About Back Office Exports

Back Office exports are used to export financial totals and statistical data, for import as a journal entry to a general ledger and/or AR accounting solution.

- **Revenue (Sales)**: Trial balance totals.
- **Market Statistics**: Market code statistics - room nights and revenue.
- **Daily Statistics** : Managers report statistics. For more information, see Managing Definable Managers Report
- **City Ledger**: Reservation accounts (guest ledger) settled to A/R Accounts Receivable payment method.

Back Office Export Workflow

The Back Office export workflow consists of the following steps:

1. During installation
    a. Assign chart of account numbers to every OPERA Cloud transaction code, market code and daily statistic. For more information, see Export Mapping
    b. Configure the back office export files. For more information, see Managing Exports.
2. During End of Day,
    a. OPERA Cloud calculates the trial balance, market and managers report statistics.
    b. Export files are generated.
3. You then import the export files as a journal entry to your general ledger accounting solution.

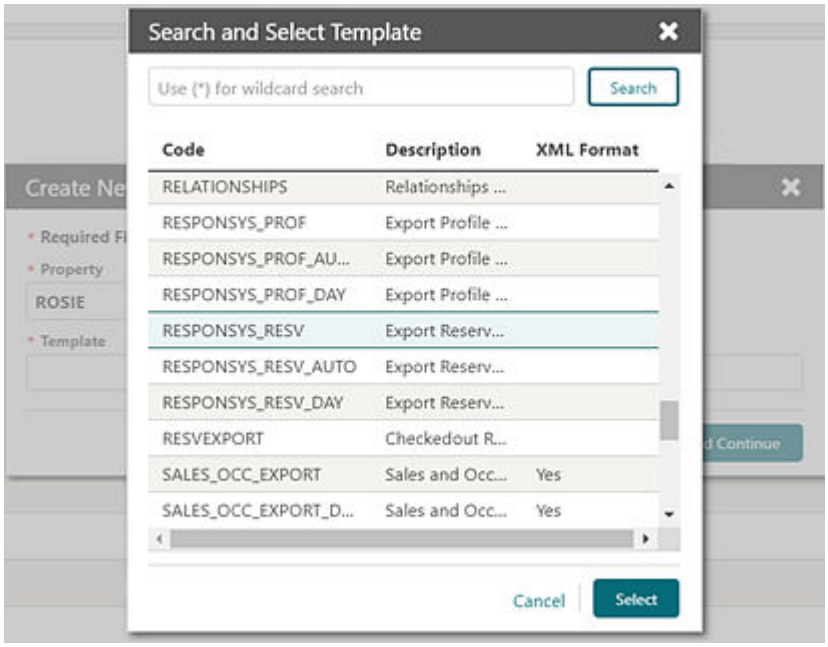
Responsys Profile Exports

The Responsys Profile Export templates export profile and membership details, along with revenue and stay details for use in the Oracle Responsys solution.

There are three export templates available:

- **RESPONSYS_PROF_DAY**. You can run this export manually for a Day or Date Range.
- **RESPONSYS_PROF**. You can configure this export to run during End of Day.
- **RESPONSYS_PROF_AUTO**. You can schedule this export from Export Schedules.

Copyright © 2016, 2025, Oracle and/or its affiliates.



Generating the Responsys_Prof_Day Export

You can run the Responsys_Prof_Day Export manually for a day or date range. When the export is generated manually, you must select dates such as Date, Month, and Year (MM/DD/YYYY) for which the export need to be generated. The date range is defaulted to the business date. For example, if you export the file on May 15, the default date range will be To Date – 14 May and For Date – 15 May; and records for May 14 through May 15 will be generated provided the current business date is later than May 15.

You can generate exports for one or multiple profile types with combinations of multi select profile privacy option.

Generating the Responsys_Prof Export

You can schedule the Responsys_Prof export to run during End of Day. The export frequency is set to Daily by default. When the Night Audit Export check box is enabled for the export, the export will run during End of Day (EOD). Once this export is added to the property, the EOD automatically considers the export based on the export frequency defined. The check box is enabled by default, and you can deselect the check box if you decide against running the export during EOD.

Generating the Responsys_Prof_Auto Export

You can schedule the Responsys_Prof_Auto export from the OPERA Cloud Scheduler: Administration->Enterprise->Opera Scheduler->New-> Select the export ‘Responsys_Prof_Auto’->Select-> Specify the scheduler frequency > click OK to schedule the export.

You can also schedule the export via Export Scheules: OPERA Cloud-> Export- > Schedules->New-> select the export Responsys_Prof_Auto-> click Run-> specify the scheduler frequency-> click OK.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Export Output

The export is generated in the .cvs format by default. You can change the format to .txt from Miscellaneous-> Exports-> General-> select the export file type-> Edit-> update the file extension formula.

The Responsys Profile export output file contains following Fields:

- **Export File Name Format**: ' pms_p.resort '|| '_' ||RESPONSYS|| '_' ||PROFILE|| '_' || EXPORT|| '_' ||to_char(pms_p.business_date,'YYYYMMDDHHMI')
- **Example**: TOKYO_RESPONSYS_PROFILE_EXPORT_202002141635

Table 8-5 Export Fields

Column	Type and Length	Description
FIRST_NAME	Text (100)	The first name of the profiles.
MIDDLE_NAME	Text (100)	The middle name of the profiles.
LAST_NAME	Text (100)	The last name of the individual profile and the search name of the other types of profiles (Group, Travel Agent, and Source) are stored in this column.
TITLE	Text (25)	The title of the profiles.
SALUTATION	Text (100)	Salutation greetings.
BIRTHDATE	Timestamp	Date of Birth of the Profiles.
VIP_STATUS	Text (100)	VIP Status of the profiles.
GENDER	Text (25)	Indicates gender of profile; either (M)ale or F(emale).
LANGUAGE	Text (25)	Primary language used for the profile.
NATIONALITY	Text (100)	Nationality of the individual.
PHONE NUMBER	Text (225)	The phone number for this record.
PHONE_COUNTRY CODE	Text (25)	Numeric phone dialing prefix code for the country.
EMAIL ADDRESS	Text (500)	Number Rooms in the reservation.
ADDRESS LINE 1	Text (225)	The first line of street address.
ADDRESS LINE 2	Text (225)	The second line of street address.
CITY	Text (50)	The city for this address.
COUNTY	Text (50)	The state of this address.
POSTAL CODE	Text (25)	The postal code of this address.
COUNTRY	Text (25)	The country of this address.
EMAIL_OPT_OUT	CHARACTER	Indicates if profile should be contacted through email.
SMS_OPT_OUT	CHARACTER	Indicates if profile should be contacted through SMS.

Table 8-5 (Cont.) Export Fields

Column	Type and Length	Description
Total_Value_of_Customer	Number	Total Value of the Guest.
Total_Room_Revenue	Number	Total revenue generated by the guest.
Total_Food_Beverage_Revenue	Number	Total Food and beverage revenue generated.
Total_Other_Revenue	Number	Total other revenue.
Total_Number_of_Stays	Number	Total Number of stay.
Total_Number_of_Nights	Number	Total Number of nights.
Last_Stay_Date	Timestamp	Last Stay date.
Last_Stay_Property_Name	Text (25)	Last Stay Property Name.
Next_Stay_Check_In_Date	Timestamp	Last Stay Check In date.
Next_Stay_Check_Out_Date	Timestamp	Last Stay Check Out date.
Next_Stay_Property_Name	Text (100)	Next Stay Property.
Partner_Name	Text (100)	Membership Type Name.
Member_Status	CHARACTER	Membership Status.
Member_Number	Text (100)	Membership Card Number.
Tier	Text (100)	Level of this Membership Type.
Points_Remaining	NUMBER	Total Points Remaining for the Profile.
Lifetime_Points	NUMBER	Total Points Accrued for the Profile.

Responsys Property Exports

The General export, RESPONSYS_PROP_DAY, exports property details to the Oracle Responsys System. The Oracle Responsys System requires the Responsys Property Export on a monthly basis per Responsys services.

The export captures property details such as Code, Brand, Type, Address, No. of Guest Rooms, No. of Meeting Rooms, Attraction, Airport, Transportation, Alternate, Cities Nearby, and Region for all properties within the chain. You can generate the export for a date or date range.

The OPERA Cloud add on OPP_EXP subscription must be activated for General Exports functionality. The Export is available from the OPERA Cloud menu by selecting Miscellaneous, then Export, then General, and then RESPONSYS_PROP_DAY.

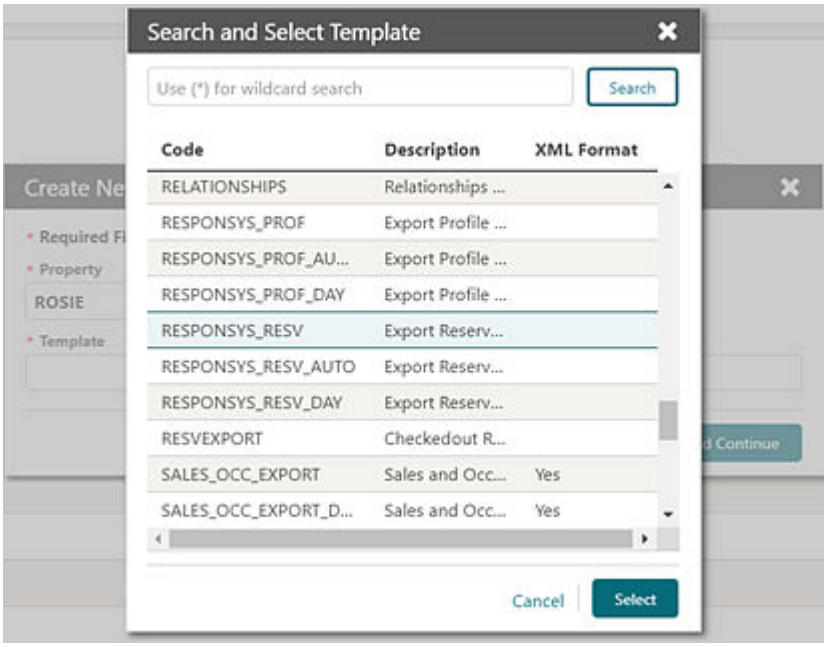
The export contains information on Properties, such as their Brand, Level, Address, Amenities, Attractions, Alternates, Transportation, Features, and so on.

The export contains information on Properties, such as their Brand, Level, Address, Amenities, Attractions, Alternates, Transportation, Features, and so on. There are three export file types available in the list of templates within the General Exports. You can select the applicable export(s) from the Template list (Miscellaneous > Exports > General > New) and add to them your property.

Copyright © 2016, 2025, Oracle and/or its affiliates.

There are three export file types available in the list of templates within the General Exports. You can select the applicable export(s) from the Template list (Miscellaneous > Exports > General > New) and add to them your property.

- **RESPONSYS_PROP_DAY**. You can run this export manually for a Day or Date Range.
- **RESPONSYS_PROP**. You can configure this export to run during End of Day.
- **RESPONSYS_PROP_AUTO**. You can schedule this export from Export Schedules.



.

Generating the Responsys_Prop_Day Export

You can generate the Responsys_Prop_Day export manually. When doing so, you must select date ranges such as Date, Month, and Year that the report is to cover. The date range is defaulted to the current month (a business date-30 days). For example, if you export the file on May 15, the default date range would be To Date – 15 April and For Date – 15 May. Records for April 15th through May 15th will be generated provided the current business date is later than May 15.

Generating the Responsys_Prop Export

You can schedule the Responsys_Prop export to run during End of Day (EOD). The export frequency is set to Monthly (30 days) by default. When the Night Audit Export check box is selected for the export, the export runs during the End of Day. Once this export is added to the Property, the EOD automatically considers the export based on the export frequency defined. The check box is enabled by default, and you can deselect the check box if you decide against running the export during EOD.

Generating the Responsys_Prop_Auto Export

You can schedule the Responsys_Prop_Auto export from the OPERA Cloud Export Scheduler.

1. From the OPERA Cloud menu, select **Miscellaneous**, select **Exports**, and then select **Scheduled Exports**.
2. Click **New**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the **Responsys_Prop_Auto** export and click **Run**.
4. Specify the scheduler frequency and click **OK**.

Export Output

The Responsys Property export output file contains the following fields:

- **Export File Name Format**. ' pms_p.resort '|| '_' ||RESPONSYS|| '_' ||PROPERTY|| '_' || EXPORT|| '_' ||to_char(pms_p.business_date,'YYYYMMDDHHMI'). The following is an example: TOKYO_RESPONSYS_PROPERTY_EXPORT_202002141635.
- **File Extension**. CSV.

Table 8-6 Export Fields

Column	Type and Length	Description
Property Name	VARCHAR (20 BYTE)	The property that the record belongs to.
Property Brand	VARCHAR (20 BYTE)	Chain Code for the chain to which the property belongs.
Property Type	VARCHAR (20 BYTE)	Type of resort.
Street Address	VARCHAR2(2000 BYTE)	The street of the property.
City	VARCHAR2(24 BYTE)	The physical city in which this property resides.
State	VARCHAR2(3 BYTE)	The state in which this property is located.
Postal Code	VARCHAR2(20 BYTE)	The postal code of this property.
Country	VARCHAR2(3 BYTE)	The name of the country in which this property resides.
No. of Guest Rooms	NUMBER	Total number of rooms in this property.
No. of Meeting Rooms	NUMBER(4,0)	Total number of Meeting rooms.
Attractions	Text (225)	The phone number for this record.
Airports	VARCHAR2(100 BYTE)	The Airport Code for the airport near the property.
Transportation	VARCHAR2(40)	Code of the transportation.
Alternatives	VARCHAR2(20)	Alternate property of the resort column.
Major_City_Nearby	VARCHAR2(20)	Marketing citycodes.
Region	VARCHAR2(20)	Region

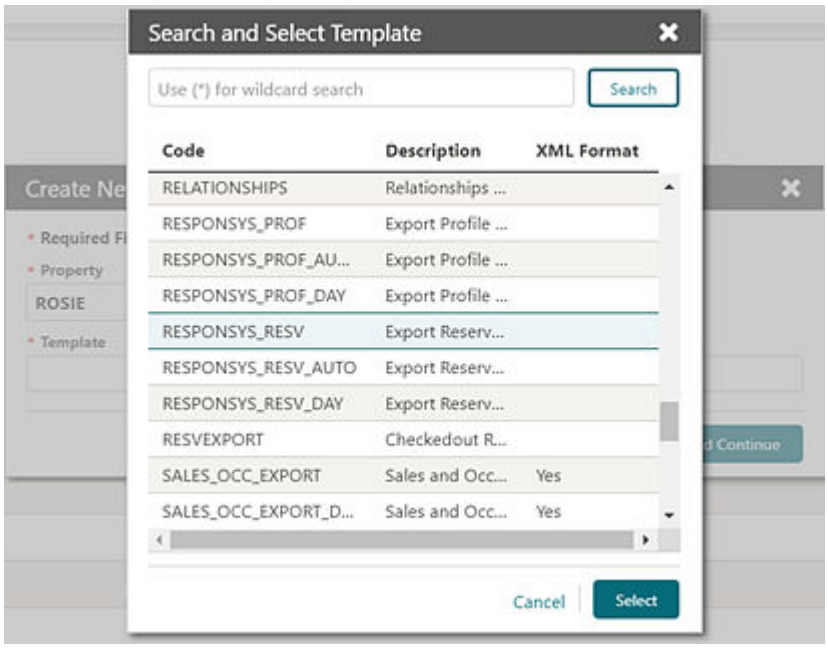
Responsys Reservation Exports

The General export, Responsys_Resv_Day, exports reservations to the Oracle Responsys system. You can generate the export for an arrival date range and request it for a specific reservation status. Additional filter conditions are definable in the Miscellaneous menu. Select **Exports**, select **General**, select the **export file type**, select **Edit**, and then click **Filter**

Copyright © 2016, 2025, Oracle and/or its affiliates.

Condition. The OPERA Cloud add on OPP_EXP subscription must be activated for General Exports functionality.

There are three export file types available in the list of templates within the General exports. You can select the export(s) from the Template list and add them to your property. The Template list is available in the Miscellaneous menu. Select **Exports**, select **General**, and then select **New**.



Generating the Responsys_Resv_Day Export

The Responsys_Resv_Day export can be generated manually. When generating it manually, you must select the Arrival Date Range and the Reservation Statuses to be considered in the export. The Date range defaults to the current month, and you can modify the date selection as required. By default, reservation statuses Arrivals, Checked In, InHouse, Departure, and Checked Out are available. You can select the following additional statuses: Waitlist, Canceled, and No Show if required.

Generating the Responsys_Resv Export

You can schedule the Responsys_Resv export to generate during End Of Day (EOD). The frequency of the export is set to Daily by default. Once this export is added to the Property, the EOD automatically considers it based on the export frequency defined. If required, you can deactivate the scheduler job for the export from Miscellaneous > Exports> Schedules > and turning off the scheduler job for the export Responsys_Resv.

When the export is scheduled to run during EOD, it generates for the next 30 days of arrivals (from the current business date). Reservations with these statuses: Arrivals, Checked In, InHouse, Departure, and Checked Out are considered by the export.

Generating the Responsys_Resv_Auto Export

You can schedule the Responsys_Resv_Auto export from Export Schedules (Miscellaneous > Exports> Schedules> Create Schedules).

Copyright © 2016, 2025, Oracle and/or its affiliates.

When the export is scheduled to run from Scheduler, it generates for the next 30 days of arrivals from the current business date. Reservations with these statuses: Arrivals, Checked In, InHouse, Departure and Checked Out are considered by the export.

Export Output

The export is generated in the .csv format by default. You can change the file format to .txt from Miscellaneous > Exports > General > Select the export file type > Edit> update the file extension formula.

The export data is ordered by reservation arrival date. Pseudo room reservations are not considered by this export.

Export file name format: propertycode_filetype_date.csv, for example: PROP1_RESPONSYS_RESV_EXPORT_202002241510.txt (Note: the DateTimestamp format for the file name is YYYYMMDDHHMI).

Table 8-7 Export Fields

Column	Type and Length	Description
RESERVATION_ID	Number	OPERA Cloud Reservation Confirmation Number.
GUEST_LAST_NAME	Text (100)	Guest Last name.
GUEST_FIRST_NAME	Text (100)	Guest First Name.
GUEST_MIDDLE_NAME	Text (100)	Guest Middle Name.
TRAVEL_AGENT_NAME	Text (100)	Name of the Travel Agent Profile. This is blank if No Travel agent is associated to the reservation.
COMPANY_NAME	Text (100)	Name of the Company Profile. This is blank if No Company is associated to the reservation.
BOOKING_SOURCE	Text (100)	Source Code of the Reservation.
PROPERTY_NAME	Text (100)	Name of the Property.
ARRIVAL_DATE	Datestamp	Arrival date of the reservation in Properties Date format.
DEPARTURE_DATE	Datestamp	Arrival date of the reservation in Properties Date format.
NUM_NIGHTS	Number	Number of Nights.
NUM_ADULTS	Number	Number of Adults in the reservation first stay night.
NUM_CHILDREN	Number	Number of Children in the reservation first Stay night.
NUM_ROOMS	Number	Number Rooms in the reservation.
ROOM_TYPE	Text (25)	Room Type in the Reservation. If the Reservation has multiple room type, this field should carry the Room Type applicable for the first Stay Night.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 8-7 (Cont.) Export Fields

Column	Type and Length	Description
ROOM_TYPE_TO_CHARGE	Text (25)	Room Type to Charge (RTC) in the Reservation. If the Reservation has multiple RTC, this field should carry the RTC applicable for the first Stay Night.
ROOM_NUMBER	Text (25)	Room Number assigned to the Reservation. For multiple room reservations, display room numbers as comma separated. If different rooms are assigned to different nights, Room Number(s) assigned to the first stay night.
RATE	Number	Rate applicable for the first Stay night of the reservation.
BLOCK_CODE	Text (25)	Block Code assigned to the Reservation First Stay Night.
RESERVATION_TYPE	Text (25)	Reservation Type of the Reservation.
PAYMENT_TYPE	Text (25)	Reservation Payment method applicable for the Payment Window1 /Folio1.
NAME_ON_CARD	Text (500)	Name on the Card. Comma separate Last Name and First Name.
DISCOUNT_AMOUNT	Number	Discount amount applied to the reservation- This field will pass null value, if no discount applied.
DISCOUNT_PERCENTAGE	Number	Discount Percentage applied to the reservation- This field will pass null value, if no discount applied.
DISCOUNT_REASON	Text (25)	Discount reason specified while applying the discount. This field will pass a null value if no discount is applied.
SPECIAL_REQUESTS	Text (500)	Special Request Codes attached to the reservation. Any preferences from the SPECIALS preference group added to the reservation will appear in this column. If multiple special requests are attached, those will be displayed as comma separated.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 8-7 (Cont.) Export Fields

Column	Type and Length	Description
PROMOTION	Text (25)	Promotion Codes attached to the reservation. If multiple Promotion Codes are attached, those will be displayed as comma separated.
ROOM_PREFERENCES	Text (500)	Reservation preference Codes from the preference group ROOM FEATURES, SMOKING and FLOOR, If there are multiple records, display as comma separated.
OTHER_PREFERENCES	Text (500)	Reservation Preference Codes from all other preference groups (VIDEO OPTIONS, TV OPTIONS, MINIBAR OPTIONS, PHONE OPTIONS, INTERESTS, KEY OPTIONS, EVENTS, ATTENDEES + ANY ADDITIONAL PREFERENCE GROUPS ADDED BY THE PROPERTY). If there are multiple records, display as comma separated.
SHARED_ROOM	Character (Y / N)	Y/N Y- if the Reservation is sharing a room with another reservation. N - if the reservation doesn't share the room.
RATE_CODE	Text (25)	Rate Code attached to the reservation. If the Reservation has multiple Rate Codes, this field should carry the Room Type applicable for the first Stay Night. For a Block Reservation, where the Block doesn't have a Rate Code attached, the Rate Code will be passed as null.
PARENT_BLOCK	Text (25)	Leave this as blank always.
RESERVATION_STATUS	Text (25)	Status of the reservation while generating the export.

Responsys Transaction Exports

The General export, Responsys_TRX_Day, exports reservation sales charge transactions to the Oracle Responsys system. This export can be generated for a transaction date range. Additional filter conditions can be defined in Miscellaneous > File Exports > General > Select the export file type > Edit > Filter Condition. The OPERA Cloud add on OPP_EXP subscription must be activated for General Exports functionality.

Copyright © 2016, 2025, Oracle and/or its affiliates.

The Responsys_TRX_Day export considers transactions where the Transaction Code is indicated revenue_yn=Y.

There are three export file types available in the list of templates within the General exports. To add templates to your property, select the applicable export(s) from the template list. Go to Miscellaneous > File Exports > General > New and select/add the files types to the property.

- **RESPONSYS_TRX_DAY**. You can use this template file type to generate the transaction export manually.
- **RESPONSYS_TRX**. When this template file type is added to the property, the transaction export is automatically scheduled to run during End of Day (EOD). You can review the scheduler job from Miscellaneous > File Exports > Schedules.
- **RESPONSYS_TRX_AUTO**. You can use this template file type to schedule the transaction export from Miscellaneous > File Exports > Schedules.

When the transaction export is generated during End Of Day or from a scheduler job, the export is generated for the previous business date.

Transactions of pseudo room type reservations are not included in this export. The Transaction export is generated in comma separated file format by default; you can change the format to .txt from Miscellaneous > File Exports > General > Select the export file type > Edit > update the file extension formula. The export is delivered to an SFTP server or file system location.

Generating the Responsys_TRX_Day Export

For generating the Responsys_TRX_Day export manually, the export parameter screen should be provided with options to select a past date range. The date range you select is the transaction date range. The From Date field and To Date field should default to the previous business date (OPERA Cloud business date - 1). You can select a different date range (earlier than today's business date). The From Date and To Date selection is mandatory to generate export. The export should not be executed until a valid date range is specified.

Table 8-8 Export Fields

Column	Type and Length	Description
TRANSACTION_DATE	Text (100)	Transaction Date in OPERA Cloud.
TRANSACTION_ID	Text (100)	OPERA Cloud Transaction Numbers.
RESERVATION_ID	Text (100)	OPERA Cloud Reservation Confirmation Numbers.
REVENUE_TYPES	Text (100)	Transaction Group mapped to the Transaction Code of the above Transaction Number.
REVENUE_AMOUNTS	NUMBER	Net Revenue Amounts.
CURRENCY	Text (100)	Currency Code used in Reservation.

Generic XML Back Office Export

OPERA Cloud provides a number of pre-defined back office exports as part of SID data. However, due to the nature of changing business requirements, these pre-defined exports are only utilized to create customized view and back office configuration.

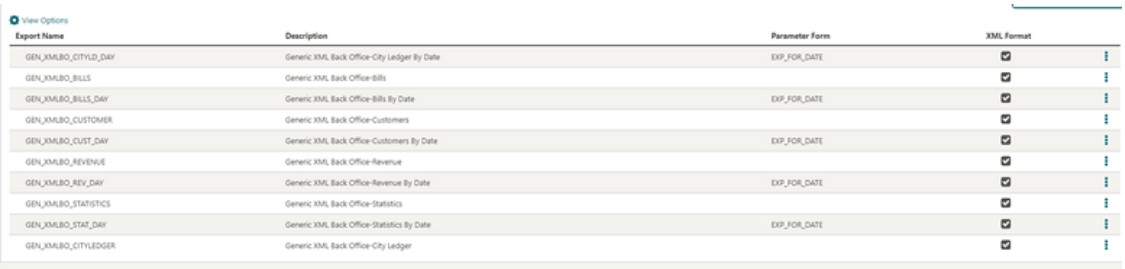
Copyright © 2016, 2025, Oracle and/or its affiliates.

To centrally manage accounts/payables etc., this export is used in passing the data to the ERP systems allowing the user a greater flexibility in managing and maintaining their financials.

Creating an Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** then select **General**.
2. Select **New From Template** and enter the following detail:
   a. **Property**: Enter or confirm the property.
   b. **Template**: Search for the template from the search glass and click **Select**.
   c. **Export Name**: Highlight an export to proceed.
   d. **Description**: The description is entered by default.
3. Click **Create & Continue**.
4. Click **Save** after creating an export
5. Repeat for all 10 exports, following the same steps as mentioned above and configure.

> **Important**
>
> No configuration change is advised in the templates except for Delivery Configuration. The templates are predefined and it is advisable not to modify them.



Generic XML Back Office Export-Specifications

The following table explains information sent in different files:

Table 8-9 Standard Views and Description

File	Description
REVENUE	Revenue and Payments for the day
CITY LEDGER	All City Ledger / Accounts Receivable transactions of the day
BILLS	All bills/folios generated on the day (including voided)
CUSTOMERS	Profile data for profiles that appear in the BILLS file

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 8-9 (Cont.) Standard Views and Description

File	Description
STATISTICS	Includes Room Nights, Persons, Noshows and Cancellations of the day by Room Class, Room Type and Market Code

All files have the same two attributes under the root element:

- **<date>**: Single date the export is executing.
- **<hotel_code>**: Identifier for the property. You can set up a custom code in Administration/Enterprise/Chain and Property Management/Properties/Property Configuration/Property Controls/Hotel Code; otherwise it will use the OPERA Cloud property code.

Formatting Conventions

All date fields use the format YYYY-MM-DD.

All monetary fields have two decimals with dot (“.”) as the separator, no thousand separator is used. Negative numbers have an explicit minus sign (“-“).

Element and attribute tags follow the lowercase and hyphen standard. Secondary information is set as Attribute, main information as Element.

Data Exchange

The information flows from OPERA Cloud to the ERP/Back Office system only. No data is being sent to OPERA Cloud. Exports are usually configured to automatically generate during the end of day routine for the day being closed, but you can manually re-generate for past days.

Revenue Export

The Revenue File contains one record per transaction code with the total of the transaction code for the day, as well as a transaction level detail of each posting generated for that transaction code, this is in case the property wants to have Market Code and/or Room Class information as a breakdown of the revenue instead of just one single total per transaction.

You may choose to work on a transaction summary basis (columns stating with “TOTAL_” or if you wish to obtain Market Code and/or Room Class breakdown, you can use the transaction level amounts (columns starting with “TRX_”).

The sum of the TOTAL_AMOUNT and TRX_AMOUNT columns matches the “Transaction Total Today” line of the Trial Balance. All LEDGER (GUEST, AR, DEPOSIT, PACKAGE) columns match the corresponding Ledger of the Trial Balance (Today Balance – Yesterday Balance)

Table 8-10 Revenue Export

Element Name	Element Type	Description	Notes
revenue	Complex Element	Root element	NA
hotel_code	Attribute	Identifies the property exporting data	Only one property is exported per file
date	Attribute	Identifies the date of the export	Only one day is exported per file

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 8-10 (Cont.) Revenue Export

Element Name	Element Type	Description	Notes
transaction_total	Complex Element	Repeats for each distinct transaction code	NA
transaction_type	Attribute	Identifies the type of transaction: revenue, non revenue, payment, paid out, package (wrapper transactions that used to post to guest account but don't affect the revenue/non revenue figures)	NA
transaction_code	Element	OPERA Cloud codes that identifies the transaction	E.G.: 1000
description	Element	OPERA Cloud description of the transaction	E.G.: Room revenue
total_amount	Element	Sum of the transaction for the date exported	Same amount that you see in trial balance for that transaction
total_guest_ledger	Element	Sum of the transaction for the date exported affecting the guest ledger	NA
total_package_ledger	Element	Sum of the transaction for the date exported affecting the package ledger (ultimately part of the guest ledger)	NA
total_ar_ledger	Element	Sum of the transaction for the date exported affecting the accounts receivable ledger	NA
total_deposit_ledger	Element	Sum of the transaction for the date exported affecting the deposit ledger	NA
transaction_details	Complex Element	List of transactions that make up the sum	NA
transaction	Complex Element		NA
market_code	Element	Market code associated with the transaction	NA
room_class	Element	Room class (a grouping of type of room) associated with the transaction	Dependent on having the room class function active in OPERA Cloud
trx_amount	Element	Amount of the transaction	For revenue transactions this is net amount (without tax)

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 8-10 (Cont.) Revenue Export

Element Name	Element Type	Description	Notes
trx_guest_ledger	Element	Amount of the transaction affecting the guest ledger	Transactions posted to a guest folio
trx_package_ledger	Element	Amount of the transaction affecting the package ledger	Wrapper transaction posted to a guest folio, offsetted by internal revenue/non revenue transactions that make the package rate
trx_ar_ledger	Element	Amount of the transaction affecting the accounts receivable ledger	Direct bill/city ledger transaction used to settle guest folios or any movement in the ar ledger (eg: payments received). Also credit card transactions if configured with an ar account
trx_deposit_ledger	Element	Amount of the transaction affecting the deposit ledger	Payments taken on reservations prior to check in. Also deposit transfer at checkin lowers the ledger upon guest check in

City Ledger Export

The City Ledger File contains one record per invoice or payment generated on the day affecting Accounts Receivable. Includes Credit Card Transfers (credit card payments configured to be sent to AR).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Amounts can be grouped by ACCOUNT_NO. Bill number and Reservation information are included to ease charge recognition. The sum of the AMOUNT column will match the AR Ledger Report in OPERA Cloud(DEBIT – CREDIT columns).

Table 8-11 City Ledger Export

Element Name	Element Type	Description	Notes
city_ledger	Complex Element	Root element	
hotel_code	Attribute	Identifies the property exporting data	Only one property is exported per file
date	Attribute	Identifies the date of the export	Only one day is exported per file
transaction_type	Attribute	Type of transaction code	
trx_code	Attribute	Transaction code against which this transaction is posted.	
bill_no	Element	Bill_no associated with reservation	
invoice_no	Element	Invoice number of the reservation .	
amount	Element	Amount of the bill	
customer_internal_id	Attribute	Internal id for the payee profile	
account_name	Element	City_ledger account name	
account_number	Element	City_ledger account number	
confirmation_no	Element	Confirmation number of the reservation .	
arrival_date	Element	Arrival date of the guest	
departure_date	Element	Departure date of the guest	
guest_name	Element	Name of the guest	
credit_card_last_4_digits	Element	Last four digit of the credit card	
transaction_type	Element	Type of transaction code	
trx_code	Element	Transaction code against which this transaction is posted.	
bill_no	Element	Bill_no associated with reservation	
invoice_no	Element	Invoice number of the reservation .	
amount	Element	Amount of the bill	
credit_card_last_4_digits	Element	Last four digit of the credit card	
account_info	Complex Element	Account Info	

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 8-11 (Cont.) City Ledger Export

Element Name	Element Type	Description	Notes
customer_internal_id	Attribute	Internal id for the payee profile	
account_name	Element	City_ledger account name	
account_number	Element	City_ledger account number	
reservation_info	Complex Element	Reservation Info	
confirmation_no	Element	Confirmation number of the reservation .	
arrival_date	Element	Arrival date of the guest	
departure_date	Element	Departure date of the guest	
guest_name	Element	Name of the guest

Bills Export

Table 8-12 Bills Export

Element Name	Element Type	Description	Notes
bills	Complex Element	Root element	
hotel_code	Attribute	Identifies the property exporting data	Only one property is exported per file
date	Attribute	Identifies the date of the export	Only one day is exported per file
bill	Complex Element	Repeats for each distinct bill Record	
customer_internal_id	Attribute	Internal id for the payee profile	
bill_no	Element	Bill_no associated with reservation	
bill_type	Element	Type of the bill	

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 8-12 (Cont.) Bills Export

Element Name	Element Type	Description	Notes
window	Element	The Window number of the bill	
status	Element	Status of the bill	
total_amount	Element	Total amount of the bill	
guest_internal_id	Element	Unique, internal ID for the payee profile	Can be used to link to the customers file to obtain additional info on the customer (internal_id tag)
queue_name	Element	Name of the printer queue	
reservation_info	Complex Element	Reservation Info	
confirmation_no	Element	Confirmation number of the reservation .	
arrival_date	Element	Arrival date of the guest	
departure_date	Element	Departure date of the guest	
guest_name	Element	Name of the guest	
trx_no	Attribute	Unique number to identify the transations	
trx_no_added_by	Attribute	Transaction number of the parent would be stored in case of Tax generations.	
bill_detail	Complex Element	Bill Detail	
transaction	Complex Element	Transaction	
arrangment_id	Element	Arrangement id.	
trx_package_no	Element	The Transaction number used to link the all the package elements for a particular day.	
trx_code	Element	Transaction code against which this transaction is posted.	
trx_date	Element	The date on which the transaction gets posted .	
net_amount	Element	Significant in case of Inclusive taxes. If the charge is inclusive of taxes, this column tells us what the contribution of each transaction is.	

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 8-12 (Cont.) Bills Export

Element Name	Element Type	Description	Notes
debit_amount	Element	Debit amount of the reservation .	
credit_amount	Element	Credit amount of the reservation .	
fiscal_bill_no	Element	Fiscal Bill Number for countries where Fiscal Folio Printing is enabled. May be blank in others. Usually the number returned by the fiscal printer or government web service.	
invoice_no	Element	Invoice number of the reservation .	
foreign_currency	Element	Type of currency in which amount is paid	
foreign_amount	Element	Foreign Amount	
name_tax_type	Simple Element	Name tax type of the payee profile

Statistics Export

The Statistics file contains the Occupied rooms, Persons, Noshow rooms and Cancelled Rooms for the day, broken down by Market Code, Room Class and Room Type.

The values can be match against most of the statistics reports such as res_statistics1.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 8-13

Element Name	Element Type	Description	Notes
statistics	Complex Element	Root element	
hotel_code	Attribute	Identifies the property exporting data	Only one property is exported per file
date	Attribute	Identifies the date of the export	Only one day is exported per file
statistic_record	Complex Element	Repeats for each distinct statistics record	
market_code	Element	Market code associated with the transaction	
room_class	Element	Room class (a grouping of type of room) associated with the transaction	
room_type	Element	The room category to which the current record applies	
rooms	Element	Number of occupied rooms for the current record's key value.	
persons	Element	Number of guests (adults + children) for the current record's key value, excluding canceled/no-show reservations.	
noshow_rooms	Element	Total number of rooms for which the reserved guest did not show up on the arrival date for the current record's key value.	
cancel_rooms	Element	Total number of rooms for which the reservation was canceled by the guest for the current record's key value.

Customer Export

The Customers file contains one record for each profile with a bill generated on that day.

Provides more detail on the customer profile. Note that Passport field will be masked unless delivery is done via secure method (SFTP).

Creating a Component Export File

Component files can be created to export a subset of data from a larger data export. For example, you might create a membership export and choose to create a component export for only the membership preferences or membership points.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Component exports are not supported with XML Exports.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **General**, **Back Office**, **Country**, or **Membership** depending on the export type for which you want to create a component file.
2. Locate the file type you previously created, click the vertical ellipsis **Actions** menu, and select **Create Component**.
3. Search by property for the file type you want to export and click **Continue**.
4. Proceed to create the component file just as you would for other export data files.

Managing Scheduled Exports

You can schedule exports to generate at a defined frequency and interval:

The following restrictions apply to scheduled exports:

- You cannot schedule more than five scheduled exports in the same hourly frequency.
- You cannot schedule the same export with the same frequency more than once.
- You cannot schedule more than 20 exports per day.
- You cannot schedule exports with parameter forms (requires user input).
- You cannot schedule a component export (child export) independently.

Adding a Scheduled Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Schedules**.
2. Click **New** and enter the following details:
   a. **Property**: Enter or confirm the property.
   b. **Export Group**: The export group from the list.
   c. **Export**: Select the export from the list.
   d. **Frequency**: Select the frequency for the schedule.
      i. **Once**: Generate the export one time.
         - **Start Date**: Enter or select a start date.
         - **Start Time**: Enter a start time HH;MM (24 hour clock).
      ii. **Hourly**: Generate the export at hourly intervals.
         - **Interval**: Enter the number of hours between intervals.
         - **Start Date**: Enter or select a start date.
         - **Start Time**: Enter a start time HH;MM (24 hour clock).
         - **End Date**: Enter or select an end date.
         - **End Time**: Enter a end time HH;MM (24 hour clock).
      iii. **Daily**: Generate the export daily.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Interval**: Enter the number of days between intervals.
- **Hour**: Enter the hour in the day to generate the report.
- **Start Date**:. Enter or select a start date.
- **Start Time**: Enter a start time HH;MM (24 hour clock).
- **End Date**: Enter or select an end date.
- **End Time**: Enter a end time HH;MM (24 hour clock).

iv. **Weekly**: Generate the export weekly.

- **Interval**: Enter the number of weeks between intervals
- **Days to Repeat**: Select the days of the week.
- **Start Date**: Enter or select a start date.
- **Start Time**: Enter a start time HH;MM (24 hour clock).
- **End Date**: Enter or select an end date.
- **End Time**: Enter a end time HH;MM (24 hour clock).

v. **Monthly**: Generate the export monthly.

- **Interval**: Enter the number of months between intervals.
- **Week to Repeat**: Select the week in the month.
- **Days to Repeat**: Select the days of the week.
- **Start Date**: Enter or select a start date.
- **Start Time**: Enter a start time HH;MM (24 hour clock).
- **End Date**: Enter or select an end date.
- **End Time**: Enter a end time HH;MM (24 hour clock).

vi. **End of Day**: Generate the export during End of Day.

- Repeat Interval
  - **Daily**: Generate Daily.
  - **Weekly**: Generate Weekly.
    - **Days to Repeat**: Select the days of the week.
  - **Monthly**: Generate monthly.
  - **Yearly**: Generate once per year.

3. Click **Save** .

Disabling a Scheduled Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Click **ON** to toggle to **OFF**.
4. Click **OK** to confirm. The status updates to **Disabled**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Activating a Scheduled Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Click **OFF** to toggle to **ON**.
4. Click **OK** to confirm. The status updates to **Scheduled**.

Editing a Scheduled Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports** then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Select the scheduled export in the result, click the **vertical ellipsis**, and select **Edit**.
4. Update details.
   a. **Inactive**: Click to make the scheduled export inactive.
5. Click **Save**.

Deleting a Schedule Export

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Select the scheduled export from your search results, click the **vertical ellipsis**, and select **Delete**.
4. Click **Delete** to confirm.

Viewing and Managing Generated Export Files

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Select the scheduled export from your search results, click the **vertical ellipsis**, and select **View Exports**.
4. Click **Refresh** to update the list of generated export files.

> **Note**
>
> If an export file fails to generate, the **Status** column indicates
>
> along with the error details.

5. Click **Back** to return to search.

Export Mapping

[Prerequisites for Export Mapping]

Copyright © 2016, 2025, Oracle and/or its affiliates.

Export Mapping provides a way to associate certain codes and values that are external to OPERA Cloud (such as general ledger codes or back office application codes that are typically determined by the property or the chain) to codes used in OPERA Cloud (such as transaction codes or market codes). When export mapping is configured for an OPERA Cloud code, the export can include the associated information needed for processing externally. For example, when generating an export that contains transaction codes and transaction totals you may require certain codes/values, such as a GL (general ledger) code, to be associated with the transaction code. In this case, each OPERA Cloud transaction code would require an export mapping associated with it.

Export Mapping configuration involves these steps:

- Setting up the export mapping types.
  - For each export mapping type, define the property/chain-specific export mapping codes that will be associated with an OPERA Cloud code. For more information, see Managing Export Mapping Types and Codes.
- Linking the export mapping codes with the OPERA Cloud code and assigning specific values to the export mapping codes. For more information, see Managing Export Mappings.

> **Note**
>
> If mappings are configured and are to be included in any export, that export definition must be updated in order to refer to such mappings.

Managing Export Mappings

Prerequisites for Export Mapping
Once the export mapping codes are defined, the final step in export mapping is to link the export mapping codes to the OPERA Cloud code and assign the appropriate value to each export mapping code for that association.

Editing Export Mappings

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From your search results, select a code, then click the vertical ellipsis **Actions** menu, and select **Edit**.
   a. Expand each Mapping Type to update details. Mapping Codes and Descriptions appear.
   b. **Export Value**: Enter a value for each Mapping Code listed.
4. Repeat for other Mapping Types listed.
5. Click **Save**.

Managing Export Mapping Types and Codes

Adding Export Mapping Types

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Click **New** and complete the following
    a. **Property**: Enter or select the property from the list
    b. **Mapped To**: Select the type of code in OPERA Cloud to which the export mapping type relates and for which a value will be defined using export mapping codes.
    c. **Type**: Enter a unique code for this export mapping type.
    d. **Description**: Enter a description for this export mapping type.
3. Click **Save** or click **Save and Continue** to add another.

Adding Export Mapping Codes to Export Mapping Types

Once export mapping types have been configured, you can edit an export mapping type and configure the export mapping codes for that export mapping type.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From the search result, select the mapping type then click the vertical ellipsis and select **Edit**.
    a. Expand the **Mapping Codes** section
    b. Click **New** and complete the following
        i. **Mapping Codes**: Enter the export mapping code to associate with an OPERA Cloud code
        ii. **Description**: Enter a description of the mapping code
        iii. **Column Type**: Select a data type from the list
        iv. **Sequence**: Enter a number to indicate the position of this export mapping code value when multiple export mapping codes are associated with the export mapping type. During the export OPERA Cloud uses a function that retrieves all mapping codes for the export mapping type with one command
        v. **Required**: Select this check box if a value must be specified for this export mapping code when it is associated with an OPERA Cloud code.
        vi. **Use LOV**: Select this check box to present a list of values for this export mapping code. You can then select from that LOV when specifying a value for this export mapping code when assigning it to an OPERA Cloud code. Otherwise, the assigned value can be entered directly.
            i. **LOV Name**: Select value from the list to choose the LOV that will present the values for this export mapping code when linking export mapping codes to OPERA Cloud codes. For more information, see: Configuring UDF Groups.
        vii. Click **Save**.
4. Click **Save**.

Editing Export Mapping Types & Codes

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From the search result, select the mapping type then click the vertical ellipsis and select **Edit**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Update details.
5. Expand the **Mapping Codes** section.
6. Select the code, then click vertical ellipsis and select **Edit**.
    a. Update Mapping Code details.
    b. Click **Save**.
7. Click **Save**.

Deleting Export Mapping Codes

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From the search result, select the mapping type then click the vertical ellipsis and select **Edit**.
4. Expand the **Mapping Codes** section.
    a. Select the code, then click vertical ellipsis and select **Delete**.
    b. Click **Delete** to confirm.

Deleting Export Mapping Types

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From the search result, select the mapping type then click the vertical ellipsis and select **Delete**.
4. Click **Delete** to confirm
5.

Copying Export Mapping Types/Codes to Other Properties

You can copy export mapping types/codes to other properties from a Hub location.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Exports**, and then select **Mapping Types/Codes**.
2. Enter search criteria and click **Search**.
3. From the search result, select the mapping type then click the vertical ellipsis and select **Copy**.
    a. **Property**: Enter or select the source property from the list.
    b. **Mapping Types/Codes**: Select one or more codes from the list.
    c. **Target Property**: Enter or select one or more properties from the list.
    d. Click **Save**.
    e. Review the details, then click **Copy and Continue**.

General Export Template Catalogue

UPE_EXPORT_DAY	Universal PMS Export	Can be manually generated for any past date range.	
VISA_EXTRACT	Visa Folio Export - End of Day		✓
VISA_EXTRACT_DAY	Visa Folio Export by Date -Manual		✓

Using eFolio Exports

Prerequisites for eFolio Exports

You can export folio data to an XML file during the End of Day procedure or on demand using the following two export templates for creating exports:

- EFOLIO_EXPORT is available to be generated during End of Day.
- EFOLIO_EXPORT_DAY is available to be manually generated on demand.

> **Note**
>
> eFolio Export is not supported by scheduled exports.

Copyright © 2016, 2025, Oracle and/or its affiliates.

The generated export file contains data for billing folio settlements made with a selected payment method. For more information see: Managing Exports.

You can include custom reference numbers in the export when the Custom Numbers OPERA Control is active and customer numbers are configured..

eFolio Export Delivery Types

Multiple delivery types can be selected in a profile, with one delivery type selected as the primary. For more information, see Managing Profile Delivery Types

- **Electronic**: transmits data to the recipient's bank.
- **Email**: generates an email to the recipient.
- **Printing**: sends by regular postal mail to the recipient.

When a guest settles a bill for a billing window with a payment type selected for eFolio Export, the cashier is prompted to select the delivery type and proceed with the settlement.

Posting

The Billing screen updates to display the Before Settlement Actions prompt when posting a settlement from the following:

- Advance Bill
- Early Departure
- Interim Bill
- Check Out
- Credit Bill (through Billing)
- Quick Checkout

You can select an eFolio delivery method from the delivery types defined on the profile.

Export APIs

The following topics provide details on available Export APIs.

Create HESTA Statistics Exports

```
EXP_COUNTRY_CH.CREATE_HESTA_STAT_EXP(IN_DATE_FROM','IN_DATE_TO)
```

This procedure acts as the pre export procedure for HESTA Statistics Exports. The procedure finds the eligible reservations in the given date range for HESTA statistics exports. If the in_date_from and in_date_to are passed as null, the procedure finds the reservations for the last 30 days based on the current business date.

Parameter	Required	Type	Description
IN_DATE_FROM	Yes	Date	Beginning date range.
IN_DATE_TO	Yes	Date	Ending date range.

EXAMPLE

EXP_COUNTRY_CH.CREATE_HESTA_STAT_EXP(01-JAN-2021','10-JAN-2021)

Post HESTA Statistics Export

```
EXP_COUNTRY_CH.POST_HESTA_STAT_EXP
```

This procedure acts as the Post Export procedure for HESTA Statistics export. The API deletes the temporary table entries made for the HESTA export creation. The API has relevance only with HESTA statistics exports.

Parameter	Required	Type	Description
NA	No	NA	Post export procedure.

EXAMPLE

EXP_COUNTRY_CH.POST_HESTA_STAT_EXP;

Set / View Global Variable Name Reference

```
NAME_REF.SET_VIEW_INACTIVE_FLAG(IN_YN)
```

This function sets the Global variable name_ref. g_View_Inactive_Flag with the value passed with the argument IN_YN.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_YN (DEFAULT'N')	Y	VARCHAR2	Sets Inactive flag view.

EXAMPLE

NAME_REF.SET_VIEW_INACTIVE_FLAG('Y') This sets the global variable as Yes.

NAME_REF.SET_VIEW_INACTIVE_FLAG('N') This sets the global variable as No.

Get Report Table ID for Last / Current Export

```
BACKLOG_BLOCKS.GET_LAST_REPORT_ID
```

This function returns the unique ID associated with the report_table for the Last/Current Export execution. Currently, this API is used in the WHERE CONDITION of Backlog and Room Pace Exports. The Report ID is set in the pre-export procedure of these exports.

Parameter	Required	Type	Description
	No		Returns report ID for last/current export.

EXAMPLE

WHERE_CLAUSE=export_id=backlog_blocks.get_last_report_id

Get Cached Value of Export Data Passed from Package Global Variable

```
EXPORT_DATA_P.GET_CACHED_NUM(IN_CODE)
```

This function returns the value associated with the code passed in the input argument from the package global variable.

Parameter	Required	Type	Description
IN_CODE	Yes	VARCHAR2	Value of code passed.

EXAMPLE

EXPORT_DATA_P.GET_CACHED_NUM

Set Start Date for Exports

```
REP_RESV_STATISTICS.SET_START_DATE(IN_DATE)
```

This API sets the Start date for Exports like Stats by Market Code, Tiers, and Room Types. If the IN_DATE is passed as NULL, the business date will be considered as the start date for the export.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_DATE	Yes	Date	Sets the Start date of Exports.

EXAMPLE

rep_resv_statistics.SET_start_date(EXP_GENERAL_RESV_PKG.EXP_START_DATE)

Here, EXP_GENERAL_RESV_PKG.EXP_START_DATE will contain the date provided in the export parameter screen.

Set End Date for Exports

```
REP_RESV_STATISTICS.SET_END_DATE(IN_DATE)
```

This API sets the end date for exports such as Stats by Market Code, Tiers, and Room Types. If the IN_DATE is passed as NULL, the business date will be considered as the end date for the export.

Parameter	Required	Type	Description
IN_DATE	Yes	Date	Sets end date of exports.

EXAMPLE

rep_resv_statistics.SET_END_date(EXP_GENERAL_RESV_PKG.EXP_start_DATE)

Here, EXP_GENERAL_RESV_PKG.EXP_START_DATE will contain the date provided in the export parameter screen.

Get Currency Exchange Rate

```
MULTI_CURRENCY.GET_EXCHANGE_RATE
```

This function converts an amount from one currency to another based on a specific exchange type, property, and date.

Parameter	Required	Type	Description
FROM_CURRENCY	Yes	VARCHAR2	Returns the currency type.
FROM_CURRENCY_AMT	No	NUMBER	Transaction amount converted into a specific currency.
TO_CURRENCY	No	VARCHAR2	Sets the currency type.
EXCH_TYPE	No	VARCHAR2	Sets the currency exchange type.
IN_DATE	No	DATE	Sets the exchange date.
IN_RESORT	No	VARCHAR2	Identifies the property.

Copyright © 2016, 2025, Oracle and/or its affiliates.

EXAMPLE

MULTI_CURRENCY.GET_EXCHANGE_RATE ('USD','100','INR','P','15-SEP-2021','BANGKOK')

Get Block Code for Resort / Allotment

```
RESERVATION_REF.GET_BLOCK_CODE(IN_RESORT','IN_ALLOTMENT_HEADER_ID)
```

This function returns the block for a given resort/allotment header ID combination.

Parameter	Required	Type	Description
IN_RESORT	Yes	VARCHAR2	Returns block for given resort.
IN_ALLOTMENT_HEADER_ID	Yes	NUMBER	Returns block for given allotment header.

EXAMPLE

Vblockcode := RESERVATION_REF.GET_BLOCK_CODE(‘TOKYO’,112356);

Get Reservation External Reference Number

```
RESERVATION_REF.GET_EXTERNAL_REFERENCE(IN_RESORT','IN_RESV_NAME_ID)
```

This function returns the external reference number of a reservation. The resort and resv name id will be passed as IN arguments.

Parameter	Required	Type	Description
IN_RESORT	Yes	VARCHAR2	Passes resort name.
IN_RESV_NAME_ID	Yes	NUMBER	Passes resv name ID.

EXAMPLE

Vrefno := RESERVATION_REF.GET_EXTERNAL_REFERENCE(‘TOKYO’,11223);

Get Reservation Guest Name

```
Vname :=
RESERVATION_REF.GET_NAME(IN_NAME_ID,’IN_NAME_PREFERENCE’,’IN_EXTENDED_YN')
```

```
Vname :=
RESERVATION_REF.GET_NAME('IN_RESORT’,IN_RESV_NAME_ID,’IN_NAME_PREFERENCE’,’IN_
EXTENDED_YN')
```

Copyright © 2016, 2025, Oracle and/or its affiliates.

This function is overloaded. It can be either invoked with NAME ID, NAME PREFERENCE AND EXTENDED_YN OR with RESORT, RESV NAME ID, NAME PREFERENCE AND EXTENDED_YN. This function returns the guest name based on the given arguments.

Parameter	Required	Type	Description
IN_NAME_ID	Yes	NUMBER	Returns guest name ID.
IN_NAME_PREFERENCE (DEFAULT 'L')	Yes	VARCHAR2	Returns guest name preference.
IN_EXTENDED_YN (DEFAULT 'N')	Yes	VARCHAR2	Indicates extended: yes, no.
IN_RESORT	Yes	VARCHAR2	Returns resort name.
IN_RESV_NAME_ID	Yes	NUMBER	Returns reservation ID.
IN_NAME_PREFERENCE (DEFAULT 'L')	Yes	VARCHAR2	Returns guest name preference.
IN_EXTENDED_YN (DEFAULT 'N')	Yes	VARCHAR2	Indicates extended: yes, no.

EXAMPLE

Vname := RESERVATION_REF.GET_NAME(1000,'L','N')

Vname := RESERVATION_REF.GET_NAME('TOKYO',100010,'L','N')

Check for Existing Resort Export

```
EXP_GEN.EXPORTS_EXIST(IN_EXPORT_TYPE',''IN_RESORT)
```

This API checks whether an export exists for a given resort.

Parameter	Required	Type	Description
IN_EXPORT_TYPE	No	VARCHAR2	Export type that maps to field: export_type in table exp_file_hdr.
IN_RESORT	Yes	VARCHAR2	Resort that the export belongs to (value of the Resort column from the Resort table).

EXAMPLE

TRX_GENERATES_EXPORT = Transaction Codes Configuration with Generate Information (Template Export).

You can use this in a formula column in export configuration, for example, (CASE WHEN exp_gen.exports_exist('TRXGEN') = 'N' THEN 'Y' ELSE FULL_REFRESH_YN END).

Get Current Business Date

```
PMS_P.BUSINESS_DATE
```

Copyright © 2016, 2025, Oracle and/or its affiliates.

This API gets the current business date for the logged-in property.

Parameter	Required	Type	Description
	No	Date	Gets logged-in property's current business date.

EXAMPLE

TO_CHAR(pms_p.business_date,'MM-DD-YYYY')

This example shows a formula column created to get the current business date.

Get Parameter Value Configured for Logged-in Resort

`PMS_P.GET_PARAMETER(IN_PARAMETER)`

Use this API to get the parameter value configured for the parameter of the logged-in resort.

Parameter	Required	Type	Description
IN_PARAMETER	No	VARCHAR2	OPERA parameter name

EXAMPLE

PMS_P.GET_PARAMETER('DEFAULT_CURRENCY')

You can use this in the Pre Export Procedure field.

Get the Resort Code of the Logged-in Resort

`PMS_P.RESORT`

You can use this in a formula column to get the hotel code of the logged-in resort.

Parameter	Required	Type	Description
	No		Gets resort code.

EXAMPLE

EXP_CREATE_DATA.get_hotel_code(pms_p.resort)

Set Business Date for a Given Session

`PMS_P.SET_BUSINESS_DATE(IN_NEW_DATE)`

You can use this to set the business date for a given session. The default value is SysDate (system date)

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_NEW_DATE	Yes	Date	Sets session business date.

EXAMPLE

PMS_P.SET_BUSINESS_DATE(12-JUN-21)

Get the Property's Date

`TZ.GET_PROPERTY_DATE(IN_RESORT','IN_FR_DATE)`

This API returns the new date-time for the given property based on Database time zone.

Parameter	Required	Type	Description
IN_RESORT	Y	VARCHAR2	Resort (value of RESORT column from RESORT table).
IN_FR_DATE	Y	DATE	Date that needs conversion (mostly sysdate is passed).

EXAMPLE

tz.get_property_date(pms_p.resort, sysdate)

Get BOF Interface Code2

`EXP_CREATE_BTR.GET_PROD_ID`

This procedure returns the bof_code2 of an active BOF interface of the current resort.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

EXP_CREATE_BTR.GET_PROD_ID

Get Checked Out Reservations for Specified Dates

`EXP_CREATE_DATA2.CHKOUT_RES_DATA`

This procedure provides Information about checked out reservations between the specified start and end dates.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
in_from_Date	No	DATE	From Date. Defaults to pms_p.business_date -1
in_to_Date	No	DATE	To Date. Defaults to pms_p.business_date -1

EXAMPLE

EXP_CREATE_DATA2.CHKOUT_RES_DATA (pms_p.business_date-1, pms_p.business_date)

Get Considered Date of a Reservations Export

`EXP_GENERAL_RESV_PKG.GET_CONSIDERED_DATE`

This procedure returns the From_Date of the Guests Reservations Export.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

EXP_GENERAL_RESV_PKG.GET_CONSIDERED_DATE

Get Considered Date of an Export

`EXP_CREATE_DATA.GET_CONSIDERED_DATE`

This procedure returns the From_Date of the export execution.

Parameter	Required	Type	Description
IN_Default/DATE (default null)	No	DATE	Export From Date. Defaults to Null

EXAMPLE

EXP_CREATE_DATA.GET_CONSIDERED_DATE

Get External Reference Value from Membership

`EXP_CREATE_DATA.GET_EXTERNAL_REF`

This procedure returns the External Reference Value of the input active Membership and External Ref Types.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_Resort	YES	VARCHAR2	Resort
IN_Membership_Type	YES	VARCHAR2	Membership Type
IN_Ref_Type	YES	VARCHAR2	Reference Type

EXAMPLE

EXP_CREATE_DATA.GET_EXTERNAL_REF('TOKYO','VIP', 'REF1')

Get Hotel Code

`EXP_CREATE_DATA.GET_HOTEL_CODE`

This procedure returns the Hotel Code that corresponds to the Resort parameter, if not found than return default hotel code as in the input parameter.

Parameter	Required	Type	Description
in_default	No	VARCHAR2	Hotel Code. Defaults to Null
in_resort	No	VARCHAR2	Resort. Defaults to PMS_P.RESORT

EXAMPLE

EXP_CREATE_DATA.GET_HOTEL_CODE('EXTTOKYO',pms_p.resort)

Get Include Guests without VAT Number Indicator

`EXP_GENERAL_RESV_PKG.GET_INCL_PROF`

This is set with exp_country.tax_export's parameter form "TAX1". This form has a checkbox "Include Guests without VAT Number" which when checked, the EXP_GENERAL_RESV_PKG.GET_INCL_PROF will return Y, else N.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

EXP_GENERAL_RESV_PKG.GET_INCL_PROF

Get Minimum Amount

`EXP_GENERAL_RESV_PKG.GET_MIN_AMOUNT`

This procedure returns the minimum amount value set for the Export.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

EXP_GENERAL_RESV_PKG.GET_MIN_AMOUNT

Get Report ID of the Export Data

`EXP_CREATE_DATA.GET_LAST_REPORT_ID`

This procedure returns the last report ID stored in the global variable g_report_id, that corresponds to the REPORT_TABLE data created by other functions for the data export.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

EXP_CREATE_DATA.GET_LAST_REPORT_ID

Get the Export Country

`EXP_GENERAL_RESV_PKG.GET_EXP_COUNTRY`

This procedure returns the export country of the Guests Reservations Export.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

EXP_GENERAL_RESV_PKG.GET_EXP_COUNTRY

Get the Export's "From Date"

`EXP_GENERAL_RESV_PKG.EXP_START_DATE`

This procedure returns the Export's start date.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

EXP_GENERAL_RESV_PKG.EXP_START_DATE

Copyright © 2016, 2025, Oracle and/or its affiliates.

Get the Export's "To Date"

`EXP_GENERAL_RESV_PKG.EXP_END_DATE`

This procedure returns the Export's end date.

Parameter	Required	Type	Description
NONE	NA	NA	NA

EXAMPLE

EXP_GENERAL_RESV_PKG.EXP_END_DATE

Set the Export's "End Date"

`EXP_GENERAL_RESV_PKG.SET_EXP_END_DATE`

This procedure sets the export end date to the value provided.

Parameter	Required	Type	Description
in_date	Yes	DATE	Date

EXAMPLE

EXP_GENERAL_RESV_PKG.SET_EXP_END_DATE(PMS_P.BUSINESS_DATE)

Initialize Buckets Summed Value

`EXP_CREATE_DATA.SUM_BUCKET_INIT`

This procedure is used to initialize all buckets to 0 for the input "in_max_buckets" rows.

Parameter	Required	Type	Description
in_max_buckets	No	NUMBER	Number of Buckets. Defaults to Null

EXAMPLE

EXP_CREATE_DATA.SUM_BUCKET_INT(10)

Initialize/Set Export Type

`EXP_CREATE_DATA2.SET_EXPORT_TYPE`

This procedure sets the export type to the value provided.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
in_type	Yes	VARCHAR2	Export Type

EXAMPLE

EXP_CREATE_DATA2.SET_EXPORT_TYPE(' EFOLIO ')

Set Global Data to Date

```
EXPORT_DATA_P.SET_DATA_TO_DATE (IN_DATA_TO_DATE)
```

This API sets the global data to date variable in the package with the parameter.

Parameter	Required	Type	Description
IN_DATA_TO_DATE Defaulted to 'N'	NA	DATE	Sets admin context to EXPORT_END_DATE

Set Age Credit

```
AR_TRX_I.SET_AGE_CREDIT
```

This API moves accruals to next aging bucket, prior to the night audit.

Parameter	Required	Type	Description
NA	NA	NA	Moves accruals to next aging bucket, prior to the night audit.

Get Parameter Method

```
EXPORT_DATA_P.GET_PARAMETER (IN_PARAM_CODE)
```

This API calls the overloaded get_parameter method with the global file id as first parameter.

Parameter	Required	Type	Description
IN_PARAM_CODE Defaulted to 'N'	NA	VARCHAR2	This function is used when file id is not available as a parameter and SET_PARAMETER sets the value.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Get Parameter Value

```
EXPORT_DATA_P.GET_PARAMETER (IN_PARAM_CODE, IN_EXP_FILE_ID)
```

This API returns the parameter value based on the file id, and the parameter code overloaded function in the package is used to generate country-specific views for all hotels in one particular country.

Parameter	Required	Type	Description
IN_EXP_FILE_ID Defaulted to 'N'	NA	VARCHAR2	Returns the parameter value based on the file id.
IN_PARAM_CODE Defaulted to 'N'	NA	VARCHAR2	This is used in extracting the value of one particular parameter in the view.

Get External Reference

```
RESERVATION_REF. GET_EXTERNAL_REFERENCE (in_resort, in_resev_name_ id)
```

Fetches external reference for the reservation.

Parameter	Required	Type	Description
in_resort	NA	VARCHAR2,	Returns external reference for the reservation.
in_resev_name_ id	NA	NUMBER	

EXAMPLE

RESERVATION_REF.GET_EXTERNAL_REFERENCE('TOKYO',344597)

Set Global Variable

```
AR_TRX_I.SETRUNNINGFROMNA
```

Sets global variable gRunningFromNa.

Parameter	Required	Type	Description
NA	NA	NA	Sets the global variable.

Get Last Report ID

```
BACKLOG_BLOCKS.GET_LAST_REPORT_ID
```

Copyright © 2016, 2025, Oracle and/or its affiliates.

Returns the last report ID.

Parameter	Required	Type	Description
NA	NA	NA	Returns the last report ID.

EXAMPLE

BACKLOG_BLOCKS.GET_LAST_REPORT_ID

Get the Number of Cached Records

```
EXPORT_DATA_P. GET_CACHED_NUM (in_code)
```

Returns the number of cached records for in_code.

Parameter	Required	Type	Description
IN_CODE	NA	VARCHAR2	Returns the number of cached records.

EXAMPLE

EXPORT_DATA_P.GET_CACHED_NUM('CL')

Create Export Data for Italian ASTAT

```
EXP_ITALY_PKG.CREATE_ASTAT (IN_EXPORT_DATE)
```

Pre-procedure related to the Italian ASTAT export using export view EXP_IT_ASTAT.

Parameter	Required	Type	Description
IN_EXPORT_DATE Defaulted to 'N'	NA	DATE	Creates the data required for Italian ASTAT export.

Create Export Data for Istat Firenze

```
EXP_ITALY_PKG.PRE_ISTAT (IN_MODE)
```

Pre-procedure related to the Istat Firenze export using export view EXP_XML_BASE.

Parameter	Required	Type	Description
IN_MODE Defaulted to 'N'	NA	VARCHAR2	Creates the data required for Istat Firenze export.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Clean Export Data for Istat Firenze

```
EXP_ITALY_PKG.POST_ISTAT(IN_MODE)
```

Post-procedure to clean up the export data for Istat Firenze export using export view EXP_XML_BASE.

Parameter	Required	Type	Description
IN_MODE Defaulted to 'N'	NA	VARCHAR2	Clean up the Istat Firenze export data.

Create Export Data for Istat Puglia Region

```
EXP_ITALY_PKG.PRE_EXPORT
```

Pre-procedure for Istat Puglia Region export using the export view EXP_XML_BASE.

Parameter	Required	Type	Description
IN_MODE	NA	VARCHAR 1	Creates the data required for Istat Puglia Region export.
IN_EXPORT_TYPE	NA	VARCHAR 2	

Create Export Data for Istat Veneto Region

```
EXP_ITALY_PKG.PRE_ISTAT (IN_MODE)
```

Pre-procedure related to the Export for Istat Veneto Region using export view EXP_ITALY_ISTAT.

Parameter	Required	Type	Description
IN_MODE Defaulted to 'N'	NA	VARCHAR2	Creates the data required for export.

Create Export Data for Vietnam Vat

```
EXP_GEN.SET_EXPORT_BUCKET_TYPE (IN_EXPORT_BUCKET_TYPE)
```

Pre-procedure related to the Vietnam Vat export using export view EXP_VIETNAM_VAT.

Parameter	Required	Type	Description
IN_EXPORT_BUCKET_TYPE Defaulted to 'N'	NA	VARCHAR2	Creates the data required for Vietnam Vat export.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Clean Export Data for Vietnam Vat

```
EXPORT_DATA_P.SET_DATA_FROM_DATE (IN_DATA_FROM_DATE)
```

Post-procedure to clean up export data for the Vietnam Vat export using export view EXP_VIETNAM_VAT.

Parameter	Required	Type	Description
IN_DATA_FROM_DATE Defaulted to 'N'	NA	VARCHAR2	Cleans up the Vietnam Vat export data.

Get the Commission Code for Profile

```
NAME_REF.GET_COMM_CODE (IN_NAME_ID - NUMBER)
```

This procedure returns the Commission Code for a Profile.

Parameter	Required	Type	Description
IN_NAME_ID - NUMBER	NA	NA	Returns the Commission Code for a Profile

EXAMPLE

NAME_REF.GET_COMM_CODE(AGENT_NAME_ID)

Get Total Available Rooms for the Property

```
EXP_STATISTIC_PKG. GET_TOTAL_ROOMS (IN_RESORT)
```

This procedure returns the total available rooms for the property.

Parameter	Required	Type	Description
IN_RESORT - (default to login property if not passed)	NA	VARCHAR2	Returns the total available rooms for the property.

EXAMPLE

EXP_STATISTIC_PKG.GET_TOTAL_ROOMS

Set Trial Balance Statistics Export

```
EXPORT_DATA_P.SET_DATA_FROM_DATE (IN_DATA_FROM_DATE)
```

This pre-procedure is related to the Trial Balance Statistics export view. It creates the data used for the export.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_DATA_FROM_DATE (DEFAULT 'N')	NA	DATE	Pre export procedure.

EXAMPLE

EXPORT_DATA_P.SET_DATA_FROM_DATE

Create Export Data for Austria Cash Register

```
EXP_AUSTRIA_DEP.CREATE_DEPEXPORT(IN_CASH_REGISTER_ID, IN_FROM_DATE,
IN_TO_DATE)
```

This is a pre-procedure related to the Austria Cash Register export. It creates the data for export by using Export View EXP_AUSTRIA_DEP_VW.

Parameter	Required	Type	Description
IN_CASH_REGISTER_ID DEFAULT 'Y'	Yes	VARCHAR2	Indicates the IN_CASH_REGISTER_ID
IN_FROM_DATE DEFAULT 'Y'	Yes	DATE	Indicates beginning date range.
IN_TO_DATE DEFAULT 'Y'	Yes	DATE	Indicates ending date range.

Clean Export Data for Austria Cash Register

```
EXP_AUSTRIA_DEP.CLEAN_DEPEXPORT
```

This is a post-procedure to clean the export data for Austria Cash Register export using Export View EXP_AUSTRIA_DEP_VW.

Parameter	Required	Type	Description
NA	NA	NA	Post-procedure to clean up export data.

Set Value Of Start Date

```
EXP_GEN.GET_EXP_START_DATE (EXP_GENERAL_RESV_PKG.EXP_START_DATE,
PMS_P.BUSINESS_DATE)
```

This API is used in generating reports for transaction codes configurations. SET_EXP_START_DATE sets the value.

Parameter	Required	Type	Description
EXP_GENERAL_RESV_PKG.EXP_START_DATE	NA	DATE	Returns the value of start date.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
PMS_P.BUSINESS_DATE	NA	DATE	If it is null returns the business date.

Set Gen Export

```
EXP_GEN.SET_EXPORT_BUCKET_TYPE (IN_EXPORT_BUCKET_TYPE)
```

This API sets the value of g_export_bucket_type.

Parameter	Required	Type	Description
IN_EXPORT_BUCKET_TYPE	NA	VARCHAR2	NA

Set Export for CODENTX

```
EXP_GEN.SET_EXP_BUCKET_CODENTX (IN_EXPORT_BUCKET_CODE)
```

This API sets the global variable value of g_exp_bucket_codeNTX.

Parameter	Required	Type	Description
IN_EXPORT_BUCKET_CODE	NA	VARCHAR2	This procedure sets/ initializes the global variable value of Bucket Code NTX for export execution.

Example

EXP_GEN.SET_EXP_BUCKET_CODENTX('NTX123')

Set Export for CODESVC

```
EXP_GEN.SET_EXP_BUCKET_CODESVC (IN_EXPORT_BUCKET_CODE)
```

This API sets the value of exp_bucket_codeSVC.

Parameter	Required	Type	Description
IN_EXPORT_BUCKET_CODE	NA	VARCHAR2	This procedure sets/initializes the global variable value of Bucket Code SVC for export execution.

Example

EXP_GEN.SET_EXP_BUCKET_CODESVC ('BCK123')

Copyright © 2016, 2025, Oracle and/or its affiliates.

Get Last Report ID

```
EXP_STATISTIC_PKG.GET_LAST_REPORT_ID (G_REPORT_ID)
```

This API is used in export view to get the revenue bucket amounts by date,

Parameter	Required	Type	Description
G_REPORT_ID	NA	NUMBER	Returns value of g_report_id. g_report_id is populated from the value v_report id while creating the report and set to null while deleting the report.

Get Next Export Sequence

```
OPERA_SEQ.GET_NEXTCOUNTRYEXPORTSEQNO (IN_COUNTRY_CODE, IN_RESORT)
```

This API is used to get the next country export sequence.

