room Features • Commission Flag Status • Tax Type • Market Code • Source Code 	<ul style="list-style-type: none"> • Linked Profiles <ul style="list-style-type: none"> – Company – Agent – Source • Alerts • Routing Instructions • Payment Instructions <ul style="list-style-type: none"> – No Post YN • Housekeeping <ul style="list-style-type: none"> – Turn-down YN – Room Instructions • Packages • Notes • Deposit Rules 	<ul style="list-style-type: none"> • Country Code

Using Block Room List Import

Using Excel or equivalent software you can produce a .xls or .xlsx data file containing profile and reservation details for import as a Block rooming list.

Note:

For optimal performance it is recommended to limit an XLS / XLSX file to a maximum of 1,000 records.

Ensure the block has available rooms and that the block is in a status that allows for pickup, click [View Room/Rate Grid](#) to view the available rooms in the block.

Consider the following when setting up the group rooming list import file:

- Files must be in Microsoft Excel .xls or .xlsx formats.

- Begin each column with headings at cell A1. Upon import, the spreadsheet's column headings map to corresponding rooming list field names.
- Only columns with data import.
- Only mapped columns import.
- The following columns are mandatory:
 - **Last name**
 - **First name** (Initial)
 - **Room Type**
 - **Email Type** if an email address is supplied.
 - **ID Type** if an ID Number is supplied.
 - **Rate Code** if the Rate Code Mandatory Block Header OPERA Control is active.
- Create columns for **Line** and **Sharer** and reference the line number of the row for the first (primary) reservation in the **Sharer** column of the secondary reservation(s).

Importing and Mapping a Rooming List File

When importing a rooming list, OPERA Cloud attempts to map the spreadsheet columns to their corresponding rooming list fields.

If a column does not map, you can manually map the column.

When mapping rooming list columns:

- The Map Columns section shows the Rooming List fields.
- The drop-down lists next to the fields show the column headers from the spreadsheet.
- The Preview pane shows the columns ready to import.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.

3. Select the block in the search result, click **I Want To...** and then click **Rooming List**.
4. Click **Import Rooming List**.
5. Click **Choose File** and browse folders and select the Microsoft Excel .xls or .xlsx file, and click **Open**.
6. Click **Import File**.

 **Note:**

If you need to re-import a corrected data file, click **Clear** and repeat the Choose File and Import File steps.

7. The Map Columns panel expand:
 - a. If there are data errors to be corrected in the data file an  displays in the column with the error in the preview panel. The rooming list import process is halted until errors are corrected.
 - b. Click  next to a field in the Mapping panel to view a list of values for a specific field - ensure values in data file match the configuration.
 - c. Click the list button below a field you need to map to data file column.
 - d. Select the column name that corresponds to field.
 - e. In the Preview panel click **Refresh**. The spreadsheet data populates the column in the import preview pane.
8. Review the mapped columns and make any adjustments.
9. Click **Add Reservations**.
10. The imported reservations are added to the [Rooming List page](#).
11. Update reservations with any additional details. For more information, see [Creating Block Reservation Using the Rooming List](#)

Changing Rooming List Template

To change the template for rooming list:

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. From your search results, click **I Want To...** and select **Rooming List**.
4. On the Rooming List screen, click **Change Template**.
5. On the Manage Reservations screen:
 - Enter search criteria and click **Search**.
6. Select the template reservation from the search results and then click **Select**.

Applying Changes to Multiple Block Reservations

You can apply the changes made to one block reservation to other reservations in the block under certain circumstances. When a change to one reservation can be copied to other reservations, the Apply Changes screen guides you through the steps for applying the changes.

Applying Changes

1. From the **OPERA Cloud** menu, click **Booking**, select **Blocks**, and select **Manage Blocks**.
 2. Enter search criteria and click **Search**.
 3. Select a block in the search results, click **I Want To . . .**, and select **Manage Reservations**.
 4. Select a reservation in the search results.
 5. Update the reservation. For more information, see: [Editing a Reservation](#).
 6. Click **Back to Manage Block Reservation**.
 7. If the change you made on the reservation can be applied to other reservations in the block, you are prompted by "Do you want to apply changes made to this reservation to other reservations in the group?"
 - a. Click **Yes**.
 - b. **Apply Changes To:**
 - i. **All Reservations in the Group**. Select to update all reservation in the block.
 - ii. **Selected Reservations**. Select to update only selected reservations.
 - iii. **Only Reservations with Same Arrival Date**. Select to update reservations with the same arrival date only.
 - iv. **All Checked in Reservations**. Select to update all checked in reservations.
 - v. **Reservations In House Between**. Select to update inhouse reservations between specified dates:
 - i. **From Date**. Enter a from-date.
 - ii. **To Date**. Enter a to-date.
- Click **Next**.
8. **Reservations**.
 - a. The applicable reservations are listed.
 - b. Click **Select**.
 9. **Actual**.
 - a. The results of the update to other reservations appear.

Creating (Encoding) Room Keys for Block Reservations

Once rooms are assigned to reservations you can encode room keys in advance of the arrival.

1. From the **OPERA Cloud** menu, select **Booking**, select **Blocks**, then select **Manage Blocks**.
2. Enter search criteria, then click **Search**.
3. Select a block from the search results and then click **I Want To . . .** and select **(Create) Room Keys**.
4. For more information, see [Managing a Room Key/Door Lock Property Interface](#).

Generating Key Packet Labels for Block Reservations

Prerequisites for Key Packet Labels

When the Generate Key Packets OPERA Control is active, you can print key package labels for arrival reservations. A sample_key_packet.rtf template can be [customized](#) to suit the label size and layout, and multiple labels templates can be set up per property. You can generate room key packet labels for block reservations from the block or from the [Front Desk Workspace](#) menu.

1. From the **OPERA Cloud** menu, select **Booking**, select **Blocks**, then select **Manage Blocks**.
2. Enter search criteria, then click **Search**.
3. Select a **block** in the search result, then click **I Want To . . .** and select **(Create) Key Packet Labels**.
4. In the Generate Key Packet Labels window:
 - a. Enter search criteria, then click **Search**.
 - b. Select the required reservations in the search result.
 - c. Click **Process Key Packet Labels**.
 - i. **Template**: Select the label format template from the list.
 - ii. **Starting Row Position**: Enter the row of first label on sheet.
 - iii. **Starting Column Position**: Enter the column of the first label on sheet.
 - iv. Select **Destination**.
 - i. **Preview**: Select to generate as PDF document (preview to print).
 - ii. **Email to Print**: Select to email the PDF to the printer.
 - i. Select a printer from the list.
 - iii. **Email**: Select to email to recipient.
 - i. Enter the recipient's email address.
 - d. Click **Process**.

Using Group Rooms Control

The Group Rooms Control (GRC) page provides a daily summary of rooms set aside for blocks, including the number of blocked, contracted, picked up, and available rooms.

Watch Video

The summary section shows **Status** and **Block Inventory**.

In the **Status** section, you can view the summary for all statuses that apply to blocks during the date range being viewed and listed here.

In the **Block Inventory** section, you can view the summary for the following:

Note:

When the Include Inquiry in Non Deduct Inventory Calculation OPERA Control is active, non-deduct calculations will include status code configured as non-deduct and inquiry for the Room Status Type.

1. **Deduct Inventory:** Blocked rooms are deducted from inventory.
2. **Non Deduct Inventory:** Blocked rooms not deducted from inventory.
3. **Available Rooms:** Total current house availability.
4. **Available Rooms with Non-Deduct:** Available rooms and not deducted from the inventory.
5. **Pick Up** tells you the day by day total of pickup rooms.

Premium

Date-driven [sell messages](#) appear informing you of special offers and announcements. Multiple sell message are sorted by Begin date.

1. Click **X** to close the sell message panel.
OR
2. Click **Sell Messages** to toggle the Sell Message panel.

RP - Rate Protect (Red) and NC - Non Compete (Yellow) color indicators appear on applicable date columns.

- Rate Protect indicates that no other groups should be booked using rates lower than those assigned to the block that is flagged as rate protect (available when the Lowest Rate Guaranteed OPERA Control is active).
- Non-compete indicates that no competing accounts (accounts with the designated NC industry code) should be booked for same dates as the block flagged as non-compete (available when Non Compete OPERA Control is active).

Viewing Group Rooms Control

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Group Rooms Control**.
2. Enter a **Property** and **Date**, along with any other relevant information, then click **Search**.
 - a. **Premium** Select the **Include Opportunities** check box to view opportunities associated with search results. The check box is available if you have the New/Edit Opportunity task assigned to your role (available when the Opportunities OPERA Control is Active).

3. Review the summary information and more details about each block in the search results.
4. Navigate to previous and future dates using the arrow buttons on the left and right sides of the horizontal date panel.
5. Click **View Options** to customize the information that appears in the GRC. This option enables you to specify what information you would like to see in the summary section, detail level, and block summary sections of the screen. Select or deselect the options you wish to view, and then click **Apply**.
6. Click **Collapse** or **Expand** details for each block listed.
7. Depending on the View Options selected, the screen shows details of the rooms allocated to the block, including the number of blocked, contracted, picked up, and available.

Viewing Day Details on the Group Rooms Control

The GRC screen visually indicates dates with special events such as holidays or festivals taking place at or near your property. Refer to [Using the Property Calendar](#).

Color indicators appear above the dates/day columns with special calendar events or Day Types setup.

Premium RP - Rate Protect and NC - Non Compete color indicators are also displayed on applicable dates

To view the details open the Day Details drawer:

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Group Rooms Control**.
2. Enter a **Property** and **Date** and any other search criteria and click **Search**.
 - a. Select the **Include Opportunities** check box to view opportunities associated with search results. The check box is available if you have the New/Edit Opportunity task assigned to your role.
 - i. In the Summary area, the Status section will show daily room totals for Opportunity status.
 - ii. In Block Inventory, the Non-Deduct Inventory totals will include Opportunities if the OPERA Control for Include Inquiry in Non-Deduct Inventory Calculations is active.
3. Click the **Day Details** tab on the right side of the GRC to slide open the panel showing details about the Calendar events, Day Types, Rate Protect and Non Compete

Viewing Block Details from the Group Rooms Control

1. From the **OPERA Cloud** menu, select **Blocks** and then select **Group Rooms Control**.
2. Enter a **Property** and **Date** and any other search criteria and click **Search**.
3. Click a **Block Code** or **Block Name** link to open a new window to view the Block Presentation page and make any changes to the block. For more information, see [Managing Blocks](#).

Viewing Account Profile from Group Rooms Control

1. From the **OPERA Cloud** menu, select **Blocks** and then select **Group Rooms Control**.
2. Enter a **Property** and **Date** and any other search criteria and click **Search**.
3. Click the **Account** link for a Block to open a new window to view the Profile Presentation page and make any changes to the sales account profile. For more information, see [Managing a Sales Account Profile](#).

Creating Blocks from Group Rooms Control

1. From the **OPERA Cloud** menu, select **Blocks** and then select **Group Rooms Control**.
2. Enter a **Property** and **Date** and any other search criteria and click **Search**.
3. Click the vertical ellipsis **Actions** menu and select [Create Block](#) or select (Create) [Master Block](#) or (Create) [Master Allocation](#) or (Create) [Opportunity](#).

Modify/Update Block — Shift Block Date

Prerequisites for Shift Block

With the Shift Block OPERA Control active, you can update a block and associated catering events to a new arrival/start date. When a shift date is initiated, the room allocation and all events associated with the block are updated. To ensure that the date change does not create availability conflicts, OPERA Cloud checks to ensure that room type inventory, function spaces, and event resources are available on the new dates.

When the Event Waitlist OPERA Control is active, and the status change/shift dates would result in a wait-list situation, a processing screen appears with the option to wait-list or cancel the event. When the Event Waitlist OPERA Control is not active, and status change/shift dates would cause an over book situation (with another block/event), a processing screen appears with the appropriate message, and you must cancel the current action.

Other dates (Cutoff Date, Follow-up Date, Decision Date, Shoulder Dates, Catering Follow-Up Date, Catering Decision Date, and Rooming List Due Date) are automatically updated by the same number of days that the block dates have shifted.

Shift Block and Event Start Date

1. From the **OPERA Cloud** menu, select **Blocks**, and select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select a block in the search results, click **I Want To . . .**, and select **Shift Block Date**.
4. Enter or select a new start date for the business block.
5. Click **Save**.

Modify/Update Block — Cutoff Block

Use the block cutoff option to manually release all non-picked rooms held in a block allocation on or before the specified cutoff date (or days) as set up in the block. You cannot undo a cutoff and would need to update the block allocation in order to add or increase the rooms in the block allocation. For more information, see [Using Block Room and Rate Grid](#).

Block Cutoff Behavior

The following examples show how the cutoff feature behaves in certain scenarios.

- When you create a block and enter a cutoff date, all room types for all dates receive the cutoff date entered in the block details. If the cutoff date is modified on the block header, a prompt appears: "Apply New Cutoff Dates to the Block Details for All Date and Room Types?" If you select Yes, the new cutoff date is applied to all the room types for all the dates in the room grid details. If you select No, the cutoff date on the block header will be different than the cutoff date in the room grid details. If you change the date to a future date, any canceled reservations will be returned to the block and not to the house until the cutoff date is reached. Afterwards, the process functions as usual.
- When you create a block without entering a cutoff date, all room types for all dates receive the arrival date as the cutoff date.
- When borrowing from a room type within a block that does not have any inventory or the block is elastic and the block dates are extended, the cutoff date in the block header is used and the cutoff dates are populated based on the following two rules:
 - If the cutoff date on the block details is present, the cutoff date for all the room types and dates will be populated with the date in the primary details.
 - If the cutoff date on the block details is not set, the cutoff date for all the room types and dates will equal the arrival date for the room type.
- When borrowing from a room type within a block that does have an inventory, the cutoff date from the block header for the new room type will be populated.
- When updating the cutoff date directly in the Business Block Search Grid details, the User Activity Log entry displays only an entry of "Updated Block Grid - Summary," not the details of what has changed on the grid.
- When a manual cutoff is completed on a block and a room is canceled on the same business date, the room is returned to the original block. However, if you run the night audit, then canceling a reservation for the block returns the room to either the house or to the block depending on the value selected in the Return Block to House OPERA Control.

Cutoff (Release) Block Rooms

1. From the **OPERA Cloud** menu, select **Booking**, select **Blocks**, and then select **Manage Blocks**.
2. Enter search criteria and click **Search**.
3. Select a block in the search results, click **I Want To . . .**, and select **Cutoff Block**.
4. Click **Yes** to confirm cutoff.

Modify/Update Block — Delete Block

Deleting a block removes all reference to the block, which is useful for any data entry or duplication errors. Only users with the Delete Block task assigned to their roles can delete blocks. You will not be able to delete the block if there are active reservations associated with the block; [cancel these reservations](#) or remove the block code from the reservations. For more information, see: [Editing a Reservation](#).

Deleting a Block

1. From the **OPERA Cloud** menu, select **Booking**, select **Blocks**, and then select **Manage Blocks**.
2. Enter search criteria and click **Search**.
3. Select a block in the search results, click **I Want To . . .** and select **Delete Block**.
4. Click **Yes** to confirm.

Managing Block Attachments

Prerequisites for Block Attachments

You can attach files (less than 10MB) to Blocks using the Attachments feature.

Adding Block Attachments

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Blocks**.
2. Enter search criteria and click **Search**.
3. Select the Block in search result, click **I Want To . . .**, click **Attachments** or open the block and click the **Attachments** details link.
4. Click **New** to attach a new file.
 - a. Click **Browse** and select a file on your workstation.
 - b. **Filename**: Enter a filename using only alphanumeric characters, no spaces or special characters are accepted.
 - c. **Description** Enter a description for the attachment.
5. Click **Save**.

Downloading Block Attachments

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Blocks**.
2. Enter search criteria and click **Search**.
3. Select the Block in search result, click **I Want To . . .**, click **Attachments** or open the block and click the **Attachments** details link.
4. On the Attachments screen, click the vertical ellipsis **Actions** menu and click **Download**.
5. Select either **Open** or **Save File**.

Deleting Block Attachments

Note:

Attachments are automatically deleted when a block is deleted or purged.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Blocks**.
2. Enter search criteria and click **Search**.
3. Select the Block in search result, click **I Want To. . .**, click **Attachments** or open the block and click the **Attachments** details link.
4. On the Attachments screen, click the vertical ellipsis **Actions** menu and click **Delete**.
5. Click **Delete** to confirm.

Managing Block Status

To change the status of a block, including canceling a block.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want to..** then **Change Block Status** or click the **Block Status** link in Block Presentation and click **Change Block Status**.
4. Select an option:
 - a. **Rooms**: Update the status for accommodation rooms allocated to the block.
 - b. **Catering (Events)**: Update the status for Events linked to the Block.
5. **Status**: Select a status from the options available. The statuses available are based on the block status flow configured at your property. For more information, see [Block and Catering Event Statuses](#).
6. Click **Save**.

Canceling a Block

Cancel blocks to return room inventory held in the block back to house availability. Cancellation can also be for an inquiry or a tentative block that is either lost or declined (refusal) .

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want to..** then **Change Block Status** or click the **Block Status** link in Block Presentation and click **Change Block Status**.
4. Select an option:
 - a. **Rooms**: Update the status for accommodation rooms allocated to the block.
 - b. **Catering (Events)**: Update the status for Events linked to the Block.
5. **Status**: Select a status from the options available. The statuses available are based on the block status flow configured at your property. For more information, see [Block and Catering Event Statuses](#).
6. Enter cancellation details:

- a. **Block Cancel / Lost Reason:** Select a cancellation reason from the list.
- b. **Destination:** Select a destination from list if the opportunity booked elsewhere.
- c. **Property:** Enter property name if the opportunity booked elsewhere.
- d. **Description:** Enter the cancellation details (maximum 2000 characters).
- e. **Cancel PM Resv:** Click to cancel any pseudo room reservations created for the block.

 **Note:**

The cancellation number is recorded in the [Viewing Changes Log Details](#).

- f. Click **Save**.

Managing Block Reservation Deposits and Cancellations

Use the Deposit / Cancellation feature to manage a blocks reservation deposit requirements, deposit payments and block cancellation penalties.

Block Reservation Deposit / Cancellation covers two separate but related features:

- Reservation Deposit deals with managing the advance deposit pre-payments that guests make prior to their stays.
- Reservation Cancellation covers the handling of cancellation charges or penalties, which might involve forfeiture of deposits already applied to the reservation.

On the Deposit / Cancellation screen, the Projected Catering Revenue in the Reservation panel shows the events revenue on the books as calculated on the Block Overview Statistics panel. The Projected Total Revenue calculation includes events revenue on the books.

If a Posting Master reservation does not already exist, you will be prompted to create a Posting Master reservation for the block. A zero-amount pricing schedule for the PM room type and dates must exist for the rate code selected in the block

Adding Block Deposit / Cancellation Details

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To...**, then **Deposit and Cancellation** or open the Block and click the **Deposit and Cancellation** link in Block Presentation.
4. To Add Deposit Request, expand the Deposit panel:
 - a. Click **New** and complete the following:
 - i. **Deposit Rule:** Select a deposit rule from the list to setup the deposit requirements or manually enter details. For more information, see [Configuring Deposit Rules](#).
 - ii. **Percentage:** If a deposit rule was selected a percentage of the rate will populate the field; update as required.

5. Click **Delete** to confirm.

Posting Deposit Payments

Note:

Country-specific OPERA Controls may impact the functionality available.

Posting an Un-allocated Deposit

An Un-allocated deposit is not applied to a specific deposit request

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To...**, then **Deposit and Cancellation** or open the Block and click the **Deposit and Cancellation** link in Block Presentation.
4. In the Deposit section, click the vertical ellipsis **Actions** menu and select **Post Un-allocated Deposit** and complete the following:
 - a. **Payment Method**: Select a payment method from the list.
 - b. **Card Number**: Enter card number if payment method is a credit card.
 - c. **Expiration**: Enter expiry date if the payment method is a credit card.
 - d. **Card Holder**: Enter cardholder name details.
 - e. **Change Payment Method on Reservation**: Select to update the payment method in the reservation.
 - f. **Amount**: Enter the deposit amount.
 - g. **Comments**: Enter any comments.
 - h. **Reference**: Enter any reference details.
 - i. **Reservation Type**: Select a reservation type to update the reservation type based on deposit payment.
5. Click **Post Payment**.

Posting an Allocated Deposit

To post a deposit payment against a specific deposit request

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To...**, then **Deposit and Cancellation** or open the Block and click the **Deposit and Cancellation** link in Block Presentation.
4. In the Deposit section, click the vertical ellipsis **Actions** menu and select **Post Un-allocated Deposit** and complete the following:
 - a. **Payment Method**: Select a payment method from the list.

- b. **Card Number:** Enter card number if payment method is a credit card.
 - c. **Expiration:** Enter expiry date if the payment method is a credit card.
 - d. **Card Holder:** Enter cardholder name details.
 - e. **Change Payment Method on Reservation:** Select to update the payment method in the reservation.
 - f. **Amount:** Enter the deposit amount.
 - g. **Comments:** Enter any comments.
 - h. **Reference:** Enter any reference details.
 - i. **Reservation Type:** Select a reservation type to update the reservation type based on deposit payment.
5. Click **Post Payment**.

Managing Block Linked Profiles

The Linked Profiles panel displays all sales accounts and contacts linked to a block. The profiles are presented in a business card format showing the profile name, address, and communication details.

Profile names are displayed as links, allowing you to access Profile Presentation when clicked.

Note:

You can access the profile details only after saving all changes on the Linked Profiles panel.

Adding Sales Account and Contact Links to Block

1. From the **OPERA Cloud** menu, select **Blocks**, and then select **Manage Block** to search for the block.
2. Enter search criteria, and then click **Search**.
3. Select the block in the search result, click **I Want To...** then **Linked Profiles** or click the **Linked Profiles** link in Block Presentation.
4. Click **Add Account** to link a Company, Agent or Source profile to the block.
 - a. On the Quick Profile Search screen, enter search criteria and click **Search**.
 - b. Select the profile (sales account) in the result and click **Select Account Only**.
 - c. If the sales account has a contact, select the contact and click **Select Account and Contact** to link both to the block.
5. Click **Add Contact** to link a contact to the block.
 - a. On the Quick Profile Search screen, enter search criteria and click **Search**.
 - b. Select the contact in the search result and click **Select Contact Only**.
 - c. If the contact is linked to a sales account, select the contact and click **Select Account and Contact** to link both to the block.

 **Note:**

If you cannot find the Sales Account or Contact, you can create new profiles and attach them to the block.

6. Click **I Want To...** in the top right. For more information, see [Managing Profiles](#).

Selecting Print and Primary Profiles

1. Each profile type must have at least one profile with the **Primary** check box selected for the block.
2. You can select the **Print** check box for one account and one contact to nominate these profiles to print on customer stationery, such as the contract or the banquet event order.

Remove Accounts and Contact Links from Block

1. From the **OPERA Cloud** menu, select **Blocks**, and then select **Manage Block** to search for the block.
2. Enter search criteria, and then click **Search**.
3. Select the block in the search result, click **I Want To...** then **Linked Profiles** or click the **Linked Profiles** link in Block Presentation.
4. Select the **Sales Account** or **Contact**, click vertical ellipsis, select **Remove**.
5. Click **Remove** to confirm.

Managing Block Access Exclusion

Use Block Access Exclusion screen to exclude the block from selected Hubs/Central Reservation Office (CRO) when the Oracle Hospitality OPERA Multi-Property Reservation Cloud Service is active. When access exclusion is setup for a business block, the selected Hubs/CROs will not be able to manage block reservations.

Adding Block Access Exclusion

1. From the **OPERA Cloud** menu, select **Bookings, Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, then click **I Want To...** then **Access Exclusion** or open the block then click **Access Exclusion**.
4. Click **New** and complete the following:
 - a. **Message:** Enter a message. This message is global and will be displayed for the selected Hubs.
 - b. **Hub:** Select one or more hubs from the list
 - c. **Hide from Availability Screen:** Select checkbox to hide block allocation from Hub users
 - d. **Prevent Reservation Creation:** Select checkbox to prevent Hub users from creating reservations for the block

- e. **Prevent Reservation Modification:** Select checkbox to prevent Hub users from updating reservations for the block
 - f. **Allow Cancel Reservation:** Select checkbox to allow Hub users to cancel reservations
 - g. **Inactive:** Select checkbox to inactivate the access exclusion rule.
5. Click **Save**.

Editing Block Access Exclusion

1. From the **OPERA Cloud** menu, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, then click **I Want To...** then **Access Exclusion** or open the block then click **Access Exclusion**.
4. Select the hub, click the vertical ellipsis **Actions** menu, and select **Edit**.
5. Update details.
6. Click **Save**.

Deleting Block Access Exclusion

1. From the **OPERA Cloud** menu, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, then click **I Want To...** then **Access Exclusion** or open the block then click **Access Exclusion**.
4. Select the hub, click the vertical ellipsis **Actions** menu, and select **Delete**.
5. Click **Delete** to confirm.

Managing Block Restrictions

Prerequisites for Managing Block Restrictions

You can setup block-level restrictions as needed; these could be length of stay restrictions or other restriction types enabled at your property. Restrictions can be set for specific room class or room type as needed. For more details see [Restrictions](#).

Note:

Restriction dates must be within the block dates, no matter if the block reservation is elastic or non-elastic.

Adding Block Restrictions

1. From the **OPERA Cloud** menu, select **Blocks**, and then select **Manage Block** to search for the block.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To...**, click **Block Restrictions** or click the Block Restrictions link in Block Presentation.

4. Click **New** and enter the following details:
 - a. **Start Date**: The restriction start date.
 - b. **End Date**: The restriction end date.
 - c. **Restriction Days**: All check boxes are preselected by default. Click to remove the check mark for days you do not want the restriction to be applied. For example, if a date range is for the entire month, but you do not want it to apply on Saturdays and Sundays, you would remove the check marks from the Saturday and Sunday check box.
 - d. **Restriction Type**: Select the down arrow to choose the restriction type you want to apply. For more information, see [Restrictions](#).
 - e. **Inventory**:
 - i. **House**: Select to indicate that the restriction applies at the house (property) level.
 - ii. **Room Class**: Select the room classes from list to which this restriction applies (Available when the Room Class OPERA Control is enabled).
 - iii. **Room Types**: Select the room types from list to which this restriction applies.
5. Click **Save** or **Save and Continue** to save and add another restriction.

Editing Block Restrictions

1. From the **OPERA Cloud** menu, select **Blocks**, and then select **Manage Block** to search for the block.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To. . .**, click **Block Restrictions** or click the Block Restrictions link in Block Presentation.
4. Select the restriction in the calendar.
5. Click the vertical ellipsis **Actions** menu, and select **View**.
6. Update restrictions details.
7. Click **Save**.

Deleting Block Restrictions

1. From the **OPERA Cloud** menu, select **Blocks**, and then select **Manage Block** to search for the block.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To. . .**, click **Block Restrictions** or click the Block Restrictions link in Block Presentation.
4. Select the restriction in the calendar, click the vertical ellipsis **Actions** menu, and select **Delete**.
5. Click **Delete** to confirm.

Clear All Restrictions for Selected Date

1. From the **OPERA Cloud** menu, select **Blocks**, and then select **Manage Block** to search for the block.
2. Enter search criteria and click **Search**.

3. Select the block in the search result, click **I Want To. . .**, click **Block Restrictions** or click the Block Restrictions link in Block Presentation.
4. Select a date in the calendar
5. Click the vertical ellipsis **Actions** menu, and select **Clear All**.
6. Click **Clear All** again to confirm.

Managing Block Item Inventory

Prerequisites for Managing Block Inventory Items

Items or Inventory Items include any equipment, products, supplies, or services that can be rented or sold to a guest, or to a catering customer as part of a catering function or block add-on.

Adding Inventory Item to Block

1. From the **OPERA Cloud** menu, select **Bookings** , select **Blocks** , and select **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select **Block** in search result, click **I Want to...**, select **Items** or click the **Items** link in Block Presentation.
4. Click **New** and enter the following details:
 - a. Enter search criteria and click **Search**.
 - b. Items and their availability are listed in the Available Inventory Items section.
 - c. To select an item click the (availability) number link for the item and start date applicable
 - d. Enter the following details:
 - i. **Quantity**: Enter or select the quantity of items required.
 - ii. **Begin Date**: Enter the date for which the item should be linked to the reservation (defaults to arrival).
 - iii. **End Date**: Enter the end date for the item (if left null OPERA Cloud assumes the departure date).
 - iv. Click **Select Item**.
 - e. The item is listed in the Selected Inventory Items panel.
 - i. Click **Remove** to remove an item .
5. Click **Save**.

Editing Inventory Item on Block

1. From the **OPERA Cloud** menu, select **Bookings** , select **Blocks** , and select **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select **Block** in search result, click **I Want to...**, select **Items** or click the **Items** link in Block Presentation.
4. From the Item Inventory screen

5. Select the inventory item, click **Vertical Ellipsis**, click **Edit**.
6. Update details.
7. Click **Save**.

Deleting Inventory Item from Block

1. From the **OPERA Cloud** menu, select **Bookings** , select **Blocks** , and select **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select **Block** in search result, click **I Want to...**, select **Items** or click the **Items** link in Block Presentation.
4. From the Item Inventory screen.
5. Select the inventory item, click **Vertical Ellipsis**, click **Delete**.
6. Confirm by clicking **Delete**.

Managing Block Wash Schedule

Prerequisites for Managing Block Wash Schedule

Block Wash Schedule makes it possible to reduce the block allocation by a percentage or fixed number of rooms on a preset schedule for any number of days or room types. Block wash is often used by properties that do not routinely hold the same number of rooms out of inventory as are contracted, based on past experience, the type of business, or industry trends. The Block Wash Schedule allows you to determine when to reduce the number of rooms held in the block and by how much: either a percentage or a fixed number of rooms, then automates the process for you prior to the block cutoff date. You can setup a schedule manually or apply a predefined block wash template, for more information, see [Block Wash Schedules](#)

Note:

A Cutoff Date must be set in order to access Wash Schedule.

Applying Block Wash Template

To add a wash schedule using a wash template:

1. From the **OPERA Cloud** menu, select **Bookings**, **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in search result, click **I Want to .. Wash Schedule** or open the block and click **Wash Schedule** from the Block Presentation page.
4. In the Wash Schedule panel, click **Vertical Ellipsis** and click **Apply Template**.
 - a. **Standard Wash Schedule**. Select a wash template from list; a wash schedule will be generated for update.
 - b. For each date listed; update
 - i. **Wash Date**. Enter a wash date

- ii. **Room Type.** Select a room type from the list
 - iii. **Wash By%.** Enter a wash %
 - iv. **Wash by Rooms.** or enter a number of rooms to wash
- c. Click **Save**.

Adding Block Wash Schedule

1. From the **OPERA Cloud** menu, select **Bookings, Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in search result, click **I Want to .. Wash Schedule** or open the block and click **Wash Schedule** from the Block Presentation page.
4. In the Wash Schedule window, click **New** to complete the following.
 - a. **Wash Date.** Enter a wash date
 - b. **Wash By%.** Select the wash a percentage of rooms
 - c. **Wash by Rooms.** Select to wash a fixed number of rooms
 - d. **%/Rooms.** Enter a wash value
 - e. **Room Type.** Select a room type from the list.
5. Click **Save**.

Editing Block Wash Schedule

1. From the **OPERA Cloud** menu, select **Bookings, Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in search result, click **I Want to .. Wash Schedule** or open the block and click **Wash Schedule** from the Block Presentation page.
4. Select the schedule , click the vertical ellipsis and select **Edit**.
5. Update the wash schedule.
6. Click **Save**.

Deleting Block Wash Schedule

1. From the **OPERA Cloud** menu, select **Bookings, Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in search result, click **I Want to .. Wash Schedule** or open the block and click **Wash Schedule** from the Block Presentation page.
4. Select the schedule , click the vertical ellipsis and select **Delete**.
5. Click **Delete** to confirm.

Managing Block Sell Messages

[Prerequisites for Block Sell Message](#)

The sell messages can contain important selling features that the agent can read to the customer or motivational messages intended for the sales agent themselves. Sell messages can be configured in multiple languages. By default, sell messages appear in the language you select when you log in.

Adding Block Sell Message

1. From the **OPERA Cloud** menu, select **Blocks**, and select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To...** then **Sell Messages** or click the **Sell Messages** link in Block Presentation.
4. Click **New** and complete the following:
 - a. **Language:** Select the Language in which you want the sell message to be displayed.
 - b. **Sell Message:** Enter the Sell Message text in the language selected.
 - c. **Begin Date:** Enter a begin date to display the sell message.
 - d. **End Date:** Enter an end date to display the sell message.
5. Click **Save** or **Save and Continue** to add another sell message.

Editing Block Sell Message

1. From the **OPERA Cloud** menu, select **Blocks**, and select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To...** then **Sell Messages** or click the **Sell Messages** link in Block Presentation.
4. Select the Sell Message, click the vertical ellipsis **Actions** menu, and select **Edit**.
5. Update the details.
6. Click **Save**.

Deleting Block Sell Message

1. From the **OPERA Cloud** menu, select **Blocks**, and select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To...** then **Sell Messages** or click the **Sell Messages** link in Block Presentation.
4. Select the Sell Message, click the vertical ellipsis **Actions** menu, and select **Delete**.
5. Click **Delete** to confirm.

Managing Blocks Traces

Traces are actionable instructions for a selected department for a specific date and time; once actioned, the trace is updated as resolved.

[Prerequisites for Block Traces](#)

Adding Block Traces

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria and click **Search**.
3. Select the block in the search result, click **I Want To...**, **Traces** or click the **Traces** link in Block Presentation.
4. Click **New** and complete the following:
 - a. **Department**. Select the department(s) for trace.
 - b. **From Date**: Enter a From date.
 - c. **To Date**: Enter a To date.
 - d. **Time**: Enter time.
 - e. **Trace text**: Enter the trace text.
 - f. **Quick Insert**: Click to select from pre-configured trace text for the selected department. [Configuring Trace Texts](#).
5. Click **Save**.

Updating Block Traces

Note:

Only open traces are displayed by default, to view completed traces click **Vertical Ellipsis**, **Show Completed**.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter block criteria, click **Search**.
3. Select the block in the search result, click **I Want To...**, **Traces** or click the **Traces** link in Block Presentation.
4. Click **+** to expand the card and view trace details.
5. Click and select **Edit**.
6. Update details.
7. Click **Save**.

the vertical ellipsis **Actions** menu

Resolving / Completing Block Traces

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the block in the search result, click **I Want To...**, **Traces** or click the **Traces** link in Block Presentation.
4. Click the vertical ellipsis **Actions** menu and select **Complete**.

Deleting Block Traces

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and then select **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the block in the search result, click **I Want To...**, **Traces** or click the **Traces** link in Block Presentation.
4. Click the vertical ellipsis **Actions** menu, and select **Delete**.
5. Click **Delete** to confirm.

Managing Block Notes

Adding Block Notes

1. From the **OPERA Cloud** menu, select **Bookings** , **Blocks** , and then **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select Block in search result, click **I Want to. . .**, **Notes** or click the **Notes** link in Block Presentation.
4. Click **New**.
 - a. **Type:** Select a note type from the list. For more information, see [Configuring Note Types](#).
 - b. **Internal:** Select this check box if the note is to be treated as internal.

 **Note:**

Internal notes are not output on stationery or on reports unless the report explicitly allows display of Internal Notes. You can deselect this check box when Override Internal is selected in the note type configuration.

- c. **Title:** Enter a summary title for the note. Defaults according to the note type.
 - d. **Comment:** Enter or paste the note details; a maximum of 2000 characters are permitted.
5. Click **Save**.

Viewing and Updating Block Notes

1. From the **OPERA Cloud** menu, select **Bookings** , **Blocks** , and then **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the Block in the search result, click **I Want to...**, **Notes** or click the **Notes** link in Block Presentation.
4. Select the note, click \pm to expand the card to read the note comments.
5. Click the vertical ellipsis **Actions** menu and click **Edit**.
6. Update details.

7. Click **Save**.

Deleting Block Notes

1. From the **OPERA Cloud** menu, select **Bookings** , **Blocks** , and then **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the Block in the search result, click **I Want to...**, **Notes** or click the **Notes** link in Block Presentation.
4. Click the vertical ellipsis **Actions** menu and click **Delete**.
5. Click **Delete** to confirm.

Managing Block Room and Rate Grid

Use the Room & Rate Grid screen to:

- Manage the room allocation for a block.
- Manage the contracted room information for inclusion on the [Sales Contract](#).
- Customize the room rate per room type.
- View the pickup, pickup percentage and available rooms.

Room & Rate Grid Types

There are various block grid types available, depending on the status of the Block.

1. **House Availability:** Displays general house availability.
2. **Original:** Default value, and only available when the block is not in an Open-for-Pickup status. Displays the original room allocation, prior to status change.
3. **Current:** Default value when the block is in an Open-for-Pickup status . Displays the current room allocation.
4. **Contract:** This grid does not deduct rooms from inventory; instead it is used in conjunction with the Sales Contract and can be manipulated without affecting any other grid. (Available when the Block Contract Grid OPERA Control is active).
5. **Pickup Rooms:** Displays the rooms picked up (reservations exists) in the room allocation.
6. **Pickup Percentage:** Displays room picked up as a percentage.
7. **Available:** Displays the Available Rooms remaining in the block allocation. (Current -Picked up) Available when the block is in an Open-for-Pickup status.
8. **Changes to Original:** Display a comparison between original and current room allocation.
9. **Rates:** Displays the rate amounts. When the Occupancy Split Per Room Type OPERA Control is active, rates are managed per occupancy level.
10. **Released Rooms:** Displays the room released from room allocation back to general house availability.

The Block Business card displays at the top of the Room & Rate Grid and indicates block name, block code, block ID, start and end dates, room and catering status, owners and the property code. Click + to expand and collapse the business card.

The Room & Rate Grid shows you a summary of the rooms allocated per room type by dates and the associated rate amount (price).

Changing the Grid View Options

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks** and then **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the block in the search result, click **I Want to . . . Room & Rate Grid** or open the Block and click **Room & Rate Grid**.
4. Click **View Options**.
 - a. **Manage Grid By**.
 - i. **Room Type**: Select to display each room type.
 - ii. **Room Pool**: Select to display [room pools](#). (Available when the Room Pools OPERA Control is active).
 - b. **Show**
 - i. **All Room Types**: Select to display all room types.
 - ii. **Used Room Types**: Select to display allocated room types only.
 - c. **Grid Type**
 - i. Select check boxes to display various room and rate grid types.
 - ii. Select **Cutoff** check box to display the cutoff date for each room type.
 - d. **View Occupancy**: Select check boxes to display various occupancy
 - e. **Room Type Order**: Use the navigation buttons to change the display sequence of room types in the grid; position allocated room types at top of the list.
5. Click **Apply**.

Loading Block Room Allocation

Use the Load Room Grid action to load the entire block room allocation; that is, the number of rooms per room type and (optionally) rates if rates are the same each night.

Even if the rates are not the same, it is recommended that you use this functionality to load the grid and then edit each Date and Room Type combination as required.

Note:

Note: When the Autoload Contract Grid OPERA Control is active, the Original Grid is copied to the Contract grid. Select the **Stop Auto Load Contract** option from the **Actions** link to prevent this from occurring. The **Maximum Occupancy** attribute of each [room type](#) is not referenced when loading a block allocation.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks** and then **Manage Block**.

2. Enter search criteria, click **Search**.
3. Select the block in the search result, click **I Want to . . . Room & Rate Grid** or open the Block and click **Room & Rate Grid**.
4. Click **Actions** then select **Load Room Grid**, complete the following
 - a. **From:** Enter or select a start date.
 - b. **To:** Enter or select an end date.
 - c. **Grid Type:** Select the grid to update.
 - i. **Original:** Default value, and only available, when the business block is not in an Open-for-Pickup status.
 - ii. **Current:** Default value, and only available, when the business block is in an Open-for-Pickup status.
 - iii. **Contract:** Display the contract grid to manage the number of rooms you want to record as Contracted for this group. This grid does not deduct rooms from inventory; instead it is used in conjunction with the Sales Contract and can be manipulated without affecting any other grid.
 - iv. **Available:** Display the Available Rooms grid. These are the rooms remaining in the allocation; not picked up. Available when the business block is in an Open-for-Pickup status.
 - d. **Day of the Week:** Select check boxes for each day of the week. By default all the check boxes for the days within the From/To date range are marked. You may mark or un-mark the check boxes to make changes to only a specific day or days of the week.
 - e. **Shoulder:** Select to allow selection of Shoulder Start or Shoulder End Date Range (when Shoulder Dates are defined for block) to load rates for these dates. No Inventory can be loaded for Shoulder Dates.
 - f. **Room Types / Room Pools:** Select one or more room types or room pools.
 - g. **Increase/Decrease Rooms:** Select this check box to indicate that you want to add or subtract rooms from the existing allocation in the grid. To increase the number of room nights on the grid, select this check box and insert in Occupancy fields the number of rooms by which to increase the block. To decrease the number of room nights on the grid, select this check box and insert a negative number, a number preceded by a minus sign (-), in Occupancy fields. To change (replace) the number outright, do not select this check box and insert a positive number in the appropriate Occupancy field.

 **Note:**

The Increase/Decrease flag only applies to the Number of Rooms; this excludes sell limits and booking positions. The values entered into those fields are always considered to be absolute values.

- h. **No of Rooms.**
 - i. **Occupancy 1, 2, 3, 4, Total:** Specify number of rooms per occupancy.
 - ii. **Rate 1, 2, 3, 4, Additional:** Available if a rate code has not been selected for the business block. Specify the rate for each occupancy. Rate amounts are shown in the currency selected on the Rooms Grid.

Override Rates for Block Room Allocation

Use this option to change rate amounts through load and edit, if a rate code has been selected on the block header.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks** and then **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the block in the search result, click **I Want to . . . Room & Rate Grid** or open the Block and click **Room & Rate Grid**.
4. Click **Actions** then select **Override Rates**.
5. Select an **Override Rates Reason** from the list.

Remove Rate Override from Block Room Allocation

Use this option to edit rates through Edit and Load if the block has a rate code assigned.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks** and then **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the block in the search result, click **I Want to . . . Room & Rate Grid** or open the Block and click **Room & Rate Grid**.
4. Click **Actions** then select **Remove Rate Override**.

Wash Block Room Allocation

Using Block Wash, you can quickly remove either a percentage or a fixed number of rooms from the room allocation for any number of days and room types.

You may also setup a wash schedule to automate the block wash process. For more information, see: [Managing Block Wash Schedule](#).

 **Note:**

If you wash an Original room allocation (not yet open for pickup status) and the Autoload Contract Grid OPERA Control is active, the wash also affects the Contract grid room allocation.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks** and then **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the block in the search result, click **I Want to . . . Room & Rate Grid** or open the Block and click **Room & Rate Grid**.
4. Click **Actions** then select **Wash**.
 - a. **From:** Enter or select a start date
 - b. **To:** Enter or select an end date
 - c. **Day of the Week:** Select check boxes for each day of the week. By default all the check boxes for the days within the From/To date range are marked. You

may mark or un-mark the check boxes to make changes to only a specific day or days of the week.

- d. **Room Types / Room Pools:** Select one or more room types or room pools used within the block.
- e. **Value:** Select this option when you would like to wash the block by a specific number of rooms.
 - i. **Number of Rooms:** Enter the number of rooms to reduce by.
- f. **Percentage:** Select this option when you would like to wash the block by a percentage of the number of rooms of each room type.
 - i. **Percentage:** Enter a percentage amount.
- g. **Percentage by Day:** Select this option when you would like to wash the block by a percentage of the number of rooms of each room type by Day of the Week.
 - i. **Days of the Week:** Enter a percentage amount for each day of the week.
- h. Click **Save**.

Events

Prerequisites for Events

- **Add an Event to a Block (Creating an Event)**

[Watch Video](#)

- **Create a Catering Block and Event**

[Watch Video](#)

The Events feature is designed to manage any kind of catering activity. Events can be as simple as a one-hour reception or more complex, such as a three-day business meeting with meals, breaks, and specific meeting room with setup and resource requirements. Any group function can be an event.

Events require many levels of organization including: booking a function space for the event, creating a food and beverage menu, and making sure all other resources needed for the event are available. All of these aspects of managing events are available when your property has an active OPERA Cloud Sales and Event Management Cloud Service subscription.

The Manage Events presentation screen enables you to search for events at your property. You can open Manage Events from the OPERA Cloud menu under Bookings by selecting Events. The screen provides the Advanced Search function where you can search by property, dates, and other key information related to an event, a sub event, the block associated with the event, and so on.

Creating Events

Catering events and sub events are associated with a block; certain fields inherit their details from details in the block. When the Single Block Status OPERA Control is active, the status of events is the same as the status of the block they are linked to.

Note:

Events cannot be created for a [master block](#) when the Master Sub Block OPERA Control is active. The **Event Attendees** field of the [block](#) must contain a value to be able to create an event.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and select **Manage Blocks**.
2. Enter or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, locate the block, click the **I Want To . . .** action, and select **Event** from the Create column.
4. In the Event Details panel, select or confirm the property depending on whether you are working at the Hub level or Property level.
 - a. **Event Type:** Select the Event Type, such as breakfast, reception, breakout session, or so on. If the Event Type you select has configured start and end times, the Start Time and End Time fields automatically populate.

If the Event Forecast Maintenance is configured, the Forecasted Revenue amount for each Event Type automatically populates on the event. You can edit the Forecasted Revenue on the Event Revenue Summary Panel after creating the event.
 - b. **Event Name:** The Event Name automatically populates from the Event Type. You can edit the name up to 60 characters.
 - c. **Event Status:** Populates with the Catering Status on the Block. Select a new status as required. The event status determines whether the Function Space and any Event Resources are deducted from inventory.
 - d. **Start Date:** Defaults to the Block Start Date. You can edit the date, but it must fall within the Block Dates or the Block Shoulder Dates if they exist. The Block and Shoulder dates are visible in the block Business Card or in the calendar icon. Type the date directly in the field or use the calendar icon to select the date.
 - e. **End Date:** Defaults to the Block Start Date and is read-only. When the Start date is changed, the End date automatically updates.
 - f. **Start and End Time:** Defaults if a value is configured for the selected Event Type, but can be edited.

You can have an event that spans two days, for example, a reception from 9 p.m. to 1 a.m. If the end time is past midnight, the end date adjusts to the next day automatically. Events cannot exceed a 24-hour period. If the end time entered exceeds 24 hours, a warning message appears.

- g. Expected Attendees:** This is an estimate of the number of guests expected to attend the event and is used for forecasting revenue. The number populates automatically from the attendees listed on the block, but can be edited.
- h. Guaranteed Attendees:** Enter the guaranteed number of attendees. This is the contracted minimum number of attendees that will attend the event and reflects as Guaranteed Revenue. If the Guaranteed check box on the block is selected, the Guaranteed Attendees field populates automatically.
- i. Actual Attendees:** After the event takes place, enter the number of attendees that actually attended. This value will be the billed amount of Attendees and determines the amount charged to the client. If the Catering Status on the block is set to Actual, the Actual Attendees field populates automatically.
- j. Space:** Select a space for the event. You will have the option to Show Available Spaces or Show All Spaces. By default, the option for Show Available Space is selected and lists spaces not reserved for events in Deduct or Actual status for the selected date/time. After selecting a space, the Space Rental Code field and Setup Style field become mandatory. Any default values configured for the space automatically populate the following fields: Rental Code, Setup Style, Setup Time, Tear Down Time, and Rental Amount. If you select a space that requires an alternate, an asterisk (*) is indicated and you are forced to select an alternate function space. Click the **Select Alternate Space** button.

 - i.** Click **Show Available Spaces** to list spaces not reserved for Events in deduct or actual status for the selected date/time.

 **Note:**

If other events are booked in the space, they appear in the Events Booked in Shareable Space popup. To book the space so no other events can occupy the room at the same time, select the **Book As Exclusive** check box.

- ii.** Click **Show Selected Spaces** to list only the spaces that have been selected as Alternates.

After selecting a space, the Rental Code field and Setup Style field become mandatory. Any default values configured for the space automatically populate the following fields: Rental Code, Setup Style, Setup Time, Tear Down Time, and Rental Amount. If you select a space that requires an alternate, an asterisk appears and you are required to select an alternate function space. Click the **Select Alternate Space** button. Refer to: [Managing Alternate Space Events](#)

 **Note:**

When the Event Waitlist OPERA Control is active and you select a function space that is already booked by an event that is part of a different block, you will receive the following message: Function space is not Available. Do you want to Waitlist? Select **Yes** to add the event to the Waitlist. For more information, see [Managing Event Waitlist](#).

- k. Space Rental Code and Rental Amount:** Select from a list of available Rental Codes for the selected space. If you select Custom Rental Code, you must enter a custom Rental Amount. The Discount field then becomes disabled, and you cannot

discount the rate. If the Rental Code has a pre-configured amount attached to it, you cannot edit the Rental Amount field. However, the Discount field becomes enabled for discounting the rate.

 **Note:**

When Use Forecast Value is active and room rental is assigned to an event, the revenue appears automatically as forecast and expected revenue. If Use Forecast Value is inactive and room rental is assigned to an event, the revenue appears as expected revenue only.

- l. Discount:** Enables you to enter a discount percentage if the Rental Code has a pre-configured amount attached. See [Applying Discounts to Event Resources on Blocks](#).
 - m. Setup Style:** Select a style for the selected space. If the number of attendees on the event is outside of the Setup Style minimum and maximum capacity range, you are prompted to override the space capacities. This requires the override user task. If you do not have the user task, you can adjust the number of attendees or select a different setup style and/or space.
 - n. Setup Time and Tear Down Time:** Enter the time needed to set up and tear down the event space. The space setup/tear down time might default based on the Setup Style. The time is added to the start/end time of the event to determine the total amount of time the room is booked.
 - o. Display Doorcard:** Selected by default. If selected, the check box indicates the doorcard should be displayed on reports or sent to external AV systems such as door card display solutions.
 - p. Doorcard:** The field is populated automatically based on the value in the block Post As field. Changes to the Post As field on the block automatically update the event Doorcard field. If the Post As field on the block is populated, the Doorcard field defaults to the block doorcard. Changes to the Post As field on the block automatically update the event Doorcard field.
 - q. Loud Event:** Provides a warning to colleagues who might want to avoid booking their clients in the adjoining space. The Loud Events flag appears on the [Function Diary](#).
 - r. Do Not Move:** Prevents anyone from changing the date, time, or space of the event. Requires the Set Do Not Move user task.
 - s. Include Event In Package.** Select the check box to add the event to the existing package associated to the block (available when one or more catering packages are associated to the block).
 - t. Linked Catering Package.** Select the Catering Package to which the event should be associated (available when more than one catering package is associated to the block).
 - u. Include Space in Package.** Select the check box when the rental price for the event space should be included in the package price and not charged separately.
5. After entering the event details, select from the following actions:

- a. **Save and Copy Event:** Saves your new event and copies (clones) the event as a new event. Refer to: [Copying Events to Other Dates](#).
- b. **Save and Create Another Event:** Saves your new event and takes you into the creation process for the next event.
- c. **Save and Create Sub Event:** Saves your new event and takes you into the create sub-event process. For more information, see: [Managing Sub Events](#)
- d. **Save and Manage Event:** Saves your new event and takes you to the [Event Presentation](#) screen where you can continue to manage the event, for example, by adding notes or resources.
- e. **Save:** Saves your new event

Creating Events from a Template

[Prerequisites for Creating Events from a Template](#)

Catering templates provide a combination of events and defaulted resources that you can use to quickly create events for a block. You can select pre-configured catering templates provisioned with events and potential resources. The events and their resources are priced separately, unlike a [Catering Package](#) where a total price per person is defined for the events and resources.

After the catering template is booked, regular event management capabilities are available to add, delete, move, cancel, copy and update events.

Creating Events from a Template

You can search for templates, save them to the block, and then add more events as needed.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and select **Manage Blocks**.
2. Enter search criteria, then click **Search**.
3. From search results, select the block, click the block's **I Want To . . .**, and then select **Event From Templates**.
4. From the Select Catering Templates page:
 - a. Enter search criteria, then click **Search**.
 - b. **Begin Date:** Select a begin date for the Event; the date must fall within the Block's dates as shown.
 - c. **Set Template Status.** Select to set the template status to either the same as the catering status of the block or to the configured default catering status.
 - i. **Catering Status of Business Block:** Select to set the event status to the catering status of the block.
 - ii. **Default Catering Status:** Select to set the event status to default.
 - d. Click any event template code to view the templates details. For more information, see [Configuring Catering Packages / Templates](#).
 - e. Select an event template in the search result, then click **Save**.
 - f. Events are created according to the template selected and displayed in Manage Event search. For more information, see [Managing Events](#).

Using the Function Diary

Use the function diary to view the availability of event spaces and manage the events scheduled to occur in each space on a selected date/time. You can view the event spaces by the hour, day, week, or by multiple weeks. Loud events, events held in shareable spaces, events with sub-events, or events in alternate spaces are clearly indicated. The events shown on the diary are color coded according to the event status and appear only when the status is configured to show in the Function Diary. For more information, see [Configuring Block Status](#).

 **Note:**

When the Include Inquiry in Non Deduct Inventory Calculation OPERA Control is active, non-deduct calculations will include status code configured as non-deduct and inquiry for the Room Status Type.

 **Note:**

Premium When the Opportunities OPERA Control is active and the Include Opportunity check box is selected, events in an Opportunity status are included in search results. The Opportunity check box is enabled for users with New/Edit Opportunity task granted.

Watch Video

Premium Guest (inventory) rooms with the option set to be a meeting room (event space) also appear in the Function Dairy. For more information, see: [Configuring Rooms](#).

For each function space the following icons indicate the properties of the space:

Events	
	Combo Space
	Combo Element
	Shareable Event Space
	Requires Alternate Space

A function space that is out of order or out of service for a period is indicated by  in the chart for the respective dates.

For each event, the following icons indicate the properties of the event:

	Loud Event
	Do Not Move Event
	Alternate Event
	Shared Event
	Sub Event
	Master Event
	Exclusive
	Setup/Tear-down Time

Viewing the Function Diary

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Function Diary**.
2. Select the **Property**, **Start Date**, and **Number of Days** to view. Enter any other search criteria.
 - a. **Include Hidden**: Select to show function spaces configured not to appear in the Function Diary.
 - b. **Show Rooms**: Displays the guest room availability for each date.
 - c. **Show Only Available Spaces** : Select to display all function spaces with no event bookings or event bookings in non-deducted status.
3. Click **Search**.
4. Use the date navigation to scroll forward or back through the dates if required.

5. Update **View** to change the number of days shown on the chart.
6. Update **Days of the Week** to show only selected days of the week on the chart.
7. Click **Save**.

Viewing Room Availability

To view a summary of property availability above the Function Diary click **Show Rooms**.

The panel displays a summary of deduct and non-deduct blocks and reservations and the **Maximum Available Rooms** per date.

Note:

Select a multi-day view to display room availability.

Viewing Calendar Events

The Function Diary displays a color line above the date/day with special events set up from the [Property Calendar](#).

Click **Day Details** to open the panel showing details about special events occurring on the date.

You can clearly identify the days with blocks indicated for rate protect and/or non-compete. A line appears above the weekdays to indicate if any bookings on that date are flagged as Rate Protect and/or Non Compete on the Business Block screen Details tab.

1. **Rate Protect** Premium. This indicates that no other groups should be booked using rates lower than those assigned to the block that is flagged as rate protect.
2. **Non Compete** Premium. This indicates that no competing accounts (accounts with the designated NC Industry code) should be booked at the same time as this block.

Viewing Function (Event) Space Information

To view the details of a function space, click the Function Space name on the far left side of the chart.

The details of the function space appear across four tabs:

1. **Overview**: Displays details of the space, the setup styles, and capacities supported per style.
2. **Image Gallery**: Displays images of the function space.
3. **Rate Details**: Displays the function space pricing information.
4. **Dimensions**: Displays the room dimensions in imperial and metric measurements.

Changing Event Label Display

By default, each event displays the Booking Name as the event label that appears in the chart.

Other choices include:

1. **Booking Name:** Displays the business block name to which the event is linked.
2. **Event Type:** Displays the type of event that it is.
3. **Set Up Style:** Displays the style of setup to be used for the event.
4. **Attendees:** Displays the number of attendees for the event.
5. **Attendees and Setup Style:** Displays the number of attendees and the setup style for the event.
6. **Event Name:** Displays the name of the event.

To change the event label display:

1. From the Function Diary, click **Modify Search Criteria** to open the **Search** panel.
2. Select an option from the **Event Label** list.
3. Click **Search**.

Viewing and Managing Event Information

To view the details of an event, the related block, and linked profiles, double click the event in the chart.

1. The Event Information panel opens.
2. Sub events are available in the sub-events tab.
3. Use the actions available to manage the event. For more information, see [Events](#).

Creating an Event for an Existing Block

You can create an event for an existing [Block](#) from the Function Diary. Start by selecting the function space and start/end time for the event.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Function Diary**.
2. Enter search criteria and click **Search**.
3. **View:** Select Day
4. Select the function space in the Function Dairy, then click the **Start time** and then click the **End time** , then select **Event using existing Block** from the Create prompt.
 - a. Alternatively, click **I Want to . . .**, (create) **Event using existing Block** without selecting a function space or times.
5. Enter block search criteria, then click **Search**.
 - a. Select the block in the search result. then click **Select**.
6. Complete the event detail. For more information, see [Creating Events](#) .
7. Select from the following actions:
 - a. **Select Alternate Space:** Select an alternate space for the event. For more information, see [Managing Alternate Space Events](#).
 - b. **Save and Copy Event:** Saves your new event and copies (clones) the event as a new event. For more information, see [Copying Events to Other Dates or Other Block](#).

- c. **Save and Create Another Event:** Saves your new event and takes you into the creation process for the next event. For more information, see [Creating Events](#)
- d. **Save and Create Sub Event:** Saves your new event and takes you into the creation process for a sub event. For more information, see [Managing Sub Events](#)
- e. **Save and Manage Event:** Saves your new event and takes you to the [Event Presentation](#) screen where you can continue to manage the event, for example, by adding notes or resources.
- f. **Save:** Saves your new event.

Using Quick Events

Prerequisites for Using Quick Events

Premium

Use Quick Events to create a block and event simultaneously. A zero-night block is auto-created for the event based on the [Quick Event](#) OPERA Control and Default New Block Status settings. Start by selecting the function space and start/end time for the event in the Function Diary. To later add a room allocation to the block, update the nights and other details in [Manage Block](#).

Note:

Your assigned role(s) must be granted New/Edit Block and New/Edit Catering Events tasks to use Quick Events.

Creating Quick Events

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Function Diary**.
2. Enter search criteria and click **Search**.
3. Select the day to view.
4. Select the **Function Space** in the Function Dairy, click the **Start** time, click the **End** time, and then select **Quick Event** from the Create prompt.
 - a. Alternatively, click **I Want To . . .** and create a **Quick Event** without selecting a function space or times.
5. Complete the Quick Event details:
 - a. Block Details:
 - i. **Account:** Click to search and select a sales account to link to the block. The Quick Profile Search screen is displayed where you can search for a Company, Travel Agent, and related Contact Profiles to associate with the Block. Or, you can select **I Want To . . .** and create a new profile. For more information, see: [Creating a Sales Account Profile](#).

- ii. **Contact:** Click to search and select a contact to link to the block.
 - iii. **End Date:** Enter or select an end date.
 - iv. **Block Name:** Enter a name for the block.
 - v. **Block Code:** Enter a block code. The Block code must be unique when the Unique Block Code OPERA Control is active. The Block Code format is determined by the Block Code Generation Pattern OPERA Control.
 - Click **Get Default Block Code** to generate a block code.
 - vi. **Market:** Select a market code from the list; used for statistical purposes. Field will default based on the Quick Event Market Code
 - vii. **Source:** Select a source code from the list; used for statistical purposes. Field will default based on the Quick Event Source Code OPERA Control.
- b. **Event Details:** For more information, see: [Creating Events from Manage Block](#).
- c. Select from the following actions:
- i. **Select Alternate Space:** Select an alternate space for the event. For more information, see: [Managing Alternate Space Events](#).
 - ii. **Save and Create Another Event.** Saves your new event and takes you into the creation process for the next event.
 - iii. **Save and Create Sub Event:** Saves your new event and takes you into the creation process for a sub event. For more information, see: [Managing Sub Events](#).
 - iv. **Save and Manage Event:** Saves your new event and takes you to the [Event Presentation](#) screen where you can continue to manage the event, for example, by adding notes or resources.
 - v. **Save:** Saves your new event.

Managing Alternate Space Events

Premium

[Prerequisites for Managing Alternate Space Events](#)

Properties typically configure outdoor function spaces to require an alternate space as a back-up space in the event of inclement weather. When creating an event in a function space that requires an alternate, you are forced to select one or more alternate function space(s) with the following exceptions:

- The event status is actual.
- The event type is excluded from requiring an alternate.
- The event is a sub event.

An alternate event is automatically created for each alternate space you select. Forecast revenue does not populate on the alternate event, however, if the alternate space has a room rental charge, OPERA Cloud copies the expected room rental revenue to the forecast revenue.

Selecting Alternate Spaces(s) for an Event

When the Alternate Spaces screen opens:

1. Enter search criteria and click **Apply Filter**.

 **Note:**

Select the Sort By list to change the display order of spaces.

2. Select one or more alternate spaces in the search results.
3. Click the **Select Alternate Space(s)** button. OPERA Cloud returns you to the [Create Event](#) or the [Event Presentation](#) screens.

Editing Alternate Events

OPERA Cloud creates an Alternate Event for every alternate space you add to an event. You can edit Alternate Events from the Alternate Event tab on the Event screen. The Alternate Event tab appears only when the event has an alternate event.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter search criteria, and click **Search**.
3. From search results, click the alternate event's **I Want To . . .** action and select **Event** from the Go To column.
4. Click **Edit** and make your changes. For more information, see: [Managing Events](#)
5. Click **Save**.

Converting Alternate Events to Master Events

You can convert Alternate Events to Master Events. When converting the Alternate Event, OPERA Cloud deletes the Alternate Event and updates the Master Event with the Function Space, Rental code (not amount), Setup Style, and Setup/Teardown times of the Alternate Event. The original master event ID is retained.

If there are multiple Alternate Events:

- The last one to convert takes the place of the Master and any previous Alternate events that were converted will be regular standalone events.
- If there are resources attached to the master, the resources will remain on the master.
- If there are existing sub events, those will remain untouched.

If the Alternate Master becomes Actualized, the Alternate Events are automatically deleted. If you change the status to Actual, you are prompted that the alternates will be deleted and asked to confirm proceeding.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter search criteria, and click **Search**.
3. From search results, select the alternate event's **I Want To . . .** action and select **Convert to Master Event** from the Modify/Update column.

Managing Events

The Manage Events search function provides options for finding events by property, dates, event type, block, account or contact, and so on.

Search results provide columns for the Event ID, Event Name, start date and time, space reserved for the event, number of attendees, event status, and package code (for identifying events belonging to the packages). You can expand events to reveal key details and links to additional information such as Event Details, Event Notes, Revenue Summary, and so on. The Sort By function changes the order of rows and remembers your last selection. View options are Table and List.

 **Note:**

You can also access Events linked to a Block from the Block search screen by selecting the Manage Events details link. For more information, see [Searching for Blocks: Advanced Search](#).

 **Note:**

When the Event Waitlist OPERA Control is active and you select a function space that is already booked by an event this is part of a different block, you will receive the following message: "Function space is not available. Do you want to Waitlist? Select **Yes** to add the event to the Waitlist." For more information, see [Managing Event Waitlist](#).

 **Note:**

If you select a space that requires an alternate, an asterisk (*) is indicated, and you are forced to select an alternate function space. Click the Select Alternate Space button. Refer to: [Managing Alternate Space Events](#).

Editing Events

You can edit event details from the Manage Events screen.

 **Note:**

For [alternate events](#) the Event Type, Status, Start Time, End Time and Space fields are disabled. If an event is marked Do Not Move the Start Date, Start Time, End Time and Space fields are disabled.

 **Note:****Premium**

When the External URL OPERA Control is active, enter a URL in **External URL** to display as a hyperlink in the Event Overview panel.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Enter search criteria, and click **Search**.
3. From the search results, select the event and then click the **Event ID** value to open the Event Presentation page.

 **Note:**

Details panels selected in the default or previously selected Presentation Panel Tab are displayed. For more information, see [Presentation Pages](#).

4. Click **Event Details**.
5. Click **Edit**.
6. Update the event details. For more information, see [Creating Events](#)
7. Click **Save**.

Table 3-10 Event Main

Event Main
Event Details
Manage Resources
Event Notes
Revenue Summary

Quick Editing Event Details **Note:**

For [alternate events](#) the Event Type, Status, Start Time, End Time and Space fields are disabled. If an event is marked Do Not Move the Start Date, Start Time, End Time and Space fields are disabled.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Enter search criteria, and click **Search**.
3. From the search results, select the event then click the pencil icon.
4. Update the event details. For more information, see [Creating Events](#)
5. Click **Save**.

Canceling Events

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Enter or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. Locate the event in search result and click **Event Details** or click the **Event ID** and scroll to the Event Details panel.
4. Click **Edit**.
5. On the Status field, update the event status to cancelled (or lost or regret).

 **Note:**

Event statuses available in the list of values depend on the block status flow configured for your property [Block Status](#).

6. Click **Save**.

Deleting Events

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Enter or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. Locate the event in the search result and click the **I Want To . . .** then **Delete Event**.
4. Click **Yes** to confirm.

Editing Multiple Events

Prerequisites for Editing Multiple Events

 **Premium**

You can edit multiple events at the same time from the Multi Edit Events screen. When making multi edits, keep the following in mind:

- If the Keep Event Details On Type Change OPERA Control is active and no start time and end time are entered, the existing start time and end time of the events will not update with the Event Type change.
- If the Keep Event Details On Type Change OPERA Control is inactive and no start time and end time are entered, the start time and end time of the events will update with the configured defaults of the selected Event Type. If no defaults are configured, the existing start and end time will not be changed.
- Regardless of the Keep Event Details On Type Change OPERA Control, if Start and End Time are entered in this screen, the marked events will update with those times.

Editing Multiple Events

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Enter or confirm the **Property**, enter the **Block ID** or **Block Name** and any additional search criteria, and click **Search**.

 **Note:**

You can also edit multiple events by clicking the OPERA Cloud menu, selecting Bookings, selecting Blocks, and then selecting Manage Blocks.

3. Select one or several **Event(S)** and click **Edit**.
4. In the Multi Edit Events screen, make your changes. The changes will affect all events you selected.
5. Click **Save**.

 **Note:**

OPERA Cloud checks function space availability for events with the new space details. If one of more of the events has an availability conflict, OPERA Cloud prompts you with the Event Overbooking screen to resolve the conflict.

 **Note:**

All event changes are recorded in the event changes log. All event production changes are recorded in the event production change logs.

Deleting Multiple Events

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Enter or confirm the **Property**, enter the **Block ID** or **Block Name** and any additional search criteria, and click **Search**.
3. Select one or several **Event(S)** and click **Delete**.
4. Click **Delete** to confirm.

Viewing Recently Accessed Events

Prerequisites for Viewing Recently Accessed Records

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, then select **Manage Events**.
2. Click **I Want to....**

3. Recently viewed events are listed in the **View** column.
4. Click an **Event** link to [view and update the Event](#).

Managing Sub Events

Prerequisites for Managing Sub Events

You can convert an event to a sub event or convert a sub event to an event if the OPERA Controls for Sub Events is active at your property.

Converting an Event to a Sub Event

When converting an event (sometimes referred to as a regular or standalone event) to a sub event, you must associate the new sub event with a master event. The new sub event inherits the function space, setup, and rate from the master event.

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From your search results, click the regular event's **I Want To . . .** action and select **Convert To Sub Event** from the Modify/Update column.
4. From the Select a Master Event screen:
 - a. Select the **Event** for the converted sub event.
 - b. Select the **Inherit Master Event Space** check box if you want the sub event to inherit the same function space as the master event.
 - c. Click **Save** to return to the Manage Events screen.
5. Search Manage Events to refresh the master event and sub event indicators.

Converting a Sub Event to a Regular Event

When converting a sub event to a regular event, no master event is required. You must assign a function space to the event, define the setup, and specify other details as required for regular events.

1. From the **OPERA Cloud** menu, select **Bookings**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From your search results, click the sub event's **I Want To . . .** action and select **Convert to Regular Event** from the Modify/Update column. The sub event converts immediately to a regular event.

Copying Events to Other Dates or Other Block

You can copy one or more events to other dates in the same block or to dates in a different block. While copying, you can select whether to include notes, resources, and other event details in the event copy. Copied events are created with the status selected in the Catering Status when Copying an Event OPERA Control.

When you copy an event to a space that is not available and the Events Waitlist OPERA Control is active, the processing screen displays a message indicating the event will be wait-listed. For more information, see [Managing Event Waitlist](#).

**Note:****Premium**

The **External URL** field value is not included when copying events.

Copying Events

1. In the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Manage Events**.
2. Enter search criteria and click **Search**.
3. Select the **Event** in search results, click **I Want To . . .** and select **Copy to Other Dates**.
4. On the Copy Event page, complete the following:
 - a. Copy Options.
 - i. **Event Notes**. Select the check box to copy all event notes.
 - i. **Include Change Notes**. Select the check box to include change notes (note type = Change).
 - ii. **Other Resources**. Select the check box to copy resources (menus, menu items, and items).
 - i. **Resource Notes**. Select the check box to copy resource notes.
 - ii. **Resource Prices**. Select the check box to copy resource pricing. If not selected, the price for the resources is taken from configuration, and the discount percentage is not copied.
 - iii. **Forecast Figures**. Select the check box to copy forecast figures.
 - iv. **Source Status**. Select the check box to copy source status. The source status is not used when the event is in a Return to Inventory or Actual status.
 - v. **Include Sub Events**. Select the check box to copy sub events.
 - b. Select Event(s) to Copy.
 - i. **Sort By**. Click to select a display order from the list.
 - ii. **Show All Events**. Select the check box to display all events for the current block.
 - iii. Select one or more **events** from the search results; your initial event is selected.
 - c. Select Date(s) to Copy To.
 - i. **Target Block**. The current block is defaulted; click to search and select a different block to copy the events to.
 - i. Enter block search criteria and click **Search**.
 - ii. Select a **Block** from the search results.

- iii. Click **Select**.
- ii. **Copy to Dates**. Select one or more dates listed.
- d. Click **Copy Event**.
- e. If there are conflicts with items or with space availability, the Event Processing screen appears.
- f. If the events copy successfully, you are taken to the Manage Event screen for the Target Block, and a success message appears in green.

Managing Event Notes

You can add notes to events to communicate details and updates to other departments. The Event Notes feature is available from the row-level I Want To action on the Manage Event Search screen and from the I Want To action on the Event Presentation screen.

Note:

You can also access Events linked to a Block from the Block search screen by selecting the **Manage Events** details link. For more information, see [Searching for Blocks: Advanced Search](#).

Adding Event Notes

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Manage Events**.
2. Enter search criteria and click **Search**.
3. Select the Event in the search result, click **I Want To . . .** then click **Event Notes** or open the event and click **Event Notes** in Event Presentation.
4. Click **New** and enter the following details:
 - a. **Type**: Select the note type from the list. For more information, see [Configuring Note Types](#).
 - b. **Internal**: Select check box to mark the note as internal; internal notes are excluded from output on client correspondence by default.

Note:

Internal notes are excluded from output on client correspondence or on reports unless the report explicitly allows display of Internal Notes. You can uncheck this check box when Override Internal is selected in the note type configuration.

- c. **Title**: Enter a title for the note.
- d. **Sequence**: Enter a sequence for the note.
- e. **Comment**: Enter or paste the note details; a maximum of 2000 characters (single byte) is supported.

5. Click **Save** or click **Save and Create Another Note** to add another note.

Viewing and Updating Event Notes

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Manage Events**.
2. Enter search criteria and click **Search**.
3. Select the Event in the search result, click **I Want To . . .** then click **Event Notes** or open the event and click **Event Notes** in Event Presentation.
4. Select the note, click **[+]** to expand the card and read the note comments.
5. Click the vertical ellipsis **Actions** menu, and then click **Edit**.
6. Update note details.
7. Click **Save**.

Deleting Event Notes

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Manage Events**.
2. Enter search criteria and click **Search**.
3. Select the Event in the search result, click **I Want To . . .** then click **Event Notes** or open the event and click **Event Notes** in Event Presentation.
4. Click the vertical ellipsis **Actions** menu, and then click **Delete**.
5. Click **Delete** to confirm.

Managing Events Revenue Summary

[Prerequisites for Managing Events Revenue Summary](#)

The Event Revenue Summary panel provides the ability to view and manage revenue details for an event. It displays Forecast, Guaranteed, On the Books, and Billed Revenue totals and by revenue type.

Use Forecast Revenue. The Use Forecast Revenue check box is selected by default when the Use Forecast Revenue is set to On in OPERA Controls. As long as the check box is selected, OPERA Cloud uses the forecast revenue for the On the Books revenue calculation even when expected or guaranteed revenue exists for the event. When the check box is deselected, the On the Books revenue calculation is based on the expected or guaranteed revenue. If Use Forecast Revenue is set to Off in OPERA Controls, the check box does not appear, and OPERA Cloud uses the most recent revenue category for revenue calculations.

Exclude from Forecast. Select to exclude the revenue for the event from the forecast (for example events in the public restaurant). The following reports are affected by this check box:

- Daily Catering Forecast (REP_EV_FORECAST)
- Catering Summary Report (REP_CATERING_SUMMARY)
- Monthly Catering Forecast Report (REP_MONTH_FORECAST)

Revenue Actualization. You can edit this field when the status of the event is set to Actual and the Event Revenue Actualization control is set to Resource_Option or Event_Option. If the setting is set to Resource_Option, the billed revenue calculation is calculated and managed at the Resource level. The Event_option defaults to Actualization at the event level and enables you to manually override/update the amount.

Forecast. Forecast amounts are inherited from the [Event Forecast Maintenance](#) configuration screen. The revenue can be forecasted by per person or flat amount. Revenue types that are generally entered with flat forecast figures are miscellaneous items such as audio visual equipment or decorations.

Expected. This value is calculated based on the resources attached to the event. Resources have revenue types linked to their rates and depending on their configuration, the revenue types are updated in the table based on changes at the event or resource levels. For menu items that are priced per person, the column is calculated by the number of expected attendees multiplied times the per person price of the menu or menu item.

Guaranteed. For resources priced per person, the column is calculated using the number of guaranteed attendees multiplied times the per person price of the item.

Billed. Billed revenue is visible only when the event is in an Actual status and indicates the final amount the group was charged. If the actualization process is set to the Event level, the revenue is inherited from the Guaranteed Revenue. If the Guaranteed Revenue is not populated, it is inherited from the Expected Revenue. You can manually update the billed amount if there is a change in what the customer was actually charged. Since the billed revenue is editable, the ability to enter actuals at the resource level is disabled.

Total Cost. This is updated from the associated cost prices of the attached resources. The value is visible when the OPERA Controls Resource Cost is Active.

Total Margin. Entries in this column are calculated from the last entered revenue column minus the associated cost. The value is visible when the OPERA Controls Resource Cost is Active.

Margin. This is the percentage of revenue to cost calculated from the last used revenue column. The value is visible when the OPERA Controls Resource Cost is Active.

 **Note:**

If an event belongs to a package, revenue types appear twice in the table; once to indicate the regular revenue of the event type that is not included in the package and a second time to indicate the revenue of each type included in the package. Revenue coming from a package is indicated in the column next to the revenue type code.

Related Controls

- **Resource Cost.** When the Resource Cost parameter is set to On in OPERA Controls, it exposes cost fields for catering resources.
- **Event Revenue Actualization.** Determines whether catering revenue is tracked at the event or resource level.
- **Use Forecast Revenue.** The On the Books Revenue calculation uses the forecasted revenue until you deselect the Use Forecast Revenue check box.

 **Note:**

You can access Events linked to a Block from the [Block Search](#) screen by selecting the Manage Events details link.

Editing Revenue Summary

1. From the OPERA Cloud menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Enter search criteria and click **Search**.
3. From the search results, select the **event**, click the event's **I Want To . . .** action, and click **Revenue Summary**.
4. Click **Edit** to manage the following details:
 - a. **Use Forecast Revenue**. Deselect the check box to use Guaranteed or Expected revenue to calculate On the Books Revenue.
 - b. **Exclude from Forecast**. Select to exclude the revenue for this event from the forecast.
 - c. **Revenue Actualization**. Select the desired option.
5. Editing Forecast and Billed Revenue:
 - a. **Forecast Per Person**. Enter the desired amount. You can edit this for Revenue Types forecasted per person.
 - b. **Forecast Total**. You can edit this for Revenue Types forecasted as a flat amount.
 - c. **Billed**. Enter the desired amount.

 **Note:**

When Revenue Actualization happens at the event level, you cannot edit the Package Revenue fields when the event turns to Actual (ACT). You can modify only the revenue from items that were added to package events, but not included in the package price. Otherwise, to edit Packaged Revenue in this case, you must edit from the Package Pricing screen (available by selecting Pricing on the Manage Catering Packages screen).

6. Click **Save**.

Generating Reports from Event Search

You can run event reports three different ways from the Manage Event search screen.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and select **Manage Events**.
2. Select or confirm the **Property** name, enter any additional search criteria, and click **Search**.

3. From search results, use any of the following methods to run event reports:
 - a. From the Block Business Card, click the **I Want To . . .** menu and select Go To Reports. The Run Reports screen opens showing Blocks and Groups in the Report Group field.
 - b. From the row level Event, click the **I Want To . . .** menu and select Go To Reports. The Run Reports screen opens showing Events in the Report Group field.
4. You can also perform a Block ID search enabling you to run reports on multiple events. This method opens a new column in search results with check boxes allowing you to multi select events.
 - a. On the search screen, enter the **Block ID** in your search criteria and click **Search**.
 - b. From search results, select the **check box(es)** of the events you want in your report. You can click **Expand All** to view more details about all of the events listed in your search results.
 - c. Click **Reports** at the bottom of the screen. The Run Reports screen opens showing Events in the Report Group field.

Posting Charges for Events

[Prerequisites for Posting Charges for Events](#)

You can post event charges directly from the Event Posting screen when the OPERA Controls for Event Posting is active. The Event Posting screen displays events with dates and time, an indicator for revenue not posted or only partially posted, and a link to the Event.

The Event Posting screen includes a column for Resource Name. When revenue is posted at the Resource Level, the resource name appears in the Resource Name column. When revenue is posted at the Event Level, the event name appears in the Resource Name column since the revenue is posted by Revenue Type instead of by individual resources.

[Watch Video](#)

Using Event Posting you can quickly post charges for the event resources such as function space rental, menu (food and beverage) charges, audio visual equipment and entertainment. You can also access [Billing](#) for the event posting master account, to post additional charges that were not setup as event resources. In addition to the billing invoice produced and a detailed [pro-forma invoice](#), with OPERA Cloud Sales and Event Management Standard or Premium Cloud Service, two different banquet folio styles showing all posted charges related to the event: Folio Style 21 (Banquet Folio by Revenue Type) and Folio Style 22 (Banquet Folio by Event). For more information, see [Selecting Folio Styles for Viewing, Printing](#)

To post event charges using the Event Posting screen, the following conditions are required:

- The block must have a checked-in PM (posting master). To create a posting master, refer to [Posting Master](#).
- The event status must be ACTUAL. This status enables the system to know the final number of attendees upon which event charges are based. You can make positive or negative postings based on changes in the number of event attendees or in the quantity of items.
- Appropriate transaction codes must exist for the event resources that are posted. For more information, see [Revenue Type Mapping](#).

- Your user account must be assigned a Cashier ID and your role must have the Manage Events, Manage Event Postings task.

Viewing Catering and Property Currencies

When the catering currency of the property is different from the resort currency, the total revenue appears twice on the Event Posting screen in each currency.

If the Catering Currency (configured in Property Controls) is different than the Property Currency (configured in Property Controls), the Event Posting screen shows two columns for revenue – one for each currency. The following example uses Canadian (CAD) and US (USD) dollars:

1. **CAD Revenue (Catering Currency):** This field reflects the amount of revenue in Canadian dollars attributable to each transaction code in the configured catering currency for the property. The label is dynamic based on the currency configured. Consider the exchange rate (posting) configured for the currency.
2. **USD Revenue (Local Currency):** This field reflects the amount of revenue attributable in US dollars to each transaction code in the configured local currency for this property. In this example, the field is for US Dollars. The label is dynamic based on the currency configured. Consider the exchange rate (posting) configured for the currency.

If the configured Catering Currency is the same as the Property Currency, only one column for Revenue appears in the event posting screen.

Posting Event Charges

Event Posting displays events dates and time, an indicator for when revenue is not posted or only partially posted, and a link to the event.

As determined by the Event Revenue Actualization OPERA Control:

- When revenue is posted at the resource level, the resource name appears in the **Resource Name** column.
- When revenue is posted at the event level, the event name appears in the **Resource Name** column, since the revenue is posted by Revenue Type.

 **Note:**

When the Force Cashier Login is active in OPERA Controls you need to enter your cashier ID and PIN.

 **Note:**

When the Transaction Code by User Role OPERA Control is active you are restricted to the transactions codes available for selection.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Event Posting**.
2. Enter search criteria, then click **Search**.
3. Select an event from the search result.

- a. The event charges appear in the **Event Posting** area.
- b. Click **Transaction Code** magnifier icon to search and select a different transaction code for the charge
- c. Select the charges to post, then click **Post**.

 **Note:**

The Post button becomes active only if the block has a valid checked-in posting master reservation. If there is more than one eligible posting master reservation checked in, you are prompted to select the posting master reservation to post the charges to and then click **Select**.

Generating Banquet Checks

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Event Posting**.
2. Enter search criteria, then click **Search**.
3. Select an event from the search result.
 - a. The event charges appear in the **Event Posting** area
 - b. Select the charges, then click **I Want to . . .** and select **Banquet Check**.
 - i. Enter report parameters and select a report destination, then click **Process**.
 - ii. For more information, see [Generating Reports](#)

Editing Posted Amounts

Posted event charges appear in the event's Revenue Summary panel. If you post charges incorrectly, you can open the event from the Event Posting screen, correct the billed amount, and return to the Event Posting screen for posting the adjusted difference. To correct posting amounts after posting:

Event Level Corrections

To correct revenue posted incorrectly at the event level, open the event and correct the **Billed Revenue** for a revenue type in [Revenue Summary](#). (Available when the Event Revenue Actualization OPERA Control is set to Events).

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Event Posting**.
2. Click the **Event Number** on the event tile to manage the [event](#).
 - a. Select **Revenue Summary** .
 - b. Click **Edit**.
 - c. Update the **Billed Revenue** for the applicable revenue type.
 - d. Click **Save**.
 - e. Click **Back to Event Posting**.
 - f. Select the new revenue record to increase or decrease the posted revenue and select **Post**.

Resource Level Corrections

To correct revenue posted incorrectly at the resource level, follow the steps below. (Available when the Event Revenue Actualization OPERA Control is set to Resources).

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Event Posting**.
2. Click the **Event Number** on the event tile to manage the [event](#).
 - a. To change menu revenue:
 - i. Select the **Event Details** link then click **Edit**.
 - ii. Update **Actual Attendees** .
 - iii. Click **Save**.
 - b. To change item revenue
 - i. Select the **Event Resources** link.
 - ii. Select the item resource , then click the vertical ellipsis **Actions** menu and select **Edit**.
 - i. Update **Actual** quantity.
 - ii. Click **Save**.
 - iii. Click **Back to Manage Events**.
 - c. To change non-included menu item resource revenue
 - i. Select the **Event Resources** link
 - ii. Select the menu resource, then click the vertical ellipsis **Actions** menu and select **Edit**.
 - iii. Update **Billed** quantity for the non included menu item.
 - iv. Click **Save**.
 - v. Click **Back to Manage Events**.
 - d. Click **Back to Event Posting**.
 - e. Select the new revenue record to increase or decrease the posted revenue and select **Post**.

Viewing Event Production Changes

The Event Production Changes feature provides information on changes in event status and event revenue. You can search for Status Changes by date, prior status, or current status. For Revenue Changes, search by change date, event date, revenue type, or status.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.

 **Note:**

You can also access events linked to a block from the Block Search screen by selecting the **Manage Events** details link. For more information, see [Searching for Blocks](#)

2. Select or confirm the **Property**, enter search criteria, and click **Search**.
3. From search results, click the event's **I Want To . . .** action and select **Event Production Changes** from the View column.
4. Select the **Status Changes** tab or the **Revenue Changes** tab.
5. Enter search criteria and click **Search to view the changes**.

Viewing the Events Changes Log

The Events Changes Log shows a specific event or the events of a specific booking or events in a certain date range.

To view the changes log for an Event.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.

 **Note:**

You can also access events linked to a block from the Block search screen by selecting the Manage Events details link. Refer [Searching for Blocks](#)

2. Select or confirm the **Property**, enter search criteria, and click **Search**.
3. From search results, click the event's **I Want To . . .** action and select **Event Changes Log** from the View column.
4. In the Event Changes Log screen, enter search criteria and click **Search**.
5. From search results, click the **[+]** icon to expand any of the search results to view the details.

Managing Catering Packages on Blocks

[Prerequisites for Managing Catering Packages on Blocks](#)

Catering Packages allow for multiple events and resources to be grouped together and sold at a total price per person or a flat price. You can attach pre-configured Catering Packages to blocks and edit the package details, copy, or delete the packages.

The events and resources associated to the Catering Package can be customized based on the customer requirements. Events can be deleted or the details can be modified as needed. Additional resources including menus and items can be added to the event, and you can determine whether the resource is included in the package or charged separately.

Package events have special handling for attendees, which allows a property to indicate and charge separately for additional guests who are not on the package. For example, a package

may include a dinner where there will be five additional guest speakers. In the event screen, the field for package expected will show the number of attendees on the package and the expected field would be updated to include the additional guests indicating the total number of attendees for the dinner. The additional guests will be charged at the menu price.

The Revenue Summary screen shows the revenue generated from the catering package and the non-package revenue separately. This allows you to easily identify and manage both the package and non-package revenue.

Adding Catering Packages to Blocks

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and select **Manage Blocks**.
2. Enter or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, click the block's **I Want To . . .** action, and select **Book Catering Packages** from the Create column.
4. From the Package Status Options panel, select the **Begin Date** and **End Date** for the package.
5. Select a Set Package Status for the package. Options are:
 - a. **Catering Status of Business Block**. This option sets the package status to match the block status.
 - b. **Default Catering Status**. Selecting this option uses the status defined in the OPERA Control for "Catering Status When Copying An Event."
6. Select a **Package** and click **Save**. The Manage Events screen opens, displaying the events associated with the package.
7. From Manage Events, you can create additional events for the package, edit the events already attached to the package, or delete events from the package.

Editing Catering Packages on Blocks

After adding packages to a block, you can return to the block and add more packages or edit, delete, and copy the existing packages.

1. From the **OPERA Cloud** menu, select **Blocks**, and then select **Manage Block**.
2. Enter or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, click the block's **I Want To . . .** action, and select **Manage Catering Packages**.
4. Click **New** to add another package to the block.
 - a. In the Search panel, enter search criteria and click **Search**.
 - b. From search results, select the **Package** and click **Save**. If the Event Processing Screen appears, click **Continue** to add the package and save only the events that can be processed successfully.
5. From the Manage Catering Packages screen, you can make the following changes to each package:

Update Package Description or Attendees.

- a. Select the **Package** and select **Edit**.
- b. Make your changes and click **Save**.

Update Revenue Details.

- a. Select the package, click the vertical ellipsis, and select Pricing.
- b. Update Price or Cost Split and click **Save**. To delete the package pricing, click the vertical ellipsis and select **Delete**.

Delete Packages.

- a. Select the package and click the vertical ellipsis.
- b. Select **Delete**.

Copy Packages.

- a. Select the **Package**, click the vertical ellipsis, and select **Copy**.
- b. Select the **Target Block** and **Dates** for the copied package.

Editing Events on Catering Packages

1. From the OPERA Cloud menu, select **Bookings**, select Blocks, and select **Manage Blocks**.
2. Enter or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, click the block's **I Want To . . .** action, and select **Manage Events**.
4. Select the event and perform any of the following:
 - a. **Edit**. Click **Edit** and update the event details as needed in such fields as Expected Attendees, Guaranteed Attendees, Actual Attendees, Start/End Date, Start/End Time, and so on.
 - i. When editing a package event there is a field for Package Expect, Guaranteed, and Actual that is inherited from the Manage Package screen and cannot be updated. The Attendee field for Expected, Guaranteed, and Actual indicates the total number of attendees and allows you to indicate additional guests that are not included in the catering package for the event.

 **Note:**

Food and Beverages for additional attendees are charged at the regular menu or menu item price.

- ii. When adding a function space to a package event, the Include Space in Package check box is automatically selected. To charge separately for the additional function space (outside of the package), deselect the check box to enable the Rental Code field.
 - b. **Copy to Other Date(s)**. Click **Copy**, select the **Event**, select the **Target Block** and **Dates** for the copied package, and click **Copy Event**.

 **Note:**

The event is copied as a regular event, not as a package event. To copy the event as a package, use the Manage Catering Package screen as described in the Editing Catering Packages on Blocks section above.

- c. **Delete.** Click **Delete** and confirm.

About Event Resources

Prerequisites for Event Resources

The Event Resources screen is "command central" for managing the resources (menus, decoration, audio visual equipment, etc) allocated to one or more events

Watch Video

The Event Resources screen displays events by date range. Selecting an event reveals the resources attached to it and displays summary information on the quantity, expected revenue, discounts, notes, and so on. The Items tab and Menus tab let you search for and add more resources to an event.

You can edit, delete, copy, move, or add notes to the resources. The Event Resources screen also provides a link to the **I Want To . . .** menu for quick access to **Create**, **View**, and **Go To** actions related to events.

Managing Event Resources

Event Resources are Items and Menu you can add to events. They include audio/visual equipment, decorations, meals, beverages, and so on. Use the Event Resources screen to add, edit, or delete items and menu resources on events.

You can add Item/Menu resources to events by searching for and selecting them from the Item/Menu drawers. Consumption based menus are visually distinguished from regular menus on the Event Resources screen by the letter (C). Multi-choice menus are marked on the Events Resources screen and the Menu drawer by (M).

Using Quick Insert

Premium

Another way to add Item/Menu resources to events is to use the Quick Insert link on the Event Resources screen. Quick Insert enables you to add the exact resource (menu or item) you need for an event without having to filter through multiple search results on the Item drawer or Menu drawer screens.

- Properties must configure Quick Inserts in advance in order to select them for events.

- You must know the unique Quick Insert number configured for the Item/Menu when adding it through Quick Insert. For inserting Items, you can use either the Quick Insert number or the Item Template Name.
- When adding a new Item/Menu using Quick Insert, the Item/Menu immediately appears on the Event Resources screen. All fields and values (attendees, revenue, and so on) associated with the Item or Menu remain with the Item/Menu.
- By default, the Item/Menu comes from the existing inventory of the property where the event is scheduled.
- At the Hub level, if the Event property and the Block property are in different locations, OPERA Cloud checks for Item/Menu availability at the event property first. If the Item/Menu does not exist at the event property, but does exist and is available from the Block property, select the Quick Insert from the Block property.

Adding Resources Using Quick Insert

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Enter or confirm the **Property**, enter any optional **search** criteria, and click **Search**.
3. From search results, click the event's row level **I Want To . . .** and select **Event Resources** from the Go To column.
4. From the Event Resources screen, Click the **Quick Insert** link and complete the following fields:
 - a. **Quick Insert/Item Template**. Enter the **Quick Insert** number for Items/Menus or enter the **Item Template** name.
 - b. **Resource Quantity**. Enter a **value** if you want to override the default quantity configured for Menus or Items.
 - c. **Include in Package**. Click the **check box** to include the Quick Insert Item/Menu in the package. The Resource Quantity field becomes disabled.
5. Click **Save** to add the resources to the event, or click **Add More** to continue adding resources before saving.

Adding Resources Using Item/Menu Drawers

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Enter or confirm the **Property**, enter any optional search criteria, and click **Search**.
3. From search results, click the event's row level **I Want To . . .** menu and select **Event Resources** from the Go To column.

 **Note:**

An alternative way to open Event Resources from search results is to click the record's **Expand** icon and then click the **Event Resources** link. You can expand all records by clicking the Expand All link.

4. From the Event Resources screen, select an **Event** and then select either the **Items** drawer or the **Menus** drawer.
 - a. Expand the Search bar for locating item or menu resources.

When the Item Inventory Warning parameter is set to Yes in OPERA Controls, a warning appears when you attempt to copy a critical item that has a low inventory count.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and select **Manage Block**.
2. Search for the block containing the event resources you want to copy (this block is referred to as the source block in the following steps).
3. From your search results, click the row-level **I Want To . . .** associated with the source block and select **Manage Events**.
4. Locate the event containing the resources you want to copy and click the row-level **I Want To . . .** associated with it. Select **Event Resources**.

All events belonging to the block appear on the left side of the screen. Resources attached to events appear on the right side of the screen. Select any event to view the resources attached to it.

5. Select the **item** and **menu** check box(es) of resources you want to copy and click **Copy**. The Copy Resources to Other Events screen opens.

The resources you selected appear in the Resources panel. If you select a limited menu, a calendar icon appears. The calendar icon shows the menu's limited availability date(s). You can copy a limited menu only if the menu date falls within the target event dates.

If you select the Show All check box, all resources attached to the event appear, enabling you to select additional resources to copy.

6. In the Events panel, select the **Target Block**. Click the **magnifier** search icon to locate the target block for the copied resources.

When you begin the copy process, the source block appears in the Target Block field as the default block. If moving resources to events in the same source block, you do not need to select a target block.

7. When the Manage Block screen opens, click **Modify Search Criteria**.
8. Enter search criteria in any of the optional fields and click **Search**.
9. Select the **Target Block** and click the **Select** button. The Copy Resources to Other Events screen reopens.
10. In the Events panel, click **Search** to locate events on the target block.
11. Select the **events** to receive the copied resources.

Events created from a configured package are identified by a package icon. If you want to add the copied resources to both the event and the configured package, select the **Include Resources to the Package** check box.

12. Click **Copy Resources**.

Applying Discounts to Event Resources

[Prerequisites for Applying Discounts to Event Resources](#)

Premium

You can apply a discount to event resources (menus, menu items, items, and function spaces) from [Manage Block](#).

Applying Discounts

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and select **Manage Block**.
2. Enter search criteria, click **Search**.
3. Select the block in the search result, then click **I Want To . . . , Block** , or open the block by clicking the **Block ID** or **Block Code** value in the search result.
4. In Block Overview, click **Edit** .
5. Scroll to Catering Details.
6. **Resource Discount (%)**: Enter a discount percentage.
7. Click **Save**.
8. From the Apply Discount dialog, apply the discount to any of the following options:
 - a. **All discountable**. Applies the discount to spaces and items (marked as discountable) with a rate code attached other than custom and the rate value is not zero. The discount also applies to menus and menu items where the rate value is not zero.
 - b. **All resources with same discount%**. Applies the discount to spaces and items with the same discount value, and have a rate code attached other than custom, and the rate value is not zero. The discount also applies to menus and menu items with the same discount value and where the rate value is not zero.
 - c. **All discountable item resources**. Applies the discount only to items that are configured as discountable, have a rate code attached other than custom, and the rate value is not zero. Menus and spaces are not updated with discount.
 - d. **Item resources with same discount%**. Applies the discount only to items that are configured as discountable, have the same discount entered, have a rate code attached other than custom, and the rate value is not zero. Menus and spaces are not updated with a discount.
 - e. **All discountable menu and menu item resources**. Applies the discount only to menus and menu items where the rate value is not zero. Items and spaces are not updated with a discount.
 - f. **Menu and menu item resources with same discount %**. Applies the discount only to menus and menu items that have the same discount value and where the rate value is not zero. Items and spaces are not updated with a discount.
 - g. **All discountable function spaces**. Applies the discount only to function spaces with a rate code attached other than custom and the rate value is not zero. Menus and items are not updated with a discount.
 - h. **Function space with same discount%**. Applies the discount only to function spaces that have the same discount entered, have a rate code attached other than custom, and the rate value is not zero. Menus and items are not updated with a discount.
 - i. **None**. No discount is applies to any resources.
9. Click **Apply**.

Managing Resource Notes

You can associate Resource Notes with individual resource items. Multiple notes can be added to an event resource.

Adding Resource Notes

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. In the search results, click the event's **I Want To . . .** action and select **Event Resources**.
4. On the Event Resources screen, select an **Item**, **Event Space**, or **Menu Item** from the list of the event's resources.
5. Click the item or menu item **vertical ellipsis**, select **Add Note**, and enter the following details:
 - a. **Title**: Enter a title for the note.
 - b. **Sequence**: Enter a number to determine the order in which the note should appear when listed.
 - c. **Internal**: Select the check box to mark the note as internal. Internal notes can be excluded from output on client correspondence by default.
 - d. **Comment**: Enter or paste the note details; a maximum of 2000 characters (single byte) is supported.
6. Click **Save** or click **Save and Continue** to add another note.

Viewing and Updating Resource Notes

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event, click the **I Want To . . .** action, and select **Event Resources**.
4. Locate the **Item**, **Event Space**, or **Menu Item** from the list of event resources and click the **Note Symbol**.
5. From the Resource Notes screen, select the **Note**, click the **[+] Symbol** to expand the card, and read the note comments.
6. To edit the note, click the note's **vertical ellipsis** and click **Edit**.
7. Make your changes and click **Save**.

Deleting Resource Notes

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event, click the **I Want To . . .** action, and select **Event Resources**.

4. Locate the **Item**, **Event Space**, or **Menu Item** from the list of event resources and click the **Note Symbol**.
5. From the Resource Notes screen, locate the note, click the note's **vertical ellipsis**, and select **Delete**.
6. Click **Delete** to confirm.

Editing Event Menu Resources

The Event Resources function provides the ability to edit Event items and Menu details.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Blocks**, and select **Manage Block**.
2. Enter or confirm a **Property** and click **Search**. The property field requires you to enter a property name only if you are logged into the Hub.
3. From your search results, click **I Want To . . .** and select **Go To Manage Events**.
4. On the Manage Events screen, click **I Want To . . .** and select **Go To Event Resources** to view the events associated with the block.
5. Click the **Action ellipsis** on a menu item and select **Edit**. The menu expands to show dishes or other components of the menu item.
6. Complete the mandatory fields and any others:
 - a. **Course**: The number of food courses the item represents.
 - b. **Order**: The position of the catering meal type in a List of Values (LOV).
 - c. **Menu Item Name**: Menu item name as you want it to appear on all documents and contracts.
 - d. **Description**: A free-typing field for adding information about the menu item.
 - e. **Restriction**: Any limitations that apply to this menu item for information only.
 - f. **Origin 1, 2, 3**: For creating additional explanations of beverage items, mostly for wines. Enter information such as origin, quality, or region for reference by team members.
 - g. **Year**: Mostly used for wines or any beverages where vintage is important.
 - h. **Responsible Department**: The department(s) within the hotel's Food and Beverage structure that either provides or organizes this item or needs to know that this item is booked for a certain event.
 - i. **Included check box**: Indicates the menu item is usually included in the total price of a Standard Menu. If the check box is not checked, the menu it should be charged separately.
 - j. **Beverage check box**: Select to classify the menu item as a beverage.
 - k. **Consumption check box**: Select if the item is usually charged on an as-consumed basis.
 - l. **Print check box**: Select to print the item on external documents. Leave unchecked to print on internal documents only.
 - m. **Container**: Denotes the container type for serving beverage menu items.
 - n. **Servings**: The number of servings in the container specified above.

- o. Portion:** Describes the portion type served for the menu item.
 - p. Sales Price:** Selling price.
 - q. Cost :** Specify the cost (pre-sales) figure for each menu item as provided by the Food & Beverage department. This facilitates the calculation of profit / loss margins on various screen displays and reports.
 - r. Revenue Type:** The revenue type that should receive the accumulated revenue from this item. Typically, this would be Food for food items and Beverage for beverage items.
 - s. Discount Percentage :** Enter an allowable discount percentage.
7. Click **Save**.

Managing Custom Menu Items

Prerequisites for Managing Custom Menu Items

Premium

You can manage (ad-hoc) custom menu items for events without having to first configure the menu item resource. Such custom menu items enable flexibility in providing customer service and are not available in configurations. You can report on custom menu items using the F&B Plan (rep_fbplan) report.

Adding Custom Menu Items

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, add menus to an event:
 - a. Click the **Menus Drawer**.
 - b. Click **Expand All**.
 - c. Select a **Menu**.
 - d. Click **Save**.
5. Select the newly added menu's **vertical ellipsis** and select **Edit**
6. Click the **Menu Items** tab and then click **Add Custom Menu Item**.
7. When the Add Custom Menu Item screen opens, complete the following fields:
 - a. **Course:** This is a mandatory field. Enter a Course order number for the appropriate menu item, which controls the display order of the menu item on the screen and in the Banquet Event Order.
 - b. **Order:** This is a mandatory field. Enter the internal order of menu items within a course. This Course Order (in conjunction with the Course) controls the display order of the menu item on the screen and in the Banquet Event Order.
 - c. **Menu Item Name 1-3:** Menu Item 1 is a mandatory field. You can use all three lines to describe this menu item. All three lines print in the Banquet Event Order.

- d. **Revenue Type:** This is a mandatory field. Select the revenue type that should receive the accumulated revenue from this item. Refer to your operational standards for any further explanations.
 - e. **Responsible Department:** The appropriate department within the hotel's Food & Beverage structure that either provides or organizes this item or needs to know that this item has been booked for a certain function. It enables printing kitchen reports filtered or grouped by Responsible Department.
 - f. **Consumption:** Indicates that the menu item will be charged based on the amount consumed. When selected, the quantity entered will not print on the Banquet Event Order, but the quantity multiplied times the sales price is used in forecasting.
 - g. **Beverage:** Select the check box to classify the menu item as a beverage. If deselected, the menu item is classified as food. Menu items marked as Beverage print in the Beverage box on the Banquet Event Order.
 - h. **Print:** Select the check box to print the menu item on external documents. If not checked, the menu items print only on internal documents.
 - i. **Sales Price:** Specifies the value of this menu item if it were to be sold separately (if not included in a menu).
 - j. **Discount:** Enter a percentage by which this item should be discounted.
 - k. **Container:** Select the type of contain in which the menu item is served.
 - l. **Servings:** The number of servings the menu item contains (typically one serving).
 - m. **Total Quantity.**
 - n. **Include in Menu:** Select to include the menu item in the total price of the standard menu to which it is attached.
8. Click **Add Custom Menu Item:** The Menu Item appears in the Menu Details – Edit panel of the Edit Menu screen.
 9. Click **Save** to add the custom menu item to the menu.

Editing Custom Menu Items

Menu Items added to a menu do not appear on the Event Resource screen. You must select the **Menu** to which you added the menu item and perform the edit process to see the menu item.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, select the **Event**, select the menu's **vertical ellipsis**, and click **Edit**.
5. Locate the custom menu item, click the menu item's **vertical ellipsis**, and select **Edit**.
6. Make your changes and click **Save**.

Deleting Custom Menu Items

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, select the **Event**, select the menu's **vertical ellipsis**, and click **Edit**.
5. Locate the custom menu item, click the menu item's **vertical ellipsis**, and select **Delete**.
6. Click **Delete** again to confirm.

Copying Custom Menu Items

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, select the **Event**, click the resources(s), and click **Copy**.
5. On the Copy Resources to Other Events screen, select the **Event(S)** you want to copy the resource to.
6. Click the **Copy Resources** button.

Moving Custom Menu Items

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, select the **Event**, select the resources(s), and click **Move**.
5. On the Move Resources to Other Events screen, select the **Event(S)** you want to move the resource(s) to.
6. Click the **Move Resources** button.

Managing Custom Items

Prerequisites for Managing Custom Items

Premium

You can manage (ad-hoc) custom menu items for events without having to first configure the menu item resource. You can report on custom menu items using the F&B Plan (rep_fbplan) report.

Adding Custom Items

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, select an **Event**, click the **Items drawer**, and click **Add Custom Item**.
5. Complete the following fields:
 - a. **Name**: This is a mandatory field. Enter the menu item name.
 - b. **Description**: Enter a description of the menu item.
 - c. **Revenue Type**: This is a mandatory field. Select the revenue type that should receive the accumulated revenue from this menu item.
 - d. **Item Class**: This is a mandatory field. Select from the list of options.
 - e. **Departments**: Enter the Department responsible for providing the menu item, if needed.
 - f. **Quantity of Items**: Select the number of the menu item added.
 - g. **Price**: Specify the value of the menu item if it is sold separately (not included in a menu).
 - h. **External Order**: Select the check box if the menu item is from an outside provider.
 - i. **Print**: Select the check box to enable printing the menu item on external documents.
6. Click **Save**.

Editing Custom Items

You can edit custom items added to events. Custom Items are identified on the Event Resource screen by a check mark in the Custom column.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, select the event, click the vertical ellipsis **Actions** menu, and click **Edit**.
5. Update the details.
6. Click **Save**.

Deleting Custom Items

You can delete custom items added to events. Custom Items are identified on the Event Resource screen by a check mark in the Custom column.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, select the event, click the vertical ellipsis **Actions** menu, and click **Delete**.
5. Click **Delete** to confirm.

Copying Custom Items

You can copy custom items added to events. Custom Items are identified on the Event Resource screen by a check mark in the Custom column.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, select the item and click **Copy**.
5. On the Copy Resources to Other Events screen, select the **Item** from the Resources section, select the **Event(s)** you want to copy it to, and click **Copy Resources**.

Moving Custom Items

You can move custom items added to events. Custom Items are identified on the Event Resource screen by a check mark in the Custom column.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. On the Event Resources screen, select the **Event**, select the resource's **vertical ellipsis**, and select **Move**.
5. On the Copy Resources to Other Events screen, select the **Item** from the Resources section and then select the **Event** you want to move it to.
6. Click the **Move Resources** button.

Managing Multi-Choice Menus

Premium

The Multi-Choice Menu is a composed menu with choices of starters, main courses, desserts, and others sold at a single price. You can add, update, and delete a multi choice menu on an event, which allows you to choose optional courses either while booking the menu or later on update. This can help reduce the need to create a separate composed menu for each possible combination of menu items. You can report on multi-choice menus in the Food and Beverage Plan report.

Multi-choice menus are visually distinguished from regular menus on the Events Resources screen and the Menus drawer by (M).

When you add or change multi-choice menus, OPERA Cloud calculates the revenue automatically.

Adding Multi-Choice Menus

You can select optional menu items during the menu booking process. Courses are visually distinguished by (M) within the multi-choice menu.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. Select the **Event**, click the **Menus drawer**, and select one or more **Multi-Choice Menu Item(S)**.
 - a. Multi-choice menus in the drawer are identified by the (M) prefix.
 - b. Menu items configured as Mandatory are pre selected by a check mark in the drawer.
5. Click **Save** or click **Save and Add More**.

Editing Multi-Choice Menus

You can perform a range of editing functions on multi-choice menu items using the actions available in Event Resources.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter additional search criteria, and click **Search**.
3. From event search results, select the event's **I Want To . . .** action and select **Event Resources** and from the Go To column.
4. Select the **Multi-Choice Menu** marked by (M), click the menu's **vertical ellipsis**, and select **Edit**.
5. On the Edit Menu screen, make your changes in the available fields or menu items.

 **Note:**

The Actual attendee field appears on the menu only if the event status is ACT. The Expected and Guaranteed attendee fields appear on the menu only if the fields contain values on the event.

6. From the list of menu items attached to the menu, you can change certain selections on each menu item course at the list level. To edit the entire menu item course:
 - a. Click a menu item's **vertical ellipsis** and select **Edit**.
 - b. Make your changes.
 - c. Click **Save** to return to the Edit Menu screen.

 **Note:**

The courses are differentiated by course and order to make them easily distinguishable for Menu Item selection.

7. To convert a multi-choice menu item to a regular menu item:
 - a. Select menu items.
 - b. Click Convert to Regular.
 - c. The Event Resources screen opens, and the multi-choice menu is converted to a regular menu along with selected menu items (the menu no longer displays the multi-choice (M) indicator).
8. Click **Save** to return to Event Resources.

Deleting Multi-Choice Menu Items

You can delete one or multiple menus from an event.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Events**.
2. Select or confirm the **Property**, enter any additional search criteria, and click **Search**.
3. From event search results, select the event's **I Want To . . .** action and select **Event Resources** from the Go To column.
4. Select the **multi-choice menu** marked by (M), click the vertical ellipsis **Actions** menu, and select **Delete**.
5. Click **Delete** to confirm.

Managing Event Waitlist

Prerequisites for Managing Event Waitlist

Use the Manage Waitlist screen to manage multiple waitlisted bookings for the same space.

The Waitlisted Events panel displays waitlist events. The confirmed event allocated to the function space is detailed in the Current Events panel on the right side of the screen.

Waitlisted events are grouped together by date and function space, then sequenced by priority on waitlist.

**Note:**

Sub-events inherit the status of the parent event if they are in the same space as the parent.

OPERA Cloud generates an activity when an event has cleared the waitlist, that is, the assigned function space has become available for the event date. The Waitlist Activity Type OPERA Control must be active.

Updating Event Waitlist Priority

With the Prioritize Events task assigned to your role, you can alter the event's waitlist priority using the options in the search result.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Waitlist**.
2. Select or confirm the **Property**, enter the **From date** and any other search criteria, and click **Search**.
3. Select the **Event** and click either the **Down Or Up** arrow to change the priority.

Force Waitlist Event to Function Space

With the Force Availability task assigned to your role, you can force the assignment of a waitlist event to the function space, making the waitlist event the current event for the space. The original event changes to Waitlist status.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Waitlist**.
2. Select or confirm the **Property**, enter the **From date** and any other search criteria, and click **Search**.
3. Select the **Waitlist Event**, click the **vertical ellipsis**, and select **Force Availability**.

View Waitlist Event in Function Diary

1. From the **OPERA Cloud** menu, select **Bookings**, select **Events**, and then select **Manage Waitlist**.
2. Select or confirm the **Property**, enter the **From date** and any other search criteria, and click **Search**.
3. Select a **Waitlist Event** or **Current Event**, click the **vertical ellipsis**, and select **Function Diary**.

For more information, see [Using the Function Diary](#)

4

Front Desk

Front Desk features some of the most commonly used operations in OPERA Cloud, such as managing guest arrivals, managing in-house guests, and managing guest departures. Some additional tasks you can complete from the Front Desk menu are room searches, room assignments, and quick check outs as well as opening folios, creating registration cards, setting wake up calls, and sending messages to guests.

Prerequisites for Front Desk

This chapter of the OPERA Cloud User Guide lists the prerequisites for Front Desk menu.

Prerequisites for Pre Register Arrival Reservations

Reservation Management

- Generate Key Packets

Arrivals and Check In

Arrivals management involves overseeing guests arriving at the property, including walk ins, day use arrivals, and groups. You can pre register, advance check in or check in guests, queue, or modify reservations.

Pre Register Arrival Reservations

[Prerequisites for Pre Register Arrival Reservations](#)

You can offer your guests the ability to check in for their reservations by pre-registering. When a reservation is pre-registered, all of the guest's information to finish the registration process is collected, including authorizing the guest's credit card for the reservation. This makes it easy to check in the reservation when the guests arrive and the assigned room is available. You can search for and manage pre-registered arrival reservations from Arrivals search by selecting the Pre-registered check box in advanced search.

Preregistration offers a low-touch check in experience and helps to streamline check in. Through a mobile app, guests can update their contact details and pertinent information regarding their stay, including confirming the estimated arrival time.

Using an Oracle Marketplace partner solution, Guests can preregister their arrival using a mobile app or booking website integrated with OPERA Cloud. Reservation eligibility is determined by the preregistration rules configured. For more information, see [Configuring Pre-Registration Rules](#). The Pre-registration External System Trace OPERA Control determines the trace department for reservation traces added by the integrated solution. The Pre-registration External System Alert OPERA Control determines the alert code to be used by the integrated solution.

With the Alerts OPERA Control active, you can configure [reservation alert rules](#) for the preregistered status.

The Arrivals Report (res_detail) offers a filter for preregistered arrival reservations. For more information, see [Arrivals Reports](#)

Searching for Preregistered Arrival Reservations

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, then select **Preregistered**.
2. Click **Search**.

Manually Preregister Arrival Reservation

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Arrivals**.
2. Click **Search**.
3. Select the reservation from the search results, then click **I Want To...** and select **Preregister Reservation**.

Reversing Preregistered Arrival Reservation

To remove the preregistered status from a reservation.

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, then select **Preregistered**.
2. Click **Search**.
3. Select the reservation from the search results, then click **I Want To...** and select **Reverse Preregister Reservation**.

Creating a Walk In Reservation

Walk in will navigate you through a workflow for creating a reservation and then processing the check in.

The Reservation Activity dashboard tile indicates the number of walk-in reservations. See, [Home Dashboard](#)

Watch Video

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
2. Click **I Want to...** then **Walk In Reservation**.
3. Create the reservation via Look to Book. For more information, see [Booking a Reservation](#).

4. Assign a room and check in the reservation. For more information, see [Checking in Reservations](#)

Managing Rooms on Hold

Prerequisites for Hold Rooms

Rooms can be placed "on hold" for a set period (from 1 to 1440 minutes or 24 hours) or for an unlimited time, depending on the HOLD condition code configuration. The HOLD conditions available for selection are determined by the hold tasks assigned to your role(s).

While a room is on hold, it cannot be assigned to reservations by other users. When a room is placed on hold by another user, you must have the Room Hold Override user task assigned to your role to remove the room from hold or assign the room to a reservation. When the hold period expires, the room is automatically removed from hold. The room is also automatically removed from hold when you check in a reservation prior to the hold period expiring.

An example of using this feature would be if you are assigning rooms to a group of four arriving reservations who want adjoining rooms. If your property has several guest service agents simultaneously managing reservation room assignments, it might be difficult or impossible to work fast enough to assign the desired four rooms to the reservations you are handling. You could place the four rooms into a hold condition for three minutes and then select those rooms for assignment to the reservations. If you have not assigned the rooms within three minutes, they then become available to other agents.

Note:

Placing a room on hold does not prevent the room from being placed in Out of Order or Out of Service status

Placing Rooms on Hold

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **Arrivals**.
2. Enter search criteria and click **Search**.
3. From the search results, select the reservation then click **Check In**.
4. Click **I Want To. . .** and select **Hold Rooms**.
5. Enter search criteria, then click **Search**.
6. Select rooms in the search result then click **Place on Hold**.
7. The Hold Rooms screen appears.
 - a. **Hold Reason:** Select a hold reason from the list; the number of minutes that the hold will be placed on the rooms is shown in the description.
 - b. **Remarks:** Provide any additional info such as guest name or confirmation number that rooms are being held for.
 - c. Click **Place on Hold**.

Removing Rooms From Hold

You must have the Room Hold Override task assigned to your role(s) to remove a room hold set by other users.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **Arrivals**.
2. Enter search criteria and click **Search**.
3. From the search results, select the reservation then click **Check In**.
4. Click **I Want To. . .** and select **Hold Rooms**.
5. Enter search criteria, then click **Search**.
6. Select held rooms in the search result, then click **Remove from Hold**.

Swapping or Shifting Assigned Rooms

Prerequisites for Swapping or Shifting Assigned Rooms

You can swap or shift the assigned rooms between two reservations with matching arrival dates and room type. It is not possible to swap or shift rooms when the alternate room is unavailable for the entire duration of the reservation or when one or both of the reservations with an assigned room is flagged Do Not Move (Available when the Do Not Move OPERA Control is active). You can swap or shift rooms from Arrivals, Arrivals with Deposits or Room Assignment. Rooms can only be swapped or shifted prior to check in (reserved status).

Watch Video

Swapping Assigned Rooms

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
OR
2. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and then select **Room Assignment**.
3. Enter search criteria and click **Search**.
4. Select two reservations in the search results.
5. Click **Swap Rooms**.
 - a. Click **Confirm**.

Shifting Assigned Room to Another Reservation

Note:

Shift action is enabled when one reservation with a room assigned and another with an unassigned room is selected.

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
OR

2. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and then select **Room Assignment**.
3. Enter search criteria and click **Search**.
4. Select two reservations in the search results.
5. Click **Shift Rooms**.
 - a. Click **Confirm**.

Using the Swap/Shift Rooms Page

When you are unsure which reservations you can swap or shift, you can access the Swap/Shift Rooms screen. The **Available** column indicates how many nights the room is available (that is, the nights until it is assigned to a future reservation or scheduled to be Out of Order).

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
OR
2. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and then select **Room Assignment**.
3. Enter search criteria and click **Search**.
4. Select one reservation in the search results.
5. Click **Swap/Shift Rooms**. The Swap/Shift Rooms screen opens.
 - a. Enter search criteria and click **Search**.
 - b. Select the reservation and then select **Swap Rooms** or **Shift Rooms**.
 - c. Click **Confirm**.

Managing Reservation Queue Status

[Prerequisites for Managing Reservation Queue Status.](#)

Watch Video

Queue Rooms enables you to view and manage Arrival rooms on queue. The number of rooms on queue and the current and average wait times appear. The Room Type section lists the number of rooms on queue per room type and shows a count of rooms in each room status.

At times, guests arrive before their assigned room or a room of their chosen room type is available for assignment. The resulting backlog of arrivals can cause confusion at the front desk and adversely impact guest service. The OPERA Cloud Queue Reservations/Queue Rooms feature is designed to help you manage room assignments and ensure guests are checked into their rooms rapidly by coordinating front desk and housekeeping efforts.

Front Desk staff can add arrival reservations to the reservation queue if the guest's room is not ready for check in or if there are no available rooms of the room type sold in the reservation. Housekeeping room attendants can view [Queue Rooms](#) on their mobile phones or other devices to determine whether to expedite the housekeeping task for these rooms.

When you attempt to check in reservations before the assigned room is ready for check in (for example, the assigned room is still occupied or all rooms of the desired room type are in dirty status) the Queue Reservations feature prompts you whether you want to continue with check-in or stop the check-in so that you can put the reservation on queue.

When a gateway to an SMS service provider is [configured](#), you can also send an SMS to room attendants to alert them of priority "rush" queue rooms and also send an SMS to the guest once the housekeeping task is complete and the room is ready for check in. (Available when the Text Message Handling OPERA Control is active).

Adding a Reservation to the Queue

At check in, you can place a reservation in the queue if the assigned room is not ready for occupancy. You can finish the check-in after the room is vacant and the housekeeping status of room is clean or inspected.

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click the **I Want To . . .** menu, and select **Place Reservation in Queue**.
4. When the confirmation appears, click **OK**.

Viewing Wait Time and Updating Queue Priority

[Watch Video](#)

1. From the **OPERA Cloud** menu, select **Front Desk**, then select **Front Desk Workspace** and then select **Queue**.
2. The current wait time on queue is displayed in the **Queue Wait Time** column.
3. The current Priority on Queue is displayed in the **Queue Priority** column
4. To change the queue priority of a reservation, select the Queue Priority value in the results grid, to open the Queue screen. Click **Prioritize** to update the reservation to first priority or change the **New Queue Priority** value and click **Save**.
5. The results grid will reorder.

Alternatively

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click the **I Want To . . .** menu, and select **Queue**.
4. The current wait time on queue appears.
5. Click **Prioritize** to make the reservation the first priority or change the **New Queue Priority** value and click **Save**.

Sending SMS Messages to Guests

You can send a text message to the guest's mobile phone advising that their room is ready for check-in.

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.

2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click the **I Want To . . .** menu, and select **Queue**.
4. Click **Send Text to Guest**.
5. Select or enter a mobile phone number.
6. Click **Send Text**.

**Note:**

This feature requires the SMS OPERA Control to be active.

Sending SMS Messages to Housekeeping

You can send the housekeeping room attendant a short text message advising there is a priority reservation on queue.

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click the **I Want To . . .** menu, and then select **Queue**.
4. Click the vertical ellipsis **Actions** menu and select **Send Text to Housekeeping**.
5. **Attendant Mobile:** Select an attendant from the list; the mobile phone number will populate the field.
6. Click **Send Text**.

**Note:**

This feature requires the SMS OPERA Control to be active.

Removing a Reservation from the Queue

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click the **I Want To . . .** menu and select **Queue**.
4. Click the vertical ellipsis **Actions** menu and select **Remove from Queue**.

Changing/Assigning Room for Room on Queue

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click the **I Want To . . .** menu and then select **Queue**.
4. Click the vertical ellipsis **Actions** menu and select **Change Room**.

5. Search and assign a room. Refer to [Assigning a Room to a Reservation](#).

Managing eSignature Registration Cards

Prerequisites for eSignature Registration Cards

eSign Registration Cards are available for mobile check-in, allowing guests to initial and sign the digital registration card on a tablet. You can create multiple registration cards for a reservation. The eSigned document(s) are saved with the reservation until purged.

Note:

With the Multi-language OPERA Control active, the registration card displayed is based on a template setup for the language specified in the guest profile.

Watch Video

Creating eSign Registration Cards

Note:

eSign Registration Cards are purged according to the Days to Purge e-Signed Registration Cards [OPERA Control](#).

1. From the **OPERA Cloud** menu, select **Front Desk**, and select **Arrivals**.
2. Search for arrival reservations.
3. From search results, locate the reservation, click the row level **I Want To . . . menu**, and select **Create eSign Registration Card**.
4. Alternatively, when [checking in reservations](#) from within the check-in steps, click the **I Want To . . . menu** and select **Create eSign Registration Card**.
5. When the registration card appears on the tablet, ask the guest to initial and sign.
 - a. The guest can tap the Initial and Signature areas and sign directly on the tablet.
 - b. The guest can tap the pencil icons adjacent to their initials or signature to make an update.
6. Press **Save** to store the eSign registration card file with the reservation.

Viewing and Printing eSign Registration Cards

After a guest signs the registration card, a link becomes available on the reservation to view and print the eSigned registration document. Depending on the reservation status use the appropriate menu to search for the reservation.

1. From the **OPERA Cloud** menu, select **Front Desk**, and select **Inhouse**.
2. Search for the inhouse reservation.

 **Note:**

For checked-out (history) reservations, use the Bookings, Manage Reservation menu to search for reservations.

3. From search results, select the reservation record or the reservation presentation page, click the **I Want To . . . menu** and select the **eSigned Registration Cards link** under the Reservation heading.
4. Click the row level **vertical ellipsis** and select either **Preview** or **Print**.
 - a. Preview displays the eSigned registration document on screen.
 - b. Print provides a print menu with options for printing the document.

External Guest Notifications

With the External Notifications feature you can flag a guest or group reservation if the guest wants to opt in to receive external notifications related to their stay. For example, if a guest arrives earlier than check in time or when their room is not yet ready, they can opt-in to receive external notifications by phone and/or email, and can then enjoy the property's amenities, theme parks, or a meal, and be notified when their room is ready. When flagging a reservation for External Notifications you can choose an existing primary phone and/or email from the guest's profile or enter new values.

- **Find Reservations with Opt-in Guest Notifications**

[Watch Video](#)

- **Opt-in Guest Notifications**

[Watch Video](#)

 **Note:**

OPERA Cloud does not directly send external notifications to guests when this flag is set on a reservation. An external system must be configured to subscribe to business events that OPERA Cloud generates for these notifications.

You can flag reservations for External Notifications in the following screens:

- **Manage Reservation** – Arrival Date and ETR Ascending.
- **Check In** – Assign Room step.
- Reservation Advanced Search.
- Room Assignment Search.

External Notification flagging or modifying the flag on a reservation is recorded in the Changes Log.

External Guest Notifications Conditions and Assumptions

The **External Notification Details** check box and **Phone/Email** fields are read-only if the reservation status is No Show, Checked Out, or Canceled.

External Guest Notifications Impact

The following data elements are within the Business Events Reservation module.

Opted For Communication

Business Event Element Details:

- **Data Element:** OPTED FOR COMM YN.
- **XML Tag Name:** OPTED FOR COMM YN.
- **Description:** A Y/N value based on the external communication flag on the reservation.
- **Data Type:** C
- **Business Event:** New Reservation, Update Reservation, Advanced Check In, Reverse Advanced Check In.

Communication Type

Business Event Element Details:

- **Data Element:** COMMUNICATION TYPE.
- **XML Tag Name:** COMMUNICATION TYPE.
- **Description:** Is always EXT_NOTIFICATIONS for this functionality.
- **Data Type:** C
- **Business Event:** New Reservation, Update Reservation, Advanced Check In, Reverse Advanced Check In.

Communication Role

Business Event Element Details:

- **Data Element:** COMMUNICATION ROLE.
- **XML Tag Name:** COMMUNICATION ROLE.
- **Description:** The type of communication (that is, Email or Phone).
- **Data Type:** C
- **Business Event:** New Reservation, Update Reservation, Advanced Check In, Reverse Advanced Check In.

Communication

Business Event Element Details:

- **Data Element:** COMMUNICATION.
- **XML Tag Name:** COMMUNICATION.
- **Description:** The value entered for Phone 1, Phone 2, Email 1, or Email 2.
- **Data Type:** C

- **Business Event:** New Reservation, Update Reservation, Advanced Check In, Reverse Advanced Check In.

Flagging a Reservation for External Guest Notifications

You can flag external notifications for a reservation the following ways.

[Watch Video](#)

In the Reservation's Additional Details Prior to Arrival or After Check-in

1. In the reservation, go to the **Additional Details** panel, select **Edit**, and then check the **Receive External Notifications** check box.
2. In the **External Notification Details** section, enter the phone numbers and/or email addresses. If a primary phone or email exists on the guest's profile, it is populated in the field – you can keep or edit that value (if you change it here it does not remove it from the profile). You can also search for and bring in other phone numbers and/or email addresses existing on the guest's profile using the search icon.
3. (Optional) Check **Add to Profile** if you want to add the phone/email to the guest's profile; otherwise, this information only saves to this reservation.

By Selecting the Assign Room Link from the Reservation Search Results

1. From the **OPERA Cloud** menu, select **Front Desk**, and then **Arrivals**. In the search results, select the reservation to opt in and then select the **Assign Room** link in the **Room** column.
2. In the **Room Details – Search** panel, select **Receive External Notifications**. If the reservation is already flagged to receive external notifications and you want to modify the information, select **Edit** in the **External Notification Details** screen.
3. In the **External Notification Details** section, enter the phone numbers and/or email addresses. If a primary phone or email exists on the guest's profile, it is populated in the field – you can keep or edit that value. You can also search for and bring in other phone numbers and/or email addresses existing on the guest's profile using the search icon.
4. (Optional) Check **Add to Profile** if you want to add the phone/email to the guest's profile; otherwise, this information only saves to this reservation.

In the Room Selection Panel During the Check In Process

You can flag External Notifications with or without assigning a room.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then **Arrivals**. In the search results, select the reservation to check in and click **Check In**.
2. In the **Room Selection** panel, select **Receive External Notifications**. If the reservation is already flagged to receive external notifications and you want to modify the information, select **Edit** in the **External Notification Details** screen.
3. In the **External Notification Details** section, enter the phone numbers and/or email addresses. If a primary phone or email exists on the guest's profile, it is populated in the field – you can keep or edit that value. You can also search for and bring in other phone numbers and/or email addresses existing on the guest's profile using the search icon.

4. (Optional) Check **Add to Profile** if you want to add the phone/email to the guest's profile; otherwise, this information only saves to this reservation.

Checking in Reservations

Checking in a reservation is a multi-step process based on the panel and sequence of steps selected for the **Custom Check In Steps** setting for your property. This setting determines the default step in the check-in process for your property. For more information, see [OPERA Controls — Front Desk](#) for more information. In addition, you can also access all reservation detail links such as routing, notes, attachments, or fixed charges.

Watch Video

Reservation check-in involves the following actions:

- Reviewing the reservation and profile details
- Reviewing the added packages and items
- Reviewing the guest's privacy preferences
- Adding or scanning a guest's identification details
- Assigning the room
- Confirming payment details
- Generating a registration card
- Completing the check-in

Note:

Identification scanning requires the OPERA Cloud ID Document Scanning Cloud Service and integration with a partner ID scan solution.

When the Check In Prepay Rules OPERA Control is set to:

- **Advanced Folio Payment:** you are prompted to collect a payment for all the anticipated charges, such as accommodation, packages, fixed charges, pre-stay charges, and so on, for all nights of stay. You can update **Nights to Charge** to a lesser value, but not lower than the Minimum Number of Nights stated in OPERA Control. Actual charges are not posted during check in. The check in can continue only when the minimum or full payment is posted to the reservation account. A room key is then issued for the number of nights paid. The room key **Valid Until Date** is defaulted and not editable. For more information, see [About Advanced Folio Payment \(Prepayment\)](#)
- **Advanced Folio Posting:** you are prompted to collect a payment for all the anticipated charges, such as accommodation, packages, fixed charges, pre-stay charges, and so on, for all nights of stay. You can update **Nights to Charge** to a lesser value but not lower than the Minimum Number of Nights OPERA Control. Actual charges are posted during check in as an Advance Bill. The check in can continue only when the minimum or full payment is posted to the reservation account. A room key is then issued for the number of nights paid. The room key **Valid Until Date** is defaulted and not editable.

The check-in process described below is the same from any area of the application where check-in is initiated, such as the Front Desk - Arrivals menu option, the Arrivals dashboard tile, Quick Launch, Room Assignment, and so on.

Checking in the Reservation

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals** to open the **Arrivals Search**.

 **Note:**

You can also open **Arrival Search** from the Arrivals Tile on your [Dashboard](#) or use [Quick Launch](#).

2. Enter search criteria and click **Search**.
3. Select the reservation, click the **Check In** button or click **I Want To . . .** and then select **Check In**.

 **Note:**

When OPERA Cloud is accessed on a tablet, the search defaults to the card view. Tap the reservation card to begin the check-in.

4. On the **Check In Reservation** screen:
 - a. The guest business card appears at the top of the page. Click the guest name link to open the profile presentation for further updates.
 - b. When the Reservation Upgrade OPERA Control is active you may see a notification regarding upgrade offers; click the notification to view the offers. For more information, see [Managing Reservation Upgrade Offers](#).
 - c. Click **I Want To...** to view the various actions for this arrival reservation.
 - d. Click the  button to collapse the business card and reservation overview panels and click the  button to expand it.
 - e. In the Room Selection panel, assign a room to the reservation if one has not already been assigned. A list of suggested rooms that are available for assignment will be displayed. When the reservation already has a room assigned, a **Show Suggested Rooms** link displays instead. When the Component Suites OPERA Control is active, an icon displayed to the right of a suggested room indicates that the room is included in a component suite. Hover the mouse over the icon to view the component suite details.
 - f. In the **Reservation Overview** information panel:
 - i. Click the **Room type** link to view details and images of the room type.
 - ii. Click the **Rate code** link to view rate code information.
 - iii. Click the **Rate amount** link to view rate Information details.
 - iv. Click the **Reservation detail** links to view and update reservation details. See the 'Reservation Detail Links' table below for more information.

- g. In the **Package and Items** panel, review and add package items and/or inventory items as needed.
 - i. See [Packages](#)
 - ii. See [Items](#)
- h. In the **Privacy** panel, review and update the guest's privacy options as needed:
 - i. Click **Edit** to update the privacy options.
 - ii. See [Managing Profile Correspondence and Privacy Options](#).
 - iii. Click **Save** when finished updating.
- i. In the **Identification** panel, you can add details for multiple ID documents and save them to the guest profile.
 - i. See [Managing Profile Identification and Personal Details](#) for more information.
- j. In the **Membership** panel, confirm or select the applicable membership(s) to link to the reservation.
 - i. See [Managing Reservation Memberships](#)
 - ii. Select entries in the Available Profile Memberships panel to move memberships into the (Reservation) Memberships panel using the down arrow and link them to the reservation. Click **Save**.
 - iii. Click **New** to add a new membership to the profile.
- k. In the **Room Selection** panel, search for and assign a room to the reservation if one has not already been assigned.
 - i. See [Assigning Rooms to a Reservation](#).
 - ii. Enter search criteria, such as floor, feature, or smoking preferences, to filter room results and click **Search**.
 - iii. Click **Accept Room** and Mark as Do Not Move Room to set a Do Not Move lock on the reservation. A lock symbol appears to the right of the room to indicate the Do Not Move status. (Available when the Do Not Move Room OPERA Control is active). For more information, see [Managing Reservation Do Not Move Room Status](#).
 - A list of suggested rooms shows up to ten available rooms of the highest cleaning status at your property.
 - The list of suggested rooms are links which provide you with the ability to click to select the room of choice.
 - After completing a reservation upgrade, the suggested room list shows any available rooms for the upgraded room type.
 - iv. Click **Mark as Do Not Move Room** to set a do not move lock on the reservation;

Room

 a padlock appears next to the room assigned . See [Setting a Reservation to Do Not Move Status](#) for more information.
 - v. Click **Place Reservation on Queue** to place the reservation on queue if the room is not ready for check-in. See [Queue Rooms](#) for more information.
- l. In the **Verify Payment** panel, confirm or update the method of payment for the reservation. You can enter details for each of the eight billing windows. For more information, see [Managing Reservation Payment Instructions](#).

5. Click **Registration Card** to generate a registration card.

 **Note:**

You will be prompted to generate a registration card when the **Generate Registration Cards at Check In, Front Desk OPERA Control** is set to **Prompt**.

6. Click **I Want To...** and select **Create eSign Registration Card** to generate an electronic registration card on a tablet device for the guest to sign. See [Managing eSignature Registration Cards](#) for more information.
7. Click **Complete Check In** when finished.

 **Note:**

You will be prompted to generate a registration card when the **Generate Registration Cards at Check In Front Desk control** is set to **Prompt**.

Issuing Prepaid Card

 **Note:**

Issue prepaid card at check in occurs when the **Stored Value System (SVS) Interface configuration** is set to **prompt for Prepaid Cards at Check In**.

See [Issue Prepaid Cards](#) .

Advance Checking In Reservations

You can flag a reservation for Advance Check In using the Check In process under these conditions:

- The reservation must be an Arrival (Due In) reservation for the current business date.
- The reservation must have a valid payment method.
- The reservation can be flagged for Advance Check In with or without a room assigned.
 - If you want the Advance Checked In reservation to be Auto Checked In upon room status match, a room must be assigned to the reservation. A room can be assigned to the reservation prior to or modified after being flagged for Advance Check In.
- Walk In reservations, Pre Registered reservations, and reservations that are in Queue can be flagged for Advance Check In.

When the Check In Prepay Rules OPERA Control is set to:

- **Advanced Folio Payment:** you are prompted to collect a payment for all the anticipated charges, such as accommodation, packages, fixed charges, pre-stay charges, and so on, for all nights of stay. You can update **Nights to Charge** to a lesser value, but not lower than the Minimum Number of Nights stated in OPERA Control. Actual charges are not posted during check in. The check in can continue only when the minimum or full payment is posted to the reservation account. A room key is then issued for the number of nights paid. The room key **Valid Until Date** is defaulted and not editable. For more information, see [About Advanced Folio Payment \(Prepayment\)](#)
- **Advanced Folio Posting:** you are prompted to collect a payment for all the anticipated charges, such as accommodation, packages, fixed charges, pre-stay charges, and so on, for all nights of stay. You can update **Nights to Charge** to a lesser value but not lower than the Minimum Number of Nights OPERA Control. Actual charges are posted during check in as an Advance Bill. The check in can continue only when the minimum or full payment is posted to the reservation account. A room key is then issued for the number of nights paid. The room key **Valid Until Date** is defaulted and not editable.

Advance Check In (with ETR) a Single Reservation

Use the Check In process to flag a reservation for Advance Check In.

Watch Video

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals** to open the **Arrivals Search**.
2. Enter search criteria and click **Search**.
3. Select the reservation, click the **Check In** button or click **I Want To . . .** and then select **Check In**.
4. (Optional) Room Selection – assign a room to the reservation.

Note:

You are not alerted if there is no room assigned, or if the room assigned is not in Clean or Inspected status.

5. Click the **Advance Check In** button.
6. (Optional) On the Expected Time of Return (ETR) screen, enter the estimated time of return and a comment. If none, then click **Cancel** to close the screen.
7. Select **Save** and then click **OK** in the Successful Advance Check In prompt.

If your property uses registration cards, you are prompted whether to print. If a room is assigned to this reservation, you have the option to create the room keys.

After the reservation is Advance Checked In:

- The Reservation is marked **Advance Checked In**.
- The arrival date is changed to read-only and cannot be modified.
- The Expected Time of Arrival (ETA) for the reservation is updated with the Advance Checked In time.
- Any deposit on the reservation is posted on the folio.
- Charges that are incurred by the guest (such as through a point of sale system) post to the reservation folio. In-room charges (such as mini bar or PBX) are not allowed.

Advance Check In (with ETR) Multiple Reservations (Mass Advance Check In)

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrivals**.
2. Enter search criteria and click **Search**.
3. From the Arrivals search or from the Room Assignment screen, select two or more reservations to Advance Check In and then click **Mass Advance Check In**.
4. (Optional) Enter the expected time of return (ETR) and an ETR comment, and then click **Process**.

 **Note:**

The ETR time and ETR comment apply to each of the selected reservations that you are now Advance Checking In.

5. In the **Mass Advance Check In Status** screen, review the status, and click **OK**.

- Select **Print** to print the status report.

If any Advance Check Ins fail, the reason is listed; you can sort the status results by successful (default) or by failures first. If a room is assigned to any reservation, you have the option to create the room keys. If your property uses registration cards, you can select the card and preview/print, email.

After the reservations are Mass Advance Checked In:

- The Reservation Type on the reservation is marked **Advance Checked In**.
- The Expected Time of Arrival (ETA) for the reservation is updated with the Advance Checked In time.
- Any deposit on the reservation is posted on the folio.
- Charges that are incurred by the guest (such as through a point of sale system) post to the reservation folio. In-room charges (such as mini bar or PBX) are not allowed.
- All reservations that failed Mass Advance Check in:
 - Are still in Arrival (Due In) status but not flagged as Advance Checked in.
 - The Arrival time (ETA) remains unchanged.
 - The Expected Time of Return (ETR) remains unchanged.
 - Revise the reservation and then retry the Advance Check In process.

Advance Check In (with ETR) and Auto Assign Rooms to Multiple Reservations (Mass Advance Check In)

Watch Video

1. From the **OPERA Cloud** menu, select **Front Desk** then select **Front Desk Workspace** and then select **Room Assignment**.
2. From the Room Assignment screen, select two or more reservations to Advance Check In and then click **Auto Assign and Advance Check In**.
3. In the Room Assignment panel, select room status and room criteria to match, and then click **Assign**.

 **Note:**

Mass Advance Check In processes all selected reservations with or without a room assigned.

4. (Optional) In the **Mass Advance Check In Options** panel enter the expected time of return (ETR) and an ETR comment, and then click **Process**.

 **Note:**

The ETR time and ETR comment apply to each of the selected reservations that you are now Advance Checking In.

5. In the **Mass Advance Check In Status** screen, review the status, and click **OK**.
 - a. Select **Print** to print the status report.
 - b. Click the **Confirmation** link to open reservation presentation for any reservation listed. For more information, see [Editing a Reservation](#)

If any Advance Check Ins fail, the reason is listed. You can sort the status results by successful (default) or by failures first.

If a room was auto assigned to any reservations, you have the option to create the room keys.

If your property uses registration cards, you can select the card and preview/print, email.

Auto Check In of Advance Checked In Reservations

Advance Checked In Reservations can be automatically checked in under these conditions:

- The reservation is in Advance Checked In state.
- The reservation has a room assigned.
- The assigned room's occupancy status is Vacant.
- The reservation has a valid payment method.

OPERA Cloud automatically checks in Advance Checked In reservations when the housekeeping status of the assigned room is updated to match a room housekeeping status defined in the Room Status for Auto Check In of Advance Checked In Reservations OPERA Control. For example, if the Room Status value is set to Clean, then Advance Checked In reservations that have rooms assigned with Dirty status are automatically checked in when the assigned room status changes to Clean.

Modifying an Advance Checked In Reservation

An Advance Checked In reservation can be modified under these conditions:

- When a reservation is Advance Checked In, the arrival date is changed to read-only and cannot be modified.
- You can assign, remove, or modify a room on an Advance Checked In reservation.
- It can be reversed unless financial transactions exist on the folio. Reservations with deposits are eligible to be reversed.
- It cannot be moved to another property.
- It cannot be canceled. First, you must reverse the advance checked in flag and then you can cancel the reservation.

Reversing Advance Checked In Reservations

An Advance Checked In reservation can be reversed unless financial transactions exist on the folio. Reservations with deposits are eligible to be reversed.

Watch Video

1. To reverse an Advance Checked In reservation, search for the Advance Checked In reservation from the Advance Check In tile (Current), the Quick Launch (F2+V), or the Manage Reservation Search criteria.
2. Select the Advance Checked In reservation to reverse.
3. Select **I Want To... Reverse Advance Check In**.

The Advance Checked In flag is removed and the reservation returns to Arrival status.

Note:

If an Expected Time of Return (ETR) and/or ETR Comment exists, it remains in the reservation after Advance Check In reversal.

Advance Check In

At times, when guests arrive to the property prior to a room being ready, you can flag a reservation as Advance Checked In for arrivals due in on the current business date. This enables guests to post charges to their reservation folio prior to check in, and helps the rooms management team prioritize room cleaning and assignment. Individual reservations (including Walk In reservations, Pre Registered reservations, and reservations that are in Queue) and group block reservations can be Advance Checked In.

An Advance Checked In reservation with an assigned room does not affect the room occupancy status and is not deducted from inventory until the reservation is checked in. Flagging a reservation as Advance Checked In (or reversing an Advance Checked In reservation) is recorded in the Changes Log.

Benefits to the Guest and to the Property

Advance Check In with the **Expected Time of Return** (ETR) parameter On provides the following benefits.

The guest can:

- Post charges to their reservation folio prior to checking in.
- Receive notifications when the room is ready.

The rooms management and front office teams can:

- Easily identify which reservations are flagged Advance Checked In.
- Prioritize and sort Advance Checked In reservations by expected time of return (ETR).
- Assign rooms to reservations based on expected time of return (ETR).
- Add ETR comments that link to the ETR time.

- Set Advance Checked In reservations to automatically check in based on room status.
- Check in multiple Advance Checked In reservations (Mass Advance Check In).

Advance Check In Process Flow

Advance Check In Conditions and Assumptions

For Reservations Prior to being Flagged as Advance Checked In

- The reservation must be an Arrival (Due In) reservation for the current business date.
- The reservation must have a valid payment method.
- The reservation can be flagged for Advance Check In with or without a room assigned:
 - If the reservation has a room assigned it must be a physical room. Pseudo room reservations cannot be flagged for Advance Check In.
 - If you want the Advance Checked In reservation to be Auto Checked In upon room status match, a room must be assigned to the reservation. A room can be assigned to the reservation prior to or modified after being flagged for Advance Check In.
- Walk In reservations, Pre Registered reservations, and reservations that are in Queue can be flagged for Advance Check In.

For Reservations that are Flagged as Advance Checked In

- The reservation is marked Advance Checked In.
- The Expected Time of Arrival (ETA) for the reservation is updated with the Advance Checked In time.
- The arrival date is changed to read only and cannot be modified.
- When Advance Checked In, deposits on the reservation are posted on the folio.
- Advance Checked In reservations cannot be reversed if financial transactions exist on the folio. Reservations with deposits are eligible to be reversed.
- Charges that are incurred by the guest (such as through a POS system) post to the reservation folio. In-room charges (such as mini bar or PBX) are not allowed.
- The Night Audit process cannot complete if any Advanced Checked In reservations have not been checked in.
- Advance Checked In reservations cannot be moved to another property.
- Advance Checked In reservations cannot be changed to No Show.
- Advance Checked In reservations cannot be canceled.

For Auto Check In of Advance Checked In Reservations

- The reservation must be in Advance Checked In state.
- The Advance Checked In reservation has a room assigned.
- The Advance Checked In reservation's assigned room's occupancy status is Vacant.
- When the assigned room's housekeeping status is updated to match a room housekeeping status defined in the Room Status for **Auto Check In of Advance Checked In Reservations** setting, the Advance Checked In reservation is automatically checked in to the property.
- The Schedule Check Out / Auto Check In processor in Toolbox – Utilities – Processors must be running.

For All Reservations that Failed Mass Advance Check In

- The reservation remains in arrival (Due In) status but is not flagged as Advance Checked in.
- The reservation's arrival time (ETA) remains unchanged.
- The reservation's Expected Time of Return (ETR) remains unchanged.

Advance Check In Impact

Activating the Advance Check In functionality with its related controls and tasks impacts the following features.

Searches and Sorting

Manage Reservations Advanced/Basic Search Screen

- Adds an **Advance Check In** option to the Reservation States filter criteria.
- When the OPERA Control **Expected Time of Return** is On for the property:
 - Adds **ETR From** and **ETR To** fields to the search criteria.
 - Adds the following sort by options to the search results view:
 - * Arrival Date and ETR Ascending
 - * Arrival Date and ETR Descending
 - Adds the following columns to the search results view:
 - * ETR and ETR Comments
 - * Advance Checked In
- Adds a predefined Advance Checked In search filter.

Manage Reservations Arrivals Search Screen

- Adds an **Advance Check In** option to the Reservation States filter criteria.
- Adds an **Exclude Advance Checked In** check box to narrow the arrivals search to arrivals that have not been flagged as Advance Checked In.
- When the OPERA Control **Expected Time of Return** is On for the property:
 - Adds **ETR From** and **ETR To** fields to the search criteria.
 - Adds the following sort by options to the search results view:

- * Arrival Date and ETR Ascending
- * Arrival Date and ETR Descending
- Adds the following columns to the search results view:
 - * ETR and ETR Comments
 - * Advance Checked In
- Adds a **Reverse Advance Check In** option to the search result I Want To... actions.
- Adds an **Advance Checked In** predefined filter to the Search Type.
- Adds a **Mass Advance Check In** button to the search results when two or more reservations are selected for Advance Check In.

Quick Launch Advance Checked In Screen

- A predefined search for reservations that are flagged as Advance Checked In.
- Adds an **Advance Checked In Status** filter for results showing only Arrival or only Checked In status reservations or both. The Advance Checked In reservation status includes both Arrival and Checked In reservations.
- When the OPERA Control **Expected Time of Return** is On for the property, adds the following sort by options to the search results view:
 - Arrival Date and ETR ascending
 - Arrival Date and ETR descending

Refer to *Advance Checked In Screen* for more information.

Room Assignment Screen

- Adds an Advance Check In predefined search filter.
- Adds an Advance Checked In column to the search results view.

Using the following search and sort options, you can assign rooms to reservations based on the guest's expected time of return to the property. This assists in prioritizing to have rooms ready for the guest upon their return:

- When the OPERA Control **Expected Time of Return** is On for the property:
 - Adds ETR From and ETR To fields to the search criteria.
 - Adds the following sort by options to the search results view:
 - * Arrival Date and ETR Ascending
 - * Arrival Date and ETR Descending
 - Adds ETR and ETR Comments columns to the search results view.

Advance Check In Tile

A dashboard tile for Advance Check In reservations provides statistical information about Advance Check In individual and block reservations for the property's current business date. Refer to *Advance Check In Tile* for more information.

Room Diary

The room diary provides visual indication for those arrival reservations with an assigned room that have been Advance Checked In.

Business Events

A Business Event for Advance Check In includes the following Data Elements:

- Advance Check In
- ETR (expected time of return)
- ETR Comments

Night Audit, Routine Schedules, and Interface Control

Night Audit

- The Night Audit process does not complete if any Advance Checked In reservations have not been checked in to the property.

Toolbox – Utilities - Processors

- Adds an Auto Check In Processor that handles the Check In of Advance Checked In reservations based on the status of the room assigned to the reservation matching the status defined in the Room Status for **Auto Check In of Advance Checked In Reservations** settings.

Property Interface Control Screen

- Provides the option of creating keys for one or multiple reservations that are flagged as Advance Checked In.

Reports – Reservation Detail Report (res_detail)

- Adds the following report parameters:
 - Advance Checked In only
 - Include Advance Checked In
- Adds a report column indicator for Advance Checked In reservation.

Troubleshooting Advance Check In

Table 4-2 Troubleshooting Advance Check In Issues

Problem / Issue	Cause	Resolution
The Advance Check In button is not enabled.	To Advance Check In a reservation a valid method of payment is required.	Verify that the reservation has a valid payment method. You can modify the payment method during the Advance Check In process.

Table 4-2 (Cont.) Troubleshooting Advance Check In Issues

Problem / Issue	Cause	Resolution
The Advance Check In button is not enabled.	The reservation is already Advance Checked In.	Verify that the reservation is not already Advanced Checked In. If a reservation is Advance Checked In, it is marked in the Reservation Type and in the Primary Details Reservation Status.
Received the error: Unable to Advance Check In reservation. Credit Card declined.	To Advance Check In a reservation a valid method of payment is required.	Verify that the reservation has a valid payment method. You can modify the payment method during the Advance Check In process.
I want to cancel an Advance Checked In reservation but the I Want To... Cancel Reservation link is missing.	Reservations that have been Advance Check In cannot be canceled.	Reverse the Advance Check In flag and then the reservation can be canceled. Refer to <i>Reversing Advance Checked In Reservations</i> .

Checking In Multiple Reservations (Mass Check In)

Prerequisites for Multiple Reservations (Mass Check In)

Use **Mass Check In** to check in multiple block or individual reservations in a single process.

- The reservations must be in arrival (due In) status.
- The reservations must have a valid payment method and details.
- The reservations assigned rooms' occupancy status is vacant.
- Linked reservations can be mass checked in.

There are two mass check in procedures available.

Table 4-3 Reservations to Mass Check In

Reservations to Mass Check In	Use this Procedure
All have rooms assigned	Mass Check In (Room Assigned)
No reservations have rooms assigned	Auto Assign and Check In
Some reservations have rooms assigned	Auto Assign and Check In

Reservations that fail to check in remain in Arrival (Due In) status and the assigned room is locked when Do Not Move status applies.

After the reservations are checked in:

- The expected time of arrival (ETA) is updated with the checked in time.
- The arrival date is locked and cannot be modified.
- Deposit payments are transferred to the reservation account.

- The check in cannot be [reversed](#) once financial charges exist on the reservation account. Reservations with deposits are eligible to be reversed.
- The Do Not Move lock is removed

Checking In Multiple Reservations with Room Assigned

To check in multiple reservations, each with a room assigned:

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **Arrival**.

 **Note:**

You can also open Arrival Search from the **Arrivals Tile** on your [Dashboard](#) or use [Quick Launch](#). You can also use Room Assignment when at least one assigned room is selected.

2. Enter search criteria then click **Search**.
3. Select the reservations in the search result then click **Mass Check In**.
 - a. In the **Check In Options** panel, select the **Room Status** check boxes to allow a check in.
 - i. **Inspected:** Select to include rooms with an Inspected status (available when the Inspected Status OPERA Control is active).
 - ii. **Clean:** Select to include rooms in a Clean status.
 - iii. **Pickup:** Select to include rooms in a Pickup status (available when the Pickup Status OPERA Control is active).
 - iv. **Dirty:** Select to include rooms in a Dirty status.
 - v. **Out of Service:** Select to include rooms in an Out of Service status (available when the Out of Service OPERA Control is active).
 - vi. Click **Process**.
 - b. In the **Mass Check In Status** screen, review the status. You can select from the following options:
 - i. **Sort By:** Select to change the sort order of the reservations listed
 - ii. **Confirmation:** Click link to launch reservation presentation to make further updates. For more information, see [Editing a Reservation](#).
 - iii. Click **Print** to generate a report of this information. A report appears in a new browser window for printing.
 - iv. Click **Close** to continue.
 - c. In the **Room Keys** panel
 - i. Select key options to encode room keys. For more information, see [Managing a Room Key / Door Lock Property Interface](#).
 - ii. Click **Process**.
 - d. In the **Registration Card** panel.
 - i. Select a Registration Card. Select a registration card template from the list (Defaults according to the Default Registration Card OPERA Control).

- ii. Select **Guests**.
 - i. **Primary and Accompanying**. Select to generate a registration card for primary guest and [accompanying profiles](#) (Available when Print Registration Cards for Accompanying Guests OPERA Control is active).
 - ii. **Primary Only**: Select to generate a registration card for primary guest only.
- iii. Report Destination
 - i. **Preview (to Print)**: Select to preview as PDF.
 - ii. **Email to Print**: Select a printer from the list.
 - iii. **Email**: Select to email.
 - i. **Email Address**: Enter an email address.
- iv. Click **Process**.

Auto Assigning Rooms and Checking In Multiple Reservations

To auto-assign a room (if not already assigned) and check in multiple individual or block reservations you can use the Auto Assign and Check In action to assign a room and mass check in reservations in one process . For more information, see [\(Batch\) Room Assignment](#).

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, then select **Room Assignment**.
2. Enter search criteria and click **Search**.

 **Note:**

By default, only unassigned reservations are included in the search. Click **Modify Search Criteria** to change the search criteria.

3. Select reservations in the search results.

 **Note:**

Hold down the CNTRL key and click to select multiple reservations in the Table, Card or Console view. To select all reservations, select the check box in the header row in List view.

4. Click **Auto Assign and Check In**.
 - a. In the Room Assignment panel select the **Room Status** and **Room Criteria** for the rooms to assign:

 **Note:**

The Default Room Status for Room Assignment OPERA Control determines the default room statuses selected in the search panel.

- i. **Inspected:** Select for rooms with an Inspected status. (available when the Inspected Status OPERA Control is active).
- ii. **Clean:** Select for rooms in a Clean status.
- iii. **Pickup:** Select for rooms in a Pickup status. (available when the Pickup Status OPERA Control is active)
- iv. **Dirty:** Select for rooms in a Dirty status.
- v. **Out of Service:** Select for rooms in an Out of Service status. (available when the Out of Service OPERA Control is active).
- vi. **Include Departure Rooms:** Select checkbox to include rooms in a due out status.
- vii. **Use Associated Preferences:** Select checkbox to enforce the room feature and smoking preference from the guest (primary) profile when the Reservation Room Features OPERA Control and Reservation Smoking Preference OPERA Control are inactive or the reservation when the Reservation Room Features OPERA Control and Reservation Smoking Preference OPERA Control are active.
- viii. **Floor:** Select floor(s) from the list.
- ix. **Smoking:** Select rooms which are smoking or non-smoking. Field is disabled when **Use Associated Preferences** is selected.
- x. **Features:** Select rooms with specific features. Field is disabled when **Use Associated Preferences** is selected.
- xi. **Start from Room:** Select a room from list to begin assigning the room.
- xii. Click **Assign** or click **Assign and Mark as Do Not Move** to lock the assigned room (Available when the Do Not Move Room OPERA Control is active).

 **Note:**

A Do Not Move lock only applies to reservations that fail to check in.

- b. The Room Assignment Status page appears showing the room results. You can select from the following options:
 - i. **Sort By:** Select to change the sort order of the reservations listed
 - ii. **Confirmation:** Click link to launch reservation presentation to make further updates. For more information, see [Editing a Reservation](#).
 - iii. Click **Print** to generate a report of this information. A report appears in a new browser window for printing.
 - iv. Click **Close** to continue.
- c. In the **Check In Options** panel, select the Room Status check boxes to allow a check in.
 - i. **Inspected:** Select to include rooms in an Inspected status (available when the Inspected Status OPERA Control is active).
 - ii. **Clean:** Select to include rooms in a Clean status.
 - iii. **Pickup:** Select to include rooms in a Pickup status (available when the Pickup Status OPERA Control is active).
 - iv. **Dirty:** Select to include rooms in a Dirty status.

- v. **Out of Service:** Select to include rooms in an Out of Service status (available when the Out of Service OPERA Control is active).
- vi. Click **Process**.
- d. In the **Room Keys** panel.
 - i. Select key options to encode room keys. For more information, see [Managing a Room Key / Door Lock Property Interface](#).
 - ii. Click **Process**.
- e. In the **Registration Card** panel.
 - i. Select a **Registration Card**. Select a registration card template from the list (Defaults according to the Default Registration Card OPERA Control).
 - ii. Select **Guests**.
 - i. **Primary and Accompanying:** Select to generate a registration card for primary guest and [accompanying profiles](#) (Available when Print Registration Cards for Accompanying Guests OPERA Control is active).
 - ii. **Primary Only:** Select to generate a registration card for primary guest only.
 - iii. Report Destination
 - i. **Preview (to Print):** Select to preview as PDF.
 - ii. **Email to Print:** Select a printer from the list.
 - iii. **Email:** Select to email.
 - i. **Email Address:** Enter an email address.
 - iv. Click **Process**.

Managing Welcome Offers

[Prerequisites for Managing Welcome Offers](#)

During check in, if the reservation is eligible for a welcome offer based on the condition specified in any of the Welcome Offer Alert rules, OPERA Cloud will prompt you to select the welcome offer for the reservation after the **Check In Now** action is selected. The welcome offers presented are determined by the Welcome Offer Options OPERA Control; valid options are:

- **Post It:** If Post It is selected, the Post It screen displays where any appropriate articles can be posted. Select the Method of Payment specified in the Welcome Offer Payment Method OPERA Control. All the charges will be transferred to the room specified in the Welcome Offer Pseudo Room OPERA Control and the alert status will be changed to Redeemed.

Note:

A reservation for the Welcome Offer Pseudo Room OPERA Control room must be checked in; If this PM reservation is not checked in, OPERA Cloud will display the message: **Welcome Offer Pseudo Room is not checked in.**

For more information, see [Charging Purchases Using Post It](#).

- **Items:** If Items is selected, the Item Inventory screen will display and a new item can be added to the reservation.

Only Inventory Items configured as applicable for Welcome Offer will display in the list. For more information, see [Reservation Item Inventory](#).

- **eCoupons:** If eCoupons is selected, the eCoupon screen will display and an eCoupon can be added to the reservation.

Only the eCoupons configured as applicable for Welcome Offer will display in the list. For more information, see [Managing Reservation eCoupons](#).

Once redeemed the welcome offer alert status updates to **Redeemed**. Welcome Offer activity is tracked in the [Changes Log](#).

Deferring Welcome Offer Selection on Check in

1. Select the **Defer Selection** option and no welcome offer will be added to the reservation at the time of check-in.
2. Click **Save**.
3. The welcome offer alert status updates to **Deferred** and the guest will be able to redeem a welcome offer at a later stage during their stay.

Redeeming Deferred Welcome Offer

For welcome offers in **Differed** status:

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **Inhouse**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search result, click **I Want to. . .** then **Alert** or open the reservation and click **Alert** in Reservation Presentation.
4. Select the Welcome Offer Alert , click **Select Welcome Offer Option**
5. If you click on **Cancel** after one of the welcome offer options has been selected, the welcome offer status updates to **Pending**.
6. Once redeemed the welcome offer alert status updates to **Redeemed**.

Redeeming Pending Welcome Offer

For welcome offers in **Pending** status:

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **Inhouse**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search result, click **I Want to. . .** then **Alert** or open the reservation and click **Alert** in Reservation Presentation.
4. Select the Welcome Offer Alert, click **Redeem Selection**.
5. Once redeemed the welcome offer alert status updates to **Redeemed**.

Changing Pending Welcome Offer Selection

For welcome offers in **Pending** status:

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **Inhouse**.

2. Enter search criteria and click **Search**.
3. Select the reservation in the search result, click **I Want to. . .** then **Alert** or open the reservation and click **Alert** in Reservation Presentation.
4. Select the Welcome Offer Alert , click **Change Selection**.

About Advanced Folio Payment (Prepayment)

[Prerequisites for Advanced Folio Payment \(Prepayment\)](#)

When the Check In Prepay Rule OPERA Control is set to Advance Folio Payment and the Prepay Folio OPERA Control is active, you will be required to process prepayment for any increase in the total cost of stay.

Arrival Reservations

When the Check In Prepay Rule OPERA Control is set to Advance Folio Payment you are prompted to collect payment for the total of stay for reservations with a payment method matching any selected in the Advance Folio Payment Type OPERA Control. You can update **Nights to Charge** to a lesser value but not lower than the value set in the Minimum Number of Nights OPERA Control. Actual charges are not posted during check in. The check in can continue only when the minimum or full payment is posted. A room key will then be issued for the number of nights paid. The room key Valid Until Date is pre-populated but is not editable. Users with the Override Prepay Rules at Check In And Reservation Update task granted to their role(s) can override the advanced folio payment processing.

Window/Room Routing Considerations

- When a reservation has window routing instructions for the lodging transaction code, and the target window payment method is not selected in the Advance folio Payment Type OPERA Control, the **Amount** shown when posting advance payment will exclude the routed charges.
- When a reservation has window routing instructions for the lodging transaction code, and the target window is empty or the payment method is selected in the Advance folio Payment Type OPERA Control, the total amount is shown in the **Amount** field for the advanced payment.
- When a reservation has room routing instructions for the lodging transaction code, the amount shown in advance payment **Amount** field will exclude the routed charges.

In House Reservations

When the Prepay Folio OPERA Control is active, you will be required to process payment for any increase in the total cost of stay for in house reservations.

Automatic Credit Card Prepayment

In the event that a change in stay details (nights, fixed charges, packages, number of adults or children, rate code, rate amount, discount, room type, room move) results in an increase in the total cost of stay, OPERA Cloud will automatically process additional advance payments for reservations with credit card details available for billing window #1 in [reservation payment details](#). If the update to the reservation involves transaction codes that have been routed to a billing window with Direct bill payment or to another reservation, then credit card payment will not be processed.

Once payment is processed, an Advance Payments changes log entry, with the payment details, is added. For more information, see [Viewing Changes Log Details](#).

If a payment refund is due for any reason, these payment must be processed manually via billing. For more information, see [Posting Credit Card Rebates to a Reservation Account](#).

**Note:**

Auto advanced folio payment processing occurs hourly.

Manual Prepayment

In the event of an increase to the [number of nights](#) without credit card payment details in window #1 in [reservation payment details](#) you will be prompted with a link to process advanced payment for the additional reservation costs. After processing the payment, or when you select **Cancel** to skip payment for the current reservation, you will see additional prompts if there are share reservations that also require advance payment. Users with the Override Prepay Rules at Check In And Reservation Update task granted to their role(s) can override the advanced folio payment processing.

**Note:**

In order to post payment you must have the Manage Financial Postings task granted to your role(s). Advanced Payments are tracked in the [changes log](#) as New Posting activity type.

This payment prompt is excluded for

- Pseudo room type reservations
- Block reservations
- Credit card payment details provided (window #1)
- Reservations without, or with negative (refund) advance payment requirement.
- Changes to rate amount, rate code, packages, items or fixed charges.
- Stay details changes via Room Diary
- Stay details changes via Look To Book

In House

The In House menu enables you to manage your in-house reservations, pseudo room type reservations (for example, group masters), and any house account reservations.

Some tasks you can complete from this menu includes searching for in-house reservations, reversing (cancelling) arrival reservations, and room moving house reservations.

You can also navigate to the Guest Profile, Reservation, Block, or Billing by using the **I Want To...** menu or by clicking the links for a reservation in the search results.

Reversing (Cancelling) Check-In

Prerequisites for Reversing (Cancelling) Check-In

You can reverse a checked-in (that is, in-house) reservation if the reservation was checked in today and has a zero balance (that is, no charges posted or deposit payments transferred on check-in).

After reversing the check-in, the reservation reverts to the Arrival (due in) status.

Watch Video

Reversing a Check-in

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria for the reservation and click Search.
3. Select a reservation in the search results.
4. Click **I Want to...** and then select **Reverse Check in**. The Reserve Check in prompt appears with the following Room Options:
 - a. **Retain Room**: Select to keep the room assigned for the reservation.
 - b. **Remove Room**: Select to remove the assigned room from the reservation.
 - c. **Update Room Status**: Select a suitable room status from the list of available options.
5. Click **Reverse Check in**.

Note:

If you select to cancel the check-in of a shared reservation, a list of all the sharing reservations and their reservation statuses appears. You have the option of reversing all checked-in sharers or just reversing the check-in for the currently selected sharer.

Moving an In House Reservation

Watch Video

Use Room Move to move an in house reservation to a different room (and possibly a new room type). When performing a room move OPERA Cloud performs the following:

- **Availability**: Checks and updates the room type availability.
- **Housekeeping Status**: Checks the housekeeping status of the destination room similar to the way room assignment and check in is handled initially. You cannot move a reservation to a room in Out of Order status.

- **Shares:** You can set up a share if moving reservation to an occupied room. Similarly, when moving a reservation from a room that is being shared, you can opt to move all sharer reservations or selected specific sharer reservations. (Available when the Sharers OPERA Control is active).
- **Property Interfaces and Integrations:** [Business events](#) are triggers to integrated systems, with details of the update to the reservation.

When the destination room type is different to the current room type, you're prompted to update the **Room Type to Charge** field to the original room type; this ensures the rate amount is not affected.

The room status of the departing room defaults according to the [Room Move Room Status OPERA Control](#); you can select a different room status if you have the Override Room Move Status task assigned to your role.

You can move an in house reservation in the [Room Diary](#) , by dragging and dropping the reservation to the required room. Alternatively, you can update an in house reservation and initiate a room move from the **I Want To...** menu.

If integrated with a door lock system you will be required to [encode room keys](#) for the new room.

Room move activity is available in the [changes log](#).

Moving an In House Reservation

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and then click **Search**.
3. Select the reservation from the search results and click **I Want To...** and select **Move Room**.
 - a. Enter search criteria for the new (target) room and click **Search**.

 **Note:**

The reservation room type populates in the Room Type field.

- b. Click **Select Room** for a suitable room listed in the search results.
- c. Complete the following details:
 - i. **Update the Room Type to Charge (RTC):** If a different room type has been selected, select this option to update the Room Type to Charge to the new room type. If left deselected, the Room Type to Charge will retain the original room type, resulting in a complimentary upgrade.
 - ii. **Room Move Reason:** Select a reason for the room move from the list.
 - iii. **Description:** Optionally enter a description for the room move.
 - iv. **Update Room Status of Departing Room:** (The **Room Move Room Status** parameter in OPERA Controls determines the default room status.) If you have the **Override Room Move Status** task, you may select a different room status for the departing room. The following statuses can be selected: **Inspected**, **Clean**, **Pickup**, and **Dirty**.
- d. Click **Assign Room**.

 **Note:**

You might be prompted to override the housekeeping status or room inventory levels.

- e. Click **Select Another Room** to return to the room search and select another room.
- f. Click **Accept Room Selection** to override warnings and continue with the room selection.

Viewing the Room Move History

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and click **I Want To. . .** and select **Move Room**.
 - a. Select **Show Move History**.

Departures and Checkout

Departures include tasks that involve scheduling and managing checkouts for guests, such as auto checkouts, early checkouts, reinstating reservations, early departures, and so on. The Check Out option is used to settle the guest's account, record payment, print folios, and automatically adjust room inventory when the guest checks out of the room.

Using Quick Check-Out

Quick Check Out is a fast way to check out reservations when the payment method is credit card or direct bill or the reservation has a zero balance.

To ensure a successful Quick Check Out:

- Make sure the guest's credit card has sufficient authorization to cover the balance.
- Make sure Direct Bill AR accounts are not restricted and have not exceeded credit limits.
- Make sure cash guest folios have a zero balance.

[Watch Video](#)

Mass Check Out Reservations

Mass check out steps you through the settlement and checkout of each reservation

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and then select **Quick Check Out**.
2. Enter search criteria then click **Search**.
3. Select the Table or List view

4. Select multiple reservations in the search result then click **Mass Check Out**.
5. Folio Settlement appears for the first reservation
 - a. Enter payment details
 - b. Click **Settle and Send Folio**.
 - i. Report Destination
 - i. Select a **Folio Style**.
 - ii. Select a **Report Destination**.
 - iii. Click **Process**.
 - c. Click **Check Out Now** to check out the reservation or click **Schedule Check Out** to schedule the check out for a later time. For more information, see [Scheduling a Checkout](#).
 - d. Select a room status.
 - e. Click **Save**.
6. Repeat step 5 for the next reservation.

Auto Check Out Reservations

Auto checkout processes credit card or direct bill settlements and checks out the reservation automatically. A status panel will display the progress for each reservation.

1. From the **OPERA Cloud** menu, select **Front Desk** , select **Front Desk Workspace**, and then select **Quick Check Out**.
2. Enter search criteria then click **Search**.
3. Select the Table or List view.
4. Select multiple reservations in the search result then click **Auto Check Out**.

Check Out All Zero Balance Due Out Reservations

To check out all due out reservations with a zero balance:

1. From the **OPERA Cloud** menu, select **Front Desk** , select **Front Desk Workspace**, and then select **Quick Check Out**.
2. Click **Check Out Zero Balance Departures**.
3. A status screen displays the progress.
 - a. For all reservations that were checked out successfully, **Successfully Processed** is displayed.
 - b. For any reservation that is not checked out successfully, a message indicating the reason is displayed.

The following are scenarios and their expected outcome when using the **Check Out Zero Balance Departures**.

Table 4-4 Scenarios and expected outcome

#	Reservation Status	Scenario	Outcome
1	Day Use	Reservation has zero rate and Zero Reservation Balance * Windows has no postings	Checked Out Successfully
2	Day Use	Reservation has zero rate and Zero Reservation Balance * Windows has postings but settled and no folio generated	Checked Out Successfully and Folio Generated
3	Day Use	Reservation has zero rate and Zero Reservation Balance * Windows have charges/payments and at least one or more windows balance is non zero	Error Shown "Reservation has a balance, checkout cannot be processed"
4	Day Use	Reservation has Non Zero Rate and Zero Guest Balance * Windows has no postings	Charged are posted Error Shown "Reservation has a balance, checkout cannot be processed"
5	Day Use	Reservation has Non Zero Rate and Zero Reservation Balance * Windows has postings but settled and no folio generated	Checked Out Successfully and Folio Generated
6	Day Use	Reservation has Non Zero Rate and Zero Reservation Balance * Windows have charges/payments and at least one or more windows balance is non zero	Error Shown "Reservation has a balance, checkout cannot be processed"
7	Due Out	Reservation has Non Zero Rate and Zero Reservation Balance * Windows has postings but settled and no folio generated	Checked Out Successfully and Folio Generated
8	Due Out	Reservation has Non Zero Rate and Zero Reservation Balance * Windows have charges/payments and at least one or more windows balance is non zero	Error Shown "Reservation has a balance, checkout cannot be processed"

Table 4-4 (Cont.) Scenarios and expected outcome

#	Reservation Status	Scenario	Outcome
9	Due Out	Reservation has Non Zero Rate, zero reservation balance and payment method configured is Direct Bill. But the payee does not have AR number configured. Payment is posted against the charges using different payment method and folio is not generated.	Error Shown "AR Account does not Exist"
10	Due Out	If Folio requires Fiscal Printing	Error Shown " The Folio requires the Fiscal Printing, please process the checkout manually."

Checking Out Reservations

[Watch Video](#)

Note:

For day-use reservations accommodation charge and taxes will be auto-posted on first time entry to the billing screen.

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Departures**.

Note:

You can also open Departure Search from the **Expected Departures** figure on the Departures Tile on a [dashboard page](#).

2. Enter search criteria, then click **Search**.

Note:

When the Discrepant Room OPERA Control is active you view Skip discrepant reservations by selecting the **Skip Rooms Only** checkbox.

3. Select a reservation from the search result, then click the **Check Out** button or click **I Want to . . .** and select **Check Out**.
4. Depending on the Cashier, check out Workflow Preference setting. For **Billing**:

- a. You can review and post additional charges or rebates using **Post Charge**:
- b. Click **Check Out** to settle window balances.
- c. For **Folio Settlement**:
 - i. Enter payment details for each window defaults based on payment details in routing instructions.
 - ii. Click **Settle and Send Folio** to post payment and generate a folio.
 - iii. Repeat for balance in other Billing windows.
 - iv. When the balance is zero for all windows, click **Checkout Now**. To schedule a checkout, click **Schedule Checkout** For more information, see [Scheduling a Checkout](#).
- d. To Checkout:
 - i. Click **I Want to**, click **Post Charges** to post charges to the reservation account.
 - ii. Click **I Want to**, click **Go to Billing** to navigate to the Billing page.
 - iii. Enter payment details for each window, it defaults based on payment details in routing instructions.
 - iv. Click **Settle and Send Folio** to post payment and generate a folio or **Settle Folio** to just post the payment.
 - v. Repeat for balance in other Billing windows.
- e. When the balance is zero for all windows, click **Checkout Now**.

Checking Out Reservations with Open Folio

Prerequisites for Checking Out with an Open Folio

Departing guests may want to checkout but remain on your property to enjoy facilities such as the restaurant or bar. In such cases, you can check out the reservation with an open folio status; resulting in the room status being updated to vacant and the reservation account being checked out with an outstanding balance. The open folio status allows guests to continue charging to their reservation account until they make final settlement and close the folio.

Note:

When manually posting a rate code with packages to an Open Folio reservation, the entire rate amount is posted to the transaction code of the rate code. The rate amount is not split into room and package charge amounts. The reason being that the Open Folio reservations are already checked out and do not go through End of Day process as normal in-house reservations. Consequently no allowance creation or profit/loss charge postings occur.

It is important to monitor reservations checked out with an open folio and ensure their settlement. Reservation departures with open folios status will not halt End of Day processing even if the reservation account has an outstanding balance. Reservations

with an open folio balance appear on the Guest Ledger. The Open Folio Closing Preference OPERA Control determine the number of days after departure a reservation account can remain in Open Folio status.

The **Zero Balance Open Folio Close Days** OPERA Control determines when open folios with a zero balance will be automatically closed.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **Departures**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and then click the **Check Out** button. Or click **I Want To...**, and select **Check Out**.
4. From the **Folio Settlement** screen, click **Checkout with Open Folio**.

Closing an Open Folio Reservation

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **Departures**.
2. Enter search criteria and click the **Checked Out** checkbox then click **Search**.
3. Select the reservation from the search results and then click **I Want To...**, and then click **Close Folio**.
4. Process settlement of any balance due.
5. Click **Close Folio**.

Scheduling a Checkout

Prerequisites for Scheduling Checkout

Ensure that the guest folio balance is zero before you schedule a checkout.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **Departures**. Or click the Departures Expected figure on the Departure tile on your dashboard.
2. Enter search criteria then click **Search**.
3. Select the reservation in the search result, then click **Checkout**.
4. If the folio has been settled, you have the option to schedule checkout for the reservation. Click **Schedule Check Out**. If the folio has not been settled and a balance exists, you cannot schedule checkout for the reservation.
5. Schedule the time for the checkout by entering the checkout date and time.

Note:

The Schedule Check Out option is only available for Departure reservations. A scheduled checkout does not complete if a charge is posted to the reservation and the charge is not settled.

6. To view reservations scheduled for checkout, from the OPERA Cloud menu, select **Front Desk, Front Desk Workspace** and then select **Scheduled Checkout Departures**.

Checking Out Reservations Early

Use **Check Out Early** to check out reservations prior to their due departure date. The Check Out Early option appears only when the reservation departure date is later than your current business date. OPERA Cloud follows the Check Out Workflow Preference OPERA Control to process the early departure.

1. From the **OPERA Cloud** menu, select **Front Desk**, select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the results and click **I Want To...** and select **Check Out Early**.

Navigating to Billing Workflow

1. You will be prompted about the reservation departure change and the reservation status will change to **Due Out**.
2. You may also be prompted about an early departure penalty.
3. Click **Continue with Early Departure**.
4. From the Billing screen further manage the charges and settlement of the reservation account. See [Manage Billing](#) .

Navigating to Checkout Steps Workflow

1. You will be prompted about the reservation departure change and the reservation status will change to **Due Out**.
2. You may also be prompted about an early departure penalty.
3. Click **Continue with Early Departure**. You are presented with **Checkout and Folio Settlement** page
4. Click **Post Charge** to post any last minute charges. For more information, see [Posting Charges to Guest Folios](#).
5. Enter payment details for each Billing window, the details default based on [payment information](#).
6. Click **Settle and Send Folio** to post payment and generate a folio or **Settle Folio** to just post the payment.
7. Repeat for balance in other Billing windows.
8. Click **Checkout Now**.
9. To Schedule a checkout, click **Schedule Checkout**. For more information, see [Scheduling a Checkout](#).

Reinstating Checked Out Reservations

[Prerequisites for Reinstating Checked Out Reservation](#)

You can reinstate a early departure [check out reservation](#) to the status of either checked In or departure (when the departure date is the same as the current business date). You can reinstate a checked out reservation only before the End of Day process on the date of departure. When reinstating an early departure reservation, the original departure date is restored when the Reinstate Early Departure to Last Departure Date [OPERA Control](#) is active.

Reinstating a reservation deducts the specified room type from inventory. You must have the required overbooking tasks assigned to your role(s) to overbook the property.

 **Note:**

When a reservation that has been checked out and the previously assigned room is already assigned to another checked in reservation, OPERA Cloud displays a message telling you: "Room <room> is already booked for <guest> whose arrival date is <date> and departure date is <date>. Continue to reinstate?" If you reply Yes, OPERA Cloud reinstates the reservation and a share is automatically created with the in-house reservation. For more information, see [Managing Reservations Shares](#).

Reinstating a Checked Out Reservation

1. From the **OPERA Cloud** menu, select **Front Desk**, then select **Departures**.
2. Enter search criteria, then click **Search**.
3. Select the checked out reservation in the search result, then click **I Want To. . .** and select **(Go to) > Billing**.
4. Click **I Want To. . .** and select **Reinstate Reservation**.
 - a. **Send the check in to the interface:** Select check box to send the check in to the [property interfaces](#).
 - b. Click **Reinstate**.
5. The **Reservation Status** is updated in the Overview panel.

Front Desk Workspace

Managing Guest Messages

[Prerequisites for Managing Guest Messages](#)

With the Messages feature, you can send messages to individual guest reservations or to a selected group of reservations, such as those linked to a block. You can maintain an unlimited number of messages on a reservation, mark the messages as received or not received, print the messages in a user-definable format for delivery to the room, or send the message via SMS to the guest's mobile number (requires a subscription with an SMS service provider). With the appropriate interfaces, the messages trigger the message-waiting lamp on the in-room telephone or the messages are sent directly to the in-room video system so guests can view them on their TV screens (if your property has an in-room video interface for guest messaging).

 **Note:**

Messages remain on the reservation until you delete them or until 30 days after the reservation departure when messages are automatically purged.

 **Note:**

Messages are purged 30 days after the reservation check out date.

Viewing a Message

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservation Workspace**, and then select **Guest Message**.
2. Enter search criteria and click **Search**.
3. Click [+] in the message card to expand the message details.

 **Note:**

The status of the message appears on the message card.

Adding a Message

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations Workspace**, and then select **Guest Messages**.
2. Click **New** and complete the following fields:
 - a. **Recipient**. Search and select the reservation(s) of the person to receive the message. Click **Select**.

 **Note:**

Click **Modify Search Criteria** to modify the reservation search criteria. For example, filter on block code to add the same message to all reservations linked to a group block.

- b. **Print Message** : Select to print a copy of the message (see 'Printing a Message' task below).
- c. **Room** : Select to send the message to the guest's room phone and/or video (the specific method depends on the messaging interface being used at your property).
- d. **Name** : Enter name of the caller.
- e. **Company** : Enter the company of the caller.
- f. **Contact Info** : Enter the contact details for the caller, such as phone or email address.

Marking a Message as Delivered

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations Workspace**, and then select **Guest Messages**.
2. Enter search criteria and click **Search**.
3. Click the vertical ellipsis **Actions** menu, for the message and then select **Mark as Delivered**.

Generating Batch Registration Cards

Prerequisites for Generating Batch Registration Cards

As well as generating registration cards "on-demand" for arrivals, you can also generate registration cards, in advance, in a batch process. For example, this is useful for group arrivals where key packets containing a registration card are prepared in advance.

The Batch Registration Card screen offers a variety of filter options to select the specific reservations and/or profiles for which you want to generate a registration card. You may also generate registration cards for pseudo room type reservations if needed.

Note:

A limit of 1000 registration cards can be generated in a batch.

When the **Print Registration Cards for Accompanying Guests** OPERA Control is active you can generate a registration card for accompanying profiles linked to the reservation; the Age Threshold to Print Registration Card OPERA Control determines the minimum age for a registration card to be generated.

Note:

As only one registration card is selected, language-specific stationery is not generated using this batch process when the Mult-language OPERA Control is active.

Generating Registration Cards

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace** then select **Registration Cards**.
2. Enter reservation and profile search criteria and click **Search**.
3. **Sort by:** Click to select a different sort order from the list.
4. Select the reservations in the search result and click **Process Registration Card**.

 **Note:**

To select all reservations listed click the checkbox in the column titles.

5. Enter the following details:
 - a. **Select a Registration Card:** Select a registration card template from the list (Selection defaults according to the Default Registration Card OPERA Control).
 - b. **Select Guests**
 - i. **Primary and Accompanying:** Select to generate a registration card for the primary guest and any accompanying guests linked to the reservation (Enabled when the Print Registration Cards for Accompanying Guests OPERA Control is active).
 - ii. **Primary Only:** Select to generate a registration card for the primary guest linked to the reservation.
 - c. **Select Destination**
 - i. **Preview :** Select to generate as PDF (preview to print).
 - ii. **Email to Print :** Select to print.
 - Select a printer from the list.
 - iii. **Email :** Select to email to a recipient.
 - Enter a recipient email address.
 - d. Click **Process**.

Running AI Room Assignment

Watch Video

AI Room Assignment is a data science based feature used to assign rooms to reservations in a batch process. The procedure considers preferences guest preferences, membership levels, room features, and other criteria to minimize occupancy gaps and room wear & tear. The AI Room Assignment procedure primarily considers accessibility and smoking preferences along with other guest preferences to assign rooms. Guest preferences are intelligently removed when rooms matching all the guest preferences are not available. AI Room Assignment incorporates reservation importance by considering a ranking value for VIP, membership type/level, and market group. The procedure also maximizes the contiguous future availability of rooms by minimizing gaps with reservations assigned to each room.

Reservations assigned a room are indicated with 'AI' after the room.

Reservations upgraded by AI room assignment are indicated with 'AI Upgrade' after the room (Available when the Allow Automatic Room Upgrades OPERA Control is active).

An AI [Room Assignment dashboard](#) tile is available to indicate the number of reservations assigned a room using this feature.

Included in AI Room Assignment

- Deduct reservation type reservations.

- Sharing reservations (Future arrivals and the entire length of shared reservations is considered).
- Block reservations (Upgrades for block reservations are not supported).
- Component room type reservations (Available when the Component Room Type OPERA Control is active).
- High/low floor preference is considered when set up in preferences.

Excluded from AI Room Assignment

- Preassigned reservations marked Do Not Move (Available when the Do Not Move Room OPERA Control is active).
- Day use reservations.
- Pseudo-room type reservations.
- Multi-room reservations (once split to single room reservations, the AI Room Assignment procedure will assign a room).
- Non-deduct reservation type reservations.
- Rooms in OO status (Available when the Out of Order OPERA Control is active).
- Rooms in OS status (Available when the Out of Service OPERA Control is active).

Running AI Room Assignment

1. From the **OPERA Cloud** menu, select **Front Desk** and then **Front Desk Workspace**.
2. Click **I Want To...**, then select **AI Room Assignment**.
3. **Property:** Select or confirm the property.
4. Click **Run Now**.

Note:

A background process is initiated; you are not provided with any confirmation that this process has commenced.

Wake Up Calls

Prerequisites for Wake Up Calls

You can set, view, and cancel wake up calls for individual reservations, for sharing guests within a room reservation, or for room reservations associated with business blocks. The reservation must be in-house (checked-in) status to set a wake up call.

The Wake-up Call feature can be used with or without a PBX interface.

Interaction Between OPERA Cloud and the PBX Interface

When OPERA Cloud is interfaced with a PBX the actual placing of wake up calls is handled by the PBX. OPERA Cloud communicates wake-up call instructions to the PBX via the interface in one of two ways depending on the capabilities of the PBX:

- When the wake-up call is set up, OPERA Cloud immediately sends the instructions to the PBX. The PBX stores the instructions and places the call at the requested time. OPERA Cloud changes the wake up call status from Pending to Completed as soon as the call order is sent to the PBX.
- OPERA Cloud sends the wake-up call instructions to the interface at the exact time the call is to be placed. The PBX then immediately places the call to the room. The wake-up call status is changed from Pending to Completed when the call order is sent to the PBX.

Managing Guest Wake Up Calls

Adding Wake Up Call for Individual Room

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and select **Wake Up Call**.
2. Select **New** and complete the following:
 - a. Enter or select the reservation room number(s) - you can search for and select multiple in house reservations by checking selection check box next to each reservation and clicking Select to close the page.
 - b. Enter the **From Date**.
 - c. Enter **Time**.
 - d. Enter a **Follow Up Call Time** if needed.
 - e. Enter any notes related to the call.
 - f. Set the wake up call **Frequency** as **Once** or **Daily** (from From Date).
3. Click **Save**.

Adding Wake Up Call for Block Rooms

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and select **Wake Up Call**.
2. Select **New** and complete the following:
 - a. Select the block code from list.
 - b. Enter or select the reservation room number(s) 1. you can search for and select multiple in house reservations by checking selection check box next to each reservation and click **Select** to close the page.
 - c. Enter the **From Date**.
 - d. Enter **Time**.
 - e. Enter a **Follow Up Call Time** if needed.
 - f. Enter any notes related to the call.
 - g. Set the wake up call **Frequency** as **Once** or **Daily** (from From Date).
3. Click **Save**.

Editing Wake Up Call

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and select **Wake Up Call**.

2. Enter search criteria then click **Search**.
3. Select the wake up call for room in search result, click the vertical ellipsis and select **Edit**.
4. Update wake-up call details.
5. Click **Save**.

Update Wake Up Call Status

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and select **Wake Up Call**.
2. Enter search criteria then click **Search**.
3. Select the wake up call for room in search result.
4. From the **Vertical Ellipsis**, click one of the **Status** options.
 - a. **Pending** - Wake-up call has not yet been placed. Pending with a green background means that the date and time designated for the wake-up call has not yet arrived. Pending with a red background means that the date and time for the wake-up call has passed.
 - b. **Completed** - Wake-up call has been placed and answered.
 - c. **No Answer** - Wake-up call was placed but was not answered.
 - d. **Cancelled** - Cancel the wake-up call (if it has not yet been placed). When the wake-up call has a follow-up wake up call associated with it, canceling the main wake-up call will also cancel the follow-up wake-up call.

Generating Wake Up Call Report

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and select **Wake Up Call**.
2. Enter search criteria then click **Search**.
3. Select the **Report** action link from the vertical ellipsis on the Wake-up Calls panel to generate the Wake-up Calls Report.
4. Enter **Report Parameters**.
5. Select **Report Destination**.
6. Click **Process**.

(Batch) Room Assignment

Use Room Assignment to rapidly assign a room to multiple reservations for specific arrival date. You can select from a number of reservation search criteria; the default search is for reservations without rooms assigned, but you can modify the search as needed. You can auto-assign rooms or step through a process to manually assign a suitable room to each reservation. When a single reservation is selected, you can [check in the reservation](#) from Room Assignment.

[Watch Video](#)

Auto Assign Rooms

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and then select **Room Assignment**.
2. Enter search criteria and click **Search**.

 **Note:**

By default, only unassigned reservations are included in the search.

3. Select reservations in the search results.

 **Note:**

Hold down the CNTRL key and click to select multiple reservations in the Table, Card or Console view. To select all reservations, select the check box in the header row in List view.

4. Select the **Room Status** and **Room Criteria** for the room to assign:

 **Note:**

The Default Room Status for Room Assignment OPERA Control determines the default room statuses selected in the search panel.

- a. **Inspected:** Select checkbox to include rooms in Inspected status.(available when the Inspected Status OPERA Control is active)
- b. **Clean:** Select checkbox to include rooms in Clean status.
- c. **Pickup:** Select checkbox to include rooms in Pickup status. (available when the Pickup Status OPERA Control is active).
- d. **Dirty:** Select checkbox to include rooms in Dirty status.
- e. **Out of Service:** Select checkbox to include rooms in Out of Service status. (available when the Out of Service OPERA Control is active).
- f. **Include Departure Rooms:** Select checkbox to include rooms in a due out status.
- g. **Use Associated Preferences:** Select checkbox to enforce the room feature and smoking preference from the guest (primary) profile when the Reservation Room Features OPERA Control and Reservation Smoking Preference OPERA Control are inactive or the reservation when the Reservation Room Features OPERA Control and Reservation Smoking Preference OPERA Control are active.
- h. **Floor:** Select floor(s) from the list.
- i. **Smoking:** Select rooms which are smoking or non-smoking. Field is disabled when Use Associated Preferences is selected.
- j. **Features:** Select rooms with specific features. Field is disabled when **Use Associated Preferences** is selected.

- k. **Start from Room:** Select a room from list to begin assigning the room.
5. Click **Assign** or click **Assign and Mark as Do Not Move** to set a **Do Not Move** lock on the reservations. (Available when the Do Not Move OPERA Control is active). For more information, see [Managing Reservation Do Not Move Room Status](#)

 **Note:**

Only rooms successfully assigned are locked as Do Not Move.

6. The Room Assignment Status page appears showing the room results. You can select from the following options:
 - a. **Sort By:** Select a sort option for the display order of the results.
 - b. **Print:** Click to generate a report of this information. A report appears in a new browser window for printing.
 - c. Click the **Confirmation** link to open reservation presentation for any reservation listed. For more information, see [Editing a Reservation](#)

Manually Assign Rooms

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and then select **Room Assignment**.
2. Enter search criteria and click **Search**.

 **Note:**

By default, only unassigned reservations are included in the search.

3. Select reservations in the search results. To select all reservations, select the check box in the header row.
4. Click **Manual Assign**.
5. In the Room Search panel, enter the following search criteria. See [Available Room Search](#).
6. Click **Search**. If no results are found, you can modify your selection criteria.
7. In the search results, click **Assign Room** for the room to be assigned to the reservation.

Once a room is assigned to the reservation, the next reservation appears. Assign a room to the reservation by repeating the steps above to enter room search criteria and assign a room.

Overriding Room Selection (if prompted)

In the Room Search, you might be prompted to select another room if the room you assigned is unavailable.

1. Click **Select Another Room** (if prompted) to return to the search results and assign an alternate room.

2. Click **Accept Room Selection** to accept the warning and continue with the room assignment.

Available Room Search

Available Room Search allows you to search for vacant, available rooms based on a variety on search criteria.

When Available Room Search is initiated from within a reservation or via [Room Assignment](#) the reservation details and preferences will populate to the relevant search criteria.

Note:

The Default Room Status for Room Assignment OPERA Control determines the default room statuses selected in the search panel.

The search result is sorted according to the [Room Display Order OPERA Control](#) or you can choose to sort by the **AI Display Order** when the AI Room Assignment OPERA Control is active.

Click the room to view information about the room or click the **Room Type** to view information about the room type

Searching Available Rooms

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace**, and then select **Available Room Search**.
2. Enter search criteria
 - a. **Property**: Select or confirm the property
 - b. **Arrival**: Enter the arrival date.
 - c. **Nights**: Enter the number of nights.
 - d. **Room Status**: Select one or more room statuses.
 - i. **Inspected**: Select to search rooms with an Inspected status (available when the Inspected Status OPERA Control is active).
 - ii. **Clean**: Select to search rooms in a Clean status.
 - iii. **Pickup**: Select to search rooms in a Pickup status (available when the Pickup Status OPERA Control is active).
 - iv. **Dirty**: Select to search rooms in a Dirty status.
 - v. **Out of Order**: Select to search rooms in an Out of Order status. OO rooms cannot be assigned to reservations (available when the Out of Order OPERA Control is active).
 - vi. **Out of Service**: Select to search rooms in an Out of Service status (available when the Out of Service OPERA Control is active).
 - e. **Room Class**: Select one or more room classes from the list (available when the Room Class OPERA Control is active).
 - f. **Room Types**. Select one or more room types from the list.

- g. **Room:** Enter a room value.
 - h. **Floor:** Select one or more floors from the list.
 - i. **Features:** Select one or more room features from the list.
 - j. **Smoking:** Select a smoking preference from the list.
 - k. **Connecting Rooms Only:** Select to display only rooms which interconnect (available when the Connecting Rooms OPERA Control is active).
 - l. **Attendant in Room Only:** Select to restrict the search to only rooms with a housekeeping room attendant currently in the room based on an active housekeeping task.
 - m. **Room Conditions:** Select to include rooms with a room condition assigned (available when the Room Conditions OPERA Control is active) and includes those with a room condition flagged as **Do Not Display in Room Assignment**. See [Managing Room Conditions](#)
 - n. **Vacant Rooms:** Selected by default. Select to include vacant rooms.
 - o. **Pseudo Rooms:** Select to include pseudo rooms in the search results. This check box is enabled when no room types are selected in the Room Type field.
 - p. **Departures:** Select to include Due Out rooms in the search results.
 - i. **Departure Time:** Enter a specific departure time to search for rooms available after the specified time.
 - q. **AI Display Order:** Select to sort the rooms listed in result according to the recommendation of AI room assignment (available when the AI Room Assignment OPERA Control is active).
3. Click **Search**.

Key Packet Labels

[Prerequisites for Key Packet Labels](#)

The key packet label functionality provides a `sample_key_packet` template that is customized according to the label sheets used. Setup customized label templates in the Labels stationery report group [Stationery Report Groups](#).

Generating Key Packet Labels

1. From the **OPERA Cloud** menu, select **Front Desk**, select **Front Desk Workspace** then select **Key Packet Labels**.
2. Enter search criteria and click **Search**.
3. **Sort by:** Click to select a different sort order from the list.
4. Select the reservations in the search result and click **Process Key Packet Labels**.

Note:

To select all reservations listed click the check box in the column titles.

5. Enter the following details:
 - a. **Key Packet Template:** Select a template from the list
 - b. **Starting Row Position:** Enter the row of first label
 - c. **Starting Column Position:** Enter the column of the first label
 - d. Select Destination
 - i. **Preview:** Select to generate as PDF (preview to print)
 - ii. **Email to Print:** Select to send PDF via email to printer.
 - i. Select a printer from the list
 - iii. **Email:** Select to email to recipient.
 - i. Enter a recipient email address.
 - e. Click **Process**.

5

Inventory

Monitor and manage your rooms, inventory restrictions, and housekeeping services. You can mark rooms out of service or order, add or change the status of rooms, view or create daily housekeeping task sheets, check room availability, and so on.

Prerequisites for Inventory

This chapter of the OPERA Cloud User Guide lists the prerequisites for Inventory menu.

 - Setting of a room to Pickup Status
 - Setting of a room to Inspected Status

Restrictions

Prerequisites for Restrictions

Restrictions help you manage occupancy and revenue (RevPAR) by defining the conditions under which specific rates, room types, and/or room classes are available to sell for new reservations. For example, you could place a two-night minimum stay restriction on all rooms and rates during a weekend when demand is high, or you could set extended stay durations on certain room types and rates to ensure maximum revenue is achieved over periods of high demand.

Restrictions can be set at the house level, meaning that any restrictions placed are applicable to all rooms/room types or based on the channel, rate code, rate category, room type, or room class. You can combine restrictions to apply to more than one element; so for example, you are able to restrict reservations for a specific room type and rate code combination.

You can view existing restrictions by month, week, or day using the calendar view or in a list.

Note:

The restriction types available at your property are determined by the [Restriction Types OPERA Control](#) setting.

You can automate the setup of rate restrictions by configuring rate strategies, which are rules to automatically set restrictions for a specific date range, according to occupancy levels or number of times a rate code is sold.

Restriction Types

- **Open:** By default, all rate categories/rate codes and room classes/room types are open. You would only set an Open restriction in order to reverse or remove an existing Closed restriction. For example, a property has closed the Discount Rate Category for July 4-6. Occupancy levels have dropped and now the property would like the Discount Rate Category to be available for sale. The property would set an Open restriction on Rate Category Discount in order to lift the closed restriction.

- **Closed:** Rate categories/rate codes or room classes/room types are unavailable for a certain date or range of dates and will not be offered at the time of reservation. Closed rates or rooms can only be booked if the user has special user rights to override the rate availability restriction.
- **Open for Arrival:** A reservation can be made for arrivals on the days defined for this rate category/rate code and room class/room type. By default all rates and rooms are open for arrival. The Open for Arrival restriction should be used to reverse or remove a Closed for Arrival restriction.
- **Closed for Arrival:** No reservation can be made for arrival on the selected date.
- **Open for Departure:** Reservations can be made for departure dates falling in this date range. By default, all rates and room are open for departure. The Open for Departure restriction should be used to reverse or remove a Closed for Departure restriction.
- **Closed for Departure:** No reservations can be made having a departure date falling on this date or in this date range.
- **Maximum Stay Through:** If any part of a new reservation touches the Maximum Stay Through restriction dates, it cannot exceed the maximum number of days on the stay restriction in order to be booked. For example, if a Maximum Stay Through restriction is set up on Saturday for 2 nights, a guest trying to book a reservation for Monday through Saturday would not be able to book a reservation, as it exceeds the maximum number of days on the Maximum Stay Through restriction. If a guest wanted to stay Friday and Saturday only, then he would be able to book the reservation. A guest trying to book a reservation for Saturday and Sunday would also be able to make a reservation.
- **Minimum Stay Through:** If any part of a new reservation touches the Minimum Stay Through restriction dates, it cannot include less than the minimum number of days on the stay restriction in order to be booked. For example, if a Minimum Stay Through restriction is set up on Saturday for 3 nights, a guest trying to book a reservation for Friday through Saturday would not be able to book a reservation, as it includes fewer than the minimum number of days on the Minimum Stay Through restriction. If a guest wanted to stay Friday, Saturday, and Sunday, then he would be able to book the reservation.
- **Maximum Length of Stay:** New reservations arriving on the date where a Minimum Length of Stay restriction is in place, must meet the minimum number of days on the Minimum Length of Stay restriction in order to be booked. For example, if you have a Minimum Length of Stay restriction on Saturday for 3 nights, a guest trying to book a new reservation for Saturday only, would not be able to book a reservation, as it does not satisfy the minimum length of stay restriction of 3 nights. If the new reservation were arriving on Saturday for 3 nights, then the reservation would be able to be booked. A guest trying to book a reservation for Friday and Saturday would also be able to book the reservation, as it does not arrive on Saturday and is not subject to the Minimum Length of Stay restriction.
- **Minimum Length of Stay:** New reservations arriving on the date where a Maximum Length of Stay restriction is in place, cannot exceed the maximum number of days on the Maximum Length of Stay restriction in order to be booked. For example, if you have a Maximum Length of Stay restriction on Saturday for 4 nights, a guest trying to book a new reservation for Saturday through Friday, would not be able to book a reservation, as it exceeds the maximum number of days on the maximum length of stay restriction. If the new reservation were arriving on Saturday for 3 nights, then the reservation would be able to be booked. A guest trying to book a reservation for Sunday through Friday would also be able to book the reservation, as it does not arrive on Saturday and is not subject to the Maximum Length of Stay restriction.
- **Minimum Advance Booking:** New reservations are subject to a minimum number of days booking window and cannot be booked to arrive on the date where a Minimum

Advance Booking restriction is in place once the number of days before the arrival date falls below the number of days on the Minimum Advance Booking restriction. You must book for this arrival date 10 days in advance and no less. For example, if you have a Minimum Advance Booking restriction set on Saturday for 3 nights, a guest trying to book a new reservation for arrival Saturday on Friday would not be able to book the reservation, as the number of advance booking days does not satisfy the minimum number of advance days of 3 days on the Minimum Advance Booking restriction. A guest trying to book a reservation arriving Saturday on Tuesday would be able to book the reservation.

- **Maximum Advance Booking:** New reservations are subject to a maximum number of days booking window and cannot be booked to arrive on the date where a Maximum Advance Booking restriction is in place until the number of days before the arrival date falls below the number of days on the Maximum Advance Booking restriction. You must book for this arrival date no more than 120 days in advance. For example, if you have a Maximum Advance Booking restriction set on Friday for 4 nights, a guest trying to book a new reservation for arrival Friday on Sunday would not be able to book the reservation, as the number of advance booking days exceeds the maximum number of advance days of 4 days on the Maximum Advance Booking restriction. A guest trying to book a reservation arriving Saturday on Friday would be able to the reservation.
- **Length of Stay Not Available (LOSNA):** This option is often used instead of Minimum Length of Stay when various lengths of stay are open or closed for arrivals on the currently selected date.

When selected, seven LOS fields appear; each field represents a number of days, from 1 to 7+. (7+ indicates 7 or more nights.) Enter O (for Open) or C (for Closed) in each field to indicate whether the corresponding minimum length of stay is allowed. For example, if the following appears in the LOS fields: C C C O O O O, for reservations arriving on this date stays of 1, 2, and 3 nights are not allowed, but stays of 4, 5, 6, and 7 or more nights are allowed.

Managing Restrictions

[Watch Video](#)

Viewing Restrictions

1. From the **OPERA Cloud** menu, select **Inventory**, and then select **Manage Restrictions**.
2. Confirm or enter a property, date, and other search criteria, click **Search**.
3. View search results in the panel below.
4. Select a view option to change the display of the result.
5. Use the date navigation < to move backward or forward through dates.

Adding Restrictions

1. From the **OPERA Cloud** menu, select **Inventory**, and then select **Manage Restrictions**.
2. Click **New** and complete the following:

- a. **Start Date:** The restriction start date. This date cannot be greater than 5 years from the current business date.
 - b. **End Date:** The restriction end date. This date cannot be greater than 5 years from the current business date.
 - c. **Restriction Days:** All check boxes are pre-selected by default. Click to remove the checkmark for days you do not want the restriction to be applied. For example, if a date range is for the entire month, but you do not want it to apply on Saturdays and Sundays, you would remove the check marks from the Saturday and Sunday check box.
 - d. **Restriction Type:** Select the down arrow to choose the restriction type you want to apply. For more information, see [Restrictions](#).
 - e. **Inventory:**
 - i. **House:** Select to indicate that the restriction applies at the house (property) level.
 - ii. **Room Class:** Select the room classes from list to which this restriction applies. (Available when the Room Class OPERA Control is enabled).
 - iii. **Room Types:** Select the room types from list to which this restriction applies.
 - f. **Rate Category:** Select the rate category(s) from list to which this restriction applies. (Available when the Rate Category Restrictions OPERA Control is enabled).
 - g. **Rate Code:** Select the rate code(s) from list to which this restriction applies.
 - h. **Channel:** Select the channel(s) from list to which this restriction applies.
3. Click **Save** to save and close the dialog, or **Save and Continue** to save and add another new restriction.

Editing Restrictions

1. From the **OPERA Cloud** menu, select **Inventory**, and then select **Manage Restrictions**.
2. Confirm or enter a property, date, and other search criteria, click **Search**.
3. Click the restriction in the calendar or list view.
4. Click the vertical ellipsis **Actions** menu and then select **View** to open the Edit Restriction screen.
5. Make your changes.
6. Click **Save**.

Deleting Restrictions

1. From the **OPERA Cloud** menu, select **Inventory**, and then select **Manage Restrictions**.
2. Confirm or enter a property, date, and other search criteria, click **Search**.
3. Click the restriction in the calendar or list view.
4. Click the vertical ellipsis **Actions** menu and then select **Delete**.
5. Confirm by clicking **Delete** again on the confirmation message.

Clear All Restrictions for Selected Date

To clear all restrictions for a specific date

1. From the **OPERA Cloud** menu, select **Inventory**, and then select **Manage Restrictions**.

2. Confirm or enter a property, select the date, click **Search**.
3. Select the date in the calendar or list view.
4. Click the vertical ellipsis **Actions** menu and then click **Clear All**.
5. Confirm by clicking **Clear All** again in the confirmation dialog.

View Restrictions Changes

View a log of all changes to rate restrictions

1. Click the vertical ellipsis **Actions** menu and select **Changes Log**.
2. Enter search criteria and click **Search**.

Property Availability

Property Availability allows you to view and manage the room type inventory by providing a detailed view of all available and sold rooms. Using **View Options** you can select from various details to display and also select default values, for House and Room Type levels, to display when launching Property Availability.

Watch Video

Some values displayed in Property Availability, for example, Out of Order provide a hyperlink to access and manage the details when the value is clicked.

The following View Options are available for display in Property Availability:

Table 5-1 Property Availability View Options

View Options	Description
Max Available Rooms	Maximum Rooms Available to sell (Physical Rooms - Rooms Sold - Out of Order – Deduct Rooms Sold + Sell Limit*).
Available Rooms with Non-deduct	Minimum Rooms Available to sell (Physical Rooms - Rooms Sold - Out of Order + Sell Limit* - Non-deduct Rooms Sold).
Deduct Rooms Sold	Number of Deduct Rooms Sold (actual number of Rooms Sold in Deduct status).
Non-deduct Rooms Sold	Number of Non-deduct rooms sold (actual number of Rooms Sold in Non-deduct status).
Canceled	Canceled Reservations (number of Arrival reservations canceled for that date).
Occupancy %	Forecast Occupied Rooms (Rooms Sold / (Physical Rooms - Out of Order + Sell Limit*) x 100).
Occupancy with Non-deduct %	Forecast Occupied Rooms (Rooms Sold + Non-deduct Rooms Sold) / (Physical Rooms - Out Of Order + Sell Limit*) x 100).
Availability %	Forecast Available Rooms ((Available Rooms / (Physical Rooms - Out Of Order + Sell Limit*) x 100).
Availability with Non-deduct %	Forecast Available Rooms (Available Rooms - Non-deduct Rooms Sold) / (Physical Rooms - Out Of Order + Sell Limit*) x 100).
Physical Rooms	Physical number of rooms configured for the property.

Table 5-1 (Cont.) Property Availability View Options

View Options	Description
Out of Order Rooms	Number of rooms set to Out of Order status.
Out of Service Rooms	Number of rooms set to Out of Service status.
Restrictions	A flag indicates that one or more restrictions exist for this date.
Non-deduct Rooms Available (Blk)	Number of rooms available in non-deduct group blocks.
Deduct Rooms Available (Blk)	Number of rooms available in deduct group blocks.
Non-Deduct Rooms Picked Up (Blk)	Number of rooms picked-up in non-deduct group blocks (reservation made).
Deduct Rooms Picked Up (Blk)	Number of rooms picked-up in deduct group blocks (reservation made).
Arrival Rooms	Number of Arrival rooms.
Departure Rooms	Number of Departure rooms.
Arrival Persons	Number of Arrival persons.
Departure Persons	Number of Departure persons.
Rooms Sold Persons	Number of persons.
Day Rooms	Number of Day Use Rooms.
Day Persons	Number of person in Day Use Rooms.
Non-Deduct Rooms Available (Blk)	Number of rooms available in non-deduct group blocks.
Deduct Rooms Available (Blk)	Number of rooms available in deduct group blocks.
Non-Deduct Rooms Picked Up (Blk)	Number of rooms picked-up in non-deduct group blocks (reservation made).
Deduct Rooms Picked Up (Blk)	Number of rooms picked-up in deduct group blocks (reservation made).
Arrival Rooms	Number of Arrival rooms.
Departure Rooms	Number of Departure rooms.
Arrival Persons	Number of Arrival persons.
Departure Persons	Number of Departure persons.
Rooms Sold Persons	<TBA> - functional
Day Rooms	Number of Day Use Rooms.
Day Persons	Number of persons in Day Use Rooms.
Sell Limit Rooms	Number of rooms with a set Sell Limit (number of rooms that increase (overbook, positive sell limit) or decrease (under book, negative sell limit*) the allowable rooms available to sell).

* If the Sell Limit is negative, then subtract it in the equation. For example, if the Physical rooms is 155 and the Sell Limit is -8, then the calculation for Physical rooms + Sell Limit would be 155 - 8.

Viewing Property Availability

1. From the **OPERA Cloud** menu, select **Inventory** and then select **Property Availability**.
2. Select the **Property**, enter the date and other optional information, and then click **Search**. The results are separated into house availability and room type availability
3. Click **Days** list to change the number of day columns in the search results.

 **Note:**

The number of days available for selection depends on your workstations resolution. At a minimum you can choose between 1 day or 7 days availability, at a maximum up to 28 days availability.

4. Click **View Options** to include or remove details to display.
 - a. **House Options**
 - i. **Default View.** Select the value that you want to display by default when launching Property Availability
 - ii. Select the values that you want to display in the Room Type availability section. The Select / Deselect All check box is available to select all options. For more information, see [Property Availability](#)
 - b. **Room Type Options**
 - i. **Default View.** Select the value that you want to display by default (per room type) when launching Property Availability
 - ii. Select the values that you want to display in the Room Type availability section. The Select / Deselect All check box is available to select all options.
 - c. Refer [Property Availability](#).
5. Click **Expand All** to expand all House and Room Type rows to view all details
6. Click a Date to launch the [Manage Restrictions](#)
7. Click an Available Rooms value to open [Manage Sell Limits](#)
8. From the vertical ellipsis:
 - a. Click **Edit Available Rooms** to enable inline edit of Max Available Rooms value for House and Room types on the property availability page.
 - i. Click **Save**.
 - b. Click **Edit Sell Limits** to enable inline edit of Sell Limit value on the property availability page.
 - i. Click **Save**.
 - c. Click **Edit Sell Control** to enable inline edit of Sell Control value on the property availability page.
 - i. Click **Save**.

- d. Click **Edit Restrictions** to launch the [Manage Restrictions](#).
- e. Click **Block Details** to navigate to [Using Group Rooms Control](#).

Sell Limits

Sell Limits let you control room availability at your property. You can configure sell limits from the Property Availability screen in the Inventory section.

You can set sell limits using positive numbers, negative numbers, or zero.

A positive sell limit overbooks rooms. It sets the number of rooms to sell at more than the number of actual physical rooms. You might overbook rooms to compensate for expected cancellations and no-shows.

A negative sell limit underbooks rooms. It subtracts the number of rooms to sell from the number of actual physical rooms. You might underbook rooms to prevent the sale of certain room types or room classes.

A zero sell limit lets you insert a zero sell limit on individual dates within a range of days. For example, suppose you set sell limits of 15 for a three-week period. You could exclude the Saturdays and Sundays from the sell limits by entering zero on those days.

You can set sell limits:

- For any day or range of dates.
- By house or room class/room type, or both.
- By a number of rooms (flat).

Setting Sell Limits

Using Linked Numbers

On the Property Availability screen, you can change sell limits by selecting linked numbers in individual cells on the Sell Limit row.

1. From the **OPERA Cloud** menu, select **Inventory**, select **Property Availability**, and then click **Search**. If the sell limit row is not visible on the screen, click **View Options** and select **Sell Limit**.
2. On the Property Availability screen, click a number by date from the Sell Limit row.
3. On the Set Sell Limit screen, select **House**, **Room Type**, or **Room Class**. If selecting Room Type or Room Class, a field appears for selecting specific room types or room classes.
4. Select a **Begin Date** and an **End Date**. If setting a range of days, select each day to include it in the new sell limit. Deselect checked days to exclude them from the new sell limits.
5. In the **Sell Limit** field, enter the number of rooms you want to limit.
6. Click **Save**.

Using Edit

Setting sell limits is one way to control the number of rooms available to sell. You can set limits on house inventory, individual room types, or room classes using Edit Sell Limits.

1. From the **OPERA Cloud** menu, select **Inventory**, select **Property Availability**, and then click **Search**. If the sell limit row is not visible on the screen, click **View Options** and select **Sell Limit**.
2. Click the vertical ellipsis button. The following options are available: Edit Available Rooms, Edit Sell Limits, and Edit Sell Control Rooms. Editing sell limits impacts the numbers in the Available Rooms row and the Sell Control Rooms row.
3. Select **Edit Sell Limits**. Individual cells in the sell limit rows can now be edited by date in the house section and for individual room types.
4. Select a cell and type in a new number, and then click **Save**.

Room Management

Housekeeping enables you to schedule daily room cleaning, maintenance, and housekeeping staff activities. It provides information on room status, out of order/out of service rooms, and forecasting.

You can assign daily housekeeping duties, collect and view room status, view room forecasts based on reservations, view room floor plans and photographs or drawings of the property, resolve room occupancy discrepancies, and resolve room maintenance requests.

Forecasting Housekeeping Services

Prerequisites for Forecasting Housekeeping Services

As each room type can be setup with a different [housekeeping task schedule](#), the **Housekeeping Forecast** is available to view a summary of the expected housekeeping tasks, occupancy, arrival rooms, stay over rooms, departure rooms, adults in-house, and children in-house for the current or future dates.

The **Statistics** panel indicates the Occupancy, Arrival, Stayover and Departure details. When the Housekeeping Credits OPERA Control is set to Facility the total credits are displayed. When the Turndown OPERA Control is active the Statistics panel also displays a row for Turndown . The value in the day columns shows the number of reservations with the Turndown check box selected in the [reservation Housekeeping panel](#) and displays as a hyperlink for the current business date only, allowing you to view all room reservations which have requested for Turndown today.

The **Tasks** panel indicates the number of rooms for each task, on each date. Click + to expand the task details and view the [Housekeeping task supplies](#) such as bed linen, towels, soap and other amenities required to be supplied.

Note:

House Keeping task supplies such as, supply items hand towels and soap are included in the forecast.

Viewing the Housekeeping Task Schedule Forecast

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Housekeeping Forecast**.
2. Use the following search criteria for the forecast:
 - a. **Property**: Enter or select a property.
 - b. **Task**: Select one or more housekeeping tasks from the list
 - c. **Start Date**: Enter or select a date.
 - d. **Use Priority**: Each task has a priority level assigned to it. Select the check box to display the task with the highest priority for the room when more than one task applies for a specific date based task frequency.
3. Click **Search**.
4. Click **>** to increase the dates by one week or click **<** to decrease the dates by one week.

Generating the Housekeeping Task Schedule Forecast Report

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Housekeeping Forecast**.
2. Click **Report**.
 - a. Enter report parameters.
 - b. Select the report destination.
 - c. Click **Process**.
 - d. See [Housekeeping Reports](#)

Using the Housekeeping Board

[Prerequisites for Using the Housekeeping Board](#)

The Housekeeping Board provides you with room and room status information plus reservation and profiles details for each room, if applicable.

Using the Housekeeping Board you can search and update the status of a room or a range of rooms.

[Watch Video](#)

Room Status refers to the current cleaning status of the room:

1. **Inspected**: An optional status to indicate a clean room has been inspected by a supervisor (available when the Inspected Status OPERA Control is active).
2. **Clean**: Indicates the room has been serviced and is clean.
3. **Pickup**: An optional status to indicate a minimum "touch-up" housekeeping service is required. This might occur if the room is occupied for only a few minutes and only needs refreshing (available when the Pickup Status OPERA Control is active).
4. **Dirty**: Indicates the room is dirty and requires a cleaning service.

5. **Out of Service:** Indicates the room is unavailable for occupancy, but remains part of inventory availability and could be sold (available when the Out of Service OPERA Control is active).
6. **Out of Order:** Indicates the room is not available for the front desk for assignments and is removed from inventory availability. Out of Order rooms affect RevPAR, average rate, and occupancy calculations (available when the Out of Order OPERA Control is active).

To set a room Out of Order or Out of Service, use the specific options [Managing Out of Order](#) and [Managing Out of Service](#).

As part of the End of Day procedures, the status of occupied rooms is updated according to the Update Occupied Room Status OPERA Control. The status of vacant rooms is updated according to the Update Vacant Room Status OPERA Control. Refer to [OPERA Controls – Room Management](#).

When the Discrepant Rooms OPERA Control is active, you can also update the housekeeping status of room(s) to identify a skip or sleep discrepancy with Front Office.

When the Turndown OPERA Control is active, you can update the turndown status of rooms(s) as needed.

When the Guest Service Status OPERA Control is active, an integrated system such as a PBX can set a Guest Service Status on rooms.

You can manage Guest Service Status from the Housekeeping Board. The Service Statuses available are:

- Make up room
- Do Not Disturb

You can set the Do Not Disturb (DND) Guest Service Status from the [Housekeeping Task Sheet Companion](#).

The following logic applies in relation to Guest Service Status:

- For a reservation room move, the Do Not Disturb and/or Make Up Room status are removed.
- Make Up Room status is removed during the End of Day process.
- Do Not Disturb status is retained after the End of Day process.
- For reservation check out, the Do Not Disturb and Make Up Room statuses are removed.

Modifying Display Options

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Housekeeping Board**.
2. Enter search criteria and click **Search**.
3. Click **Display Options**:
 - a. **Reservation Information.** Select to display reservation information for each room. The display of guest names is determined by the Show Guest Name in Task Sheets and Housekeeping Board task assigned to roles.
 - b. **Turndown.** Select to display turndown (available when the Turndown OPERA Control is active).

4. Click **Close**.

Updating Room Status

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Housekeeping Board**.
2. Enter search criteria and click **Search**.
3. Select one or more rooms from the search results.
4. Click **Update Room Status**:
 - a. The selected rooms are listed on the Set Room Status screen.
 - b. **Prioritize**: Select to prioritize the room(s) in the [task sheet companion](#).
 - c. **Status**: Select a room status:
 - i. **Inspected**: An optional status to indicate a clean room has been inspected by a supervisor (available when the Inspected Rooms OPERA Control is active).
 - ii. **Clean**: Indicates the room has been serviced and is clean.
 - iii. **Pickup**: An optional status to indicate a minimum "touch-up" housekeeping service is required (available when the Pickup Rooms OPERA Control is active).
 - iv. **Dirty**: Indicates the room is dirty and requires cleaning service.
5. Click **Close**.

Updating Housekeeping Status (Discrepancy)

This functionality is available when the Discrepant Room OPERA Control is active.

Amending the Housekeeping status results in a discrepancy between Housekeeping and Front Office status. The outcome is either a Sleep or Skip discrepancy for the front office to resolve. Refer to [Viewing Room Discrepancies](#).

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Housekeeping Board**.
2. Enter search criteria and click **Search**.
3. Select one or more rooms from the search results.
4. Click **Update Room Status**:
 - a. On the Set Room Status screen, click the + symbol on Housekeeping Status to expand this area.
 - b. Select **Vacant** or **Occupied**.
5. Click **Close**.

Updating Guest Service Status

This functionality is available when the Guest Service Status OPERA Control is active. You can update Service Status only on rooms with a service status set.

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Housekeeping Board**.
2. Enter search criteria and click **Search**.
3. Select one or more rooms from the search results.

4. Click **Update Room Status**:
 - a. On the Set Room Status screen, click the + symbol on Guest Service Request to expand this area.
 - b. Select **Do Not Disturb**, **Make up Room**, or **No Status**.
5. Click **Close**.

Updating Turndown Status

This functionality is available when the Turndown OPERA Control is active.

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Housekeeping Board**.
2. Enter search criteria and click **Search**.
3. Select one or more rooms from the search results.
4. Click **Update Room Status**:
 - a. On the Set Room Status screen, click the + symbol on Turndown Status to expand this area.
 - b. Select **Completed**, **Requires**, or **Not Required**.
5. Click **Close**.

Prioritizing a Room

Use Prioritize to update the cleaning priority of a room in the Housekeeping Task Sheet Companion.

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Housekeeping Board**.
2. Enter search criteria and click **Search**.
3. Select one or more rooms from the search results.
4. Click **Update Room Status**:
 - a. Select the **Prioritize** check box to prioritize the room(s) in the [task sheet companion](#).
5. Click **Close**.

Generating the Housekeeping Details Report

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Housekeeping Board**.
2. Enter search criteria and click **Search**.
3. Click the **vertical ellipsis** and select **Report**.
 - a. Enter **report parameters**.
 - b. Select a **report destination**.
 - c. Refer to [Generating Reports](#).
4. Click **Process**.

Managing Room Discrepancies

Prerequisites for Managing Room Discrepancies

You can update the Housekeeping status of a room to identify there is a discrepancy with the Front Office status. For example, when a reservation is checked in and the front office status is occupied, but housekeeping finds the room vacant you can set the room as Skip discrepant. When the Front Office status is vacant and housekeeping identify the room as occupied you can set the room as Sleep discrepant. It is also possible to update the housekeeping status and set a room as discrepant using the OPERA Cloud mobile application; for more information, see [Room Status](#). Front office must then resolve room discrepancies by checking in or checking out a reservation for the room.

When there is a discrepancy between the Front Office and Housekeeping status of a room you can update the housekeeping status to record a sleep or skip discrepancy.

- A Sleep discrepancy is when the front office shows the room as vacant, but housekeeping reports it as occupied (For example, there is luggage in the room).
- A Skip discrepancy is when a reservation is checked into the room, so the front office shows it as occupied, but housekeeping reports the room as vacant.

 **Note:**

You can view Skip discrepant reservations in [Departures](#) and [Quick Check Out](#) search by selecting the **Skip Rooms Only** checkbox.

Search Discrepant Rooms

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and select **Room Discrepancies**.
2. Enter search criteria and click **Search**.
3. Rooms are listed in the search result.

Updating Housekeeping / Discrepancy Status

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and select **Room Discrepancies**.
2. Enter search criteria and click **Search**.
3. Select one or more rooms in the search result, then click **Update Room Status**.
4. In the Housekeep Status section select:
 - a. **Vacant**: To record the room as Skip discrepant.
 - b. **Occupied**: To record the room as Sleep discrepant.
5. Click **Close**.
6. For more information, see [Using the Housekeeping Board](#).

Generating Housekeeping Discrepancy Report

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and select **Room Discrepancies**.
2. To generate the **hk_discrepancy report**, click the **Vertical Ellipsis** and click **Report**.
3. Enter report parameters as required.
4. Select a report destination:
 - a. **Preview**: Select the preview the report as PDF.
 - b. **Print**: Select to print to an email addressable printer. For more information, see [Configuring Printers](#).
 - i. **Printer**: Select the printer from the list.
 - c. **Email**: Select to email report.
 - i. **Email Address**: Enter an email address.
5. Click **Process**.

Viewing Floor Plans

Floor Plans provide a graphical layout of floors, rooms, and other physical features such as stairways, HVAC closets, elevators, and so on. Floor plans can use color coding for room status and provide room-specific information, including the property name, room number, front office status, room status, room type, and reservation status.

1. From the OPERA Cloud menu, select **Inventory**, and select **Room Management** and then select **Floor Plan**.
2. Enter information for a Property and Floor and then click **Search**.
3. Click **View Options** to select the Room Status, Front Office Status, and Reservation Status options you wish to view, and then click **OK**.

If a user clicks a room then **Room Details** is displayed.

1. Update the Room Status.
2. Update the Housekeeping Status to identify a discrepant room.
3. Select **Prioritize** to place the room at the top of the list for cleaning on the Task Sheet.
4. Click **Close**.

Managing Room Maintenance Requests

[Prerequisites for Managing Maintenance Requests](#)

[Watch Video](#)

Room Maintenance enables you manage and resolve maintenance requests such as changing a light bulb , repairing a faulty lock, service a faulty air conditioning unit and so on, for guest rooms.

You can assign maintenance requests to staff according to a staff member's skills and/or qualifications.

The management of maintenance tasks is also available on the [OPERA Cloud Mobile](#) web app.

Adding Maintenance Requests

1. From the **OPERA Cloud** menu, select **Inventory**, select **Rooms Management**, and then select **Room Maintenance**.
2. Click **New** and enter the following details:
 - a. **Room**: Enter or select room(s) from the list.
 - b. **Reason**: Select a reason (type) from the list.
 - c. **Remarks**: Enter descriptive information regarding the maintenance request.
 - d. **User**: Select a user to assign the task to a specific user.
 - i. **Expected By.**: Enter or select a completion date.
3. Click **Save**.

Editing Maintenance Requests

1. From the **OPERA Cloud** menu, select **Inventory**, select **Rooms Management**, and then select **Room Maintenance**.
2. Enter search criteria and click **Search**.
3. Select a maintenance request from the list and click **Edit**.
4. Update details.

 **Note:**

To assign a request select a **User**.

5. Click **Save**.

Deleting Maintenance Requests

1. From the **OPERA Cloud** menu, select **Inventory**, select **Rooms Management**, and then select **Room Maintenance**.
2. Enter search criteria and click **Search**.
3. Select a maintenance request from the list and click **Delete**.
4. Click **Delete** to confirm.

Resolving Maintenance Requests

1. From the **OPERA Cloud** menu, select **Inventory**, select **Rooms Management**, and then select **Room Maintenance**.
2. Enter search criteria and click **Search**.

3. Select a maintenance request from the list and click **Resolved** check box (column).

Generating Maintenance Report

1. From the **OPERA Cloud** menu, select **Inventory**, select **Rooms Management**, and then select **Room Maintenance**.
2. Click **Vertical Ellipsis**, select **Report**.
3. Update report parameters.
4. Select report destination.
5. Click **Process**.

Managing Out of Order Rooms

Prerequisites for Out of Order

Out of order rooms are deducted from room inventory; reservation cannot be allocated to a room in OO status.

Note:

Default Reason is specified in [OPERA Controls](#).

Adding Out of Order Rooms

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Out of Order**.
2. Click **New**.
3. Enter the search criteria and click **Search**.
4. Select one or more rooms in the result.
5. Click **Set Out of Order** and complete the following:
 - a. **Reason:** Select the Reason for the out of order status. For more information, see [Configuring Out of Order and Out of Service Reason Codes](#) .
 - b. **From Date:** Select the desired dates to change the rooms' status.
 - c. **Nights:** Add or remove number of nights for which the room needs to out of order.
 - d. **Through Date:** The room will automatically be returned to inventory during end of day processing for the Through Date.
 - e. **Return Status:** Return Status Select the status that the room(s) when returned to service.
6. Click **Set Out of Order**.

Editing Out of Order Rooms

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Out of Order**.
2. Enter search criteria and click **Search**.

3. In the search results, select the **Code** and click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Set Out of Order**.

Deleting Out of Order Rooms

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Out of Order**.
2. Enter search criteria and click **Search**.
3. From the search results, select the **Code** and click the vertical ellipsis **Actions** menu and select **Delete**.
4. Update the details.
5. Click **Delete Out of Order** to confirm.

Managing Out of Service Rooms

Prerequisites for Out of Service

Out of Service rooms are not removed from inventory. The out-of- service rooms remain in the availability and can be sold if the need arises. It is possible to assign a reservation to a room in out of service room status.

Note:

Default Reason is specified in [OPERA Controls](#).

Adding Out of Service Rooms

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Out of Service**.
2. Click **New**.
3. Enter the search criteria and click **Search**.
4. Select one or more rooms in the result.
5. Click **Set Out of Service** and complete the following:
 - a. **Reason:** Select the Reason for the out of service status. For more information, see [Out of Order and Out of Service Reason Codes](#).
 - b. **From Date:** Select the desired dates to change the rooms' status.
 - c. **Nights:** Add or remove number of nights for which the room needs to out of service.
 - d. **Through Date:** The room will automatically be returned to inventory during end of day processing for the Through Date
 - e. **Return Status:** Select the status that the room(s) when returned to service.
6. Click **Set Out of Service**.

Editing Out of Service Rooms

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Out of Service**.
2. Enter search criteria and click **Search**.
3. In the search results, select the **Code** and click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Set Out of Service** .

Deleting Out of Service Rooms

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Out of Service**.
2. Enter search criteria and click **Search**.
3. From the search results, select the **Code** and click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** Out of Service to confirm.

Managing Room Conditions

Prerequisites for Managing Room Conditions

Watch Video

Room Conditions allow you to assign a special , temporary condition to rooms resulting in the room being available (displayed) or not available within [Available Room search](#), depending on how you configure the room condition code. Room conditions are a useful way to communicate special , temporary conditions of a room with front desk agents..

For example, you could set a room condition, on a room, to temporarily remove the room in the available room search result because it is being used for room shows or for a photography shoot. Or you could set a room condition on a room to indicate that the inter-connecting door is unlocked or that the minibar has been removed, and have this room condition display to front desk agents in [Available Room search](#). See [Configuring Room Conditions](#).

Adding Room Conditions

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Room Conditions**.
2. Click **New**.
3. Enter search criteria and click **Search**.
4. Select the room(s) to add room condition and click **Select**.
5. In the **Details** panel complete the following
 - a. **Condition**. Select a condition from the list

 **Note:**

The type column indicates whether the room is available or unavailable in the Available Room search.

- b. Remarks.** Enter additional details about the room condition.
6. Click **Save**
7. Click **Back to Room Conditions** on confirmation page

Editing Room Conditions

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Room Conditions**.
2. Enter search criteria and click **Search**.
3. Select the room in the search result, click the **vertical ellipsis** and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Room Conditions

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Room Conditions**.
2. Enter search criteria and click **Search**.
3. Select the room(s) in the search result, click **Delete**.

Generating Room Condition Room (hkassignroomall)

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Room Conditions**.
2. Click **Report**.
 - a.** Enter report parameters.
 - b.** Select a report destination.
 - c.** See [Generating Reports](#).
3. Click **Process**.

Viewing Property Site Plan Images

The Site Plan is available to display images of the property, facilities, amenities or other subject matter such as diagrams that are useful to staff.