Parameter	Required	Type	Description
IN_COUNTRY_CODE	NA	VARCHAR2	Returns the next export sequence in format "EXPORT_" appended with country code and resort code.
IN_RESORT	NA	VARCHAR2	

Get Export Value

```
EXP_MAPPING_API.GET_EXPORT_VALUE (IN_MAPPING_TYPE, IN_MAPPING_CODE,
IN_LINKED_CODE, IN_CONFIG_TYPE, IN ESORT)
```

This API is used in generating views data about paidouts, payments, receivers, issuers and revenue details of Sales Documents.

Parameter	Required	Type	Description
IN_MAPPING_TYPE DEFAULT 'N'	NA	VARCHAR2	Get export value of a linked code using EXP_MAPPING_ID, MAPPING_CODE and LINKED_CODE.
IN_MAPPING_CODE DEFAULT 'N'	NA	NA	
IN_LINKED_CODE DEFAULT 'N'	NA	NA	This method is used to get value of export type of a particular string.
IN_CONFIG_TYPE DEFAULT 'Y'	NA	NA	

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_RESORT DEFAULT 'Y'	NA	NA	

Get Property Codes

```
EXP_MAPPING_API.GET_PROPERTYCODES_TYPE (C_PROPERTY_CODES_TYPE)
```

This API returns c_property_codes_type which is a constant String of value " PROPERTY_CODES' that is used in generating views data about paidouts, payments, receivers, issuers and revenue details of Sales Documents.

Parameter	Required	Type	Description
C_PROPERTY_CODES_TYPE	NA	VARCHAR2	Returns value of c_property_codes_type variable.

Get Next Invoice

```
OPERA_SEQ.GET_NEXTITEINVOICE (IN_RESORT)
```

This API is used to increment sequence value.

Parameter	Required	Type	Description
IN_RESORT (DEFAULT 'Y')	NA	VARCHAR2	Returns an incremented sequence value categorized resort-wise as the invoice number. The invoice number can be alphanumeric in number.

Get C Operating Unit

```
TRANCODE_DU.GET_C_OPERATING_UNIT (C_OPERATINGUNIT)
```

In this API, "OPERATING_UNIT" which is a constant string of value returns the value of variable c_operatingunit.,

Parameter	Required	Type	Description
C_OPERATINGUNIT	NA	VARCHAR2	Returns the value of variable c_operatingunit,

Copyright © 2016, 2025, Oracle and/or its affiliates.

Get Property Primary Code

```
TRANCODE_DU.GET_PROPERTY_PRIMARY_CODE (IN_RESORT, IN_CORPORATE_INFO_TYPE)
```

This API function returns the primary code of property.

Parameter	Required	Type	Description
IN_RESORT DEFAULT 'Y'	NA	VARCHAR2	Returns the primary code of property from based on resort and corporate information.
IN_CORPORATE_INFO_TYPE DEFAULT 'N'	NA	VARCHAR2	

Clean Export Data for Italy

```
EXP_COUNTRY_IT.POST_SPESOMETRO
```

You can use this API to clean up export data for Italy export.

Parameter	Required	Type	Description
No parameters	NA	NA	Post-procedure to clean up export data for Italy export

EXAMPLE

EXP_COUNTRY_IT.POST_SPESOMETRO ();

Create Export Data for Italy

```
EXP_COUNTRY_IT.PRE_SPESOMETRO (IN_DATE_FROM, IN_DATE_TO)
```

You can use this API to create the JPK data required for the export.

Parameter	Required	Type	Description
IN_DATE_FROM	Y	DATE	Procedure to create JPK export for Poland.
IN_DATE_TO	Y	DATE	

EXAMPLE

EXP_COUNTRY_IT.PRE_SPESOMETRO ('10052022','30052022');

Create JPK Export for Poland

```
EXP_COUNTRY_PL.CREATE_JPK_EXPORT (IN_DATE_FROM, IN_DATE_TO)
```

Copyright © 2016, 2025, Oracle and/or its affiliates.

You can use this API create JPK export for Poland.

Parameter	Required	Type	Description
IN_DATE_FROM	Y	DATE	Pre-procedure related to Italy export. Creates the data required for the export.
IN_DATE_TO	Y	DATE	

EXAMPLE

EXP_COUNTRY_PL.CREATE_JPK_EXPORT ('10052022','30052022');

Clean JPK Export for Poland

```
EXP_COUNTRY_PL.POST_JPK_EXPORT();
```

You can use this API to clean up JPK export data for Poland export.

Parameter	Required	Type	Description
No parameters	NA	NA	Post-procedure to clean up export data for Poland export.

EXAMPLE

EXP_COUNTRY_PL. POST_JPK_EXPORT();

Create SAFT Export for Portugal

```
EXP_COUNTRY_PT.CREATE_SAFT_EXPORT (IN_FROM_DATE, IN_DATE_TO)
```

You can use this API to create SAFT export for Portugal.

Parameter	Required	Type	Description
IN_FROM_DATE	Y	DATE	Procedure to create SAFT export for Portugal.
IN_DATE_TO	Y	DATE	

EXAMPLE

EXP_COUNTRY_PT.CREATE_SAFT_EXPORT ('10052022','30052022');

Clean SAFT Export for Portugal

```
EXP_COUNTRY_PT.POST_SAFT_EXPORT
```

You can use this API to clean up export data for the Portugal SAFT.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
No parameters	NA	NA	Post-procedure to clean up export data for the Portugal SAFT export.

EXAMPLE

EXP_COUNTRY_PT.POST_SAFT_EXPORT();

Create Export Data for France

```
EXP_CREATE_FR_ARCHIVE.CREATE_EXPORT (IN_RESORT, IN_DATE)
```

You can use this API to create export for France.

Parameter	Required	Type	Description
IN_RESORT	Y	VARCHAR2	Procedure to create export for France.
IN_DATE	Y	DATE	

EXAMPLE

EXP_CREATE_FR_ARCH IVE.CREATE_EXPORT ('LUCY', '12092020');

Clean Export Data for France

```
EXP_CREATE_FR_ARCHIVE.POST_EXPORT
```

You can use this API to clean up export data for France export.

Parameter	Required	Type	Description
No parameters	NA	NA	Post-procedure to clean up export data for France export.

EXAMPLE

EXP_CREATE_FR_ARCHIVE.POST_EXPORT();

Create Export for India

```
EXP_HSN_OUTSTANDING.CREATE_EXPORT (IN_RESORT, IN_DATE)
```

You can use this procedure to create export for India.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_RESORT	Y	VARCHAR2	Procedure to create export for India.
IN_DATE	Y	DATE	

EXAMPLE

EXP_HSN_OUTSTANDING.CREATE_EXPORT('LUCY', '12092020');

Get the Version Information

```
EXP_CREATE_IT_EINVOICE.GET_VERSIONE_ATTRIB
```

You can use this API will return the version information.

Parameter	Required	Type	Description
No Parameters	NA	NA	The function will return the version information.

EXAMPLE

EXP_CREATE_IT_EINVOICE.GET_VERSIONE_ATTRIB();

Get Total Count of Records for ALL

```
EXP_ITALY_PKG.TOTRECORDS (IN_DATE)
```

You can use this API will return the total count of records for export_type='ALL' and business date combination.

Parameter	Required	Type	Description
IN_DATE	N	DATE	The function will return the total count of records for export_type='ALL' and business date combination

EXAMPLE

EXP_ITALY_PKG.TOTRECORDS('12092020');

Get Total Count of Records for TMP

```
EXP_ITALY_PKG.TOTRECORDSISTAT (IN_DATE IN_EXPORT_TYPE)
```

Copyright © 2016, 2025, Oracle and/or its affiliates.

You can use this API will return the total count of records for export_type='TMP' and business date combination.

Parameter	Required	Type	Description
IN_DATE	N	DATE	The function will return the total count of records for export_type='TMP' and business date combination.
IN_EXPORT_TYPE	N	VARCHAR2	

EXAMPLE

EXP_ITALY_PKG.TOTRECORDSISTAT('12092020','TMP');

Get Number Of Rooms Reserved

```
EXP_ITALY_PKG.GET_ROOMS_BY_RESV (IN_TIPPO_ALLOGGIATO, IN_RESV_NAME_ID,
IN_ALLOTMENT_HEADER_ID)
```

You can use this API will return the total number of rooms reserved.

Parameter	Required	Type	Description
IN_TIPPO_ALLOGGIATO	N	VARCHAR2	The function will return the total number of reserved rooms.
IN_RESV_NAME_ID	N	NUMBER	
IN_ALLOTMENT_HEADER_ID	N	NUMBER	

EXAMPLE

EXP_ITALY_PKG.GET_ROOMS_BY_RESV('16', 100, 1988);

Values for tipoalloggiato field:

- 16 OSPITE SINGOLO
- 17 CAPOFAMIGLIA
- 18 CAPOGRUPPO
- 19 FAMILIARE
- 20 MEMBRO GRUPPO

Get Province

```
EXP_ITALY_PKG.GET_PROVINCE (IN_CITY)
```

You can use this API to get the province.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_CITY	N	VARCHAR2	The function will return the province.

EXAMPLE

EXP_ITALY_PKG.GET_PROVINCE('HYD');

Get Country ID

```
EXP_ITALY_PKG.GET_COUNTRY_ID (IN_COUNTRY_CODE)
```

You can use this API to get the Country ID.

Parameter	Required	Type	Description
IN_COUNTRY_CODE	N	VARCHAR2	The function will return the Country ID.

EXAMPLE

EXP_ITALY_PKG.GET_COUNTRY_ID('PT');

Get City ID

```
EXP_ITALY_PKG.GET_CITY_ID (IN_CITY)
```

You can use this API to get the City ID.

Parameter	Required	Type	Description
IN_CITY	N	VARCHAR2	The function will return the City ID.

EXAMPLE

EXP_ITALY_PKG.GET_CITY_ID('HYD');

Get Rooms By Date

```
EXP_ITALY_PKG.GET_AVL_ROOMSBYDATE (IN_DATE)
```

You can use this API to get the number of available rooms on a particular date.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_DATE	N	VARCHAR2	The function will return the number of available rooms on a particular date.

EXAMPLE

EXP_ITALY_PKG.GET_AVL_ROOMSBYDATE('12092020');

Get Physical Inventory

`EXP_ITALY_PKG.GET_AVL_ROOMS`

You can use this API to get the physical inventory.

Parameter	Required	Type	Description
NA	NA	NA	This function will fetch the physical inventory.

EXAMPLE

EXP_ITALY_PKG.GET_AVL_ROOMS();

Get Available Beds

`EXP_ITALY_PKG.GET_AVL_BEDS`

You can use this API to get the physical inventory.

Parameter	Required	Type	Description
NA	NA	NA	This function will return the total number of available beds.

EXAMPLE

EXP_ITALY_PKG.GET_AVL_BEDS();

Get Last Reservation ID

`EXP_ITALY_PKG.GETLASTRESVID`

You can use this API to get the last Reservation ID.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
NA	NA	NA	This function will return the Last Reservation ID.

EXAMPLE

EXP_ITALY_PKG.GETLASTRESVID();

Get Last Group

```
EXP_ITALY_PKG.GETLASTGROUP
```

You can use this API to get the Last Group.

Parameter	Required	Type	Description
NA	NA	NA	This function will return the Last Group.

EXAMPLE

EXP_ITALY_PKG.GETLASTGROUP();

Get Name ID

```
EXP_ITALY_PKG.GETNAMEID (IN_RESV_NAME_ID, IN_NAME_ID, IN_UDFSEARCH)
```

You can use this API to get the Name ID.

Parameter	Required	Type	Description
IN_RESV_NAME_ID	N	NUMBER	This function will return the Name ID.
IN_NAME_ID	N	NUMBER	
IN_UDFSEARCH	N	VARCHAR2	

EXAMPLE

EXP_ITALY_PKG.GETNAMEID(100, 344, 'TEST');

Get Membership Level

```
EXP_CREATE_DATA.GET_MEMBER_LEVEL (IN_RESV_NAME_ID, IN_MEMBERSHIP_TYPE,
IN_MEMBERSHIP_NO, IN_RESORT)
```

You can use this API to get Get membership level based on the reservation name id, member type, member number.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_RESV_NAME_ID	NA	NUMBER	Get membership level based on the reservation name id, member type, member number
IN_MEMBERSHIP_TYPE	NA	VARCHAR2	
IN_MEMBERSHIP_NO	NA	VARCHAR2	
IN_RESORT	NA	VARCHAR2	

EXAMPLE

EXP_CREATE_DATA.GET_MEMBER_LEVEL(RESV_NAME_ID, LOYALTY_MEMBER_TYPE, LOYALTY_MEMBER_NO, PMS_P.RESORT)

Get Commission Code For Rate Code

```
EXP_CREATE_DATA.RATE_COMM_CODE (IN_RATE_CODE, IN_RESORT)
```

You can use this API to get the commission code for rate code.

Parameter	Required	Type	Description
IN_RATE_CODE	NA	VARCHAR2	Get commission code for rate code
IN_RESORT	NA	VARCHAR2	

EXAMPLE

- EXP_CREATE_DATA.RATE_COMM_CODE(RATE_CODE)

Get Profile Info

```
EXP_CREATE_DATA.GET_PROF_INFO (N_NAME_ID, IN_COLUMN, IN_RESORT)
```

You can use this API to fetch the specific values of a profile.

Parameter	Required	Type	Description
N_NAME_ID	NA	NUMBER	Get value in column specified from name_view for name_id specified. So in this example function will get IATA_CORP_NO for profile.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_COLUMN	NA	VARCHAR2	Get value in column specified from name_view for name_id specified. So in this example function will fetch the 'Display Name' (Last and First) of profile.
IN_RESORT	NA	VARCHAR2	Get value in column specified from name_view for name_id specified. So in this example function will fetch "Currency code" column value for profile.

EXAMPLE

- EXP_COUNTRY_PL.CREATE_JPK_EXPORT ('10052022','30052022')
- EXP_CREATE_DATA.GET_PROF_INFO(RESV_CONTACT_ID,'DISPLAY_NAME')
- EXP_CREATE_DATA.GET_PROF_INFO(AGENT_NAME_ID,'CURRENCY_CODE')

Fix Characters

```
EXP_ITALY_PKG.FIXCHAR (IN_STRING)
```

You can use this API to replace the characters.

Parameter	Required	Type	Description
IN_STRING	NA	VARCHAR2	This function will replace Unicode characters with substitution characters.

EXAMPLE

EXP_ITALY_PKG.FIXCHAR('ó');

Get the Country Description

```
NAME_REF.GET_COUNTRY_NAME (in_name_id)
```

This API helps you to get the country description for the profile.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_NAME_ID	Y	Number	Gets the Country description for the profile.

EXAMPLE

NAME_REF.GET_COUNTRY_NAME(AGENT_NAME_ID)

Get State Description

```
NAME_REF.GET_STATE_NAME (in_name_id - number)
```

This API helps you to get the state description for the profile.

Parameter	Required	Type	Description
IN_NAME_ID - NUMBER	Y	Number	Gets the State description for the profile.

EXAMPLE

NAME_REF.GET_STATE_NAME(AGENT_NAME_ID)

Get Out of Service Room Count

```
CTR_PANEL_PKG.OSROOMS (IN_RESORT, CONSIDERED_DATE, PMS_P.RESORT)
```

This API Returns Out of Service room count.

Parameter	Required	Type	Description
CONSIDERED_DATE	NA	DATE	Returns Out of Service room count based on input data considered and Resort
IN_RESORT	NA	VARCHAR2	
PMS_P.RESORT	NA	DEFAULT	

EXAMPLE

CTR_PANEL_PKG.OSROOMS (PMS_P.BUSINESS_DATE,'PROP1')

Get Out of Order Room Count

```
CTR_PANEL_PKG.OOROOMS (in_resort, considered_date)
```

This API Returns Out of Order room count.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
considered_date	NA	DATE	Returns Out of Order room count based on input data considered and Resort
in_resort DEFAULT pms_p.resort	NA	VARCHAR2	

EXAMPLE

CTR_PANEL_PKG.OSROOMS (PMS_P.BUSINESS_DATE,'PROP1')

Get Bill Generation Date

```
FIN_TRAN_VIEW_REF.GET_BILL_GENERATION_DATE (IN_RESV_NAME_ID, IN_BILL_NO,
IN_FOLIO_TYPE, IN_RESORT)
```

This function will Returns Bill Generation Date value.

Parameter	Required	Type	Description
IN_RESV_NAME_ID		NUMBER	Returns Bill Generation Date value based on input bill number/Folio Type/ Reservation Id and Resort values.
IN_BILL_NO		NUMBER	
IN_FOLIO_TYPE		VARCHAR2	
IN_RESORT		VARCHAR2	

EXAMPLE

FIN_TRAN_VIEW_REF.GET_BILL_GENERATION_DATE (4352412,678,'DEBIT','PROP1');)

Get Export Considered Run Date

```
EXP_STAYSTYPE_PKG.GET_CONSIDERED_DATE
```

This function will returns export considered Run Date.

Parameter	Required	Type	Description
NA		NUMBER	Returns Export considered Run Date (Considered Date).

EXAMPLE

EXP_STAYSTYPE_PKG.GET_CONSIDERED_DATE

Determine Value Type

```
GEN_UTIL.VALUE_IS_NUMERIC_YN (IN_VALUE )
```

This function will determine if a given value is numeric(Y) or alpha(N).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_VALUE	Yes	VARCHAR2	Determines the if a given function value is numeric(Y) or alpha(N).

EXAMPLE

GEN_UTIL.VALUE_IS_NUMERIC_YN('ABCDEF');

Convert Business Date

```
OPERA_FUNC.CONVERT_FROM_BUSINESS_DATE (IN_BUSINESS_DATE, IN_RESORT,
PMS_P.RESORT)
```

Returns the inserted date for a given business date.

Parameter	Required	Type	Description
IN_BUSINESS_DATE	NA	DATE	This function will return the insert date for a given business date.
IN_RESORT	NA	VARCHAR2	
PMS_P.RESORT	NA	DEFAULT	

EXAMPLE

OPERA_FUNC.CONVERT_FROM_BUSINESS_DATE(PMS_P.BUSINESS_DATE, 'PROP1');

Get Payment Methods

```
EXP_MAPPING_API.GET_PAYMENT_METHODS_TYPE
```

This API will return the export payment method type.

Parameter	Required	Type	Description
NA		NUMBER	Returns a constant value payment methods.

EXAMPLE

EXP_MAPPING_API.GET_PAYMENT_METHODS_TYPE;

Get New Time

```
TZ.GET_NEW_TIME (IN_FR_DATE, IN_FR_TZ_REGION, IN_TO_TZ_REGION)
```

You can use this API to get the new date-time.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
IN_FR_DATE	N	DATE	This function will return the new date-time for the given date-time based on from and to_time zone.
IN_FR_TZ_REGION	N	VARCHAR2	
IN_TO_TZ_REGION	N	VARCHAR2	

EXAMPLE

TZ.GET_NEW_TIME(SYSDATE,'+00:00','GMT');

Get Property Currency

`PMS_P.CURRENCY`

You can use this API to currency of a particular country.

Parameter	Required	Type	Description
NA	NA	NA	The function will return the property currency.

EXAMPLE

PMS_P.CURRENCY. For example, Australia/Brisbane.

Get Property Language

`PMS_P.LANGUAGE`

You can use this API to language of a particular property.

Parameter	Required	Type	Description
NA	NA	NA	The function will return the property language.

EXAMPLE

PMS_P.LANGUAGE. For example, ES.

Get Timezone

`PMS_P.TIMEZONE_REGION`

You can use this API to get time zone of a particular property.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
NA	NA	NA	The function will return the property time zone.

EXAMPLE

PMS_P.TIMEZONE_REGION; for example, Australia/Brisbane.

Search Entity Detail Translation

```
SC_TRANSLATION.ENTITY_DETAIL_TRANSLATION (IN_CODE_TYPE, IN_LANG, IN_CODE,
IN_RESORT)
```

You can use this API to search for a translation for a description of entity detail table on the description translation table.

Parameter	Required	Type	Description
IN_CODE_TYPE	NA	VARCHAR2	This functions searches for a translation for a 'DESCRIPTION' of entity_detail table on the desc_translation table. If not found returns the english version.
IN_LANG	NA	VARCHAR2	
IN_CODE	NA	VARCHAR2	
IN_RESORT	NA	VARCHAR2	

EXAMPLE

SC_TRANSLATION.ENTITY_DETAIL_TRANSLATION ('MARKET_CODE', 'DE','CORI','TOKYO');

Set Bucket Code Type

```
EXP_GEN.SET_EXPORT_BUCKET_TYPE
```

This API sets the global variable value of Bucket Code Type.

Parameter	Required	Type	Description
IN_EXPORT_BUCKET_TYPE	NA	VARCHAR2	This procedure sets/ initializes the global variable value of Bucket Code Type for export execution.

Example

EXP_GEN.SET_EXPORT_BUCKET_TYPE('BCKTY123')

Copyright © 2016, 2025, Oracle and/or its affiliates.

Get Export Start Date

`EXP_GEN.GET_EXP_START_DATE`

This API returns the start date of a particular export.

Parameter	Required	Type	Description
N/A	NA	NA	Returns Export Start Date. Defaults to Business Date when not set by Export execution.

Example

EXP_GEN.GET_EXP_START_DATE

Get Availability

`CTR_PANEL_PKG.GET_AVAILABILITY (CONSIDEREDDATE)`

This API returns the Inventory Availability based on input data.

Parameter	Required	Type	Description
CONSIDEREDDATE	NA	DATE	Returns Inventory Availability based on input data considered and Resort.

Example

CTR_PANEL_PKG.GET_AVAILABILITY (PMS_P.BUSINESS_DATE)

Get COMM End Date

`COMM_PMNT_EXP_API.GET_COMM_END_DT`

This API returns COMM End Date set for the export execution.

Parameter	Required	Type	Description
N/A	NA	N/A	Returns COMM End Date set for the export execution.

Example

COMM_PMNT_EXP_API.GET_COMM_END_DT

Copyright © 2016, 2025, Oracle and/or its affiliates.

Get COMM Check Number

`COMM_PMNT_EXP_API.GET_COMM_CHECK_NO`

This API returns COMM check number.

Parameter	Required	Type	Description
N/A	NA	N/A	Returns COMM Check No set for the export execution.

Example

COMM_PMNT_EXP_API.GET_COMM_CHECK_NO

Get COMM Begin Date

`COMM_PMNT_EXP_API.GET_COMM_BEGIN_DT`

This API returns COMM begin date.

Parameter	Required	Type	Description
N/A	NA	N/A	Returns COMM Begin Date set for the export execution.

Example

COMM_PMNT_EXP_API.GET_COMM_BEGIN_DT

Get COMM Agent ID

`COMM_PMNT_EXP_API.GET_COMM_AGNT_ID`

This API returns COMM Agent ID.

Parameter	Required	Type	Description
N/A	NA	N/A	Returns COMM Begin Date set for the export execution.

Example

COMM_PMNT_EXP_API.GET_COMM_BEGIN_DT

Get COMM Account ID

`COMM_PMNT_EXP_API.GET_COMM_ACNT_ID`

Copyright © 2016, 2025, Oracle and/or its affiliates.

This API returns COMM Account ID.

Parameter	Required	Type	Description
N/A	NA	N/A	Returns COMM Account Id set for the export execution.

Example

COMM_PMNT_EXP_API.GET_COMM_ACNT_ID

Set Data To Date

```
EXPORT_DATA_P.SET_DATA_TO_DATE
```

This API helps you to set to date.

Parameter	Required	Type	Description
IN_DATA_TO_DATE	NA	DATE	Sets TO_DATE for export execution.

EXPORT_DATA_P.SET_DATA_TO_DATE(pms_p.business_date);

Get All Export Values

```
EXP_MAPPING_API.GET_ALL_EXPORT_VALUES (IN_MAPPING_TYPE, IN_LINKED_CODE,
IN_DELIMITER, IN_RESORT, IN_CONFI_TYPE)
```

This API returns all export values of a code.

Parameter	Required	Type	Description
IN_MAPPING_TYPE	NA	VARCHAR2	Returns all export values of a code linked to in_mapping_type, delimited with in_delimiter; Sequence is determined by SEQ_NO, EXP_MAPPING_CODE of the mapping codes belonging to that mapping type.
IN_LINKED_CODE	NA	VARCHAR2	
IN_DELIMITER	NA	VARCHAR2	
IN_RESORT	NA	VARCHAR2	
IN_CONFIG_TYPE	NA	VARCHAR2	

EXAMPLE

EXP_MAPPING_API.GET_ALL_EXPORT_VALUES
('E_INVOICE_ITA','CIT','/','CITALY','PROPERTY_CODES');

Copyright © 2016, 2025, Oracle and/or its affiliates.

Get Filename Format

`SC_EXPORTS.GET_FILE_NAME_FORMAT`

You can use this API to get the filename format for exports based on Resort Name and Business Date.

Parameter	Required	Type	Description
NA	NA	NA	This function returns filename format for exports based on Resort Name and Business Date.

EXAMPLE

SC_EXPORTS.GET_FILE_NAME_FORMAT;

For example, returns ROSA_D21339 when Resort = 'ROSIE' and Business_Date = 05-DEC-21

Set Data From Date

`EXPORT_DATA_P.SET_DATA_FROM_DATE`

This API helps you to set data from date.

Parameter	Required	Type	Description
IN_DATA_FROM_DATE	NA	DATE	Sets FROM_DATE for export execution.

EXPORT_DATA_P.SET_DATA_FROM_DATE(pms_p.business_date-1);

Get Date Iteration

`EXPORT_DATA_P.GET_DATE_ITERATION`

You can use this API to get the date iteration number.

Parameter	Required	Type	Description
NA	NA	NA	Returns date iteration number.

EXAMPLE

EXPORT_DATA_P.GET_DATE_ITERATION

Copyright © 2016, 2025, Oracle and/or its affiliates.

Get Export Data ID

```
EXPORT_DATA_P.GET_EXP_DATA_ID
```

You can use this API to get the Export Data Id.

Parameter	Required	Type	Description
NA	NA	NA	Returns Export Data Id from current session.

EXAMPLE

EXPORT_DATA_P.GET_EXP_DATA_ID;

Get Export Mode

```
EXPORT_DATA_P.GET_EXPORT_MODE
```

You can use this API to get the Export Mode.

Parameter	Required	Type	Description
NA	NA	NA	Returns Export running mode.

EXAMPLE

EXPORT_DATA_P.GET_EXPORT_MODE

Get ISO Language Code

```
EXPORT_DATA_P.GET_ISO_LANG_CODE (IN_LANGUAGE_CODE)
```

You can use this API to get the ISO Language Code.

Parameter	Required	Type	Description
IN_LANGUAGE_CODE	NA	VARCHAR2	Returns ISO Language Code for the input language code.

EXAMPLE

GET_ISO_LANG_CODE('EN');

Copyright © 2016, 2025, Oracle and/or its affiliates.

Get Data to Folio

`EXPORT_DATA_P.GET_DATA_TO_FOLIO`

You can use this API to get the folio value.

Parameter	Required	Type	Description
NA	NA	NA	Returns To Folio value.

EXAMPLE

EXPORT_DATA_P.GET_DATA_TO_FOLIO

Get Data From Folio

`EXPORT_DATA_P.GET_DATA_FROM_FOLIO`

You can use this API to get the from folio value.

Parameter	Required	Type	Description
NA	NA	NA	Returns From Folio Value.

EXAMPLE

EXPORT_DATA_P.GET_DATA_FROM_FOLIO

Get Cash Register ID

`EXPORT_DATA_P.GET_CASHREG_ID`

You can use this API to get the cash register Id.

Parameter	Required	Type	Description
NA	NA	NA	Returns Cash Register ID.

EXAMPLE

EXPORT_DATA_P.GET_CASHREG_ID

Get ISO Date Format

`BUSINESS_EVENT_EXT.GETISODATEFORMAT`

This API returns the ISO date format.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Required	Type	Description
N/A	NA	N/A	Returns date format 'YYYY-MM-DD'.

Example

BUSINESS_EVENT_EXT.GETISODATEFORMAT

Get District Code

`CALCULATE_FORECAST.GET_DISTRICT`

This API returns the District Code.

Parameter	Required	Type	Description
IN_COUNTRY_CODE	NA	VARCHAR2	Returns District Code based on input Country,Postal and City codes.
IN_POSTAL_CODE	NA	VARCHAR2	
IN_CITY	NA	VARCHAR2	

Example

CALCULATE_FORECAST.GET_DISTRICT ('IN','560068',"HYD')

Get Data From Date

`EXPORT_DATA_P.GET_DATA_FROM_DATE`

You can use this API to get the from date value.

Parameter	Required	Type	Description
NA	NA	NA	Returns From Date value.

EXAMPLE

EXPORT_DATA_P.GET_DATA_FROM_DATE

Using Telephone Operator

Use the Telephone Operator to perform any of the following tasks:

- Search for reservation and guest information.
- Manage guest messages for reservations. For more information, see Managing Guest Messages
- Manage reservations traces. For more information, see Managing Reservation Traces
- Manage wake up calls. For more information, see Managing Wake Up Calls.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Manage guest locators. For more information, see Managing Reservation (Guest) Locators

> **Tip**
>
> Switch the console view , which provides quick access to all reservation details links.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone**, then select **Telephone Operator**.
2. Enter search criteria then click **Search**.
3. Select a reservation in the search result.
   a. To navigate to the reservation, click the **Confirmation number** in left panel or top section of console view or click **I Want To ....**, and select **Reservation**.
   b. To navigate to the profile, click the **Guest Name** in left panel or from profile section of console view or click **I Want To ....**, and select **Profile**.
   c. To navigate to Billing, click the **Balance** in the Billing section or click **I Want To ....**, and select **Billing**.

Managing Telephone Book Categories and Entries

Prerequisites for Managing Telephone Book Categories and Entries

The telephone book is available to maintain contact information for local theaters, restaurants, taxi stands, airlines, churches, employee directory, other properties, etc. The Telephone Book stores all information for guest referral and each entry is categorized, such as restaurants, transportation etc. Within each category are the contact entries with names, telephone numbers, and web addresses of people and places that your staff may need. The Telephone Book can be used as a Concierge guide, with information that can be helpful to communicate to the guests such as area attractions, airports, or transportation system companies and remarks.

Adding Telephone Category

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone**, then select **Telephone Book Category**.
2. Click **New** and enter the following details:
   a. **Category**: Select the category from list.
   b. **Description**: Enter a description for category.
   c. **Sequence**: Enter a Sequence to determine the order in which the type appears.
   d. **Global**: Select the check box to enable this category (and the related Telephone Book entries) in all properties.

3. Click **Save**.

Editing Telephone Category

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone**, then select **Telephone Book Category**.
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Telephone Category

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone**, then select **Telephone Book Category**.
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Telephone Book Entry

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone Book** .
2. Click **New** and enter the following details:
    a. **Category**: Select the category from list.
    b. **Name**: Enter name for telephone book entry.
    c. **Telephone**: Telephone number for the entry.
    d. **Web Address**: Web address for the selected name/company. This web address also serves as a hyper link to the highlighted name's web page.
    e. **Notes**: Enter notes such as directions to movie theater, church services times, restaurant reviews and any other additional comments.
3. Click **Save**.

Editing Telephone Book Entry

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone**, then select **Telephone Book** .
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Telephone Book Entry

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Telephone**, then select **Telephone Book** .
2. Enter search criteria and click **Search**.
3. In the search results, select the entity, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Monitoring Business Event Queue

A business event sends information about changes made in OPERA Cloud to external systems. You can view business events (triggers), signifying that an action has occurred and that an outbound message is produced and placed in queue for external systems to analyze and take appropriate action.

The following information is displayed:

- **EXT System**: Name of the external system that the message was created for and needs to picked up by.
- **Enq Time**: Displays the time of when the business event change occurred.
- **Resort**: Property name of where the change happened.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Module**: Module name of where the change happened.
- **Action Type**: Type of action that the outbound message is pertaining to. For example, a new reservation was created, a current reservation was updated, or a profile was updated.
- **Action ID**: ID number that is automatically assigned to the action when it happened.
- **Created Time**: Date and time that the change happened.
- **Primary Key**: Alpha-numeric key to uniquely identify the data applicable to that particular action

Viewing Business Event Queue

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **Business Event Queue**.
2. Select an external system, Enqueue Date and enter other search criteria and click **Search**.

Refreshing Business Event Queue

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **Business Event Queue**.
2. Select an external system, Enqueue Date and enter other search criteria and click **Search**.
3. Click **Vertical Ellipsis** and select **Refresh**.

Monitoring IATA Exception

The Channel Exception Queue is used to record exceptions for GDS bookings when there is no record locator or International Air Transport Association (IATA) number within the message.

The type of information displayed in the queue is determined by two Channel Management OPERA Controls :

- When the **IATA Exception** OPERA Control is active and request is received from GDS without an IATA number, the IATA exception will display in the queue.
- When the **Record Locator Exception** OPERA Control is active and request is received from GDS without a record locator, the record locator exception will display in the queue.

The following information is displayed:

- **Insert Date**: The date the exception occurred.
- **Reason**: The reason for the exception.
- **Status**: The exception status, such as "pending".
- **GDS Property**: The property.
- **Conf#**: The confirmation number.
- **GDS Transaction No**: The message ID from the message.
- **GDS Source**: If the exception is a result of a missing IATA number, the source is GDS type A or GDS type B: If the exception is a result of missing record locator, the source is the GDS host.
- **GDS Rec Loc**: The GDS record locator.
- **GDS Value**: The GDS value.
- **CRS Value**: The CRS value.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Viewing IATA Exception Queue

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **IATA Exception**.
2. Select a Property, Channel(s), Type and enter other search criteria and click **Search**.

Monitoring ADS Error Message

The ADS Error Processing screen is used to monitor messages for the ADS channels and allows you to search for messages with a status of "Error" to investigate what the issue is.

In addition, the ACK and NACK responses received from the ADS host are also logged.

Viewing ADS Error Messages

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **ADS Error Message**.
2. Select a Property, Channel(s), Type and enter other search criteria and click **Search**.

Refreshing ADS Error Messages

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **ADS Error Message**.
2. Select a Property, Channel(s), Type and enter other search criteria and click **Search**.
3. Click **Vertical Ellipsis** and select **Refresh**.

Monitoring Fiscal Business Event Status

Prerequisites for Monitoring Fiscal Business Event Status

Fiscal Business Event Status displays the status of fiscal business events triggered to an external fiscal program via OPERA Fiscal Integration Solution (OFIS).

Viewing Fiscal Business Event Status

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **Fiscal Business Event Status**.
2. Enter search criteria, then click **Search**.

Re-sending Failed Fiscal Business Events

You can resend failed messages according to the Fiscal Business Event Resend Days and Maximum Fiscal Business Events to Resend OPERA Controls.

You role must be granted the Resend Fiscal Business Events task.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **Fiscal Business Event Status**.
2. Enter search criteria, then click **Search**.
3. Select the failed business event(s) in the search result.
4. Click **Resend**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Viewing Request/Response Message for Expired Events

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Monitoring** then select **Fiscal Business Event Status**.
2. Select **Only Display Expired Events** check box, enter additional search criteria, then click **Search**.
3. Select the business event in the search result, then click the vertical ellipsis **Actions** menu and select **View Request/Response**.

Using Supporting Documents

Prerequisites for Supporting Documents

To generate information folios, pro-forma folios, and confirmation letters as supporting documents for fiscal partner.

> **Note**
>
> Document Type `CONFIRMATION_LETTER` is only visible when the **Confirmation Letters** OPERA Control is active. Document Type `PROFORMA_FOLIO` is only visible when the **Generate Proforma Folio** OPERA Control is active.

Sending Supporting Documents to a Fiscal Printer

To send supporting documents in Failure status to fiscal partner.

> **Note**
>
> Select **Document Type** to filter on Pro-Forma Folios when **Generate Proforma Invoice** OPERA Control is active. Select **Document Type** to filter on Confirmation Letters when **Confirmation Letters** OPERA Control is active.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Supporting Documents**.
2. Enter search criteria, then click **Search**.
3. Select the document number in the search result, then click the vertical ellipsis **Actions** menu and select **Send**.

Previewing Information Folios and Pro-Forma Folios from Supporting Documents

To preview, e-mail, or download a supporting document.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Supporting Documents**.
2. Enter search criteria, then click **Search**.
3. Select the document number in the search result, then click the vertical ellipsis **Actions** menu and select **Print/Preview**.
   a. On the Report Destination page.

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Folio Style**: The default folio style is displayed; click to select a different folio style. For more information, see Selecting Folio Styles for Viewing, Printing.

ii. Click **View in Currency** to select a currency from the list (available when the **Ability to Quote Rates in Foreign Currencies** OPERA Control is active).

    i. Select a currency from the list.

    ii. Click **Select**.

iii. **Folio Text**: Click to add folio-specific text to appear when generating the folio (available when the **Additional Folio Text** OPERA Control is active).

    i. Enter Promotional or Reference text into the fields.

    ii. Click **Save**.

iv. Select a destination.

    i. **Preview**: Select to generate as PDF file.

    ii. **Email to Print**: Select a printer from the list. For more information, see Configuring Printers.

    iii. **E-mail**: Select an e-mail address from the list.

        i. Click **New E-mail** to add an e-mail address.

            i. **E-mail Type**: Select an e-mail type from the list.

            ii. **E-mail Address**: Enter an e-mail address.

            iii. Click **Save**.

    iv. **Download**: Select to download PDF file.

v. Click **Process**.

Previewing Confirmation Letters from Supporting Documents

To preview a supporting document.

1. From the **OPERA Cloud** menu, select **Miscellaneous**, select **Supporting Documents**.
2. Enter search criteria, then click **Search**.
3. Select the document number in the search result, then click the vertical ellipsis **Actions** menu and select **Print/Preview**.

About Reports

The report module provides access to standard reports; these can be previewed, printed, emailed or downloaded in a variety of file formats. All reports are categorized into report groups with access restricted by assigning various report group tasks to roles, see OPERA Cloud Tasks — Reports.

Reports that support multiple properties are indicated in the **Multi Property Report** column of the Manage Report search result; you can generate these reports for multiple properties from a Hub location.

You can setup Shift Reports to generate multiple reports in a batch process. For more information, see Managing Shift Reports

When the **Report Scheduler** OPERA Control is active, reports (including shift reports) can be scheduled to auto-generate periodically. For more information, see Managing Scheduled Reports

When the **Enable Watermark for Reports** OPERA Control is active, you can setup a watermark to generate for all report groups (globally), for reports in specific report groups or for specific reports only. For more information, see Managing Report Watermarks.

> **Note**
>
> Standard reports do not support localization, nor do they output custom flex fields added with Page Composer. Reporting and Analytics is available for custom reporting. For more information, see OPERA Reporting and Analytics

The reports module is also used to manage the stationery templates setup for each stationery report group. For more information, see About Stationery Editor

Generating Reports

From the Manage Report screen, you can:

- Search for OPERA Cloud reports based on the active OPERA Controls, then:
  - Generate reports with default parameters or modify the report parameters at runtime
  - Email reports in various file formats to one or more recipients.
  - Download report output in various file formats.
  - Print reports to an email addressable printer.
  - Preview reports in PDF format and print the PDF to a local or network printer.
  - Schedule report. (Available when the **Report Scheduler** OPERA Control is active). For more information, see Managing Scheduled Reports .
  - Manage customized stationery templates. For more information, see About Stationery Editor (Oracle Business Intelligence (BI) Publisher).
  - Duplicate reports and preset the default report parameters.
  - Copy reports and stationery templates to other properties. For more information, see Copying Reports to Multiple Properties.
- Search for template and custom R&A reports (Available with OCIM unified platform). The template reports available is based on the active OPERA Controls and Country Mode of your property. You can then:
  - Generate reports with default parameters or modify the report parameters at runtime.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Preview reports in PDF format and print the PDF to a local or network printer.
- Download report output in various file formats.
- Email and email-to-print BI Publisher reports, in various file formats, to one or more recipients. Reports are emailed from R&A.
- Duplicate reports and preset default report parameters. See Managing Reports.
- Copy reports to other properties. For more information, see Copying Reports to Multiple Properties.

> **Note**
>
> Reports and Analytics reports are indicated with in the search result.

Watch Video

> **Note**
>
> The available report groups are determined by the report group tasks assigned to your role(s). The reports and report parameters available is determined by the OPERA Controls active at your property.

> **Note**
>
> File formats available for email delivery and file download vary depending on the specific report; these include PDF, HTML, RTF, XML, Excel, Delimited, and Delimited Data.

Reports that support multiple properties are indicated in the search results, and you can generate these reports with multiple properties selected when operating from a Hub location. For more information, see Changing Your Location in multi-property Operations.

You can also use the actions listed in the ribbon to configure a New Report , Managing Report Groups or Managing Scheduled Reports.

Previewing Reports

To download / preview a report, with default parameters, as a PDF file in a browser tab.

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.
2. On the Manage Reports screen, enter or confirm the Property Code. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report name** and/or select a **Report Group** from the list and then click **Search**.
4. Select a report from the search result.
5. Click **Preview /Download** : A PDF file is generated and displayed in a separate browser window.

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. To Print the PDF, select the print icon or press **[CNTRL][P]** to launch the print dialogue for your browser.

b. To download the PDF to your workstation click the download option in your browser.

Printing Reports

To print a report to an email addressable printer. For more information, see Configuring Printers

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.
2. On the Manage Reports screen, enter or confirm the **Property Code**. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report Name** and/or select a **Report Group** from the list and then click **Search**.
4. Select a report from the search result.
5. Click **Select Printer** and select a printer from the list. Global printers and property-specific printers are listed.
6. Click **Print** to print the report to the selected printer.

> **Note**
>
> Printer selection is retained during your session.

Downloading Reports

To download a report, with default parameters, in various file formats.

> **Note**
>
> It is recommended to use only Delimited and Delimited Data file formats for reports with simple tabular layouts. Delimited and Delimited Data file formats should not be selected for reports that have group-by or other complex layouts that can cause duplication of rows or prevent rows from generating in the report.

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.
2. On the Manage Reports screen, enter or confirm the **Property Code**. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report Name** and/or select a **Report Group** from the list and then click **Search**.
4. Select a report from the search result.
5. Click **Download As**.
   a. Select a file format from the list. File formats available are HTML, RTF, XML, Delimited, Delimited Data and Excel (for selected BI Publisher-based reports).
   b. Click **Download**.

Emailing Reports

To email a report, with default parameters, in various file formats.

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. On the Manage Reports screen, enter or confirm the **Property Code**. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report name** and/or select a **Report Group** from the list and then click **Search**.
4. Select a report from the search result.
5. Click **Email** and then enter the email address or addresses of the recipient(s). You can enter separate email addresses for multiple recipients with a comma (,) or semi-colon (;).
    a. Select a file format from the list. File formats available are HTML, RTF, PDF, XML, Delimited, Delimited Data and Excel (for selected BI Publisher-based reports).

> **Note**
>
> When the HTML format and email delivery are selected, the report output is embedded in the email received.

    b. Click **Email**.

Modifying Report Parameters

You can modify the default values for report parameters prior to generating the report. Report parameters determine the data selection, group-by, sort order and other output attributes. The report parameters available are determined by the OPERA Controls active at your property.

1. From the **OPERA Cloud** menu, select **Reports**, and then **Manage Reports**.
2. On the Manage Reports screen, enter or confirm the **Property Code**. If you are logged in at the hub level, you will have the option to view either Global reports or Property reports.
3. Enter a **Report name** and/or select a **Report Group** from the list and then click **Search**.
4. Select a report from the search result.
5. Click **Edit Report Parameters**.
    a. On the Report Parameters page, update the report parameters as required.
    b. Click **Download As** to download the report in a selected file format. File formats available are HTML, RTF, PDF, XML, Delimited, Delimited Data and Excel (for selected BI Publisher-based reports)
    c. Click **Email** to email the report.
    d. Click **Preview/Download** to generate the report as PDF in browser tab.
    e. Click **Cancel** to return to the report search page.

Managing Report Watermarks

Prerequisites for Watermarks

The watermark feature adds a faint text to the background of reports generated in PDF format. The watermark can be configured at a global level, for specific report groups, or for individual reports and stationery templates. You can specify the watermark text and set its size, color, and position on the page.

Defining a Global Watermark

1. From the**Administration** menu, select **Enterprise**, and then select **OPERA Controls**.
2. Select the **General** group.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Activate the **Enable Watermark for Reports** parameter.
4. Update the **Configure (Global) Watermark Settings** setting. For more information, see *Watermark Mode Options* section.

Defining Watermark for Report Groups

1. From the **OPERA Cloud** menu, select **Reports** and then select **Manage Reports**.
2. Click **Manage Report Groups**.
3. Enter search criteria then click **Search**.
4. From the search results, select a report then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. **Watermark Mode**: Select from the watermark settings. See Watermark Mode Options.
    b. Click **Save**.
    c. For more information, see Managing Report Groups.

Defining Watermark for Reports & Stationery

1. From the **OPERA Cloud** menu, select **Reports** and then select **Manage Reports**.
2. Enter search criteria then click **Search**.
3. From the search results, select a report then click the vertical ellipsis **Action** menu and select **Edit**.
    a. Scroll to the bottom of the page
        i. **Watermark Mode**: Select from the watermark settings. See Watermark Mode Options.
    b. Click **Save**.
    c. For more information, see Managing Reports.

Watermark Mode Options

- **Simple**- the default watermark configuration:
    - **Font size**: 100 pts.
    - **Font name**: Helvetica
    - **Font color**: light gray
    - **Watermark position**: centered between the lower left corner and the upper right corner of the page on a 55 degree slant.
    - **Text**: Enter the watermark text
- **Enhanced** - allows you to customize the position, font size, and color for the watermark.
    - **Text**: Enter the watermark text
    - **X-Position**: Enter the horizontal start position
    - **Y-Position**: Enter the vertical start position
    - **Angle**: Specify an incline in degrees
    - **Font Size**: Enter a font size
    - **Color**: Enter a font color. See https://htmlcolorcodes.com/
- No Watermark (disable watermark)

Copyright © 2016, 2025, Oracle and/or its affiliates.

About Stationery Editor

Prerequisites for Stationery Editor

OPERA Cloud stationery is customized using Microsoft Word; supporting all standard and familiar formatting capabilities of an RTF document; including images, tables, font style, size, color and alignment. You can also include links to websites, either as text links or as part of a clickable image. Most stationery is generated in PDF format, for printing or email delivery. HTML output is also supported for email confirmation delivery. See Configuring Delivery Management for more information.

Oracle Business Intelligence (BI) Publisher Desktop is a special add-in for Microsoft Word which is used to assist with the customization of stationery templates, by supporting the import of an XML data model containing a list of all data elements available and allowing you to drag and drop these data elements onto the RTF layout as needed. At runtime these data elements are replaced with actual values from OPERA Cloud. The add-in also allows you to define conditional blocks of text and graphics within the template. Prior to customizing any stationery templates ensure your workstation has Microsoft Word and the Oracle BI Publisher add-in installed. See Installing Oracle BI Publisher Desktop on a Workstation for more information.

For more information on Oracle BI Publisher and RTF templates refer to Fusion Middleware Report Designer's Guide for Oracle Business Intelligence Publisher.

> **Note**
>
> Users do not need to install Oracle BI Publisher to generate OPERA Cloud reports and stationery.

Predefined (internal) report groups exist for each type of stationery that can be generated. For more information, see Stationery Reports Groups.

For PDF output, images can be embedded in the RTF template or you can use placeholder graphics and reference internal images by URL, this method is used for the property logo.

For HTML output (ie confirmation letter email delivery), you must use placeholder graphics and reference external images by URL; these images are downloaded by the email client when the email if opened.

> **Note**
>
> Templates must be under 10MB in size.

When the **Multi Language** OPERA Control is active a report template must be configured in each stationery report group for every language code configured. Each language-specific report typically references a unique template setup with the translated text in the body of the RTF. You may choose, however, to reference the English template in report setup for any language you do not wish to offer translation. At runtime, OPERA Cloud will generate the specified RTF template for the profile language and also fetch the translated descriptions for your configuration setup in **Manage Translations**. For example, Room Types, Rate Codes, Package Codes, Transaction Codes, Menu Items. If language-specific translation for configuration is not defined, the primary description is output.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> For **Multi Language** stationery it is recommended to prefix or suffix filenames with the language code; for example: `e_folio.rtf` , `fr_folio.rtf`, `de_folio.rtf`, `es_folio.rtf`

Custom message text configuration is also available for stationery templates; allowing you to configure translatable text strings in OPERA Cloud that are included in the generated stationery. Special data elements in each of the XML data models are available for these custom message texts, suffixed with the property code, so you can setup a custom message per property. For example, for the confirmation letter template there are `SAMPLE_GUEST_CONFIRMATION_TEXT1` and `SAMPLE_GUEST_CONFIRMATION_TEXT2` data elements. This feature is useful when you have a special promotional message you'd like to include in the generated stationery short-term and eliminates the need to download and update the RTF template directly. You can grant other users the **Report Text Configuration** user task and not the **Manage Report** user tasks; limiting who can modify RTF templates, but still enable configuration of custom messages for stationery.

When the **Custom Numbers** OPERA Control is active, one or more custom reference numbers can be configured to output on the folio or receipts. For more information, see Configuring Custom Numbers.

When the **Additional Folio Text** OPERA Control is active, you can setup folio templates with `<FOLIO_TEXT1_FTR/>` `<FOLIO_TEXT2_FTR/>` elements to output reservation-specific folio text entered when generating a folio. For more information, see Generating a Folio for a Billing Window.

When the **Multi-Language** OPERA Control is active a report template must be configured for every language in every stationery report group, see Stationery Reports Groups. Each language-specific report entry typically references a unique RTF template setup with the translated text in the body of the RTF. At runtime, OPERA Cloud generates the RTF template for the linked profile **Language** and fetches the translated code descriptions setup in Manage Translations. If language-specific translation is not defined, the primary code description is used. You may also choose to reference the English RTF template in report setup for any **Language** you do not wish to offer localized stationery.

> **Tip**
>
> For multi-language stationery it is recommended to prefix or suffix RTF filenames with the language code; for example:**e_folio.rtf, fr_folio.rtf, de_folio.rtf, es_folio.rtf.**

The text in an RTF can be formatted using the following fonts and font styles.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Using Stationery Template Editor

Template Preparation and Sample Data

After selecting to create or update a stationery template two files (*.rtf and *.xml) are downloaded to a folder on your workstation.

> **Note**
>
> When creating a new stationery template you must first rename the sample*.rtf to something different. You cannot upload a customized template with the filename sample*.rtf.

Open RTF file

Navigate to the download folder and open the RTF template file using Microsoft Word; either double-click the file in Windows Explorer or launch Microsoft Word and the use the **File | Open** menu from within Word.

Load Sample XML Data File

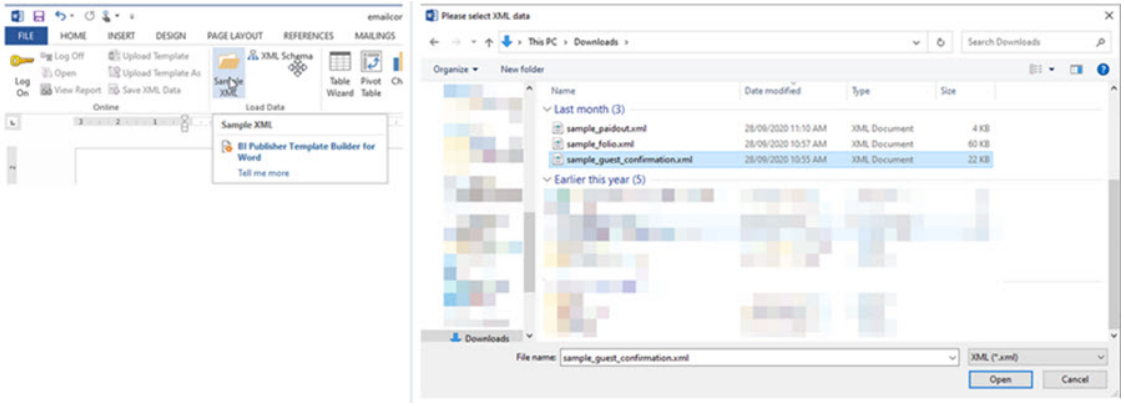
The sample data file consists of data element (XML elements) available for inclusion in the layout of the stationery template.

1. Click the **BI Publisher** tab on the toolbar and click **Sample XML**.
2. Navigate to the folder where the sample XML file was downloaded to.
3. Select the file and click **Open**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> The Oracle BI Publisher toolbar appears in Microsoft Word after installation of the Oracle BI Publisher software. If the toolbar does not appear automatically, select View, select Toolbars, and then select Template Builder to add it to the existing toolbar display. Also ensure that BI Publisher add-in is enabled in COM Add-Ins (File, Options, Add-Ins, Manage COM Add-Ins, Go)

Figure 9-1 Load Sample XML Data



The XML data file will always be named `sample_xxxx`, corresponding to the type of template you are customizing. For example, if you are creating a confirmation letter template and you named the RTF file `email_confirmation`, you will not see a corresponding XML file. Rather, you would select and load the `sample_guest_confirmation.xml`, listing all the available elements for customization on the confirmation template. Once the XML is selected, a **Data loaded successfully** message appears and informs you that the sample XML data is now loaded for use in customization.

Each tag set is an element. For example, `<RESERVATION_MADE_DATE_ISO>2020-12-12</RESERVATION_MADE_DATE_ISO>` is the date the reservation was created. `RESERVATION_MADE_DATE_ISO` is the tag name. The data between the tags is the value of the element. For example, the value of `<RESERVATION_MADE_DATE_ISO>` is a date 2020-12-12 (12th December 2020).

> **Note**
>
> Sample XML files contain property details elements such as Property Code, `<RESORT>`, Property Name `<RESORT_FULL_NAME>`, Property Address `<RESORT_FULL_ADDRESS>`, Property Phone `<RESORT_PHONE_NO>` - ensuring one template can be shared across multiple properties.

Identifying Placeholders and Groups

The template content and layout must correspond to the content and hierarchy of the input XML file. Each data field in the template must map to an element in the XML file. Each group of repeating elements in the template must correspond to a parent-child relationship in the XML file.

Copyright © 2016, 2025, Oracle and/or its affiliates.

To map the data fields you define placeholders. To designate the repeating elements, you define groups.

When you mark up the template design, you define placeholders for the XML elements. The placeholder maps the template report field to the XML element. At runtime the placeholder is replaced by the value of the element of the same name in the XML data file.

Using Placeholders

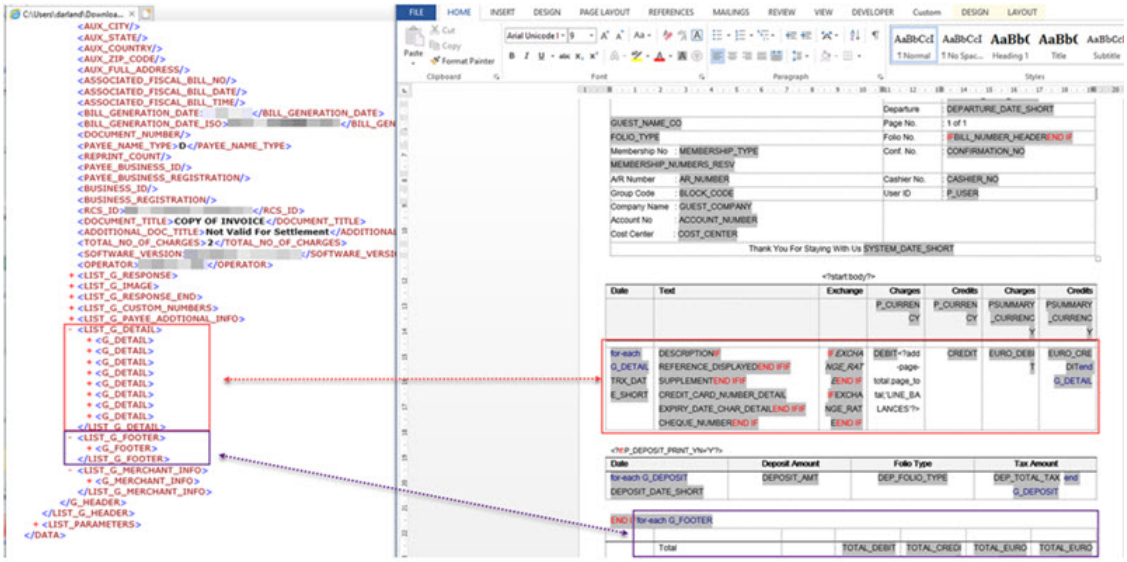
Each data field in the report template must correspond to an element in the XML file. When you mark up the template design, you define placeholders for the XML elements. The placeholder maps the template report field to the XML element. At runtime the placeholder is replaced by the value of the element of the same name in the XML data file.

Identifying Group of Repeating Elements

Stationery templates often contain groups of repeating fields; this occurs when data is fetched from multiple entities in a parent-child 1:many relationship. For the folio this applies to the posting details for one reservation. Fields that belong to one of the child entities are prefixed with a **G_** to identify a repeating group of fields. At runtime, BI Publisher loops through the occurrences of the element in the XML and outputs the data for all records within the group.

The following is the XML file that correspondence to a folio RTF template

Figure 9-2 Sample_folio.xml and Repeating Groups



Adding Markup to the Template Layout

BI Publisher converts the formatting that you apply in Microsoft Word to XSL-FO.

You add markup to create the mapping between the layout and the XML file and to include features that cannot be represented directly in the format.

The most basic markup elements are placeholders, to define the XML data elements; and groups, to define the repeating elements.

Creating Placeholders

The placeholder maps the template field to the XML element data field. At runtime the placeholder is replaced by the value of the element of the same name in the XML data file.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Enter placeholders in the document using the following syntax:

```
<?XML element tag name?>
```

The placeholder must match the XML element tag name exactly and is case sensitive.

There are two ways to insert placeholders in the document, as described in the following sections:

- Insert the placeholder syntax directly into the template document. For more information, see Using the Basic RTF Method.
- Insert the placeholder syntax in Microsoft Word's Text Form Field Options window. This method allows you to maintain the appearance of the template. For more information, see Using the Form Field Method.
- **Using the Basic RTF Method**

  1. Enter the placeholder syntax in the document where you want the XML data value to appear.
  2. Enter the element's XML tag name using the syntax:

     ```
     <?XML element tag name?>
     ```

     In the example, the template field "Reservation Made Date" maps to the XML element RESERVATION_MADE_DATE_ISO in the document, enter:

     ```
     <?RESERVATION_MADE_DATE_ISO?>
     ```

- **Using the Form Field Method**

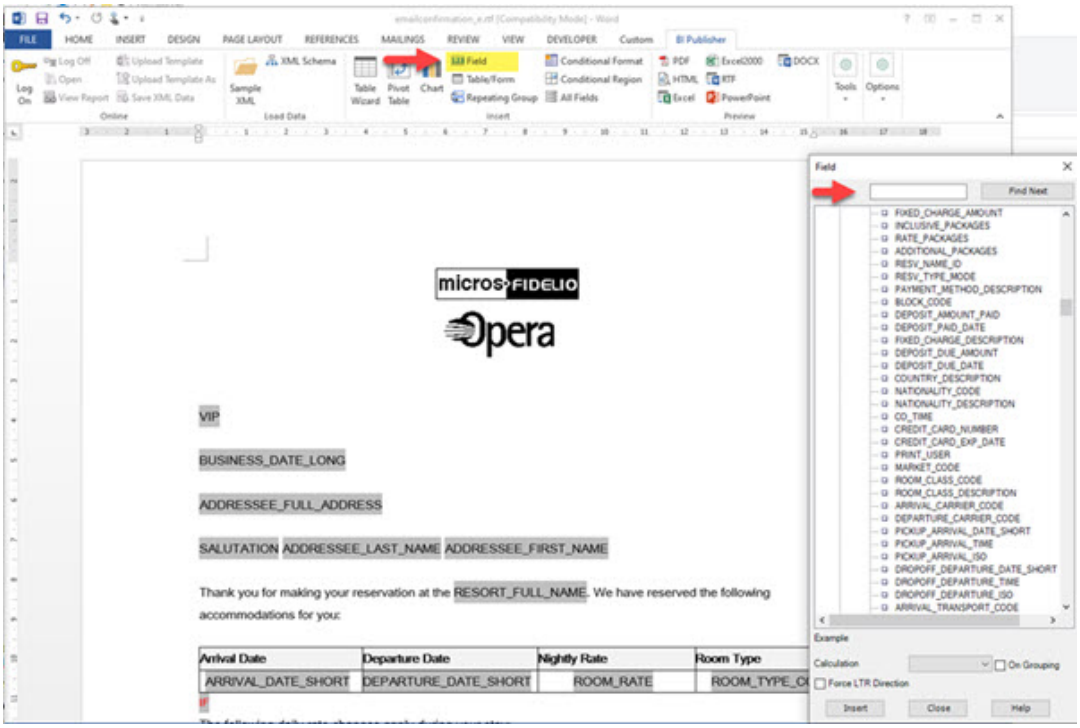
  After the XML data file has been loaded use the **123 Field** option on the BI Publisher toolbar tab to insert new fields in the template.

  Search and select the XML tag or field to add to the customizable report from the list of available fields. The tree of available fields is divided into the sections applicable to the report groupings, (for example, header, footer, body, and so on). You can add fields by selecting and dragging the element to the document or double clicking on a selected field from this list to insert at the current cursor location.

> **Note**
>
> It is recommended that tables are used in your layout to keep the field positions static. When creating a new table in Word, be sure to set the AutoFit behavior to ‘AutoFit to Contents’ to avoid truncating fields larger than the actual cell size or resizing a cell to accommodate a field with a longer description than the display data. Refer to Microsoft Word Help (F1) for more details.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Figure 9-3 Insert Form Field



Defining Groups

By defining a group, you notify BI Publisher that for each occurrence of an element, you want the included text and fields displayed.

At runtime, BI Publisher loops through the occurrences of the element and outputs the fields each time.

All sample stationery templates are preconfigured with the required groups for the corresponding XML data file.

For the folio, for each occurrence of G_DETAIL in the XML file, you want the template to display the child elements TRX_DATE, DESCRIPTION, REFERENCE_DISPLAYED, DEBIT, CREDIT and so on.

To designate a group of repeating fields, insert the grouping tags around the elements to repeat.

Insert the following tag before the first element

```
<?for-each:XML group element tag name?>
```

Insert the following tag after the final element:

```
<?end for-each?>
```

Using XPath Commands

You can reference XML elements using XPATH location-path expressions to locate XML elements to reference in the RTF.

Copyright © 2016, 2025, Oracle and/or its affiliates.

For example, in the XML document:

```
<DATA> <DATA>
-<FRM_SID>49940888:5000283</FRM_SID>
--<LIST_REPORT>
---<REPORT>
----<PAYMENT_DUE_DATE>11.25.16</PAYMENT_DUE_DATE>
----<PAYMENT_DUE_DATE_ISO>2016-11-25</PAYMENT_DUE_DATE_ISO>
----<P_BILL_GENERATION_DATE>11.15.16</P_BILL_GENERATION_DATE>
----<P_BILL_GENERATION_DATE_ISO>2016-11-15</P_BILL_GENERATION_DATE_ISO>
---</REPORT>
--</LIST_REPORT>
</DATA>
```

The `PAYMENT_DUE_DATE` element can be referenced using:

`XPATH: /DATA/LIST_REPORT/REPORT/PAYMENT_DUE_DATE`

For more information, see Using XPath Commands.

Adding Images and QR Codes

Inserting QR Code Images

You can define QR codes in OPERA Cloud then add an expression to output the QR code image. For more information, see Managing QR Code Definitions.

1. Enable the **Forms** toolbar in Microsoft Word.
2. Position the cursor in the location where you want to insert the QR code.
3. Select the **Text Form Field** toolbar icon. This action inserts a form field area in the template.
4. Double-click the form field area to invoke the **Text Form Field Options** dialog box.
5. (Optional) Enter a description of the field in the **Default text** field. The entry in this field populates the placeholder's position on the template.
    a. Select the **Add Help Text** button.
    b. In the help text entry field, enter the expression : `<fo:instream-foreign-object content-type="image/jpg"> <xsl:value-of select=".//<QRCODE>"/> </ fo:instream-foreign-object>`, replacing **<QRCODE>** with the code setup in Managing QR Code Definitions.
    c. Click **OK** to apply.

Inserting Images

There are two methods for inserting images into templates:

- Directly inserting images in the RTF template
- Inserting Images with URL references to website or content management system.

Directly Inserting Images

Inserted images quickly increases the template's size and can be used when generating PDFs.

From the Word toolbar, select **Insert**, select **Pictures** and then select a source.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Inserting Images with URL References

Referencing web images results in the image being downloaded from a cloud server or content management system at runtime. This method of adding images is suitable for both PDF or HTML email delivery. An email client will download the image from the server as needed.

For HTML confirmation email delivery, the image URL reference method must be used. The recipient's email client will download the images from the website or content management system when the email is opened and display the image at the specified location in the email body.

> **Note**
>
> By default, emails client may block images from initial download and provide a specific action to download these images on demand.

To add images by URL references:

1. Insert a dummy image by selecting **Insert** and then selecting **Pictures**. The dummy image can be set to the required size using Word's picture tools.
2. Insert a dummy graphic into the layout in Word by selecting **Insert** and then selecting **Pictures**.
3. Right-click the image and select the **Format Picture** option and then click the **Alt Text** tab.
   a. Enter the following syntax to reference the image location:

      `url:{'https://<image location>'}.`

      For example, enter: `url:{'https://www.example.com/images/oracle_logo.gif'}`

An image URL is used to generate the property logo. Each sample template contains a placeholder image with
`url:{concat($IMAGES_PATH,'/',/DATA/LIST_REPORT/REPORT/LOGO_IMAGE,'.',$IMAGES_TYPE)` or

`url:{concat($IMAGES_PATH,'/',/DOCUMENT/BOOKING/BOOKING_ROW/PROPERTY,'.',$IMAGES_TYPE)` to generate a dynamic URL for the property logo.

At runtime, the placeholder image is replaced with the image available at the specified web address (URL).

Formatting Date and Numbers

BI Publisher supports two methods for specifying the number format.

- Microsoft Word's native number format mask.
- Oracle's **format-number** function.

BI Publisher supports three methods for specifying the date format

- Microsoft Word's native date format mask.
- Oracle's **format-date** function.
- Oracle's abstract date format masks. (Recommended for multilingual templates.)

Copyright © 2016, 2025, Oracle and/or its affiliates.

For more information of formatting dates, numbers and currency values see Formatting Numbers, Dates, and Currencies.

Formatting Dates

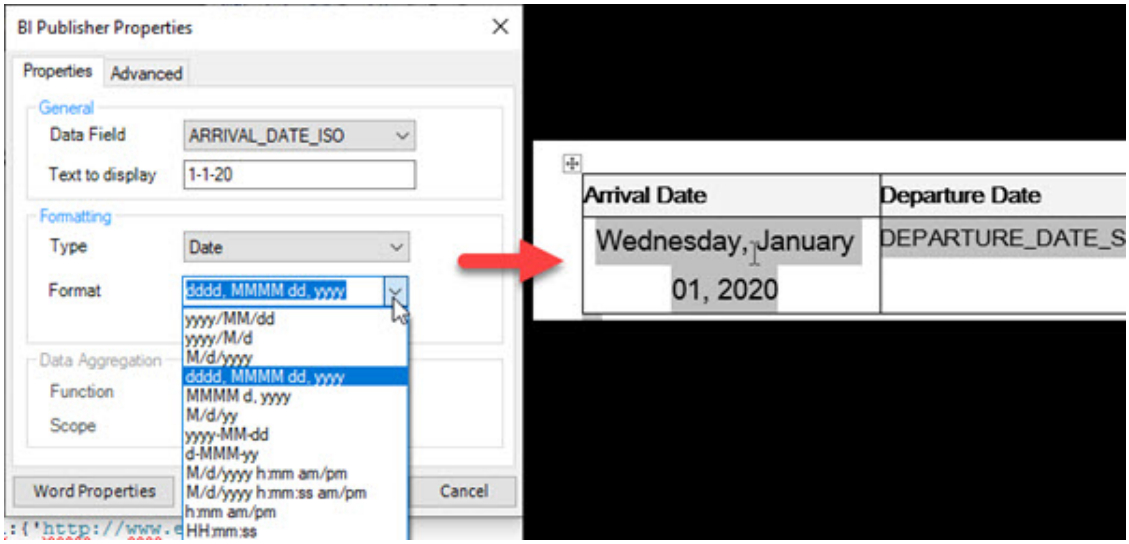
In addition to pre-formatted dates in string format in the XML, all date fields are also available in canonical date/time format.

Canonical date fields are identified with the suffix **_ISO** in the element name and can be formatted to suit your needs:

To apply a MS Word format mask to a _ISO canonical date field:

1. Double click the date placeholder in the template.
2. Set **Text to Display** to a test date.
3. Set Type to **Date**.
4. Select a date format from the list.
5. Click **OK**.

Figure 9-4 Formatting Dates



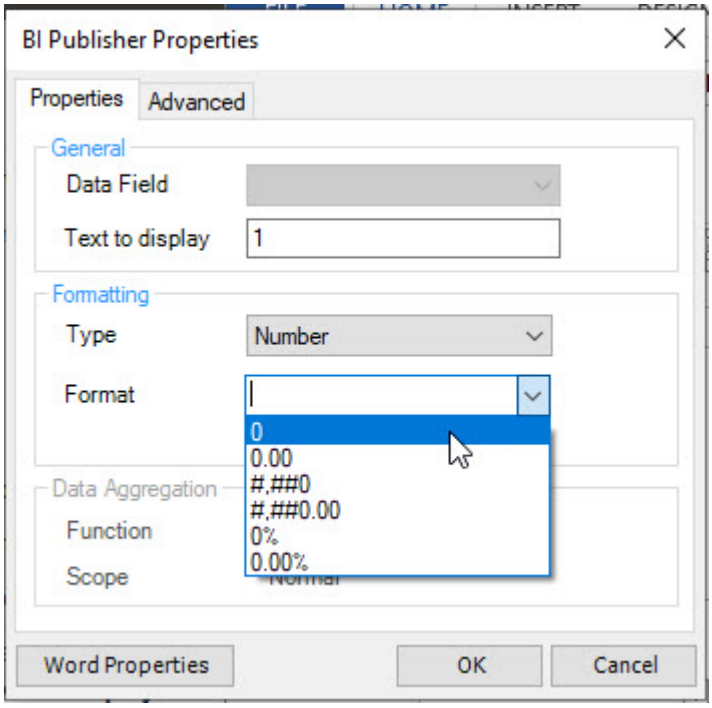
Formatting Numbers

To apply a MS Word format mask to number fields:

1. Double click the number placeholder in the template.
2. Set **Text to Display** to a test number.
3. Set Type to **Number**.
4. Select a number format from the list.
5. Click **OK**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Figure 9-5 Formatting Numbers



Using Conditional Formatting

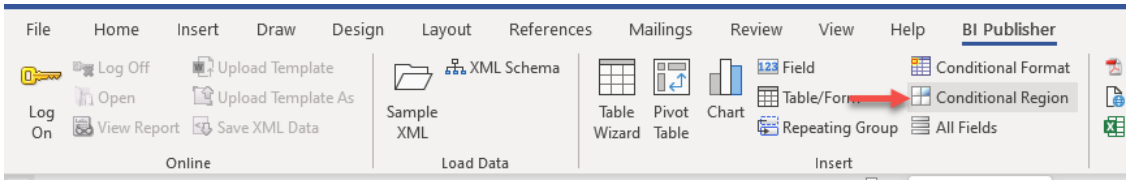
Using Conditional Formatting and Regions

Conditional formatting occurs when a formatting element appears only when a certain condition is met.

BI Publisher supports the usage of simple "if" statements, as well as more complex "choose" expressions.

For additional information, see Using Conditional Formatting .

> **Note**
>
> To define a conditional block you can also use the conditional region wizard launched from the BI Publisher toolbar.



Using IF Statements

Use an if statement to define a simple condition; for example, if a data field is a specific value.