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Site Plan**.
2. Select a Property and click **Search**.
3. Click an image in the search result to view larger image.

Using the Attendant Console

Prerequisites for Using the Attendant Console

The Attendants Console enables you to evaluate the progress of each housekeeping room attendant and monitor the time taken to service a room, view task completion percentage, total and completed number of credits, and relative location of a housekeeping attendant. The information is gathered from the Mobile Task Sheet Companion [Mobile Task Sheet Companion](#) or [Task Sheet Companion](#), which attendants use to manage the rooms assigned to their task sheet.

Viewing Task and Attendant Information

To view room information through Attendant Console, do the following:

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, and then select **Attendant Console**.
2. Enter search criteria and click **Search**.
3. Select the **Details** tab to view details for each attendant.
4. Click **+** to expand details for a specific attendant.
5. Select the **Summary** tab to view a summary for all attendant.

Task Sheets

Prerequisites for Task Sheets

- **Auto Generate Task Sheets**

[Watch Video](#)

- **Manually Create a Task Sheet**

[Watch Video](#)

Task Sheets inform housekeeping room attendants about their daily work assignments; providing a list of rooms assigned to attendants, any special instructions about specific rooms, and related reservations details.

When the Task Sheets OPERA Control is active you can generate task sheets without the option to select a task; rooms with the selected room status(es) are simply added to the task sheets. Alternatively, when the Advanced Task Sheet OPERA Control is active you can generate task sheets by selecting a task and specifying other options; providing more flexibility in task sheet management.

When the Task Sheets or Advance Task Sheets and Housekeeping Task Scheduling OPERA Control are both active you can select multiple tasks when generating task sheets. The task assigned to each room is determined by the [task schedule](#) configured for the [room type](#) or setup on the [reservation](#). Housekeeping Task Scheduling is useful in limited service and/or extended stay operations, where a room is not eligible for a daily full service.

 **Note:**

A room with a departure reservation will always be assigned the departure task. Housekeeping Task Scheduling is useful in limited service and/or extended stay operations, where a room is not eligible for a daily full service.

Task sheets can either be auto-generated or manually created by allocating rooms to each task sheet and assigning the housekeeping attendant as needed. Based on the Additional Task Sheet OPERA Control selection, additional task sheets can be generated for rooms with Do Not Disturb (Available when the Guest Service Status OPERA Control is active) and No Service Required (that is, no task is scheduled for the date).

With the Inspected Status OPERA Control active, you can generate separate task sheets for room inspections (rooms in clean status). With the Turndown OPERA Control active, you can generate separate task sheets for turndown service based on the evening sections and credits.

After creating the daily task sheets, you can generate and distribute task sheet reports to room attendants or supervisors. For more information, see [Generating Task Sheet Reports](#)

Task sheets are also accessible from the Task Companion on mobile devices. The Task Companion replaces the need for printed task sheet reports by providing real-time, interactive housekeeping task management and enables you to update room and housekeeping status, view and resolve reservation traces, and request assistance from other room attendants. For more information, see [OPERA Cloud Mobile Application Overview](#) and [Task Sheet Companion](#) (Tablet).

You can track task sheet completion and attendant progress from the [Attendant Console](#).

Generating Task Sheets

Use Generate Task Sheets to generate task sheets for an individual attendant, a group of attendants, or all available attendants on a daily basis.

 **Note:**

A warning message will display if task sheets with the same task(s) already exist.

Auto-Generating Task Sheets

1. From the **OPERA Cloud** menu, select **Inventory**, select **Task Sheets**, then **Auto Generate Task Sheets**.
2. In the Resources panel, do the following:
 - a. **Template Code:** Select a previously saved template to populate pre-selected values to the parameters.
 - i. Click **Manage Templates** to edit or delete templates.
 - ii. To edit, click vertical ellipsis, click **Edit**, update template details, click **Save**.
 - iii. To delete, click vertical ellipsis, click **Delete**, click **Delete** to confirm.
 - b. **Turndown:** Select the generate turndown task sheets.

- c. **Task(s):** Select the task(s) from the list to include in the task sheets. (Not available when only the Task Sheet OPERA Control is active). (Multiple tasks can be selected when the Housekeeping Task Scheduling OPERA Control is active).
 - d. **Show All Scheduled Tasks:** This checkbox is available when at least 2 Tasks are selected. When unchecked, only the scheduled Task with the highest priority will be shown. When checked, all scheduled tasks that fall on the day will be shown.
 - e. **Next Day:** Select to generate task sheets for the following day rooms/reservations.
 - f. **Attendants:** Select the attendants to assign to the task sheets.
 - g. **Number of Attendants:** or enter the number of attendants.
 - h. **Maximum Credits:** Enter the maximum number of credits to be assigned to any one attendant/task sheet. Credits will be divided evenly by the number of attendants entered in the Number of Attendants field, not to exceed this number per attendant per Task Sheet. Any remaining rooms/credits will flow down to an overflow task sheet.
 - i. **Inhouse First:** Available when no Attendants are chosen and the Number of Attendants is 0.
 - j. **Task Instructions:** Task instructions default to any task instructions set up for the selected task(s). You may edit the instructions. Instructions are displayed on task sheet reports and in the task companion.
 - k. **Room Instructions:** Enter any default room instructions; Instructions are displayed on task sheet reports and in the task companion.
 - l. **Attendant Instructions:** Enter any default attendant instructions; to all attendants; Instructions are displayed on task sheet reports and in the task companion.
 - m. Click **Next**.
3. In the Room (Reservation) Criteria Panel, do the following:
 - a. **Room Status:** Select the statuses of the rooms to be included on the generated Task Sheets. If a room is scheduled for a task, the room status is verified against the selections made here; if a match is found, the room is included in the Task Sheet.
 - b. **Front Office Status:** Select the **Vacant** and/or **Occupied** check boxes. The Task Sheet will include only the rooms that match the FO statuses you select. (By default, both are selected.) No rooms will be printed if neither option is selected.
 - c. **Reservation Status:** Select the reservation statuses to be included in the Task Assignment sheet. The Task Sheet includes only rooms that match the reservation statuses you select. By default, none of the reservation statuses are selected reservation status is not considered and all rooms are included, regardless of reservation status.
 - d. **Room Assignment:** Select Assigned and/or unassigned to filter the rooms. The Task Sheet includes only the rooms that match your selection.
 - e. **Room Class:** Select room classes from list to limit room type selection to specific room classes (Available when the **Room Class OPERA** Control is active).

 **Note:**

When the Guest Service Status OPERA Control is active and the Additional Task Sheets OPERA Control is set to NSR and/or DND, additional task sheets will be generated during the auto generation process.

- When NSR is selected, the No Service Required task sheet is generated.
- When DND is selected, the Do Not Disturb task sheet is generated.

Traveling Task Credits Functionality

When the Housekeeping Credits is set to either Rooms or Facility, a Traveling Task Credits OPERA Control can have a one or two-digit value. As part of the auto task assignment, the Traveling Task Credits setting is included in calculating the maximum number of credits when the rooms assigned are distributed across multiple floors. OPERA Cloud differentiates floors for both numeric and alpha values and recognizing that multiple floors can be defined for a single room number, a Traveling Task Credit will be applied for each floor change. Traveling credits show in the total of each task sheet on the screen and in the summary section on the task sheet reports.

Manually Creating Task Sheets

1. From the **OPERA Cloud** menu, select **Inventory**, select **Task Sheets**, then **Create Manual Task Sheets**.
2. At the New Task Sheet prompt complete the following:
 - a. **Turndown:** Select to create turndown task sheets (Available when the Turndown OPERA Control is active).
 - b. **Task(s):** Select the task(s) from list to assign to the task sheet. (Not available when only the Task Sheet OPERA Control is active). (Multiple tasks can be selected when the Housekeeping Task Scheduling OPERA Control is active).
 - c. **Room(s):** Select the room(s) from list to assign to the task sheet. Selecting no rooms will create a 'blank' task sheet.
 - d. **Credits:** Enter the number of credits to assign to the task sheet.
 - e. **Room Instructions:** Enter any default room instructions; Instructions are displayed on task sheet reports and in the task companion.
3. Click **Create**.
4. Click **New** to create an additional task sheet and repeat steps.

Managing Task Sheets

Editing Task Sheets

To assign a room attendant and add task instructions.

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, select **Task Sheets**, then **Manage Task Sheets**.

2. Enter search criteria and click **Search**.
3. Select the task sheet card in either summary or detail tabs, click **Manage**.

 **Note:**

You can select another task sheet to manage by selecting the task sheet number from list.

4. Select **Edit**.
 - a. **Attendant:** Select a [housekeeping attendant](#) from the list to assign to the task sheet. The room attendant can access their assigned task sheet on the [Task Companion](#) or [mobile task companion](#).
 - b. **Task Sheet Instructions:** Enter or update any instructions to display or output on the task sheet.
 - c. Click **Save**.

Adding Room(s) to Task Sheet

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, select **Task Sheets**, then **Manage Task Sheets**.
2. Enter search criteria then click **Search**.
3. Select the task sheet card in either summary or detail tabs, click **Manage**.
4. Click **Actions**, select **Add Room(s)**.
5. **Rooms:** Select rooms from list.
6. **Credits:** Enter the number of credits to assign.
7. **Room Instructions:** Enter room instructions for the rooms selected.
8. Click **Add**.

Deleting Room(s) from Task Sheet

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, select **Task Sheets**, then **Manage Task Sheets**.
2. Enter search criteria then click **Search**.
3. Select the task sheet card in either summary or detail tabs, click **Manage**.
4. Select the room(s).
5. Click **Actions**, select **Remove Room(s)** .

Reassigning Rooms to Another Task Sheet

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, select **Task Sheets**, then **Manage Task Sheets**.
2. Enter search criteria then click **Search**.
3. Select the task sheet card in either summary or detail tabs, click **Manage**.
4. Select the room(s).
5. Click **Actions**, select **Move Room(s) to Another >> task sheet number**.

Updating Room Details

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, select **Task Sheets**, then **Manage Task Sheets**.
2. Enter search criteria then click **Search**.
3. Select the task sheet card in either summary or detail tabs, click **Manage**.
4. Select the room(s).
5. Click **Actions**, select **Update Room Details**.
 - a. **Credits**: Enter the number of credits to assign.
 - b. **Room Instructions**: Enter room instructions for the rooms selected.
 - c. Click **Update Room Details**.

Updating Priority, Room and Housekeeping Status.

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, select **Task Sheets**, then **Manage Task Sheets**.
2. Enter search criteria, then click **Search**.
3. Select the task sheet card in either summary or detail tabs, then click **Manage**.
4. Select the room(s) from the task list then click **Actions** and select **Update Room Status**.
 - a. The selected rooms are listed on the Set Room Status screen.
 - b. **Prioritize**: Select to prioritize the room(s) in the [task sheet companion](#).
 - c. **Status**: Select a room status:
 - i. **Inspected**: An optional status to indicate a clean room has been inspected by a supervisor (available when the Inspected Rooms OPERA Control is active).
 - ii. **Clean**: Indicates the room has been serviced and is clean.
 - iii. **Pickup**: An optional status to indicate a minimum "touch-up" housekeeping service is required (available when the Pickup Rooms OPERA Control is active).
 - iv. **Dirty**: Indicates the room is dirty and requires cleaning service.
 - d. **Housekeeping Status**: Select a housekeeping status; amending HK status will result in discrepant room; refer [Viewing Room Discrepancies](#) .
 - e. Click **Close**.

Locking Task Sheet

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, select **Task Sheets**, then **Manage Task Sheets**.
2. Enter search criteria, then click **Search**.
3. Select the task sheet card in either summary or detail tabs, then click **Manage**.
4. Click **Actions**, select **Lock Task Sheet**.

Merging Task Sheets

1. From the **OPERA Cloud** menu, select **Inventory**, select **Room Management**, select **Task Sheets**, then **Manage Task Sheets**.
2. Enter search criteria, then click **Search**.
3. Select the task sheet card in either summary or detail tabs, then click **Manage**.
4. Click **Actions**, select **Merge Task Sheet**, **Task sheet number**.

Generating Task Sheet Reports

1. From the OPERA Cloud menu, select **Inventory**, select **Room Management**, select **Task Sheets**, then **Manage Task Sheets**.
2. Enter search criteria and click **Search**.
Click **Vertical Ellipsis**, click **Report**.
 - a. Enter report parameters.
 - b. **Report Style**: Report format determines what information is included in the report. Select from among the following available styles:
 - **Type 1** (Landscape Orientation): Room No., Room Status, FO Status, Reservation Status, Title, Guest Name, Tasks, Totals.
 - **Type 2** (Landscape Orientation) (Displayed when Housekeeping Task Scheduling OPERA Control is active.): Room No., Room Status, FO Status, Reservation Status, Title, Guest Name, Tasks, Facility Codes with Counts, Totals.
 - **Type 3** (Landscape Orientation): Room No., Room Type, FO Status, Reservation Status, Guest Name, Arrival Date, Departure Date, Tasks, Totals.
 - **Type 4** (Landscape Orientation) (No Guest Name): Room No., Room Status, Section AM, Section PM, Reservation Status, Turndown, FO Status, VIP, Arrival Date, Arrival Time, Departure Date, Departure Time, # of Adults, # of Children, Tasks, Totals.
 - **Type 5** (Landscape Orientation) (Tasksheet 4 with Credits displayed): Room No., Room Status, Section AM, Section PM, Credits, Reservation Status, Turndown, FO Status VIP Arrival Date, Arrival Time, Departure, Departure Time, # of Adults, # of Children, Tasks, Totals.
 - **Type 6** (Landscape Orientation) (Tasksheet 5 with FO Status and Guest Name displayed, No Credits): Room No., Room Status, FO Status, Section AM, Section PM, Reservation Status, Turndown, Guest Name, Arrival Date, Arrival Time, Departure Date, Departure Time, VIP, # of Adults, # of Children, Tasks, Totals.
 - **Type 7** (Landscape Orientation) (Tasksheet 6 with Credits displayed): Room No., Room Status, FO Status, Section AM, Section PM, Credits, Reservation Status, Turndown, Guest Name, Arrival Date, Arrival Time, Departure Date, Departure Time, VIP, # of Adults, # of Children, Tasks, Totals.
 - **Type 8** (Landscape Orientation) (Room Details with Specials & Customized Room Instructions): Room No., Room Type, Room Status, FO Status, Section AM, Section PM, Credits, Reservation Status, Nationality, Title, Guest Name, Arrival

Date, Arrival Tim, Departure Date, Departure Time, VIP, # of Adults, # of Children Specials, Tasks/Room Instructions, Totals, Block Code.

- **Type 8 Large Font** (Landscape Orientation) (Room Details with Specialized & Customized Room Instructions - Large font): Room No., Room Type, Room Status, FO Status, Section AM, Section PM, Credits, Reservation Status, Nationality, Title, Guest Name, Arrival Date, Arrival Tim, Departure Date, Departure Time, VIP, # of Adults, # of Children, Specials, Tasks/Room Instructions, Totals, Block Code.
- **Type 9** (Landscape Orientation) (Room Details with Specialized & Customized Room Instructions without Guest Nationality): Room No., Room Type, Room Status, FO Status, Section AM, Section PM, Credits, Reservation Status, Next Reservation Arrival Time, Turndown, Title, Guest Name, Arrival Date, Arrival Tim, Departure Date, Departure Time, VIP, # of Adults, # of Children Specials, Tasks/Room Instructions, Totals, Block Code, Traces.
- **Type 9 Large Font:** (Landscape Orientation) (Room Details with Specialized & Customized Room Instructions without Guest Nationality - Large font): Room No., Room Type, Room Status, FO Status, Section AM, Section PM, Credits, Reservation Status, Next Reservation Arrival Time, Turndown, Title, Guest Name, Arrival Date, Arrival Tim, Departure Date, Departure Time, VIP, # of Adults, # of Children Specials, Tasks/Room Instructions, Totals, Block Code.
- **Type 10** (Landscape Orientation) (Simple task sheet): Room No., Room Status, FO Status, Totals.
- **Type 11**(Portrait Orientation) (Simple task sheet): Room No., Room Status, Credits, Reservation Status, Arrival Date, Departure Date, # of Adults, # of Children, Tasks/Room Instructions, Totals.
- **Type 12** (Landscape Orientation): Room No., Room Type, Room Status, FO Status, Adults, Children, Tasks, Cleaning Time, Credits, Reservation Status, Membership Level, Arrival Date, Arrival Time, Mobile Registered, Departure Date, Departure Time, Specials, Room Instructions, Room Check.
- **Summary** (Landscape Orientation) (Summary of housekeeping task sheets): Date, Task Sheet Number, Attendant, Total Rooms, Total Credits, Dirty Rooms, Pickup Rooms, Clean Rooms, Departure Rooms, # of Adults, # of Children, Totals.

- c. **Destination:** Select a report destination.
- d. Click **Process**.

Using the Task Sheet Companion

Prerequisites for Using the Task Sheet Companion

Watch Video

The Task Companion replaces the need for printed task sheet reports by providing real-time, interactive housekeeping task management via tablet and enables you to update room and housekeeping status, view and resolve reservation traces and request assistance from other room attendants.

Note:

When the Housekeeping Task Scheduling OPERA Control is active, multiple tasks are combined into a single task sheet. Select from the list of tasks. You can view all task sheets when the Access All Task Assignments in Task Companion task is assigned to your role(s).

Using the Task Sheet Companion

1. From the **OPERA Cloud** menu, select **Inventory**, select **Task Sheets**, and then select **Manage Task Sheets**.

Note:

You can also drill down from the Task Sheet dashboard tile

2. Search and select the required task, and then click **Search**.
3. Select the task and click **Manage**.
4. On the **Manage Task Sheet** screen, click **Actions**, and select **Go to Task Sheet Companion**.
5. All rooms assigned to the task sheet are listed in the **My Rooms** panel on the right; click the tab to open and close the panel.
 - a. Rooms are sequenced according to the predefined task priority. See [Task Companion Auto-Priority](#).
 - b. The requested service time from the reservation is displayed along side each room.
6. Room and task instructions details are displayed in the top left panel.
 - a. Room attendant, task and reservation-specific instructions are displayed in this panel.
 - b. Housekeeping supply items are also listed.
 - c. Click **Go on Break** to pause the task and indicate that you're on a break; this status is displayed in the [Attendant Console](#).

7. Reservation details are displayed in the bottom left panel
 - a. Click **Traces** to view and manage any traces for the reservation. See [Adding Traces to Reservations](#) .

 **Note:**

If there are multiple reservations applicable for the room (eg due out and due in), click **Load More Items** to display additional reservations in the panel.

8. To commence the task for the room click **Start**.

 **Note:**

Depending on the Task Companion Timer OPERA Control, a time counter might increment or decrement during completion of the task.

- a. Update the room status when task is complete.
 - i. **Room Status:** Click a new status to update the room status.
 - ii. **Housekeeping Status:** Click to update the housekeeping status ; this option is used to report a skip or sleep discrepancy. See [Viewing Room Discrepancies](#).
 - b. Click **Finish** when the task is complete.
 - c. Click **Next Room** then click **Start** to commence the next room.
 - d. To skip a room click **Next Room**.
 - e. Repeat for all rooms listed in the My Rooms panel.
9. To request assistance from another room attendant, click **Need Assistance** (Available when the **Task Companion Assistance OPERA Control** is active).
 - a. Enter a message and click **Send General Assistance**.
 - b. To send an emergency assistance request, click **Send Emergency**.

 **Note:**

Users with the **Receive Task Companion General Assistance Notifications** task assigned to their role(s) will receive any General Assistance notifications. Users with the **Receive Task Companion Emergency Assistance Notifications** task assigned to their role(s) will receive any Emergency notifications.

Task Companion Auto-Priority

Rooms displayed in the task companion are sequenced according to the following priority, based on the active **OPERA Controls**.

1. Vacant + pickup + arrival + VIP + queue.
2. Vacant + dirty + arrival + VIP + queue.
3. Vacant + pickup + arrival + queue.
4. Vacant + dirty + arrival + queue.
5. Vacant + Pickup + room type on queue.
6. Vacant + Dirty + room type on queue.
7. Prioritized for Service
8. Vacant + pickup + arrival + VIP + ETA (within next 60 minutes).
9. Vacant + Dirty + arrival + VIP + ETA (within next 60 minutes).
10. Vacant + pickup + arrival + ETA (within next 60 minutes).
11. Vacant + Dirty + arrival + ETA (within next 60 minutes).
12. Vacant + pickup + arrival + VIP.
13. Vacant + dirty + arrival + VIP.
14. Vacant + pickup + arrival.
15. Vacant + dirty + arrival.
16. Vacant + pickup.
17. Vacant + dirty.
18. Occupied + stay over + pickup + VIP.
19. Occupied + stay over + dirty + VIP.
20. Occupied + stay over + pickup.
21. Occupied + stay over + dirty.
22. Occupied + stay over + pickup + DND.
23. Occupied + stay over + dirty + DND.
24. Occupied + due out + pickup.
25. Occupied + due out + dirty.

Accounts Receivables

Prerequisites for Accounts Receivables

Watch Video

OPERA Cloud's Accounts Receivables feature enables you to create accounts and manage Direct Billing for company, travel agent, group, source, and guest profiles so that charges can be accumulated and billed for payments on an agreed-upon schedule. It also provides the tools for creating Accounts Receivables Accounts, tracking account activity across multiple properties, preparing reminder and statement letters, and managing invoices and payments.

Note:

Zero balance invoices are purged according to the Zero Invoice Purge Days [OPERA Control](#).

Managing Accounts Receivables Accounts

To create an AR Account you must first select or create a profile to link to the AR Account; the AR Account then inherits the name of the profile. You can create multiple

AR Accounts for a single profile; each AR Account will have a unique AR Address (address type). An AR account number will be automatically generated for a new AR account when the Automatically Assign Account Number OPERA Control is active.

**Note:**

Permanent AR Accounts with a zero balance are not purged; non-permanent accounts with a zero balance are purged or can be deleted.

**Watch Video****Adding Accounts Receivables Accounts**

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Manage Accounts Receivables**.
2. Click **I Want To . . .** and select **Create Account**.
3. Search for and select the Profile.
 - a. If no profile exists, click **I Want To . . .** and select a profile type listed to create a new profile. See [Creating a Guest or Contact Profile](#) and [Creating a Sales Account Profile](#).
 - b. You can then select the newly created profile for the AR account.
4. On the Account Setup screen, complete the following:
 - a. **Primary Account:** Select to make this the primary Accounts Receivables account for this profile. A profile can have multiple Accounts Receivables accounts at the same property, however, only one of those accounts can be designated as the primary account for that property. The primary account is used as the default, for example, when the profile has multiple accounts and an account is listed on a screen or appears in a report.
 - b. **Opt In Email for Reminders and Statements.** Select to include AR Account in email delivery of Statements and Reminders.
 - c. **Permanent Account:** Select the Permanent Account check box if this account is to be a permanent Accounts Receivables account. As long as this check box is selected, the account cannot be deleted.
 - d. **Month End Calculation:** Select the check box to calculate the Payment Due Date based on the last day of the month for the Bill Generation Date and add the number specified in the Payment Due Days field to determine the Payment Due Date that appears on the folio.
 - e. **Include In Batch Statements:** Select to include the account when running batch statements. You might not want to include certain accounts such as internal accounts or credit card accounts in batch statements.
 - f. **Restricted:** Select this checkbox to prevent additional invoices being created in Accounts Receivable, or prevent guest ledger (Front Office) invoices being settled by Direct Bill to this AR account.
 - i. **Restricted Reason:** Select a reason for restriction from the list.
 - g. **Property:** Enter or select the required property from the list. Property list will be determined by your current [location](#).

- h. Account Type:** Select an Account Type from the list. Account Types help you to categorize your AR Accounts for searching and reporting. Account type selection also determines the AR Statement template to be used and the reminder letter cycle for this AR Account. For more information, see [Configuring Accounts Receivable Account Types](#)
 - i. Account Number (ID):** Enter an AR Account ID according to the format specified in the [Account Picture OPERA Control](#) and can be alpha-numeric. This field is disabled when the Automatically Assign Account Number OPERA Control is active; an account number is automatically generated.
 - j. Credit Limit:** Specify the maximum amount of credit available to this account, or the amount of the letter of credit provided by the account holder. You can change this amount if necessary. If you attempt to settle to direct bill and the transaction would exceed the credit limit for the account, a warning message prompts you to indicate whether you wish to proceed with the action.
 - k. Contact:** Enter the name of the AR account contact. If you enter a contact here, the contact is used for AR purposes only (for example, for statements and reminder letters).
 - l. Payment Due Days:** (Available when the Payment Due Days OPERA Control is active). Enter or select a number between 0-999 that indicates the number of days until the payment is due for the AR account. This date can be displayed on the AR Folio (generated in AR) by adding the `AR_PAYMENT_DUE_DATE` merge code to your customized folio template(s), indicating the payment due date, for example, AR Pay Due Date 07/07/21. For more information, see [Configuring Pay Days](#).
-  **Note:**

When you create an AR Account for a profile that already has a Payment Due Days value setup, the number automatically populates to this field. But if you create an AR Account for a Profile that does not have the Payment Due Days already configured, the number entered here does not get copied back to the Profile.
- m. Address.** By default, this field is populated with the AR Address of the profile linked to this AR account. The AR Address is used for AR purposes such as for statements and reminder letters. Update this address if AR correspondence is to be directed to a different address. You can add multiple AR Addresses to a profile to setup multiple AR accounts for one profile. For more information, see [Managing Profile Communication](#)
 - n. Phone.** By default, this field is populated with the primary phone number from the profile linked to this AR account. Update as required. For more information, see [Managing Profile Communication](#)
 - o. Email:** By default, this field is populated with the primary email address from the profile linked to this AR account. Update as required. For more information, see [Managing Profile Communication](#)
5. Click **Save**.

Editing Accounts Receivables Accounts

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Manage Accounts Receivables**.
2. Enter search criteria and click **Search**.
3. Select the AR Account in the search result, then click **I Want To. . .** then select the **Account Number** link in the search result.
4. Select a details link to access any of the following details for the AR Account.

Table 6-3 AR Account Detail Links

Account	Notifications	Billing
Account Setup. For more information, see Adding Accounts Receivables Accounts section.	Notes	Fixed Charges
Aging	Traces	Invoices
Year View	Reminders	
Future and Past Stays	Statements	

5. Click **Save**.

Distributing Accounts Receivables Accounts

When the OPERA Multi-Property Reservation Cloud Service is active, you can distribute AR Accounts to other properties from a [Hub location](#).

**Note:**

The AR Account Type must exist in the destination properties.

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Manage Accounts Receivables**.
2. Enter search criteria and click **Search**
3. Select the AR Account then click **I Want To...** then select **Account Setup**.
4. Click the vertical ellipsis **Actions** menu and select **Distribute**.
5. Search and select the destination properties then click **Select**.
6. Check the result for failures.

Deleting Accounts Receivables Accounts

 **Note:**

AR accounts cannot be deleted in the following scenarios:

- You cannot delete an AR account if it is a non-zero balance. To delete all no-balance accounts of a specific account type, or all no-balance accounts having account numbers in a specific range, use the AR Account Search screen search criteria to filter the accounts.
- You cannot delete an AR account if the account is a Permanent Account. If you need to delete a permanent account, you must first un-select the Permanent Account check box on the Account Setup screen.
- You cannot delete an AR account if there are window routing instructions on the reservation that routes charges to that account for the current business date or for a future date. This restriction applies even if there are no charges posted to that AR account.

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Manage Accounts Receivables**.
2. Enter search criteria and click **Search**.
3. Select the AR Account then click **I Want To...** and select **Delete Account**.
4. Click **Delete** to confirm.

Managing Accounts Receivables Fixed Charges

Prerequisites for Accounts Receivables Fixed Charges

Use Fixed Charges to schedule a re-occurring charge to be posted to an AR account periodically and automatically during the End of Day process. Fixed Charge also offers a convenient way to post a one-time fixed charge on a specific date in the future. A new invoice (with new invoice number) is created each time the fixed charge is posted to the AR account.

Adding Fixed Charges

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Manage Accounts Receivables**.
2. Enter search criteria, click **Search**.
3. Click **I Want To...** and then select **Fixed Charges** for the AR account in search results.

 **Note:**

Click **Show All** to view all detail links.

4. Click **New** and enter the following details:
 - a. **Frequency**: Select the frequency with which the fixed charge should be posted.
 - i. **Once**: Post the charge one time. When this option is selected, the **End Date** field becomes unavailable.
 - ii. **Daily**: Post the charge every day.
 - iii. **Weekly**: Post the charge once a week. When this option is selected, the **Day to Execute** field appears. Select the down arrow to choose the day of the week (1 = Sunday, 2 = Monday, 3 = Tuesday, and so on) to have the fixed charge posted.
 - iv. **Monthly**: Post the charge once a month. When this option is selected, the **Day to Execute** field becomes available. Select any number from 1 to 31 or **END**. Numbers 1 through 31 trigger a posting on that date each month. If the date does not fall in that month (for example, some months have fewer than 31 days), no posting occurs for the month. Selecting **End** always posts the fixed charge on the last day of the month.
 - v. **Quarterly**: Post the charge once a quarter. When this option is selected, the **Day to Execute** field becomes available. Fixed charges are posted every quarter, that is, every three months. Select the down arrow to choose the date during the last month in the quarter to have the fixed charge posted. For example, if you select 15, the fixed charges are posted on the 15th of March, the 15th of June, the 15th of September, and the 15th of December. To post the charge on the last day of the quarter, regardless of the date, select **End**.
 - vi. **Yearly**: Post the charge once a year. When this option is selected, the **Date to Execute** field becomes available. Fixed charges always post every year on the month and day you select. The year portion of the date is ignored.
 - b. **Begin Date /End Date**: Select the **Begin Date** and **End Date** to determine the period when the fixed charge can be posted to the AR Account.
 - c. **Transaction Code**: Enter or select the charge from the list.
 - d. **Quantity**: Enter the number of units to be charged. Entering a negative quantity will post a negative amount.
 - e. **Amount (Price)**: Enter the unit price of the charge. A negative amount can be entered.

 **Note:**

Fixed charges are always posted in the local/base currency for the property. The posted amount will be the price x quantity.

- f. **Supplement**: Use this field for supplemental information about the charge. For example, for a fixed parking charge you may want to enter a parking ticket number or parking space number.
5. Click **Save** or **Save and Continue** to add another fixed charge.

Editing Fixed Charges

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Manage Accounts Receivables**.
2. Enter search criteria, click **Search**.

3. Select the AR account in the search result, then click **I Want To. . .** and then select **Fixed Charges**.
 - a. Select the **Fixed Charge** then click the vertical ellipsis **Actions** menu and select **Edit**.
 - b. Make the desired changes.
 - c. Click **Save**.

Deleting Fixed Charges

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Manage Accounts Receivables**.
2. Enter search criteria, click **Search**.
3. Select the AR account in the search result, then click **I Want To. . .** and then select **Fixed Charges**.
 - a. Select the **Fixed Charge** then click the vertical ellipsis **Actions** menu and select **Delete**.
 - b. Click **Delete** to confirm.

Managing Accounts Receivables Notes

The Accounts Receivables Notes allows you to keep a record of internal information for an account. For example, you can save information about an account's billing preferences, actions taken on an invoice, or special instructions on how to handle an account or invoice.

You could also use it to record notes during telephone conversations, to record past history of issues, or just to log general information regarding the account.

With the AR Account Presentation page the notifications link will indicate the number of notes on the AR Account; click the notification link to read the notes.

Adding Notes

1. From the OPERA Cloud menu, select **Financials**, select **Accounts Receivable**, and then select **Manage Accounts Receivable**.
2. Enter search criteria, click **Search**.
3. Select the AR Account in the search result, click **I Want To...**, **Notes**, or click the **Notes** link in Accounts Receivable Account Presentation.
4. Click **New** and complete the following:
 - a. **Type**: Select a note type. For more information, see [Configuring Note Types](#).
 - b. **Internal**: Select this check box if the comment is to be treated as internal.

 **Note:**

Internal notes are not output on stationery or on reports unless the report explicitly allows display of Internal Notes. You can uncheck this check box when Override Internal is selected in the note type configuration.

- c. **Title:** Enter a summary title for the note (will default based on note type but can be updated).
 - d. **Comment:** Enter or paste the note details; a maximum of 2000 characters (single byte) is supported.
5. Click **Save** or click **Save and Continue** to add another note.

Viewing and Updating Notes

1. From the OPERA Cloud menu, select **Financials**, select **Accounts Receivable**, and then select **Manage Accounts Receivable**.
2. Enter search criteria, click **Search**.
3. Select the AR Account in the search result, click **I Want To..., Notes**, or click the **Notes** link in Accounts Receivable Account Presentation.
4. Select the note , click **+** to expand the card to read the note comments.
5. Select **Vertical Ellipsis** and click **Edit**.
6. Update details.
7. Click **Save**.

Deleting Notes

1. From the OPERA Cloud menu, select **Financials**, select **Accounts Receivable**, and then select **Manage Accounts Receivable**.
2. Enter search criteria, click **Search**.
3. Select the AR Account in the search result, click **I Want To..., Notes**, or click the **Notes** link in Accounts Receivable Account Presentation.
4. Select **Vertical Ellipsis** and click **Delete**.
5. Click **Delete** to confirm.

Managing Accounts Receivable Traces

[Prerequisites for Accounts Receivable Traces](#)

Accounts Receivable traces are actionable instructions or reminders for follow-up on a specific date. Once an action is taken the trace is updated as resolved. You can use Traces to set reminders regarding payment collection or other to-do's related to an AR account. The [AR Trace report](#) is available to generate a list of unresolved / actionable AR traces.

Adding AR Traces

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, select **Manage Account Receivables**.

2. Enter search criteria, click **Search**.
3. Select the AR Account in the search result, click **I Want To...**, **Traces** or click the **Traces** link in AR Account Presentation.
4. Click **New** and complete the following:
 - a. **Date**: Enter the date for the trace.
 - b. **Trace text**: Enter the trace text / details.
5. Click **Save**.

Editing AR Traces

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, select **Manage Account Receivables**.
2. Enter search criteria, click **Search**.
3. Select the AR Account in the search result, click **I Want To...**, **Traces** or click the **Traces** link in AR Account Presentation.
4. Click **+** to expand the card and view trace details
5. Click **Vertical Ellipsis** and select **Edit**.
6. Update details.
7. Click **Save**.

Completing (Resolve) AR Traces

To mark a trace as completed, once it has action had been taken:

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, select **Manage Account Receivables**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To...**, **Traces** or click the **Traces** link in AR Account Presentation.
4. Click **Vertical Ellipsis** and select **Resolve**.

Deleting AR Traces

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, select **Manage Account Receivables**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To...**, **Traces** or click the **Traces** link in AR Account Presentation.
4. Click **Vertical Ellipsis** and select **Delete**.
5. Click **Delete** to confirm.

Managing AR Account Invoices and Payments

Use Manage Account Invoices to manage invoices and associated payments. Use the following steps to access the screen:

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Enter search criteria then click **Search**.
3. Select the AR account in the search result, then click the amount in the **Balance** column or click **I Want To . . .** and select **Invoices**.
4. When the Force Cashier Login OPERA Control is active you will be prompted for your cashier login credentials.

Managing the Accounts Receivables Screen

The Manage Account Invoices screen displays a table of account invoices and payments. The Account Name and Account Number appear above the invoice table along with summary information on Balance, Invoices, Payments, and Total Selected. The summary information updates in real-time depending on the rows you select.

1. **Balance:** Displays the total amount due for all invoices in this account.
2. **Invoices:** Displays the amount of all selected invoices.
3. **Payments:** Displays the sum of selected payments.
4. **Total Selected:** Displays the total of all open amounts for selected invoices, minus selected payment.
5. **Search results:** Table lists the invoices and payments.
6. **Check boxes:** Enables selecting one or more invoices/payments for making payments, creating statements, transferring invoices, and so on.

Searching for Invoices or Payments

The following optional search criteria is available for invoices and payments.

1. **Account Number:** Enter the AR Account Number.
2. **Custom Number:** Enter the full custom number or partial custom number. (Available when Custom Numbers in AR Manage Account Invoices OPERA Control is active).
3. **Folio No:** The full folio number or the first part of the folio number.
4. **Invoice No:** The full invoice number or the first part of the invoice number.
5. **Statement No:** Available when the Statement Numbering AR control is enabled. Enter the system assigned statement number associated with the invoice.
6. **From Date:** Enter or select a date for the invoice.
7. **To Date:** Enter or select a date for the invoice.
8. **Open Balance Only:** Select to display only open balance invoices (those having a non-zero balance); uncheck to include zero balance invoices and payments.
9. **Payments Only:** Select to display only payments posted to the AR account.
10. **Finalized Invoices:** Available when the Invoice Finalize Date AR control is enabled. Select to include finalized invoices in search; uncheck to exclude finalized invoices.
11. **Non-Printed:** Select the check box to display Invoices that have not been included as line items on successfully generated statements.
12. **Un Billed:** Available when the Statement Numbering AR control is enabled. Select the check box to display only the invoices that do not have a statement number associated with them.

Adding a New Invoice

1. From **Manage Accounts Receivables**, search for the account.
2. From search results, locate the account and click the Balance amount due or click the Invoices detail link.
3. On the Manage Account Invoices screen, click **New** and enter invoice information and charge information:
 - a. **Invoice Information:**
 - i. **Name:** Search and select a profile for the Invoice.
 - ii. **Market Code:** Enter or select a market code for the invoice charges.
 - iii. **Source Code:** Enter or select a source code for the invoice charges.
 - iv. **Room Class:** Select a room class from the list.
 - v. **Supplement:** Enter text if applicable.
 - vi. **Reference:** Enter a number if applicable.
 - b. **Charge Information:**
 - i. **Transaction Code:** Enter or select the charge from the list.
 - ii. **Price:** Enter the amount.
 - iii. **Generated Charges:** Click to view a list of generates charges, such as taxes, for the charge.
 - iv. **Quantity:** Enter the quantity.
 - v. **Supplement:** Use this field for supplemental information about the charge.
 - vi. **Reference:** Use this field for reference information for the charge.
 - vii. **Check Number:** Enter a number if applicable.
 - viii. **Arrangement Code:** Enter or select a folio arrange code from the list (this field is enabled when the Arrangements OPERA Control is active).
 - ix. **X :** Click  to delete a row.
 - x. Click  to post the charge
 - xi. Click **Add New Row** to add a row and post additional charge(s).
 - xii. **Total Postings, Total Taxes, and Total Charges:** Values update automatically for each charge added or deleted on the new invoice.
4. Click **Create Invoice** or click **Create and Add Another Invoice** to continue creating invoices.

Managing AR Invoice Payments

Use the Manage Account Invoices screen to post payments or apply payments to accounts receivables invoices. To post payments to an invoice or multiple invoices, select the invoice(s) and click the Make Payment button. The Make Payment button is available only when the invoice has an open balance. You can also post unallocated payments to an AR Account and apply the payment to selected invoice(s) at a later time.

Posting Payments to Invoices

1. From the OPERA Cloud menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Enter search criteria and click **Search**.
3. From search results, locate and click the amount in the **Balance** column to open the account.

 **Note:**

As an alternative, you can click the **Invoices** link on the account.

4. On the Manage Account Invoices screen, select one or more **Invoices** and click **Make Payment** to open the Pay Invoices page.
5. Complete the following:
 - a. **Property:** Select or confirm the property.
 - b. **Account:** Select or confirm the AR Account (defaults to the current AR Account).
 - c. **Invoice Selection:** Select the desired option
 - **Selected Invoices:** This option is automatically selected if you have selected one or more invoices to apply the payment to prior to selecting the Make Payment button. The payment is divided equally among the invoices you select. When you select more than one invoice for payment, the total outstanding for all selected invoices appears in the Amount field.
 - If the amount is changed to less than the total of all selected invoices, the payment is applied to the greatest outstanding balance.
 - If there is any part of the payment remaining after the greatest outstanding balance is paid, it is applied to the next largest outstanding balance, and so on.
 - If the payment is larger than the total outstanding balance on the selected invoices, the remainder is applied to the account as an unallocated payment.
 - **Oldest:** This options applies the payment to the outstanding invoice with the earliest date. If the amount of the payment is greater than the outstanding amount of the oldest invoice, the remainder of the payment is applied to the next oldest invoice that has an outstanding balance, and so on, until the payment is completely allocated. Any remaining payment amount is credited to the account as an unallocated payment.
 - **Selective(ly):** This option lets you see a list of invoices with open balance so that you can select invoices to apply payment to, along with the portion of the payment total.
 - d. **Method:** Select a payment method such as a credit card and so on. An additional screen opens for you to complete the payment details.
 - e. **Amount:** Enter the payment amount.
 - f. **Supplement:** Enter a comment relevant to the payment you are entering.
 - g. **Reference:** Enter any reference information relevant to the payment.

To post multiple payments to the AR account, you can add an additional payment panel, click **vertical ellipsis** and click **Add Payment** to display an additional payment panel. To remove the payment panel click the **vertical ellipsis** and click **Remove**.

6. Click **Post Payments**.

Posting Unallocated Payments to AR Accounts

1. From the OPERA Cloud menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Enter search criteria and click **Search**.
3. From search results, locate and click the amount in the **Balance** column to open the account.

 **Note:**

As an alternative, you can click the **Invoices** link on the account.

4. On the Manage Account Invoices screen, select one or more **Invoices** and click **Make Payment** to open the Pay Invoices page.
5. Complete the following:
 - a. **Property:** Select or confirm the property.
 - b. **Account:** Select or confirm the AR Account (defaults to the current AR Account).
 - c. **Invoice Selection:** Select the desired option
 - **Unallocated:** Selecting this option applies the payment to the AR account, but the payment is not allocated to any invoice.
 - d. **Method:** Select a payment method such as a credit card and so on. An additional screen opens for you to complete the payment details.
 - e. **Amount:** Enter the payment amount.
 - f. **Supplement:** Enter a comment relevant to the payment you are entering.
 - g. **Reference:** Enter any reference information relevant to the payment.

To post multiple payments to the AR account, you can add an additional payment panel, click **vertical ellipsis** and click **Add Payment** to display an additional payment panel. To remove the payment panel click the **vertical ellipsis** and click **Remove**.

6. Click **Post Payments**.

Applying Unallocated Payments to Selected invoice

You can apply one or more unallocated payments posted to the AR Account to an invoice.

1. From the OPERA Cloud menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Enter search criteria and click **Search**.

3. From search results, locate and click the amount in the **Balance** column to open the account.

 **Note:**

As an alternative, you can click the **Invoices** link on the account.

4. On the Manage Account Invoices screen:
 - a. Select the unallocated payment(s).
 - b. Select the invoice to apply the payment(s) to.

 **Note:**

The summary bar totals will update accordingly.

- c. Click **Apply Payment** ; the payment or payments are immediately applied to the selected invoice, and the updated invoice balance appears in the Open column.

 **Note:**

If the payment total is greater than the outstanding balance of the invoice, an unallocated payment will remain in the AR account.

Selectively Applying an Unallocated Payment to One or More Invoices

You can apportion an allocated payment to one or more invoices or part-pay a single invoice.

1. From the OPERA Cloud menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Enter search criteria and click **Search**.
3. From search results, locate and click the amount in the **Balance** column to open the account.

 **Note:**

As an alternative, you can click the **Invoices** link on the account.

4. On the Manage Account Invoices screen:
 - a. Select the unallocated payment.
 - b. Select the invoice(s).

 **Note:**

The summary bar totals will update accordingly.

- c. Click **Apply Payment Selectively**.

- d. The selected invoices appear in a list. Enter the (partial) payment amount to apply to each invoice listed. The **Total Specified** indicates the total applied to the invoices listed.
- e. Click **Apply Payment** to post payment amounts to the respective invoice(s).

 **Note:**

Any remaining amount will remain as an unallocated payment in the AR account

Reversing AR Invoice Payments

Reversing Payments

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Enter search criteria then click **Search**.
3. Select the AR account in the search result, then click the amount in the Balance column or click **I Want To . . .** and select **Invoices**.
4. When the Force Cashier Login OPERA Control is active you will be prompted for your cashier login credentials.

 **Note:**

When the Manage Account Invoices screen opens, you can use the fields or check boxes to narrow your search for invoices.

5. Select a payment then click **Reverse Payment**.
 - a. A debit payment for the original payment amount is posted with the supplement **Reverse Posting**.

 **Note:**

To view reverse payments (open balance = 0.00); update the search criteria and deselect the Open Balances Only check box.

Unapplying Payments

Unapplied payments will list as unallocated payment in the AR Account. To view applied payments (open balance = 0.00); update the search criteria and deselect the **Open Balances Only** check box.

1. In the **OPERA Cloud** menu, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Search for Accounts Receivables.
3. Select the AR account in the search result, then click the amount in the Balance column or click **I Want To . . .** and select Invoices.
4. When the Force Cashier Login OPERA Control is active you will be prompted for your cashier login credentials.

 **Note:**

When the Manage Account Invoices screen opens, you can use the fields or check boxes to narrow your search for invoices.

5. Select an invoice or payment with an amount in the **Paid** column.
6. Click **Pay History** or click **Unapply Payment**. Payments are displayed in posting date order.
 - a. Select the payment(s) to unapply from the list.
 - b. Click **Unapply Selected Payment(s)**.

Viewing Payment History

Use Pay History to view the details all payments posted to an invoice. To access payment history, select a payment or invoice that displays an amount in the **Paid** column; the **Pay History** action button then appears.

 **Note:**

To view applied payments (open balance = 0.00); update the search criteria and deselect the **Open Balances Only** check box.

Viewing AR Invoice Payment History

1. From the **OPERA Cloud** menu, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Search for Accounts Receivables.
3. From search results, locate and click the **Amount** in the Balance column to open the account.

 **Note:**

When the Manage Account Invoices screen opens, you can use the fields or check boxes to narrow your search for invoices. For example, to search for payments made starting on a particular date, use the calendar tool or enter the date in the From Date field. The first payment made on that date will scroll to the top of the search results grid.

4. Select an **Invoice** with an amount in the Paid column.
5. Click the **Pay History** button to view payment history.
6. The following columns provide payment history. The information shown in certain fields differs depending on whether you selected an invoice or a payment.
 - a. **Date:** The posting date of the payment.
 - b. **Invoice:** The number of the invoice to which the payment was applied, if applicable.
 - c. **Code:** The transaction code for the payment method.
 - d. **Description:** The description of the payment method transaction code.
 - e. **Original Amount:** The full amount of the payment.
 - f. **Applied Amount:** The amount of the payment applied to the current invoice. (The payment might have been split between invoices with only part of it applied to the current invoice).
 - g. **Reference:** Reference information for this payment. The credit card number appears here if a credit card was used for the payment.
7. Click **Close** when finished viewing payment history.

Compressing Invoices

Use the Compress feature to combine two or more invoices into one new invoice.

- After you compress invoices, you cannot add new postings or adjust transactions on the invoice.
- You cannot compress invoices that include postings for the current business date.
- You cannot compress invoices that have been paid either partially or in full.
- The Payment button is not available for the detail invoices of a compressed invoice. You can apply a payment only to the top-level master invoice.

When you combine two or more invoices into a single invoice, the combined entry is assigned a new invoice number on the Manage Account Invoices page. The new parent invoice reflects the total amount of the compressed invoices and displays an icon to identify the record as compressed.

A plus sign (+) appears to the left of the parent invoice; click the plus sign (+) to expand and view the original invoices, now marked by an icon, that are now compressed. The plus sign (+) changes to a minus sign (-). Click the minus sign (-) to collapse the display of individual invoices to view only the compressed invoice.

Compressing Invoices

To compress two or more invoices, mark the invoices you want to combine and select the Compress button. The Compress Invoices screen appears, showing the account name and total amount of the compressed invoices. Enter Supplement or Reference text if applicable.

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, and then select **Manage Accounts Receivables**.
2. Enter search criteria, then click **Search**.

3. Select the AR account in the search result, then click the amount in the **Balance** column or click **I Want To . . .** and select **Invoices**.
4. When the Force Cashier Login OPERA Control is active you are prompted for your cashier login credentials..
 - a. On Manage Account Invoices:
 - b. Select the invoice check boxes of two or more invoices you want to compress.
 - c. Click **Compress Invoices** and complete the following:
 - i. **Supplement:** Enter any supplementary information text.
 - ii. **Reference:** Enter any reference information.
 - iii. Click **Compress Invoices**.

Uncompressing Invoices

You can decompress invoices that have been compressed on the same business day; once the business date has changed the option is not longer available.

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, and then select **Manage Accounts Receivables**.
2. Enter search criteria, then click **Search**.
3. Select the AR account in the search result, then click the amount in the **Balance** column or click **I Want To . . .** and select **Invoices**.
4. When the Force Cashier Login OPERA Control is active you are prompted for your cashier login credentials.
 - On Manage Account Invoices.
 - Locate and select the compressed (parent) invoice.
 - Click **Uncompress Invoices**.

Viewing and Managing Invoice Details

Prerequisites for Viewing and Managing Invoice Details

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Search for the account.
3. In search results, locate and open the account by clicking the **Balance** amount due.

 **Note:**

As an alternative, you can click the **expand icon** and then click the **Invoices link** on the account.

4. If a login screen appears, enter your cashier **sign-in** and click **Login**.
5. On the Invoices popup, click **Manage**.
6. From the Manage Account Invoices screen, select an **invoice** and click **Manage Invoice Details**.

7. Use Search to locate additional postings. Enter any of the following search criteria:
 - a. **Date From/Date To.** Displays the postings for a range of dates.
 - b. **Transaction Code.** Select to search for transaction codes to display postings.
 - c. **Transaction Code Subgroup.** Select to search for transaction code subgroups to display postings.
 - d. **Check Number.** Enter the check number to search for postings associated with that check.
 - e. **Cashier.** Select to search for postings made by cashier ID.
 - f. **Supplement.** Enter text to search for postings having that text in the Supplement field.
 - g. **Reference.** Enter text to search for postings having that text in the Reference field.

Generating a Folio

1. From the Manage Invoice Details screen, click **View Folio** to open the Report Destination dialog. Select any of the following:
 - a. **Folio Style.** Select a [folio style](#).
 - b. **View In Currency.** Select a currency.
 - c. **Folio Text.** Enter folio text to output when generated.
 - d. **Report Destination.** Select Preview or other print/electronic options.

Postings Additional Charges to an Invoice

You can post additional charges to AR invoices when the [No Modify Invoice](#) and the [Folio No Reprint](#) OPERA Controls are inactive, and the invoice is not [finalized](#).

1. On the Manage Invoice Details screen, select the **vertical ellipsis**, and select **Post Charges**.
2. If required, enter your cashier **sign-in** and click **Login**.
3. Complete the following:
 - a. **Transaction Code.** Enter or select the charge from the list.
 - b. **Price.** Enter the amount.
 - c. **Quantity.** Enter the quantity.
 - d. **Supplement.** Use this field for supplemental information about the charge.
 - e. **Reference.** Use this field for reference information for the charge.
 - f. **Check Number.** Enter a number if applicable.
 - g. **Arrangement Code.** Enter or select a folio arrange code (this field is enabled when Arrangement cashier control is active).
4. Click **Post Charges**.

Editing Postings

1. On the Manage Invoice Details screen, select a **transaction**, select the **vertical ellipsis**, and select **Edit Posting**.

2. If required, enter your cashier **sign-in** and click **Login**.
3. Update or add text in the Supplement field.
4. Update or add text in the Reference field.
5. Enter a **check number**.
6. Click **Save Transaction**.

Posting Adjustments to an Invoice

After posting transactions, you can make the following changes using the Post Adjustments feature:

- Adjust postings made on or before the current business date.
- Make a flat-amount or a percentage change to invoice transactions based on transaction codes/routing codes and date range.

You can post adjustments to AR invoices when the [No Modify Invoice](#) and the [Folio No Reprint](#) OPERA Controls are inactive. The AR Invoice Adjustment Period AR OPERA Control determines the period after the invoice date that an invoice can be adjusted. The Adjust action is unavailable if there are no charges on the invoice remaining open to adjustment or when the invoice is [finalized](#).

1. On the Manage Invoice Details screen, select a **transaction**, select the **vertical ellipsis**, and select **Post Adjustments**.
2. If required, enter your cashier **sign-in** and click **Login**.
3. Make the following adjustments:
 - a. **Amount/Percentage**. Select the Amount option button to adjust all selected transactions by the same fixed amount. Select the Percentage option button to adjust all selected transactions by the same fixed percentage
 - b. **Amount**. Enter the amount or percentage to adjust.
 - c. **Reason**. Select an adjustment reason from the list.
 - d. **Reason Text**. Update or enter reason text as needed.
4. Click **Process Adjustments**.

Transferring Invoice Charges

Prerequisites for Transferring Invoice Charges

You can transfer charges from a selected invoice in an AR account to another AR account. The source AR account balance is decreased by the amount equal to the postings that are transferred to the target AR account. The charges appear on the target invoice associated with the same transaction codes as on the source invoice.

Transfers offer the following options:

- Transfer individual charges from an invoice in one AR account to a new invoice in a different AR account.
- Transfer individual charges from an invoice in one AR account to an existing invoice in a different AR account.
- Transfer charges from an invoice in one AR account to a new invoice in a new AR account.

Consider the following conditions when transferring individual charges:

- You cannot transfer charges from an invoice if that invoice was previously transferred from one AR account to another AR account.
- Transferred postings are flagged on the source invoice so you cannot edit these transactions.
- The Transfer Charges feature is available only for invoices associated with reservations that are checked out.
- If an automatic statement number was assigned to an invoice (available when the Accounts Receivable > Statement Numbers parameter is active), you cannot transfer the charges on that invoice. You must first unlink the statement number from the invoice.
- You cannot transfer payments.

Transferring Charges

1. On the Manage Invoice Details screen, select the **charges** you want to transfer.
2. Click the **vertical ellipsis** and select **Transfer Charges**.
3. On the Transfer Charges screen, select a **Transfer Scope**.

To transfer to a different invoice in the current account:

- a. Select to **transfer the charges** to a different invoice in the current AR account.
- b. Search and select the **invoice** from the list and click **Select Invoice**.

To transfer to a different invoice in a different account:

- a. Select to **transfer the charges** to a different AR account and invoice.
 - b. Enter the **account number** or search for the AR Account.
 - c. Enter or search the **invoice number** to receive the transferred charges.
4. Click **Transfer Postings**.

Transferring Invoices or Payments to a Different AR Account

Use the AR Transfer feature to transfer invoices or payments from one AR account to another AR account.

The following rules control transfers of invoices and payments:

- You cannot transfer an invoice after applying a payment; you must first unapply the payment to enable transferring the invoice.
- You cannot transfer a payment after applying it; you must first unapply the payment to enable transferring the invoice.
- You cannot transfer a finalized invoice.
- You cannot transfer an invoice that is associated with a Credit Card account.

Transferring Invoices or Payments

1. From the OPERA Cloud menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Select or confirm the **Property**, enter additional search criteria, and click **Search**.

3. From search results, locate the account and click the **amount due** in the Balance column to open the Manage Account Invoices screen.
4. Select the **invoice(s)** or **payment(s)** and click **Transfer**.
5. From the Transfer screen, enter the **Account Number**:
 - a. Search and select or enter the **destination AR Account Number**.
 - b. Enter search criteria and click **Search**.
 - c. Select the **AR Account** in search results and click **Select**.
6. Enter the Supplement information:
 - a. Enter a comment pertaining to this transfer.
 - b. The information appears in the Supplement field of the transaction on the Manage Invoice screen for the originating, or source, account.
7. Click **Transfer**.

 **Note:**

The invoice transfer appears in the source account when you search (with the Open Balances Only check box deselected) for all invoices to include zero balance invoices.

Finalizing Invoices

Prerequisites for Finalizing Invoices.

The Finalize Invoice feature allows you to lock invoices, ensuring that no further charges or adjustments can be posted, nor charges edited to update reference or supplemental. Use the Finalize Invoice feature to indicate the invoice has been reviewed and is ready to submit to the debtor. The finalized invoice date can be the start date for invoice aging when Finalize Date is selected as the Date for Aging [OPERA Control](#).

Finalizing Invoices

You are required to enter your PIN when the Force Cashier Login OPERA Control is active.

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Enter search criteria and click **Search**.
3. From search results, select the AR Account then click the amount in the **Balance** column.

 **Note:**

As an alternative, you can click the Invoices link in the AR Account.

4. On the Manage Account Invoices screen:
 - a. Select the invoice(s), then click **Finalize**.

Un-finalizing Invoices

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and select **Manage Accounts Receivables**.
2. Enter search criteria and click **Search**.
3. From search results, select the AR Account then click the amount in the **Balance** column.

 **Note:**

As an alternative, you can click the Invoices link in the AR Account.

4. On the Manage Account Invoices screen:
 - a. Select the finalized invoice(s), then click **Unfinalize**.

Viewing Accounts Receivable Aging

AR Account Aging provides a summary of the invoice aging according to the aging levels setup in [OPERA Controls](#). The aging "clock" is determined by the Date for Aging OPERA Control. Choices include the date the invoice is transferred to AR from Front Office (ART); the date the invoice is closed in AR (INC); the reservation check out date (COD); or the date when the interim bill or advance bill is generated and settled to an AR Account (ING).

Aging information appears in graph and table formats:

- The graph generates a color-coded view of net balances owed in each property.
- The table breaks down the balances owed by aging period (Bucket).

Viewing AR Account Aging

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, and then select **Manage Account Receivables**.
2. Enter search criteria then click **Search**.
3. Select the AR Account in search result, then click **I Want To. . .** and select **Aging**.
 - a. Click **View Summary** to view summary (Total Amount).
 - b. Click vertical ellipsis Actions menu and select **View Details** to toggle to display details (Open Balance and Credits).

Viewing Accounts Receivables Future and Past Stays

Future and Past Stays displays a list of the reservations linked to the AR Account profile.

 **Note:**

The Future & Past Stays details link count displays a maximum of (26). The Future & Past Stays panel displays a maximum of 50 reservations.

Viewing AR Account Future and Past Stays

To view the Future and Past Stays, do the following:

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, and then select **Manage Account Receivables**.
2. Enter search criteria then click **Search**.
3. Select the AR Account in search result, then click **I Want To . . .** and select **Future And Past Stays**.
 - a. The panel displays list of Future Reservations and Past Reservations.
 - b. Click **[+]** to expand a reservation and view linked profiles.
 - c. Click **Confirmation** to open Reservation Presentation for the selected reservation. See [Editing a Reservation](#).
 - d. Click **Rate** to view the rate code information.
 - e. Click **Room Type** to view the room type information.

Viewing Accounts Receivables Accounts Changes Log

The Accounts Receivables Changes Log displays account activity by Date, Time, Action Type, Description, and other details. The Changes Log provides the following types of AR Account information:

- Transfers from Front Office to AR (Transfer of Invoice).
- Postings made to existing account invoices (New Posting for Invoice).
- New invoices added to the account (Invoice Posting).
- Payments and reverse payments posted to the account (Post and Reverse Post).
- Compressed invoices (Compression of Invoice).
- Finalized Invoices (Invoices that have been finalized).
- Old Balances posted to the account (Old Balance).

Viewing AR Account Changes Log

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivable**, and then select **Manage Accounts Receivables**.
2. Enter search criteria then click **Search**.
3. Select the AR Account in search result, then click **I Want To . . .** and select **Changes Log**.

Generating a Changes Log Report

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivable**, and then select **Manage Accounts Receivables**.
2. Enter search criteria then click **Search**.
3. Select the AR Account in search result, then click **I Want To . . .** and select **Changes Log**.
4. Click the page level vertical ellipsis **Actions** menu and select **Report**.
5. Select a **Report Destination** and click **Process**.

Viewing Accounts Receivable Year View

Use Year View to see annual summary of an AR Account in table or graph format. The bar chart graph shows net debits and un-allocated credits. A trend line shows an account balance pattern over 12 months. The graph provides a legend for the color coded data. Select Debit, Credit, or Balance on the legend to isolate information on the graph. By default the data appears in a graph format, to see the data in table format, click **Table**.

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Manage Accounts Receivables**.
2. Enter search criteria then click **Search**.
3. Select the AR account, then click **I Want To. . .** and select **Year View**.

Generating Accounts Receivable Reminder Letters

Use reminder letters to generate a letter based on the defined reminder cycle for the [AR Account Type](#). When the Simple Reminder OPERA Control is active the **Cycle** is displayed; otherwise the **Age** is displayed. Reminder letters are setup using the [Stationery Editor](#) in the Accounts Receivable Reminders and Statements [report group](#).

Generating an AR Account Reminder Letter

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, select **Manage Account Receivables**, and then search for accounts.
2. Enter search criteria then click **Search**.
3. Select the AR Account in search result, then click **I Want To. . .** and select **Reminders**.
 - a. **View in Currency**: Select a currency from the list (Available when the Multi-currency OPERA Control is active)
 - b. Eligible reminder letter is displayed, click **Process Reminder**.
 - c. Select a destination.
 - d. Click **Process**.

Viewing Reminder Letter History

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, select **Manage Account Receivables**, and then search for accounts.

2. Enter search criteria then click **Search**.
3. Select the AR Account in search result, then click **I Want To. . .** and select **Reminders**.
4. Click the vertical ellipsis Actions menu and select **History**.
 - a. Enter search criteria, then click **Search**.

Generating Batch Account Receivable Reminder Letters

Use reminder letters to generate a letter based on the defined reminder cycle for the [AR Account Type](#). Reminder letters are setup using the [Stationery Editor](#) in the Accounts Receivable Reminders and Statements [report group](#).

When the Simple Reminder OPERA Control is active the **Cycle** is displayed; otherwise the **Age** is displayed. The Reminder Details screen sorts reminder letters in the order in which they were set up, starting with the first letter that was configured. This is typically the order in which these letters are generated for reminder letter mailings. There may be more than one letter "queued up" to be generated for the account depending on the age of the account balance and which letters have already been generated. When Simple Reminder OPERA Control is inactive, reminder letters are sorted based on the number of days in the reminder cycle, lowest to highest. For this parameter setting, reminder letter mailings are generated depending on the age of the account balance, not on which letters have already been mailed. For example, assuming there are 30, 60, and 90 day cycles, if the account balance is 63 days old when letters are generated, the 60 day letter is sent, regardless of whether the 30 day letter was sent.

Generating AR Account Reminder Letters

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, select **Manage Account Receivables**, and then search for accounts.
2. Enter search criteria then click **Search**.
3. Select the AR Account(s) to process in the search result , then click **Process Selected Reminders**.
 - a. **View in Currency**: Select a currency from the list (Available when the Multi-currency OPERA Control is active)
 - b. Select reminders to generate. To select multiple, hold down the Control key and click each row
 - c. Click **Process Reminder**.
 - d. Select a destination.
 - e. Click **Process**.

Viewing Reminder Letter History

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, select **Manage Account Receivables**, and then search for accounts.
2. Enter search criteria then click **Search**.
3. Select the AR Account(s) to process in the search result , then click **Process Selected Reminders**.
4. Click **History** for an AR Account listed.
 - a. Enter search criteria, then click **Search**.

Creating and Generating Accounts Receivable Statements

Accounts Receivable Statements

The statement template generated is selected in the AR Account Type of the [AR Account](#)

When the Statement Numbering OPERA Control is active a unique number is assigned to each statement generated (per property). This allows you to see which invoices have been included in each statement and to search for invoices using the statement (reference) number. Once an invoice is associated to a statement, you must use the Unlink action to remove the invoice from the statement before that invoice can be included in a different statement. The Balance Brought Forward Statement Mode is ignored if selected for the [AR Account](#).

 **Note:**

The sample_statement_numbering template must be customized when utilizing the AR Statement Numbering feature.

Generating AR Account Statement

1. From the **OPERA Cloud** menu, select **Financials**, select **Account Receivables**, and then select **Manage Account Receivables**.
2. Enter search criteria then click **Search**.
3. Select the AR Account in search result, then click **I Want To. . .** and select **Statements**.
 - a. Select the AR Account(s) to process then click **Process Selected Accounts**.
 - b. For more information, see [Generating Account Receivable Account Batch Statements](#).

Generating Account Receivable Account Batch Statements

As well as generating a statement for a specific [AR Account](#) you can generate statements for multiple AR Account in a batch process. The statement template generated is selected in the [AR Account Type](#).

 **Note:**

Typically, you would use either **Balance Forward From** or **Last Posted From** and **Last Posted To** to specify the date range to be included on the statement.

When the Statement Numbering OPERA Control is active a unique number is assigned to each statement generated (per property). This allows you to see which invoices have been included in each statement and to search for invoices using the statement (reference) number. Once an invoice is associated to a statement, you must use the Unlink action to remove the invoice from the numbered statement before that

invoice can be included in a different statement. The Balance Brought Forward Statement Mode is ignored if selected for the [AR Account Type](#) of the AR Account.

**Note:**

The `sample_statement_numbering` template must be customized when utilizing the AR Statement Numbering feature. For more information, see [Stationery Report Groups](#).

Generate Batch AR Account Statements

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Batch Statements**.
2. Enter search criteria then click **Search**.
3. Select the AR Account(s) to process in the search result, then click **Process Selected Accounts**

**Note:**

To select all AR Account click the selection check box in the column header.

- a. **View in Currency:** Select a currency from the list. Available when the Multi-Currency OPERA Control is active.
- b. **Print Zero Balance:** Select check box to include zero-balance (paid) invoices on the statement.
- c. **Print Invoices:** Select check box to generate invoices along with the statement.

**Note:**

This check box will be selected by default when the **Print Separate Folios** check box is selected in the [Stationery Report Groups](#) of the AR Account. Only folios with a folio number assigned will be generated. Folios that do not have a folio number (such as those created using [Enter Old Balances](#) will not be generated.

- d. **Include Previously Printed Statements:** Select check box to include previously generated statements . (Not available when the Statement Numbering OPERA Control is active)
- e. **Balance Forward From:** Enter or select a Balance Fwd date. The Balance Brought Forward Statement Mode is enabled per [AR Account Type](#). Balance Forward is not applicable when the Statement Numbering OPERA Control is active.
- f. **Last Posted From:** Enter or select a date to indicate the start of transactions to include in the statement.
- g. **Last Posted To:** Enter or select a date to indicate the end date of transactions to include in the statement.

- h. Order By:** Select a sort order for the invoices listed on the statement. When the **Print Invoices** check box selected, invoices will be generated in the same order.
- i. Copies:** Enter or select the number of copies of the statement to generate.
- j. Promotional Text:** Enter optional text message to output on the final page of the statement.
- k.** Click **Process Statements**.

Managing Direct Bill Transfers

When the 'Direct Bill' or 'AR Settlement' payment method is used to settle the balance of a reservation account [billing window](#), the charges are processed during End of Day creating an invoice that must be transferred into the applicable AR account.

When the Accounts Receivables, Automatic Transfer of Direct Bill Folios OPERA Controls is enabled, the invoice transfer occurs automatically. If not enabled, the invoice transfer must be performed manually, giving you an opportunity to review and validate the invoices prior to transfer into their AR Accounts.

When the **Date for Aging** OPERA Controls is set to ART (AR Transfer Date), invoices do not commence aging until they are transferred to their AR accounts.

Note:

Invoices listed in the Direct Bill Transfer area are reported as accruals on the Trial Balance.

The Direct Bill Transfer screen provides the following information:

- 1. Selection check box.** Select an invoice check box, to perform the functions that become active on the screen.
- 2. Account Name:** The name of the AR account to which the invoice will be transferred.
- 3. Account Number:** The AR Account number to which the invoice will be transferred
- 4. Name:** The profile linked to the Front Office folio/reservation.
- 5. Date:** The date when the payment was made to direct bill.
- 6. Folio No:** The folio number assigned to the guest's bill.
- 7. Invoice No:** The invoice number assigned to the invoice.
- 8. Amount:** The total amount of the direct bill payment. This is also the amount of the invoice.

Viewing a Folio

To view and print a copy of the invoice:

- 1.** From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and select **Direct Bill Transfer**.

2. Select or confirm the **Property**, select or enter any other search criteria, and click **Search**.
3. In search results, select the invoice you want to view or print and then click **View Folio**.

Linking an Invoice to a Different AR Account

From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and select **Direct Bill Transfer**.

1. Select or confirm the **Property**, select or enter any other search criteria, and click **Search**. The Account Name and the Account No. fields on the Transfer Invoices to AR screen show the destination AR account for the invoice.
2. Click the invoice and click **Select Account**. The Transfer Edit screen appears, listing all the available AR Accounts.
3. Search for the specific account using the search criteria to filter search results.
4. Select the account and click **OK**.
5. When the message asks: Are you sure? Select **Yes** to transfer the invoice to the selected AR account.

 **Note:**

The transferred invoices are immediately removed from the list.

6. Select **No** if you do not want to transfer this invoice to a different account at this time.

Viewing and Managing Invoice Details

To view and manage the invoice charges prior to transferring to the AR account:

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and select **Direct Bill Transfer**.
2. Select or confirm the **Property**, select or enter any other search criteria, and click **Search**.
3. In search results, select the invoice you want to view and click [Manage Invoice Details](#).

Transferring Invoices to AR

To transfer Front Office invoices through to their AR accounts:

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and select **Direct Bill Transfer**.
2. Select or confirm the **Property**, then select or enter any other search criteria, and click **Search**.
3. In the search result, select the invoices you want to transfer to AR and click **Transfer Selected Invoice(s)**.

 **Note:**

The transferred invoices are immediately removed from the list

Accounts Receivables Batch Charges

Using Accounts Receivable Batch Charges

Use batch charging to post a charge for the same amount to multiple AR accounts.

Posting a Charge to Multiple AR Accounts

You are required to enter your **PIN** when the Force Cashier Login OPERA Control is active.

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, select **Batch Charges**.
2. Enter the AR account search criteria and click **Search**.
3. Select the one or multiple AR accounts and then click **Post Charge**.

 **Note:**

To select all AR accounts, click the check box in the column header.

4. On the Posting Details page, enter the following information:
 - a. **Transaction Code:** Enter or select a charge code from the list.
 - b. **Price:** Enter the amount of the charge.
 - c. **Supplement:** Enter supplementary text regarding this posting. An entry is required in this field when posting negative amounts.
 - d. **Reference:** Enter a reference details.
5. Click **Post**.

Using Accounts Receivable Transaction Research

Use search to find specific invoices and payments based on the following search criteria: Property, Account Number, Account Name, Name, Folio Number, Invoice Number, Statement Number, From or To Date, or Amount From or To.

Searching for AR Transactions

1. From the **OPERA Cloud** menu, select **Financials**, select **Accounts Receivables**, and then select **Transaction Research**.
2. Enter search criteria, then click **Search**.

From search results, you are presented with different actions depending on the record you select :

- **Pay History:** Displays a history of payments for the selected account.
- **Manage Invoice Details:** View and manage invoice details from the Manage Invoice Details screen. For more information, see [Viewing and Managing Invoice Details](#).

- **View Folio:** Generate a folio for the selected invoice. For more information, see [Managing Historical Folios](#).
- **Edit Invoice:** View the invoice details or edit supplement and reference information for the invoice.
- **Transfer:** Transfer the full or partial invoice amount from one account to another account. For more information, see [Transferring Invoices or Payments to a Different AR Account](#).
- **Manage Account:** Access AR Account details related to an invoice or payment. For more information, see [Managing AR Account Invoices and Payments](#).
- **Manage Invoice:** Launch Manage Invoices with the selected invoice number selected in the search criteria. For more information, see [Managing AR Account Invoices and Payments](#).
- **Finalize Invoice:** Mark the invoice as finalized; you cannot make new postings to the invoice, edit transaction reference or supplemental information, or make adjustments to charges. For more information, see [Finalizing Invoices](#)
- **Apply Payments:** Apply payments to selected invoice. For more information, see [Managing AR Account Invoices and Payments](#).

Accounts Receivables Credit Card Transfer

The Credit Cards Transfer feature allows you to transfer credit card transactions posted to future reservations (deposit ledger), in-house reservation folios (guest ledger), or AR accounts (city ledger) to AR debtor accounts set up for the respective credit card merchants while awaiting payment from the merchant.

At the time of transfer to the merchants' AR account, the individual credit card transactions you select are compressed into a single invoice. From within Accounts Receivables, you can then reconcile outstanding invoice amounts and process remittance payments from the credit card merchants.

If the Consolidate Credit Card AR OPERA Control is enabled, all credit card payments are automatically compressed and transferred to their respective AR Accounts during the End of Day processing.

If the Consolidate Credit Card AR OPERA Control is not enabled, and the credit card payments have not been manually transferred into AR, OPERA Cloud automatically compresses and transfers the credit card transactions that are older than 60 days during its End of Day processing.

Note:

Transactions are available for transfer to AR immediately when a payment is posted using a credit card payment transaction code that has an AR account associated with it.

To use the AR Credit Cards feature, each credit card payment transaction code must be associated with an AR account.

1. Create an AR Account for the credit card merchant [Managing Accounts Receivables Accounts](#). Select a suitable AR Account Type to separate these AR accounts from

companies, agents, or other categorizations [Configuring Accounts Receivable Account Types](#).

2. Link the AR Account in Transaction Code Configuration for the credit card payment transaction code [Adding Transaction Codes](#). Note that only one AR account can exist for the AR Credit Card profile for the property.

Managing AR Credit Card Transfer

When the Consolidate Credit Cards OPERA Control is enabled, credit cards are automatically compressed and transferred by the End of Day Procedure. You cannot access this feature (from a separate session) while End of Day processing is running.

AR Credit Card Search Results

Running a search for credit card transactions provides the following information:

- **Check box.** Enables you to select a transaction.
- **Date.** The date the posting was created.
- **Name.** The name on the transaction.
- **Folio No.** The number assigned to the folio. This field is blank if the posting was made manually (no bill was generated) to a Billing screen window associated with an AR account.
- **Fiscal Bill No.** The fiscal bill number on the folio is available when the Fiscal Folio Printing OPERA Control is enabled.
- **Amount.** The amount of the transaction.
- **Credit Card / Reference.** The credit card number used in payment for this transaction. This is the same information as appears in the Reference field on the Billing screen.
- **Expiry Date / Supplement.** The expiration date for the credit card used in payment for this transaction. This is the same information as appears in the Supplement field on the Billing screen.
- **Total Selected.** As you select transactions, the total value of the selected transactions is displayed.

Transferring Credit Card Transactions to AR

1. From the Application menu, select **Finance**, select **Accounts Receivable**, and then select **Credit Card Transfer**.
2. If a login screen appears, enter your **cashier sign-in** and click **Login**.
 - a. Select or confirm the **Property**.
 - b. Select a **Credit Card** payment transaction code (that is linked to an AR account) from the list.
 - c. Enter optional **From Date** or **To Date** of transactions you want to locate and click **Search**.
3. To select All Payments, click the page level **vertical ellipsis** and select **Select All**.
4. To select one or more transactions click the **selection column** for the transaction.
5. Click **Transfer Credit Card(s)**.

**Note:**

Select a transaction to display the Invoice Supplement field where you can enter supplement text.

After the selected credit cards are compressed to an invoice and transferred to the AR account, the AR Credit List report auto-generates, detailing all credit card transactions compressed and transferred.

The selected transactions are removed from the AR Credit Cards screen as they have been compressed and transferred to their respective AR accounts.

After transfer, the consolidated credit card transactions for the debtor/merchant appear as an invoice in the [Managing AR Invoice Payments](#) page for the respective AR account.

The [Viewing and Managing Invoice Details](#) screen shows the individual credit card transactions included in the invoice.

To manually generate the AR Credit List Report

1. Click the page level **vertical ellipsis** and select **Report**.

Comp AR Accounts

Gaming

Prerequisites for Comp AR Accounts

You can select or set up an AR account to automatically receive comp transactions for AR handling. A comp transaction AR account has an account type matching the account type specified by the **Authorizer AR Type** setting in OPERA Controls. When **Authorizer AR Type** has an account type specified, you can associate and set up comp transaction AR account types for authorizers. During configuration of a user as an authorizer, a comp AR account can be created and attached to the authorizer's profile.

If the OPERA Cloud user already has a comp AR account, it is automatically identified during authorizer configuration. When an authorizer has a comp AR account, that account is associated with the comp windows (windows 101 ... 108) to which the authorizer transfers or routes comp transactions. When the guest checks out, transactions appearing in the guest's comp windows automatically post to the authorizer's AR account (provided the comp transactions have been approved by the PTS).

If a comp AR account is not set up for the authorizer or if the **Auto Settle Comp Folio** function and the **Comp Method of Payment** setting are not configured in OPERA Controls, comp transactions the authorizer has transferred or routed to comp windows must be settled at guest check out, just like transactions in any of the non-comp Billing screen windows.

Cashiering and Finance

Financials enables you to manage the daily financial transactions at your property. This includes functions such as cashiering, batch deposits, generating cashier reports, folio histories, authorizing credit cards, researching receipts, currency calculations, and so on.

Using Credit Limit Overage

You can set a credit limit for a particular credit card payment method, and different credit limits can be set for each credit card type. If any folio window with a credit card payment method meets or exceeds the limit set for the card type, the reservation is included in the Credit Limit Overage process and payment is automatically processed for the entire balance of the folio window. For example, you set up your Visa credit card payment method to have a credit limit of 400.00 USD. Each time a Visa payment method on a folio window reaches a balance of 400.00 USD or higher, the reservation is included in the Credit Limit Overage Process and payment is automatically processed for the entire balance.

If payment processing for a folio window fails, the reservation is flagged as No Post and no further charges can be posted to the reservation. This occurs even if payment is successfully processed for the balances in the other folio windows.

Credit Card Limit Overage Processing Prerequisites

For the automatic processing of credit card limit overages, the following conditions are required:

- The **Credit Limit Overage Payments** parameter must be set to **On**.
- The **Credit Limit Overage Payments Interval Time** setting must have an interval defined for it.
- The **Credit Limit Overage Payment Methods** setting must have one or more credit card payment methods selected.

Note:

If the **Default Credit Limit Overage Payments Auto Pay** parameter is set to **On**, new reservations are included in the Credit Limit Overages process. If the **Credit Limit Overage Payment Failure No Post Flag** is set to **On**, the reservation is flagged as **No Post** when it fails to apply a payment to a folio window. If the **Exclude No Post Reservations For Credit Limit Overage Payments** parameter is set to **On**, reservations flagged as **No Post** are excluded from the automatic payment processing.

- **Credit Limit Auto Pay** must be selected in the Payment Instructions panel of the reservation.
- A credit card payment method must exist in the Payment Instructions panel of the reservation.
- The credit card payment method must be in a folio window with a non-credit balance.
- A credit limit must be set for the credit card payment method.

- The balance in the folio window must be equal to or higher than the credit limit of the credit card payment method.
- The Credit Card Limit Overage process must attempt to charge the total balance amount in the folio window.

Credit Card Limit Overage Processing

A guest's charges can sometimes exceed the credit card payment type limits set by your property. However, if you want to keep an open credit line for a reservation, you can enable the automatic processing of credit card payments that are over the credit card limit as defined by your property. With this feature enabled, payments are automatically processed in folio windows where the balance is equal to or higher than the limit set for the credit card payment method.

If the **Credit Limit Overage Payment Failure No Post Flag** parameter is **On** and automatic payment processing fails, the reservation is flagged as No Post and charging privileges are automatically revoked on the reservation. Automatically revoking charging privileges on a reservation reduces the guest's financial liability.

Within the payment instructions for a reservation, you can opt to include or exclude the reservation from automatic credit limit overages processing. When a reservation is included in the overage process, you can manually initiate the payment process for selected reservations with credit cards over the limit as well as view reservations that failed automatic processing.

Automatic Credit Limit Overages Process Flow

Credit Card Limit Overages Process – Successful

If the Credit Card Limit Overage process successfully charges the credit card, the following occurs:

- The payment is posted and the folio window balance becomes zero.
- The new credit card limit for the folio window becomes the same as the credit limit amount configured for the payment method. For example, if 400 dollars is the hotel credit limit for a Visa payment method, the automatic payment processing does not occur again until this limit is reached.

Credit Card Limit Overages Process – Failed

If the Credit Card Limit Overage process fails to charge the credit card, the following occurs:

- The folio window balance remains the same and no payment is posted.
- If the **Credit Limit Overage Payment Failure No Post Flag** parameter is **On**, the **No Post** check box is automatically selected when a credit limit overage payment fails in a reservation.

Setting Up Automatic Processing of Credit Card Limit Overages

To enable the automatic payment processing for credit limit overages at your property, the following setups are required.

Activate OPERA Controls

1. From the **Administration** menu, select **Enterprise**, and select **OPERA Controls**.
2. In the **Credit Card** group, set the **Credit Limit Overage Payments** parameter to **On**.
3. Set the following parameters and settings:
 - **Credit Limit Overage Payments Interval Time** setting: Enter a value for the time interval.
 - **Credit Limit Overage Payment Methods** setting: Select one or more payment methods.
 - **Default Credit Limit Overage Payments Auto Pay** parameter: Set to **On**.
 - **Credit Limit Overage Payment Failure No Post Flag** parameter: Set to **On**.

Set the Credit Limit for the Credit Card Payment Method

For the reservation to be included in the Credit Limit Overage process, a credit limit must be set for the credit card payment method.

1. From the **Administration** menu, select **Financial**, select **Transaction Management**, and select **Payment Methods**.
2. Select the credit card payment method for which you want to set a limit, click the vertical ellipsis, and click **Edit**.
3. In the **Credit Limit** field, enter a value for the dollar amount. This is the amount that triggers the automatic processing of the payment when the folio balance is at or over this limit.
4. Click **Save**.

Enable the Automatic Processing of Credit Limit Overages

In the Reservation Payment Instructions panel, you must select **Credit Limit Auto Pay** to include the reservation in automatic payment processing when the reservation charges go over the credit limit for the payment method.

1. From the OPERA Cloud menu, select **Bookings**, select **Reservations**, and select **Manage Reservation**. Search for and open the reservation.
2. Click the **Payment Instructions** link in the Billing section under Reservation Overview.
3. Select **Credit Limit Auto Pay**.
4. Select a credit card payment method for the reservation.

Credit Limit Overages Screen

Path: Applications – Financials – Cashiering – Credit Limit Overages

If a reservation's charges are equal to or over the credit limit set by the property, you can search for this reservation from the Credit Limit Overages screen and manually initiate the Credit Limit Payment process by selecting the **Make Payment** button.

Credit card limit overage can be applied to the following reservation types:

- In House reservations.
- Advance Checked In reservations (when the Advance Check In function is active at the property).
- Arrival (Due In) reservations (when Pre Stay Charges is active at the property).
- Departed (Checked Out) reservations (when Post Stay Charges is active at the property).

Search Area

The Credit Limit Overages screen features a search area with the following search filters:

- **Property** (required) – Filter by property code. If you are logged in at the property level, this field defaults to that property. If you are logged in at the hub level, the drop-down list contains all properties within the hub that have the **Credit Limit Overage** parameter set to **On**.
- **Card Type** – Filter by the credit card types configured at the property.
- **Name** – Filter by guest's last name..
- **Room** – Filter by room number.

Search Results

After you enter search criteria and click **Search**, the Credit Limit Overages screen returns reservations matching the search criteria with a folio window balance equal to or higher than the credit limit set for the credit card payment method of that folio window.

The results include In House reservations as well as the following:

- Arrival reservations, if the Pre Stay Charges function is active at the property.
- Checked Out reservations, if the Post Stay Charges function is active at the property.
- Advance Checked In reservations, if the Advance Check In function is active at the property.

Making a Payment

You can manually initiate the Credit Limit Overage process whenever you need to make payments for reservations. After you select one or more reservations, the **Make Payment** button appears. Selecting this button begins the Credit Limit Overage process for the selected reservations.

If you choose to initiate the Credit Limit Overage process and the **Automatic Credit Limit Overages** parameter is **On**, the next Automatic Credit Limit Overage process begins based on the interval in minutes set for the **Automatic Credit Limit Overage Interval** setting. For example, if a 30 minute interval is defined for this setting and you initiate the process at 9:00 am, the system checks at 9:30 am to determine if the process is complete. If the process is not complete, the next check occurs at 10:00 am. However, if the process finishes at 9:45 am, the next check still occurs at 10:00 am, and the next Automatic Credit Limit Overage process automatically begins at this time.

If the Automatic Credit Limit Overages process is already running in the background and you choose to manually initiate a new instance of the process, OPERA Cloud presents a warning message indicating the process is currently in progress.

Credit Limit Overages Status

Once you click the **Make Payment** button, the Credit Limit Overages Status screen appears.

The Credit Limit Overage Status screen presents this information in view-only mode for the reservations selected for processing. This information includes Name, Room, Credit Card, Type, Payment Amount, and Status.

The Status for each record is updated based on the credit card processing and shows failures and successes. Closing the status screen while credit cards are being processed does not stop the process.

The order of the results follows the order of the search results. You can change the order of the results based on the status by selecting **Failures First** in the **Sort By** field.

The results can be printed by selecting the **Print** button.

Credit Limit Overages Conditions/Assumptions

OPERA Controls

- A credit card interface is configured at the property.
- The **Credit Card Online Settlements** parameter is set to **On** because it is required for EMV / Chip and PIN functionality as the connected terminal and processor are responsible for handling the credit card data.

Selecting Folio Styles for Viewing, Printing

Selecting Folio Style and Currency Options

OPERA Cloud offers a variety of folio styles to select from when generating a Billing or AR folio.; folio styles determine the layout and details included on the folio.

All folio styles except the group folios generate the same [customized folio template](#).

When the Multi-Language OPERA Control is active a language-specific folio template is generated based on the language specified in the profile of the Billing window or AR account.

You can exclude various folio styles from appearing for selection by setting the [Exclude Folio Styles OPERA Control](#).

The default Billing and Post It folio style is determined by the [Folio Style OPERA Control](#)

For Accounts Receivable folios, the default folio style is determined by the [Default AR Folio Style OPERA Control](#).

When the Ability to Quote Rates in Foreign Currencies OPERA Control is active you may also select a currency in which to generate the folio - charge and payment

amounts will be converted according to the exchange rates setup. See [Managing Currency Exchange Rates](#).

As part of the folio options, you can also enter a one-off message to include on the folio

 **Note:**

Transaction codes that belong to the same [subgroup](#) will be grouped together and listed one after another, for the same date, on the Billing screen and Folio Styles 1, 9, 10, 11, 14, 16, 15, 19, 24, 27.

 **Note:**

For Folio Styles where payment transactions are not summarized in any way, the exchange rate information is displayed on the folio for Foreign Currency Cash Payments.

Selecting Folio Print Options On the Folio Print pop-up

On the Folio Print pop-up

1. **Folio Style:** Click to select a folio style from the list;
 - a. Select a Folio Style
 - b. Click **Select Folio Style**
2. **View in Currency:** Click to select a currency from the list
 - a. Select a currency
 - b. Click **Select**
3. **Folio Text:** Click to add folio-specific text to appear when generated
 - a. Enter Folio1 and Folio2 (promotional or reference) message / text
 - b. Click **Save**.
4. **Report Destination:** Select a report destination
 - a. **Preview:** Select to generate a PDF preview for printing
 - b. **Email to Print:** Select to email to [printer](#).
 - c. **Email:** Select to email to a recipient
 - i. Select email address from list or click **New Email** to enter an email address
 - d. **Download:** Select to download PDF file
5. Click **Process**.

Printing Folios for Banquet Charges

When the function for Banquet Posting is active, the two folio styles become available for detailing banquet charges and can be used as a banquet check. Folio Style 21 groups the event related charges by Revenue Type while Folio Style 22 groups the charges by Event.

The folio can be run for a specific set of date and can include PMS postings like guest room charges.

1. From the OPERA Cloud menu, select **Front Desk** and click **In House**.
2. Search for reservations.
3. From search results, select a reservation, click the row-level **I Want To . . .** menu, and select Go To **Billing**.
4. On the Window containing the charges you want to print, click **Information Folio**.
5. When the Folio Print dialog appears, click the **Folio Style** field and select one of the following:
 - a. Select 21 – Banquet Folio by Revenue Types.
 - b. Select 22- Banquet Event (Time).
6. Click **Select Folio Style**.
7. When the Folio Print dialogue opens, select the date ranges, page breaks, report destination, and other printing options.
8. Click **Process**.

Detailed Folio (Date) (1)

This folio style is the Default style. It is one of the most commonly used folio styles.

- Displays two lines per transaction code.
- Prints References and Supplements for each transaction.
- Prints Generates immediately following the information for the transaction code from which they were generated.

Sort Order: Date, transaction code.

Display Order:

- Line 1 - Date, transaction code, transaction description, charges or credits.
- Line 2 - Reference and supplement (as available).

Transaction Code Summary Per Day (Code) (2)

This folio style combines all postings with the same transaction code and the same date into one entry. When there are postings to a specific transaction code on a given day, an entry appears for that date and transaction code.

- Does not print reference and supplement information.
- Combines Generates according to date and transaction code, not necessarily following the transactions from which they were generated.
- Sorts Folio entries by date starting with the first day of the stay.

Sort Order: Transaction date, internal transaction number.

Display Order: Date, transaction code, transaction description, charges or credits.

Transaction Code Summary Per Stay (Code) (3)

This folio style is similar to the Transaction Code Summary per Day, except it summarizes on one line all postings with the same transaction code during the stay.

- The date reflects the date of the most posting to the transaction code.
- Does not print Reference and Supplement information.
- Combines Generates according to date and transaction code, not necessarily following the transactions from which they were generated.
- Sorts Folio entries by date, starting with the first day of the stay.

Sort Order: Date, transaction code.

Display Order: Date, transaction code, transaction description, combined charge or credit.

Arrangement Summary Per Day (Date) (4)

This folio style offers the ability to arbitrarily group postings according to the guest's requirements by using arrangement codes.

- Summarizes all postings with the same arrangement code and same date on one line.
- Prints summarized arrangement codes for each day first, followed by transaction codes (that are not part of an arrangement) for that day.
- Prints any posting not included in an arrangement code individually by transaction code.
- Does not print Reference and Supplement information.
- Displays Generates not in an arrangement code according to transaction code.

Sort Order: Date, internal transaction number, transaction code.

Display Order:

- With Arrangement - Date, highest numbered transaction code for the arrangement, arrangement code description, total charges or credits.
- Without Arrangement - Date, transaction code, transaction description, charge or credit.

Arrangement Summary Per Stay (Date) (5)

This folio style is equivalent to the Arrangement Summary per Day, except it summarizes on one line all postings having the same arrangement code during the entire stay.

- Prints summarized arrangement codes first regardless of the date the charge occurred.
- When there are postings to an arrangement code during the stay, the earliest date of a posting to that arrangement code determines the date under which that arrangement code summary prints.
- Following the arrangement code summaries, any posting not included in an arrangement code prints individually by date and transaction code, starting with the first day of the stay.
- Does not Reference and Supplement information.

- Displays Generates not in an arrangement code according to transaction code, not necessarily following the transaction from which they were generated.

Sort Order: Check number, internal transaction number.

Display Order:

- With Arrangement - Date, highest numbered transaction code for the arrangement, arrangement code description, total charges or credits.
- Without Arrangement - Date, transaction code, transaction description, charge or credit.

One Line Per Day (Date) (6)

This folio style combines all postings (except payments) for each day starting with the first day, and prints them on a single line. The descriptive text is the day of the week spelled out (e.g., MONDAY, TUESDAY, etc.) followed by the total number of postings for that day.

- Includes Generates in the total for the day.
- Following the daily summary of postings, it lists payments individually along with related Supplement and Reference information.

Sort Order: Date

Display Order: Date, day of the week (number of postings for the day), charges or

Daily Summary for Groups (Date) (7)

This folio style is equivalent to the Transaction Code Summary per Day.

- Groups postings only when the transaction code, transaction date, and price are identical.
- Prints all postings with this transaction code, transaction date, and price on one line.
- Does not print Reference and Supplement information if there are multiple postings with the same transaction code, transaction date and price.
- Prints the Reference and Supplement information immediately following the transaction description if there is only one posting to a transaction code.
- Prints Generates immediately following the transaction code from which they were generated.

Sort Order: Date

Display Order: Date, transaction code, transaction description, charges or credits. (If there are multiple postings per transaction code, the transaction description will be followed by the number of postings and unit price.)

Person Summary for Groups (Date) (8)

This folio style summarizes on one line all transactions transferred for each guest/room in the group.

- Does not show transaction code detail.
- Does not print Reference and Supplement information.
- Includes Generates in the total for the room.

Sort Order: Guest room number.

Display Order: Date, guest room number, guest name, charges or credits.

Detailed Folio (Room) (9)

This folio style sorts all transactions for the group by room number, then by date within the room number.

- Prints all charges for a room, then prints the next room.
- Prints Supplements for each transaction.
- Prints Generates immediately following the transaction code from which they were generated.

Sort Order: Room number, transaction date, internal transaction number

Display Order:

- Line 1 - Date, guest name, charges or credits.
- Line 2 - Supplement (as available).

Summary by Stay and Check Number. (Date) (10)

This folio style displays all the room and tax + package postings as 1 line on the folio for the entire stay even if there is a rate change during the stay. The date and description for this is taken from the 1st posted rate code either via night audit or manually via post rate code option. All the other charges follow after this line and appear as one line in the order of date they were posted and grouped by the check number if associated similar to folio style 14. If the check number is not associated with the transactions then they are displayed separately as individual postings.

Resort Hotel Folio (Date) (11)

This folio style is especially useful for properties where some guests stay for long periods and rate changes apply. The property folio style clearly indicates any rate changes.

- Lists Room charges first followed by a chronological listing of all other charges.
- Summarizes Room Charge lines by daily rate.
- Lists the highest daily rate first followed by other daily rates from highest to lowest.
- Shows the number of postings and the unit price when there is more than one room at the same daily rate.

Sort Order: Room number, transaction date, internal transaction number.

Display Order:

- Room Charges - Date, room charge description, combined charges or credits for that daily rate (number of room charge postings x unit price) .

Non-Room Charges: Line 1 - Date, transaction code, transaction description, charges or credits.

Daily Plan (Date) (12)

This folio style is available when the Cashiering > Daily Plans application parameter is set to Y. With this folio style, charges for transaction codes associated with the LODGING group and the OTHERS group are consolidated by day. For example, if the room charge is \$100 per night and the breakfast charge is \$20 per person, the following entries might appear on the guest's folio when the folio is printed in the Daily Plan folio style:

01/07/18	Room and Breakfast	\$120
01/08/18	Room and Breakfast	\$120

Arrangement Summary (Date) (13)

This folio style is similar to the Arrangement Summary per Day style, except that all arrangement code summaries are printed first in chronological order by date.

- Summarizes all postings with the same arrangement code and same date on one line.
- Prints all other transactions in order by date following the arrangement code summaries.
- Prints any posting not included in an arrangement code individually by transaction code.
- Does not print Reference and Supplement information.
- Displays Generates not in an arrangement code according to transaction code, not necessarily following the transaction from which they were generated.
- Sorts Folio entries by date starting with the first day of the stay.

Sort Order: Date, internal transaction number.

Display Order:

- With Arrangement - Date, arrangement code, arrangement code description, total charges or credits.
- Without Arrangement - Date, transaction code, transaction description, charge or credit.

Summary by Check Number (Date) (14)

This folio style is useful if the property is working with a point-of-sale interface. The folio:

- Summarizes all postings to the same check number on one line.
- Prints Generates immediately following the transaction code from which they were generated.

- If the transaction codes used are also configured for an arrangement code, then the arrangement code text of the transaction code with the lowest Transaction ID will be taken.
- Lowest Transaction ID means the first posting made for that check number.
- If the transaction codes used are not configured for an arrangement code, then the description of the transaction code with the lowest transaction ID will be taken.

Sort Order: Date, internal transaction number.

Display Order with Check Number:

- Line 1- Date, internal transaction number (the lowest internal transaction number is shown on the folio), transaction description. (When splitting postings, new transactions are created which then would have a higher internal transaction number.)
- Line 2 - Reference and supplement (as available).

Display Order without Check Number:

- Line 1 - Date, transaction code, transaction description.
- Line 2 - Reference and supplement (as available).

Group Folio Subtotal (Date) (15)

This folio style lists together all postings routed to the room by date. The folio:

- Groups transactions by date, room number, and then by transaction code.
- Adds a daily subtotal line at the end of each day's transaction list.
- Prints References and Supplements for each transaction.
- Prints Generates immediately following the transaction code from which they were generated.

Sort Order: Date, guest room number, internal transaction number.

Display Order:

- Line 1 - Date, guest name, transaction description, charges or credits.
- Line 2 - Reference and supplement (as available).

Group Folio Subtotal Per Guest (Date) (16)

This folio style lists together all postings transferred to the folio by room. Within a room, transactions are grouped together by date and by transaction code.

- Lists transactions having the same transaction code individually (not summarized).
- Adds a room subtotal line at the end of each room's transaction list.
- Prints References and Supplements for each transaction.
- Prints Generates immediately following the transaction code from which they were generated.

Sort Order: Date, internal transaction number.

Display Order:

- Line 1 - Date, guest name, transaction description, charges or credits
- Line 2 - Reference and supplement (as available)

Group Folio Subtotal per Trn Code (Date) (17)

This folio style combines all postings with the same transaction code and the same date into one entry.

- When there are postings to a specific transaction code on a given day, an entry appears for that date and transaction code.
- Adds a daily subtotal line at the end of each day.
- Prints References and Supplements for each transaction.
- Prints Generates immediately following the transaction code from which they were generated.

Sort Order: Date, transaction code.

Display Order:

- Line 1 - Date, transaction description, charges or credits.
- Line 2 - Reference and supplement (as available).

Group Summary Folio (Room) (18)

With this folio style, all postings that have been transferred to the reservation account are listed by room in numerical order. Folio groupings that are assigned in [System Configuration](#) are listed across the page. Information for each room reservation is listed on one line. A group subtotal is listed at the bottom of the page. No Reference and Supplement information will output. Tax generates are included in the totals according to the folio grouping configuration.

Note:

When the Accounts Receivable Settlements Visible on Folio OPERA Control is inactive, Direct bill (AR) settlements are suppressed when folio is generated in this folio style. The **Payments** column displays as 0.00.

The sample_grp_folio.rtf can be [customized](#) and setup in the [Group Folio report group](#).

This folio style lists all postings transferred together to the folio by room in numerical order.

- Lists Folio groupings assigned in System Configuration across the page.
- Lists information for each room on one line.
- Lists a group subtotal at the bottom of the page.
- Does not print Reference and Supplement information.
- Includes Generates in the totals according to the bucket configuration.

Sort Order: Room number, date, internal transaction number.

Display Order: Date, room number, guest name, buckets 1- 10, payments, total.

Room	Name	Arrival	Departure	Room	Food & Beverage	Others	Payments								Grand Total	Payments	
140	Devers, Kit	06/16/03	06/17/03	0.00	21.76	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	21.76	0.00

Total Rooms		3															
Total Guests		9															

Group Folio Subtotal Per Room (Date) (19)

This folio style lists together all postings transferred to the folio by room. The display of postings for each room is headed by a line showing the guest's name and room number. The folio:

- Groups transactions by date and then by transaction code within a room.
- List transactions individually and not summarized by transaction code.
- Prints References and Supplements for each transaction.
- Prints Generates immediately following the transaction code from which they were generated.
- Adds a Guest Total line at the end of the transactions for each room.

Sort Order: Room number, date, internal transaction number.

Display Order:

- Line 1 - Date, guest name, transaction description, charges or credits.
- Line 2 - Reference and supplement (as available).

Group Summary Folio (Alpha) (20)

This folio style lists together all postings transferred to the folio by guest name in alphabetical order. Folio groupings assigned in System Configuration are listed across the page. Information for each room is listed on one line. A group subtotal is listed at the bottom of the page.

- Does not print Reference and Supplement information will print.
- Includes Generates in the totals according to the bucket configuration.

Sort Order: Guest name (alphabetical).

Display Order: Date, room number, guest name, buckets 1- 10, payments, total.

Banquet Folio by Revenue Types (21)

This folio style displays the group/type of revenue with the details about the revenue group it belongs to. Available when the Events > Event Posting application function is set to Y and a country has not been specified in the Country Mode field for the property in the Property Controls.

- Within each grouping, the Taxes and Service Charges are displayed and if catering packages are part of the check, the package is displayed as a separate group before any of the other groups.
- Based on the selection criteria for the report, PMS Postings can also be displayed in a separate section and will be displayed by transaction code for the appropriate date. Plus, select the Printing Method for the report and how to display the Revenue Summary.

Sort Order: Revenue Group.

Display Order: Quantity, Description, Unit Price, Total.

Banquet Event (Time) (22)

This folio style displays the revenue by event by displaying each individual item that has been posted to the event. Available when the Events > Event Posting application function is set to Y and a country has not been specified in the Country Mode field for the property in the Property Controls. This report uses the same report criteria options as Folio Style 21 and can include PMS Postings, select the Printing Method, and how the Revenue Summary is to be displayed.

Sort Order: Time of the Event (Earliest to Latest).

Display Order: Event, Item, Quantity, Currency, Unit Price, Total.

Daily Plan (Room) (23)

With this folio style, charges for transaction codes associated with the LODGING group and the OTHERS group (set up via **Administration > Financial > Cashiering Management > Daily Plan Codes**) are consolidated by room/guest. Available when the **Cashiering > Daily Plans** application parameter is set to Y.

Examples:

A reservation for Mr. Smith checks in with a daily rate of EUR 100 (no packages attached) for 2 nights. He has breakfast at EUR 10 each per day. The Daily Plan Folio (Room) will appear as follows:

01/07/18	Room and Breakfast 110 Mr. Smith	\$110
01/08/18	Room and Breakfast 110 Mr. Smith	\$110

Reservations for Mr. Smith and Mr. Thompson are checked in with a daily rate of EUR 100 each (no packages attached) for 2 nights. Both guests have breakfast at EUR 10 each per day. At checkout, Mr. Smith agrees to pay for Mr. Thompson's charges as well as his own. Lodging and breakfast charges are transferred from Mr. Thompson's reservation to Mr. Smith's reservation. The Daily Plan Folio (Room) will appear as follows:

01/07/18	Room and Breakfast 110 Mr. Smith	\$110
01/07/18	Room and Breakfast 220 Mr. Thompson	\$110
01/08/18	Room and Breakfast 110 Mr. Smith	\$110
01/08/18	Room and Breakfast 220 Mr. Thompson	\$110

Detailed Folio (Package) (24)

This folio style displays the split of packages included in a rate code or added to the reservation. Also, the VAT % for each transaction can be displayed using the VAT Percentage merge code.

- The folio will display 1 line item for the total amount of each package wrapper transaction and then separate line items for all the components of the package wrapper that are either included in the rate or Add to Rate Combined line packages.
- Add to Rate Separate line packages will continue to display as separate line items on this folio style as well.

Examples (Include details where the VAT merge code has been added to the customized folio)

A Bed & Breakfast rate code for 120 EURO has an included Breakfast rate of 20 EURO with an 8% inclusive tax on the room charge and a 25% inclusive tax on the breakfast food. This would produce a folio like the following:

Date	Text	Charges EURO	Credits EURO
09/09/18	Bed & Breakfast	120.00	
	Room Charge	100.00 (8%)	
	Breakfast	20.00 (25%)	
	Total	120.00	0.00

If the above example included exclusive generates on the package components, they would be printed as separate line items as in this example.

A Bed & Breakfast rate code for 120 EURO has an included Breakfast rate of 20 EURO with an 8% exclusive tax of the room charge and a 25% exclusive tax on the breakfast food. Also, an extra bed posting with an exclusive tax of 10% is posted to the reservation. This example would produce the following folio:

Date	Text	Charges EURO	Credits EURO
09/09/18	Bed & Breakfast	Breakfast	
09/09/18	Room Charge	100.00 (8%)	
09/09/18	Breakfast	20.00 (25%)	
09/09/18	Room Exclusive Tax	8.00	
	F&B Exclusive Tax	5.00	
	Extra Bed	60.00 (10%)	
	Extra Bed Exclusive Tax	6.00	
	Total	199.00	0.00

If a Supplement or Reference is added to the wrapper transaction code, then it will be displayed after the line item for the wrapper posting on the folio.

Group Folio (Package) (25)

Note:

Available only when the Country Mode is not set Latin America, Hungary, Germany, or France and the **Cashiering > Package Arrangement Code** application parameter is set to **N**.

When using this folio style to generate a folio, all the package/wrapper transactions are first grouped by the Transaction Date, then by the Rate Code, and then by the Rate Amount.

The folio displays 1 line item that shows the Quantity multiplied by the Rate Amount for each Rate Code that has distinct Rate Amount. The package components, i.e., Room and Package charges, are also shown in the same manner (Quantity multiplied by Amount). But this is applicable only for Included in Rate and Combined Line Packages. Add to Rate Separate Line packages do not post wrapper, therefore they display as separate line items.

Charges that are not part of the package wrapper posting follow the grouped wrapper charges for each date and reference/supplement shows only for these charges.

Examples:

The following examples display how folio 25 will display based on the following Block Reservation for the first night (02/01/13):

- Arrival: 02/01/2018

- Departure: 02/03/2018
- Rooms: 30 (10 assigned to each Rate Code below)
- Rate Codes: B (100.00) / B (120.00) / B (150.00)

Inclusive Package/Exclusive Tax

Taxes: 10% on Rooms / 25% on Breakfast food.

Date	Text	Charges	Credits
02/01/18	B&B (10*100.00) 1,000.00	()	
	Transient Room Revenue (10*90.00)	900.000 (10%)	
	Food & Beverage (10*10.00)	100.00 (25%)

Detailed Folio (Name) (26)

This folio style sorts all transactions for the group by guest's last name, then by transaction date.

- Prints all charges for one guest, then prints the next guest's charges.
- Prints Supplements for each transaction.
- Prints Generates immediately following the transaction code from which they were generated.

Sort Order: Guest Last Name, Transaction date, internal transaction number.

Detailed Folio (Generates) (27)

This folio style shows all generates in the detailed section of the folio, including any zero VAT amounts irrespective whether the transaction code is configured as inclusive or exclusive of generates.

The folio shows the VAT details in a separate column if the folio is customized accordingly.

Managing Historical Folios

A record of each folio generated is retained and available from Folio History when:

- A reservation account balance is settled (including post it, passer-by and no show). For more information, see [Settling a Reservation Account Balance](#).
- An invoice is created in an [AR Account](#).
- A deposit folio is created (according to the Advanced Deposit Handling OPERA Control). For more information, see [About Reservation Advanced Deposit Handling](#).
- Credit bill is generated. (Available when the Credit Bill OPERA Control is active).
- Debit bill is generated. (Available when the Debit Bill OPERA Control is active).

You can search for various types of folios using the check box options in the search panel:

- **Check Out** - Display folios for guests who have checked out.
- **No Show** - Displays folios for guests who were no shows. (Available when the No Show and Cancellation Posting OPERA Control and Post Revenue (Charges) to No Show OPERA Controls are active).
- **Passer By** - Display folios for transactions posted for non-residential reservation accounts.

- **Video Checkout** - Display folios for guests who used video checkout (Available when the Video Checkout OPERA Control is active).
- **Accounts Receivable** - Displays folios created in AR. (Available when the Accounts Receivable OPERA Control is active).
- **Post It** - Include Post It folios. (Available when the Post It OPERA Control is active).
- **Debit Bill** - Display folios showing a debit to the guest bill. (Available when the Debit Bill OPERA Control is active).
- **Credit Bill** - Display folios showing a credit to the guest bill. (Available when the Credit Bill OPERA Control is active)
- **Deposit** - Displays folios that show a deposit on them.

When the Custom Numbers OPERA Control is active, the search result displays a **Custom Number** column with the custom number(s) generated for each folio.

When the Fiscal Service Terminals OPERA Control is active, the **Fiscal Terminal** column displays the Terminal Label value selected during generation of the original fiscal folio.

**Note:**

You are required to enter your **PIN** when the Force Cashier Login OPERA Control is active.

Regenerating / Reprinting a Folio

**Note:**

When the Permanent Folio Storage OPERA Control is active, the stored copy of the folio is reprinted; else the folio is regenerated from the transactional data.

1. From the **OPERA Cloud** menu, select **Financials, Cashiering** and then select **Folio History**.
2. Enter search criteria and click **Search**.
3. Locate the folio in the search result, then click the vertical ellipsis **Actions** menu and select **Quick Print Folio**.
4. On the Report Destination page.
 - a. **Folio Style:** The default folio style is displayed; click to select a different folio style. For more information, see [Selecting Folio Styles for Viewing, Printing](#).
 - b. View in Currency:

Click to select a currency from the list (available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active).

 - i. Select a currency from the list.
 - ii. Click **Select**.
 - c. **Folio Text:** Click to add folio-specific text to appear when generating the folio (available when the Additional Folio Text OPERA Control is active).

- i. Enter Promotional or Reference text into the fields.
 - ii. Click **Save**.
 - d. Select a destination.
 - i. **Preview**: Select to generate as PDF file.
 - ii. **Print**: Select a printer from the list. For more information, see [Configuring Printers](#).
 - iii. **E-mail**: Select an e-mail address from the list.
 - i. Click **New E-mail** to add an e-mail address.
 - ii. **E-mail Type**: Select an e-mail type from the list.
 - iii. **E-mail Address**: Enter an e-mail address.
 - iv. Click **Save**.
 - iv. **Download**: Select to download PDF file.
 - e. Click **Process**.

Generating Credit Bills

Available when the Credit Bill [OPERA Control](#) is active.

1. From the **OPERA Cloud** menu, select **Financials, Cashiering** and then select **Folio History**.
2. Enter search criteria and click **Search**.
3. Locate the folio in the search result, then click the vertical ellipsis **Actions** menu and select **Generate Credit Bill**.
4. For more information, see [Credit Bills For Folios](#).

Generating Debit Bills

Available when the Debit Bill [OPERA Control](#) is active. You can generate a Debit Bill/ Supplemental Folio for existing folios, for when additional charges need to be posted and linked to the original folio.

1. From the **OPERA Cloud** menu, select **Financials, Cashiering** and then select **Folio History**.
2. Enter search criteria and click **Search**.
3. Locate the folio in the search result, then click the vertical ellipsis **Actions** menu and select **Generate Debit Bill**.
4. For more information, see [Debit Bills for Folios](#).

Sending Offline Fiscal Folios

When the Fiscal Folio Printing, Use General Payload and the Offline Folio OPERA Controls are active, the Fiscal Folio/Payload for the Offline Folios can be generated and transmitted to the Fiscal Service. When the transmission is successful, the 'Offline Folio' link is no longer displayed and the folio will be treated as a successful Fiscal Folio.

1. From the **OPERA Cloud** menu, select **Financials, Cashiering** and then select **Folio History**.

2. Enter search criteria and click **Search**.
3. Locate the folio in the search result, then click the vertical ellipsis **Actions** menu and select **Send Fiscal Folio**.
 - a. Select **Send Folio**.

Resend Fiscal Folios

When the Resend Fiscal Folio OPERA Control is active, you can resend a folio to the fiscal service.

1. From the **OPERA Cloud** menu, select **Financials, Cashiering** and then select **Folio History**.
2. Enter search criteria and click **Search**.
3. Locate the folio in the search result, then click the vertical ellipsis **Actions** menu and select **Send Folio**.

Credit Bills For Folios

Prerequisites for Credit Bills For Folios

Once a folio has been generated you can associate a credit (that is, a negative posting) with it. Using the Maximum Credit Days For Individuals and Maximum Credit Days For Non-Individuals OPERA Controls you may stipulate that a credit bill can be applied to a folio for only a limited number of days following the date the folio was created.

Note:

A folio must have been generated before the current business date in order to associate a credit bill with that folio. An exception is the case of deposit folios. If a folio was created on the current date for a deposit, a credit bill may be associated with the deposit folio up until the time the reservation is checked in.

Using the Same Day Credit Bills OPERA Control, you can define when a Credit Bill can be issued. There are three options:

- **All:** You can create a credit bill on all folios on the same date the folios are generated.
- **Deposit:** You can create a credit bill on deposit folios on the same date the folios are generated.
- **Never:** You cannot create a credit bill on folios on the same date they are generated.

Follow these guidelines when associating a credit bill with a folio:

- You can generate a credit bill for an amount up to the remaining balance on the original folio. For example, if you have a folio for \$100.00 and you have already issued a credit bill for \$20.00, then you can only issue a credit bill for the remaining \$80.00 of that folio.
- You cannot associate a credit bill with another credit bill unless the Allow Credit Bill for Credit Bill Folios OPERA Control is active.
- You cannot apply a credit bill to a voided bill.

 **Note:**

When the Credit Bill Reasons OPERA Control is active, a Credit Bill Reason prompt is displayed when you generate a Credit Bill. Select a credit bill adjustment code and enter any remarks.

 **Note:**

When the Advanced Deposit Handling OPERA Control is setup to Generate a Deposit Folio, transaction codes configured as Paid Out will not be available for selection when posting to a Credit Bill.

 **Note:**

The passer-by folio template is used to generate credit bills.

Generating a Credit Bill

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Folio History**.
2. Enter search criteria , then click **Search**.
3. Select the folio then click the vertical ellipsis **Actions** menu and select **Generate Credit Bill**.
4. On the Credit Bill screen:
 - a. Select **Individual Transactions** to select an individual transaction to apply the credit against.
 - b. Select **All Transactions** to apply the credit against all previously posted transactions.
 - c. When adding charges in the Post Charges panel, click the vertical ellipsis **Actions** menu and select **Add Charge**.
 - d. Enter the transaction code of the charge and enter the price as a negative value. The quantity will set to 1 by default.
 - e. Enter additional information such as the Supplement, Reference, or a Check Number. The Supplement field is mandatory for all negative posts.
 - f. When adding payments in the Post Payments panel, click the vertical ellipsis **Actions** menu and select **Add Payment**.
 - g. Enter the payment method and the amount of the payment. You must add a minus sign to the payment amount, for example, -13.20. Cash or Check payment types are not allowed for negative amounts.
 - h. When making a payment for All Transactions, the payment amount is pre-filled in the Amount field.
 - i. Enter any value in the **Reference** field for the negative payment. This field is mandatory for all negative payments

- j. The Supplement field is available but not mandatory.
- k. Click **Settle Credit Bill** or click **Settle and Print Credit Bill** to generate a credit invoice.
- l. On the next screen, select a terminal to process the payment.

Debit Bills for Folios

Prerequisites for Debit Bills for Folios

You can generate a Debit Bill/Supplemental Folio for existing folios, for when additional charges need to be posted and linked to the original folio.

Note:

You are required to enter your [PIN](#) when the Force Cashier Login OPERA Control is active.