To use an if statement:

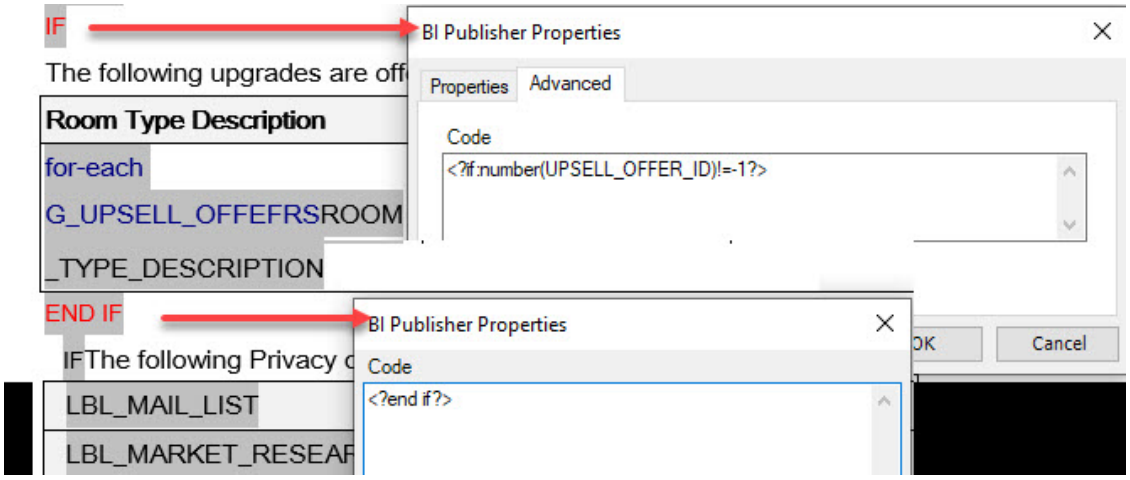
Copyright © 2016, 2025, Oracle and/or its affiliates.

1. Insert the following syntax to designate the beginning of the conditional area `<?if:[ELEMENT][CONDITION]?>`.

> **Note**
>
> Ensure the [ELEMENT] from the XML is referenced in matching case.

2. Add the conditional text / image(s).
3. Insert the following syntax at the end of the conditional area `<?end if?>`.

Figure 9-6 Placeholders defining conditional block between <?IF()> and <?end if?>



IF statements can be combined with other string functions.

CONTAINS

Using the CONTAINS function, an expression can be constructed to output conditional text when an element contains a specific string value. This is similar to a LIKE operator.

```
<?if: contains(ELEMENT,'txt_to_search_for')='true'?>Yes it does <?end if?>
```

STARTS-WITH

To evaluate the start of a string, use the STARTS-WITH function:

```
<?if: starts-with(COMPANY_NAME,'Oracle')?><?end if?>
```

Using Inline IF Statements

You can use “if” statements to change text output in boilerplate text.

Use the BI Publisher context command to place the if statement into the inline sequence rather than into the block (the default placement).

Using the @inline syntax, a sentence string can be constructed conditionally; for example:

The program was `<?if@inline:SUCCESS='N'?>not<?end if?>` successful.

Result in the output:

Copyright © 2016, 2025, Oracle and/or its affiliates.

- The program was successful. (If SUCCESS does not equal 'N')
- The program was not successful. (If SUCCESS equals 'N')

For more information refer Controlling the Placement of Instructions Using the Context Commands.

Using IF-THEN-ELSE

BI Publisher supports the common programming construct "if-then-else". "if-then-else" is extremely useful when you must test a condition and conditionally show a result.

Use the following syntax to construct an if-then-else statement in the RTF template:

```
<?xdofx:if element_condition then result1 else result2 end if?>
```

For example, the following statement tests the AMOUNT element value. If the value is greater than 1000, show the word "Higher"; if it is less than 1000, show the word "Lower"; if it is equal to 1000, show "Equal":

```
<?xdofx:if AMOUNT > 1000 then 'Higher'
  else
  if AMOUNT < 1000 then 'Lower'
   else
   'Equal'
end if?>
```

Using DECODE Statements

The decode function has the functionality of an `IF-THEN-ELSE` statement. The syntax for the decode function is:

```
decode (expression, search, result [,search, result]...[, default])
```

- `expression` is the value to compare.
- `search` is the value that is compared against expression.
- `result` is the value returned, if expression is equal to search.
- `default` is returned if no matches are found.

For example, the following statement tests the value in `BOOK_NOTE_CODE` and outputs a different string for each value.

```
<?xdofx:decode(BOOK_NOTE_CODE,'GEN','General Notes','RATE','Rate
Notes','BILL','Billing Notes','Other Notes')?>
```

Using CHOOSE Statement

Use the choose, when, and otherwise elements to express multiple conditional tests. If certain conditions are met in the incoming XML data, then specific sections of the template are rendered. This is a very powerful feature of the RTF template.

Use the following syntax for these elements:

```
<?choose:?>
<?when:expression?> <?end when?>
```

Copyright © 2016, 2025, Oracle and/or its affiliates.

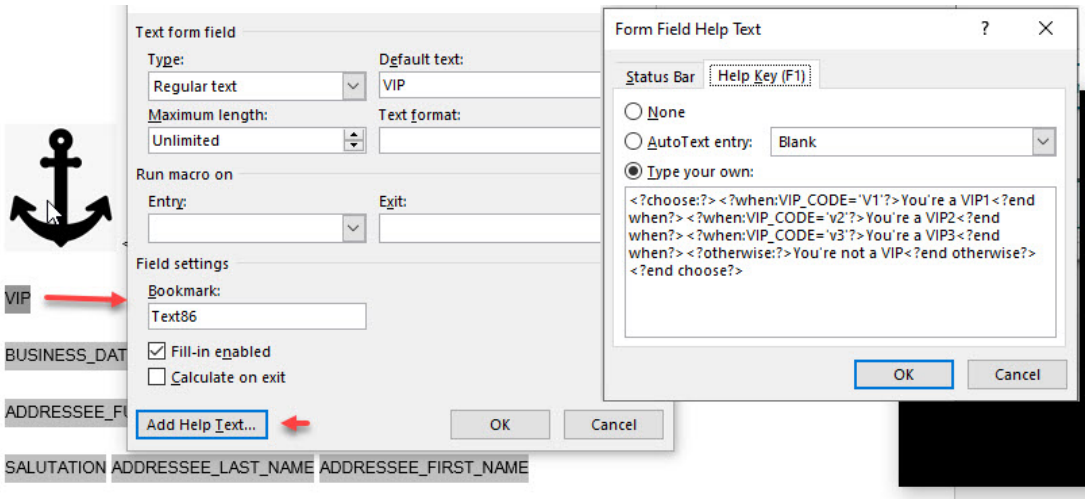
```
<?otherwise?> <?end otherwise?>
<?end choose?>
```

For example, to output a string based on the VIP field:

```
 <?choose:?>
<?when:VIP_CODE='V1'?>You're a VIP1<?end when?>
<?when:VIP_CODE='V2'?>You're a VIP2<?end when?>
<?when:VIP_CODE='V3'?>You're a VIP3<?end when?>
 <?otherwise:?>You're not a VIP<?end otherwise?>
 <?end choose?>
```

Using the form field method; add the expression to the Help Text.

Figure 9-7 <?CHOOSE:?> Example



Adding Conditions for Internal Parameters

Each customizable report contains internal parameters that are used for report generation. These parameters can be utilized when creating conditions for report generation.

For example, if you need to display a graphic on a confirmation letter only when generating in PDF format, these internal parameters would be used and are available.

The XML tags

```
<PARAM_NAME>DESFORMAT</PARAM_NAME>
```

```
<PARAM_VALUE>PDF</PARAM_VALUE>
```

Copyright © 2016, 2025, Oracle and/or its affiliates.

In this example, a condition is created for text to only appear if the report output is PDF format. To accomplish this, add the field PARAM_NAME and then double click to edit. In the Form Field Help Text screen, insert the following line:

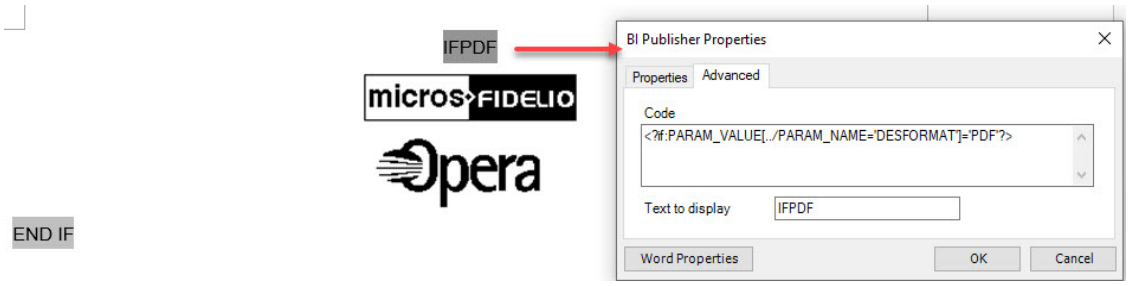
```
<?if:PARAM_VALUE[../PARAM_NAME='DESFORMAT']='PDF'?>
```

Insert an

```
 <?end if?>
```

statement after the image to close the conditional block

Figure 9-8 Conditional Image for PDF Output



Adding Hyperlinks

Adding Hyperlinks for PDF and HTML Output

The RTF template may contain links on text and images to web locations.

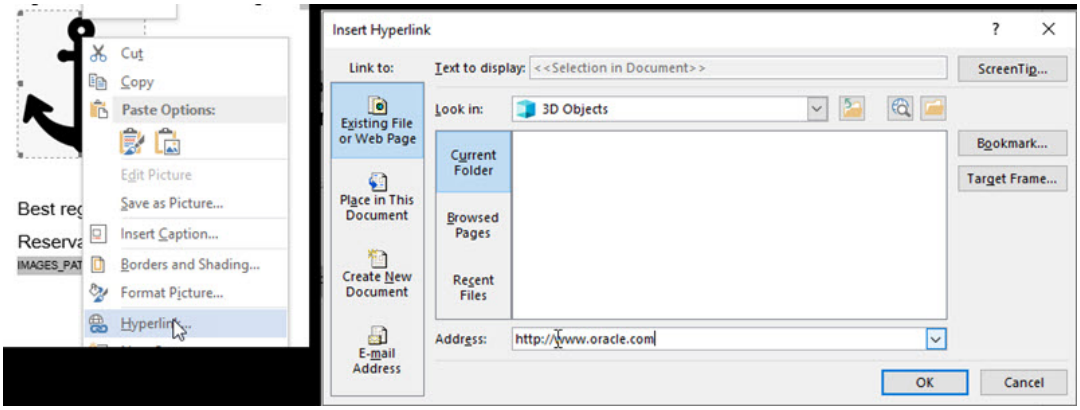
When a hyperlink is setup on an image placeholder, the image becomes a click-able image (button) in the document.

When generated in PDF or HTML format, the PDF file / HTML email will contain those hyperlinks to launch the website.

1. Select the area of text or image in the template.
2. Right click and select **Hyperlink**.
3. Enter the URL in the **Address**.
4. Click **OK**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Figure 9-9 Insert Hyperlink



5. Links can also be defined on images in the template for PDF and HTML output. Select an image and select **Insert** and then select **Hyperlink**. In the resulting email or PDF file, the image is a button the recipient can click to launch the URL.

Special Font Handling

Asian Character Sets

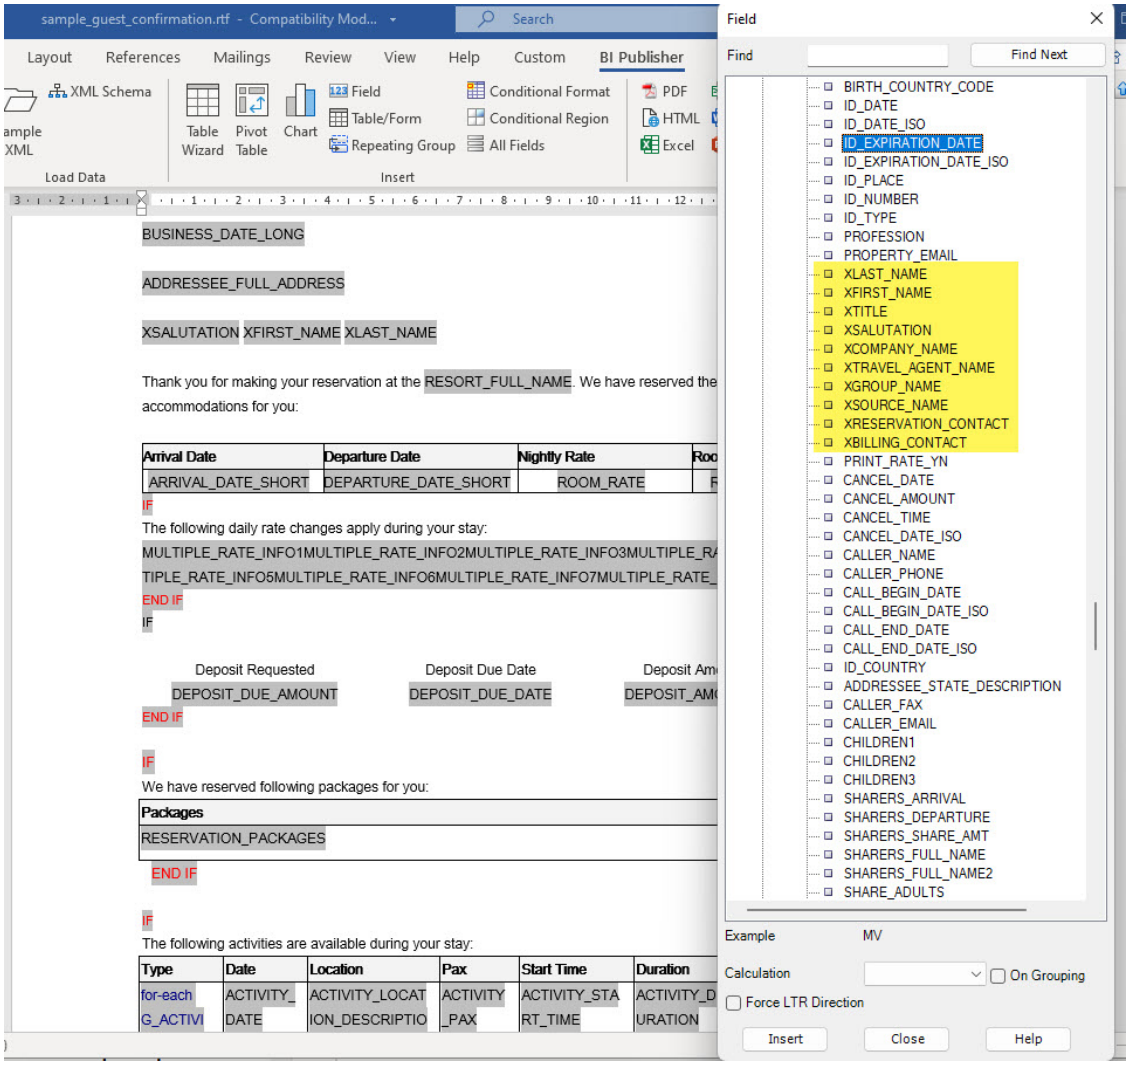
Use DengXian font for Chinese or Japanese characters. For other characters use a Unicode font in the template; all text formatted with a Unicode font is generated using the Arial Unicode font.

> **Note**
>
> Bold, italic and underline styling is not supported by the Arial Unicode font.

Alternate name data elements are prefixed with 'X' (example: XLAST_NAME) in the sample data model. At runtime, if no alternate name exists, these 'X' data elements contain the western (primary) name. Therefore, your templates only need to reference the x-fields and dynamically output the alternate or primary name. Format these fields in a suitable font for the language of the template.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Figure 9-10 Alternate Name



Using Barcode Fonts

The following table describes the barcodes that are included with BI Publisher.

Font File	Supported Algorithm
128R00.TTF	code128a, code128b, and code128c
B39R00.TTF	code39, code39mod43
UPCR00.TTF	upca, upce
MICR____.TTF	E-13B

When you use one of these prepackaged fonts, BI Publisher executes the preprocessing on the data prior to applying the barcode font to the data in the output document. For example, to calculate checksum values or start and end bits for the data before formatting them.

To use the barcode fonts in the report output:

1. Insert a field in the template where the barcode is to display in the report output.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. In the form field, enter the following command:

   ```
   <?format-barcode:data;'barcode_type'?>
   ```

   where:

   - data is the element from the XML data source to be encoded. For example: INVOICE_NO
   - barcode_type is one of the supported algorithms listed above.

   Examples:

   ```
   <?format-barcode:INVOICE_NO;'code128a'?>

   <?format-barcode:INVOICE_NO;'code39mod43'?>

   <?format-barcode:INVOICE_NO;'upca'?>
   ```

3. In Microsoft Word, apply the barcode font to the field.

Extended SQL and XSL Functions

BI Publisher has extended a set of SQL and XSL functions for use in RTF templates. The syntax for these extended functions are the following:

```
<?xdofx:expression?> for extended SQL functions

<?xdoxslt:expression?> for extended XSL functions
```

An SQL example is IF-THEN-ELSE used for defining a conditional region or defining conditional output.

```
<?xdofx: if RESERVATION_STATUS='CANCELLED' then 'Cancellation Number:' else
'Confirmation Number:' end if?> <?xdofx: if RESERVATION_STATUS='CANCELLED'
then CANCELLATION_NO else CONFIRMATION_NO end if?>
```

These two expressions would result in either:

- Cancellation Number: 123456
- Confirmation Number: 987654

Calculating Dates

You can calculate dates using the **ora_format_date_offset()** function and referencing Canonical date fields from the XML.

The expression <?xdoxslt:ora_format_date_offset(DATE_IN_ISO,X,'+')?> adds X number of days to the **date_in_iso** field.

The expression <?xdoxslt:ora_format_date_offset(DATE_IN_ISO,Y,'-')?> subtracts Y number of days from the **date_in_iso** field.

Copyright © 2016, 2025, Oracle and/or its affiliates.

For example to add 14 days to the arrival_date_iso field:

```
<?xdoxslt:ora_format_date_offset(ARRIVAL_DATE_ISO,14,'+')?>
```

The calculated date form field can be formatted using Word native date formatting.

Alternatively, you can use the Oracle <?format-date?> function to format a calculated date.

For example to format a calculated date with 'DD-MM-YYYY' mask :

```
<?format-date:xdoxslt:ora_format_date_offset(ARRIVAL_DATE_ISO,14,'+');'DD-MM-
YYYY'?>
```

For further information, refer to Extended SQL and XSL Functions.

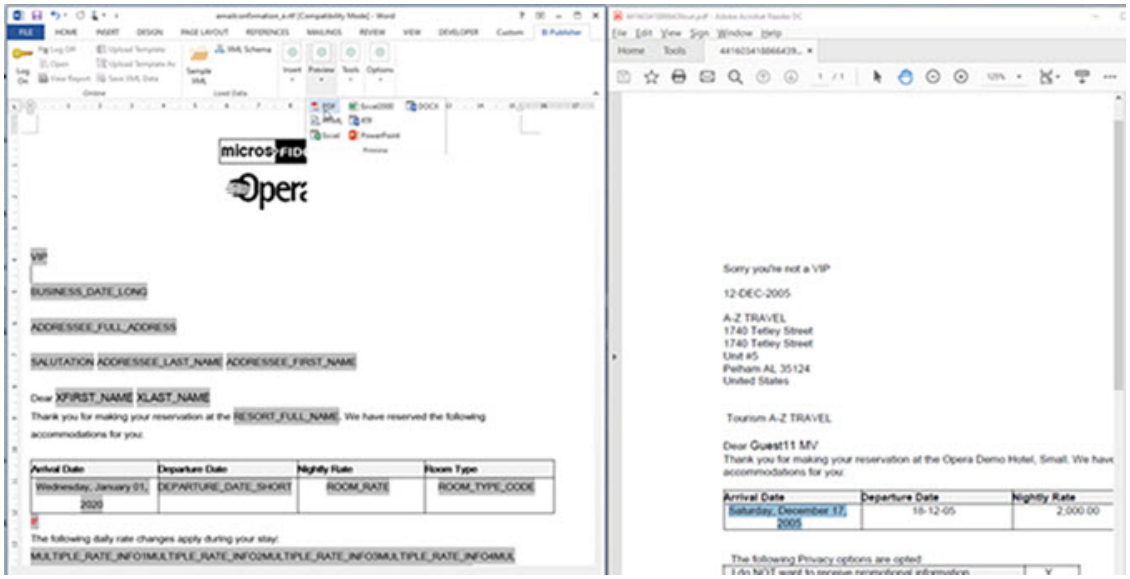
Previewing Template using Sample XML

Once you've finished customizing the template, you can preview from within Microsoft Word to verify the layout, format masks and test that conditions are correct.

From the BI Publisher tab on the toolbar, select **Preview** then select PDF or HTML

A file will generated using the data available in the sample XLM loaded for the template.

Figure 9-11 Preview Template



Saving RTF Template

Ensure you save your modified RTF template; from within Microsoft Word click **Cntrl + S** or click **File** then click **Save**.

Refer to **step 11** in Configuring Stationery Templates topic for information on uploading the modified RTF template to OPERA Cloud.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Updating Customized Stationery with Current Data Model

Following an upgrade of OPERA Cloud the sample RTF template and corresponding XML (data model) is updated to reference and benefit from functionality added.
To benefit from the changes made to the data model your customized templates needs to be updated with the new XML elements.

If you have multiple templates to update repeat the process for each template.

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**.
2. Select the **Show Internal** checkbox and then select the stationery report group from the **Report Group** list, then click **Search**.
3. Select the template to update in the search result.
4. Click the vertical ellipsis **Actions** menu and select **Download Sample Data** to download the updated XML file (to default download folder).
5. Click the vertical ellipsis **Actions** menu and select **Download Customized Report** to download your customized template (to default download folder).
6. Launch Microsoft Word and open the customized report template (RTF file); navigate to the download folder location to access the file.
    a. Click the **BI Publisher** tab on the toolbar and click **Sample XML**.
        i. Navigate to the folder where the sample XML file was downloaded.
        ii. Select the file and click **Open**.
        iii. A message **Data loaded successfully** informs you that the sample XML data is now loaded for use.
    b. Proceed to update the RTF template with new XML elements listed. See Using Stationery Template Editor.
    c. When updates to your template are complete, click **File** then **Save** to save the changes to the RTF and then exit Microsoft Word.
    d. Exit Microsoft Word.
7. In OPERA Cloud (Manage Report).
8. Select the template to update and click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Click **Choose File** and select the updated RTF file from the folder location on your workstation and click **Open** to upload the file.
    b. Click **Save**.

Configuring Stationery Templates

Stationery templates are RTF files, customised in Microsoft Word. Each stationery template is based on a sample RTF file which is renamed, customised and uploaded to OPERA Cloud. When the **Multi Language** OPERA Control is active, you can translate the text in templates to generate localized stationery for guests and sales accounts based on the **Language** selected in the profile. A **Stationery Substitution Language** OPERA Control can be used to generate a substitution template when a language-specific template is not configured.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> For multi-language stationery it is recommended to prefix or suffix filenames with the language code; for example: `e_folio.rtf` , `fr_folio.rtf`, `de_folio.rtf`.

Complete the following steps to customise stationery templates:

- Download the sample RTF template to your workstation.
- Download the sample XML (data model) file to your workstation,
- Rename the sample RTF file to a unique file name.
- Launch Word and open the renamed RTF file and load the sample XML file.
- Customise the layout of the template, adding fields, text, tables and images.
- Save the changes to RTF on your workstation.
- Upload the customised RTF file to OPERA Cloud. Maximum size is 10MB

Adding Stationery Templates

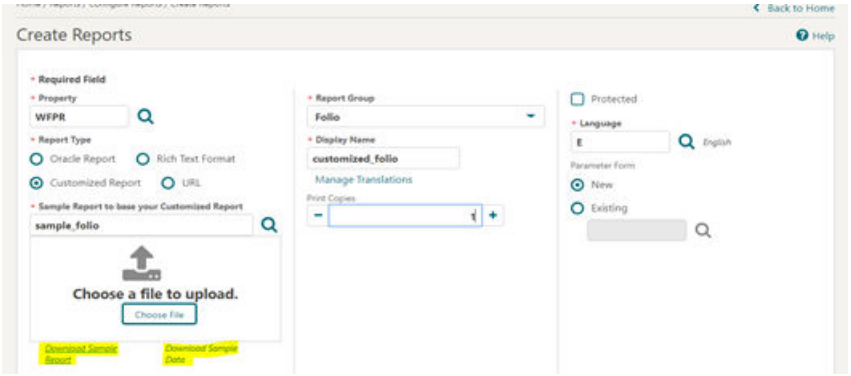
1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**.
2. Click **New Report** and complete the following:
   a. **Property**: Enter or select a property.
   b. **Report Group**: Select a stationery report group from the list. For more information, see Stationery Reports Groups.
   c. **Report Type**: Select Customized Report.
   d. **Sample Report to base your Customized Report**: Click to search and select a sample RTF template to customize.

Figure 9-12 Sample Report to base your Customized Report

   e. Click **Download Sample Report (RTF)** and click **Download Sample Data (XML)** to download the sample template and sample data model.

Copyright © 2016, 2025, Oracle and/or its affiliates.

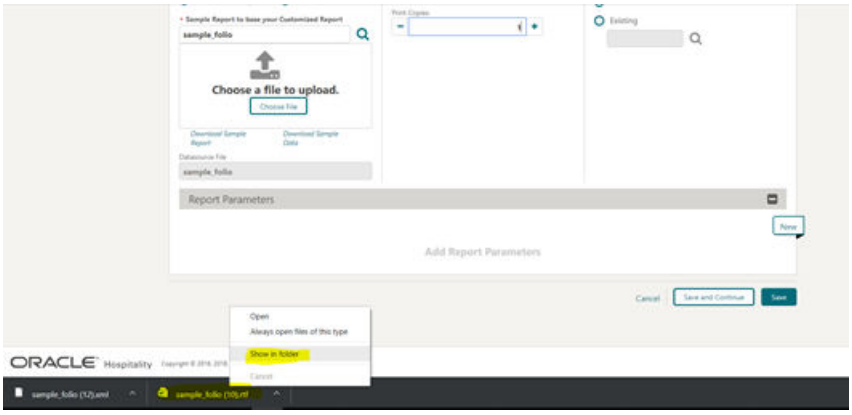
Figure 9-13 Download Sample Report and Sample Data links



> **Note**
>
> Once downloaded, the files are located in the default download folder (that is, the Downloads Folder on your local machine).

f. Navigate to the file location and right click the downloaded file and then click the **Show in folder** option. You can also navigate to the preset download folder to open or view the file.

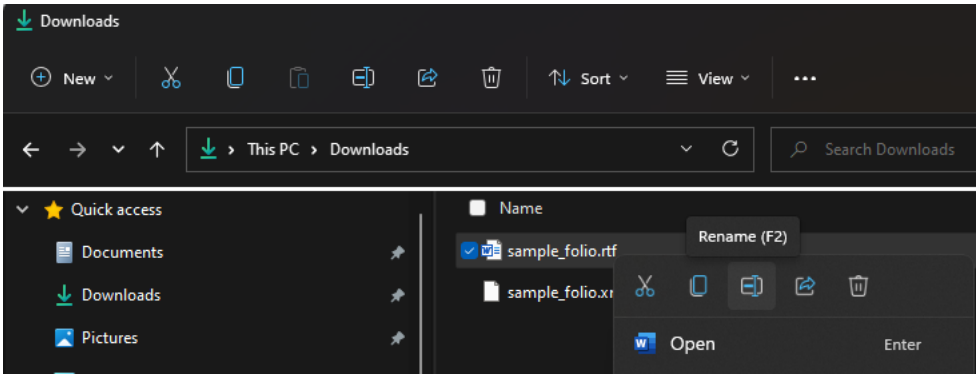
Figure 9-14 Show in folder option



g. Rename the <sample>.rtf file (for example, `sample_folio.rtf`) per your requirement and ensure the updated name does not begin with “SAMPLE.” No name changes are needed for the XML files. Right click the .rtf file and then select the **Rename** option to change the name or press F2. No name changes are needed for the XML files

Copyright © 2016, 2025, Oracle and/or its affiliates.

Figure 9-15 Rename File



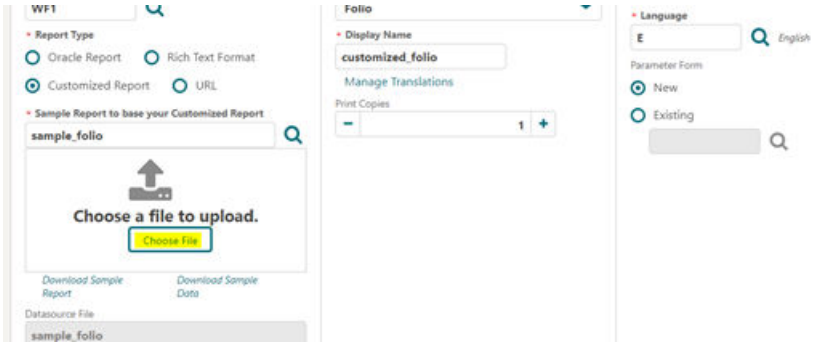
h. Customize the template as needed . For more information, see Using Stationery Template Editor.

i. Save the RTF file and close Microsoft Word.

j. In OPERA Cloud (Create Report), upload the customized RTF file by clicking **Choose File** and then select the file from the workstation location and click **Open**.

> **Note**
>
> Templates must be less than 10MB in size.

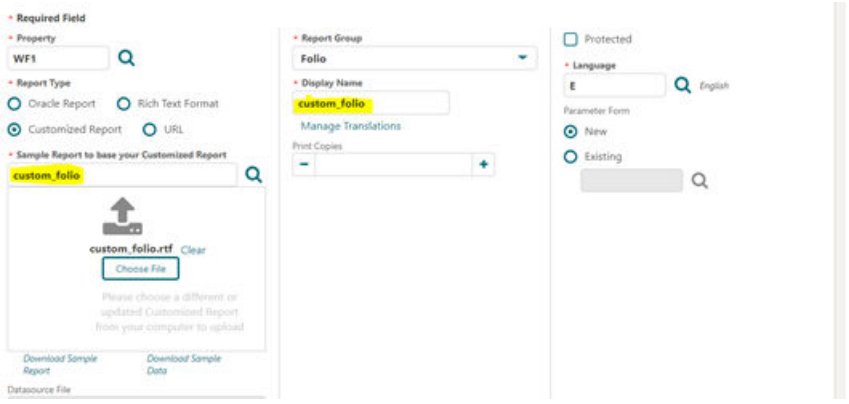
Figure 9-16 Choose File



Once uploaded, the file display name in the **Display Name** field automatically updates to the uploaded .rtf file's name.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Figure 9-17 Display Name matches the uploaded .rtf file's name



k. **Print Copies**: Enter the number based on your requirements (for example, enter 1 or 2).

l. **Language**: Select the language of the template. When the **Multi Language** OPERA Control is active you must configure a template for each profile language or select a language for the **Stationery Substitution Language** OPERA Control.

m. **Parameter Form**: This step is not applicable for PMS stationery templates. For Simple Diary and Sales and Event Management stationery such as the Banquet Event Order and Sales Contract a parameter form is required. For more information, see Blocks and Groups Reports.

n. Click **Save**.

Installing Oracle BI Publisher Desktop on a Workstation

Download Oracle BI Publisher Desktop

Download Oracle BI Publisher Desktop from the Oracle Analytics Publisher site. Choose the Oracle BI Publisher Desktop installer according to your version of Microsoft Office : 32 bit or 64 bit.

The following versions of Microsoft Word are certified for Oracle BI Publisher Desktop 12.2.1.4.0

- Microsoft Office 2021 (Microsoft 365)
- Microsoft Office 2019 (Microsoft 365)
- Microsoft Office 2016

Installing Oracle BI Publisher Desktop

> **Note**
>
> If a previous version of Oracle BI Publisher Desktop is installed it must be uninstalled prior to the installation of new version. See Uninstalling Oracle BI Publisher Desktop. A user with admin rights must perform the Oracle BI Publisher Desktop installation on a workstation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> The Oracle BI Publisher Desktop installer must configure some Microsoft Word components, if you launch Microsoft Word during this process, the installation fails.

> **Note**
>
> Close all Microsoft Office products prior to running the installation. This includes not only Microsoft Word but also Outlook or any software that uses Microsoft Word as a text editor.

The following procedure describes the steps for installing Oracle BI Publisher Desktop for Microsoft Office 365 (32-bit) on a Microsoft Windows 10 machine with JRE 1.8 (32-bit).

1. From Windows explorer, right-click on the **Oracle BI Publisher Desktop** installer executable and choose **Run as Administrator**.
2. You are prompted to choose a language. Click the list to select the setup language for this installation and then click **OK** to continue.
3. Click **OK** to begin the Oracle BI Publisher Desktop - InstallShield Wizard process.
4. A Welcome screen appears, click **Next** to continue.
5. Click **Browse** and choose the desired folder to install Oracle BI Publisher Desktop, then click **Next** to run the setup.
6. Click **Finish**.

Enabling the Template Builder

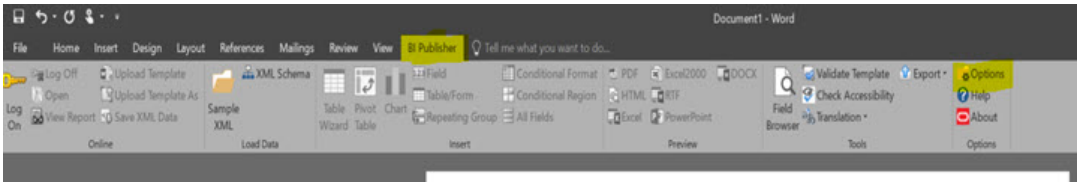
If the BI Publisher toolbar is not displayed in Microsoft Word for a specific user, enable the template builder add in.

1. From the Windows start bar, navigate to **Oracle BI Publisher Desktop** folder.
2. Click the **Enable or Disable Template Builder** shortcut.
3. For more information, refer Doc ID 2681769.1.

Post Installation Steps

1. Launch Microsoft Word.
2. Click the **BI Publisher** tab in your Microsoft Word toolbar and select **Options**. An Option screen appears.
3. See figure, BI Publisher Tab.

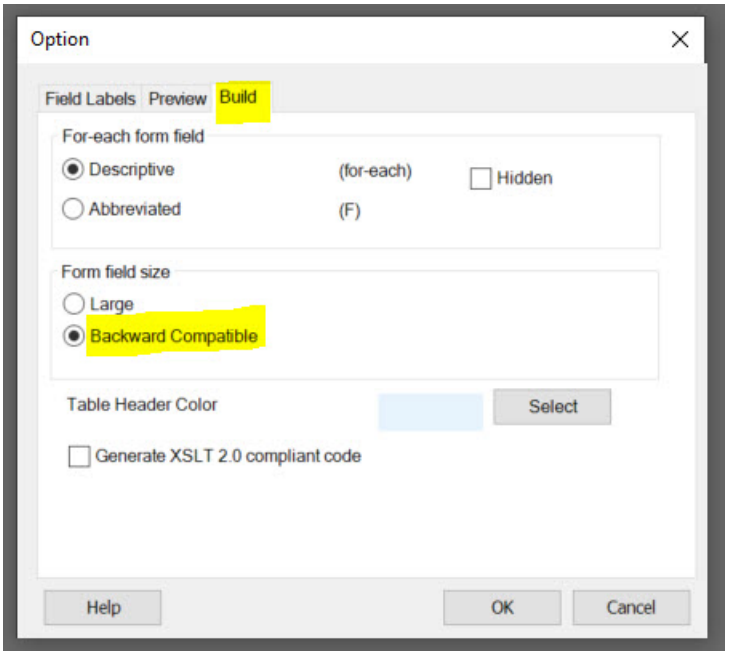
Figure 9-18 BI Publisher Tab



4. Click the **Build** tab and select the **Backward Compatible** option.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Figure 9-19 Option screen



5. See figure, Option screen.
6. Click **OK** to close the screen.

Windows Registry Update for WMF Images

To prevent creation of WMF images, increasing size of RTF

1. Click **Start**, click **Run**, type **regedit** in the **Open** box, and then click **OK**.
2. Locate and then click to select one of the following registry keys: `HKEY_CURRENT_USER\Software\Microsoft\Office\16.0\Word\Options`.
3. Select **Edit** menu, then click **New** and select **String**.
4. Enter **ExportPictureWithMetafile**, and then press **ENTER**.
5. Right-click **ExportPictureWithMetafile**, and then click **Modify**.
6. In the **Value data** box, type **0**, and then click **OK**.
7. On the **File** menu, click **Exit** to quit Registry Editor.

Barcode Fonts

There are several fonts that output barcodes included with BI Publisher. The following table describes the barcodes that are included with BI Publisher.

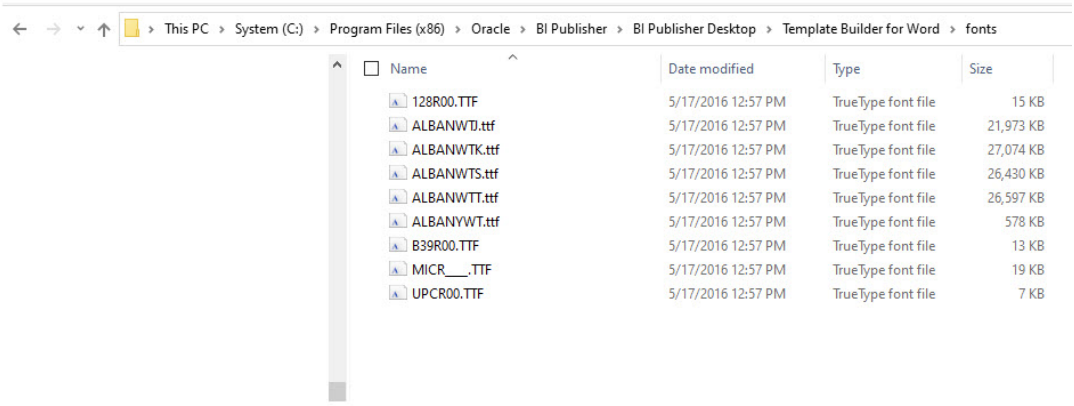
Font File	Supported Algorithm
128R00.TTF	code128a, code128b, and code128c
B39R00.TTF	code39, code39mod43
UPCR00.TTF	upca, upce

Installing Barcode Fonts

1. Launch File Explorer.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Navigate to x:\Program Files (x86)\Oracle\BI Publisher\BI Publisher Desktop\Template Builder for Word \ fonts.
3. Select the font file, then right-click and select **Install for all Users** (requires Administrator authority).



Uninstalling Oracle BI Publisher Desktop

1. Uninstall the Oracle BI Publisher / Analytics Publisher from the Microsoft Windows Control Panel, Add or Remove Programs option.
2. Go to the installation folder (for example, C:\Program Files\Oracle) and verify the BI Publisher directory is removed. Delete this folder if it still exists.
3. Open **Microsoft Word** and verify the **BI Publisher** tab no longer appears.
4. Shut down and restart your workstation before reinstalling Oracle BI Publisher Desktop.

Report Descriptions

The following contains short descriptions of reports categorized by their report group.

Accounts Receivable Reports

Accounts Receivable Report by Activity Type (aractivity) - displays all accounts receivable accounts for a specified date range.

Aging by Type Only (agetype) - displays all accounts receivable accounts with an outstanding balance for the selected account type.

Aging Summary By Type (araging) - displays the current outstanding balance of each account type as of the business date selected.

Aging Summary of All Accounts (aragingdet/aragingdetall) - displays all accounts receivable accounts that have an outstanding balance or activity on the account.

Accounts Receivable Activity - All Types (aractivity) - displays a log of all postings and payments made on an accounts receivable account for a particular date.

Accounts Receivable Adjustments (aradjustments) - displays adjustments that have been made to a posting from a previous business date (that is, posted and audited). Adjustments involve reversal of the original transaction (or group of transactions) and re-posting the correct transactions. Adjustments can be made to a single transaction or to multiple related transactions.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Accounts Receivable Aging Summary for All Types (arallagetype) - displays all account types and the corresponding accounts that fall under each account type.

Accounts Receivable Apply/Unapply Payments (ar_payments_tracking) - provides a report of applied and unapplied payments for a specified date range, accounts, and payment methods.

Accounts Receivable Collection Statistics (ar_collectionstat) - displays accounts with invoices paid in full or the balance is equal to 0.00. The report calculates how many days it took to bring any invoice balances to 0.00 from the date the record was transferred to accounts receivable.

Accounts Receivable Credit Balance (arcreditbal) - displays all accounts that have or had a credit balance on a selected business date. A credit balance is defined as the respective account having a credit on their account, rather than owing monies to the property (a debit).

Accounts Receivable Credit Card Transfer (arcrtransfer) - displays all transactions transferred from front office to accounts receivable to completely settle a guest folio.

Accounts Receivable Credit Limit (ar_balance) - displays a summarized alphabetic listing of all accounts with their balances for the current business date.

Accounts Receivable Detailed Aging (aragingdet/aragingdetall) - displays all account invoice details per accounts receivable account. This report lists each invoice, transaction or folio that contributes to the current balance of each individual accounts receivable account. The information displays the invoice balance for each line item in the appropriate aging level.

Accounts Receivable Ledger (arledger) - displays all transactions that have been posted directly on an accounts receivable account or transferred to an accounts receivable account for a selected business date. Print this report to verify that all transactions balance back to the accounts receivable ledger portion of the trial balance.

Accounts Receivable Master List Detail (ardirectdet) - displays a list of all configured accounts receivable accounts and a more detailed breakdown of the account setup. The information includes account status, permanent account Y/N, credit limit, batch statement Y/N, as well as more basic account information such as account number and name, address, contact, and phone number.

Accounts Receivable Master List Summary (ardirect) - displays a list of all configured accounts receivable accounts with basic account information. This will include the account number, account name, address, contact information, and the telephone and fax numbers configured in the Accounts Receivable setup.

Accounts Receivable Payments / City Ledger Settlements Summary (arpayments) - displays all payments posted to an accounts receivable account for a specific date.

Accounts Receivable Trace (artraces) - displays messages that notify the accounting department staff of actions they are expected to take.

Accounts Receivable Transfer Report (artransfer) - details the folios settled to direct bill, invoices awaiting transfer to AR and invoices transferred to AR.

Accounts Receivable Unpaid Invoices (ar_unpaid) - displays a list of all unpaid invoices when the Delay Days Report and Payment Due Days OPERA Controls are active based on **Calculate Based on Payment Due Days** check box.

Days Credit Sales Outstanding (days_credit_sales_outstanding) - calculates the total accounts receivables outstanding (non-credit card) for the current business date. The report then subtracts daily balances from the outstanding until it reaches 0. The number of days it takes to reach 0 is displayed at the bottom of the report and represents the total days sales outstanding.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Accounts Receivable Aging Summary for All Types (arallagetype)

Accounts Receivable Aging Summary for All Types (arallagetype) report displays all account types and the corresponding accounts that fall under each account type.

Activity Reports

Prerequisites for Activity Report

The following activity reports are available for selection:

Activity Report (rep_activity_rep with rep_activity.fmx): This report prints To Do's and Activities for the past, present, and future, or spanning from the past to the future.

Activity Summary Matrix Report (rep_srep_act_summary.rep with rep_srep_act_summary.fmx): This report summarizes catering activities by type and owner.

Activity Report (rep_activity_rep with rep_activity.fmx)

This report prints To Do's and Activities. You can run the report for the past, present, and future, or spanning from the past to the future. It is ideal for a recap of all activities performed for the past week or months.

Copyright © 2016, 2025, Oracle and/or its affiliates.

When printed for a specific Account rather than for a specific sales manager, the report also provides a great way of showing the total activity history of the account. For example, it is possible to see that the account had been contacted regularly every six weeks in the first two years in the system, but then started to be called only seldom and randomly when another sales manager took over the account. Therefore, production has gone down. If a manager/director of sales reviewed this report for key accounts on a regular basis, potential problems with certain accounts might be prevented.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Activity Filter. This option allows you to print the report by any predefined filters that have been created for the activity module. It also gives the user the option to create a new filter directly from the report order form, which will subsequently also be accessible from the Activity Search screen.

Account Name. Select to filter this report by account name.

Contact Name. Select to filter this report by contact name.

Bus. Block Name. Select to filter this report by Business Block name.

Activity Owner. Select to filter this report by activity owner.

Activity Name. Select to filter this report by specific activities.

Activity Type. Select to filter this report by activity type.

Activity Class. Select to filter this report by activity class.

Purpose. Free form field to filter for a specific activity purpose.

Activity Result. This filter is only visible when this report is run from SFA and when the application parameter ACTIVITY > ACTIVITY RESULTS is set to Y. Use the down arrow to select Activity Results from the LOV.

Activity Date Range From/To. Select a date range between which activities exist.

> **Note**
>
> The date and time information related to activities is converted to your logged-in time zone; if no time zone is specified for the logged-in user, the logged-in property time zone is assumed; if the logged-in property does not have a time zone assigned, the database time zone is assumed. See Activity Time Zones for details.

Group By. Allows to sort and group the report by either Account, Sales Manager, or Date. This report always considers a group by Account.

> **Note**
>
> When no Group by is selected, the Activities are sorted by Start Date and Time and there is no grouping by Account.

Copyright © 2016, 2025, Oracle and/or its affiliates.

When Account is selected, the first group by is alpha by Account Name, then alpha by Contact Last Name, and then the Activities are sorted by Activity Start Date. When Owner is selected, the first group by is alpha by Account Owner Code, then alpha by Account Name, then alpha by Contact Last Name and then the Activities are sorted by Activity Start Date. When Date is selected the first group by is Activity Start Date, then alpha by Account Name and then alpha by Contact Last Name with the activities listed below.

For each group by, the Account/Contact is listed in alphabetical order first by Account then by Contact Last Name. When no Contact is attached to the Account, that Account will be displayed last, alphabetically in the account grouping.

Example:

- ABC Account / ABC Contact
- ABC Account / XYZ Contact
- ABC Account / No Contact

If there is an activity with no account included on this report, those activities are listed alphabetically by Contact after the activities with Accounts have been reported.

Page Break. This flag works together with the Group by option. A page break will occur after each member of the selected group, i.e., after each account, if Account has been selected as the Group By filter, or after each sales manager if Owner has been selected in the Group By filter.

Display Address. If this check box is selected, the addresses for linked accounts and contacts are printed on the report (including Address1, Address2, Address3, and Address4). If it is not selected, only the account and contact names and phone numbers print.

Completed (Yes/No/Both). Select to view completed, incomplete or all activities.

Display (Activities/To Do Only/Both). Select to display activities only, to do only or both.

Notes (All/Limited/None). If limited is selected only the first 100 characters of each activity note will print on the report instead of the whole note text if it is longer.

Report Data

The report displays all Activities and To Do’s that fall within the selected criteria. Activities are always grouped by Accounts, either as the primary or secondary group, and depend on the value selected in the Group By filter. For example, it is not possible to switch this report to print in pure date order, irrespective of the accounts these activities are linked to. When group by Owner is selected, the activities are first grouped by Owner Code and then by Account / Contact within that owner code.

Account and Contact names and phone numbers are printed in the header line of each group. If the Display Address flag is checked, the appropriate account and contact addresses print in this header line.

For each activity that exists in the selected time frame for this account, the activity owner, start date, start time and end time, the activity type code, the activity purpose, and the booking name of the linked booking id (if any) will print. Activity Notes are printed below the initial activity record if any exist, depending on the selection made on the filter to print either full notes, notes limited to 100 characters, or no notes at all.

Activity Summary Matrix Report (rep_srep_act_summary.rep with rep_srep_act_summary.fmx)

The Activity Summary Matrix Report summarizes catering activities by type and owner. The report prints a summary of all activities for a selected date range by type, and can be printed for activities based on their completion status or for all activities.

Selection Criteria

1. **Property**: Enter or select the property. You can select multiple properties from a hub location.
2. **Activity Type**: A mandatory field. Use this option to select one, multiple, or all available activity types (up to 14) to print on this report.
3. **Activity From Date** : Filter the report by selecting an Activity From date range.
4. **Activity To Date**: Filter this report by selecting an activity To date range for this report.
5. **Owner**: Select the Owner or multiple Owners for which the report should print.
6. **Purpose**: This field accepts free-form text entry and wildcards.
7. **Activity Result**: Use the multi select list.
8. **Completed**: Select Yes, No, or Both. Select include or exclude activities that are either completed, not completed or both.

Report Data

The report prints in the following order: Owner Code, Sales Manager, and all selected activity types. The final column contains totals for all the selected activities for each sales rep. The final row of the matrix contains totals for each selected activity type and a grand total of all activities by owner in the last column.

Arrivals Reports

- **Arrivals and Checked In Today** (arrchkinbyroom) — lists all expected arrival and reservations checked in today.
- **Arrivals with Scheduled Activities** (resarr_activities) — displays reservations with scheduled activities and allows you to group the output by arrival date, activity type, or block code.
- **Arrivals: Detailed** (res_detail) — provides a detailed list of all arrival reservations for the selected date range and various other filter options. When the **Preregistration Check In** OPERA Control is active use this report to list preregistered arrivals. Report can be sorted by Name, Room, Reservation Type, ETA and other attributes.
- **Membership Pre-Check** (arrprecheckinmem) — displays reservations that have not yet checked in, and have active membership attached to the reservation.
- **Police** (police_report) — generated daily for all reservations that have a check in date equal to the business date. The report will display the sequence number, first name, last name, passport number, nationality, mother's name, father's name, place of birth, arrival date, and departure date.
- **Routing Details** (routing_details) —shows all reservations with a room, window or comp routing instructions. This report can be run for arrival, in-house, or both block and individual reservations. A range of dates can be selected for reservations that are either arriving, checked in, checking out, or are already checked out. The Date Range can be filtered by Arrival Dates or Stay Dates.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Gaming

For comp routing, the report displays the dates of the reservation, the authorizer, dates of the comps, and any notes attached to the comp. Room routings will display the dates of the room routing, the room number, and name on the reservation. Window routing will display the window number and the person responsible for payment of the routing. (Available when the **Routing Instructions** OPERA Control is active).

Arrivals: Detailed Report (res_detail)

The **Arrivals: Detailed** Report (res_detail) provides a detailed list of all arrival reservations for the selected date range and various other filter options. When the **Preregistration Check In** OPERA Control is active use this report to list preregistered arrivals. Report can be sorted by Name, Room, Reservation Type, ETA and other attributes.

Blocks and Groups Reports

Prerequisites for Blocks and Groups Reports

Banquet Event Order - 1 Column (sample_beo_1column.rtf) – contains vital information about the catering portion of a business block broken down into events and resources in a 1-column format.

Banquet Event Order - 2 Column (sample_beo_2column.rtf) – contains vital information about the catering portion of a business block broken down into events and resources in a 2-column format.

Banquet Event Order - 2 Column FB (Food and Beverage) (sample_beo_2collumn_fb.rtf) – contains vital information about the catering portion of a business block broken down into events and resources.

Banqueting F&B Plan (rep_fbplan.rep with rep_fbplan.fmx) – The Banqueting F&B Plan report is especially useful for the Banquet Chef and kitchen. You can use it for Banquet Event Orders (BEO) or as a detailed document for any food or beverage preparation and requirements.

Block Actual Report (rep_actbb_p.rep) – This report compares booked room nights, revenue, and average rate with picked-up room nights, revenue, and average rate.

Block Actual Pick Up Report (rep_actbh.rep) – This report compares booked room nights, revenue, and average rate with picked-up room nights, revenue, and average rate. This is a slightly different model of the Block Pick Up Report (REP_ACTBB_P.REP) with a different lay-out and filter options, but essentially the same information is included.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Block Cancellation Summary Report (rep_cancel_summary.rep) – The main purpose of the Cancellation Summary report is to show all groups canceled or lost for a specific cancellation date range or a specific arrival date.

Block Conversion (rep_block_conversion.rep) – This report calculates the booking conversion to an Actual status for any date range in absolute figures as well as conversion percentages.

Block Information (resblkinfo) – This report displays a detailed breakdown of a block header and room grid for a specified date range.

Business Block Change Log (rep_bookchglog.rep with rep_bookchglog.fmx) – The Business Block Change Log report is a listing of the production (status/revenue changes) changes made to a Business Block within a specified production period. Changes include status changes, increase or decrease of the room block, or increase or decrease of the revenue (rate changes).

Business Block Lead Time Report (rep_block_leadtime) – This report displays multiple statuses (by date) and revenue types for Business Block bookings.

Business Block Total Spend Report (rep_busblock_spend.rep) – The Business Block Total Spend Report displays the total group spend by including all revenues posted to any reservations linked to the block.

Contract Merge Report (Based on Sample_Cont_Merge.RTF with Rep_Cont_Merge.FMX) – This report outputs group room block and catering event details. It is possible to customize sample_cont_merge.rtf into multiple reports, each with the Rep_Cont_Merge parameter form.

Deposit Report (rep_deposit.rep with rep_deposit.fmx) – The Deposit Report provides an overview of business block deposits requested and received. Room and Catering deposits can be listed separately if they are requested that way.

Forecast/Availability Book (rep_rooms.rep with rep_rooms.fmx)– The Rooms Availability and Forecast report parameter screen provides options for printing the Rooms Availability report as well as the rooms forecast report. When combined, these two reports form a unit that presents a picture of the on-the-books group business for the coming months compared to targets and budgets.

Group Room Pace (BI) Report (rep_group_rooms_pace_bi.rtf with rep_group_rooms_pace_bi.fmx) – The Group Room Pace Report is sorted by Property Year and grouped by Total, Catering Only Y (Sales) and Catering Only N (Catering).

Group Room Reservation Sheet (Sample_GRMRES_Sales_STD.Rep with Sample_GRMRES_Sales_STD.fmx) – This report details all information about a group block including linked accounts, contact and agent information, room grid with rates and revenue, all major block details, catering event information, sales activities, and deposit information.

Month End Details Report (BI) (rep_month_end_details_bi with rep_month_end_details_bi – The Month End Details report details business block and sales and event production changes during the dates requested.

Pro Forma Invoice Generates Report (Rep_Proforma_Invoice) – The Pro Forma Invoice Generates Report details guest rooms, all catering packages, events, and resources booked on a block in a billing format. The number of units booked, the price per unit, and the total price are printed in a list format. It can provide a sub-total and page break per day and can also be printed for single events.

Quote Report (sample_sc_quote) – The Quote report provides day-by-day accommodation and event details. As a customizable stationery template, you can produce a quote detailing the Accommodation, PMS Packages for City Tax and/or Breakfast Packages, Catering Packages, Events, and Event Resources.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Room and Catering Revenue Pace (BI) (rep_room_cat_rev_pace_bi.rtf with rep_room_cat_rev_pace_bi.fmx) – This report displays room and event revenue by Stay Period for the requested Production Period. It also displays the On the Books forecast revenue for the same Stay Period with a comparison to OBI Budgeted Revenue, Same Time Last Year (STLY), and Actual Last Year (ACTLY) figures.

Banquet Event Order – 1 Column (Sample_BEO_1Column.RTF with Rep_BEO_1Column.FMX)

The Banquet Event Order 1 report is a comprehensive document that contains all the vital information about the catering portion of a business block broken down into events and resources. It is an ideal tool for communicating with customers and various hotel internal departments to ensure that all customer requirements regarding the events are met and prepared per agreement and contract.

The report is one of several sample BEO (Banquet Event Orders) that you can customize during installation of the system to be further tailored to the hotel's specific requirements.

> **Note**
>
> When selecting the email method for printing Banquet Event Orders from the main Reports screen, the document attached to the email is renamed to the report name with the Block ID appended to it. For example, in the case of a BEO named BEO 1 Column, the output would be renamed as BEO 1 Column - 795547.pdf.

The Property list of values in this report is limited by the properties to which the user has the appropriate access granted.

You can customize this report using the Stationery Editor. The following Selection Criteria fields are available when using the Stationery Editor.

Selection Criteria

1. **Property**: Select the property for which the report should be printed. The BEO can be ordered across multiple properties in a multi property environment. This is useful if a booking has its event distributed over several properties.
2. **Report Type**: Customized Report.
3. **Sample Report to base your Customized Report**: Select Sample_beo_1column. Once selected, the links to Download Sample Report and Download Sample Data will be displayed allowing for the templates to be downloaded and modified. The sample data file will allow users to preview the changes without having to upload the report into the application. The modified file can be uploaded through the Choose File option.

   > **Note**
   >
   > You must rename the file without using the word "sample."

4. **Datasource File**: This read only field is populated automatically based on the report selection.
5. **Report Group**: Select the group from the list. It is recommended that you load the report in the Group Stationery report group.

Copyright © 2016, 2025, Oracle and/or its affiliates.

6. **Display Name**: Enter the report name.
7. **Print Copies**: Enter the number of copies to print.
8. **Protected**: Prevents users from editing the report.
9. **Language**: Determines the language in which the report prints.
10. **Parameter Form**: Select the Sample BEO 1 Column parameter form.

Report Parameters

When creating or editing the report, you can set default values for these parameters.

1. **Event Date From/Event Date To**: Allows you to select the event from and to dates.
2. **Block Arrival Date From/Arrival Date To**: Allows the selection of the block from and to dates.
3. **Business Block**: Select one or several specific business blocks for printing the BEO report.
4. **Event**: Select one or several events for printing the BEO.
5. **Event Status**: Select event statuses. Typically, return-to-inventory statuses, like lost and canceled statuses, would be excluded.
6. **Event Type**: Select or several event types to print the BEO.
7. **Space**: Select one or several function spaces in which the events are taking place.
8. **Item Class**: Allow you to select the resource item classes that should be printed. Depending on whether the BEO is printed for internal use or to send to the customer, your selections here could be different. For example, there might be item classes that are necessary to print for internal use, like furniture and linen requirements, but not necessary to print on the copy you send to the customer.
9. **Block Note Type**: Allows you to select business block note types to be printed on the BEO. This parameter works in conjunction with the internal and external notes flag on the first tab. Even if note types have been selected, if neither internal nor external are identified, no notes would print. Not all business block notes might be relevant to print on the BEO.
10. **Cover Letter Note Type**: A portion of the cover letter can be made up from business block notes, which make the letter more flexible and allows for custom texts per customer without having to change the text that is embedded in the report. Enter the note type to print on the cover letter.
11. **Sort By**: Allows the ordering of events by one of these four predefined sort orders:
    a. Event Date + Booking Name + Event Time
    b. Event Date + Event Time + Booking Name
    c. Booking Name + Event Date + Event Time
    d. Booking Name + Master Event Date + Master Event Time
12. **Address Type**: Allows you to select an address type other than the primary address. This provides the option to print an extended byte address onto the BEO if one is attached to the account or contact, even if it is not the primary address. Any address type can be chosen. If the field is left blank or the selected address type does not exist for the current customer, the primary address will print instead.
13. **Address Format**: Allows you to select address formats different from the standard format. This is useful in an international environment where addresses might have different formats from country to country. For example, when sending a BEO to Europe, the address

Copyright © 2016, 2025, Oracle and/or its affiliates.

format might have the zip code before the city name and no state printed at all. The list of values shows all configured catering address formats. If the field is left blank, the address prints the default format.

14. **Print Address of**: This option determines what address to print as part of the header. This can either be set to print the account address or the contact's address.
15. **Print Account**: The Print Account defaults to the Account marked as PT for the Business Block from the Name Select screen. If a different Account should be printed on the BEO, select the Print Account ellipsis and click the PT column to select another Account already linked to the business block.
16. **Print Contact**: Print Contact defaults to the Contact marked as PT for the Business Block from the Name Select screen. If a different Contact should be printed on the BEO, select the Print Contact ellipsis to select another Contact already linked to the business block.

> **Note**
>
> When the BEO is printed for more than one booking, the Print Account and Print Contact are pulled by default. No option is provided to select a different Account or Contact for Printing. If no Print Account or Print Contact is selected for a booking, the default hierarchy is used. Additionally, when no relationship exists between the Print Account and the Print Contact, the Print Contact appears red.

17. **Event Printing Method**: The possible selections are one event per page, Master and Sub per page, Prints events continuously.
18. **Revenue Summary**: The possible options are Internal, External, or None. The External and Internal options print a revenue summary at the end of the BEO before the general conditions. External summarizes non-package revenues by date, and catering packages as one price per delegate without breaking it down into its component revenue types. Internal summarizes non-package revenues by revenue type per date and non-package revenue by event and revenue type per date. Selecting None suppresses the Revenue Summary completely.
19. **Print Deposit**: If checked, deposit information prints on the BEO. If not checked, that information is suppressed.
20. **Print Deposit Details**: Select whether to print deposit by Event Printing Method or on Last Page Only. Available when printing by **Block ID**.
21. **Sort Deposit**: Deposits can print sorted by type or by due date. If type is selected a sub-total for each type prints as well as a general total.
22. **Print Internal/External Notes**: Specify whether notes should print on the BEO and if so, select from notes that are marked as Internal, External, or both. Typically, only external notes would be selected if the BEO is printed to be sent to a customer and either only internal, or internal and external, if the BEO is printed for use as inter-departmental communication tool.
23. **Print Block Notes on Last Page**: If checked, the selected **Book Note Types** output once on the final page of the last banquet event order. Available when printing by **Block ID**.
24. **Suppress Account Name**: This suppresses any reference to an account on the BEO header and in the signature. This is typically done for “social” BEOs that are organized privately by individuals that are not associated with any account, for example, weddings, birthday parties, and so on.
25. **Suppress Signature**: Select this option to suppress the Signature field at the end of each BEO.

Copyright © 2016, 2025, Oracle and/or its affiliates.

26. **Hide Doorcard**: This suppresses printing the Post As references on the event itinerary.
27. **Print Package Name for Multiple Days**: If a Business Block has a Catering Package that spans multiple days, checking this flag makes the package header information print on each date that has a Package Event. If the flag left deselected, the package header information print only on the first day of Package Events.
28. **Exclude Alternate Events**: When the application function Catering > Alternate Space is set to Y, the Exclude Alternate Events check box is visible. When selected, Alternate Events do not print on this report.
29. **Print Extended Characters**: If secondary account and contact names are entered into the system using the globe button on the appropriate fields (only available if the application function General > Alternate Name is active), the report procedure scans those secondary fields when printing account and contact information; if an entry is found, it returns that entry instead of the primary name. If the appropriate fields are empty, the regular names print. This functionality is primarily added for extended byte handling in the Asia- Pacific region.
30. **Reset Page Numbering**: Select this option to reset the page numbering when printing multiple BEOs. If unchecked, the pages are numbered based on the total number of pages in the BEO batch. If checked, the page numbers are reset with each new agenda.
31. **Print General Conditions**: General conditions and terms of contract can be added as text pages after the body of the BEO. They would have been tailored to the hotel on installation. Typically, the general conditions would only be printed if the BEO is sent out to customers.

> **Note**
>
> When generating the BEO a Block ID is required in order to select Print General Conditions. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

32. **Print Cover Letter**: Prints a cover page. The text of that page is customized to the hotel and can be individualized using business block notes. Typically, this cover page would only be printed if the BEO is sent out to customers. When generating the BEO by Block ID, you can select the option to print the Room Grid.

> **Note**
>
> When generating the BEO a Block ID is required in order to select Print Cover Letter. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

33. **Print Package Events Combined**: When the Combine Package Events in BEO OPERA Control is active, the Print Package Events Combined check box is visible. When selected, the attendee count for package events with the same Block ID, Event Name, Event Type, Event Dates, Event Status, Event Times and Function Space are summed to output a total number of attendees
34. **Print Room Grid**: Prints the Room Grid. Once selected, additional parameters will be enabled to control how the room and rate information appears within the grid.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When generating the BEO a Block ID is required in order to select Print Room Grid. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and disabled for all fields related to the room grid.

35. **Grid Type**: Allows you to determine which grid type will print on the BEO. The possible options are Contract (available when the OPERA Control for Contract Grid is active, Current, or Pickup.
36. **Revenue Values**: Select an option from the list below to determine how the rates amounts are displayed in the grid. For more information, see: Contract Merge Report, Revenue Values Calculation Examples
    a. Gross Rates/Revenue. Gross Room Rate is calculated as:
        i. Included generates are not deducted.
        ii. Excluded generates are added.
        iii. Excluded packages are not added. Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
    b. Net Rates/Revenue. Net Room Rate is calculated as:
        i. Included generates are deducted.
        ii. Excluded generates are not added.
        iii. Included packages stay included.
        iv. Included generates on included or excluded packages are calculated out. Net Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
    c. Gross and Net Rates/Revenue. When this option is selected, both the Gross and Net room rates are reported and displayed.
37. **Rooms with Rate and No Inventory**: When selected, room types where no inventory has been booked are included.
38. **PMS Room Type**: If selected, PMS room types output on the BEO instead of the Room Pools. If the Room Pools OPERA Control is not active and room pools are not configured for the property, the PMS room types will print by default. For more information, see: Configuring Room Pools
39. **Occupancy**: If selected, the number of rooms per occupancy level per day is included on the report when the Occupancy Split OPERA Control is activated. If not selected, the total number of rooms per day per room type per day is output.
40. **Room Rates**: Select to display room rates, otherwise, Room and Rates Separately, Inline Currency, and Show Decimals are disabled.
41. **Room and Rate Separately**: If selected, room nights and room rates are included in separate grids. If not selected, they appear in the same grid. This option is available only when both the Rate and the Occupancy flags are selected.
42. **Inline Currency**: Enabled when Room Rates is selected. If selected, the currency symbol is included with the rate in the grid cells in the Room Grid.
43. **Show Decimals**: Enabled when Room Rates is selected. If selected, the rates in the Room Grid with decimals appears as set up in the Property Details. If not selected, the rounded rate displays without decimals.

Copyright © 2016, 2025, Oracle and/or its affiliates.

44. **Print Space Between Currency and Amount**. Select the check box to print in the report (available when Room Rates and Inline Currency are selected). When selected, a space will be added between the currency symbol/code and the rate amounts displayed in the grid.
45. **Currency**: Available when the application function Rates > Foreign Currency Handling is active, this selection allows the conversion of foreign currency to a property's base or catering currency when the foreign currency has a defined exchange rate for posting.
46. **Exchange Rate Date**: If selected, enter a date or use the calendar tool to select the effective date of the exchange rate for the specified currency. The prices in the BEO are calculated using the exchange rate for the specified currency as it was on that date.
47. **Creation Date**: If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the booking creation date.
48. **Distributed Date**: . If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the date the distributed flag was checked.

Report Data

Rather than detailing every piece of data that can appear on the BEO, the following paragraphs describe specific behavior you should note:

The 1 Column BEO layout prints with the Food, Beverage and Item Class in a single column. The Item Class will print in order based on the sequence assigned to the Item Class in configuration.

The sections of the BEO if printed continuously are:

Header > Catering package information > Event Itinerary for all events of the current block > Food Section for all events of the current booking, in date and time order > Beverage Service for all events of the current booking in date and time order, > Resources, in resource class sequence order. Within each resource class, the resources are listed in event time order. In all sections, the function space and the event time identify to which event of the itinerary the appropriate resources belong.

The sections of the BEO if printed as Master/Sub or One Event per Page:

Header > Catering Package information > Basic event information for the current event only including start and end time, event name, function space name, set-up style, and function space rate plus rate amount > food section for the current event > beverage section for the current event > resource section for the current event in resource sequence order. Page break and repeat for all subsequent events.

In order to select to print the Cover Letter, General Conditions, and/or Room Grid, the Block ID field must be populated with a single value. If the report is accessed from a block and the Block ID is passed, the default values for Print Cover Letter, Print General Conditions, and Print Room Grid section appear. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default values are cleared.
The Booking Type field on the BEO header takes its contents from the Booking Type field (visible when OPERA Control for Business Block Type is active).

A text message that prints at the end of the BEO just before the signature section can be created or amended in Report Text Configuration in the Administration menu using the field, SC_BEO_BOTTOM_TEXT_[PropertyCode], for the selected resort. This message typically contains information on tax and service charge levels that apply to the items listed on the BEO.

The Date Last Printed field prints at the very end of the BEO just below the Organization Authorized Signature field for each event printed or at the end of each event if more than one event per business block exists. This field displays the last date the events for this booking was

Copyright © 2016, 2025, Oracle and/or its affiliates.

printed. For Example, if Event #1 is printed on 4/10/xx but Event #2 has never been printed: when Event #2 is printed, it will read “Date Last Printed 4/10/xx” because that is the last date a BEO for this booking was printed.

Banquet Event Order – 2 Column (Sample_BEO_2column.RTF)

The Banquet Event Order 2 report is a comprehensive document that contains all the vital information about the catering portion of a business block broken down into events and resources. It is an ideal tool to use for communicating with customers and various hotel internal departments to ensure that all customer requirements regarding the events are met and prepared per agreement and contract.

The report is one of several sample BEO (Banquet Event Orders) that you can customize during installation of the system to be further tailored to the hotel’s specific requirements.

> **Note**
>
> When selecting the email method for printing Banquet Event Orders from the main Reports screen, the document attached to the email is renamed to the report name with the Block ID appended to it. For example, in the case of a BEO named BEO 2 Column, the output would be renamed as BEO 2 Column - 795547.pdf.

You can customize this report using the Stationery Editor. The following Selection Criteria fields are available when using the Stationery Editor.

Selection Criteria

1. **Property**. Select the property for which the report should be printed. The BEO can be ordered across multiple properties in a **Multi Property** environment. This is useful if a booking has its event distributed over several properties.
2. **Report Type**. Customized Report.
3. **Sample Report to base your Customized Report**. Select Sample_beo_2column. Once selected, the links to Download Sample Report and Download Sample Data appear, allowing the templates to be downloaded and modified. The sample data file allows you to preview the changes without having to upload the report into the application. The modified file can be uploaded through the Choose File option.

   > **Note**
   >
   > You must rename the file without using the word “sample.”

4. **Datasource File**. Read Only field that will populate automatically based on the report selection.
5. **Report Group**. Select the group from the list. It is recommend that you load the report in the Group Stationery report group.
6. **Display Name**. Enter the report name.
7. **Print Copies**. Enter the number of copies to print.
8. **Protected**. Prevents users from editing the report.
9. **Language**. Determines the language in which the report prints.

Copyright © 2016, 2025, Oracle and/or its affiliates.

10. **Parameter Form**. Select the Sample BEO 2 Column parameter form.

Report Parameters

When creating or editing the report, you can set default values for these parameters.

1. **Event Date From/Event Date To**. Allows the selection of the event from and to dates.
2. **Block Arrival Date From/Arrival Date To**. Allows the selection of the block from and to dates.
3. **Business Block**. Select one or several specific business blocks for printing the BEO report.
4. **Event**. Select one or several events for printing the BEO.
5. **Event Status**. Select event statuses. Typically, return-to-inventory statuses, like lost and canceled statuses, would be excluded.
6. **Event Type**. Select one or several event types to print the BEO.
7. **Space**. Select one or several function spaces in which the events are taking place.
8. **Left Column Item Class**. Allows the selection of resource item classes that should print on the left hand side of this two column event order. Depending on whether the BEO is printed for internal use or for the customer, the selection here could be different. For example, there might be item classes needed for internal use, like furniture and linen requirements, but that would not be necessary to print on the copy that is sent to the customer.
9. **Right Column Item Class**. Allows the selection of resource item classes that should print on the right hand side of this two column event order.
10. **Block Note Type**. Allows you to select business block note types to be printed on the BEO. This parameter works in conjunction with the internal and external notes flag on the first tab. Even if note types have been selected, if neither internal nor external are identified, no notes would print. Not all business block notes might be relevant to print on the BEO.
11. **Cover Letter Note Type**. A portion of the cover letter can be made up from business block notes, which make the letter more flexible and allows for custom texts per customer without having to change the text that is embedded in the report. Enter the note type to print on the cover letter.
12. **Sort By**. Allows the ordering of events by one of these four predefined sort orders:
    a. Event Date + Booking Name + Event Time
    b. Event Date + Event Time + Booking Name
    c. Booking Name + Event Date + Event Time
    d. Booking Name + Master Event Date + Master Event Time
13. **Address Type**. Allows you to select an address type other than the primary address. This provides the option to print an extended byte address onto the BEO if one is attached to the account or contact, even if it is not the primary address. Any address type can be chosen. If the field is left blank or the selected address type does not exist for the current customer, the primary address will print instead.
14. **Address Format**. Allows you to select address formats different from the standard format. This is useful in an international environment where addresses might have different formats from country to country. For example, when sending a BEO to Europe, the address format might have the zip code before the city name and no state printed at all. The list of

Copyright © 2016, 2025, Oracle and/or its affiliates.

values shows all configured catering address formats. If the field is left blank, the address prints the default format.