Generating a Debit Folio

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Folio History**.
2. Enter search criteria, then click **Search**.
3. Select the folio then click the vertical ellipsis **Actions** menu and select **Generate Debit Bill**.
4. Click **Add Charge** to post charge(s).
 - a. **Code:** Enter or select a charge code from the list. As you enter the transaction code description a list of matching codes is displayed.
 - b. **Price:** Enter the amount of the charge. Price may default based on the transaction code selected.
 - c. **Quantity:** Enter the quantity of the charge. The total amount posted = Price x Quantity.
 - d. **Arrangement:** Select an arrangement code from the list. An Arrangement Code is a folio grouping code that controls the display of the transaction on the folio (available when the Folio Arrangements OPERA Control is active). For more information, see [Selecting Folio Styles for Viewing, Printing](#).
 - e. **Supplement:** Enter any supplemental information text. If a negative price is entered, this field is mandatory to ensure that you enter a reason for the negative (rebate) posting.
 - f. **Reference:** Enter any reference information. This field is also used to automatically note any transferred postings and/or interface information, such as phone details.
 - g. **Check Number:** Enter a POS check number if applicable. The field might be mandatory based on the transaction code setup.
 - h. Click **Add Charge**.
5. To remove a charge, select the charge then click the vertical ellipsis **Actions** menu and select **Remove**.
6. Click **Post Payment** to post payment for additional charges.

- a. **Method:** Enter or select a payment method from the list.
 - i. **Card Number:** Enter credit card number (PAN).
 - ii. **Card Expiry:** Enter credit card expiry date (MM/YY).
 - iii. **Card Holder:** Enter the name of the card holder.
 - iv. **Apply Surcharge:** Select to apply a credit card surcharge (available when the Credit Card Transaction Surcharge OPERA Control is active).
 - b. **Amount:** Enter the payment amount. Enter a negative amount to post a reversal or refund.
 - i. **Total Amount** will include any surcharge calculated.
 - ii. Click **Change Payment Currency** to change the currency for the payment (available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active).
 - c. **Supplement:** Enter any supplementary information text.
 - d. **Reference:** Enter any reference information. When the Mandatory Reference Negative Payments OPERA Control is active, this field is mandatory for negative payment amounts to ensure a reason is provided.
 - e. Click **Add Payment**.
7. Click **Settle Debit Bill** to close the debit bill or click **Settle and Print Debit Bill** to close the debit and print a copy of the folio.

Manage Billing

Billing is used to manage in house, due out, and checked out with open folio reservation accounts. You can view, post, adjust or transfer charges, post payments, generate folios, and perform many other tasks.

[Watch Video](#)

Each reservation account is divided into eight sub-accounts (commonly called windows) that are numbered #1 - #8). Each sub-account (billing window) is linked to a payee profile and can be used in conjunction with charge routing (available when the Routing OPERA Control is active) to automatically route selected charges to the sub-accounts. For example, account #1 could be for all charges to be settled by the guest, and account #2 could be linked to a company profile for all charges to be settled by the guest's employer.

Billing can display a single sub-account window or two sub-account windows side-by-side. When charges only exist in a single billing window, billing opens in single panel view. If charges exist on two billing sub-account windows, billing opens with two account panels appearing side-by-side. If charges exist in more than two sub-accounts, billing opens in panel view with the billing drawer displayed to indicate the balance in other sub-accounts. You can toggle between single and panel views by clicking the appropriate view button on the billing window.

When the Oracle Hospitality OPERA Comp Accounting Cloud Service or Oracle Hospitality OPERA Cloud Service Casino and Gaming Management are active, additional sub-accounts (#101 - #108) are available for the management of complimentary charges.

When the Fiscal Folio Printing and Offline Folio OPERA Controls are active, you can settle the folio when the fiscal service is unavailable. The Fiscal Folio/Payload for the Offline Folios can be generated and transmitted to the Fiscal Service from [Folio History](#).

[Reservation Cashiering Notes](#) appear in the **Notifications** area. When accessing Billing, the Notification panel automatically opens to display the reservation Cashiering notes. Unread notes are marked with a vertical blue indicator and a bold title. Click **Mark All as Read** to clear the indicator.

You can do the following when managing a guest's billing:

- Post charges to the guest account by transaction code, price, and quantity. You can post charges in any of eight separate windows.
- Accept and post guest payments by credit card, cash, or check to any of the eight windows.
- Reverse a payment by creating a new transaction in the same amount. This option appears after you select a payment transaction.
- Edit postings or transfer entire folios or partial postings to other folios or guest rooms.
- Adjust transactions by amounts or percentages. You can provide reason codes and descriptions for the adjustments.
- Split a single transaction into two transactions based on an amount or a percentage. Split amounts appear in separate rows on the Manage Billing screen.
- Print, email, or preview a folio by window or currency.
- Search for all transactions made by the guest or enter search criteria to find only specific transactions.
- Move postings from one window to another window.
- View notifications. The Notification window opens up by default with a red notification icon showing the number of notes waiting to be read.
- Expand the guest's business card to view profile information and more.

Settling a Reservation Account Balance

A reservation account balance must be settled at check out unless the reservation is checked out with an [Open Folio](#), which allows you to post charges to the reservation in a checked out status.

Reservation account settlement involves the posting of payment(s) for the balance due in each sub-account (billing window). A folio is generated for each billing window and available in [Folio History](#). Each folio is assigned a bill number according to the Fix Bill Reservation and [Fix Bill Window OPERA Controls](#). Custom reference numbers can be configured to generate on the folio when the [Custom Numbers OPERA Control](#) is active. For more information, see [Configuring Custom Numbers](#).

For a reservation balance to be transferred to Accounts Receivable, a **Direct Bill** or **City Ledger** pseudo-payment method is posted when the payee profile linked to the billing window has an [AR account setup](#). By default, the balance payable is displayed masked #####. Click **View Folio Balances** to unmask the direct bill amount. City Ledger (transfer) settlement is always a complete bill and not a standalone payment. As such, if you need to partially settle a balance to cash or other payment type, first post the cash settlement and then you can settle the remaining balance to direct bill/city ledger.

To settle the reservation account and check out a reservation earlier than the expected departure date, an Early Departure settlement option is available. The reservation departure date is updated and rooms management is alerted to the unexpected early departure. For more information, see [Checking Out Reservations Early](#).

You can also settle a reservation account balance without checking out the reservation using one of these options:

- **Interim Folio:** Interim settlement allows you to process the payment for a reservation account and generate a folio (bill) without checking out the reservation.
- **Advanced Folio:** While the Interim Bill option covers the current balance due, an Advance Bill allows you apply charges for the current night, several nights, or entire stay.

When the [eFolio Export OPERA Control](#) is active, you can be prompted to select a [delivery method](#) for an eFolio based on the payment method selected.

When the [Fiscal Folio Printing OPERA Control](#) is active, an additional options for generating a special, fiscally compliant folio can occur. For more information, see [Oracle Hospitality Localization Center for Hotel](#).

Interim Folio Settlement

Select Interim Folio to process the payment for a reservation account balance and generate a folio (bill) without checking out the reservation.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and then click **Search**.
3. Select the **reservation** from the search results, click **I Want To . . .** and then select **Billing**.
4. On the Manage Billing screen:
 - a. Click **I Want To . . .** and select **Interim Folio**.
 - b. Select the **Billing Window** and then enter the payment details. For more information, see [Posting Payments to a Reservation Account](#).
 - c. Click **Settle and Send Folio**.
 - d. Select the folio print options. For more information, see [Generating a Folio for a Billing Window](#).

Advanced Folio Settlement

Select Advance Bill to process a payment without checking out the reservation. All anticipated fixed charges (such as room and tax or service charges) get posted.

 **Note:**

The transaction date for all charges paid by Advance Folio—including package and allowances and associated taxes (inclusive and exclusive)—is the date when the Advance Bill is generated. However, revenue for these charges is not recognized until the business date for which the charge is applicable. For example, assume a reservation staying three days, JUN 1 through JUN 3, has a breakfast allowance of \$20.00 plus a 6% tax for a total of 21.20 per day. The guest requests an Advance Bill on the first day of the stay. The guest ledger for JUN 1 will show a 63.60 charge for the breakfast transaction code. However, revenue accounting will show 21.20 for JUN 1, another 21.20 on JUN 2, and another 21.20 for JUN 3.

When the Generate Zero Bill OPERA Control is active and a zero balance is due, OPERA Cloud prompts you to select whether to generate a zero-balance folio.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria then click **Search**.
3. Select the reservation from the search results, click **I Want To . . .** and select **Billing**.
4. On the Manage Billing screen:
 - a. Click **I Want To . . .** and select **Advance Folio**.
 - b. Select an option:
 - i. **Tonight**: Current date only.
 - ii. **Nights to Charge**: Enter a number of nights to charge.
 - iii. **Entire Stay**.
 - c. Click **Apply Advanced Charges**.
 - d. On the Folio Settlement page, enter the [payment details](#).
 - e. Click **Settle and Send Folio**.
 - f. Select the folio print options. For more information, see [Generating a Folio for a Billing Window](#).

Departure Settlement

To settle a reservation account balance to an AR account, the AR Account profile must be selected for the Billing window using [reservation routing](#). To reverse a direct bill settlement, see [Reversing Direct Bill Settlement](#).

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria then click **Search**.
3. Select the reservation from the search results, click **I Want To . . .** and select **Billing**.
4. On the Manage Billing screen, click **Checkout**.
 - a. On the Folio Settlement page, review the Billing windows with a balance due and click **View Folio Balances** to display amounts currently masked.
 - b. Select the **Billing window** and enter the [payment details](#).
 - c. Click **Settle and Send Folio**.

- d. Select the **folio print** options. For more information, see [Generating a Folio for a Billing Window](#).
- e. Repeat for the next Billing window.
- f. When the reservation account balance is zero for all windows, click **Checkout Now**.

Generating a Folio for a Billing Window

By default, folios are generated in the style selected in the [Default Folio Style OPERA Control](#), but you can select a different style in the Folio Print Options. When the Ability to Quote Rates in Foreign Currencies OPERA Control is active, you can generate folios in any currency for which exchange rates are set up. For more information, see [Managing Currency Exchange Rates](#). When the Additional Folio Text OPERA Control is active, you can enter reservation-specific promotional or reference text to include on the folio. For example, you could indicate a travel agent voucher number or purchase order reference details on an AR invoice.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and then click **Search**.
3. Select the reservation from the search results, click **I Want To. . .** and select **Billing**.
4. Click **I Want To. . .** and then click **Generate Folio for a Window**.
5. On the Generate a Folio screen:
 - a. Select a Window.
 - b. Folio Print Options:
 - i. **Folio Style**. Click to select a folio style. For more information, see [Selecting Folio Styles for Viewing, Printing](#).
 - ii. **View in Currency**: Click to select a currency from the list (available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active).
 - i. Select a **currency** from the list.
 - ii. Click **Select**.
 - iii. **Folio Text**. Click to add folio-specific text to appear when generating the folio (available when the Additional Folio Text OPERA Control is active).
 - i. Enter **Promotional** or **Reference** text into the fields.
 - ii. Click **Save**.
 - c. Select a destination.
 - i. **Preview**. Select to generate as PDF file.
 - ii. **Print**. Select a printer from the list. For more information, see [Configuring Printers](#).
 - iii. **Email**. Select an email address from the list.
 - i. Click **New Email** to add an email address.
 - ii. **Email Type**: Select an email type from the list.
 - iii. **Email Address**: Enter an email address.

- iv. Click **Save**.
- iv. **Download**. Select to download PDF file.
- d. Click **Process**.

Generating a ProForma Invoice

Prerequisites for Generating a ProForma Invoice

You can generate a preliminary bill, known as a proforma folio, with the actual and anticipated charges such as fixed, package and accommodation charges, and taxes for the duration of the stay. A proforma folio only applies to Billing window #1. Room routing of charges are included on the proforma folio for the **routed-to** reservation and not for the **routed-from** reservation. Generating a proforma folio does not actually post the anticipated charges to the reservation account and is not regarded as an actual invoice or bill; it is a provided as an estimate only.

When the Ability to Quote Rates in Foreign Currencies OPERA Control is active, any rate or package pricing setup in a foreign currency is converted to your property's currency based on the current posting exchange rate. For more information, see [Managing Currency Exchange Rates](#).

Note:

You cannot generate a proforma folio for a reservation in Checked Out, Cancelled, or No Show status.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Enter search criteria then click **Search**.
3. Select the reservation from the search results, click **I Want To . . .** and select Billing.
4. Click **I Want To . . .** and then click **Proforma Folio**.
5. Select the **folio** print options. For more information, see [Generating a Folio for a Billing Window](#).
6. Click **Process**.

Charges Adjustment and Payments

Billing enables you to post, edit, split, transfer, and adjust charges on reservation accounts. You can also post payment and settle reservation accounts.

Posting Payments to a Reservation Account

Use the Post Payment action to apply credit card, cash, check and other forms of payments to the reservation account. You can post payments to any of eight different billing windows.

 **Note:**

When the Service Type OPERA Control is active, the total for Goods and Services must be settled separately for each billing window.

 **Note:**

When the Rounding Factor OPERA Control is active, some payments will be rounded up or down according to the setup. For more information, see [OPERA Controls – Cashiering](#).

 **Note:**

When the Calculate Change Due OPERA Control is active, you will be prompted if the cash amount received is greater than the amount due.

 **Note:**

When the Ability to Quote Rates in Foreign Currencies OPERA Control is active, you can post payment in various currencies; the amount is converted using the current settlement exchange rate for the currency. For more information, see [About Foreign Currency Codes](#).

 **Note:**

When the Restrict Cash/Check Payment Reversal OPERA Control is active you are not able to post negative cash or check payments. When the Restrict Cash/Check Payment Reversal OPERA Control is inactive, your role must be granted the Reverse Cash/Check Payments task in order to post negative cash or check payments.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and click **I Want To. . .** and select **Billing**.
4. On the Manage Billing screen, click **Post Payment** then complete the following:
 - a. **Window**. Select the billing window for the payment.
 - b. **Method**. Enter or select a payment method from the list.
 - i. **Card Number**. Enter credit card number (PAN).
 - ii. **Card Expiry**. Enter credit card expiry date (MM/YY).
 - iii. **Card Holder**. Enter the name of the card holder.

- iv. **Apply Surcharge.** Select to apply a credit card surcharge (available when the Credit Card Transaction Surcharge OPERA Control is active).
- c. **Amount.** Enter the payment amount. Enter a negative amount to post a reversal or refund.
 - i. **Total Amount** will include any surcharge calculated.
 - ii. Click **Change Payment Currency** to change the currency for the payment (available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active).
- d. **Supplement.** Enter any supplementary information text.
- e. **Reference.** Enter any reference information. When the Mandatory Reference Negative Payments OPERA Control is active, this field is mandatory for negative payment amounts to ensure a reason is provided.
- f. Click **Apply Payment**.

Posting an Adjustment Charge to a Reservation Account

The Post Adjustments action in Billing enables you to adjust transactions by a fixed amount or a percentage of the cost.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and click **I Want To . . .** and select **Billing**.
4. On the Manage Billing screen, click **I Want To . . .** and click **Post Adjustment**.
 - a. In the Adjustment panel:
 - i. Select **Amount** or **Percentage**.
 - i. **Amount:** Enter either an adjustment amount or a percentage of the original posted amount.
 - ii. **Department:** Select a department from the list.
 - iii. **Reason:** Select an adjustment reason from the list. For more information, see [Configuring Adjustment Reason Codes](#)
 - iv. **Reason Text:** Enter additional information about the adjustment.
 - b. In the Selected Transactions panel:
 - i. Click the vertical ellipsis **Actions** menu and select **Search Transactions**.
 - ii. Enter your search criteria and click **Search**.
 - iii. Select a transaction to adjust and click the down arrow to move charges it into the **Selected** section, then click **Select**.
 - iv. Click **Process Adjustment**.

Posting Charges to a Reservation Account

Use the Post Charge action to post charges to an in-house reservation account. When the Pre-Stay Charges OPERA Control is active, you can post charges to future reservations with [pre-stay charging privileges](#). When the Post-Stay Charges OPERA Control is active, you can post charges to checked out reservations with [post-stay charging privileges](#).

You can post charges to any of eight different billing windows. A payment method icon and profile name appears for each Billing window to indicate the payee and payment type for the Billing window. Select the **Views** icon to toggle between single or dual Billing window display.

You can transfer posted charges to another window or reservation according to [reservation routing instructions](#).

 **Note:**

A warning is prompted when you post charges to reservations flagged as “no post” in [reservation payment details](#). Users with the Post Charges to No-Post Reservations task assigned to their roles can override posting the charge.

 **Note:**

When the Rollup Transactions OPERA Control is active, charges posted with the same check number (for example, Restaurant Food and Restaurant Tax) are rolled up into a single line item in Billing. The posting will have a plus sign (+) in the Code field with the check number following the description. Double-click the plus sign to expand and display the individual charges included in that check number.

Posting Charges

 **Note:**

When you post a (cash) paid out charge, you are prompted to generate a paid out receipt for the guest to sign.

 **Note:**

When the Allow Negative Postings (Charges) OPERA Control is inactive, you cannot post negative charges to reservation accounts, overriding the Post Negative Amounts task assigned to your role(s).

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click **I Want To. . .** and select **Billing**.
4. On the Manage Billing screen, click **Post Charge** and complete the following:
 - a. **Window**. Select the billing window for the charge (defaults to the current billing window).
 - b. **Code**. Enter or select a charge code from the list. As you enter the transaction code description a list of matching codes is displayed.

- c. **Price.** Enter the amount of the charge. Price may default based on the transaction code selected.
- d. **Quantity.** Enter the quantity of the charge. The total amount posted = **Price x Quantity.**
- e. **Arrangement.** Select an arrangement code from the list. An Arrangement Code is a folio grouping code that controls the display of the transaction on the folio (available when the Folio Arrangements OPERA Control is active). For more information, see [Selecting Folio Styles for Viewing, Printing](#).
- f. **Supplement.** Enter any supplemental information text. If a negative price is entered, this field is mandatory to ensure that you enter a reason for the negative (rebate) posting.
- g. **Reference.** Enter any reference information. This field is also used to automatically note any transferred postings and/or interface information, such as phone details.
- h. **Check Number:** Enter a POS check number if applicable. The field might be mandatory based on the transaction code setup.
- i. Click **Apply Charge** or click **Apply Charge and Post Another** to post another charge.

Posting Articles

The following is available when the Articles OPERA Control is active:

A charge transaction code can sometimes serve as an "umbrella" for multiple individual items or articles that can be posted using that code. At times, it might be desirable to break out these separate articles for billing and revenue tracking purposes. For example, a single "minibar food" transaction code might cover potato chips, crackers, peanuts, pretzels, and so forth. Using [articles setup](#), you can specify an individual article number that identifies each of these food items, even though they are all grouped under the same transaction code. Moreover, you can specify a default price for each article, just as you can for transaction codes. Then, instead of posting a lump sum to the minibar food transaction code, you have the option of posting each individual article and its quantity and price. For example, rather than posting \$7.75 to minibar food, you can post \$5.00 for two bags of peanuts and \$2.75 for potato chips. Two separate charges to the minibar food transaction code will appear on the folio (one for \$5.00 and one for \$2.75).

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click **I Want To. . .** and select **Billing**.
4. On the Manage Billing screen, click **Post Charge** and complete the following:
 - a. **Window.** Select the billing window for the charge (defaults to the current billing window).
 - b. **Code.** Enter or select an article code from the list. As you enter the article description, a list of matching codes is appear.
 - c. **Price.** Enter the amount of the charge. Price may default based on the article selected.
 - d. **Quantity.** Enter the quantity of the charge. The total amount = **Price x Quantity.**
 - e. **Arrangement.** Select an arrangement code from the list. An Arrangement Code is a folio grouping code that controls the display of this transaction on the folio. For more information, see: [Selecting Folio Styles for Viewing, Printing](#).

- f. **Supplement.** Enter any supplemental information text. If a negative price is entered, this field is mandatory to ensure that you enter a reason for the negative (rebate) posting.
- g. **Reference.** Enter any reference information. This field is also used to automatically note any transferred postings and/or interface information, such as phone details.
- h. **Check Number.** Enter a POS check number if applicable. The field might be mandatory based on the transaction code setup.
- i. Click **Apply Charge** or click **Apply Charge and Post Another** to post another charge.

Posting (Cash) Paid out Charges

Paid out is a special type of charge that identifies cash payment as given out from your cash draw. A paid out receipt is generated after posting a paid out charge; the recipient of the cash can sign the receipt to confirm acceptance.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and click **I Want To . . .** and select **Billing**.
4. On the Manage Billing screen, click **Post Charge** then complete the following:
 - a. **Window.**Select the billing window for the charge (defaults to the current billing window).
 - b. **Code.**Enter or select a paid out charge from the list. As you enter the transaction code description a list of matching codes is displayed.
 - c. **Price.**Enter the amount of the paid out
 - d. **Supplement.**Enter any supplementary information text. If a negative price is entered, this field is mandatory to ensure that you enter a reason for the negative (rebate) posting.
 - e. **Reference.**Enter any reference information. This field is also used to automatically note any transferred postings and/or interface information, such as phone details.
 - f. Click **Apply Charge** or click **Apply Charge and Post Another** to post another charge.

Moving Posted Transactions from One Folio Window to Another

The Move Charges option lets you move charges from one folio window to another. For example, a guest might want to move charges to keep business expenses separate from personal expenses.

1. From the **OPERA Cloud** menu, select **Bookings**, select **Reservations**, and then select **Manage Reservation**.
2. Search for and open a reservation.
3. Click **I Want To . . .** and then click **Billing**.
4. On the Billing screen, click **Move Charges** and then select the **Windows** option or verify this option is selected.

5. Click the window from which you want to move a transaction. From the table listing transactions for the window, click the transaction you want to move and drag and drop it to another window.

The transaction moves into the new window. The balance in both windows updates to reflect the change.

Posting a Rate Code Charge to a Reservation Account

Use Post Rate Code to manually post room and tax charges to a reservation account in advance of the End of Day post room and tax procedure. When the Post Stay Charges and Open Folio OPERA Controls are active, the Post Rate Code action is enabled for reservation accounts in open folio status. For more information, see [Closing an Open Folio Reservation](#).

Note:

When manually posting rate code charges to an Open Folio Reservation and allowance packages are linked to the rate code, these package allowances will not be posted as part of manual rate code posting process. The reason being that the Open Folio reservations are already checked out and do not go through End of Day process as in-house reservations. Due to this no allowances and profit/loss charges occur.

Note:

Manually posting rate code charges does not affect the auto-posting of room and tax charges during End of Day, nor does manually posted room and tax charges change the rate code, room type, number of persons, rate, or other details specified on the reservation.

Note:

Posting rate code charges does not post any [fixed charges](#) setup on the reservation.

The Post Rate Code action allows you to manually post room and tax charges to a guest's bill.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and click **I Want To . . .** and then select **Billing**.
4. Click **I Want To . . .** and then click **Post Rate Code**.
 - a. Select a **Window** (1–8).
 - b. **Rate Code**: Select a rate code from the list (defaults from the reservation).
 - c. **Amount**: Enter an amount to post (defaults from the reservation).

- d. **Quantity:** Enter quantity to charge.
- e. **Adults:** Enter number of adults (defaults from the reservation).
- f. **Children:** Enter number of children (defaults from the reservation).
- g. Select **Post Packages** to post packages included in the rate.
- h. Click **Post Rate Code**.

Redeem Prepaid (Gift) Cards

Prerequisites for Redeem Prepaid (Gift) Cards

1. From the **OPERA Cloud** menu, select **Front Desk**, then select **In house (or Departures)**.
2. Enter search criteria and click **Search**.
3. Select the reservation and click **I Want To . . .** then **Billing** (or click the **Balance** link for the reservation).
4. Click **Post Redemption**.
 - a. Select the billing window to post redemption.
 - b. Select a card from the list.
 - i. Click **Get Balance** to request card balance from vendor.
 - ii. **Amount to Redeem.** Enter the amount to redeem on the prepaid card and post as payment towards settlement; amount cannot be greater than card balance.
 - iii. Click **Redeem**.
 - c. Click **Add Row** to add a card to the reservation.
 - i. **Name.** Enter name on card.
 - ii. **Card Number.** Enter the card number.
 - iii. **PIN.** Enter card PIN (if required).
 - iv. Click **Get Balance** to request card balance from vendor.
 - v. **Amount to Redeem** Enter the amount to redeem on the prepaid card and post as payment towards settlement; amount cannot be greater than card balance.
 - vi. Click **Redeem**.

Payment(s) will be posted the selected billing window.

Posting Credit Card Rebates to a Reservation Account

You can post a rebate (refund) to a credit card. When the Credit Card Rebate Validation OPERA Control is active, the rebate amount is checked against the previously charged amount to the credit card to ensure the rebate does not exceed the original payment amount posted.

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **In-House**.

2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click **I Want To . . .** and select **Billing**.
4. On the **Manage Billing** screen, click **Post Payment** and complete the following
 - a. **Window**. Select the billing window for the payment.
 - b. **Method**. Enter or select a credit card payment method from the list.
 - i. **Card Number**. Enter the credit card number (PAN).
 - ii. **Card Expiry**. Enter the credit card expiry date (MM/YY).
 - iii. **Card Holder**. Enter the name of the card holder.
 - iv. **Apply Surcharge**. Select to apply a credit card surcharge (available when the Credit Card Transaction Surcharge OPERA Control is active).
 - c. **Amount**. Enter the negative payment amount.
 - i. The Total Amount includes any surcharge calculated.
 - ii. Click **Change Payment Currency** to change the currency for the payment (available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active).
 - iii. The Override Debit Activity to Process Rebate dialog appears. If you want to override the validation against the original amount, select the check box. If the rebate amount is greater than the original charge, OPERA Cloud prompts this message: Debit Activity for Credit Card Rebate is Insufficient.
 - d. **Supplement**. Enter any supplementary information text.
 - e. **Reference**. Enter any reference information. When the Mandatory Reference Negative Payments OPERA Control is active, this field is mandatory for negative payment amounts to ensure a reason is provided.
 - f. Click **Apply Payment**.

Posting a Comp Redemption

Gaming

Prerequisites for Posting a Comp Redemption

The following conditions are required to post redemptions to reservations:

- The attached membership must equal the **Default PTS Membership Type** setting in OPERA Controls.
- The redemption amount is greater than 1.00 (not zero or a negative amount), but not higher than the balance of the folio window where the redemption is being posted.

If granted the **Manage Financial Posting** user task, you can go to the Billing screen and post redemption(s) to reservations using any of the following ways:

- Clicking the **Post Redemption** button.
- Clicking **I Want To . . .** and then selecting **Post Redemption**.
- Clicking the **Post Redemption** link from the Vertical Ellipsis for each folio window.

Posting Comp Redemptions

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter or select a **Property** and click **Search**.
3. Click **I Want To . . .** for the reservation and select **Billing**.
4. On the Billing screen, click the **Post Redemption** button. The Redemption screen appears with a listing of comp redemption codes configured at your property.
5. Select a window and enter the amount to redeem for the selected comp redemption code.

You can enter a total amount equal to or less than the balance of the selected folio window. The redemption amount or the sum of redemption amounts cannot be negative or higher than the balance of the selected folio window.

6. Click **Post Redemption**.

After posting redemptions to a folio window, you cannot edit the redemption amount, split, move, transfer, or adjust the transaction.

Reversing Comp Redemption Postings

To correct or reverse a redemption posting, users granted the **Reverse Redemption** task can click the **Reverse Redemption** button and select an adjustment reason for deleting the selected redemption.

 **Note:**

The **Reverse Redemption** button becomes available when editing a redemption already posted to the folio. This button is only available for redemptions made on the same business date of the property.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Click **Search**. You can also enter search criteria to refine the search results.
3. Click **I Want To . . .** for a reservation and select **Billing**.
4. On the Billing screen, click the transaction code of the redemption you want to reverse.
5. Click the **Reverse Redemption** button.
6. Select a reason to process the reversal and click **Select**.
7. Click the **Reverse** button to post the reversal to the folio.

Splitting Charges and Payments

You can split most charges (including negative amount charges), for checked in or open folio reservation accounts, by a fixed amount, a percentage, or a quantity. You can also split payments by a fixed amount or percentage.

When a charge is split, it is divided into two amounts within the same window. You can then transfer either of the resulting charges to another window (by using the drag-and-

drop method or to another reservation account. Negative amounts or percentages can be entered as an Amount to Split / Percentage to Split. For example, if you split a posting of 100 by -10, the result would be postings of 110 and -10. Or if you split a posting for 40 by -10% the result would be postings of 44 and -4. If you split a posting of -10 by -5%, the result would be postings of -10.50 and 0.50. In a split posting, the two resulting values will always equal the amount you start with.

 **Note:**

When you split a charge with tax generates, the tax is automatically recalculated for the two resulting transactions. A generate that has been split cannot be selected and transferred to another window by itself (without the main transaction) when the Auto Transfer Generate With Main OPERA Control is active.

 **Note:**

When the Tax Type Calculation OPERA Control is set to Profile, and a split charge with tax generates is moved between billing windows, the generates for the moved portion of the transaction recalculates based on the tax type of the profile linked to the target billing window.

Splitting Charges

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and click **I Want To. . .** and select **Billing**.
4. On the Manage Billing screen, select the **Billing Window** with the charges.
5. Select the charge(s) then click the vertical ellipsis and select **Quick Split** and choose from the options.
 - a. **Split by Amount:** Select the Amount option button to split the transactions into two fixed amounts.
 - i. **Amount to Split:** Enter the amount by which the transaction is to be split.
 - ii. The transaction will be split into two transactions: One will be for the amount you specified, and the other will be for the remainder of the original amount.
 - b. **Split by Percentage:** Select the Percentage option button to split the transaction by a percentage of the original amount.
 - i. **Percentage to Split:** Enter the percentage by which the transaction is to be split.
 - ii. The transaction will be split into two transactions: One will be for the percentage of the original amount you specified, and the other will be for the remainder of the original amount.
 - c. **Split by Quantity:** Select the Quantity option button to split the transaction by a quantity so the amount is automatically split based on the unit price multiplied by the respective new quantity values for the resulting transactions
 - i. **Quantity to Split:** When a quantity of more than one exists for the transaction, enter the quantity by which the transaction is to be split. Transactions with more than 1 quantity can be split by a quantity between 1 and existing quantity minus

1. If a single transaction having 1 quantity is selected for split, then the Quantity option is not available. If multiple transactions are selected and any of the transactions cannot or did not split, then a message is displayed that "X Charge(s) Not Split".

- d. Click **Split**.

Splitting Payments

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and click **I Want To . . .** and select **Billing**.
4. On the Manage Billing screen, select the **Billing Window** with the payment.
 - a. Select the payment, then click the vertical ellipsis and select **Quick Split** and choose from the options.
 - b. **Split by Amount**: Select the Amount option button to split the payment into two fixed amounts.
 - i. **Amount to Split**: Enter the amount by which the payment is to be split.
 - ii. The payment transaction is split into two transactions: One will be for the amount you specified, and the other will be for the remainder of the original amount.
 - c. **Split by Percentage**: Select the Percentage option button to split the payment by a percentage of the original amount.
 - i. **Percentage to Split**: Enter the percentage by which the transaction is to be split.
 - ii. The payment transaction is split into two transactions: One will be for the percentage of the original amount you specified, and the other will be for the remainder of the original amount.
- d. Click **Split**.

Editing Charge Details

You can update current business date charges posted with your cashier ID. With the Update Charge Details task granted to your role, you can also update charge details posted by other users.

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results, click **I Want To . . .** and select **Billing**.
4. On the **Manage Billing** screen, select the **Billing Window** with the charge.
5. Click the **Code** link for the charge or select the charge, click the **vertical ellipsis** Action, and select **Edit Posting**.
6. Update charge details:

- a. **Price:** Enter the price. It can only be changed on the same day that the posting was made, that is, before your business date is rolled over to the next day by End of Day.
 - b. **Quantity:** Enter the quantity. It can only be changed on the same day that the posting was made, that is, before your business date is rolled over to the next day by End of Day.
 - c. **Arrangement Code:** Select an Arrangement Code from the list. An Arrangement Code is a folio grouping code that controls the display of this transaction on the folio (available when the Folio Arrangements OPERA Control is active). For more information, see [Selecting Folio Styles for Viewing, Printing](#).
 - d. **Revenue Date:** Enter or select a revenue date (enabled when the Change Revenue Date task is granted to your role). For more information, see Changing Revenue Date below.
 - e. **Supplement:** Enter any supplemental information text. If you enter a negative price, this field becomes mandatory to ensure that you provide a reason for the negative (rebate) posting.
 - f. **Reference:** Enter any reference information. This field is also used to automatically note any transferred postings and/or interface information, such as phone details.
 - g. **Check No:** Enter a POS check number if applicable. This field might be mandatory based on setup of the transaction code.
 - h. **Covers:** Enter the number of covers.
7. Click **Save Transaction**.

Changing Revenue Date

If the Change Revenue Date task is granted to role(s), you can update the revenue date on postings.

The revenue date can be changed to any date that is equal or greater than the current business date and less than the departure date. A warning message appears if you try to enter a revenue date that is greater than the reservation departure date or earlier than the current business date.

If the revenue date for the main charge is changed, the revenue date for any (tax) generates is changed automatically. You cannot edit the the date directly.

The revenue date cannot be changed for a transaction if the reservation is checked out or in Open Folio status.

Note:

You cannot edit the revenue date for a payment wrapper or tax posting.

Example

A guest checks in for four nights on room-only rate and an advance bill is generated. The next morning, the guest decides to have breakfast at \$10.00 per day.

As packages cannot be attached to the reservation once an Advance Bill is generated, the cashier posts four breakfasts manually, as shown below, with all breakfast charges allocated to the same business date.

Table 6-4 Charge Details

	Charge Amount	Transaction Date	Revenue Date
Breakfast	10.00	16 May	16 May
Breakfast	10.00	16 May	16 May
Breakfast	10.00	16 May	16 May
Breakfast	10.00	16 May	16 May
Total Breakfast	40.00		

After the Revenue Date is updated, the revenue can be allocated as below:

Table 6-5 Charge Details

	Charge Amount	Transaction Date	Revenue Date
Breakfast	10.00	16 May	16 May
Breakfast	10.00	16 May	17 May
Breakfast	10.00	16 May	18 May
Breakfast	10.00	16 May	19 May
Total Breakfast	40.00		

Adjusting Custom Charges

Prerequisites for Adjusting Custom Charges

You can make changes to the Custom Charge Exemptions during the reservation stay by accessing custom charge adjustments . Once you make any corrections OPERA Cloud recalculates the total custom charges appropriate for the reservation. If the existing Custom Charges are too much or too little, in comparison with the updated Custom Charge Exemptions, then OPERA Cloud automatically posts a Custom Charge Adjustment to compensate for the difference.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria for the reservation and click **Search**.
3. Select a reservation in the search results.
4. Click **I Want to. . .** and then select **Billing** or click the Balance link in search result.
5. Click **I Want to. . .** and click **Adjust Custom Charges**.
 - a. See [Managing Custom Charge Exemption](#).

Posting Service Recovery Adjustment Charges

Prerequisites for Posting Service Recovery Adjustment Charges

A Service Recovery Adjustment enables you to associate a department, reason code, and clarifying text with an adjustment to a charge. You can also gain a guest signature acknowledging the adjustment. The Service Recovery Adjustment provides the ability to post and track Service Recovery Adjustments versus other non-service recovery related adjustments.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and click **I Want To. . .** and select **Billing**.
4. In **Manage Billing**, click **Vertical Ellipsis** and select **Post Service Recovery Adjustment**.
 - a. In the Adjustment panel:
 - i. Select **Amount** or **Percentage**.
 - i. **Amount**: Enter either an adjustment amount or a percentage of the original posted amount.
 - ii. **Department**: Select a department from the list.
 - iii. **Reason**: Select a reason from the list.
 - iv. **Reason Text**: Enter additional information about the adjustment .
 - b. In the Selected Transactions panel,
 - i. Click the vertical ellipsis **Actions** menu and select **Post Service Recovery Adjustment**.
 - ii. Enter your search criteria and click **Search**.
 - iii. Select a transaction to adjust and click the down arrow to move it into the **Selected** section of the screen, then click **Select**.
 - iv. Click **Process Adjustment**.

Reversing Direct Bill Settlement

When the Folio No Reprint OPERA Control is inactive and your role is granted the Reverse Direct Bill task, you can reverse (delete) a Direct Bill settlement to an AR account posted to an in house or due out reservation. This action might be necessary when the incorrect profile and AR account were selected for the routing instructions or if the AR Account is on credit hold and an alternate settlement of the reservation account balance is required.

For checked out reservations with [Post Stay privileges](#), **Reverse Direct Bill** is enabled on the departure date prior to running End of Day.

When the Folio No Reprint OPERA Control is active, you cannot reverse a Direct Bill settlement. Instead, a credit bill must be issued from [Folio History](#). For more information, see [Credit Bills For Folios](#).

Reversing a Direct Bill Settlement

1. From the OPERA Cloud menu, select **Front Desk**, then select **In House** (or click the figure in the In House tile).
2. Enter search criteria and then click **Search**

3. In the search results, select the reservation, click **I Want To . . .** and select **Billing** (or click the value in the **Balance** column).
4. Select the Billing window with the Direct Bill settlement.
5. Click the **Code** link for the Direct Bill settlement posting.
 - a. Click **Reverse Direct Bill**
 - i. **Reason**: Select a adjustment reason from the list.
 - ii. Click **Reverse**.
6. The Direct Bill settlement is deleted and removed from the Billing window.

Transferring Guest Folio Postings

Use Transfer Posting to transfer entire or partial postings to different windows within a guest's folio or to another guest staying at the property.

1. Open Manage Reservation in the **Application** menu and select **Search**.
2. Search and select a reservation, then select **Go to Billing**.
3. On the Manage Billing screen, select **Actions** and then select **Transfer Posting**.
4. On the Transfer Type screen, select either **Entire Folio** or **Partial/Selected Postings**.
 - a. If you select **Entire Folio**, select either **To a Room** or **From Room(s)**. Enter the guest number and name.
 - b. If you select **Partial/Selected Postings**, select **To a Folio Window** and choose the window, or select either **To a Room** or **From Room(s)**. If you select the room options, enter the guest room number and name.
5. Select **Next**.
6. On the Transaction Stop screen, select transactions from the **Available** row and move them to the **Selected** row.
7. Select **Next**.
8. On the Split Options screen, select one of three options: **Do not split**, **Split by Amount**, or **Split by Percentage**. Enter an amount or percentage if you selected either Split by Amount or Split by Percentage.
9. Select **Next**.
10. On the Transfer Confirmation screen, select **Transfer** to move the posting to either another window on the guest's folio or to another guest's room.

Transferring Credit Card Payments with Surcharges

When the Credit Card Transaction Surcharge OPERA Control is active, an additional amount is calculated and posted to cover the costs associated with accepting credit card charges. The surcharge amount posts to the guest ledger using the transaction code defined by the Default Surcharge Transaction Code OPERA Control.

You can transfer deposits and reservation account settlements made by credit cards with surcharges to other reservations. When doing so, the transfer moves only the nett credit card payment, not the surcharge.

Example

A guest makes a \$1000.00 reservation deposit using a credit card with a 10% surcharge applicable. The deposit payment is recorded as \$1100.00. The \$100.00 credit card surcharge posts to the guest ledger. Afterwards, the available deposit amount on the reservation shows as \$1000.00.

Viewing a POS Check Image for a Charge

A Point of Sale (POS) partner can post a guest check image using the OPERA XML posting specification. After posting the check, the image will be available for viewing and printing from OPERA Cloud billing. POS charges appear in a folio window with a check number in the supplement field. You also can include the POS check image when generating folios. Supported folio styles are: (1) Detail folio (date), (9) Detail Folio (room), (10) Summary by stay and check Number (Date), (14) Summary by check number (date) and (26) Detail folio (name).

POS check images are retained for 730 days and purged with the daily purge routine.

To view, print, or email the check image:

1. From the OPERA Cloud menu, select **Front Desk**, and select **In House** or any checked-in or departure reservation.
2. Search for reservations.
3. From the search results, click the row-level **I Want To . . . menu** and select **Go To Billing** (or click the **link** for the Balance amount).
4. Click the **information icon** in the reference column for a POS posting to view the check image.
5. To email or print the POS check, click **Print**. The following options appear:
 - Select **Email** to send the image as an email attachment. If the email address is not configured, click **New Email** and enter an address. The new email address will save in the guest's profile.
 - Select **Preview to Print** to generate a PDF of the check image for printing.

Example 6-1 Generating a Folio

To generate a folio that includes the POS check image:

1. Select **Information Folio**.
2. Select a **folio style**: (1) Detail folio (date), (9) Detail Folio (room), (10) Summary by stay and check Number (Date), (14) Summary by check number (date) and (26) Detail folio (name).
3. Select the **Destination**.
 - a. Select **Email** to send a PDF of the folio as an email attachment. If the email address is not configured, click **New Email** and enter an address. The new email address will save in the guest's profile.
 - b. Select **Preview to Print** to generate a PDF of the folio
 - c. Select **download** for a PDF version of the folio.

[Managing Historical Folios](#)

Cashier Login

Cashier Login is a security feature designed to prevent unauthorized users from accessing cashiering functions. You can configure cashier IDs in [Configure Cashier](#) and assign cashier IDs and privileges to users in [Managing Users](#).

When the Force Cashier Login is active in OPERA Controls you need to enter your cashier logon details to access cashiering functions such as:

- Reservation Deposits
- Reservations Check Out
- Reservation Billing
- Accounts Receivable Invoices
- Block Post Unallocated Deposits
- Posting Journal
- Post It

Note:

A PIN is required for authentication instead of your sign-on password.

Pre Stay and Post Stay Charging

The Pre Stay Charging and Post Stay Charging features control whether the property allows charges to be made to a reservation before check in or after check out. These features operate according to rules established in the Cashiering group under OPERA Controls.

After activating pre stay charging in OPERA Controls, you can:

- Allow pre stay charging for a set number of days prior to guest arrival.
- Specify eligible payment methods for pre stay charging.
- Restrict pre stay charging privileges to certain reservation types.
- Allow charging only if the reservation is on queue waiting to be checked in.
- Make pre stay charging a default option on guest Payment Instructions.

After activating post stay charging in OPERA Controls, you can:

- Make post stay charging a default option on guest Payment Instructions. This enables posting charges after checkout regardless of the payment type associated with the reservation.
- Restrict post stay charging privileges to certain reservation types.
- Activate the open folio functionality.
- Specify when an open folio needs to be closed (options are Sameday, Unrestricted, or a defined number of days).

- Define payment types that you can associate with a reservation to enable post stay charging.
- Set the number of days before automatically closing an open folio with a zero balance.

Pre Stay Charging Example

Paul Jensen makes a reservation for next Monday with pre stay charging allowed and a payment method and reservation type covered by the pre stay rules. He later calls to request tickets to a concert he wants to attend Monday evening. The property can reserve the tickets and post the cost of the tickets to his reservation.

Post Stay Charging Example

Pat Anderson has post stay charging enabled on her reservation and AMEX credit card information associated with her profile. The property allows folios to remain open only on the day of checkout. When she checks out on May 6, she uses the AMEX credit card for settlement. Later the same day, she goes to the lobby bar for lunch. The meal can be automatically posted to her folio by the POS interface. Anderson is still in town the next day, May 7, so she stops at the hotel for lunch again. This time, the meal cannot be automatically posted by the POS interface because your property's post-stay charges rules limit an open folio to **SAMEDAY**.

Viewing the Billing Summary

The Billing Summary displays a summary of charges for each billing window. When the Oracle Hospitality OPERA Cloud Service, Casino and Gaming Management Add-on is active, the Billing Summary page also allows casino hosts to review a side-by-side summary comparison of the "cash" and "comped" charges for a reservation.

1. From the OPERA Cloud menu, select **Front Desk**, and then select **In House**.
2. Enter search criteria and then click **Search**.
3. Select the reservation from the search results and click **I Want To...** and select **Billing**.
4. In Manage Billing
 - a. Click **I Want To...** and then select **Billing Summary**.

Searching Reservation Transactions

You can use the Search Transactions feature to locate charges posted to the reservation account.

Searching Transactions

1. From the OPERA Cloud menu, select **Front Desk** and then select **In House**.
2. Enter search criteria and then click **Search**.
3. Select the reservation from the search results and click **I Want To...** and select **Billing**.
4. In Manage Billing:
 - a. Click **I Want To...** and then select **Search Transactions**.
 - i. Enter search criteria and then click **Search**.

Searching and Transferring Transactions

1. From the OPERA Cloud menu, select **Front Desk** and then select **In House**.
2. Enter search criteria and then click **Search**.
3. Select the reservation from the search results and click **I Want To...** and select **Billing**.
4. In Manage Billing:
 - a. Click **I Want To...** and then select **Search Transactions**.
 - i. Enter search criteria and then click **Search**
 - ii. Select transactions in the search result, then click vertical ellipsis and select **Transfer Postings**.
 - iii. Select the **Transfer Direction**.
 - i. **to Folio Window**: Select to transfer charges to a folio window in the current reservation
 - ii. **to a Room**: Select to transfer charges to another room/reservation
 - i. **Room**: Enter or select a room from the list
 - ii. **Guest Name**: Enter or select reservation/guest name from the list
 - iii. Click **Transfer**.

Generating a Posting Journal Report

1. From the OPERA Cloud menu, select **Front Desk** and then select **In House**.
2. Enter search criteria and then click **Search**.
3. Select the reservation from the search results and click **I Want To...** and select **Billing**.
4. In Manage Billing:
 - a. Click **I Want To...** and then select **Search Transactions**.
 - i. Enter search criteria and then click **Search**
 - ii. Select transactions in the search result, then click vertical ellipsis and select **Generate Journal Report**.
 - iii. Select a destination then click **Process**.

Void Folios

Prerequisites for Void Folios

Use Void Folio to void folios generated on settlement of a reservation account balance. You can only void a folio on the same business date as the reservation departure date. Use the following guidelines when voiding a folio:

- A folio that contains a Bucket Redemption transaction code cannot be voided.
- A folio can be voided only on the same business date as it was created.

- A folio can be voided only if it has not been settled to Direct Bill / City Ledger (transferred to Accounts Receivable).
- Once the reservation is checked out, voiding the bill will reinstate the reservation.
- Void bill removes the bill number from the charges.
- Voided bills will show a status of Void.

Voiding a Folio

1. From the OPERA Cloud menu, select **Front Desk**, then select **In house (or Departures)**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search result, then click **I Want To ...** then **Billing**.
OR
4. Click the **Balance** link for the reservation.
5. Click **I Want To...** and select **Void Folio**.
 - a. Select a folio from the displayed list , then click the vertical ellipsis and select **Void Folio**.

Managing Package Allowances and Charges

Prerequisites for Managing Package Allowances and Charges

For reservations with package allowances, you can view the details of allowances and the charges posted against those allowances, including any package profit or loss adjustment or any allowance overage charge posted to the reservation account.

- Package profit is posted when a package allowance is not consumed or under consumed; adjusting revenue to the item price.
- Package loss is posted when a package is fully consumed; adjusting revenue from the posted amount to the item price.

When the Package Allowance Consumption When No Post or Post Stay Flag OPERA Control is active charges may be posted to allowances even when the reservation is flagged 'No Post' or has Post Stay charge privileges. For more information, see [Payment Instructions](#).

When the Package Allowance Linking OPERA Control is active you can also setup allowance linking; transferring the allowances from one reservation to another. For example, you can transfer allowances for multiple reservations to a posting master reservation in order for the outlet post a single breakfast charge to the master group reservation account.

Viewing Reservation Package Allowances and Charges

To view the charges posted against an allowance.

1. From the OPERA Cloud menu, select **Front Desk**, then select **In House**.
2. Enter search criteria and then click **Search**.
3. In the search result, select the reservation then click **I Want to...** and select **Billing** (or click the value in the **Balance** column).
4. Click **+ Show More** then select the **Packages** link.

- a. Select the **Package Postings** tab.
 - i. Click **Breakout** to display a detailed list of all transactions, including any allowance overages charged to the guest.
 - ii. Click **Daily View** to display a summary view. Use < and > to scroll through the reservation stay dates.

Linking Reservation Package Allowances

(Available when the Package Allowance Linking OPERA Control is active)

The reservations in a linked allowance relationship are known as the "source" room and the "target" room. The source room makes its allowance available to the target room. Whether or not the source room can draw on the allowance(s) of the target room is determined by the **Use Shared Allowance** check box in the Linked Allowances panel.

1. From the OPERA Cloud menu, select **Front Desk**, then select **In House**.
2. Enter search criteria and then click **Search**.
3. In the search result, select the reservation then click **I Want to...** and select **Billing** (or click the value in the **Balance** column).
4. Click **+ Show More** then select the **Packages** link.
 - a. Select the **Package Postings** tab.
 - b. Click **Link Allowances**.
 - c. Enter reservation search criteria and click **Search**.
 - d. Select a reservation then click **Select**.
 - e. Click > to view the Linked Allowances panel.

Unlinking Reservation Package Allowances

(Available when the Package Allowance Linking OPERA Control is active).

Once a charge is made against an allowance of either the source or target room, you cannot unlink allowances until completion of End of Day.

1. From the OPERA Cloud menu, select **Front Desk**, then select **In House**.
2. Enter search criteria and then click **Search**.
3. In the search result, select the reservation then click **I Want to...** and select **Billing** (or click the value in the **Balance** column).
4. Click **+ Show More** then select the **Packages** link.
 - a. Select the **Package Postings** tab.
 - b. Click > to view the Linked Allowances panel.
 - c. Select the linked room/reservation , then click **Unlink**.
 - d. Click **Unlink** to confirm.

Generating Batch Folios

You can generate folios for multiple reservations without having to access billing for each reservation. When the multi-language OPERA Control is active folios are generated in the language selected in the linked (guest) profile.

**Note:**

In order to deliver the folios via email, ensure the reservation has opted-in to receive email folios. See [Managing Reservation Payment Instructions](#) .

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Batch Folios**
2. In the Folio Options panel select the following:
 - a. **Property**: Select or confirm the property.
 - b. **Batch Folio Option**: Select the folio option required.
 - i. **Guests Departing Tomorrow**: Select to generate folios for reservations departing tomorrow.
 - ii. **Guest Checked Out Today**: Select to generate folios for reservation departed today.
 - iii. **All Guests**: Select to generate folios for all in-house reservations.
 - iv. **Guests Departing Today**: Select to generate folios for all reservations departing today.
 - v. **Guest Checked Out Yesterday**: Select the generate folios for reservations departed yesterday.
 - vi. **Periodic Folios**: Useful for long-term reservations, this option allows you to print information folios weekly, monthly, or for user-defined periods of time.
 - i. Select whether you want to print weekly, monthly, or other periodic folios.
 - i. **Weekly Folio**: Prints folios for in house guests whose last periodic folio was printed 7 or more days ago, or who have never had a periodic folio printed.
 - ii. **Monthly Folio**: Prints folios for in house guests whose last periodic folio was printed 28 or more days ago, or who have never had a periodic folio printed.
 - iii. **Folio for**: You specify a period of days to be covered. A folio will be printed for guests whose last periodic folio was printed the specified number of days (or more) ago, or who have never had a periodic folio printed.
 - vii. **Auto-folio Settlement**: For more information, see [Auto Folio Settlement](#).
 - c. Click **Next**.
3. In the Reservation Selection panel search and select the reservations:
 - a. Enter any search criteria to refine the reservation search, click **Search**.
 - b. From your search results, select the reservations to include in the batch folio process; click the selection column header to select all reservations listed in result.
 - c. **Sort By**: Select a sort option from the list.

- d. Click **Select**.
4. In the Billing Options panel specify the following:
 - a. Folio Scope
 - i. **Information Bill**: Generates an information folio with current charges.
 - ii. **Advance Bill**: Generates a folio with expected room and fixed charges.
 - b. Billing Windows
 - i. **All Windows**: Folios for all Billing Windows in the reservations.
 - ii. **Only Guest Windows**: Select to generate folios only for Billing windows linked to the guest profile (exclude Billing Windows linked to Company or Agent).
 - c. Payment Methods
 - i. **All Payment Methods**: Select this option to generate folios for reservations with any payment method
 - ii. **Credit Cards**: Select this option to generate folios for reservations using a credit card payment method
 - iii. **Simulate Zero Balance**: Select to generate a folio with a credit shown based on the method of payment for a particular billing window. This allows you to provide folios to the guest, with a payment line, showing a zero balance due, without posting an actual payment or checking out the reservation.
5. On the Batch Report Destination page:
 - a. Make changes to the folio destinations if needed. You can either change the destination for each folio individually or change it for all folios. Confirm your selections before generating the batch folios.
 - b. Click **Process** to print, email or preview the batch report.

Auto Folio Settlement

Prerequisites for Auto Folio Settlement

Using Auto Folio Settlement, you can:

- Select reservations to automatically settle the reservation account window balances periodically, rather than manually processing settlement. See [Payment Instructions](#).
- Auto-transfer settled charges to billing window #8 (Available when the Transfer Charges to Window 8 OPERA Control is active).
- Configure automatic folio settlements to only process reservations / billing windows with certain payment types or profiles with a specific folio settlement type. See [Configuring Auto Folio Settlement Types](#).
- Specify the folio settle type within the Profile Details panel. For more information, see [Managing a Guest or Contact Profile](#)
- Process automatic folio settlements as a part of the [End of Day procedures](#) after all accommodation, package and fixed charges have been posted to reservation accounts. Available when the Auto Settlement to be performed during End of Day OPERA Control is active.

- Manually run the folio settlement process from the [Batch Folios](#) screen. You can select folios to automatically settle and initiate the automatic folio settlement process under these conditions:
 - Reservations must be eligible for automatic settlement.
 - Payment type must be eligible for automatic settlement. Cash and check payment types are not able to be automatically settled, and the Auto Settlement Rules, Payment Methods OPERA Control can restrict other payment types.
 - The folio window selection you choose to settle must have a non-zero balance.

When OPERA Cloud is integrated with a payment partner, settlement occurs automatically.

For processing payments manually, activate the Prompt Payment Screen for Auto Folio Settlements OPERA Control so that payment and authorization details can be manually entered for each settlement.

 **Note:**

For reservations to be settled using auto folio settlement, the following must be true:

- For Direct Bill Settlement, the profile linked to the reservation billing window must have a valid AR account.
- Valid credit card information must be available in reservation [payment instructions](#).
- [Profile address details](#) must meet the requirements specified in the Address Check for Folio Generation [OPERA Control](#).
- Auto Folio Settlement Type field updated in [profile](#) to specify the auto folio settlement types to be included in Auto Folio Settlement Process. The Auto Folio Settlement process will perform the appropriate validations for credit card authorization / settlement and direct bill settlement and only if successful, then the settlement transaction will be posted. The validations as currently exist (i.e., valid credit card number / expiry date or valid AR number associated with the billing window), will occur in the background and no user input should be expected. Any charges that were transferred to window 8 will remain there if window 8 cannot be settled for any reason. While posting an Auto Settlement transaction, if a credit card authorization / settlement fails or if no AR account number exists, then such reservations/ billing windows will not be settled and a [change log](#) entry for activity type of **Record Credit Card Failure** will be added, detailing the confirmation no and settlement failure reason.

An [Auto Settlement Transaction report \(auto_settlement\)](#) is available, which lists the auto-settlement transactions. This report is generated automatically when the Auto Settlement to be performed during End of Day OPERA Control is active.

Running the Batch Folio Process for Automatic Folio Settlement

1. From the **OPERA Cloud** menu,, select **Financials**, select **Cashiering**, and then select **Batch Folios**.
2. Enter your **Cashier ID** and **PIN** when the Force Cashier Login OPERA Control is active.
3. In the Folio Options panel:

- a. Select the **Auto Folio Settlement** check box
 - b. Select one or more **Folio Settlement Type** values from the list to determine the eligible reservations based on the Folio Settlement Type selected in the profile. For more information, see [Managing a Guest or Contact Profile](#).
 - c. Select the **Use Days on Reservation** check box to use the Days cycle setup in the [reservation payment instructions](#).
 - d. Deselect the **Use Days on Reservation** check box to enter a **Date Since Last Auto Settled** or **Days Since Last Auto Settled** value.
4. To process all reservations click **Process All Auto Folio Reservations**.
 - a. Then in the **Reservation Selection** panel, click **Select**.
 5. To process selected reservations, click **Search Auto Folio Reservations**.

 **Note:**

A maximum of 999 reservations can be selected using this option.

- a. In the **Reservation Selection** panel:
 - i. Enter search criteria to narrow your reservation search results and select one or more reservations for auto folio settlement.
 - ii. Open the Search panel to view search filters. To limit your search results to only checked out reservations with an open folio balance, select **Checked Out** for the Reservation Status and select the **Open Balance** option. Click **Search**.

 **Note:**

For a reservation to appear in the search results using the Checked Out and Open Balance search filters, the reservation must already be checked out and it must have a pending balance. Also, the Payment Instructions on the reservation must have Post-Stay Charging and Auto Settle options selected.

- iii. Select one or more reservations to automatically settle. You can select the check box in the table header to select all reservations. When you have chosen all reservations to settle.
 - iv. Click **Select**.
6. In the **Billing Options** panel:
 - a. **Payment Methods:** Select reservations payment methods to automatically settle from the list.
 - b. **Minimum Window Balance:** Enter a minimum balance to restrict the amount for which this auto settlement process occurs. For example, if you want to settle all folios with a balance of \$1000 or more, enter \$1000 in this field.
 - c. **Include Credit Balance:** Select check box to Include folio windows with a credit balance.

- d. **Generate Folio:** Select check box to generate a folio for each settlement processed.
 - e. **Windows to Settle:** Click the appropriate numbered boxes to select Windows to Settle.
 - f. **Transfer Settled Windows to Window 8:** Select any folio windows for which you want to transfer the settled charges to window 8.
 - g. If needed, click **Folio Style** to select a different folios style from the list of available styles. For more information, see [Selecting Folio Styles for Viewing, Printing](#).
 - h. Click **Generate Batch Folios** to proceed.
7. Review the Auto Folio Settlement Summary.
 - a. Click **Print** to generate a report.
 - b. Click **OK** to complete the automatic folio settlement process.

Posting Batch Charges

Batch Charges enables you to simultaneously post a single charge to multiple rooms or to individual rooms in a group. You can also post a single charge to all rooms associated with one travel agent or to all checked-in guests. Examples of batch posting includes charging each member in a group for baggage handling or charging a number of individual guests for a sightseeing excursion.

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Batch Charges**.
2. On the Batch Charges screen, search for reservations.
 - a. **Reservation Status:** Select one or more reservation status. No Show and Cancelled status is displayed when the 'No Show and Cancellation Postings' OPERA Control is active.
 - b. **Include Pseudo Rooms:** Include pseudo room type reservations in the search
 - c. **Include No Post:** Post charge to reservations flagged No Post (cash only)
 - d. **Advanced Checkin:** Search for arrival reservations that are flagged as Advance Checked In (available when Advance Check In control is active).
3. Click **Search**.
4. Select one or more reservations in the search results.
5. Click **Post Charge**.
6. On the Posting Details screen:
 - a. **Code:** Enter or select the transaction code.
 - b. **Price:** Enter a price for the charge.
 - c. **Quantity:** Enter a quantity.
 - d. **Supplement:** Enter any supplemental information for charge.
 - e. **Reference:** Enter a reference number for the charge.

 **Note:**

The amount posted will be Price x Quantity.

- f. Click **Post Charge**.
A Batch Charge Status screen displays the result.
- g. Click **Report** to generate a report.

Processing Batch Deposits

Batch deposit payment processing is available when your property is integrated with a payment partner, for online credit card processing. You can process multiple reservation deposit payments in a batch process and generate a deposit payment receipt for each payment charged to a credit card.

 **Note:**

Alternatively, batch deposit payments can be processed as an [End of Day procedure](#).

Reservation Requirements

- [Reservation Payment Instructions](#) has a valid credit card type and card details.
- [Reservation Deposit / Cancellation](#) has a deposit request with due date matching the current business date.
- Reservation Status is Reserved or Due In.

Processing Batch Deposit Payments

1. From the OPERA Cloud menu, select Financials, select Cashiering, and then click Batch Deposits.
2. Enter search criteria, then click **Search**
3. Select one or more reservations showing deposit payment due for processing.
4. Click **Process Selected** to initiate processing of credit card charges
 - a. As each deposit is processed, the following information appears on this screen.
 - i. Name. Name of the guest whose deposit is being authorized.
 - ii. CC Number. Masked credit card number.
 - iii. Exp. Date. Credit card expiration date.
 - iv. Amount. Payment amount being charged.
 - b. A deposit receipt is generated in the background and available in [Receipt History](#).
 - c. Deposit details are saved to the [changes log](#).

- i. The details for the Record Credit Card Approval action type entry will have the following format:

```
BATCH DEPOSIT PROCESSING APPROVED 143.75 USD, FOR PAYMENT TYPE }}AX,  
APPROVAL CODE: 580895, FOR Heald IN {{ROOM 130
```

- ii. In cases where the End of Day procedure runs deposit batch processing, the changes log detail entry will take the form:

```
NIGHT AUDIT BATCH DEPOSIT ROUTINE APPROVED 655.53 USD, FOR PAYMENT  
TYPE VA, APPROVAL CODE: 768364, FOR Casey IN ROOM 1121
```

Credit Card Settlement

Credit Card Settlement allows you to view and modify credit card transactions prior to final processing. The Credit Card Settlements screen provides a list of credit card transactions. The screen provides information on the charge amount, charge date, guest name, room number, folio number, window number, credit card number, expiration date, and approval code.

Amounts on hold and Amounts to be settled appear at the bottom of the screen. The system calculates these amounts in real-time based on the transactions you select:

- The Total Amount to be Settled represents the total amount of one or more credit card payment transactions selected for settlement.
- The Total Amount on Hold represents the total amount of all credit card payment transactions not selected for settlement.

After reviewing transactions, the system sends the charges electronically to a third-party credit card processing company for batch settlement processing. Credit Card Settlement usually runs once a day as part of the end-of-day routine. You can also run this option at any time, for example, at the end of a shift.

Settling Credit Card Transactions

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Credit Card Settlements**.
2. Enter a property and additional search criteria if needed and click **Search** to view credit card transactions.
3. Select transactions to review and modify.
4. Select **Settle Credit Cards** to begin processing.

Managing Prepaid (Gift) Cards

[Prerequisites for Managing Prepaid \(Gift\) Cards](#)

Pre-paid Cards allow you to view and manage the details of a stored value / gift card.

You can view the card transactions, reload (top-up) the card, and transfer or cash out the card balance.

Card details, including card balance, appear in the left-side panel; card transaction details are in the right-side panel.

Use this option to issue cards non-resident guests by creating or searching for a profile.

Issuing Prepaid Card

1. From the **OPERA Cloud** menu, select **Financial**, select **Cashiering** and select **Pre-Paid Cards**.
2. Click **Issue Card** and complete the following
 - a. **Interface**. Select the Stored Value System from the list.
 - b. **Card Number**. Enter the gift card number.
 - c. **Amount**. Enter the issue amount.
 - d. **Passerby tab**
 - i. **Name**. Enter name to search for guest profile.
 - i. Click **I Want to . . .** to create new profile.
 - ii. **Method**. Select a payment method from the list.
 - iii. **Card Number**. Enter credit card number.
 - iv. **Expiration**. Enter credit card expiry date.
 - v. **Card Holder**. Enter card holder name.
 - e. **Additional Information tab**
 - i. **Reference**. Enter reference number.
 - ii. **Supplement**. Enter supplement text.
 - f. Click **Issue Card**.

Activating Prepaid Card

Note:

This option is vendor specific and cards are activated one time

1. From the **OPERA Cloud** menu, select **Financial**, select **Cashiering** and select **Pre-Paid Cards**.
2. Select the interface , enter the Card Number and PIN (if required) and click **Search**.
3. Click **Activate Card**.
 - a. **Amount**. Enter the issue amount.
 - b. **Passerby tab**
 - i. **Name**. Enter name to search for guest profile.
 - i. Click **I Want to . . .** to create new profile.
 - ii. **Method**. Select a payment method from the list.

- iii. **Card Number.** Enter credit card number.
- iv. **Expiration.** Enter credit card expiry date.
- v. **Card Holder.** Enter card holder name.
- c. Additional Information tab
 - i. **Reference.** Enter reference number.
 - ii. **Supplement.** Enter supplement text.
- d. Click **Activate Card.**

Reloading (Top-up) Prepaid Card

1. From the **OPERA Cloud** menu, select **Financial**, select **Cashiering** and select **Pre-Paid Cards**.
2. Select the interface, enter the Card Number and PIN (if required), and click **Search**.
3. Click **Reload Card**.
 - a. **Amount.** Enter the reload amount.
 - b. **Passer-by tab**
 - i. **Name.** Enter name to search for guest profile.
 - i. Click **I Want to . . .** to create new profile.
 - ii. **Method.** Select a payment method from the list.
 - iii. **Card Number.** Enter credit card number.
 - iv. **Expiration.** Enter credit card expiry date.
 - v. **Card Holder.** Enter card holder name.
 - c. Additional Information tab
 - i. **Reference.** Enter reference number.
 - ii. **Supplement.** Enter supplement text.
 - d. Click **Reload Card**.

Cancelling Prepaid Transaction

Note:

The Cancel Transaction action is only available for records of types **Issue** and **Reload** posted on the current business date.

1. From the **OPERA Cloud** menu, select **Financial**, select **Cashiering**, and select **Pre-Paid Cards**.
2. Select the interface, enter the Card Number and PIN (if required), and click **Search**.
3. Select the **OPERA Transactions** tab.
4. Select a transaction, click the vertical ellipsis, and click **Cancel Transaction**.
 - a. **Name.** Enter name to search for guest profile.
 - i. Click **I Want to . . .** to create new profile.

Viewing Prepaid Transaction Details

Note:

'View Transaction Details' action is only available when the 'Prepaid Cards Transaction' SVS IFC setting is **Vendor Transaction** or **OPERA and Vendor Transaction**.

1. From the **OPERA Cloud** menu, select **Financial**, select **Cashiering** and select **Pre-Paid Cards**.
2. Select the interface , enter the Card Number and PIN (if required) and click **Search**.
3. Select the **OPERA Transactions** tab.
4. Select a transaction, click the vertical ellipsis, and click **View Transaction Details**.

Managing Currency Exchange

Prerequisites for Currency Exchange

The Currency Calculator lets you calculate and post currency exchange amounts based on an established exchange rate per exchange type for each currency. For more information, see [Managing Currency Exchange Rates](#). When posting currency exchange you must select a reservation or profile for the currency exchange receipt generated.

When the Sell Currency OPERA Control is active you can sell (pay out) foreign currency as well as buy (receive) foreign currency.

When the [Foreign Currency Limits OPERA Control](#) is active, daily and monthly exchange limits are setup per currency. For more information, see [Configuring Foreign Currency Limits](#).

When the Daily Currency Exchange Limit Amount and Daily Currency Exchange Limit Code [OPERA Controls](#). are setup a daily limit for the specified currency code applies. For more information, see Oracle Hospitality Localization Center for Hotel; Israel - under OPERA Cloud, Solutions: [OPERA Cloud Fiscal Primary Data Document \(Doc ID: 2621636.1\)](#).

Calculating Currency Exchange

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and select **Currency Calculator**.
2. **Property:** Enter or select the property.
3. Select the **Buy** or **Sell** tab. (Sell tab is enabled when the Sell Currency OPERA Control is active).
 - a. **Exchange Type:** Select an exchange type: Cash, Check, Posting (Charges), Settlement, Commission, Membership and Certificate. Each exchange type can have a different exchange rate.
 - b. **From Currency:** Select a currency to convert from.
 - i. **From Amount:** Enter the From Currency amount.
 - c. **To Currency:** Select a currency to convert to.
 - i. **To Amount:** Displays the converted amount.

- d. Currency exchange information automatically populates on the screen.
- e. Click **Clear** to clear the entries on the page.

Posting Currency Exchange

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and select **Currency Calculator**.
2. **Property**: Enter or select the property.
3. Select the **Buy** or **Sell** tab. (Sell tab is enabled when the Sell Currency OPERA Control is active).
 - a. **Exchange Type**: Select an exchange type: Cash, Check, Posting (Charges), Settlement, Commission, Membership and Certificate. Each exchange type can have a different exchange rate.
 - b. **From Currency**: Select a currency to convert from.
 - i. **From Amount**: Enter the From Currency amount.
 - c. **To Currency**: Select a currency to convert to.
 - i. **To Amount**: Displays the converted amount.
 - d. Currency exchange information automatically populates on the screen.
 - e. Click **Clear** to clear the entries on the page.
4. Click **Post Currency Exchange**.
 - a. Enter your **Cashier ID** and **PIN**.
 - b. Posting Details.
 - i. Search and select a **Room** (Reservation) or **Name** (Profile).
 - ii. **Supplement**: Enter reference text.
 - iii. Click **Post Exchange**.
 - c. Click **Send Receipt** to generate a currency exchange receipt.
 - i. Select a report destination
 - i. **Preview**: Generate a PDF.
 - ii. **Email to Print**: Select a printer from the list. For more information, see [Configuring Printers](#).
 - iii. **Email**: Enter an email address.
 - iv. Click **Process**.

Managing Currency Exchange Rates

Currency exchange rates can vary depending on the type of transaction being conducted, such as posting settlement in a foreign currency or calculating agent commission or member points for foreign currency rates and charges. In addition, exchange rates for buying foreign currency (the usual foreign currency exchange transaction) can also differ from exchange rates for selling foreign currency. Exchange rates are time and date sensitive; they are set up to become effective on a certain date/time and remain in-effect until they are superseded by an exchange rate with a newer effective date.

Adding Currency Exchange Rates

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Currency Calculator**.
2. Click the **I Want To . . .** and select **Manage Exchange Rates**.
3. Click **New** and enter the following details:
 - a. **Exchange Types**: Select one or more check boxes indicating the exchange types covered by the new exchange rate.
 - i. **Cash** - for cash currency exchanges and foreign currency payments (for example, deposit payments, Billing - Pay only)
 - ii. **Check** - for foreign currency traveler's check exchange.
 - iii. **Settlement** - for posting a settlement payment in Billing in foreign currency.
 - iv. **Posting** - for posting sales charges in a foreign currency. You can use this for accommodation and package charges for rate code and package elements configured in another currency.
 - v. **Commission** - for commission calculation on foreign currency commission bank accounts.
 - vi. **Certificate** - for printing an e-certificate voucher (Available when the Loyalty e Certificates OPERA Control is active).
 - vii. **Membership** - for member point calculation on foreign currency rates/charges and for Payment Award Redemption when the Loyalty Payment Award OPERA Control is active.
 - b. **Property**: Enter or select the property.
 - c. **Currency**: Select the currency from the list.
 - d. **Begin Date** : Enter or select the start date for the exchange rate.
 - e. **Begin Time** : Enter the start time for the exchange rate.
 - f. **Buy Rate / From Buy Rate**: Enter either the Buy Rate or the From Buy Rate. OPERA Cloud will calculate the complementary exchange rate and display both exchange transactions in the Exchange Info area.
 - **Buy Rate**: When buying foreign currency, one unit of the local currency equals this many units of the foreign currency.
 - **From Buy Rate**: When buying foreign currency, one unit of the foreign currency equals this many units of the local currency.

For example, assume US Dollars is the local currency and you are setting rates for buying Euros. When buying Euros you want 1 USD to equal 0.770471 EUR; therefore, you enter 0.770471 in the Buy Rate field. OPERA Cloud will calculate the From Buy Rate and automatically enter 1.297907... in the From Buy Rate field. The Exchange Info area will summarize the buy exchange rate as follows:

1 USD = 0.770471 EUR
1 EUR = 1.297907 USD
 - g. **Buy Commission**: Enter a Forex commission percentage to charge.
 - h. **Net Buy Rate**: View Only. Displays the calculated nett buy rate , including any Buy Commission.

- i. **Sell Rate/ From Sell Rate.:** Enter either the Sell Rate or the From Sell Rate. OPERA Cloud will calculate the complementary exchange rate and display both exchange transactions in the Exchange Info area.

- **Sell Rate.** When selling foreign currency, one unit of the local currency equals this many units of the foreign currency.
- **From Sell Rate.** When selling foreign currency, one unit of the foreign currency equals this many units of the local currency.

For example, assume US Dollars is the local currency and you are setting rates for selling Euros. When selling Euros you want 1 USD to equal 0.770471 EUR; therefore, you enter 0.770471 in the Sell Rate field. OPERA Cloud will calculate the From Sell Rate and automatically enter 1.297907... in the From Sell Rate field. The Exchange Info area will summarize the buy exchange rate as follows:

1 USD = 0.770471 EUR

1 EUR = 1.297907 USD

- j. **Sell Commission:** Enter a Forex commission percentage to charge.
- k. **Net Sell Rate:** View Only. Displays the calculated nett sell rate , including any Sell Commission.
- l. **Comments:** Enter any comments.

4. Click **Save**.

Editing a Current Exchange Rate

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Currency Calculator**.
2. Enter search criteria and click **Search**.
3. Select a currency code in the search result.
4. Expand result to view exchange rate per exchange type.
5. Select an exchange rate and click **Edit**.
6. Update details.
7. Click **Save**.

Managing Future/History Exchange Rates for a Currency

Viewing All Exchange Rates

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Currency Calculator**.
2. Enter search criteria and click **Search**.
3. Select a currency code in the search result.
4. Click the **I Want To . . .** and select **Manage Exchange Rates**.

Deleting an Exchange Rate

1. From the Application menu, select **Financials**, select **Cashiering**, and then select **Currency Calculator**.
2. Enter search criteria and click **Search**.

3. Select a currency code in the search result.
4. Click the **I Want To . . .** and select **Manage Exchange Rates**.
5. Click **vertical ellipsis** and select **History Future Exchange Rates**.
6. Select an exchange rate, click vertical ellipsis **Actions** menu, and select **Delete**.
7. Click **Delete** to confirm.

 **Note:**

OPERA Cloud stores exchange rates for critical financial transactions so deleting a past exchange rate will not impact these areas. However, deleting a past exchange rate may affect certain operations. For example, assume you are examining a past reservation and you view Rate Info to view rate summary details. If you decide you want to see the rate summary details in a currency other than that in which the reservation's rate amount is stored, OPERA Cloud will use the current exchange rate for that currency as the past exchange rate for the date in question was deleted.

 **Note:**

When the Multi-Currency OPERA Control is active, the Delete action is not enabled for past exchange rates.

Managing Global Membership Exchange Rates

Prerequisites for Managing Global Membership Exchange Rates

Loyalty Global membership exchange rates are required for the conversion of revenue from the **property currency** to the central currency (Central Currency Code **OPERA Control**), for loyalty program management.

Adding Global Membership Exchange Rates

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Currency Calculator**.
2. Click **I Want To . . .** and select **Manage Global Exchange Rates**.
3. Click **New** and enter the following details:
 - a. **Currency**: Select the currency from the list.
 - b. **Begin Date**: Enter or select the start date for the exchange rate.
 - c. **Begin Time**: Enter the start time for the exchange rate.
 - d. **Buy Rate**: Enter either the Buy Rate
 - e. **Buy Commission**: Enter a Forex commission percentage to charge. When buying foreign currency, one unit of the local currency equals this many units of the foreign currency.
 - f. **Net Buy Rate**: View Only. Displays the calculated nett buy rate , including any Buy Commission.

- g. **Sell Rate/ From Sell Rate:** Enter either the Sell Rate. When selling foreign currency, one unit of the local currency equals this many units of the foreign currency.
 - h. **Sell Commission:** Enter a Forex commission percentage to charge.
 - i. **Net Sell Rate:** View Only. Displays the calculated nett sell rate , including any Sell Commission.
 - j. **Comments:** Enter any comments.
4. Click **Save**.

Editing Global Membership Exchange Rates

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Currency Calculator**.
2. Click **I Want To . . .** and select **Manage Global Exchange Rates**.
3. Click **Search**.
4. Select a currency code in the search result.
5. Expand result to view exchange rate
6. Select an exchange rate , then click **Edit**.
7. Update details.
8. Click **Save**.

Deleting Past / Future Exchange Rates

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Currency Calculator**.
2. Click **I Want To . . .** and select **Manage Global Exchange Rates**.
3. Enter search criteria, then click **Search**.
4. Select a currency code in the search result.
5. Click the vertical ellipsis **Actions** menu and select **History Future Exchange Rates**.
6. Select an exchange rate, then click vertical ellipsis **Actions** menu and select **Delete**.
7. Click **Delete** to confirm.

Viewing All Exchange Rates

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Currency Calculator**.
2. Click **I Want To . . .** and select **Manage Global Exchange Rates**.
3. Enter search criteria, then click **Search**.
4. Select a currency code in the search result.
5. Click the vertical ellipsis **Actions** menu and select **History Future Exchange Rates**.

Charging Purchases Using Post It

Prerequisites for Charging Purchases Using Post It

Post it provides a way to charge for the consumption of items such as mini-bar item, day spa treatments, gift shop items, and so on with features similar to a point of sale. The items have a price defined and are posted to a cart. The balance of the cart is then settled to a room reservation or by cash or credit card.

Post It does not support room charge to future reservations enabled with pre-stay charging. See, [Managing Reservation Payment Instructions](#)

Watch Video

Posting Charges using Post it

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and then select **Post It**.
2. Select an article or a transaction code for posting. Alternatively, if the item has a UPC number, you can enter value in the UPC field using a UPC scanner or by manually typing it.

 **Note:**

The selected item and its price (and associated taxes) appear in the cart.

3. Select **[x]** next to an article in the cart to remove the item.
4. Repeat the steps to post additional items to the cart.
5. To settle the cart, click **Pay**.
 - a. If settling the cart balance to a room reservation, click the **Charge to Room** check box.

 **Note:**

User role must be granted **Charge to Room (Settlement)** task to settle balance to a room reservation account.

- i. Enter a room number or guest name and click **Search**.
 - ii. To include Open Folio reservations click the **Open Folio** check box.
 - iii. Select the required reservation from search results.
- b. If settling to a credit card, select the payment method, and enter card number, expiration date, and card holder name (swipe or tap card if payment integration is active at property).

 **Note:**

A **Card Present** check box is available when the **Payment Services Directive** OPERA Control is active. This check box is deselected by default and remains deselected if you manually enter a credit card number. A 'Credit Card Was Entered Manually' message appears when you manually enter a credit card. This check box is automatically selected if you insert or swipe a credit card in a credit card terminal.

- c. You can also search and select a profile and enter reference text to generate a personalized folio.
6. Click **Complete Sale** to post the settlement.
7. To post negative items, first select the **Activate Minus Posting** button and then select the article(s) being adjusted. The button then changes to **Deactivate Minus Posting** to enable the posting of articles.

 **Note:**

Your user role must be granted **Post a Negative Post It Article** task.

Posting Charges using Fast Post

Fast posting is used to rapidly post the same charge to multiple room reservation accounts. This feature is useful for manually posting point of sale (POS) charges to room accounts when integration with the POS system is unavailable. Other uses are for posting laundry or mini bar (summary totals).

1. Select **Fast Post** check box.
2. **Code.** Enter or select the charge transaction code to be posted.
3. **Room / Name.** Enter or select the room reservation the charge is to be posted to.
4. **Amount.** Enter the amount of the charge.
5. Click **Post**.

The **Code** field will retain the selected charge code - repeat entry of Name/Room and Amount to a post new charge.

Managing Receipt History

OPERA Cloud stores a copy of receipts for foreign currency exchange, deposit payment, deposit refund, guest ledger payment and paid out transactions. Use **Receipt History** to regenerate a copy of the receipt.

1. From the **OPERA Cloud** menu, select **Financials**, select **Cashiering**, and select **Receipt History**.
2. Enter a property and any additional search criteria and click **Search** .

3. Locate the receipt in the search result, click the **Vertical Ellipsis** and select **Send to**.
4. Select a destination option:
 - a. **Preview**: Select to preview in PDF.
 - b. **Email to Print**: Select to print to selected printer.
 - c. **Email**: Select to delivery via email as PDF attachment. Select or enter an email address.
5. Click **Process**.

Open Cashiers

Viewing Open Cashiers

Open Cashiers provides status information about currently open cashier sessions. The information includes the following:

1. From the **OPERA Cloud** menu, select **Financials, Cashiering** and then **Open Cashiers**.
 - a. **Cashier Number**. An ID number assigned to the cashier during setup.
 - b. **Cashier Name**. Name assigned to the Cashier ID during Cashier setup.
 - c. **Maximum Daily Use**. Number of times a cashier can close and re-open in one business day. This value is set during Cashier setup.
 - d. **Times Opened**. The number of times the Cashier opened since the last End of Day processing.
 - e. **Opened Time**. Most recent time the Cashier opened since the last End of Day processing.
 - f. **Last Closed Time**. Most recent time the Cashier closed since the last End of Day processing. This field is blank if the Cashier has not closed since the last End of Day processing.

Closing Cashiers

Close Cashier enables you to view and audit charges posted during your shift, the closing balances for charges, confirm your shift drop amounts, print your daily reports, and close your shift.

Note:

When you close your cashier, you are not logged out of **OPERA Cloud**. You may continue to use other features, however to perform cashiering activities, you will be prompted to re-open your cashier. The number of times your cashier can be opened and closed during a single business day is set for your cashier ID in [Cashier Configuration](#).

 **Note:**

When the **Blind Cash Drop Cashiering** control is enabled all transactions (charges) are displayed except for Cash and Check transactions.

Closing Your Cashier

1. From the OPERA Cloud menu, select **Financials**, select **Cashiering**, select **Cashier Closure**.
2. When the Force Cashier Login OPERA control is enabled, the Cashier Login screen appears, prompting you to confirm your cashier ID and enter your user PIN to continue.

Property Selection

In multi-property operations you may have posted charges and payments to reservation accounts or AR accounts in various properties. The property selection panel allows you to select each property in order to reconcile transactions and enter shift drop details for the property, click a property in the list to refresh the details for the selected property.

Review Transaction Details

The transaction panel displays a summary list of all charges and payments which have been posted is presented for audit purposes.

Click the transaction code link to view a **Detailed Posting Journal** for the selected transaction code.

 **Note:**

Link is not enabled when **All Properties** checkbox is selected.

Posting Journal

1. Enter search criteria.

 **Note:**

The cashier ID field defaults with your cashier ID.

2. Click **Search**.
3. The transactions matching the criteria are listed.
4. Click the transaction code link for a posting to view and edit the posting details.

Shift Drop

The Shift Drop panel allows you to reconcile cash, checks, credit card and other payments posted in local currency during your shift. Behavior in this panel is dependent on the **Blind Shift Drop** cashier control.

When the **Blind Shift Drop** cashier control is not enabled :

- **Opening Balance Including Float Cash.** Displays the amount of cash in your cash drawer when you opened your cashier. Opening Balance Cash reflects any starting amount of cash and any "float" over or under amount of cash from the last time you closed your cashier. **Cashier Configuration** defines the Starting Amount, if any, and whether Float Over/Short is considered.

 **Note:**

When more cash is paid out than is received, this is known as negative banking. Whether or not the **Float Over/Short** check box is selected when configuring the cashier. **Cashier Configuration** determines if a negative amount is displayed when the cashier logs back in. For example, a cashier logs in and pays out 200 and takes in 0. This means that the Expected Shift Drop is -200. If the **Float Over/Short** check box is selected for the cashier, the next time the cashier logs back in he has an Opening Balance Including Float Cash of -200. (If the cashier has a starting amount configured, the Opening Balance Including Float Cash would equal the starting amount plus the previous Expected Shift Drop.) If the **Float Over/Short** check box is not selected, then the Opening Balance Including Float Cash will display 0 because no float amount is carried over from the previous shift drop.

- **Opening Balance Check:** Displays the amount of checks in your cash drawer when you opened your cashier. Opening Balance Check reflects any "float" over or under amount in checks from the last time you closed your cashier. **Cashier Configuration** determines whether Float Over/Short is considered.
- **Cash Received:** Total amount of cash received in your drawer this shift, based on the record of cash payment transactions you posted.
- **Cash Paid Out:** Total amount of cash paid out from your drawer this shift, based on the record of paid out transactions you posted.
- **Cash Received:** Total amount of monies to be dropped to the General Cashier. This is the result of the calculation of Cash - Paid Out. You may change the figure shown in the **Cash Actual Shift Drop** field if this is incorrect. This is the amount of local currency cash you are dropping to the General Cashier.
- **Check (Cheque) Received:** Total amount of checks accepted into your drawer this shift, based on the record of check (cheque) payment transactions you posted. You may change the figure shown in the **Check Actual Shift Drop** field if this is incorrect. This is the amount of local currency checks you are dropping to the General Cashier.
- **Expected Shift Drop:** The sum of Total Cash Drop + Checks Received. The amount of cash and checks you are dropping to the General Cashier. When the **Positive Cashier Drop** cashier control is enabled the amount must be a positive value.
- **Credit Card Expected Shift Drop:** Total amount of all credit card settlements based on the record of transactions you posted.

- **Other Payments Expected Shift Drop:** Total amount of all other payment based on the record of transactions you posted. Examples of other payments include Direct Bank Transfer, TA Commission, C/Card Commission.
- **Cash Actual Shift Drop:** Enter the total amount of physical cash you have to drop (bank). When selecting another property the amount that is entered in this field will be saved before switching to another property . When the **Negative Cash Shift Drop** cashier control is enabled this amount can be a negative value.
- **Check Actual Shift Drop:** Enter the total amount of checks you have to drop (bank). When selecting another property the amount that is entered in this field will be saved before switching to another property.

 **Note:**

An alert message appears notifying you of the amount by which the total of **Actual Checks** and **Actual Cash** varies from **Expected Shift Drop**.

Foreign Currency

Displayed when the Foreign Currency Handling cashier control is enabled . Foreign currencies are not included in the reconciliation performed in the Shift Drop section of the Cashier Closure screen. The Foreign Currency section lets you account for the amounts of foreign cash received during this shift, based on the record of transactions that you posted. These could be payments received in foreign currency or as a result of foreign currency exchanges posted. Information is provided individually for each currency, as applicable.

- **Currency:** Currency code for the type of currency to be reconciled. This field is populated from transactions recorded throughout the day by your cashier ID.
- **Opening:** Amount of this currency in your cash drawer when it was opened.
- **From Today:** Amount of this currency taken in today.
- **Shift Drop:** Enter the amount of this currency you are dropping to the General Cashier. Enter the amount in the foreign currency, not the amount converted into your local currency. For example, if you have 20,000 Japanese yen, enter 20000 and not the equivalent amount in your local currency. This is the expected shift drop.
- **Difference:** Any difference between the amount of cash in this currency taken in today and the amount you are dropping to the **General Cashier (From Today - Shift Drop)**.

Foreign Check

Displayed when the **Foreign Currency Handling** cashier control is enabled . Foreign checks (usually, traveler's checks) are not included in the reconciliation performed for the Shift Drop section of the Cashier Closure screen. The Foreign Currency section lets you account for the amounts of foreign checks received during this shift, based on the record of transactions that you handled. Information is provided individually for each currency, as applicable.

- **Currency:** Currency code for the type of checks to be reconciled. This field is populated from transactions recorded throughout the day by your Cashier ID.

- **Opening:** Amount of checks in this currency in your cash drawer when it was opened.
- **From Today:** Amount of checks in this currency taken in today.
- **Shift Drop:** Enter the amount of checks in this currency you are dropping to the General Cashier. Enter the amount in the foreign currency, not the amount converted into your local currency. For example, if you have a check for 20,000 Japanese yen, enter 20000 and not the equivalent amount in your local currency. This is the expected shift drop.
- **Difference:** Any difference between the amount of checks in this currency taken in today and the amount you are dropping to the General Cashier (From Today - Shift Drop).

When the **Blind Cashier Drop** cashier control is enabled, the following is displayed:

- **Credit Card Expected Shift Drop:** Total amount of all credit card settlements based on the record of transactions you posted.
- **Other Payments Expected Shift Drop:** Total amount of all other payment based on the record of transactions you posted. Examples of other payments include Direct Bank Transfer, TA Commission, C/Card Commission.

When the **Enter Shift Drop Amounts** cashier control is enabled, the following is displayed:

- **Cash Actual Shift Drop:** Enter the total amount of physical cash you have to drop (bank). When selecting another property the amount that is entered in this field will be saved before switching to another property.
- **Check Actual Shift Drop:** Enter the total amount of checks you have to drop (bank). When selecting another property the amount that is entered in this field will be saved before switching to another property.

Closing Cashier and Generating Reports

Once all transactions have been reconciled and you have entered Shift Drop totals for local currency payments and foreign currencies payment for each property you are ready to close your cashier.

1. In multi-property operations select the **All Properties** checkbox to enable the **Close Cashier** button.
2. **Shift Drop Location and Bag Number:** When the **Shift Drop Location and Bag Numbers** OPERA Control is active, you are required to select a shift drop location and enter a bag number - these details are included on Cashier Shift Bag Report Financial report, refer [Financials Reports](#).
 - **Shift Drop Location:** Select a location from [Configuring Shift Drop Locations](#).
 - **Cash Bag Number:** Enter a bag number value.
 - **Others Bag Number:** Enter a bag number value .
3. Click **Close Cashier** to close your cashier.
4. When prompted click **Close Cashier** to confirm and continue. You will see an Information notification confirming that your cashier has been closed.
5. Next you will be prompted to generate the Cashier Closure reports.
6. Click **Process** to generate the reports.
 - **Cash Report:** This report lists all cash transactions with your cashier ID, including cash received in payment (credit), cash paid out in check exchange (debit), cash paid out in currency exchange (debit).

- **Check Report:** This report lists all checks received with your Cashier ID, including checks received in payment and checks received for check exchange Foreign Currency Report - this report lists all foreign currency received with your Cashier ID, including foreign monies received in the form of cash and traveler's checks for currency exchange, and foreign monies received in the form of cash and checks in payment (Applicable hen the Foreign Currency Handling cashier control is enabled).
- **Credit Cards Report:** This report lists all credit card transactions posted by your Cashier ID.
- **AR Settlements Report:** This report lists all settlements sent to AR with your Cashier ID.
- **Miscellaneous Payments Report:** The Miscellaneous Payments Report lists all payment transactions handled by your Cashier ID for which the transaction code is designated as Other Payments.
- **Deposit Transfers Report:** Deposit transfers are transactions that represent deposits transferred at check in. Whilst these transactions belong to the Other Payments transaction type, they are listed separately from the payment transactions included in the Miscellaneous Payments Report.
- **Cashier Closure Report :** The Cashier Closure Report is a summary of the cashiering activity for your Cashier ID during the shift just ending. The report has these main sections:
 - The report provides the amounts (in local and foreign currency) and number of postings for each of the following:
 - * Cash Received.
 - * Checks Received.
 - * Total Cash and Checks Received.
 - Cash Drop Amount, Check Drop Amount, and Total Drop Amount.
 - Difference between Cash Drop Amount and Cash Received, Check Drop Amount and Checks Received, and Total Drop Amount and Total Cash and Checks Received.
 - Credit Card transactions by type and Total Value of Credit Card transactions.
 - Accounts Receivable transactions Total Value.
 - Other Payments (excluding deposit transfers) by type and Total Value of Other Payments.
 - Deposit Transfers.

Generating Cashier Reports

You can view transactions and generate Cashier Reports containing details for the transactions posted on your cashier number from the last time your cashier was opened.

You can also use this option to regenerated the reports produced from [closing a cashier](#).

The following reports are available

- **Cash Report:** This report lists all cash transactions with your cashier ID, including cash received in payment (credit), cash paid out in check exchange (debit), cash paid out in currency exchange (debit)
- **Check Report:** This report lists all checks posted with your Cashier ID, including checks received in payment and checks received for travelers check exchange.
- **Foreign Currency Report:** This report lists all foreign currency posted with your Cashier ID, including foreign monies received in the form of cash and travelers checks for currency exchange, and foreign monies received in the form of cash and checks in payment (available when Foreign Currency Handling OPERA Control is active).
- **Credit Card Report:** This report lists all credit card transactions posted by your Cashier ID.
- **AR Settlement Report:** This report lists all settlements posted to AR Direct Bill by your Cashier ID.
- **Miscellaneous Payment Report:** . This report lists all payment transactions posted by your Cashier ID for which the transaction code is configured as **Other** payment.
- **Deposit Transfer Report:** This report lists deposits transferred at check in transactions handled internally by your Cashier ID

 **Note:**

Whilst these transactions are configured as Other Payments transaction type, they are listed separately from the transactions listed on the Miscellaneous Payments Report.

Generating Current (Open) Cashier Reports

1. From the OPERA Cloud menu, select **Financials**, select **Cashiering** then **Cashier Reports**.
2. Enter your user/cashier PIN.
3. Select the **Current** tab and enter the following details:
 - a. **Property:** Enter or select the property.
 - b. **Report Type:** Select a report type from the list.
 - c. Click **Search** to view the transactions.
 - d. Click **Print** to generate the report.
 - i. Select a report destination and click **Process**.
 - e. Click **Print Closure Reports** to generate all reports.
 - i. Select a report destination and click **Process**

Reprint Past (Closed) Cashier Reports (All Cashiers)

1. From the OPERA Cloud menu, select **Financials**, select **Cashiering** then **Cashier Reports**.
2. Enter your user/cashier PIN.
3. Select the **Reprint** tab and enter the following details:
 - a. **Property:** Enter or select the property.

- b. **CashierID**: Enter or select a cashier number.
- c. **Closure Date**: Enter or select the closure date
- d. **Closure Number**: Select a closure number from the list.
- e. **Report Type**: Select a report type from the list.
- f. Click **Search** to view the transactions.
- g. Click **Reprint** to generate the report.
 - i. Select a report destination and click **Process**.
- h. Click **Reprint Closure Reports** to generate all reports.
 - i. Select a report destination and click **Process**.

Viewing Posting Journal

Use the posting journal to view details on charges and payments posted in OPERA Cloud.

Charges can be posted manually, automatically (during end of day) or via an integrated system such as point of sale or call accounting system.

1. From the **OPERA Cloud** menu select **Financials**, select **Cashiering**, and then select **Posting Journal**.
2. Enter search criteria and click **Search**.
 - a. Click the **Transaction Code** link to view the posting details.
 - b. Click the **Confirmation Number** link to view the reservation details.

Sending Fiscal Commands

[Prerequisites for Sending Fiscal Commands](#)

You can manually send a specific command to a fiscal printer using the Fiscal Commands option.

The commands / actions available vary according to your country location.

For further information, see [Oracle Hospitality Localization Center for Hotel](#).

Sending a Command to a Fiscal Printer

1. From the OPERA Cloud menu, select **Financials**, then **Cashiering**, then select **Fiscal Commands**.
2. Enter or select the property and click **Search**.
3. Select a terminal (printer) , then click the vertical ellipsis and select a command from the list.

Sending Failed Fiscal Payloads

[Prerequisites for Sending Failed Fiscal Payloads](#)

You can re-send fiscal payloads that failed transmission during the original reservation check out.

Re-sending Fiscal Payloads

1. From the **OPERA Cloud** menu, select **Financials**, then **Cashiering**, then select **Fiscal Payloads**.
2. Enter search criteria and click **Search**.
3. Select the reservation in the search result, then click the vertical ellipsis **Actions** menu and select **Send**.

Commissions

Prerequisite for Commissions

The Commissions feature enables you to process commission payments for travel agents and other sources of reservations at your hotel.

Detaching Reservations from Travel Agent or Source

In the event that a reservation is linked to the incorrect profile for commission payment, you can detach the reservation from the agent or source profile. You can then attach (link) the reservation to the correct profile. For more information, see [Attaching Travel Agents / Sources to Reservations](#).

1. From the **OPERA Cloud** menu, select **Financials**, select **Commissions**, and then select **Bank Account**.
2. Enter search criteria, then click **Search**.
3. Select a bank account in the search result, then click the vertical ellipsis **Actions** menu and select **Go to Commissions**.
4. A message appears informing you that Commission Records successfully processed. Click **OK**.
 - a. On the Manage Commissions screen:
 - i. Select the reservation to detach, then click the vertical ellipsis **Actions** menu and select **Detach Reservation**.
 - ii. Click **Detach Reservation** to confirm.

Attaching Travel Agents / Sources to Reservations

Use the Manage Commissions screen to attach a Travel Agent/Source to a reservation. You can also detach a reservation from a Travel Agent/Source. Reservation not currently linked to a profile can be manually attached to a profile.

1. From the **OPERA Cloud** menu, select **Financials**, select **Commissions**, and then select **Bank Account**.
2. Enter search criteria, then click **Search**.

3. Select a bank account in the search result, then click the vertical ellipsis **Actions** menu and select **Go to Commissions**.
4. A message appears informing you that Commission Records successfully processed. Click **OK**.
5. In Manage Commissions, Travel Agent / Source panel, locate the agent or source profile then click the vertical ellipsis **Actions** menu and select **Attach Existing Reservation**.
 - a. Select a reservation, then click **Attach Existing Reservation**.

Managing Commission Payment Holds

You can place reservation commission payments to Travel Agents or Sources on hold; excluding these commissions from payment processing. You can also release a hold on a reservation commission when ready to pay the commission. When the Stop Processing Reason Codes OPERA Control is active you must select a reason why the commission payment is on hold.

Placing All Reservation Commissions on Hold

To hold all reservation commissions for a selected Travel Agent or Source

1. From the **OPERA Cloud** menu, select **Financials**, select **Commissions**, and then select **Travel Agent/Source**.
2. Enter search criteria, then click **Search**.
3. In the search result, click **I Want To...** next to the travel agent or source and select **Commission**.
4. A message appears informing you that Commission Records successfully processed. Click **OK**.
5. On the Manage Commissions screen, select the **Travel Agent or Source**, then click the vertical ellipsis **Actions** menu and select **Hold**.
 - a. **Hold Reason:** Select a Hold Reason from the list.
 - b. **Description:** Enter an explanation for the hold.
 - c. Click **OK**.

The **Hold** checkbox is selected against the agent and all commission listed below are placed on hold and the On Hold total is updated in the Summary panel.

Placing a Reservation Commission on Hold

1. From the **OPERA Cloud** menu, select **Financials**, select **Commissions**, and then select **Travel Agent/Source**.
2. Enter search criteria, then click **Search**.
3. In the search result, click **I Want To...** next to the travel agent or source and select **Commission**.
4. A message appears informing you that Commission Records successfully processed. Click **OK**.
5. On the Manage Commissions screen, select the reservation, then click the vertical ellipsis **Actions** menu and select **Hold**.

- a. **Hold Reason:** Select a Hold Reason from the list.
- b. **Description:** Enter an explanation for the hold.
- c. Click **OK**.

The **Hold** checkbox is selected against the agent and all commission listed below are placed on hold and the On Hold total is updated in the Summary panel.

Releasing Reservation Commissions from Hold

1. From the **OPERA Cloud** menu, select **Financials**, select **Commissions**, and then select **Travel Agent/Source**.
2. Enter search criteria, then click **Search**.
3. In the search result, click **I Want To...** next to the travel agent or source and select **Commission**.
4. A message appears informing you that Commission Records successfully processed. Click **OK**.
5. On the Manage Commissions screen, select the reservation, then click the vertical ellipsis **Actions** menu and select **Release from on Hold**.
6. Click **Release from on Hold** to confirm

The **Hold** checkbox is cleared and the On Hold total is updated in the Summary panel.

Transferring Zero Commissions to History

You can process reservations with zero-payable commission records so these are sent to payment history and not included in payment processing.

Processing Zero-Payment Commissions for Bank Account

1. From the **OPERA Cloud** menu, select **Financials**, select **Commissions**, and then select **Bank Account**.
2. Enter search criteria, then click **Search**.
3. Select a bank account in the search result, then click the vertical ellipsis **Actions** menu and select **Go to Commissions..**
4. A message appears informing you that Commission Records successfully processed. Click **OK**.
5. In Manage Commissions, click the vertical ellipsis Actions menu and select **Process All Zero**.
 - a. Click **Process All Zero** to confirm.

Processing Commission Payments

Use Manage Commissions to process commissions owed on reservations. Depending on the setup of the [bank account](#) commissions may be paid by generating checks or by EFT.

Processing Commission Payments by Check

1. From the **OPERA Cloud** menu, select **Financials**, select **Commissions**, and then select **Bank Account**.
2. Enter search criteria, then click **Search**.

3. Select a bank account in the search result, then click the vertical ellipsis **Actions** menu and select **Go to Commissions**.
4. A message appears informing you that Commission Records successfully processed. Click **OK**.
5. In Manage Commissions, click **I Want To . . .** and then select **Process Payment**.
 - a. **From Departure Date:** Enter a start date
 - b. **To Departure Date:** Enter an end date
 - c. **Check Number:** Enter the starting check number. This number can only be changed when **Edit Check Number** check box is selected in the [Bank Account setup](#).
 - d. **Print Payment Details:** Select check box to print the payment details report.
 - e. Click **Process**.

Processing Commission Payments by EFT

EFT payment generates a text file for submission to a commission processing agency.

1. From the **OPERA Cloud** menu, select **Financials**, select **Commissions**, and then select **Bank Account**.
2. Enter search criteria, then click **Search**.
3. Select a bank account in the search result, then click the vertical ellipsis **Actions** menu and select **Go to Commissions**.
4. A message appears informing you that Commission Records successfully processed. Click **OK**.
5. In Manage Commissions, click **I Want To . . .** and then select **Process Payment**.
 - a. **From Departure Date:** Enter a start date
 - b. **To Departure Date:** Enter an end date
 - c. **Print Transmittal Letter:** Select check box to generate a transmittal letter. This letter may be emailed to the commission processing agency to confirm the EFT file.
 - d. Click **Process**.

Internal Charge Number

Prerequisites for Internal Charge Numbers

Internal Charge Number functionality provides guests with a unique, internal charge number for their reservation that enables them to charge directly to their hotel folio. This is a convenience that enables the guest to use one method of payment throughout the property and any other associated locations during their stay. The Internal Charge Number can be used before the reservation is checked in and after checking out. The unique charge numbers are generated automatically. Hotel staff can view guest postings for research and audit purposes. Guests can use the assigned charge card number for purchases made at the hotel, as well as other integrated locations throughout the resort or theme park.

Internal Charge Number functionality provides the following benefits.

The guest can:

- Use one charge card for purchases at the property and related locations such as theme parks, spa facilities, and restaurants.
- Receive one bill for all related purchases in one folio at the hotel.

Hotel staff can:

- Configure charge card numbers in a variety of ways, including adding prefixes and suffixes to the number using property information, guest identification numbers, and so on.
- Ensure that all new reservations are automatically provided with an internal charge card number at the time a confirmation number is generated.
- Search for postings by charge card number in the Posting Journal when the third-party system is configured to provide this information.

Reviewing Postings to the Internal Charge Number in the Posting Journal

1. From the Navigation Bar, select **Financials**, select **Cashiering**, and then select **Posting Journal**.
2. Enter search criteria, such as Room Number, Cashier ID, and including the internal charge number in the **Reference** field. Note that this is dependent on the third-party system providing this data in the posting message.
3. Click **Search**.
4. Click the **Code** link to review posting details.

Accessing an Internal Charge Number from the Changes Log

1. From the Navigation Bar, select **Miscellaneous**, and then select **Changes Log**.
2. Select a **Property**, select **Reservation** in the **Activity Group** field, select the **Activity Type NEW**, select or confirm the **Activity Date From** and **Activity Date To** fields, and then click **Search**.
3. Double-click a row in the search results to review information. You can identify the internal charge number in the **Description** field: **CHARGE NUMBER -> 10000000**, for example.
4. Click the **X** icon to close the Changes Log.

Internal Charge Number Setup

1. To enable internal charge numbers in OPERA Controls, from the Administration menu, select **Enterprise**, and then select **OPERA Controls**.
2. Select **Reservations** from the Groups menu.
3. Ensure the **Create Internal Charge Number** setting is enabled.
4. Modify **Charge Number Pattern** settings:
 - a. Add a **Charge Number Pattern Prefix** if the internal charge numbers should begin with a specific alpha or numeric code. For example, enter DL in this field if you want all internal charge numbers to begin with the letters DL.

- b. Add a **Charge Number Pattern** to define the pattern to be used to generate internal charge numbers. For example, press **Ctrl** and click to select **PROPERTY** and **NAME ID** from the multi-selection pane, and then click **Save**. This defines the number creation pattern to use and the guest's name ID when creating new internal charge numbers. Leave this field blank to use the Oracle Sequence Number.
- c. Add a **Charge Number Pattern Suffix** if the internal charge numbers should end with a specific alpha or numeric code. For example, enter **ORL** in this field if you want all internal charge numbers to end with the letters **ORL**.
- d. Enter a value in the **Charge Number Maximum Size** field to specify a maximum number of characters to be used in internal charge numbers. The minimum value is five and maximum is 60 characters.

Troubleshooting Internal Charge Numbers

Table 6-6 Troubleshooting Internal Charge Numbers

Problem / Issue	Cause	Resolution
Internal Charge Numbers are not generated when reservations are created or imported into the system.	OPERA Control for Create Internal Charge Number is set to Off .	Set the OPERA Control for Create Internal Charge Number to On .
Internal Charge Number is not found when used with a posting from a third-party system.	Reservation is not active for posting.	Verify why the reservation is not active for posting. For example, the status might not be correct, or the Pre and Post Stay rules are not valid.

Internal Charge Number Impact

Activating the Create Internal Charge Number parameter with its related controls impacts the following features:

Reservations

- When a confirmation number is generated (that is, when a reservation is created in the property management system or received from a third-party system), a charge number is generated and associated with the reservation.

Changes Log

- There is a field (**CHARGE NUMBER**) in the changes log, which is available when viewing logs for reservations with a charge number associated.

Folio Windows

- Postings can be made from third-party systems to guest folios when purchases are made using an internal charge number at the third-party's POS terminals.

Posting Journal

- Postings from third-party systems are included in search results in the **Posting Journal Reference** field. This assumes that the third-party system delivers the

appropriate information in the posting message and it is saved in the **Reference** field.

Internal Charge Number Conditions/Assumptions

- When the **Create Internal Charge Number** parameter is set to **On**, all new reservations that are assigned a confirmation number have an internal charge number created.
- Assuming the Pre Stay Charges function is active in the property, internal charge numbers can be used for posting before the reservation is checked in.
- Advanced Checked In status is considered an active status and internal charge number functions for Advanced Checked In reservations.
- OPERA Cloud posts charges to folio window 1, including the internal charge number and any additional data provided by the third-party POS system in the **Reference** field of the posting. This is dependent on the POS system passing this data in specific elements in the posting message.
- If credit limit checking is configured for a third-party system, the credit is validated before a posting is allowed. If there is not enough available credit, the posting fails.
- If the NoPost check is configured for a third-party system and the reservation has the NoPost flag active, the posting fails.
- Assuming the Post Stay Charges function is active in the property, charge numbers can be used after the reservation has been checked out, up until the next day following the departure date of the reservation.
- OPERA Cloud accepts any charge number posting from the third-party system and posts it to the folio of the reservation that is mapped to that charge card number, as long as the reservation is valid with the posting rules configured.
- An external system must handle Hotel Charge ID replacement or deactivation.
- Searches for internal charge number are only available from the Posting Journal, not from the reservation search, and is dependent on this information being provided by third-party systems.
- Only the internal charge number is created by the OPERA Cloud system. If a physical card is generated and provided to the guest, this is created in an external system that interfaces with OPERA Cloud to fetch the internal charge number of the reservation. Depending on the external system, each guest can have an individual charge number or physical card that is mapped back to the reservation's internal charge number.

Comp Accounting

Gaming

[Prerequisites for Comp Accounting](#)

The Oracle Hospitality OPERA Comp Accounting Cloud Service enables you to set up complimentary goods and services, referred to as "comps" or comp transactions, and offer them to guests during their stay. You set up comp accounting by adding routing instructions to the reservation to transfer selected transaction codes to one of eight special "Comp" billing windows (#101 to #108).

You can specify the sales charges to be comped (including how related taxes should be handled) and nominate staff members (called authorizers) to approve comp requests and the

monetary value of the comps they authorize (per-day and per-stay). Authorizers review and evaluate requests for comps submitted by other staff members, who themselves may not be authorizers.

When integrated with a Player Tracking System (PTS), approved comps can be automatically transferred to the AR account associated with an authorizer. If no AR account is associated to an authorizer, the front desk agent / cashier selects an alternate payment method to settle the comp charges. If AR accounts are used, comp charges are managed through the Accounts Receivable module.

Comp Posting Journal

Gaming

[Prerequisites for Comp Posting Journal](#)

The Comp Posting Journal feature provides a detailed summary of the comp transactions that have been routed or transferred to the comp windows (101...108).

Comp Transaction Postings

There are three configurations available for controlling how comp transaction postings are handled by users:

- The first is for users to send comp postings to a Patron Tracking System (PTS) for approval.
- The second is for users to manually approve comp postings.
- The third is to not provide users with options for approving or updating the status of comp postings.

When the **Comp Accounting Integration Service** parameter is **On** and a PTS interface cloud service code is active, users can send interfaced postings to a Patron Tracking System (PTS) for approval. You can use the Comp Posting Journal to determine which transactions were approved, staged (that is, not approved), and declined by the PTS. Staged transactions can be re-submitted to the PTS for approval, transferred to another of the guest's Billing screen windows, or transferred to another room.

When the **Comp Transaction Status** parameter is **On**, users can manually approve, decline, or stage comp postings. Only one of these two OPERA Controls (**Comp Accounting Integration Service** parameter or **Comp Transaction Status** parameter) can be on at a time.

When neither OPERA Control is on, there are no options available for users to update the status of a comp posting or send a comp posting for approval.

Search Filters

The Comp Posting Journal enables you to search by authorizer, start date, end date, transaction code, room number, reference, and supplement. When the **Comp Transaction Status** parameter or the **Comp Accounting Integration Service** parameter is enabled in OPERA Controls, additional search filters for approval code, approved, staged, and declined are available.

Available Actions for Comp Transactions

The below actions are available for the comp transactions listed in the search results, enabling you to access options related to the transaction and the associated reservation. To access these options for a transaction, click the row-level vertical ellipsis.

- **Confirmation Number** — Click to open the Reservation Overview (available when the Reservation Management task is granted).
- **Code** — Click to edit the transaction (available when the Manage Financial Postings task is granted).
- **Go to Billing** — Click to open the Billing screen (available when the Manage Financial Postings task is granted).
- **Go to Profile** — Click to open the Profile Overview (available when the Profiles Management task is granted).
- **View Routing Instructions** — Click to open the Routing Instructions (available when the Routing Instructions task is granted).
- **Transfer Posting** — Click to open the Transfer Postings page (available when the Manual Transfer of Transactions Between Reservations task is granted).
- **Update Approval Status** — Click to manually update the transaction status to approved, declined, or pending approval (available when the **Comp Transaction Status** parameter is set to **On** and the **Update Approval Status** task is granted).

 **Note:**

When the **Comp Accounting Integration Service** parameter is set to **On**, the 'Update Approval Status' button changes to 'Submit for Approval.'

You can access the Transaction Details for any transaction that appears on the Comp Posting Journal screen. From the Edit Transaction Details screen, you can view the transaction details such as price, quantity, cashier ID, supplemental and reference information, posting windows, and other information related to the transaction.

Approval Request Status

After sending comp postings to the external PTS system for approval, postings that are declined or staged appear on the Approval Request Status screen. You can select one or more comp postings and take the following actions:

- **Submit for Approval**
— Click to send the selected comp posting(s) to the Patron Tracking System (PTS) for approval if a gaming interface is active (available when the PTS interface cloud service code is active and the **Comp Accounting Integration Service** parameter is set to **On**).

 **Note:**

When the **Comp Transaction Status** parameter is set to **On**, the 'Submit for Approval' button changes to 'Update Approval Status.'

- **Move to Folio 1** — Click to move the selected comp posting(s) to folio 1 of the reservation account.

 **Note:**

The Comp Posting Journal will not show these postings after refreshing since they are no longer comp postings.

- **Leave on Comp Folio** — Click to leave the selected comp posting(s) on the current comp folio(s). These records will remain in a declined or staged status.

Managing Comp Transactions

Gaming

Viewing Comp Transactions

To view the detailed summary of the transactions that have been routed or transferred to the comp windows, do the following:

1. From the **OPERA Cloud** menu, select **Financials**, select **Comp Accounting**, and then select **Comp Posting Journal**.
2. Use the following search criteria:
 - a. **Authorizer**: Select the authorizers whose comp transactions you want to review in the Comp Posting Journal.
 - b. **Start Date/ End Date**: Enter or select the range of dates to review transactions.
 - c. **Transaction Code**: Select transaction codes to review in the Comp Posting Journal.
 - d. **Room**: Enter the guest's room number or search and select from the list of room numbers. Multiple rooms can be selected.
 - e. **Status Code**: Enter the status code assigned by the PTS to a transaction.
 - f. **Approved**: Select this check box to see transactions that were approved by the PTS. Available when the Oracle Hospitality OPERA Gaming Interface Cloud Service and Comp Accounting Integration Service OPERA Control are active.
 - g. **Staged**: Select this check box to see transactions that are staged by the PTS. (Available when PTS interface cloud service code is active and the **Comp Accounting Integration Service** parameter is **On**.)
 - h. **Declined**: Select this check box to display transactions that were declined by the PTS. (Available when PTS interface cloud service code is active and the **Comp Accounting Integration Service** parameter is **On**.)
3. Click **Search**.
4. Click the **Code** link to access the frequently used functions such as billing, routing, and other reservation details.

Manually Updating Comp Transaction Status

When the **Comp Transaction Status** OPERA Control is active, users can manually approve, decline, or stage comp postings.

1. From the **OPERA Cloud** menu, select **Financials**, select **Comp Accounting**, and then select **Comp Posting Journal**.
2. Enter search criteria and click **Search**.
3. Select one or more transaction records and then click the **Update Approval Status** button.
4. On the Status Code screen, select **Approved**, **Declined**, or **Staged** and then click **Save**.

Sending a Comp Transaction to a Patron Tracking System (PTS) for Approval

When the **Comp Accounting Integration Service** OPERA Control is active and the Oracle Hospitality OPERA Gaming Interface Cloud Service is active, you can send interfaced postings to a Patron Tracking System (PTS) for approval.

1. From the **OPERA Cloud** menu, select **Financials**, select **Comp Accounting**, and then select **Comp Posting Journal**.
2. Enter search criteria and click **Search**.
3. Select one or more comp postings.
4. Click **Submit for Approval**.

Updating Patron Tracking System (PTS) Declined or Staged Comp Transactions

When the **Comp Accounting Integration Service** OPERA Control is active and Oracle Hospitality OPERA Gaming Interface Cloud Service is active, you can use the Comp Posting Journal to determine which transactions were approved, staged (that is, not approved), and declined by the Patron Tracking System (PTS). Staged transactions can be re-submitted to the PTS for approval, transferred to another of the guest's Billing screen windows, or transferred to another room.

After sending comp postings to the external PTS system for approval, postings that are declined or staged appear on the Approval Request Status screen.

1. From the **OPERA Cloud** menu, select **Financials**, select **Comp Accounting**, and then select **Comp Posting Journal**.
2. Enter search criteria and click **Search**.
3. On the Approval Request Status screen, select one or more comp postings.
4. Select one of the following actions:
 - a. **Submit for Approval**: Click to send the selected comp postings(s) back to the Patron Tracking System (PTS) for approval.
 - b. **Move to Folio 1**: Click to move the selected comp posting(s) to folio 1 of the reservation account.

 **Note:**

The Comp Posting Journal will not show these postings after refreshing since they are no longer comp postings.

- c. **Leave on Comp Folio:** Click to leave the selected comp posting(s) on the current comp folio(s). These records will remain in a declined or staged status.

Comp Routing Instructions

Gaming

[Prerequisites for Comp Routing Instructions](#)

From the Comp Routing Instructions screen, you can view existing comp routings and view the status of comp routing requests, such as Pending or Declined. If a comp routing instruction exists on the reservation, you can add additional comp routing instructions to the reservation from this screen.

From the Routing Instructions panel on the Reservation screen, you can add, edit, and delete comp routing instructions as well as edit, decline, or delete comp requests.

When the **PTS Membership Type based Comp Routing** parameter is active in OPERA Controls, comp routing instructions are only allowed for reservations where the linked membership type is equal to the **Default PTS Membership Type** setting. The **Default PTS Membership Type** setting in OPERA Controls specifies the default membership type for the Patron Tracking System (PTS). If this setting is blank, the option to set up comp routing is hidden when creating or updating routing instructions for reservations. Additionally, the option to set up comp routing instructions is hidden for reservations without a linked membership type equal to the **Default PTS Membership Type** setting. However, when the **PTS Membership Type based Comp Routing** parameter is OFF, comp routing can be set up for all reservations.

Managing Comp Routing Instructions

[Prerequisites for Comp Routing Instructions](#)

Searching for and Viewing Comp Routing Instructions

1. From the **OPERA Cloud** menu, select **Financials**, select **Comp Accounting**, and then select **Comp Routing Instructions**. The Comp Routing Instructions screen appears.
2. **Search Criteria:** Enter the following search criteria to search for and view comp routing instructions for a reservation:
 - a. **Property.** Confirm the property or select a new property.
 - b. **Start Date/ End Date:** Select the data range for which you want to view the comp routing instructions.
 - c. **VIP:** Select the required VIP status from the list of available VIP status codes. You can select more than one VIP status.

- d. **Name:** Enter the guest's complete last name or the first part of the guest's last name.
 - e. **Player ID:** Enter the Player ID number assigned to the guest by the Patron Tracking System (PTS).
 - f. **Authorizer:** Enter the authorizer name or search for and select the required authorizer.
 - g. **Room:** Enter the guest's room number or search for and select from the list of room numbers. Multiple rooms can be selected.
 - h. **Comp:** Select to display existing comp routings.
 - i. **Request:** Select to display pending comp requests. If you have authorizer privileges, you can edit those requests and update them to comp routings.
 - j. **Declined:** Select to display comp requests that have been declined by the authorizer.
3. Select a record from the search results and click the row-level vertical ellipsis and select **View Routing Instructions**. The Routing Instructions screen appears with sections for Window (folio window routings), Room (room routings), Comp (comp window routings), and Request (comp requests).

Adding a Comp Routing Instruction

1. From the **OPERA Cloud** menu, select **Front Desk** and then select **In House**. You can also set up routings for future reservations by selecting the **Bookings** menu, selecting **Reservations**, and then selecting **Manage Reservation**.
2. Click **Search** and open a reservation from the search results. You can enter optional search criteria to refine the results.
3. From the Routing Instructions panel on the reservation, click **New** and complete the following fields:
 - a. **Comp.** Select this option to create a comp routing instruction.
 - b. **Authorizer.** Select to require an authorizer to approve the comp routing instruction. Enter or select an authorizer for this routing instruction.
 - c. **Folio.** Select the comp folio window to route the postings to.
 - d. **Membership Number.** (Appears when **Comp** is selected and the **Generic Comp Membership Number** parameter is active in OPERA Controls.) Click the **Profile Search** link to open the Profile Search screen to search for a profile and populate its Membership Number and Membership Name on the Routing Instructions screen. The membership number and membership name is saved along with the routing instructions. Any communication with the external PTS (Patron Tracking System) will have the selected profile's membership number attached.

 **Note:**

You cannot change the membership type populated on the Profile Search screen. The membership type that appears is the one configured for the Default PTS Membership Type setting in OPERA Controls. The search results only include profiles with the PTS membership type attached.

- e. **Comp / Coupon.** Enter a comp coupon.
- f. **Comments.** Enter any comments for the routing instruction if needed.

- g. **Date Range.** Select either **Entire Stay** to apply the comp routing to the guest's entire stay or select **Specific Dates** to only apply the comp routing to a specific date range. Once the date has passed, there is no limitation on transferring or routing charges to comp windows.
- h. **Routing / Transaction Codes.** Use this section to select the **Comp Routing Codes** or **Transaction Codes** that will be routed to the comp folios. In the **Available** pane, select one or more transaction codes and click the arrow button to move the codes to the **Selected** pane. To unassign a code, select it in the **Selected** pane and click the arrow button to move it back to the **Available** pane.

 **Note:**

You can select either **Comp Routing Code** or **Transaction Code** to filter the types of codes that appear in either pane. You can also enter a search filter above the Available or Selected pane and click **Go** to further filter the transaction codes that appear.

- i. **Apply Instructions to Postings on Folios.** Select to apply these routing instructions to existing folio postings.
 - j. **Routing Limits.** In this section, you can set the limits for the amount that can be routed to the comp folio. Select **Amount** to enter a dollar amount, select **Percentage** to enter a percentage for the amount, or select **Covers**.
4. Click **Save**.

 **Note:**

When the **Authorizer PIN Required** parameter is On, you are prompted to enter both an **Authorizer ID** and **PIN**. This is the PIN belonging to the authorizer for the target window to which you are transferring the posting.

Editing a Comp Routing Instruction

1. From the Routing Instructions panel on the reservation, navigate to the Comp section and locate a routing instruction.
2. Click the row-level vertical ellipsis and select **Edit**.
3. Make your desired edits and click **Save**.

Deleting a Comp Routing Instruction

1. From the Routing Instructions panel on the reservation, navigate to the Comp section and locate a routing instruction.
2. Click the row-level vertical ellipsis and select **Delete**.
3. Confirm the deletion.

Managing Comp Requests

[Prerequisites for Comp Requests](#)

Approving a Comp Request

1. From the **OPERA Cloud** menu, select **Financials**, select **Comp Accounting**, and then select **Comp Routing Instructions**. The Comp Routing Instructions screen appears.
2. Enter search criteria and click **Search**. If you are searching for pending comp requests, only select the **Request** check box and then click **Search**.
3. From the search results, locate a comp request, click the row-level vertical ellipsis, and select **View Routing Instructions**.
4. On the Routing Instructions screen, locate the comp request under the Request section, click the row-level vertical ellipsis, and select **Edit**.
5. Select the **Comp** option and finish the setup of the comp routing instruction as described in [Managing Comp Routing Instructions](#).

Declining a Comp Request

1. From the Comp Routing Instructions screen, enter search criteria and click **Search**.
2. From the search results, locate a comp request, click the row-level vertical ellipsis, and select **View Routing Instructions**.
3. On the Routing Instructions screen, locate the comp request under the Request section, click the row-level vertical ellipsis, and select **Edit**.
4. Click **Decline**.

Deleting a Comp Request

1. From the Comp Routing Instructions screen, enter search criteria and click **Search**.
2. From the search results, locate a comp request, click the row-level vertical ellipsis, and select **View Routing Instructions**.
3. On the Routing Instructions screen, locate the comp request under the Request section, click the row-level vertical ellipsis, and select **Delete**.

Player Snapshot

Gaming

[Prerequisites for Player Snapshot](#)

The Player Snapshot gives you a summary of comp and reservation information related to current, future, and past stays by guests who have a Patron Tracking System (PTS) player ID. This feature is available when the Oracle Hospitality OPERA Comp Accounting Cloud Service is active.

Besides giving an overview of information related to guests who have player IDs, you can also determine which guests are scheduled to arrive on a given date, check the current comp balances for in- house guests, and so on.

Viewing a Player's Snapshot

Prerequisites for Player Snapshot

The Player Snapshot screen enables you to view a summary of comp and reservation information related to current, future, and past stays by guests who have a Patron Tracking System (PTS) player ID.

Note:

The Player Snapshot is only available for guests who have a Patron Tracking System (PTS) player ID.

1. From the **OPERA Cloud** menu, select **Financials**, select **Comp Accounting**, and then select **Player Snapshot**.
2. To view a player's snapshot, complete the following search fields and click **Search**:
 - a. **Property**. Confirm the **Property** or select a new one. When at the Hub level, all properties within the Hub are selected by default if you do not select one or more properties.
 - b. **Name**. Enter the guest's complete last name or the first part of the guest's last name.
 - c. **Player ID**. Enter the Player ID number assigned to the guest by the Patron Tracking System (PTS).
 - d. **Room**. Enter the guest's room number or choose from a list of room numbers.
 - e. **Comp Balance From/To**. Enter a **Comp Balance From** value to view only those guests with a comp balance (that is, a total amount of charges transferred to comp) equal to or greater than the entered amount. Enter a **Comp Balance To** value to establish a lower limit to the search. Enter the same amount in both fields to search only for guests with that specific comp balance.
 - f. **Balance From / To**. Enter a **Balance From** value to view only those guests with a balance (that is, a total amount of charges not transferred to comp) equal to or greater than the entered amount. Enter a **Balance To** value to establish a lower limit to the search. Enter the same amount in both fields to search only for guests with that specific comp balance.
 - g. **Reservation Status**. Select the options that correspond to the reservation statuses you want to search.
 - Checked Out** – Search for guests who have already checked out.
 - Due Out** – Search for guests whose departure date is today.
 - Stay Overs** – Search for guests whose departure date has passed, but who have not checked out. This option is selected by default.

Arrivals/Date From – Search for guests by arrival date. The **Date From** field becomes active when you select the **Arrivals** check box. The search will start from this date and extend into the future. The default arrival date is today's date, but you can also search from any future or past arrival date. To enter a date, select the calendar tool or enter the date manually.

Viewing Player Statistics

Prerequisites for Player Statistics

Gaming

Player Statistics are available when OPERA Cloud is integrated with a Patron Tracking System (PTS). The Player Statistics screen can be accessed from the [Guest's Profile](#), the [Guest's Reservation](#), [Arrivals](#), [Billing](#), or from the [Player Snapshot](#).

The Player Statistics screen provides an up-to-the-minute display of gaming information for a guest with a player ID. Guests have a player ID if their profiles are associated with the membership program specified by the PTS Membership Type OPERA Control. The data fetched from the Player Tracking System appears as view-only. You can select up to 30 data items for display.

Note:

The data available varies according to the Player Tracking System integrated with OPERA Cloud.

To view the Player Statistics for a guest:

1. Navigate to **Manage Reservation**, **Manage Profile**, **Arrivals** or **Billing** :
 - a. **Manage Reservation screen:** Select **Bookings**, select **Reservations**, and select **Manage Reservation**. For more information, see [Editing a Reservation](#)
 - b. **Manage Profile screen:** Select **Client Relations**, select **Profiles**, and select **Manage Profile**. For more information, see [Managing a Guest or Contact Profile](#)
 - c. **Check In:** Select **Front Desk**, select **Arrivals**. Search for a reservation. For more information, see [Checking in Reservations](#)
 - d. **Billing:** Select **Front Desk**, then select **Inhouse**. For more information, see [Manage Billing](#)
2. Select **I Want To . . .** and then select **Player Statistics**.

You can also access Player Statistics through [Player Snapshot](#).

Searching for and Transferring Comp Postings

Gaming

On the Search Transactions screen, you can search for transaction postings and filter your search to view only postings from comp windows 101–108. From the search results, you can select charges and transfer them to a folio window or to a room, transfer charges from cash windows to comp windows and vice versa, or transfer charges within a comp window.

Searching for Comp Postings

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House**.
2. Search for In House guests by entering a **Name** and clicking **Search**. You can also click **Search** to view all in house guests without entering search criteria.
3. In the search results, click **I Want To...** for the reservation you want to view and select **Billing**.
4. On the Billing screen, click **I Want To...** and select **Search Transactions**.
5. On the Search Transactions screen, select a comp window of **101-108** to filter the list of transaction codes to show only transactions posted to a comp window.
6. Click **Search** to view the filtered transaction code list.

Transferring Comp Postings

1. On the Search Transactions screen, select the transaction from the search results, click the vertical ellipsis, and select **Transfer Posting**.
2. On the Transfer Postings screen, select a **Transfer Direction**, either **To a Folio Window** or **To a Room**.
 - a. **To a Folio Window**. Click the down arrow and select a comp window (101-108) for the transfer.
 - b. **To a Room**. Enter or select a **Room Number** or a **Guest Name** for transfer.
3. Click **Transfer**. You are prompted for an Authorizer ID and must enter your **Authorizer ID** to proceed with the transfer.

Note:

When the **Authorizer PIN Required** parameter is On, you are prompted to enter both an **Authorizer ID** and **PIN**. This is the PIN belonging to the authorizer for the target window to which you are transferring the posting.

Working with Comp Windows

Gaming

[Prerequisites for Working with Comp Windows](#)

Accessing Comp Windows

With the **Access Comp Windows** task granted, you can access comp windows 101 through 108.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House** or select **Departures**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and then click **I Want To . . .** and select **Billing**.

The comp windows appear on the right-side of the Billing screen as windows 101 through 108.

4. Select the comp window you want to work with.

Editing Price and Quantity

With the **Edit Price Quantity Comp No Approval** task granted, you can edit the price or quantity of a posting on windows 101-108 even if it has not been approved. With the **Edit Price Quantity Comp With Approval** task granted, you can only edit the price or quantity of a posting on windows 101-108 that has already been approved.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House** or select **Departures**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and then click **I Want To . . .** and select **Billing**.
4. On the Billing screen, select a comp window (101 through 108), select a transaction, and then click the vertical ellipsis button and select **Edit Posting**.
5. Edit the **Price** or **Quantity** as needed and click **Save Transaction** when finished.

Transferring a Comp Posting

With the **Transfer Posting Comp No Approval** task granted, you can transfer a comp posting without an approval code assigned to it.

Direct postings are not allowed in comp windows 101-108 and postings must be transferred from windows 1-8.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House** or select **Departures**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and then click **I Want To . . .** and select **Billing**.
4. On the Billing screen, click the vertical ellipsis button and select **Transfer Posting**.
5. In the **Select a Transfer Scope** pane, select **Partial/Selected Posting**.
6. In the **Select a Transfer Direction** pane, select **To a Folio Window**.
7. Select a comp window (101 through 108).
8. In the **Split Options** pane, select one of the following options: **Do not split**, **Amount**, **Percentage**, or **Quantity**.

 **Note:**

If you are transferring only a portion of the transaction charges, enter the amount, percentage, or quantity based on your selection.

9. In the **Selected Transactions** pane, search for transactions by clicking the vertical ellipsis button and selecting **Search Transactions**.
10. Enter search criteria such as the **Transaction Code**, **Routing Code**, or a **Start Date / End Date** to narrow your search results and click **Search**.

 **Note:**

Only Transactions that are allowed to be transferred appear in the search results.

11. From your search results, select one or more transactions, click **Add**.
12. From the **Selected** section, select one or more transactions, click **Next**.
13. Click **Transfer** to confirm the transfer.

Transferring Transactions to Comp Windows

Gaming

The Transfer Transactions function lets you transfer and split transactions from a folio (or non-comp) window to a comp window. You must have an authorizer ID and credentials to transfer transactions.

 **Note:**

When the **Restrict New Profile** parameter is active in OPERA Controls, you are restricted from removing the primary profile linked to the reservation when comp charges exist on any of the comp windows. In addition, you are unable to attach another profile to the reservation.

When the **Authorizer PIN Required** parameter is active in OPERA Controls, the Authorizer Sign In window appears when transferring comp transactions to a different comp window and authorizers are prompted for a password. When the parameter is set to **Off**, authorizers are only prompted for an Authorizer ID when transferring transactions.

If the transaction has an inclusive tax associated with it and the **Deduct Inclusive Tax from Comp Window** parameter is active in OPERA Controls, the inclusive tax will not be included in the transfer to the comp window. If the same transaction is transferred back to guest billing window, the inclusive tax is re-posted.

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **In House** or select **Departures**.
2. Enter search criteria and click **Search**.
3. Select the reservation from the search results and then click **I Want To . . .** and select **Billing**.
4. On the Billing screen, click **I Want To . . .** and select **Transfer Posting**.
5. In the **Select a Transfer Scope** pane, select **Partial/Selected Postings**.
6. In the **Select a Transfer Direction** pane, select **To a Folio Window**.
7. Click the down arrow and select a comp window (101 through 108).
8. In the **Split Options** pane, select one of the following: **Do not split**, **Amount**, **Percentage**, or **Quantity**.

If you are transferring only a portion of the transaction charges, enter the amount, percentage, or quantity based on your selection.

9. In the **Selected Transactions** pane, click the **vertical ellipsis** and select **Search Transactions**.
10. Enter search criteria and click **Search**. From your search results, select one or more transactions and click **Select**.
11. Click **Transfer** to complete the transfer. You are prompted for an Authorizer ID and must enter your **Authorizer ID** to proceed with the transfer.

When the **Authorizer PIN Required** parameter is On, you are prompted to enter both an **Authorizer ID** and **PIN**. This is the PIN belonging to the authorizer for the target window to which you are transferring the posting.

Settling and Printing Comp Folios

Gaming

Prerequisites for Settling and Printing Comp Folios

Settling a Comp Folio

1. From the **OPERA Cloud** menu, select **Front Desk**, and then select **Departures**.
2. Enter the reservation search criteria and click **Search**.
3. Select a reservation from the search results and then click the **Check Out** button.
4. On the Check Out screen, select **I Want To...** and select **Billing**.
5. On the Billing screen, select **I Want To...** and select **Interim Bill** or select **Advance Bill**.
6. On the Folio Settlement screen, select a comp window and then select either **Settle and Send Folio** or select **Settle Folio**.

Note:

The **Print Comp Folio** setting in OPERA Controls affects the printing options as follows:

- When set to **AUTO_PRINT**, the **Settle Folio** button is not available for selection. Clicking the **Settle and Send Folio** button takes you to the print screen after settlement.
- When set to **SELECT_DESTINATION**, the **Settle Folio** button is available for selection. Clicking the **Settle Folio** button settles the folio without printing it. Clicking the **Settle and Send Folio** button takes you to the print screen after settlement.
- If set to blank, the **Settle Folio** button is available for selection. Clicking the **Settle Folio** button settles the folio without printing it.

End of Day Procedures

End of Day balance and closes each day's business activities for your property. Once the process is complete the business date is updated and final reports are generated. End of Day can be run while other users remain logged into OPERA Cloud; once the business date has updated they are prompted to reinitialize their session for the new date. You can also run End of Day for multiple properties concurrently via separate browser tabs (sessions) from a Hub location. See, [Changing Your Location in Multi-Property Operations](#).

Note:

If your browser supports a duplicate tab option you can duplicate your current OPERA Cloud End Of Day session to manage and run End of Day for different properties.

Based on the active OPERA Controls at your property the end of day routine executes a number of procedures; during which you may be prompted with a message to action. For example, you might be notified to resolve due in arrival reservations or expected

departure reservations not yet checked out. When the Auto Continue OPERA control is active OPERA Cloud will continue and commence the next procedure without pausing for confirmation.

Table 6-7 End of Day Procedures

Procedures	Description
Country and State Check	Checks for country and state codes to complete a guest's address.
Arrivals not Checked In	Verifies that guests who are expected to arrive have either checked in or changed their reservation status or arrival date. If not resolved, End of Day may list the reservation status as No Show.
Arrivals with Deposit Balance Check	When activated, an additional check for Arrivals with Deposit Balance is added to the Night Audit process prior to the Arrival not yet Checked in, the Night Audit will stop if there are any such Arrivals identified and cannot be continued unless all these Reservations are checked in or their Deposit Balance is zero.
Departures not Checked Out	Verifies that guests expected to check out have checked out or have extended their stay. You must resolve each guest's Due Out status. You can either extend or check out the guest.
Open Folios	An Open Folio is a guest account that is allowed to remain open after checkout. It allows the guest to check out with an outstanding balance and to continue charging until final settlement is made.
Cashier Closure	Closes any open cashiers other than the End of Day routine cashier.
Weather or Notes	Enter weather related information or other factors that impact the business day; for example, weather delaying airline flights.
Update the Business Date	Moves the business date forward one day. Arrivals, check outs, charges, and other activities occurring afterwards assume the new date. The business date can be updated when: <ul style="list-style-type: none"> • All the anticipated departures are checked out, extended, or otherwise resolved. • All cashiers are closed. When the above two tasks have been accomplished, the system displays a waiting time before updating the business date. You may change this setting as needed. The default waiting time is 0.5 minutes. The system then broadcasts a warning to all users that the business date is about to be updated, and then updates the business date forward.
Pseudo Rooms not Checked In	This step runs before the business date is advanced and checks in any pseudo room type reservation in ARRIVAL (DUE IN) status for the current business date.
Pseudo Room Arrivals Next Day	This step runs after the business date is advanced to the next day and checks in any pseudo room type reservations in ARRIVAL status.

Table 6-7 (Cont.) End of Day Procedures

Procedures	Description
Posting Room and Tax	<p>Checks each in-house guest (and any guaranteed reservations with a No Show status) and posts the day's room and tax charges. During the Post RT, Packages, Fixed Charges procedure the system automatically posts the charges for Room and Tax, Fixed charges, Packages, and Package Profit/Loss to all in house guests. The Postings status page displays specific information about each posting, such as how many times each posting has been run (iterations), the starting and stopping time, and the posting's status.</p> <p>The Post Room and Tax function checks each in-house guest and any guaranteed reservations with a No Show status, and posts the day's room and tax charges, package charges, and any affiliated fixed charges to the guest's folio.</p> <ul style="list-style-type: none"> • Room and Tax - Posts room night's charges and applicable taxes. • Other Fixed Charges - Specific charges attached to a reservation that post according to specific reservation or posting rules. • Package Charges - Depending on how the property has set up packages, the system will post related package charges, for example, breakfast). • Package Profit/Loss - An internal accounting of whether or not the property sustains a profit/loss on packages. <p>No matter how many times a day this procedure is run, OPERA Cloud does not allow duplicate charges. The End of Day Routine system tracks the folios that have been charged and the folios that are new. There is no system downtime during the End of Day Routine. As discrepancies are found, the system prompts to make any necessary changes. Once all data is verified, the system will post the room and associated fixed charges.</p>
Audit	Balances each transaction code and verifies the sum of all transaction codes used throughout the business day.
Run Additional Procedures	Runs additional procedures that are defined and scheduled in the End of Day Setup function.
Auto Folio Settlement	Auto Folio Settlement enables you to automatically process payments for reservations. This reduces the labor cost of manually processing payments and facilitates a seamless settlement process for guests and hotel staff.
Print Final Reports	Generates the reports and prepares them for printing, emailing, or faxing.

Use End of Day search to retrieve properties for end of day processing. You can search for a single property or several properties within a chain. If running End of Day for several properties, Search results appear beneath the date and time on the Manage End of Day screen.

You can create or activate extra End of Day procedures and reports using End of Day Setup.

Running End of Day

The End of Day process is specific to each property and run separately, however you can run End of Day for one or more properties concurrently via separate browser tabs (sessions).

 **Note:**

If your browser supports a duplicate tab option you can duplicate your current OPERA Cloud EOD session to manage and run End of Day for different properties.

Prior to commencing End of Day you can manage the various procedures [Mandatory and Optional End of Day Sequence Procedures](#) and reports to be run for the current date.

1. From the **OPERA Cloud** menu, select **Financials**, select **End of Day**, and then select **Manage End of Day**.
2. **Property:** Search and select a property from the list, click **Search**.

 **Note:**

From a Hub location you can select multiple properties and view status for all selected properties.

3. A tile is displayed for each property, indicating the number of Arrivals and Departure due plus an open cashiers requiring closure; click the values to drill down and manage the details.
 - a. Arrival due reservations will be updated to no-show status when the Auto No Show Arrivals End of Day control is enabled.
 - b. Open cashiers will be auto-closed when the Auto Close Cashiers End of Day control is enabled.
4. To modify the End of Day procedures or reports to run for a property, click **Manage**, then click **Setup**.

 **Note:**

When an optional procedure fails during the Additional Procedures step you can inactivate the failed procedure by selecting **Setup**. If you return to Manage End of Day and select **Continue**, the end of day process continues and advances to the next procedure or step.

- a. Mandatory procedures are indicated with a lock icon; these cannot be altered.
- b. Procedures are displayed in a tab and Reports in a second tab, select the tab required.
- c. Click **Vertical Ellipsis**, **Show Inactive** to display inactive procedures.
- d. To active a procedure
 - i. Select an inactive procedure (red background), click **Vertical Ellipsis**, select **Activate**.
- e. To deactivate a procedure or report.

 **Note:**

From a Hub location you can select multiple properties and view status for all selected properties.

3. On the property tile, select the open business date tab, click the **vertical ellipsis** and select an option:
 - a. **Reservations:** Click to search for (current) in house reservations and click value in **Balance** column to go to Billing. For more information, see [Manage Billing](#).
 - b. **Post It:** Click to launch Post It to access Passerby. For more information, see [Charging Purchases Using Post It](#)

Finalizing a Business Date

1. From the OPERA Cloud menu, select **Financials**, select **End of Day**, select **Manage Income Audit**.
2. Enter or select the property and click **Search**.

 **Note:**

From a Hub location you can select multiple properties and view status for all selected properties.

3. On the property tile, select the tab for the business date, click **Manage**.
4. To modify the End of Day procedures or reports to run, For more information, see [Running End of Day](#).
5. Click **Continue** to proceed with completing the End of Day and closing the business date.

Print Interim Reports

The OPERA Controls End of Day - Audit must be set to Active for OPERA Cloud to print Interim Reports. OPERA Cloud generates the selected interim reports and prepares them for the Income Auditor as established in End of Day Routine Setup. Use these Interim Reports with the Income Audit feature to make corrections, adjustments, and postings to guest folios as necessary.

If your property does not use the Income Audit feature, the auditor can now close the business date and print final reports.

If the property uses the Income Audit feature, the Interim reports are then run after the procedures. These reports are referenced when the income auditor makes adjustments and new charges.

It is suggested that the interim reports include the Preliminary Manager's Report, Preliminary Trial Balance, and Preliminary Journal by Transaction Code.

Update the Business Date

The business date can be advanced when:

- All expected departures are settled and checked out or their departure date extended or otherwise resolved from due out status.
- All open cashiers are closed.

 **Note:**

With the Auto Close Cashiers OPERA Control is active. Open cashiers are automatically closed during End of Day

When the above two tasks have been accomplished, OPERA Cloud displays a notification to users, advising a duration before the business date advances.

The browser tab where you are running **End of Day** remains active to complete the process. In any other browser tabs and additional browser sessions (including incognito) a message that the business date is being advanced (updated) is displayed and once completed a confirmation message appears. Selecting **OK** refreshes OPERA Cloud with the new business date.

All other user sessions will receive a message that the business date will be advanced (updated) and once complete their sessions will automatically log out.

Post Room and Tax

During the Post Room and Tax procedure OPERA Cloud posts accommodation charges and associated taxes, plus any [fixed charges](#) plus rate code and reservation-specific packages charges [Reservation Package Items](#) to all in house reservation accounts. Additionally, when the Advanced Package OPERA Control is active OPERA Cloud posts package allowances and package profit and loss charges to the package ledger for applicable in house reservations.

When the Post Revenue To No Shows OPERA Control is active a no-show accommodation charge is posted to reservations in a no-show status; based on the no-show posting rules configured. See, [Configuring No Show Posting Rules](#)

When the Advanced Discount OPERA Control is active the Post Room & Tax procedure references the Advanced Discount Reasons (ADR) and the Advanced Discount Reasons calculation rules to calculate the discount amount to be applied to each reservation based on the advanced discount reason set in the reservation discount reason field. The amount to be posted considers all non-Advanced Discount Reason Reservations to calculate the amount of discount to be posted to guest reservations. The Room Rate Posting posts the percent of ADR on all guest reservations with an Advance Discount Reason attached. The amount of the posting depends on the configuration of the Advance Discount Reason and the previous night's occupancy.

The Postings Status page displays specific information about each posting, such as how many times each posting process has been run (iterations), the starting and stopping time, and the status.

- **Room and Tax** - Posts room accommodation and applicable taxes.
- **Other Fixed Charges** - Specific charges added to a reservation which post periodically .

- **Package Charges** - Posts package items sold in reservations or via the reservation rate code.
- **Package Profit/Loss** - An internal accounting charge posted to package ledger to adjust consumed package allowances to their item price.

No matter how many iterations of the Post Room and Tax procedure are run during a business date, OPERA Cloud will not post duplicate charges.

Running End of Day Additional Procedures

Run Additional Procedures to help with corrections, adjustments, and postings to guest folios as necessary.

1. From the **OPERA Cloud** menu, select **Financials**, select **Manage Income Audit**.
2. On the **Manage Income Audit** screen, click **Manage**.
3. On the Income Audit screen, from the **Steps** menu, select **Run Additional Procedures**.
4. In the End of Day Setup panel, click Final Procedure tab, select a procedure and click the vertical ellipsis to set it to **Active** or **Inactive**.

The Procedures section is view only and it displays information about each procedure, such as the Iteration Number, the Start and End time, and the procedure's Status (running, completed). Errors are displayed above the status grid. The iteration only changes numbers if there was an error in the previous iteration. If a previous night's procedures have not been completed, OPERA Cloud does not allow the next End of Day Sequence to run.

End of Day and Reservation Statistics

Reservation statistics tables are created during the end of day process for the current business date.

Transactions within the Financial Transactions table are recorded and stored with the market code, source code and room class of the originating reservation. If a transaction is routed or transferred to another reservation (irrespective of the transactions posting date) with a different room class, market segment or source code, the entries in the financial transaction table are not be updated with the above data for the target reservation. Financial journals and reports print from the financial transaction table and are therefore referenced to the financial information and filtration based on the originating reservation.

Reservation statistic tables that are created during the end of day process (for the current business date and a have revenue association) summarize and calculate revenues by the room class, market segment and source code of the reservation they are linked/associated to for the specific transaction at the time the business date is rolled. It is not intended be a direct reflection of the components such as market/source etc. of the actual posting for reasons such as transfer, routing, room moves, and so on.

An exception to the revenue statistic calculation in the end of day process as described above are those transactions which are routed or transferred to a PM (pseudo) account. Those revenues for statistical reporting are recorded under the room class, market segment and source code of the reservation from which they were last routed/transfer on the business date of the posting.

Managing End of Day Reports

End of Day reports, for any date in the past, can be viewed, regenerated and resent.

Note:

Trial Balance and Guest Balance Snapshot cannot be regenerated.

Preview End of Day Reports

Reports with a Filed status can be previewed.

1. From the OPERA Cloud menu, select **Financials**, select **End of Day**, and then select **End of Day Reports**.
2. Confirm or select the Property, then select a past date and select the report statuses:
 - a. **Filed**: Report was generated to file.
 - b. **Sent**: Report was emailed or printed.
 - c. **Not Processed**: Report was not generated.
3. Click **Search**.
4. Select the report then click the vertical ellipsis and select **Preview**.

Regenerate End of Day Reports

1. From the OPERA Cloud menu, select **Financials**, select **End of Day**, and then select **End of Day Reports**.
2. Confirm or select the Property, then select a past date and select the report statuses:
 - a. **Filed**: Report was generated to file.
 - b. **Sent**: Report was emailed or printed.
 - c. **Not Processed**: Report was not generated.
3. Click **Search**.
4. Select one or more reports in the search result , click the page-level vertical ellipsis and select **Regenerate and Send To...**
5. Update the report destination(s).
6. Click **Process**.

 **Note:**

The following reports can be regenerated on the previous business day only:

- gi_trial_balance
- deposit_ledger
- guest_ledger_snapshot

Resend End of Day Reports

1. From the OPERA Cloud menu, select **Financials**, select **End of Day**, and then select **End of Day Reports**.
2. Confirm or select the Property, then select a past date and select the report statuses
 - a. **Filed**: Report was generated to file
 - b. **Sent**: Report was emailed or printed.
3. Click **Search**.
4. Select one or more reports in the search result , click the page-level vertical ellipsis and select **Regenerate and Send To...**
5. Update the report destination(s).
6. Click **Process**.

Print Final Reports

OPERA Cloud generates the selected final reports and prepares them for printing on the default End of Day Sequence printer based on the configuration of your property. The Night Auditor compares the data conveyed in different folios against points of sales outlets daily reports, the housekeeping room status report, and so on. This cross- referencing function is a vital procedure in the internal control.

 **Note:**

If the end of day sequence gets hung up on a report, when the end of day sequence is re-started it will begin with the reports that have not finished printing. For example, when running the final reports, the user gets hung up on report 15 out of 24. When the final reports are started again, it will start with the 15th report and finish running them.

End of Day Sequence Mandatory and Additional Reports are considered your final reports of the day because the information contained in these reports cannot be changed (once the date has changed, any postings, etc. will be reflected on the new day). The reports processed in the Balancing Reports phase are not considered final because that information can change (the date has not yet been changed and therefore postings, etc. will effect today's information).

7

Channel

Channel provides alternative sources of reservations. You can monitor channels for inventory, billing accounts, statements, and evaluations.

Managing Channel Inventory

The Channel Inventory Setup screen enables you to setup sell limits for each channel.

Managing Channel Sell Limits

Adding Channel Sell Limit

1. From the **OPERA Cloud** menu, select **Channel** then select **Channel Inventory**.
2. Enter search criteria and click **Search**.
3. Click **Manage Sell Limits**.
4. Click **New** and enter the following details:
 - a. **Property**: Enter or select the property.
 - b. **Channel**: Select the channel from the list.
 - c. **Channel Room Type**: Select a room type from the list.
 - d. **Start Date**: Enter or select the start date.
 - e. **End Date**: Enter or select the end date.
 - f. **Number of Rooms**: Enter the number of rooms for the Sell Limit.
 - g. **Days of Week**: Select the applicable days of the week.
5. Click **Save**.

Editing Channel Sell Limit

1. From the **OPERA Cloud** menu, select **Channel** then select **Channel Inventory**.
2. Enter search criteria and click **Search**.
3. Click **Manage Sell Limits**.
4. Enter search criteria and click **Search**.
5. Select the Sell Limit, click the vertical ellipsis **Actions** menu, and select **Edit**.
6. Update details.
7. Click **Save**.

Deleting Channel Sell Limit

1. From the **OPERA Cloud** menu, select **Channel**, and then select **Channel Inventory**.
2. Enter search criteria and click **Search**.
3. Click **Manage Sell Limits**.
4. Enter search criteria and click **Search**.
5. Select the Sell Limit, click the vertical ellipsis **Actions** menu, and select **Delete**.
6. Click **Delete** to confirm.

8

Miscellaneous

The Miscellaneous menu enables you to create or search for a variety of information and perform a variety of functions using features such as the Changes Log (search and create reports on logged activities by property, activity group, activity type, and date range), Service Requests (create service requests by assigning priorities, dates, and times), and Telephone Book (create phone numbers and categories for properties, restaurants, and transportation).

Prerequisites for Miscellaneous

This chapter of the OPERA Cloud User Guide lists the prerequisites for Miscellaneous menu.

Prerequisites for Property Interface Control

Property Brochure

The Property Brochure is a resource that central sales, reservations, and on-property staff can use to obtain detailed information about services, facilities, accommodation at your property, and details on transportation options and local attractions in surrounding areas of your property. The Property Brochure can include high-quality photographs of your property accommodations and facilities and information on popular local attractions, dining and retail, local airports, transportation services, and other facilities.

Watch Video

Your property's primary details and contact information appear in the business card format at the top of the Property Brochure screen. The remaining information is presented in the following three panels:

- **Property Details.** Tabs for Directions, Airports, and Transportation.
- **Features.** Tabs for Amenities, Dining & Retail, Local Attractions, Event Spaces, Images, and Calendar.
- **Miscellaneous.** Tabs for Alternate Properties, General Notes, and Additional Details.

Viewing the Property Brochure

You can open the Property Brochure from the Look to Book (LTB) Sales screen or in full-size mode from the Miscellaneous, Property Brochure menu. You can also add the Property Brochure menu option to your Quick Links in F2 [Quick Launch](#).

When the OPERA Cloud multi-property or Reservation Systems subscription is active and you are initialized to a Hub location, you can select and view the details for any property associated with the Hub; select the Property Code from the Property list.

If filtering is available within a panel, use it to hide or unhide information.

1. Select **Filter Results** and select or enter the information you want to appear in the tab.
2. Click **Apply Filters**.
3. After applying filtering, click **Reset** to remove the filters.

The [Property Calendar](#) is available from the Features panel of the Property Brochure.

Property Interface Control

Prerequisites for Property Interface Control

Property Interface Control allows you to manage the status of features for the property systems integrated with OPERA Cloud. Quite often these systems are related to guest rooms and reservations, and may also apply to other areas in your property.

Note:

The **Reservation Status** search field lists Checked In, In House and Departure status reservations for all IFC types except a Door Lock System (DLS). For a Door Lock System the **Reservation Status** search field lists future-date arrivals, Due In, Checked In, Inhouse and Departure statuses. You can also select to search for Advanced Check-In reservations when the Advanced Check In OPERA Control is active.

The type of systems listed in Property Interface Control include:

- PBX, Call Accounting, Voicemail and other telephone related systems
- Room key / Door lock
- In-room movie / entertainment
- Minibar
- WIFI/Internet
- Building /Energy Management
- Point of Sale (POS)
- EFT/Payment
- Stored Value / Gift Card
- Ticketing

Managing a Room Key / Door Lock Property Interface

Use Property Interface Control to create and manage keys independently of other processes such as check in. You can create room keys for future-date arrivals, Due In, Advanced Checked In or Checked In, Inhouse, and Departure reservations with a room number assigned. You can select multiple reservations if required.

[Watch Video](#)

Creating Room Keys for a Reservation

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Property Interface Control**.
2. Enter or select the property and click **Search**.

3. Select and expand the **Key Card / Door Lock System (DLS)** panel.
4. Enter reservation search criteria and click **Search**.
5. Select a reservation in the search then click **Create Key**.
6. Room Key Options:
 - a. **Key Type:**
 - i. **Cut New Key:** Select to encode a new key, which invalidates any existing keys.
 - ii. **Cut Duplicate Key:** Select to encode a duplicate key. Existing keys remain valid.
 - b. **Number of Keys:**
 - i. **Per Adult on Reservation:** Select the number of keys based on Adults in the reservations. (Defaults when the Default Key Selection OPERA Control is set to Per Adult).
 - ii. **Per Reservation:** Select a fixed number of keys per reservations. (Defaults when the Default Key Selection OPERA Control is set to Per Reservation).
 - i. **Value:** Enter the number of keys. (Defaults from the Default Number of Keys Per Reservation OPERA Control).
 - c. **Additional Rooms:** Select any additional rooms from the list.
 - d. **Key Options:** Select special key options from the list. Key options provide special access to areas such as a fitness center, club floor, or so on.
 - e. **Keycard Use:** Select a use for the key from the list.
 - f. **Valid Until Date:** Enter or select a expiry date. The default is the departure date.
 - g. **Valid Until Time:** Enter an expiry time. The default is the departure time.
7. Guest Details for Multiple Keys (Available when the Multiple Guest Room Key OPERA Control is active).

 **Note:**

The primary guest has a new key encoded and the accompanying guests have a duplicate key encoded. A New key can be also encoded for an accompanying guest as well.

- a. The primary guest and any accompanying guests are listed for selection.
- b. Select the check box to select the guest.
- c. **Adult/Child:** Select Adult or Child from the list.
- d. **Remaining Balance:** Enter an amount for the guest.
- e. Click **Add Rows** to add additional guest names. An accompanying guest is not added to the reservation.
- f. Click **Edit** to update the **Adult/Child** or **Remaining Balance** for guests listed.
 - i. Click **Save** to update changes.

8. Key Encoder Locations

- a. **Display All Encoders:** Switch on to display a list of all encoders; when off, the last used encoder is displayed.
- b. Select a device area to view a list of encoders allocated to the area.
- c. Select a key encoding device.

9. Click **Create Key**.

Creating Room Keys for Multiple Reservations

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Property Interface Control**.
2. Enter or select the property and click **Search**.
3. Select and expand the **Key Card / Door Lock System (DLS)** panel.
4. Enter reservation search criteria and click **Search**.
5. Select multiple reservations in the search then click **Create Key**.
6. **Room Key Options:**
 - a. **Key Type**
 - i. **Cut New Key:** Select to encode a new key and invalidate any existing keys.
 - ii. **Cut Duplicate Key:** Select to encode a duplicate key. Existing keys remain valid.
 - b. **Number of Keys**
 - i. **Per Adult on Reservation:** Select a number based on the number of adults in the reservations.
 - ii. **Per Reservation:** Select a fixed number of keys per reservations.
 - i. **Value:** Enter the number of keys.
 - c. **Additional Rooms:** Select any additional rooms from the list.
 - d. **Key Options:** Select special key options from the list. Key options provide special access to areas such as a fitness centre or club floor.
 - e. **Keycard Use:** Select a use for the key from the list.
 - f. **Valid Until Date:** Enter or select a expiry date. The default is the departure date.
 - g. **Valid Until Time:** Enter an expiry time. The default is the departure time.
7. **Key Encoder Locations:**
 - a. **Display All Encoders:** Switch on to display a list of all encoders; when off the last used encoder is displayed.
 - b. Select a device area to view a list of encoders allocated to the area.
 - c. Select a key encoding device.
8. Click **Process**.
9. The Information Message **Create Keys for Reservation 1 of x: (Room Number: xxx) (Name: xxx)** appears at the top of the panel.
 - a. Modify the Room Key Options if required.
 - b. Click **Create Keys**.

- c. To skip this reservation, click **Skip**.
 - d. Repeat for each reservation.
10. Click **Close** after all reservations are processed

Creating One-Shot (One-time Use) Keys for a Room

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Property Interface Control**.
2. Enter or select the property and click **Search**.
3. Select and expand the **One-Shot Key (DLS)** panel.
4. Enter search criteria for the room to access and click **Search**.
5. Select a room in the search result then click **Create Key**.
6. Room Key Options:
 - a. Number of Keys:
 - i. **Per Adult on Reservation**: Select the number of keys based on the number of adults in the reservations.
 - ii. **Per Reservation**: Select a fixed number of keys per reservations (Defaults to this and 1).
 - i. **Value**: Enter the number of keys.
 - b. **Additional Rooms**: Select any additional rooms from the list (when configured for the DLS IFC type in use).
 - c. **Key Options**: Select special key options from the list. Key options provide special access to areas such as fitness center or club floor. Default from [Key Options Preferences](#).
 - d. **Keycard Use**: Select a use for the key from the list (defaults to Room Key Only, other options are available when Gaming is in use).
 - e. **Valid Start Date**: Defaults to the current date (when configured for the DLS IFC type in use).
 - f. **Valid Start Time**: Defaults to the current time or the configured setting in OPERA Controls.
 - g. **Valid Until Date**: Enter or select a expiry date. The default is the departure date (follows the OPERA Controls settings for Keys Expiry Days and Time under IFC Group).
 - h. **Valid Until Time**: Enter an expiry time. The default is the departure time (follows the OPERA Controls settings for Keys Expiry Days and Time under IFC Group).
7. Key Encoder Locations:
 - a. **Display All Encoders**: Switch on to display a list of all encoders; when off the last used encoder is displayed.
 - b. Select a device area to view a list of encoders allocated to the area.
 - c. Select a key encoding device.
8. Click **Create Key** (a Oneshot Key Request is sent to the Door Lock System and a response is expected whether success/failure).

Encoding a Duplicate (Additional) Key

Existing keys encoded for room remain valid.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Property Interface Control**.
2. Enter or select the property and click **Search**.
3. Select and expand the **One-Shot Key (DLS)** panel.
4. Enter search criteria for the room to access and click **Search**.
5. Room Key Options:
 - a. Key Type
 - i. Select **Cut Duplicate Key**: Any existing keys for room remain valid.
 - b. Number of Keys
 - i. **Per Adult on Reservation**: Select quantity of keys based on Adults in the reservations.
 - ii. **Per Reservation**: Select a fixed number of keys per reservations.
 - i. **Value**: Enter the number of keys.
 - c. **Additional Rooms**: Select any additional rooms from the list.
 - d. **Key Options**: Select special key options from the list; key options provide special access to areas such as fitness center or club floor. Default from [Key Options Preferences](#).
 - e. **Keycard Use**: Select a use for the key from the list.
 - f. **Valid Start Date**: Defaults to the current date (when configured for the DLS IFC type in use).
 - g. **Valid Start Time**: Defaults to the current time or the configured setting in OPERA Controls.
 - h. **Valid Until Date**: Enter or select a expiry date. The default is the departure date (follows the OPERA Controls settings for Keys Expiry Days and Time under IFC Group).
 - i. **Valid Until Time**. Enter an expiry time. The default is the departure time (follows the OPERA Controls settings for Keys Expiry Days and Time under IFC Group).
6. Key Encoder Locations:
 - a. **Display All Encoders**: Switch on to display a list of all encoders; when off the last used encoder is displayed.
 - b. Select a device area to view a list of encoders allocated to the area.
 - c. Select a key encoding device.
7. Click **Create Key** (a Duplicate Key Request is sent to the Door Lock System and a response is expected whether success/failure).

Re-encoding a Room Key (Replacement)

Requests a key that duplicates all data of the existing key.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Property Interface Control**.
2. Enter or select the property and click **Search**.
3. Select and expand the **One-Shot Key (DLS)** panel
4. Enter reservation search criteria and click **Search**.
5. Room Key Options:
 - a. Key Type
 - i. Select **Re-encode Key**:
 - b. Number of Keys
 - i. **Per Adult on Reservation**: Select quantity of keys based on Adults in the reservations.
 - ii. **Per Reservation**: Select a fixed number of keys per reservations.
 - i. **Value**: Enter the number of keys.
 - c. **Additional Rooms**: Select any additional rooms from the list.
 - d. **Key Options**: Select special key options from the list. Key options provide special access to areas such as fitness center or club floor. Default from [Key Options Preferences](#).
 - e. **Keycard Use**: Select a use for the key from the list.
 - f. **Valid Until Date**: Enter or select a expiry date. The default is the departure date.
 - g. **Valid Until Time**: Enter an expiry time. The default is the departure time.
6. Key Encoder Locations:
 - a. **Display All Encoders**: Switch on to display a list of all encoders; when off the last used encoder is displayed.
 - b. Select a device area to view a list of encoders allocated to the area.
 - c. Select a key encoding device.
7. Click **Re-encode Key** (a Duplicate Key Request is sent to the Door Lock System and a response is expected whether success/failure)

Reading a Room Key

To identify a key you can read a room key.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Property Interface Control**.
2. Enter or select the property and click **Search**.
3. Select and expand the **Read Key (DLS)** panel.
4. Key Encoder Locations:
 - a. **Display All Encoders**: Switch on to display a list of all encoders; when off the last used encoder is displayed.
 - b. Select a device area to view a list of encoders allocated to the area.
 - c. Select a key encoding device to read the key.

5. Click **Read Key**.
6. Key details are displayed for the key inserted in the encoder selected.

Deleting a Room Key

Requests the Door Lock System to remove a key when supported.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Property Interface Control**.
2. Enter or select the property and click **Search**.
3. Select and expand the **One-Shot Key (DLS)** panel.
4. Enter reservation search criteria and click **Search**.
5. Room Key Options:
 - a. Key Type
 - i. Select **Delete Key**
6. Key Encoder Locations.
 - a. **Display All Encoders**: Switch on to display a list of all encoders; when off the last used encoder is displayed.
 - b. Select a device area to view a list of encoders allocated to the area.
 - c. Select a key encoding device.
7. Click **Delete Key**.

Managing Service Requests

Prerequisites for Managing Service Requests

Service Requests are used for incident, complaint or general request tracking and can be associated with a guest profile, reservation or room.

Each service request opened must be resolved and then followed-up at a later date to be completed and closed.

You can create service request directly from a reservation or profile or generically via Miscellaneous.

You can report on the current service requests via the Service Requests Report and Service Request Comparison reports - For more information, see [Miscellaneous Reports](#).

Adding Service Request

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Service Requests**.
2. Click **New** complete the following:
 - a. **Service Type**: Select from the options.
 - b. **Reservation**: Select to create a service request for a reservation.
 - i. **Confirmation**: Search and select a reservation.
 - c. **Profile**: Select to create a service request for a profile.
 - i. **Name**: Search and select a profile.

- d. **Room:** Select to create a service request a room.
 - i. **Room:** Search and select a room number.
 - e. **Code:** Select a service request code from the list.
 - f. **Priority:** Select a priority for the request from the list.
 - g. **Date Opened:** Defaults to the current calendar date.
 - h. **Time:** Defaults to the current time.
 - i. **Remarks:** Enter any remarks / notes for the request or incident/complaint.
3. Click **Save**.

Editing Service Request

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Service Requests**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To...**, select **Service Requests** or click the **Service Requests** link in Reservation Presentation.
4. Select the card for the request, click Vertical Ellipsis and click **Edit**.
5. Update request.
6. Click **Save**.

Deleting Service Request

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Service Requests**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To...**, select **Service Requests** or click the **Service Requests** link in Reservation Presentation.
4. Select the card for the request, click **Vertical Ellipsis** and click **Delete**.
5. Click **Delete** to confirm.

Completing (Resolve) Service Request

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Service Requests**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To...**, select **Service Requests** or click the **Service Requests** link in Reservation Presentation.
4. Select the card for the request, click **Vertical Ellipsis** and click **Complete**.
5. The Complete Service Request page is displayed. Enter the following details:
 - a. **Contact Method:** Select a contact method.
 - b. **Contacted By:** Enter your name or who contacted the guest to complete the request.
 - c. **Action Taken:** Enter details of the action taken.
 - d. **Date Completed:** Defaults to the current calendar date; you can update.
 - e. **Time Completed:** Defaults to the current time; you can update.
6. Click **Save**.

Following up (Closing) Service Request

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Service Requests**.
2. Enter search criteria, click **Search**.
3. Select the reservation in the search result, click **I Want To...**, select **Service Requests** or click the **Service Requests** link in Reservation Presentation.
4. Select the card for the request, click **Vertical Ellipsis** and click **Followup**.
5. The Close Service Request page is displayed. Enter the following details:
 - a. **Closed By:** Enter your name or who contacted the guest to close the request.
 - b. **Action Taken:** Enter details of the action taken.
 - c. **Date Completed:** Defaults to the current calendar date; you can update.
 - d. **Time Completed:** Defaults to the current time; you can update.
6. Click **Save**.

Viewing Changes Log Details

Changes Log

The Changes Log records a history of user activity and details the user who performed the action, the date, the time, the activity type and a description of the change.

For example, it can show you activity such as reservation check ins, check outs, posting of charges, adjustments and payment, and the creation or update of profiles, reservations, blocks and events. Changes to your property configuration are also captured, along with activity from integrated systems based on the service account user as defined in Oracle Identity Manager.

Note:

When the Payment Service Directive **OPERA Control** is active, the CIT (Customer Initiated Transaction) value received can be viewed in New Reservation, Update Reservation & Record Credit Card Approval activity.

Note:

Historical change log activity is purged, therefore it is recommended to add the Change Log report for the current business activity to the End of Day reports. For more information, see [Configuring Interim / Final Procedures and Reports](#).

Viewing Changes Log Details

1. From the OPERA Cloud menu, select **Miscellaneous** and then select **Changes Log**.
2. Enter search criteria and click **Search**.

 **Note:**

Enter any text in the **Description** field for a wildcard search.

Generating the Changes Log Report

1. From the OPERA Cloud menu, select **Miscellaneous** and then select **Changes Log**.
2. Enter search criteria and click **Search**.
3. Click the vertical ellipsis **Actions** menu and select **Report**.
4. Select a **Report Destination** and then click **Process**.

Managing Log It

Prerequisites for Logging It

Log It available for tracking and communicating information to other users. Each log book entry is linked to a department so that other users in the same department can filter and read relevant Log It entries. Log It is useful for handing over information, tasks or other activities to users on the next shift. You can also create Log It entry for a future date and use this feature to remind staff in a specific department to complete certain tasks. A Log It report is available to generate details of the log book entries.

 **Note:**

Log It entries are purged 30 days after the Log Date.

Generating the Log It Report

To generate the log_book report with details of the log book entries that are currently displayed in the Log Book

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Log It**.
2. Enter search criteria and click **Search**.
3. Click the **Vertical Ellipsis** and select **Report**.
4. Select a report destination then click **Process**.

Adding Log It Entry

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Log It**.
2. Click **New** and enter the following details:
 - a. **Department:** Select the down arrow to choose the department associated with the log book entry. Once the entry is saved, this field cannot be edited. The department name appears to the right of the field.
 - b. **Log Date:** Enter the date to which this entry applies. Current date is the default date. The date cannot be earlier than today's date.
 - c. **Log Time:** Enter the time to which this entry applies.

- d. **Details:** Enter the text of the log book entry.
3. Click **Save**.

Viewing/Editing Log It Entry

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Log It**.
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update entry.
5. Click **Save**.

Note:

Past date entries cannot be edited, a **View** action link is available instead of Edit.

Deleting Log It Entry

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Log It**.
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Track It

Prerequisites: [Track It](#)

Watch Video

Track It manages storage and delivery of guest luggage, parcels, vehicles (valet), and lost items.

Track It tickets are optionally linked to a reservation if related to an arrival, in-house, or departure reservation.

Track It requests can also be managed on a smartphone using the OPERA Cloud [mobile web application](#).

Note:

Closed (resolved) Track It Requests are purged 30 days after the closed date.

Managing Track It Requests

Adding Track It Requests

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Track It**, and then select **New**.
2. Click **New** and enter the following details:
 - a. **Category**: Select a category : **Parcel, Valet, Baggage, or Lost**.
 - b. **Property**: Enter or select the property.
 - c. **Track It Number**: Enter a reference number, such a baggage receipt number.
 - d. **Type**: Select a Track it type from the list.
 - e. **Action**: Select a Track It action from the list.
 - f. **Quantity**: Enter the quantity of items. (Enabled for Parcel, Baggage and Lost categories).
 - g. **Location**: Enter the current location of the item.
 - h. **Action Date**: Enter or select an action date.
 - i. **Assigned To**: Select an employee to assign the Track it request.

 **Note:**

Track It on mobile devices shows the 'My Requests' by default. This is a listing of requests assigned to the user.

- j. **Description**. Enter a detailed description of the item(s).
3. **Reservation Information**: To associate the Track It request with a reservation
 - a. Enter the guest last name into the **Name** search field and press tab.
 - b. Select the reservation in the search result (you can modify the search criteria if the reservation is not found).
 - c. Click **Select Reservation**.
 4. Click **Save**.

Editing Track It Requests

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Track It**.
2. Enter search criteria and then click **Search**.

 **Note:**

To search Requests assigned to you, select **Assigned**.

 **Note:**

By default, only Open status requests are included in the search.

3. Click the vertical ellipsis **Actions** menu and select **Edit**.
4. To assign a request to a staff member, select **User** from the list.
5. **Reservation Information:** To associate the Track It request with a reservation
 - a. Enter the guest last name into the **Name** search field and press tab.
 - b. Select the reservation in the search result (you can modify the search criteria if the reservation is not found).
 - c. Click **Select Reservation**.
 - d. To view the guest profile, click the **Guest Name** link.
6. To view the history of a request, select **View History** from the vertical ellipsis. The request history appears in a screen.

Deleting Track It Requests

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Track It**.
2. Enter search criteria and then click **Search**.

 **Note:**

To search Requests assigned to you, select **Assigned**.

 **Note:**

By default, only Open status requests are included in the search.

3. Click the vertical ellipsis **Actions** menu and select **Delete**.

Closing (Resolving) Track it Requests

1. From the **OPERA Cloud** menu, select **Miscellaneous**, and then select **Track It**.
2. Enter search criteria and then click **Search**.

 **Note:**

To search Requests assigned to you, select **Assigned**.

 **Note:**

By default, only Open status requests are included in the search.

3. To edit a request, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Select an appropriate action from the list to close the request (for example, select **Done** or **Delivered**).

Exports

Prerequisites for Exports

Using the exports module you can export data to text or XML files; text files can be setup as either fixed-width or delimited data. Export files can be configured to generate a file for download (file system) or transmitted via SFTP. When the delivery method is setup for file system, the export file is encrypted and stored in the OPERA Cloud database for 30 days. The file generated is decrypted and delivered securely when you select to download or zip the file.

You can configure export files to generate a file for download (File System) or transmit using SFTP. When the delivery method is set up for File System, the export file is encrypted and stored in the OPERA Cloud database for 30 days. The file generated is decrypted and delivered securely when you select to download or zip the file.

Note:

Export files are generated with UTF-8 encoding unless otherwise specified in [Managing Export Definitions](#).

The following export types exist in OPERA Cloud:

- **General:** Used for all general or generic exports.
- **Back Office:** Used for export of financial data to general ledger / ERP solutions. For more information, see [Back Office Exports](#)
- **Membership:** Used to export membership and point data to airline reward programs. For more information, see [Membership Exports](#)
- **Country:** Used for country-specific exports. For more information, see [Oracle Hospitality Localization Center for Hotel](#)

OPERA Cloud offers a number of pre-defined export templates that you can use as-is or customize to suit your needs. For more information, see [General Export Template Catalogue](#)

You can also configure component exports that reference different data sources and then combine the data from each component into a single export file.

Export File Configuration Workflow

The setup of an export involves the following steps:

1. Creating the export from a template or as-new. For more information, see [Managing Exports](#)
2. Setup data definitions for static variables. For more information, see [Managing Export Definitions](#)
3. Select fields and setup formula columns to output in header, detail and footer. For more information, see [Managing Export Columns](#)

4. Select an export delivery method. For more information, see [Managing Export File Delivery](#)

Export File Generation Methods

There are three methods for generating export files.

- **End of Day.** When the GENERATE EXPORT NA DATA End of Day procedure is active, exports configured for End of Day processing are generated. For more information, see [End of Day Procedures](#).
- **Scheduled.** You can schedule exports to generate periodically. For more information, see [Managing Scheduled Exports](#).
- **Manual.** You can generate export files on an ad-hoc basis with the ability to enter runtime parameters. For more information, see [Exporting a General or Back Office Data File](#)

Export File Generation Process

The export file process typically consists of the following steps:

1. **Runtime Parameters:** For manually generated exports, you are prompted to input parameters to control the execution of the export generation. For example, the parameter screen can prompt for the start and end dates of the date range covered by the export. Not all exports use a parameter screen.
2. **Pre-Processing:** When export generation commences, a pre-processor (pre-export procedure) runs. This occurs only if a pre-processor is defined for the export. The procedure is specific to the export and populates views and sets variables and filters. Each export uses views that are supplied as standard with OPERA Cloud. Views are collections of data that are pulled from the many hundreds of OPERA Cloud database tables specifically for use in creating exports and reports.
3. **Fetch Data:** The export generation process pulls data from the views, applies parameters and filters (if defined in the export setup), and calculates formulas as appropriate. Exported data is stored in tables and can be viewed through the View Exports option. For more information, see [Managing Export Results](#)
4. **Generate File:** When the export is automatically generated during End of Day processing, the export file is generated with no user intervention required.
5. **Post-Processing:** A Post Export Procedure runs to perform clean-up after the export data is generated. This includes activities such as truncating temp tables and resetting variables that were set by a parameter form.

Exports with Sensitive Data

Any exports configured with the following field attributes are considered sensitive and are flagged accordingly:

- CREDIT_CARD (PAN)
- CC_NO (PAN)
- PAY_REF
- ID_NUMBER
- PASSPORT
- PPT_NO
- BIRTH_DATE

- BIRTHDAY
- BIRTH_DAY
- DATE_OF_BIRTH
- DOCUMENT_NUMBER

The **View Exports with Sensitive Data** task must be granted to roles in order to enable the **View Exports** action for exports flagged with sensitive data. The Personally Identifiable Information (PII) data is unmasked in the View Details screen for exports flagged with sensitive data.

 **Note:**

The Sensitive Data check box will be unchecked when PII columns are removed from the export definition and no data files have been generated. Delete all generated export files to update the export definition and remove PII columns. For more information, see [Managing Export Results](#)

Managing Exports

In addition to creating exports using a template, you can also set up exports starting with a **blank canvas**.

The Pre-defined Format wizard can assist you with automating the setup of your export definition based on the file format, column selection and sort order selected.

 **Note:**

The expression editor used below provides selectable values to build an SQL expression using String, Number, Date, Boolean, and conversion functions. You can also select from a list of SQL functions, separators, operators, and table columns (fields). To join multiple string elements together use the '||' concatenation operator in your expression.

Adding Fixed Width or Delimited Exports (ASCII text)

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **General, Back Office, Country, or Membership**.
2. Click **New** and complete the following.
 - a. **Property:** Enter or select a Property.
 - b. **Export Name:** Enter a name for the export.
 - c. **Description:** Enter a description for the export.
 - d. **Data Source:** Select a data source from the list. The file should contain the information for different views and tables as needed for the new export.
 - e. **Pre Export Procedure:** The Pre Export Procedure is an internal setup procedure that executes prior to the data export. The procedure populates views, filters views, and sets variables. Click the pencil to launch the [expression editor](#).

- f. **Post Export Procedure:** The Post Export Procedure is a post-processor that truncates temp tables following export generation and might also reset parameters that were set for the export. Click the pencil to launch the expression editor
- g. **Filter Condition:** The filter condition is the 'where clause' defining which data to select for export. Click the pencil to launch the expression editor.
- h. **File Name Formula:** Define the expression for the filename. For example, 'WY' || TO_CHAR(PMS_P.BUSINESS_DATE, 'MMDD') || 'EXP'. Click the pencil to launch the expression editor.
- i. **File Extn Formula:** Define the expression for the file extension. . For example 'TXT'. Click the pencil to launch the expression editor.
- j. **Zip file name:** Define the expression for the zip filename. Click the pencil to launch the expression editor.
- k. **End of Day:** Click to generate the export during End of Day.
 - i. **Frequency:** Select a frequency from the list.
 - ii. **Day of Week:** Select a day of the week from the list (not enabled for daily frequency).
- l. **Parameter Form:** Select the parameter form to use when the export is manually generated (not enabled when End of Day is selected).
- m. **Exports Contents Configuration**
 - i. **Pre-Define Formats:** Click to use a wizard to setup the data export. Using the wizard will override the current column selection.
 - i. **Format:** Select a file format from the list.
 - i. **CVS:** Comma separated values.
 - ii. **Custom List:** Custom separated list.
 - i. **Separator:** Click to select a predefined value from the list. Based on selection made, each data element within export records would be separated by the separator symbol or action selected.
 - i. **Custom Separator:** Else, enter a custom Separator value. This is used as alternate to the predefined separators to be used to separate each data element in the export.
 - ii. **Enclose In:** Click to select a predefined value from the list. Based on selection made, each data element within export records would be enclosed by the value selected.
 - i. **Custom Enclose In:** Else, enter a custom Enclose In value. This is used as alternate to the predefined Enclose In to be used to enclose each data element in the export.
 - iii. **JSON:** JavaScript Object Notation format.
 - iv. **TSV:** Tab-separated values.
 - ii. **Columns:** Select one or more data columns to include in the export. Click [➤] to move the selected columns from the Available panel to the Selected panel.
 - i. Use the UP and DOWN arrows to reorder the columns in the Selected panel.
 - iii. Click **OK**.

- k. **Zip file name:** Click pencil to launch expression editor.
- l. **End Of Day:** Select check box to generate the export during end of day.
 - i. **Frequency:** Select a frequency from the list.
 - ii. **Day Of Week:** Select a day of the week (if weekly selected in Frequency).
- m. **Parameter Form:** Select the parameter form to display, for user input, when the export is manually generated (not enabled when End of Day is selected). Parameterized exports cannot be scheduled.
- n. Export Contents Configuration.
 - i. **XML Encoding:** Enter the encoding attribute to add to the <?xml?> file header. (20 character max). Example: UTF-8.
 - ii. **XML Processing Instructions:** Enter any additional processing instructions to the XML file header. (2000 character max).
 - iii. **XML Document Type Name:** Used to define an optional document type name (<!DOCTYPE "_doc_type_name">). (100 character max).
 - iv. **XML Document Type System ID.** Used to Define an optional document type system ID (<!SYSTEM "_system_id_">). (100 character max).
 - v. **XML Document Type Public ID.** Used to define an optional document type public ID (<!PUBLIC "_public_id_">). (100 character max).
- o. XML Schema Configuration: To add attribute / elements, click **More** then select **Add Attributes/Elements**.
 - i. Select Database Columns to add data columns for Attributes or Elements.
 - i. Select the columns on left, then click > to move selected columns to the right.
 - ii. Click OK
 - ii. Select SQL Expression to add SQL expression
 - i. **Type:** Select an element type
 - Attribute
 - i. **Name:** Enter a name.
 - ii. **Value:** Click the pencil to launch the expression editor.
 - iii. Column Length.
 - i. **Variable:** Select check box if length is variable
 - ii. **Value:** Enter a fixed length
 - iv. **Required:** Select check box if element is required.
 - Simple:** Contains no sub elements.
 - i. **Name:** Enter a name.
 - ii. **Value:** Click the pencil to launch the expression editor.
 - iii. Column Length.
 - i. **Variable:** Select check box if length is variable.
 - ii. **Value:** Enter a fixed length.
 - iv. **Required.** Select check box if element is required.

Complex - Contains other sub elements.

- i. **Name:** Enter a name.

Complex Element with Additional Source - data for this element is taken from a view (data source) that is different than the view named in Export Source.

- i. **Name:** Enter a name.
- ii. **Data Source Name:** Select a data source from the list.
- iii. **Filter:** This can be used as a link between the main export source and the source for the current element. For example: EXPORT_ID = <EXPORT_ID> AND CONSIDERED_DATE= <CONSIDERED_DATE>. Click the pencil to launch the expression editor.

- ii. Click **OK**

- iii. To edit an attribute / elements, click **More** then select **Edit Attributes/ Elements**.

- i. Select **Attributes/Elements** from the list then click **OK**.

- iv. To reorder attributes / elements, click **More** then select **Reorder Attributes/Elements..**

- i. Select the **Attributes or Elements** then use the up/down arrows, then click **OK**.

- v. To delete attributes / elements, click **More** then select **Delete Attributes/ Elements**.

- i. Select **Attributes/Elements** from the list then click **OK**.

3. Click **Save**.

Adding Exports Using a Template

To simplify setting up exports, you can select various predefined export templates. You should not need to update any of the details for the export, however you can update details if required: for example, you could modify the default filter condition expression.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **General, Back Office, Country, or Membership**.
2. Click **New from Template** and complete the following:
 - a. **Property:** Enter or select the property.
 - b. **Template:** Select a template from the list. For more information see: [General Export Template Catalogue](#).
 - c. **Export Name:** Enter or confirm a name for the export.
 - d. **Description:** Enter a description of the export.
3. Click **Create and Continue** .
4. Update export setup. For more information, see sections, **Adding Fixed Width or Delimited Export** or **Adding XML Exports**.
5. Click **Save**.

Editing Exports

Note:

To view inactive exports, click the vertical ellipsis **Actions** menu and select **Show Inactive**.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **General, Back Office, Country, or Membership**.
2. Enter a search criteria and click **Search**.
3. Select the export in search result, click the vertical ellipsis **Actions** menu, and then click **Edit**.
4. Update details.
5. **Inactive**: Select check box to inactivate the export.
6. Click **Save**.

Deleting Exports

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **General, Back Office, Country, or Membership**.
2. Enter a search criteria and click **Search**.
3. Select the export in search result, click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Cloning and Copying Exports to other Properties

You can clone an export within the same property (with a new name) or copy an export to other properties. Change to a [Hub location](#) to copy exports to other properties. Your assigned role(s) must be granted the Copy or Duplicate Export task.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **General, Back Office, Country, or Membership**.
2. Enter a search criteria and click **Search**.
3. Select the export in search result, then click the vertical ellipsis and select **Copy**.
4. On the Copy Export page complete the following details:
 - a. **Property**: Select one or more properties from the list.
 - b. **Export Name**: Enter a name for the export; the source export name is populated.
 - c. **Export Description**: Enter a description for the export; the source export description is populated.
5. Click **Copy Export**.

Generating Exports

For manually generated exports, you may be prompted to input parameters to control the execution of the export. For example, you can be prompted for the start date and end date range for the export. Exports that do not require input of parameters can be [scheduled](#). Once generated you can manage the [export result](#).

Generating Exports

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **General**, **Back Office**, or **Membership**.
2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **Export Data**.
4. Enter export parameters if prompted.

Managing Export Columns

Configure the export columns (data fields) for an export. Select the Header (first row), Data (repeating rows) or Footer (last row) to add columns. You can select a columns (fields) from the export data source or setup a custom formula column using the [expression editor](#).

Adding Export Data Source Columns

To add a field from the data source.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and select either **General**, **Country**, **Membership**, or **Back Office**.
2. Enter search criteria, then click **Search**.
3. Select the export definition in the search results, then click the vertical ellipsis **Actions** menu and select **Columns**.
4. Click **New**.
 - a. **Column Type**.
 - i. Select **Use Existing Column**.
 - b. **Column Name**: Select a column from the list.
 - c. **Order By**: Enter a number to indicate the sequence in the file.
 - d. **Field Data Type**: Select a data type from the list.
 - i. **Header**: Add column to first row.
 - ii. **Data**: Add column to repeating row.
 - iii. **Footer**: Add column to last row.
 - e. **Default Value**: Enter the value that is automatically inserted in the column.
 - f. **Column Alignment**: Select a value from the list.
 - g. **Ignore Length**: Select check box to have the field length varies depending on what data is stored in it.

- c. **Order By:** Enter a number to indicate the sequence in the file.
 - d. **Field Data Type:** Select a data type from the list.
 - i. **Header** - Add column to first row
 - ii. **Data** - Add column to repeating row
 - iii. **Footer** - Add column to last row
 - e. **Default Value:** Enter the value that is automatically inserted in the column.
 - f. **Column Alignment:** Select a value from the list
 - g. **Ignore Length:** Select check box to have the field length varies depending on what data is stored in it.
 - h. **Column Length:** Enter a number to indicate the length of the field; for instance a character field can be 50 characters long.
 - i. **Formula:** Click the pencil to launch the [Using the Expression Editor](#).
5. Click **Save**.

Editing Export Columns

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and select either **General**, **Country**, **Membership**, or **Back Office**.
2. Enter search criteria, then click **Search**.
3. Select the export definition in the search results, then click the vertical ellipsis **Actions** menu and select **Columns**.
4. Select **Header**, **Data** or **Footer** tab.
5. Select the column in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
6. Update details.
7. Click **Save**.

Deleting Export Columns

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and select either **General**, **Country**, **Membership**, or **Back Office**.
2. Enter search criteria, then click **Search**.
3. Select the export definition in the search results, then click the vertical ellipsis **Actions** menu and select **Columns**.
4. Select **Header**, **Data** or **Footer** tab.
5. Select the column in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
6. Click **Delete** to confirm.

Managing Export Definitions

Export definitions are commonly used to include static data elements in an export file. Once defined you can select as an [export column](#). One exception to this is the **Code** EXPORT CHARACTER SET, setup to override the default (UTF8) character encoding for the export; set the **Value** to the required character encoding. For more information, see [Choosing a Character Set](#).

Adding Export Definitions

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and select either **General**, **Country**, **Membership**, or **Back Office**.
2. Enter search criteria, then click **Search**.
3. Select the export definition in the search results, then click the vertical ellipsis **Actions** menu and select **Definitions**.
4. Click **New** and complete the following:
 - a. **Code**: Enter a code.
 - b. **Description**: Enter a description.
 - c. **Value**: Enter a value.
5. Click **Save** or **Save and Continue** to add another.

Editing Export Definitions

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and select either **General**, **Country**, **Membership**, or **Back Office**.
2. Enter search criteria, then click **Search**.
3. Select the export definition in the search results, then click the vertical ellipsis **Actions** menu and select **Definitions**.
4. Select the code, then click the vertical ellipsis **Actions** menu and select **Edit**.
5. Update the details.
6. Click **Save**.

Deleting Export Definitions

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and select either **General**, **Country**, **Membership**, or **Back Office**.
2. Enter search criteria, then click **Search**.
3. Select the export definition in the search results, then click the vertical ellipsis **Actions** menu and select **Definitions**.
4. Select the code, then click the vertical ellipsis **Actions** menu and select **Delete**.
5. Click **Delete** to confirm.

Managing Export File Delivery

Editing Export Delivery Configuration

You can select to deliver an export data file to an SFTP location or simply as a file for manual download.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and select either **General**, **Country**, **Membership** or **Back Office**.
2. Enter a search criteria and click **Search**.
3. Select the export definition in the search results, then click the vertical ellipsis **Actions** menu and select **Delivery Configuration**.
4. Click **Edit** to update the destination.
 - a. **SFTP**: Select to delivery export to SFTP location.

 **Note:**

When an SFTP delivery option is selected, Personally Identifiable Information (PII) data is unmasked once the file is received at the SFTP destination. For more information , see [Exports](#)

- i. **SFTP Code**: Select a SFTP destination from the list.
 - ii. **SFTP Folder**: Select a folder from the list.
 - iii. For more information, see [Configuring SFTP Connections](#)
- b. **HTTPS**: Not used.
 - c. **File System**: Select to generate a file for manual download. Files are retained for 30 days. For more information, see [Viewing and Generating Export Files](#)
5. Click **Save**.

Managing Export Results

Once an export is generated you can view the export result, edit the data within the export and generate the data file to the specified [export destination](#). For file system delivery you can download the export data file to your workstation.

 **Note:**

Export files are stored encrypted in the OPERA Cloud database for 30 days.

 **Note:**

The **View Exports with Sensitive Data** task must be assigned in order to view exports flagged with sensitive data.

Viewing Export File Details

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General**, **Back Office**, or **Membership** .
2. Enter search criteria and click **Search**.

3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.

Deleting Export Results

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General, Back Office, or Membership**.
2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
 - a. Select the export result in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
 - i. Click **Delete** to confirm

Viewing Export File Data Details

Note:

With the **View Exports with Sensitive Data** task assigned, PII data is unmasked.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General, Back Office, or Membership**.
2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
4. Select the export result in the search result, then click the vertical ellipsis **Actions** menu and select **View Details**.

Editing Export File Data Details

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General, Back Office, or Membership**.
2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
4. Select the export result in the search result, then click the vertical ellipsis **Actions** menu and select **View Details**.
 - a. Select an export data element in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
 - i. Update the data details.
 - ii. Click **Save**.

Batch Editing Export File Data Details

To update data details using search and replace.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General, Back Office, or Membership**.

2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
4. Select the export result in the search result, then click the vertical ellipsis **Actions** menu and select **View Details**.
 - a. Select an export data element in the search result, then click the vertical ellipsis **Actions** menu and select **Batch Edit**.
 - i. **Data**: Enter the string to find for update.
 - ii. **Replace with**: Enter the replacement string.
 - iii. Click **Save**.

Adding Export File Data Details

To add data to the end of the export data file.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General**, **Back Office**, or **Membership**.
2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
4. Select the export result in the search result, then click the vertical ellipsis **Actions** menu and select **View Details**.
 - a. Click **New**.
 - b. **Data**: Enter the data string to include in the export data.
 - c. Click **Save**.

Deleting Export File Data Details

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General**, **Back Office**, or **Membership**.
2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
4. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
 - a. Select an export data element in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
 - i. Click **Delete** to confirm.

Generating Export Data Files

To generate an export data to the [specified destination](#).

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General**, **Back Office**, or **Membership**.
2. Enter search criteria and click **Search**.

3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
4. Select the export result in the search result, then click the vertical ellipsis **Actions** menu and select **Generate File**.
 - a. **File Name**: Confirm or enter a filename.
 - b. **Extension**: Confirm or enter a file extension.
 - c. Click **Generate File**.

Downloading Export Data Files

To decrypt and download an export data file.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General, Back Office, or Membership**.
2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
4. Select the export result in the search result, then click the vertical ellipsis **Actions** menu and select **Generate File**.
 - a. **File Name**: Confirm or enter a filename.
 - b. **Extension**: Confirm or enter a file extension.
 - c. Click **Generate File**.
5. Select the export data file, then click the vertical ellipsis **Actions** menu and select **Download**.

Compressing and Downloading Export Data Files

To decrypt, compress and download an export data file.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General, Back Office, or Membership**.
2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
4. Select the export result in the search result, then click the vertical ellipsis **Actions** menu and select **Generate File**.
 - a. **File Name**: Confirm or enter a filename.
 - b. **Extension**: Confirm or enter a file extension.
 - c. Click **Generate File**.
5. Select the export data file, then click the vertical ellipsis **Actions** menu and select **Zip File**.
 - a. **Zip File**: Enter a filename.
 - b. Click **Zip File**.

Deleting Export Data Files

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** and then select **General, Back Office, or Membership**.
2. Enter search criteria and click **Search**.
3. Select the export in the search result, then click the vertical ellipsis **Actions** menu and select **View Exports**.
4. Select the export result in the search result, then click the vertical ellipsis **Actions** menu and select **Generate File**
 - a. **File Name:** Confirm or enter a filename.
 - b. **Extension:** Confirm or enter a file extension.
 - c. Click **Generate File**.
5. Select the export data file, then click the vertical ellipsis **Actions** menu and select **Delete**.
6. Click **Delete** to confirm.

Using the Expression Editor

The expression editor provides selectable values to build an SQL expression, using String, Number, Date, Boolean, and conversion functions. You can also select from a list of SQL functions, separators, operators, and system variables such as PMS_P.BUSINESS_DATE or PMS_P.RESORT.

Use the [ADD] [ADD BEFORE] and navigation controls to determine the placement of the selected function, operator, separator, string or numeric values.

**Note:**

To join multiple string elements together use the '||' concatenation operator in your expression.

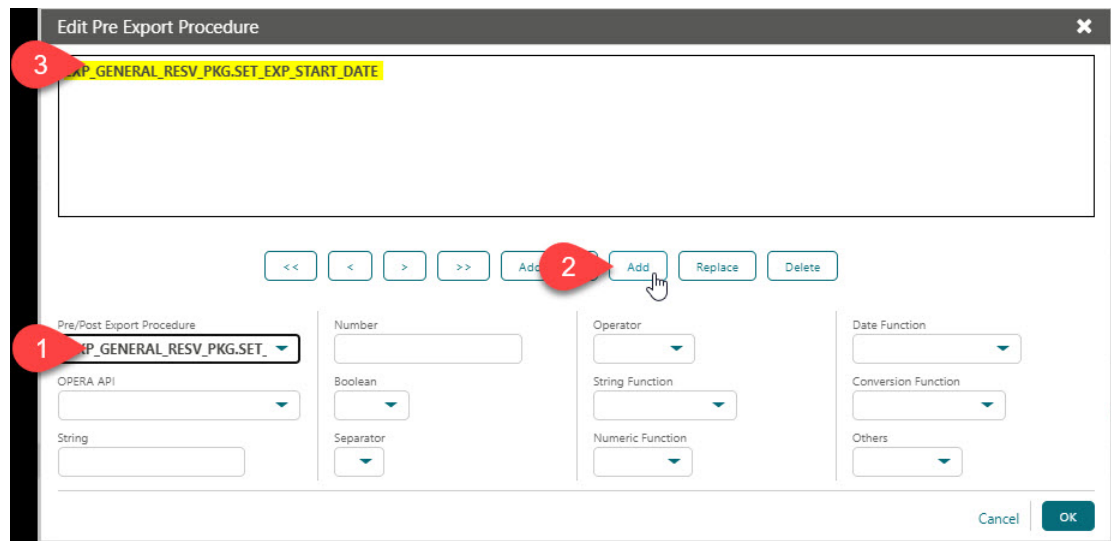

Table 8-2 Example of expressions

Type	Expression
Pre Export Procedure	EXP_GENERAL_RESV_PKG.SET_EXP_START_DATE(PMS_P.BUSINESS_DATE)
Post Export Procedure	exp_create_data.delete_report_table
Filter condition	inactive_date is null and NAME_TYPE = 'D' and COUNTRY = 'US' and FIRST is not null and TOTAL_ROOM_REVENUE > '1000'
Filter condition	business_date=to_char(pms_p.business_date-1,'DD-MM-YY')
Filename	'CR' pms_p.resort lpad(to_char(pms_p.business_date,'DDD'),3,'0')

Table 8-2 (Cont.) Example of expressions

Type	Expression
Filename	'DRS' SUBSTR(HOTEL_CODE,1,5) TO_CHAR(EXP_GENERAL_RESV_PKG.EXP_START_DATE),'DDD')
Filename	'DCO_' pms_p.resort to_char(pms_p.business_date,'MMDDYY')
Filename	'STAT_' pms_p.resort '_' to_char(sysdate,'YYYYMMDD')

1. Click the **pencil icon** to create or edit an SQL expression.
2. Select a procedure, API, operator, function or other element from the list.
OR
3. Enter text into **String** field to add text to the expression.
OR
4. Enter a numeric value to the **Number** field to add a number to the expression.
5. Click **[ADD]** to append the selection after the yellow highlighted entry.
6. Click **[REPLACE]** to replace the highlighted entry
7. Click **[DELETE]** to delete highlighted entry
8. Use **[<]** and **[>]** to move through the entries in the expression.
9. Repeat steps to construct the expression; inserting elements where required.
10. Click **OK** when complete.

Loyalty Membership data can be exported to provide stay and calculated point data to airlines partners. Alternatively, membership and point data can be exported from [OPERA Cloud Reporting and Analytics](#).

The following membership export templates are available.

Table 8-3 Membership Export Templates

File Type	Description
BA EXPORT	British Airways Export
CI EXPORT	China Airlines Export
CX EXPORT	Cathay Pacific Airlines Export
FF EXPORT	Frequent Flyer Export
FF EXPORT PC	Frequent Flyer Export
GL1 EXPORT	Airline Guests Reservations Export
GV1 EXPORT	Gold Passport Reservations Export
MEM EXPORT	Membership Fulfillment Production Export
OCIS AMERICAN	OCIS American Airline Export
OCIS ALASKA	OCIS Alaska Airline Export
OCIS DL EXP	OCIS DL Export
PA EXPORT	Passages Export
QF EXPORT	Qantas Airways Export
SCC EXPORT	SCC Export
SR EXPORT	Swiss Air Export
UA EXPORT	United Airlines Export
VS EXPORT	Virgin Atlantic Airways Export

About Back Office Exports

Back Office exports are used to export financial totals and statistical data, for import as a journal entry to a general ledger and/or AR accounting solution.

- **Revenue (Sales):** Trial balance totals.
- **Market Statistics:** Market code statistics - room nights and revenue.
- **Daily Statistics :** Managers report statistics. For more information, see [Managing Definable Managers Report](#)
- **City Ledger:** Reservation accounts (guest ledger) settled to A/R Accounts Receivable payment method.

Back Office Export Workflow

The Back Office export workflow consists of the following steps:

1. During installation
 - a. Assign chart of account numbers to every OPERA Cloud transaction code, market code and daily statistic. For more information, see [Export Mapping](#)

- b. Configure the back office export files. For more information, see [Managing Exports](#).
 2. During End of Day,
 - a. OPERA Cloud calculates the trial balance, market and managers report statistics.
 - b. Export files are generated.
 3. You then import the export files as a journal entry to your general ledger accounting solution.

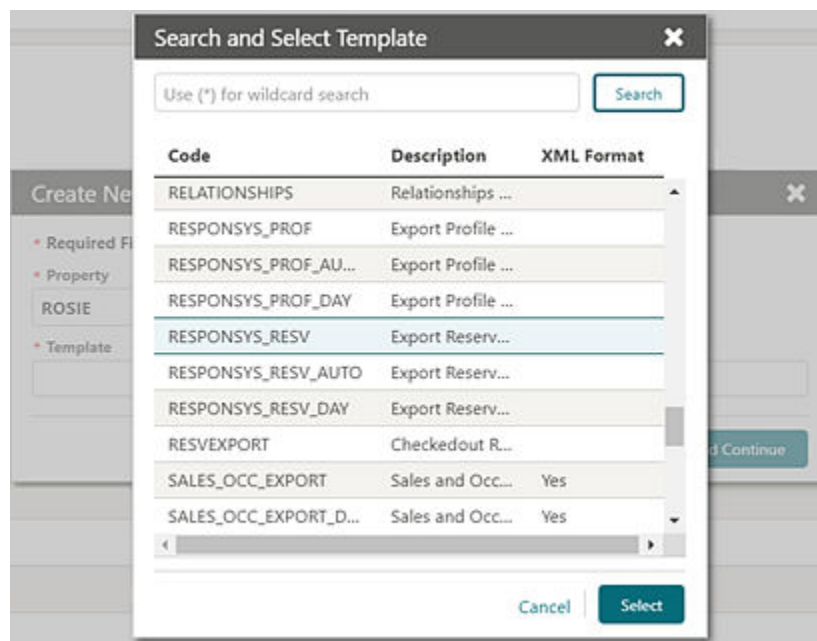

Responsys Profile Exports

The General export, Responsys_TRX_Day, exports reservation sales charge transactions to the Oracle Responsys system. This export can be generated for a transaction date range. Additional filter conditions can be defined in Miscellaneous > File Exports > General > Select the export file type > Edit > Filter Condition.

The export contains information on Profile attributes, Revenue generated, Stay Details, and Membership details for profile types(s). The Export is available under OPERA Cloud-> Miscellaneous-> Export-> General-> RESPONSYS_PROF_DAY.

There are three export file types available in the list of templates within the General exports. You can select the export(s) from the Template list and add them to your property. The Template list is available in the Miscellaneous menu by selecting **Exports**, selecting **General**, and then selecting **New**.

- **RESPONSYS_PROF_DAY**. You can run this export manually for a Day or Date Range.
- **RESPONSYS_PROF**. You can configure this export to run during End of Day.
- **RESPONSYS_PROF_AUTO**. You can schedule this export from Export Schedules.

Generating the Responsys_Prof_Day Export

You can run the Responsys_Prof_Day Export manually for a day or date range. When the export is generated manually, you must select dates such as Date, Month, and Year (MM/DD/YYYY) for which the export need to be generated. The date range is defaulted to the business date. For example, if you export the file on May 15, the default date range will be To Date – 14 May and For Date – 15 May; and records for May 14 through May 15 will be generated provided the current business date is later than May 15.

You can generate exports for one or multiple profile types with combinations of multi select profile privacy option.

Generating the Responsys_Prof Export

You can schedule the Responsys_Prof export to run during End of Day. The export frequency is set to Daily by default. When the Night Audit Export check box is enabled for the export, the export will run during End of Day (EOD). Once this export is added to the property, the EOD automatically considers the export based on the export frequency defined. The check box is enabled by default, and you can deselect the check box if you decide against running the export during EOD.

Generating the Responsys_Prof_Auto Export

You can schedule the Responsys_Prof_Auto export from the OPERA Cloud Scheduler: Administration->Enterprise->Opera Scheduler->New-> Select the export 'Responsys_Prof_Auto'->Select-> Specify the scheduler frequency > click OK to schedule the export.

You can also schedule the export via Export Scheules: OPERA Cloud-> Export-> Schedules->New-> select the export Responsys_Prof_Auto-> click Run-> specify the scheduler frequency-> click OK.

Export Output

The export is generated in the .csv format by default. You can change the format to .txt from Miscellaneous-> Exports-> General-> select the export file type-> Edit-> update the file extension formula.

The Responsys Profile export output file contains following Fields:

- **Export File Name Format:** ' pms_p.resort '|| '_' ||RESPONSYS|| '_' ||PROFILE|| '_' ||EXPORT|| '_' ||to_char(pms_p.business_date,'YYYYMMDDHHMI')
- **Example:** TOKYO_RESPONSYS_PROFILE_EXPORT_202002141635

Table 8-4 Export Fields

Column	Type and Length	Description
FIRST_NAME	Text (100)	The first name of the profiles.
MIDDLE_NAME	Text (100)	The middle name of the profiles.

Table 8-4 (Cont.) Export Fields

Column	Type and Length	Description
LAST_NAME	Text (100)	The last name of the individual profile and the search name of the other types of profiles (Group, Travel Agent, and Source) are stored in this column.
TITLE	Text (25)	The title of the profiles.
SALUTATION	Text (100)	Salutation greetings.
BIRTHDATE	Timestamp	Date of Birth of the Profiles.
VIP_STATUS	Text (100)	VIP Status of the profiles.
GENDER	Text (25)	Indicates gender of profile; either (M)ale or F(emale).
LANGUAGE	Text (25)	Primary language used for the profile.
NATIONALITY	Text (100)	Nationality of the individual.
PHONE NUMBER	Text (225)	The phone number for this record.
PHONE_COUNTRY CODE	Text (25)	Numeric phone dialing prefix code for the country.
EMAIL ADDRESS	Text (500)	Number Rooms in the reservation.
ADDRESS LINE 1	Text (225)	The first line of street address.
ADDRESS LINE 2	Text (225)	The second line of street address.
CITY	Text (50)	The city for this address.
COUNTY	Text (50)	The state of this address.
POSTAL CODE	Text (25)	The postal code of this address.
COUNTRY	Text (25)	The country of this address.
EMAIL_OPT_OUT	CHARACTER	Indicates if profile should be contacted via email.
EMAIL_OPT_OUT	CHARACTER	Indicates if profile should be contacted via email.
SMS_OPT_OUT	CHARACTER	Indicates if profile should be contacted via SMS.
Total_Value_of_Customer	Number	Total Value of the Guest.
Total_Room_Revenue	Number	Total revenue generated by the guest.
Total_Food_Beverage_Revenue	Number	Total Food and beverage revenue generated.
Total_Other_Revenue	Number	Total other revenue.
Total_Number_of_Stays	Number	Total Number of stay.

Table 8-4 (Cont.) Export Fields

Column	Type and Length	Description
Total_Number_of_Nights	Number	Total Number of nights.
Last_Stay_Date	Timestamp	Last Stay date.
Last_Stay_Property_Name	Text (25)	Last Stay Property Name.
Next_Stay_Check_In_Date	Timestamp	Last Stay Check In date.
Next_Stay_Check_Out_Date	Timestamp	Last Stay Check Out date.
Next_Stay_Property_Name	Text (100)	Next Stay Property.
Partner_Name	Text (100)	Membership Type Name.
Member_Status	CHARACTER	Membership Status.
Member_Number	Text (100)	Membership Card Number.
Tier	Text (100)	Level of this Membership Type.
Points_Remaining	NUMBER	Total Points Remaining for the Profile.
Lifetime_Points	NUMBER	Total Points Accrued for the Profile.

Responsys Property Exports

The General export, `RESPNSYS_PROP_DAY`, exports property details to the Oracle Responsys System. The Oracle Responsys System requires the Responsys Property Export on a monthly basis per Responsys services.

The export captures property details such as Code, Brand, Type, Address, No. of Guest Rooms, No. of Meeting Rooms, Attraction, Airport, Transportation, Alternate, Cities Nearby, and Region for all properties within the chain. You can generate the export for a date or date range.

The OPERA Cloud add on `OPP_EXP` subscription must be activated for General Exports functionality. The Export is available from the OPERA Cloud menu by selecting Miscellaneous, then Export, then General, and then `RESPNSYS_PROP_DAY`.

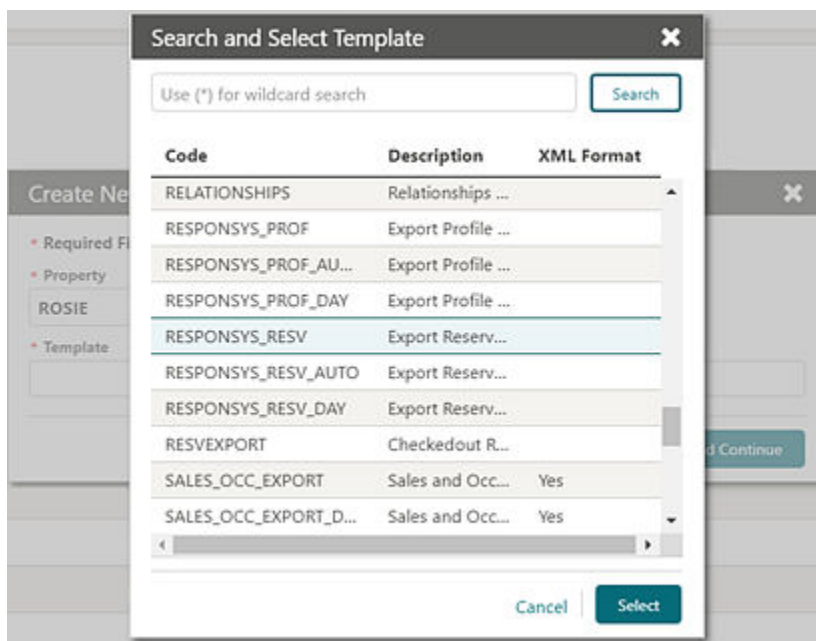

The export contains information on Properties, such as their Brand, Level, Address, Amenities, Attractions, Alternates, Transportation, Features, and so on.

The export contains information on Properties, such as their Brand, Level, Address, Amenities, Attractions, Alternates, Transportation, Features, and so on. There are three export file types available in the list of templates within the General Exports. You can select the applicable export(s) from the Template list (Miscellaneous > Exports > General > New) and add to them your property.

There are three export file types available in the list of templates within the General Exports. You can select the applicable export(s) from the Template list (Miscellaneous > Exports > General > New) and add to them your property.

- **RESPNSYS_PROP_DAY**. You can run this export manually for a Day or Date Range.

- **RESPNSYS_PROP**. You can configure this export to run during End of Day.
- **RESPNSYS_PROP_AUTO**. You can schedule this export from Export Schedules.

Generating the Responsys_Prop_Day Export

You can generate the Responsys_Prop_Day export manually. When doing so, you must select date ranges such as Date, Month, and Year that the report is to cover. The date range is defaulted to the current month (a business date-30 days). For example, if you export the file on May 15, the default date range would be To Date – 15 April and For Date – 15 May. Records for April 15th through May 15th will be generated provided the current business date is later than May 15.

Generating the Responsys_Prop Export

You can schedule the Responsys_Prop export to run during End of Day (EOD). The export frequency is set to Monthly (30 days) by default. When the Night Audit Export check box is selected for the export, the export runs during the End of Day. Once this export is added to the Property, the EOD automatically considers the export based on the export frequency defined. The check box is enabled by default, and you can deselect the check box if you decide against running the export during EOD.

Generating the Responsys_Prop_Auto Export

You can schedule the Responsys_Prop_Auto export from the OPERA Cloud Export Scheduler.

1. From the OPERA Cloud menu, select **Miscellaneous**, select **Exports**, and then select **Scheduled Exports**.
2. Click **New**.
3. Select the **Responsys_Prop_Auto** export and click **Run**.
4. Specify the scheduler frequency and click **OK**.

Export Output

The Responsys Property export output file contains the following fields:

- **Export File Name Format.** ' pms_p.resort '|| ' ' ||RESPONSYS|| ' ' ||PROPERTY|| ' ' ||EXPORT|| ' ' ||to_char(pms_p.business_date,'YYYYMMDDHHMI'). The following is an example:
TOKYO_RESPONSYS_PROPERTY_EXPORT_202002141635.
- **File Extension.** CSV.

Table 8-5 Export Fields

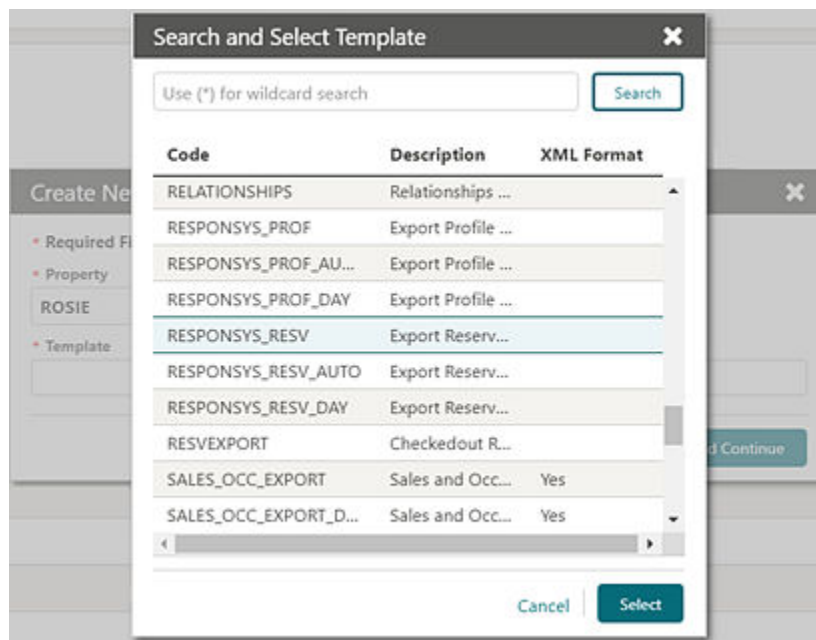

Column	Type and Length	Description
Property Name	VARCHAR (20 BYTE)	The property that the record belongs to.
Property Brand	VARCHAR (20 BYTE)	Chain Code for the chain to which the property belongs.
Property Type	VARCHAR (20 BYTE)	Type of resort.
Street Address	VARCHAR2(2000 BYTE)	The street of the property.
City	VARCHAR2(24 BYTE)	The physical city in which this property resides.
State	VARCHAR2(3 BYTE)	The state in which this property is located.
Postal Code	VARCHAR2(20 BYTE)	The postal code of this property.
Country	VARCHAR2(3 BYTE)	The name of the country in which this property resides.
No. of Guest Rooms	NUMBER	Total number of rooms in this property.
No. of Meeting Rooms	NUMBER(4,0)	Total number of Meeting rooms.
Attractions	Text (225)	The phone number for this record.
Airports	VARCHAR2(100 BYTE)	The Airport Code for the airport near the property.
Transportation	VARCHAR2(40)	Code of the transportation.
Alternatives	VARCHAR2(20)	Alternate property of the resort column.
Major_City_Nearby	VARCHAR2(20)	Marketing citycodes.
Region	VARCHAR2(20)	Region

Responsys Reservation Exports

The General export, Responsys_Resv_Day, exports reservations to the Oracle Responsys system. You can generate the export for an arrival date range and request it for a specific reservation status. Additional filter conditions are definable in the Miscellaneous menu. Select **Exports**, select **General**, select the **export file type**,

select **Edit**, and then click **Filter Condition**. The OPERA Cloud add on OPP_EXP subscription must be activated for General Exports functionality.

There are three export file types available in the list of templates within the General exports. You can select the export(s) from the Template list and add them to your property. The Template list is available in the Miscellaneous menu. Select **Exports**, select **General**, and then select **New**.

Generating the Responsys_Resv_Day Export

The Responsys_Resv_Day export can be generated manually. When generating it manually, you must select the Arrival Date Range and the Reservation Statuses to be considered in the export. The Date range defaults to the current month, and you can modify the date selection as required. By default, reservation statuses Arrivals, Checked In, InHouse, Departure, and Checked Out are available. You can select the following additional statuses: Waitlist, Canceled, and No Show if required.

Generating the Responsys_Resv Export

You can schedule the Responsys_Resv export to generate during End Of Day (EOD). The frequency of the export is set to Daily by default. Once this export is added to the Property, the EOD automatically considers it based on the export frequency defined. If required, you can deactivate the scheduler job for the export from Miscellaneous > Exports> Schedules > and turning off the scheduler job for the export Responsys_Resv.

When the export is scheduled to run during EOD, it generates for the next 30 days of arrivals (from the current business date). Reservations with these statuses: Arrivals, Checked In, InHouse, Departure, and Checked Out are considered by the export.

Generating the Responsys_Resv_Auto Export

You can schedule the Responsys_Resv_Auto export from Export Schedules (Miscellaneous > Exports> Schedules> Create Schedules).

When the export is scheduled to run from Scheduler, it generates for the next 30 days of arrivals from the current business date. Reservations with these statuses: Arrivals, Checked In, InHouse, Departure and Checked Out are considered by the export.

Export Output

The export is generated in the .csv format by default. You can change the file format to .txt from Miscellaneous > Exports > General > Select the export file type > Edit> update the file extension formula.

The export data is ordered by reservation arrival date. Pseudo room reservations are not considered by this export.

Export file name format: propertycode_filetype_date.csv, for example:
PROP1_RESPONSYS_RESV_EXPORT_202002241510.txt (Note: the
DateTimestamp format for the file name is YYYYMMDDHHMI).

Table 8-6 Export Fields

Column	Type and Length	Description
RESERVATION_ID	Number	OPERA Cloud Reservation Confirmation Number.
GUEST_LAST_NAME	Text (100)	Guest Last name.
GUEST_FIRST_NAME	Text (100)	Guest First Name.
GUEST_MIDDLE_NAME	Text (100)	Guest Middle Name.
TRAVEL_AGENT_NAME	Text (100)	Name of the Travel Agent Profile. This is blank if No Travel agent is associated to the reservation.
COMPANY_NAME	Text (100)	Name of the Company Profile. This is blank if No Company is associated to the reservation.
BOOKING_SOURCE	Text (100)	Source Code of the Reservation.
PROPERTY_NAME	Text (100)	Name of the Property.
ARRIVAL_DATE	Datestamp	Arrival date of the reservation in Properties Date format.
DEPARTURE_DATE	Datestamp	Arrival date of the reservation in Properties Date format.
NUM_NIGHTS	Number	Number of Nights.
NUM_ADULTS	Number	Number of Adults in the reservation first stay night.
NUM_CHILDREN	Number	Number of Children in the reservation first Stay night.
NUM_ROOMS	Number	Number Rooms in the reservation.

Table 8-6 (Cont.) Export Fields

Column	Type and Length	Description
ROOM_TYPE	Text (25)	Room Type in the Reservation. If the Reservation has multiple room type, this field should carry the Room Type applicable for the first Stay Night.
ROOM_TYPE_TO_CHARGE	Text (25)	Room Type to Charge (RTC) in the Reservation. If the Reservation has multiple RTC, this field should carry the RTC applicable for the first Stay Night.
ROOM_NUMBER	Text (25)	Room Number assigned to the Reservation. For multiple room reservations, display room numbers as comma separated. If different rooms are assigned to different nights, Room Number(s) assigned to the first stay night.
RATE	Number	Rate applicable for the first Stay night of the reservation.
BLOCK_CODE	Text (25)	Block Code assigned to the Reservation First Stay Night.
RESERVATION_TYPE	Text (25)	Reservation Type of the Reservation.
PAYMENT_TYPE	Text (25)	Reservation Payment method applicable for the Payment Window1 /Folio1.
NAME_ON_CARD	Text (500)	Name on the Card. Comma separate Last Name and First Name.
DISCOUNT_AMOUNT	Number	Discount amount applied to the reservation- This field will pass null value, if no discount applied.
DISCOUNT_PERCENTAGE	Number	Discount Percentage applied to the reservation- This field will pass null value, if no discount applied.
DISCOUNT_REASON	Text (25)	Discount reason specified while applying the discount. This field will pass a null value if no discount is applied.

Table 8-6 (Cont.) Export Fields

Column	Type and Length	Description
SPECIAL_REQUESTS	Text (500)	Special Request Codes attached to the reservation. Any preferences from the SPECIALS preference group added to the reservation will appear in this column. If multiple special requests are attached, those will be displayed as comma separated.
PROMOTION	Text (25)	Promotion Codes attached to the reservation. If multiple Promotion Codes are attached, those will be displayed as comma separated.
ROOM_PREFERENCES	Text (500)	Reservation preference Codes from the preference group ROOM FEATURES, SMOKING and FLOOR, If there are multiple records, display as comma separated.
OTHER_PREFERENCES	Text (500)	Reservation Preference Codes from all other preference groups (VIDEO OPTIONS, TV OPTIONS, MINIBAR OPTIONS, PHONE OPTIONS, INTERESTS, KEY OPTIONS, EVENTS, ATTENDEES + ANY ADDITIONAL PREFERENCE GROUPS ADDED BY THE PROPERTY). If there are multiple records, display as comma separated.
SHARED_ROOM	Character (Y / N)	Y/N Y- if the Reservation is sharing a room with another reservation. N - if the reservation doesn't share the room.
RATE_CODE	Text (25)	Rate Code attached to the reservation. If the Reservation has multiple Rate Codes, this field should carry the Room Type applicable for the first Stay Night. For a Block Reservation, where the Block doesn't have a Rate Code attached, the Rate Code will be passed as null.

Table 8-6 (Cont.) Export Fields

Column	Type and Length	Description
PARENT_BLOCK	Text (25)	Leave this as blank always.
RESERVATION_STATUS	Text (25)	Status of the reservation while generating the export.

Responsys Transaction Exports

The General export, Responsys_TRX_Day, exports reservation sales charge transactions to the Oracle Responsys system. This export can be generated for a transaction date range. Additional filter conditions can be defined in Miscellaneous > File Exports > General > Select the export file type > Edit > Filter Condition. The OPERA Cloud add on OPP_EXP subscription must be activated for General Exports functionality.

The Responsys_TRX_Day export considers transactions where the Transaction Code is flagged revenue_yn=Y.

There are three export file types available in the list of templates within the General exports. To add templates to your property, select the applicable export(s) from the template list. Go to Miscellaneous > File Exports > General > New and select/add the files types to the property.

- **RESPNSYS_TRX_DAY.** You can use this template file type to generate the transaction export manually.
- **RESPNSYS_TRX.** When this template file type is added to the property, the transaction export is automatically scheduled to run during End of Day (EOD). You can review the scheduler job from Miscellaneous > File Exports > Schedules.
- **RESPNSYS_TRX_AUTO.** You can use this template file type to schedule the transaction export from Miscellaneous > File Exports > Schedules.

When the transaction export is generated during End Of Day or from a scheduler job, the export is generated for the previous business date.

Transactions of pseudo room type reservations are not included in this export. The Transaction export is generated in comma separated file format by default; you can change the format to .txt from Miscellaneous > File Exports > General > Select the export file type > Edit > update the file extension formula. The export is delivered to an SFTP server or file system location.

Generating the Responsys_TRX_Day Export

For generating the Responsys_TRX_Day export manually, the export parameter screen should be provided with options to select a past date range. The date range you select is the transaction date range. The From Date field and To Date field should default to the previous business date (OPERA Cloud business date - 1). You can select a different date range (earlier than today's business date). The From Date and To Date selection is mandatory to generate export. The export should not be executed until a valid date range is specified.

Table 8-7 Export Fields

Column	Type and Length	Description
TRANSACTION_DATE	Text (100)	Transaction Date in OPERA Cloud.
TRANSACTION_ID	Text (100)	OPERA Cloud Transaction Numbers.
RESERVATION_ID	Text (100)	OPERA Cloud Reservation Confirmation Numbers.
REVENUE_TYPES	Text (100)	Transaction Group mapped to the Transaction Code of the above Transaction Number.
REVENUE_AMOUNTS	NUMBER	Net Revenue Amounts.
CURRENCY	Text (100)	Currency Code used in Reservation.

Generic XML Back Office Export

OPERA Cloud provides a number of pre-defined back office exports as part of SID data. However, due to the nature of changing business requirements, these pre-defined exports are only utilized to create customized view and back office configuration.

To centrally manage accounts/payables etc., this export is used in passing the data to the ERP systems allowing the user a greater flexibility in managing and maintaining their financials.

Creating an Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** then select **General**.
2. Select **New From Template** and enter the following detail:
 - a. **Property**: Enter or confirm the property.
 - b. **Template**: Search for the template from the search glass and click **Select**.
 - c. **Export Name**: Highlight an export to proceed.
 - d. **Description**: The description is entered by default.
3. Click **Create & Continue**.
4. Click **Save** after creating an export
5. Repeat for all 10 exports, following the same steps as mentioned above and configure.

! Important:

No configuration change is advised in the templates except for Delivery Configuration. The templates are predefined and it is advisable not to modify them.

Export Name	Description	Parameter Form	XML Format
GEN_XMLBO_CITYLEDGER_DAY	Generic XML Back Office-City Ledger By Date	EXP_FOR_DATE	<input checked="" type="checkbox"/> <input type="checkbox"/>
GEN_XMLBO_BILLS	Generic XML Back Office-Bills		<input checked="" type="checkbox"/> <input type="checkbox"/>
GEN_XMLBO_BILLS_DAY	Generic XML Back Office-Bills By Date	EXP_FOR_DATE	<input checked="" type="checkbox"/> <input type="checkbox"/>
GEN_XMLBO_CUSTOMER	Generic XML Back Office-Customers		<input checked="" type="checkbox"/> <input type="checkbox"/>
GEN_XMLBO_CUST_DAY	Generic XML Back Office-Customers By Date	EXP_FOR_DATE	<input checked="" type="checkbox"/> <input type="checkbox"/>
GEN_XMLBO_REVENUE	Generic XML Back Office-Revenue		<input checked="" type="checkbox"/> <input type="checkbox"/>
GEN_XMLBO_REV_DAY	Generic XML Back Office-Revenue By Date	EXP_FOR_DATE	<input checked="" type="checkbox"/> <input type="checkbox"/>
GEN_XMLBO_STATISTICS	Generic XML Back Office-Statistics		<input checked="" type="checkbox"/> <input type="checkbox"/>
GEN_XMLBO_STAT_DAY	Generic XML Back Office-Statistics By Date	EXP_FOR_DATE	<input checked="" type="checkbox"/> <input type="checkbox"/>
GEN_XMLBO_CITYLEDGER	Generic XML Back Office-City Ledger		<input checked="" type="checkbox"/> <input type="checkbox"/>

Generic XML Back Office Export-Specifications

The following table explains information sent in different files:

Table 8-8 Standard Views and Description

File	Description
REVENUE	Revenue and Payments for the day
CITY LEDGER	All City Ledger / Accounts Receivable transactions of the day
BILLS	All bills/folios generated on the day (including voided)
CUSTOMERS	Profile data for profiles that appear in the BILLS file
STATISTICS	Includes Room Nights, Persons, Noshows and Cancellations of the day by Room Class, Room Type and Market Code

All files have the same two attributes under the root element:

- **<date>**: Single date the export is executing.
- **<hotel_code>**: Identifier for the property. You can set up a custom code in Administration/Enterprise/Chain and Property Management/Properties/Property Configuration/Property Controls/Hotel Code; otherwise it will use the OPERA Cloud property code.

Formatting Conventions

All date fields use the format YYYY-MM-DD.

All monetary fields have two decimals with dot (".") as the separator, no thousand separator is used. Negative numbers have an explicit minus sign ("-").

Element and attribute tags follow the lowercase and hyphen standard. Secondary information is set as Attribute, main information as Element.

Data Exchange

The information flows from OPERA Cloud to the ERP/Back Office system only. No data is being sent to OPERA Cloud. Exports are usually configured to automatically generate during the end of day routine for the day being closed, but you can manually re-generate for past days.

Revenue Export

The Revenue File contains one record per transaction code with the total of the transaction code for the day, as well as a transaction level detail of each posting generated for that transaction code, this is in case the property wants to have Market Code and/or Room Class information as a breakdown of the revenue instead of just one single total per transaction.

You may choose to work on a transaction summary basis (columns stating with "TOTAL_" or if you wish to obtain Market Code and/or Room Class breakdown, you can use the transaction level amounts (columns starting with "TRX_").

The sum of the TOTAL_AMOUNT and TRX_AMOUNT columns matches the "Transaction Total Today" line of the Trial Balance. All LEDGER (GUEST, AR, DEPOSIT, PACKAGE) columns match the corresponding Ledger of the Trial Balance (Today Balance – Yesterday Balance)

Table 8-9 Revenue Export

Element Name	Element Type	Description	Notes
revenue	Complex Element	Root element	NA
hotel_code	Attribute	Identifies the property exporting data	Only one property is exported per file
date	Attribute	Identifies the date of the export	Only one day is exported per file
transaction_total	Complex Element	Repeats for each distinct transaction code	NA
transaction_type	Attribute	Identifies the type of transaction: revenue, non revenue, payment, paid out, package (wrapper transactions that used to post to guest account but don't affect the revenue/non revenue figures)	NA
transaction_code	Element	OPERA Cloud codes that identifies the transaction	E.G.: 1000

Table 8-9 (Cont.) Revenue Export

Element Name	Element Type	Description	Notes
description	Element	OPERA Cloud description of the transaction	E.G.: Room revenue
total_amount	Element	Sum of the transaction for the date exported	Same amount that you see in trial balance for that transaction
total_guest_ledger	Element	Sum of the transaction for the date exported affecting the guest ledger	NA
total_package_ledger	Element	Sum of the transaction for the date exported affecting the package ledger (ultimately part of the guest ledger)	NA
total_ar_ledger	Element	Sum of the transaction for the date exported affecting the accounts receivable ledger	NA
total_deposit_ledger	Element	Sum of the transaction for the date exported affecting the deposit ledger	NA
transaction_details	Complex Element	List of transactions that make up the sum	NA
transaction	Complex Element		NA
market_code	Element	Market code associated with the transaction	NA
room_class	Element	Room class (a grouping of type of room) associated with the transaction	Dependent on having the room class function active in OPERA Cloud
trx_amount	Element	Amount of the transaction	For revenue transactions this is net amount (without tax)
trx_guest_ledger	Element	Amount of the transaction affecting the guest ledger	Transactions posted to a guest folio

Table 8-9 (Cont.) Revenue Export

Element Name	Element Type	Description	Notes
trx_package_ledger	Element	Amount of the transaction affecting the package ledger	Wrapper transaction posted to a guest folio, offsetted by internal revenue/non revenue transactions that make the package rate
trx_ar_ledger	Element	Amount of the transaction affecting the accounts receivable ledger	Direct bill/city ledger transaction used to settle guest folios or any movement in the ar ledger (eg: payments received). Also credit card transactions if configured with an ar account
trx_deposit_ledger	Element	Amount of the transaction affecting the deposit ledger	Payments taken on reservations prior to check in. Also deposit transfer at checkin lowers the ledger upon guest check in

City Ledger Export

The City Ledger File contains one record per invoice or payment generated on the day affecting Accounts Receivable. Includes Credit Card Transfers (credit card payments configured to be sent to AR).