15. **Print Address of**. This option determines what address to print as part of the header. This can either be set to print the account address or the contact's address.
16. **Print Account**. The Print Account defaults to the Account marked as PT for the Business Block from the Name Select screen. If a different Account should be printed on the BEO, select the Print Account ellipsis and click the PT column to select another Account already linked to the business block.
17. **Print Contact**. Print Contact defaults to the Contact marked as PT for the Business Block from the Name Select screen. If a different Contact should be printed on the BEO, select the Print Contact ellipsis to select another Contact already linked to the business block.

> **Note**
>
> When the BEO is printed for more than one booking, the Print Account and Print Contact are pulled by default. No option is provided to select a different Account or Contact for Printing. If no Print Account or Print Contact is selected for a booking, the default hierarchy is used. Additionally, when no relationship exists between the Print Account and the Print Contact, the Print Contact appears red.

18. **Event Printing Method**. The possible selections are one event per page, Master and Sub per page, Prints events continuously.
19. **Revenue Summary**. The possible options are Internal, External, or None. The External and Internal options print a revenue summary at the end of the BEO before the general conditions. External summarizes non-package revenues by date, and catering packages as one price per delegate without breaking it down into its component revenue types. Internal summarizes non-package revenues by revenue type per date and non-package revenue by event and revenue type per date. Selecting None suppresses the Revenue Summary completely.
20. **Print Deposit**. If checked, deposit information prints on the BEO. If not checked, that information is suppressed.
21. **Print Deposit Details**: Select whether to print deposit by Event Printing Method or on Last Page Only. Available when printing by **Block ID**.
22. **Sort Deposit**. Deposits can print sorted by type or by due date. If type is selected a sub-total for each type prints as well as a general total.
23. **Print Internal/External Notes**. Specify whether notes should print on the BEO and if so, select from notes that are marked as Internal, External, or both. Typically, only external notes would be selected if the BEO is printed to be sent to a customer and either only internal, or internal and external, if the BEO is printed for use as inter-departmental communication tool.
24. **Print Block Notes on Last Page**: If checked, the selected **Book Note Types** output once on the final page of the last banquet event order. Available when printing by **Block ID**.
25. **Suppress Account Name**. This suppresses any reference to an account on the BEO header and in the signature. This is typically done for ”social” BEOs that are organized privately by individuals that are not associated with any account, for example, weddings, birthday parties, and so on.
26. **Suppress Signature**. Select this option to suppress the Signature field at the end of each BEO.
27. **Hide Doorcard**. This suppresses printing the Post As references on the event itinerary.

Copyright © 2016, 2025, Oracle and/or its affiliates.

28. **Print Package Name for Multiple Days**. If a Business Block has a Catering Package that spans multiple days, checking this flag makes the package header information print on each date that has a Package Event. If the flag left deselected, the package header information print only on the first day of Package Events.
29. **Exclude Alternate Events**. When the application function Catering > Alternate Space is set to Y, the Exclude Alternate Events check box is visible. When selected, Alternate Events do not print on this report.
30. **Print Extended Characters**. If secondary account and contact names are entered into the system using the globe button on the appropriate fields (only available if the application function General > Alternate Name is active), the report procedure scans those secondary fields when printing account and contact information; if an entry is found, it returns that entry instead of the primary name. If the appropriate fields are empty, the regular names print. This functionality is primarily added for extended byte handling in the Asia- Pacific region.
31. **Reset Page Numbering**. Select this option to reset the page numbering when printing multiple BEOs. If unchecked, the pages are numbered based on the total number of pages in the BEO batch. If checked, the page numbers are reset with each new agenda.
32. **Print General Conditions**. General conditions and terms of contract can be added as text pages after the body of the BEO. They would have been tailored to the hotel on installation. Typically, the general conditions would only be printed if the BEO is sent out to customers.

> **Note**
>
> When generating the BEO a Block ID is required in order to select Print General Conditions. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

33. **Print Cover Letter**. Prints a cover page. The text of that page is customized to the hotel and can be individualized using business block notes. Typically, this cover page would only be printed if the BEO is sent out to customers. When generating the BEO by Block ID, you can select the option to print the Room Grid.

> **Note**
>
> When generating the BEO a Block ID is required in order to select Print Cover Letter. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

34. **Print Package Events Combined**: When the Combine Package Events in BEO OPERA Control is active, the Print Package Events Combined check box is visible. When selected, the attendee count for package events with the same Block ID, Event Name, Event Type, Event Dates, Event Status, Event Times and Function Space are summed to output a total number of attendees.
35. **Print Room Grid**. Prints the Room Grid. Once selected, additional parameters will be enabled to control how the room and rate information appears within the grid.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When generating the BEO a Block ID is required in order to select Print Room Grid. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and disabled for all fields related to the room grid.

36. **Grid Type**. Allows you to determine which grid type will print on the BEO. The possible options are Contract (available when the OPERA Control for Contract Grid is active, Current, or Pickup.
37. **Revenue Values**. Select an option from the list below to determine how the rates amounts are displayed in the grid. For more information, see: Contract Merge Report, Revenue Values Calculation Examples
    a. Gross Rates/Revenue. Gross Room Rate is calculated as:
        i. Included generates are not deducted.
        ii. Excluded generates are added.
        iii. Excluded packages are not added. Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
    b. Net Rates/Revenue. Net Room Rate is calculated as:
        i. Included generates are deducted.
        ii. Excluded generates are not added.
        iii. Included packages stay included.
        iv. Included generates on included or excluded packages are calculated out. Net Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
    c. Gross and Net Rates/Revenue. When this option is selected, both the Gross and Net room rates are reported and displayed.
38. **Include Guest Room in Revenue Summary**. Available for selection when Revenue Summary is set to External or Internal. When selected, the room revenue will be included in the Revenue Summary calculations.
39. **Rooms with Rate and No Inventory**. When selected, room types where no inventory has been booked are included.
40. **PMS Room Type**. If selected, PMS room types output on the BEO instead of the Room Pools. If the Room Pools OPERA Control is not active and room pools are not configured for the property, the PMS room types will print by default. For more information, see: Configuring Room Pools.
41. **Occupancy**. If selected, the number of rooms per occupancy level per day is included on the report when the Occupancy Split OPERA Control is activated. If not selected, the total number of rooms per day per room type per day is output.
42. **Room Rates**. Select to display room rates, otherwise, Room and Rates Separately, Inline Currency, and Show Decimals are disabled.
43. **Room and Rate Separately**. If selected, room nights and room rates are included in separate grids. If not selected, they appear in the same grid. This option is available only when both the Rate and the Occupancy flags are selected.
44. **Inline Currency**. Enabled when Room Rates is selected. If selected, the currency symbol is included with the rate in the grid cells in the Room Grid.

Copyright © 2016, 2025, Oracle and/or its affiliates.

45. **Show Decimals**. Enabled when Room Rates is selected. If selected, the rates in the Room Grid with decimals appears as set up in the Property Details. If not selected, the rounded rate displays without decimals.
46. **Print Space Between Currency and Amount**. Select the check box to print in the report (available when Room Rates and Inline Currency are selected). When selected, a space will be added between the currency symbol/code and the rate amounts displayed in the grid.
47. **Currency**. Available when the application function Rates > Foreign Currency Handling is active, this selection allows the conversion of foreign currency to a property's base or catering currency when the foreign currency has a defined exchange rate for posting.
48. **Exchange Rate Date**. If selected, enter a date or use the calendar tool to select the effective date of the exchange rate for the specified currency. The prices in the BEO are calculated using the exchange rate for the specified currency as it was on that date.
49. **Creation Date**. If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the booking creation date.
50. **Distributed Date**. If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the date the distributed flag was checked.

Report Data

Rather than detailing every piece of data that can appear on the BEO, the following paragraphs describe specific behavior you should note:

The 2 Column BEO layout prints with the food across the top and the Beverage section below the food in the column on the left side. The Item Classes will print on the left or right side based on the selection in the parameter form.

The sections of the BEO if printed continuously are:

Header > Catering package information > Event Itinerary for all events of the current block > Food Section for all events of the current booking, in date and time order > Beverage Service for all events of the current booking in date and time order, > Resources, in resource class sequence order. Within each resource class, the resources are listed in event time order. In all sections, the function space and the event time identify to which event of the itinerary the appropriate resources belong.

The sections of the BEO if printed as Master/Sub or One Event per Page:

Header > Catering Package information > Basic event information for the current event only including start and end time, event name, function space name, set-up style, and function space rate plus rate amount > food section for the current event > beverage section for the current event > resource section for the current event in resource sequence order. Page break and repeat for all subsequent events.

In order to select to print the Cover Letter, General Conditions, and/or Room Grid, the Block ID field must be populated with a single value. If the report is accessed from a block and the Block ID is passed, the default values for Print Cover Letter, Print General Conditions, and Print Room Grid section appear. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default values are cleared.
The Booking Type field on the BEO header takes its contents from the Booking Type field (visible when OPERA Control for Business Block Type is active).

A text message that prints at the end of the BEO just before the signature section can be created or amended in Report Text Configuration in the Administration menu using the field, SC_BEO_BOTTOM_TEXT_[PropertyCode], for the selected resort. This message typically contains information on tax and service charge levels that apply to the items listed on the BEO.

Copyright © 2016, 2025, Oracle and/or its affiliates.

The Date Last Printed field prints at the very end of the BEO just below the Organization Authorized Signature field for each event printed or at the end of each event if more than one event per business block exists. This field displays the last date the events for this booking was printed. For Example, if Event #1 is printed on 4/10/xx but Event #2 has never been printed: when Event #2 is printed, it will read “Date Last Printed 4/10/xx” because that is the last date a BEO for this booking was printed.

Banquet Event Order – 2 Column FB (Sample_BEO_2Column_FB.RTF)

The Banquet Event Order 2 column F&B (Food and Beverage) report is a comprehensive document that contains the vital information about the catering portion of a business block broken down into events and resources. It is an ideal tool for communicating with customers and various hotel internal departments to ensure that all customer requirements regarding the events are met and prepared per agreement and contract.

The report is one of several sample BEO (Banquet Event Orders) that you can customize during installation of the system to be further tailored to the hotel’s specific requirements.

> **Note**
>
> When selecting the email method for printing Banquet Event Orders from the main Reports screen, the document attached to the email is renamed to the report name with the Block ID appended to it. For example, in the case of a BEO named BEO 2 Column F&B, the output would be renamed as BEO 2 Column F&B- 795547.pdf.

You can customize this report using the Stationery Editor. The following Selection Criteria fields are available when using the Stationery Editor.

Selection Criteria

1. **Property**: Select the property for which the report should be printed. The BEO can be ordered across multiple properties in a **Multi Property** environment. This is useful if a booking has its event distributed over several properties.
2. **Report Type**: Customized Report.
3. **Sample Report to base your Customized Report**: Select Sample_beo_2column F&B. Once selected, the links to Download Sample Report and Download Sample Data appear, allowing the templates to be downloaded and modified. The sample data file allow you to preview the changes without having to upload the report into the application. The modified file can be uploaded through the Choose File option.

   > **Note**
   >
   > You must rename the file without using the word “sample.”

4. **Datasource File**: Read Only field that will populate automatically based on the report selection.
5. **Report Group**: Select the group from the list. It is recommend that you load the report in the Group Stationery report group.
6. **Display Name**: Enter the report name.
7. **Print Copies**: Enter the number of copies to print.

Copyright © 2016, 2025, Oracle and/or its affiliates.

8. **Protected**: Prevents users from editing the report.
9. **Language**: Determines the language in which the report prints.
10. **Parameter Form**: Select the SAMPLE_BEO_2COLUMN_FB/rep_beo_2column parameter form.

Report Parameters

When creating or editing the report, you can set default values for these parameters.

1. **Event Date From/Event Date To**: Allows the selection of the event from and to dates.
2. **Block Arrival Date From/Arrival Date To**: Allows the selection of the block from and to dates.
3. **Business Block**: Select one or several specific business blocks for printing the BEO report.
4. **Event**: Select one or several events for printing the BEO.
5. **Event Status**: Select event statuses. Typically, return-to-inventory statuses, like lost and canceled statuses, would be excluded.
6. **Event Type**: Select one or several event types to print the BEO.
7. **Space**: Select one or several function spaces in which the events are taking place.
8. **Left Column Item Class**: Allows the selection of resource item classes that should print on the left hand side of this two column event order. Depending on whether the BEO is printed for internal use or for the customer, the selection here could be different. For example, there might be item classes needed for internal use, like furniture and linen requirements, but that would not be necessary to print on the copy that is sent to the customer.
9. **Right Column Item Class**: Allows the selection of resource item classes that should print on the right hand side of this two column event order.
10. **Block Note Type**: Allows you to select business block note types to be printed on the BEO. This parameter works in conjunction with the internal and external notes flag on the first tab. Even if note types have been selected, if neither internal nor external are indentified, no notes would print. Not all business block notes might be relevant to print on the BEO.
11. **Cover Letter Note Type**: A portion of the cover letter can be made up from business block notes, which make the letter more flexible and allows for custom texts per customer without having to change the text that is embedded in the report. Enter the note type to print on the cover letter.
12. **Sort By**: Allows you to order events by one of these four predefined sort orders:
    a. Event Date + Booking Name + Event Time
    b. Event Date + Event Time + Booking Name
    c. Booking Name + Event Date + Event Time
    d. Booking Name + Master Event Date + Master Event Time
13. **Address Type**: Allows you to select an address type other than the primary address. This provides the option to print an extended byte address onto the BEO if one is attached to the account or contact, even if it is not the primary address. Any address type can be chosen. If the field is left blank or the selected address type does not exist for the current customer, the primary address will print instead.

Copyright © 2016, 2025, Oracle and/or its affiliates.

14. **Address Format**: Allows you to select address formats different from the standard format. This is useful in an international environment where addresses might have different formats from country to country. For example, when sending a BEO to Europe, the address format might have the zip code before the city name and no state printed at all. The list of values shows all configured catering address formats. If the field is left blank, the address prints the default format.
15. **Print Address of**: This option determines what address to print as part of the header. This can either be set to print the account address or the contact's address.
16. **Print Account**: The Print Account defaults to the Account marked as PT for the Business Block from the Name Select screen. If a different Account should be printed on the BEO, select the Print Account ellipsis and click the PT column to select another Account already linked to the business block.
17. **Print Contact**: Print Contact defaults to the Contact marked as PT for the Business Block from the Name Select screen. If a different Contact should be printed on the BEO, select the Print Contact ellipsis to select another Contact already linked to the business block.

> **Note**
>
> When the BEO is printed for more than one booking, the Print Account and Print Contact are pulled by default. No option is provided to select a different Account or Contact for Printing. If no Print Account or Print Contact is selected for a booking, the default hierarchy is used. Additionally, when no relationship exists between the Print Account and the Print Contact, the Print Contact appears red.

18. **Event Printing Method**: The possible selections are one event per page, Master and Sub per page, Prints events continuously.
19. **Revenue Summary**: The possible options are Internal, External, or None. The External and Internal options print a revenue summary at the end of the BEO before the general conditions. External summarizes non-package revenues by date, and catering packages as one price per delegate without breaking it down into its component revenue types. Internal summarizes non-package revenues by revenue type per date and non-package revenue by event and revenue type per date. Selecting None suppresses the Revenue Summary completely.
20. **Print Deposit**: If checked, deposit information prints on the BEO. If not checked, that information is suppressed.
21. **Print Deposit Details**: Select whether to print deposit by Event Printing Method or on Last Page Only. Available when printing by **Block ID**.
22. **Sort Deposit**: Deposits can print sorted by type or by due date. If type is selected a sub-total for each type prints as well as a general total.
23. **Print Internal/External Notes**: Specify whether notes should print on the BEO and if so, select from notes that are marked as Internal, External, or both. Typically, only external notes would be selected if the BEO is printed to be sent to a customer and either only internal, or internal and external, if the BEO is printed for use as inter-departmental communication tool.
24. **Print Block Notes on Last Page**: If checked, the selected **Book Note Types** output once on the final page of the last banquet event order. Available when printing by **Block ID**.
25. **Suppress Account Name**: This suppresses any reference to an account on the BEO header and in the signature. This is typically done for “social” BEOs that are organized privately by individuals that are not associated with any account, for example, weddings, birthday parties, and so on.

Copyright © 2016, 2025, Oracle and/or its affiliates.

26. **Suppress Signature**: Select this option to suppress the Signature field at the end of each BEO.
27. **Hide Doorcard**: This suppresses printing the Post As references on the event itinerary.
28. **Print Package Name for Multiple Days**: If a Business Block has a Catering Package that spans multiple days, checking this flag makes the package header information print on each date that has a Package Event. If the flag left deselected, the package header information print only on the first day of Package Events.
29. **Exclude Alternate Events**: When the application function Catering > Alternate Space is set to Y, the Exclude Alternate Events check box is visible. When selected, Alternate Events do not print on this report.
30. **Print Extended Characters**: If secondary account and contact names are entered into the system using the globe button on the appropriate fields (only available if the application function General > Alternate Name is active), the report procedure scans those secondary fields when printing account and contact information; if an entry is found, it returns that entry instead of the primary name. If the appropriate fields are empty, the regular names print. This functionality is primarily added for extended byte handling in the Asia- Pacific region.
31. **Reset Page Numbering**: Select this option to reset the page numbering when printing multiple BEOs. If unchecked, the pages are numbered based on the total number of pages in the BEO batch. If checked, the page numbers are reset with each new agenda.
32. **Print General Conditions**: General conditions and terms of contract can be added as text pages after the body of the BEO. They would have been tailored to the hotel on installation. Typically, the general conditions would only be printed if the BEO is sent out to customers.

> **Note**
>
> When generating the BEO a Block ID is required in order to select Print General Conditions. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

33. **Print Cover Letter**: Prints a cover page. The text of that page is customized to the hotel and can be individualized using business block notes. Typically, this cover page would only be printed if the BEO is sent out to customers. When generating the BEO by Block ID, you can select the option to print the Room Grid.

> **Note**
>
> When generating the BEO a Block ID is required in order to select Print Cover Letter. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and the field disabled.

34. **Print Package Events Combined**: When the Combine Package Events in BEO OPERA Control is active, the Print Package Events Combined check box is visible. When selected, the attendee count for package events with the same Block ID, Event Name, Event Type, Event Dates, Event Status, Event Times and Function Space are summed to output a total number of attendees.
35. **Print Room Grid**: Prints the Room Grid. Once selected, additional parameters will be enabled to control how the room and rate information appears within the grid.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When generating the BEO a Block ID is required in order to select Print Room Grid. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default value will be cleared and disabled for all fields related to the room grid.

36. **Grid Type**: Allows you to determine which grid type will print on the BEO. The possible options are Contract (available when the OPERA Control for Contract Grid is active, Current, or Pickup.
37. **Revenue Values**: Select an option from the list below to determine how the rates amounts are displayed in the grid. For more information, see: Contract Merge Report, Revenue Values Calculation Examples
    a. Gross Rates/Revenue. Gross Room Rate is calculated as:
        i. Included generates are not deducted.
        ii. Excluded generates are added.
        iii. Excluded packages are not added. Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
    b. Net Rates/Revenue. Net Room Rate is calculated as:
        i. Included generates are deducted.
        ii. Excluded generates are not added.
        iii. Included packages stay included.
        iv. Included generates on included or excluded packages are calculated out. Net Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Mapping.
    c. Gross and Net Rates/Revenue. When this option is selected, both the Gross and Net room rates are reported and displayed.
38. **Include Guest Room in Revenue Summary**: Available for selection when Revenue Summary is set to External or Internal. When selected, the room revenue will be included in the Revenue Summary calculations.
39. **Rooms with Rate and No Inventory**: When selected, room types where no inventory has been booked are included.
40. **PMS Room Type**: If selected, PMS room types output on the BEO instead of the Room Pools. If the Room Pools OPERA Control is not active and room pools are not configured for the property, the PMS room types will print by default. For more information, see: Configuring Room Pools.
41. **Occupancy**: If selected, the number of rooms per occupancy level per day is included on the report when the Occupancy Split OPERA Control is activated. If not selected, the total number of rooms per day per room type per day is output.
42. **Room Rates**: Select to display room rates, otherwise, Room and Rates Separately, Inline Currency, and Show Decimals are disabled.
43. **Room and Rate Separately**: If selected, room nights and room rates are included in separate grids. If not selected, they appear in the same grid. This option is available only when both the Rate and the Occupancy flags are selected.
44. **Inline Currency**: Enabled when Room Rates is selected. If selected, the currency symbol is included with the rate in the grid cells in the Room Grid.

Copyright © 2016, 2025, Oracle and/or its affiliates.

45. **Show Decimals**: Enabled when Room Rates is selected. If selected, the rates in the Room Grid with decimals appears as set up in the Property Details. If not selected, the rounded rate displays without decimals.
46. **Print Space Between Currency and Amount**: Select the check box to print in the report (available when Room Rates and Inline Currency are selected). When selected, a space will be added between the currency symbol/code and the rate amounts displayed in the grid.
47. **Currency**: Available when the application function Rates > Foreign Currency Handling is active, this selection allows the conversion of foreign currency to a property's base or catering currency when the foreign currency has a defined exchange rate for posting.
48. **Exchange Rate Date**: If selected, enter a date or use the calendar tool to select the effective date of the exchange rate for the specified currency. The prices in the BEO are calculated using the exchange rate for the specified currency as it was on that date.
49. **Creation Date**: If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the booking creation date.
50. **Distributed Date**: If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the date the distributed flag was checked.

Report Data

Rather than detailing every piece of data that can appear on the BEO, the following paragraphs describe specific behavior you should note:

The 2 Column BEO layout prints with the food across the top and the Beverage section below the food in the column on the left side. The Item Classes will print on the left or right side based on the selection in the parameter form.

The sections of the BEO if printed continuously are:

Header > Catering package information > Event Itinerary for all events of the current block > Food Section for all events of the current booking, in date and time order > Beverage Service for all events of the current booking in date and time order, > Resources, in resource class sequence order. Within each resource class, the resources are listed in event time order. In all sections, the function space and the event time identify to which event of the itinerary the appropriate resources belong.

The sections of the BEO if printed as Master/Sub or One Event per Page:

Header > Catering Package information > Basic event information for the current event only including start and end time, event name, function space name, set-up style, and function space rate plus rate amount > food section for the current event > beverage section for the current event > resource section for the current event in resource sequence order. Page break and repeat for all subsequent events.

In order to select to print the Cover Letter, General Conditions, and/or Room Grid, the Block ID field must be populated with a single value. If the report is accessed from a block and the Block ID is passed, the default values for Print Cover Letter, Print General Conditions, and Print Room Grid section appear. If the report is accessed directly without a Block ID populated or multiple Block IDs are populated, the default values are cleared.
The Booking Type field on the BEO header takes its contents from the Booking Type field (visible when OPERA Control for Business Block Type is active).

A text message that prints at the end of the BEO just before the signature section can be created or amended in Report Text Configuration in the Administration menu using the field, SC_BEO_BOTTOM_TEXT_[PropertyCode], for the selected resort. This message typically contains information on tax and service charge levels that apply to the items listed on the BEO.

Copyright © 2016, 2025, Oracle and/or its affiliates.

The Date Last Printed field prints at the very end of the BEO just below the Organization Authorized Signature field for each event printed or at the end of each event if more than one event per business block exists. This field displays the last date the events for this booking was printed. For Example, if Event #1 is printed on 4/10/xx but Event #2 has never been printed: when Event #2 is printed, it will read “Date Last Printed 4/10/xx” because that is the last date a BEO for this booking was printed.

Banqueting F&B Plan (rep_fbplan.rep with rep_fbplan.fmx)

The Banqueting F&B Plan report is a great tool, especially for the Banquet Chef and kitchen. You can use it for Banquet Event Orders (BEO) or as a detailed document for any needed food or beverage preparation and requirements.

You can print the report in a daily format with a page break after each day or in a continuous weekly format. There is also an option to print more details such as account name, contacts name, and communication details plus all relevant notes, or a summary format that essentially prints only the food and beverage requirements.

> **Note**
>
> To run the report, you must have the Event Print task granted to your role in the property. The list of properties available for you to select is limited to the properties where you have access granted. You also need the task for the Events Report Group.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Event Date From: Select the event from date.

Event Date To: Select the event to date.

Business Block: You can order the report for one or several specific business blocks.

> **Note**
>
> When selecting a Master Block ID in the Business Block filter, OPERA Cloud also includes the Sub Block IDs linked to that Master. The report prints all events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only events linked to that Sub Block are printed.

Event Status: This allows you to filter the report by event status. Generally, this would include only the production status code. Cancellation status codes should be excluded.

Event Type: Allows you to filter the report by event type.

Responsible Department: Allows you to select the responsible departments. For example, if different menu components are prepared in different kitchen sections, and those sections/ departments are correctly assigned to all menu items, you could produce the report separately for each kitchen section. Or, on a simpler level, it would only indicate whether the kitchen, beverage staff, or banquet operations staff members are responsible to provide certain items on the list.

Report Type: Select Daily or Weekly.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Food & Beverage: Select Food, Beverage, or Both.

Print Details: Select the check box to print the details.

Report Data

The report is sorted in date order and, within each date, in event time order. Information available on the report is per event, event start and end time, event name and ID, function space, set-up style, and number of attendees.

> **Note**
>
> The Event Date is repeated in the header of each page for this report.

If you select **Detailed** on the report order form, additional information about account name, contact name, contact on site, and contact communication details are printed for each event.

Account and contact information appear according to the following profile type hierarchy:

- If a Company profile is attached to the business block, the Company profile name appears.
- If a Company profile is not attached to the business block, but a Travel Agent is attached, the Travel Agent profile name appears.
- If neither a Company profile nor a Travel Agent profile is attached to the business block, and a Source profile is attached, the Source profile name appears.

For each event, follow the menu details: menu serving time, menu name, menu internal price (total that the menu would cost if all items contained in it were sold separately – calculated from the menu item prices), menu sales price, numbers of expected, guaranteed, set and actual covers.

On the next level menu item detail, the information printed contains: menu item name, menu item price – if the menu item is not included in the menu, numbers expected, guaranteed, set and actual, and the responsible department if one is assigned to the item in question.

After the menu item details, the menu notes relating to each menu are printed, followed by the event notes after all menus are printed.

Block Actual Report (rep_actbb_p.rep)

Prerequisite for Actual Business Block Rooms Report

This report compares booked room nights, revenue, and average rate with picked-up room nights, revenue, and average rate.

Selection Criteria

Property.

1. When logged into a Property:
   a. The Property filter should be Visible, Required, and displayed at the top of the Parameter.
   b. The logged in Property should be passed (defaulted) to the Property filter.
   c. No other Properties are available for selection.
2. When logged into a HUB:

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. The Property filter should be Visible, Required, Multi-Select, and displayed at the top of the Parameter.

b. The Property selected in the Report Property search filter should be passed (defaulted) to the Property filter.

c. All Properties in the HUB will be available for selection.

3. Mandatory when visible.

Stay Date Range. This field allows you to select blocks that have at least one stay day within the selected from and to date.

1. From Date:

   a. The Date field with formatting based on the configured short date format for the logged in Property or HUB.

   b. This field filters on allotment dates (Stay Dates are the dates between the start date and the end date, for example, one).

   c. The value in this field must be earlier than or equal to the date in the Stay Date To Date field.

   d. No default value when inserting the report.

2. To Date:

   a. The Date field with format based on the configured short date format for the logged in Property or HUB.

   b. This field will filter on allotment dates (the dates between the start date and end date, for example, one).

   c. The value in this field must be later than or equal to the date in the Stay Date From Date field.

   d. No default value when inserting the report.

Block Type. You must select one of the following values (select only one).

1. Rooms:

   a. Radio button selection.

   b. Only one of these three values can be selected at one time.

   c. When Rooms is selected, only blocks that are not marked as Catering Only are returned.

2. Catering:

   a. Radio button selection.

   b. Only one of these three values can be selected at one time.

   c. When Catering is selected, only blocks that are marked as Catering Only and have rooms revenues are returned. If the blocks have only catering revenues and no rooms revenues, then the report won't return any results even if the Catering radio button is selected.

> **Note**
>
> The **Catering Only Blocks** OPERA Control must be inactive in order to create blocks identified as Catering Only and be able to also enter room revenues.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. All:
    a. Radio button selection.
    b. Only one of these three values can be selected at one time.
    c. When selected, all blocks that meet the other filter criteria are returned.
    d. Default ALL when the report is inserted.

Block Status.

1. The field is defaulted with the ghost text All Codes indicating that all Block Statuses are considered.
2. The field is displayed with multi select LOV.
3. After selecting the magnifying glass, open the LOV for Search and select Block Status with an option to select one or multiple Block Statuses.
4. The list will display all Block Status codes and descriptions.
5. After selecting Block Status code(s), pass them back to the Report Request Parameter screen.
6. If multiple Block Statuses are selected, they will appear as comma separated values.

Rooms Owner. Select a room owner.

1. The field is defaulted with the ghost text All Codes indicating that all Rooms Owners will be considered.
2. The field is displayed with a multi select LOV.
3. After selecting the magnifying glass, open the LOV for search and select Rooms Owner with an option to select one or multiple Owners.
4. The list will appear with all Owner codes, Owner Name.
5. If multiple properties are selected in the Property field, the list will display the Property code against each Owner.
6. After selecting Owner code(s), pass the Owner Code(s) back to the Report Request Parameter screen.
7. If multiple Owners are selected, they will appear as comma separated values.

Change Date Status.

1. The field is defaulted with no value.
2. The field is displayed with single select LOV of all Block Status codes and descriptions.
3. After selecting the magnifying glass, open the LOV for search and select Block Status with the list of all Block Status codes and descriptions.
4. You have the option to filter a specific Block status. Only one Block Status can be selected from the LOV.
5. After selecting Block Status code(s), pass the selected Block Status code(s) back to the Report Request Parameter screen.

Sort Order. The following options should be available. Make at least one selection.

1. Sort by Rooms Owner – renamed from Sales Manager.
2. Sort by Block Status – renamed from Business Status.
3. Sort by Start Date – renamed from Arrival Date.
4. Sort by End Date – renamed from Departure Date.

Copyright © 2016, 2025, Oracle and/or its affiliates.

5. Sort by Catering Owner – renamed from Catering Manager.

Currency. Visible when the application parameter Rate Management >Ability to Quote Rates in Foreign Currency is Active.

Report Data

For each booking, the report prints the following data:

- The account name and block, as well as the block ID, current block status, selected change status and status change date, rooms owner, and catering owner of the block.
- The block start and end date and block currency.
- The current room nights, revenue, and average rate (printed in the top row of the revenue box).
- The actual picked-up room nights, revenue, and average rate (printed beneath the current figures).
- The calculated difference as a third line beneath the actual values.

A sub-total by selected first sort group is printed, as well as a total for the whole report.

> **Note**
>
> The current block rates are calculated from the value as it appears in the room grid of the booking regardless of any included taxes and package elements, if applicable. The picked-up rates and revenue are NET of taxes and packages. You should keep this in mind when comparing these values.

Block Actual Pick Up Report (rep_actbh.rep)

Prerequisite for Actual Business Block Rooms Report

This report compares booked room nights, revenue, and average rate with picked-up room nights, revenue, and average rate. This is a slightly different model of the Block Pick Up Report (REP_ACTBB_P.REP) with a different lay-out and filter options, but essentially the same information is included.

Selection Criteria

1. Enter or select the property. You can select multiple properties from a hub location.
2. **Start From Date From/Start To Date**: Enter a block start (arrival) range.

   Or

   Stay From Date / Stay To Date: Enter a block stay-over date range (the room allocation date range.
3. **Block Status**: Select one or more block statuses from the list.
4. **Market Segment**: Select one more market segments from the list.
5. **Block Type**: Select a block type.
   a. **Rooms**: Only blocks with the Catering Only check box unchecked are included.
   b. **Catering**: Blocks with the Catering Only check box checked are included.
   c. **All**: All blocks are included.

Copyright © 2016, 2025, Oracle and/or its affiliates.

6. **Rooms Owner**: Select one or more rooms owners from the list. (Available when the Owner OPERA Control is active)
7. **Status For Current Figures**: Select one or more block statuses from the list.
8. **Sort Order**: Select a sort order in the Available panel and use > to move selection to the Selected panel.
9. **Page Orientation**: Select a page orientation.
10. **Currency**: Select a currency from the list. (Available when the Ability to Quote Rates in Foreign Currency OPERA Control is active).

Report Data

For each booking, the report prints the following data:

- The account name and block, as well as the block ID, current block status, selected change status and status change date, rooms owner, and catering owner of the block.
- The block start and end date and block currency.
- The current room nights, revenue, and average rate (printed in the top row of the revenue box).
- The actual picked-up room nights, revenue, and average rate (printed beneath the current figures).
- The calculated difference as a third line beneath the actual values.

A sub-total by selected first sort group is printed, as well as a total for the whole report.

> **Note**
>
> The current block rates are calculated from the value as it appears in the room grid of the booking regardless of any included taxes and package elements, if applicable. The picked-up rates and revenue are NET of taxes and packages. You should keep this in mind when comparing these values.

Block Cancellation Summary Report (rep_cancel_summary.rep)

Prerequisites for Cancellation Summary Report

The main purpose of the Cancellation Summary report is to show all groups canceled or lost for a specific cancellation date range or a specific arrival date. It can be filtered and/or sorted by cancellation reason or destination “Lost to” and therefore represents an excellent tool for pinpointing weaknesses or disadvantages the hotel might have in groups or catering operations.

Search Criteria

The main purpose of the Cancellation Summary report is to show all groups canceled or lost for a specific cancellation date range or a specific arrival date. It can be filtered and/or sorted by cancellation reason or destination “Lost to” and therefore represents an excellent tool for pinpointing weaknesses or disadvantages the hotel might have in groups or catering operations.

Property. Enter or select the property. You can select multiple properties from a hub location.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Cancellation Date Range (From Date/To Date). Allows the selection of a date range in which the booking room status or booking catering status was canceled.

Start Date Range (From Date/To Date). The arrival date range for bookings to view.

Block Status. Select a business block status. Typically a lost, canceled, or refused status would be chosen here. By default, all statuses are selected.

Overall Owner. Select an overall booking owner's initials.

Rooms Owner. Select the rooms owner's initials.

Catering Owner. Select the catering owner's initials.

1. The owner fields are defaulted with the ghost text All Codes indicating that all Overall, Rooms or Catering Owners will be considered.
2. The fields are displayed with multi select LOV.
3. Select the magnifying glass, open the LOV for Search, and select Owner with an option to select one or multiple Owners.
4. The list displays all Owner codes, Owner Name.
5. If multiple properties are selected in the Property field, the list displays the Property code against each Owner.
6. After selecting the Owner code(s), pass the Owner code(s) back to the Report Request Parameter screen.
7. If multiple Owners are selected, they appear as comma separated values.

Lost to Destination. Select destinations to which bookings were lost.

Lost to Property. Free form text entry field. Provide the name of the property or competitor brand business was lost to.

Reason. Select Cancellation reason.

Block Type (Rooms Only, Catering Only, All). Enables you to filter this report to print only for blocks without catering elements, only for blocks that do have catering elements booked, or for all blocks.

Print Cancellation Comments (Rooms Only, Catering Only, All). Enables you to print cancellation comments only for rooms cancellation, only catering cancellation, or for all.

Display Options

Include All Events. If checked, all lost/canceled events are calculated into the lost catering revenue figures. If not checked, only the events canceled on the same day as the catering status on business block was changed to CAN are calculated into the catering revenue figures. Events that were canceled prior (on a different date) to the catering status being CAN would therefore be excluded if the check box is selected.

Page Break. It is possible to create a page break after the first sort option when the Page Break check box is checked.

Sort Order. It is possible to sort the report by the following options: Cancellation Date, Arrival Date, Status, Rooms Owner, Catering Owner, Overall Owner, Rooms Reason, Catering Reason or Destination.

Currency. Visible when the application parameter Rate Management > Ability to Quote Rates in Foreign Currency is Active.

Select the currency in which the revenues on this report will display.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Report Data

The report lists the following booking data: account name, block name, block code, block id, arrival date, departure date, current booking status and date the booking turned that status, rooms owner, catering owner, number of room nights, average rate, catering food and beverage revenue, catering other revenue, rooms revenue, total catering revenue, and total revenue. Business block contact name, follow up date and the destination (lost to) are also listed.

When the OPERA Controls parameter Catering Events >USE FORECAST VALUE ONLY is set to Y, the Food and Beverage and Other Revenue calculations consider the Use Forecast Only check box on the Event main screen.

Account information is displayed according to the following profile type hierarchy:

- If a Company profile is attached to the business block, the Company profile name appears.
- If a Company profile is not attached to the business block, but a Travel Agent is attached, the Travel Agent profile name appears.
- If neither a Company profile nor a Travel Agent profile is attached to the business block, and a Source profile is attached, the Source profile name appears.

Room revenue on this report is as entered on the block, not taking into account taxes or packages that might be included in the booked rate. Catering revenue is calculated downwards cascading, meaning if there is actual revenue, actual revenue prints; if there is no actual revenue, guaranteed revenue is checked and printed if existing. If no guaranteed revenue is found, expected revenue is checked and printed. If there is no expected revenue, forecasted revenue is printed.

If only the rooms part of a booking is canceled, but catering stays on production status, the block appears on the report, but only the room night and room revenue figures show as canceled.

If only the catering part of a block is canceled, but rooms are still active, only the catering figures show as canceled on the report.

If only some events are canceled, but the catering status of the block is still active, the block will not appear at all on the report.

The last page of the report summarizes the following data by block status: Room nights, room revenue, catering food and beverage revenue, catering other revenue, total catering revenue and total revenue.

It is possible to print the report for statuses other than the return-to-inventory statuses, but no revenue prints in that case (as no revenue was lost if the booking is not lost or canceled).

Block Conversion (rep_block_conversion.rep)

Prerequisite for Block Conversion

The Booking Conversion Report calculates the booking conversion to an Actual status for any date range in absolute figures as well as conversion percentages.

For the selected date range, all bookings that reach a final status will print subject to status selection. The bookings are summarized into Actual bookings (considered Converted) and bookings on other final statuses. These other final statuses are commonly Lost or Canceled status types. You can specify one additional non-final status to include in the actual total.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Typically, this status would be a Definite or equivalent status that has not yet turned to actual, but is highly expected to do so.

The report summary then calculates the ratio of all bookings on a final status in the selected date range versus those bookings that have turned ACTUAL (or are highly likely to do so).

The report summary then calculates the ratio of all bookings on a final status in the selected date range versus bookings that have turned Actual (or are highly likely to do so).

Selection Criteria

1. **Property**: Enter or select the property. You can select multiple properties from a hub location.
2. **Start From Date From/Start To Date**: Enter a block start (arrival) range.
3. **Account**: Search and select sales accounts to include in the report.
4. **Current Status**: Select one or more block status. The list shows only final statuses, meaning statuses that do not have any further follow-on status assigned to them in configuration (e.g., Actual, Lost, Canceled).

> **Note**
>
> When the Block Status is Actual, the Net Rate, Gross Rate and Net Room Revenues are calculated based on Picked-up figures.

5. **Status not Turned**: Select one or more block status. This allows inclusion of blocks that are highly likely to turn Actual in the near future into the Converted statistics. The list only shows statuses that have the actual status configured as a follow-on status in the status flow configuration.
6. **Market Segment**: Select one or more market segments from the list
7. **Revenue Type 1**: Select one or more revenue types.
8. **Revenue Type 2**: Select one or more revenue types.
9. **Revenue Type 3**: Select one or more revenue types.
10. **Revenue Type 4**: Select one or more revenue types.
11. **Revenue Type 5**: Select one or more revenue types.

> **Note**
>
> Each revenue type field allows for the selection of multiple revenue types. When revenue types are combined, for instance Food and Beverage, the revenue type values are subtotaled. Once you select a revenue type for one, the revenue type is not available for selection in another **Revenue Type** column.

12. **Currency**: Select a currency from the list. (Available when the Ability to Quote Rates in Foreign Currency OPERA Control is active).

Report Data

The first part of the report outputs the block details in two lines per booking record. The details shown for each booking include: booking status, catering status, booking name, booking id, arrival date, departure date, catering revenue types 1-5 (per the report parameters), initial number of rooms booked, total number of rooms booked, net room rate, gross room rate,

Copyright © 2016, 2025, Oracle and/or its affiliates.

breakfast included flag, market segment, net room revenue, total catering revenue, total revenue and the reason lost, canceled or turned down for those bookings on a cancel status.

> **Note**
>
> The Initial room night figure is taken from the Initial block snapshot, not from the original block figures. Therefore, you must use block snapshots to have this figure appear on the report.

Catering Revenue prints per the regular principle: if an event is actual, the Actual/Billed revenue prints. If no Actual/Billed revenue exists (and when the event is not yet actual), the Guaranteed/Expected revenues are checked. If Guaranteed Revenue is higher than Expected Revenue, Guaranteed Revenue prints. Otherwise, Expected Revenue prints. If Expected/ Guaranteed Revenues do not exist, Forecast Revenues prints.

An exception to the above rule is made when the OPERA Controls parameter **Events > Use Forecast Value Only** is active. In this case, all events are created with the flag Use Forecast Revenue Only checked. While this flag is checked, all catering revenue in this report come only from the forecast figures, even if expected or guaranteed figures exist. The flag is unchecked automatically when the event turns actual, but can also be manually unchecked earlier in the life of the event.

The report summary that prints at the end is composed of four lines:

- **Line1**: Summarizes all bookings listed on the report including their room nights and revenues.
- **Line2**: Summarizes all bookings, their room nights, and revenues, on actual status plus those bookings on the status defined in filter “Status not turned.” This line represents the Converted business.
- **Line3**: Calculates conversion percentages and factors of actual / converted bookings (line2) versus all bookings (line1) (this is, the percentage of all bookings turned actual as opposed to lost or canceled).
- **Line4**: Splits out the number of bookings, revenues, and room nights of bookings that are on the status, “Status not turned” to get a clearer picture of the business that might turn actual, but still has a chance of getting canceled.

Block Information Report (resblkinfo)

Block Information (resblkinfo) – displays a detailed breakdown of a block header and room grid for a specified date range.

Business Block Change Log (rep_bookchanglog.rep with rep_bookchglog.fmx)

[Prerequisites for Business Block Change Log Report]

The Business Block Change Log report is a listing of the production (status/revenue changes) changes made to a Business Block within a specified production period. Changes include status changes, increase or decrease of the room block, or increase or decrease of the revenue (rate changes).

This information is also available when displaying the business block through the Production Changes option. Changes are recorded per change date/per stay date in the log. Rates and revenue are recorded as entered into the room grid, that is, if the rate amount includes tax or packages, those are not deducted from the amount to find the net room rate.

These are the report general conditions:

- The report is located in the Business Blocks report group.
- The report parameter is named REP_BOOKCHGLOG.
- The report is named Block Change Log Report.
- The report generates rep_bookchglog.rep.

Selection Criteria

Use the following filters to generate the report. The Stay Date From/Stay Date To filter, Change Date From/Change Date To filter, and Block filter are mandatory.

- **Stay Date From/Stay Date To**: The range of stay dates covered by the report. For example, when the Stay Date From is set to 01/01/2022 and the Stay Date To is set to

Copyright © 2016, 2025, Oracle and/or its affiliates.

12/31/2022 and a business block exists that arrives on 12/26/2021 and stays until 01/15/2022, only those room nights and revenues that occur in the month of January 2022 for this business block (01st to 15th) are included in the report. The dates from 12/26/2021 through 12/31/2021 will not appear because they do not fall within the From/To Stay Date range.

- **Change Date From/Change Date To**: These fields define the date range in which business block changes are recorded. Each change made to room status or room nights and revenue is recorded in a specific production change log. The Production Date Range filter scans the entries in the production change log searching for any business block room changes that fall under the other criteria that have been selected on the filter form. Due to the nature of this date range filter, only dates in the past are valid entries because there cannot be any entries in the business block change log after the current business date. To illustrate: a business block that gets created on status TEN in April 2021 with Stay Dates in October 2021 can turn to status DEF in June 2021. In this scenario, there would be two entries in the change log for this business block; one for the creation of the business block on status TEN in production period April 2021, and one for the status change to DEF in June 2021.
- **Block**: Click the down arrow and select business blocks. The default is **all business blocks**.
- **Room Owner**: Click the down arrow and select the specific Rooms owner.
- **Catering Owner**: Click the down arrow and select the specific Catering owner.
- **Change By User**: Click the down arrow and select the users to report on specific users.
- **Status Changes Only**: Select this check box to include only the status changes in the report.

Report Data

If multiple business blocks are included, they are sorted by booking ID. For each business block, the account name and the booking name print as well as the booking ID, original number of room-nights, revenue and average rate on booking creation, room owner, catering owner, booking arrival, and departure dates.

The Account Name appears according to the following profile type hierarchy:

- If a Company profile is attached to the business block, the Company profile name appears.
- If a Company profile is not attached to the business block, but a Travel Agent is attached, the Travel Agent profile name appears.
- If neither a Company profile nor a Travel Agent profile is attached to the business block, and a Source profile is attached, the Source profile name appears.

Business Block Lead Time Report (rep_block_leadtime)

The Business Block Lead Time Report is used to display multiple statuses (by date) and revenue types for Business Block bookings. The purpose of this report is to show the total lead time elapsed between the date the booking is created and the day the booking arrives at the hotel. This report reflects all booking status changes by date and the total number of days the booking stayed at each status. This report is particularly helpful for identifying the booking patterns of customers in order to accurately forecast anticipated group business and the time frame in which it will transpire. With options to select up to six different statuses and up to four different revenue types, this report can be either very simple or highly detailed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Date Range: Select the From and To dates to display the booking lead time for this time period.

Current Status: Select bookings by their current statuses. This filter is multi-select.

Account: Select the space type for which the report should be printed as, Single, Combo, or Both.

Market Segment: Select bookings in a particular market segment.

Status 1 - 6: Select the order in which the booking statuses display in the report.

Revenue Type 1- 4: Select the order of revenue type to display in the report. Each revenue type is multi-select. See Configuring Catering Revenue Types.

Currency: Available when the Ability to Quote Rates in Foreign Currency OPERA Control is active.

Report Data

This report presents each booking as a single record that displays from left to right. The columns on the right side display the arrival date, current status, block name, and booking ID for a single record. The center of the report displays the ordered statuses, the date each booking was changed from one status to another, and the number of days each booking was in specific status.

The far-right side of the report displays the date that the booking was placed in actual status; this is a default for this report and cannot be user defined. Each record can reflect up to four revenue types and their associated totals. Each record also contains, by default, the initial rooms count, average room rate (which is calculated inclusive of packages and taxes), total room count, and the total number of lead days per booking.

Catering Revenue prints per the regular principle: if an event is actual, the Actual/Billed revenue prints. If there are no Actual/Billed revenue and/or the event is not actual yet, the Guaranteed/Expected revenues print. If Guaranteed Revenue is higher than Expected Revenue, Guaranteed Revenue prints. If Expected/Guaranteed Revenues does not exist, the Forecast Revenues prints.

An exception to the above rule is made when the Use Forecast Revenue OPERA Control is active. In this case all events are created with the flag Use Forecast Revenue checked. While this flag is checked, all catering revenue in this report only come from the forecast figures, even if expected or guaranteed figures exist. The flag is unchecked automatically when the event turns actual but can also manually be deselected earlier in the life of the event.

The report summary at the end of the report shows the following:

- Total Number of Bookings.
- Total Number of Actual Bookings.
- Total Number of Room Nights.
  - For Master Allocations (indicated on this report by an asterisk (*) preceding the Block Name), the total number of room nights are the total number of available rooms, **not** the number of rooms blocked.
- Total Number of Actual Room Nights.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Average Lead Time (for all bookings).
- Average Actual Lead Time (for bookings in Actual status).
- Conversion Bookings.
- Conversion Room Nights.

Business Block Total Spend Report (rep_busblock_spend.rep with rep_busblock_spend.fmx)

The Business Block Total Spend Report displays the total group spend by including all revenues posted to any reservations linked to the block. This report provides a summary similar to the summary screen on a business block in granular detail by showing revenue grouped by the transaction code sub-group.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Block Arrival Date From/To: Enter an Arrival Date range to filter business blocks for the report.

Transaction Date From/To: Enter a Transaction Date range to filter business blocks for the report.

Block: Opens the Business Block Search screen. Select business blocks to print on this report.

Block Status: Select statuses to filter business blocks for the report.

Display all Transaction Code Groups: If you select this option, all Transaction Code Groups print on this report even if they have no postings to them for the selected business blocks. If you do not select this option, then only the Transaction Code Groups with postings for the selected business blocks will print.

Display all Transaction Code Sub-Groups: If you select this option, all Transaction Code Sub-Groups print on this report even if they have no postings to them for the selected business blocks. If you do not select this option, then only the Transaction Code Sub-Groups with postings for the selected business blocks will print.

Print as Posted: If you select this check box, the report will not calculate net values for generates that are configured as included in the appropriate transaction codes. For example, if a 10 percent tax is included in $2,000.00 of Banquet Food revenue, the report will print 2,000.00 instead of 1818.181818 (as it would when the check box is not selected). If the Print as Posted check box is not selected, the report will print six decimal figures for all values in order to avoid rounding differences.

Print Event Summary Revenue: If you select this option, the report prints the Event Revenue Type breakdown on the right side of this report. If this option is not selected, the Event Revenue Type breakdown does not print. The figures that print in the Event Revenue Summary are determined by the transaction codes linked to the event revenue type as configured in the Revenue Type Cross Reference. The revenue is reported based on the posted transaction code and the revenue type it maps to.

Combine Revenue: This option is mutually exclusive with the Revenue Grouped by Booking option, meaning that you can select only one of them. If you select this option, the revenues for all selected business blocks are combined into a single report. The selected header

Copyright © 2016, 2025, Oracle and/or its affiliates.

information prints totals for each business block selected, followed by the summary revenue info.

Revenue Grouped by Booking: This option is mutually exclusive with the Combine Revenue option, meaning that you can select only one of them. If you select this option, each of the selected business blocks prints revenue details for each block, and a summary section prints the totals for all of the selected business blocks.

Currency: Select the currency in which the revenues on this report will appear.

Report Data

For Each Business Block: Business Block ID, Block Code, Arrival Date, Departure Date, Business Block Name, Account Name, Contact Name, Contact Phone, Total Rooms, Total Guests, Total Spend, and Total Payments.

For Revenue Details (All Revenue): Depending on the Display all Transaction Code Groups and the Display all Transaction Code Sub-Groups filter options, this section contains all selected summary information, for example: Food and Beverage, Miscellaneous, Room, and Tax.

The next section prints the Event Revenue Summary that prints for any booking that has posted event revenue when the Print Event Summary Revenue check box is selected in the parameters.

Contract Merge Report (Based on Sample_Cont_Merge.RTF with Rep_Cont_Merge.FMX)

Prerequisites for Contract Merge Reports

The Group and Event Contract (Sample_Cont_Merge.RTF) outputs group room block and catering event details. It is possible to customize `sample_cont_merge.rtf` into multiple reports, each with the `Rep_Cont_Merge` parameter form. The Potential Revenue summary table outputs a summary based on the **Revenue Values** selected in the report parameters. With the report parameters to determine which room grid and event template merge into the document, and the possibility of merging deposit information makes the report very flexible.

In multi-property operations the Contract Merge Report can generate details for blocks and events in multiple properties.

> **Note**
>
> When you output events belonging to a sub-block, all events output on one contract as if they were one booking; not as separate contracts.

Selection Criteria

- **Property**: Enter or select the property. You can select multiple properties from a hub location.
- **Block**: Click to select the block to include in the report.
- **Event Property**: Select or confirm the property name.
- **Event Status**: (Available with **Simple Events** or **Catering Events** OPERA Control). Select the statuses of events to include in the report.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Print Account**: Defaults to the block's default print Account. The Linked Profiles dialog opens enabling you to select other accounts or contacts linked to the selected block.
- **Print Contact**: When a block is selected in the Block filter, the print contact defaults to the block's default Print Contact. The Linked Profiles dialog opens enabling you to select other accounts or contacts linked to the selected block.
- **Grid Type**: Select one of the following options from the list:
  - Current
  - Contract
  - Pickup
- **Event Templates**: Select one of the following values from the list:

Full Event Templates (when the Catering Events OPERA Control is active)

- **Template1**: Date, Time, Event Name, Space Name, Attendees.
- **Template2**: Date, Time, Event Name, Attendees, Function Space Rental.
- **Template3**: Date, Time, Event Name, Space Name, Attendees (Double Spaced).
- **Template4**: Date, Time, Event Name, Space Name, Setup Style, Attendees, Food Revenue, Beverage Revenue, Rental Revenue, Other Revenue. The amounts are calculated from the revenue types that have been selected on the report parameters for each column.
- **Template5**: Date, Time, Event Name, Space Name, Setup Style, Attendees, Function Space Rental.
- **Template6**: Date, Time, Event Name, Space Name, Setup Style, Attendees, F and B Minimum.
- **Template7**: Date, Time, Event Name, Space Name, Attendees, Resources, and Price. Price is based on the Total Expected Revenue, even if the Use Forecast Only check box is selected on the Event Search or Event screen (Available when the Event Resources OPERA Control is active).
- **Template 8**: Similar to Template #7, but with less resource details. This template includes the Date, Time, Event Name, Space Name, Attendees, Limited Resources, and Price. Price is based on the Total Expected Revenue. (Available when the **Event Resources** OPERA Control is active).

  Catering Package Events in Template #8:

  - Item Rate Codes will NOT print.
  - Included Items will NOT print.
  - Additional Items and their Rate (but not Rate Code) will print.
  - Included Menu Names will print; the 'Included' tag will NOT print.
  - Excluded Menus and their Rate will print.
  - Excluded Menu Container will NOT print.
  - Included Menu Items will NOT print (whether attached to an Included or Excluded Menu).
  - Excluded Menu Items and their Rate will print (whether attached to an Included or Excluded Menu).
  - Excluded Menu Item Containers will NOT print.
  - Function Space Rate Code or the Included tag will NOT print.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Items with a 0 Quantity will NOT print.

Non Catering Package Events in Template #8:

- Item Rate Codes will NOT print.
- Included Menu Names will print.
- Menu Containers will NOT print.
- Included Menu Items will NOT print.
- Excluded Menu Items and their Rate will print.
- Excluded Menu Item Containers will NOT print.
- Function Space Rate Code will NOT print.
- Items with a 0 Quantity will NOT print.

Partial Event Templates (when the Simple Events OPERA Control is active):

- The following template values are available:
  - **Template1**: Date, Time, Event Name, Space Name, Attendees.
  - **Template2**: Date, Time, Event Name, Attendees, Function Space Rental.
  - **Template3**: Date, Time, Event Name, Space Name, Attendees (Double Spaced).
  - **Template 5**: Date, Time, Event Name, Space Name, Setup Style, Attendees, Function Space Rental.
- **Block Notes**: Select block note types from the list to include in the report output.
- **Deposit**: Select one of the following sort options: By Date, By Time, or No Deposit. If sorted by deposit type, a sub-total for each deposit type will output.
- **Currency**: Select a currency from the list. This is available when the Ability to Quote Rates in Foreign Currency OPERA Control is active.
- **Revenue Values**: Select an option from the list. Also see: Examples of Rev. Values.
- **Gross Rates/Revenue**: Gross Room Rate is calculated as:
  - Included generates are not deducted.
  - Excluded generates are added.
  - Excluded packages are not added. Gross Catering Price is calculated based on the Transaction Codes mapped in Configuring Revenue Type Mapping.
- **Net Rates/Revenue**: Net Room Rate is calculated as:
  - Included generates are deducted.
  - Excluded generates are not added.
  - Included packages stay included.
  - Included generates on included or excluded packages are calculated out. Net Catering Price is calculated based on the Transaction Codes mapped in Configuring Revenue Type Mapping.
- **Gross and Net Rates/Revenue**. When this option is selected, both the Gross and Net room rates and catering prices are reported and displayed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> If you do not select an option, the room rates and catering prices appear as they are in OPERA Cloud.

Select revenue types. If you select the Template values as Template 4: Date/Time-Event-Space-Setup-Att-Rev1-Rev2-Rev3-Rev4, all Revenue Types are required fields. (Available when the Simple Events or Catering Events OPERA Control is active.)

- **Rooms with Rate and No Inventory**: If selected, room types where no inventory has been booked are included.
- **PMS Room Types**: If selected, PMS room types output on the contract instead of the Room Pools. If the Room Pools OPERA Control is not active and room pools are not configured for the property, you must select PMS Room Types to display the rooms in the contract output. For more information, see: Configuring Room Pools
- **Room and Rate Separately**: If selected, room nights and room rates are included in separate grids. If not selected, they output in the same grid. This option is available only when both the Rate and the Occupancy flags are selected.
- **Room Rates**: Select to output room rates, otherwise, Room and Rates Separately, Inline Currency, and Show Decimals are disabled.
- **Inline Currency**: Enabled when Room Rates is selected. If selected, the currency symbol is included with the rate in the grid cells in the Room Grid and Event Templates.
- **Show Decimals**: Enabled when Room Rates is selected. If selected, the rates in the Room Grid and Event Templates with decimals outputs as set up in the Property Details. If not selected, the rounded rate outputs without decimals.
- **Print Space Between Currency and Amount**: Select the check box to print in the report (available when Room Rates and Inline Currency are selected). When selected, a space will be added between the currency symbol/code and the rate amounts displayed in the grid.
- **Hide Property Code**: Select to suppress the property code from output in the report. The Property name will output.
- **Occupancy**: If selected, the number per occupancy level per day is included on the report when the Occupancy Split OPERA Control is activated. If not selected, the total number of rooms per day per room type per day is output.
- **Internal Notes**: If selected, internal block notes are included on the report.
- **External Notes**: If selected, external block notes are included on the report.
- **Event and Resources Notes**: (Available with Simple Events or Catering Events OPERA Control). If selected, event and resource notes are included on the report.

Revenue Values Calculation Examples

The following are examples for the Rev. Values options in the report parameters.

Table 9-2 Occ1 Net Rate = 48.91

Deposit Report (rep_deposit.rep with rep_deposit.fmx)

The Deposit Report provides an overview of business block deposits requested and received. Room and Catering deposits can be listed separately if they are requested that way. Otherwise, the combined ALL deposit type will print.

You can organize the report by deposit due date or by business block arrival date range.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Start Date Range: Allows entry of an arrival date range. All business blocks with an arrival date within the selected range will print on the report.

Deposit Date Range: Allows entry of a date range for which deposits are requested. All business blocks that have deposit requests with a due date within this date range print on the report.

Block Name: Filter the report parameters by the Block Name.

Block Status: Use this option to filter the report by specific Block Status.

Catering Status: Use this option to filter the report by specific Catering Status.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Block Type: Select Rooms, Catering, or All. Allows the selection of Block Room Type only deposits to print (type 'R'), Catering Only Business Block Type deposits (type 'C'), or both Business Block Room Types and Catering Business Block Types (R, C and All) deposits.

Deposit Type: Select one of the following three options:

- **Paid** – If arrival dates are defined, all paid deposits for business blocks during that period will be printed. If deposit due dates are defined, all paid business block deposits made in that period and any unallocated payments for any period will be printed.
- **Unpaid –** Unpaid deposit requests due during the defined period will be printed.
- **Both –** Both the paid and unpaid deposit information will be printed.

Report Data

The report prints a separate section for each business block in booking ID order. The business block details printed include rooms status, catering status, business block name, booking ID, arrival date, departure date, company account name, company contact name, agent or source account name, and agent or source contact name. The deposit data contains the deposit type, percentage of the total that the deposit represents (if it was entered that way), deposit requested amount, due date of the deposit, deposit comments, total amount paid, and the total amount unpaid for each specific request.

Deposit types can be Room, Catering, or All. If a deposit payment is posted without a deposit request being present or the payment is not been offset against an existing request when posting it, the deposit record will be listed on this report as Unallocated, and only the total amount paid shows a figure.

The Total Unpaid figure is calculated for each requested record by deducting the paid amount from the request to which it is allocated.

A report grand total is printed as a summary of all details listed in the Total Paid and Total Unpaid columns.

Forecast/Availability Book (rep_rooms.rep with rep_rooms.fmx)

The Rooms Availability and Forecast report parameter screen provides options for printing the Rooms Availability report as well as the rooms forecast report. When combined, these two reports form a unit that presents a picture of the on-the-books group business for the coming months compared to targets and budgets.

- The availability page contains several sections of different data. It summarizes the day-by-day group business per booking status and compares it against the Sales Allowance (if existing). Also, on a per day basis, the contract figures, target figures, and current total pick-up are displayed and several variances are calculated. At the bottom of this page, the monthly group budget prints and can be compared against the figures currently on the books.
- The rooms forecast page shows a daily breakdown of number of rooms booked versus the number of rooms picked-up for each group horizontally across the page, so that a whole month's worth of business can be viewed at once.

> **Note**
>
> Because the report uses configured periods (rather than calendar dates) as date parameters, it cannot be used with Scheduled Reports.

Copyright © 2016, 2025, Oracle and/or its affiliates.

The report is primarily designed as a forecast tool, not a production report. Therefore, the figures on this report, if printed for past dates, should not be balanced or compared against any of the booking production reports. You can generate this report with an **OPERA Cloud Foundation** subscription and **OPERA Cloud Sales and Management** add on subscription.

Selection Criteria

1. **Include Past Dates**. Select check box to include dates prior to the current business date.
2. **Stay Period From**. Select a date or fiscal periods when the **Period Definition** OPERA Control is active. For more information, see Configuring Period Definition Periods.
3. **Stay Period To**. Select a date or fiscal periods when the **Period Definition** OPERA Control is active. For more information, see Configuring Period Definition Periods.
4. **Rooms**. Select to print Availability, Forecast, or Both. Fields options change depending on whether you select **Availability**, **Forecast**, or **Both**.
5. **Origin**. (Available when you select **Rooms** and **Availability** or **Rooms** and **Forecast**). Select the origins of the business block. You can select one or more of the following (depending on the active modules and cloud services):
   - EXT (External System)
   - ORS (Central Reservation Sales)
   - PMS (Property Reservations Sales)
   - SC (Property Conference Sales)
   - SFA (Central Conference Sales)
6. **Summary Info Status**. (Available when you select **Rooms** and **Availability** or **Rooms** and **Both**). Allows you to select one or several combined statuses that are compared to contract, pick-up, and target figures in the summary section of the report. These statuses will also be combined for a group ADR and Total Room Revenue for each date.
7. **Budget Status 1 & 2**. (Available when you select **Rooms** and **Availability** or **Rooms** and **Both**) Allows you to select one or several statuses in each filter field to compare against the group budget for the month.
8. **Status**. Only bookings of the selected statuses are included in the report.

> **Note**
>
> The data on the Rooms Forecast and Rooms Availability reports is sorted by status code in the configured sequence order.

9. **Print Contract Rooms for Forecast**. (Available when you select **Rooms** and **Forecast** or **Rooms** and **Both**) Select the **Print Contract Rooms** check box to print an additional line for each business block with the total number of Contracted rooms per day.
10. **Net Revenue**. Select this check box to display Net room revenues. When this flag is not selected, gross room revenue are calculated.
11. **Currency**. Select the type of currency to display the revenues on this report.
12. **Name**. (Available when you select **Rooms** and then **Forecast**). Possible options are **Business Block Name** or **Primary Account Name**. The name you select prints on the booking forecast page.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When this report is printed by Account Name, the following logic is used: If a Company profile is attached to the booking, the Company profile prints. If no Company profile is attached, but an Agent profile is present, then the Agent profile prints. If no Company and no Agent profiles are attached, but a Source profile is present, then the Source profile prints.

13. **Property Revenue Type**. (Available when you select **Rooms** and **Forecast** or **Rooms** and **Both**). Select one or more revenue type codes.
14. **Market Segment**. (Available when you select **Rooms** and **Forecast** or **Rooms** and **Both**). Include only bookings from the market segments chosen in this field.

Report Data

The Availability Book

The calendar month or fiscal period appears at the top of the report, along with the corresponding dates.

Premium The **Rate Protect** bar is available when the **Rate Protect** OPERA Control is active. The **Non-Compete** bar is available when the **Non Compete** OPERA Control is active. If any booking is designated Non-compete, **NC** appears above that date. If any booking is Rate Protected **RP** appears above the date.

- Rate protect means that no other groups should be booked using rates lower than those assigned to the block that is flagged as rate protect. The rate protect flag can be applied to all or selected dates of the flagged block.
- Non compete means that no competing accounts (accounts having the designated NC Industry code) should be booked at the same time as this block. The non compete flag can be applied to all or selected dates of the flagged block.

The Events bar indicates the first letter of any events entered on the Property Calendar.

The first section of the availability book is made up of the total per booking status and period of the data that appears in detail on the forecast book. The totals per status shown are: average rate, total number of room nights, total revenue, followed by a breakdown of room nights day-by-day for the whole month for the appropriate status across the page. If the hotel operates with a sales allowance, the total rooms per day allocated to the sales allowance prints above the first status total. Following the status details, a “Rooms Available” line prints. The totals that appear in this line are calculated by deducting all room nights of deduct-inventory status from the total sales allowance for the day. The last line in this section shows the sum of all rooms by day that are lined to bookings. Even lost and canceled status totals are added in order to arrive at the total (if these were included in the status selection).

The second part of the availability book contains a section titled Summary Information. All information printed in the section pertaining to current revenue and average rates depends on the Summary Information Status filter .The average rate and revenue for each day in the printed month appears, followed by details of contracted room nights, revenues and average rates, picked-up room nights (picked up rooms are never reported for Master Allocations), revenues and average rates, and daily targets for room nights, revenues, and average rates if these were entered. Subsequent rows show the calculated variance of current figures to contract figures (as entered into the contract room grid on each booking, if used) as well as the calculated variance of current figures to daily targets. All of the above figures are calculated and appear on a day-by-day basis. For Master Allocations, calculations are based on available rooms, not the number of rooms blocked.

Copyright © 2016, 2025, Oracle and/or its affiliates.

The last section of the report shows the group budget figures entered for the month and the status summaries for the whole month of those statuses that were selected in budget status one and budget status two in the filter form. The totals for the statuses selected in budget status two are compared against the budget and the variance printed.

Status

- The first line per booking contains the internal booking ID number, the booking name or primary account name depending on what had been chosen in the Name filter on the report order form, and the market code. The room's owner initials print next.
- The Rate Protect and/or Non Compete bar is available when either or both the **Blocks** and the **Blocks, Non Compete** application parameters are set to **Y**. If the booking is designated non compete on a given date, NC appears above that date. If the booking is rate protect on a given date, RP appears above the date. Rate protect means that no other groups can be booked using rates lower than those assigned to the block that is flagged as rate protect. The rate protect flag can be applied to all or selected dates of the flagged block. Non compete means that no competing accounts (accounts having the designated NC Industry code) should be booked at the same time as this block. The non compete flag can be applied to all or selected dates of the flagged block. For non compete bookings, the NC Industry code appears in the Industry column.
- For each block there is an Average Rate for the month, RevPOR (Revenue Per Occupied Room) that is calculated by adding room revenue and catering revenue of the catering revenue types selected on the filter and then dividing the total sum by the total number of room nights and Room Revenue for the month.
- The rest of the line is divided into number of days of the appropriate month or fiscal period and shows the number of room nights booked on each day for the booking. The second line contains the pickup figures (picked up rooms are never reported for Master Allocations) per day. If the Print Contract Rooms check box is selected on the report order form, the third row contains the number of contracted rooms per day. Each line has a total for the month.
- For each status there is a Total Rooms Revenue and Total Average Rate:
  - When Status is not an ACTUAL status, the Avg Rate = Total Rooms Revenue / Total Room Nights (blocked).
  - When Status is an ACTUAL status, the Avg Rate = Total Rooms Revenue / Pickup Room Nights.

Period

The Period Totals are highlighted in the gray bar.

- The first figure is the Total Room Nights, then total Pickup Room Nights, and if the Print Contract Rooms check box is selected in the report order form, the third figure is the total Contract Room Nights per period.
- Beneath those figures are the Total Room Revenue and the Average Rate per period. For business blocks in an actual status, Picked up rooms and Picked up room revenue are considered.

> **Note**
>
> When the application function**Blocks** and **Master Allocations** is active and a Master Allocation is included on this report, these blocks are indicated by an asterisk (*) on the left of the Business Block Names and in the footer.

OPERA CLOUD

Group Room Pace (BI) Report (rep_group_rooms_pace_bi.rtf with rep_group_rooms_pace_bi.fmx)

Prerequisites for Group Room Pace (BI) Report

The Group Room Pace Report is sorted by Property Year and grouped by Total, Catering Only Y (Sales) and Catering Only N (Catering).

This report is a BI Publisher report. Customizing the report is not recommended. The following are the report elements:

- Report Name - Group Room Pace (BI)
- File Name - rep_group_rooms_pace_bi.rtf
- Form to run - rep_group_rooms_pace_bi.fmx
- Data Template - rep_group_rooms_pace_bi.odt

Selection Criteria

Production Period:

Each change to Revenue or Status is recorded in production change logs. When dates are entered in the Production From and To Date fields, those dates are used as filters when querying the logs. To illustrate, a business block created on status TEN in April 2018 with a start date in October 2018 turns to DEF in June 2018. In this scenario, two entries would appear in the status change log for this business block: one for the creation of the business block on status TEN in April 2018, and one for the status change to DEF in June 2018. If

Copyright © 2016, 2025, Oracle and/or its affiliates.

revenue is added to the DEF business block in July 2018, another change log entry is written to record that revenue. Because they filter on a date when something has already happened in OPERA Cloud, the dates entered here should be for today's date or earlier.

For STLY (Same Time Last Year) calculations, the report considers the Production From Date as empty and the Production To Date as the Production Date entered, minus one year.

- **From**: (Mandatory) Enter the calendar date to indicate the beginning of the Production Period for which the report is to be filtered.
- **To**: (Mandatory) Enter the calendar date to indicate the end of the Production Period for which the report is to be filtered.

Stay Dates: These dates are the calendar stay periods that appear in the report. The calculations for STLY are affected by the Fixed Stay Dates check box. When the Fixed Stay Date check box is selected, the Stay Dates used for calculating STLY are the same as those entered here. When the check box is not selected, the Stay Dates used for calculating STLY are the Stay Dates entered, minus one year.

- **From**: (Mandatory) Enter a start date range when the report will filter business blocks by allotment date.
- **To**: (Mandatory) Enter an end date ranged when the report will filter business blocks by allotment date.

Property: Enter or select the property. You can select multiple properties from a hub location.

Origin: Select Origins. This LOV lists all of the possible values from the internal field allotment_origin values from the Business Block header. When a value is selected, only events from business blocks with this origin are considered. If no value is selected, all business blocks are considered. Possible values are based on the user who created the block and the Act As and At values set on the user in Role Manager.

- If the Act As value = Conference Sales Person, and the At value = Property level, then the block is flagged as Sales and Catering.
- If the Act As value = Reservation Sales Person, and the At value = Central, then the block is flagged as ORS.
- If the Act As value = External System, then At value = not required, and the block is flagged as EXT.
- If the Act As value = Reservation Sales Person, and the At value = Property, then the block is flagged as PMS.
- If the Act As value = Conference Sales Person, and the At value = Central level, then the block is flagged as SFA.

Block:

New Definite: (Mandatory) Select one status code from a list of all status codes that can turn to an Actual status. The New Definite column is calculated based on the business blocks that turned to this status during the requested production period.

Incl Actual. (Enabled when a Status is selected in the New Definite field): Select this check box to include Actual business blocks with the figures in the Definite On the Books totals.