Amounts can be grouped by ACCOUNT_NO. Bill number and Reservation information are included to ease charge recognition. The sum of the AMOUNT column will match the AR Ledger Report in OPERA Cloud(DEBIT – CREDIT columns).

Table 8-10 City Ledger Export

Element Name	Element Type	Description	Notes
city_ledger	Complex Element	Root element	
hotel_code	Attribute	Identifies the property exporting data	Only one property is exported per file
date	Attribute	Identifies the date of the export	Only one day is exported per file
transaction_type	Attribute	Type of transaction code	
trx_code	Attribute	Transaction code against which this transaction is posted.	
bill_no	Element	Bill_no associated with reservation	
invoice_no	Element	Invoice number of the reservation .	
amount	Element	Amount of the bill	
customer_internal_id	Attribute	Internal id for the payee profile	
account_name	Element	City_ledger account name	
account_number	Element	City_ledger account number	
confirmation_no	Element	Confirmation number of the reservation .	
arrival_date	Element	Arrival date of the guest	
departure_date	Element	Departure date of the guest	
guest_name	Element	Name of the guest	
credit_card_last_4_digits	Element	Last four digit of the credit card	

Table 8-10 (Cont.) City Ledger Export

Element Name	Element Type	Description	Notes
transaction_type	Element	Type of transaction code	
trx_code	Element	Transaction code against which this transaction is posted.	
bill_no	Element	Bill_no associated with reservation	
invoice_no	Element	Invoice number of the reservation .	
amount	Element	Amount of the bill	
credit_card_last_4_digits	Element	Last four digit of the credit card	
account_info	Complex Element	Account Info	
customer_internal_id	Attribute	Internal id for the payee profile	
account_name	Element	City_ledger account name	
account_number	Element	City_ledger account number	
reservation_info	Complex Element	Reservation Info	
confirmation_no	Element	Confirmation number of the reservation .	
arrival_date	Element	Arrival date of the guest	
departure_date	Element	Departure date of the guest	
guest_name	Element	Name of the guest

Bills Export

Table 8-11 Bills Export

Element Name	Element Type	Description	Notes
bills	Complex Element	Root element	
hotel_code	Attribute	Identifies the property exporting data	Only one property is exported per file
date	Attribute	Identifies the date of the export	Only one day is exported per file
bill	Complex Element	Repeats for each distinct bill Record	
customer_internal_id	Attribute	Internal id for the payee profile	
bill_no	Element	Bill_no associated with reservation	
bill_type	Element	Type of the bill	
window	Element	The Window number of the bill	
status	Element	Status of the bill	
total_amount	Element	Total amount of the bill	
guest_internal_id	Element	Unique, internal ID for the payee profile	Can be used to link to the customers file to obtain additional info on the customer (internal_id tag)
queue_name	Element	Name of the printer queue	
reservation_info	Complex Element	Reservation Info	
confirmation_no	Element	Confirmation number of the reservation .	
arrival_date	Element	Arrival date of the guest	
departure_date	Element	Departure date of the guest	
guest_name	Element	Name of the guest	
trx_no	Attribute	Unique number to identify the transations	
trx_no_added_by	Attribute	Transaction number of the parent would be stored in case of Tax generations.	
bill_detail	Complex Element	Bill Detail	
transaction	Complex Element	Transaction	
arrangment_id	Element	Arrangement id.	

Table 8-11 (Cont.) Bills Export

Element Name	Element Type	Description	Notes
trx_package_no	Element	The Transaction number used to link the all the package elements for a particular day.	
trx_code	Element	Transaction code against which this transaction is posted.	
trx_date	Element	The date on which the transaction gets posted .	
net_amount	Element	Significant in case of Inclusive taxes. If the charge is inclusive of taxes, this column tells us what the contribution of each transaction is.	
debit_amount	Element	Debit amount of the reservation .	
credit_amount	Element	Credit amount of the reservation .	
fiscal_bill_no	Element	Fiscal Bill Number for countries where Fiscal Folio Printing is enabled. May be blank in others. Usually the number returned by the fiscal printer or government web service.	
invoice_no	Element	Invoice number of the reservation .	
foreign_currency	Element	Type of currency in which amount is paid	
foreign_amount	Element	Foreign Amount	
name_tax_type	Simple Element	Name tax type of the payee profile

Statistics Export

The Statistics file contains the Occupied rooms, Persons, Noshow rooms and Cancelled Rooms for the day, broken down by Market Code, Room Class and Room Type.

The values can be match against most of the statistics reports such as res_statistics1.

Table 8-12

Element Name	Element Type	Description	Notes
statistics	Complex Element	Root element	
hotel_code	Attribute	Identifies the property exporting data	Only one property is exported per file
date	Attribute	Identifies the date of the export	Only one day is exported per file
statistic_record	Complex Element	Repeats for each distinct statistics record	
market_code	Element	Market code associated with the transaction	
room_class	Element	Room class (a grouping of type of room) associated with the transaction	
room_type	Element	The room category to which the current record applies	

Table 8-12 (Cont.)

Element Name	Element Type	Description	Notes
rooms	Element	Number of occupied rooms for the current record's key value.	
persons	Element	Number of guests (adults + children) for the current record's key value, excluding canceled/no-show reservations.	
noshow_rooms	Element	Total number of rooms for which the reserved guest did not show up on the arrival date for the current record's key value.	
cancel_rooms	Element	Total number of rooms for which the reservation was canceled by the guest for the current record's key value.

Customer Export

The Customers file contains one record for each profile with a bill generated on that day.

Provides more detail on the customer profile. Note that Passport field will be masked unless delivery is done via secure method (SFTP).

Table 8-13 Customer Export

Element Name	Element Type	Description	Notes
customers	Complex Element	Root element	
hotel_code	Attribute	Identifies the property exporting data	Only one property is exported per file
date	Attribute	Identifies the date of the export	Only one day is exported per file
customer	Complex Element	Repeats for each distinct customer	
internal_id	Attribute	Name_ID of the Profile	
customer_type	Element	Type of the Profile	
name	Element	Full name of the Profile	
legal_name	Element	Legal name of the Profile	

Table 8-13 (Cont.) Customer Export

Element Name	Element Type	Description	Notes
tax_id1	Element	Tax id1 of this Profile. Usually issued by a government agency.	
tax_id2	Element	Tax id2 of this Profile. Usually issued by a government agency.	
corporate_id	Element	The unique key of this name stores IATA#, Company # etc.	
passport_no	Element	Passport Number of the Profile	
nationality	Element	Nationality of the Profile	
address_info	Complex Element	Repeats for each distinct address	
address1	Element	The first line of street address.	
city	Element	City of this address	
country	Element	Country of this address	
country_name	Element	Full Country name of this address	
zip_code	Element	The postal code of this address.	
address2	Element	The second line of street address.	
address3	Element	The third line of street address.	
address4	Element	The fourth line of street address.	
state	Element	The state of this address.	
communication_info	Complex Element	Repeats for each distinct communication info	
email	Element	Email ID of the Profile	
phone	Element	Phone Number of the Profile

Creating a Component Export File

Component files can be created to export a subset of data from a larger data export. For example, you might create a membership export and choose to create a component export for only the membership preferences or membership points.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **General**, **Back Office**, **Country**, or **Membership** depending on the export type for which you want to create a component file.
2. Locate the file type you previously created, click the vertical ellipsis button, and select **Create Component**.
3. Search by property for the file type you want to export and click **Continue**. Proceed to create the component file just as you would for other export data files.

Managing Scheduled Exports

You can schedule exports to generate at a defined frequency and interval:

The following restrictions apply to scheduled exports:

- You cannot schedule more than five scheduled exports in the same hourly frequency.
- You cannot schedule the same export with the same frequency more than once.
- You cannot schedule more than 20 exports per day.
- You cannot schedule exports with parameter forms (requires user input).
- You cannot schedule a component export (child export) independently.

Adding a Scheduled Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Schedules**.
2. Click **New** and enter the following details:
 - a. **Property**: Enter or confirm the property.
 - b. **Export Group**: The export group from the list.
 - c. **Export**: Select the export from the list.
 - d. **Frequency**: Select the frequency for the schedule.
 - i. **Once**: Generate the export one time.
 - **Start Date**: Enter or select a start date.
 - **Start Time**: Enter a start time HH;MM (24 hour clock).
 - ii. **Hourly**: Generate the export at hourly intervals.
 - **Interval**: Enter the number of hours between intervals.
 - **Start Date**: Enter or select a start date.
 - **Start Time**: Enter a start time HH;MM (24 hour clock).
 - **End Date**: Enter or select an end date.
 - **End Time**: Enter a end time HH;MM (24 hour clock).
 - iii. **Daily**: Generate the export daily.
 - **Interval**: Enter the number of days between intervals.
 - **Hour**: Enter the hour in the day to generate the report.
 - **Start Date**: Enter or select a start date.
 - **Start Time**: Enter a start time HH;MM (24 hour clock).
 - **End Date**: Enter or select an end date.
 - **End Time**: Enter a end time HH;MM (24 hour clock).
 - iv. **Weekly**: Generate the export weekly.
 - **Interval**: Enter the number of weeks between intervals
 - **Days to Repeat**: Select the days of the week.
 - **Start Date**: Enter or select a start date.
 - **Start Time**: Enter a start time HH;MM (24 hour clock).
 - **End Date**: Enter or select an end date.
 - **End Time**: Enter a end time HH;MM (24 hour clock).
 - v. **Monthly**: Generate the export monthly.

- **Interval:** Enter the number of months between intervals.
 - **Week to Repeat:** Select the week in the month.
 - **Days to Repeat:** Select the days of the week.
 - **Start Date:** Enter or select a start date.
 - **Start Time:** Enter a start time HH;MM (24 hour clock).
 - **End Date:** Enter or select an end date.
 - **End Time:** Enter a end time HH;MM (24 hour clock).
- vi. **End of Day:** Generate the export during End of Day.
- Repeat Interval
 - **Daily:** Generate Daily.
 - **Weekly:** Generate Weekly.
 - * **Days to Repeat:** Select the days of the week.
 - **Monthly:** Generate monthly.
 - **Yearly:** Generate once per year.

3. Click **Save** .

Disabling a Scheduled Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Click **ON** to toggle to **OFF**.
4. Click **OK** to confirm. The status updates to **Disabled**.

Activating a Scheduled Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Click **OFF** to toggle to **ON**.
4. Click **OK** to confirm. The status updates to **Scheduled**.

Editing a Scheduled Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Select the scheduled export in the result, click the **vertical ellipsis**, and select **Edit**.
4. Update details.
 - a. **Inactive:** Click to make the scheduled export inactive.
5. Click **Save**.

Deleting a Schedule Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Select the scheduled export from your search results, click the **vertical ellipsis**, and select **Delete**.
4. Click **Delete** to confirm.

Viewing and Managing Generated Export Files

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Select the scheduled export from your search results, click the **vertical ellipsis**, and select **View Exports**.
4. Click **Refresh** to update the list of generated export files.

 **Note:**

If an export file fails to generate, the **Status** column indicates  **Failed** along with the error details.

5. Click **Back** to return to search.

Export Mapping

Prerequisites for Export Mapping

Export Mapping provides a way to associate certain codes and values that are external to OPERA Cloud (such as general ledger codes or back office application codes that are typically determined by the property or the chain) to codes used in OPERA Cloud (such as transaction codes or market codes). When export mapping is configured for an OPERA Cloud code, the export can include the associated information needed for processing externally. For example, when generating an export that contains transaction codes and transaction totals you may require certain codes/values, such as a GL (general ledger) code, to be associated with the transaction code. In this case, each OPERA Cloud transaction code would require an export mapping associated with it.

Export Mapping configuration involves these steps:

- Setting up the export mapping types.
 - For each export mapping type, define the property/chain-specific export mapping codes that will be associated with an OPERA Cloud code. For more information, see [Managing Export Mapping Types and Codes](#).
- Linking the export mapping codes with the OPERA Cloud code and assigning specific values to the export mapping codes. For more information, see [Managing Export Mappings](#).

**Note:**

If mappings are configured and are to be included in any export, that export definition must be updated in order to refer to such mappings.

Managing Export Mappings

Prerequisites for Export Mapping

Once the export mapping codes are defined, the final step in export mapping is to link the export mapping codes to the OPERA Cloud code and assign the appropriate value to each export mapping code for that association.

Editing Export Mappings

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From your search results, select a code, then click the vertical ellipsis **Actions** menu, and select **Edit**.
 - a. Expand each Mapping Type to update details. Mapping Codes and Descriptions appear.
 - b. **Export Value:** Enter a value for each Mapping Code listed.
4. Repeat for other Mapping Types listed.
5. Click **Save**.

Managing Export Mapping Types and Codes

Adding Export Mapping Types

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Click **New** and complete the following
 - a. **Property:** Enter or select the property from the list
 - b. **Mapped To:** Select the type of code in OPERA Cloud to which the export mapping type relates and for which a value will be defined using export mapping codes.
 - c. **Type:** Enter a unique code for this export mapping type.
 - d. **Description:** Enter a description for this export mapping type.
3. Click **Save** or click **Save and Continue** to add another.

Adding Export Mapping Codes to Export Mapping Types

Once export mapping types have been configured, you can edit an export mapping type and configure the export mapping codes for that export mapping type.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.

2. Enter search criteria and click **Search**.
3. From the search result, select the mapping type then click the vertical ellipsis and select **Edit**.
 - a. Expand the **Mapping Codes** section
 - b. Click **New** and complete the following
 - i. **Mapping Codes**: Enter the export mapping code to associate with an OPERA Cloud code
 - ii. **Description**: Enter a description of the mapping code
 - iii. **Column Type**: Select a data type from the list
 - iv. **Sequence**: Enter a number to indicate the position of this export mapping code value when multiple export mapping codes are associated with the export mapping type. During the export OPERA Cloud uses a function that retrieves all mapping codes for the export mapping type with one command
 - v. **Required**: Select this check box if a value must be specified for this export mapping code when it is associated with an OPERA Cloud code.
 - vi. **Use LOV**: Select this check box to present a list of values for this export mapping code. You can then select from that LOV when specifying a value for this export mapping code when assigning it to an OPERA Cloud code. Otherwise, the assigned value can be entered directly.
 - i. **LOV Name**: Select value from the list to choose the LOV that will present the values for this export mapping code when linking export mapping codes to OPERA Cloud codes. For more information, see: [Configuring UDF Groups](#).
 - vii. Click **Save**.
4. Click **Save**.

Editing Export Mapping Types & Codes

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From the search result, select the mapping type then click the vertical ellipsis and select **Edit**.
4. Update details.
5. Expand the **Mapping Codes** section.
6. Select the code, then click vertical ellipsis and select **Edit**.
 - a. Update Mapping Code details.
 - b. Click **Save**.
7. Click **Save**.

Deleting Export Mapping Codes

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.

3. From the search result, select the mapping type then click the vertical ellipsis and select **Edit**.
4. Expand the **Mapping Codes** section.
 - a. Select the code, then click vertical ellipsis and select **Delete**.
 - b. Click **Delete** to confirm.

Deleting Export Mapping Types

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From the search result, select the mapping type then click the vertical ellipsis and select **Delete**.
4. Click **Delete** to confirm
- 5.

Copying Export Mapping Types/Codes to Other Properties

You can copy export mapping types/codes to other properties from a [Hub location](#).

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From the search result, select the mapping type then click the vertical ellipsis and select **Copy**.
 - a. **Property**: Enter or select the source property from the list.
 - b. **Mapping Types/Codes**: Select one or more codes from the list.
 - c. **Target Property**: Enter or select one or more properties from the list.
 - d. Click **Save**.
 - e. Review the details, then click **Copy and Continue**.

General Export Template Catalogue

Template	Description	Notes	XML Output
BACKLOG_DAILY_DET AIL	Backlog Daily Detail	Backlog Export contains information about the year-to-date production for a property. Data will contain the current year and the two previous years. Room nights and nett revenue are output by status, but the last status is only reported on. These figures are then split by market segment and stay month.	
BOOK_STATUS_SNAPS HOT	Booking Status Snapshot Export

TREXPORT_DAY	Financial Transactions Export by Date - Manual		
TRX_CODES	Transaction Codes - End of Day		
TRX_CODES_DAY	Transaction Codes by Date - Manual		
TRXCODEEXPT	Transaction Codes		
TSA01	TSA01 Export	Exports specific to https://www.tsa-solutions.com/	
UPE_EXPORT	Universal PMS Export	Automatically run during the End of Day process.	
UPE_EXPORT_DAY	Universal PMS Export	Can be manually generated for any past date range.	
VISA_EXTRACT	Visa Folio Export - End of Day		YES
VISA_EXTRACT_DAY	Visa Folio Export by Date -Manual		YES

Using eFolio Exports

Prerequisites for eFolio Exports

You can export folio data to an XML file during the End of Day procedure or on demand using the following two export templates for creating exports:

- EFOLIO_EXPORT is available to be generated during End of Day.
- EFOLIO_EXPORT_DAY is available to be manually generated on demand.

 **Note:**

eFolio Export is not supported by scheduled exports.

The generated export file contains data for billing folio settlements made with a selected payment method. For more information see: [Managing Exports](#).

You can include custom reference numbers in the export when the Custom Numbers OPERA Control is active and [customer numbers](#) are configured..

eFolio Export Delivery Types

Multiple delivery types can be selected in a profile, with one delivery type selected as the primary. For more information, see [Managing Profile Delivery Types](#)

- **Electronic:** transmits data to the recipient's bank.
- **Email:** generates an email to the recipient.
- **Printing:** sends by regular postal mail to the recipient.

When a guest settles a bill for a billing window with a payment type selected for eFolio Export, the cashier is prompted to select the delivery type and proceed with the settlement.

Posting

The Billing screen updates to display the Before Settlement Actions prompt when posting a settlement from the following:

- Advance Bill
- Early Departure
- Interim Bill
- Check Out
- Credit Bill (through Billing)
- Quick Checkout

You can select an eFolio delivery method from the delivery types defined on the profile.

Sample eFolio XML Export

Export APIs

The following topics provide details on available Export APIs.

Create HESTA Statistics Exports

```
EXP_COUNTRY_CH.CREATE_HESTA_STAT_EXP(IN_DATE_FROM,'IN_DATE_TO)
```

This procedure acts as the pre export procedure for HESTA Statistics Exports. The procedure finds the eligible reservations in the given date range for HESTA statistics exports. If the `in_date_from` and `in_date_to` are passed as null, the procedure finds the reservations for the last 30 days based on the current business date.

Parameter	Required	Type	Description
IN_DATE_FROM	Yes	Date	Beginning date range.
IN_DATE_TO	Yes	Date	Ending date range.

EXAMPLE

```
EXP_COUNTRY_CH.CREATE_HESTA_STAT_EXP(01-JAN-2021','10-JAN-2021)
```

Post HESTA Statistics Export

```
EXP_COUNTRY_CH.POST_HESTA_STAT_EXP
```

This procedure acts as the Post Export procedure for HESTA Statistics export. The API deletes the temporary table entries made for the HESTA export creation. The API has relevance only with HESTA statistics exports.

Parameter	Required	Type	Description
NA	No	NA	Post export procedure.

EXAMPLE

```
EXP_COUNTRY_CH.POST_HESTA_STAT_EXP;
```

Set / View Global Variable Name Reference

```
NAME_REF.SET_VIEW_INACTIVE_FLAG(IN_YN)
```

This function sets the Global variable name_ref. g_View_Inactive_Flag with the value passed with the argument IN_YN.

Parameter	Required	Type	Description
IN_YN (DEFAULT'N')	Y	VARCHAR2	Sets Inactive flag view.

EXAMPLE

```
NAME_REF.SET_VIEW_INACTIVE_FLAG('Y') This sets the global variable as Yes.
```

```
NAME_REF.SET_VIEW_INACTIVE_FLAG('N') This sets the global variable as No.
```

Get Report Table ID for Last / Current Export

```
BACKLOG_BLOCKS.GET_LAST_REPORT_ID
```

This function returns the unique ID associated with the report_table for the Last/ Current Export execution. Currently, this API is used in the WHERE CONDITION of Backlog and Room Pace Exports. The Report ID is set in the pre-export procedure of these exports.

Parameter	Required	Type	Description
	No		Returns report ID for last/current export.

EXAMPLE

```
WHERE_CLAUSE=export_id=backlog_blocks.get_last_report_id
```

Get Cached Value of Export Data Passed from Package Global Variable

```
EXPORT_DATA_P.GET_CACHED_NUM(IN_CODE)
```

This function returns the value associated with the code passed in the input argument from the package global variable.

Parameter	Required	Type	Description
IN_CODE	Yes	VARCHAR2	Value of code passed.

EXAMPLE

```
EXPORT_DATA_P.GET_CACHED_NUM
```

Set Start Date for Exports

```
REP_RESV_STATISTICS.SET_START_DATE(IN_DATE)
```

This API sets the Start date for Exports like Stats by Market Code, Tiers, and Room Types. If the IN_DATE is passed as NULL, the business date will be considered as the start date for the export.

Parameter	Required	Type	Description
IN_DATE	Yes	Date	Sets the Start date of Exports.

EXAMPLE

```
rep_resv_statistics.SET_start_date(EXP_GENERAL_RESV_PKG.EXP_START_DATE)
```

Here, EXP_GENERAL_RESV_PKG.EXP_START_DATE will contain the date provided in the export parameter screen.

Set End Date for Exports

```
REP_RESV_STATISTICS.SET_END_DATE(IN_DATE)
```

This API sets the end date for exports such as Stats by Market Code, Tiers, and Room Types. If the IN_DATE is passed as NULL, the business date will be considered as the end date for the export.

Parameter	Required	Type	Description
IN_DATE	Yes	Date	Sets end date of exports.

EXAMPLE

```
rep_resv_statistics.SET_END_date(EXP_GENERAL_RESV_PKG.EXP_start_DATE)
```

Here, EXP_GENERAL_RESV_PKG.EXP_START_DATE will contain the date provided in the export parameter screen.

Get Currency Exchange Rate

```
MULTI_CURRENCY.GET_EXCHANGE_RATE
```

This function converts an amount from one currency to another based on a specific [exchange type](#), property, and date.

Parameter	Required	Type	Description
FROM_CURRENCY	Yes	VARCHAR2	Returns the currency type.
FROM_CURRENCY_A MT	No	NUMBER	Transaction amount converted into a specific currency.
TO_CURRENCY	No	VARCHAR2	Sets the currency type.
EXCH_TYPE	No	VARCHAR2	Sets the currency exchange type.
IN_DATE	No	DATE	Sets the exchange date.
IN_RESORT	No	VARCHAR2	Identifies the property.

EXAMPLE

```
MULTI_CURRENCY.GET_EXCHANGE_RATE ('USD','100','INR','P','15-  
SEP-2021','BANGKOK')
```

Get Block Code for Resort / Allotment

```
RESERVATION_REF.GET_BLOCK_CODE (IN_RESORT', 'IN_ALLOTMENT_HEADER_ID)
```

This function returns the block for a given resort/allotment header ID combination.

Parameter	Required	Type	Description
IN_RESORT	Yes	VARCHAR2	Returns block for given resort.
IN_ALLOTMENT_HE ADER_ID	Yes	NUMBER	Returns block for given allotment header.

EXAMPLE

```
Vblockcode := RESERVATION_REF.GET_BLOCK_CODE('TOKYO',112356);
```

Get Reservation External Reference Number

```
RESERVATION_REF.GET_EXTERNAL_REFERENCE (IN_RESORT', 'IN_RESV_NAME_ID)
```

This function returns the external reference number of a reservation. The resort and resv name id will be passed as IN arguments.

Parameter	Required	Type	Description
IN_RESORT	Yes	VARCHAR2	Passes resort name.
IN_RESV_NAME_ID	Yes	NUMBER	Passes resv name ID.

EXAMPLE

```
Vrefno := RESERVATION_REF.GET_EXTERNAL_REFERENCE('TOKYO',11223);
```

Get Reservation Guest Name

```
Vname :=
RESERVATION_REF.GET_NAME(IN_NAME_ID, 'IN_NAME_PREFERENCE', 'IN_EXTENDED_YN')
```

```
Vname :=
RESERVATION_REF.GET_NAME('IN_RESORT', IN_RESV_NAME_ID, 'IN_NAME_PREFERENCE', 'IN
_EXTENDED_YN')
```

This function is overloaded. It can be either invoked with NAME ID, NAME PREFERENCE AND EXTENDED_YN OR with RESORT, RESV NAME ID, NAME PREFERENCE AND EXTENDED_YN. This function returns the guest name based on the given arguments.

Parameter	Required	Type	Description
IN_NAME_ID	Yes	NUMBER	Returns guest name ID.
IN_NAME_PREFERENC E (DEFAULT 'L')	Yes	VARCHAR2	Returns guest name preference.
IN_EXTENDED_YN (DEFAULT 'N')	Yes	VARCHAR2	Indicates extended: yes, no.
IN_RESORT	Yes	VARCHAR2	Returns resort name.
IN_RESV_NAME_ID	Yes	NUMBER	Returns reservation ID.
IN_NAME_PREFERENC E (DEFAULT 'L')	Yes	VARCHAR2	Returns guest name preference.
IN_EXTENDED_YN (DEFAULT 'N')	Yes	VARCHAR2	Indicates extended: yes, no.

EXAMPLE

```
Vname := RESERVATION_REF.GET_NAME(1000,'L','N')
```

```
Vname := RESERVATION_REF.GET_NAME('TOKYO',100010,'L','N')
```

Check for Existing Resort Export

```
EXP_GEN.EXPORTS_EXIST(IN_EXPORT_TYPE', 'IN_RESORT)
```

This API checks whether an export exists for a given resort.

Parameter	Required	Type	Description
IN_EXPORT_TYPE	No	VARCHAR2	Export type that maps to field: export_type in table exp_file_hdr.
IN_RESORT	Yes	VARCHAR2	Resort that the export belongs to (value of the Resort column from the Resort table).

EXAMPLE

TRX_GENERATES_EXPORT = Transaction Codes Configuration with Generate Information (Template Export).

You can use this in a formula column in export configuration, for example, (CASE WHEN exp_gen.exports_exist('TRXGEN') = 'N' THEN 'Y' ELSE FULL_REFRESH_YN END).

Get Current Business Date

```
PMS_P.BUSINESS_DATE
```

This API gets the current business date for the logged-in property.

Parameter	Required	Type	Description
	No	Date	Gets logged-in property's current business date.

EXAMPLE

```
TO_CHAR(pms_p.business_date,'MM-DD-YYYY')
```

This example shows a formula column created to get the current business date.

Get Parameter Value Configured for Logged-in Resort

```
PMS_P.GET_PARAMETER(IN_PARAMETER)
```

Use this API to get the parameter value configured for the parameter of the logged-in resort.

Parameter	Required	Type	Description
IN_PARAMETER	No	VARCHAR2	OPERA parameter name

EXAMPLE

```
PMS_P.GET_PARAMETER('DEFAULT_CURRENCY')
```

You can use this in the Pre Export Procedure field.

Get the Resort Code of the Logged-in Resort

```
PMS_P.RESORT
```

You can use this in a formula column to get the hotel code of the logged-in resort.

Parameter	Required	Type	Description
	No		Gets resort code.

EXAMPLE

```
EXP_CREATE_DATA.get_hotel_code(pms_p.resort)
```

Set Business Date for a Given Session

```
PMS_P.SET_BUSINESS_DATE(IN_NEW_DATE)
```

You can use this to set the business date for a given session. The default value is SysDate (system date)

Parameter	Required	Type	Description
IN_NEW_DATE	Yes	Date	Sets session business date.

EXAMPLE

```
PMS_P.SET_BUSINESS_DATE(12-JUN-21)
```

Get the Property's Date

```
TZ.GET_PROPERTY_DATE(IN_RESORT', 'IN_FR_DATE)
```

This API returns the new date-time for the given property based on Database time zone.

Parameter	Required	Type	Description
IN_RESORT	Y	VARCHAR2	Resort (value of RESORT column from RESORT table).
IN_FR_DATE	Y	DATE	Date that needs conversion (mostly sysdate is passed).

EXAMPLE

```
tz.get_property_date(pms_p.resort, sysdate)
```

Get BOF Interface Code2

```
EXP_CREATE_BTR.GET_PROD_ID
```

This procedure returns the bof_code2 of an active BOF interface of the current resort.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

```
EXP_CREATE_BTR.GET_PROD_ID
```

Get Checked Out Reservations for Specified Dates

```
EXP_CREATE_DATA2.CHKOUT_RES_DATA
```

This procedure provides Information about checked out reservations between the specified start and end dates.

Parameter	Required	Type	Description
in_from_Date	No	DATE	From Date. Defaults to pms_p.business_date -1
in_to_Date	No	DATE	To Date. Defaults to pms_p.business_date -1

EXAMPLE

```
EXP_CREATE_DATA2.CHKOUT_RES_DATA (pms_p.business_date-1,  
pms_p.business_date)
```

Get Considered Date of a Reservations Export

```
EXP_GENERAL_RESV_PKG.GET_CONSIDERED_DATE
```

This procedure returns the From_Date of the Guests Reservations Export.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

```
EXP_GENERAL_RESV_PKG.GET_CONSIDERED_DATE
```

Get Considered Date of an Export

```
EXP_CREATE_DATA.GET_CONSIDERED_DATE
```

This procedure returns the From_Date of the export execution.

Parameter	Required	Type	Description
IN_Default/DATE (default null)	No	DATE	Export From Date. Defaults to Null

EXAMPLE

```
EXP_CREATE_DATA.GET_CONSIDERED_DATE
```

Get External Reference Value from Membership

```
EXP_CREATE_DATA.GET_EXTERNAL_REF
```

This procedure returns the External Reference Value of the input active Membership and External Ref Types.

Parameter	Required	Type	Description
IN_Resort	YES	VARCHAR2	Resort
IN_Membership_Type	YES	VARCHAR2	Membership Type
IN_Ref_Type	YES	VARCHAR2	Reference Type

EXAMPLE

```
EXP_CREATE_DATA.GET_EXTERNAL_REF('TOKYO','VIP', 'REF1')
```

Get Hotel Code

```
EXP_CREATE_DATA.GET_HOTEL_CODE
```

This procedure returns the Hotel Code that corresponds to the Resort parameter, if not found than return default hotel code as in the input parameter.

Parameter	Required	Type	Description
in_default	No	VARCHAR2	Hotel Code. Defaults to Null
in_resort	No	VARCHAR2	Resort. Defaults to PMS_P.RESORT

EXAMPLE

```
EXP_CREATE_DATA.GET_HOTEL_CODE('EXTTOKYO',pms_p.resort)
```

Get Include Guests without VAT Number Indicator

```
EXP_GENERAL_RESV_PKG.GET_INCL_PROF
```

This is set with exp_country.tax_export's parameter form "TAX1". This form has a checkbox "Include Guests without VAT Number" which when checked, the EXP_GENERAL_RESV_PKG.GET_INCL_PROF will return Y, else N.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

```
EXP_GENERAL_RESV_PKG.GET_INCL_PROF
```

Get Minimum Amount

```
EXP_GENERAL_RESV_PKG.GET_MIN_AMOUNT
```

This procedure returns the minimum amount value set for the Export.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

```
EXP_GENERAL_RESV_PKG.GET_MIN_AMOUNT
```

Get Report ID of the Export Data

```
EXP_CREATE_DATA.GET_LAST_REPORT_ID
```

This procedure returns the last report ID stored in the global variable `g_report_id`, that corresponds to the `REPORT_TABLE` data created by other functions for the data export.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

```
EXP_CREATE_DATA.GET_LAST_REPORT_ID
```

Get the Export Country

```
EXP_GENERAL_RESV_PKG.GET_EXP_COUNTRY
```

This procedure returns the export country of the Guests Reservations Export.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

```
EXP_GENERAL_RESV_PKG.GET_EXP_COUNTRY
```

Get the Export's "From Date"

```
EXP_GENERAL_RESV_PKG.EXP_START_DATE
```

This procedure returns the Export's start date.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

```
EXP_GENERAL_RESV_PKG.EXP_START_DATE
```

Get the Export's "To Date"

```
EXP_GENERAL_RESV_PKG.EXP_END_DATE
```

This procedure returns the Export's end date.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

```
EXP_GENERAL_RESV_PKG.EXP_END_DATE
```

Set the Export's "End Date"

```
EXP_GENERAL_RESV_PKG.SET_EXP_END_DATE
```

This procedure sets the export end date to the value provided.

Parameter	Required	Type	Description
in_date	Yes	DATE	Date

EXAMPLE

```
EXP_GENERAL_RESV_PKG.SET_EXP_END_DATE(PMS_P.BUSINESS_DATE)
```

Initialize Buckets Summed Value

```
EXP_CREATE_DATA.SUM_BUCKET_INIT
```

This procedure is used to initialize all buckets to 0 for the input "in_max_buckets" rows.

Parameter	Required	Type	Description
in_max_buckets	No	NUMBER	Number of Buckets. Defaults to Null

EXAMPLE

```
EXP_CREATE_DATA.SUM_BUCKET_INT(10)
```

Initialize/Set Export Type

```
EXP_CREATE_DATA2.SET_EXPORT_TYPE
```

This procedure sets the export type to the value provided.

Parameter	Required	Type	Description
in_type	Yes	VARCHAR2	Export Type

EXAMPLE

```
EXP_CREATE_DATA2.SET_EXPORT_TYPE(' EFOLIO ')
```

Set Global Data to Date

```
EXPORT_DATA_P.SET_DATA_TO_DATE (IN_DATA_TO_DATE)
```

This API sets the global data to date variable in the package with the parameter.

Parameter	Required	Type	Description
IN_DATA_TO_DATE Defaulted to 'N'	NA	DATE	Sets admin context to EXPORT_END_DATE

Set Age Credit

```
AR_TRX_I.SET_AGE_CREDIT
```

This API moves accruals to next aging bucket, prior to the night audit.

Parameter	Required	Type	Description
NA	NA	NA	Moves accruals to next aging bucket, prior to the night audit.

Get Parameter Method

```
EXPORT_DATA_P.GET_PARAMETER (IN_PARAM_CODE)
```

This API calls the overloaded get_parameter method with the global file id as first parameter.

Parameter	Required	Type	Description
IN_PARAM_CODE Defaulted to 'N'	NA	VARCHAR2	This function is used when file id is not available as a parameter and SET_PARAMETER sets the value.

Get Parameter Value

```
EXPORT_DATA_P.GET_PARAMETER (IN_PARAM_CODE, IN_EXP_FILE_ID)
```

This API returns the parameter value based on the file id, and the parameter code overloaded function in the package is used to generate country-specific views for all hotels in one particular country.

Parameter	Required	Type	Description
IN_EXP_FILE_ID Defaulted to 'N'	NA	VARCHAR2	Returns the parameter value based on the file id.

Parameter	Required	Type	Description
IN_PARAM_CODE Defaulted to 'N'	NA	VARCHAR2	This is used in extracting the value of one particular parameter in the view.

Get External Reference

```
RESERVATION_REF.GET_EXTERNAL_REFERENCE (in_resort, in_resev_name_id)
```

Fetches external reference for the reservation.

Parameter	Required	Type	Description
in_resort	NA	VARCHAR2,	Returns external reference for the reservation.
in_resev_name_id	NA	NUMBER	

EXAMPLE

```
RESERVATION_REF.GET_EXTERNAL_REFERENCE('TOKYO',344597)
```

Set Global Variable

```
AR_TRX_I.SETRUNNINGFROMNA
```

Sets global variable gRunningFromNa.

Parameter	Required	Type	Description
NA	NA	NA	Sets the global variable.

Get Last Report ID

```
BACKLOG_BLOCKS.GET_LAST_REPORT_ID
```

Returns the last report ID.

Parameter	Required	Type	Description
NA	NA	NA	Returns the last report ID.

EXAMPLE

```
BACKLOG_BLOCKS.GET_LAST_REPORT_ID
```

Get the Number of Cached Records

```
EXPORT_DATA_P.GET_CACHED_NUM (in_code)
```

Returns the number of cached records for in_code.

Parameter	Required	Type	Description
IN_CODE	NA	VARCHAR2	Returns the number of cached records.

EXAMPLE

```
EXPORT_DATA_P.GET_CACHED_NUM('CL')
```

Create Export Data for Italian ASTAT

```
EXP_ITALY_PKG.CREATE_ASTAT (IN_EXPORT_DATE)
```

Pre-procedure related to the Italian ASTAT export using export view EXP_IT_ASTAT.

Parameter	Required	Type	Description
IN_EXPORT_DATE Defaulted to 'N'	NA	DATE	Creates the data required for Italian ASTAT export.

Create Export Data for Istat Firenze

```
EXP_ITALY_PKG.PRE_ISTAT (IN_MODE)
```

Pre-procedure related to the Istat Firenze export using export view EXP_XML_BASE.

Parameter	Required	Type	Description
IN_MODE Defaulted to 'N'	NA	VARCHAR2	Creates the data required for Istat Firenze export.

Clean Export Data for Istat Firenze

```
EXP_ITALY_PKG.POST_ISTAT (IN_MODE)
```

Post-procedure to clean up the export data for Istat Firenze export using export view EXP_XML_BASE.

Parameter	Required	Type	Description
IN_MODE Defaulted to 'N'	NA	VARCHAR2	Clean up the Istat Firenze export data.

Create Export Data for Istat Puglia Region

```
EXP_ITALY_PKG.PRE_EXPORT
```

Pre-procedure for Istat Puglia Region export using the export view EXP_XML_BASE.

Parameter	Required	Type	Description
IN_MODE	NA	VARCHAR 1	Creates the data required for Istat Puglia Region export.
IN_EXPORT_TYPE	NA	VARCHAR 2	

Create Export Data for Istat Veneto Region

```
EXP_ITALY_PKG.PRE_ISTAT (IN_MODE)
```

Pre-procedure related to the Export for Istat Veneto Region using export view EXP_ITALY_ISTAT.

Parameter	Required	Type	Description
IN_MODE Defaulted to 'N'	NA	VARCHAR2	Creates the data required for export.

Create Export Data for Vietnam Vat

```
EXP_GEN.SET_EXPORT_BUCKET_TYPE (IN_EXPORT_BUCKET_TYPE)
```

Pre-procedure related to the Vietnam Vat export using export view EXP_VIETNAM_VAT.

Parameter	Required	Type	Description
IN_EXPORT_BUCKET_TYPE Defaulted to 'N'	NA	VARCHAR2	Creates the data required for Vietnam Vat export.

Clean Export Data for Vietnam Vat

```
EXPORT_DATA_P.SET_DATA_FROM_DATE (IN_DATA_FROM_DATE)
```

Post-procedure to clean up export data for the Vietnam Vat export using export view EXP_VIETNAM_VAT.

Parameter	Required	Type	Description
IN_DATA_FROM_DATE Defaulted to 'N'	NA	VARCHAR2	Cleans up the Vietnam Vat export data.

Get the Commission Code for Profile

```
NAME_REF.GET_COMM_CODE (IN_NAME_ID - NUMBER)
```

This procedure returns the Commission Code for a Profile.

Parameter	Required	Type	Description
IN_NAME_ID - NUMBER	NA	NA	Returns the Commission Code for a Profile

EXAMPLE

```
NAME_REF.GET_COMM_CODE(AGENT_NAME_ID)
```

Get Total Available Rooms for the Property

```
EXP_STATISTIC_PKG.GET_TOTAL_ROOMS (IN_RESORT)
```

This procedure returns the total available rooms for the property.

Parameter	Required	Type	Description
IN_RESORT - (default to login property if not passed)	NA	VARCHAR2	Returns the total available rooms for the property.

EXAMPLE

```
EXP_STATISTIC_PKG.GET_TOTAL_ROOMS
```

Set Trial Balance Statistics Export

```
EXPORT_DATA_P.SET_DATA_FROM_DATE (IN_DATA_FROM_DATE)
```

This pre-procedure is related to the Trial Balance Statistics export view. It creates the data used for the export.

Parameter	Required	Type	Description
IN_DATA_FROM_DATE (DEFAULT 'N')	NA	DATE	Pre export procedure.

EXAMPLE

```
EXPORT_DATA_P.SET_DATA_FROM_DATE
```

Create Export Data for Austria Cash Register

```
EXP_AUSTRIA_DEP.CREATE_DEEXPORT(IN_CASH_REGISTER_ID, IN_FROM_DATE,
IN_TO_DATE)
```

This is a pre-procedure related to the Austria Cash Register export. It creates the data for export by using Export View EXP_AUSTRIA_DEP_VW.

Parameter	Required	Type	Description
IN_CASH_REGISTER_ID DEFAULT 'Y'	Yes	VARCHAR2	Indicates the IN_CASH_REGISTER_ID
IN_FROM_DATE DEFAULT 'Y'	Yes	DATE	Indicates beginning date range.
IN_TO_DATE DEFAULT 'Y'	Yes	DATE	Indicates ending date range.

Clean Export Data for Austria Cash Register

```
EXP_AUSTRIA_DEP.CLEAN_DEEXPORT
```

This is a post-procedure to clean the export data for Austria Cash Register export using Export View EXP_AUSTRIA_DEP_VW.

Parameter	Required	Type	Description
NA	NA	NA	Post-procedure to clean up export data.

Set Value Of Start Date

```
EXP_GEN.GET_EXP_START_DATE (EXP_GENERAL_RESV_PKG.EXP_START_DATE,
PMS_P.BUSINESS_DATE)
```

This API is used in generating reports for transaction codes configurations. SET_EXP_START_DATE sets the value.

Parameter	Required	Type	Description
EXP_GENERAL_RESV_PKG.EXP_START_DATE	NA	DATE	Returns the value of start date.
PMS_P.BUSINESS_DATE	NA	DATE	If it is null returns the business date.

Set Gen Export

```
EXP_GEN.SET_EXPORT_BUCKET_TYPE (IN_EXPORT_BUCKET_TYPE)
```

This API sets the value of `g_export_bucket_type`.

Parameter	Required	Type	Description
IN_EXPORT_BUCKET_TYPE	NA	VARCHAR2	NA

Set Export for CODENTX

```
EXP_GEN.SET_EXP_BUCKET_CODENTX (IN_EXPORT_BUCKET_CODE)
```

This API sets the value of `g_exp_bucket_codeNTX`.

Parameter	Required	Type	Description
IN_EXPORT_BUCKET_CODE	NA	VARCHAR2	NA

Set Export for CODESVC

```
EXP_GEN.SET_EXP_BUCKET_CODESVC (IN_EXPORT_BUCKET_CODE)
```

This API sets the value of `exp_bucket_codeSVC`.

Parameter	Required	Type	Description
IN_EXPORT_BUCKET_CODE	NA	VARCHAR2	NA

Get Last Report ID

```
EXP_STATISTIC_PKG.GET_LAST_REPORT_ID (G_REPORT_ID)
```

This API is used in export view to get the revenue bucket amounts by date,

Parameter	Required	Type	Description
G_REPORT_ID	NA	NUMBER	Returns value of <code>g_report_id</code> . <code>g_report_id</code> is populated from the value <code>v_report_id</code> while creating the report and set to null while deleting the report.

Get Next Export Sequence

```
OPERA_SEQ.GET_NEXTCOUNTRYEXPORTSEQNO (IN_COUNTRY_CODE, IN_RESORT)
```

This API is used to get the next country export sequence.

Parameter	Required	Type	Description
IN_COUNTRY_CODE	NA	VARCHAR2	Returns the next export sequence in format "EXPORT_" appended with country code and resort code.
IN_RESORT	NA	VARCHAR2	

Get Export Value

```
EXP_MAPPING_API.GET_EXPORT_VALUE (IN_MAPPING_TYPE, IN_MAPPING_CODE,  
IN_LINKED_CODE, IN_CONFIG_TYPE, IN ESORT)
```

This API is used in generating views data about payouts, payments, receivers, issuers and revenue details of Sales Documents.

Parameter	Required	Type	Description
IN_MAPPING_TYPE DEFAULT 'N'	NA	VARCHAR2	Get export value of a linked code using EXP_MAPPING_ID, MAPPING_CODE and LINKED_CODE.
IN_MAPPING_CODE DEFAULT 'N'	NA	NA	
IN_LINKED_CODE DEFAULT 'N'	NA	NA	This method is used to get value of export type of a particular string.
IN_CONFIG_TYPE DEFAULT 'Y'	NA	NA	
IN_RESORT DEFAULT 'Y'	NA	NA	

Get Property Codes

```
EXP_MAPPING_API.GET_PROPERTYCODES_TYPE (C_PROPERTY_CODES_TYPE)
```

This API returns c_property_codes_type which is a constant String of value "PROPERTY_CODES" that is used in generating views data about payouts, payments, receivers, issuers and revenue details of Sales Documents.

Parameter	Required	Type	Description
C_PROPERTY_CODES_TYPE	NA	VARCHAR2	Returns value of c_property_codes_type variable.

Get Next Invoice

OPERA_SEQ.GET_NEXTINVOICE (IN_RESORT)

This API is used to increment sequence value.

Parameter	Required	Type	Description
IN_RESORT (DEFAULT 'Y')	NA	VARCHAR2	Returns an incremented sequence value categorized resort-wise as the invoice number. The invoice number can be alphanumeric in number.

Get C Operating Unit

TRANCODE_DU.GET_C_OPERATING_UNIT (C_OPERATINGUNIT)

In this API, "OPERATING_UNIT" which is a constant string of value returns the value of variable c_operatingunit.,

Parameter	Required	Type	Description
C_OPERATINGUNIT	NA	VARCHAR2	Returns the value of variable c_operatingunit,

Get Property Primary Code

TRANCODE_DU.GET_PROPERTY_PRIMARY_CODE (IN_RESORT, IN_CORPORATE_INFO_TYPE)

This API function returns the primary code of property.

Parameter	Required	Type	Description
IN_RESORT DEFAULT 'Y'	NA	VARCHAR2	Returns the primary code of property from based on resort and corporate information.
IN_CORPORATE_INFO_TYPE DEFAULT 'N'	NA	VARCHAR2	

Clean Export Data for Italy

```
EXP_COUNTRY_IT.POST_SPESOMETRO
```

You can use this API to clean up export data for Italy export.

Parameter	Required	Type	Description
No parameters	NA	NA	Post-procedure to clean up export data for Italy export

EXAMPLE

```
EXP_COUNTRY_IT.POST_SPESOMETRO ();
```

Create Export Data for Italy

```
EXP_COUNTRY_IT.PRE_SPESOMETRO (IN_DATE_FROM, IN_DATE_TO)
```

You can use this API to create the JPK data required for the export.

Parameter	Required	Type	Description
IN_DATE_FROM	Y	DATE	Procedure to create JPK export for Poland.
IN_DATE_TO	Y	DATE	

EXAMPLE

```
EXP_COUNTRY_IT.PRE_SPESOMETRO ('10052022','30052022');
```

Create JPK Export for Poland

```
EXP_COUNTRY_PL.CREATE_JPK_EXPORT (IN_DATE_FROM, IN_DATE_TO)
```

You can use this API create JPK export for Poland.

Parameter	Required	Type	Description
IN_DATE_FROM	Y	DATE	Pre-procedure related to Italy export. Creates the data required for the export.
IN_DATE_TO	Y	DATE	

EXAMPLE

```
EXP_COUNTRY_PL.CREATE_JPK_EXPORT ('10052022','30052022');
```

Clean JPK Export for Poland

```
EXP_COUNTRY_PL.POST_JPK_EXPORT();
```

You can use this API to clean up JPK export data for Poland export.

Parameter	Required	Type	Description
No parameters	NA	NA	Post-procedure to clean up export data for Poland export.

EXAMPLE

```
EXP_COUNTRY_PL.POST_JPK_EXPORT();
```

Create SAFT Export for Portugal

```
EXP_COUNTRY_PT.CREATE_SAFT_EXPORT (IN_FROM_DATE, IN_DATE_TO)
```

You can use this API to create SAFT export for Portugal.

Parameter	Required	Type	Description
IN_FROM_DATE	Y	DATE	Procedure to create SAFT export for Portugal.
IN_DATE_TO	Y	DATE	

EXAMPLE

```
EXP_COUNTRY_PT.CREATE_SAFT_EXPORT ('10052022','30052022');
```

Clean SAFT Export for Portugal

```
EXP_COUNTRY_PT.POST_SAFT_EXPORT
```

You can use this API to clean up export data for the Portugal SAFT.

Parameter	Required	Type	Description
No parameters	NA	NA	Post-procedure to clean up export data for the Portugal SAFT export.

EXAMPLE

```
EXP_COUNTRY_PT.POST_SAFT_EXPORT();
```

Create Export Data for France

```
EXP_CREATE_FR_ARCHIVE.CREATE_EXPORT (IN_RESORT, IN_DATE)
```

You can use this API to create export for France.

Parameter	Required	Type	Description
IN_RESORT	Y	VARCHAR2	Procedure to create export for France.
IN_DATE	Y	DATE	

EXAMPLE

```
EXP_CREATE_FR_ARCHIVE.CREATE_EXPORT ('LUCY', '12092020');
```

Clean Export Data for France

```
EXP_CREATE_FR_ARCHIVE.POST_EXPORT
```

You can use this API to clean up export data for France export.

Parameter	Required	Type	Description
No parameters	NA	NA	Post-procedure to clean up export data for France export.

EXAMPLE

```
EXP_CREATE_FR_ARCHIVE.POST_EXPORT();
```

Create Export for India

```
EXP_HSN_OUTSTANDING.CREATE_EXPORT (IN_RESORT, IN_DATE)
```

You can use this procedure to create export for India.

Parameter	Required	Type	Description
IN_RESORT	Y	VARCHAR2	Procedure to create export for India.
IN_DATE	Y	DATE	

EXAMPLE

```
EXP_HSN_OUTSTANDING.CREATE_EXPORT('LUCY', '12092020');
```

Get the Version Information

```
EXP_CREATE_IT_EINVOICE.GET_VERSIONE_ATTRIB
```

You can use this API will return the version information.

Parameter	Required	Type	Description
No Parameters	NA	NA	The function will return the version information.

EXAMPLE

```
EXP_CREATE_IT_EINVOICE.GET_VERSIONE_ATTRIB();
```

Get Total Count of Records for ALL

```
EXP_ITALY_PKG.TOTRECORDS (IN_DATE)
```

You can use this API will return the total count of records for export_type='ALL' and business date combination.

Parameter	Required	Type	Description
IN_DATE	N	DATE	The function will return the total count of records for export_type='ALL' and business date combination

EXAMPLE

```
EXP_ITALY_PKG.TOTRECORDS('12092020');
```

Get Total Count of Records for TMP

```
EXP_ITALY_PKG.TOTRECORDSISTAT (IN_DATE IN_EXPORT_TYPE)
```

You can use this API will return the total count of records for export_type='TMP' and business date combination.

Parameter	Required	Type	Description
IN_DATE	N	DATE	The function will return the total count of records for export_type='TMP' and

Parameter	Required	Type	Description
IN_EXPORT_TYPE	N	VARCHAR2	business date combination.

EXAMPLE

```
EXP_ITALY_PKG.TOTRECORDSISTAT('12092020','TMP');
```

Get Number Of Rooms Reserved

```
EXP_ITALY_PKG.GET_ROOMS_BY_RESV (IN_TIPPO_ALLOGGIATO, IN_RESV_NAME_ID,  
IN_ALLOTMENT_HEADER_ID)
```

You can use this API will return the total number of rooms reserved.

Parameter	Required	Type	Description
IN_TIPPO_ALLOGGIATO	N	VARCHAR2	The function will return the total number of reserved rooms.
IN_RESV_NAME_ID	N	NUMBER	
IN_ALLOTMENT_HEADER_ID	N	NUMBER	

EXAMPLE

```
EXP_ITALY_PKG.GET_ROOMS_BY_RESV('16', 100, 1988);
```

Values for tipoalloggiato field:

- 16 OSPITE SINGOLO
- 17 CAPOFAMIGLIA
- 18 CAPOGRUPPO
- 19 FAMILIARE
- 20 MEMBRO GRUPPO

Get Province

```
EXP_ITALY_PKG.GET_PROVINCE (IN_CITY)
```

You can use this API to get the province.

Parameter	Required	Type	Description
IN_CITY	N	VARCHAR2	The function will return the province.

EXAMPLE

```
EXP_ITALY_PKG.GET_PROVINCE('HYD');
```

Get Country ID

```
EXP_ITALY_PKG.GET_COUNTRY_ID (IN_COUNTRY_CODE)
```

You can use this API to get the Country ID.

Parameter	Required	Type	Description
IN_COUNTRY_CODE	N	VARCHAR2	The function will return the Country ID.

EXAMPLE

```
EXP_ITALY_PKG.GET_COUNTRY_ID('PT');
```

Get City ID

```
EXP_ITALY_PKG.GET_CITY_ID (IN_CITY)
```

You can use this API to get the City ID.

Parameter	Required	Type	Description
IN_CITY	N	VARCHAR2	The function will return the City ID.

EXAMPLE

```
EXP_ITALY_PKG.GET_CITY_ID('HYD');
```

Get Rooms By Date

```
EXP_ITALY_PKG.GET_AVL_ROOMSBYDATE (IN_DATE)
```

You can use this API to get the number of available rooms on a particular date.

Parameter	Required	Type	Description
IN_DATE	N	VARCHAR2	The function will return the number of available rooms on a particular date.

EXAMPLE

```
EXP_ITALY_PKG.GET_AVL_ROOMSBYDATE('12092020');
```

Get Physical Inventory

```
EXP_ITALY_PKG.GET_AVL_ROOMS
```

You can use this API to get the physical inventory.

Parameter	Required	Type	Description
NA	NA	NA	This function will fetch the physical inventory.

EXAMPLE

```
EXP_ITALY_PKG.GET_AVL_ROOMS();
```

Get Available Beds

```
EXP_ITALY_PKG.GET_AVL_BEDS
```

You can use this API to get the physical inventory.

Parameter	Required	Type	Description
NA	NA	NA	This function will return the total number of available beds.

EXAMPLE

```
EXP_ITALY_PKG.GET_AVL_BEDS();
```

Get Last Reservation ID

```
EXP_ITALY_PKG.GETLASTRESVID
```

You can use this API to get the last Reservation ID.

Parameter	Required	Type	Description
NA	NA	NA	This function will return the Last Reservation ID.

EXAMPLE

```
EXP_ITALY_PKG.GETLASTRESVID();
```

Get Last Group

```
EXP_ITALY_PKG.GETLASTGROUP
```

You can use this API to get the Last Group.

Parameter	Required	Type	Description
NA	NA	NA	This function will return the Last Group.

EXAMPLE

```
EXP_ITALY_PKG.GETLASTGROUP();
```

Get Name ID

```
EXP_ITALY_PKG.GETNAMEID (IN_RESV_NAME_ID, IN_NAME_ID, IN_UDFSEARCH)
```

You can use this API to get the Name ID.

Parameter	Required	Type	Description
IN_RESV_NAME_ID	N	NUMBER	This function will return the Name ID.
IN_NAME_ID	N	NUMBER	
IN_UDFSEARCH	N	VARCHAR2	

EXAMPLE

```
EXP_ITALY_PKG.GETNAMEID(100, 344, 'TEST');
```

Get Membership Level

```
EXP_CREATE_DATA.GET_MEMBER_LEVEL (IN_RESV_NAME_ID, IN_MEMBERSHIP_TYPE,  
IN_MEMBERSHIP_NO, IN_RESORT)
```

You can use this API to get Get membership level based on the reservation name id, member type, member number.

Parameter	Required	Type	Description
IN_RESV_NAME_ID	NA	NUMBER	Get membership level based on the reservation name id, member type, member number
IN_MEMBERSHIP_TYP E	NA	VARCHAR2	
IN_MEMBERSHIP_NO	NA	VARCHAR2	
IN_RESORT	NA	VARCHAR2	

EXAMPLE

```
EXP_CREATE_DATA.GET_MEMBER_LEVEL(RESV_NAME_ID,
LOYALTY_MEMBER_TYPE, LOYALTY_MEMBER_NO, PMS_P.RESORT)
```

Get Commission Code For Rate Code

```
EXP_CREATE_DATA.RATE_COMM_CODE (IN_RATE_CODE, IN_RESORT)
```

You can use this API to get the commission code for rate code.

Parameter	Required	Type	Description
IN_RATE_CODE	NA	VARCHAR2	Get commission code
IN_RESORT	NA	VARCHAR2	for rate code

EXAMPLE

- EXP_CREATE_DATA.RATE_COMM_CODE(RATE_CODE)

Get Profile Info

```
EXP_CREATE_DATA.GET_PROF_INFO (N_NAME_ID, IN_COLUMN, IN_RESORT)
```

You can use this API to fetch the specific values of a profile.

Parameter	Required	Type	Description
N_NAME_ID	NA	NUMBER	Get value in column specified from name_view for name_id specified. So in this example function will get IATA_CORP_NO for profile.
IN_COLUMN	NA	VARCHAR2	Get value in column specified from name_view for name_id specified. So in this example function will fetch the 'Display Name' (Last and First) of profile.

Parameter	Required	Type	Description
IN_RESORT	NA	VARCHAR2	Get value in column specified from name_view for name_id specified. So in this example function will fetch "Currency code" column value for profile.

EXAMPLE

- EXP_COUNTRY_PL.CREATE_JPK_EXPORT ('10052022','30052022')
- EXP_CREATE_DATA.GET_PROF_INFO(RESV_CONTACT_ID,'DISPLAY_NAME')
- EXP_CREATE_DATA.GET_PROF_INFO(AGENT_NAME_ID,'CURRENCY_CODE')

Fix Characters

```
EXP_ITALY_PKG.FIXCHAR (IN_STRING)
```

You can use this API to replace the characters.

Parameter	Required	Type	Description
IN_STRING	NA	VARCHAR2	This function will replace Unicode characters with substitution characters.

EXAMPLE

```
EXP_ITALY_PKG.FIXCHAR('ó');
```

Telephone Operator

Use the Telephone Operator to perform any of the following tasks:

- Search for reservation and guest information.
- Manage guest messages for reservations.
- Manage reservations traces
- Manage wake up calls.
- Manage guest locators

 **Note:**

It is recommended to use the console  view for Telephone Operator, as this view provides quick access to all reservation details links.

Search for reservations using the available search criteria, click **Search**.

- From the Sort By drop-down list, change the sort order for results.
- From the Show list box, select the number of results per page.
- To navigate to the Reservation, click the Confirmation number in left panel or top section of console view or from **I Want To > Go To > Reservation**.
- To navigate to the Profile, click the Guest Name hyperlink in left panel or from profile section of console view or from **I Want To > Go To > Profile**.
- To navigate to Billing, click the Balance hyperlink in the Billing section or **I Want To > Go To > Billing**.
- Links to various details are available in the Details section, or from **I Want To** .

Table 8-14 Reservation Detail Links

Reservations	Billing
Call History	Payment Instructions

Managing Telephone Book Categories and Entries

The telephone book is available to maintain contact information for local theaters, restaurants, taxi stands, airlines, churches, employee directory, other properties, etc. The Telephone Book stores all information for guest referral and each entry is categorized, such as restaurants, transportation etc. Within each category are the contact entries with names, telephone numbers, and web addresses of people and places that your staff may need. The Telephone Book can be used as a Concierge guide, with information that can be helpful to communicate to the guests such as area attractions, airports, or transportation system companies and remarks.

Adding Telephone Category

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone Book Category**.
2. Click **New** and enter the following details:
 - a. **Category**: Select the category from list.
 - b. **Description**: Enter a description for category.
 - c. **Sequence**: Enter a Sequence to determine the order in which the type appears.
 - d. **Global**: Select the check box to enable this category (and the related Telephone Book entries) in all properties.
3. Click **Save**.

Editing Telephone Category

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone Book Category**.
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Telephone Category

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone Book Category**.
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Adding Telephone Book Entry

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone Book** .
2. Click **New** and enter the following details:
 - a. **Category**: Select the category from list.
 - b. **Name**: Enter name for telephone book entry.
 - c. **Telephone**: Telephone number for the entry.
 - d. **Web Address**: Web address for the selected name/company. This web address also serves as a hyper link to the highlighted name's web page.
 - e. **Notes**: Enter notes such as directions to movie theater, church services times, restaurant reviews and any other additional comments.
3. Click **Save**.

Editing Telephone Book Entry

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone Book** .
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Telephone Book Entry

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone Book** .
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Monitoring Business Event Queue

A business event sends information about changes made in OPERA Cloud to external systems. You can view business events (triggers), signifying that an action has occurred and that an outbound message is produced and placed in queue for external systems to analyze and take appropriate action.

The following information is displayed:

- **EXT System**: Name of the external system that the message was created for and needs to be picked up by.
- **Enq Time**: Displays the time of when the business event change occurred.
- **Resort**: Property name of where the change happened.
- **Module**: Module name of where the change happened.

- **Action Type:** Type of action that the outbound message is pertaining to. For example, a new reservation was created, a current reservation was updated, or a profile was updated.
- **Action ID:** ID number that is automatically assigned to the action when it happened.
- **Created Time:** Date and time that the change happened.
- **Primary Key:** Alpha-numeric key to uniquely identify the data applicable to that particular action

Viewing Business Event Queue

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **Business Event Queue**.
2. Select an external system, Enqueue Date and enter other search criteria and click **Search**.

Refreshing Business Event Queue

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **Business Event Queue**.
2. Select an external system, Enqueue Date and enter other search criteria and click **Search**.
3. Click **Vertical Ellipsis** and select **Refresh**.

Monitoring IATA Exception

The Channel Exception Queue is used to record exceptions for GDS bookings when there is no record locator or International Air Transport Association (IATA) number within the message.

The type of information displayed in the queue is determined by two Channel Management OPERA Controls :

- When the **IATA Exception** OPERA Control is active and request is received from GDS without an IATA number, the IATA exception will display in the queue.
- When the **Record Locator Exception** OPERA Control is active and request is received from GDS without a record locator, the record locator exception will display in the queue.

The following information is displayed:

- **Insert Date:** The date the exception occurred.
- **Reason:** The reason for the exception.
- **Status:** The exception status, such as "pending".
- **GDS Property:** The property.
- **Conf#:** The confirmation number.
- **GDS Transaction No:** The message ID from the message.
- **GDS Source:** If the exception is a result of a missing IATA number, the source is GDS type A or GDS type B: If the exception is a result of missing record locator, the source is the GDS host.

- **GDS Rec Loc:** The GDS record locator.
- **GDS Value:** The GDS value.
- **CRS Value:** The CRS value.

Viewing IATA Exception Queue

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **IATA Exception**.
2. Select a Property, Channel(s), Type and enter other search criteria and click **Search**.

Monitoring ADS Error Message

The ADS Error Processing screen is used to monitor messages for the ADS channels and allows you to search for messages with a status of "Error" to investigate what the issue is.

In addition, the ACK and NACK responses received from the ADS host are also logged.

Viewing ADS Error Messages

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **ADS Error Message**.
2. Select a Property, Channel(s), Type and enter other search criteria and click **Search**.

Refreshing ADS Error Messages

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **ADS Error Message**.
2. Select a Property, Channel(s), Type and enter other search criteria and click **Search**.
3. Click **Vertical Ellipsis** and select **Refresh**.

9

Reports

The report module provides access to standard reports, categorized into [report groups](#). Reports can be previewed or printed, or reports can be emailed or downloaded in a variety of file formats. Reports can also be scheduled when the Report Scheduler OPERA Control is active. For more information, see [Managing Scheduled Reports](#)

Prerequisites for Reports

This chapter of the OPERA Cloud User Guide lists the prerequisites for Reports menu.

Prerequisites for Stationery Editor

OPERA Cloud Tasks

Group: Reports

Tasks:

- View Internal Reports / Report Groups
- Manage Reports
 - Copy Reports

Prerequisites for Activity Reports

Licenses / Subscriptions

Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition

Or

Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition

OPERA Controls

Group: Activity

Parameters: Use Time Zones for Activities

OPERA Cloud Tasks

Group: Reports

Tasks:

- Report Groups
- Activity

Prerequisites for Blocks and Groups Reports

Tasks: Manage Scheduled Reports

- New/Edit Scheduled Reports
- Delete Scheduled Report

Generating Reports

From the Manage Report screen, you can:

- Search for a report based on specific criteria.
- Generate a report with default parameters or modify the report parameters.
- Email a report in various file formats to one or more recipients.
- Download a report in various file formats.
- Print a report to an email addressable printer.
- Preview a report as a PDF and then print it to a local or network printer.
- Schedule a report. (Available when the Report Scheduler OPERA Control is active). For more information, see [Managing Scheduled Reports](#) .
- Manage customized stationery templates. For more information, see [About Stationery Editor \(Oracle Business Intelligence \(BI\) Publisher\)](#).
- Copy reports and stationery templates to other properties. For more information, see [Copying Reports to Multiple Properties](#).

[Watch Video](#)

Note:

The available report groups are determined by the report group tasks assigned to your role(s). The reports and report parameters available is determined by the OPERA Controls active at your property.

Note:

File formats available for email delivery and file download vary depending on the specific report; these include PDF, HTML, RTF, XML, Excel, Delimited, and Delimited Data.

Reports that support multiple properties are indicated in the search results, and you can generate these reports with multiple properties selected when operating from a Hub location. For more information, see [Changing Your Location in Multi-Property Operations](#).

You can also use the actions listed in the ribbon to configure a [New Report](#) , [Managing Report Groups](#) or [Managing Scheduled Reports](#) .

Previewing Reports

To download / preview a report, with default parameters, as a PDF file in a browser tab.

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.
2. On the Manage Reports screen, enter or confirm the Property Code. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report name** and/or select a **Report Group** from the list and then click **Search**.
4. Select a report from the search result.
5. Click **Preview /Download** : A PDF file is generated and displayed in a separate browser window.
 - a. To Print the PDF, select the print icon or press [CNTRL][P] to launch the print dialogue for your browser.
 - b. To download the PDF to your workstation click the download option in your browser.

Printing Reports

To print a report to an email addressable printer. For more information, see [Configuring Printers](#)

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.
2. On the Manage Reports screen, enter or confirm the **Property Code**. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report Name** and/or select a **Report Group** from the list and then click **Search**.
4. Select a report from the search result.
5. Click **Select Printer** and select a printer from the list.
6. Click **Print** to print the report to the selected printer.

 **Note:**

Printer selection is retained during your session.

Downloading Reports

To download a report, with default parameters, in various file formats.

 **Note:**

It is recommended to use only Delimited and Delimited Data file formats for reports with simple tabular layouts. Delimited and Delimited Data file formats should not be selected for reports that have group-by's or other complex layouts that can cause duplication of rows or prevent rows from generating in the report.

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.
2. On the Manage Reports screen, enter or confirm the **Property Code**. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report Name** and/or select a **Report Group** from the list and then click **Search**.
4. Select a report from the search result.
5. Click **Download As**.
 - a. Select a file format from the list. File formats available are HTML, RTF, PDF, XML, Delimited, Delimited Data and Excel (for selected BI Publisher-based reports).
 - b. Click **Download**.

Emailing Reports

To email a report, with default parameters, in various file formats.

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.
2. On the Manage Reports screen, enter or confirm the **Property Code**. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report name** and/or select a **Report Group** from the list and then click **Search**.
4. Select a report from the search result.
5. Click **Email** and then enter the email address or addresses of the recipient(s). You can enter separate email addresses for multiple recipients with a comma (,) or semi-colon (;).
 - a. Select a file format from the list. File formats available are HTML, RTF, PDF, XML, Delimited, Delimited Data and Excel (for selected BI Publisher-based reports).

 **Note:**

When the HTML format and email delivery are selected, the report output is embedded in the email received.

- b. Click **Email**.

Modifying Report Parameters

When a report has parameters, you can modify the default values to suit your needs then generate the report.

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.
2. On the Manage Reports screen, enter or confirm the **Property Code**. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report name** and/or select a **Report Group** from the list and then click **Search**.

4. Select a report from the search result.
5. Click **Edit Report Parameters**.
 - a. On the Report Parameters page, update the report parameters as required.
 - b. Click **Download As** to download the report in a selected file format. File formats available are HTML, RTF, PDF, XML, Delimited, Delimited Data and Excel (for selected BI Publisher-based reports)
 - c. Click **Email** to email the report.
 - d. Click **Preview/Download** to generate the report as PDF in browser tab.
 - e. Click **Cancel** to return to the report search page.

Working with Watermarks

The watermark feature lets you add faint text to the background of reports generated in PDF format. You can create the watermark to appear on different report groups. You can also open watermark settings and create watermark text, and set its size, color, and position on the page. This can be configured on a global, report group, or individual report level.

Activating Global Watermark

1. From the **Administration** menu, select **Enterprise**, and then select **OPERA Controls**.
2. Select the **General** group.
3. Activate the **Enable Watermark for Reports** parameter.
4. Update the **Configure (Global) Watermark Settings** setting.

Adding Watermark to Reports

1. From the **OPERA Cloud** menu, select **Reports** and then select **Manage Reports**.
2. Enter search criteria then click **Search**.
3. From the search results, select a report then click the vertical ellipsis **Action** menu and select **Edit**.
4. Scroll to the bottom of the page.
 - a. **Watermark Mode**: Select from the watermark settings mentioned below.
5. Click **Save**.
6. For more information, see [Configuring Reports](#).

Adding Watermark to Report Groups

1. From the **OPERA Cloud** menu, select **Reports** and then select **Manage Reports**.
2. Click **Manage Report Groups**.
3. Enter search criteria and click **Search**.
4. Select the report group, click the vertical ellipsis, and then click **Edit**.
 - a. **Watermark Mode**: Select from the watermark settings mentioned below
5. Click **Save**.

6. For more information, see [Configuring Report Groups](#).

Watermark Mode Options

- **Simple** - the default watermark configuration:
 - Font size: 100 pts.
 - Font name: Helvetica
 - Font color: light gray
 - Watermark position: centered between the lower left corner and the upper right corner of the page on a 55 degree slant.
 - Enter the watermark text
- **Enhanced** - allows you to customize the position, font size, and color for the watermark.
 - Enter the watermark text
- **(Use) Report Group Watermark**
- **Global Watermark** (OPERA Control)
- **No Watermark** (disable watermark)

About Stationery Editor

Prerequisites for Stationery Editor

OPERA Cloud stationery is customized using Microsoft Word; supporting all standard and familiar formatting capabilities of an RTF document; including images, tables, font style, size, color and alignment. You can also include links to websites, either as text links or as part of a clickable image. Most stationery is generated in PDF format, for printing or email delivery. HTML output is also supported for email confirmation delivery. See [Configuring Delivery Management](#) for more information.

Oracle Business Intelligence (BI) Publisher Desktop is a special add-in for Microsoft Word which is used to assist with the customization of stationery templates, by supporting the import of an XML data file containing a list of the data elements available and allowing you to drag and drop these data elements onto the RTF layout as needed. At runtime these data elements are replaced with actual values from OPERA Cloud. The add-in also allows you to define conditional blocks of text and graphics within the template. Prior to customizing any stationery templates ensure your workstation has Microsoft Word and the Oracle BI Publisher add-in installed. See [Installing Oracle BI Publisher Desktop on a Workstation](#) for more information.

For more information on Oracle BI Publisher and RTF templates refer to [Fusion Middleware Report Designer's Guide for Oracle Business Intelligence Publisher](#).

Note:

Users do not need to install Oracle BI Publisher to generate OPERA Cloud reports and stationery.

Predefined (internal) report groups exist for each stationery type that can be generated. For more information, see [Stationery Reports Groups](#).

When the Multi-language OPERA Control is active a report template must be configured for every [language](#) in every stationery report group. Each language-specific report typically references a unique template setup with the translated text in the body of the RTF. You may choose, however, to reference the English template in report setup for any language you do not wish to offer translation. At runtime, OPERA Cloud will generate the specified RTF template for the profile language and also fetch the translated descriptions for your configuration setup in **Manage Translations**. For example, Room Types, Rate Codes, Package Codes, Transaction Codes, Menu Items. If language-specific translation for configuration is not defined, the primary description is output.

**Note:**

For multi-language stationery it is recommended to prefix or suffix filenames with the language code; for example: e_folio.rtf , fr_folio.rtf, de_folio.rtf, es_folio.rtf

Text can be formatted using the following fonts and font styles. For Japanese, and Korean characters use a Unicode font in the template. All text formatted with a Unicode font or any alternate font, (not listed) is generated in the Arial Unicode font.

Table 9-1 Supported Fonts and Font styles

Font	Normal	Bold	Italic	Underline	Supported Code Pages (Character Encoding)
Arial	✓	✓	✓	✓	https://learn.microsoft.com/en-us/typography/font-list/arial
Courier New	✓	✓	✓	✓	https://learn.microsoft.com/en-us/typography/font-list/courier-new
Times New Roman	✓	✓	✓	✓	https://learn.microsoft.com/en-us/typography/font-list/times-new-roman
DengXian	✓	✓	✗	✗	https://learn.microsoft.com/en-us/typography/font-list/dengxian

Table 9-1 (Cont.) Supported Fonts and Font styles

Font	Normal	Bold	Italic	Underline	Supported Code Pages (Character Encoding)
Wdings	✓	✗	✗	✗	https://learn.microsoft.com/en-us/typography/font-list/wdings
Arial Unicode (catch all for other fonts)	✓	✗	✗	✗	https://learn.microsoft.com/en-us/typography/font-list/arial-unicode-ms
BC 3of9 Barcode	✓	✗	✗	✗	
Code 128 Barcode	✓	✗	✗	✗	
UPC/EAN Barcode	✓	✗	✗	✗	
MICR MT Barcode	✓	✗	✗	✗	

In multi-property operations templates can be shared by multi properties – simply reference the same RTF template file in [report configuration](#) in each property. Any future change made to the template is in effect immediately at each property using the template.

Whilst images can be embedded within a template it is recommended to always use a placeholder graphic and reference a web image by URL - this method ensures the image is available when stationery is generated in HTML format (e.g. confirmation email) and also supports the display of a dynamic images based on the property code - such as the property logo when working with shared multi-property stationery.

 **Note:**

Templates must be under 10MB in size.

Custom [message text configuration](#) is also available for stationery templates; allowing you to configure translatable text strings in OPERA Cloud that are included in the generated stationery. Special data elements in the XML data file are available for these custom message texts, suffixed with the property code, so you can setup a custom message per property. For example, for the confirmation letter template there are SAMPLE_GUEST_CONFIRMATION_TEXT1 and SAMPLE_GUEST_CONFIRMATION_TEXT2 data elements. This feature is useful when you have a special promotional message you'd like to include in the generated stationery short-term and eliminates the need to download and update the RTF template directly. You can grant other users the Report Text

Configuration user task and not the Manage Report user tasks; limiting who can modify RTF templates yet still allowing configuration of custom messages for stationery.

When the Custom Numbers OPERA Control is active, one or more custom reference numbers can be configured to output on the folio or receipts. For more information, see [Configuring Custom Numbers](#).

When the Additional Folio Text OPERA Control is active, you can setup folio templates with <FOLIO_TEXT1_FTR/> <FOLIO_TEXT2_FTR/> elements to output reservation-specific folio text entered when generating a folio. For more information, see [Generating a Folio for a Billing Window](#)

Using Stationery Template Editor

Template Preparation and Sample Data

After selecting to create or update a stationery template two files (*.rtf and *.xml) are downloaded to a folder on your workstation.

Note:

When creating a new stationery template you must first rename the sample*.rtf to something different. You cannot upload a customized template with the filename sample*.rtf.

Open RTF file

Navigate to the download folder and open the RTF template file using Microsoft Word; either double-click the file in Windows Explorer or launch Microsoft Word and use the **File | Open** menu from within Word.

Load Sample XML Data File

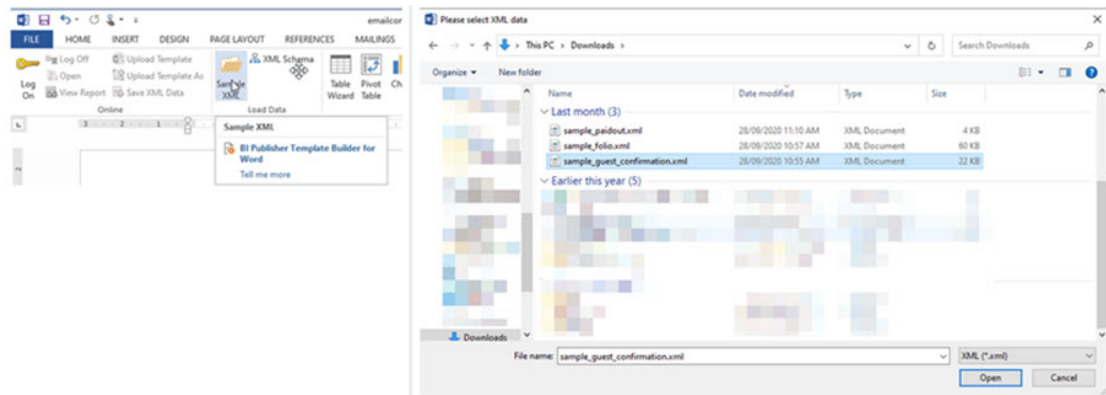

The sample data file consists of data element (XML elements) available for inclusion in the layout of the stationery template.

1. Click the **BI Publisher** tab on the toolbar and click **Sample XML**.
2. Navigate to the folder where the sample XML file was downloaded to.
3. Select the file and click **Open**.

Note:

The Oracle BI Publisher toolbar appears in Microsoft Word after installation of the Oracle BI Publisher software. If the toolbar does not appear automatically, select View, select Toolbars, and then select Template Builder to add it to the existing toolbar display. Also ensure that BI Publisher add-in is enabled in COM Add-Ins (File, Options, Add-Ins, Manage COM Add-Ins, Go)

Figure 9-1 Load Sample XML Data

The XML data file will always be named `sample_xxxx`, corresponding to the type of template you are customizing. For example, if you are creating a confirmation letter template and you named the RTF file “email_confirmation,” you will not see a corresponding XML file. Rather, you would select and load the “sample_guest_confirmation.xml” , listing all the available elements for customization on the confirmation template. Once the XML is selected, a “Data loaded successfully” message appears and informs you that the sample XML data is now loaded for use in customization.

Each tag set is an element. For example, `<RESERVATION_MADE_DATE_ISO>2020-12-12</RESERVATION_MADE_DATE_ISO>` is the date the reservation was created. `RESERVATION_MADE_DATE_ISO` is the tag name. The data between the tags is the value of the element. For example, the value of `<RESERVATION_MADE_DATE_ISO>` is a date 2020-12-12 (12th December 2020).

Note:

Sample XML files contain property details elements such as Property Code, `<RESORT>`, Property Name `<RESORT_FULL_NAME>`, Property Address `<RESORT_FULL_ADDRESS>`, Property Phone `<RESORT_PHONE_NO>` - ensuring one template can be shared across multiple properties.

Identifying Placeholders and Groups

The template content and layout must correspond to the content and hierarchy of the input XML file. Each data field in the template must map to an element in the XML file. Each group of repeating elements in the template must correspond to a parent-child relationship in the XML file.

To map the data fields you define placeholders. To designate the repeating elements, you define groups.

When you mark up the template design, you define placeholders for the XML elements. The placeholder maps the template report field to the XML element. At runtime the placeholder is replaced by the value of the element of the same name in the XML data file.

Using Placeholders

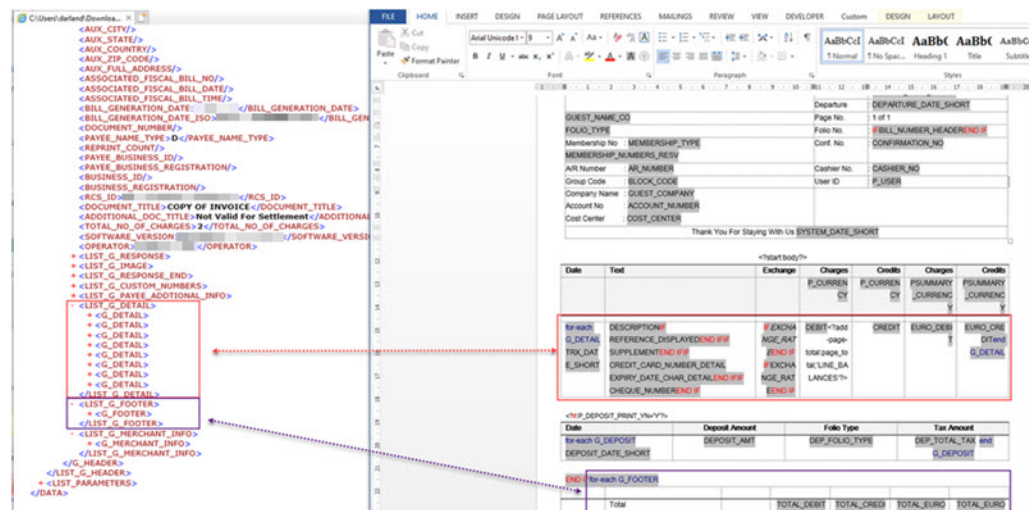

Each data field in the report template must correspond to an element in the XML file. When you mark up the template design, you define placeholders for the XML elements. The placeholder maps the template report field to the XML element. At runtime the placeholder is replaced by the value of the element of the same name in the XML data file.

Identifying Group of Repeating Elements

Stationery templates often contain groups of repeating fields; this occurs when data is fetched from multiple entities in a parent-child 1:many relationship. For the folio this applies to the posting details for one reservation. Fields that belong to one of the child entities are prefixed with a **G_** to identify a repeating group of fields. At runtime, BI Publisher loops through the occurrences of the element in the XML and outputs the data for all records within the group.

The following is the XML file that correspondence to a folio RTF template

Figure 9-2 Sample_folio.xml and Repeating Groups

Adding Markup to the Template Layout

BI Publisher converts the formatting that you apply in Microsoft Word to XSL-FO.

You add markup to create the mapping between the layout and the XML file and to include features that cannot be represented directly in the format.

The most basic markup elements are placeholders, to define the XML data elements; and groups, to define the repeating elements.

Creating Placeholders

The placeholder maps the template field to the XML element data field. At runtime the placeholder is replaced by the value of the element of the same name in the XML data file.

Enter placeholders in the document using the following syntax:

```
<?XML element tag name?>
```

The placeholder must match the XML element tag name exactly and is case sensitive.

There are two ways to insert placeholders in the document, as described in the following sections:

- **Using the Basic RTF Method:** Insert the placeholder syntax directly into the template document.
- **Using the Form Field Method:** Insert the placeholder syntax in Microsoft Word's Text Form Field Options window. This method allows you to maintain the appearance of the template.
- **Using the Basic RTF Method**
 1. Enter the placeholder syntax in the document where you want the XML data value to appear.
 2. Enter the element's XML tag name using the syntax:

```
<?XML element tag name?>
```

In the example, the template field "Reservation Made Date" maps to the XML element RESERVATION_MADE_DATE_ISO in the document, enter:

```
<?RESERVATION_MADE_DATE_ISO?>
```

- **Using the Form Field Method**

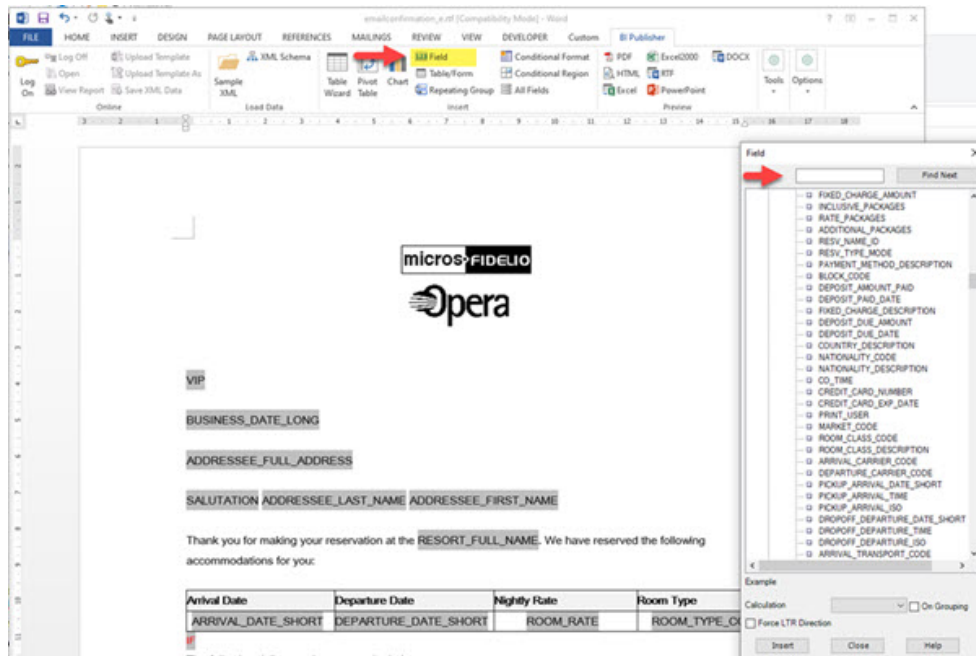

After the XML data file has been loaded use the **123 Field** option on the BI Publisher toolbar tab to insert new fields in the template.

Search and select the XML tag or field to add to the customizable report from the list of available fields. The tree of available fields is divided into the sections applicable to the report groupings, (for example, header, footer, body, and so on). You can add fields by selecting and dragging the element to the document or double clicking on a selected field from this list to insert at the current cursor location.

 **Note:**

It is recommended that tables are used in your layout to keep the field positions static. When creating a new table in Word, be sure to set the AutoFit behavior to 'AutoFit to Contents' to avoid truncating fields larger than the actual cell size or resizing a cell to accommodate a field with a longer description than the display data. Refer to Microsoft Word Help (F1) for more details.

Figure 9-3 Insert Form Field

Defining Groups

By defining a group, you notify BI Publisher that for each occurrence of an element, you want the included text and fields displayed.

At runtime, BI Publisher loops through the occurrences of the element and outputs the fields each time.

All sample stationery templates are preconfigured with the required groups for the corresponding XML data file.

For the folio, for each occurrence of G_DETAIL in the XML file, you want the template to display the child elements TRX_DATE, DESCRIPTION, REFERENCE_DISPLAYED, DEBIT, CREDIT and so on.

To designate a group of repeating fields, insert the grouping tags around the elements to repeat.

Insert the following tag before the first element

```
<?for-each:XML group element tag name?>
```

Insert the following tag after the final element:

```
<?end for-each?>
```

Inserting Images

There are two methods for inserting images into templates:

- Embedding images in the RTF template
- Referencing images available on a website or content management system.

Embedding images quickly increases the template's size, whereas referencing external images results in a significantly smaller file. Externally referenced images can also be updated without modifying the template(s).

For HTML confirmation email delivery, the image URL reference method must be used. The recipient's email client will download the images from the website or content management system when the email is opened and display the image at the specified location in the email body.

Note:

By default, emails client may block images from initial download and provide a specific action to download these images on demand.

Embedding Images in Template

Images can be inserted directly into the RTF template. This method is suitable for PDF output only. Insert the jpg, gif, or png image directly in the template by selecting **Insert** and then selecting **Pictures** in Microsoft Word.

Note:

There is a file size limit of 10MB for RTF templates.

Reference Image by URL

Referencing web images means the image is fetched at runtime. This method is suitable for both PDF or HTML email delivery.

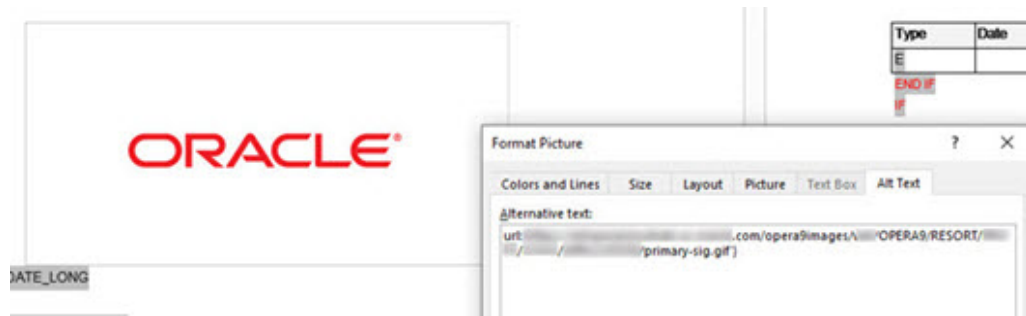

Note:

Ensure to include an alternative text link for an image.

To insert images with URL references:

1. Insert a dummy graphic into the layout in Word by selecting **Insert** and then selecting **Pictures**.
2. Right-click the image and select the **Format Picture** option and then click the **Alt Text** tab.
3. Enter the following syntax to reference the image location:

```
url: {'http://<image location>'}
```

Figure 9-4 Format Picture and Alt Text tab

For example, enter:

```
url: { ' http://www.example.com/images/oracle\_logo.gif }
```

The dummy graphic (used as a place holder within the RTF) can be set to the required image size using picture tools.

At runtime, the placeholder graphic is replaced with the image available at the specified web address

Formatting Date and Numbers

BI Publisher supports two methods for specifying the number format.

- Microsoft Word's native number format mask.
- Oracle's **Format-Number** function.

BI Publisher supports three methods for specifying the date format

- Microsoft Word's native date format mask.
- Oracle's **format-date** function.
- Oracle's abstract date format masks. (Recommended for multilingual templates.)

For more information of formatting dates, numbers and currency values see [Formatting Numbers, Dates, and Currencies](#).

Formatting Dates

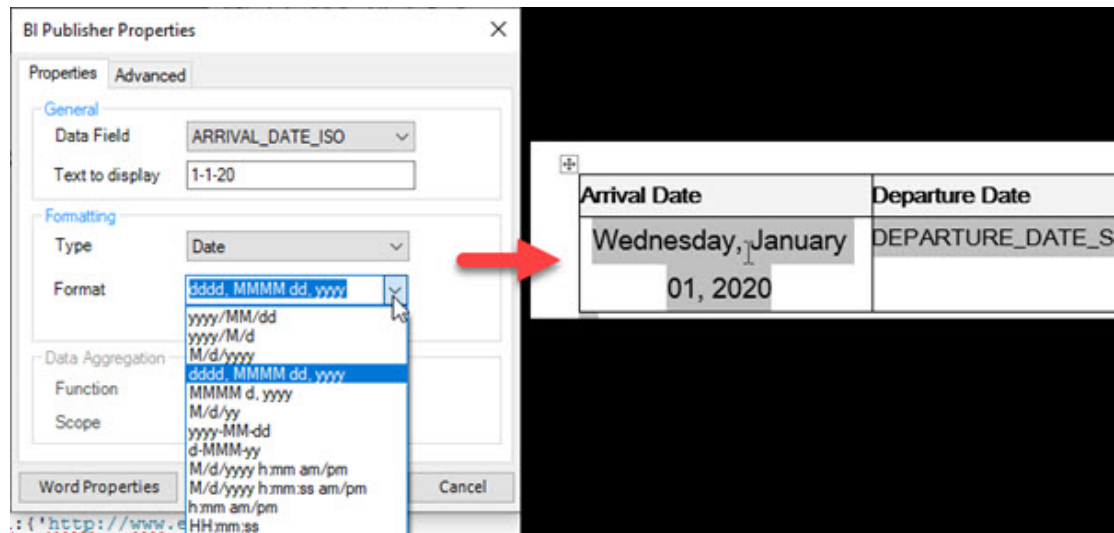

In addition to pre-formatted dates in string format in the XML, all date fields are also available in canonical date/time format.

Canonical date fields are identified with the suffix **_ISO** in the element name and can be formatted to suit your needs:

To apply a MS Word format mask to a **_ISO** canonical date field:

1. Double click the date placeholder in the template.
2. Set **Text to Display** to a test date.
3. Set Type to **Date**.
4. Select a date format from the list.
5. Click **OK**.

Figure 9-5 Formatting Dates

Formatting Numbers

To apply a MS Word format mask to number fields:

1. Double click the number placeholder in the template.
2. Set **Text to Display** to a test number.
3. Set Type to **Number**.
4. Select a number format from the list.
5. Click **OK**.

Figure 9-6 Formatting Numbers

Using Conditional Formatting

Conditional formatting occurs when a formatting element appears only when a certain condition is met.

BI Publisher supports the usage of simple "if" statements, as well as more complex "choose" expressions.

For additional information, see [Using Conditional Formatting](#) .

Note:

To define a conditional block you can also use the conditional region wizard launched from the BI Publisher toolbar.

Using IF Statements

Use an if statement to define a simple condition; for example, if a data field is a specific value.

To use an if statement:

1. Insert the following syntax to designate the beginning of the conditional area.

```
<?if:condition?>
```

2. Insert the following syntax at the end of the conditional area:

```
<?end if??>
```

```
<?if: [ELEMENT] [CONDITION] ??>
```

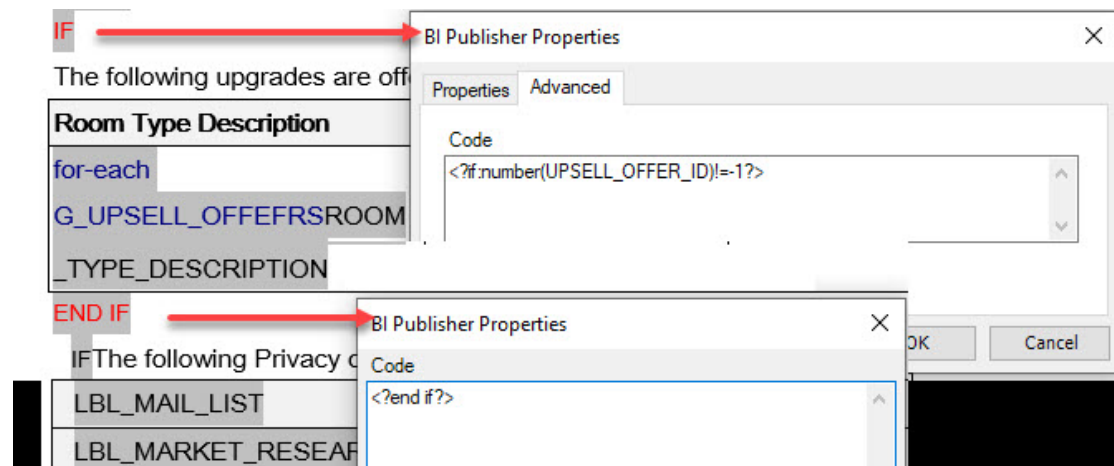

Conditional block

```
<?end if??>
```

Note:

Ensure the [ELEMENT] from the XML is referenced in matching case.

Figure 9-7 Placeholders defining conditional block between <?IF()> and <?end if??>

IF statements can be combined with other string functions.

CONTAINS

Using the CONTAINS function, an expression can be constructed to output conditional text when an element contains a specific string value. This is similar to a LIKE operator.

```
<?if: contains(ELEMENT,'txt_to_search_for')='true'?>Yes it does <?end if??>
```

STARTS-WITH

To evaluate the start of a string, use the STARTS-WITH function:

```
<?if: starts-with(COMPANY_NAME,'Oracle')?><?end if??>
```

Using Inline IF Statements

You can use “if” statements to change text output in boilerplate text.

Use the BI Publisher context command to place the if statement into the inline sequence rather than into the block (the default placement).

Using the @inline syntax, a sentence string can be constructed conditionally; for example:

The program was <?if@inline:SUCCESS='N' ?>not<?end if?> successful.

Result in the output:

- The program was successful. (If SUCCESS does not equal 'N')
- The program was not successful. (If SUCCESS equals 'N')

For more information refer [Controlling the Placement of Instructions Using the Context Commands](#).

Using IF-THEN-ELSE

BI Publisher supports the common programming construct "if-then-else". "if-then-else" is extremely useful when you must test a condition and conditionally show a result.

Use the following syntax to construct an if-then-else statement in the RTF template:

```
<?xdofx:if element_condition then result1 else result2 end if?>
```

For example, the following statement tests the AMOUNT element value. If the value is greater than 1000, show the word "Higher"; if it is less than 1000, show the word "Lower"; if it is equal to 1000, show "Equal":

```
<?xdofx:if AMOUNT > 1000 then 'Higher'
  else
    if AMOUNT < 1000 then 'Lower'
      else
        'Equal'
      end if?>
end if?>
```

Using CHOOSE Statement

Use the choose, when, and otherwise elements to express multiple conditional tests. If certain conditions are met in the incoming XML data, then specific sections of the template are rendered. This is a very powerful feature of the RTF template.

Use the following syntax for these elements:

```
<?choose:??>
<?when:expression?> <?end when?>
<?otherwise?> <?end otherwise?>
<?end choose?>
```

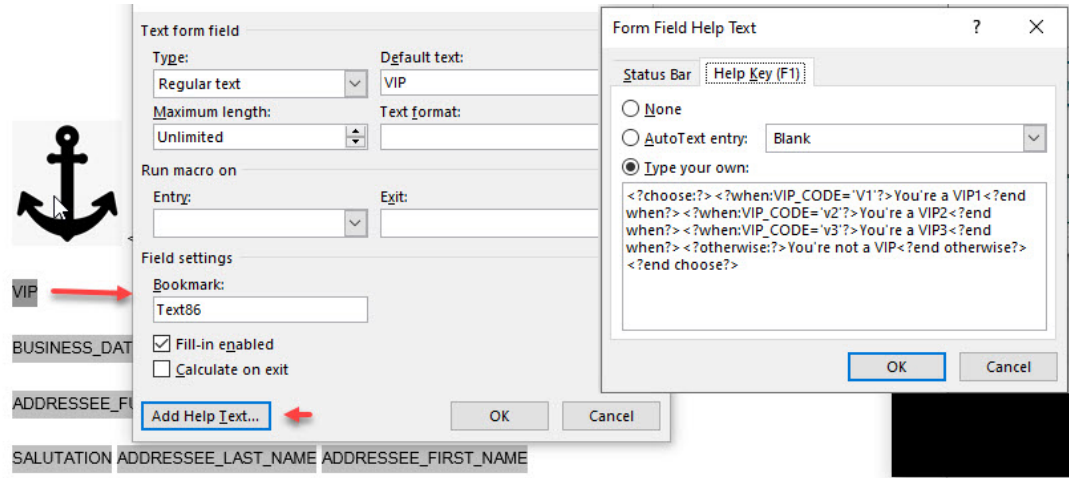

For example, to output a string based on the VIP field:

```
<?choose:??>
<?when:VIP_CODE='V1'?>You're a VIP1<?end when?>
<?when:VIP_CODE='V2'?>You're a VIP2<?end when?>
<?when:VIP_CODE='V3'?>You're a VIP3<?end when?>
```

```
<?otherwise:?>You're not a VIP<?end otherwise?>
<?end choose?>
```

Using the form field method; add the expression to the Help Text.

Figure 9-8 <?CHOOSE:?> Example

Adding Conditions for Internal Parameters

Each customizable report contains internal parameters that are used for report generation. These parameters can be utilized when creating conditions for report generation.

For example, if you need to display a graphic on a confirmation letter only when generating in PDF format, these internal parameters would be used.

The XML tags

```
<PARAM_NAME>DESFORMAT</PARAM_NAME>
```

```
<PARAM_VALUE>PDF</PARAM_VALUE>
```

and are available.

In this example, a condition is created for text to only appear if the report output is PDF format. To accomplish this, add the field PARAM_NAME and then double click to edit. In the Form Field Help Text screen, insert the following line:

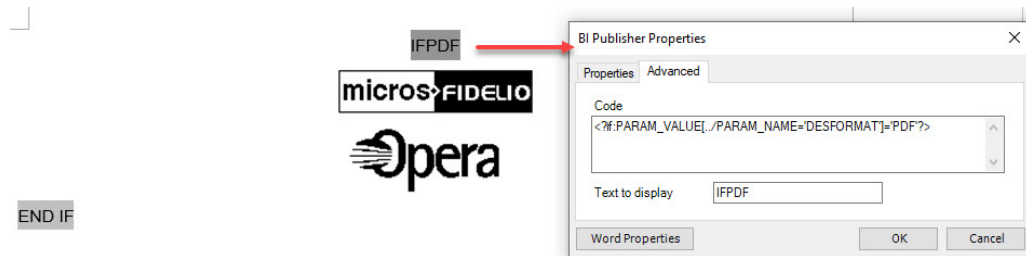

```
<?if:PARAM_VALUE[../PARAM_NAME='DESFORMAT']='PDF'?>
```

Insert an

```
<?end if?>
```

statement after the image to close the conditional block

Figure 9-9 Conditional Image for PDF Output

Adding Hyperlinks for PDF and HTML Output

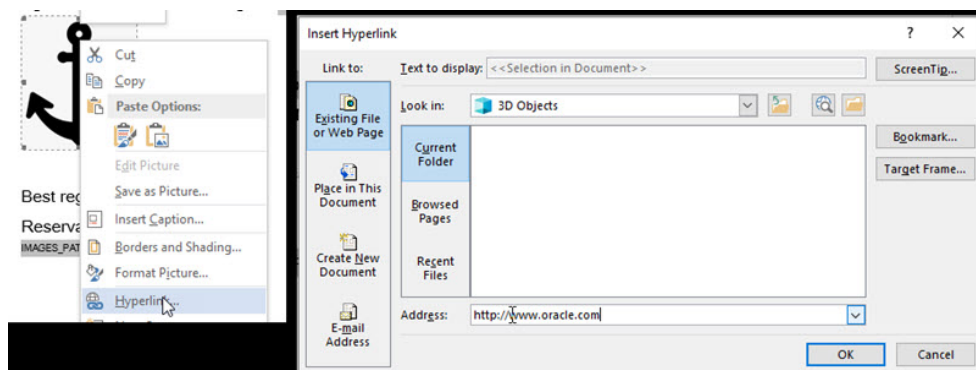

The RTF template may contain links on text and images to web locations.

When a hyperlink is setup on an image placeholder, the image becomes a click-able image (button) in the document.

When generated in PDF or HTML format, the PDF file / HTML email will contain those hyperlinks to launch the website.

1. Select the area of text or image in the template
2. Right click and select **Hyperlink**.
3. Enter the URL in the **Address**.
4. Click **OK**.

Figure 9-10 Insert Hyperlink

5. Links can also be defined on images in the template for PDF and HTML output. Select an image and select **Insert** and then select **Hyperlink**. In the resulting email or PDF file, the image is a button the recipient can click to launch the URL.

Asian Character Sets

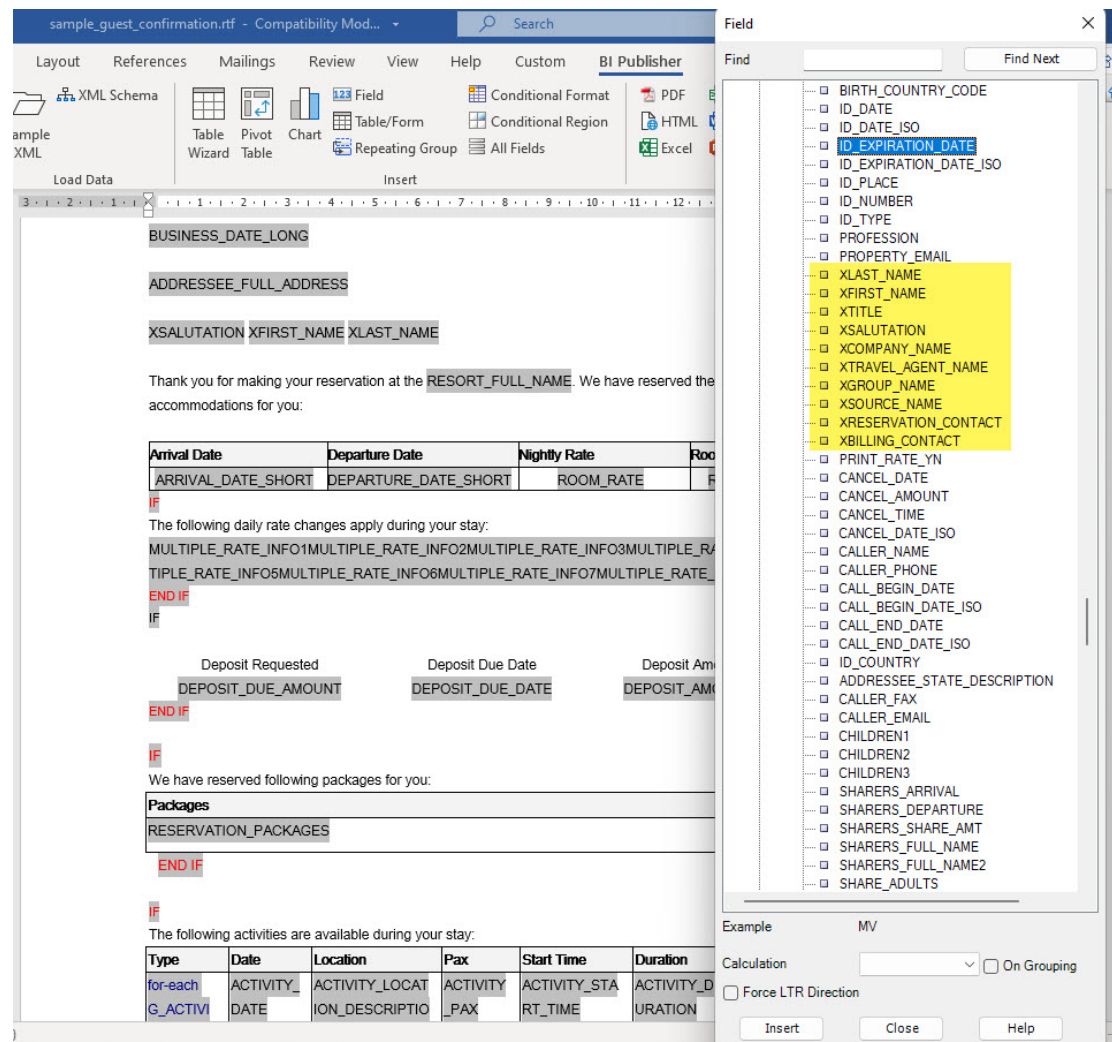

Use DengXian font for Chinese or Japanese characters. For other characters use a Unicode font in the template; all text formatted with a Unicode font is generated using the Arial Unicode font.

Note:

Bold, italic and underline styling is not supported by the Arial Unicode font.

Alternate name data elements are prefixed with 'X' (example: XLAST_NAME) in the sample data model. At runtime, if no alternate name exists, these 'X' data elements contain the western (primary) name. Therefore, your templates only need to reference the x-fields and dynamically output the alternate or primary name. Format these fields in a suitable font for the language of the template.

Figure 9-11 Alternate Name

Using Barcode Fonts

The following table describes the barcodes that are included with BI Publisher.

Font File	Supported Algorithm
128R00.TTF	code128a, code128b, and code128c
B39R00.TTF	code39, code39mod43
UPCR00.TTF	upca, upce
MICR____.TTF	E-13B

When you use one of these prepackaged fonts, BI Publisher executes the preprocessing on the data prior to applying the barcode font to the data in the output document. For example, to calculate checksum values or start and end bits for the data before formatting them.

To use the barcode fonts in the report output:

1. Insert a field in the template where the barcode is to display in the report output.
2. In the form field, enter the following command:

```
<?format-barcode:data;'barcode_type'??>
```

where:

- data is the element from the XML data source to be encoded. For example: INVOICE_NO
- barcode_type is one of the supported algorithms listed above.

Examples:

```
<?format-barcode:INVOICE_NO;'code128a'??>
```

```
<?format-barcode:INVOICE_NO;'code39mod43'??>
```

```
<?format-barcode:INVOICE_NO;'upca'??>
```

3. In Microsoft Word, apply the barcode font to the field.

Extended SQL and XSL Functions

BI Publisher has extended a set of SQL and XSL functions for use in RTF templates. The syntax for these extended functions are the following:

```
<?xdofx:expression??> for extended SQL functions
```

```
<?xdoxslt:expression??> for extended XSL functions
```

An SQL example is IF-THEN-ELSE used for defining a conditional region or defining conditional output.

```
<?xdofx: if RESERVATION_STATUS='CANCELLED' then 'Cancellation Number:'  
else 'Confirmation Number:' end if?? <?xdofx: if  
RESERVATION_STATUS='CANCELLED' then CANCELLATION_NO else  
CONFIRMATION_NO end if??>
```

These two expressions would result in either:

- Cancellation Number: 123456
- Confirmation Number: 987654

Calculating Dates

You can calculate dates using the **ora_format_date_offset()** function and referencing Canonical date fields from the XML.

The expression `<?xdoxslt:ora_format_date_offset(DATE_IN_ISO,X,'+')?>` adds X number of days to the **date_in_iso** field.

The expression `<?xdoxslt:ora_format_date_offset(DATE_IN_ISO,Y,'-')?>` subtracts Y number of days from the **date_in_iso** field.

For example to add 14 days to the `arrival_date_iso` field:

```
<?xdoxslt:ora_format_date_offset(ARRIVAL_DATE_ISO,14,'+')?>
```

The calculated date form field can be formatted using Word native date formatting.

Alternatively, you can use the Oracle `<?format-date?>` function to format a calculated date.

For example to format a calculated date with 'DD-MM-YYYY' mask :

```
<?format-date:xdoxslt:ora_format_date_offset(ARRIVAL_DATE_ISO,14,'+');'DD-MM-YYYY'?>
```

For further information, refer to [Extended SQL and XSL Functions](#).

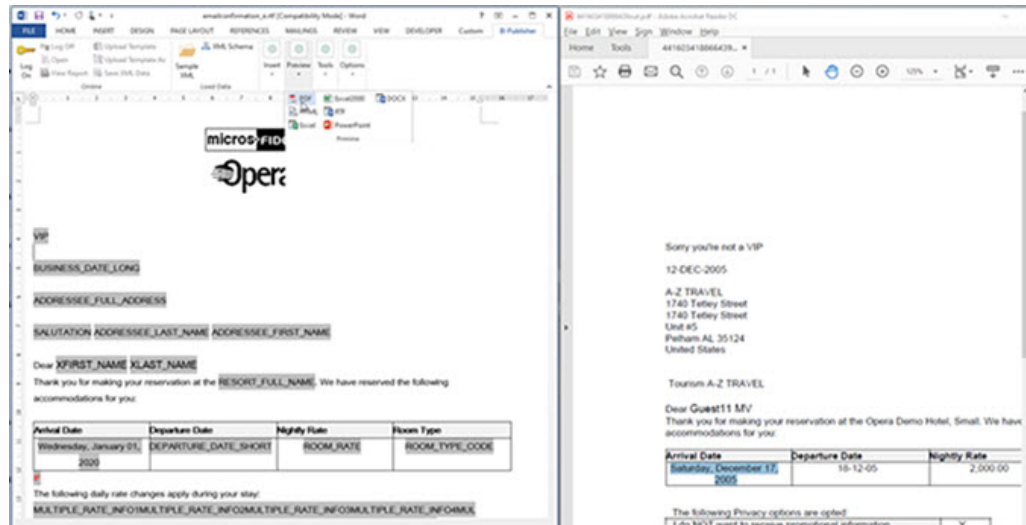

Preview using Sample XML

Once you've finished customizing the template, you can preview from within Microsoft Word to verify the layout, format masks and test that conditions are correct.

From the BI Publisher tab on the toolbar, select **Preview** then select PDF or HTML

A file will generated using the data available in the sample XML loaded for the template.

Figure 9-12 Preview Template

Save RTF File

Ensure you save your modified RTF template; from within Microsoft Word click **Ctrl + S** or click **File** then click **Save**.

Refer to **step 11** in [Configuring Stationery Templates](#) topic for information on uploading the modified RTF template to OPERA Cloud.

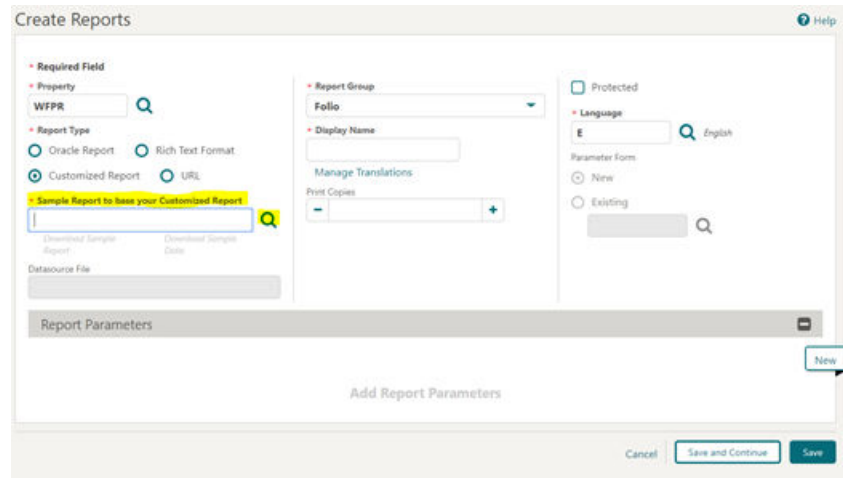

Updating Customized Stationery with Current Data Model

Following an upgrade of OPERA Cloud the sample RTF template and corresponding XML (data model) is updated to reference and benefit from functionality added. To benefit from the changes made to the data model your customized templates needs to be updated with the new XML elements.

If you have multiple templates to update repeat the process for each template.

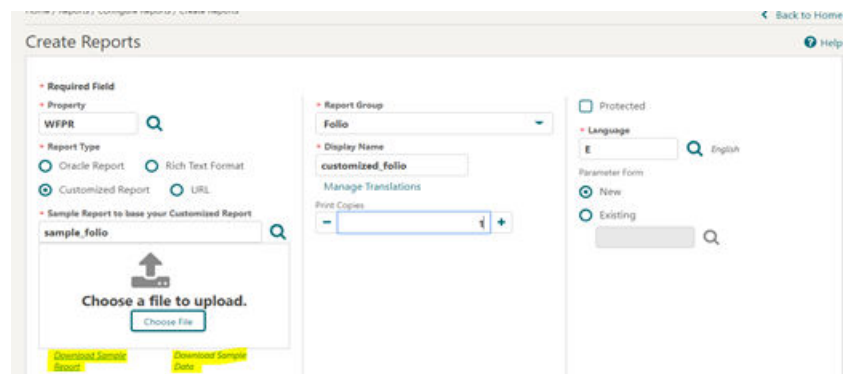

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**.
2. Select the **Show Internal** checkbox and then select the [stationery report group](#) from the **Report Group** list, then click **Search**.
3. Select the template to update in the search result.
4. Click the vertical ellipsis **Actions** menu and select **Download Sample Data** to download the updated XML file (to default download folder).
5. Click the vertical ellipsis **Actions** menu and select **Download Customized Report** to download your customized template (to default download folder).
6. Launch Microsoft Word and open the customized report template (RTF file); navigate to the download folder location to access the file.
 - a. Click the **BI Publisher** tab on the toolbar and click **Sample XML**.
 - i. Navigate to the folder where the sample XML file was downloaded.
 - ii. Select the file and click **Open**.

Figure 9-13 Sample Report to base your Customized Report

- e. Click **Download Sample Report (RTF)** and click **Download Sample Data (XML)** to download the sample template and sample data model.

Figure 9-14 Download Sample Report and Sample Data links

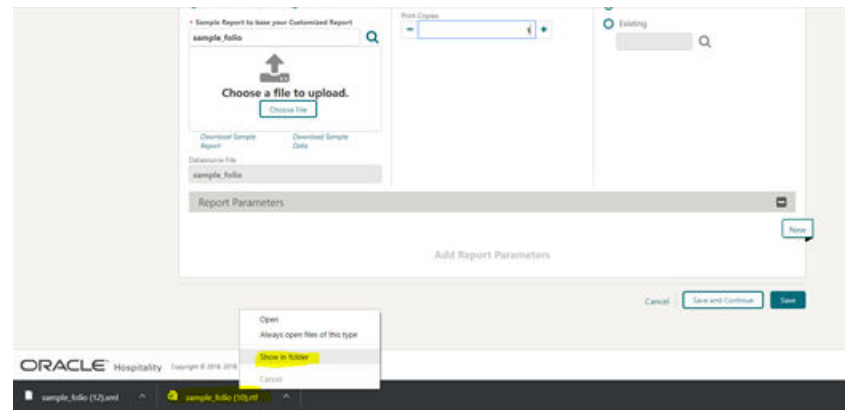

Note:

Once downloaded, the files are located in the default download folder (that is, the Downloads Folder on your local machine).

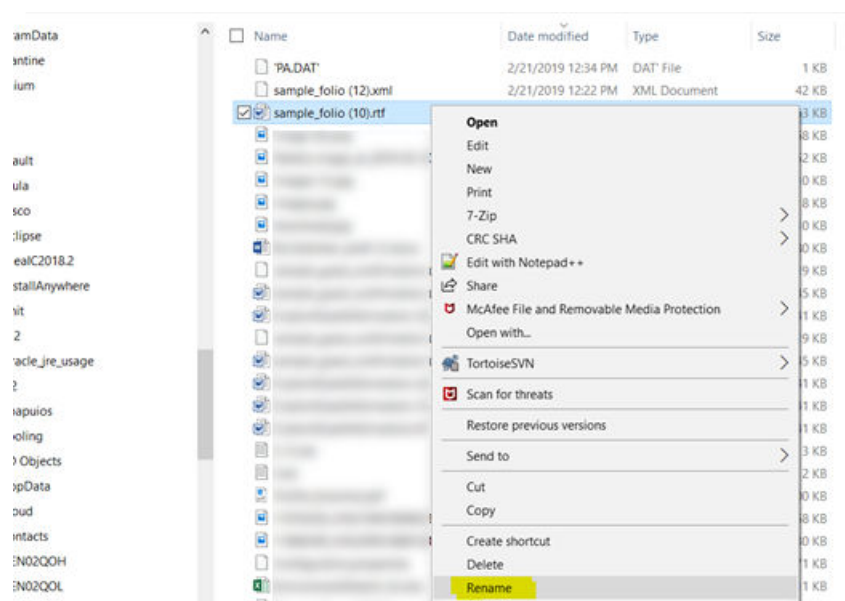

- f. Navigate to the file location and right click the downloaded file and then click the **Show in folder** option. You can also navigate to the preset download folder to open or view the file.

Figure 9-15 Show in folder option

- g. Rename the <sample>.rtf file (for example, sample_folio.rtf) per your requirement and ensure the updated name does not begin with “SAMPLE.” No name changes are needed for the XML files. Right click the .rtf file and then select the **Rename** option to change the name.

Figure 9-16 Rename File

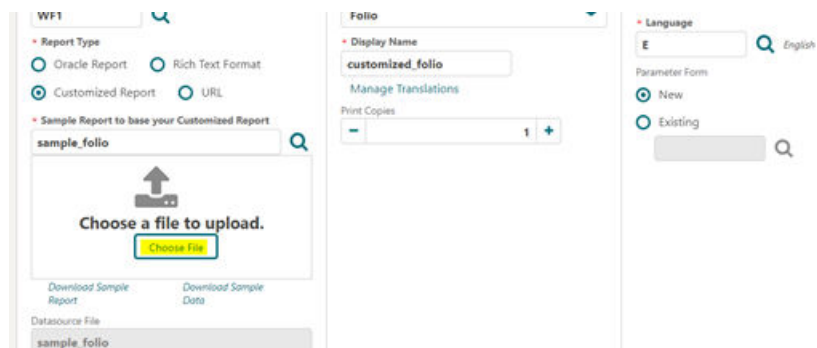

- h. Customize the template as needed . For more information, see [Using Stationery Editor](#).
- i. Save the RTF file and close Microsoft Word.
- j. In OPERA Cloud (Create Report), upload the customized RTF file by clicking **Choose File** and then select the file from the workstation location and click **Open**.

 **Note:**

Templates must be less than 10MB in size.

Figure 9-17 Choose File

Once uploaded, the file display name in the **Display Name** field automatically updates to the uploaded .rtf file's name.

Figure 9-18 Display Name matches the uploaded .rtf file's name

- k. **Print Copies:** Enter the number based on your requirements (for example, enter 1 or 2).
- l. **Language:** Select the language of the template. When the multi-language OPERA Control is active you must configure an entry for each profile language so OPERA Cloud knows which template to generate for each language.
- m. **Parameter Form:** This step is not applicable for PMS stationery templates. For Simple Diary and Sales and Event Management stationery such as the Banquet Event Order and Sales Contract a parameter form is required. For more information, see [Blocks and Groups Reports](#).
- n. Click **Save**.

Installing Oracle BI Publisher Desktop on a Workstation

Installation Procedure

Verifying the Certified Versions of Oracle BI Publisher Desktop.

Download Oracle BI Publisher Desktop from the [Oracle Analytics Publisher](#) site. Choose the Oracle BI Publisher Desktop installer according to your version of Microsoft Office : 32 bit or 64 bit.

The following versions of Microsoft Word are certified for Oracle BI Publisher Desktop 12.2.1.4.0

- Microsoft Office 2021 (Microsoft 365)
- Microsoft Office 2019 (Microsoft 365)
- Microsoft Office 2016

Installing Oracle BI Publisher Desktop

Note:

If a previous version of Oracle BI Publisher Desktop is installed it must be uninstalled prior to the installation of new version. See Uninstalling Oracle BI Publisher Desktop. A user with admin rights must perform the Oracle BI Publisher Desktop installation on a workstation.

Note:

The Oracle BI Publisher Desktop installer must configure some Microsoft Word components, if you launch Microsoft Word during this process, the installation fails.

Note:

Close all Microsoft Office products prior to running the installation. This includes not only Microsoft Word but also Outlook or any software that uses Microsoft Word as a text editor.

The following procedure describes the steps for installing Oracle BI Publisher Desktop for Microsoft Office 365 (32-bit) on a Microsoft Windows 10 machine with JRE 1.8 (32-bit).

1. From Windows explorer, right-click on the **Oracle BI Publisher Desktop** installer executable and choose **Run as Administrator**.
2. You are prompted to choose a language. Click the list to select the setup language for this installation and then click **OK** to continue.
3. Click **OK** to begin the Oracle BI Publisher Desktop - InstallShield Wizard process.
4. A Welcome screen appears, click **Next** to continue.
5. Click **Browse** and choose the desired folder to install Oracle BI Publisher Desktop, then click **Next** to run the setup.
6. Click **Finish**.

Post Installation Steps

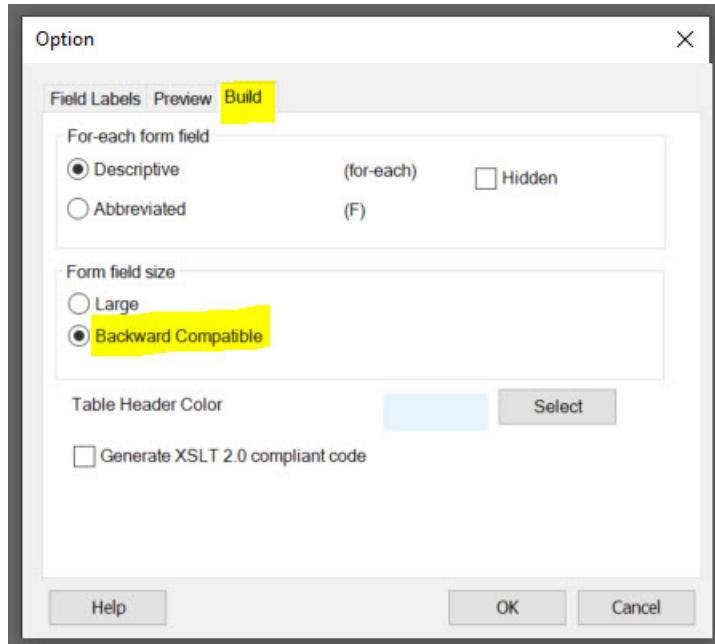

1. Launch Microsoft Word.
2. Click the **BI Publisher** tab in your Microsoft Word toolbar and select **Options**. An Option screen appears.
3. See figure, BI Publisher Tab.

Figure 9-19 BI Publisher Tab

4. Click the **Build** tab and select the **Backward Compatible** option.

Figure 9-20 Option screen

5. See figure, Option screen.
6. Click **OK** to close the screen.

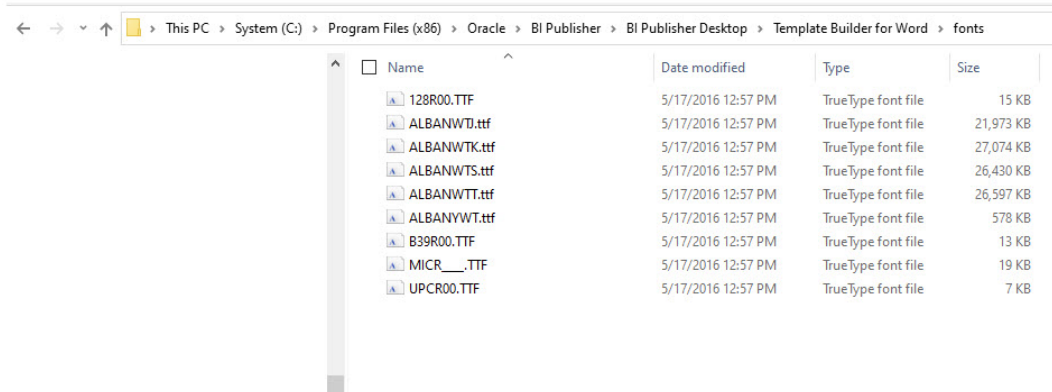

Barcode Fonts

There are several fonts that output barcodes included with BI Publisher. The following table describes the barcodes that are included with BI Publisher.

Font File	Supported Algorithm
128R00.TTF	code128a, code128b, and code128c
B39R00.TTF	code39, code39mod43
UPCR00.TTF	upca, upce

Installing Barcode Fonts

1. Launch File Explorer.
2. Navigate to x:\Program Files (x86)\Oracle\BI Publisher\BI Publisher Desktop\Template Builder for Word \ fonts.
3. Select the font file, then right-click and select **Install for all Users** (requires Administrator authority).

Uninstalling Oracle BI Publisher Desktop

1. Uninstall the Oracle BI Publisher / Analytics Publisher from the Microsoft Windows Control Panel, Add or Remove Programs option.
2. Go to the installation folder (for example, C:\Program Files\Oracle) and verify the BI Publisher directory is removed. Delete this folder if it still exists.
3. Open **Microsoft Word** and verify the **BI Publisher** tab no longer appears.
4. Shut down and restart your workstation before reinstalling Oracle BI Publisher Desktop.

Report Descriptions

The following contains short descriptions of reports categorized by their report group.

Accounts Receivable Reports

Accounts Receivable Report by Activity Type (aractivity) - displays all accounts receivable accounts for a specified date range.

Aging by Type Only (aragetype) - displays all accounts receivable accounts with an outstanding balance for the selected account type.

Aging Summary By Type (araging) - displays the current outstanding balance of each account type as of the business date selected.

Aging Summary of All Accounts (aragingdet/aragingdetail) - displays all accounts receivable accounts that have an outstanding balance or activity on the account.

Accounts Receivable Activity - All Types (aractivity) - displays a log of all postings and payments made on an accounts receivable account for a particular date.

Accounts Receivable Adjustments (aradjustments) - displays adjustments that have been made to a posting from a previous business date (that is, posted and audited). Adjustments involve reversal of the original transaction (or group of transactions) and re-posting the correct transactions. Adjustments can be made to a single transaction or to multiple related transactions.

Accounts Receivable Aging Summary for All Types (arallagetype) - displays all account types and the corresponding accounts that fall under each account type.

Accounts Receivable Apply/Unapply Payments (ar_payments_tracking) - provides a report of applied and unapplied payments for a specified date range, accounts, and payment methods.

Accounts Receivable Collection Statistics (ar_collectionstat) - displays accounts with invoices paid in full or the balance is equal to 0.00. The report calculates how many days it took to bring any invoice balances to 0.00 from the date the record was transferred to accounts receivable.

Accounts Receivable Credit Balance (arcreditbal) - displays all accounts that have or had a credit balance on a selected business date. A credit balance is defined as the respective account having a credit on their account, rather than owing monies to the property (a debit).

Accounts Receivable Credit Card Transfer (arcctransfer) - displays all transactions transferred from front office to accounts receivable to completely settle a guest folio.

Accounts Receivable Credit Limit (ar_balance) - displays a summarized alphabetic listing of all accounts with their balances for the current business date.

Accounts Receivable Detailed Aging (aragingdet/aragingdetail) - displays all account invoice details per accounts receivable account. This report lists each invoice, transaction or folio that contributes to the current balance of each individual accounts receivable account. The information displays the invoice balance for each line item in the appropriate aging level.

Accounts Receivable Ledger (arledger) - displays all transactions that have been posted directly on an accounts receivable account or transferred to an accounts receivable account for a selected business date. Print this report to verify that all transactions balance back to the accounts receivable ledger portion of the trial balance.

Accounts Receivable Master List Detail (ardirectdet) - displays a list of all configured accounts receivable accounts and a more detailed breakdown of the account setup. The information includes account status, permanent account Y/N, credit limit, batch statement Y/N, as well as more basic account information such as account number and name, address, contact, and phone number.

Accounts Receivable Master List Summary (ardirect) - displays a list of all configured accounts receivable accounts with basic account information. This will include the account number, account name, address, contact information, and the telephone and fax numbers configured in the Accounts Receivable setup.

Accounts Receivable Payments / City Ledger Settlements Summary (arpayments) - displays all payments posted to an accounts receivable account for a specific date.

Accounts Receivable Trace (artraces) - displays messages that notify the accounting department staff of actions they are expected to take.

Accounts Receivable Transfer Report (artransfer) - displays all transactions transferred from front office to accounts receivable to completely settle a guest folio. Details of the folio are completely reclassified as part of the accounts receivable ledger.

Accounts Receivable Unpaid Invoices (ar_unpaid) - displays a list of all unpaid invoices when the Delay Days Report and Payment Due Days OPERA Controls are active based on **Calculate Based on Payment Due Days** check box.

Days Credit Sales Outstanding (days_credit_sales_outstanding) - calculates the total accounts receivables outstanding (non-credit card) for the current business date. The report then subtracts daily balances from the outstanding until it reaches 0. The number of days it takes to reach 0 is displayed at the bottom of the report and represents the total days sales outstanding.

Accounts Receivable Aging Summary for All Types (arallagetype)

Accounts Receivable Aging Summary for All Types (arallagetype) report displays all account types and the corresponding accounts that fall under each account type.

Activity Reports

Prerequisites for Activity Report

Activity Report (rep_activity_rep with rep_activity.fmx) - This report is another version of the Call Report. It displays slightly less information on the linked entities like bookings, but has instead many additional filter options. One important difference is though, that the main sort order of the report is always by account.

Activity Summary Matrix Report (rep_srep_act_summary with rep_srep_act_summary.fmx) - The Activity Summary Matrix Report is a Matrix-style report that summarizes Sales and Event Activities by type and owner. This report prints a summary of all activities for a selected date range by type, and can be printed for activities based on their completion status or for all activities.

Activity Report (rep_activity_rep with rep_activity.fmx)

This report prints To Do's and Activities. You can run the report for the past, present, and future, or spanning from the past to the future. It is ideal for a recap of all activities performed for the past week or months.

When printed for a specific Account rather than for a specific sales manager, the report also provides a great way of showing the total activity history of the account. For example, it is possible to see that the account had been contacted regularly every six weeks in the first two years in the system, but then started to be called only seldom and randomly when another sales manager took over the account. Therefore, production has gone down. If a manager/director of sales reviewed this report for key accounts on a regular basis, potential problems with certain accounts might be prevented.

SELECTION CRITERIA

Property. Select the property for which the report should be printed.

Activity Filter. This option allows you to print the report by any predefined filters that have been created for the activity module. It also gives the user the option to create a new filter directly from the report order form, which will subsequently also be accessible from the Activity Search screen.

Account Name. Select to filter this report by account name.

Contact Name. Select to filter this report by contact name.

Bus. Block Name. Select to filter this report by Business Block name.

Activity Owner. Select to filter this report by activity owner.

Activity Name. Select to filter this report by specific activities.

Activity Type. Select to filter this report by activity type.

Activity Class. Select to filter this report by activity class.

Purpose. Free form field to filter for a specific activity purpose.

Activity Result. This filter is only visible when this report is run from SFA and when the application parameter ACTIVITY > ACTIVITY RESULTS is set to Y. Use the down arrow to select Activity Results from the LOV.

Activity Date Range From/To. Select a date range between which activities exist.

Note:

The date and time information related to activities is converted to your logged-in time zone; if no time zone is specified for the logged-in user, the logged-in property time zone is assumed; if the logged-in property does not have a time zone assigned, the database time zone is assumed. See Activity Time Zones for details.

Group By. Allows to sort and group the report by either Account, Sales Manager, or Date. This report always considers a group by Account.

 **Note:**

When no Group by is selected, the Activities are sorted by Start Date and Time and there is no grouping by Account.

When Account is selected, the first group by is alpha by Account Name, then alpha by Contact Last Name, and then the Activities are sorted by Activity Start Date. When Owner is selected, the first group by is alpha by Account Owner Code, then alpha by Account Name, then alpha by Contact Last Name and then the Activities are sorted by Activity Start Date. When Date is selected the first group by is Activity Start Date, then alpha by Account Name and then alpha by Contact Last Name with the activities listed below.

For each group by, the Account/Contact is listed in alphabetical order first by Account then by Contact Last Name. When no Contact is attached to the Account, that Account will be displayed last, alphabetically in the account grouping.

Example:

- ABC Account / ABC Contact
- ABC Account / XYZ Contact
- ABC Account / No Contact

If there is an activity with no account included on this report, those activities are listed alphabetically by Contact after the activities with Accounts have been reported.

Page Break. This flag works together with the Group by option. A page break will occur after each member of the selected group, i.e., after each account, if Account has been selected as the Group By filter, or after each sales manager if Owner has been selected in the Group By filter.

Display Address. If this check box is selected, the addresses for linked accounts and contacts are printed on the report (including Address1, Address2, Address3, and Address4). If it is not selected, only the account and contact names and phone numbers print.

Completed (Yes/No/Both). Select to view completed, incomplete or all activities.

Display (Activities/To Do Only/Both). Select to display activities only, to do only or both.

Notes (All/Limited/None). If limited is selected only the first 100 characters of each activity note will print on the report instead of the whole note text if it is longer.

REPORT DATA

The report displays all Activities and To Do's that fall within the selected criteria. Activities are always grouped by Accounts, either as the primary or secondary group, and depend on the value selected in the Group By filter. For example, it is not possible to switch this report to print in pure date order, irrespective of the accounts these activities are linked to. When group by Owner is selected, the activities are first grouped by Owner Code and then by Account / Contact within that owner code.

Account and Contact names and phone numbers are printed in the header line of each group. If the Display Address flag is checked, the appropriate account and contact addresses print in this header line.

For each activity that exists in the selected time frame for this account, the activity owner, start date, start time and end time, the activity type code, the activity purpose, and the booking name of the linked booking id (if any) will print. Activity Notes are printed below the initial activity record if any exist, depending on the selection made on the filter to print either full notes, notes limited to 100 characters, or no notes at all.

Activity Summary Matrix Report (rep_srep_act_summary with rep_srep_act_summary.fmx)

The Activity Summary Matrix Report summarizes catering activities by type and owner. The report prints a summary of all activities for a selected date range by type, and can be printed for activities based on their completion status or for all activities.

Report General Conditions

- The report parameter form is named **REP_SREP_ACT_SUMMARY**.

Fields

1. **Property:** Select the property from the multi select list field.
2. **Activity Type:** A mandatory field. Use this option to select one, multiple, or all available activity types (up to 14) to print on this report.
3. **Activity From Date :** Filter the report by selecting an Activity From date range.
4. **Activity To Date:** Filter this report by selecting an activity To date range for this report.
5. **Owner:** Select the Owner or multiple Owners for which the report should print.
6. **Purpose:** This field accepts free-form text entry and wildcards.
7. **Activity Result:** Use the multi select list.
8. **Completed:** Select Yes, No, or Both. Select include or exclude activities that are either completed, not completed or both.

Report Data

The report prints in the following order: Owner Code, Sales Manager, and all selected activity types. The final column contains totals for all the selected activities for each sales rep. The final row of the matrix contains totals for each selected activity type and a grand total of all activities by owner in the last column.

Arrivals Reports

- **Arrivals and Checked In Today** (arrckinbyroom) — lists all expected arrival and reservations checked in today.
- **Arrivals with Scheduled Activities** (resarr_activities) — displays reservations with scheduled activities and allows you to group the output by arrival date, activity type, or block code.
- **Arrivals: Detailed** (res_detail) — provides a detailed list of all arrival reservations for the selected date range and various other filter options. When the Preregistration Check In OPERA Control is active use this report to list [preregistered arrivals](#). Report can be sorted by Name, Room, Reservation Type, ETA and other attributes.
- **Membership Pre-Check** (arrprecheckinmem) — displays reservations that have not yet checked in, and have active membership attached to the reservation.
- **Police** (police_report) — generated daily for all reservations that have a check in date equal to the business date. The report will display the sequence number, first name, last name, passport number, nationality, mother's name, father's name, place of birth, arrival date, and departure date.
- **Routing Details** (routing_details) — shows all reservations with a room, window or comp routing instructions. This report can be run for arrival, in-house, or both block and individual reservations. A range of dates can be selected for reservations that are either arriving, checked in, checking out, or are already checked out. The Date Range can be filtered by Arrival Dates or Stay Dates.

Gaming

For comp routing, the report displays the dates of the reservation, the authorizer, dates of the comps, and any notes attached to the comp. Room routings will display the dates of the room routing, the room number, and name on the reservation. Window routing will display the window number and the person responsible for payment of the routing. (Available when the Routing Instructions OPERA Control is active).

Arrivals: Detailed Report (res_detail)

The **Arrivals: Detailed** Report (res_detail) provides a detailed list of all arrival reservations for the selected date range and various other filter options. When the Preregistration Check In OPERA Control is active use this report to list [preregistered arrivals](#). Report can be sorted by Name, Room, Reservation Type, ETA and other attributes.

Blocks and Groups Reports

Prerequisites for Blocks and Groups Reports

Banquet Event Order - 1 Column (sample_beo_1column.rep) – contains vital information about the catering portion of a business block broken down into events and resources in a 1-column format.

Banquet Event Order - 2 Column (sample_beo_2column.rep) – contains vital information about the catering portion of a business block broken down into events and resources in a 2-column format.

Banquet Event Order - 2 Column FB (Food and Beverage) (sample_beo_2column_fb.rep) – contains vital information about the catering portion of a business block broken down into events and resources.

Blocks by Cutoff Date (resblockbycutoffdate) – can be used by reservations or sales staff to determine which dates specific blocks will be cut off.

Block Information (resblkinfo) – displays a detailed breakdown of a block header and room grid for a specified date range.

Block Short Listing Report (rep_bh_short) – displays details for a list of business blocks and is useful to follow up on group booking decision dates, cutoff dates or to provide a list of business blocks due to arrive in the coming weeks or months. Report parameters has multiple filter combinations and sort options.

Block Traces (resblktraces) – displays trace text and the due date for a block.

Business Block Change Log (rep_bookchglog.rep with rep_bookchglog.fmx).

Business Block Lead Time Report (rep_block_leadtime). Use to display multiple statuses (by date) and revenue types for Business Block bookings.

Business Block Total Spend Report (rep_busblock_spend.rep) – displays the total group spend by including all revenues posted to any reservations linked to the block.

Daily Forecast (rep_daily_forecast.rep) – can print room nights, room revenue, and catering revenue on a daily basis per booking. This report incorporates the option to print catering revenues as net or gross depending on the Catering Revenue Price Type OPERA Control.

Forecast/Availability Book (rep_rooms.rep with rep_rooms.fmx). The Rooms Availability and Forecast report parameter screen provides options for printing the Rooms Availability report as well as the rooms forecast report. When combined, these two reports form a unit that presents a picture of the on-the-books group business for the coming months compared to targets and budgets.

Group Departure By Room (grpdepbyroom) – displays all the reservations in house that have a group profile attached.

Group In House by Room (grpinhousebyroom) – displays all in-house reservations with a group profile attached, sorted by room number.

Group Pickup (grppickup) – provides a breakdown for all existing and future blocks.

Group Rooming List (grprmlist) – provides a list of all reservations associated with a specific block for the date range selected.

Quote Report (sample_sc_quote) – a customizable stationery template for producing a quote detailing the accommodation, PMS packages for city tax and/or breakfast packages, catering packages, events, and event resources.

Banquet Event Order – 1 Column(SAMPLE_BEO_1COLUMN.REP with REP_BEO_1COLUMN.FMX)

The Banquet Event Order 1 report is a comprehensive document that contains all the vital information about the catering portion of a business block broken down into events and resources. It is an ideal tool for communicating with customers and various hotel internal departments to ensure that all customer requirements regarding the events are met and prepared per agreement and contract.

The report is one of several sample BEO (Banquet Event Orders) that you can customize during installation of the system to be further tailored to the hotel's specific requirements.

Note:

When selecting the email method for printing Banquet Event Orders from the main Reports screen, the document attached to the email is renamed to the report name with the Block ID appended to it. For example, in the case of a BEO named BEO 1 Column, the output would be renamed as BEO 1 Column - 795547.pdf.

The Property list of values in this report is limited by the properties to which the user has the appropriate access granted.

You can customize this report using the Stationery Editor. The following Selection Criteria fields are available when using the [Stationery Editor](#).

Selection Criteria

1. **Property.** Select the property for which the report should be printed. The BEO can be ordered across multiple properties in a multi-property environment. This is useful if a booking has its event distributed over several properties.
2. **Report Type.** Customized Report.
3. **Sample Report to base your Customized Report.** Select Sample_beo_1column. Once selected, the links to Download Sample Report and Download Sample Data will be displayed allowing for the templates to be downloaded and modified. The sample data file will allow users to preview the changes without having to upload the report into the application. The modified file can be uploaded through the Choose File option.

 **Note:**

You must rename the file without using the word “sample.”

4. **Datasource File.** This read only field is populated automatically based on the report selection.
5. **Report Group.** Select the group from the list. It is recommend that you load the report in the Group Stationery report group.
6. **Display Name.** Enter the report name.
7. **Print Copies.** Enter the number of copies to print.
8. **Protected.** Prevents users from editing the report.
9. **Language.** Determines the language in which the report prints.
10. **Parameter Form.** Select the Sample BEO 1 Column parameter form.

Report Parameters

When creating or editing the report, you can set default values for these parameters.

1. **Event Date From/Event Date To.** Allows you to select the event from and to dates.
2. **Block Arrival Date From/Arrival Date To.** Allows the selection of the block from and to dates.
3. **Business Block.** Select one or several specific business blocks for printing the BEO report.
4. **Event.** Select one or several events for printing the BEO.
5. **Event Status.** Select event statuses. Typically, return-to-inventory statuses, like lost and canceled statuses, would be excluded.
6. **Event Type.** Select or several event types to print the BEO.
7. **Space.** Select one or several function spaces in which the events are taking place.
8. **Item Class.** Allow you to select the resource item classes that should be printed. Depending on whether the BEO is printed for internal use or to send to the customer, your selections here could be different. For example, there might be

item classes that are necessary to print for internal use, like furniture and linen requirements, but not necessary to print on the copy you send to the customer.

9. **Block Note Type.** Allows you to select business block note types to be printed on the BEO. This parameter works in conjunction with the internal and external notes flag on the first tab. Even if note types have been selected, if neither internal nor external are flagged, no notes would print. Not all business block notes might be relevant to print on the BEO.
10. **Cover Letter Note Type.** A portion of the cover letter can be made up from business block notes, which make the letter more flexible and allows for custom texts per customer without having to change the text that is embedded in the report. Enter the note type to print on the cover letter.
11. **Sort By.** Allows the ordering of events by one of these four predefined sort orders:
 - a. Event Date + Booking Name + Event Time
 - b. Event Date + Event Time + Booking Name
 - c. Booking Name + Event Date + Event Time
 - d. Booking Name + Master Event Date + Master Event Time
12. **Address Type.** Allows you to select an address type other than the primary address. This provides the option to print an extended byte address onto the BEO if one is attached to the account or contact, even if it is not the primary address. Any address type can be chosen. If the field is left blank or the selected address type does not exist for the current customer, the primary address will print instead.
13. **Address Format.** Allows you to select address formats different from the standard format. This is useful in an international environment where addresses might have different formats from country to country. For example, when sending a BEO to Europe, the address format might have the zip code before the city name and no state printed at all. The list of values shows all configured catering address formats. If the field is left blank, the address prints the default format.
14. **Print Address of.** This option determines what address to print as part of the header. This can either be set to print the account address or the contact's address.
15. **Print Account.** The Print Account defaults to the Account marked as PT for the Business Block from the Name Select screen. If a different Account should be printed on the BEO, select the Print Account ellipsis and click the PT column to select another Account already linked to the business block.
16. **Print Contact.** Print Contact defaults to the Contact marked as PT for the Business Block from the Name Select screen. If a different Contact should be printed on the BEO, select the Print Contact ellipsis to select another Contact already linked to the business block.

 **Note:**

When the BEO is printed for more than one booking, the Print Account and Print Contact are pulled by default. No option is provided to select a different Account or Contact for Printing. If no Print Account or Print Contact is selected for a booking, the default hierarchy is used. Additionally, when no relationship exists between the Print Account and the Print Contact, the Print Contact appears red.

17. **Event Printing Method.** The possible selections are one event per page, Master and Sub per page, Prints events continuously.

18. **Revenue Summary.** The possible options are Internal, External, or None. The External and Internal options print a revenue summary at the end of the BEO before the general conditions. External summarizes non-package revenues by date, and catering packages as one price per delegate without breaking it down into its component revenue types. Internal summarizes non-package revenues by revenue type per date and non-package revenue by event and revenue type per date. Selecting None suppresses the Revenue Summary completely.
19. **Print Deposit.** If checked, deposit information prints on the BEO. If not checked, that information is suppressed.
20. **Sort Deposit.** Deposits can print sorted by type or by due date. If type is selected a sub-total for each type prints as well as a general total.
21. **Print Internal/External Notes.** Specify whether notes should print on the BEO and if so, select from notes that are marked as Internal, External, or both. Typically, only external notes would be selected if the BEO is printed to be sent to a customer and either only internal, or internal and external, if the BEO is printed for use as inter-departmental communication tool.
22. **Suppress Account Name.** This suppresses any reference to an account on the BEO header and in the signature. This is typically done for “social” BEOs that are organized privately by individuals that are not associated with any account, for example, weddings, birthday parties, and so on.
23. **Suppress Signature.** Select this option to suppress the Signature field at the end of each BEO.
24. **Hide Doorcard.** This suppresses printing the Post As references on the event itinerary.
25. **Print Package Name for Multiple Days.** If a Business Block has a Catering Package that spans multiple days, checking this flag makes the package header information print on each date that has a Package Event. If the flag left deselected, the package header information print only on the first day of Package Events.
26. **Exclude Alternate Events.** When the application function Catering > Alternate Space is set to Y, the Exclude Alternate Events check box is visible. When selected, Alternate Events do not print on this report.
27. **Print Extended Characters.** If secondary account and contact names are entered into the system using the globe button on the appropriate fields (only available if the application function General > Alternate Name is active), the report procedure scans those secondary fields when printing account and contact information; if an entry is found, it returns that entry instead of the primary name. If the appropriate fields are empty, the regular names print. This functionality is primarily added for extended byte handling in the Asia- Pacific region.
28. **Reset Page Numbering.** Select this option to reset the page numbering when printing multiple BEOs. If unchecked, the pages are numbered based on the total number of pages in the BEO batch. If checked, the page numbers are reset with each new agenda.
29. **Print General Conditions.** General conditions and terms of contract can be added as text pages after the body of the BEO. They would have been tailored to the hotel on installation. Typically, the general conditions would only be printed if the BEO is sent out to customers.

 **Note:**

When generating the BEO a Block ID is required in order to select Print General Conditions. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

30. **Print Cover Letter.** Prints a cover page. The text of that page is customized to the hotel and can be individualized using business block notes. Typically, this cover page would only be printed if the BEO is sent out to customers. When generating the BEO by Block ID, you can select the option to print the Room Grid.

 **Note:**

When generating the BEO a Block ID is required in order to select Print Cover Letter. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

31. **Print Room Grid.** Prints the Room Grid. Once selected, additional parameters will be enabled to control how the room and rate information appears within the grid.

 **Note:**

When generating the BEO a Block ID is required in order to select Print Room Grid. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and disabled for all fields related to the room grid.

32. **Grid Type.** Allows you to determine which grid type will print on the BEO. The possible options are Contract (available when the OPERA Control for Contract Grid is active, Current, or Pickup).
33. **Revenue Values.** Select an option from the list below to determine how the rates amounts are displayed in the grid. For more information, see: [Contract Merge Report, Revenue Values Calculation Examples](#)
- a. **Gross Rates/Revenue.** Gross Room Rate is calculated as:
 - i. Included generates are not deducted.
 - ii. Excluded generates are added.
 - iii. Excluded packages are not added. Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
 - b. **Net Rates/Revenue.** Net Room Rate is calculated as:
 - i. Included generates are deducted.
 - ii. Excluded generates are not added.
 - iii. Included packages stay included.
 - iv. Included generates on included or excluded packages are calculated out. Net Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.

- c. **Gross and Net Rates/Revenue.** When this option is selected, both the Gross and Net room rates are reported and displayed.
- 34. **Rooms with Rate and No Inventory.** When selected, room types where no inventory has been booked are included.
- 35. **PMS Room Type.** If selected, PMS room types output on the BEO instead of the Room Pools. If the Room Pools OPERA Control is not active and room pools are not configured for the property, the PMS room types will print by default. For more information, see: [Configuring Room Pools](#)
- 36. **Occupancy.** If selected, the number of rooms per occupancy level per day is included on the report when the Occupancy Split OPERA Control is activated. If not selected, the total number of rooms per day per room type per day is output.
- 37. **Room Rates.** Select to display room rates, otherwise, Room and Rates Separately, Inline Currency, and Show Decimals are disabled.
- 38. **Room and Rate Separately.** If selected, room nights and room rates are included in separate grids. If not selected, they appear in the same grid. This option is available only when both the Rate and the Occupancy flags are selected.
- 39. **Inline Currency.** Enabled when Room Rates is selected. If selected, the currency symbol is included with the rate in the grid cells in the Room Grid.
- 40. **Show Decimals.** Enabled when Room Rates is selected. If selected, the rates in the Room Grid with decimals appears as set up in the Property Details. If not selected, the rounded rate displays without decimals.
- 41. **Print Space Between Currency and Amount.** Select the check box to print in the report (available when Room Rates and Inline Currency are selected). When selected, a space will be added between the currency symbol/code and the rate amounts displayed in the grid.
- 42. **Currency.** Available when the application function Rates > Foreign Currency Handling is active, this selection allows the conversion of foreign currency to a property's base or catering currency when the foreign currency has a defined exchange rate for posting.
- 43. **Exchange Rate Date.** If selected, enter a date or use the calendar tool to select the effective date of the exchange rate for the specified currency. The prices in the BEO are calculated using the exchange rate for the specified currency as it was on that date.
- 44. **Creation Date.** If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the booking creation date.
- 45. **Distributed Date.** If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the date the distributed flag was checked.

Report Data

Rather than detailing every piece of data that can appear on the BEO, the following paragraphs describe specific behavior you should note:

The 1 Column BEO layout prints with the Food, Beverage and Item Class in a single column. The Item Class will print in order based on the sequence assigned to the Item Class in configuration.

The sections of the BEO if printed continuously are:

Header > Catering package information > Event Itinerary for all events of the current block > Food Section for all events of the current booking, in date and time order > Beverage Service for all events of the current booking in date and time order, > Resources, in resource class sequence order. Within each resource class, the resources are listed in event time order. In all sections, the function space and the event time identify to which event of the itinerary the appropriate resources belong.

The sections of the BEO if printed as Master/Sub or One Event per Page:

Header > Catering Package information > Basic event information for the current event only including start and end time, event name, function space name, set-up style, and function space rate plus rate amount > food section for the current event > beverage section for the current event > resource section for the current event in resource sequence order. Page break and repeat for all subsequent events.

In order to select to print the Cover Letter, General Conditions, and/or Room Grid, the Block ID field must be populated with a single value. If the report is accessed from a block and the Block ID is passed, the default values for Print Cover Letter, Print General Conditions, and Print Room Grid section appear. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default values are cleared. The Booking Type field on the BEO header takes its contents from the Booking Type field (visible when OPERA Control for Business Block Type is active).

A text message that prints at the end of the BEO just before the signature section can be created or amended in Report Text Configuration in the Administration menu using the field, SC_BEO_BOTTOM_TEXT_[PropertyCode], for the selected resort. This message typically contains information on tax and service charge levels that apply to the items listed on the BEO.

The Date Last Printed field prints at the very end of the BEO just below the Organization Authorized Signature field for each event printed or at the end of each event if more than one event per business block exists. This field displays the last date the events for this booking was printed. For Example, if Event #1 is printed on 4/10/xx but Event #2 has never been printed: when Event #2 is printed, it will read "Date Last Printed 4/10/xx" because that is the last date a BEO for this booking was printed.

Banquet Event Order – 2 Column (SAMPLE_BEO_2COLUMN.REP)

The Banquet Event Order 2 report is a comprehensive document that contains all the vital information about the catering portion of a business block broken down into events and resources. It is an ideal tool to use for communicating with customers and various hotel internal departments to ensure that all customer requirements regarding the events are met and prepared per agreement and contract.

The report is one of several sample BEO (Banquet Event Orders) that you can customize during installation of the system to be further tailored to the hotel's specific requirements.

Note:

When selecting the email method for printing Banquet Event Orders from the main Reports screen, the document attached to the email is renamed to the report name with the Block ID appended to it. For example, in the case of a BEO named BEO 2 Column, the output would be renamed as BEO 2 Column - 795547.pdf.

You can customize this report using the Stationery Editor. The following Selection Criteria fields are available when using the [Stationery Editor](#).

Selection Criteria

1. **Property.** Select the property for which the report should be printed. The BEO can be ordered across multiple properties in a multi-property environment. This is useful if a booking has its event distributed over several properties.
2. **Report Type.** Customized Report.
3. **Sample Report to base your Customized Report.** Select Sample_beo_2column. Once selected, the links to Download Sample Report and Download Sample Data appear, allowing the templates to be downloaded and modified. The sample data file allows you to preview the changes without having to upload the report into the application. The modified file can be uploaded through the Choose File option.

 **Note:**

You must rename the file without using the word “sample.”

4. **Datasource File.** Read Only field that will populate automatically based on the report selection.
5. **Report Group.** Select the group from the list. It is recommend that you load the report in the Group Stationery report group.
6. **Display Name.** Enter the report name.
7. **Print Copies.** Enter the number of copies to print.
8. **Protected.** Prevents users from editing the report.
9. **Language.** Determines the language in which the report prints.
10. **Parameter Form.** Select the Sample BEO 2 Column parameter form.

Report Parameters

When creating or editing the report, you can set default values for these parameters.

1. **Event Date From/Event Date To.** Allows the selection of the event from and to dates.
2. **Block Arrival Date From/Arrival Date To.** Allows the selection of the block from and to dates.
3. **Business Block.** Select one or several specific business blocks for printing the BEO report.
4. **Event.** Select one or several events for printing the BEO.
5. **Event Status.** Select event statuses. Typically, return-to-inventory statuses, like lost and canceled statuses, would be excluded.
6. **Event Type.** Select one or several event types to print the BEO.
7. **Space.** Select one or several function spaces in which the events are taking place.
8. **Left Column Item Class.** Allows the selection of resource item classes that should print on the left hand side of this two column event order. Depending on whether the BEO is printed for internal use or for the customer, the selection here

could be different. For example, there might be item classes needed for internal use, like furniture and linen requirements, but that would not be necessary to print on the copy that is sent to the customer.

9. **Right Column Item Class.** Allows the selection of resource item classes that should print on the right hand side of this two column event order.
10. **Block Note Type.** Allows you to select business block note types to be printed on the BEO. This parameter works in conjunction with the internal and external notes flag on the first tab. Even if note types have been selected, if neither internal nor external are flagged, no notes would print. Not all business block notes might be relevant to print on the BEO.
11. **Cover Letter Note Type.** A portion of the cover letter can be made up from business block notes, which make the letter more flexible and allows for custom texts per customer without having to change the text that is embedded in the report. Enter the note type to print on the cover letter.
12. **Sort By.** Allows the ordering of events by one of these four predefined sort orders:
 - a. Event Date + Booking Name + Event Time
 - b. Event Date + Event Time + Booking Name
 - c. Booking Name + Event Date + Event Time
 - d. Booking Name + Master Event Date + Master Event Time
13. **Address Type.** Allows you to select an address type other than the primary address. This provides the option to print an extended byte address onto the BEO if one is attached to the account or contact, even if it is not the primary address. Any address type can be chosen. If the field is left blank or the selected address type does not exist for the current customer, the primary address will print instead.
14. **Address Format.** Allows you to select address formats different from the standard format. This is useful in an international environment where addresses might have different formats from country to country. For example, when sending a BEO to Europe, the address format might have the zip code before the city name and no state printed at all. The list of values shows all configured catering address formats. If the field is left blank, the address prints the default format.
15. **Print Address of.** This option determines what address to print as part of the header. This can either be set to print the account address or the contact's address.
16. **Print Account.** The Print Account defaults to the Account marked as PT for the Business Block from the Name Select screen. If a different Account should be printed on the BEO, select the Print Account ellipsis and click the PT column to select another Account already linked to the business block.
17. **Print Contact.** Print Contact defaults to the Contact marked as PT for the Business Block from the Name Select screen. If a different Contact should be printed on the BEO, select the Print Contact ellipsis to select another Contact already linked to the business block.

 **Note:**

When the BEO is printed for more than one booking, the Print Account and Print Contact are pulled by default. No option is provided to select a different Account or Contact for Printing. If no Print Account or Print Contact is selected for a booking, the default hierarchy is used. Additionally, when no relationship exists between the Print Account and the Print Contact, the Print Contact appears red.

18. **Event Printing Method.** The possible selections are one event per page, Master and Sub per page, Prints events continuously.
19. **Revenue Summary.** The possible options are Internal, External, or None. The External and Internal options print a revenue summary at the end of the BEO before the general conditions. External summarizes non-package revenues by date, and catering packages as one price per delegate without breaking it down into its component revenue types. Internal summarizes non-package revenues by revenue type per date and non-package revenue by event and revenue type per date. Selecting None suppresses the Revenue Summary completely.
20. **Print Deposit.** If checked, deposit information prints on the BEO. If not checked, that information is suppressed.
21. **Sort Deposit.** Deposits can print sorted by type or by due date. If type is selected a sub-total for each type prints as well as a general total.
22. **Print Internal/External Notes.** Specify whether notes should print on the BEO and if so, select from notes that are marked as Internal, External, or both. Typically, only external notes would be selected if the BEO is printed to be sent to a customer and either only internal, or internal and external, if the BEO is printed for use as inter-departmental communication tool.
23. **Suppress Account Name.** This suppresses any reference to an account on the BEO header and in the signature. This is typically done for "social" BEOs that are organized privately by individuals that are not associated with any account, for example, weddings, birthday parties, and so on.
24. **Suppress Signature.** Select this option to suppress the Signature field at the end of each BEO.
25. **Hide Doorcard.** This suppresses printing the Post As references on the event itinerary.
26. **Print Package Name for Multiple Days.** If a Business Block has a Catering Package that spans multiple days, checking this flag makes the package header information print on each date that has a Package Event. If the flag left deselected, the package header information print only on the first day of Package Events.
27. **Exclude Alternate Events.** When the application function Catering > Alternate Space is set to Y, the Exclude Alternate Events check box is visible. When selected, Alternate Events do not print on this report.
28. **Print Extended Characters.** If secondary account and contact names are entered into the system using the globe button on the appropriate fields (only available if the application function General > Alternate Name is active), the report procedure scans those secondary fields when printing account and contact information; if an entry is found, it returns that entry instead of the primary name. If the appropriate fields are empty, the regular names print. This functionality is primarily added for extended byte handling in the Asia- Pacific region.

29. **Reset Page Numbering.** Select this option to reset the page numbering when printing multiple BEOs. If unchecked, the pages are numbered based on the total number of pages in the BEO batch. If checked, the page numbers are reset with each new agenda.
30. **Print General Conditions.** General conditions and terms of contract can be added as text pages after the body of the BEO. They would have been tailored to the hotel on installation. Typically, the general conditions would only be printed if the BEO is sent out to customers.

 **Note:**

When generating the BEO a Block ID is required in order to select Print General Conditions. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

31. **Print Cover Letter.** Prints a cover page. The text of that page is customized to the hotel and can be individualized using business block notes. Typically, this cover page would only be printed if the BEO is sent out to customers. When generating the BEO by Block ID, you can select the option to print the Room Grid.

 **Note:**

When generating the BEO a Block ID is required in order to select Print Cover Letter. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

32. **Print Room Grid.** Prints the Room Grid. Once selected, additional parameters will be enabled to control how the room and rate information appears within the grid.

 **Note:**

When generating the BEO a Block ID is required in order to select Print Room Grid. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and disabled for all fields related to the room grid.

33. **Grid Type.** Allows you to determine which grid type will print on the BEO. The possible options are Contract (available when the OPERA Control for Contract Grid is active, Current, or Pickup).
34. **Revenue Values.** Select an option from the list below to determine how the rates amounts are displayed in the grid. For more information, see: [Contract Merge Report, Revenue Values Calculation Examples](#)
 - a. **Gross Rates/Revenue.** Gross Room Rate is calculated as:
 - i. Included generates are not deducted.
 - ii. Excluded generates are added.
 - iii. Excluded packages are not added. Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
 - b. **Net Rates/Revenue.** Net Room Rate is calculated as:

- i. Included generates are deducted.
 - ii. Excluded generates are not added.
 - iii. Included packages stay included.
 - iv. Included generates on included or excluded packages are calculated out. Net Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
 - c. Gross and Net Rates/Revenue. When this option is selected, both the Gross and Net room rates are reported and displayed.
- 35. Include Guest Room in Revenue Summary.** Available for selection when Revenue Summary is set to External or Internal. When selected, the room revenue will be included in the Revenue Summary calculations.
- 36. Rooms with Rate and No Inventory.** When selected, room types where no inventory has been booked are included.
- 37. PMS Room Type.** If selected, PMS room types output on the BEO instead of the Room Pools. If the Room Pools OPERA Control is not active and room pools are not configured for the property, the PMS room types will print by default. For more information, see: [Configuring Room Pools](#).
- 38. Occupancy.** If selected, the number of rooms per occupancy level per day is included on the report when the Occupancy Split OPERA Control is activated. If not selected, the total number of rooms per day per room type per day is output.
- 39. Room Rates.** Select to display room rates, otherwise, Room and Rates Separately, Inline Currency, and Show Decimals are disabled.
- 40. Room and Rate Separately.** If selected, room nights and room rates are included in separate grids. If not selected, they appear in the same grid. This option is available only when both the Rate and the Occupancy flags are selected.
- 41. Inline Currency.** Enabled when Room Rates is selected. If selected, the currency symbol is included with the rate in the grid cells in the Room Grid.
- 42. Show Decimals.** Enabled when Room Rates is selected. If selected, the rates in the Room Grid with decimals appears as set up in the Property Details. If not selected, the rounded rate displays without decimals.
- 43. Print Space Between Currency and Amount.** Select the check box to print in the report (available when Room Rates and Inline Currency are selected). When selected, a space will be added between the currency symbol/code and the rate amounts displayed in the grid.
- 44. Currency.** Available when the application function Rates > Foreign Currency Handling is active, this selection allows the conversion of foreign currency to a property's base or catering currency when the foreign currency has a defined exchange rate for posting.
- 45. Exchange Rate Date.** If selected, enter a date or use the calendar tool to select the effective date of the exchange rate for the specified currency. The prices in the BEO are calculated using the exchange rate for the specified currency as it was on that date.
- 46. Creation Date.** If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the booking creation date.
- 47. Distributed Date.** If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the date the distributed flag was checked.

Report Data

Rather than detailing every piece of data that can appear on the BEO, the following paragraphs describe specific behavior you should note:

The 2 Column BEO layout prints with the food across the top and the Beverage section below the food in the column on the left side. The Item Classes will print on the left or right side based on the selection in the parameter form.

The sections of the BEO if printed continuously are:

Header > Catering package information > Event Itinerary for all events of the current block > Food Section for all events of the current booking, in date and time order > Beverage Service for all events of the current booking in date and time order, > Resources, in resource class sequence order. Within each resource class, the resources are listed in event time order. In all sections, the function space and the event time identify to which event of the itinerary the appropriate resources belong.

The sections of the BEO if printed as Master/Sub or One Event per Page:

Header > Catering Package information > Basic event information for the current event only including start and end time, event name, function space name, set-up style, and function space rate plus rate amount > food section for the current event > beverage section for the current event > resource section for the current event in resource sequence order. Page break and repeat for all subsequent events.

In order to select to print the Cover Letter, General Conditions, and/or Room Grid, the Block ID field must be populated with a single value. If the report is accessed from a block and the Block ID is passed, the default values for Print Cover Letter, Print General Conditions, and Print Room Grid section appear. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default values are cleared. The Booking Type field on the BEO header takes its contents from the Booking Type field (visible when OPERA Control for Business Block Type is active).

A text message that prints at the end of the BEO just before the signature section can be created or amended in Report Text Configuration in the Administration menu using the field, SC_BEO_BOTTOM_TEXT_[PropertyCode], for the selected resort. This message typically contains information on tax and service charge levels that apply to the items listed on the BEO.

The Date Last Printed field prints at the very end of the BEO just below the Organization Authorized Signature field for each event printed or at the end of each event if more than one event per business block exists. This field displays the last date the events for this booking was printed. For Example, if Event #1 is printed on 4/10/xx but Event #2 has never been printed: when Event #2 is printed, it will read "Date Last Printed 4/10/xx" because that is the last date a BEO for this booking was printed.

Banquet Event Order – 2 Column FB (SAMPLE_BEO_2COLUMN_FB.REP)

The Banquet Event Order 2 column F&B (Food and Beverage) report is a comprehensive document that contains the vital information about the catering portion of a business block broken down into events and resources. It is an ideal tool for communicating with customers and various hotel internal departments to ensure that all customer requirements regarding the events are met and prepared per agreement and contract.

The report is one of several sample BEO (Banquet Event Orders) that you can customize during installation of the system to be further tailored to the hotel's specific requirements.

 **Note:**

When selecting the email method for printing Banquet Event Orders from the main Reports screen, the document attached to the email is renamed to the report name with the Block ID appended to it. For example, in the case of a BEO named BEO 2 Column F&B, the output would be renamed as BEO 2 Column F&B- 795547.pdf.

You can customize this report using the Stationery Editor. The following Selection Criteria fields are available when using the [Stationery Editor](#).

Selection Criteria

1. **Property.** Select the property for which the report should be printed. The BEO can be ordered across multiple properties in a multi-property environment. This is useful if a booking has its event distributed over several properties.
2. **Report Type.** Customized Report.
3. **Sample Report to base your Customized Report.** Select Sample_beo_2column F&B. Once selected, the links to Download Sample Report and Download Sample Data appear, allowing the templates to be downloaded and modified. The sample data file allow you to preview the changes without having to upload the report into the application. The modified file can be uploaded through the Choose File option.

 **Note:**

You must rename the file without using the word "sample."

4. **Datasource File.** Read Only field that will populate automatically based on the report selection.
5. **Report Group.** Select the group from the list. It is recommend that you load the report in the Group Stationery report group.
6. **Display Name.** Enter the report name.
7. **Print Copies.** Enter the number of copies to print.
8. **Protected.** Prevents users from editing the report.
9. **Language.** Determines the language in which the report prints.
10. **Parameter Form.** Select the SAMPLE_BEO_2COLUMN_FB/rep_beo_2column parameter form.

Report Parameters

When creating or editing the report, you can set default values for these parameters.

1. **Event Date From/Event Date To.** Allows the selection of the event from and to dates.

2. **Block Arrival Date From/Arrival Date To.** Allows the selection of the block from and to dates.
3. **Business Block.** Select one or several specific business blocks for printing the BEO report.
4. **Event.** Select one or several events for printing the BEO.
5. **Event Status.** Select event statuses. Typically, return-to-inventory statuses, like lost and canceled statuses, would be excluded.
6. **Event Type.** Select one or several event types to print the BEO.
7. **Space.** Select one or several function spaces in which the events are taking place.
8. **Left Column Item Class.** Allows the selection of resource item classes that should print on the left hand side of this two column event order. Depending on whether the BEO is printed for internal use or for the customer, the selection here could be different. For example, there might be item classes needed for internal use, like furniture and linen requirements, but that would not be necessary to print on the copy that is sent to the customer.
9. **Right Column Item Class.** Allows the selection of resource item classes that should print on the right hand side of this two column event order.
10. **Block Note Type.** Allows you to select business block note types to be printed on the BEO. This parameter works in conjunction with the internal and external notes flag on the first tab. Even if note types have been selected, if neither internal nor external are flagged, no notes would print. Not all business block notes might be relevant to print on the BEO.
11. **Cover Letter Note Type.** A portion of the cover letter can be made up from business block notes, which make the letter more flexible and allows for custom texts per customer without having to change the text that is embedded in the report. Enter the note type to print on the cover letter.
12. **Sort By.** Allows you to order events by one of these four predefined sort orders:
 - a. Event Date + Booking Name + Event Time
 - b. Event Date + Event Time + Booking Name
 - c. Booking Name + Event Date + Event Time
 - d. Booking Name + Master Event Date + Master Event Time
13. **Address Type.** Allows you to select an address type other than the primary address. This provides the option to print an extended byte address onto the BEO if one is attached to the account or contact, even if it is not the primary address. Any address type can be chosen. If the field is left blank or the selected address type does not exist for the current customer, the primary address will print instead.
14. **Address Format.** Allows you to select address formats different from the standard format. This is useful in an international environment where addresses might have different formats from country to country. For example, when sending a BEO to Europe, the address format might have the zip code before the city name and no state printed at all. The list of values shows all configured catering address formats. If the field is left blank, the address prints the default format.
15. **Print Address of.** This option determines what address to print as part of the header. This can either be set to print the account address or the contact's address.
16. **Print Account.** The Print Account defaults to the Account marked as PT for the Business Block from the Name Select screen. If a different Account should be printed on the BEO,

select the Print Account ellipsis and click the PT column to select another Account already linked to the business block.

- 17. Print Contact.** Print Contact defaults to the Contact marked as PT for the Business Block from the Name Select screen. If a different Contact should be printed on the BEO, select the Print Contact ellipsis to select another Contact already linked to the business block.

 **Note:**

When the BEO is printed for more than one booking, the Print Account and Print Contact are pulled by default. No option is provided to select a different Account or Contact for Printing. If no Print Account or Print Contact is selected for a booking, the default hierarchy is used. Additionally, when no relationship exists between the Print Account and the Print Contact, the Print Contact appears red.

- 18. Event Printing Method.** The possible selections are one event per page, Master and Sub per page, Prints events continuously.
- 19. Revenue Summary.** The possible options are Internal, External, or None. The External and Internal options print a revenue summary at the end of the BEO before the general conditions. External summarizes non-package revenues by date, and catering packages as one price per delegate without breaking it down into its component revenue types. Internal summarizes non-package revenues by revenue type per date and non-package revenue by event and revenue type per date. Selecting None suppresses the Revenue Summary completely.
- 20. Print Deposit.** If checked, deposit information prints on the BEO. If not checked, that information is suppressed.
- 21. Sort Deposit.** Deposits can print sorted by type or by due date. If type is selected a sub-total for each type prints as well as a general total.
- 22. Print Internal/External Notes.** Specify whether notes should print on the BEO and if so, select from notes that are marked as Internal, External, or both. Typically, only external notes would be selected if the BEO is printed to be sent to a customer and either only internal, or internal and external, if the BEO is printed for use as inter-departmental communication tool.
- 23. Suppress Account Name.** This suppresses any reference to an account on the BEO header and in the signature. This is typically done for “social” BEOs that are organized privately by individuals that are not associated with any account, for example, weddings, birthday parties, and so on.
- 24. Suppress Signature.** Select this option to suppress the Signature field at the end of each BEO.
- 25. Hide Doorcard.** This suppresses printing the Post As references on the event itinerary.
- 26. Print Package Name for Multiple Days.** If a Business Block has a Catering Package that spans multiple days, checking this flag makes the package header information print on each date that has a Package Event. If the flag left deselected, the package header information print only on the first day of Package Events.
- 27. Exclude Alternate Events.** When the application function Catering > Alternate Space is set to Y, the Exclude Alternate Events check box is visible. When selected, Alternate Events do not print on this report.

28. **Print Extended Characters.** If secondary account and contact names are entered into the system using the globe button on the appropriate fields (only available if the application function General > Alternate Name is active), the report procedure scans those secondary fields when printing account and contact information; if an entry is found, it returns that entry instead of the primary name. If the appropriate fields are empty, the regular names print. This functionality is primarily added for extended byte handling in the Asia- Pacific region.
29. **Reset Page Numbering.** Select this option to reset the page numbering when printing multiple BEOs. If unchecked, the pages are numbered based on the total number of pages in the BEO batch. If checked, the page numbers are reset with each new agenda.
30. **Print General Conditions.** General conditions and terms of contract can be added as text pages after the body of the BEO. They would have been tailored to the hotel on installation. Typically, the general conditions would only be printed if the BEO is sent out to customers.

 **Note:**

When generating the BEO a Block ID is required in order to select Print General Conditions. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

31. **Print Cover Letter.** Prints a cover page. The text of that page is customized to the hotel and can be individualized using business block notes. Typically, this cover page would only be printed if the BEO is sent out to customers. When generating the BEO by Block ID, you can select the option to print the Room Grid.

 **Note:**

When generating the BEO a Block ID is required in order to select Print Cover Letter. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

32. **Print Room Grid.** Prints the Room Grid. Once selected, additional parameters will be enabled to control how the room and rate information appears within the grid.

 **Note:**

When generating the BEO a Block ID is required in order to select Print Room Grid. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and disabled for all fields related to the room grid.

33. **Grid Type.** Allows you to determine which grid type will print on the BEO. The possible options are Contract (available when the OPERA Control for Contract Grid is active, Current, or Pickup).
34. **Revenue Values.** Select an option from the list below to determine how the rates amounts are displayed in the grid. For more information, see: [Contract Merge Report, Revenue Values Calculation Examples](#)

- a. **Gross Rates/Revenue.** Gross Room Rate is calculated as:
 - i. Included generates are not deducted.
 - ii. Excluded generates are added.
 - iii. Excluded packages are not added. Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
 - b. **Net Rates/Revenue.** Net Room Rate is calculated as:
 - i. Included generates are deducted.
 - ii. Excluded generates are not added.
 - iii. Included packages stay included.
 - iv. Included generates on included or excluded packages are calculated out. Net Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
 - c. **Gross and Net Rates/Revenue.** When this option is selected, both the Gross and Net room rates are reported and displayed.
- 35. Include Guest Room in Revenue Summary.** Available for selection when Revenue Summary is set to External or Internal. When selected, the room revenue will be included in the Revenue Summary calculations.
- 36. Rooms with Rate and No Inventory.** When selected, room types where no inventory has been booked are included.
- 37. PMS Room Type.** If selected, PMS room types output on the BEO instead of the Room Pools. If the Room Pools OPERA Control is not active and room pools are not configured for the property, the PMS room types will print by default. For more information, see: [Configuring Room Pools](#).
- 38. Occupancy.** If selected, the number of rooms per occupancy level per day is included on the report when the Occupancy Split OPERA Control is activated. If not selected, the total number of rooms per day per room type per day is output.
- 39. Room Rates.** Select to display room rates, otherwise, Room and Rates Separately, Inline Currency, and Show Decimals are disabled.
- 40. Room and Rate Separately.** If selected, room nights and room rates are included in separate grids. If not selected, they appear in the same grid. This option is available only when both the Rate and the Occupancy flags are selected.
- 41. Inline Currency.** Enabled when Room Rates is selected. If selected, the currency symbol is included with the rate in the grid cells in the Room Grid.
- 42. Show Decimals.** Enabled when Room Rates is selected. If selected, the rates in the Room Grid with decimals appears as set up in the Property Details. If not selected, the rounded rate displays without decimals.
- 43. Print Space Between Currency and Amount.** Select the check box to print in the report (available when Room Rates and Inline Currency are selected). When selected, a space will be added between the currency symbol/code and the rate amounts displayed in the grid.
- 44. Currency.** Available when the application function Rates > Foreign Currency Handling is active, this selection allows the conversion of foreign currency to a property's base or catering currency when the foreign currency has a defined exchange rate for posting.

45. **Exchange Rate Date.** If selected, enter a date or use the calendar tool to select the effective date of the exchange rate for the specified currency. The prices in the BEO are calculated using the exchange rate for the specified currency as it was on that date.
46. **Creation Date.** If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the booking creation date.
47. **Distributed Date.** If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the date the distributed flag was checked.

Report Data

Rather than detailing every piece of data that can appear on the BEO, the following paragraphs describe specific behavior you should note:

The 2 Column BEO layout prints with the food across the top and the Beverage section below the food in the column on the left side. The Item Classes will print on the left or right side based on the selection in the parameter form.

The sections of the BEO if printed continuously are:

Header > Catering package information > Event Itinerary for all events of the current block > Food Section for all events of the current booking, in date and time order > Beverage Service for all events of the current booking in date and time order, > Resources, in resource class sequence order. Within each resource class, the resources are listed in event time order. In all sections, the function space and the event time identify to which event of the itinerary the appropriate resources belong.

The sections of the BEO if printed as Master/Sub or One Event per Page:

Header > Catering Package information > Basic event information for the current event only including start and end time, event name, function space name, set-up style, and function space rate plus rate amount > food section for the current event > beverage section for the current event > resource section for the current event in resource sequence order. Page break and repeat for all subsequent events.

In order to select to print the Cover Letter, General Conditions, and/or Room Grid, the Block ID field must be populated with a single value. If the report is accessed from a block and the Block ID is passed, the default values for Print Cover Letter, Print General Conditions, and Print Room Grid section appear. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default values are cleared.

The Booking Type field on the BEO header takes its contents from the Booking Type field (visible when OPERA Control for Business Block Type is active).

A text message that prints at the end of the BEO just before the signature section can be created or amended in Report Text Configuration in the Administration menu using the field, SC_BEO_BOTTOM_TEXT_[PropertyCode], for the selected resort. This message typically contains information on tax and service charge levels that apply to the items listed on the BEO.

The Date Last Printed field prints at the very end of the BEO just below the Organization Authorized Signature field for each event printed or at the end of each event if more than one event per business block exists. This field displays the last date the events for this booking was printed. For Example, if Event #1 is printed on 4/10/xx but Event #2 has never been printed: when Event #2 is printed, it will read "Date Last Printed 4/10/xx" because that is the last date a BEO for this booking was printed.

Banqueting F&B Plan (rep_fbplan.rep with rep_fbplan.fmx)

The Banqueting F&B Plan report is a great tool, especially for the Banquet Chef and kitchen. You can use it for Banquet Event Orders (BEO) or as a detailed document for any needed food or beverage preparation and requirements.

You can print the report in a daily format with a page break after each day or in a continuous weekly format. There is also an option to print more details such as account name, contacts name, and communication details plus all relevant notes, or a summary format that essentially prints only the food and beverage requirements.

 **Note:**

To run the report, you must have the Event Print task granted to your role in the property. The list of properties available for you to select is limited to the properties where you have access granted. You also need the task for the Events Report Group.

Report Parameters

Property. Select the property for the report you are printing.

Event Date From. Select the event from date.

Event Date To. Select the event to date.

Business Block. You can order the report for one or several specific business blocks.

 **Note:**

When selecting a Master Block ID in the Business Block filter, OPERA Cloud also includes the Sub Block IDs linked to that Master. The report prints all events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only events linked to that Sub Block are printed.

Event Status. This allows you to filter the report by event status. Generally, this would include only the production status code. Cancellation status codes should be excluded.

Event Type. Allows you to filter the report by event type.

Responsible Department. Allows you to select the responsible departments. For example, if different menu components are prepared in different kitchen sections, and those sections/departments are correctly assigned to all menu items, you could produce the report separately for each kitchen section. Or, on a simpler level, it would only indicate whether the kitchen, beverage staff, or banquet operations staff members are responsible to provide certain items on the list.

Report Type. Select Daily or Weekly.

Food & Beverage. Select Food, Beverage, or Both.

Print Details. Select the check box to print the details.

Report Data

The report is sorted in date order and, within each date, in event time order. Information available on the report is per event, event start and end time, event name and ID, function space, set-up style, and number of attendees.

Note:

The Event Date is repeated in the header of each page for this report.

If you select **Detailed** on the report order form, additional information about account name, contact name, contact on site, and contact communication details are printed for each event.

Account and contact information appear according to the following profile type hierarchy:

- If a Company profile is attached to the business block, the Company profile name appears.
- If a Company profile is not attached to the business block, but a Travel Agent is attached, the Travel Agent profile name appears.
- If neither a Company profile nor a Travel Agent profile is attached to the business block, and a Source profile is attached, the Source profile name appears.

For each event, follow the menu details: menu serving time, menu name, menu internal price (total that the menu would cost if all items contained in it were sold separately – calculated from the menu item prices), menu sales price, numbers of expected, guaranteed, set and actual covers.

On the next level menu item detail, the information printed contains: menu item name, menu item price – if the menu item is not included in the menu, numbers expected, guaranteed, set and actual, and the responsible department if one is assigned to the item in question.

After the menu item details, the menu notes relating to each menu are printed, followed by the event notes after all menus are printed.

Block Actual Report (rep_actbb_p)

[Prerequisites for Actual Business Block Rooms Report](#)

This report compares booked room nights, revenue, and average rate with picked-up room nights, revenue, and average rate.

SELECTION CRITERIA

Property.

1. When logged into a Property:
 - a. The Property filter should be Visible, Required, and displayed at the top of the Parameter.
 - b. The logged in Property should be passed (defaulted) to the Property filter.
 - c. No other Properties are available for selection.
2. When logged into a HUB:

- a. The Property filter should be Visible, Required, Multi-Select, and displayed at the top of the Parameter.
 - b. The Property selected in the Report Property search filter should be passed (defaulted) to the Property filter.
 - c. All Properties in the HUB will be available for selection.
3. Mandatory when visible.

Stay Date Range. This field allows you to select blocks that have at least one stay day within the selected from and to date.

1. From Date:
 - a. The Date field with formatting based on the configured short date format for the logged in Property or HUB.
 - b. This field filters on allotment dates (Stay Dates are the dates between the start date and the end date, for example, one).
 - c. The value in this field must be earlier than or equal to the date in the Stay Date To Date field.
 - d. No default value when inserting the report.
2. To Date:
 - a. The Date field with format based on the configured short date format for the logged in Property or HUB.
 - b. This field will filter on allotment dates (the dates between the start date and end date, for example, one).
 - c. The value in this field must be later than or equal to the date in the Stay Date From Date field.
 - d. No default value when inserting the report.

Block Type. You must select one of the following values (select only one).

1. Rooms:
 - a. Radio button selection.
 - b. Only one of these three values can be selected at one time.
 - c. When Rooms is selected, only blocks that are not marked as Catering Only are returned.
2. Catering:
 - a. Radio button selection.
 - b. Only one of these three values can be selected at one time.
 - c. When Catering is selected, only blocks that are marked as Catering Only are returned.
3. All:
 - a. Radio button selection.
 - b. Only one of these three values can be selected at one time.
 - c. When selected, all blocks that meet the other filter criteria are returned.
 - d. Default ALL when the report is inserted.

Block Status.

1. The field is defaulted with the ghost text All Codes indicating that all Block Statuses are considered.
2. The field is displayed with multi select LOV.
3. After selecting the magnifying glass, open the LOV for Search and select Block Status with an option to select one or multiple Block Statuses.
4. The list will display all Block Status codes and descriptions.
5. After selecting Block Status code(s), pass them back to the Report Request Parameter screen.
6. If multiple Block Statuses are selected, they will appear as comma separated values.

Rooms Owner. Select a room owner.

1. The field is defaulted with the ghost text All Codes indicating that all Rooms Owners will be considered.
2. The field is displayed with a multi select LOV.
3. After selecting the magnifying glass, open the LOV for search and select Rooms Owner with an option to select one or multiple Owners.
4. The list will appear with all Owner codes, Owner Name.
5. If multiple properties are selected in the Property field, the list will display the Property code against each Owner.
6. After selecting Owner code(s), pass the Owner Code(s) back to the Report Request Parameter screen.
7. If multiple Owners are selected, they will appear as comma separated values.

Change Date Status.

1. The field is defaulted with no value.
2. The field is displayed with single select LOV of all Block Status codes and descriptions.
3. After selecting the magnifying glass, open the LOV for search and select Block Status with the list of all Block Status codes and descriptions.
4. You have the option to filter a specific Block status. Only one Block Status can be selected from the LOV.
5. After selecting Block Status code(s), pass the selected Block Status code(s) back to the Report Request Parameter screen.

Sort Order. The following options should be available. Make at least one selection.

1. Sort by Rooms Owner – renamed from Sales Manager.
2. Sort by Block Status – renamed from Business Status.
3. Sort by Start Date – renamed from Arrival Date.
4. Sort by End Date – renamed from Departure Date.
5. Sort by Catering Owner – renamed from Catering Manager.

Currency. Visible when the application parameter Rate Management >Ability to Quote Rates in Foreign Currency is Active.

REPORT DATA

For each booking, the report prints the following data:

- The account name and block, as well as the block ID, current block status, selected change status and status change date, rooms owner, and catering owner of the block.
- The block start and end date and block currency.
- The current room nights, revenue, and average rate (printed in the top row of the revenue box).
- The actual picked-up room nights, revenue, and average rate (printed beneath the current figures).
- The calculated difference as a third line beneath the actual values.

A sub-total by selected first sort group is printed, as well as a total for the whole report.

 **Note:**

The current block rates are calculated from the value as it appears in the room grid of the booking regardless of any included taxes and package elements, if applicable. The picked-up rates and revenue are NET of taxes and packages. You should keep this in mind when comparing these values.

Block Actual Pick Up Report (rep_actbh)

[Prerequisites for Actual Business Block Rooms Report](#)

This report compares booked room nights, revenue, and average rate with picked-up room nights, revenue, and average rate.

SELECTION CRITERIA

Property.

1. When logged into a Property:
 - a. The Property filter should be Visible, Required, and displayed at the top of the Parameter.
 - b. The logged in Property should be passed (defaulted) to the Property filter.
 - c. No other Properties are available for selection.
2. When logged into a HUB:
 - a. The Property filter should be Visible, Required, Multi-Select, and displayed at the top of the Parameter.
 - b. The Property selected in the Report Property search filter should be passed (defaulted) to the Property filter.
 - c. All Properties in the HUB will be available for selection.
3. Mandatory when visible.

Stay Date Range. This field allows you to select blocks that have at least one stay day within the selected from and to date.

1. From Date:

- a. The Date field with formatting based on the configured short date format for the logged in Property or HUB.
 - b. This field filters on allotment dates (Stay Dates are the dates between the start date and the end date, for example, one).
 - c. The value in this field must be earlier than or equal to the date in the Stay Date To Date field.
 - d. No default value when inserting the report.
2. To Date:
 - a. The Date field with format based on the configured short date format for the logged in Property or HUB.
 - b. This field will filter on allotment dates (the dates between the start date and end date, for example, one).
 - c. The value in this field must be later than or equal to the date in the Stay Date From Date field.
 - d. No default value when inserting the report.

Block Type. You must select one of the following values (select only one).

1. Rooms:
 - a. Radio button selection.
 - b. Only one of these three values can be selected at one time.
 - c. When Rooms is selected, only blocks that are not marked as Catering Only are returned.
2. Catering:
 - a. Radio button selection.
 - b. Only one of these three values can be selected at one time.
 - c. When Catering is selected, only blocks that are marked as Catering Only are returned.
3. All:
 - a. Radio button selection.
 - b. Only one of these three values can be selected at one time.
 - c. When selected, all blocks that meet the other filter criteria are returned.
 - d. Default ALL when the report is inserted.

Block Status.

1. The field is defaulted with the ghost text All Codes indicating that all Block Statuses are considered.
2. The field is displayed with multi select LOV.
3. After selecting the magnifying glass, open the LOV for Search and select Block Status with an option to select one or multiple Block Statuses.
4. The list will display all Block Status codes and descriptions.
5. After selecting Block Status code(s), pass them back to the Report Request Parameter screen.

6. If multiple Block Statuses are selected, they will appear as comma separated values.

Rooms Owner. Select a room owner.

1. The field is defaulted with the ghost text All Codes indicating that all Rooms Owners will be considered.
2. The field is displayed with a multi select LOV.
3. After selecting the magnifying glass, open the LOV for search and select Rooms Owner with an option to select one or multiple Owners.
4. The list will appear with all Owner codes, Owner Name.
5. If multiple properties are selected in the Property field, the list will display the Property code against each Owner.
6. After selecting Owner code(s), pass the Owner Code(s) back to the Report Request Parameter screen.
7. If multiple Owners are selected, they will appear as comma separated values.

Change Date Status.

1. The field is defaulted with no value.
2. The field is displayed with single select LOV of all Block Status codes and descriptions.
3. After selecting the magnifying glass, open the LOV for search and select Block Status with the list of all Block Status codes and descriptions.
4. You have the option to filter a specific Block status. Only one Block Status can be selected from the LOV.
5. After selecting Block Status code(s), pass the selected Block Status code(s) back to the Report Request Parameter screen.

Sort Order. The following options should be available. Make at least one selection.

1. Sort by Rooms Owner – renamed from Sales Manager.
2. Sort by Block Status – renamed from Business Status.
3. Sort by Start Date – renamed from Arrival Date.
4. Sort by End Date – renamed from Departure Date.
5. Sort by Catering Owner – renamed from Catering Manager.

Currency. Visible when the application parameter Rate Management >Ability to Quote Rates in Foreign Currency is Active.

REPORT DATA

For each booking, the report prints the following data:

- The account name and block, as well as the block ID, current block status, selected change status and status change date, rooms owner, and catering owner of the block.
- The block start and end date and block currency.
- The current room nights, revenue, and average rate (printed in the top row of the revenue box).

- The actual picked-up room nights, revenue, and average rate (printed beneath the current figures).
- The calculated difference as a third line beneath the actual values.

A sub-total by selected first sort group is printed, as well as a total for the whole report.

 **Note:**

The current block rates are calculated from the value as it appears in the room grid of the booking regardless of any included taxes and package elements, if applicable. The picked-up rates and revenue are NET of taxes and packages. You should keep this in mind when comparing these values.

Block Cancellation Summary Report (rep_cancel_summary.rep)

[Prerequisites for Cancellation Summary Report](#)

The main purpose of the Cancellation Summary report is to show all groups canceled or lost for a specific cancellation date range or a specific arrival date. It can be filtered and/or sorted by cancellation reason or destination “Lost to” and therefore represents an excellent tool for pinpointing weaknesses or disadvantages the hotel might have in groups or catering operations.

SELECTION CRITERIA

Property.

1. When logged into a Property:
 - a. The Property filter should be Visible, Required, and displayed at the top of the Parameter.
 - b. The logged in Property will be passed (defaulted) to the Property filter.
 - c. No other Properties are available for selection.
2. When logged into a HUB:
 - a. The Property filter should be Visible, Required, and Multi-Select and should appear at the top of the Parameter.
 - b. The Property selected in the Report Property search filter should pass (defaulted) to the Property filter.
 - c. All Properties in the HUB will be available for selection.
3. Mandatory when visible.

Cancellation Date Range (From Date/To Date). Allows the selection of a date range in which the booking room status or booking catering status was canceled.

Start Date Range (From Date/To Date). The arrival date range for bookings to view.

Block Status. Select a business block status. Typically a lost, canceled, or refused status would be chosen here. By default, all statuses are selected.

Overall Owner. Select an overall booking owner’s initials.

Rooms Owner. Select the rooms owner's initials.

Catering Owner. Select the catering owner's initials.

1. The owner fields are defaulted with the ghost text All Codes indicating that all Overall, Rooms or Catering Owners will be considered.
2. The fields are displayed with multi select LOV.
3. Select the magnifying glass, open the LOV for Search, and select Owner with an option to select one or multiple Owners.
4. The list displays all Owner codes, Owner Name.
5. If multiple properties are selected in the Property field, the list displays the Property code against each Owner.
6. After selecting the Owner code(s), pass the Owner code(s) back to the Report Request Parameter screen.
7. If multiple Owners are selected, they appear as comma separated values.

Lost to Destination. Select destinations to which bookings were lost.

Lost to Property. Free form text entry field. Provide the name of the property or competitor brand business was lost to.

Reason. Select Cancellation reason.

Block Type (Rooms Only, Catering Only, All). Enables you to filter this report to print only for blocks without catering elements, only for blocks that do have catering elements booked, or for all blocks.

Print Cancellation Comments (Rooms Only, Catering Only, All). Enables you to print cancellation comments only for rooms cancellation, only catering cancellation, or for all.

DISPLAY OPTIONS

Include All Events. If checked, all lost/canceled events are calculated into the lost catering revenue figures. If not checked, only the events canceled on the same day as the catering status on business block was changed to CAN are calculated into the catering revenue figures. Events that were canceled prior (on a different date) to the catering status being CAN would therefore be excluded if the check box is flagged.

Page Break. It is possible to create a page break after the first sort option when the Page Break check box is checked.

Sort Order. It is possible to sort the report by the following options: Cancellation Date, Arrival Date, Status, Rooms Owner, Catering Owner, Overall Owner, Rooms Reason, Catering Reason or Destination.

Currency. Visible when the application parameter Rate Management > Ability to Quote Rates in Foreign Currency is Active.

Select the currency in which the revenues on this report will display.

REPORT DATA

The report lists the following booking data: account name, block name, block code, block id, arrival date, departure date, current booking status and date the booking turned that status, rooms owner, catering owner, number of room nights, average rate,

catering food and beverage revenue, catering other revenue, rooms revenue, total catering revenue, and total revenue. Business block contact name, follow up date and the destination (lost to) are also listed.

When the OPERA Controls parameter Catering Events >USE FORECAST VALUE ONLY is set to Y, the Food and Beverage and Other Revenue calculations consider the Use Forecast Only check box on the Event main screen.

Account information is displayed according to the following profile type hierarchy:

- If a Company profile is attached to the business block, the Company profile name appears.
- If a Company profile is not attached to the business block, but a Travel Agent is attached, the Travel Agent profile name appears.
- If neither a Company profile nor a Travel Agent profile is attached to the business block, and a Source profile is attached, the Source profile name appears.

Room revenue on this report is as entered on the block, not taking into account taxes or packages that might be included in the booked rate. Catering revenue is calculated downwards cascading, meaning if there is actual revenue, actual revenue prints; if there is no actual revenue, guaranteed revenue is checked and printed if existing. If no guaranteed revenue is found, expected revenue is checked and printed. If there is no expected revenue, forecasted revenue is printed.

If only the rooms part of a booking is canceled, but catering stays on production status, the block appears on the report, but only the room night and room revenue figures show as canceled.

If only the catering part of a block is canceled, but rooms are still active, only the catering figures show as canceled on the report.

If only some events are canceled, but the catering status of the block is still active, the block will not appear at all on the report.

The last page of the report summarizes the following data by block status: Room nights, room revenue, catering food and beverage revenue, catering other revenue, total catering revenue and total revenue.

It is possible to print the report for statuses other than the return-to-inventory statuses, but no revenue prints in that case (as no revenue was lost if the booking is not lost or canceled).

Block Conversion (rep_block_conversion.rep)

Prerequisites for Block Conversion

The Booking Conversion Report calculates the booking conversion to an Actual status for any date range in absolute figures as well as conversion percentages.

For the selected date range, all bookings that reach a final status will print subject to status selection. The bookings are summarized into Actual bookings (considered Converted) and bookings on other final statuses. These other final statuses are commonly Lost or Canceled status types. You can specify one additional non-final status to include in the actual total. Typically, this status would be a Definite or equivalent status that has not yet turned to actual, but is highly expected to do so.

The report summary then calculates the ratio of all bookings on a final status in the selected date range versus those bookings that have turned ACTUAL (or are highly likely to do so).

The report summary then calculates the ratio of all bookings on a final status in the selected date range versus bookings that have turned Actual (or are highly likely to do so).

SELECTION CRITERIA

Property.

1. When logged into a Property:
 - a. The Property filter should be Visible, Required, and displayed at the top of the Parameter.
 - b. The logged in property passes (defaulted) to the Property filter.
 - c. No other Properties are available for selection.
2. When logged into a HUB:
 - a. The Property filter should be Visible, Required, Multi-Select, and displayed at the top of the Parameter.
 - b. The Property selected in the Report Property search filter should pass (defaulted) to the Property filter.
 - c. All Properties in the HUB are available for selection.
3. Mandatory when visible.

Start Date From/Start Date To. The start date range of the blocks you wish to review on this report, such as arrivals between 09/01/2007 and 09/30/2007).

Account. Select accounts to review on this report.

Current Status. Use this option to select bookings by their current status. The LOV for Current Status on this report shows only Final statuses, meaning statuses that do not have any further follow-on status assigned to them in configuration (e.g., actual, lost, canceled).

Note: When the Block status is Actual, the Net Rate, Gross Rate and Net Room Revenues are calculated based on Picked-up figures.

Status not turned. Allows selection of one other status that is configured directly prior to the Actual status (e.g., definite). This allows inclusion of blocks that are highly likely to turn Actual in the near future into the Converted statistics. The LOV shows only statuses that have the actual status configured as a follow-on status in the status flow configuration.

Market Segment. Use this filter to select blocks in a particular market segment, for example, nationwide or corporate local.

Revenue Types 1-5. Use this option to select the catering revenue types to use for calculating the catering revenue figures from and in what order these revenue types print on the report.

Note: Each revenue type field is multi-select and allows for multiple selections of revenue types per field. When revenue types are combined, for instance Food and Beverage, the revenue type values are subtotaled. As well, the filters for Revenue Types are mutually exclusive; after you select one, it is not available for selection in another Revenue Type column.

Currency. Select the currency type in which to display revenue values on this report.

REPORT DATA

The first part of the report prints the block details in two lines per booking record. The details shown for each booking include: booking status, catering status, booking name, booking id, arrival date, departure date, catering revenue types 1 -5 (as selected in filter), initial number of rooms booked, total number of rooms booked, net room rate, gross room rate, breakfast included flag, market segment, net room revenue, total catering revenue, total revenue and the reason lost, canceled or turned down for those bookings on a cancel status.

Note:

The Initial room night figure is taken from the Initial block snapshot, not from the original block figures. Therefore, you must use block snapshots to have this figure appear on the report.

Catering Revenue prints per the regular principle: if an event is actual, the Actual/Billed revenue prints. If no Actual/Billed revenue exists (and when the event is not yet actual), the Guaranteed/Expected revenues are checked. If Guaranteed Revenue is higher than Expected Revenue, Guaranteed Revenue prints. Otherwise, Expected Revenue prints. If Expected/Guaranteed Revenues do not exist, Forecast Revenues prints.

An exception to the above rule is made when the OPERA Controls parameter **Events>Use Forecast Value Only** is active. In this case, all events are created with the flag Use Forecast Revenue Only checked. While this flag is checked, all catering revenue in this report come only from the forecast figures, even if expected or guaranteed figures exist. The flag is unchecked automatically when the event turns actual, but can also be manually unchecked earlier in the life of the event.

The report summary that prints at the end is composed of four lines:

- Line1: Summarizes all bookings listed on the report including their room nights and revenues.
- Line2: Summarizes all bookings, their room nights, and revenues, on actual status plus those bookings on the status defined in filter "Status not turned." This line represents the Converted business.
- Line3: Calculates conversion percentages and factors of actual / converted bookings (line2) versus all bookings (line1) (this is, the percentage of all bookings turned actual as opposed to lost or canceled).
- Line4: Splits out the number of bookings, revenues, and room nights of bookings that are on the status, "Status not turned" to get a clearer picture of the business that might turn actual, but still has a chance of getting canceled.

Block Information Report (resblkinfo)

Block Information (resblkinfo) – displays a detailed breakdown of a block header and room grid for a specified date range.

ORACLE HOSPITALITY		OPERA DEMO HOTEL						05-16-18

Business Block Change Log (rep_bookchanglog.rep with rep_bookchglog.fmx)

Prerequisites for Business Block Change Log Report

The Business Block Change Log report is a listing of the production (status/revenue changes) changes made to a Business Block within a specified production period. Changes include status changes, increase or decrease of the room block, or increase or decrease of the revenue (rate changes).

This information is also available when displaying the business block through the Production Changes option. Changes are recorded per change date/per stay date in the log. Rates and revenue are recorded as entered into the room grid, that is, if the rate amount includes tax or packages, those are not deducted from the amount to find the net room rate.

Report General Conditions:

- The report is located in the Business Blocks report group.
- The report parameter is named REP_BOOKCHGLOG.
- This report is named Block Change Log Report.
- This report generates rep_bookchglog.rep.

Report Parameters

Use the following filters to generate the report. The Stay Date From/Stay Date To filter, Change Date From/Change Date To filter, and Block filter are mandatory.

- **Stay Date From/Stay Date To:** The range of stay dates covered by the report. For example, when the Stay Date From is set to 01/01/2022 and the Stay Date To is

set to 12/31/2022 and a business block exists that arrives on 12/26/2021 and stays until 01/15/2022, only those room nights and revenues that occur in the month of January 2022 for this business block (01st to 15th) are included in the report. The dates from 12/26/2021 through 12/31/2021 will not appear because they do not fall within the From/To Stay Date range.

- **Change Date From/Change Date To:** These fields define the date range in which business block changes are recorded. Each change made to room status or room nights and revenue is recorded in a specific production change log. The Production Date Range filter scans the entries in the production change log searching for any business block room changes that fall under the other criteria that have been selected on the filter form. Due to the nature of this date range filter, only dates in the past are valid entries because there cannot be any entries in the business block change log after the current business date. To illustrate: a business block that gets created on status TEN in April 2021 with Stay Dates in October 2021 can turn to status DEF in June 2021. In this scenario, there would be two entries in the change log for this business block; one for the creation of the business block on status TEN in production period April 2021, and one for the status change to DEF in June 2021.
- **Block:** Click the down arrow and select business blocks. The default is **all business blocks**.
- **Room Owner:** Click the down arrow and select the specific Rooms owner.
- **Catering Owner:** Click the down arrow and select the specific Catering owner.
- **Change By User:** Click the down arrow and select the users to report on specific users.
- **Status Changes Only:** Select this check box to include only the status changes in the report.

Report Data

If multiple business blocks are included, they are sorted by booking ID. For each business block, the account name and the booking name print as well as the booking ID, original number of room-nights, revenue and average rate on booking creation, room owner, catering owner, booking arrival, and departure dates.

The Account Name appears according to the following profile type hierarchy:

- If a Company profile is attached to the business block, the Company profile name appears.
- If a Company profile is not attached to the business block, but a Travel Agent is attached, the Travel Agent profile name appears.
- If neither a Company profile nor a Travel Agent profile is attached to the business block, and a Source profile is attached, the Source profile name appears.

Business Block Lead Time Report (rep_block_leadtime)

The Business Block Lead Time Report is used to display multiple statuses (by date) and revenue types for Business Block bookings. The purpose of this report is to show the total lead time elapsed between the date the booking is created and the day the booking arrives at the hotel. This report reflects all booking status changes by date and the total number of days the booking stayed at each status. This report is particularly helpful for identifying the booking patterns of customers in order to accurately forecast anticipated group business and the time frame in which it will transpire. With options to select up to six different statuses and up to four different revenue types, this report can be either very simple or highly detailed.

- **Property:** Select the property for which the report should be printed. You can select multiple properties from the [hub location](#).
- **Date Range:** Select the From and To dates to display the booking lead time for this time period.
- **Current Status:** Select bookings by their current statuses. This filter is multi-select.
- **Account:** Select the space type for which the report should be printed as, Single, Combo, or Both.
- **Market Segment:** Select bookings in a particular market segment.
- **Status 1 - 6:** Select the order in which the booking statuses display in the report.
- **Revenue Type 1- 4:** Select the order of revenue type to display in the report. Each revenue type is multi-select. See [Configuring Catering Revenue Types](#).
- **Currency:** Available when the Ability to Quote Rates in Foreign Currency OPERA Control is active.

Report Data

This report presents each booking as a single record that displays from left to right. The columns on the right side display the arrival date, current status, block name, and booking ID for a single record. The center of the report displays the ordered statuses, the date each booking was changed from one status to another, and the number of days each booking was in specific status.

The far-right side of the report displays the date that the booking was placed in actual status; this is a default for this report and cannot be user defined. Each record can reflect up to four revenue types and their associated totals. Each record also contains, by default, the initial rooms count, average room rate (which is calculated inclusive of packages and taxes), total room count, and the total number of lead days per booking.

Catering Revenue prints per the regular principle: if an event is actual, the Actual/Billed revenue prints. If there are no Actual/Billed revenue and/or the event is not actual yet, the Guaranteed/Expected revenues print. If Guaranteed Revenue is higher than Expected Revenue, Guaranteed Revenue prints. If Expected/Guaranteed Revenues does not exist, the Forecast Revenues prints.

An exception to the above rule is made when the Use Forecast Revenue [OPERA Control](#) is active. In this case all events are created with the flag Use Forecast Revenue checked. While this flag is checked, all catering revenue in this report only come from the forecast figures, even if expected or guaranteed figures exist. The flag is unchecked automatically when the event turns actual but can also manually be deselected earlier in the life of the event.

The report summary at the end of the report shows the following:

- Total Number of Bookings.
- Total Number of Actual Bookings.
- Total Number of Room Nights.
 - For Master Allocations (indicated on this report by an asterisk (*) preceding the Block Name), the total number of room nights are the total number of available rooms, **not** the number of rooms blocked.
- Total Number of Actual Room Nights.

- Average Lead Time (for all bookings).
- Average Actual Lead Time (for bookings in Actual status).
- Conversion Bookings.
- Conversion Room Nights.

Business Block Total Spend Report (rep_busblock_spend.rep with rep_busblock_spend.fmx)

The Business Block Total Spend Report displays the total group spend by including all revenues posted to any reservations linked to the block. This report provides a summary similar to the summary screen on a business block in granular detail by showing revenue grouped by the transaction code sub-group.

Report Parameters

Property. Select the properties to filter the report.

Block Arrival Date From/To. Enter an Arrival Date range to filter business blocks for the report.

Transaction Date From/To. Enter a Transaction Date range to filter business blocks for the report.

Block. Opens the Business Block Search screen. Select business blocks to print on this report.

Block Status. Select statuses to filter business blocks for the report.

Display all Transaction Code Groups. If you select this option, all Transaction Code Groups print on this report even if they have no postings to them for the selected business blocks. If you do not select this option, then only the Transaction Code Groups with postings for the selected business blocks will print.

Display all Transaction Code Sub-Groups. If you select this option, all Transaction Code Sub-Groups print on this report even if they have no postings to them for the selected business blocks. If you do not select this option, then only the Transaction Code Sub-Groups with postings for the selected business blocks will print.

Print as Posted. If you select this check box, the report will not calculate net values for generates that are configured as included in the appropriate transaction codes. For example, if a 10 percent tax is included in \$2,000.00 of Banquet Food revenue, the report will print 2,000.00 instead of 1818.181818 (as it would when the check box is not selected). If the Print as Posted check box is not selected, the report will print six decimal figures for all values in order to avoid rounding differences.

Print Event Summary Revenue. If you select this option, the report prints the Event Revenue Type breakdown on the right side of this report. If this option is not selected, the Event Revenue Type breakdown does not print. The figures that print in the Event Revenue Summary are determined by the transaction codes linked to the event revenue type as configured in the Revenue Type Cross Reference. The revenue is reported based on the posted transaction code and the revenue type it maps to.

Combine Revenue. This option is mutually exclusive with the Revenue Grouped by Booking option, meaning that you can select only one of them. If you select this option, the revenues for all selected business blocks are combined into a single report. The selected header

information prints totals for each business block selected, followed by the summary revenue info.

Revenue Grouped by Booking. This option is mutually exclusive with the Combine Revenue option, meaning that you can select only one of them. If you select this option, each of the selected business blocks prints revenue details for each block, and a summary section prints the totals for all of the selected business blocks.

Currency. Select the currency in which the revenues on this report will appear.

Report Output

For Each Business Block: Business Block ID, Block Code, Arrival Date, Departure Date, Business Block Name, Account Name, Contact Name, Contact Phone, Total Rooms, Total Guests, Total Spend, and Total Payments.

For Revenue Details (All Revenue): Depending on the Display all Transaction Code Groups and the Display all Transaction Code Sub-Groups filter options, this section contains all selected summary information, for example: Food and Beverage, Miscellaneous, Room, and Tax.

The next section prints the Event Revenue Summary that prints for any booking that has posted event revenue when the Print Event Summary Revenue check box is selected in the parameters.

Contract Merge Report (Based on Sample_Cont_Merge.RTF with Rep_Cont_Merge.FMX)

Prerequisites for Contract Merge Reports

The Contract Merge Report (rep_cont_merge.rep) outputs group room block and catering event details. Although Contract Merge is mainly used to produce group contracts, there is a much wider scope of possibilities for this customizable report. It is possible to customize sample_cont_merge into multiple report templates linked to the parameter form. The additional options to define which room grid and event template merge into the document and the possibility of merging deposit information make the report very flexible

In multi-property operations the Contract Merge Report can generate details for blocks and events in multiple properties.

Note:

When you output events belonging to a sub-block, all events output on one contract as if they were one booking; not as separate contracts.

Report Parameters

Property. If your location is a property, the property code appears automatically. If your location is a hub, select one or more properties from the list.

Block. Click to select the block to include in the report.

Event Property. Select or confirm the property name.

Event Status. (Available with Simple Events or Catering Events OPERA Control). Select the statuses of events to include in the report.

Print Account. Defaults to the block's default print Account. The Linked Profiles dialog opens enabling you to select other accounts or contacts linked to the selected block.

Print Contact. When a block is selected in the Block filter, the print contact defaults to the block's default Print Contact. The Linked Profiles dialog opens enabling you to select other accounts or contacts linked to the selected block.

Grid Type. Select one of the following options from the list:

- Current
- Contract
- Pickup

Event Templates. Select one of the following values from the list:

Full Event Templates (when the Catering Events OPERA Control is active)

- **Template1.** Date, Time, Event Name, Space Name, Attendees.
- **Template2.** Date, Time, Event Name, Attendees, Function Space Rental.
- **Template3.** Date, Time, Event Name, Space Name, Attendees (Double Spaced).
- **Template4.** Date, Time, Event Name, Space Name, Setup Style, Attendees, Food Revenue, Beverage Revenue, Rental Revenue, Other Revenue. The amounts are calculated from the revenue types that have been selected on the report parameters for each column.
- **Template5.** Date, Time, Event Name, Space Name, Setup Style, Attendees, Function Space Rental.
- **Template6.** Date, Time, Event Name, Space Name, Setup Style, Attendees, F and B Minimum.
- **Template7.** Date, Time, Event Name, Space Name, Attendees, Resources, and Price. Price is based on the Total Expected Revenue, even if the Use Forecast Only check box is selected on the Event Search or Event screen (Available when the Event Resources OPERA Control is active).
- **Template 8.** Similar to Template #7, but with less resource details. This template includes the Date, Time, Event Name, Space Name, Attendees, Limited Resources, and Price. Price is based on the Total Expected Revenue. (Available when the Event Resources OPERA Control is active).

Catering Package Events in Template #8:

- Item Rate Codes will NOT print.
- Included Items will NOT print.
- Additional Items and their Rate (but not Rate Code) will print.
- Included Menu Names will print; the 'Included' tag will NOT print.
- Excluded Menus and their Rate will print.
- Excluded Menu Container will NOT print.
- Included Menu Items will NOT print (whether attached to an Included or Excluded Menu).

- Excluded Menu Items and their Rate will print (whether attached to an Included or Excluded Menu).
- Excluded Menu Item Containers will NOT print.
- Function Space Rate Code or the Included tag will NOT print.
- Items with a 0 Quantity will NOT print.

Non Catering Package Events in Template #8:

- Item Rate Codes will NOT print.
- Included Menu Names will print.
- Menu Containers will NOT print.
- Included Menu Items will NOT print.
- Excluded Menu Items and their Rate will print.
- Excluded Menu Item Containers will NOT print.
- Function Space Rate Code will NOT print.
- Items with a 0 Quantity will NOT print.

Partial Event Templates (when the Simple Events OPERA Control is active):

- The following template values are available:
 - **Template1.** Date, Time, Event Name, Space Name, Attendees.
 - **Template2.** Date, Time, Event Name, Attendees, Function Space Rental.
 - **Template3.** Date, Time, Event Name, Space Name, Attendees (Double Spaced).
 - **Template 5.** Date, Time, Event Name, Space Name, Setup Style, Attendees, Function Space Rental.

Block Notes. Select block note types from the list to include in the report output.

Deposit. Select one of the following sort options: By Date, By Time, or No Deposit. If sorted by deposit type, a sub-total for each deposit type will output.

Currency. Select a currency from the list. This is available when the Ability to Quote Rates in Foreign Currency OPERA Control is active.

Revenue Values. Select an option from the list. Also see: Examples of Rev. Values.

- **Gross Rates/Revenue.** Gross Room Rate is calculated as:
 - Included generates are not deducted.
 - Excluded generates are added.
 - Excluded packages are not added. Gross Catering Price is calculated based on the Transaction Codes mapped in [Revenue Type Mapping](#).
- **Net Rates/Revenue.** Net Room Rate is calculated as:
 - Included generates are deducted.
 - Excluded generates are not added.
 - Included packages stay included.

- Included generates on included or excluded packages are calculated out. Net Catering Price is calculated based on the Transaction Codes mapped in [Revenue Type Mapping](#).
- **Gross and Net Rates/Revenue.** When this option is selected, both the Gross and Net room rates and catering prices are reported and displayed.

 **Note:**

If you do not select an option, the room rates and catering prices appear as they are in OPERA Cloud.

Select revenue types. If you select the Template values as Template 4: Date/Time-Event-Space-Setup-Att-Rev1-Rev2-Rev3-Rev4, all Revenue Types are required fields. (Available when the Simple Events or Catering Events OPERA Control is active.)

- **Rooms with Rate and No Inventory.** If selected, room types where no inventory has been booked are included.
- **PMS Room Types.** If selected, PMS room types output on the contract instead of the Room Pools. If the Room Pools OPERA Control is not active and room pools are not configured for the property, you must select PMS Room Types to display the rooms in the contract output. For more information, see: [Configuring Room Pools](#)
- **Room and Rate Separately.** If selected, room nights and room rates are included in separate grids. If not selected, they output in the same grid. This option is available only when both the Rate and the Occupancy flags are selected.
- **Room Rates.** Select to output room rates, otherwise, Room and Rates Separately, Inline Currency, and Show Decimals are disabled.
- **Inline Currency.** Enabled when Room Rates is selected. If selected, the currency symbol is included with the rate in the grid cells in the Room Grid and Event Templates.
- **Show Decimals.** Enabled when Room Rates is selected. If selected, the rates in the Room Grid and Event Templates with decimals outputs as set up in the Property Details. If not selected, the rounded rate outputs without decimals.
- **Print Space Between Currency and Amount.** Select the check box to print in the report (available when Room Rates and Inline Currency are selected). When selected, a space will be added between the currency symbol/code and the rate amounts displayed in the grid.
- **Hide Property Code.** Select to suppress the property code from output in the report. The Property name will output.
- **Occupancy.** If selected, the number per occupancy level per day is included on the report when the Occupancy Split OPERA Control is activated. If not selected, the total number of rooms per day per room type per day is output.
- **Internal Notes.** If selected, internal block notes are included on the report.
- **External Notes.** If selected, external block notes are included on the report.
- **Event and Resources Notes.** (Available with Simple Events or Catering Events OPERA Control). If selected, event and resource notes are included on the report.

Revenue Values Calculation Examples

The following are examples for the Rev. Values options in the report parameters.

Table 9-2 Occ1 Net Rate = 48.91

Trx Code	Description	Amount
1000	Room Charge	38.00
2200	Package Breakfast Included	10.91
5000	Package Golf Excluded	62.50
8310	Generate on Room – Excluded at 10%	3.80
8000	Generate on Breakfast – Included at 10%	1.09
8200	Generate on Golf – Included at 20%	12.50
		48.91

Table 9-3 Occ1 Gross Rate = 53.80

Trx Code	Description	Amount
1000	Room Charge	38.00
2200	Package Breakfast Included	10.91
5000	Package Golf Excluded	62.50
8310	Generate on Room – Excluded at 10%	3.80
8000	Generate on Breakfast – Included at 10%	1.09
8200	Generate on Golf – Included at 20%	12.50
		53.80

Table 9-4 Occ2 Net Rate = 47.82

Trx Code	Description	Amount
1000	Room Charge	26.00
2200	Package Breakfast Included	21.82
5000	Package Golf Excluded	125.00
8310	Generate on Room – Excluded at 10%	2.60
8000	Generate on Breakfast – Included at 10%	2.18
8200	Generate on Golf – Included at 20%	25.00
		47.82

Table 9-5 Occ2 Gross Rate = 52.60

8000	Generate on Breakfast – Included at 10%	4.36
8200	Generate on Golf – Included at 20%	50.00
		50.20

Deposit Report (rep_deposit.rep with rep_deposit.fmx)

The Deposit Report provides an overview of business block deposits requested and received. Room and Catering deposits can be listed separately if they are requested that way. Otherwise, the combined ALL deposit type will print.

You can organize the report by deposit due date or by business block arrival date range.

Report Parameters

Property. Select the property for which the report should be printed. The report can be ordered across multiple properties in a multi-property environment.

Start Date Range. Allows entry of an arrival date range. All business blocks with an arrival date within the selected range will print on the report.

Deposit Date Range. Allows entry of a date range for which deposits are requested. All business blocks that have deposit requests with a due date within this date range print on the report.

Block Name. Filter the report parameters by the Block Name.

Block Status. Use this option to filter the report by specific Block Status.

Catering Status. Use this option to filter the report by specific Catering Status.

Block Type. Select Rooms, Catering, or All. Allows the selection of Block Room Type only deposits to print (type 'R'), Catering Only Business Block Type deposits (type 'C'), or both Business Block Room Types and Catering Business Block Types (R, C and All) deposits.

Deposit Type. Select one of the following three options:

- **Paid** – If arrival dates are defined, all paid deposits for business blocks during that period will be printed. If deposit due dates are defined, all paid business block deposits made in that period and any unallocated payments for any period will be printed.
- **Unpaid** – Unpaid deposit requests due during the defined period will be printed.
- **Both** – Both the paid and unpaid deposit information will be printed.

Report Data

The report prints a separate section for each business block in booking ID order. The business block details printed include rooms status, catering status, business block name, booking ID, arrival date, departure date, company account name, company contact name, agent or source account name, and agent or source contact name. The deposit data contains the deposit type, percentage of the total that the deposit represents (if it was entered that way), deposit requested amount, due date of the deposit, deposit comments, total amount paid, and the total amount unpaid for each specific request.

Deposit types can be Room, Catering, or All. If a deposit payment is posted without a deposit request being present or the payment is not been offset against an existing request when posting it, the deposit record will be listed on this report as Unallocated, and only the total amount paid shows a figure.

The Total Unpaid figure is calculated for each requested record by deducting the paid amount from the request to which it is allocated.

A report grand total is printed as a summary of all details listed in the Total Paid and Total Unpaid columns.

Forecast/Availability Book (rep_rooms.rep with rep_rooms.fmx)

The Rooms Availability and Forecast report parameter screen provides options for printing the Rooms Availability report as well as the rooms forecast report. When combined, these two reports form a unit that presents a picture of the on-the-books group business for the coming months compared to targets and budgets.

- The availability page contains several sections of different data. It summarizes the day-by-day group business per booking status and compares it against the Sales Allowance (if existing). Also, on a per day basis, the contract figures, target figures, and current total pick-up are displayed and several variances are calculated. At the bottom of this page, the monthly group budget prints and can be compared against the figures currently on the books.

- The rooms forecast page shows a daily breakdown of number of rooms booked versus the number of rooms picked-up for each group horizontally across the page, so that a whole month's worth of business can be viewed at once.

 **Note:**

Because the report uses configured periods (rather than calendar dates) as date parameters, it cannot be used with Scheduled Reports.

The report is primarily designed as a forecast tool, not a production report. Therefore, the figures on this report, if printed for past dates, should not be balanced or compared against any of the booking production reports. You can run this report in PMS-only properties, as well as in properties with an active OPERA Cloud Sales and Management subscription.

Report Parameters

Include Past Dates. Select this option to allow this report to print dates prior to the current date.

Stay Period From. Select a date from one or several calendar months or fiscal periods, depending on how the hotel is configured.

Stay Period To. Select a date up to one or several calendar months or fiscal periods, depending on how the hotel is configured.

Rooms. Select to print Availability, Forecast, or Both. Fields options change depending on whether you select Availability, Forecast, or Both.

Origin. (Available when you select Rooms>Availability or Rooms>Forecast). Select the origins of the business block. You can select one or more of the following (depending on the active modules and cloud services):

- EXT (External System)
- ORS (Central Reservation Sales)
- PMS (Property Reservations Sales)
- SC (Property Conference Sales)
- SFA (Central Conference Sales)

Summary Info Status. (Available when you select Rooms>Availability or Rooms>Both). Allows you to select one or several combined statuses that are compared to contract, pick-up, and target figures in the summary section of the report. These statuses will also be combined for a group ADR and Total Room Revenue for each date.

Budget Status 1 & 2. (Available when you select Rooms>Availability or Rooms>Both) Allows you to select one or several statuses in each filter field to compare against the group budget for the month.

Status. Only bookings of the selected statuses are included in the report.

 **Note:**

The data on the Rooms Forecast and Rooms Availability reports is sorted by status code in the configured sequence order.

Print Contract Rooms for Forecast. (Available when you select Rooms>Forecast or Rooms>Both) Select the Print Contract Rooms check box to print an additional line for each business block with the total number of Contracted rooms per day.

Net Revenue. Select this check box to display Net room revenues. When this flag is NOT selected, gross room revenue are calculated.

Currency. Select the type of currency to display the revenues on this report.

Name. (Available when you select Rooms>Forecast) Possible options are Business Block Name or Primary Account Name. The name you select prints on the booking forecast page.

 **Note:**

When this report is printed by Account Name, the following logic is used: If a Company profile is attached to the booking, the Company profile prints. If no Company profile is attached, but an Agent profile is present, then the Agent profile prints. If no Company and no Agent profiles are attached, but a Source profile is present, then the Source profile prints.

Property Revenue Type. (Available when you select Rooms>Forecast or Rooms>Both). Select one or more revenue type codes.

Market Segment. (Available when you select Rooms>Forecast or Rooms>Both). Include only bookings from the market segments chosen in this field.

Report Data

The Availability Book

The calendar month or fiscal period appears at the top of the report, along with the corresponding dates.

The Rate Protect and/or Non-compete bar is available when either or both the Blocks > Rate Protect and Blocks > Non Compete application parameters are set to Y. Both of these controls are available with the OPERA Cloud Sales and Event Management Cloud Service subscription. If any booking is designated non compete on a given date, NC appears above that date. If any booking is rate protected on a given date, RP appears above the date.

- Rate protect means that no other groups should be booked using rates lower than those assigned to the block that is flagged as rate protect. The rate protect flag can be applied to all or selected dates of the flagged block.
- Non compete means that no competing accounts (accounts having the designated NC Industry code) should be booked at the same time as this block. The non compete flag can be applied to all or selected dates of the flagged block.

The Events bar indicates the first letter of any events entered on the Property Calendar.

The first section of the availability book is made up of the total per booking status and period of the data that appears in detail on the forecast book. The totals per status shown are: average rate, total number of room nights, total revenue, followed by a breakdown of room nights day-by-day for the whole month for the appropriate status across the page. If the hotel operates with a sales allowance, the total rooms per day allocated to the sales allowance prints above the first status total. Following the status details, a "Rooms Available" line prints. The totals that appear in this line are calculated by deducting all room nights of deduct-inventory status from the total sales allowance for the day. The last line in this section shows the sum of all rooms by day that are lined to bookings. Even lost and canceled status totals are added in order to arrive at the total (if these were included in the status selection).

The second part of the availability book contains a section titled Summary Information. All information printed in the section pertaining to current revenue and average rates depends on the Summary Information Status filter. The average rate and revenue for each day in the printed month appears, followed by details of contracted room nights, revenues and average rates, picked-up room nights (picked up rooms are never reported for Master Allocations), revenues and average rates, and daily targets for room nights, revenues, and average rates if these were entered. Subsequent rows show the calculated variance of current figures to contract figures (as entered into the contract room grid on each booking, if used) as well as the calculated variance of current figures to daily targets. All of the above figures are calculated and appear on a day-by-day basis. For Master Allocations, calculations are based on available rooms, not the number of rooms blocked.

The last section of the report shows the group budget figures entered for the month and the status summaries for the whole month of those statuses that were selected in budget status one and budget status two in the filter form. The totals for the statuses selected in budget status two are compared against the budget and the variance printed.

Status

- The first line per booking contains the internal booking ID number, the booking name or primary account name depending on what had been chosen in the Name filter on the report order form, and the market code. The room's owner initials print next.
- The Rate Protect and/or Non Compete bar is available when either or both the **Blocks** and the **Blocks > Non Compete** application parameters are set to Y. If the booking is designated non compete on a given date, NC appears above that date. If the booking is rate protect on a given date, RP appears above the date. Rate protect means that no other groups can be booked using rates lower than those assigned to the block that is flagged as rate protect. The rate protect flag can be applied to all or selected dates of the flagged block. Non compete means that no competing accounts (accounts having the designated NC Industry code) should be booked at the same time as this block. The non compete flag can be applied to all or selected dates of the flagged block. For non compete bookings, the NC Industry code appears in the Industry column.
- • For each block there is an Average Rate for the month, RevPOR (Revenue Per Occupied Room) that is calculated by adding room revenue and catering revenue of the catering revenue types selected on the filter and then dividing the total sum by the total number of room nights and Room Revenue for the month.
- • The rest of the line is divided into number of days of the appropriate month or fiscal period and shows the number of room nights booked on each day for the booking. The second line contains the pickup figures (picked up rooms are never

reported for Master Allocations) per day. If the Print Contract Rooms check box is selected on the report order form, the third row contains the number of contracted rooms per day. Each line has a total for the month.

- For each status there is a Total Rooms Revenue and Total Average Rate:
 - When Status is not an ACTUAL, the Avg Rate = Total Rooms Revenue / Total Room Nights (blocked).
 - When Status is an ACTUAL status, the Avg Rate = Total Rooms Revenue / Pickup Room Nights.

Period

The Period Totals are highlighted in the gray bar.

- The first figure is the Total Room Nights, then total Pickup Room Nights, and if the Print Contract Rooms check box is selected in the report order form, the third figure is the total Contract Room Nights per period.
- Beneath those figures are the Total Room Revenue and the Average Rate per period. For business blocks in an ACTUAL status, Picked up rooms and Picked up room revenue are considered.

 **Note:**

When the application function Blocks > Master Allocations is active and a Master Allocation is included on this report, these blocks are indicated by an asterisk(*) on the left of the Business Block Names, as well as in the footer.

Group Room Pace (BI) Report (Rep_Group_Rooms_Pace_BI.Rep with Rep_Group_Rooms_Pace_BI.FMX)

Prerequisites for Group Room Pace (BI) Report

The Group Room Pace Report is sorted by Property Year and grouped by Total, Catering Only Y (Sales) and Catering Only N (Catering).

Report Elements

- This report is a BI Publisher report. Customizing the report is not recommended. The following are the report elements:
 - Report Name - Group Room Pace (BI)
 - File Name - rep_group_rooms_pace_bi.rtf
 - Form to run - rep_group_rooms_pace_bi.fmx
 - Data Template - rep_group_rooms_pace_bi.odt

Selection Criteria

Production Period

Each change to Revenue or Status is recorded in production change logs. When dates are entered in the Production From and To Date fields, those dates are used as filters when querying the logs. To illustrate, a business block created on status TEN in April 2018 with a

start date in October 2018 turns to DEF in June 2018. In this scenario, two entries would appear in the status change log for this business block: one for the creation of the business block on status TEN in April 2018, and one for the status change to DEF in June 2018. If revenue is added to the DEF business block in July 2018, another change log entry is written to record that revenue. Because they filter on a date when something has already happened in OPERA, the dates entered here should be for today's date or earlier.

For STLY (Same Time Last Year) calculations, the report considers the Production From Date as empty and the Production To Date as the Production Date entered, minus one year.

- **From. (Mandatory).** Enter the calendar date to indicate the beginning of the Production Period for which the report is to be filtered.
- **To. (Mandatory).** Enter the calendar date to indicate the end of the Production Period for which the report is to be filtered.

Stay Dates. These dates are the calendar stay periods that appear in the report. The calculations for STLY are affected by the Fixed Stay Dates check box. When the Fixed Stay Date check box is selected, the Stay Dates used for calculating STLY are the same as those entered here. When the check box is not selected, the Stay Dates used for calculating STLY are the Stay Dates entered, minus one year.