Cancel: (Mandatory) Select status codes from a list of all Return-to-Inventory statuses. The Cancel column is calculated based on the business blocks that turned to this status during the requested production period. All figures are reported as a negative.

OTB Status 2: (Mandatory) Select status codes from a list of all status to be used when calculating the first of the last two sections.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- The TY (This Year) column is calculated based on the business blocks currently in this status for the stay dates.
- The STLY (Same Time Last Year) column is calculated based on business blocks with this as a Last Status for the Production Period and Stay Period minus one year.

OTB Status 3: (Mandatory) Select status codes from a list of all status codes to be used when calculating the second of the last two sections.

- The TY (This Year) column is calculated based on the business blocks currently in this status for the stay dates.
- The STLY (Same Time Last Year) column is calculated based on business blocks with this as a Last Status for the Production Period and Stay Period minus one year.

Revenue:

Currency: Select the currency you want to be used for calculating the figures in this report. All figures are reported in the selected currency. If no value is selected, the report will be calculated using the Base Currency of the logged in Property.

Revenue: One of the options must be selected, Net or Gross. You can select the Incl Packages check box if either Net or Gross is selected.

- **Net**: When selected, Room Revenue will be calculated as: Net Room Rate calculated as Room Only.
  1. Included generates are deducted.
  2. Excluded generates are not added.
  3. Included packages and their generates are excluded.
  4. If Incl Packages is selected, then Included and Excluded Packages are included but their Included and Excluded Generates are not included.
- **Gross**: When selected, Room Revenue will be calculated as: Gross Room Rate calculated as:
  1. Included generates are not deducted.
  2. Excluded generates are added.
  3. Excluded packages are not added.
  4. Included Packages and their generates are excluded.
  5. If Incl Packages is selected, then Included and Excluded Packages are included and so are their Included and Excluded Generates.

> **Note**
>
> Net and Gross calculations are only done for On the Books and ACTLY (Actual Last Year) calculations. All other revenue is reported as seen in OPERA Cloud.

Owner: All three filters are multi select. If no value is selected, then all Owners listed in the LOV are considered.

- **Block Owner**: Only business blocks with this Overall Owner are considered.
- **Rooms Owner**: Only business blocks with this Rooms Owner are considered.
- **Catering Owner**: Only business blocks with this Catering Owner are considered.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Block Type: (1 of the 3 options must be selected).

- **All**: Select if all business blocks will be considered.
- **Catering**: Select if only business blocks marked as Catering Only will be considered.
- **Rooms**: Select if only business blocks not marked as Catering Only will be considered.

Same Time Last Year. Select how you want the calculations made for STLY. When the Fixed Stay Date check box is selected, the Stay Dates used for calculating STLY are the same as those entered in Stay Dates To/From fields. When the check box is not selected, the Stay Dates used for calculating STLY are the dates entered in the Stay Dates To/From fields, minus one year.

Report Data

- The first grouping depends on the value selected in the Block Type filter.
- If All is selected, the grouping will contain Total Sales and Catering, Total Sales, Total Catering.
- If Catering is selected, only Total Catering will print.
- If Rooms is selected, only Total Sales will print.
- The second grouping is by Stay Month (based on the Stay Date range selected in the report parameter screen)

Row Headers:

- Calendar Periods. Determined by the values selected in the Stay Date range.

Production Period Section:

- **New DEF**: Calculated from business blocks that turned Definite during the Production Period. Definite is determined by the New Definite filter in the report parameter screen.
- **Can**: (Cancel). Calculated from business blocks that turned to Cancel during the Production Period. These numbers will always be reported as a negative. Cancel is determined by the Cancel filter in the report parameter screen.
- **Rev**: (Revaluations). Calculated from business blocks that were already Definite when the Production Period began and had a change during the Production Period while still in Definite. Definite is determined by the New Definite filter in the report parameter screen.
- **Slip**: (Slippage). Calculated from business blocks that were already Actual when the Production Period began and had a change during the Production Period.

An example for the above columns:

- In June 2018, Block turns DEF with 100 Rooms.
- In July 2018, Block drops to 95 Rooms (still DEF).
- In August 2018, Block turns to ACT with 97 Rooms.

If the report is run for Production Period June – August 2018, the results are:

- NEW DEF +100 rooms
- Reval -5 rooms
- Slippage +2 rooms
- Net. (Net Change) = (New Definite + Cancel + Reval + Slippage).

Rooms On The Books Section:

Copyright © 2016, 2025, Oracle and/or its affiliates.

The Rooms On the Books column header will be updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen.

- **Total**: The current number of Room Nights for business blocks in this status for this Stay Period. If the business block is in an Actual status, picked-up room nights are considered. Otherwise, blocked room nights are considered.
- **ACTLY**: (Actual Last Year) The current number of picked-up room nights for Actual business blocks for the Stay Period minus one year (production period is not considered).
- **STLY**: (Same Time Last Year) Rooms Nights for business blocks in this status at the end of the selected Production Period minus one year for the selected Stay Period minus one year. The calculation considers the Production From Date as empty and the Production To Date as the Production Date entered, minus one year.
- **Budget**: Room Night Budget for the Stay Period as entered in the OBI Budget Forecast module.
- **ACTLY Var**: Total – ACTLY.
- **STLY Var**: Total – STLY.
- **Budget Var**: Total – Budget.

Rates On The Books Section:

The Rates On the Books column header are updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen.

- **Total**: (Total OTB Revenue ÷ Total OTB Room Nights).
- **ACTLY**: (ACTLY Revenue ÷ ACTLY Rooms Nights).
- **STLY**: (STLY Revenue ÷ STLY Room Nights).
- **Budget**: (Budget Revenue ÷ Budget Room Nights).
- **ACLTY Var**: Total – ACTLY.
- **STLY Var**: Total – STLY.
- **Budget Var**: Budget Var = Total – Budget.

Room Revenue On The Books:

The Room Revenue On The Books column header are updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen.

- **Total**: Total Room Revenue for business blocks in this status for this Stay Period. If the business block is in an Actual status, picked-up room revenue is considered. Otherwise, blocked room revenue is considered.
- **ACTLY**: (Actual Last Year) The picked-up room revenue from Actual business blocks for the Stay Period minus one year (production period is not considered).
- **STLY**: (Same Time Last Year) Room Revenue for business blocks in this status at the end of the selected Production Period minus one year for the Stay Period minus one year. The calculation considers the Production From Date as empty and the Production To Date as the Production Date entered, minus one year.
- **Budget**: Room Revenue Budget for the Stay Period as entered in the OBI Budget Forecast module.
- **ACTLY Var**: Total – ACTLY.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **STLY Var**: Total – STLY.
- **Budget Var**: Total – Budget.

On the Books Status 2 and 3 Sections:

This section reports Room Nights, Average Rate and Room Revenue for the Stay Dates based on the status selected in the OTB Status 2 and OTB Status 3 filters in the report parameter screen.

- **TY**: (This Year). Current, on the books Room Nights, Average Rate and Room Revenue for the selected Status and Stay Period.
- **STLY**: (Same Time Last Year). Room Nights, Average Rate and Room Revenue for business blocks in this status at the end of the Production Period minus one year for the Stay Period minus one year.
- **Var**: TY – STLY (This Year – Same Time Last Year).

Group Room Reservation Sheet (Sample_GRMRES_Sales_STD.Rep with Sample_GRMRES_Sales_STD.fmx)

The Group Room Reservation Sheet report details all information about a group block including linked accounts, contact and agent information, room grid with rates and revenue, all major block details, catering event information, sales activities, and deposit information. Additionally, you can include all notes associated with the block and events.

Report Parameters

- **Property**: Enter or select the property. You can select multiple properties from a Hub location.
- **Filter**:
  - **Start Date**. Enter or select a date.
  - **Block**. Click to search and select a block from the list. The internal booking ID appears in the search field.

    > **Note**
    >
    > When selecting a Master Block, Master Allocation, or Master Tour Series, all sub-booking information prints in the Room and Event sections. If you select only a sub-booking, then only the data for that business block is output.

  - **Block Status**. Select a block status from the list be included in the report.
  - **Event Status**. Select event statuses from the list to be included in the report. (Available when the Simple Events or Catering Events OPERA Control is active.)
- **Notes**:
  - **Print Internal Notes**. Select the check box to include notes marked as Internal.
  - **Print External Notes**. Select the check box to include notes marked as External.
  - **Types**. Select note type(s) from the list.
- **Room Grid Type**:
  - **Original**. Select the check box to output the Original room grid.

Copyright © 2016, 2025, Oracle and/or its affiliates.

  - **Pickup**. Select the check box to output the Pickup room grid.
  - **Current**. Select the check box to output the Current room grid.
  - **Contract**. Available when the OPERA Control for Block Contract Grid is active.
- **Room Rates**:
  - **Hide Rates**. Select the check box to suppress the output of rate amounts.
  - **Print Rooms with Rate and No Inventory**. Select the check box to display room types with a rate but no rooms booked. If not selected, room types with a rate but no rooms booked are not included.
- **Display (Output)**:
  - **PMS Room Types**. Select to output the inventory room types.
  - **Room Pools**. Select to output the room pools (Available when the Room Pool OPERA Control is active.). For more information, see: Configuring Room Pool.
  - **Summary**. Select the check box to include a summary of the selected room grids. If selected, a total line for each selected grid type prints, showing only the number of booked rooms per day irrespective of rates or room type. This area prints only if you select at least one grid type to print on the first filter page.
  - **Information**. Select the check box to include all codes, dates, and miscellaneous information found in the Block Details panel.
  - **Activities**. Select the check box to include activities linked to the selected business block. (Available when Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition or Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition is active.)
    - **Activity Notes**. Select the check box to include the activity notes.
  - **Room Header Display**:
    - **Code**. Select to output the code.
    - **Description**. Select to output the description.
    - **Both**. Select to output the code and the description.
  - **Extended (multi-byte) Characters**. Select to output the alternate name for profiles linked to the block. (Available when the **Multi Language** OPERA Control is active.)
  - **Events**. Select the check box to include catering event information. If the event status filter is used on the first filter page, only events of the selected statuses will be included. (Available when the Simple Events or Catering Events OPERA Control is active.)
  - **Address Type**. Select an address type other than the primary address to output all linked profiles. If no address of that type is found for one of the profiles attached to the selected bookings, the primary address outputs instead.
- **Deposits**:
  - **Print Deposits**. Select the check box to output deposit information. You must have a deposit request for any deposit information to output.
  - **Sort By**:
    - **Type**. Select to sort by deposit type.
    - **Date**. Select to sort by deposit due date.
- **Currency**. Select a currency to convert revenue amounts based on exchange rate setup (available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active).

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Deposit Requests, Payments, and the Due Amount are always reported in your property's base currency irrespective of the currency selected.

Report Output

Account and Contact Information. Includes the primary account name, address and primary website, primary contact name and primary email for the contact, relationship to booking and address, secondary contact name, relationship to booking and address, and primary agent name and address. The address/phone information for each profile uses up to three lines across the page. If a specific profile is not used, these three lines are suppressed and the subsequent space allotted for this information is collapsed.

Booking General Information. Includes all codes (market, source, booking type, and so on), dates and other information from the business block rooms, catering, and details sections. This section also may include the following details for the booking when the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition is active:

- **Ranking**. (Available when the Block Ranking OPERA Control is active, which is available only with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition). You can apply a ranking code to a business block to indicate the rank (or priority) of the business block. For more information, see: Configuring Block Rankings
- **Conversion**. (Available when the Block Ranking OPERA Control is active, which is available only with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition). You can apply a conversion value to a business block to indicate a percentage of likelihood that the booking will turn definite. For more information, see: Configuring Block Conversions
- **Non Compete and NC Industry**. (Available when the Block Ranking OPERA Control is active, which is available only with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition). Non compete means that no competing accounts (accounts having the designated NC Industry code) should be booked at the same time as this block. You can apply the non compete flag to all or selected dates of the indicated block. If all dates are covered, ALL appears here. If only selected dates for the booking are non compete, SOME appears and an additional Dates area shows the dates. Otherwise, NONE appears.
- **Rate Protect**.(Available when the Block Ranking OPERA Control is active, which is available only with the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition). Rate protect means that no other groups should be booked using rates lower than those assigned to the block that is indicated as rate protect. You can apply the rate protect flag to all or selected dates of the indicated block. If all dates are covered, ALL appears here. If only selected dates for the booking are rate protect, SOME appears and an additional Dates area shows the dates. Otherwise, NONE appears.

Current Room Grid Information. Dates output across the page, and room types/occupancy levels as rows. The total number of booked room nights as well as revenue and average rate appear in this area.

Summary Section. If summary section is indicated on the filter screen, a summary of total number of rooms booked per day for each grid will output after the grid details.

Notes and Business Block Info. All selected business block notes output after the summary section on the left hand side of the report. On the right hand side beside the notes, another box containing additional information on overall owner, rooms owner, and catering owner outputs if

Copyright © 2016, 2025, Oracle and/or its affiliates.

the business block is lost or canceled. The details, including reason lost and destination lost to, also output in that Business Block Information box.

Events. Catering Event information is output if Events are selected to be included in the report parameters. Details of these events include: Event Type, Function Space and Function Space Rate, Set-up Style, Event Date and Event Time, internal Event ID, and Number of Attendees per Event. The Door-card text (Post As) for each event also outputs underneath the Event Type.

> **Note**
>
> If no catering events are associated with the selected Business Block, this section is suppressed.

Deposit. Deposit information appears next if deposit requests are attached to the booking and/or deposits are posted to the booking already. This section outputs only if the appropriate flag is checked on the filter form. The sequence for how the deposits are output is governed also by the report parameters, depending on whether you selected print deposit by type or by date. If you select by type, a sub-total outputs after each type. The information output for each deposit includes: deposit type (rooms, catering, all), percentage of total revenue (if entered), deposit amount requested, due date, amount paid, due amount, and description/comment (if entered). Totals of all amount fields output as a summary line below all separate deposit records.

Activities. Displays the following information for activities associated with the selected business block: Activity Start Date, Start and End times, Activity Type, Purpose, Owner, and whether or not the activity is complete.

> **Note**
>
> If no activities are associated with the selected Business Block, this section is suppressed

Month End Details Report (BI) (rep_month_end_details_bi with rep_month_end_details_bi

Prerequisites for Month End Details Report

Report Name: **Month End Details** (REP_MONTH_END_DETAILS_BI with REP_MONTH_END_DETAILS_BI.fmx): The Month End Details report details business block and sales and event production changes during the dates requested. The report can be grouped by Stay Month or Owner and has many filtering options including business blocks with the Catering Only check box = Y or the Catering Only check box = N.

Selection Criteria

Production Date Range

Each change to Room and Event Revenue or Status is recorded in production change logs. When dates are entered in the Production From and To Date fields, those dates are used as filters when querying the logs. To illustrate, a business block that is created on status TEN in April 2020 with a start date in October 2020 turns to DEF in June 2020. In this scenario there would be two entries in the status change log for this business block: one for the creation of the business block on status TEN in April 2020 and one for the status change to DEF in June

Copyright © 2016, 2025, Oracle and/or its affiliates.

2020. If revenue is added to the DEF business block in July 2020, another change log entry will be written to record that revenue. Because they filter on a date when something has already happened in OPERA Cloud, the dates entered here should be for today's date or earlier. Separate change log entries are written for room and event status and revenue changes.

- From Date. Enter the calendar date to indicate the beginning of the Production Period for which the report is to be filtered. Room Revenue is filtered on the business block change date and Catering Revenue is filtered on the event change date.
- To Date. (Mandatory) Enter the calendar date to indicate the end of the Production Period for which the report is to be filtered.

1. **Stay Date Range**: These are the calendar periods that will be displayed in the report.
    - **From Date**. (Mandatory) Enter a start date range when the report will filter events by their start date and the business blocks by allotment date.
    - **To Date**. (Mandatory) Enter an end date range when the report will filter events by their start date and business blocks by allotment date.
2. **Property**: Select the property for which the events should be filtered.
3. **Block Origin**: Select Origins. This lists all of the possible values from the internal field allotment_origin. When an Origin is selected, only events from business blocks with this Origin will be considered. If no Origin is selected, all business blocks will be considered. Possible options are:
    - ORS (business blocks created in the ORS application)
    - SFA (business blocks created in the SFA application)
    - PMS (business blocks created in the PMS application)
    - SC (business blocks created in the S&C application)
    - EXT (business blocks created in an External system)
4. **Block & Events**:
    a. **Definite**: (Mandatory) Select one status code from the list of all status codes that can turn to an Actual status.
    b. **Incl Actual**: (Enabled when a Status is selected in the Definite field) Select this check box to include business blocks and events in an Actual status with the status selected in the Definite LOV.
    c. **Status**: Select Status Codes from the list except the ACTUAL status and the status selected in the Definite LOV.
    d. **Business Block**: Select specific business blocks from the Business Block Search screen for which to print the report. If none are selected, the report will print all business blocks that meet the other criteria on the report parameter screen.
    e. **Market Segments**: Select market segments by which the business blocks should be filtered. If none are selected, business blocks will not be filtered by market segments.
    f. **Covers**: Select Event Types to indicate which will be included in the Covers calculation in the reports. If no value is selected, all event types will be considered.
    g. **Block Type** (1 of the 3 options must be selected):
        - **All**: Select if all business blocks will be considered.
        - **Catering**: Select if only business blocks marked as Catering Only will be considered.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Rooms**: Select if only business blocks not marked as Catering Only will be considered.

5. **Print Options**:

   a. **Revenue**: One of the options must be selected, Net or Gross. The Incl Packages and/or Print Grand Total check box can be selected if either Net or Gross is selected. The Incl Packages option is described with Net and Gross examples below.

      The Print Grand Total check box, when selected, will print a final summary page which includes the Totals for each subtotal (Changes and New) and a Grand Total. If not selected, no summary page will print.

   b. **Net**: When selected, Room and Catering Revenue will be calculated as:

      - Net Room Rate is calculated as ROOM ONLY.
      - Included generates are deducted
      - Excluded generates are not added
      - Included packages and their generates are excluded
      - If Incl. Packages is selected, then Included and Excluded PMS Packages are included, but their Included and Excluded Generates are not included.

        Net Catering is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Configuration > Cashiering > Rev Type Cross Reference):

        – Included generates are deducted
        – Excluded generates are not added
        – The Incl. Packages check box has no influence on the Catering Revenue calculation.

   c. **Gross**: When selected, Room and Catering Revenue will be calculated, Gross Room Rate is calculated as:

      - Included generates are not deducted
      - Excluded generates are added
      - Excluded packages are not added
      - Included Packages and their generates are excluded
      - If Incl. Packages is selected, then Included and Excluded PMS Packages are included and so are their Included and Excluded Generates.

        Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Configuration > Cashiering > Rev Type Cross Reference):

        – Included generates are not deducted
        – Excluded generates are added
        – The Incl. Packages check box has no influence on the Catering Revenue calculation.

> **Note**
>
> Net and Gross calculations are only done for the Current figures. Change revenue is reported as seen in OPERA.

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Print Grand Total**: If selected, a final summary page will print which includes the Totals for each subtotal (Changes & New) and a Grand Total.

e. **FB Revenue**: Select active Revenue Types to include in the F&B Revenue calculations in the report. If none are selected, no F&B Revenue calculation will be done.

f. **Other Revenue**: Select active Revenue Types to include in the Other Revenue calculations in the report. If none are selected, no Other Revenue will be calculated.

g. **Currency**: Select the one currency for which all revenue figures will be reported. If no value is selected, the report will be calculated using the Base Currency of the logged in Property.

h. **Owner**: (Select Owners. If no value is selected, then all Owners listed in the LOV will be considered.)

- **Overall**: Only business blocks with this Overall Owner will be considered.
- **Rooms**: Only business blocks with this Rooms Owner will be considered.
- **Catering**: Only business blocks with this Catering Owner will be considered.

i. **Exclude from Forecast**: (1 of the 3 options must be selected)

- **Both**: All events will be considered regardless of the Exclude from Forecast check box.
- **Yes**: Only events marked as Exclude from Forecast will be considered.
- **No**: Only events not marked as Exclude from Forecast will be considered.

j. **Group By** : (1 of the 4 options must be selected)

- Stay Month. If selected, the report will be grouped by business block stay month. For room nights and room revenue, the business blocks will be grouped based on which night the room is reserved. For event revenue, the business blocks will be grouped based on the event start date.
- **Overall Owner**: If selected, the report will be grouped by the Business Block Overall Owner.
- **Rooms Owner**: If selected, the report will be grouped by the Business Block Rooms Owner.
- **Catering Owner**: If selected, the report will be grouped by the Business Block Catering Owner.

Report Data

1. **Business Block Owner**

   The 1st grouping may be by Owner (Rooms Owner, Catering Owner, or Overall Owner) as selected as a Group By in the report parameter screen.

   - The Owner's First and Last Name is printed in bold.
   - The Owner's name is listed by First Name in Alpha Order.

   If, for example, the report is Grouped by Rooms Owner and filtered by Catering Owner, the grouping will continue to list each of the Rooms Owners that qualify based on the other filters, as well as having the selected Catering Owner on the business blocks.

2. **Business Block Changes**

Copyright © 2016, 2025, Oracle and/or its affiliates.

If there are business block or event production changes for the Owner for the requested production period, the ¿Changes¿ heading displays and the changes are listed in that grouping under the appropriate Status.

3. **Status Code**:

   - Each Status that has a change is listed with the Status Code and the word ¿Changes¿.
   - The Status Codes are listed in order by their configured sequence.
   - Within each Status Code, the business block is listed that contributed with a room or event change.
   - A business block will be included if it has a change to room revenue, room nights, or catering revenue during the requested production period. A business block may be listed under more than one status if the sleeping room and events are in a different status and thus contribute to a different status code.

   In the Status Code section the following columns display.

   - Block Name
   - Block ID
   - Arrival (the business block start date in the logged in Property¿s Short Date format)

   Current and Change rules apply to each of the sections in this report. Current Revenue and room nights at the time the report is printed and only including business block and events currently in that status.

   - A business block is included if the room nights, room revenue, or catering revenue had a status change during the production period in this status – last status only except if noted below. The current revenues is calculated from On the Books figures unless that business block or event is in an Actual Status. In that case, the current revenue is calculated as:
     - Current Room Nights and Room Revenue figures will be taken from reservation_stat_daily.
     - Current Event figures are taken from Billed Revenue in gem event_revenue.
   - If a business block or event turned to a Return-to-Inventory Status, the report displays 0.00 for the Current Revenue, Room Nights, and Covers.
     - **A (see example below)**: If a business block or event turned to Actual (and not DEF) during the production period and did not have a room night or revenue change during the period, that business block will not be listed in this report.
     - **B (see example below)**: If a business block or event turned to DEF and ACT during the production period, it will be listed in the New DEF/ACT grouping. The Current revenue will be calculated from statistics for rooms and room revenue and from billed revenue for events.
     - **C (see example below)**: If a business block or event turned to Actual (but not DEF) and had a change during the production period, that business block will be listed in the ACT Changes grouping.
     - **D (see example below)**: If a business block turned to DEF and Cancel during the production period, that business block will be listed in the New DEF and New CAN groupings.

       Change Revenue and room nights that changed during the requested production period for this status.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **E (see example below)**: Last status changes to room nights and revenue during the production period.
  - If a business block turned to a Return-to-Inventory Status during the production period, the Change Revenue is reported as a negative.
  - If an Actual business block or event had a change to room nights or revenue during the production period, that change is reported here and will be calculated as:
    - Room Revenue. Changes will be calculated from the production logs.
    - Catering Revenue (Billed Revenue and Production) excluding ACT Production from the requested production period. Any event with a change in gem$event_revenue or event$changes will be included.

- **Examples**: Report generated for Production Dates July 1 and July 31, 2013
  - **A** : Business block turned to DEF on June 15th, 2013.

    Business block turned to ACT on July 2nd, 2013.

    No other changes in July 2013.

    That business block would not be included in the report.

    There will never be a New ACT grouping in the report.
  - **B** : Business block turned to DEF on July 2nd 2013 with 100.00 Catering Revenue / 3450.00 Room Revenue / 30 Room Nights. All rooms picked-up at 3450.00 room revenue / 30 room nights.

    Business block turned to ACT on July 5th, 2013.

    No other changes in July 2013.

    That business block will be included in the New DEF/ACT grouping with the following figures:
    - Current catering revenue = 100.00, Current room revenue =3450.00, Current room nights = 30.
    - Change catering revenue = 100.00, Change room revenue = 3450.00, Change room nights = 30.
  - **C** : Business block turned to DEF on June 15th, 2013.

    Business block turned to ACT on July 2nd, 2013 with 36,000.00 Catering Revenue / 1000.00 Room Rev.

    Business block added 300.00 catering revenue on July 2nd, 2013 / No Room changes Business block will be included in the ACT Changes grouping in this report with the following figures:
    - Current catering revenue = 36,300.00. Current room revenue - 275,000.00. Current room nights = 1000.
    - Change catering revenue = 300.00. Change room revenue = 0.00. Change room nights = 0.
  - **D**: Business block turned to DEF on July 15th, 2013 with 100.00 Catering Revenue / 3450.00 Room Revenue / 30 Room Nights.
    - Business Block added 300.00 Catering Revenue / 6750.00 Room Revenue / 3 Room Nights on July 17th, 2013
    - Business block turned to CAN on July 20th.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Business Block will be included in the New DEF grouping in this report with the following figures:

* Current catering revenue = 0.00, Current room revenue = 0.00, Current room nights = 0.
* Change catering revenue = 400.00, Change room revenue = 4,125.00, Change room nights = 33

Business Block will be also included in the New CAN grouping in this report with the:

* Current catering revenue = 0.00, Current room revenue = 0.00, Current room nights = 0.
* Change catering revenue = -400.00, Change room revenue = -4,125.00, Change room nights = 33.

– **E**: Business block turned to TEN on July 2nd, 2013 with 20 room nights / 2000.00 room revenue.

  Business block added 10 room nights / 1500.00 on July 3rd, 2013

  Business block turned to DEF on July 7th, 2013

  Business block added 3 room nights / 450.00 on July 20th, 2013

  Business block will be included in the New DEF grouping with Current & Change the same:

  * Current figures calculated from OTB as 33 room nights / 3950.00 room revenue
  * Change figures calculated from OTB as 33 room nights / 3950.00 room revenue

FB Revenue and Revenue Types to consider determined by the values selected in the FB Revenue filter in the report parameter screen. If no values have been selected in the parameter screen, no calculation will be done for these fields.

– Current: The FB Revenue as of the time the report is printed and only including events currently in that status.
  * If a business block is in a Return-to-Inventory Status, report displays 0.00.
– Change: The FB Revenue that changed during the requested production period for this status.
  * If a business block turned to a Return-to-Inventory Status during the production period, the Change Revenue is the full value of the F&B event revenue and is reported as a negative.

Other Revenue - Revenue Types to consider determined by the values selected in the Other Revenue filter in the report parameter screen.

– Current: The Other Revenue as of the time the report is printed and only including events currently in that status.
  * If a business block is in a Return-to-Inventory Status, report displays 0.00.
– Change: The Other Revenue that changed during the requested production period for this status.
  * If a business block turned to a Return-to-Inventory Status during the production period, the Change Revenue is the full value of the Other event revenue and is reported as a negative.

Room Nights

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Current: The Room Nights as of the time the report is printed. Current Room Nights are included in the status grouping based on the business block's status at the time the report is run.
  - If a business block is in a Return-to-Inventory Status, the report displays report 0.00.
- Change: The Room Nights that changed during the requested production period. Change Room Nights are included in the status grouping based on the business block's status when the change was made.
  - If a business block turned to a Return-to-Inventory Status during the production period, the Change Room Nights are the total number of rooms and is reported as a negative.

ADR

- Current: Calculated as (Current Rooms Revenue ÷ Current Room Nights). If a business block is in a Return-to-Inventory Status, the report displays 0.00.
- Change: Calculated as (Current ADR (Current Rooms Revenue and Change Rooms Revenue) ÷ (Current Room Nights and Change Room Nights).

Rooms Revenue

- Current: The Rooms Revenue as of the time the report is printed. Current Room Revenue will be included in the status grouping based on the business block's status at the time the report is run.
  - If a business block is in a Return-to-Inventory Status, the report displays 0.00.
- Change: The Room Revenue that changed during the requested production period. Change Room Revenue is included in the status grouping based on the business block's status when the change was made.
  - If a business block turned to a Return-to-Inventory Status during the production period, the Change Revenue is the full value of the room revenue and will be reported as a negative.

Current

- Covers: This value is populated with the sum of the Attendees for all of the Events for this business block and status and filtered by the Event Types selected in the Covers filter in the report parameter screen. If no value is selected, all Event Types will be considered.
  - If the event is Actual, the Actual Attendees are reported.
  - If the event is not Actual and Guaranteed Attendees is populated, the Guaranteed Attendees are reported.
  - If the event is not Actual and Guaranteed Attendees is NOT populated, the Expected Attendees are reported.
  - If the event is in a Return-to-Inventory status, the report displays 0.00.
- Avg Check and Calculated (Current FB Revenue ÷ Current Covers).
  - For events in a Return-to-Inventory status, the report displays 0.00.

At the end of each Status Changes grouping is a Total Status Changes line totaling each of the columns above.

New Status Changes Grouping:

- If the Owner has a business block or event that changed status during the requested period, the heading and New Status Changes appears.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- All of the columns detailed above are included. For the New Status records, the Current and Change columns will be the same (except for the New DEF/ACT grouping).
- At the end of each New Status grouping a Total New Status line appears that totals each of the columns above (ADR & Avg Check calculations to remain as detailed above).
- At the end of each New Status section (per Owner) a Total New Status ¿ [Owner First + Last Name] line totaling all of the Bookings for this Owner.
- At the end of each Owner grouping is a Total [Owner First + Last Name] that totals the Total Changes and Total New Statuses lines.
- If the Print Grand Total check box is selected in the report parameter screen, an additional page with Totals & Grand Total displays.

Grouped By Stay Month

This option prints when Stay Month is selected as a Group By in the report parameter screen.

The 1st grouping is by Business Block Stay Month. The report is then grouped and sorted as detailed above and the Totals are done on the stay month grouping instead of the Owner.

Note

Current Catering figures are calculated using the standard calculation for catering forecasting.

If the Use Forecast Revenue OPERA Control is active:

- If the Use Forecast Revenue check box is selected in the main Events screen, only Forecast Revenue for that Event will be reported. If the Use Forecast Revenue Only check box is not selected in the main Events screen, the Expected Revenue for that Event will be reported.
- If the Event is in an Actual status, the Billed Revenue for that Event will be reported.

If the Use Forecast Revenue OPERA Control is not active, the report will evaluate each Revenue Type for each Event.

- If there is Guaranteed Rev, it will be reported.
- If there is no Guaranteed Rev but there is Expected Rev, Expected Rev will be reported. If there is no Expected Rev but there is Forecast Rev, Forecast Rev will be reported.
- If the Event is in an Actual status, it will be reported as Billed Revenue.
- Once Expected Revenue is added to the event, Forecast Revenue will be ignored for that Event and Revenue Type. So, even if the Resource is deleted, Forecast Revenue will no longer be reported.

Pro Forma Invoice Generates Report (Rep_Proforma_Invoice)

Prerequisites for Pro Forma Invoice Generates Report

Copyright © 2016, 2025, Oracle and/or its affiliates.

The Pro Forma Invoice Generates Report details guest rooms, all catering packages, events, and resources booked on a block in a billing format. Apart from the event and resource descriptions, the number of units booked, the price per unit, and the total price are printed in a list format. The report can provide a sub-total and page break per day and can also be printed for single events.

> **Note**
>
> The text labels in this report can be translated into additional languages. For more information, see Configuring Stationery Custom Message Texts

When generating for a master block the proforma invoice will print guest rooms (if selected) and catering event charges for all linked sub blocks within the selected property. (Available when the **Master Sub Blocks** OPERA Control is active).

Selection Criteria

1. **Property**: Select the property for which the report should be printed.
2. **Event Date From**: Enter the event start date.
3. **Event Date To**: Enter the event end date.
4. **Arrival Date From**: Enter the booking's arrival from date.
5. **Arrival Date To**: Enter printing the booking's arrival to date.
6. **Departure Date From**: Enter the booking's departure from date.
7. **Departure Date To**: Enter the booking's departure to date.
8. **Business Block**: The block name.
9. **Block Status**: Allows the inclusion of only blocks on the defined status.
10. **Event**: Allows for the selection of specific events to be included in the report. When the event is Actual (ACT), only the Billed or Actual Revenues print on the report.
11. **Event Status**: Allows the inclusion of only bookings on the defined status. Lost or canceled events can be excluded from printing using this filter.
12. **Package ID**: This filter allows for the selection of only packages for which to print the Pro Forma Invoice without the inclusion of non-package events. The filter cannot be used in conjunction with the Event filter and vice versa.
13. **Print Account**: Print Account defaults to the Account marked as PT for the Business Block from the Name Select screen. If a different Account should be printed on the Banquet Event Order (BEO), select the list to select another Account already linked to the business block.
14. **Print Contract**: Print Contact defaults to the contact marked as PT for the block from the Name Select screen. If a different contact should be printed on the Banquet Event Order (BEO), select the list to select another Contact already linked to the business block.
15. **Address Format**: This option allows the selection of a configured address format other than the sales office default. It works in conjunction with the selected Address Type.
16. **Address Type**: This option will allow the selection of an address type other than the primary address of the attached account.

Rooms and Event Details:

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. **Print Guest Rooms**: When selected, the report output displays rooms booked. If Room Pools are configured, the report shows the room amounts by Room Pools by default. If Room Pools are not configured, the report shows the room amounts by Room Types. If selected, the report output prints the Room Pools/Room Types per day and prints rates in the selected currency. The rates will be net, including the packages.
2. **Print Event Details**: When left unchecked, the details of the event (Menus, Items, Function Space) will not print in the report. It is recommended that this option be left unchecked when the event is in an Actual status and the Billed Revenue is updated at the event level.
3. **Display Discounts**: Select this check box to display the discounted percentage and discounted price of a Resource: Space, Menu, or Item. The original price also displays for comparison. A summary at the end of the report displays the 'Total Discount xxx.xx' for all resources. This informs guests of how much they saved.
4. **Print Generates With Each Item**: This check box is available only if Print Summary is selected. If selected, then all generates for both events and guest rooms are combined into one line item in the Summary, Inclusive Generates or Exclusive Generates. If there are both inclusive and exclusive generates, then two lines will print, one reading Inclusive Generates and one reading Exclusive Generates. If Print Generates Combined is not selected and Print Summary is selected, the generates should be included in the Summary section summarized by transaction code description.
5. **Print Summary**: If checked, a summary per configured revenue type prints in between the detailed breakdown and the final totals of the report. The summary is per day if the Page Break per Day flag is checked, otherwise the summary is done for the whole booking. Any package revenues are not split into the internally configured revenue types. Instead, a virtual revenue type called Package Revenue appears in the summary section that shows all revenue generated from catering packages.
6. **Print Generates Combined**: This check box is available only if Print Summary is selected. If selected, then all generates are combined into one line item in the Summary, Inclusive Generates or Exclusive Generates. If there are both inclusive and exclusive generates, then two lines will print, one reading Inclusive Generates and one reading Exclusive Generates. If Print Generates Combined is not selected and Print Summary is selected, the generates should be included in the Summary section summarized by transaction code description.

Report Data

1. **Print Date**: When this option is selected, the date the report is run prints in the bottom left-hand corner of the report.
2. **Print Time**: When this option is selected, the time the report is run prints in the bottom left-hand corner of the report.
3. **Print Page Break Per Day**: This inserts a page break per day with a total calculation (including tax and service charge calculation) for each day per booking for bookings that span several days of catering events. No deposit information is considered when selecting to print the report with the flag checked; this is because deposits are not stay date specific, and it is not possible to determine the date against which the posted catering deposits would need to be offset.
4. **Print Deposit**: Select one of the following check box options to print their associated deposits: Catering, Rooms, Unallocated, or All.
5. **Currency**: Select the currency to use for printing revenues.

Quote Report (sample_sc_quote)

Copyright © 2016, 2025, Oracle and/or its affiliates.

The Quote report provides day-by-day accommodation and event details. As a customizable stationery template, you can produce a quote detailing the Accommodation, PMS Packages for City Tax and/or Breakfast Packages, Catering Packages, Events, and Event Resources. The quote includes conditional text that you can modify or remove, areas to add your properties photos and logo, plus the ability to generate the quote in different languages (available when the **Multi Language** OPERA Control is active). The report contains several sections: the detail of the event, the specific conditions of the sale, the general conditions of the sale, and the approval page for the customer signature.

Quote Report Overview

Some information on calculations and configuration, include:

- Net amounts for guest rooms include PMS package elements: Net amounts do not include generates/taxes for the guest room or for included PMS packages.
- Gross amounts include all generates/taxes. A check box on the report parameter screen (Add Excluded Pkg Elements to Gross Revenue) allows you to include or exclude "excluded" PMS package elements in the gross price and revenue. If selected, excluded PMS package elements and their generates are included in the gross amount for room rate and room revenue. If not selected, these excluded elements will not be part of the gross room rate and revenue.
- Catering revenue net and gross values are based on transaction code generates, depending on the revenue type cross reference configured for the catering revenue type in Revenue Type Mapping.
- Rooms Revenue is calculated based on generates linked to the room's transaction codes. When packages are included in the room rate, these are not deducted for the net amount, but their respective generates and taxes are deducted.
- City tax is calculated as a total amount across the entire business block. City tax must be set up as an excluded PMS package element and selected on the report parameter screen (City Tax Pkg) for the amount to be correctly calculated.
- If several events are configured for the same date with the same start and end dates, same event type, same set-up style, same number of attendees, and same space rental revenue, these events will print combined into one line, rather than separately (for example, for break-out rooms). Any non-F&B (food and beverage) resources that are attached to several of these combined events and are the same item and same price across these combined events also print combined into one line underneath the combined events line. Menus will NOT print combined, even if the same menu may be attached to several of the combined events.
- You can select Business Block Notes and Banking Notes (from Property Notes) from the report parameter.
- If a deposit schedule is entered for the business block, it prints in the terms and conditions area of the report.
- Consumption based menus/menu items do not print revenue and taxes on the report. The quantity of menu items always appears as “1” for consumption-based menu items on the report, irrespective of what is entered as the quantity in OPERA Cloud. If two consumption-based menus containing the same non-included menu items are booked for the same event, the menu items print for both menus.
- This report contains a lot of conditional text for the catering section of the report based on event types. You can remove or amend the conditional text according to your needs.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Selection Criteria

- **Property**: Enter or select a property. You can select multiple properties from a hub location.
- **Business Block**: Select the business block(s) from which you want to generate a quote. The Business Block ID defaults when this report is called from the Blocks module. (This report cannot be printed over a date range, only for specific business blocks.)
- **Block Note Type**: Select the business block note types to print on the report. Only notes selected as External print on the report.
- **Event Status**: Select the event statuses of events to be included in the report (typically not those that were lost or canceled).
- **Breakfast Package**: Select PMS package codes that represent breakfast packages. These are used in the accommodation section of the report to indicate whether breakfast is included or excluded from the rate.
- **City Tax Package**: Select one PMS package code that represents the city tax. This is used to calculate the city tax on accommodations.
- **Print Account**: This displays the account name that prints on the report, depending on the selected Print Account on the business block.
- **Print Contact**: Displays the contact's name that prints on the report, depending on the selected Print Contact on the business block.
- **Note Type for Banking Notes**: Select the Note Type for Banking Notes to Print. A list displays all note types that are configured for property notes.
- **Add Excluded Pkg Elements to Gross Revenue**: When selected, excluded package elements and their taxes are added to the gross revenue amount calculation. When not selected, excluded package elements and their taxes are not added to the gross revenue calculation.
- **Increase Quote Reference Number**: Select check box to increase the quote reference number in the block details; indicating changes have been made to the original quote generated. (Available when the Use Quote Reference Number OPERA Control is active).
- **Currency**: Select a currency from this list. This selection allows the conversion of foreign currency to a property's base or catering currency when the foreign currency has a defined exchange rate for the Posting Exchange type. (Available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active.)
- **Exchange Rate Date**: If selected, enter a date, or use the calendar tool to select the effective date of the exchange rate for the specified currency. The prices in the report are calculated using the exchange rate for the specified currency as it was on that date.
- **Creation Date**: If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the booking creation date.
- **Distributed Date**: If selected, the exchange rate for the specified currency is calculated based on the exchange rate as it was on the date the Distributed Date check box was selected.

Room and Catering Revenue Pace (BI) (rep_room_cat_rev_pace_bi.rtf with rep_room_cat_rev_pace_bi.fmx)

Prerequisites for Room and Catering Revenue Pace (BI)

Copyright © 2016, 2025, Oracle and/or its affiliates.

The Room and Catering Revenue Pace (BI) report displays room and event revenue by Stay Period for the requested Production Period. It also displays the On the Books forecast revenue for the same Stay Period with a comparison to OBI Budgeted Revenue, Same Time Last Year (STLY), and Actual Last Year (ACTLY) figures.

This report is a BI Publisher report. Customizing the report is not recommended. The following are the report elements:

- Report Name = Room and Catering Revenue Pace (BI)
- File Name = rep_room_cat_rev_pace_bi.rtf
- Form to run = rep_room_cat_rev_pace_bi.fmx
- Data Template = rep_room_cat_rev_pace_bi.odt

Selection Criteria

Production Period Section

Each change to Room and Event Revenue or Status is recorded in production change logs. When dates are entered in the Production From and To Date fields, those dates are used as filters when querying the logs. To illustrate, a business block that is created on status TEN in April 2018 with a start date in October 2018 turns to DEF in June 2018. In this scenario there would be two entries in the status change log for this business block: one for the creation of the business block on status TEN in April 2018 and one for the status change to DEF in June 2018. If revenue is added to the DEF business block in July 2018, another change log entry will be written to record that revenue. Because they filter on a date when something has already happened in OPERA, the dates entered here should be for today's date or earlier. Separate change log entries are written for room and event status and revenue changes.

For STLY calculations, the report displays the Production Date From as null and the Production Date To as the Production Date entered here, minus one year.

- **From.** (Mandatory). Enter the calendar date to indicate the beginning of the Production Period for which the report is to be filtered. Room Revenue is filtered on the business block change date and Catering Revenue is filtered on the event change date.
- **To.** (Mandatory). Enter the calendar date to indicate the end of the Production Period for which the report is to be filtered.

Stay Dates These dates define the stay periods that display in the report. The calculations for STLY are affected by the Same Time Last Year/Fixed Stay Dates check box. When the Fixed Stay Date check box is selected, the Stay Dates in STLY are the same as those entered here. When the check box is not selected, the Stay Dates in STLY are the Stay Dates entered, minus one year.

- **From.** (Mandatory). Enter a start date range when the report will filter events by their start date and the business blocks by allotment date.
- **To.** (Mandatory). Enter an end date range when the report will filter events by their start date and business blocks by allotment date.

Property. Select the property for which the report should be printed. When you are logged in at the hub level, the property LOV is multi select, which allows you to run the report for multiple properties.

Origin. Select Origins. This LOV lists all of the possible values from the internal field allotment_origin values from the Business Block header. When a value is selected, only events from business blocks with this origin are considered. If no value is selected, all business blocks are considered. Possible values are based on the user who created the block and the Act As and At values set on the user in Role Manager.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- If the Act As value = Conference Sales Person, and the At value = Property level, then the block is indicated as Sales and Catering.
- If the Act As value = Reservation Sales Person, and the At value = Central, then the block is indicated as ORS.
- If the Act As value = External System, then At value = not required, and the block is indicated as EXT.
- If the Act As value = Reservation Sales Person, and the At value = Property, then the block is indicated as PMS.
- If the Act As value = Conference Sales Person, and the At value = Central level, then the block is indicated as SFA.

Block:

New Definite. (Mandatory). Select one status code from a list of all status codes that can turn to an Actual status. The New Definite column will be calculated based on the business blocks and events that turned to this status during the requested production period.

Incl. Actual. (Enabled when a Status is selected in the New Definite field). Select this check box to include Actual business blocks and events with the figures in the Definite On the Books section totals.

Cancel. (Mandatory). Select status codes from a list of all return-to-inventory statuses. The Cancel column are calculated based on the business blocks and events that turned to this status during the requested production period. All figures are reported as a negative.

OTB Status 2. (Mandatory). Select one or more status codes from a list of all status codes. The 1st column in the last On the Books section are calculated based on the business blocks and events currently in this status for the stay period.

OTB Status 3. (Mandatory). Select one of more status codes from a list of all status codes. The 2nd column in the last On the Books section are calculated based on the business blocks and events currently in this status for the stay period.

Revenue – One of the options must be selected: Net or Gross. The Incl Packages check box can be selected if either Net or Gross is selected.

- **Net.** When selected, Room and Catering Revenue are calculated as:
  - Net Room Rate is calculated as ROOM ONLY.
    - Included generates are deducted
    - Excluded generates are not added
    - Included packages and their generates are excluded
    - If Incl. Packages is selected, then Included & Excluded PMS Packages are included but their Included & Excluded Generates are not included.
- Net Catering is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration> Financial> Transaction Management> Revenue Type Mapping):
  - Included generates are deducted.
  - Excluded generates are not added.
  - The Incl. Packages check box has no influence on the Catering Revenue calculation.

Gross. When selected, Room and Catering Revenue are calculated as:

- Gross Room Rate is calculated as:

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Included generates are not deducted.
- Excluded generates are added.
- Excluded packages are not added.
- Included Packages and their generates are excluded.
- If Incl. Packages is selected, then Included and Excluded PMS Packages are included and so are their Included & Excluded Generates.

 Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration> Financial> Transaction Management> Revenue Type Mapping):

- Included generates are not deducted.
- Excluded generates are added.
- The Incl. Packages check box has no influence on the Catering Revenue calculation.

> **Note**
>
> Net and Gross calculations are only done for On the Books and ACTLY calculations. All other revenue is reported as seen in OPERA.

Cat Rev. This LOV lists all active revenue types. Select the revenue types to be used when calculating Cat Rev in this report. If no value is selected, all Revenue Types are considered.

Currency. Select the currency to be used for calculating the figures in this report. All figures are reported in the selected currency. If no value is selected, the report are calculated using the Base Currency of the logged in Property.

Owner. All 3 filters are multi-select. Select one or more Owners. If no value is selected, then all Owners listed in the LOV are considered.

- **Overall Owner.** Only business blocks with this Overall Owner are considered.
- **Rooms Owner.** Only business blocks with this Rooms Owner are considered.
- **Catering Owner.** Only business blocks with this Catering Owner are considered.

Exclude from Forecast Event (1 of the 3 options must be selected).

- Both. All events are considered regardless of the Exclude from Forecast check box.
- Yes. Only events marked as Exclude from Forecast are considered.
- No. Only events not marked as Exclude from Forecast are considered.

Block Type (1 of the 3 options must be selected).

- **All.** Select if all business blocks should be considered. When selected, the Combine check box appears. See description below.
- **Catering.** Select if only business blocks marked as Catering Only will be considered.
- **Rooms.** Select if only business blocks not marked as Catering Only will be considered.
- **Combine.** This check box is only visible when the Block Type All is selected. When Combine is selected, room revenue and catering revenue figures are combined. When unselected, room revenue and catering revenue figures are separated by block type:
  - The Rm Rev - Rms (Room Revenue from business blocks where the Catering Only check box is not selected) and Rm Rev - Cat (Room Revenue from business blocks where the Catering Only check box is selected) figures are combined. The report label

Copyright © 2016, 2025, Oracle and/or its affiliates.

reads Room Rev and includes: Production, On the Books, Pace and On the Books). The Revenue, Budget and Variance figures are also combined.

- The Cat Rev - Rms (Event Revenue from business blocks where All or Rooms is selected) and Cat Rev - Cat (Event Revenue from business blocks where Catering is selected) figures are combined. The report label reads Cat Rev and includes: Production, On the Books, Pace and On the Books). The Revenue, Budget and Variance figures are also combined.

Same Time Last Year. Select how you want the calculations made for STLY.

- When the Fixed Stay Date check box is selected, the Stay Dates in STLY are the same as those entered in Stay Dates To/From fields. When the check box is not selected, the Stay Dates in STLY are the dates entered in the Stay Dates To/From fields, minus one year.

Report Data

This is a Rooms and Catering revenue pace report that is sorted by Property and Year and grouped by Calendar Period.

Row Headers

- **Rm Rev-Rms** – Room Revenue from business blocks where All or Rooms is selected in the report parameter Block Type.
- **Rm Rev-Cat** – Room Revenue from business blocks where Catering is selected in the report parameter Block Type.
- **Cat Rev-Rms** – Event Revenue from business blocks where All or Rooms is selected in the report parameter Block Type.
- **Cat Rev-Cat** – Event Revenue from business blocks where Catering is selected in the report parameter Block Type.

Production Period Section

Figures in these columns are filtered on the Production Period and Stay Dates.

- **New DEF** – Calculated from business blocks and events that turned Definite during the Production Period. Definite is determined by the New Definite filter in the report parameter screen.
- **Cancel** – Calculated from business blocks and events that turned to Cancel during the Production Period. These numbers are always reported as a negative. Cancel is determined by the Cancel filter in the report parameter screen.
- **Reval** – (Revaluations) Calculated from business blocks and events that were already Definite when the Production Period began and had a change during the Production Period while still in Definite. Definite is determined by the New Definite filter in the report parameter screen.
- **Slippage** – This is calculated from business blocks and events that were already Actual when the Production Period began and had a change during the Production Period.

An example of the above columns:

- In June 2019, Block turns DEF with 100 Rooms.
- In July 2019, Block drops to 95 Rooms (still DEF).
- In August 2019, Block turns to ACT with 97 Rooms.

If the report is run for Production Period June – August 2018, the results are:

- NEW DEF +100 rooms

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Reval -5 rooms
- Slippage +2 rooms
- Catering Slippage is calculated for each event as Billed Revenue – Production (excluding ACT Production from the requested production period).

  Net Change - Net Change = (New Definite + Cancel + Reval + Slippage).

> **Note**
>
> The Production Period figures are calculated from the following tables:
> Room Revenue - Status change dates are taken from booking_status_changes. Room Revenue is calculated from allotment_changes. If the business block is in an Actual status, the Revenue is calculated from reservation_stat_daily.
>
> Catering Production – Status change dates are taken from event$status_changes. Revenue is calculated from event$changes. If the event is in an Actual status, the Revenue is calculated from the billed revenue in gem$event_revenue.

1st On the Books Section

- **1st Column** – The column header is updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen. The data is the revenue for business blocks and events currently in the Definite or Actual Status for that Stay Period.
- **Budget** – Budget for the Stay Period as entered in the OBI Budget Forecast module.
- **STLY** – (Same Time Last Year) Revenue for the Production and Stay Dates minus 1 Year. For Business Blocks with a last status of Actual, the room revenue figures are calculated from reservation_stat_daily. For Events with a last status of Actual, the catering revenue figures are calculated from billed revenue.
- **ACTLY** – (Actual Last Year) Picked-up Room Revenue and Billed Event Revenue for Actual business blocks and events for the Stay Dates minus 1 Year (Production Period is not considered).

  An example of the above columns:

  – Production Dates in the parameter screen: Jan 2019 – Feb 2019
  – Stay Dates in the parameter screen: Jan 2019 – Dec 2019
  – New DEF in the parameter screen: DEF Incl Actual is checked

On the Books columns calculations as follows:

- **ACT/DEF** - Current figures for business blocks currently in an ACT or DEF status with a stay date between Jan 2019 – Dec 2019.
- **ACTLY** - Current figures for business blocks currently in an ACT or DEF status with a stay date between Jan 2018 – Dec 2018.
- **STLY** - Calculated using the following filters:

  – Production Dates: Jan 2018 – Feb 2018
  – Stay Dates: Jan 2013 – Dec 2018
  – Status: business blocks with a LAST status of ACT or DEF during that period.

Pace Section:

- Var to Budget Revenue = ACT/DEF – Budget

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Var to Budget % = (ACT/DEF ÷ Budget) × 100
- Var to STLY = ACT/DEF – STLY
- Var to STLY % = (ACT/DEF ÷ STLY) × 100
- Var to ACTLY = ACT/DEF – ACTLY
- Var to ACTLY % = (ACT/DEF ÷ ACTLY) × 100

2nd On the Books Section:

This section calculates Revenue for business blocks and events currently in the OTB Statuses selected in the report parameter screen.

- **1st Column** – The column header is updated with the Status Code selected in the OTB Status 2 filter in the report parameter screen. The data is the revenue for business blocks and events currently in that Status.
- **2nd Column** – The column header is updated with the Status Code selected in the OTB Status 3 filter in the report parameter screen. The data is the revenue for business blocks and events currently in that Status.

Catering Configuration Reports

Prerequisites for Catering Configuration Reports

The following Event Resource Configuration reports are available:

Daily Menu Item List (rep_menuitem.rep with rep_menuitem.fmx): This report provides a list of menu items with numbers expected, guaranteed, and actual separately for each day of the selected date range. This is an ideal report to use as a forecast and guide for the kitchen in preparing food orders for the future.

Menu Information (rep_menuinfo.rep with rep_menuinfo.fmx): This configuration report allows you to check whether all catering menus are entered into the system and that they are configured correctly. It typically is printed after the initial input of configuration data or if catering menus are changed.

Menu Item List (rep_mitemdtl.rep with rep_mitemdtl.fmx): This report is helpful in reviewing the configured menu items with their internal criteria. It is typically generated during and after configuration of menu items to verify that all relevant data is entered. The same is applicable when menus and menu items are changed.

Daily Menu Item List (rep_menuitem.rep with rep_menuitem.fmx)

This report provides a list of menu items with numbers expected, guaranteed, and actual separately for each day of the selected date range. This is an ideal report to use as a forecast and guide for the kitchen in preparing food orders for the future.

If ordered for the past, it is a good indication of the more popular versus the less popular food items sold.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Data Range From/To Date. Includes menu items sold on days included in the date range.

Business Block. Select Business Blocks for this report.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When selecting a Master Block ID in the Bus. Block filter, OPERA Cloud also includes the Sub Block IDs linked to that Master. The report then prints all events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only events linked to that sub Block will be printed.

Event Type. Select event types for this report.

Event Status. Select event statuses for this report.

Department. You can select (single or multi select) the department responsible for a menu item. If an item is assigned to several departments, it prints in each department section.

Menu Class. Allows filtering of the configured items by the selected menu classes.

Report Data

The report is grouped by responsible department and then sorted in date order. Within each date, the menu name is printed with the menu items listed below it in alphabetical order. If an item is configured with several responsible departments, it prints in the sections of all departments it is assigned to.

Data printed for each menu item is: Menu item name (alphabetically), numbers expected, guaranteed, set and actual, Unit Price, Total Price, Unit Cost, and Total Cost. A sub-total is displayed at the end of each menu entry per date, and a grand total is displayed for each responsible department.

Menu Information (Rep_Menuinfo.Rep with Rep_Menuinfo.fmx)

The Menu Information report is a configuration report that allows you to check whether all catering menus have been entered into the system and configured correctly. You would typically print the report after initially inputting configuration data or after changing catering menus.

Selection Criteria

Property. Select the property for which the report should be printed.

Menu Class. Select menu classes to include in the report.

Menu. Select specific menus by name to include in the report.

Print Menu Details. If you select Yes, the report prints details of the menu items that make up the menu, like course order, menu item name, portion, container, and so on as listed below in Report Data. If you select No, only the menu name, price, serving, article number, resort, and events for which this menu is available print for each menu.

Print Revenue Type. If you select Yes, the revenue types that are linked to the menu print together with their appropriate share of the menu price, cost, internal quote, and margin. If you select No, the information is suppressed.

Report Data

The report is sorted alphabetically in menu class order and within each class by menu name order. If neither menu details nor revenue types are selected, the following information is

Copyright © 2016, 2025, Oracle and/or its affiliates.

printed for each menu: menu name, price, serving, article number, resort, and events for which this menu is available.

If you select Print Menu Details, the following additional info prints for each menu item that is part if the menu: course, course order, menu item name, included Y/N, demand factor, unit price, serving, portion, and container.

If you select Revenue Type, the following details print: revenue type (any revenue types linked to the menu), cost, internal quote, margin and margin percent - difference between cost price and internal quote (internal sales price), menu price share of that revenue type and margin / margin percent - difference between cost price and menu price (quoted sales price).

Menu Item List (Rep_Mitemdtl.Rep with Rep_Mitemdtl.fmx)

This report is helpful in reviewing the configured menu items with their internal criteria. It is typically printed during and after configuration of menu items to verify that all relevant data was entered. The same would apply when menus and menu items are changed. You can print the report at any time to review the current catering menu item configuration on paper.

Selection Criteria

Property. Select the property for which the report should be printed.

Print Detailed Item (Yes/No). If you select Yes, additional item information is printed for each item. See the Report Data section for details.

Menu Item Type. Select only food items, only beverage items, or both.

Sort Order. You can arrange the report in menu item name order or in article number order.

Menu Class. Select specific menu classes to include in the report.

Department List. Select specific departments to include in the report print.

Event Types. Select specific event types for which the printed menu items are available/linked to.

Report Data

The reports primary sort order is always by menu item class. Within each class, you can sort the report either by article number or by menu item name, depending on the selection on the report form. For each menu item, the following information prints: article number, menu item name (all three lines is used – first line prints bold), inclusive Y/N, revenue type, sales price, cost, serving, department, and events that are linked to the menu item (for which the menu item is available).

If you select Print Details on the report order form, additional information for each menu item is printed, including the following: restrictions, description, beverage Y/N, portion, year, print Y/N, and container.

Commissions Reports

Commissions Pre Payment (prepayment with TAC3.FMX)) : Provides the same information displayed in the commission processing screen. This includes all reservations that are placed in commission processing because a travel agent or source profile is attached to the reservation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Paid Commissions (postpayment): Provides the same information displayed in the commission register screen. This includes all reservations and corresponding travel agents/ source profiles that were processed.

Payment Activity (chkregister with TAC5.FMX): The report shows all checks printed for each bank account.

Transferred Commissions (comtransfer with TAC6.FMX): Shows the reservations that are in commission payment processing by an agent or by a source for the selected departure date or date range. Each guest record includes commission amount details. The report also shows grand total commissions information for all agents and sources.

Travel Agent Master Listing (tamaster with TAC2.FMX): Includes all configured travel agent profiles in the property. The information displayed includes the travel agent address, IATA number, phone number and commission code.

Travel Agent Summary (ta_summary with TAC7.FMX): A month-by-month digest of commissions, room revenue, non-room revenue, room nights, number of guests, guest nights, and no show and cancelled reservations for each travel agent.

Commissions Prepayment Report (prepayment)

Commissions Pre Payment (prepayment with TAC3.FMX) – Provides the same information displayed in the commission processing screen. This includes all reservations that are placed in commission processing because a travel agent or source profile is attached to the reservation.

Comp Accounting Reports

Gaming

The following Gaming reports are available:

Authorizer Limits (ga_auth_limits) — This report displays all authorizers for the selected date and the corresponding Credit Limits that are granted for Groups of Transaction Codes. Additionally, the report displays the Actual Comp Charges that were posted by that Authorizer for each Group of Transaction Codes.

Comp Charges (ga_comp_charges) — This report includes the comp transaction code, amount, and the authorizer who made the comp request. When the Comp Transaction Code field on the parameter form is set to ALL, all comp transaction codes, including any payment types configured for windows 101-108, appear on the report.

Comp Routing (ga_comp_routing) — This report displays all reservations with Comp Routing attached. This includes declines and requests for Comp routing.

Configuration Reports

Account Types (cf_accounttypes) - displays the property's configured accounts receivable account types. The accounts receivable cloud service must be active in order to configure any account types.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Articles (cf_articles) - displays the property's configured articles. Articles allow a property to post certain items to a guest folio in such a way that they appear to have come from a single transaction code.

Authorizer Groups (cf_authorizer_groups) - displays all authorizer groups, along with the group rate code, transaction codes, and credit limits. The report also lists the authorizers who are members of each group by authorizer ID and name. Gaming

Budgets (cf_budgets) - displays the property's configured budgets.

Cancellation Reasons (cf_cancelreasons) - displays the property's configured cancellation reasons.

Cashiers (cf_cashiers) - displays the property's configured cashiers.

Cities and Postal Codes (cf_postal_codes) - displays the property's configured cities and postal codes.

Country Codes (cf_countrycodes) - displays the property's configured countries.

Credit Limits (cf_creditlimit) - displays the property's configured credit limits.

Discount Reasons (cf_creditlimit) - displays the property's configured discount reasons.

Districts (cf_districts) - displays the property's configured districts.

eCoupon Codes (cf_ecoupons) - displays the property's configured eCoupon codes.

Exchange Rates (cf_exchange_rates) - displays the property's configured exchange rates. The report includes all details that are set in the exchange rate setup.

Features (cf_features) - displays the property's configured features.

Folio Grouping Codes (cf_folio_groupings) - displays the transaction codes associated with the folio groupings of arrangement, expense and group codes.

Housekeeping Sections (cf_hksections) - displays all housekeeping sections and days of the week that correspond to the property's attendants.

Housekeeping Workflow Report (cf_hsk_workflow) - displays the configured **Building Groups, Buildings, Section Groups, Sections, Floors, Rooms** and **Facility Tasks**. (**Building Groups, Building** and **Section Groups** configuration is available when the **Building Management** OPERA Control is active).

Item Inventory (cf_iteminventory) - displays the property's configured items.

Languages (cf_languages) - displays the property's configured languages.

Market Codes (cf_marketcodes) - displays the property's configured market codes.

Master Codes (cf_mastercodes) - displays the property's configured master codes.

Origin Codes (cf_origincodes) - displays the property's configured origin codes.

Out of Order Reasons (cf_outoforderreasons) - displays the property's configured out of order reasons.

Package Codes (cf_packagecodes) - displays the property's configured packages.

Preferences (cf_preferences) - displays all preferences that have been configured in the application.

Profile Changes (cf_profilechanges) - displays all changes made to profiles for the date range specified.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Rate Category (cf_ratecategory) - displays the property's configured rate categories.

Rate Class (cf_rateclass) - displays the property's configured rate classes.

Rate Code – Details (cf_ratecodedetail) - displays the details of the property's configured rate codes.

Rate Code Header (cf_ratecodeheader) - displays rate header information of the property's configured rate codes.

Rate Seasons (cf_rateseason) - displays the property's configured seasons.

Reason Codes (cf_reasoncodes) - displays the property's configured adjustment codes.

Regions (cf_regions) - displays the property's configured regions.

Relationship Types (cf_relationshiptypes) - displays the property's configured relationship types.

Reservation Types (cf_reservationtypes) - displays the property's configured reservation types.

Revenue Buckets (cf_revenue_buckets) - displays the transaction codes associated with the various revenue buckets.

Room Classes (cf_roomclasses) - displays the property's configured room classes.

Rooms (cf_rooms) - displays the property's configured rooms and corresponding information.

Room Types (cf_roomtypes) - displays the property's configured room types and corresponding information.

Routing Codes (cf_billinginstructions) - displays the property's configured routing codes.

Source Codes (cf_sourcecodes) - displays the property's configured source codes.

Special Requests (cf_specialrequests) - displays the property's configured special request preferences.

State Codes (cf_statescodes) - displays the property's configured states.

Tax Types (cf_taxcodes) - displays the property's configured tax types.

Tax Types by Transaction Codes (cf_taxtypesbytrxcodes) - displays the property's configured tax types, organized by transaction codes.

Titles (cf_titles) - displays the property's configured titles. The output includes the language with which the title has been associated.

Transaction Codes (cf_trxcodes1) - displays the property's configured transaction codes, grouped by transaction group, then subgroup, then transaction code.

Transaction Codes by Transaction (cf_trxcodes2) - displays the property's configured transaction codes in numerical order by transaction code.

Transaction Diversion Rules (cf_trans_diversion_rules): Displays the property's diversion rules.

Turnaway Reasons (cf_turnawayreasons) - displays the property's configured turnaway reasons.

Waitlist Priorities (cf_waitlistpriorities) - displays all waitlist priorities and their defined sequence order to display.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Departures Reports

Departures (departure_all) - lists all departure reservations for a specified date. Day-use reservations are included on the report.

Departure Extended (depextended) - lists all reservations which were due out today and have extended their stay.

Departure Individual & Group (depindgrp) - displays all departures reservations for individuals and groups, sorted by room -number -for a given date.

Departures Report (departure_all)

Departures (departure_all) report lists all departure reservations for a specified date. Day-use reservations are included on the report.

OPERA CLOUD

End of Day Reports

Cancellations by End of Day Process (nacancel) - displays all cancellations that were due to arrive and were cancelled during the end of day process.

Cashier Summary (nacashiersummary) - displays each cashier's total intake, currency for the day, credit cards, and other - prepaid commissions and manual credit cards.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Credit Card Authorization (nacc_authorization) - displays details of all credit cards that have had an authorization amount held on the card via the batch process.

Deposit Transferred at Check In (nadeptransci) - display all reservations that had a deposit posted, and checked in today. The information will include who checked in the guest.

Group Business - In-House Detail (nagrpbusiness) - displays the current reservations in-house that are associated with a block.

Group Business - In-House Summary (nagrpbussumm) - names currently in-house, number of rooms, persons, and revenue associated with these rooms.

Manager Report (manager_report) - is configurable to output statistical and revenue information for your property. For more information, see Managing Definable Managers Report

Matrix Trial Balance (matrix_trial_balance) - displays a summarized financial picture of the four ledgers - deposit ledger, guest ledger, package ledger, and accounts receivable ledger.

Night Audit Guest Ledger Detail (naguestleddetail) - displays a breakdown of a guest's total bill into Room Charges, Other Charges, Credits, and the current balance on each guest account. This breakdown takes into consideration comp windows for those properties using comp accounting with their guest ledger.

Night Audit Daily Status (nadailystat) - displays a brief summary of guest statistics for room occupancy and revenue. It is considered a summary version of the more detailed Manager Report.

No Shows of the Day (nanoshow) - generated during the night audit sequence and displays reservations that were due to arrive today, but did not cancel the reservation and the reservation was not canceled during the night audit process.

Paid Outs (napaidout) - displays all the paid-out transactions of the day to guests and is generated during the night audit sequence.

Posting Adjustments (naadjustments) - displays adjustments that have been made to all posting activity for the previous day.

Posting Corrections (nacorrections) - displays all corrections that have been made to a posting for the current day. This report can be used as a checklist for tracking cashiers' activity.

Posting Error Reasons (naerror) - part of the night audit sequence of reports and displays errors that occurred during posting room and tax activity.

Userlog - Today's Checkout (nauserlogtodaycheckout) - displays all persons who checked out a guest for the current day, and runs as part of the night audit sequence.

Weather/Title (naweather) - displays the full property name, and the business date and time the end of day is being generated. Additionally, as one of the steps in closing the date, you can enter notes about the business date that is being closed. The report displays those notes to refer back to the date and the reported figures. This can include the temperature, world news, local business, or weather affecting bookings.

Group Business - In-House Detail Report (nagrpbusiness)

The **Groups In House Detail Report** displays the current reservations in house that are associated with a Block and have a Group profile attached. The report provides a detailed break down of reservations and associated revenue for each Block and then prints a Grand Total of all Blocks in house.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Event Reports

Prerequisites for Event Reports

The following event reports are available for selection:

Banquet Check Folio by Event (sample_bqt_chk_folio_by_event rep with rep_banquet_check_folio.fmx): When selecting the Banquet Check Folio by Event report from the report menu, the entire banquet check for all events and postings of the selected block are produced.

Banquet Check Folio by Revenue Type/Group (sample_bqt_chk_folio_by_rev rep with rep_banquet_check_folio.fmx): This report displays a breakdown of each posting grouped by Revenue Type/Group for the block.

Catering Pace / Progress Reports (rep_catering_progress.rep with rep_catering_progress_bi.fmx) : The Catering Pace Progress report displays the catering production for a certain time period compared to budgeted covers and revenue for the same stay date period and another comparison to the production for the same stay date range last year. The produced covers, revenue, and average checks are grouped by stay date periods (either calendar month or fiscal period, depending on the hotel's configuration).

Catering Summary Report (rep_catering_summary.rep with rep_catering_summary.fmx).The Catering Summary report is a production report that calculates the catering revenue changes for all business blocks that have had events created on a specified status, events that had their status changed to a specified status, or events that were on the specified status before the production period, but had changes done to their revenue during the production period. The report also includes a summary and grand total amounts for the blocks.

Daily Catering Forecast (rep_ev_forecast.rep with rep_ev_forecast.fmx): This is a very detailed catering forecast report that allows printing the forecast figures per day per event type, divided into the selected revenue types. Each event is listed separately with a summary for each event type. It a great tool for the catering department to project their expected revenues in minute detail at any time for any time into the future.

Daily Forecast Report (rep_daily_forecast.rep with rep_daily_forecast.fmx). The Daily Forecast Report displays room nights, room revenues, and catering revenues on a daily basis per booking. Catering revenues can be split into up to five catering revenue type groups. Each day has a status summary line per status and one total daily summary across all statuses. The report incorporates the option to print catering revenues as net or gross depending on the setup of tax configuration.

Daily/Weekly List of Events – Detailed (sample_event_list_detailed.rep with rep_evord.fmx): The Daily/Weekly List of Events Detailed report is a line report that is extremely useful as a daily or weekly communication tool to all hotel departments about upcoming catering events, the location where they are being held (including the function space, number of attendees, set-up style), and so on.

Equipment List (rep_equipment_list.rep with rep_equipment_list.fmx): This report is a great tool for the banquet operations staff. You can use it with Banquet Event Orders (BEO) as a detailed document for equipment organization and setup. You can print the report in a daily format with a page break after each day or in a continuous weekly format. You have the option to print more details like the account name, contact name, communication details, and all relevant notes instead of the plain format that essentially prints only the equipment requirements.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Event Note Change Log Report (rep_event_note_changelog.rep_with_rep_event_note_changelog.fmx): The Event Note Change Log Report is created to report changes to Banquet Event Orders (BEO) after distribution without having to reprint the entire original sheet. It works in conjunction with event notes. To have change notes print on the report, you must create an event note for the appropriate event with the notes type: Change. OPERA Cloud stamps the note with the date, time, and user name. In the notes, enter any changes you want included in the distributed Change Log report.

Function Space Utilization Report (rep_fs_utilization.rep with rep_fs_utilization.fmx): This report displays the usage times and percentage of used time versus available time within configured utilization periods for each function space, as well as an overall daily usage time and percentage. The occupancy percentage is calculated based on the occupied times.

Item Availability Report (rep_item_availability.rep with rep_item_availability.fmx): This report is useful for catering equipment planning and ordering. It provides a detailed list of all equipment booked on a daily basis with the number of items in inventory, items booked, and items still available.

Meal Type Forecast By Day (rep_meal_type_forecast_bi rtf with rep_meal_type_forecast_bi): The Meal Type Forecast (BI) report is an easy to read forecast report for banquet operations. It is broken down by Catering Covers, Status, and Event Date.

Menu Cost Report (rep_menu_cost.rep with rep_menu_cost.fmx): The Menu Cost report shows booked menus per day with revenue versus cost information.

Monthly Catering Forecast (rep_month_forecast.rep with rep_month_forecast.fmx): This is another reporting option to use for forecasting event revenues. Where the Daily Event Forecast report breaks down the revenue into daily sub-totals, this report only prints total revenue per event type per status type, followed by a breakdown of revenues into the selected revenue types by status type for each calendar month that falls within the selected date range.

Posted Event Revenue Report (rep_posted_event_revenue rep with rep_posted_event_revenue.fmx): The Posted Event Revenue report provides hotels with a view of Expected, Guaranteed, Billed and Posted Event Revenue, listed by Event and Revenue Type within the selected time period. The report calculates and displays the variance difference between the Posted and Billed Revenue.

Sales Manager Progress (BI) (rep_mgr_progress_bi.rtf with rep_mgr_progress_bi.fmx): The Sales Manager Progress report is an easy to read month-end report showing sales manager performance versus goals compared to On the Books figures. This report has three outputs: one organized by Manager and Year; one organized by Manager and Month using Production Goals; and the third organized by Manager and Month using Arrival Goals.

Banquet Check Folio by Event (sample_bqt_chk_folio_by_event rep with rep_banquet_check_folio.fmx)

When selecting the Banquet Check Folio by Event report from the report menu, the entire banquet check for all events and postings of the selected block are produced. The report is available when the Event Posting OPERA Control is active and a country is specified in the Country Mode field for the property in the Property Details. The Banquet Check Folio by Event report displays a breakdown of each posting grouped by event.

OPERA Cloud enables you to generate the banquet check folio from the Event Posting screen. To allow properties access to generate this report from other areas of the application, you must configure the report in the Reports menu. Depending on whether the reports is generated from the Event Posting screen or a report group, the filter criteria noted below will vary.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> This report is fully translatable and prints in the selected report language when printed from Reports (if the appropriate translations exist). When this report is printed from the Event Posting screen, the Banquet Check prints in the configured language of the selected translation. If no translations exists for the contact language, the check prints in English.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Event Date From. The start date of the event.

Event Date To. The end date of the event.

Block Date Range From. The start date of the block. The field appears when generating the report outside of the Event Posting screen.

Block Date Range To. The end date of the block. The field appears when generating the report outside of the Event Posting screen.

Block. Allows you to select one or several specific business blocks for which to print. The field appears when generating the report outside of the Event Posting screen.

Event Printing Method. Options are: Continuously, Per Event, or Master/Sub.

- **Continuously option**: prints an event itinerary by date and time that includes all events for the same date/booking on the first page of the Banquet Event Order (BEO). This is followed by the event resources and details in date and time order, but not separated from each other by event's ID or dates.
- **Master and Sub option**: prints regular events with a page break between events, but keeps master events together with their associated sub-events.
- **One Event per Page option**: inserts a page break after each event.

Print Account. Select the account to print.

Print Contact. Select the contact linked to the account.

> **Note**
>
> When the Banquet Check Folio is printed for more than one booking, no option is provided to select a different Account or Contact for printing.

Page Break Per Day. Select to summarize each day and print each day on its own page.

Include PMS Postings. Enables printing another group labeled Other Postings after the last revenue group that prints all postings not linked to event management.

Display Discounts. Select the check box to display the discounted percentage and discounted price of a Resource: Space, Menu, or Item. The original price also appears for comparison. A summary at the end of the report displays the 'Total Discount xxx.xx' for all resources. This informs guests of the amount they saved. The field appears when generating the report outside of the Event Posting screen.

Currency. Select the currency in which to print the report from the drop down list.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Revenue Summary with value of No Summary, By Revenue Group and By Revenue Type.
- The Posting Account appears when the selected block has more than one eligible Posting Master Reservation allowing the user to select which account to use when generating the banquet check.

Banquet Check Folio by Revenue Type/Group (sample_bqt_chk_folio_by_rev rep with rep_banquet_check_folio.fmx)

The Banquet Check Folio by Revenue Type/Group is available when the Event Posting OPERA Control is active and a country is not specified in the Country Mode field for the property in the Property Details. This report displays a breakdown of each posting grouped by Revenue Type/Group for the block. When selecting SAMPLE_BQT_CHK_FOLIO_BY_REV, the entire banquet check for all events and postings of the selected block are produced.

OPERA Cloud enables you to generate the banquet check folio from the Event Posting screen. To allow properties access to generate this report from other areas of the application, you must configure the report in the Reports menu. Depending on whether the reports is generated from the Event Posting screen or a report group, the filter criteria noted below will vary.

> **Note**
>
> This report is fully translatable and prints in the selected report language when printed from Reports (if the appropriate translations exist). When this report is printed from the Event Posting screen, the Banquet Check prints in the configured language of the selected translation. If no translations exists for the contact language, the check prints in English.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Event Date From. The start date of the event.

Event Date To. The end date of the event.

Block Date Range From. The start date of the block. The field appears when generating the report outside of the Event Posting screen.

Block Date Range To. The end date of the block. The field appears when generating the report outside of the Event Posting screen.

Block. Allows you to select one or several specific business blocks for which to print. The field appears when generating the report outside of the Event Posting screen.

Event Printing Method. Options are: Continuously, Per Event, or Master/Sub.

- **Continuously option**: prints an event itinerary by date and time that includes all events for the same date/booking on the first page of the Banquet Event Order (BEO). This is followed by the event resources and details in date and time order, but not separated from each other by event's ID or dates.
- **Master and Sub option**: prints regular events with a page break between events, but keeps master events together with their associated sub-events.
- **One Event per Page option**: inserts a page break after each event.

Print Account. Select the account to print.

Print Contact. Select the contact linked to the account.

> **Note**
>
> When the Banquet Check Folio is printed for more than one booking, no option is provided to select a different Account or Contact for printing.

Page Break Per Day. Select to summarize each day and print each day on its own page.

Include PMS Postings. Enables printing another group labeled Other Postings after the last revenue group that prints all postings not linked to event management.

Display Discounts. Select the check box to display the discounted percentage and discounted price of a Resource: Space, Menu, or Item. The original price also appears for comparison. A summary at the end of the report displays the 'Total Discount xxx.xx' for all resources. This informs guests of the amount they saved. The field appears when generating the report outside of the Event Posting screen.

Currency. Select the currency in which to print the report from the drop down list.

- Revenue Summary with value of No Summary, By Revenue Group and By Revenue Type.
- The Posting Account appears when the selected block has more than one eligible Posting Master Reservation allowing the user to select which account to use when generating the banquet check.

Catering Pace / Progress Reports (rep_catering_progress.rep with rep_catering_progress_bi.fmx)

Prerequisites for Event Reports

The Catering Pace Progress report displays the catering production for a certain time period compared to budgeted covers and revenue for the same stay date period and another comparison to the production for the same stay date range last year. The produced covers, revenue, and average checks are grouped by stay date periods (either calendar month or fiscal period, depending on the hotel’s configuration).

You can run the report for a limited production period (such as 01 June 2018 to 30 June 2018), which would only show the production during that time frame. Alternatively, you can run the report with the production date range left blank, which would represent catering covers and revenue for the stay date range at the moment of printing (also known as On-the-Books).

The report operates without a defined credit status and therefore only reports on the last status of an event during the production period. For example, if the report is run for production period June 2018, and the property has an event that was created with 100.00 USD food revenue on status TEN on 02 June 2018, turned DEF on 10 June 2018, and became ACT on 20 June 2018, the 100.00 USD food revenue only appears in the column for status ACT, which was the last status this event was on in the reported production period. This is important to note when comparing this report to other catering production reports like the Catering Production report (Rep_Catering_Summary), which operates with a credit status and could therefore count the event twice: once in the defined credit status (usually DEF) and once in the last status (here ACT) if the event passed both statuses in the production period.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Event Period (Event From/Event To): Enter the event start and end date range to filter the events included in this report.

Production Period (Begin Date/End Date): Defines the date range for recording event changes. Each change to an event status or to event revenue is recorded in a specific production change log. The Production Date Range filter scans the entries in the production change log for any event changes that fall under the other criteria selected on the filter form. Due to the nature of the filter, only dates in the past are valid entries, because there cannot be any entries in the event change log after the current business date. To illustrate, an event created on status TEN in April 2018 with the event date in October 2018 can turn to status DEF in June 2018. In this scenario, two entries would appear in the change log for this event: one for the creation of the event on status TEN in production period April 2018, and one for the status change to DEF in June 2018.

Group Each Period by (Market Segment): This field sorts each period by the market segments selected here. When OPERA Sales and Catering Management catering budget information is configured, and the Catering Pace Report (rep_catering_progress) is run without a Market Segment filter, the budget information prints on the report with a variance to the booked numbers. However, when you run the report with a Market Segment filter selected, the budget information does not print.

Event Status 1 and 2: Allows a selection of up to two different status columns to print on the report. This report only reports an event under the last status that it was in the production period. If an event turned DEF and ACT in the selected production date range, it will only be reported in the ACT column, not in both DEF and ACT. The first column of the report always prints the ACT status and the second column is calculated from the ACT column plus values from the status selected in status filter 1. In most set-ups, it makes sense to select the status just prior to ACT in the status filter 1, such as DEF.

Status1 & 2 – Last Year: Allows the selection of up to two different status columns to print for the production in the same production date range and stay date range one year back. It makes sense to select the same status code that was selected for the current production period in order to compare last year's production to the current production within the same status codes.

Covers – Event Type: Select the Event Types to use for calculating covers and average check.

RevPor. – Rev Type: Select the Revenue Types to use for calculating Revenue per Occupied Room. The figure in the report is calculated by dividing the sum of these revenue types by the number of blocked rooms for those groups. If the business blocks status is in an actual status, the picked-up rooms are used instead of blocked rooms.

Avg Check – Rev Type: Select the Revenue Types that should be used for calculating the Average Check. The figure in the report is calculated by dividing the sum of these revenue types by the number of covers.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When the application parameter Use Forecast Value Only is set to Y and an Event has a Food and Beverage Minimum Rate Code attached, forecasted revenue is not reported or recorded for the Revenue Types that are configured to contribute to the F and B Minimum. If the Rate Code is changed to one that does not require a minimum, and expected revenue has not been added to those revenue types, the forecasted revenue for revenue types configured to contribute to the F and B Minimum is reported.

Variance based on Status 1, 2 or Both: Select the status column for calculating the variance to budget on the report. Typically, the variance would be compared to a combination of DEF and ACT bookings.

Print Exclude from Forecast Event - Both/Yes/No: Select this option to either include or exclude certain events. Select **Both** : Prints all qualifying events. When Yes is selected, only events that have had the Exclude from Forecast Reports check box selected print (the Exclude from Forecast Reports check box is accessible on the Revenue Summary Panel. When No is selected, only events that have not been marked as Exclude from Forecast Reports print.

Report Data

The budget figures in this report come from the Budget Forecast module.

The first four columns of the report show the produced catering revenue by revenue type, total catering revenue, covers, average check, and revenue per occupied room by status for each calendar month in the selected stay date range. The first column is hardcoded to always show the ACTUAL produced figures. The second column adds the production of status 1 defined in the report parameter screen to the ACTUAL produced figures and show the total of those two statuses. The third and fourth columns show the production of statuses 1 and 2 as defined on the report order form respectively.

Each event is counted for only one of the selected status codes, namely the last one that it was on at the end of the production period. No event is recorded under the DEF and ACT status columns, even if it passed through the DEF status into the ACT status during the selected production period.

The next two columns of this report represent the budget figures that have been entered for the stay date range that the report is run for, as well as the difference of the current produced figures to the budget figures, depending on which status column has been selected on the filter form for comparison.

The next two columns show the production of the same production period exactly one year back. If the current production period is June 2018 for stays dates June 2018 to December 2018, the last year columns calculate the production in June 2017 for stay dates June 2017 to December 2017.

The following two columns show the budget for last year and the variance of the produced figures versus the budgeted figures last year.

The last column shows the actual figures produced last year.

Forecast figures are calculated as event production for this report if no expected, guaranteed, or actual figures exist for a specific revenue type. For example, if an event had forecasted revenue for 500.00 USD Room Rental, 1000.00 USD for Food and 100.00 USD for Decoration, but only the function space is booked at a rate of 450.00 USD when the event becomes DEF, the revenue recorded in this report as production on the status change will still be 450.00 USD Rental, 1000.00 USD Food and 400.00 USD Decoration.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Catering Summary Report (rep_catering_summary.rep with rep_catering_summary.fmx)

The Catering Summary report is a production report that calculates the catering revenue changes for all business blocks that had events created on a specified status, events that had their status changed to a specified status, or events that were on the specified status before the production period, but had revenue changes during the production period. The report also includes a summary and grand total amounts for the blocks.

The figures are calculated and appear on a booking-by-booking basis. If a business block has events of different statuses that all fall into the production criteria, the business block name is listed underneath all the statuses. The report can be grouped either by room owner or by catering owner.

This report provides the option to select a credit status. This means that events can be accounted for in the selected credit status even if they moved on to another follow-on status in the same production period. For example, if an event becomes both **Definite** and **Actual** in the selected production period, if you select Definite as the credit status, the event will appear under the status section for both Definite and Actual rather than just under Actual, which would be the last status. This helps greatly in calculating Sales Manager incentives that are usually based on a defined credit status.

> **Note**
>
> You must be granted the Event Print task in the selected property to run the Catering Summary report. Also, the available property in this report is further limited by the properties to which you have the appropriate access granted.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Event Date (Event Start/Event End): The event date range that should be covered in this report.

Production Date (Start/End): Defines the date range for reporting event changes. Each change made to an event status or to catering revenue is recorded in a specific event production change log. The Production Date Range filter scans the entries in the production change log to search for any event changes that fall under the criteria selected on the filter form. The date range filter is valid only for dates in the past, because there cannot be any entries in the event change log after the current business date. To illustrate the above, an event that gets created on status TEN in April 2021 with Event Date in October 2021 can turn to status DEF in June 2021. In this scenario, there would be two entries in the change log for this event, one for the creation of the event on status TEN in production period April 2021 and one for the status change to DEF in June 2021. And if the report is filtered for production dates April 01, 2021 — June 30, 2021, the business block would be reported once under TEN and once under DEF.

> **Note**
>
> The production period is mandatory for this report.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Event Status: The statuses selected in this filter query for events in that status at the end of the selected production period. Make sure that the Credit Status filter and the Event Status filter do not contradict each other. For example, if the selected credit status is DEF and the Event Statuses selected are INQ and TEN, nothing will be recorded under the credit status section, if DEF is a status that follows INQ or TEN in the status flow.

However, if the selected Event Statuses are DEF, CAN, ACT and the selected credit status is DEF, this report will correctly record those events in the credit status section that are either still on status DEF at the end of the production period or that moved through the status DEF into either status CAN or ACT in the same production period.

Credit Status: Defines the status code that an event should be recorded on in any case, irrespective of whether the event is still on that status at the end of the production period or has moved on.

For example, an event with 200.00 USD Food Revenue turns DEF in April 2021. In May 2021, 100.00 USD Food Revenue is added to the booking. Still, in May 2021 (that is, some days after the revenue is added), the event turns ACT. If no credit status is selected, the event is on this report only included in the section for status ACTUAL with a total of 300.00 USD Food Revenue (the original 200.00 USD plus the 100.00 USD added in May). If the credit status is defined as DEF, the event will appear twice on this report if it is ordered for production period May 2021. Once under the status section for DEF with 100.00 USD Food Revenue change (because 100.00 USD was added while the event was still on the credit status) and once on the section for ACT with 300.00 USD. If the event had turned DEF in May 2021 instead of in April 2021, it would again appear twice if the credit status was DEF: once as DEF with 300.00 USD, and once as ACT, also with 300.00 USD.

Net Total: Allows for the totals of two statuses to be either summed or subtracted from one another by selecting the (+/-) from the list of values. For example, if statuses, INQ, TEN, DEF, LOS and CAN were selected to be reported on and DEF is credit status (most typical scenario), it would make sense to define the net total as DEF minus CAN. This total will be reported by the selected Group By with a Grand Total at the end.

Revenue Types 1-4: Allows the selection of up to four catering revenue types or combinations of revenue types for which changes should be reported. Descriptions of the selected revenue types will appear in the report footer.

Group By (Catering Manager/Sales Manager): As described above, the report can be grouped on catering manager or sales manager. Sub-total and net totals are calculated per group.

Owner: Allows selection of specific manager initials.

Print Booking Details: If selected, each business block that falls within the selected parameters will print separately onto the report with a sub-total per status and net total per selected group. If not selected, only the summary per status and the net total will print within each group without any booking details.

Print Current Totals: When selected, prints the current on-the-books figures for each booking with no filter for the production date range. This option is only available when Print Booking Details is selected.

Print Grand Total: When selected, prints the Grand Total of all the owners, including summed attendees, per person revenue calculated as the Grand Total Attendees, and the summed number of blocks.

New Statuses Only: When selected, only those business blocks will be reported that have had an event status change occurring in the selected production period. Business Blocks with events that only underwent revenue changes will be omitted. This information appears in the Net Status row.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Blocks (All/Catering Only/Rooms with Catering): Use this option to filter results for business blocks that have been flagged as Catering Only, business blocks that have not been flagged as Catering Only, or All business blocks.

Print Exclude from Forecast Event - Both/Yes/No: Select this option to either include or exclude certain events. If you select Both, all qualifying events will print. When Yes is selected, only events that have had the Exclude from Forecast Reports flag selected will print (the Exclude from Forecast Reports flag is accessible on the Events Screen Details tab). When No, is selected only events that have not been marked as Exclude from Forecast Reports will print.

Report Data

The report will print one record for each business block that fits the filter criteria provided that the Print Booking Details check box is selected. The business block must have at least one event that was created or changed in the production period. If the business block has several events of different event statuses, the business block record will print in each appropriate status section, once with the total production per event status. The report is grouped primarily on the group defined in filter options. Within each main group, business blocks are then automatically grouped by event status.

Columns:

The selected sort group header is printed above each section (either room(s) owner name and initials or catering owner name and initials). Data printed for each business block can include these columns:

- **Account Name**.
- **Business Block Name**.
- **Business Block ID**.
- **Att. (Attendees)**: The sum of the attendees of the events that fall within the filters specified when generating the report. If the event is in an Actual Status, this figure represents the actual attendees. If the Event is not in an Actual Status, the figure represents the guaranteed attendees or else the expected. If forecasting revenue (when the Use Forecast Value Only application parameter is set to Y), the expected attendees are calculated.
- **Status**: The Status column will populate with the appropriate event status and is appended with NEW if the status change happened during the requested production period.
- **Chg. Date**: The Change Date represents the most recent date an event changed to that status.
- **Rooms Owner Code**.
- **Catering Owner Code**.
- **Begin Date/End Date**: Business Block Arrival and Departure Dates.
- **Business Block Source**.
- **Rev Types 1-4**: For each revenue type(s) selected, the top row of revenue information is the total revenue for that type as of the end of the requested production date range.
- **Change**: The bottom row of revenue information is the change in revenue for the requested production date range.
- **TOTAL**: Sum of each of the revenue types selected.

Rows:

Depending on the filter criteria, the following rows will appear.

- **Event Status**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Block Name**.
- **Current Block Total**: The total appears if the Print Current Total check box is selected. The information in this row is calculated based on figures for that business block at the time the report is printed. Information includes: Attendees from the Business Block Catering Tab; Per Person is the total revenue calculated as the current Business Block Total/Attendees; current totals for Revenue Type 1-4 based on the revenue types selected in the Catering Production parameters; and current total revenue.
- **(Status) Change Summary**: Summary of each defined event status. Displays information such as the Attendees calculated as the total per status of new attendees per block; the total number of people summed from the attendees on each block from the events contributing to the revenue; Per Person calculated as the Status Summary Block Total / Status Summary Block Attendees; number of blocks calculated as the total number of business blocks for that status.
- **(Owner Code) Net Status**: Summary for each owner considering the Net Status values selected when ordering the report. Displays information such as Attendees summed based on net status calculation; Per Person calculated as the Net Status Total/Grand Total Attendees; number of blocks summed based on net status.

Grand Total: The total appears if the Print Grand Total check box is selected. Includes the following: Grand total of the (Owner) Net Status rows including attendees summed based on Grand Total calculation; Per Person calculated as the Grand Total Total/Grand Total Attendees; Number of blocks summed based on Grand Total calculation.

> **Note**
>
> Accounts and contacts use the following logic when printing the Catering Summary report. If a Company profile is attached to the business block, then the Company profile will print. If no Company profile is attached, but an Agent profile is present, then the Agent profile will print. If no Company and no Agent profiles are attached, but a Source profile is present, then the Source profile will print.

If a business block is in a return-to-inventory status, the date the business block was lost or canceled will print as well as the reason for the cancellation. For each business block, two rows of figures are recorded. The upper row shows the total catering revenue by revenue type for the business block as of the end of the production period, including the changes made to the events in the production period. The second row only represents the catering revenue changes during the production period.

If the event status was changed in the production period, the total revenue figures for the event are added as a change. A status change is always considered a rollover of all existing revenues into the new status and, therefore, all revenue on the books at the end of the production period is considered changes within the production period.

If a credit status is defined in the filter form, events that went through the credit status and into a follow-on status of the credit status (or had changes done to them while on the credit status in the production period and then turned into a follow-on status still in the same production period) will be reported twice on this report, once under the credit status and once under the last status of the event.

It is possible for a business block to appear more than twice if its events are in several different statuses at the end of the production period.

Forecast figures are calculated as event production for the Catering Summary report if no expected, guaranteed, or actual figures exist for a specific revenue type. For example, if an event had forecasted revenue for 500.00 USD Room Rental, 1000.00 USD for Food, and

Copyright © 2016, 2025, Oracle and/or its affiliates.

100.00 USD for Decoration, but only the function space is booked at a rate of 450.00 USD when the event becomes DEF, the revenue recorded in this report as production on the status change will still be 450.00 USD Rental, 1000.00 USD Food, and 400.00 USD Decoration.

Daily Catering Forecast (rep_ev_forecast.rep with rep_ev_forecast.fmx)

Prerequisites for Event Reports

The daily Catering Forecast is a detailed catering report that can print the forecast figures per day, per event type, and divided into the selected revenue types. Each event is listed separately with a summary for each event type. It a great tool for the catering department to project their expected revenues in minute detail at any time for any time into the future.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Date Range: This represents the event date range that the report should cover.

Bus-Block ID: It is possible to select a single business block or a range of business blocks for the report.

> **Note**
>
> When selecting a Master Block ID in the Bus. Block filter, OPERA will also include the Sub Block IDs linked to that Master. The report will then print all Events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only Events linked to that Sub Block will be printed.

> **Note**
>
> If no Account is connected to a Business Block, the Business Block Name will print in the Account field on this report. Also, the Agent Name will print if no Company is attached and the Source Name will print if no Company or Agent is attached.

Event Type. Allows you to select the event types that should be included or excluded.

> **Note**
>
> Alternate Events are excluded from all catering calculations on this report.

Catering Manager: It is possible to only print event for a specific catering manager or a range of catering managers. The report will rely on the catering manager initials that have been selected on the booking catering tab for this filter.

Event Status: Allows you to select the event statuses to include or exclude. Typically, lost or canceled events would not be included in the forecast. Alternatively, it is also possible to select only lost and canceled events to get an idea of the lost revenue from the cancellations over the selected date range.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Event Status Sub-Total 1 and 2: Allows the sub-totaling of different statuses. This could be used to get a sub-total for production statuses as one and another sub-total for return-to-inventory statuses as the other. This would allow you to print the report as forecast and lost/canceled overview without having to print it twice. Or it could be used to group non- deduct statuses into one sub-total and deduct inventory statuses into the other sub-total.

Event Type for Average Check: Allows you to select event types to include in the average check calculation. If the average check is used for Food and Beverage purposes, this would typically only be event types that include food and beverage servings, such as Lunch or Dinner, and not event types like Setup that generates only function space revenue if at all.

Currency: Select the currency code for revenue figures. (Available when the **Ability to Quote Rates in Foreign Currencies** OPERA Control is active).

Revenue Type 1-4: Up to four revenue types or groupings of revenue types can be included for printing on the report at any one time. These are represented as separate revenue columns on the report body and described in the report footer. The check box in front of each revenue type determines whether the revenue of this type (if checked) should be included in the average check calculation. Again, average checks could be based solely on Food and Beverage revenue types and events, or alternatively could be calculated for any catering revenue that gets generated.

Events - All/Catering Only/Rooms with Catering: These options allow you to decide, based on the type of block, which events will be included in the results.

Print Exclude from Forecast Event - Both/Yes/No: Select this option to either include or exclude certain events. When Both is selected, the report prints all qualifying events. When Yes is selected, the report prints only events that have had the Exclude from Forecast Reports flag checked. When No is selected, the report prints only events that have NOT been marked as Exclude from Forecast Reports.

Report Data

The report is sorted in date order starting with first date selected in the date range filter. Within each date, the events are grouped by event type. For each event, the report displays the following columns: Account name, booking ID, booking status, catering owner initials, rooms owner initials, number of covers, revenues in four columns as selected per type on the filter form, total revenue, total average check revenue (this only show the revenue of those event types and revenue types that have been selected for calculation of the average check on the filter form), and the average check value. This is calculated by dividing the average check revenue by number of covers of those event types that have been selected for average check calculation.

Revenues are calculated in the following sequence by revenue type by event. If billed revenue exists, show billed revenue. If no billed revenue exists, show actual revenue. If no actual revenue exists, show guaranteed revenue. If no guaranteed revenue exists, show expected revenue. If no expected revenue exists, show forecasted revenue. If no forecasted revenue exists, show zero.

For each day, revenues are subtotaled per event type. As a summary for each day, the sub-totals for selected statuses are printed (if so selected on the filter form) followed by a total for the day.

Daily Forecast (rep_daily_forecast.rep with rep_daily_forecast.fmx)

The Daily Forecast Report displays room nights, room revenues, and catering revenues on a daily basis per booking. Catering revenues can be split into up to five catering revenue type groups. Each day has a status summary line per status and one total daily summary across all

Copyright © 2016, 2025, Oracle and/or its affiliates.

statuses. The report incorporates the option to print catering revenues as net or gross depending on the setup of tax configuration on catering revenue types.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Stay Date From: Enter or select a stay from date for the block.

Stay Date To: Enter or select a stay to date for the block.

Block Status: Enter of select one or more status from the list.

Market Segment: Enter or select ore more market segments from the list.

Block Type: Enter or select a block (booking) type from the list.

Event Revenue.

- When the application setting Catering Revenue Price Type is set as Gross and the option button Gross is selected, catering revenue figures print as booked.
- When the application setting Catering Revenue Price Type is set as Gross and the option button Net is selected, catering revenue figures print with the VAT (Tax) percentage configured for each catering revenue type deducted to the booked revenue.
- When the application setting Catering Revenue Price Type is set as Net and the option button Net is selected, catering revenue figures print as booked.
- When the application setting Catering Revenue Price Type is set as Net and the option button Gross is selected, catering revenue figures print with the VAT (Tax) percentage configured for each catering revenue type added to the booked revenue.

Revenue Type 1-5:

- Use this option to select the catering revenue types that should be used to calculate the catering revenue figures and the order in which these revenue types should print on the report.

Print Exclude From Forecast Event:

- Use this option to decide whether to include or exclude (or print exclusively) event revenue from events that have the “Exclude from Forecast Reports” flag on the Event Details Tab selected.

Rooms Revenue:

- If the option button Net is selected, room revenue figures print net of any generates or packages that might be configured with the rate or are added to the booking.
- If the option button Gross is selected, room revenue figures print inclusive of room generates.

Block Owner/Primary Owner Only:

- Use this filter to select bookings by their block owner.
- Depending on the “Primary Owner Only” flag, only bookings where the selected initials are the primary block owner are selected.
- If not selected, bookings where the initials are primary or secondary block owner are selected.

Rooms Owner/Primary Owner Only:

- Use this filter to select bookings by their catering owner.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Depending on the “Primary Owner Only” flag, only bookings where the selected initials are the primary catering owner are selected.
- If not selected, bookings where the initials are primary or secondary catering owner will be selected.

Catering Owner/Primary Owner Only:

- Use this filter to select bookings by their catering owner.
- Depending on the “Primary Owner Only” flag, only bookings where the selected initials are the primary catering owner are selected.
- If not selected, bookings where the initials are primary or secondary catering owner will be selected.

Currency:

- Select the currency type in which to display revenue values on this report. (Available when the Ability to Quote Rates in Foreign Currencies OPERA Control is active.)

Daily/Weekly List of Events – Detailed (sample_event_list_detailed.rep with rep_evord.fmx)

Prerequisites for Event Reports

The Daily/Weekly List of Events – Detailed report is a line report that can be useful as a daily or weekly communication tool to all hotel departments about upcoming catering events, their location (including the function space, number of attendees, set-up style), and so on. It is more detailed than its sister report, Daily/Weekly List of Events – Simple. In addition to the basic event details, this report also prints items from the booking level, such as the responsible managers, booking and catering status, and event status. Optionally, you can print Event notes, and the report indicates whether there are sleeping rooms associated with the catering events. The report is sorted and grouped first by the event date and then within each date sorted by business block name and followed by the event start time.

> **Note**
>
> You must have the Event Print task assigned to your role in the selected property in order to run the report. Also, the property available in this report is further limited by the properties to which you have the appropriate access granted.

The report is customizable.

Selection Criteria

Account: Select an account to print only the events linked to that account.

Contact: Select a contact to print only the events linked to the contact.

Business Block: Select a Business Block to print only events linked to that business block.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When selecting a Master Block ID in the Block filter, OPERA Cloud includes the Sub Block IDs linked to that Master. The report then prints all events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only events linked to that Sub Block will print.

Date Range: Select the date range of the events that should be included in the report.

Event Status: Select the status of the events that should be included in the report.

Event Type: Select the event types of the events that should be included in the report.

Function Space. Select a function space to print only the events booked in that space.

Event w/o Space Assignment only: If selected, OPERA Cloud prints only the events that fit the other filter criteria that do not have a function space attached to them. Also, when selected, the Function Space filter and any values selected in that filter becomes inaccessible.

Print Event Notes: If selected, event notes print underneath the Doorcard field on the report.

Print Alternate Events: When selected, alternate events are included in the report.

Report Type - Daily/Weekly: When Daily is selected, a page break per day occurs. When Weekly is selected, the report prints continuously for the span of the selected date range.

Report Data

The report prints in booking ID order within each date. The primary company name, primary contact name, booking name, booking status, catering status, rooms owner, catering owner, and booking ID print on the booking group level. The report also indicates whether any sleeping rooms (and their number) are part of the booking.

Underneath the booking information, the events attached to the booking for the appropriate date are listed in start time order. Information that prints for each event includes event description, event ID, event status, event start and end time, doorcard, assigned function space, number of attendees, and the set-up style for the function space.

If event notes are attached to any event and the Print Event Notes flag is selected on the report filter form, the event notes print on the report underneath the Doorcard field of each event.

Equipment List (rep_equipment_list.rep with rep_equipment_list.fmx)

Prerequisites for Event Reports

This report is a great tool for the banquet operations staff. It can be used with Banquet Event Orders (BEO) as a detailed document for equipment organization and setup. You can print the report in a daily format with a page break after each day or in a continuous weekly format. You have the option to print more details like the account name, contact name, communication details, and all relevant notes instead of the plain format that essentially prints only the equipment requirements.

Selection Criteria

Date Range. Allows you to select any event date range. To generate the report, enter either the Date Range or Business Block ID.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Property: Enter or select the property. You can select multiple properties from a hub location.

Business Block. It is possible to order the report for one or several specific business blocks.

> **Note**
>
> When selecting a Master Block ID in the Business Block filter, OPERA Cloud includes the Sub Block IDs linked to the Master Block. The report prints all Events linked to the Master Block and its Sub Blocks. If a Sub Block ID is selected, only Events linked to that Sub Block are printed.

Event Status. This allows filtering the report by event status. Generally, this would only include production status code. Cancellation status codes should be excluded.

Event Type. Allows filtering the report by event type.

Responsible Dept. Allows you to select responsible departments, for example, if audio visual equipment is provided by an outside vendor, the report can be generated to show only the items the vendor is responsible for providing.

Resource Item. Allows you to select one or more specific items as report filters.

Report Type – Daily/Weekly. When Daily is selected, a page break per day occurs. When on Weekly, the report prints continuously for the span of the selected date range.

Print Details. If you select Detailed, additional information on the account name, contact name, and communication details print beneath the event time and name. If you select Plain, this information is excluded.

Account and Contact information appear on the report according to the following profile type hierarchy:

- If a Company profile is attached to the business block, the Company profile name appears.
- If a Company profile is not attached to the business block, but a Travel Agent is attached, the Travel Agent profile name appears.
- If neither a Company profile nor a Travel Agent profile is attached to the business block, and a Source profile is attached, the Source profile name appears.

Print External Y/N/B. Select Yes, No or Both.

- Yes prints items that have an X in the External (E) column in the Event Resources screen. This includes items configured as External or items configured as Critical that are attached to an event and the quantity requested exceeds the configured Quantity.
- No prints items that are not marked as External in the Event Resources screen.
- Both prints all items regardless of the External flag.

Report Data

The report is sorted in date order and within each date in event time order. Information available on the report is per event, event start and end time, event name and ID, function space, set-up style, and number of attendees.

If you select Detailed on the report order form, additional information about the account name, contact name, contact on site, block name, and catering owner code, as well as contact communication details, are printed for each event also.

Copyright © 2016, 2025, Oracle and/or its affiliates.

For each event, the following resource details print: required quantity, item name, item attribute, price and rate description, indicator if the item is to be externally ordered, and the responsible department.

Following each item, item notes print if any are attached to the item, followed by event notes after all items are printed.

Event Note Change Log Report (rep_event_note_changelog.rep_with_rep_event_note_changelog.fmx)

The **Event Note Change Log Report** is created to report changes to **Banquet Event Orders** (BEO) after distribution without having to reprint the entire original sheet. It works in conjunction with event notes. To have change notes print on the report, you must create an event note for the appropriate event with the notes type: Change. OPERA Cloud stamps the note with the date, time, and user name. In the notes, enter any changes you want included in the distributed Change Log report.

> **Note**
>
> The **BEO** number will not output a value.

- **Report General Conditions**: The new parameter form is named `rep_event_note_changelog.rep_with_rep_event_note_changelog.fmx`.
- **Report Parameters**: All parameters are in one section.

Selection Criteria

1. **Property**: Enter or select the property. You can select multiple properties from a hub location.
2. **Block**: Select a specific block to print in the report. When selecting a Master Block ID in the Business Block filter, OPERA Cloud also includes the Sub Block IDs linked to that Master. The report prints all events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only Events linked to that Sub Block are printed.
3. **Event**: Select specific events to be included in the report.
4. **Event Dates From**: Select an event date from range.
5. **Event Dates To**: Select an event date to range.
6. **Change Log From Date**: Select a date range covering the period in which change notes were created. The system compares this to the change note date/time stamp of creation/ last modification.
7. **Change Log To Date**: Select a date range covering the period in which change notes were created. The system compares this to the change note date/time stamp of creation/ last modification.
8. **Change Log Times**: Enables you to narrow down the selection of a time period during which the changes were made. This filter is evaluated against the date/time stamp of creation/modification of the event change notes.
9. **User**: If nothing is specified in this field, it's assumed all users are available for filtering. Select a specific user for which to print changes. This will be compared against the user name stamped onto the event change notes on creation/modification.

Copyright © 2016, 2025, Oracle and/or its affiliates.

10. **Internal Notes**: The report only prints event change notes that are also flagged as internal if the flag is checked on the filter form.

Report Data

The report prints in event date order. Within each date, events print per block and within each block. Only events that have event change notes attached print on this report. Printed information includes block name and account name, event ID, event date, event time, and event name. The main information, in regard to the event change notes, shows change date, change time, change made by, event ID, and the text of the change note itself.

When no filters are populated, the current date (change log dates/time) passes to the report.

Function Space Utilization Report (rep_fs_utilization.rep with rep_fs_utilization.fmx)

The Function Space Utilization Report details the Maximum (Potential) Utilization, Actual Utilization and Occupancy % of each function space. In order to generate an accurate report ensure the **100% Occupancy** attribute is setup correctly in Additional Details Configuring Function Space Additional Details for each function space. If the 100% Occupancy attribute is not configured for a space, the report will generate based on the default time of 1440 minutes (24 hours).

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Date Range: Select the From and To dates to display the function space utilization for this time period.

Days of the Week: Used in conjunction with the Date Range field, select the check box beside the day of the week that is to display in the report.

Space Type: Select the space type for which the report should be printed, Single, Combo or Both.

Event Status: Select the status of the event. Even though any status can be selected, revenue figures will only be calculated for events in a deduct-from-inventory status.

Event Type: Select the type of events to display in the results.

Function Space: Select all or specific function spaces.

Revenue Type: Select the revenue type of the function space.

Include Setup/Tear down Time: Displays the length of time it takes to setup and tear down the function space.

Print Daily Summary: Active only when the Single Space Type option button is selected, includes the daily summary for the function space.

Date Range Summary Only: Active only when Print Daily Summary is not checked. When selected only a summary for the selected date range will be printed. No details by event will be included.

Print Events: Available only when Date Range Summary Only is not checked. Reports the events booked in each function space based on the filters selected.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Report Data

This report is ordered by row, one row per space/day. Each row contains the following columns: Date, Room Type (Single, Combo or Both), Space Name/Event Name, Business Block ID and Event Scheduled Time (displays only when the Print Events option is selected), Maximum Configured Utilization, Actual Utilization, Occupancy Percentage, Number of Attendees, Total Revenues and Revenue per Square Footage of Function Space, or Square Meters depending on the OPERA Control configuration for Measurements and Average Check. The calculation for Total Revenue will use either expected revenue, guaranteed revenue or actual revenue.

Item Availability Report (rep_item_availability.rep with rep_item_availability.fmx)

The Item Availability report is useful for catering equipment planning and ordering. It provides a detailed list of all equipment booked on a daily basis with the number of items in inventory, items booked, and items still available. External items are marked as external, enabling you to order the items well in advance.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Event Date From: Filter the report by selecting an Event From date range.

Event Date To: Filter the report by selecting an Event From date range.

Event Status: From the multi-select list of values, select the event statuses you want the report to display.

Responsible Department: Filter the report to only show items linked to the selected departments.

Daily/Weekly: If you select Daily, a page break occurs after each date. If you select Weekly, the report prints in date order, but continuously with page breaks.

Print External Only: Select the check box to print only for externally ordered items.

Report Data

The report is sorted in date order as first sort. Within each date, a list of booked items print in alphabetic order by item name and time booked. If an item is booked for different time slots on the same day, it prints as many times as it is booked.

The time booked, account name, resort name, business block ID, event status, event name, and function space name prints for each item. For external items, the assigned vendor name prints if it is defined.

Account information appears according to the following profile type hierarchy:

- If a company profile is attached to the business block, the report displays the company profile name.
- If a company profile is not attached to the business block, but a travel agent is attached, the report displays the travel agent profile name.
- If neither a company profile nor a travel agent profile is attached to the business block, and a source profile is attached, the report displays the source profile name.

Copyright © 2016, 2025, Oracle and/or its affiliates.

The Inventory field is pulled from the configuration for that item. Numbers are populated in the Internal and External fields only for events that are in an inquiry, non-deduct, or deduct from inventory status. The Total field is populated with the internal + external quantities booked.

Only internal items are taken off the number of items in inventory. When the value in the Internal field is No, it indicates the item was not configured with a quantity.

This report also print items from events in a Return to Inventory status.

> **Note**
>
> When Custom Items are included in this report, the word “Custom” prints in the Available field.

Meal Type Forecast by Day (BI) (rep_meal_type_forecast_bi rtf with rep_meal_type_forecast_bi.fmx)

Prerequisites for Event Reports

The Meal Type Forecast (BI) report is an easy to read forecast report for banquet operations. It is broken down by Catering Covers, Status, and Event Date.

Selection Criteria

Report Elements:

This report is a BI Publisher report. Customizing the report is not recommended. The following are the report elements:

- Report Name = Meal Type Forecast by Day
- File Name = rep_meal_type_forecast_bi.rtf
- Form to run = rep_meal_type_forecast_bi.fmx
- Data Template = rep_meal_type_forecast_bi.odt

Event Dates:

- **From**: (Mandatory). Enter the calendar date to indicate the beginning of the Event period for filtering the report.
- **To**: (Mandatory). Select the end date of the Event period for filtering the report.

Property: Enter or select the property. You can select multiple properties from a hub location.

Block Origin: The Block Origin field lists all of the possible values from the internal field allotment_origin values from the Business Block header. When a value is selected, only events from business blocks with this origin are considered. If no value is selected, all business blocks are considered. Possible values are based on the user who created the block and the Act As and At values set on the user in Role Manager.

- If the Act As value = Conference Sales Person, and the At value = Property level, then the block is flagged as Sales and Catering.
- If the Act As value = Reservation Sales Person, and the At value = Central, then the block is flagged as ORS.
- If the Act As value = External System, then At value = not required, and the block is flagged as EXT.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- If the Act As value = Reservation Sales Person, and the At value = Property, then the block is flagged as PMS.
- If the Act As value = Conference Sales Person, and the At value = Central level, then the block is flagged as SFA.

Event:

Definite : (Mandatory) Select one Status Code from a list of all status codes that can turn to an Actual status. This selection is used to filter by event status.

Incl Actual: (Enabled when a Status is selected in the Definite field) Select this check box to include events in an ACTUAL status in the Definite totals.

Status: (On the Books) Select Status Codes from the list of all status codes (does not include the status selected in the Definite LOV) that represent the other status code groupings listed in the report. This selection is used to filter by event status.

Summary Statuses: (Mandatory) Select Status Codes from the list of all status codes to represent the status codes added together for the summary grouping at the beginning of the report (this filter is not dependent on the values selected in any of the other status fields).

Meal Type 1: (Mandatory) Select one Meal Type to be represented in the 1st Meal Type Column.

Meal Type 2 - 5: Select Meal Types to be represented in the 2nd – 5th Meal Type Columns. If no value is selected in a field, then no figures are calculated for that column in the report.

Revenue: (You must select one of the options).

- **Net**: When selected, Catering Revenue will be calculated as:
  - Net Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration>Financial>Transaction Management>Revenue Type Mapping): Included generates are deducted; or Excluded generates are not added.
- **Gross**: When selected, Catering Revenue is calculated as:
  - Gross Catering Price calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration>Financial>Transaction Management>Revenue Type Mapping): Included generates are not deducted, or Excluded generates are added.

Currency: Select the currency for calculating the report. All revenue figures are reported in the selected currency. If no value is selected, the report is calculated using the Base Currency of the logged in Property.

Meal Type Revenue: (Mandatory). Select the listed Active Revenue Types for use in the revenue calculation in the Meal Type Revenue columns.

Revenue Type 1 - 4: Select the listed Active Revenue Types for use in calculating the Rev Type Columns 1-4 at the end of the report. If no value is selected in a field, then no figures are calculated for that column in the report.

Owner: (Select Owners. If no value is selected, then all Owners listed in the LOV are considered.).

- **Block Owner**: Only Events from business blocks with this Overall Owner are considered.
- **Rooms**: Only Events from business blocks with this Rooms Owner are considered.
- **Catering**: Only Events from business blocks with this Catering Owner are considered.

Exclude from Forecast: (select one of the three options).

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Both**: All events are considered regardless of the Exclude from Forecast check box.
- **Yes**: Only events marked as Exclude from Forecast are considered.
- **No**: Only events not marked as Exclude from Forecast are considered.

Block Type: (select one of the three options).

- **All**: Select to consider events from all business blocks.
- **Catering**: Select to consider only events from business blocks marked as Catering Only.
- **Rooms**: Select to consider only events from business blocks not marked as Catering Only.

Report Data

The first grouping is a summary of the status codes selected in the Summary Statuses filter in the report parameter screen. The Status Codes are listed in this header in descending sequence.

The second grouping is the figures for the status code selected in the Definite filter in the report parameter screen. If the Incl Actual check box is selected, then the ACTUAL status is included with this total.

The third and further groupings are for the figures for the status codes selected in the Status filter. If more than one status code is selected, then there will be more than one grouping. Each status code in this filter gets its own grouping/page. The status codes are listed in descending sequence order.

Year: The Year is displayed in the column header.

Date: Each date (with day of week) in the selected date range is printed regardless of whether there is data to report.

Meal Type 1 – 5: The current figures for the event types linked to this Meal Type.

Covers: Current number of attendees for the meal type in the column header. If the event is in an Actual status, then the Actual Attendees are reported. If the event is not in an Actual status, and Guaranteed Attendees are populated, then the Guaranteed Attendees are reported. If the event is not in an Actual status, and Guaranteed Attendees are not populated, then the Attendees are reported. Avg (Check) = (Revenue / Covers).

Revenue. Catering revenue for the event types linked to the meal type calculated using the revenue types selected in the Meal Type Revenue field in the report parameter screen. The Revenue reported is the On the Books figure.

If the application parameter Events > Use Forecast Value Only is set to Off, Revenues are calculated in the following sequence by Revenue Type by event:

If the event is in an ACTUAL status, billed revenue is reported for all Revenue Types.

If the event is not in an ACTUAL status and Guaranteed revenue is added, then the Guaranteed revenue is reported for that Revenue Type

If the event is not in an ACTUAL status, Guaranteed revenue has not been added, and Expected revenue has been added, then the Expected revenue is reported for that Revenue Type.

If the event is not in an ACTUAL status, Guaranteed revenue has not been added, and Expected revenue has not been added, then the Forecasted revenue is reported for that Revenue Type.

If the application parameter Events > Use Forecast Value Only is set to On, the Revenue calculation considers the Use Forecast Revenue Only check box in the Event Details Tab. If

Copyright © 2016, 2025, Oracle and/or its affiliates.

the event is in an ACTUAL status, billed revenue is reported for the event. If the event is not in an ACTUAL status and the Use Forecast Revenue Only check box is selected, the Forecast revenue is reported for the event. If the event is not in an ACTUAL status, the Use Forecast Revenue Only check box is not selected, and Guaranteed revenue exists, then the Guaranteed revenue is reported for this event. If the event is not in an ACTUAL status, the Use Forecast Revenue Only check box is not selected, and Guaranteed revenue does not exist, then the Expected revenue is reported for this event.

Totals by Revenue Type:

Rev Type 1 – 4: Catering revenue totals for each date and qualifying Event calculated using the revenue types selected in the report parameter screen. The figures in these columns are not filtered by Meal Type. If no value is selected in one of the fields, then no calculation is done for that column in the report.

At the bottom of the 1st grouping are additional rows that are included in the first grouping.

- Budget (Meal Type columns) – These fields include the Budgeted Covers, Revenue, and Avg Check for each Meal Type/Month and are filtered by the Revenue Types and Block Type filter (Catering Only Y/N) selected in the report parameter screen. The Budget figures are taken from the OBI Budget Forecast module.
- Budget (Revenue Type columns) These fields include the Budgeted Covers, Revenue and Avg Check for each Revenue Type/Month and are filtered by the Revenue Types and Block Type filter (Catering Only Y/N) selected in the report parameter screen. The Budget figures are taken from the OBI Budget Forecast module.
- Last Year. This is the calculation of The On the Books figures for this Meal Type as of the end of the Same Month last year. If the Date Range selected in the report parameter screen is 12/10/18 – 12/31/18, the figures in Last Year are the figures for 12/1/17 – 12/31/17. This section includes Covers, Avg Check, and Revenue.
- Variance. (Meal Type Totals – Budget).
- Var to STLY. (Meal Type Totals – Last Year).

The final section is the Covers Summary by Meal Type and Day.

- **Date**: Each date in the date range selected in the report parameter is printed regardless of whether there is data to report.
- **Meal Type 1 – 5**: The current Covers for the event types linked to this Meal Type, filtered by the Summary Statuses selected in the report parameter screen.
- **Total Covers**: Total Covers for the Date.

Menu Cost Report (rep_menu_cost.rep with rep_menu_cost.fmx)

Prerequisites for Event Reports

The Menu Cost report (Miscellaneous>Reports) shows booked menus per day with revenue versus cost information.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

To/From Date Range: Select a To and From date range. Only events scheduled within this time frame are included in the report.

Business Block: Select a business block to run this report, or select multiple business blocks.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When selecting a Master Block ID in the Bus. Block filter, OPERA Cloud includes the Sub Block IDs linked to that Master. The report then prints all events linked to the Master and its Sub Blocks. If a Sub Block ID is selected, only events linked to that Sub Block will print.

Event Status: Select one, multiple, or all event statuses to appear in the report.

Menu Class: Select one, multiple, or all menu classes to appear in the report.

Menu: Select one, multiple, or all menus to appear in the report.

Print Menu Details: When selected, this option allows the menu details to appear in the report.

Print Package Menus: When selected, this option allows package menus to appear in the report. For Package Menus however, cost is calculated from the event, and revenue is calculated from the revenue split in the menu configuration.

> **Note**
>
> A (P) denotes a package menu when they are included in this report.

Report Data

The report prints information about booked menus for the events that fall into the selection criteria defined on the report order form. The information is grouped and summarized by date and within each date by menu class. The report shows the menu name, menu item name, event id, included in menu flag, quantity, price per person, total menu price, cost per person, total cost per event, and the variance between total menu/menu item revenue and total menu/menu item cost for each menu and menu item listed. Subtotals are listed at the bottom of the following columns in each table; Quantity, Price, Total Menu, Cost, Total Cost and Variance.

Monthly Catering Forecast (rep_month_forecast.rep with rep_month_forecast.fmx)

Prerequisites for Event Reports

This report is another option to use for forecasting event revenues. Where the Daily Event Forecast report breaks down the revenue into daily sub-totals, this report only prints the total revenue per event type per status type, followed by a breakdown of revenues into the selected revenue types by status type for each calendar month that falls within the selected date range.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

Date Range: This represents the event date range that the report should cover.

Account: Select specific accounts to run in this forecast.

Event Type. Select event types to include or exclude.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Alternate Events are excluded from all catering calculations on this report.

Average Check: The revenue of the event types selected here are the basis for calculation of the average check.

Catering Manager: It is possible to only print the events for a specific catering manager or a range of catering managers. The report relies on the catering manager initials selected on the booking catering tab for this filter.

Event Status 1 – 4: You can summarize revenues for up to four events status codes. It is possible to combine several statuses into one total by selecting them into the same line.

Revenue Types 1 –4: You can include up to four revenue types or groupings of revenue types to print on the report at any one time. These are represented as separate revenue columns on the report body. The check box in front of each revenue type determines whether the revenue of this type/these types (if checked) should be included in the average check calculation. Average checks could be based solely on Food and Beverage revenue types and events, or alternatively could be calculated for any catering revenue that gets generated.

Events - All/Catering Only/Rooms with Catering: These options allow you to decide, based on the type of block, which events will be included in the results.

Print Exclude from Forecast Event - Both/Yes/No: Select this option to either include or exclude certain events. When Both is selected, the report prints all qualifying events. When Yes is selected, the report prints only events that have had the Exclude from Forecast Reports flag checked. When No is selected, the report prints only events that have not been marked as Exclude from Forecast Reports.

Report Data

The report is sorted in calendar month order starting with the first month covered by the selected date range. The first summary area of the report lists the event types that have been used during that month in rows. The total revenue associated with these event types in that month is shown next, divided into the selected status types. This is followed by a column that shows the total Food and Beverage Revenue per event type across all status types. This is calculated from the revenue types flagged as Food and Beverage revenue type in revenue type configuration. The number of covers per event type is printed next, followed by the Average Check, which in this part of the report is calculated by dividing the Food and Beverage revenue by the number of covers (irrespective of the revenue types selected for the average check on the report order form).

The second summary section for each month lists the status types beneath each other. The revenue associated with each status is printed next, divided into the revenue types selected on the report order form. Two revenue totals are printed in the next two columns; the first one being the total of all revenue types flagged for average check calculation, followed by a total of all other revenue, irrespective of the selected revenue types. The covers for each status type follow. The last column is again the average check column, but in this case the calculation is based on the total of selected revenue types divided by the number of covers.

The grand total summary of the report repeats the pattern of the second summary per month. Statuses are listed per row, with two lines per status – dividing the bookings into Sales Only and Sales and Catering revenues. Sales Only includes only those bookings for which the Catering Only flag is off, whereas the Sales and Catering rows include the revenues for all bookings irrespective of the setting of the Catering Only flag. The revenues are broken down in up to four selected revenue types. The total revenue per status row is shown in two columns,

Copyright © 2016, 2025, Oracle and/or its affiliates.

one summarizing the revenue of the revenue types selected for average rate calculation, the second column summarizing the rest revenues. Total number of covers per status row print next, followed by the average check, which is calculated by dividing the Total (Sel.) column by the number of covers.

All revenues are calculated downwards cascading, meaning, if actual revenue exists, actual revenue will print. If no actual revenue exists, guaranteed revenue is checked and printed. If no guaranteed revenue exists, expected revenue is checked and printed. If expected revenue also does not exist, the forecasted revenue is printed. The same is valid for covers.

OPERA CLOUD

Posted Event Revenue Report (rep_posted_event_revenue rep with rep_posted_event_revenue.fmx)

Prerequisites for Event Reports

The Posted Event Revenue report provides a view of Expected, Guaranteed, Billed, and Posted Event Revenues. The information is listed by Event and Revenue Type within the selected time period. You can use the Posted Event Revenue report to verify that all revenue is posted or to identify and research discrepancies between the billed and posted revenue amounts.

Selection Criteria

Select the filters for report search results. The only mandatory filter is Property.

Property: Enter or select the property. You can select multiple properties from a hub location.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Event Date: Allows the selection of any event date range. When you select a date range, the events are reported by event date within the property.

Event Date From: Type or select the calendar button for the beginning date for the report results.

Event Date To Date: Type or select the calendar button for the ending date for the report results.

Block: The LOV displays the Manage Block search screen where you can select the block(s) with the desired events. Select a single block or a range of blocks for the report. Events are sorted by date inside the block.

Event Type: Select the event types that should be included in the report. When this field is left empty, all of the event types are considered.

Catering Owner: You can print the report for a specific catering manager or a range of catering managers. The report relies on the catering manager's initials you select on the Booking Catering tab for this filter.

Event Status:Enables you to select the event statuses to include in the report. When this field is left empty, all event statuses are considered.

Revenue Type: Defines the catering revenue types to print. When this field is left empty, all of the revenue types are considered.

Currency: Select the currency of the revenue converted and reported on the report.

Report Data

Events are filtered by those attached to a booking with the selected owners as a catering owner within the selected time period.

Event ID: Event ID of the event.

BB ID: The business block ID of the event.

Event Start Date: The beginning date of the event.

Rev Type: The category of revenue associated with the event, such as Food, Beverage, and so on.

Event Start Time: The time of day the event starts on the event date.

Expected: The amount of revenue expected for the revenue type during the course of the event.

Event Status: The current status of the event, such as Definite, Tentative, or Actualized.

Guaranteed: The amount of guaranteed revenue for the revenue type on the event.

Event Type: The name of the event, such as Breakfast, Meeting, and so on.

Billed: The amount of billed revenue for the revenue type of the event.

Space: The room or facility where the event is being held.

Posted: The amount posted for the revenue type of the event.

Cat Owner: The catering manager/owner associated with the block.

Var: Posted-Billed: The difference in revenue between the posted and billed revenues by revenue type.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Event Property: The property code where the event is being held.

Business Block Name: Description of the Business Block ID associated with the event.

Total for Event (Event ID): The total amount of revenue Expected, Guaranteed, Billed, and Posted. The total variance amount indicates the total variance between the amount Posted and the amount Billed for the event.

Sales Manager Progress (BI) (rep_mgr_progress_bi.rtf with rep_mgr_progress_bi.fmx)

Prerequisites for Sales Manager Progress (BI)

The Sales Manager Progress report is an easy to read month-end report showing sales managers' performance versus their goals compared to On the Books figures. This report has three outputs: one organized by Manager and Year; one organized by Manager and Month using Production Goals; and the third organized by Manager and Month using Arrival Goals.

- This report is a BI Publisher report. Customizing the report is not recommended. The following are the report elements:
  - Report Name = Sales Manager Month End Progress
  - File Name = rep_mgr_progress_bi.rtf
  - Form to run = rep_mgr_progress_bi.fmx
  - Data Template = rep_mgr_progress_bi.odt

Selection Criteria

Goal Period:

These mandatory LOVs list the Report Periods selected in the Report Period fields. You cannot select a Goal Period outside of what has been selected in the Report Period.

- **From**: (Mandatory) Select the calendar date to indicate the beginning of the Sales Manager's Goal Period by which the report is to be filtered.
- **To** : (Mandatory) Select the end of the Sales Manager's Goal Period by which the report is to be filtered.

Report Period:

These mandatory LOVs list the same periods offered when configuring sales goals. The periods selected here are those on which the monthly versions of the report are grouped.

- **From**: (Mandatory) Select the calendar date to indicate the beginning of the period by which the report is to be filtered.
- **To**: (Mandatory) Select the end of the period by which the report is to be filtered.

Stay Periods When Configured: (Visible when the application parameter General > Combine Rooms and Catering Goals is set to On and enabled when the Goal option Production is selected.) When this check box is selected:

- The Report Period fields are disabled.
- The report displays the Stay periods configured as Arrival Periods in Production Goals. If Arrival Periods are not configured for the Production Goals, then no data prints in the report when Stay Periods as Configured is selected.

Property: Enter or select the property. You can select multiple properties from a hub location.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Origin: Select Origins. This LOV lists all of the possible values from the internal field allotment origin values from the Business Block header. When a value is selected, only events from business blocks with this origin are considered. If no value is selected, all business blocks are considered. Possible values are based on the user who created the block and the Act As and At values set on the user in Role Manager.

- If the Act As value = Conference Sales Person, and the At value = Property level, then the block is flagged as Sales and Catering.
- If the Act As value = Reservation Sales Person, and the At value = Central, then the block is flagged as ORS.
- If the Act As value = External System, then At value = not required, and the block is flagged as EXT.
- If the Act As value = Reservation Sales Person, and the At value = Property, then the block is flagged as PMS.
- If the Act As value = Conference Sales Person, and the At value = Central level, then the block is flagged as SFA.

Block:

New Definite: (Mandatory). Select one status code from the list of all status codes that can turn to an Actual status. The New Definite column is calculated based on the business blocks and events that turned to this status during the requested production period.

Incl Actual: (Enabled when a Status is selected in the New Definite field). Select this check box to include business blocks and events in an Actual status in the Definite On the Books totals.

Cancel: (Mandatory). Select status codes from a list of all return-to-inventory statuses. The Cancel column is calculated based on the business blocks and events that turned to this status during the requested production period. All figures are reported as a negative.

OTB Status 1: (On the Books). Select Status Codes from the list of all status codes. The 1st On the Books column is calculated based on the business blocks and events currently in this status for the report period.

OTB Status 2: (On the Books). Select Status Codes from the list of all status codes. The second On the Books column is calculated based on the business blocks and events currently in this status for the report period.

Event:

F and B Revenue Type: Select active Revenue Types to include in the Food and Beverage Revenue calculations in the report.

Other Revenue: Select active Revenue Types to include in the Other Revenue calculations in the report.

Covers: Select Event Types to indicate to be included in the Covers calculation in the reports. If no value is selected, all event types are considered.

Filter: Select Owners. If no value is selected, then all Owners listed are considered.

Rooms Owner: Select if only business blocks with this Rooms Owner are to be considered.

Catering Owner: Select if only business blocks with this Catering Owner are to be considered.

Block Owner: Select if only business blocks with this Block Owner are to be considered.

Exclude from Forecast Event(Select one of the three options):

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Both**: Select if all events are to be considered regardless of the Exclude from Forecast check box.
- **Yes**: Select if only events marked as Exclude from Forecast are to be considered.
- **No**: Select if only events not marked as Exclude from Forecast are to be considered.

Block Type (Select one of the three options):

- **All**: Select if all business blocks are to be considered.
- **Catering**: Select if only business blocks marked as Catering Only are to be considered.
- **Rooms**: Select if only business blocks not marked as Catering Only are to be considered.

Output:

To determine whether the report is based on Yearly or Monthly output, select one or both check boxes.

- **Yearly**: Select to generate the Yearly output.
- **Monthly**: Select to generate the Monthly output. Whether Arrival or Production goals are generated depends on the selection in the Goal filter. When Monthly output is selected (Arrival or Production), the Sub Total per Year figures and Owner appear in the report.

Goal : (Visible only when the application parameter General > Combine Rooms and Catering goals is set to On).

Select one option button to determine which Monthly report option is generated. These options are accessible when the Output Monthly check box is selected (the Yearly option does not report on Goals).

- **Arrival**: Arrival Goals are used in the report, and the Variance is calculated against the On the Books figures.
- **Production**: Production Goals are used in the report, and the Variance is calculated against the Net Change (production) figures. The Goal Period listed in the report is the calendar time frame period entered in the Goal From/To fields.

For Example:

Rooms and Catering Goal 1 Configured as:

– Production 01.01.18 - 01.31.18

– Arrival Period 01.14.18 - 12.31.18

Rooms and Catering Goal 2 Configured as:

– Production 01.01.18 - 01.31.18

– Arrival Period 01.01.15 - 12.31.17

If the report is run for Production Goals with the following date filters:

– Report Period 01.01.14 - 12.31.17

– Goal Period 01.01.14 - 01.31.14

The report output has three Goal Period rows: Jan-14 to Dec 14, Jan 15 to Dec 17, and Total.

None: When selected, the report prints the same as the Production Goal minus the Goal and Variance columns.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When selected, the report prints the same as the Production Goal minus the Goal and Variance columns.

Revenue:

Select one of the options, Net or Gross. The Incl Packages check box is selectable if either Net or Gross is selected and you want Included and Excluded Packages in the report.

- **Net**: When selected, Room and Catering Revenue is calculated as:
  - Included generates are deducted.
  - Excluded generates are not added.
  - Included packages and their generates are excluded.
  - If Incl Packages is selected, then Included & Excluded Packages are included, but their Included & Excluded Generates are not included.
- Net Catering is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration>Financial>Transaction Management> Revenue Type Mapping):
  - Included generates are deducted.
  - Excluded generates are not added.
- **Gross**: When selected Room and Catering Revenue are calculated as:
  - Gross Room Rate is calculated as:
  - Included generates are not deducted.
  - Excluded generates are added.
  - Excluded packages are not added.
  - Included Packages and their generates are excluded.
  - If Incl Packages is selected, then Included & Excluded Packages are included and so are their Included & Excluded Generates.
- Gross Catering Price is calculated based on the Transaction Codes mapped in Revenue Type Cross Reference configuration (Administration> Financial> Transaction Management> Revenue Type Mapping):
  - Included generates are not deducted.
  - Excluded generates are added.

Currency: Select the one currency for which all revenue figures are reported. If no value is selected, the report is calculated using the Base Currency of the logged in Property.

Report Data

- This option prints when the Output Yearly is selected in the report parameter screen.
- The 1st grouping is by Owner (which Owner is determined in the report parameter screen).
- The 2nd grouping is by Stay Year (based on the Reporting Period range selected in the report parameter screen).
- The report prints the requested Years for each of the selected Owners with a Total at the end for all of the selected Owners.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- This option does not report Sales Manager Goals.

Production Period Section:

This section shows data calculated based on the Goal Period date range selected in the report parameter screen. It is grouped by the business block allotment stay years based on the selected Report Period range.

- **Year**: Stay Year as determined by the range selected in the Report Period filter in the report parameter screen.
- **New DEF**: (New Definites). Room nights calculated from business blocks that turned to Definite during the Production Period. Definite is determined by the New Definite filter in the report parameter screen.
- **Cancel**: Room nights calculated from business blocks that turned to Cancel during the Production Period. Cancel numbers are always be reported as a negative. Cancel is determined by the Cancel filter in the report parameter screen.
- **Reval** : (Revaluations). Room nights calculated from business blocks that were already Definite when the Production Period began and had a change during the Production Period while still in Definite. Definite is determined by the New Definite filter in the report parameter screen.
- **Slip** : (Slippage). This is calculated business blocks that were already Actual when the Production Period began had a change during the Production Period.

An example of the above columns:

- In June 2019, Block turns DEF with 100 Rooms
- In July 2019, Block drops to 95 Rooms (still DEF)
- In August 2019, Block turns to ACT with 97 Rooms

If the report is run for Goal Period June – August 2012, the results are:

- NEW DEF +100 rooms
- Reval -5 rooms
- Slippage +2 rooms
- Catering Slippage is calculated for each event as Billed Revenue – Production (excluding ACT Production from the requested production period).

> **Note**
>
> The Production Period figures are calculated from the following tables:
>
> - Room Revenue - Status change dates are taken from booking_status_changes. Room Revenue is calculated from allotment_changes. If the business block is in an Actual status, the Revenue is calculated from reservation_stat_daily.
> - Catering Production – Status change dates are taken from event$status_changes. Revenue is calculated from event$changes. If the event is in an Actual status, the Revenue is calculated from the billed revenue in gem$event_revenue.

- **Net Change**: Net Change = (New Definite + Cancel + Reval + Slippage). Cancel numbers are always reported as a negative.
- **ADR** : Average Daily Rate (Room Revenue / Net Change). The figures in this field conform to the property's currency format.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Room Revenue**: Calculated as the sum of the Room Revenue from (New Definite + Cancel + Reval + Slippage). Cancel numbers are always reported as a negative.
- **FB Revenue**: (Food & Beverage Revenue) reports the sum of F and B Revenue from (New Definites + Cancel + Reval + Slip). Revenue Types are determined by the FB Rev filter in the report parameter screen. Cancel numbers are always reported as a negative.
- **Other Revenue**: Reports the sum of Other Catering Revenue from (New Definites + Cancel + Reval + Slip). Revenue Types are determined by the Other Rev filter in the report parameter screen. Cancel numbers are always reported as a negative.

On the Books Section:

On the Books data is calculated based on the current values at the time the report is run and grouped by the business block allotment stay years based on the Report Period range selected in the report parameter screen.

- **DEF/ACT**:. The column header is updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen. The data is the revenue for business blocks currently in the Definite or Actual Status for that Stay Period.
  - **Rooms**: The current room nights for business blocks in this status.
  - **ADR**: Average Daily Rate. (Room Revenue ÷ Rooms).
  - **Room Revenue**: The current room revenue for business blocks in this status.
- **Status 2**: The current figures for business blocks currently in the Status selected in the OTB Status 2 LOV in the report parameter screen.
  - **Rooms**: The current room nights for business blocks in this status.
  - **ADR**: Average Daily Rate. (Room Revenue ÷ Rooms).
  - **Room Revenue**. The current room revenue for business blocks in this status.
- **Status 3**: The current figures for business blocks currently in the Status selected in the OTB Status 3 LOV in the report parameter screen.
  - **Rooms**: The current room nights for business blocks in this status.
  - **ADR**: Average Daily Rate. (Room Revenue ÷ Rooms).
  - **Room Revenue**: The current room revenue for business blocks in this status.

Monthly Production Tab

This option prints when the Output Monthly and Production Goal options are selected in the report parameter screen.

- The 1st grouping is by Owner (Owner is determined by the selection in the report parameter screen).
- The Sales Manager Name for the Owner codes selected in the report parameter screen are listed.
- The 2nd grouping is by Stay Month (based on the Report Period range selected in the report parameter screen).
- The report prints the requested Period for each of the selected Owners with a Total at the end for all of the selected Owners.
- This option includes Sales Manager Production Goals with a Variance to Net Change.

Production Period Section

Copyright © 2016, 2025, Oracle and/or its affiliates.

The data in this section is calculated based on the Production that occurred during the periods selected in the Goal Period list. If more periods are selected in the Report Period than in the Goal Period, the additional periods have On the Books data, but no figures are be reported for the Production Period columns.

Row Headers:

- **Rooms**: (Room Nights). The number of rooms booked per year, per Owner.
- **ADR**: (Average Daily Rate) = (Rooms Rev / Rooms) This field conforms to the property's currency format.
- **Rooms Rev**: (Rooms Revenue). This field conforms to the property's currency format.
- **FB Rev**: (Food & Beverage Revenue). The Revenue Types used in this calculation are determined by the selection made in the FB Revenue LOV in the report parameter screen. This field conforms to the property's currency format.
- **Other Rev**: (Other Revenue). The Revenue Types used in this calculation are determined by selection made in the Other Revenue LOV in the report parameter screen. This field conforms to the property's currency format.
- **Cat Covers**: (Catering Covers). The Event Types used in this calculation of the number of event attendees are determined by the selection made in the Covers LOV in the report parameter screen. If no value is selected, then all values are considered.
- **Avg Check** = (FB Revenue / Cat Covers). This field conforms to the property's currency format.

Column Headers:

- **New Definite**: Calculated from business blocks that turned Definite during the Production Period. Definite is determined by the New Definite filter in the report parameter screen.
- **Cancel**: Calculated from business blocks that turned to Cancel during the Production Period. These numbers are always reported as a negative. Cancel is determined by the Cancel filter in the report parameter screen.
- **Reval**: (Revaluations). Calculated from business blocks that were already Definite when the production Period began and had a change during the Production Period while still in Definite. Definite is determined by the New Definite filter in the report parameter screen.
- **Slippage**: This is calculated from business blocks that were already Actual when the Production Period began and had a change during the Production Period.

An example for the above columns:

- In June 2018, Block turns DEF with 100 Rooms
- In July 2018, Block drops to 95 Rooms (still DEF)
- In August 2018, Block turns to ACT with 97 Rooms

If the report is run for Goal Period June – August 2018, the results are:

- NEW DEF +100 rooms
- Reval -5 rooms
- Slippage +2 rooms

Net Change: Net Change = (New Definite + Cancel + Reval + Slippage). Cancel numbers are always reported as a negative.

Goal: The configured Goals for the Owner for that Production Month.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Variance: Variance = (Net Change – Goal). This calculation is used when Production Goal is selected in the report parameter screen.

On the Books Section:

On the Books data is calculated based on the current values at the time the report is run and is grouped by the business block allotment stay months based on the Report Period range selected in the report parameter screen. If more periods are selected in the Report Period than in the Goal Period, the additional periods have On the Books data, but no figures are reported for the Production Period columns.

- **DEF, ACT**: (On the Books Definites). The column header is updated with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen. The data is the revenue for business blocks currently in the Definite or Actual Status for that Stay Period.
- **Status 2**: (On the Books Status 2). The current figures for bookings currently in the Statuses selected in the OTB Status 2 LOV in the report parameter screen.
- **Status 3**: (On the Books Status 3). The current figures for bookings currently in the Statuses selected in the OTB Status 3 LOV in the report parameter screen.

Monthly - Arrival Tab

This option prints when the Output Monthly and Production Arrival Goal options are selected in the report parameter screen.

- The 1st grouping is by Owner (which Owner is determined in the report parameter screen).
- List the Sales Manager Name for the Owner codes selected in the report parameter screen.
- The 2nd grouping is by Stay Month (based on the Report Period range selected in the report parameter screen).
- The report prints the requested Period for each of the selected Owners with a Total at the end for all of the selected Owners.
- This option includes Sales Manager Production Goals with a Variance to On the Books DEF,ACT.

Production Period Section:

Production Period data is calculated based on the Production that occurred during the periods selected in the Goal Period LOV. If more periods are selected in the Report Period than in the Goal Period, the additional periods have On the Books data, but no figures are reported for the Production Period columns.

Row Headers:

- **Rooms**: Room Nights.
- **ADR**: Average Daily Rate (Rooms Rev / Rooms). This field conforms to the property's currency format.
- **Rooms Rev**: (Rooms Revenue).This field conforms to the property's currency format.
- **FB Rev**: (Food & Beverage Revenue). The Revenue Types used in this calculation are determined by the selection made in the FB Revenue LOV in the report parameter screen.
- **Other Rev**: (Other Revenue). The Revenue Types used in this calculation are determined by the selection made in the Other Revenue LOV in the report parameter screen.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Cat Covers**: (Catering Covers). The Event Types used in this calculation of the number of event attendees are determined by the selection made in the Covers LOV in the report parameter screen. If no value is selected, then no Cover calculation is made.
- **Avg Check**: (FB Revenue / Cat Covers).

Column Headers:

- **New Definite**: Calculated from business blocks that turned Definite during the Production Period. Definite is determined by the New Definite filter in the report parameter screen.
- **Cancel**: Calculated from business blocks that turned to Cancel during the Production Period. These numbers will always be reported as a negative. Cancel is determined by the Cancel filter in the report parameter screen.
- **Reval**: (Revaluations). Calculated from business blocks that were already Definite when the production Period began and had a change during the Production Period while still in Definite. Definite is determined by the New Definite filter in the report parameter screen.
- **Slippage**: This is calculated from business blocks that were already Actual when the Production Period began and had a change during the Production Period.

An example for the above columns:

- In June 2019, Block turns DEF with 100 Rooms
- In July 2019, Block drops to 97 Rooms (still DEF)
- In August 2019, Block turns to ACT with 95 Rooms

If report is run for Goal Period June – August 2012, the results are:

- NEW DEF +100 rooms
- Reval -5 rooms
- Slippage +2 rooms
- **Net Change**: Net Change = (New Definite + Cancel + Reval + Slippage). Cancel numbers will always be reported as a negative.