- **From. (Mandatory).** Enter a start date range when the report will filter business blocks by allotment date.
- **To. (Mandatory).** Enter an end date ranged when the report will filter business blocks by allotment date.

Property. Select the property for which the report should be printed. When you are logged in at the hub level, the property LOV is multi select, which allows you to run the report for multiple properties.

Origin. Select Origins. This LOV lists all of the possible values from the internal field allotment_origin values from the Business Block header. When a value is selected, only events from business blocks with this origin are considered. If no value is selected, all business blocks are considered. Possible values are based on the user who created the block and the Act As and At values set on the user in Role Manager.

- If the Act As value = Conference Sales Person, and the At value = Property level, then the block is flagged as Sales and Catering.
- If the Act As value = Reservation Sales Person, and the At value = Central, then the block is flagged as ORS.
- If the Act As value = External System, then At value = not required, and the block is flagged as EXT.
- If the Act As value = Reservation Sales Person, and the At value = Property, then the block is flagged as PMS.
- If the Act As value = Conference Sales Person, and the At value = Central level, then the block is flagged as SFA.

Block

New Definite. (Mandatory). Select one status code from a list of all status codes that can turn to an Actual status. The New Definite column is calculated based on the business blocks that turned to this status during the requested production period.

Incl Actual. (Enabled when a Status is selected in the New Definite field). Select this check box to include Actual business blocks with the figures in the Definite On the Books totals.

Cancel. (Mandatory). Select status codes from a list of all Return-to-Inventory statuses. The Cancel column is calculated based on the business blocks that turned to this status during the requested production period. All figures are reported as a negative.

OTB Status 2. (Mandatory). Select status codes from a list of all status to be used when calculating the first of the last two sections.

- The TY (This Year) column is calculated based on the business blocks currently in this status for the stay dates.
- The STLY (Same Time Last Year) column is calculated based on business blocks with this as a Last Status for the Production Period and Stay Period minus one year.

OTB Status 3. (Mandatory). Select status codes from a list of all status codes to be used when calculating the second of the last two sections.

- The TY (This Year) column is calculated based on the business blocks currently in this status for the stay dates.
- The STLY (Same Time Last Year) column is calculated based on business blocks with this as a Last Status for the Production Period and Stay Period minus one year.

Revenue

Currency. Select the currency you want to be used for calculating the figures in this report. All figures are reported in the selected currency. If no value is selected, the report will be calculated using the Base Currency of the logged in Property.

Revenue. One of the options must be selected, Net or Gross. You can select the Incl Packages check box if either Net or Gross is selected.

- **Net.** When selected, Room Revenue will be calculated as: Net Room Rate calculated as Room Only.
 1. Included generates are deducted.
 2. Excluded generates are not added.
 3. Included packages and their generates are excluded.
 4. If Incl Packages is selected, then Included and Excluded Packages are included but their Included and Excluded Generates are not included.
- **Gross.** When selected, Room Revenue will be calculated as: Gross Room Rate calculated as:
 1. Included generates are not deducted.
 2. Excluded generates are added.
 3. Excluded packages are not added.
 4. Included Packages and their generates are excluded.
 5. If Incl Packages is selected, then Included and Excluded Packages are included and so are their Included and Excluded Generates.

 **Note:**

Net and Gross calculations are only done for On the Books and ACTLY (Actual Last Year) calculations. All other revenue is reported as seen in OPERA Cloud.

Owner. All 3 filters are multi select. If no value is selected, then all Owners listed in the LOV are considered.

- Block Owner. Only business blocks with this Overall Owner are considered.
- Rooms Owner. Only business blocks with this Rooms Owner are considered.
- Catering Owner. Only business blocks with this Catering Owner are considered.

Block Type. (1 of the 3 options must be selected).

- All. Select if all business blocks will be considered.
- Catering. Select if only business blocks marked as Catering Only will be considered.
- Rooms. Select if only business blocks not marked as Catering Only will be considered.

Same Time Last Year. Select how you want the calculations made for STLY. When the Fixed Stay Date check box is selected, the Stay Dates used for calculating STLY are the same as those entered in Stay Dates To/From fields. When the check box is not selected, the Stay Dates used for calculating STLY are the dates entered in the Stay Dates To/From fields, minus one year.

Report Output

- The first grouping depends on the value selected in the Block Type filter.
- If All is selected, the grouping will contain Total Sales and Catering, Total Sales, Total Catering.
- If Catering is selected, only Total Catering will print.
- If Rooms is selected, only Total Sales will print.
- The second grouping is by Stay Month (based on the Stay Date range selected in the report parameter screen)

Row Headers

- Calendar Periods. Determined by the values selected in the Stay Date range.

Production Period Section

- **New DEF.** Calculated from business blocks that turned Definite during the Production Period. Definite is determined by the New Definite filter in the report parameter screen.
- **Can.** (Cancel). Calculated from business blocks that turned to Cancel during the Production Period. These numbers will always be reported as a negative. Cancel is determined by the Cancel filter in the report parameter screen.
- **Rev.** (Revaluations). Calculated from business blocks that were already Definite when the Production Period began and had a change during the Production Period while still in Definite. Definite is determined by the New Definite filter in the report parameter screen.

- **Slip.** (Slippage). Calculated from business blocks that were already Actual when the Production Period began and had a change during the Production Period.

An example for the above columns:

- In June 2018, Block turns DEF with 100 Rooms.
- In July 2018, Block drops to 95 Rooms (still DEF).
- In August 2018, Block turns to ACT with 97 Rooms.

If the report is run for Production Period June – August 2018, the results are:

- NEW DEF +100 rooms
- Reval -5 rooms
- Slippage +2 rooms
- Net. (Net Change) = (New Definite + Cancel + Reval + Slippage).

Rooms On The Books Section

The Rooms On the Books column header will be updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen.

- **Total.** The current number of Room Nights for business blocks in this status for this Stay Period. If the business block is in an Actual status, picked-up room nights are considered. Otherwise, blocked room nights are considered.
- **ACTLY.** (Actual Last Year) The current number of picked-up room nights for Actual business blocks for the Stay Period minus one year (production period is not considered).
- **STLY.** (Same Time Last Year) Rooms Nights for business blocks in this status at the end of the selected Production Period minus one year for the selected Stay Period minus one year. The calculation considers the Production From Date as empty and the Production To Date as the Production Date entered, minus one year.
- **Budget.** Room Night Budget for the Stay Period as entered in the OBI Budget Forecast module.
- **ACTLY Var.** Total – ACTLY.
- **STLY Var.** Total – STLY.
- **Budget Var.** Total – Budget.

Rates On The Books Section

The Rates On the Books column header are updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen.

- **Total.** (Total OTB Revenue ÷ Total OTB Room Nights).
- **ACTLY.** (ACTLY Revenue ÷ ACTLY Rooms Nights).
- **STLY.** (STLY Revenue ÷ STLY Room Nights).
- **Budget.** (Budget Revenue ÷ Budget Room Nights).
- **ACTLY Var.** Total – ACTLY.
- **STLY Var.** Total – STLY.
- **Budget Var.** Budget Var = Total – Budget.

Room Revenue On The Books

The Room Revenue On The Books column header are updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen.

- **Total.** Total Room Revenue for business blocks in this status for this Stay Period. If the business block is in an Actual status, picked-up room revenue is considered. Otherwise, blocked room revenue is considered.
- **ACTLY.** (Actual Last Year) The picked-up room revenue from Actual business blocks for the Stay Period minus one year (production period is not considered).
- **STLY.** (Same Time Last Year) Room Revenue for business blocks in this status at the end of the selected Production Period minus one year for the Stay Period minus one year. The calculation considers the Production From Date as empty and the Production To Date as the Production Date entered, minus one year.
- **Budget.** Room Revenue Budget for the Stay Period as entered in the OBI Budget Forecast module.
- **ACTLY Var.** Total – ACTLY.
- **STLY Var.** Total – STLY.
- **Budget Var.** Total – Budget.

On the Books Status 2 and 3 Sections

This section reports Room Nights, Average Rate and Room Revenue for the Stay Dates based on the status selected in the OTB Status 2 and OTB Status 3 filters in the report parameter screen.

- **TY.** (This Year). Current, on the books Room Nights, Average Rate and Room Revenue for the selected Status and Stay Period.
- **STLY.** (Same Time Last Year). Room Nights, Average Rate and Room Revenue for business blocks in this status at the end of the Production Period minus one year for the Stay Period minus one year.
- **Var.** TY – STLY (This Year – Same Time Last Year).

Group Room Reservation Sheet (Sample_GRMRES_Sales_STD.Rep with Sample_GRMRES_Sales_STD.fmx)

The Group Room Reservation Sheet report details all information about a group block including linked accounts, contact and agent information, room grid with rates and revenue, all major block details, catering event information, sales activities, and deposit information. Additionally, you can include all notes associated with the block and events.

Report Parameters

- **Property:** Enter or select the property. You can select multiple properties from a [Hub location](#).
- **Filter:**
 - **Start Date.** Enter or select a date.

- **Block.** Click to search and select a block from the list. The internal booking ID appears in the search field.

 **Note:**

When selecting a Master Block, Master Allocation, or Master Tour Series, all sub-booking information prints in the Room and Event sections. If you select only a sub-booking, then only the data for that business block is output.

- **Block Status.** Select a block status from the list to be included in the report.
- **Event Status.** Select event statuses from the list to be included in the report. (Available when the Simple Events or Catering Events OPERA Control is active.)
- **Notes:**
 - **Print Internal Notes.** Select the check box to include notes marked as Internal.
 - **Print External Notes.** Select the check box to include notes marked as External.
 - **Types.** Select note type(s) from the list.
- **Room Grid Type:**
 - **Original.** Select the check box to output the Original room grid.
 - **Pickup.** Select the check box to output the Pickup room grid.
 - **Current.** Select the check box to output the Current room grid.
 - **Contract.** Available when the OPERA Control for Block Contract Grid is active.
- **Room Rates:**
 - **Hide Rates.** Select the check box to suppress the output of rate amounts.
 - **Print Rooms with Rate and No Inventory.** Select the check box to display room types with a rate but no rooms booked. If not selected, room types with a rate but no rooms booked are not included.
- **Display (Output):**
 - **PMS Room Types.** Select to output the inventory room types.
 - **Room Pools.** Select to output the room pools (Available when the Room Pool OPERA Control is active.). For more information, see: [Configuring Room Pool](#).
 - **Summary.** Select the check box to include a summary of the selected room grids. If selected, a total line for each selected grid type prints, showing only the number of booked rooms per day irrespective of rates or room type. This area prints only if you select at least one grid type to print on the first filter page.
 - **Information.** Select the check box to include all codes, dates, and miscellaneous information found in the Block Details panel.
 - **Activities.** Select the check box to include activities linked to the selected business block. (Available when Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition or Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition is active.)
 - * **Activity Notes.** Select the check box to include the activity notes.
 - **Room Header Display:**

- * **Code.** Select to output the code.
- * **Description.** Select to output the description.
- * **Both.** Select to output the code and the description.
- **Extended (multi-byte) Characters.** Select to output the alternate name for profiles linked to the block. (Available when the Multi-Language OPERA Control is active.)
- **Events.** Select the check box to include catering event information. If the event status filter is used on the first filter page, only events of the selected statuses will be included. (Available when the Simple Events or Catering Events OPERA Control is active.)
- **Address Type.** Select an address type other than the primary address to output all linked profiles. If no address of that type is found for one of the profiles attached to the selected bookings, the primary address outputs instead.
- **Deposits:**
 - **Print Deposits.** Select the check box to output deposit information. You must have a deposit request for any deposit information to output.
 - **Sort By:**
 - * **Type.** Select to sort by deposit type.
 - * **Date.** Select to sort by deposit due date.
- **Currency.** Select a currency to convert revenue amounts based on exchange rate setup (available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active).

 **Note:**

Deposit Requests, Payments, and the Due Amount are always reported in your property's base currency irrespective of the currency selected.

Report Output

Account and Contact Information. Includes the primary account name, address and primary website, primary contact name and primary email for the contact, relationship to booking and address, secondary contact name, relationship to booking and address, and primary agent name and address. The address/phone information for each profile uses up to three lines across the page. If a specific profile is not used, these three lines are suppressed and the subsequent space allotted for this information is collapsed.

Booking General Information. Includes all codes (market, source, booking type, and so on), dates and other information from the business block rooms, catering, and details sections. This section also may include the following details for the booking when the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition is active:

- **Ranking.** (Available when the Block Ranking OPERA Control is active, which is available only with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition). You can apply a ranking code to a business block

to indicate the rank (or priority) of the business block. For more information, see: [Configuring Block Rankings](#)

- **Conversion.** (Available when the Block Ranking OPERA Control is active, which is available only with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition). You can apply a conversion value to a business block to indicate a percentage of likelihood that the booking will turn definite. For more information, see: [Configuring Block Conversions](#)
- **Non Compete and NC Industry.** (Available when the Block Ranking OPERA Control is active, which is available only with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition). Non compete means that no competing accounts (accounts having the designated NC Industry code) should be booked at the same time as this block. You can apply the non compete flag to all or selected dates of the flagged block. If all dates are covered, ALL appears here. If only selected dates for the booking are non compete, SOME appears and an additional Dates area shows the dates. Otherwise, NONE appears.
- **Rate Protect.** (Available when the Block Ranking OPERA Control is active, which is available only with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition). Rate protect means that no other groups should be booked using rates lower than those assigned to the block that is flagged as rate protect. You can apply the rate protect flag to all or selected dates of the flagged block. If all dates are covered, ALL appears here. If only selected dates for the booking are rate protect, SOME appears and an additional Dates area shows the dates. Otherwise, NONE appears.

Current Room Grid Information. Dates output across the page, and room types/occupancy levels as rows. The total number of booked room nights as well as revenue and average rate appear in this area.

Summary Section. If summary section is flagged on the filter screen, a summary of total number of rooms booked per day for each grid will output after the grid details.

Notes and Business Block Info. All selected business block notes output after the summary section on the left hand side of the report. On the right hand side beside the notes, another box containing additional information on overall owner, rooms owner, and catering owner outputs if the business block is lost or canceled. The details, including reason lost and destination lost to, also output in that Business Block Information box.

Events. Catering Event information is output if Events are selected to be included in the report parameters. Details of these events include: Event Type, Function Space and Function Space Rate, Set-up Style, Event Date and Event Time, internal Event ID, and Number of Attendees per Event. The Door-card text (Post As) for each event also outputs underneath the Event Type.

**Note:**

If no catering events are associated with the selected Business Block, this section is suppressed.

Deposit. Deposit information appears next if deposit requests are attached to the booking and/or deposits are posted to the booking already. This section outputs only if the appropriate flag is checked on the filter form. The sequence for how the deposits are output is governed also by the report parameters, depending on whether you selected print deposit by type or by date. If you select by type, a sub-total outputs after each type. The information output for

each deposit includes: deposit type (rooms, catering, all), percentage of total revenue (if entered), deposit amount requested, due date, amount paid, due amount, and description/comment (if entered). Totals of all amount fields output as a summary line below all separate deposit records.

Activities. Displays the following information for activities associated with the selected business block: Activity Start Date, Start and End times, Activity Type, Purpose, Owner, and whether or not the activity is complete.

**Note:**

If no activities are associated with the selected Business Block, this section is suppressed

Month End Details Report (BI) (rep_month_end_details_bi with rep_month_end_details_bi)

Prerequisites for Month End Details Report

Report Name: **Month End Details** (REP_MONTH_END_DETAILS_BI with REP_MONTH_END_DETAILS_BI.fmx): The Month End Details report details business block and sales and event production changes during the dates requested. The report can be grouped by Stay Month or Owner and has many filtering options including business blocks with the Catering Only check box = Y or the Catering Only check box = N.

Selection Criteria

Production Date Range

Each change to Room and Event Revenue or Status is recorded in production change logs. When dates are entered in the Production From and To Date fields, those dates are used as filters when querying the logs. To illustrate, a business block that is created on status TEN in April 2020 with a start date in October 2020 turns to DEF in June 2020. In this scenario there would be two entries in the status change log for this business block: one for the creation of the business block on status TEN in April 2020 and one for the status change to DEF in June 2020. If revenue is added to the DEF business block in July 2020, another change log entry will be written to record that revenue. Because they filter on a date when something has already happened in OPERA Cloud, the dates entered here should be for today's date or earlier. Separate change log entries are written for room and event status and revenue changes.

- From Date. Enter the calendar date to indicate the beginning of the Production Period for which the report is to be filtered. Room Revenue is filtered on the business block change date and Catering Revenue is filtered on the event change date.
 - To Date. (Mandatory) Enter the calendar date to indicate the end of the Production Period for which the report is to be filtered.
1. **Stay Date Range:** These are the calendar periods that will be displayed in the report.
 - From Date. (Mandatory) Enter a start date range when the report will filter events by their start date and the business blocks by allotment date.

- To Date. (Mandatory) Enter an end date range when the report will filter events by their start date and business blocks by allotment date.
2. **Property:** Select the property for which the events should be filtered.
 3. **Block Origin:** Select Origins. This lists all of the possible values from the internal field allotment_origion. When an Origin is selected, only events from business blocks with this Origin will be considered. If no Origin is selected, all business blocks will be considered. Possible options are:
 - ORS (business blocks created in the ORS application)
 - SFA (business blocks created in the SFA application)
 - PMS (business blocks created in the PMS application)
 - SC (business blocks created in the S&C application)
 - EXT (business blocks created in an External system)
 4. **Block & Events:**
 - a. **Definite:** (Mandatory) Select one status code from the list of all status codes that can turn to an Actual status.
 - b. **Incl Actual:** (Enabled when a Status is selected in the Definite field) Select this check box to include business blocks and events in an Actual status with the status selected in the Definite LOV.
 - c. **Status:** Select Status Codes from the list except the ACTUAL status and the status selected in the Definite LOV.
 - d. **Business Block:** Select specific business blocks from the Business Block Search screen for which to print the report. If none are selected, the report will print all business blocks that meet the other criteria on the report parameter screen.
 - e. **Market Segments:** Select market segments by which the business blocks should be filtered. If none are selected, business blocks will not be filtered by market segments.
 - f. **Covers:** Select Event Types to indicate which will be included in the Covers calculation in the reports. If no value is selected, all event types will be considered.
 - g. **Block Type** (1 of the 3 options must be selected):
 - **All:** Select if all business blocks will be considered.
 - **Catering:** Select if only business blocks marked as Catering Only will be considered.
 - **Rooms:** Select if only business blocks not marked as Catering Only will be considered.
 5. **Print Options:**
 - a. **Revenue:** One of the options must be selected, Net or Gross. The Incl Packages and/or Print Grand Total check box can be selected if either Net or Gross is selected. The Incl Packages option is described with Net and Gross examples below.

The Print Grand Total check box, when selected, will print a final summary page which includes the Totals for each subtotal (Changes and New) and a Grand Total. If not selected, no summary page will print.
 - b. **Net:** When selected, Room and Catering Revenue will be calculated as:
 - Net Room Rate is calculated as ROOM ONLY.

- Included generates are deducted
- Excluded generates are not added
- Included packages and their generates are excluded
- If Incl. Packages is selected, then Included and Excluded PMS Packages are included, but their Included and Excluded Generates are not included.

Net Catering is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Configuration > Cashiering > Rev Type Cross Reference):

- Included generates are deducted
- Excluded generates are not added
- The Incl. Packages check box has no influence on the Catering Revenue calculation.

- c. **Gross:** When selected, Room and Catering Revenue will be calculated, Gross Room Rate is calculated as:

- Included generates are not deducted
- Excluded generates are added
- Excluded packages are not added
- Included Packages and their generates are excluded
- If Incl. Packages is selected, then Included and Excluded PMS Packages are included and so are their Included and Excluded Generates.

Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Configuration > Cashiering > Rev Type Cross Reference):

- Included generates are not deducted
- Excluded generates are added
- The Incl. Packages check box has no influence on the Catering Revenue calculation.

 **Note:**

Net and Gross calculations are only done for the Current figures. Change revenue is reported as seen in OPERA.

- d. **Print Grand Total:** If selected, a final summary page will print which includes the Totals for each subtotal (Changes & New) and a Grand Total.
- e. **FB Revenue:** Select active Revenue Types to include in the F&B Revenue calculations in the report. If none are selected, no F&B Revenue calculation will be done.
- f. **Other Revenue:** Select active Revenue Types to include in the Other Revenue calculations in the report. If none are selected, no Other Revenue will be calculated.
- g. **Currency:** Select the one currency for which all revenue figures will be reported. If no value is selected, the report will be calculated using the Base Currency of the logged in Property.

- h. Owner:** (Select Owners. If no value is selected, then all Owners listed in the LOV will be considered.)
 - **Overall:** Only business blocks with this Overall Owner will be considered.
 - **Rooms:** Only business blocks with this Rooms Owner will be considered.
 - **Catering:** Only business blocks with this Catering Owner will be considered.
- i. Exclude from Forecast:** (1 of the 3 options must be selected)
 - **Both:** All events will be considered regardless of the Exclude from Forecast check box.
 - **Yes:** Only events marked as Exclude from Forecast will be considered.
 - **No:** Only events not marked as Exclude from Forecast will be considered.
- j. Group By :** (1 of the 4 options must be selected)
 - **Stay Month.** If selected, the report will be grouped by business block stay month. For room nights and room revenue, the business blocks will be grouped based on which night the room is reserved. For event revenue, the business blocks will be grouped based on the event start date.
 - **Overall Owner:** If selected, the report will be grouped by the Business Block Overall Owner.
 - **Rooms Owner:** If selected, the report will be grouped by the Business Block Rooms Owner.
 - **Catering Owner:** If selected, the report will be grouped by the Business Block Catering Owner.

Report Data

1. Business Block Owner

The 1st grouping may be by Owner (Rooms Owner, Catering Owner, or Overall Owner) as selected as a Group By in the report parameter screen.

- The Owner's First and Last Name is printed in bold.
- The Owner's name is listed by First Name in Alpha Order.

If, for example, the report is Grouped by Rooms Owner and filtered by Catering Owner, the grouping will continue to list each of the Rooms Owners that qualify based on the other filters, as well as having the selected Catering Owner on the business blocks.

2. Business Block Changes

If there are business block or event production changes for the Owner for the requested production period, the *Changes* heading displays and the changes are listed in that grouping under the appropriate Status.

3. Status Code:

- Each Status that has a change is listed with the Status Code and the word *Changes*.
- The Status Codes are listed in order by their configured sequence.
- Within each Status Code, the business block is listed that contributed with a room or event change.
- A business block will be included if it has a change to room revenue, room nights, or catering revenue during the requested production period. A business block may be

listed under more than one status if the sleeping room and events are in a different status and thus contribute to a different status code.

In the Status Code section the following columns display.

- Block Name
- Block ID
- Arrival (the business block start date in the logged in Property's Short Date format)

Current and Change rules apply to each of the sections in this report. Current Revenue and room nights at the time the report is printed and only including business block and events currently in that status.

- A business block will be included if the room nights, room revenue or catering revenue had a status change during the production period in this status & last status only except if noted below. The current revenues will be calculated from On the Books figures unless that business block or event is in an Actual Status. In that case, the current revenue will be calculated as:
 - Current Room Nights and Room Revenue figures will be taken from reservation_stat_daily.
 - Current Event figures are taken from Billed Revenue in gem_event_revenue.
- If a business block or event turned to a Return-to-Inventory Status, the report displays 0.00 for the Current Revenue, Room Nights, and Covers.
 - **A (see example below)**: If a business block or event turned to Actual (and not DEF) during the production period and did not have a room night or revenue change during the period, that business block will not be listed in this report.
 - **B (see example below)**: If a business block or event turned to DEF and ACT during the production period, it will be listed in the New DEF/ACT grouping. The Current revenue will be calculated from statistics for rooms and room revenue and from billed revenue for events.
 - **C (see example below)**: If a business block or event turned to Actual (but not DEF) and had a change during the production period, that business block will be listed in the ACT Changes grouping.
 - **D (see example below)**: If a business block turned to DEF and Cancel during the production period, that business block will be listed in the New DEF and New CAN groupings.

Change Revenue and room nights that changed during the requested production period for this status.
 - **E (see example below)**: Last status changes to room nights and revenue during the production period.
 - * If a business block turned to a Return-to-Inventory Status during the production period, the Change Revenue is reported as a negative.
 - * If an Actual business block or event had a change to room nights or revenue during the production period, that change is reported here and will be calculated as:
 - * Room Revenue. Changes will be calculated from the production logs.

- * Catering Revenue (Billed Revenue and Production) excluding ACT Production from the requested production period. Any event with a change in gem\$event_revenue or event\$changes will be included.
- **Examples:** Report generated for Production Dates July 1 and July 31, 2013
 - **A :** Business block turned to DEF on June 15th, 2013.
Business block turned to ACT on July 2nd, 2013.
No other changes in July 2013.
That business block would not be included in the report.
There will never be a New ACT grouping in the report.
 - **B :** Business block turned to DEF on July 2nd 2013 with 100.00 Catering Revenue / 3450.00 Room Revenue / 30 Room Nights. All rooms picked-up at 3450.00 room revenue / 30 room nights.
Business block turned to ACT on July 5th, 2013.
No other changes in July 2013.
That business block will be included in the New DEF/ACT grouping with the following figures:
 - * Current catering revenue = 100.00, Current room revenue =3450.00, Current room nights = 30.
 - * Change catering revenue = 100.00, Change room revenue = 3450.00, Change room nights = 30.
 - **C :** Business block turned to DEF on June 15th, 2013.
Business block turned to ACT on July 2nd, 2013 with 36,000.00 Catering Revenue / 1000.00 Room Rev.
Business block added 300.00 catering revenue on July 2nd, 2013 / No Room changes Business block will be included in the ACT Changes grouping in this report with the following figures:
 - * Current catering revenue = 36,300.00. Current room revenue - 275,000.00. Current room nights = 1000.
 - * Change catering revenue = 300.00. Change room revenue = 0.00. Change room nights = 0.
 - **D:** Business block turned to DEF on July 15th, 2013 with 100.00 Catering Revenue / 3450.00 Room Revenue / 30 Room Nights.
 - * Business Block added 300.00 Catering Revenue / 6750.00 Room Revenue / 3 Room Nights on July 17th, 2013
 - * Business block turned to CAN on July 20th.
 Business Block will be included in the New DEF grouping in this report with the following figures:
 - * Current catering revenue = 0.00, Current room revenue = 0.00, Current room nights = 0.
 - * Change catering revenue = 400.00, Change room revenue = 4,125.00, Change room nights = 33
 Business Block will be also included in the New CAN grouping in this report with the:

- * Current catering revenue = 0.00, Current room revenue = 0.00, Current room nights = 0.
- * Change catering revenue = -400.00, Change room revenue = -4,125.00, Change room nights = 33.
- **E:** Business block turned to TEN on July 2nd, 2013 with 20 room nights / 2000.00 room revenue.
Business block added 10 room nights / 1500.00 on July 3rd, 2013
Business block turned to DEF on July 7th, 2013
Business block added 3 room nights / 450.00 on July 20th, 2013
Business block will be included in the New DEF grouping with Current & Change the same:
 - * Current figures calculated from OTB as 33 room nights / 3950.00 room revenue
 - * Change figures calculated from OTB as 33 room nights / 3950.00 room revenue

FB Revenue and Revenue Types to consider determined by the values selected in the FB Revenue filter in the report parameter screen. If no values have been selected in the parameter screen, no calculation will be done for these fields.

- Current: The FB Revenue as of the time the report is printed and only including events currently in that status.
 - * If a business block is in a Return-to-Inventory Status, report displays 0.00.
- Change: The FB Revenue that changed during the requested production period for this status.
 - * If a business block turned to a Return-to-Inventory Status during the production period, the Change Revenue is the full value of the F&B event revenue and is reported as a negative.

Other Revenue - Revenue Types to consider determined by the values selected in the Other Revenue filter in the report parameter screen.

- Current: The Other Revenue as of the time the report is printed and only including events currently in that status.
 - * If a business block is in a Return-to-Inventory Status, report displays 0.00.
- Change: The Other Revenue that changed during the requested production period for this status.
 - * If a business block turned to a Return-to-Inventory Status during the production period, the Change Revenue is the full value of the Other event revenue and is reported as a negative.

Room Nights

- Current: The Room Nights as of the time the report is printed. Current Room Nights are included in the status grouping based on the business block's status at the time the report is run.
 - * If a business block is in a Return-to-Inventory Status, the report displays report 0.00.

- Change: The Room Nights that changed during the requested production period. Change Room Nights are included in the status grouping based on the business block's status when the change was made.
 - * If a business block turned to a Return-to-Inventory Status during the production period, the Change Room Nights are the total number of rooms and is reported as a negative.

ADR

- Current: Calculated as (Current Rooms Revenue ÷ Current Room Nights). If a business block is in a Return-to-Inventory Status, the report displays 0.00.
- Change: Calculated as (Current ADR (Current Rooms Revenue and Change Rooms Revenue) ÷ (Current Room Nights and Change Room Nights)).

Rooms Revenue

- Current: The Rooms Revenue as of the time the report is printed. Current Room Revenue will be included in the status grouping based on the business block's status at the time the report is run.
 - * If a business block is in a Return-to-Inventory Status, the report displays 0.00.
- Change: The Room Revenue that changed during the requested production period. Change Room Revenue is included in the status grouping based on the business block's status when the change was made.
 - * If a business block turned to a Return-to-Inventory Status during the production period, the Change Revenue is the full value of the room revenue and will be reported as a negative.

Current

- Covers: This value is populated with the sum of the Attendees for all of the Events for this business block and status and filtered by the Event Types selected in the Covers filter in the report parameter screen. If no value is selected, all Event Types will be considered.
 - * If the event is Actual, the Actual Attendees are reported.
 - * If the event is not Actual and Guaranteed Attendees is populated, the Guaranteed Attendees are reported.
 - * If the event is not Actual and Guaranteed Attendees is NOT populated, the Expected Attendees are reported.
 - * If the event is in a Return-to-Inventory status, the report displays 0.00.
- Avg Check and Calculated (Current FB Revenue ÷ Current Covers).
 - * For events in a Return-to-Inventory status, the report displays 0.00.

At the end of each Status Changes grouping is a Total Status Changes line totaling each of the columns above.

New Status Changes Grouping:

- If the Owner has a business block or event that changed status during the requested period, the heading and New Status Changes appears.
- All of the columns detailed above are included. For the New Status records, the Current and Change columns will be the same (except for the New DEF/ACT grouping).

- At the end of each New Status grouping a Total New Status line appears that totals each of the columns above (ADR & Avg Check calculations to remain as detailed above).
- At the end of each New Status section (per Owner) a Total New Status & [Owner First + Last Name] line totaling all of the Bookings for this Owner.
- At the end of each Owner grouping is a Total [Owner First + Last Name] that totals the Total Changes and Total New Statuses lines.
- If the Print Grand Total check box is selected in the report parameter screen, an additional page with Totals & Grand Total displays.

Grouped By Stay Month

This option prints when Stay Month is selected as a Group By in the report parameter screen.

The 1st grouping is by Business Block Stay Month. The report is then grouped and sorted as detailed above and the Totals are done on the stay month grouping instead of the Owner.

Note:

Current Catering figures are calculated using the standard calculation for catering forecasting.

If the Use Forecast Revenue OPERA Control is active:

- If the Use Forecast Revenue check box is selected in the main Events screen, only Forecast Revenue for that Event will be reported. If the Use Forecast Revenue Only check box is not selected in the main Events screen, the Expected Revenue for that Event will be reported.
- If the Event is in an Actual status, the Billed Revenue for that Event will be reported.

If the Use Forecast Revenue OPERA Control is not active, the report will evaluate each Revenue Type for each Event.

- If there is Guaranteed Rev, it will be reported.
- If there is no Guaranteed Rev but there is Expected Rev, Expected Rev will be reported. If there is no Expected Rev but there is Forecast Rev, Forecast Rev will be reported.
- If the Event is in an Actual status, it will be reported as Billed Revenue.
- Once Expected Revenue is added to the event, Forecast Revenue will be ignored for that Event and Revenue Type. So, even if the Resource is deleted, Forecast Revenue will no longer be reported.

Pro Forma Invoice Generates Report (Rep_Proforma_Invoice)

The Pro Forma Invoice Generates Report details guest rooms, all catering packages, events, and resources booked on a block in a billing format. Apart from the event and resource descriptions, the number of units booked, the price per unit, and the total

price are printed in a list format. It can provide a sub-total and page break per day and can also be printed for single events.

 **Note:**

This report is only available for properties with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition or the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition active.

 **Note:**

The text labels in this report can be translated into additional languages. For more information, see [Configuring Stationery Custom Message Texts](#)

Report Parameters

1. **Property:** Select the property for which the report should be printed.
2. **Event Date From:** Enter the event start date.
3. **Event Date To:** Enter the event end date.
4. **Arrival Date From:** Enter the booking's arrival from date.
5. **Arrival Date To:** Enter printing the booking's arrival to date.
6. **Departure Date From:** Enter the booking's departure from date.
7. **Departure Date To:** Enter the booking's departure to date.
8. **Business Block:** The block name.
9. **Block Status:** Allows the inclusion of only blocks on the defined status.
10. **Event:** Allows for the selection of specific events to be included in the report. When the event is Actual (ACT), only the Billed or Actual Revenues print on the report.
11. **Event Status:** Allows the inclusion of only bookings on the defined status. Lost or canceled events can be excluded from printing using this filter.
12. **Package ID:** This filter allows for the selection of only packages for which to print the Pro Forma Invoice without the inclusion of non-package events. The filter cannot be used in conjunction with the Event filter and vice versa.
13. **Print Account:** Print Account defaults to the Account marked as PT for the Business Block from the Name Select screen. If a different Account should be printed on the Banquet Event Order (BEO), select the list to select another Account already linked to the business block.
14. **Print Contract:** Print Contact defaults to the contact marked as PT for the block from the Name Select screen. If a different contact should be printed on the Banquet Event Order (BEO), select the list to select another Contact already linked to the business block.
15. **Address Format:** This option allows the selection of a configured address format other than the sales office default. It works in conjunction with the selected Address Type.
16. **Address Type:** This option will allow the selection of an address type other than the primary address of the attached account.

Rooms and Event Details:

1. **Print Guest Rooms:** When selected, the report output displays rooms booked. If Room Pools are configured, the report shows the room amounts by Room Pools by default. If Room Pools are not configured, the report shows the room amounts by Room Types. If selected, the report output prints the Room Pools/Room Types per day and prints rates in the selected currency. The rates will be net, including the packages.
2. **Print Event Details:** When left unchecked, the details of the event (Menus, Items, Function Space) will not print in the report. It is recommended that this option be left unchecked when the event is in an Actual status and the Billed Revenue is updated at the event level.
3. **Display Discounts:** Select this check box to display the discounted percentage and discounted price of a Resource: Space, Menu, or Item. The original price also displays for comparison. A summary at the end of the report displays the 'Total Discount xxx.xx' for all resources. This informs guests of how much they saved.
4. **Print Generates With Each Item:** This check box is available only if Print Summary is selected. If selected, then all generates for both events and guest rooms are combined into one line item in the Summary, Inclusive Generates or Exclusive Generates. If there are both inclusive and exclusive generates, then two lines will print, one reading Inclusive Generates and one reading Exclusive Generates. If Print Generates Combined is not selected and Print Summary is selected, the generates should be included in the Summary section summarized by transaction code description.
5. **Print Summary:** If checked, a summary per configured revenue type prints in between the detailed breakdown and the final totals of the report. The summary is per day if the Page Break per Day flag is checked, otherwise the summary is done for the whole booking. Any package revenues are not split into the internally configured revenue types. Instead, a virtual revenue type called Package Revenue appears in the summary section that shows all revenue generated from catering packages.
6. **Print Generates Combined:** This check box is available only if Print Summary is selected. If selected, then all generates are combined into one line item in the Summary, Inclusive Generates or Exclusive Generates. If there are both inclusive and exclusive generates, then two lines will print, one reading Inclusive Generates and one reading Exclusive Generates. If Print Generates Combined is not selected and Print Summary is selected, the generates should be included in the Summary section summarized by transaction code description.

Report Details:

1. **Print Date:** When this option is selected, the date the report is run prints in the bottom left hand corner of the report.
2. **Print Time:** When this option is selected, the time the report is run prints in the bottom left hand corner of the report.
3. **Print Page Break Per Day:** This inserts a page break per day with a total calculation (including tax and service charge calculation) for each day per booking for bookings that span several days of catering events. No deposit information is taken into account when selecting to print the report with the flag checked; this is because deposits are not stay date specific and it is not possible to determine the date against which the posted catering deposits would need to be offset.
4. **Print Deposit:** Select one of the following check box options to print their associated deposits: Catering, Rooms, Unallocated, or All.

5. **Currency:** Select the currency to use for printing revenues.

Quote Report (sample_sc_quote)

The Quote report provides day-by-day accommodation and event details. As a [customizable stationery template](#), you can produce a quote detailing the Accommodation, PMS Packages for City Tax and/or Breakfast Packages, Catering Packages, Events, and Event Resources. The quote includes conditional text that you can modify or remove, areas to add your properties photos and logo, plus the ability to generate the quote in different languages (available when the Multi-language OPERA Control is active). The report contains several sections: the detail of the event, the specific conditions of the sale, the general conditions of the sale, and the approval page for the customer signature.

Quote Report Overview

Some information on calculations and configuration, include:

- Net amounts for guest rooms include PMS package elements: Net amounts do not include generates/taxes for the guest room or for included PMS packages.
- Gross amounts include all generates/taxes. A check box on the report parameter screen (Add Excluded Pkg Elements to Gross Revenue) allows you to include or exclude "excluded" PMS package elements in the gross price and revenue. If selected, excluded PMS package elements and their generates are included in the gross amount for room rate and room revenue. If not selected, these excluded elements will not be part of the gross room rate and revenue.
- Catering revenue net and gross values are based on transaction code generates, depending on the revenue type cross reference configured for the catering revenue type in [Revenue Type Mapping](#).
- Rooms Revenue is calculated based on generates linked to the room's transaction codes. When packages are included in the room rate, these are not deducted for the net amount, but their respective generates and taxes are deducted.
- City tax is calculated as a total amount across the entire business block. City tax must be set up as an excluded PMS package element and selected on the report parameter screen (City Tax Pkg) for the amount to be correctly calculated.
- If several events are configured for the same date with the same start and end dates, same event type, same set-up style, same number of attendees, and same space rental revenue, these events will print combined into one line, rather than separately (for example, for break-out rooms). Any non-F&B (food and beverage) resources that are attached to several of these combined events and are the same item and same price across these combined events also print combined into one line underneath the combined events line. Menus will NOT print combined, even if the same menu may be attached to several of the combined events.
- You can select Business Block Notes and Banking Notes (from Property Notes) from the report parameter.
- If a deposit schedule is entered for the business block, it prints in the terms and conditions area of the report.
- Consumption based menus/menu items do not print revenue and taxes on the report. The quantity of menu items always appears as "1" for consumption-based menu items on the report, irrespective of what is entered as the quantity in OPERA Cloud. If two consumption-based menus containing the same non-included menu items are booked for the same event, the menu items print for both menus.

- This report contains a lot of conditional text for the catering section of the report based on event types. You can remove or amend the conditional text according to your needs.

Report Parameters

- **Property:** Enter or select a property. You can select multiple properties from a [hub location](#).
- **Business Block:** Select the business block(s) from which you want to generate a quote. The Business Block ID defaults when this report is called from the Blocks module. (This report cannot be printed over a date range, only for specific business blocks.)
- **Block Note Type:** Select the business block note types to print on the report. Only notes selected as External print on the report.
- **Event Status:** Select the event statuses of events to be included in the report (typically not those that were lost or canceled).
- **Breakfast Package:** Select PMS package codes that represent breakfast packages. These are used in the accommodation section of the report to indicate whether breakfast is included or excluded from the rate.
- **City Tax Package:** Select one PMS package code that represents the city tax. This is used to calculate the city tax on accommodations.
- **Print Account:** This displays the account name that prints on the report, depending on the selected Print Account on the business block.
- **Print Contact:** Displays the contact's name that prints on the report, depending on the selected Print Contact on the business block.
- **Note Type for Banking Notes:** Select the Note Type for Banking Notes to Print. A list displays all note types that are configured for property notes.
- **Add Excluded Pkg Elements to Gross Revenue:** When selected, excluded package elements and their taxes are added to the gross revenue amount calculation. When not selected, excluded package elements and their taxes are not added to the gross revenue calculation.
- **Increase Quote Reference Number:** Select check box to increase the quote reference number in the block details; indicating changes have been made to the original quote generated. (Available when the Use Quote Reference Number OPERA Control is active).
- **Currency:** Select a currency from this list. This selection allows the conversion of foreign currency to a property's base or catering currency when the foreign currency has a defined exchange rate for the Posting Exchange type. (Available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active.)
- **Exchange Rate Date:** If selected, enter a date, or use the calendar tool to select the effective date of the exchange rate for the specified currency. The prices in the report are calculated using the exchange rate for the specified currency as it was on that date.
- **Creation Date:** If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the booking creation date.
- **Distributed Date:** If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the date the Distributed Date check box was selected.

Room and Catering Revenue Pace (BI) (Rep_Room_Cat_Rev_Pace_BI.Rep with Rep_Room_Cat_Rev_Pace_BI.FMX)

Prerequisites for Room and Catering Revenue Pace (BI)

The Room and Catering Revenue Pace (BI) report displays room and event revenue by Stay Period for the requested Production Period. It also displays the On the Books forecast revenue for the same Stay Period with a comparison to OBI Budgeted Revenue, Same Time Last Year (STLY), and Actual Last Year (ACTLY) figures.

- This report is a BI Publisher report. Customizing the report is not recommended. The following are the report elements:
 - Report Name = Room and Catering Revenue Pace (BI)
 - File Name = rep_room_cat_rev_pace_bi.rtf
 - Form to run = rep_room_cat_rev_pace_bi.fmx
 - Data Template = rep_room_cat_rev_pace_bi.odt

Selection Criteria

Production Period Section

Each change to Room and Event Revenue or Status is recorded in production change logs. When dates are entered in the Production From and To Date fields, those dates are used as filters when querying the logs. To illustrate, a business block that is created on status TEN in April 2018 with a start date in October 2018 turns to DEF in June 2018. In this scenario there would be two entries in the status change log for this business block: one for the creation of the business block on status TEN in April 2018 and one for the status change to DEF in June 2018. If revenue is added to the DEF business block in July 2018, another change log entry will be written to record that revenue. Because they filter on a date when something has already happened in OPERA, the dates entered here should be for today's date or earlier. Separate change log entries are written for room and event status and revenue changes.

For STLY calculations, the report displays the Production Date From as null and the Production Date To as the Production Date entered here, minus one year.

- **From.** (Mandatory). Enter the calendar date to indicate the beginning of the Production Period for which the report is to be filtered. Room Revenue is filtered on the business block change date and Catering Revenue is filtered on the event change date.
- **To.** (Mandatory). Enter the calendar date to indicate the end of the Production Period for which the report is to be filtered.

Stay Dates These dates define the stay periods that display in the report. The calculations for STLY are affected by the Same Time Last Year/Fixed Stay Dates check box. When the Fixed Stay Date check box is selected, the Stay Dates in STLY are the same as those entered here. When the check box is not selected, the Stay Dates in STLY are the Stay Dates entered, minus one year.

- **From.** (Mandatory). Enter a start date range when the report will filter events by their start date and the business blocks by allotment date.
- **To.** (Mandatory). Enter an end date range when the report will filter events by their start date and business blocks by allotment date.

Property. Select the property for which the report should be printed. When you are logged in at the hub level, the property LOV is multi select, which allows you to run the report for multiple properties.

Origin. Select Origins. This LOV lists all of the possible values from the internal field allotment_origin values from the Business Block header. When a value is selected, only events from business blocks with this origin are considered. If no value is selected, all business blocks are considered. Possible values are based on the user who created the block and the Act As and At values set on the user in Role Manager.

- If the Act As value = Conference Sales Person, and the At value = Property level, then the block is flagged as Sales and Catering.
- If the Act As value = Reservation Sales Person, and the At value = Central, then the block is flagged as ORS.
- If the Act As value = External System, then At value = not required, and the block is flagged as EXT.
- If the Act As value = Reservation Sales Person, and the At value = Property, then the block is flagged as PMS.
- If the Act As value = Conference Sales Person, and the At value = Central level, then the block is flagged as SFA.

Block:

New Definite. (Mandatory). Select one status code from a list of all status codes that can turn to an Actual status. The New Definite column will be calculated based on the business blocks and events that turned to this status during the requested production period.

Incl. Actual. (Enabled when a Status is selected in the New Definite field). Select this check box to include Actual business blocks and events with the figures in the Definite On the Books section totals.

Cancel. (Mandatory). Select status codes from a list of all return-to-inventory statuses. The Cancel column are calculated based on the business blocks and events that turned to this status during the requested production period. All figures are reported as a negative.

OTB Status 2. (Mandatory). Select one or more status codes from a list of all status codes. The 1st column in the last On the Books section are calculated based on the business blocks and events currently in this status for the stay period.

OTB Status 3. (Mandatory). Select one of more status codes from a list of all status codes. The 2nd column in the last On the Books section are calculated based on the business blocks and events currently in this status for the stay period.

Revenue – One of the options must be selected: Net or Gross. The Incl Packages check box can be selected if either Net or Gross is selected.

- **Net.** When selected, Room and Catering Revenue are calculated as:
 - Net Room Rate is calculated as ROOM ONLY.
 - * Included generates are deducted
 - * Excluded generates are not added
 - * Included packages and their generates are excluded

- * If Incl. Packages is selected, then Included & Excluded PMS Packages are included but their Included & Excluded Generates are not included.
- Net Catering is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration> Financial> Transaction Management> Revenue Type Mapping):
 - Included generates are deducted.
 - Excluded generates are not added.
 - The Incl. Packages check box has no influence on the Catering Revenue calculation.

Gross. When selected, Room and Catering Revenue are calculated as:

- Gross Room Rate is calculated as:
 - Included generates are not deducted.
 - Excluded generates are added.
 - Excluded packages are not added.
 - Included Packages and their generates are excluded.
 - If Incl. Packages is selected, then Included and Excluded PMS Packages are included and so are their Included & Excluded Generates.
- Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration> Financial> Transaction Management> Revenue Type Mapping):
 - Included generates are not deducted.
 - Excluded generates are added.
 - The Incl. Packages check box has no influence on the Catering Revenue calculation.

 **Note:**

Net and Gross calculations are only done for On the Books and ACTLY calculations. All other revenue is reported as seen in OPERA.

Cat Rev. This LOV lists all active revenue types. Select the revenue types to be used when calculating Cat Rev in this report. If no value is selected, all Revenue Types are considered.

Currency. Select the currency to be used for calculating the figures in this report. All figures are reported in the selected currency. If no value is selected, the report are calculated using the Base Currency of the logged in Property.

Owner. All 3 filters are multi-select. Select one or more Owners. If no value is selected, then all Owners listed in the LOV are considered.

- **Overall Owner.** Only business blocks with this Overall Owner are considered.
- **Rooms Owner.** Only business blocks with this Rooms Owner are considered.
- **Catering Owner.** Only business blocks with this Catering Owner are considered.

Exclude from Forecast Event (1 of the 3 options must be selected).

- **Both.** All events are considered regardless of the Exclude from Forecast check box.
- **Yes.** Only events marked as Exclude from Forecast are considered.

- No. Only events not marked as Exclude from Forecast are considered.

Block Type (1 of the 3 options must be selected).

- **All.** Select if all business blocks should be considered. When selected, the Combine check box appears. See description below.
- **Catering.** Select if only business blocks marked as Catering Only will be considered.
- **Rooms.** Select if only business blocks not marked as Catering Only will be considered.
- **Combine.** This check box is only visible when the Block Type All is selected. When Combine is selected, room revenue and catering revenue figures are combined. When unselected, room revenue and catering revenue figures are separated by block type:
 - The Rm Rev - Rms (Room Revenue from business blocks where the Catering Only check box is not selected) and Rm Rev - Cat (Room Revenue from business blocks where the Catering Only check box is selected) figures are combined. The report label reads Room Rev and includes: Production, On the Books, Pace and On the Books). The Revenue, Budget and Variance figures are also combined.
 - The Cat Rev - Rms (Event Revenue from business blocks where All or Rooms is selected) and Cat Rev - Cat (Event Revenue from business blocks where Catering is selected) figures are combined. The report label reads Cat Rev and includes: Production, On the Books, Pace and On the Books). The Revenue, Budget and Variance figures are also combined.

Same Time Last Year. Select how you want the calculations made for STLY.

- When the Fixed Stay Date check box is selected, the Stay Dates in STLY are the same as those entered in Stay Dates To/From fields. When the check box is not selected, the Stay Dates in STLY are the dates entered in the Stay Dates To/From fields, minus one year.

Report Output

This is a Rooms and Catering revenue pace report that is sorted by Property and Year and grouped by Calendar Period.

Row Headers

- **Rm Rev-Rms** – Room Revenue from business blocks where All or Rooms is selected in the report parameter Block Type.
- **Rm Rev-Cat** – Room Revenue from business blocks where Catering is selected in the report parameter Block Type.
- **Cat Rev-Rms** – Event Revenue from business blocks where All or Rooms is selected in the report parameter Block Type.
- **Cat Rev-Cat** – Event Revenue from business blocks where Catering is selected in the report parameter Block Type.

Production Period Section

Figures in these columns are filtered on the Production Period and Stay Dates.

- **New DEF** – Calculated from business blocks and events that turned Definite during the Production Period. Definite is determined by the New Definite filter in the report parameter screen.
- **Cancel** – Calculated from business blocks and events that turned to Cancel during the Production Period. These numbers are always reported as a negative. Cancel is determined by the Cancel filter in the report parameter screen.
- **Reval** – (Revaluations) Calculated from business blocks and events that were already Definite when the Production Period began and had a change during the Production Period while still in Definite. Definite is determined by the New Definite filter in the report parameter screen.
- **Slippage** – This is calculated from business blocks and events that were already Actual when the Production Period began and had a change during the Production Period.

An example of the above columns:

- In June 2019, Block turns DEF with 100 Rooms.
- In July 2019, Block drops to 95 Rooms (still DEF).
- In August 2019, Block turns to ACT with 97 Rooms.

If the report is run for Production Period June – August 2018, the results are:

- NEW DEF +100 rooms
- Reval -5 rooms
- Slippage +2 rooms
- Catering Slippage is calculated for each event as Billed Revenue – Production (excluding ACT Production from the requested production period).

Net Change - Net Change = (New Definite + Cancel + Reval + Slippage).

Note:

The Production Period figures are calculated from the following tables:
Room Revenue - Status change dates are taken from `booking_status_changes`.
Room Revenue is calculated from `allotment_changes`. If the business block is in an Actual status, the Revenue is calculated from `reservation_stat_daily`.

Catering Production – Status change dates are taken from `event$status_changes`. Revenue is calculated from `event$changes`. If the event is in an Actual status, the Revenue is calculated from the billed revenue in `gem$event_revenue`.

1st On the Books Section

- **1st Column** – The column header is updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen. The data is the revenue for business blocks and events currently in the Definite or Actual Status for that Stay Period.
- **Budget** – Budget for the Stay Period as entered in the OBI Budget Forecast module.
- **STLY** – (Same Time Last Year) Revenue for the Production and Stay Dates minus 1 Year. For Business Blocks with a last status of Actual, the room revenue figures are

calculated from reservation_stat_daily. For Events with a last status of Actual, the catering revenue figures are calculated from billed revenue.

- **ACTLY** – (Actual Last Year) Picked-up Room Revenue and Billed Event Revenue for Actual business blocks and events for the Stay Dates minus 1 Year (Production Period is not considered).

An example of the above columns:

- Production Dates in the parameter screen: Jan 2019 – Feb 2019
- Stay Dates in the parameter screen: Jan 2019 – Dec 2019
- New DEF in the parameter screen: DEF Incl Actual is checked

On the Books columns calculations as follows:

- **ACT/DEF** - Current figures for business blocks currently in an ACT or DEF status with a stay date between Jan 2019 – Dec 2019.
- **ACTLY** - Current figures for business blocks currently in an ACT or DEF status with a stay date between Jan 2018 – Dec 2018.
- **STLY** - Calculated using the following filters:
 - Production Dates: Jan 2018 – Feb 2018
 - Stay Dates: Jan 2013 – Dec 2018
 - Status: business blocks with a LAST status of ACT or DEF during that period.

Pace Section:

- Var to Budget Revenue = ACT/DEF – Budget
- Var to Budget % = (ACT/DEF ÷ Budget) × 100
- Var to STLY = ACT/DEF – STLY
- Var to STLY % = (ACT/DEF ÷ STLY) × 100
- Var to ACTLY = ACT/DEF – ACTLY
- Var to ACTLY % = (ACT/DEF ÷ ACTLY) × 100

2nd On the Books Section:

This section calculates Revenue for business blocks and events currently in the OTB Statuses selected in the report parameter screen.

- **1st Column** – The column header is updated with the Status Code selected in the OTB Status 2 filter in the report parameter screen. The data is the revenue for business blocks and events currently in that Status.
- **2nd Column** – The column header is updated with the Status Code selected in the OTB Status 3 filter in the report parameter screen. The data is the revenue for business blocks and events currently in that Status.

Catering Configuration Reports

[Prerequisites for Catering Configuration Reports](#)

The following Event Resource Configuration reports are available:

Menu Information (rep_menuinfo.rep with rep_menuinfo.fmx): This configuration report allows you to check whether all catering menus are entered into the system and that they are configured correctly. It typically is printed after the initial input of configuration data or if catering menus are changed.

Daily Menu Item List (rep_menuitem.rep with rep_menuitem.fmx): This report provides a list of menu items with numbers expected, guaranteed, and actual separately for each day of the selected date range. This is an ideal report to use as a forecast and guide for the kitchen in preparing food orders for the future.

Menu Item List (rep_mitemdtl.rep with rep_mitemdtl.fmx): This report is helpful in reviewing the configured menu items with their internal criteria. It is typically generated during and after configuration of menu items to verify that all relevant data is entered. The same is applicable when menus and menu items are changed.

Daily Menu Item List (rep_menuitem.rep with rep_menuitem.fmx)

This report provides a list of menu items with numbers expected, guaranteed, and actual separately for each day of the selected date range. This is an ideal report to use as a forecast and guide for the kitchen in preparing food orders for the future.

If ordered for the past, it is a good indication of the more popular versus the less popular food items sold.

SELECTION CRITERIA

Property. Select the property for the report you are printing.

Data Range From/To Date. Includes menu items sold on days included in the date range.

Business Block. Select Business Blocks for this report.

Note:

When selecting a Master Block ID in the Bus. Block filter, OPERA Cloud also includes the Sub Block IDs linked to that Master. The report then prints all events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only events linked to that sub Block will be printed.

Event Type. Select event types for this report.

Event Status. Select event statuses for this report.

Department. You can select (single or multi select) the department responsible for a menu item. If an item is assigned to several departments, it prints in each department section.

Menu Class. Allows filtering of the configured items by the selected menu classes.

REPORT DATA

The report is grouped by responsible department and then sorted in date order. Within each date, the menu name is printed with the menu items listed below it in alphabetical order. If an item is configured with several responsible departments, it prints in the sections of all departments it is assigned to.

Data printed for each menu item is: Menu item name (alphabetically), numbers expected, guaranteed, set and actual, Unit Price, Total Price, Unit Cost, and Total Cost. A sub-total is displayed at the end of each menu entry per date, and a grand total is displayed for each responsible department.

Menu Information (Rep_Menuinfo.Rep with Rep_Menuinfo.fmx)

The Menu Information report is a configuration report that allows you to check whether all catering menus have been entered into the system and configured correctly. You would typically print the report after initially inputting configuration data or after changing catering menus.

Selection Criteria

Property. Select the property for which the report should be printed.

Menu Class. Select menu classes to include in the report.

Menu. Select specific menus by name to include in the report.

Print Menu Details. If you select Yes, the report prints details of the menu items that make up the menu, like course order, menu item name, portion, container, and so on as listed below in Report Data. If you select No, only the menu name, price, serving, article number, resort, and events for which this menu is available print for each menu.

Print Revenue Type. If you select Yes, the revenue types that are linked to the menu print together with their appropriate share of the menu price, cost, internal quote, and margin. If you select No, the information is suppressed.

Report Data

The report is sorted alphabetically in menu class order and within each class by menu name order. If neither menu details nor revenue types are selected, the following information is printed for each menu: menu name, price, serving, article number, resort, and events for which this menu is available.

If you select Print Menu Details, the following additional info prints for each menu item that is part of the menu: course, course order, menu item name, included Y/N, demand factor, unit price, serving, portion, and container.

If you select Revenue Type, the following details print: revenue type (any revenue types linked to the menu), cost, internal quote, margin and margin percent - difference between cost price and internal quote (internal sales price), menu price share of that revenue type and margin / margin percent - difference between cost price and menu price (quoted sales price).

Menu Item List (Rep_Mitemdtl.Rep with Rep_Mitemdtl.fmx)

This report is helpful in reviewing the configured menu items with their internal criteria. It is typically printed during and after configuration of menu items to verify that all relevant data was entered. The same would apply when menus and menu items are changed. You can print the report at any time to review the current catering menu item configuration on paper.

Selection Criterial

Property. Select the property for which the report should be printed.

Print Detailed Item (Yes/No). If you select Yes, additional item information is printed for each item. See the Report Data section for details.

Menu Item Type. Select only food items, only beverage items, or both.

Sort Order. You can arrange the report in menu item name order or in article number order.

Menu Class. Select specific menu classes to include in the report.

Department List. Select specific departments to include in the report print.

Event Types. Select specific event types for which the printed menu items are available/linked to.

Report Data

The reports primary sort order is always by menu item class. Within each class, you can sort the report either by article number or by menu item name, depending on the selection on the report form. For each menu item, the following information prints: article number, menu item name (all three lines is used – first line prints bold), inclusive Y/N, revenue type, sales price, cost, serving, department, and events that are linked to the menu item (for which the menu item is available).

If you select Print Details on the report order form, additional information for each menu item is printed, including the following: restrictions, description, beverage Y/N, portion, year, print Y/N, and container.

Commissions Reports

Commissions Pre Payment (prepayment with TAC3.FMX) : Provides the same information displayed in the commission processing screen. This includes all reservations that are placed in commission processing because a travel agent or source profile is attached to the reservation.

Paid Commissions (postpayment): Provides the same information displayed in the commission register screen. This includes all reservations and corresponding travel agents/ source profiles that were processed.

Payment Activity (chkregister with TAC5.FMX): The report shows all checks printed for each bank account.

Transferred Commissions (comtransfer with TAC6.FMX): Shows the reservations that are in commission payment processing by an agent or by a source for the selected departure date or date range. Each guest record includes commission amount details. The report also shows grand total commissions information for all agents and sources.

Travel Agent Master Listing (tamaster with TAC2.FMX): Includes all configured travel agent profiles in the property. The information displayed includes the travel agent address, IATA number, phone number and commission code.

Travel Agent Summary (ta_summary with TAC7.FMX): A month-by-month digest of commissions, room revenue, non-room revenue, room nights, number of guests, guest nights, and no show and cancelled reservations for each travel agent.

Commissions Prepayment Report (prepayment)

Commissions Pre Payment (prepayment with TAC3.FMX) – Provides the same information displayed in the commission processing screen. This includes all reservations that are placed in commission processing because a travel agent or source profile is attached to the reservation.

Comp Accounting Reports

Gaming

The following Gaming reports are available:

Authorizer Limits (ga_auth_limits) — This report displays all authorizers for the selected date and the corresponding Credit Limits that are granted for Groups of Transaction Codes. Additionally, the report displays the Actual Comp Charges that were posted by that Authorizer for each Group of Transaction Codes.

Comp Charges (ga_comp_charges) — This report includes the comp transaction code, amount, and the authorizer who made the comp request. When the Comp Transaction Code field on the parameter form is set to ALL, all comp transaction codes, including any payment types configured for windows 101-108, appear on the report.

Comp Routing (ga_comp_routing) — This report displays all reservations with Comp Routing attached. This includes declines and requests for Comp routing.

Configuration Reports

Account Types (cf_accounttypes) - displays the property's configured accounts receivable account types. The accounts receivable cloud service must be active in order to configure any account types.

Articles (cf_articles) - displays the property's configured articles. Articles allow a property to post certain items to a guest folio in such a way that they appear to have come from a single transaction code.

Authorizer Groups (cf_authorizer_groups) - displays all authorizer groups, along with the group rate code, transaction codes, and credit limits. The report also lists the authorizers who are members of each group by authorizer ID and name. **Gaming**

Back Office Interface Market Codes Mapping (cf_bof_mkpcodes_map) - displays the property's configured Back Office mappings for market codes.

Back Office Interface Statistic Codes Mapping (cf_bof_statcodes_map) - displays the property's configured Back Office mappings for statistic codes.

Back Office Interface Transaction Codes Mapping (cf_bof_trxcodes_map) - displays the property's configured Back Office mappings for transaction codes.

Budgets (cf_budgets) - displays the property's configured budgets.

Cancellation Reasons (cf_cancelreasons) - displays the property's configured cancellation reasons.

Cashiers (cf_cashiers) - displays the property's configured cashiers.

Cities and Postal Codes (cf_postal_codes) - displays the property's configured cities and postal codes.

Country Codes (cf_countrycodes) - displays the property's configured countries.

Credit Limits (cf_creditlimit) - displays the property's configured credit limits.

Discount Reasons (cf_creditlimit) - displays the property's configured discount reasons.

Districts (cf_districts) - displays the property's configured districts.

eCoupon Codes (cf_ecoupons) - displays the property's configured eCoupon codes.

Exchange Rates (cf_exchange_rates) - displays the property's configured exchange rates. The report includes all details that are set in the exchange rate setup.

Features (cf_features) - displays the property's configured features.

Folio Grouping Codes (cf_folio_groupings) - displays the transaction codes associated with the folio groupings of arrangement, expense and group codes.

Housekeeping Sections (cf_hksections) - displays all housekeeping sections and days of the week that correspond to the property's attendants.

Item Inventory (cf_iteminventory) - displays the property's configured items.

Languages (cf_languages) - displays the property's configured languages.

Market Codes (cf_marketcodes) - displays the property's configured market codes.

Master Codes (cf_mastercodes) - displays the property's configured master codes.

Origin Codes (cf_origincodes) - displays the property's configured origin codes.

Out of Order Reasons (cf_outoforderreasons) - displays the property's configured out of order reasons.

Package Codes (cf_packagecodes) - displays the property's configured packages.

Preferences (cf_preferences) - displays all preferences that have been configured in the application.

Profile Changes (cf_profilechanges) - displays all changes made to profiles for the date range specified.

Rate Category (cf_ratecategory) - displays the property's configured rate categories.

Rate Class (cf_rateclass) - displays the property's configured rate classes.

Rate Code – Details (cf_ratecodedetail) - displays the details of the property's configured rate codes.

Rate Code Header (cf_ratecodeheader) - displays rate header information of the property's configured rate codes.

Rate Seasons (cf_rateseason) - displays the property's configured seasons.

Reason Codes (cf_reasoncodes) - displays the property's configured adjustment codes.

Regions (cf_regions) - displays the property's configured regions.

Relationship Types (cf_relationshiptypes) - displays the property's configured relationship types.

Reservation Types (cf_reservationotypes) - displays the property's configured reservation types.

Revenue Buckets (cf_revenue_buckets) - displays the transaction codes associated with the various revenue buckets.

Room Classes (cf_roomclasses) - displays the property's configured room classes.

Rooms (cf_rooms) - displays the property's configured rooms and corresponding information.

Room Types (cf_roomtypes) - displays the property's configured room types and corresponding information.

Routing Codes (cf_billinginstructions) - displays the property's configured routing codes.

Source Codes (cf_sourcecodes) - displays the property's configured source codes.

Special Requests (cf_specialrequests) - displays the property's configured special request preferences.

State Codes (cf_statescodes) - displays the property's configured states.

Tax Types (cf_taxcodes) - displays the property's configured tax types.

Tax Types by Transaction Codes (cf_taxtypesbytrxcodes) - displays the property's configured tax types, organized by transaction codes.

Titles (cf_titles) - displays the property's configured titles. The output includes the language with which the title has been associated.

Transaction Codes (cf_trxcodes1) - displays the property's configured transaction codes, grouped by transaction group, then subgroup, then transaction code.

Transaction Codes by Transaction (cf_trxcodes2) - displays the property's configured transaction codes in numerical order by transaction code.

Transaction Diversion Rules (cf_trans_diversion_rules): Displays the property's diversion rules.

Turnaway Reasons (cf_turnawayreasons) - displays the property's configured turnaway reasons.

Waitlist Priorities (cf_waitlistpriorities) - displays all waitlist priorities and their defined sequence order to display.

Departures Reports

Departures (departure_all) - lists all departure reservations for a specified date. Day-use reservations are included on the report.

Departure Extended (depextended) - lists all reservations which were due out today and have extended their stay.

Departure Individual & Group (depindgrp) - displays all departures reservations for individuals and groups, sorted by room -number -for a given date.

Departures Report (departure_all)

Departures (departure_all) report lists all departure reservations for a specified date. Day-use reservations are included on the report.

End of Day Reports

Cancellations by End of Day Process (nacancel) - displays all cancellations that were due to arrive and were cancelled during the end of day process.

Cashier Summary (nacashiersummary) - displays each cashier's total intake, currency for the day, credit cards, and other - prepaid commissions and manual credit cards.

Credit Card Authorization (nacc_authorization) - displays details of all credit cards that have had an authorization amount held on the card via the batch process.

Deposit Transferred at Check In (nadepransci) - display all reservations that had a deposit posted, and checked in today. The information will include who checked in the guest.

Group Business - In-House Detail (nagrpbusiness) - displays the current reservations in-house that are associated with a block.

Group Business - In-House Summary (nagrpbussumm) - names currently in-house, number of rooms, persons, and revenue associated with these rooms.

Manager Report (manager_report) - is configurable to output statistical and revenue information for your property. For more information, see [Managing Definable Managers Report](#)

Matrix Trial Balance (matrix_trial_balance) - displays a summarized financial picture of the four ledgers - deposit ledger, guest ledger, package ledger, and accounts receivable ledger.

Night Audit Guest Ledger Detail (naguestledetail) - displays a breakdown of a guest's total bill into Room Charges, Other Charges, Credits, and the current balance on each guest account. This breakdown takes into consideration comp windows for those properties using comp accounting with their guest ledger.

Night Audit Daily Status (nadailystat) - displays a brief summary of guest statistics for room occupancy and revenue. It is considered a summary version of the more detailed Manager Report.

No Shows of the Day (nanoshow) - generated during the night audit sequence and displays reservations that were due to arrive today, but did not cancel the reservation and the reservation was not canceled during the night audit process.

Paid Outs (napaidout) - displays all the paid-out transactions of the day to guests and is generated during the night audit sequence.

Posting Adjustments (naadjustments) - displays adjustments that have been made to all posting activity for the previous day.

Posting Corrections (nacorrections) - displays all corrections that have been made to a posting for the current day. This report can be used as a checklist for tracking cashiers' activity.

Posting Error Reasons (naerror) - part of the night audit sequence of reports and displays errors that occurred during posting room and tax activity.

Userlog - Today's Checkout (nauserlogtodaycheckout) - displays all persons who checked out a guest for the current day, and runs as part of the night audit sequence.

Weather/Title (naweather) - displays the full property name, and the business date and time the end of day is being generated. Additionally, as one of the steps in closing the date, you

can enter notes about the business date that is being closed. The report displays those notes to refer back to the date and the reported figures. This can include the temperature, world news, local business, or weather affecting bookings.

Group Business - In-House Detail Report (nagrpbusiness)

The **Groups In House Detail Report** displays the current reservations in house that are associated with a Block and have a Group profile attached. The report provides a detailed break down of reservations and associated revenue for each Block and then prints a Grand Total of all Blocks in house.

Event Reports

Prerequisites for Event Reports

The following event reports are available for selection:

Catering Pace/Progress Reports (Rep_Catering_Progress.Rep with Rep_Catering_Progress.FMX): The Catering Pace Progress report displays the catering production for a certain time period compared to budgeted covers and revenue for the same stay date period and another comparison to the production for the same stay date range last year. The produced covers, revenue, and average checks are grouped by stay date periods (either calendar month or fiscal period, depending on the hotel's configuration).

Catering Summary Report (Rep_Catering_Summary.Rep with Rep_Catering_Summary.fmx). The Catering Summary report is a production report that calculates the catering revenue changes for all business blocks that have had events created on a specified status, events that had their status changed to a specified status, or events that were on the specified status before the production period, but had changes done to their revenue during the production period. The report also includes a summary and grand total amounts for the blocks.

Daily Catering Forecast (rep_ev_forecast with rep_ev_forecast): This is a very detailed catering forecast report that allows printing the forecast figures per day per event type, divided into the selected revenue types. Each event is listed separately with a summary for each event type. It a great tool for the catering department to project their expected revenues in minute detail at any time for any time into the future.

Daily Menu Cost Report (rep_menu_cost with rep_menu_cost): The Menu Cost report shows booked menus per day with revenue versus cost information.

Daily/Weekly List of Events – Detailed (Sample_Event_List_Detailed.Rep with Rep_Evord.fmx). The Daily/Weekly List of Events Detailed report is a line report that is extremely useful as a daily or weekly communication tool to all hotel departments about upcoming catering events, the location where they are being held (including the function space, number of attendees, set-up style), and so on.

Daily Forecast Report (rep_daily_forecast). The Daily Forecast Report displays room nights, room revenues, and catering revenues on a daily basis per booking. Catering revenues can be split into up to five catering revenue type groups. Each day has a status summary line per status and one total daily summary across all statuses. The report incorporates the option to print catering revenues as net or gross depending on the setup of tax configuration.

Equipment List (rep_equipment_list.rep with rep_equipment_list.fmx): This report is a great tool for the banquet operations staff. You can use it with Banquet Event Orders (BEO) as a detailed document for equipment organization and setup. You can print the report in a daily format with a page break after each day or in a continuous weekly format. You have the option to print more details like the account name, contact name, communication details, and all relevant notes instead of the plain format that essentially prints only the equipment requirements.

Event List Detailed (sample_event_list_detailed with rep_evord): This is a line report that is extremely useful as a daily or weekly communication tool to all departments in the hotel for upcoming catering events, the location where they are being held, the function space, number of attendees, set-up style, and so on. It is more detailed than its sister report, Daily/Weekly List of Events – Simple. In addition to the basic event details, this report also prints items from the booking level like the responsible managers, booking and catering status, as well as event status. Event notes can optionally be printed, and the report indicates whether there are sleeping rooms associated with the catering events. The report is sorted and grouped first by the event date and then within each date sorted by business block name, followed by event start time.

Event Note Change Log Report (Rep_Event_Note_Changelog): The Event Note Change Log Report is created to report changes to Banquet Event Orders (BEO) after distribution without having to reprint the entire original sheet. It works in conjunction with event notes. To have change notes print on the report, you must create an event note for the appropriate event with the notes type: Change. OPERA Cloud stamps the note with the date, time, and user name. In the notes, enter any changes you want included in the distributed Change Log report.

Function Space Utilization Report (rep_fs_utilization): displays the usage times and percentage of used time versus available time within configured utilization periods for each function space, as well as an overall daily usage time and percentage. The occupancy percentage is calculated based on the occupied times.

Meal Type Forecast By Day (rep_meal_type_forecast_bi with rep_meal_type_forecast_bi): The Meal Type Forecast (BI) report is an easy to read forecast report for banquet operations. It is broken down by Catering Covers, Status, and Event Date.

Monthly Catering Forecast (rep_month_forecast with rep_month_forecast): This is another reporting option to use for forecasting event revenues. Where the Daily Event Forecast report breaks down the revenue into daily sub-totals, this report only prints total revenue per event type per status type, followed by a breakdown of

revenues into the selected revenue types by status type for each calendar month that falls within the selected date range.

Posted Event Revenue (rep_posted_event_revenue with rep_posted_event_revenue):

The Posted Event Revenue report provides hotels with a view of Expected, Guaranteed, Billed and Posted Event Revenue, listed by Event and Revenue Type within the selected time period. The report calculates and displays the variance difference between the Posted and Billed Revenue.

Sales Manager Month End Progress (BI) (rep_mgr_progress_bi.rep with

rep_mgr_progress_bi.fmx): The Sales Manager Progress report is an easy to read month-end report showing sales manager performance versus goals compared to On the Books figures. This report has three outputs: one organized by Manager and Year; one organized by Manager and Month using Production Goals; and the third organized by Manager and Month using Arrival Goals.

Banquet Check Folio by Revenue Type/Group (sample_bqt_chk_folio_by_rev with rep_banquet_check_folio.fmx)

The Banquet Check Folio by Revenue Type/Group is available when the Event Posting OPERA Control is active and a country is not specified in the Country Mode field for the property in the Property Details. This report displays a breakdown of each posting grouped by Revenue Type/Group for the block. When selecting SAMPLE_BQT_CHK_FOLIO_BY_REV, the entire banquet check for all events and postings of the selected block are produced.

OPERA Cloud enables you to generate the banquet check folio from the Event Posting screen. To allow properties access to generate this report from other areas of the application, you must configure the report in the Reports menu. Depending on whether the reports is generated from the Event Posting screen or a report group, the filter criteria noted below will vary.

Note:

This report is fully translatable and prints in the selected report language when printed from Reports (if the appropriate translations exist). When this report is printed from the Event Posting screen, the Banquet Check prints in the configured language of the selected translation. If no translations exists for the contact language, the check prints in English.

Report Filter Criteria

Property. Select or confirm the property. The field appears when generating the report outside of the Event Posting screen.

Event Date From. The start date of the event.

Event Date To. The end date of the event.

Block Date Range From. The start date of the block. The field appears when generating the report outside of the Event Posting screen.

Block Date Range To. The end date of the block. The field appears when generating the report outside of the Event Posting screen.

Block. Allows you to select one or several specific business blocks for which to print. The field appears when generating the report outside of the Event Posting screen.

Event Printing Method. Options are: Continuously, Per Event, or Master/Sub.

- **Continuously option:** prints an event itinerary by date and time that includes all events for the same date/booking on the first page of the Banquet Event Order (BEO). This is followed by the event resources and details in date and time order, but not separated from each other by event's ID or dates.
- **Master and Sub option:** prints regular events with a page break between events, but keeps master events together with their associated sub-events.
- **One Event per Page option:** inserts a page break after each event.

Print Account. Select the account to print.

Print Contact. Select the contact linked to the account.

 **Note:**

When the Banquet Check Folio is printed for more than one booking, no option is provided to select a different Account or Contact for printing.

Page Break Per Day. Select to summarize each day and print each day on its own page.

Include PMS Postings. Enables printing another group labeled Other Postings after the last revenue group that prints all postings not linked to event management.

Display Discounts. Select the check box to display the discounted percentage and discounted price of a Resource: Space, Menu, or Item. The original price also appears for comparison. A summary at the end of the report displays the 'Total Discount xxx.xx' for all resources. This informs guests of the amount they saved. The field appears when generating the report outside of the Event Posting screen.

Currency. Select the currency in which to print the report from the drop down list.

- Revenue Summary with value of No Summary, By Revenue Group and By Revenue Type.
- The Posting Account appears when the selected block has more than one eligible Posting Master Reservation allowing the user to select which account to use when generating the banquet check.

Banquet Check Folio by Event (sample_bqt_chk_folio_by_event with rep_banquet_check_folio.fmx)

When selecting the Banquet Check Folio by Event report from the report menu, the entire banquet check for all events and postings of the selected block are produced. The report is available when the Event Posting OPERA Control is active and a country is specified in the Country Mode field for the property in the Property Details. The Banquet Check Folio by Event report displays a breakdown of each posting grouped by event.

OPERA Cloud enables you to generate the banquet check folio from the Event Posting screen. To allow properties access to generate this report from other areas of the application, you must configure the report in the Reports menu. Depending on whether the reports is generated from the Event Posting screen or a report group, the filter criteria noted below will vary.

 **Note:**

This report is fully translatable and prints in the selected report language when printed from Reports (if the appropriate translations exist). When this report is printed from the Event Posting screen, the Banquet Check prints in the configured language of the selected translation. If no translations exists for the contact language, the check prints in English.

Report Filter Criteria

Property. Select or confirm the property. The field appears when generating the report outside of the Event Posting screen.

Event Date From. The start date of the event.

Event Date To. The end date of the event.

Block Date Range From. The start date of the block. The field appears when generating the report outside of the Event Posting screen.

Block Date Range To. The end date of the block. The field appears when generating the report outside of the Event Posting screen.

Block. Allows you to select one or several specific business blocks for which to print. The field appears when generating the report outside of the Event Posting screen.

Event Printing Method. Options are: Continuously, Per Event, or Master/Sub.

- **Continuously option:** prints an event itinerary by date and time that includes all events for the same date/booking on the first page of the Banquet Event Order (BEO). This is followed by the event resources and details in date and time order, but not separated from each other by event's ID or dates.
- **Master and Sub option:** prints regular events with a page break between events, but keeps master events together with their associated sub-events.
- **One Event per Page option:** inserts a page break after each event.

Print Account. Select the account to print.

Print Contact. Select the contact linked to the account.

 **Note:**

When the Banquet Check Folio is printed for more than one booking, no option is provided to select a different Account or Contact for printing.

Page Break Per Day. Select to summarize each day and print each day on its own page.

Include PMS Postings. Enables printing another group labeled Other Postings after the last revenue group that prints all postings not linked to event management.

Display Discounts. Select the check box to display the discounted percentage and discounted price of a Resource: Space, Menu, or Item. The original price also appears for comparison. A summary at the end of the report displays the 'Total Discount xxx.xx' for all resources. This informs guests of the amount they saved. The field appears when generating the report outside of the Event Posting screen.

Currency. Select the currency in which to print the report from the drop down list.

- Revenue Summary with value of No Summary, By Revenue Group and By Revenue Type.
- The Posting Account appears when the selected block has more than one eligible Posting Master Reservation allowing the user to select which account to use when generating the banquet check.

Catering Pace / Progress Reports (Rep_Catering_Progress.Rep with REP_CATERING_PROGRESS_BI.FMX)

[Prerequisites for Event Reports](#)

The Catering Pace Progress report displays the catering production for a certain time period compared to budgeted covers and revenue for the same stay date period and another comparison to the production for the same stay date range last year. The produced covers, revenue, and average checks are grouped by stay date periods (either calendar month or fiscal period, depending on the hotel's configuration).

You can run the report for a limited production period (such as 01 June 2018 to 30 June 2018), which would only show the production during that time frame. Alternatively, you can run the report with the production date range left blank, which would represent catering covers and revenue for the stay date range at the moment of printing (also known as On-the-Books).

The report operates without a defined credit status and therefore only reports on the last status of an event during the production period. For example, if the report is run for production period June 2018, and the property has an event that was created with 100.00 USD food revenue on status TEN on 02 June 2018, turned DEF on 10 June 2018, and became ACT on 20 June 2018, the 100.00 USD food revenue only appears in the column for status ACT, which was the last status this event was on in the reported production period. This is important to note when comparing this report to other catering production reports like the Catering Production report (Rep_Catering_Summary), which operates with a credit status and could therefore count the event twice: once in the defined credit status (usually DEF) and once in the last status (here ACT) if the event passed both statuses in the production period.

Selection Criteria

Property. Select the property for which the report should be printed. When you are logged in at the hub level, the property LOV is multi-select, which allows you to run the report for multiple properties.

Event Period (Event From/Event To). Enter the event start and end date range to filter the events included in this report.

Production Period (Begin Date/End Date). Defines the date range for recording event changes. Each change to an event status or to event revenue is recorded in a specific production change log. The Production Date Range filter scans the entries in the production change log for any event changes that fall under the other criteria selected on the filter form. Due to the nature of the filter, only dates in the past are valid entries, because there cannot be any entries in the event change log after the current business date. To illustrate, an event created on status TEN in April 2018 with the event date in October 2018 can turn to status DEF in June 2018. In this scenario, two entries would appear in the change log for this event: one for the creation of the event on status TEN in production period April 2018, and one for the status change to DEF in June 2018.

Group Each Period by (Market Segment). This field sorts each period by the market segments selected here. When OPERA Sales and Catering Management catering budget information is configured, and the Catering Pace Report (rep_catering_progress) is run without a Market Segment filter, the budget information prints on the report with a variance to the booked numbers. However, when you run the report with a Market Segment filter selected, the budget information does not print.

Event Status 1 and 2. Allows a selection of up to two different status columns to print on the report. This report only reports an event under the last status that it was in the production period. If an event turned DEF and ACT in the selected production date range, it will only be reported in the ACT column, not in both DEF and ACT. The first column of the report always prints the ACT status and the second column is calculated from the ACT column plus values from the status selected in status filter 1. In most set-ups, it makes sense to select the status just prior to ACT in the status filter 1, such as DEF.

Status1 & 2 – Last Year. Allows the selection of up to two different status columns to print for the production in the same production date range and stay date range one year back. It makes sense to select the same status code that was selected for the current production period in order to compare last year's production to the current production within the same status codes.

Covers – Event Type. Select the Event Types to use for calculating covers and average check.

RevPor. – Rev Type. Select the Revenue Types to use for calculating Revenue per Occupied Room. The figure in the report is calculated by dividing the sum of these revenue types by the number of blocked rooms for those groups. If the business blocks status is in an actual status, the picked-up rooms are used instead of blocked rooms.

Avg Check – Rev Type. Select the Revenue Types that should be used for calculating the Average Check. The figure in the report is calculated by dividing the sum of these revenue types by the number of covers.

 **Note:**

When the application parameter Use Forecast Value Only is set to Y and an Event has a Food and Beverage Minimum Rate Code attached, forecasted revenue is not reported or recorded for the Revenue Types that are configured to contribute to the F and B Minimum. If the Rate Code is changed to one that does not require a minimum, and expected revenue has not been added to those revenue types, the forecasted revenue for revenue types configured to contribute to the F and B Minimum is reported.

Variance based on Status 1, 2 or Both. Select the status column for calculating the variance to budget on the report. Typically, the variance would be compared to a combination of DEF and ACT bookings.

Print Exclude from Forecast Event - Both/Yes/No. Select this option to either include or exclude certain events. Select **Both** to print all qualifying events. When **Yes** is selected, only events that have had the Exclude from Forecast Reports check box selected print (the Exclude from Forecast Reports check box is accessible on the Revenue Summary Panel. When **No** is selected, only events that have not been marked as Exclude from Forecast Reports print.

Report Data

The budget figures in this report come from the Budget Forecast module.

The first four columns of the report show the produced catering revenue by revenue type, total catering revenue, covers, average check, and revenue per occupied room by status for each calendar month in the selected stay date range. The first column is hardcoded to always show the ACTUAL produced figures. The second column adds the production of status 1 defined in the report parameter screen to the ACTUAL produced figures and show the total of those two statuses. The third and fourth columns show the production of statuses 1 and 2 as defined on the report order form respectively.

Each event is counted for only one of the selected status codes, namely the last one that it was on at the end of the production period. No event is recorded under the DEF and ACT status columns, even if it passed through the DEF status into the ACT status during the selected production period.

The next two columns of this report represent the budget figures that have been entered for the stay date range that the report is run for, as well as the difference of the current produced figures to the budget figures, depending on which status column has been selected on the filter form for comparison.

The next two columns show the production of the same production period exactly one year back. If the current production period is June 2018 for stays dates June 2018 to December 2018, the last year columns calculate the production in June 2017 for stay dates June 2017 to December 2017.

The following two columns show the budget for last year and the variance of the produced figures versus the budgeted figures last year.

The last column shows the actual figures produced last year.

Forecast figures are calculated as event production for this report if no expected, guaranteed, or actual figures exist for a specific revenue type. For example, if an event had forecasted revenue for 500.00 USD Room Rental, 1000.00 USD for Food and 100.00 USD for Decoration, but only the function space is booked at a rate of 450.00 USD when the event becomes DEF, the revenue recorded in this report as production on the status change will still be 450.00 USD Rental, 1000.00 USD Food and 400.00 USD Decoration.

Catering Summary Report (rep_catering_summary.rep with rep_catering_summary.fmx)

The Catering Summary report is a production report that calculates the catering revenue changes for all business blocks that had events created on a specified status,

events that had their status changed to a specified status, or events that were on the specified status before the production period, but had revenue changes during the production period. The report also includes a summary and grand total amounts for the blocks.

The figures are calculated and appear on a booking-by-booking basis. If a business block has events of different statuses that all fall into the production criteria, the business block name is listed underneath all the statuses. The report can be grouped either by room owner or by catering owner.

This report provides the option to select a credit status. This means that events can be accounted for in the selected credit status even if they moved on to another follow-on status in the same production period. For example, if an event becomes both **Definite** and **Actual** in the selected production period, if you select Definite as the credit status, the event will appear under the status section for both Definite and Actual rather than just under Actual, which would be the last status. This helps greatly in calculating Sales Manager incentives that are usually based on a defined credit status.

 **Note:**

You must be granted the Event Print task in the selected property to run the Catering Summary report. Also, the available property in this report is further limited by the properties to which you have the appropriate access granted.

Selection Criteria

Property. The property from which you will print the report.

Event Date (Event Start/Event End). The event date range that should be covered in this report.

Production Date (Start/End). Defines the date range for reporting event changes. Each change made to an event status or to catering revenue is recorded in a specific event production change log. The Production Date Range filter scans the entries in the production change log to search for any event changes that fall under the criteria selected on the filter form. The date range filter is valid only for dates in the past, because there cannot be any entries in the event change log after the current business date. To illustrate the above, an event that gets created on status TEN in April 2021 with Event Date in October 2021 can turn to status DEF in June 2021. In this scenario, there would be two entries in the change log for this event, one for the creation of the event on status TEN in production period April 2021 and one for the status change to DEF in June 2021. And if the report is filtered for production dates April 01, 2021 — June 30, 2021, the business block would be reported once under TEN and once under DEF.

 **Note:**

The production period is mandatory for this report.

Event Status. The statuses selected in this filter query for events in that status at the end of the selected production period. Make sure that the Credit Status filter and the Event Status filter do not contradict each other. For example, if the selected credit status is DEF and the Event Statuses selected are INQ and TEN, nothing will be recorded under the credit status section, if DEF is a status that follows INQ or TEN in the status flow.

However, if the selected Event Statuses are DEF, CAN, ACT and the selected credit status is DEF, this report will correctly record those events in the credit status section that are either still on status DEF at the end of the production period or that moved through the status DEF into either status CAN or ACT in the same production period.

Credit Status. Defines the status code that an event should be recorded on in any case, irrespective of whether the event is still on that status at the end of the production period or has moved on.

For example, an event with 200.00 USD Food Revenue turns DEF in April 2021. In May 2021, 100.00 USD Food Revenue is added to the booking. Still, in May 2021 (that is, some days after the revenue is added), the event turns ACT. If no credit status is selected, the event is on this report only included in the section for status ACTUAL with a total of 300.00 USD Food Revenue (the original 200.00 USD plus the 100.00 USD added in May). If the credit status is defined as DEF, the event will appear twice on this report if it is ordered for production period May 2021. Once under the status section for DEF with 100.00 USD Food Revenue change (because 100.00 USD was added while the event was still on the credit status) and once on the section for ACT with 300.00 USD. If the event had turned DEF in May 2021 instead of in April 2021, it would again appear twice if the credit status was DEF: once as DEF with 300.00 USD, and once as ACT, also with 300.00 USD.

Net Total. Allows for the totals of two statuses to be either summed or subtracted from one another by selecting the (+/-) from the list of values. For example, if statuses, INQ, TEN, DEF, LOS and CAN were selected to be reported on and DEF is credit status (most typical scenario), it would make sense to define the net total as DEF minus CAN. This total will be reported by the selected Group By with a Grand Total at the end.

Revenue Types 1-4. Allows the selection of up to four catering revenue types or combinations of revenue types for which changes should be reported. Descriptions of the selected revenue types will appear in the report footer.

Group By (Catering Manager/Sales Manager). As described above, the report can be grouped on catering manager or sales manager. Sub-total and net totals are calculated per group.

Owner. Allows selection of specific manager initials.

Print Booking Details. If selected, each business block that falls within the selected parameters will print separately onto the report with a sub-total per status and net total per selected group. If not selected, only the summary per status and the net total will print within each group without any booking details.

Print Current Totals. When selected, prints the current on-the-books figures for each booking with no filter for the production date range. This option is only available when Print Booking Details is selected.

Print Grand Total. When selected, prints the Grand Total of all the owners, including summed attendees, per person revenue calculated as the Grand Total Attendees, and the summed number of blocks.

New Statuses Only. When selected, only those business blocks will be reported that have had an event status change occurring in the selected production period. Business Blocks with events that only underwent revenue changes will be omitted. This information appears in the Net Status row.

Blocks (All/Catering Only/Rooms with Catering). Use this option to filter results for business blocks that have been flagged as Catering Only, business blocks that have not been flagged as Catering Only, or All business blocks.

Print Exclude from Forecast Event - Both/Yes/No. Select this option to either include or exclude certain events. If you select Both, all qualifying events will print. When Yes is selected, only events that have had the Exclude from Forecast Reports flag selected will print (the Exclude from Forecast Reports flag is accessible on the Events Screen Details tab). When No, is selected only events that have not been marked as Exclude from Forecast Reports will print.

Report Data

The report will print one record for each business block that fits the filter criteria provided that the Print Booking Details check box is selected. The business block must have at least one event that was created or changed in the production period. If the business block has several events of different event statuses, the business block record will print in each appropriate status section, once with the total production per event status. The report is grouped primarily on the group defined in filter options. Within each main group, business blocks are then automatically grouped by event status.

Columns:

The selected sort group header is printed above each section (either room(s) owner name and initials or catering owner name and initials). Data printed for each business block can include these columns:

- **Account Name.**
- **Business Block Name.**
- **Business Block ID.**
- **Att. (Attendees).** The sum of the attendees of the events that fall within the filters specified when generating the report. If the event is in an Actual Status, this figure represents the actual attendees. If the Event is not in an Actual Status, the figure represents the guaranteed attendees or else the expected. If forecasting revenue (when the Use Forecast Value Only application parameter is set to Y), the expected attendees are calculated.
- **Status.** The Status column will populate with the appropriate event status and is appended with NEW if the status change happened during the requested production period.
- **Chg. Date.** The Change Date represents the most recent date an event changed to that status.
- **Rooms Owner Code.**
- **Catering Owner Code.**
- **Begin Date/End Date.** Business Block Arrival and Departure Dates.
- **Business Block Source.**
- **Rev Types 1-4.** For each revenue type(s) selected, the top row of revenue information is the total revenue for that type as of the end of the requested production date range.
- **Change.** The bottom row of revenue information is the change in revenue for the requested production date range.
- **TOTAL.** Sum of each of the revenue types selected.

Rows:

Depending on the filter criteria, the following rows will appear.

- **Event Status.**
- **Block Name.**
- **Current Block Total.** The total appears if the Print Current Total check box is selected. The information in this row is calculated based on figures for that business block at the time the report is printed. Information includes: Attendees from the Business Block Catering Tab; Per Person is the total revenue calculated as the current Business Block Total/Attendees; current totals for Revenue Type 1-4 based on the revenue types selected in the Catering Production parameters; and current total revenue.
- **(Status) Change Summary.** Summary of each defined event status. Displays information such as the Attendees calculated as the total per status of new attendees per block; the total number of people summed from the attendees on each block from the events contributing to the revenue; Per Person calculated as the Status Summary Block Total /Status Summary Block Attendees; number of blocks calculated as the total number of business blocks for that status.
- **(Owner Code) Net Status.** Summary for each owner considering the Net Status values selected when ordering the report. Displays information such as Attendees summed based on net status calculation; Per Person calculated as the Net Status Total/Grand Total Attendees; number of blocks summed based on net status.

Grand Total. The total appears if the Print Grand Total check box is selected. Includes the following: Grand total of the (Owner) Net Status rows including attendees summed based on Grand Total calculation; Per Person calculated as the Grand Total Total/Grand Total Attendees; Number of blocks summed based on Grand Total calculation.

 **Note:**

Accounts and contacts use the following logic when printing the Catering Summary report. If a Company profile is attached to the business block, then the Company profile will print. If no Company profile is attached, but an Agent profile is present, then the Agent profile will print. If no Company and no Agent profiles are attached, but a Source profile is present, then the Source profile will print.

If a business block is in a return-to-inventory status, the date the business block was lost or canceled will print as well as the reason for the cancellation. For each business block, two rows of figures are recorded. The upper row shows the total catering revenue by revenue type for the business block as of the end of the production period, including the changes made to the events in the production period. The second row only represents the catering revenue changes during the production period.

If the event status was changed in the production period, the total revenue figures for the event are added as a change. A status change is always considered a rollover of all existing revenues into the new status and, therefore, all revenue on the books at the end of the production period is considered changes within the production period.

If a credit status is defined in the filter form, events that went through the credit status and into a follow-on status of the credit status (or had changes done to them while on the credit status in the production period and then turned into a follow-on status still in

the same production period) will be reported twice on this report, once under the credit status and once under the last status of the event.

It is possible for a business block to appear more than twice if its events are in several different statuses at the end of the production period.

Forecast figures are calculated as event production for the Catering Summary report if no expected, guaranteed, or actual figures exist for a specific revenue type. For example, if an event had forecasted revenue for 500.00 USD Room Rental, 1000.00 USD for Food, and 100.00 USD for Decoration, but only the function space is booked at a rate of 450.00 USD when the event becomes DEF, the revenue recorded in this report as production on the status change will still be 450.00 USD Rental, 1000.00 USD Food, and 400.00 USD Decoration.

Daily Catering Forecast (rep_ev_forecast.rep with rep_ev_forecast.fmx)

Prerequisites for Event Reports

The daily Catering Forecast is a detailed catering report that can print the forecast figures per day, per event type, and divided into the selected revenue types. Each event is listed separately with a summary for each event type. It a great tool for the catering department to project their expected revenues in minute detail at any time for any time into the future.

SELECTION CRITERIA

Property. Select the property for which the report should be printed.

Date Range. This represents the event date range that the report should cover.

Bus-Block ID. It is possible to select a single business block or a range of business blocks for the report.

Note:

When selecting a Master Block ID in the Bus. Block filter, OPERA will also include the Sub Block IDs linked to that Master. The report will then print all Events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only Events linked to that Sub Block will be printed.

Note:

If no Account is connected to a Business Block, the Business Block Name will print in the Account field on this report. Also, the Agent Name will print if no Company is attached and the Source Name will print if no Company or Agent is attached.

Event Type. Allows you to select the event types that should be included or excluded.

 **Note:**

Alternate Events are excluded from all catering calculations on this report.

Catering Manager. It is possible to only print event for a specific catering manager or a range of catering managers. The report will rely on the catering manager initials that have been selected on the booking catering tab for this filter.

Event Status. Allows you to select the event statuses to include or exclude. Typically, lost or canceled events would not be included in the forecast. Alternatively, it is also possible to select only lost and canceled events to get an idea of the lost revenue from the cancellations over the selected date range.

Event Status Sub-Total 1 and 2. Allows the sub-totaling of different statuses. This could be used to get a sub-total for production statuses as one and another sub-total for return-to-inventory statuses as the other. This would allow you to print the report as forecast and lost/canceled overview without having to print it twice. Or it could be used to group non- deduct statuses into one sub-total and deduct inventory statuses into the other sub-total.

Event Type for Average Check. Allows you to select event types to include in the average check calculation. If the average check is used for Food and Beverage purposes, this would typically only be event types that include food and beverage servings, such as Lunch or Dinner, and not event types like Setup that generates only function space revenue if at all.

Revenue Type 1-4. Up to four revenue types or groupings of revenue types can be included for printing on the report at any one time. These are represented as separate revenue columns on the report body and described in the report footer. The check box in front of each revenue type determines whether the revenue of this type (if checked) should be included in the average check calculation. Again, average checks could be based solely on Food and Beverage revenue types and events, or alternatively could be calculated for any catering revenue that gets generated.

Events - All/Catering Only/Rooms with Catering. These options allow you to decide, based on the type of block, which events will be included in the results.

Print Exclude from Forecast Event - Both/Yes/No. Select this option to either include or exclude certain events. When Both is selected, the report prints all qualifying events. When Yes is selected, the report prints only events that have had the Exclude from Forecast Reports flag checked. When No is selected, the report prints only events that have NOT been marked as Exclude from Forecast Reports.

REPORT DATA

The report is sorted in date order starting with first date selected in the date range filter. Within each date, the events are grouped by event type. For each event, the report displays the following columns: Account name, booking ID, booking status, catering owner initials, rooms owner initials, number of covers, revenues in four columns as selected per type on the filter form, total revenue, total average check revenue (this only show the revenue of those event types and revenue types that have been selected for calculation of the average check on the filter form), and the average check value. This is calculated by dividing the average check revenue by number of covers of those event types that have been selected for average check calculation.

Revenues are calculated in the following sequence by revenue type by event. If billed revenue exists, show billed revenue. If no billed revenue exists, show actual revenue. If no actual revenue exists, show guaranteed revenue. If no guaranteed revenue exists, show expected revenue. If no expected revenue exists, show forecasted revenue. If no forecasted revenue exists, show zero.

For each day, revenues are subtotaled per event type. As a summary for each day, the sub-totals for selected statuses are printed (if so selected on the filter form) followed by a total for the day.

Daily Forecast Report (rep_daily_forecast)

The Daily Forecast Report displays room nights, room revenues, and catering revenues on a daily basis per booking. Catering revenues can be split into up to five catering revenue type groups. Each day has a status summary line per status and one total daily summary across all statuses. The report incorporates the option to print catering revenues as net or gross depending on the setup of tax configuration on [catering revenue types](#).

- **Property.** Enter or select a property. You can select multiple properties from a [hub location](#).
- **Stay Date From.** Enter or select a stay from date for the block.
- **Stay Date To.** Enter or select a stay to date for the block.
- **Block Status.** Enter or select one or more status from the list.
- **Market Segment.** Enter or select one or more market segments from the list.
- **Block Type.** Enter or select a block (booking) type from the list.
- **Event Revenue:**
 - When the application setting Catering Revenue Price Type is set as Gross and the option button Gross is selected, catering revenue figures print as booked.
 - When the application setting Catering Revenue Price Type is set as Gross and the option button Net is selected, catering revenue figures print with the VAT (Tax) percentage configured for each catering revenue type deducted to the booked revenue.
 - When the application setting Catering Revenue Price Type is set as Net and the option button Net is selected, catering revenue figures print as booked.
 - When the application setting Catering Revenue Price Type is set as Net and the option button Gross is selected, catering revenue figures print with the VAT (Tax) percentage configured for each catering revenue type added to the booked revenue.
- **Revenue Type 1-5:**
 - Use this option to select the catering revenue types that should be used to calculate the catering revenue figures and the order in which these revenue types should print on the report.
- **Print Exclude From Forecast Event:**
 - Use this option to decide whether to include or exclude (or print exclusively) event revenue from events that have the “Exclude from Forecast Reports” flag on the Event Details Tab selected.
- **Rooms Revenue:**

- If the option button Net is selected, room revenue figures print net of any generates or packages that might be configured with the rate or are added to the booking.
- If the option button Gross is selected, room revenue figures print inclusive of room generates.
- **Block Owner/Primary Owner Only:**
 - Use this filter to select bookings by their block owner.
 - Depending on the “Primary Owner Only” flag, only bookings where the selected initials are the primary block owner are selected.
 - If not selected, bookings where the initials are primary or secondary block owner will be selected.
- **Rooms Owner/Primary Owner Only:**
 - Use this filter to select bookings by their catering owner.
 - Depending on the “Primary Owner Only” flag, only bookings where the selected initials are the primary catering owner are selected.
 - If not selected, bookings where the initials are primary or secondary catering owner will be selected.
- **Catering Owner/Primary Owner Only:**
 - Use this filter to select bookings by their catering owner.
 - Depending on the “Primary Owner Only” flag, only bookings where the selected initials are the primary catering owner are selected.
 - If not selected, bookings where the initials are primary or secondary catering owner will be selected.
- **Currency:**
 - Select the currency type in which to display revenue values on this report. (Available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active.)

Daily/Weekly List of Events – Detailed (sample_event_list_detailed.rep with rep_evord.fmx)

[Prerequisites for Event Reports](#)

The Daily/Weekly List of Events – Detailed report is a line report that can be useful as a daily or weekly communication tool to all hotel departments about upcoming catering events, their location (including the function space, number of attendees, set-up style), and so on. It is more detailed than its sister report, Daily/Weekly List of Events – Simple. In addition to the basic event details, this report also prints items from the booking level, such as the responsible managers, booking and catering status, and event status. Optionally, you can print Event notes, and the report indicates whether there are sleeping rooms associated with the catering events. The report is sorted and grouped first by the event date and then within each date sorted by business block name and followed by the event start time.

 **Note:**

You must have the Event Print task assigned to your role in the selected property in order to run the report. Also, the property available in this report is further limited by the properties to which you have the appropriate access granted.

The report is customizable.

Selection Criteria

Account. Select an account to print only the events linked to that account.

Contact. Select a contact to print only the events linked to the contact.

Business Block. Select a Business Block to print only events linked to that business block.

 **Note:**

When selecting a Master Block ID in the Block filter, OPERA Cloud includes the Sub Block IDs linked to that Master. The report then prints all events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only events linked to that Sub Block will print.

Date Range. Select the date range of the events that should be included in the report.

Event Status. Select the status of the events that should be included in the report.

Event Type. Select the event types of the events that should be included in the report.

Function Space. Select a function space to print only the events booked in that space.

Event w/o Space Assignment only. If selected, OPERA Cloud prints only the events that fit the other filter criteria that do not have a function space attached to them. Also, when selected, the Function Space filter and any values selected in that filter becomes inaccessible.

Print Event Notes. If selected, event notes print underneath the Doorcard field on the report.

Print Alternate Events. When selected, alternate events are included in the report.

Report Type - Daily/Weekly. When Daily is selected, a page break per day occurs. When Weekly is selected, the report prints continuously for the span of the selected date range.

Report Data

The report prints in booking ID order within each date. The primary company name, primary contact name, booking name, booking status, catering status, rooms owner, catering owner, and booking ID print on the booking group level. The report also indicates whether any sleeping rooms (and their number) are part of the booking.

Underneath the booking information, the events attached to the booking for the appropriate date are listed in start time order. Information that prints for each event includes event description, event ID, event status, event start and end time, doorcard, assigned function space, number of attendees, and the set-up style for the function space.

If event notes are attached to any event and the Print Event Notes flag is selected on the report filter form, the event notes print on the report underneath the Doorcard field of each event.

Equipment List (rep_equipment_list.rep with rep_equipment_list.fmx)

Prerequisites for Event Reports

This report is a great tool for the banquet operations staff. It can be used with Banquet Event Orders (BEO) as a detailed document for equipment organization and setup. You can print the report in a daily format with a page break after each day or in a continuous weekly format. You have the option to print more details like the account name, contact name, communication details, and all relevant notes instead of the plain format that essentially prints only the equipment requirements.

Date Range. Allows you to select any event date range. To generate the report, enter either the Date Range or Business Block ID.

Property. This is a multi-property report enabling you to run it for multiple properties when logged in at the HUB level.

Business Block. It is possible to order the report for one or several specific business blocks.

Note:

When selecting a Master Block ID in the Business Block filter, OPERA Cloud includes the Sub Block IDs linked to the Master Block. The report prints all Events linked to the Master Block and its Sub Blocks. If a Sub Block ID is selected, only Events linked to that Sub Block are printed.

Event Status. This allows filtering the report by event status. Generally, this would only include production status code. Cancellation status codes should be excluded.

Event Type. Allows filtering the report by event type.

Responsible Dept. Allows you to select responsible departments, for example, if audio visual equipment is provided by an outside vendor, the report can be generated to show only the items the vendor is responsible for providing.

Resource Item. Allows you to select one or more specific items as report filters.

Report Type – Daily/Weekly. When Daily is selected, a page break per day occurs. When on Weekly, the report prints continuously for the span of the selected date range.

Print Details. If you select Detailed, additional information on the account name, contact name, and communication details print beneath the event time and name. If you select Plain, this information is excluded.

Account and Contact information appear on the report according to the following profile type hierarchy:

- If a Company profile is attached to the business block, the Company profile name appears.

- If a Company profile is not attached to the business block, but a Travel Agent is attached, the Travel Agent profile name appears.
- If neither a Company profile nor a Travel Agent profile is attached to the business block, and a Source profile is attached, the Source profile name appears.

Print External Y/N/B. Select Yes, No or Both.

- Yes prints items that have an X in the External (E) column in the Event Resources screen. This includes items configured as External or items configured as Critical that are attached to an event and the quantity requested exceeds the configured Quantity.
- No prints items that are not marked as External in the Event Resources screen.
- Both prints all items regardless of the External flag.

REPORT DATA

The report is sorted in date order and within each date in event time order. Information available on the report is per event, event start and end time, event name and ID, function space, set-up style, and number of attendees.

If you select Detailed on the report order form, additional information about the account name, contact name, contact on site, block name, and catering owner code, as well as contact communication details, are printed for each event also.

For each event, the following resource details print: required quantity, item name, item attribute, price and rate description, indicator if the item is to be externally ordered, and the responsible department.

Following each item, item notes print if any are attached to the item, followed by event notes after all items are printed.

Event Note Change Log Report (Rep_Event_Note_Changelog)

The Event Note Change Log Report is created to report changes to Banquet Event Orders (BEO) after distribution without having to reprint the entire original sheet. It works in conjunction with event notes. To have change notes print on the report, you must create an event note for the appropriate event with the notes type: Change. OPERA Cloud stamps the note with the date, time, and user name. In the notes, enter any changes you want included in the distributed Change Log report.

Report General Conditions

- The new parameter form is named **REP_EVENT_NOTE_CHANGELOG**.

Report Parameters

- All the parameters are in one section.

Fields

1. **Property:** Confirm or select a property. At the Hub level, you are presented with a multi select list.
2. **Block:** Select a specific block to print in the report. When selecting a Master Block ID in the Business Block filter, OPERA Cloud also includes the Sub Block IDs linked to that Master. The report prints all events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only Events linked to that Sub Block are printed.

3. **Event:** Select specific events to be included in the report.
4. **Event Dates From:** Select an event date from range.
5. **Event Dates To:** Select an event date to range.
6. **Change Log From Date:** Select a date range covering the period in which change notes were created. The system compares this to the change note date/time stamp of creation/last modification.
7. **Change Log To Date:** Select a date range covering the period in which change notes were created. The system compares this to the change note date/time stamp of creation/last modification.
8. **Change Log Times:** Enables you to narrow down the selection of a time period during which the changes were made. This filter is evaluated against the date/time stamp of creation/modification of the event change notes.
9. **User:** If nothing is specified in this field, it's assumed all users are available for filtering. Select a specific user for which to print changes. This will be compared against the user name stamped onto the event change notes on creation/modification.
10. **Internal Notes:** The report only prints event change notes that are also flagged as internal if the flag is checked on the filter form.

Report Data

The report prints in event date order. Within each date, events prints per block and within each block. Only events that do have event change notes attached print on this report. Information that prints includes, block name and account name, event ID, event date, event time, and event name. The main information in regard to the event change notes shows change date, change time, change made by, event ID, and the text of the change note itself.

When no filters are populated, the current date (change log dates/time) passes to the report.

Function Space Utilization Report (rep_fs_utilization)

The Function Space Utilization Report details the Maximum (Potential) Utilization, Actual Utilization and Occupancy % of each function space. In order to generate an accurate report ensure the **100% Occupancy** attribute is setup correctly in Additional Details [Configuring Function Space Additional Details](#) for each function space. If the 100% Occupancy attribute is not configured for a space, the report will generate based on the default time of 1440 minutes (24 hours).

- **Property:** Choose the property for which the report should be printed.
- **Date Range:** Select the From and To dates to display the function space utilization for this time period.
- **Days of the Week:** Used in conjunction with the Date Range field, select the checkbox beside the day of the week that is to display in the report.
- **Space Type:** Select the space type for which the report should be printed, Single, Combo or Both.

- **Event Status:** Select the status of the event. Even though any status can be selected, revenue figures will only be calculated for events in a deduct-from-inventory status.
- **Event Type:** Select the type of events to display in the results.
- **Function Space:** Select all or specific function spaces.
- **Revenue Type:** Select the revenue type of the function space.
- **Include Setup/Tear down Time:** Displays the length of time it takes to setup and tear down the function space.
- **Print Daily Summary:** Active only when the Single Space Type option button is selected, includes the daily summary for the function space.
- **Date Range Summary Only:** Active only when Print Daily Summary is not checked. When selected only a summary for the selected date range will be printed. No details by event will be included.
- **Print Events:** Available only when Date Range Summary Only is not checked. Reports the events booked in each function space based on the filters selected.

Report Data

This report is ordered by row, one row per space/day. Each row contains the following columns: Date, Room Type (Single, Combo or Both), Space Name/Event Name, Business Block ID and Event Scheduled Time (displays only when the Print Events option is selected), Maximum Configured Utilization, Actual Utilization, Occupancy Percentage, Number of Attendees, Total Revenues and Revenue per Square Footage of Function Space, or Square Meters depending on the [OPERA Control](#) configuration for Measurements and Average Check.

Item Availability Report (rep_item_availability.rep with rep_item_availability.fmx)

The Item Availability report is useful for catering equipment planning and ordering. It provides a detailed list of all equipment booked on a daily basis with the number of items in inventory, items booked, and items still available. External items are marked as external, enabling you to order the items well in advance.

Report Parameters

Property. The property for which the report should be printed.

Event Date From. Filter the report by selecting an Event From date range.

Event Date To. Filter the report by selecting an Event From date range.

Event Status. From the multi-select list of values, select the event statuses you want the report to display.

Responsible Department. Filter the report to only show items linked to the selected departments.

Daily/Weekly. If you select Daily, a page break occurs after each date. If you select Weekly, the report prints in date order, but continuously with page breaks.

Print External Only. Select the check box to print only for externally ordered items.

Report Data

The report is sorted in date order as first sort. Within each date, a list of booked items print in alphabetic order by item name and time booked. If an item is booked for different time slots on the same day, it prints as many times as it is booked.

The time booked, account name, resort name, business block ID, event status, event name, and function space name prints for each item. For external items, the assigned vendor name prints if it is defined.

Account information appears according to the following profile type hierarchy:

- If a company profile is attached to the business block, the report displays the company profile name.
- If a company profile is not attached to the business block, but a travel agent is attached, the report displays the travel agent profile name.
- If neither a company profile nor a travel agent profile is attached to the business block, and a source profile is attached, the report displays the source profile name.

The Inventory field is pulled from the configuration for that item. Numbers are populated in the Internal and External fields only for events that are in an inquiry, non-deduct, or deduct from inventory status. The Total field is populated with the internal + external quantities booked.

Only internal items are taken off the number of items in inventory. When the value in the Internal field is No, it indicates the item was not configured with a quantity.

This report also print items from events in a Return to Inventory status.

Note:

When Custom Items are included in this report, the word "Custom" prints in the Available field.

Meal Type Forecast by Day (BI) (Rep_Meal_Type_Forecast_bi.rep with rep_Meal_Type_Forecast_BI.FMX)

Prerequisites for Event Reports

The Meal Type Forecast (BI) report is an easy to read forecast report for banquet operations. It is broken down by Catering Covers, Status, and Event Date.

Report Elements

- This report is a BI Publisher report. Customizing the report is not recommended. The following are the report elements:
 - Report Name = Meal Type Forecast by Day
 - File Name = rep_meal_type_forecast_bi.rtf
 - Form to run = rep_meal_type_forecast_bi.fmx
 - Data Template = rep_meal_type_forecast_bi.odt

Selection Criteria

Event Dates:

- **From.** (Mandatory). Enter the calendar date to indicate the beginning of the Event period for which the report is to be filtered.
- **To.** (Mandatory). Select the end date of the Event period when the report is filtered.

Property. Select the property for which the report should be printed. When you are logged in at the hub level, the property LOV is multi select, which allows you to run the report for multiple properties.

Block Origin. The Block Origin LOV lists all of the possible values from the internal field allotment_origin values from the Business Block header. When a value is selected, only events from business blocks with this origin are considered. If no value is selected, all business blocks are considered. Possible values are based on the user who created the block and the Act As and At values set on the user in Role Manager.

- If the Act As value = Conference Sales Person, and the At value = Property level, then the block is flagged as Sales and Catering.
- If the Act As value = Reservation Sales Person, and the At value = Central, then the block is flagged as ORS.
- If the Act As value = External System, then At value = not required, and the block is flagged as EXT.
- If the Act As value = Reservation Sales Person, and the At value = Property, then the block is flagged as PMS.
- If the Act As value = Conference Sales Person, and the At value = Central level, then the block is flagged as SFA.

Event:

Definite. (Mandatory) Select one Status Code from a list of all status codes that can turn to an Actual status. This selection will be used to filter by event status.

Incl Actual. (Enabled when a Status is selected in the Definite field) Select this check box to include events in an ACTUAL status in the Definite totals.

Status. (On the Books) Select Status Codes from the list of all status codes (does not include the status selected in the Definite LOV) that will represent the other status code groupings listed in the report. This selection is used to filter by event status.

Summary Statuses. (Mandatory) Select Status Codes from the list of all status codes to represent the status codes added together for the summary grouping at the beginning of the report (this filter is not dependent on the values selected in any of the other status fields).

Meal Type 1. (Mandatory) Select one Meal Type to be represented in the 1st Meal Type Column.

Meal Type 2 - 5. Select Meal Types to be represented in the 2nd – 5th Meal Type Columns. If no value is selected in a field, then no figures will be calculated for that column in the report.

Revenue (You must select one of the options)

- **Net.** When selected, Catering Revenue will be calculated as:
 - Net Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration>Financial>Transaction

Management>Revenue Type Mapping): Included generates are deducted; or Excluded generates are not added.

- **Gross.** When selected, Catering Revenue will be calculated as:
 - Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration>Financial>Transaction Management>Revenue Type Mapping): Included generates are not deducted; or Excluded generates are added.

Currency. Select the currency you want used for calculating the report. All revenue figures will be reported in the selected currency. If no value is selected, the report is calculated using the Base Currency of the logged in Property.

Meal Type Revenue. (Mandatory). Select the listed Active Revenue Types for use in the Revenue calculation in the Meal Type Revenue columns.

Revenue Type 1 - 4. Select the listed Active Revenue Types for use in the calculation for the Rev Type Columns 1-4 at the end of the report. If no value is selected in a field, then no figures are calculated for that column in the report.

Owner. (Select Owners. If no value is selected, then all Owners listed in the LOV will be considered.)

- **Block Owner.** Only Events from business blocks with this Overall Owner are considered.