On the Books Section:

On the Books data is calculated based on the CURRENT values at the time the report is run and is grouped by the business block allotment stay months based on the Report Period range selected in the report parameter screen. If more periods are selected in the Report Period than in the Goal Period, the additional periods have On the Books data, but no figures are reported for the Production Period columns.

- **DEF, ACT** (On the Books Definites). The column header update with the Status Code selected in the New Definite filter in the report parameter screen and the Actual Status Code, if Incl. Actual is selected in the report parameter screen. The data is the revenue for business blocks currently in the Definite or Actual Status for that Stay Period.
- **Goal**: The configured Goals for the Owner for that Production Month.
- **Variance**: Variance = (On the Books DEF,ACT– Goal). This calculation is used when Arrival Goal is selected in the report parameter screen.
- **Status 2**: (On the Books Status 2). The current figures for bookings currently in the Statuses selected in the OTB Status 2 LOV in the report parameter screen.
- **Status 3**: (On the Books Status 3). the current figures for bookings currently in the Statuses selected in the OTB Status 3 LOV in the report parameter screen.

Financials Reports

Auto Settlement Transactions (auto_settlement) - Lists all of the folios that were settled automatically. This report is automatically generated when the Auto Settlement to be performed during End of Day OPERA Control is active and the Auto Settlement process is completed and folios are generated during the End of Day processing"

Cashier Audit (finpayments) - displays all payments that have been posted for the selected business date.

Cashier Shift Bag Report (cashier_shift_bag_bi) - displays the Payment Type (such as Cash and Others), Bag Number, Cashier Name, Cashier ID, Date, and Shift Drop Location. The report can be filtered by Date From and Date To (only for the current and past dates), Cashier ID, and Payments (Cash and Others).

Check Ledgers (check_ledgers) - displays all check ledgers for the selected business date.

Corrections and Cancelled Payment (fincorrectionscalpay) - displays all corrections by cashier ID and can be run by transaction code range. This journal displays all same-day reversals (debits) made to posting slips. Adjustments are made to previous days postings, or claimed revenue.

Credit Card Rebates (creditcard_rebates) - displays credit card rebate overrides. The date, time, name of the credit card holder, folio number, credit card type, credit card number, amount, override (Y/N), and the cashier who entered the rebate. (Available when the Credit Card Rebate Validation OPERA Control is active).

Credit Cards Report (check_rep) — displays a report of credit card usage for the selected date.

Currency Exchange Summary (curr_exch_sum) - displays the amount of monies exchanged for the selected date per currency code.

Custom Charge and Redemption Summary - This RTF report consists of three sections: 1. Paying Guests, 2. Exempt Guests, 3. Special condition Guests (Available when the **Custom Charges** OPERA Control is active). For more information, see Configuring Custom Charges and refer Oracle Hospitality Localization Center for Hotel; Italy - Cloud Fiscal Primary Data Document.

Deposit Ledger (deposit_ledger) - used by the accounting department to determine how much deposit revenue has been posted in the hotel for the date specified.

Detailed Folio Report (Poland) (folio_details) - developed to meet reporting requirements for properties in Poland. The intent is to display all amounts posted to a guest folio for the specified date. A summary of all folios generated.

Effective Package Allowance (effpkgallowance) - provides a summarized list of all packages that are in use for the current business date. It provides a detailed breakdown of all package charges, including the allowance balance as compared to the actual package debits and credits.

Effective Package Allowance Trial Balance (effpkgallowance) - provides a summarized list of all packages for which the package wrapper has been posted for the current/past business date while the reservation is/was in-house.

Financial Payment and Revenue (findeptcodes)- displays a sum of all transactions posted for the date specified.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Financial Transaction Summary (fintrxsummary) — provides a summary of all financial transactions for a specified date range, grouped by transaction code, transaction date, transaction group, or transaction subgroup.

Financial Transactions by Block (finjrnl_blk) - allows the property to see the revenues, taxes, and package credits generated by specific blocks and transaction codes.

Financial Transactions by Folio Number (finjrnlbytrans3) — lists transactions per folio created by the selected Terminal ID during the report timeframe. The report shows only transactions that would have been visible on the folio and billing screen and omits internal transactions. You can Filter, Group By, and/or Sort By Terminal ID on the Report Parameters screen when the **Fiscal Service Terminals** OPERA Control is active.

Financial Transactions by Tax Type (finjrnlbytax) - displays each transaction posted for the dates selected. This report is different from other financial transaction reports in that it is intended to display the taxes posted. The output groups results by tax transaction codes. If any postings do not have a tax transaction code attached, they are grouped together under a “no tax” heading.

Financial Transactions with Generates (finjrnlbytrans2) - lists each transaction code and the corresponding amounts for the dates specified. Also included is a breakdown of the taxes and package credits attached to each transaction code posted and the user that posted each transaction.

Folio Tax Revenue (foliotax_revenue) - displays the total of all charges posted to a guest on a particular date. If charges were routed and paid for by another guest, the other guest’s total reflects these charges.

Folio Tax - Style 01 (foliotax_01) - developed to meet reporting requirements for properties in Spain to display the breakdown of VAT Tax that was posted on each reservation for a specified date range.

Folio Tax - Style 02 (foliotax_02.rdf) - developed to meet reporting requirements for properties in Poland. The report displays a breakdown of VAT Tax that was posted on each reservation for a specified date range. To save paper, the report prints only those tax groups (1 to 10) that were used in the requested time frame.

Folio Tax - Style 03 (foliotax_03.rdf) - developed to meet reporting requirements for properties in Portugal. The report displays a breakdown of VAT Tax that was posted on each reservation for a specified date range.

Folio Tax - Style 04 (foliotax_04) - developed to meet reporting requirements for properties in Turkey. The report displays a breakdown of VAT Taxes that were used on each reservation for a specified date range.

Folio Tax - Style 05 (foliotax_05) - developed to meet reporting requirements for properties in India. The report displays a breakdown of Luxury Taxes that were used on each reservation for a specified date range.

Folio Tax - Style 07 (foliotax_07) - provides the summarized tax details for a folio for a given date range.

Guest Balance Snapshot (guest_balance_snapshot) — provides a summarized snapshot of all current guest balances.

Guest Ledger (guest_ledger) - displays the current balance associated with in-house guests for today.

Guest Trial Balance (gl_trial_balance) - displays all guests in-house and their folio balances for a specific date equal to or less than the current business date.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Invoices of Today's Check Outs by Bill Number (fininvtodaycobybill) - displays all guests who have checked out today by billing/invoice number.

Italian Folio Tax (istat/istat_monthly) - prints statistical information for all bills and is formatted based on the style of the report selected. The report output is grouped by folio types and displays the net, VAT and gross revenue for all bills generated in the property.

Journal by Cashier and Article Code (finjrnl_articles) - displays one line for each posted article for the selected date. Similar to other financial reports, this allows you to see when, to whom, and who posted an article to a reservation or an accounts receivable account.

Journal by Cashier and Transaction Code (finjrnlbytrans) — provides a detailed summary of transactions for a specified date range, grouped by cashier, check number, room number, or transaction code.

Journal by Foreign Currency (finjrnlbyforcurr) - displays all postings for today that were posted in a currency not equal to the property' base currency.

Lodging Tax Exempt (lodging_tax_exempt) — displays details and summary information about tax exempt revenue for a specified date range. (Available when the Tax Types and Advanced Generates OPERA Controls are active).

Maldives Green Tax Report (maldives_green_tax) — Provide information about all guests who stayed at the property during the month. More specifically, it includes information about:

- Guests/reservations that checked in during the month, until 23:59hrs of the final day of the month.
- Guests/reservations that stayed and checked out during the month.
- Guests/reservations that stayed over from the previous month.

Open Balances: All (finopbalall) - displays the current balance on reservations or blocks. This includes advance deposits.

Gaming **Open Comp Balance** (comp_open_balance) — For the purpose of reporting revenue accurately, this report will sum and account for the total open balance of all charges posted to comp windows or comp transaction codes that are not yet settled. When this report is included with the End of Day reports, it will display reservations from the previous business date with open comp balances. Checked out reservations with open comp balances will also be displayed.

Package Ledger Balance (pkgledger_balance) — lists all postings made to the package ledger and runs during the night audit sequence. This report displays total credits and offsetting debits, as well as profit and loss on all packages. Print this report to analyze whether or not hotel packages are making or losing revenue. This detailed report corresponds to the summarized package ledger portion of the trial balance.

Package Ledger Detail (effpkgledgerdtl) — detailed breakdown of all package charges for each room. The report includes all package postings for the current business date. As a cross reference, if the guest has checked out, the debit column will be equal to the credit column. Print this report to obtain a list of internal department charge-back totals.

Package Option (package_option) — displays the guest name, room number, arrival and departure dates, rate code, package name, description, date posted, allowance, posted amount, and overage.

Package Postings (finpkgposting) - displays all posted charges that have been associated with a package. This report provides users with summary information about package postings and serves as an audit trail on cashiers and transaction codes.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Paid Outs (finpaidout) - displays all the paid-out transactions of the day to guests and is generated during the night audit sequence.

Payment Tax Invoices (fin_payment_tax) - developed to comply with legal requirements in Thailand. When generating a payment receipt, the sample_payment_tax must be configured and used.

Room Revenue by Tax (tax_type_details) - displays the amount of room revenue generated within each tax type for a reservation.

SPED Report (br_sped.rtf) — provides detailed information regarding sales for a specific month according to Brazil requirements.

Tax Exempt (taxexempt_02) - gives a detailed daily breakdown of room revenue and the taxes that each specific guest is exempt from. (Available when the Tax Types and Advanced Generates OPERA Controls are active. and the Tax Type Calculation OPERA Control is set to 'Reservations).

Tax Report (tax_report) - contains the total amounts posted to a company/travel agent/source/ group profile. The report output displays the sequence number, tax number, net amount and tax amount posted to a company, travel agents, source, or group profiles.

Trial Balance (trial_balance) - displays a summarized financial status of the property for a specific date. The data displayed includes all transactions posted, and then a breakdown of business within each of the five ledgers. The ledgers are guest, accounts receivable, deposit, package and inter hotel.

Userlog Transfers (finuserlogtransfers) - displays all folios that have been transferred to another guest or account for a specific date or range of dates.

Financial Payment and Revenue Report (findeptcodes)

The Financial Payment and Revenue (findeptcodes) report displays a sum of all transactions posted for the date specified.The transactions are grouped first by Transaction Group, then Transaction Subgroup, and then by Transaction Code with a subtotal for each Group and Subgroup.

> **Note**
>
> When selecting the **Fiscal** option in report parameters, the **Budget** option is not available.

Trial Balance Report (trial_balance)

The **Trial Balance Report** (trial_balance) displays a summarized financial status of the property for a specific date. The data displayed includes all transactions posted, and then a breakdown of business within each of the five ledgers. The ledgers are guest, accounts receivable, deposit, package and inter hotel.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Fiscal Reports (R&A)

R&A fiscal reports are available to generate from OPERA Cloud. For more information, see https://docs.oracle.com/en/industries/hospitality/opera-reporting-analytics/rtrna/report.pdf.

Forecast Reports

Day/Month-to-Date/Year-to-Date (blk_forecast) - displays a breakdown of reservations by the selected grouping and sub grouping.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Business on the Books (business_on_the_books) - displays the mix of business currently comprising a property's occupancy.

Detailed Availability Forecast (detail_avail) — provides a detailed breakdown of room availability for a selected date range.

Facility Forecast (facility_forecast) — provides a forecast of occupancy and housekeeping tasks for the next five days including and following the selected business date.

Four Week Forecast (fourweek_forecast) - displays the forecasted occupancy for each room type for four weeks at a time.

Future Occupancy Report (resfutureoccupancy) — displays the forecasted occupancy for the property for the selected date range, broken down by individual reservations, block reservations, block rooms not picked up, and all rooms.

Guest Preference Report (preference_forecast) — displays a forecast of guest preferences based on their reservation dates, using the preference code for each day for reservations that are arriving, in house, due out, or for sometime in the future.

History and Forecast (history_forecast) - gives you a clear picture of past reservation activity as well as what reservations are anticipated in the future.

History and Forecast Block (history_forecast_blk) - gives you a clear picture of past reservation activity as well as what reservations are anticipated in the future, broken down into individual and block business.

Inventory Forecast (inventory_forecast) - displays each item with the number available and reserved for each date in the date range.

Length of Stay (los_forecast) - displays a length of stay forecast based on room class or type.

Length of Stay by Market Code (los_market_forecast) - displays a length of stay forecast based on market group, market code, room class, or room type. The lengths of stay are predetermined at 1 - 4 nights, 5 – 11 nights, 12 – 29 nights and 30+ nights, unless rate tiers are active. When this is active, the lengths of stay groupings will be based on those configured for the property.

Package Forecast (pkgforecast) - displays a daily breakdown of the number of reservations, or anticipate reservations, with an attached package.

Preference Forecast (sp_forecast) — displays a forecast of preferences broken down by room number for the specified date range. You have several options to filter this data in the report parameters, for example, including only certain room classes or blocks.

Reservation Booking Pace (reservation_pace) — captures the number of individual and block reservations on the books on any specific day and tracks booking trends. Block reservations does not include block rooms when the block status is INQUIRY, REGRET and LOST. You must enter a compare date range and a stay date range. OPERA Cloud stores the number of reservations for each day, 14 months in the past and in the future. Room Revenue is displayed in local currency and includes any revenue posted that is marked as Lodging.

Reservation Forecast Reports (res_forecast1 and res_forecast2) - generates a reservation forecast by date, for a specified date range.

Rooms on the Books Report (room_type_forecast) - forecasts for a year out from the selected date for all the reservations currently on the books.

Room Type Forecast (rooms_books) - for each room type, report details include total physical rooms (total number of rooms configured for the room type), out of order rooms, inventory rooms (total rooms available minus out of order rooms), total rooms sold (total reserved

Copyright © 2016, 2025, Oracle and/or its affiliates.

rooms), and available rooms (available to sell plus sell limits set at room type level minus total sold).

Three Month Forecast Report (three_month_forecast) - a three-month outlook report based on the number of room nights, room revenue, and average rate per market main group per month.

Yearly Forecast Report (stat_forecastyearly) - The yearly forecast report displays all reserved rooms in a summary breakdown of either deduct or non-deduct. The reservation type determines whether the room reserved has a status of deduct or non-deduct. The figure represents both reservations and rooms held against a block.

History and Forecast Report (history_forecast)

The **History and Forecast (history_forecast) Report** gives you a clear picture of past reservation activity as well as what reservations are anticipated in the future. The report output is divided into Historical (statistical) data and Forecast data.

Yearly Forecast Report (stat_forecastyearly)

The **Yearly Forecast** Report (stat_forecastyearly) displays all reserved rooms in a summary breakdown of either deduct or non-deduct. The reservation type determines whether the room reserved has a status of deduct or non-deduct. The figure represents both reservations and rooms held against a block.

Guests In-House Reports

Cash Paying Guest In—House including Pmrooms (giinclpmcashbyname) - displays all guests in-house including pseudo and posting master accounts paying by cash.

Checked Out Guest Messages (gicomessage) - displays a list all checked-out guests, the departure date, and the status of the message.

Credit Card History (creditcard_history) - summarizes all credit card transactions within the selected time frame.

Credit Limit Report - All Payment Methods (gi_authlimit) - verifies authorization amounts for guests in house.

Deposit Activity (deposit_activity) - used by the accounting department to determine how much deposit revenue has been received in the hotel for a particular date.

Detailed Checkout Report (detailed_checkout) - breaks down the total charges attached to the transaction codes that have been attached to each revenue bucket and then displays a total of all charges for the guest's stay.

Guest In-House Traces (gitraces) - identifies traces for a specific department so you can take action on a trace that is applicable to that department.

Guest Preferences (guest_preferences) - displays those reservations for the date range specified which have preferences attached to the profile. You can choose to print all profiles or those profiles with preferences of arrivals, in house, or departing.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Guests In-House By Company (gi_inhousebycomp) - displays all guests in house that have a company profile on the reservation.

Guests In-House By Group (gibygroup) - displays detail for all blocks in house grouped by block.

Guests In-House By Room Number (gibyroom) - displays various information for all guests in house and will be sorted by room number.

Guests In-House by Tax Type (taxexempt) - should be run to determine the tax status of each in-house reservation.

Guests In-House Cash Payment Method (gicashbyname) - displays all guests in house paying by cash or check, and is sorted alphabetically by last name.

Guests In-House Complimentary (gi_c_h) - displays all in house guests with a complimentary room rate or a house room rate.

Guests In-House No Video Check Out (ginovideo) - displays a list of all guests in house who are not authorized to checkout through the video checkout system.

Guests In-House PM Account By Name (gipmbyname) - displays all in pseudo rooms in alphabetical order so you can see all house accounts by name and balance.

Guests In-House PM Account By Room (gipmbyroom) - displays all in pseudo rooms in room number order so you can see all house accounts by name and balance.

Guests In-House Rate Check (giratecheck) - displays a comparison of the rate amount being charged for a reservation to the configured rate code amount and then determines the variance.

Guests In-House Special Requests (gisprequest) - displays all special requests for in-house services such as flowers, chocolate, an iron, or exercise bicycle for a guest reservation.

Meal Vouchers (vouchers) - You can print meal vouchers for today, days in advance, or for guests in-house. The vouchers are for one person and are based upon the package elements and forecasted package elements that have been defined from the rate code and/or package setup.

Messages for Guests In-House and Due Arrivals (giarrmessage) - can be run during downtimes so messages can be relayed to all guests due in or in house.

No Posting Allowed Guest (ginopost) - displays all checked in guests who have no posting privileges on their reservation.

No Video Check Out (ginovideo) - displays a list of all guests in house who are not authorized to checkout through the video checkout system.

Package Allowance Guests In-House (finpkgallow) - displays package allowances for guests in-house.

Projected Guests In-House (gifuturebyname) - displays a projected number of guests in-house for a specified date range.

Rate Variance (giratevariance) - displays consolidated rate check statistics for guests in house.

Room Moves (room_move) - shows which reservations have been moved to a different room number for a particular date or a range of dates.

Room Revenue by Tax Type (tax_type_details) - displays room revenue broken down by tax type for a specified date range.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Wake Up Calls (wake_up_calls) - provides a list of all wake up calls associated to reservations for the date range selected.

Zero Rate Rooms (gi_zeroraterooms) - displays all guests that have zero rates. Sharing guests will be zero-rate candidates in most cases. Print this report to determine which in-house guests should or should not be at zero rate status.

Deposit Activity Report (deposit_activity)

Deposit Activity (deposit_activity) report is used by the accounting department to determine how much deposit revenue has been received in the hotel for a particular date.

Housekeeping Reports

Assign Rooms All (hkassignroomall) - displays all rooms that have been blocked using the reason codes under the assignment status of all, general, and show. General assignment will prevent the room from being displayed when you search for vacant rooms.

Facility Forecast (facility_forecast) - displays a five day forecast summary for the property, that includes numbers of arrivals, stay overs, departures, adults, and children. Also displayed is a break down of the facility tasks as well as the total number of items needed to be completed for the selected days.

House Status (hkroomstatusbytype) - displays all the movements for the day for each room type.

Housekeeping Detail Report (hk_details) - provides a detailed report on housekeeping status.

Housekeeping Discrepancy Report (hk_discrepancy) - displays a list of rooms and their housekeeping status, along with a column including any discrepancies.

Housekeeping Status (hk_allstatus) - displays the status for all activity in every room in the hotel.

Housekeeping Stayover (hkstayover) - displays all guests who are stayovers in the hotel.

Housekeeping VIP by Room Number(hkvipbyroom) - displays all VIPs in-house and due in by room number.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Out of Order By Reason (hkooobyreason) - displays all rooms that are out of order and the reason.

Queue Reservation Activity (qresv_activity) - queue rooms activity for the day or days selected.

Queue Reservations (qresv) - displays a list of reservations in the queue for the selected date.

Queue Rooms (qrooms) - provides a list of rooms in the queue for the selected date.

Room Discrepancy (hkroomdiscrepancy) - displays all discrepant rooms - a listing of all room statuses that are inconsistent with housekeeping status and front office status. The "sleep" discrepancy reflects that housekeeping status is occupied and front office status is vacant. The "skip" discrepancy reflects that front office status is occupied, and housekeeping status is vacant. Print this report to verify room status discrepancies.

Room Maintenance Not Resolved (hk_maintenance) - displays the all maintenance requests or work orders on rooms that are resolved as well as unresolved.

Room Status Changes (room_status_changes) - displays changes made in a room status that was completed by a user, telephone interface, or automatically changed by the system.

Rooms (hkroomstatusperroom) - displays all of your property's rooms. Print this report to see a list of all rooms and their housekeeping status.

Task Assignment Summary (task_assignment_summary) - displays every room in the property along with the Housekeeper assigned to take care of it and any special needs that the room may require. The report is available when at least one value is configured in the Additional Task Sheets OPERA Control (available when the Advanced Task Sheets OPERA Control is active).

Vacant Rooms Report (hkvaroom) - displays a list of vacant rooms and all room statuses in the hotel. When the 'Days' Duration Type is selected, the report lists rooms that have been vacant equal to and longer than the entered number. When the 'Cycle' Duration Type is selected, the report lists rooms that have been vacant the entered number amount of days and its multiples. For example, if you enter 7, the report lists rooms vacant for 7, 14, 21, 28, and so on, days.

> **Note**
>
> In certain formats and browser combinations the report header is truncated when printing. Adjust the **Scale** setting to **Fit to printable area** in your browser.

Housekeeping Status Report (hk_allstatus)

The Housekeeping Status (hk_allstatus) Report shows the status for all activity in every room in the hotel.

Miscellaneous Reports

Balance Check Report (balance_check) - lists the output of the ledger imbalance checks for any date earlier than the current business date.

Greek Trial Balance (trial_balance_tax_01). For more information, see Document ID DOC11483.

No Post Flag Activity Log (user_log_detailed) - displays user log changes specific to the no-post flags on reservations. Since reservations can be modified by any user who has permission, it can lead to potentially non-qualified people to determine whether the guest is allowed to charge to the room.

Offline Credit Card Settlements Pending (cc_offline_settlement) - displays a list of all of the pending offline credit card settlements.

Phone Details Report (hb_fin_details) - displays telephone call details report.

Police Report (police_report2) - created to adhere to legal reporting requirements for properties in Portugal. The properties are required to print a report for all arrivals and departures of the day with the morning information on a daily basis. Accompanying guests on a reservation will be included on the report output.

Service Requests (service_requests) - displays a list of all service requests for the requested time frame (Status, Open date range, Closed date range, Department, Priority, and sorted by Room, Open date, Service Request Code).

Service Request Comparison (service_request_compare) - displays a comparison of Service Requests for two months. It will compare the Total Requests (totaled for all departments), Time

Copyright © 2016, 2025, Oracle and/or its affiliates.

to Complete/Follow Up, Requests by Department, and Requests by Priority. The report will display all requests that have been opened during the month, disregarding what status the requests currently have.

Transport Request (transreq) - displays those reservations and in-house reservations that have requested transportation service.

User Activity Log (user_activity_log) - displays all activity that has taken place by user, group, type of activity, etc., for the date specified.

Wake up Call Activity (wake_up_call_activity) - Displays all logged and deleted wake up calls for a room, specific date, or specific guest. This information is pulled directly from the user activity log.

Saudi Arabia Bookings Report (sau_rep_bookings)

Saudi Arabia Cancellations Report (sau_rep_cancellations)

Saudi Arabia Expense Report (sau_rep_expense)

Saudi Arabia End of Day Occupancy Report (sau_rep_occupancy_eod) - Configure as End of Day report. For more information, see Configuring Interim / Final Procedures and Reports.

Profiles Reports

Activities Scheduled for Profiles Only (osa_profile_only) - displays activities that are associated to profiles (not reservations) and that fall within the date range selected.

Duplicate Profile (prduplicateprofile) - displays profile address, membership and passport information to assist in determining if a duplicate profile exists in your system.

Guest Birthday (pr_birthday) - displays all guest profiles that have a birthdate entered. The report includes information on stay history, VIP status, and the next scheduled reservation.

Incomplete Address (princompleteaddress) - displays all profiles that have incomplete address information.

Individual Profile Productivity - Summary (prof_prod_sum) - provides a summary of reservation statistics for individual profiles only.

Member Report (member) - displays all reservations that have or had a membership attached to the reservation.

Membership Pre-Check In (arrprecheckinmem) - displays reservations not yet checked in that have an active membership attached to the reservation.

Membership Stays Report (loyalty_member_stay) - provides a detailed listing of loyalty guests, along with their membership types and levels for the selected date range.

Profile Address (pr_address) - lists basic address information for all profiles in the system.

Profile Notes (pr_notes) - displays all the profile notes attached to profiles.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Profile Production Statistics (profileproductivitystat) - allows a property the means to determine the production a profile is generating for their property.

Profile Productivity Length of Stay (prof_prod_los) - allows the user to display profile production by pre-defined length of stay groups.

Individual Profile Productivity Summary (profprodsum): Displays a summary of reservation statistics for Individual Profiles only.

Profile Productivity Statistics-Detailed (profile_productivity_detailed) - allows a means of printing a detailed breakdown of each reservation that comprised the production for a specific profile.

Profile with Accounts Receivable Number (pr_with_ar_no) - displays all profiles that have an accounts receivable number configured and attached to the profile.

Restricted List (pr_restricted) - displays a list of all profiles that have been marked with a restricted status.

Sample Enrollment by Agent (sample_mem_enroll_agent) – a customizable report displaying a list of agent enrollments in a time period.

Sample Profile Data Portability (sample_prof_data_port) – displays profile data such as name, address, communication details, and relationship information.

Profile Production Statistics Report (profileproductivitystat)

The Profile Production Summary report details the revenue and nights a profile is generating at your property. You can select the details to output on the report, including: room nights, revenues, cancellations, block bookings, etc. Further filters allow for the user to narrow down the number of profiles that will be listed by stipulating a minimum revenue production or a specific country or owner code. The report can be printed for any date range and can either be run for one profile type or multiple profile types.

Selection Criteria

Date

From/To: Enter any date range; this can include past, present and future dates. When selecting to include the current date, keep in mind that any postings that have been made for today will not be included on the report.

Reservation Filter

Room Class: Select one more room classes from the list (Available when the Room Class OPERA Control is active).

Individuals/Blocks: When the Business Block Type OPERA Control is active, the list displays each booking type, including inactive ones. When the Business Block Type OPERA Control is inactive, only the Individuals and Block options are available for selection. Selecting a booking type will limit the report to statistics belonging to profiles associated with business blocks having that booking type.

Profile Filter

When reporting on Selected Profiles, all fields in the Profile Filter section will not be available for selection.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Minimum Revenue: The minimum amount of Revenue that a Profile has produced, in order to be included on the report.

> **Note**
>
> Which kind of revenue will be taken into consideration for the Minimum Revenue field depends on the sort order that is chosen for the report.

When the sort order is Alphabetical, Room Nights, Room Revenue, or Arrival Rooms then the Minimum Revenue is based on Room Revenue.

When the sort order is F&B Revenue then the Minimum Revenue is based on Food & Beverage Revenue.

When the sort order is Total Revenue then the Minimum Revenue is based on Total Revenue.

Minimum Nights: The minimum amount of Room Nights that a Profile has stayed, in order to be included on the report.room Postal Code. The postal code to begin the results with.

To Postal Code: The postal code to end the results with.

Industry Code: Select the industry type(s) to be included in the results.

Account Type: Select the account type, or account types, to be included in the results from the multi-select list of values.

Currency Code: The currency code that will be used when determining the exchange rate to be displayed in the results.

Owner: Select a specific Sales Manager for filtering on the report. When selecting an owner from the list, all the profiles with the Owner selected as Primary Owner or not, are listed in the report output. (Available when the Owner OPERA Control is active).

Business Segment: Available for Company, Travel Agent, Source, and Contact profiles. This refers to the Business Segment attached to a profile, not on the reservation. The Business Segment field is not available for Group profiles. However, for all other profile types, the Business Segment field is available on the Sales Info tab.

Rollup Master Statistics: Report will only output 'Master" profiles at the highest relationship level and, in turn, will include all statistics attached to the Subsidiary Profiles that have a Relationship established.

Print All Subsidiary Profiles: When a single Company, Source, or Travel Agent profile is selected in conjunction with the**Rollup Master Statistics** check box, this check box is displayed. Selecting this check box along with the **Rollup Master Statistics** check box, the results will display all of the subsidiary statistics accordingly and will display the Master Profile Statistics without any of the subsidiary statistics included.

Include Legacy/Manual Statistics: Not applicable.

Profile Category

You may filter and report on an entire profile type category (Individual, Company, Travel Agent, Group, Source, or Contact), or you may select individual profiles from one or more type category.

To filter and report on one profile type category, select the **Individuals**, **Companies**, **Travel Agents**, **Groups**, **Sources**, or **Contacts** radio button. All profiles in the category you select are eligible for the report, depending on the other filter criteria you choose.

Copyright © 2016, 2025, Oracle and/or its affiliates.

To filter and report on selected profiles from one or more profile type categories, select the **Selected Profiles** radio button. A field with a down arrow appears to the right, allowing you to make your selection of profiles from all categories. (At least one profile must be selected.).

To choose profiles, select the down arrow. The Profile Search screen appears. Use this screen as you normally would to search for the profile you want to include in the report. Two special features appear on this screen when it is accessed from the Profile Production Statistics screen:

- A **Select** button allows you to perform multiple searches, using the **Select** button to choose profiles from each search results.
- The number of profiles selected appears in blue below the search results grid. This lets you keep track of how many profiles you have chosen.

(Options such as editing profiles and creating new profiles are not available from this screen when accessed for purposes of this report.) When you select the **Close** button, the **Select Profile** screen appears.

This screen shows the profiles you have chosen for the report, including address information. The profile type of the highlighted profile appears in blue text in the lower left-hand corner of the screen.

Use this screen to verify your choices of profiles and to add or remove profiles from the report.

Add: Select this button to return to the Profile Search screen to choose additional profiles for reporting.

Remove: Highlight a profile and select this button to remove the profile from the profiles being reported on.

When you are done, select the **OK** button to return to the report options screen.

> **Note**
>
> Once you have chosen one or more profiles for reporting, the Profile Select screen, rather than the Profile Search screen, will appear when you select the down arrow on the Selected Profiles field. When either the Contacts radio button is selected, or the Select Profiles radio button is selected and at least one of the selected profiles is a Contact profile, three additional radio buttons appear:
>
> - **Booked**: Only include stays where the Contact profile was attached as the Reservation Contact to the Reservation from the table `CONTACT_STAT_DAILY`.
> - **Stayed**: Only include stays where the Contact profile stayed in the hotel (was the `GUEST_NAME_ID` on `RESERVATION_NAME` from the table `PROFILE_STAT_DAILY`).
> - **Both**: Include all stays.

Output on Report Check Boxes

- **Room Nights**: Displays the total number of room nights.
- **Cancelled Rooms**: Displays the total number of cancelled rooms.
- **No Show Rooms**: Displays the total number of no show rooms.
- **Day Use Rooms**: Displays the total number of day use rooms.
- **ADR**: Displays the average daily revenue.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Total Revenue**: Displays the total revenue.
- **Room Revenue**: Displays the total room revenue.
- **F&B Revenue**: Displays the total F&B revenue.
- **Extra Revenue**: Displays the total extra revenue.
- **Non Revenue**: Displays the total non revenue.
- **Adults**: Displays the total number of adults.
- **Total Revenue Per Guest**: Displays the total revenue per guest.
- **Room Revenue Per Guest**: Displays the total room revenue per guest.
- **F&B Revenue Per Guest**: Displays the total F&B revenue per guest.
- **Extra Revenue Per Guest**: Displays the total extra revenue per guest.
- **Non Revenue Per Guest**: Displays the total non revenue per guest.
- **Reservation Nights**: Displays the total reservation nights.
- **Reservation Arrivals**: Displays the total reservation arrivals.
- **Cancelled Reservations**: Displays the total cancelled reservations.
- **No Show Reservations**: Displays the total no show reservations.
- **Day Use Reservations**: Displays the total day use reservations.

The following options will display more than one result on the report when selected:

- **Arrival Rooms**: Sorts the results by Arrival Rooms and on the **Top xxx Arrival Rooms**. This option only considers the primary share and the number of rooms reserved.
- **Children**: When the Rates > Rates by Defined Buckets application function is active, the report will break down the rates into age buckets that have been defined in the Rates > Rate 1-5 application setting.
- **Block Breakdown**: Will display the breakdown of Room Nights, Room Revenue and ADR that has been generated for reservations attached to a Block.
- **Individual Breakdown**: Will display the breakdown of Room Nights, Room Revenue and ADR that has been generated for reservations not attached to a Block.

Print Options

Sort Order: Alphabetical, Arrival Rooms, F&B Revenue, Room Nights, Room Revenue, Total Revenue.

> **Note**
>
> When **F&B Revenue, Room Nights, Room Revenue or Total Revenue** is selected, a **Top** field is displayed, allowing you to further filter their criteria to only look for those profiles that have "produced" for their resort. For example, if you selected the Company profile type and sorted on **Room Nights** and then inserted a 20 in the Top field, the report would only return the Company Profiles that produced the top 20 most room nights. Therefore the number of profiles displayed on the report can be more than the number entered in the Top field. This is due to the fact that some profiles may have the same number of nights.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Net and Gross Radio Buttons

- **Net**: The room/food/other/total revenue values are displayed without taxes. The non-revenue values include all tax postings plus all other non-revenue postings (e.g., paid-outs).
- **Gross**: All tax postings will be shown under their respective revenue types, i.e. tax postings that have been created by room revenue postings will be included in the Room Revenue Total. That means that the non-revenue column will now show only the 'real' non-revenue postings plus any tax postings that have been created by non-revenue postings.

OPERA CLOUD

Profile Productivity Statistics-Detailed Report (profile_productivity_detailed)

The **Profile Productivity Statistics-Detailed Report** provides a detailed breakdown of each reservation that comprised the production for a specific profile selected in report parameters.

The report output displays Room Class, Room Type, Room, Primary Profile, Reservation Status, Arrival Date, Departure Date, Reservation Nights, Room Revenue, F&B Revenue, Other Revenue, Total Revenue, and Non Revenue.

Reservations are grouped by Room Class (when the Room Class OPERA Control is activate); then sorted in date order.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> For manually transferred revenue to another reservation, this revenue applies to the profile for the reservation that the revenue was routed to.

Selection Criteria

1. **Property**: Enter or select a property.
2. **From Date**: Enter or select a start date.
3. **To Date**: Enter or select an end date.
4. **Name**: Click the search icon to display Profile Search to search and select a profile.
5. **Market Codes**: Select market codes from the list to display any reservations for the selected profile that meet the date and market code filter criteria on the report. The market code that exists on the reservation on the day of checkout, or if checked in on the business date will be the market code taken into consideration for the report.

OPERA CLOUD

Reservations Reports

Alerts (alerts) - displays all guests with an attached alert that falls within the date range selected. The alert functionality is based on the activation of the alerts application function in the reservation application settings.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Detailed Availability (detail_avail) - displays availability based on room types for a specified date range. The report can reflect either availability or occupancy.

Duplicate Reservations (duplicate_reservations) - identifies multiple reservations for the same guest.

Forecast Future Occupancy (resfutureoccupancy) - after you select a date range, you can calculate a summarized forecasted occupancy. This includes the projected arrivals and departures for a specific date. The report can be run from the current business date to any date in the future.

Housekeeping Forecast (resforecasthk) - displays the number of guests who have arrived, departed, or are stay-overs and then the number of Arrival rooms, departure rooms, and the rooms that have been marked for evening service, for a specified day or date range.

No Shows of the Day (nanoshow) - displays a detailed report of all no show reservations of the selected date.

Rate Change Report (res_rate_compare) - displays all of the due in, in-house, and checked in reservations that have had the rate code or rate amount updated on a specific date.

Reservation Booking Pace (reservation_pace) - captures how many individual and block reservations were on the books on any specific day, and tracks booking trends to maximize revenues. Block reservations does not include block rooms when the block status is INQUIRY, REGRET and LOST. You must enter a compare date range and a stay date range. OPERA Cloud stores the number of reservations for each day, 14 months in the past and in the future. Room Revenue is displayed in local currency and includes any revenue posted that is marked as Lodging.

Reservation By (rereserved) - displays all reservations for a specific date range and the type of filter you choose.

Reservation Cancellations (rescancel) - displays all cancellations for a specified date range, including the current business date. But this report will not include pseudo rooms in its data results.

Reservation eCoupons (resv_ecoupons) - This report lists all reservations between the specified Arrival/Departure date range with any of the specified eCoupons added.

Reservation Entered On and By (resenterdon) - displays reservation agents' reservation statistics. Review this report to get a listing of production activity on individual or all reservation agents.

Reservation Pre-Blocked (respreblocked) - allows you to determine what room assignments have been made then to see the Front Office status of the room and the housekeeping status. This is useful when run for the current business date as the front desk can keep track of the room status and make a room blocking change when necessary.

Reservation Rate Check (res_rate_check) - compares the price charged on the reservation versus the price setup on the rate detail for that room type stored in the RTC field. The report displays the total price being charged including all shares to determine if the reservation should be highlighted as a variance. Reservations without a rate code are not included on the report since there will be no variance to report against.

Reservation Summary Report (ressummary) - provides a summarized breakdown per day of all Reservation activity in the property.

Reservation with Discounts (res_with_discounts) - displays a list of reservations which have discounts applied and meet the search criteria selected.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Reservations - Made Yesterday (resreservyesterday) - displays the hotel reservation production from the previous day.

Reservations for Repeat Guests (resrepeatguest) - displays reservations for the specified arrival date range that have an attached profile that has stayed at your property at least one time. To display on the report the reservation status has to be reserved or due in.

Reservations with Notes (res_with_notes) - displays all notes attached to the reservation and primary profile which can be filtered by note type, include internal notes, and exclude notes older than a selected date. Reservations are selected by arrival date range.

Reservations with Rate Changes (res_rate_changes) - provides visibility on guests with rate changes, which allows you to tailor your welcome letter and other information to address any additional amenities and packages to which the guest is entitled.

Reservations with Room Class Upgrades (res_with_upgrades) - displays details of when an upgrade discrepancy has been created, as well as identifying reservations based on the booked room class from the RTC field compared with the blocked room class from the room type field.

Reservations with Travel Agent Profile Changes (res_agent_changes) – displays all travel agent profile modifications made to reservations after the booking has been created, including IATA number changes and name changes.

Restrictions Detail (raterest) - can be run for up to 90 days prior to the current business date, to display the restrictions that were in place on a given date.

Room Plan (resroomplan) - displays an enhanced summary of the availability of each individual room in the property, showing 15 days per display.

Upsell (resupsell) - displays any guests who paid additional monies to be upgraded to another room type. You can use this information to track the number of upsells and additional room revenue that front desk agents generated at check-in.

Waitlist (reswaitlist) – displays details about guests whose reservations cannot be made because of lack of availability.

Reservation Booking Pace Report (reservation_pace)

Reservation Booking Pace (reservation_pace) - captures the number of individual and block reservations on the books on any specific day and tracks booking trends. Block reservations does not include block rooms when the block status is INQUIRY, REGRET and LOST. You must enter a compare date range and a stay date range. OPERA Cloud stores the number of reservations for each day, 14 months in the past and in the future. Room Revenue is displayed in local currency and includes any revenue posted that is marked as Lodging.

Sales Account Reports

Prerequisites for Sales Account Reports

The following Sales Account report is available:

Account Statistics Report (rep_acc_stats with rep_acc_stats.fmx): The Account Statistics report shows the number of room nights generated by a master (with the option to roll up subsidiary statistics) and whether the reservations (split between group and individual) were attached to a company, travel agent, or source profile, and if so, which one(s).

Account Statistics Report (rep_acc_stats.rep with rep_acc_stats.fmx)

The Account Statistics report shows the number of room nights generated by a master (with the option to roll up subsidiary statistics) and whether the reservations (split between group and individual) were attached to a company, travel agent, or source profile, and if so, which one(s). The account statistics can be detailed by source code, origin code, market code, company profile, travel agent profile or source profile.

Copyright © 2016, 2025, Oracle and/or its affiliates.

For this report, the definition of a Master Account is any company, agent, or source profile that has hierarchical relationships linked beneath it and does not have any hierarchical relationships linked above it.

Selection Criteria

Property: Enter or select the property. You can select multiple properties from a hub location.

From Date. Filter account statistics from the selected date.

To Date. Filter account statistics to the selected date.

Account. Search and select one or more sales accounts.

- When selected, the field displays the list of selected profiles.
- The Account Name or Account ID value can be entered in this field, which is then be validated against the Search and Select Profile.

Owner Code. Filter accounts by Owners. This filter applies to the account being detailed, not to the accounts that may be reported as details of that account.

Priority. Filter accounts by Priority codes. This filter applies only to the account being detailed, not to the accounts that may be reported as details of that account.

Territory. Filter accounts by Regions. This filter applies only to the account being detailed, not to the accounts that may be reported as details of that account.

Business Segment. Filter accounts by Business Segments. This filter applies only to the account being detailed, not to the accounts that may be reported as details of that account.

Country. Filter accounts by Account Countries. This filter applies only to the account being detailed, not to the accounts that may be reported as details of that account.

Postal From/To. Filter accounts by a Postal Code range. This filter applies only to the account being detailed, not to the accounts that may be reported as details of that account.

Profile Type. Filter accounts by Profile Type (Company, Travel, or Source). This filter applies only to the account being detailed, not to the accounts that may be reported as details of that account.

Rollup Sub-Account Statistics. If checked, the selection field is enabled. Select from a list of all configured hierarchical relationship types where the From Type and the To Type equal the type selected in the Profile Type LOV. For example, if Company is selected in the Profile Type LOV, then the Relationship LOV lists Company to Company hierarchical relationships. Hierarchical relationships with a From Type or To Type that are not equal to Company do not appear. The report then calculates statistics from all accounts linked to the master account from that relationship type.

Net/Gross. Select the Net or the Gross option button depending on how you want to display actual figures.

Currency. Visible when the application parameters Rate Management > Ability to Quote Rates in Foreign Currency is Active. (parameter already exposed in Cloud).

Report Data

This report displays the following information broken down by:

- Name, Name 2, Name 3.
- Address Line 1, City, Postal, Country, State.
- Address Line 2, Priority, Owner Name, Owner Code, Business Segment, Territory.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Stays.
- Total Nights (Individual, Blocked, Total).
- Net Revenue or Gross (depending on the selection made: Room, Food and Beverage, or Miscellaneous), and Total Revenue.

This report does not consider DAY USE rooms in the Room Nights figures.

The figures in rep_acc_stats are calculated using the following Profile summary tables:

1. profile_yearly_statistics - when the date range requested includes a full calendar year.
2. profile_monthly_statistics – when the date range requested includes full calendar months, but not a complete calendar year.
3. company_stat_daily (or agent_stat_daily or source_stat_daily) – when the date range requested includes dates that are less than a full calendar month, this tablet is used for those dates.

- **Example 1:** If the requested date range is January 1, 2011 – December 31, 2011, then profile_yearly_statistics are used.
- **Example 2:** If the requested date range is January 1, 2011 – December 30, 2011, then profile_monthly_statistics are used for January 1 – November 30 and company_stat_daily are used for December 1 – December 30.

Statistics Reports

Copyright © 2016, 2025, Oracle and/or its affiliates.

Gaming **Comp Analysis Statistics** (stat_comp_analysis) - shows a breakdown of Cash Rooms, Cash Room Revenue, Comp Rooms, Comp Room Revenue, and the Average Daily Rate (ADR). When the report is run, the report output is divided into the three sections of Day, Month to Date, and Year to Date.

Country by Revenue Statistics (stat_country_revenue) - displays a year to date comparison of room revenue and room night totals for statistical tracking of country information. Print this report for forecasting and budget projection purposes.

Country Revenue Day/Month-to-Date/Year-to-Date (country_revenue_statistics) - displays daily country statistics based on information entered in the primary profile on each reservation. The report provides daily, monthly, and yearly figures.

Country Specific Statistics (stat_countryspec) - meets the reporting requirements for properties in Norway and Sweden.

Extended Stay Summary and Detail(extended_stay_stats) — displays a breakdown of extended stay reservations.

Matrix Report (matrix_report) - allows you to cross-reference market, region, room type, rate category, rate code, origin or source statistics for a specified month.

Nationality/Country Statistics by Day (stat_countrybyday) - generates both nationality and country statistics per day. The statistics output can include room nights or persons.

Nationality/Country Statistics by Month (stat_countrybymon) - allows the properties to generate both nationality and country statistics per month.

On the Books Sales Statistics (otb_sales_statistics) - provides the ability to view reservations booked per room type for a past date and for a future date. The information includes individual and group reservations, definite and tentative block reservations, waitlisted individual and group reservations, total number of reserved rooms, out of order and service rooms, turnaways, available rooms, occupancy in percent, overbooking level, projected occupancy in percent, number of guests in house, double occupancy in percent and the individual and group revenue and average rate.

Region Statistics Year View (stat_region_yearview) - displays a breakdown per month, for the current year, a breakdown of reservation arrivals, room nights and revenue production per configured region.

Reservation Statistics (res_statistics1 and res_statistics2) - shows a statistical breakdown of reservations generated from a variety of filter options.

Sales Tiered Statistics (sales_tiered_stats) - displays a breakdown of the Room Nights, Room Revenue, and ADR by guest Length of Stay.

Special Requests Statistics (specials_statistics) - displays daily, month- to-date, and year-to-date statistics per specials code. Details include rooms sold, guests in house, room revenue, food and beverage revenue, other revenue, total revenue, average room rate, arrival rooms, arrival guests, no-show rooms, no-show guests, cancellation rooms, and cancellation guests.

Statistics - Room (statroom) - displays revenue and room usage by room for each month. Use this report to monitor room usage, keep track of rooms needing repairs, or to change the room-ordering sequence.

Statistics - Room Type (statroomtype) - displays by room the amount of room revenue generated per Room Type, the Potential Rooms that are available for a date, and the number of rooms occupied in the room type for a specific date or a date range.

Statistics by Length of Stay (sales_tiered_stats2) - displays a breakdown of the Room Nights, Room Revenue and ADR by guest length of stay.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Matrix Report (matrix_report)

Matrix Report (matrix_report) allows you to cross-reference market, region, room type, rate category, rate code, origin or source statistics for a specified month.

Yield Management Reports

Revenue Management System Hurdle Point (hurdle_point) - displays all hurdle points (rates) for a property for a date range specified. The report can be used to check the hurdle point by product class/yield category for up to a year and also indicates the sell to capacity values that have been set for the hotel in addition to providing you with inventory information.

Revenue Management System Hurdle Point 2 (hurdle_point2) - displays all hurdle points (rates) for a property for a date range specified, including total rooms sold and delta. The report can be used to check the hurdle point by product class/yield category for up to a year and also indicates the sell to capacity values that have been set for the hotel in addition to providing you with inventory information.

Revenue Management System Rate Code (yield_rate_code) - used to determine the Rate Strategies) that have been set for indicated rate codes.

Revenue Management System Setup (yield_room_type) - displays room type, product class, and flow through statistics. This report can be used to determine what product class is assigned to each room type in OPERA Cloud as well as indicating which room type is the flow through room type.

Managing Reports

Prerequisites for Managing Reports

Copyright © 2016, 2025, Oracle and/or its affiliates.

Watch Video

On provisioning of your property, all standard OPERA Cloud reports are added to their respective report groups. Standard OPERA Cloud reports are detailed in the reports description section, for more information, see Report Descriptions. Additionally, template Reporting and Analytics (R&A) reports are added to their respective report groups and custom R&A reports can be configured in order to be generated from OPERA Cloud. (R&A) reports are indicated with .

You can configure additional instances of reports to suit your needs by duplicating the report defaulting the report parameters (search criteria, column display options and layout options (group-by and/or sort-order) and giving your report a unique Display Name. For example, the standard Arrival Report - res_detail, can be configured multiple times in the Arrival Reports report group with various filters, sort order and column selections selected. You could have an **Arrivals by Name**, **Arrivals - VIP Only by Name**, **Arrivals by ETA (Time)** reports - all of which generate the same RES_DETAIL arrival report, but with different parameters preset for search criteria, display and layout options. Date fields display an 'offset' field, supporting the setup of a calculated date **+/-** from the business date.

When the **Multi Property** OPERA Control is active, you can copy reports and stationery templates to other properties. For more information, see Copying Reports to Multiple Properties.

When the **Report Scheduler** OPERA Control is active, you can schedule OPERA Cloud reports to generate periodically. For more information, see Managing Scheduled Reports

You can also add reports to shift (batch) reports. For more information, see Managing Shift Reports

Adding Reports

1. From the **OPERA Cloud** menu, select **Reports**, and then select **Manage Reports**.
2. Click **New Report** and complete the following:
    a. **Property**: Enter or select the property.
    b. **Report Type**:
        i. **Oracle Report**: Select for all standard reports provided as part of OPERA Cloud provisioning. For more information, see Report Descriptions.
        ii. **Rich Text Format**: Select for standard RTF-based reports provided as part of OPERA Cloud provisioning (Various Sales and Event Management reports use this format). For more information, see Report Descriptions.
        iii. **Customized Report**: Select to setup a stationery template. For more information, see Configuring Stationery Templates.
        iv. **Reporting and Analytics**: Select for custom R&A reports.
    c. **Internal Name**: For Oracle Reports, select a report from the list, for example res_detail (Arrival Report). For R&A reports, select a folder, then click **+** to expand and select a report from the list.
    d. **Report Group**: Select a group to assign to the report. Report access is based on the assignment of the related report group task to user roles. For more information, see Report Groups.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> You can configure additional report groups, as needed. For more information, see Managing Report Groups

e. **Display Name**: Enter a descriptive name for the report; this appears in Run Reports and Shift Reports.

   i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).

f. **Print Copies**: Enter the number of copies of this report to be run by default.

g. **Protected**: Select to allow users only with the **Print Protected Reports** user task assigned to their roles to generate the report.

h. **Language**: Select the language that the report needs to display.

> **Note**
>
> This is only applicable to RTF stationery templates, not Oracle reports.

i. **Parameter Form**: Select the existing parameter form for the selected **Report Name**. For example, `res1` parameter form for the `RES_DETAIL` report. Ensure you select the correct parameter form for the report The report parameters are then displayed. Setup the report Search Criteria, Filter, Include, Display and Layout options as desired. Date fields are null for applying the current business date and display an **offset** field, supporting the setup of a calculated date **+/-** from the business date; enter the number of days to subtract or add to the date.

j. **Watermark**: Select the watermark option. For more information, see Working with Watermarks.

3. Click **Save** or **Save and continue** to save and create another report.

Editing Reports

> **Note**
>
> You can modify the **Display Name** and **Report Parameters** for Reporting And Analytics reports.

1. From the **OPERA Cloud** menu, select **Reports**, and then select **Manage Reports**.
2. Enter search criteria, and click **Search**.
3. Select the report in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update report configuration and report parameters as required.
5. Click **Save**.

Duplicating Reports

You can copy reports in the same property to store it with a different name and different default parameter values.

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **OPERA Cloud** menu, select **Reports**, and then select **Manage Reports**.
2. Enter search criteria, and click **Search**.
3. Select the report in the search result, then click the vertical ellipsis **Actions** menu and select **Duplicate**.
4. Complete the following:
   a. **Internal Name**: Select a report from the list, for example `res_detail` (Arrival Report).
   b. **Report Group**: Select a group in which the report is to be listed.

      Note: You can configure additional report groups, as needed. For more information, see Managing Report Groups
   c. **Display Name**: Enter a descriptive name for the report; this appears in Run Reports .
      i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
   d. **Print Copies**: Enter the number of copies of this report to be run by default.
   e. **Protected**: Select to allow users only with the Print Protected Reports user task assigned to their roles to generate the report.
   f. **Language**: Select the language that the report needs to display.

      > **Note**
      >
      > This is only applicable to RTF stationery templates, not Oracle reports.

   g. **Parameter Form**: Select the existing parameter form for the selected Report Name. For example, `res1` parameter form for the `RES_DETAIL` report. Ensure you select the correct parameter form for the report selected.

      The report parameters are then displayed. Setup the report Search Criteria, Filter, Include, Display and Layout options as desired.
   h. **Watermark**: Select the watermark option. For more information, see Working with Watermarks
5. Click **Save**.

Deleting Reports

1. From the **OPERA Cloud** menu, select **Reports**, and then select **Manage Reports**.
2. Enter search criteria, and click **Search**.
3. Select the report in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Managing Shift Reports

Use Shift Reports to generate a predefined selection of reports in a batch process. For example, you may wish to configure 'Downtime Reports' for unplanned power or data outages -

Copyright © 2016, 2025, Oracle and/or its affiliates.

generating reports such as Arrivals, In House, Departures, Housekeeping Room Status, Guest Ledger Balances etc.

All reports selected for a Shift Report generate with the default report parameters (filter, display options, sort order) configured on the report and output as a single file.

When the **Report Scheduler** OPERA Control is active you can setup Shift Reports to auto-generate periodically. See Managing Scheduled Reports .

> **Note**
>
> OPERA Reporting and Analytics (R&A) reports are not supported for inclusion in shift reports.

Viewing (Generating) Shift Reports

> **Note**
>
> A new browser window is launched to generate shift reports and can be minimized while reports are generating. All reports are combined in a single PDF file.

1. From the **OPERA Cloud** menu, select **Reports**, and then **Shift Reports**.
2. Enter search criteria and click **Search**.
3. Select the Shift Report in the search result, then click vertical ellipsis **Actions** menu and select **View**.
4. Select the report destination:
    a. **Leave Destination as selected**: Reports will generate to destination as listed above; use **Change to Email, Print** options to modify the destination for a specific report.
    b. **Change Destination for all reports**: Allows you to change the destination.
        i. **Preview**: Generates a PDF file that can be printed or downloaded.
        ii. **Email to Print** : Generates a PDF and emails direct to a printer for printing; select a printer from the list.
        iii. **Email**: Generates a PDF and emails file as attachment to specified email address.

Adding Shift Reports

1. From the **OPERA Cloud** menu, select **Reports**, and then **Shift Reports**.
2. Click **New** and enter the following details:
    a. **Property**: Enter or select a property.
    b. **Display Name**: Enter a name for the shift report.
    c. From the **Available** panel select report(s) to add to the Shift Report; press the **Ctrl** key to select multiple reports in search result.
        i. To search for a report, enter the report name in **Filter** and click **Go**.
    d. Click the forward arrow **>** to move the selected report(s) to the **Selected** panel.
    e. Repeat these steps to select other reports to add to the **Selected** panel.
    f. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Shift Reports

1. From the **OPERA Cloud** menu, select **Reports**, and then **Shift Reports**.
2. Enter search criteria and click **Search**.
3. Select the Shift Report in the search result, then click vertical ellipsis **Actions** menu and select **Edit**.
4. Update the report selection.
5. Click **Save**.

Deleting Shift Reports

1. From the **OPERA Cloud** menu, select **Reports**, and then **Shift Reports**.
2. Enter search criteria and click **Search**.
3. Select the Shift Report in the search result, then click vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Managing Scheduled Reports

Prerequisites Manage Scheduled Reports

Watch Video

Use Report Scheduler to schedule OPERA Cloud reports to generate at a specified interval and frequency (example - every 2 weeks). By default, reports generate as a file for manual download, but you can select additional delivery methods (destinations).

1. **Email**: Deliver report to one or more email addressed
2. **Printer**: Deliver report to an email-addressable printer. See Configuring Printers.
3. **SFTP**: Deliver report to secure FTP (SFTP) server. For more information, see Configuring SFTP Connections.

As many reports require date parameters; the report scheduler supports the setup of calculated dates (ie +/- offset from the business date) so that a reoccurring report generates with the required date criteria.

> **Note**
>
> The **Report Groups** listed in search are based on the report group tasks assigned to your role.

> **Note**
>
> R&A reports cannot be scheduled.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Scheduled reports will not be generated if the user who scheduled them becomes inactive in Identity Management.

Scheduling Standard Reports

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**
2. Enter search criteria and click **Search**.
3. In the search results, select the report from the list and click the **vertical ellipsis** and select **Schedule Report**.

   > **Note**
   >
   > You can also schedule a report by clicking **Manage Scheduled Reports** and then click **New**.

4. **Reports Parameter**: Review and update the following criteria.
   a. **Property**: Select or confirm the Property.
   b. **Dates/Date Range**: Enter a fixed date or use a dynamically calculated date; see **Set Date** below.
   c. **Filter**: Select or enter the filter criteria.
   d. **Include**: Select the Include options.
   e. **Layout**: Select the Layout option.
5. Click **Next**.
6. **Set Date** (Date Options)

   You can setup a dynamic, calculated date value for any report date parameter by using date modifiers. Use the **Validate Date** option to evaluate your setup.
   a. **Date Option**: Select a value from the list.
   b. **Offset**: Enter a negative (past) or positive (future) date value.
   c. **Days**: Select for a Days offset.
   d. **Months**: Select for a Month offset.
   e. **Validate Date**: Based on the current business date two dates are displayed:
      - **If Report is Started on**
      - **Date Parameter Value**

      When you update the **If Report is Started on** date value, the **Date Parameter Value** is indicated.
7. **Repeat Interval**:
   a. **Start Date**: Enter the date when you want the report schedule to Start.
   b. **Start Time**: Enter the time when you want the report schedule to Start.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **End Date**: Enter the date when you want the report schedule to stop. (null is indefinite).

d. **End Time**: Enter the time associated with the End Date when you want the report schedule to stop (null is indefinite).

e. **Report Language**: Select a language from the list.

f. **Recurrence Pattern**:

   i. **Once Only**: Select this option if you want the report to only generate once. Otherwise, proceed to select the Repeat option.

   ii. **Repeat**: Repeat the schedule according to the **Interval** and **Frequency**.

      i. **Interval**: Enter a frequency interval.

      ii. **Frequency**:

         i. **Hours**: Select this option button to run the report on an hourly basis based on the **Interval** set.

         ii. **Days**: Select this option button to run the report on a weekly basis based on the **Interval** set.

         iii. **Weeks**: Select this option button to run the report on a weekly basis based on the **Interval** set.

            i. **Days of the Week**: Select the days of the week that you would like to repeat the report, based on the Start Date/Time.

      iii. **Months**: Select this option button to run the report on a monthly basis based on the **Interval** set:

         i. **Days of the Week**: Select the days of the week that you would like to repeat the report, based on the Start Date/Time.

         ii. **Week Number to Repeat**: Select a week in the month from the list.

g. Click **Next**.

8. **Destination (Delivery Method)**:

   a. **Filename**: Enter a filename.

   b. **File Format**: Select a file format from the list. Available options are HTML, RTF, PDF, XML, Delimited, Delimited Data and Excel (for selected BI Publisher-based reports).

> **Note**
>
> When HTML format and email delivery are selected, the report output is embedded in the email received.

> **Note**
>
> It is recommended to use only Delimited and Delimited Data file formats for reports with simple tabular layouts. Delimited and Delimited Data file formats should not be selected for reports that have group-by's or other complex layouts that can cause duplication of rows or prevent rows from generating in the report.

   c. To add an additional destination, click **New** and complete the following.

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Mode**: Select the destination mode and provide the additional details.
    i. **Email**: Enter an email address; separate multiple addressed with a semi-colon.
    ii. **Printer**: Select a printer from the list. See Configuring Printers .
    iii. **SFTP**: Enter SFTP details.
        i. **Additional Details**: Select a SFTP destination from the list.
        ii. **Folder Name**: Select a destination folder from the list.
        iii. To delete, click the vertical ellipsis **Actions** menu and select **Delete**.
    iv. Repeat to add another destination. One entry per **Mode** is allowed.

9. Click **Save**.

Scheduling Shift Reports

To schedule Shift Reports.

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**
2. Click **Manage Scheduled Reports** and then click **New**.
3. **Report Name**: Enter the name of Shift Report.
4. Click **Search**.
5. Select the **Shift Report** in the result and click **Select**.
6. Click **Next** on report parameters (not applicable).
7. **Repeat Interval**:
    a. **Start Date**: Enter the date when you want the report schedule to Start.
    b. **Start Time**: Enter the time when you want the report schedule to Start.
    c. **End Date**: Enter the date when you want the report schedule to stop. (null is indefinite).
    d. **End Time**: Enter the time associated with the End Date when you want the report schedule to stop (null is indefinite).
8. **Recurrence**:
    a. **Once Only**: Select this option button if you want the report to be run only once. Otherwise, proceed to select the frequency option buttons.
    b. **Repeat**: Repeat the schedule according to the frequency and interval.
    c. **Interval** : Enter a number to indicate how many times the report should be run per hours, days, weeks, or months.
    d. **Frequency**:
        i. **Hours**: Select this option button to run the report on an hourly basis. The Every field appears where you can enter the "every number" of hours you want the report to be run.
        ii. **Days**: Select this option button to run the report on a daily basis. The Every field appears where you can enter the "every number of days" you want the report to be run.

Copyright © 2016, 2025, Oracle and/or its affiliates.

iii. **Weeks**: Select this option button to run the report on a weekly basis. The Every field appears where you can enter the "every number of weeks" you want the report to be run.

When Weeks is selected, the Days of the Week option buttons display. You can select the days of the week that you would like to repeat the report, based on the Start Date/Time.

iv. **Months**: Select this option button to run the report on a monthly basis. Several options provide further scheduling flexibility.

i. In the **Every** field, enter the every "number of months" you want the report to run. As an example, if 1 is selected, the report will repeat every month after the Start Date/Time. If the Start Date is 11/30/11 and the Time is 4:05 pm, the report will run every month on the 30th day at 4:05 PM.

ii. When **Months** is selected, the Repeat option displays. You can select which week in the month you want the report to repeat after the initial Start Date and Time. You can select either the First, Second, Third, Fourth, or Last week you want the report to repeat. If the Second week is selected, the report will run every second week of the month at the time selected in Start.

iii. When **Week** option is selected, the Days of the Week option buttons display. You can select the days of the week that you would like to run the report. Using our example, if you select Monday and Friday, the report will run the second week of every month, on Monday and Friday at 4:05 pm. If you have selected a week for Repeat, in our example, if you still want the report to run on a Wednesday, you will have to select Wednesday DOW.

v. **Days of the Week**: (Only available when the Weeks or Months option button is selected.) Select the day, or days, of the week in which you want the report to be run (Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, Sunday) on a Weekly or Monthly basis.

9. Click **Next**.

10. **Destination**: Shift Reports can only be scheduled in PDF format. The file can be previewed and downloaded from Executed Reports. For more information, see section *Viewing Executed Scheduled Reports*.

a. Click **New** and complete the following.

i. **Mode**: Select the destination mode and provide the additional details.

ii. **Email** : Enter an email address; separate multiple addressed with a semi-colon.

iii. **Printer**: Select a printer from the list Configuring Printers.

iv. **SFTP**: Enter SFTP details:

i. i. **Additional Details**: Select a SFTP destination from the list.

ii. **Folder Name**: Select a destination folder from the list.

iii. To delete, click the vertical ellipsis **Actions** menu and select **Delete**.

v. Repeat to add another destination. One entry per **Mode** is allowed.

b. Click **Save**.

Editing Scheduled Reports

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**
2. Click **Manage Scheduled Reports**.
3. Enter search criteria and click **Search**.
4. In the search results, select the scheduled report and click the vertical ellipsis **Actions** menu and select **Edit**.
5. Update the scheduled report configuration and parameters.
6. Click **Save**.

Deleting Scheduled Reports

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**
2. Click **Manage Scheduled Reports**.
3. Enter search criteria and click **Search**.
4. In the search results, select the scheduled report and click the vertical ellipsis **Actions** menu and select **Delete**.
5. Click **Delete** to confirm.

Pausing Scheduled Reports

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**
2. Click **Manage Scheduled Reports**.
3. Enter search criteria and click **Search**.
4. In the search results, toggle the **ON/OFF** status button for the report in the list of **Report Scheduled**.

Force Run Scheduled Reports

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**
2. Click **Manage Scheduled Reports**.
3. Enter search criteria and click **Search**.
4. In the search results, select the scheduled report and click the vertical ellipsis **Actions** menu and select **Run Reports**.

Viewing Scheduled Report Destinations

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Click **Manage Scheduled Reports**.
3. Enter search criteria and click **Search**.
4. In the search results, select the scheduled report and click the vertical ellipsis **Actions** menu and select **View Destinations**.

Viewing Executed Scheduled Reports

> **Note**
>
> The **Detailed Status** column indicates the destination mode, address and delivery status for each report. Shift reports are indicated with **+/-**, click **+** to expand. Select **Incomplete** in **Execution Status** to view shift reports where at least one report failed.

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**
2. Click **Manage Scheduled Reports**.
3. Click **View Executed Reports**.
4. Enter search criteria and click **Search**.
5. In the search results, select the scheduled report and click the vertical ellipsis **Actions** menu and select **Preview**.

Deleting Executed Scheduled Reports

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**
2. Click **Manage Scheduled Reports**.
3. Click **View Executed Reports**.
4. Enter search criteria and click **Search**.
5. In the search results, select the scheduled report and click the vertical ellipsis **Actions** menu and select **Delete**.

Report Groups

Standard report groups and their reports are setup on provisioning of OPERA Cloud. You can configure additional report groups and then setup reports to suit your needs. For example, you could configure a 'Club Floor' report group and configure various reports preset with the club floor room class filter.

OPERA Cloud automatically creates a report group user task for each report group created; these tasks must then be assigned to roles to enable user access to the reports in the report group.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Report groups marked **Internal** are used for managing stationery templates such as contracts, statements, confirmation letters, folios and receipts. These report groups do not display in the report group list in Manage Reports and do not need a report group task to be assigned to roles. Your role must be granted the View Internal Reports / Report Groups task to access these report groups however. For more information, see Stationery Report Groups

The following report groups are automatically created on provisioning of your OPERA Cloud property.

Table 9-10 Report Groups

Report Group	Service	Standard Reports
Account (Sales)	Sales and Event Management	Sales Account Reports
Activity (Sales)	Sales and Event Management	Activity Reports
Accounts Receivable	Property Management	Accounts Receivable Reports
Arrival	Property Management	Arrivals Reports
Blocks & Groups	• Property Management • Sales and Event Management	Blocks and Groups Reports
Catering Configuration	Sales and Event Management	Catering Configuration Reports
Commission (Agent)	Property Management	Commissions Reports
Configuration	• Property Management • Sales and Event Management	Configuration Reports
Departure	Property Management	Departures Reports
Events	Sales and Event Management	Event Reports
Financial	Property Management	Financials Reports
Forecast	Property Management	Forecast Reports
Guests in House	Property Management	Guests In-House Reports
Housekeeping	Property Management	Housekeeping Reports
Miscellaneous	Property Management	Miscellaneous Reports
Profiles	Property Management	Profiles Reports
Reservations	Property Management	Reservations Reports
Statistical	• Property Management • Sales and Event Management	Statistics Reports
Yield Management	Property Management	Yield Management Reports

Managing Report Groups

Adding Report Groups

> **Note**
>
> Remember to access role manager and assign the auto-created report group user task to roles.

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**.
2. Click **Manage Report Groups**.
    a. Click **New** and complete the following information..
        i. **Group Name**: Enter a code or name of the report group, Report Group names are limited to a maximum of 30 characters and cannot be changed when editing a group.
        ii. **Description**: Enter the description for the report group.
            i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
        iii. **Type**: Select **Report**.
        iv. **Watermark Mode**: Select a watermark mode. For more information, see Working with Watermarks. This appears when Enable Watermark For Reports OPERA control is active.
3. Click **Save**.

Editing a Report Group

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**.
2. Click **Manage Report Groups**.
    a. Enter search criteria and click **Search**.
    b. In the search results, select the report group, click the vertical ellipsis **Actions** menu, then click **Edit**
    c. Update configuration.
    d. Click **Save**.

Deleting a Report Group

1. From the **OPERA Cloud** menu, select **Reports**, then select **Manage Reports**.
2. Click **Manage Report Groups**.
    a. Enter search criteria and then click **Search**.
    b. In the search results, select the report group, click the vertical ellipsis **Actions** menu, then click **Delete**.
    c. Click **Delete** to confirm.

Stationery Report Groups

The following report groups are available for the management of customized stationery templates. These internal report groups are not displayed to users in the list of report groups in Managing Reports unless the **Show Internal** check box is selected. Your role must be granted the View Internal Reports / Report Groups tasks to access these report groups.

Create one or more templates in these report groups to specify which template OPERA Cloud should generate for the respective area of the application; the sample template to use for your customized template(s) is listed below.

Many of the stationery report groups only require one template to be setup. However, when the **Multi Language** OPERA Control is active, an RTF template per language is required. The

Copyright © 2016, 2025, Oracle and/or its affiliates.

setup of each template references a specific language. OPERA Cloud then generates the RTF template matching the **Language** selected in the profile. For example, a guest folio template with French text in the layout has **Language = French** selected in Configuring Stationery Templatesthis RTF template is generated when generating folios for guests, companies or agents with **Language = French** selected in the profile. The French translation for transaction codes and other configuration is output on the folio. The **Stationery Substitution Language** OPERA Control can be used to generate an alternate (substitution) template when a language-specific template is not configured.

Other stationery report groups support multiple templates regardless of the **Multi Language** OPERA Control; for these stationery report groups a user either selects from a list of templates or there is related configuration which determines the specific template to be used. For example, Global Alert configuration references the templates configured in the Alerts stationery report group and Commission Bank Account configuration references the commission check templates setup in the Commission Check report group.

> **Note**
>
> When the **Confirmation Letter for Cancel Reservation** OPERA Control is active, ensure you have cancellation letter template(s) setup in the **Confirmation Letter** report group.

Table 9-11 Stationery Report Groups

Report Group	Description	Template Quantity	Sample RTF Template
Accounts Receivable Folio	AR Folio For more information, see Guest Folio template, row 13 in this table	One (per language if **Multi Language** OPERA Control is active)

Managing Definable Manager's Report

Use Definable Manager's Report to select the statistics to include on the Manager's Report. You can also define your own calculations for certain item types. To format the report, you can sequence the order of statistics and configure the output of horizontal lines and extra line spacing as needed .

Once the report is configured you can generate it at any time from Manage Reports or you can schedule the report. For more information, see Reports. You can also add the Manager's Report to the End of Day final reports.

Copyright © 2016, 2025, Oracle and/or its affiliates.

View Manager's Report Configuration

Perform a search to view the current setup of the Manager's Report; the result indicates the statistics selected for inclusion and the sequence in which they appear on the report.

1. From the **OPERA Cloud** menu, select **Reports**, select **Configure Reports**, and then **Definable Manager's Report**.
2. Select or confirm the Property, click **Search**.

   The current selection and sequence of statistics to output on the report are listed in search result.

   a. **Active**: A tick in this column indicates that the statistical item is included in the report.
   b. **Description**: Text description of the statistical displayed on the report.
   c. **User-defined**: A tick in this column indicates that the statistic is user defined.
   d. **Print Line**: A tick in this column indicates that a line drawn on the report after this item. Lines can be used to divide sections of the report or to call attention to a particular statistical item.
   e. **Blank Rows**: Number of blank rows following this item. Blank rows are used to create sections in the report for clarity or to call attention to a particular statistical item. The default is 0 rows (no extra space).
   f. **Seq**: Number indicating the relative position of the item in the report. Items are displayed from lowest number to highest number.

Editing Statistics

To amend the setup or remove a statistic from the report you need to edit the statistic. Changing the display sequence results in the statistic relocating to the desired position in the list. Removing the active check box removes the statistic from appearing on the report.

1. From the **OPERA Cloud** menu, select **Reports**, select **Configure Reports**, and then **Definable Manager's Report**.
2. In the search results, select the statistic to update and click the vertical ellipsis and click **Edit**.
3. Modify or update the following information:

   a. **Item Name**: Edit the unique item name, for user-defined entries. (value is read only for predefined items).
   b. **Description**: Edit the description (output on report) for user-defined entries (value is read only for predefined items).
   c. **Display Sequence**: Update value to change the position of the statistic on the report.
   d. **Blank Rows**: Set the number of blank rows after this statistic.
   e. **Print Line**: Check to generate a horizontal line after this statistic.
   f. **Active**: When checked the statistical item is included in the report. Uncheck to remove the statistic from the output .
4. Click **Save**.

Adding User-Defined Statistics

Use this option to add a user-defined items to the Manager's Report. On this screen you can choose to add certain attributes to the base calculation of the item type. For example, you can

Copyright © 2016, 2025, Oracle and/or its affiliates.

choose to add Day Use Rooms and/or subtract House Use Rooms from the calculation for 'Rooms Occupied'.

1. From the **OPERA Cloud** menu, select **Reports**, select **Configure Reports**, and then **Definable Manager's Report**.
2. Click **New**.
3. In the Primary Details section, enter the following details.
   a. **Item Type**: Select the Item Type from the drop-down.

Table 9-12 Item type and its definition

Item Type	Calculation/Definition
Rooms Occupied	Number of rooms In-House with a Front Office status of 'OCC'
% Rooms Occupied	Number of rooms In-House with a Front Office status of 'OCC' / Total Rooms in Hotel * 100
ADR	Total amount of all postings today where the Transaction Code is marked as 'Revenue' and the Transaction Type is 'Lodging' / Number of rooms In-House with a Front Office status of 'OCC'
ADR (Distributed)	Total amount of all postings today (Distributed) where the Transaction Code is marked as 'Revenue' and the Transaction Type is 'Lodging' / Number of rooms In-House with a Front Office status of 'OCC'
Rooms Occupied Tomorrow	Total number of deduct rooms reserved for tomorrow
% Rooms Occupied Tomorrow	Total number of deduct rooms reserved for tomorrow / Total Rooms in Hotel * 100
Rooms Occupied for the Next 7 Days	Total number of deduct rooms reserved starting tomorrow for 7 days
% Rooms Occupied for the Next 7 Days	Total number of deduct rooms reserved starting tomorrow for 7 days / Total Rooms in Hotel * 100
Rooms Occupied for the Next 31 Days	Total number of deduct rooms reserved starting tomorrow for 31 days
% Rooms Occupied for the Next 31 Days	(Total number of deduct rooms reserved starting tomorrow for 31 days) / (Total Rooms in Hotel) * 100
Rooms Occupied for the Next 365 Days	Total number of deduct rooms reserved starting tomorrow for 365 days
% Rooms Occupied for the Next 365 Days	Total number of deduct rooms reserved starting tomorrow for 365 days / Total Rooms in Hotel * 100
Projected Rooms Occupied for Current Month	Total number of deduct rooms reserved for the whole month
Projected % Rooms Occupied for Current Month	Total number of deduct rooms reserved for the whole month / Total Rooms in Hotel * 100
Projected Rooms Occupied for Current Year	Total number of deduct rooms reserved for the whole year
Projected % Rooms Occupied for Current Year	Total number of deduct rooms reserved for the whole year / Total Rooms in Hotel * 100

   b. **Item Name**: Item name is automatically populated, but can you can manually edit.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **Description**: Enter the description of the statistical item that needs to be printed on the Manager's Report. This description is what is displayed on the report output for the Item Type.

d. **Blank Rows**: Set the number of blank rows after this statistic.

e. **Print Line**: Check to generate a horizontal line after this statistic.

f. **Active**: When checked the statistical item is included in the report. Uncheck to remove the statistic.

4. In the Rooms Occupied section, select single or multiple options:

   a. **Plus Day Use**: Select to add Day Use Rooms that are occupied to the Item Type calculation selected. (Day Use Rooms are Reservations with 0 Nights.)

   b. **Plus No Shows**: Select to add No Show Rooms to the Item Type calculation selected.

   c. **Minus Comp.**: Select to subtract Comp Rooms from the Item Type calculation selected. (Comp Rooms are Reservations with a Rate Code that has the 'Complimentary' check box checked on the Rate Setup screen within Rate Code configuration).

   d. **Minus House**: Select to subtract House Use Rooms from the Item Type calculation selected. (House Rooms are Reservations with a Rate Code that has the 'House Use' check box checked on the Rate Setup screen within Rate Code configuration).

5. In the Total Rooms In Hotel, you can select the following options. This section allows for additional items to be added to the default calculations for the above Item Types.

   a. **Minus Out of Order Rooms**: Available when the **Room Management** > **Out of Order** control is set to Active, select to subtract the total number of OOO rooms at the property from the Item Type calculation selected.

   b. **Minus Out of Service Rooms**: Available when the**Room Management** > **Out of Order** control is set to Active, select to subtract the total number of OOS rooms at the property from the Item Type calculation selected.

6. In the Formula section, the area shows the Calculation/Definition of the Item Type that is selected and any additional Rooms Occupied and/or Total Rooms in Hotel options that are selected.

7. Click **Save**.

Deleting User Defined Statistics

1. From the **OPERA Cloud** menu, select **Reports**, select **Configure Reports**, and then **Definable Manager's Report**.

2. In the search results, select the statistic to update and click the vertical ellipsis and click **Delete**.

3. Click **Delete** and confirm the deletion.

Generating the Definable Manager's Report

You can test the changes made to the Manager's Report layout by generating a preview of the list of predefined statistics.

1. From the **OPERA Cloud** menu, select **Reports**, select **Configure Reports**, and then **Definable Manager's Report**.

2. On the Definable Manager's Report screen, click the vertical ellipsis and then click **Report**.

3. In the Report Destination pop-up, select **Preview**, **Email to Print**, **Email** or **Fax** option and click **Process**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Following is the list of predefined statistics that can be included in the Manager's Report.

Table 9-13 Definable Manager's Report - Item Descriptions

Item Description	Calculation
% Beds Occupied	Total Adults and Children In House divided by Total Beds, calculated using the Max. Occupancy field in Rooms Configuration for each occupied room, multiplied by 100.
% Individual Member Departures	Number of Rooms with a Departure Date equal to today, a Membership number attached to the reservation, with no block code attached to the reservation, divided by Number of Rooms with a Departure Date equal to today, multiplied by 100.
% Member Departures	Number of Adults and Children with a Departure Date equal to today, with a Membership number attached to the reservation, divided by Number of Rooms with a Departure Date equal to today multiplied by 100.
% Multiple Occupancy	Number of Rooms Occupied where total persons is greater than 1 / Number of Rooms Occupied , multiplied by 100. EG: (3/232) * 100 which is .0129 * 100 = 1.29%
% Occupancy for the Month	Total number of rooms reserved starting tomorrow for 1 calendar month, divided by Total Rooms in Hotel starting tomorrow for 1 calendar month, multiplied by 100.
% Occupancy for the Year	Total number of rooms reserved starting tomorrow for 1 calendar year, divided by Total Rooms in Hotel starting tomorrow for 1 calendar year, multiplied by 100.
% Occupancy Next 7 Days	Total number of deduct rooms reserved starting tomorrow for 7 days, divided by Total Rooms in Hotel starting tomorrow for 7 days, multiplied by 100
% Rooms Occupied	Rooms Occupied, divided by Total Rooms in Hotel, multiplied by 100.
% Rooms Occupied for the Next 31 Days	Total number of deduct rooms reserved starting tomorrow for 31 days, divided by Total Rooms in Hotel starting tomorrow for 31 days, multiplied by 100
% Rooms Occupied for the Next 365 Days	Total number of deduct rooms reserved starting tomorrow for 365 days, divided by Total Rooms in Hotel starting tomorrow for 365 days, multiplied by 100
% Rooms Occupied for Tomorrow	Number of Rooms Occupied tomorrow, divided by Total Rooms in Hotel, multiplied by 100.
% Rooms Occupied minus Comp	Rooms Occupied minus Comp, divided by Total Rooms in Hotel, multiplied by 100.
% Rooms Occupied minus Comp and House	Rooms Occupied minus Comp and House, divided by Total Rooms in Hotel, multiplied by 100.
% Rooms Occupied minus Comp and OOO	Rooms Occupied minus Comp, divided by Total Rooms in Hotel minus Out of Order, multiplied by 100.
% Rooms Occupied minus Comp, House, and OOO	Rooms Occupied minus Comp and House, divided by Total Rooms in Hotel minus Out of Order, multiplied by 100.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
% Rooms Occupied minus House	Rooms Occupied minus House, divided by Total Rooms in Hotel, multiplied by 100.
% Rooms Occupied minus House and OOO	Rooms Occupied minus House, divided by Total Rooms in Hotel minus Out of Order, multiplied by 100.
% Rooms Occupied minus OOO	Rooms Occupied, divided by Total Rooms in Hotel minus Out of Order, multiplied by 100.
% Rooms Occupied plus Day Use	Rooms Occupied plus Day Use minus House Use, divided by Total Rooms in Hotel minus Out of Order, multiplied by 100.
% Rooms Occupied plus Day Use and No Show	Rooms Occupied plus Day Use and No Show, divided by Total Rooms in Hotel, multiplied by 100.
% Rooms Occupied plus Day Use for the next 31 Days	Total number of deduct rooms reserved plus Day Use starting tomorrow for 31 days, divided by Total Rooms in Hotel starting tomorrow for 31 days, multiplied by 100.
ADR	Room Revenue, divided by Rooms Occupied.
ADR (Distributed)	Room Revenue, divided by Rooms Occupied. When an Advance Bill is associated with the reservation, revenue is distributed over the stay period in order to reflect actual revenue generated per day, rather than recording all revenue on the day the advance bill is generated.
ADR minus Comp	Room Revenue, divided by Rooms Occupied minus Comp rooms.
ADR (Distributed) minus Comp	Room Revenue, divided by Rooms Occupied minus Comp rooms. When an Advance Bill is associated with the reservation, revenue is distributed over the stay period in order to reflect actual revenue generated per day, rather than recording all revenue on the day the advance bill is generated.
ADR minus Comp and House	Room Revenue, divided by Rooms Occupied minus Comp and House rooms.
ADR (Distributed) minus Comp and House	Room Revenue, divided by Rooms Occupied minus Comp and House rooms. When an Advance Bill is associated with the reservation, revenue is distributed over the stay period in order to reflect actual revenue generated per day, rather than recording all revenue on the day the advance bill is generated.
ADR minus House	Room Revenue, divided by Rooms Occupied minus House rooms.
ADR (Distributed) minus House	Room Revenue, divided by Rooms Occupied minus House rooms. When an Advance Bill is associated with the reservation, revenue is distributed over the stay period in order to reflect actual revenue generated per day, rather than recording all revenue on the day the advance bill is generated.
ADR plus Day Use	Room Revenue, divided by Rooms Occupied plus Day Use.
Adults Free	Number of Tax Free Adults for Rooms In House. Field available based on parameter setting for 'Tax Free Guests'.
Arrival Persons	Number of Adults and Children with an Arrival Date equal to today.
Arrival Persons for Tomorrow	Number of Adults and Children with an Arrival Date equal to tomorrow.
Arrival Reservations	Number of all the reservations with an arrival date equal to today.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
Arrival Rooms	Number of Rooms with an Arrival Date equal to today. Only one reservation per room will be considered for this total.
Arrival Rooms for Tomorrow	Number of Rooms with an Arrival Date equal to tomorrow. Only one reservation per room will be considered for this total.
Available Rooms	Total Rooms in Hotel, minus Rooms Occupied.
Available Rooms minus OOO Rooms	Total Rooms in Hotel, minus Rooms Occupied, minus Out of Order Rooms.
Average Adults per Room minus House Use	Number of Adults divided by number of Rooms Occupied minus House Use Rooms (Index of Frequency 1).
Average Adults per Room	Number of Adults divided by number of Rooms Occupied (Index of Frequency 2).
Average Persons per Room minus House Use	Number of Adults and Children divided by number of Rooms Occupied minus House Use Rooms (Index of Frequency 3).
Average Persons per Room	Number of Adults and Children divided by number of Rooms Occupied (Index of Frequency 4).
Average Person Rate	Room Revenue, divided by number of Adults and Children.
Average Persons per Block Rooms	Adults and Children attached to the reservation with Reservation status of 'Checked In', divided by number of Rooms Occupied that have a Block Code attached.
Average Revenue per Block Rooms	Block Revenue, divided by Number of rooms that have a block code attached to the reservation with a reservation status of 'Checked In'.
Average Room Revenue per Block Rooms	Block Room Revenue, divided by Number of rooms that have a block code attached to the reservation with a reservation status of 'Checked In'.
Birthdays in House	Number of Rooms with the Birthday field from the profile equal to today.
Block Member Rooms	Total number of rooms today for those reservations which have a membership number of the default membership type attached to the reservation and have a block code attached to the reservation. If no default membership type is defined than any membership attached to the reservation will be considered.
Block Member % of Rooms	Total number of rooms today for those reservations which have a membership number of the default membership type attached to the reservation and have a block code attached to the reservation, divided by the number of total rooms today and multiplied by 100. If no default membership type is defined than any membership attached to the reservation will be considered.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
Block Member Average Room Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue' and the Transaction Code Type is 'Lodging', for reservations that have a membership number of the default membership type attached to the reservation and do not have a block code attached to the reservation divided by the number of rooms today for those same reservations. If no default membership type is defined then any membership attached to the reservation will be considered.
Block Member Average Total Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue', for reservations that have a membership number of the default membership type attached to the reservation and do not have a block code attached to the reservation divided by the number of rooms today for those same reservations. If no default membership type is defined then any membership attached to the reservation will be considered.
Block Member Room Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue' and the Transaction Code Type is 'Lodging', for reservations that have a membership number of the default membership type attached to the reservation and have a block code attached to the reservation. If no default membership type is defined then any membership attached to the reservation will be considered.
Block Member Total Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue', for reservations that have a membership number of the default membership type attached to the reservation and a block code attached to the reservation. If no default membership type is defined then any membership attached to the reservation will be considered.
Block Member % of Room Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue' and the Transaction Code Type is 'Lodging', for reservations that have a membership number of the default membership type attached to the reservation and a block code attached to the reservation, divided by the room revenue for all reservations and multiplied by 100. If no default membership type is defined then any membership attached to the reservation will be considered.
Block Member % of Total Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue', for reservations that have a membership number of the default membership type attached to the reservation and a block code attached to the reservation, divided by the total revenue for all reservations and multiplied by 100. If no default membership type is defined then any membership attached to the reservation will be considered.
Block Member Average Length of Stay	Total number of nights for reservations that have a member number of the default membership type attached to the reservation and a block code attached to the reservation, divided by the count of those same reservations. If no default membership type is defined then any membership attached to the reservation will be considered.
Block Persons in House	Number of Adults and Children for Rooms In-House with a Block code attached to the reservation.
Block Revenue	Total amount of postings today where the Transaction Code is marked as 'Revenue' for reservations that have a Block Code attached.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
Block Room Revenue	Total amount of postings today where the Transaction Code is marked as 'Revenue' and a Transaction Code Type is 'Lodging' for reservations that have a Block Code attached.
Block Rooms in House	Number of Rooms that have a block code attached to the reservation.
Blocks in House	Number of Blocks where today's date falls between the start date and end date.
Cancellations Made Today	Number of Cancellations that were taken today for any date.
Canceled Reservations for Today	Number of Reservations that were canceled with an arrival date equal to today.
Canceled Rooms for Today	Number of rooms that were canceled with an arrival date equal to today
Children Free	Number of Tax Free Children for Rooms In House. Field available based on parameter setting for 'Tax Free Guests'.
Clean Rooms	Number of Rooms that have a Housekeeping Status of 'CL'.
Company Revenue	Total amount of postings today where the transaction code is marked as 'Revenue' for reservations that have a company profile attached
Company Room Revenue	Total amount of postings today where the transaction code is marked as 'Revenue' and a transaction code type is 'Lodging' for reservations that have a company profile attached
Company Rooms in House	Number of Rooms that have a Company profile attached to the reservation.
Complimentary Adults	Total no of adults on complimentary reservations.
Complimentary Children	Total no of children on complimentary reservations.
Complimentary Persons	Adults + Children
Complimentary Rooms	Number of Rooms In-House that have a rate code marked as Complimentary.
Day Use Adults	Total no of adults on Day use reservations.
Day Use Children	Total no of children on Day use reservations.
Day Use Persons	Adults + Children
Day Use Reservations	Number of reservations where the arrival date and departure date are equal to today.
Day Use Rooms	Number of Reservations where the arrival date and departure date are equal to today.
Deducted Arrivals	Number of Rooms with an Arrival Date equal to today, and the reservation type is equal to deduct.
Departure Persons	Number of Adults and Children with a Departure Date equal to today.
Departure Persons for Tomorrow	Number of Adults and Children with a Departure Date equal to tomorrow.
Departure Rooms	Number of Rooms with a Departure Date equal to today. Only one reservation per room will be considered for this total.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
Departure Rooms for Tomorrow	Number of Rooms with a Departure Date equal to tomorrow. Only one reservation per room will be considered for this total.
Dirty Rooms	Number of Rooms that have a Housekeeping Status of 'DI'.
Doubles as Singles	Number of Rooms where each room has Occupancy Max greater than 1, and Number of Persons In-House is less than or equal to 1.
Early Departure Persons	Number of Adults and Children for checked out rooms with an original departure date greater than today.
Early Departure Rooms	Number of checked out rooms with an original departure date greater than today.
Extended Stay Persons	Number of Adults and Children In-House where an original departure date equal to today.
Extended Stay Rooms	Number of Rooms In-House where an original departure date equal to today.
Food and Beverage Revenue	Total amount of all postings today where the Transaction Code is marked as 'Revenue' and the Transaction Type is 'Food and Beverage'.
Food and Beverage Revenue (Distributed)	Total amount of all postings today where the Transaction Code is marked as 'Revenue' and the Transaction Type is 'Food and Beverage'. When an Advance Bill is associated with the reservation, revenue is distributed over the stay period in order to reflect actual revenue generated per day, rather than recording all revenue on the day the advance bill is generated.
Group Rooms in House	Number of Rooms that have a Group profile attached to the reservation.
House Use Adults	Total no of adults on House use reservations.
House Use Children	Total no of children on House use reservations.
House Use Persons	Adults + Children
House Use Rooms	Number of Rooms In-House that have a rate code marked as House Use.
In-House Adults	Number of Adults for Rooms In-House.
In-House Children	Number of Adults for Rooms In-House.
Individual Departure Persons	Number of adults and children divided by number of room occupied (include house use).
Individual Departure Rooms	Number of Rooms with a Departure Date equal to today and no block code attached to the reservation.
Individual Member Departure Persons	Number of Adults and Children with a Departure Date equal to today, a Membership number attached to the reservation, with no block code attached to the reservation.
Individual Member Departure Rooms	Number of Rooms with a Departure Date equal to today, a Membership number attached to the reservation, with no block code attached to the reservation.
Individual Member Rooms	Total number of rooms today for those reservations which have a membership number of the default membership type attached to the reservation and do not have a block code attached to the reservation. If no default membership type is defined than any membership attached to the reservation will be considered.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
Individual Member % of Rooms	Total number of rooms today for those reservations which have a membership number of the default membership type attached to the reservation and do not have a block code attached to the reservation, divided by the number of total rooms today and multiplied by 100. If no default membership type is defined than any membership attached to the reservation will be considered.
Individual Member Average Room Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue' and the Transaction Code Type is 'Lodging', for reservations that have a membership number of the default membership type attached to the reservation and do not have a block code attached to the reservation divided by the number of rooms today for those same reservations. If no default membership type is defined then any membership attached to the reservation will be considered.
Individual Member Average Total Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue', for reservations that have a membership number of the default membership type attached to the reservation and do not have a block code attached to the reservation divided by the number of rooms today for those same reservations. If no default membership type is defined then any membership attached to the reservation will be considered.
Individual Member Room Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue' and the Transaction Code Type is 'Lodging', for reservations that have a membership number of the default membership type attached to the reservation and do not have a block code attached to the reservation. If no default membership type is defined then any membership attached to the reservation will be considered.
Individual Member Total Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue', for reservations that have a membership number of the default membership type attached to the reservation and do not have a block code attached to the reservation. If no default membership type is defined then any membership attached to the reservation will be considered.
Individual Member % of Room Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue' and the Transaction Code Type is 'Lodging', for reservations that have a membership number of the default membership type attached to the reservation and do not have a block code attached to the reservation, divided by the room revenue for all reservations and multiplied by 100. If no default membership type is defined then any membership attached to the reservation will be considered.
Individual Member % of Total Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue' for reservations that have a membership number of the default membership type attached to the reservation do not have a block code attached to the reservation, divided by the total revenue for all reservations and multiplied by 100. If no default membership type is defined then any membership attached to the reservation will be considered.
Individual Member Average Length of Stay	Total number of nights for reservations that have a membership number of the default membership type attached to the reservation and no block code attached to the reservation, divided by the count of those same reservations. If no default membership type is defined then any membership attached to the reservation will be considered.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
Individual Persons in House	Number of Adults and Children for Rooms In-House with no Block code attached to the reservation.
Individual Revenue	Total amount of postings today where the Transaction Code is marked as 'Revenue' for reservations that do not have a Block Code attached.
Individual Room Revenue	Total amount of postings today where the Transaction Code is marked as 'Revenue' and a Transaction Code Type is 'Lodging' for reservations that do not have a Block Code attached.
Individual Rooms in House	Number of Rooms that do not have a block code attached to the reservation.
Inspected Rooms	Number of Rooms that have a Housekeeping Status of 'IP'. (Available when the Rooms Management > Inspected application function is set to Y.)
Late Cancellations for Today	Number of Reservations that were canceled today, with an arrival date equal to today.
Late Room Cancellations for Today	Number of rooms that were canceled today, with an arrival date equal to today.
Maximum Revenue	Amount of Brochure Rate on each room.
Maximum Revenue %	Amount of Room Revenue, divided by Brochure Rate on each room, multiplied by 100.
Maximum Revenue % per Rooms Occupied	Amount of Room Revenue, divided by Brochure Rate on each room listed as a Front Office status of 'OCC', multiplied by 100.
Maximum Revenue for Rooms Occupied	Amount of Brochure Rate on each room, with a Front Office status of 'OCC'.
Member Departure Persons	Number of Adults and Children with a Departure Date equal to today and a Membership number attached to the reservation.
Member Departure Rooms	Number of Rooms with a Departure Date equal to today and a Membership number attached to the reservation.
Member persons in House	Number of Adults and Children for Rooms In-House with a Membership Number attached to the reservation.
Member Revenue	Total amount of postings today where the Transaction Code is marked as 'Revenue' for reservations that have a Membership Number attached to the reservation.
Member Room Revenue	Total amount of postings today, where the Transaction Code is marked as 'Revenue' and a Transaction Code Type is 'Lodging', for reservations that have a Membership Number attached to the reservation.
No Show Extended Persons	Number of Persons Arrival extended to next day due to No Show
No Show Extended Reservations	Number of Reservations Arrival extended to next day

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
No Show Extended Rooms	Number of Rooms Arrival extended to next day due to No Show. This number calculates the number of physical rooms that had a rolling no show reservation. If a component room reservation is included in this calculation, then the actual number of rooms that make up the component room will be included in the calculation. For example, if there are 3 rooms that make up the component room, then this reservation would be represented by 3, not 1.
No Show Persons	Number of Adults and Children with a Reservation Status of No Show.
No Show Reservations	Number of reservations with a reservation status of No Show
No Show Rooms	Number of Rooms with a Reservation Status of No Show.
Non-Deducted Arrivals	Number of Rooms with an Arrival Date equal to today, and the reservation type is equal to non-deduct.
Other Revenue	Total amount of all postings today where the Transaction Code is marked as 'Revenue' and the Transaction Code Type is not 'Lodging', 'Food and Beverage', 'Tax', or 'Non Hotel Supplies'.
Other Revenue (Distributed)	Total amount of all postings today where the Transaction Code is marked as 'Revenue' and the Transaction Code Type is not 'Lodging', 'Food and Beverage', 'Tax', or 'Non Hotel Supplies'. When an Advance Bill is associated with the reservation, revenue is distributed over the stay period in order to reflect actual revenue generated per day, rather than recording all revenue on the day the advance bill is generated.
Out of Order rooms	Number of Rooms marked as Out of Order for today.
Out of Service Rooms	Number of Rooms marked as Out of Service for today. (Available when the Rooms Management > Out of Service application function is set to Y.)
Payments	Total amount of postings today that have a Transaction Code linked to a Group of 'Payment'. This amount includes passerby direct bill payments.
Person Rate Bucket 1	Number of Persons in House Belonging to Rate Bucket 1
Person Rate Bucket 2	Number of Persons in House Belonging to Rate Bucket 2
Person Rate Bucket 3	Number of Persons in House Belonging to Rate Bucket 3
Person Rate Bucket 4	Number of Persons in House Belonging to Rate Bucket 4
Person Rate Bucket 5	Number of Persons in House Belonging to Rate Bucket 5
Proj. Rooms Occ. + DU and NS for current Month	Total number of deduct rooms plus Day Use and No Show reserved for the whole month.
Proj. Rooms Occ. + DU and NS for current Year	Total number of deduct rooms reserved plus Day Use and No Show for the whole year.
Proj. % Rooms Occ. DU and NS for current Month	Total number of deduct rooms reserved plus Day Use and No Show for the whole month, divided by Total Rooms in Hotel for the whole month, multiplied by 100.
Proj. % Rooms Occ. DU and NS for current Year	Total number of deduct rooms reserved plus Day Use and No Show for the whole year, divided by Total Rooms in Hotel for the whole year, multiplied by 100

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
Projected % Rooms Occupied for Current Month	Total number of deduct rooms reserved for the whole month, divided by Total Rooms in Hotel for the whole month, multiplied by 100.
Projected % Rooms Occupied for Current Year	Total number of deduct rooms reserved for the whole year, divided by Total Rooms in Hotel for the whole year, multiplied by 100.
Projected Rooms Occupied for Current Month	Total number of deduct rooms reserved for the whole month.
Projected Rooms Occupied for Current Year	Total number of deduct rooms reserved for the whole year.
Repeat Guests Persons	Number of guests in-house for guests that have at least one prior check-out
Repeat Guests Revenue	Total amount of postings today where the transaction code is marked as 'Revenue' for reservations where the guest has at least one prior check-out.
Repeat Guests Room Revenue	Total amount of postings today where the transaction code is marked as 'Revenue' and a transaction code Type is 'Lodging' for reservations where the guest has at least one prior check-out.
Repeat Guests Rooms Occupied	Number of room occupied by guests that have at least one prior check-out.
Reservations Made Today	Number of Reservations that were created today for any date. Pseudo Room reservations are not included.
Revenue per Available Room	Room Revenue, divided by Available Rooms.
Revenue per Available Room minus OOO	Room Revenue, divided by Available Rooms minus OOO Rooms.
Room Nights Reserved Today	Total number of nights from all Reservations Made Today. Pseudo Room reservations are not included.
Room Revenue	Total amount of all postings today where the Transaction Code is marked as 'Revenue' and the Transaction Type is 'Lodging'. **Note**: An exception exists for this column that if a transaction was moved from a non-PM Room to a PM Room, then the revenue is displayed under the non-PM Room (originating room for the reservation). If the transaction is moved from a PM Room to another PM Room, then the transaction will be displayed under the Room Class of the PM Room the transaction was moved to.
Room Revenue (Distributed)	Total amount of all postings today where the Transaction Code is marked as 'Revenue' and the Transaction Type is 'Lodging'. When an Advance Bill is associated with the reservation, revenue is distributed over the stay period in order to reflect actual revenue generated per day, rather than recording all revenue on the day the advance bill is generated.
Rooms Cancelled Today	Number of rooms that were cancelled today for any date
Rooms Occupied	Number of rooms In-House with a Front Office status of 'OCC'.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 9-13 (Cont.) Definable Manager's Report - Item Descriptions

Item Description	Calculation
Rooms Occupied including Owner and Auth. User Rooms	Number of Total rooms occupied plus occupied Owner Rooms (Rental Program), plus occupied Auth. Users (Rental Program), plus occupied Owner Rooms, plus occupied Auth. Users Rooms.
Rooms Occupied for Next 7 Days	Total number of deduct rooms reserved starting tomorrow for 7 days.
Rooms Occupied minus Comp	Number of Rooms In-House with a Front Office status of 'OCC', minus any Complimentary Rooms.
Rooms Occupied minus Comp and House Use	Number of Rooms In-House with a Front Office status of 'OCC', minus any Complimentary Rooms and House Rooms.
Rooms Occupied minus House Use	Number of Rooms In-House with a Front Office status of 'OCC', minus any House Rooms.
Rooms Occupied plus Day Use and No Show	Number of Rooms In-House with a Front Office status of 'OCC', plus any Dayuse Rooms and No-Show Rooms.
Rooms Occupied plus Day Use for the next 7 Days	Total number of deduct rooms reserved plus Day Use starting tomorrow for 7 days.
Source Rooms in House	Number of Rooms that have a Source profile attached to the reservation.
Today's Demand	Number of room Turnaways for today's date plus Number of Rooms Occupied In-House today.
Total In-House Persons	Number of Adults and Children for Rooms In-House.
Total Revenue	Total amount of Room Revenue, Food and Beverage Revenue and Other Revenue.
Total Revenue (Distributed)	Total amount of Room Revenue, Food and Beverage Revenue and Other Revenue. When an Advance Bill is associated with the reservation, revenue is distributed over the stay period in order to reflect actual revenue generated per day, rather than recording all revenue on the day the advance bill is generated.
Total Revenue per Person	Total amount of Room Revenue, Food and Beverage Revenue and Other Revenue, divided by Total Adults and Children In-House.
Total Rooms in Hotel	Sum of all rooms defined for the property.
Total Rooms in Hotel minus OOO Rooms	Number of Rooms in the Hotel minus Out of Order Rooms.
Travel Agent Revenue	Total amount of postings today where the transaction code is marked as 'Revenue' for reservations that have a travel agent profile attached
Travel Agent Room Revenue	Total amount of postings today where the transaction code is marked as 'Revenue' and a transaction code Type is 'Lodging' for reservations that have a travel agent profile attached
Travel Agent Rooms in House	Number of Rooms that have a Travel Agent profile attached to the reservation.
Turnaways	Number of Turnaways with an arrival date of today. (Available when the Turnaways Functionality OPERA Control is active).

Copying Reports to Multiple Properties

When the **Multi Property** OPERA Control is active, you can copy reports and stationery templates created one in property to other properties from a hub location.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> If the report(s) already exist in the destination property the copy process will fail and an error displayed.

Watch Video

Copying Reports to Other Properties

1. From the **OPERA Cloud** menu, select **Reports**, and then select **Manage Reports**.
2. Select or confirm the Property, enter optional search criteria, and click **Search**.
3. Select the check box for report(s) to be copied and click **Copy to Property**.
4. On the Copy to Property screen, the selected report(s) are listed.
   a. **Property**: Select the destination properties and click **Select**.
5. Click **Copy Report(s)**.

> **Note**
>
> If the report(s) already exist in the destination property the copy process will fail and an error displayed.

Managing QR Code Definitions

Prerequisites for Managing QR Code Definitions

QR (Quick Response) Codes are a type of matrix barcode; a barcode being a machine-readable optical label. A QR code consists of black squares arranged in a square grid on a white background and can be read by devices such as a camera on tablet or smartphone. The amount of data that can be stored in the QR code depends on the version (1, ..., 40, indicating the overall dimensions of the symbol, i.e. 4 × version number + 17 dots on each side), and the error correction level. You can setup QR codes to convert text and selected data elements (merge codes) into a QR code image for output in a selected location in a stationery template. For more information, see About Stationery Editor.

Table 9-14 QR Code Versions

QR Code Version	Modules	Max Alphanumeric Characters Held
1	21x21	25
2	25x25	47
3	29x29	77
4	33x3	114
5	37x37	154

Adding QR Code Definitions

1. From the **OPERA Cloud** menu, select **Reports**, select **Configure Reports**, and then select **QR Code Configuration**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Click **New** and complete the following:
    a. **Property**: Enter or select the property
    b. **Code**: Enter a code for the QR code. This code is referenced in the customized RTF template, to generate the QR code image at runtime.
    c. **Description**: Enter a description for the QR code.
    d. **Stationery (Template) Type**: Select a stationery template type from the list
        i. **Stationery (Template) Section**: Select a template section from the list. List is based on the template type selected.
    e. **QR Code Version**: Select a version from the list.
    f. **QR Code Quiet Zone**: Enter a value for the margin on left and right side. Default is 6.
    g. **QR Code Size**: Select a QR code size from the list.
        i. Select **Custom** to define a size.
            i. **QR Code Dimensions**: Enter a value to specify the custom size.
    h. **Add Logo to QR Code**: Select check box to add a logo overlaid on the QR code.
        i. **QR Code Error Correction**: Select a value from the list.
        ii. Image.
            i. Click **Choose File** to select and upload an image from your workstation.
            ii. To replace the selected image, click **Replace File** then select and upload an image.
            iii. To remove the selected image, click **Clear**.
    i. QR Code Configuration.
        i. For more information, see Using the Rich Text Editor.
        ii. Click **Merge Codes** to open a panel listing all merge codes that can be added to the QR Code definition. The merge codes available are based on the **Stationery (Template) Type** selected.
    j. Click **Preview** to generate a test QR Code.
    k. Click **Save**.

Editing QR Code Definitions

1. From the **OPERA Cloud** menu, select **Reports**, select **Configure Reports**, and then select **QR Code Configuration**.
2. Enter search criteria, then click **Search**
3. From search results, select the QR Code definition, then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Update the configuration. For more information, see Using the Rich Text Editor
    b. Add Logo to QR Code.
        i. To replace the selected image, click **Replace File** then select and upload an image.
        ii. To remove the selected image, click **Clear**.
    c. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting QR Code Definitions

1. From the **OPERA Cloud** menu, select **Reports**, select **Configure Reports**, and then select **QR Code Configuration**.
2. Enter search criteria, then click **Search**
3. From search results, select the QR Code definition, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Accessing Reporting And Analytics

You can launch **Reporting And Analytics** in a separate browser tab.

1. From the Reports menu, select **Reporting And Analytics**.
2. Enter your R&A credentials.

For more information, see https://docs.oracle.com/en/industries/hospitality/opera-reporting-analytics/.

Part II
OPERA Cloud Mobile Application

This part of the OPERA Cloud Help system contains information on working with the OPERA Cloud Mobile Application.

Copyright © 2016, 2025, Oracle and/or its affiliates.

10

Overview

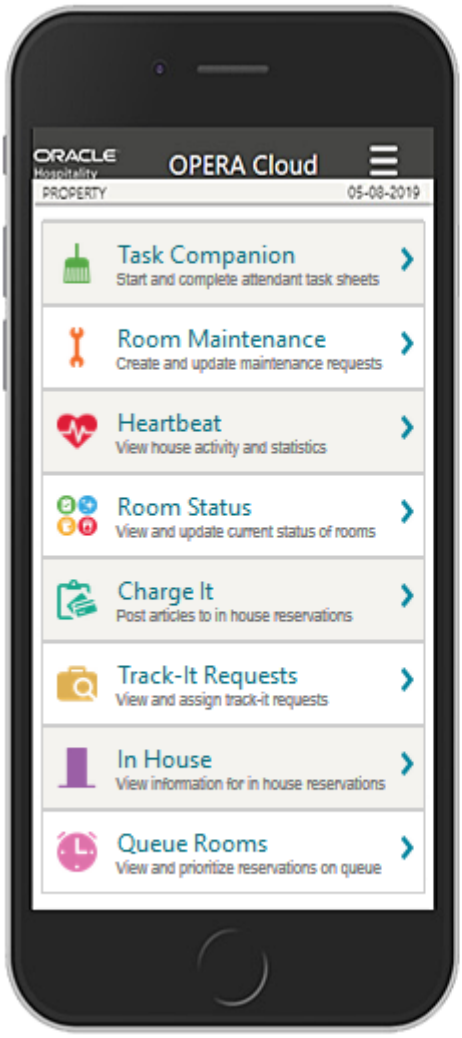
OPERA Cloud Mobile extends various OPERA Cloud features to smartphone devices. Based on the active OPERA Controls, you can view property activity and statistics, view in-house reservation information, and post article charges to in-house reservations. You can also use the housekeeping task companion for your assigned task sheet, update room status, view rooms on queue, manage room maintenance tasks and Track-It requests.

> **Note**
>
> Two finger scrolling is required in the screens with inner and out scrollbar such as In House, Post It, Room Status search results.

The OPERA Cloud mobile web-application is accessible through a browser app on any smartphone through the `/mobile` end-point for your OPERA Cloud URL. For example: `https://operacloud.oracleindustry.com/OPERA9/opera/mobile`.

> **Note**
>
> Idle session timeout is 60 minutes.

Copyright © 2016, 2025, Oracle and/or its affiliates.



Key Features:

Task Companion
Start and complete attendant task sheets.

Room Maintenance
Create and update maintenance requests.

Heartbeat
View house activity and statistics.

Room Status
View and update current status of rooms.

Charge It
Post articles to in house reservations.

Track-It Requests
View and assign track-it requests.

In House
View information for in house reservations.

Queue Rooms
View and prioritize reservations on queue.

Hamburger Menu

Find the following menu items within the hamburger (three-line icon ☰) menu at the top right of the screen:

- **Change Settings**: Select the language to use in the application, and then tap **Save**.
- **Change Location**: For multi-property operations, you can search and select another property location. From the search results, select the Hub or Property and then tap **Select**.

Prerequisites for OPERA Cloud Mobile Application

This chapter of the OPERA Cloud User Guide lists the prerequisites for OPERA Cloud Mobile Application menu.

Prerequisites for PWA - Mobile Task Companion

OPERA Controls

Group: Room Management

Task Companion (Housekeeping)

Prerequisites for Mobile Task Companion

The Task Companion replaces the need to generate and distribute task sheet reports by providing real-time, interactive housekeeping task management using a mobile device. Attendants can view reservation details, including reservation traces (based on departments selected in the **Housekeeping Traces** OPERA Control) and send notifications to request assistance. When the **Guest Service Status** OPERA Control is active attendants can also set **Do Not Disturb** status on rooms. Room Attendants can indicate when they are on a break and this status is indicated in the Task Sheet Overview screen (Summary & Detail) and the Task Sheet presentation screen.

When the **Housekeeping Task Scheduling** OPERA Control is active, multiple tasks are combined into a single task sheet; select from the list of tasks.

When the **Access All Task Assignments in Task Companion** task is not assigned to your role, you can only access the task sheet assigned. Housekeeping supervisors can be assigned the **Access All Task Assignments in Task Companion** task to view task sheets for all room attendants.

Using The Task Companion

1. Tap to select the assigned task sheet number. For easier identification and selection, you can indicate the assigned attendant for each task sheet.

   On the summary page, the following information appears: the total count of allocated rooms, a count of rooms per room status, a list of the room numbers assigned to the task sheet, and task sheet instructions if applicable.

   > **Note**
   >
   > Rooms listed in the task sheet are sequenced according to their auto-priority.

2. Tap **Start** to begin the task. The following options appear for the first room:
   a. **Start**: Tap to begin the task for the room.
   b. **Skip**: Tap to skip the room.
   c. **View Reservations**: Tap to view details of arrival, stay over, or departure reservations.
   d. **View My Room List**: Tap to view a list of rooms assigned to the task sheet.

      > **Note**
      >
      > If the room is sold as a component room then an indicator with component suite & room details display (Available when the **Component Room** OPERA Control is active). Traces for departments selected in the **Housekeeping Traces** OPERA Control are available.

   e. **View Traces**: Tap to create, view, or update traces for the room reservations (Available when the **Reservation Traces** OPERA Control is active). Traces for departments selected in the**Housekeeping Traces** OPERA Control are available.
      i. **Resolve trace**: Tap to resolve a trace.

Copyright © 2016, 2025, Oracle and/or its affiliates.

ii. **Create trace**: Tap to create a trace by selecting a **Department**, selecting the **Date Range**, entering the message into the **Trace Text** field, and then tapping **Save**.

f. **Do not Disturb**: Tap to identify a room as DND. The room is skipped and the next room appears (Available when the **Guest Service Status** OPERA Control is active).

g. **Request Assistance**: Tap to send notifications to other users that assistance is required.

i. Select from **General** or **Location** notifications.

> **Note**
>
> The **Request Assistance** action only sends a notification to users assigned a role with the **Receive Task Companion General Assistance Notifications** and/or **Receive Task Companion Location Assistance Notifications** tasks granted.

h. **On-break**: Tap to pause a task and set its status as **on-break**. This status is indicated in the Housekeeping Attendant Console.

3. When **Start** is selected, the following specific room details appear:

- Preferred service time
- Room specific task instructions

a. **Maintenance Requests**: Tap to create, view, or update maintenance requests for the room (Available when the **Maintenance** OPERA Control is active). For more information, see Room Maintenance .

b. **Request Assistance**:Tap to send notifications to other users that assistance is required. Select from the **General** or **Location** notification options.

> **Note**
>
> The **Request Assistance** action only sends a notification to users assigned a role with the **Receive Task Companion General Assistance Notifications** and/or **Receive Task Companion Location Assistance Notifications** tasks granted.

c. **View Reservations**: Tap to view the details of arrival, stay over, or departure reservations.

d. **View Traces**: Tap to create, view, or update traces for the room reservations. Traces for departments selected in the **Housekeeping Traces** OPERA Control are available.

e. **Resolve Trace**: Tap to resolve a trace.

f. **Create Trace**: Tap to create a trace by selecting a **Department**, selecting the **date range**, entering the message into the **Trace Text** field, and then tapping **Save**.

g. **Room Status**: Once the task is complete select a room status from the options available. For more information, see Room Status.

h. **Housekeeping Status**: Update the housekeeping status (to vacant or occupied). These housekeeping status options are used to report a discrepancy between housekeeping status and the front office status of the room; resulting in a Skip or Sleep discrepancy. (Available when the **Discrepant Rooms** OPERA Controls is active)

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Depending on the **Task Companion Timer** setting in OPERA Controls, a time counter might increment or decrement during completion of the task.

i. **Finish this room**: Tap to complete the task, close the page and begin the next room in sequence.

> **Note**
>
> The room no longer shows in the room list since the task has been completed and the Task Companion advances to the task for the next room.

Room Maintenance

Prerequisites for Room Maintenance

Room Maintenance enables you to record, view, or resolve maintenance requests for rooms, such as changing a light bulb or repairing a faulty lock, air conditioning unit, or leaky faucet. You can assign maintenance requests to staff according to a staff member's skills and/or qualifications.

Watch Video

Adding a Maintenance Request

1. Tap to create a maintenance request.
2. Search for and select a **room**.
3. Select a **reason code** from the list.
4. Enter additional remarks.
5. To assign the request to a specific user, search for and select the user.
6. Tap **Create Maintenance Request** to save the request and close the page.

Searching for Maintenance Requests

1. Use the search fields to filter and view existing maintenance requests by entering search criteria and tapping **Search**.

> **Note**
>
> The **Show** field is populated with the value "Unresolved" by default.

2. Tap the **Show** field and select **Resolved** to view resolved maintenance requests. Select **ALL** to list both resolved and unresolved maintenance requests.
3. Tap **Search** to view results.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> **My (Assigned) Requests** appear by default in the search results, listing all maintenance tasks assigned to you.

4. To view all other requests, change your selection to **All Requests** or **Unassigned Requests**.

Updating Maintenance Requests

1. Tap a maintenance request to open, view, or update its details.
2. Tap the **User** field to search for and assign a user to the task.
3. Update the **Reason** and **Remarks** as needed.
4. Tap **Save** to save updates to the request.
5. Tap **Delete** to delete the request.

Resolving Maintenance Requests

1. Tap a maintenance request to open, view, or update its details.
2. Tap **Resolve** to update the status to resolved and close the page.

Heartbeat

You can use Heartbeat to view real-time statistics for your property.

Tap **Heartbeat** and select from the following options:

- **Activity** — Select to view arrivals, in-house, departure, and day-use room counts for today (current date), month to current date, and year to current date.
- **Room Status** — Select to view a summary of room status for occupied, vacant, and assigned rooms. View the number of rooms on queue and view any discrepant rooms.
- **60 Minutes** — Select to view activity in the past 60 minutes: Arrivals, Departures, Cleaned, and Inspected Rooms.
- **Comp / House Use** — Select to view a count of Arrival, Inhouse, and Departure Rooms identified for house use and complimentary purposes.
- **Summary** — Select to view Rooms Sold, Average Rate, Total Revenue, and RevPAR for today (current date), month to current date, and year to current date.

Room Status

Prerequisites for Room Status

Use Room Status to update the status of a specific room (for example, clean to inspected). When the **Discrepant Room** OPERA Control is active. you can also update the housekeeping status to identify a Skip or Sleep discrepant room. For more information, see Managing Room Discrepancies.

Updating Room Status

1. Enter search criteria and tap **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Tap the room you want to update.
3. Swipe from left to right to set a vacant room to Out of Order / Out of Service, Prioritize or change the Housekeeping Status.
4. Swipe from left to right to update an Out of Order / Out of Service room by taping **Manage**.
   a. Tap **Prioritize** or **Housekeeping Status (Occupied / Vacant)** to update the room.
5. Select a new room status for the room.
   a. **Inspected (IP)** : An optional status to indicate a clean room has been inspected by a supervisor (Available when the **Inspected Status** OPERA Control is active).
   b. **Clean (CL)** : Indicates the room has been serviced and is clean.
   c. **Pickup (PU)** : An optional status to indicate a minimum “touch-up" housekeeping service is required. This might occur if the room is occupied for only a few minutes and only needs refreshing (available when the **Pickup Status** OPERA Control is active).
   d. **Dirty (DI)** : Indicates the room is dirty and requires a cleaning service.
6. Update the housekeeping status to report a room discrepancy.
   a. An occupied room set to a **Vacant** status registers a skip discrepancy.
   b. A vacant room set to an **Occupied** status registers a sleep discrepancy.
7. Tap **<** to return to the search results.

Post it

Prerequisites for Post It

Post it enables you to post articles, such as mini bar items, to in-house reservation accounts.

To use Post it, you add items to a shopping cart and then post the balance of the cart to a reservation account.

> **Note**
>
> User role(s) must be granted **Charge to Room (Settlement)** task.

> **Note**
>
> Your user profile must be assigned a cashier ID to access Post It. For more information, see Managing Users.

Using Post it

1. Perform a search for a reservation by entering a **Name** or a **Room**.
2. Tap to select a reservation from the search results.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Tap items to post to the cart. You can tap the same item multiple times to add multiple quantities of the item.
4. To delete an item, tap **View Cart** and then tap the **X** next to the item you want to remove from the cart.
5. Tap **Post to Room** to post the cart balance to the reservation account. A confirmation message appears informing you the charges have been successfully posted to the room.
6. Tap **<** to return back to the search page.

Track-It Requests

Prerequisites for Track-It Requests

Track It enables you to manage the storage and delivery of guest luggage, parcels, vehicles (valet), and lost items.

If related to an arrival, in-house, or departure reservation, Track-It tickets are optionally linked to a reservation.

In Track It, a list of open Track-It requests appear, but only assigned tickets appear by default via the My Requests search filter.

Using Track It

1. Tap **Unassigned** to view all unassigned requests.
2. Tap **All Requests** to view both assigned and unassigned requests.
3. To view a list of open Track-It requests for each group, toggle between **Parcel**, **Valet**, **Baggage** (Luggage), and **Lost** groups.
4. Tap any request in the search results to view and manage the Track-It request details.

Managing a Track-It Request

Both the Track It request details and the linked reservation (if a reservation is linked) appear.

1. Tap **Action** and select the appropriate action from the list to update the status of the request.
2. To close the request, tap **Action** and select an appropriate **Action** from the list to close the request (for example, select **DONE**, **DELIVERED**, or **COMPLETE**).

In House

In House enables you to view the primary details of in house reservations.

Viewing In House Reservations

1. Select **In House**.
2. Enter a **Name** or **Room** and tap **Search**.

> **Note**
>
> Entering no criteria in the search fields results in a list of all in-house reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Tap the reservation in the search results to view the details.
4. Tap **<** to return to the search results.

Queue Rooms

Prerequisites for Queue Rooms

Use Queue Rooms to view and manage Arrival rooms on queue. The number of rooms on queue and the current and average wait times appear. The Room Type section lists the number of rooms on queue per room type and shows a count of rooms in each room status.

Using Queue Rooms

1. Tap **View Reservation on Queue** to view a list of reservations.
2. Tap any reservation to view its reservation details, including the assigned room.
3. Tap **Prioritize** to set a reservation as a top (number one) priority.
4. Tap **Remove from Queue** to remove the reservation from the queue status.
5. Tap **<** to return to the results page.

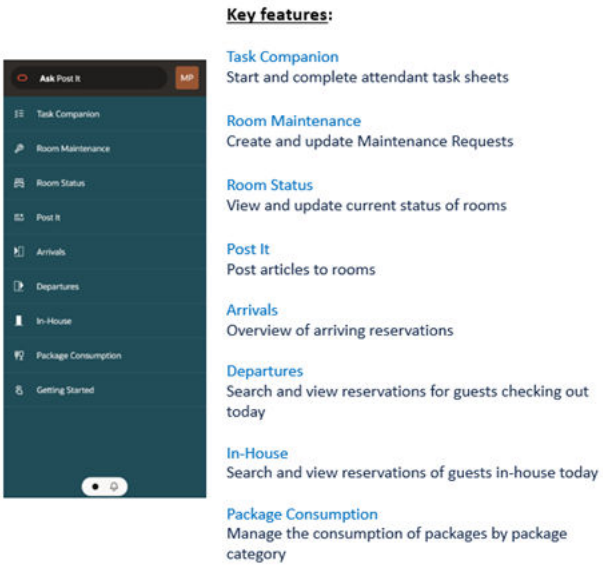
Overview

OPERA Cloud Tasks - OPERA Cloud Mobile PWA

OPERA Cloud Mobile extends various OPERA Cloud features to mobile devices. Based on the active OPERA Controls, you can use the housekeeping task companion for your assigned task sheet, update room status, post articles to rooms and manage room maintenance tasks.

Key Features

Copyright © 2016, 2025, Oracle and/or its affiliates.



Ask Oracle Menu

- OPERA Cloud modules are available according to active OPERA Controls and tasks assigned to your roles.
- An **Ask Oracle** button is available in the application bar to return you to the home page from any module.
- A button with your user initials displays in the top right corner of the Ask Oracle menu providing access to options such as Change Language, Change Location, Change Pin and Sign out, and others.
- Notifications can be viewed when swiping right or clicking on the bell icon at the bottom of the Ask Oracle menu.
  - A dot in front of the text indicates new notifications.
  - You can remove notifications by tapping on the **Dismiss** ✕ button.
  - A maximum of 15 notifications can be viewed. Once that limit is reached, the old notifications are removed, and new notifications added.
  - The **End of Day** notification prompts you to re-login. OPERA Cloud Mobile automatically reloads if you do not take the required action within the specified time limit.

You can see the following entries in the Ask Oracle menu at the bottom right of the screen:

- **Task Companion**: Start and complete attendant task sheets.
- **Room Maintenance**: Create and update Maintenance Requests.
- **Room Status**: View and update current room and housekeeping status of rooms.
- **Post It** : Post articles to rooms.
- **Arrivals**: Search and view arriving reservations.
- **Departures**: Search and view reservations for guests checking out today.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **In-House**: Search and view reservations of guests in-house today.
- **Package Consumption**: Manage the consumption of packages by package category.

Tap the User menu with your user initials at the top right to see the following options:

- **Change Language**: Choose from any of the supported languages to view the application in the selected language.
- **Switch Chain**: To Switch between different Chains; only available for Enterprise-level users with multi-chain access.
- **Change Location**: For multi-property operations, you can search and select another property location. From the search results, select the Hub or Property and then tap **Select**.
- **Refresh My Roles**: Choose this option to refresh your access if recent changes to your role assignment are not reflected immediately.
- **Clear Application Cache**: Select this option only if instructed by your administrator or support.
- **Change Pin**: Changing your PIN is required to access functionality that requires additional authorization.

> **Note**
>
> This is not your user password.

- **Notifications**: Enable the device notifications. You will receive notifications only if you have added OPERA Cloud Mobile to your Home Screen or if you have installed the Progressive Web App.

Launching OPERA Cloud Mobile on Mobile Devices

Launching OPERA Cloud Mobile

Launch OPERA Cloud Mobile to a mobile device by scanning a QR code using the mobile device camera.

1. From the **OPERA Cloud** desktop side menu, select **OPERA Cloud Mobile**.
2. Open the camera app on your mobile device and scan the QR displayed.
3. Tap the link displayed.

Adding Home Screen Shortcut in Safari on iOS and iPadOS Devices

To add a shortcut icon on your mobile device home screen.

1. Open the Safari app on your Phone.
2. Launch the OPERA Cloud Mobile URL.
3. Click the **Share** icon.
4. Scroll down the list of options, then tap **Add to Home Screen**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Home Screen Shortcut in Chrome on iOS and iPadOS Devices

To add a shortcut icon on your mobile device home screen.

1. Open the Chrome app on your Phone.
2. Launch the OPERA Cloud Mobile URL.
3. Click the Share icon in address bar.
4. Scroll down the list of options, then tap **Add to Home Screen**.

Adding Home Screen Shortcut in Firefox on iOS and iPadOS Devices

To add a shortcut icon on your mobile device home screen.

1. Open the Firefox app on your Phone.
2. Launch the OPERA Cloud Mobile URL.
3. Tap the menu icon (ellipses icon in the upper right corner), then tap to **Add to Home Screen**.

Adding Home Screen Shortcut in Edge on iOS and iPadOS Devices

To add a shortcut icon on your mobile device home screen.

1. Launch the Edge browser on your Phone.
2. Launch the OPERA Cloud Mobile URL.
3. Tap the menu icon (ellipses icon in the upper right corner) in the toolbar, then tap to **Add to Home Screen**.

Installing OPERA Cloud Mobile PWA in Chrome on Android devices

1. On your Android device, open Chrome.
2. Launch the OPERA Cloud Mobile URL.
3. Tap **More** on the right of the address bar, and select **Add to home screen** and then click **Install**.
4. Follow the on-screen instructions.

Installing OPERA Cloud Mobile PWA in Firefox on Android devices

1. On your Android device, open Firefox
2. Launch the OPERA Cloud Mobile URL
3. In the browser's menu, click the vertical ellipses and look for an **Install**, **Install App**, or **Add to Home Screen** option.
4. Select the **Add to Home Screen** option.

Uninstalling the Progressive Web Application (PWA) on Android devices

1. **Open Settings**: Access your device's main settings menu.
2. **Go to Apps**: Navigate to the Apps or Applications section.
3. **Find the PWA**: Locate the OPERA Cloud Mobile PWA from the list of installed apps.
4. **Uninstall**: Tap the **PWA** icon, then select **Uninstall** and confirm the action.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Activating Push Notifications

1. Add OPERA Cloud Mobile to your Home Screen (iOS and iPadOS devices) or install the OPERA Cloud Mobile PWA (Android devices).
2. Log into OPERA Cloud Mobile and navigate to **Ask Oracle**, > **User Menu**, and then tap or click the **Notification**.
3. To receive notifications you must be logged into OPERA Cloud Mobile

PWA - Arrivals

Prerequisites for PWA - Arrivals

Arrivals management involves overseeing guests arriving at the property, including walk ins, day use arrivals, and groups.

You can filter reservations using the **Search by name or confirmation** field and by using any of the following information:

- Guest last name or guest first name (only full name searches)
- Reservation company or source or travel agent name
- Confirmation number

Or you can use the **Advanced Filter** option to find reservations by combining any of the following search criteria:

- Reservations Checked In Today
- Guest First Name and Guest Last Name (partial name searches possible)
- Membership Number
- Confirmation Number
- Company name
- Travel Agent name
- Source name
- Room Type
- VIP Code
- Block Code

To view more information, tap or click on a reservation and the reservation detail screen opens.

The reservation detail screen includes information such as:

- Basic Profile information, such as Guest Name, Guest Alternate Name, Primary Phone Number and Email Address, Membership Information
- Basic Stay Details, including Rate Code, Rate Amount per night, Total Cost of Stay, Balance
- Packages allocated to the reservation - If more than two packages are allocated to the reservation, only the first two are displayed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Preferences assigned to the reservation - If more than two preferences are assigned to the reservation, only the first two are displayed
- Indicators include the First Time Guest / Return Guest indicator, Do Not Move room indicator

PWA - Task Companion

Prerequisites for PWA - Task Companion

The Task Companion replaces the need to generate and distribute task sheet reports by providing real-time, interactive housekeeping task management using a mobile device. Attendants can view reservation details, including reservation traces (based on departments selected in the **Housekeeping Traces** OPERA Control) and post articles to the reservation. When the **Guest Service Status** OPERA Control is active attendants can also set **Do Not Disturb** and **Service Declined** status on rooms. Room Attendants can indicate when they are on a break and this status is indicated in the Task Sheet Overview screen (Summary & Detail) and the Task Sheet presentation screen.

When the **Housekeeping Task Scheduling** OPERA Control is active, multiple tasks are combined into a single task sheet; select from the list of tasks.

When the **Access All Task Assignments in Task Companion** task is not assigned to your role, you can only access the task sheet assigned to you. Housekeeping supervisors can be assigned the **Access All Task Assignments in Task Companion** task to view task sheets for all room attendants.

Using The Task Companion

1. Tap to select the assigned task sheet number. For easier identification and selection, you can indicate the assigned attendant for each task sheet.

   On the summary page, the following information is provided: the total count of allocated rooms, a count of rooms per room status, a list of the room numbers assigned to the task sheet and task sheet instructions, if applicable, and the total of credits assigned to the task sheet and those completed.

   > **Note**
   >
   > Rooms listed in the task sheet are sequenced according to their auto-priority. If the room is sold as a component room then an indicator with component suite & room details display (Available when the **Component Room** OPERA Control is active).

2. Select a Room to view its details. The following information and options are available:
   - Preferred service time
   - Room specific task instructions
   - Linen Change indicator
   - Credits
   - Make Up Room indicator
   - Supplies scheduled for this room
3. Tap **Start** to begin the task. The following options appear for the first room:

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> You can also swipe from right to left on a room to start the task and swipe left to right for more options.

> **Note**
>
> Depending on the **Task Companion Timer** OPERA Control, a time counter might increment or decrement during completion of the task.
>
> a. **Finish this room**: Tap to complete the task, close the page and begin the next room in sequence.

> **Note**
>
> The room no longer shows in the room list since the task has been completed and the Task Companion advances to the task for the next room.

a. **Start**: Tap to begin the task for the room.

b. **Cancel**: Tap to cancel the task.

c. **Room Status**: Once the task is complete select a room status from the options available. For more information, see Room Status.

d. **Housekeeping Status**: Update the housekeeping status (to vacant or occupied). These housekeeping status options are used to report a discrepancy between housekeeping status and the front office status of the room; resulting in a Skip or Sleep discrepancy. (Available when the **Discrepant Rooms** OPERA Controls is active).

e. **Reservations**: Tap to view details of arrival, stay over, or departure reservations.

f. **Post It**: For more information, see PWA - Post It

g. **Traces**: Tap to add, view, or update traces for the room reservations (available when the **Reservation Traces** OPERA Control is active). Traces for departments selected in the **Housekeeping Traces** OPERA Control are available.

    i. **Resolve trace**: Tap to resolve a trace.

    ii. **Create trace**: Tap to create a trace by selecting a **Department**, selecting the **Date Range**, entering the message into the **Trace Text** field, and then tapping **Save**.

h. **Do not Disturb** or **Service Declined**: Tap to identify a room as DND or that the guest declined service. The room is skipped and the next room appears (Available when the **Guest Service Status** OPERA Control is active).

i. **Maintenance Requests**: Tap to create, view, or update maintenance requests for the room (Available when the **Maintenance** OPERA Control is active). For more information, see Room Maintenance Progressive Web App.

j. **On-break**: Tap to pause the task. This is indicated in the Housekeeping Attendant Console. To resume, tap the On-break icon again.

k. **Assistance**: Tap to send notifications to other users that assistance is required.

    i. Tap the **Send Location** button to send a notification with the current room number and property code.

Copyright © 2016, 2025, Oracle and/or its affiliates.

ii. Add text to the **General Assistance** notification and tap the **Send** button to broadcast the request for general assistance.

> **Note**
>
> The **Request Assistance** action only sends a notification to users assigned a role with the **Receive Task Companion General Assistance Notifications** and/or **Receive Task Companion Location Notifications** tasks granted.

Setting Task Sheet to Completed Status

You can mark a Task Sheet as completed when the **Task Sheet Completion** OPERA Control is active. Once marked, this prevents any further updates to the Attendant's statistics. For example, if a room is designated as 'Do Not Disturb' (DND) throughout the day and cannot be cleaned, it counts as one (1) DND room for the attendant. If the DND status is removed after the attendant has completed their shift and another staff member cleans the room, the count of one (1) DND room remains assigned to the initial attendant because the Task Sheet was marked as completed. Any subsequent changes will not impact the statistics of the earlier attendant.

To set a Task Sheet to the Completed status follow these steps:

- Tap the **Complete Task Sheet** button while you are in the Room Listing view of the Task Sheet.
- A **Completed** label next to the task sheet number indicates that the Task Sheet is completed and a **Reopen Task Sheet** button is displayed.

The following conditions apply for completing Task Sheets:

- You cannot set the Task Sheet to the **On Break** status.
- All rooms on the Task Sheet must be either **Finished** or not started.

The following options remain available in the Task Sheet when it is marked as **Completed**:

- Viewing/adding/editing Traces
- Viewing Reservation(s)
- Posting Charges (Post It)
- Maintenance Requests

The following options are unavailable in the Task Sheet when it is marked as **Completed**:

- **Room Status** - you cannot change the Room Status.
- **Housekeeping Status** - you cannot set a **Sleep/Skip** or **Person Discrepancy** status.
- Requesting Assistance

A Task Sheet marked as completed can be reopened by tapping the **Reopen Task Sheet** button in the task sheet **Room Listing** view.

PWA - Room Maintenance

[Prerequisites for PWA - Room Maintenance]

Copyright © 2016, 2025, Oracle and/or its affiliates.

Use Room Maintenance to create, view, or resolve maintenance requests for rooms. Maintenance requests can be tasks such as changing a light bulb or repairing a faulty lock, air conditioning unit, or leaky faucet. You can assign maintenance requests to staff according to a staff member's skills and/or qualifications

> **Tip**
>
> You can either swipe or use long press to reveal the available actions for a task in the search result.

Adding Maintenance Requests

1. Tap **+ Add Request** to create a maintenance request.
2. **Room**: Search and select a room.
3. **Assign to User**: To assign the request to a specific user, search and select the user.
4. **Expected By**: Select a due date to resolve the request.
5. **Reason** : Select a reason from the list.
6. **Remarks**: Enter additional remarks.
7. **Take Photo**: Click to take pictures and upload with the ticket.
8. **Add from Gallery**: Click to upload pictures from the phone's gallery or choose from files or take a new photo to upload in the ticket.
9. Tap **Create** to save and close the page.

Searching Maintenance Requests

> **Note**
>
> **My (Assigned) Requests** appear by default in the search results, listing all maintenance tasks assigned to you. To view all other requests, change the selection to **All Requests** or **Unassigned Requests**.

1. Use the **Search by Room** to search for a particular room or tap **Filter** to search using the available options.
   a. **Status**: Select Resolved / Unresolved / All.
   b. **Front Office Status**: Select Vacant / Occupied / All.
   c. **Room**: Select rooms from the list.
   d. **Reason** : Select reason codes from the list.
   e. **User**: Select users from the list.
   f. **Expected By** : Select a date from the calendar.

> **Note**
>
> Room Maintenance requests are populated with the status **Unresolved** by default.

Copyright © 2016, 2025, Oracle and/or its affiliates.

g. Tap **Filter** to view results.

Updating Maintenance Requests

1. Use the **Search by Room** to search for a particular room or tap **Filter** to search using the available options.
2. Tap a maintenance request to open, view, or update its details.

> **Tip**
>
> You can also swipe right and select **Manage** or tap a maintenance request to open, view, or update its details.

3. **Room**: Cannot be changed once a Maintenance Request is created.
4. **Assign to User**: Search and select a user to assign to the task.
5. **Expected By**: Select a **Date** when the Maintenance Request completion is expected.
6. **Reason** : Select a reason code from the list.
7. **Remarks**: Enter additional remarks.
8. **Take Photo**: Click to take pictures and upload to the maintenance request.
9. **Add from Gallery**: Click to upload pictures from the phone's gallery or choose from files or take a new photo to upload to the maintenance request.
10. Tap **Update** to save.

Resolving/Unresolving Maintenance Requests

1. Use the **Search by Room** to search for a particular room or tap **Filter** to search using the available options.
2. a. Tap a maintenance request to open, view, or update its details.
   b. Tap the (More Actions menu and) **Actions** menu to select the **Resolve** or **Unresolve** option and to update the status. Tap **Update** to complete the action and return to the request listing screen.
   c. You can also swipe right to left to change the status to resolved or unresolved.
   d. Long press a maintenance request to view the available actions. Tap **Resolve / Unresolve** to change the status.

Deleting Maintenance Requests

1. Use the **Search by Room** to search for a particular room or tap **Filter** to search using the available options.
2. Long press on the request to select the **Delete** option.
3. Swipe right to delete a maintenance request.
4. Tap a maintenance request to open, view, or update its details. Tap the (More Actions menu and) **Actions** menu to select the **Delete** option. Confirm the Deletion to return to the maintenance request listing screen.

PWA - Room Status

Prerequisites for PWA - Room Status

Use Room Status to update the status of a specific room (for example, to change the room status from Clean to Inspected). When the **Discrepant Room** OPERA Control is active. You can also update the housekeeping status to identify a Skip or Sleep discrepant room. For more information, see Managing Room Discrepancies.

> **Tip**
>
> You can either swipe or use long-press gestures to reveal the available actions for a room.

Updating Room Status

1. Enter search criteria and tap **Search**.
2. Tap the **Room** to update or swipe left to change the room status.
3. Select a new room status.
   a. **Inspected (IP)** : An optional status to indicate a clean room has been inspected by a supervisor (Available when the **Inspected Status** OPERA Control is active).
   b. **Clean (CL)** : Indicates the room has been serviced and is clean.
   c. **Pickup (PU)** : An optional status to indicate a minimum “touch-up" housekeeping service is required. This might occur if the room is occupied for only a few minutes and only needs refreshing (available when the **Pickup Status** OPERA Control is active).
   d. **Dirty (DI)** : Indicates the room is dirty and requires a cleaning service.
4. Update the housekeeping status to report a room discrepancy.
   a. An occupied room set to a **Vacant** status registers a skip discrepancy.
   b. A vacant room set to an **Occupied** status registers a sleep discrepancy.
5. Tap **<** to return to the search results.

Updating Housekeeping Statuses

When the **Discrepant Room** OPERA Control is active. You can also update the housekeeping status to identify a Skip or Sleep discrepant room. For more information, see Managing Room Discrepancies.

1. Enter search criteria and tap **Search**.
2. Tap the **Room** to update (or swipe from left to right and select the **More..** option, then select the housekeeping status).
3. Update the housekeeping status to report a room discrepancy:

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. Select **Vacant** to register a skip discrepancy.

b. Select **Occupied** to register a sleep discrepancy.

4. Tap **<** to return to the search results.
5. The **Number of Guests** field is available in occupied rooms and displays the person's value from Front Office Guests. You can edit the Number of Guests to update the Housekeeping persons and to create a Person Discrepancy that displays a person icon on the Room (Available when the **Person Discrepancy** OPERA Controls is active). A person discrepancy created in OPERA Cloud displays in OPERA Cloud Mobile (PWA) in the Room Status Dashboard tile. You can view the total discrepancy in persons from the OPERA Cloud Room Status tile.

Setting Housekeeping Service Priority

Select to prioritize or to remove priority of the room in the task sheet companion.

1. Enter search criteria and tap **Search**.
2. Tap the **Room** to update (or swipe right and select **More**, and then **Prioritize or Remove Priority**).
3. In **Room Details**, tap to prioritize the room or tap to remove the priority.
4. Tap **<** to return to the search results

Setting Out of Order / Out of Service Statuses

When the **Out of Order** and **Out Of Service** OPERA Controls are active, you can also set vacant rooms to out of order and out of service status. When the **Unit Status** OPERA Control is active, you can select from a list of Unit Status reasons instead of the standard Out of Order and Out of Service reasons. For more information, see Configuring Unit Statuses.

1. Enter search criteria and tap **Search**.
2. Tap the **Room** or swipe to right and select **Out of Service** or **Out of Order** .
   a. **From Date**: Enter a start date.
   b. **Through Date**: Enter an end date.
   c. **Reason**: Select a reason from the list. When the **Unit Status** OPERA Control is active, unit status reasons are displayed.
   d. **Remarks**: Enter any remarks to provide more information.
   e. **Return Status**: Select a room status from the list to determine the status the room should have when the Out of Order/Out of Service period ends.
   f. **Take Photo**: Tap to take pictures and upload to the Out of Order record.
   g. **Add from Gallery**: Tap to upload pictures from your device gallery or choose from files or take a new photo to upload to the Out of Order record.
   h. Tap **Confirm** to save.

Updating Out of Order / Out of Service Statuses

1. Enter search criteria and tap **Search**.
2. Tap on the room in Out of Order / Out of Service status (or swipe to right and select **Manage**).

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Tap **More Actions** and **Edit**.
4. Update the details.
5. Tap **Confirm** to save.

PWA - Post It

Prerequisites for PWA - Post It

Post It enables you to post articles, such as mini bar items, to in-house reservation accounts.

To use Post It, you add items to a shopping cart and then post the balance of the cart to a reservation account.

> **Note**
>
> User role(s) must be granted **Charge to Room (Settlement)** task.

> **Note**
>
> Your user profile must be assigned a cashier ID to access Post It. For more information, see Managing Users.

Using Post It

> **Note**
>
> You can search articles by partial or full descriptions or multiple articles by separating the search criteria using commas.

1. From the **Ask Oracle** menu, select **Post It**.
2. Tap items to post to the cart. You can tap the same item multiple times to add multiple quantities of the item.
3. You can post a freely defined amount for articles without a pre-defined default price. These articles display "--" in place of the amount. When selected, you are prompted to enter the amount.
4. Click **Negative** to post negative amounts.
5. Tap **View Cart**.
   a. Tap **-** to reduce the number of items posted.
   b. Tap **+** to increase the number of items posted.
   c. Tap **X** to remove the item from cart.
6. Tap **Post to Room** to post the cart balance to a reservation account.
7. Search for reservation by **Room** or **Name**. A Reservation Card displays details of the reservation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

8. Tap **Complete Sales**. A confirmation message appears informing you the items are successfully posted to the room.

PWA - Departures

Prerequisites for PWA - Departures

Departure management involves overseeing reservations that are due today.

You can filter reservations using the **Search by name or confirmation** field and by using any of the following information:

- Guest last name or guest first name (only full name searches)
- Reservation company or source or travel agent name
- Confirmation number

Or you can use the **Advanced Filter** option to find reservations by combining any of the following search criteria:

- Include Checked Out reservations
- Guest First Name and Guest Last Name (partial name searches possible)
- Membership Number
- Confirmation Number
- Company name
- Travel Agent name
- Source name
- Room Type
- VIP Code
- Block Code

To view more information, tap or click on a reservation and the reservation detail screen opens.

The reservation detail screen includes information such as:

- Basic Profile information, such as Guest Name, Guest Alternate Name, Primary Phone Number and Email Address, Membership Information.
- Basic Stay Details, including Rate Code, Rate Amount per night, Total Cost of Stay, Balance.
- Room
- Payment Method
- Linked Profile, if any
- Packages allocated to the reservation

> **Note**
>
> If more than two packages are allocated to the reservation, only the first two are displayed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Preferences assigned to the reservation

> **Note**
>
> If more than two preferences are assigned to the reservation, only the first two are displayed.

- Indicators include the First Time Guest / Return Guest indicator.

PWA - In-House

Prerequisites for PWA - In-House

The In House menu enables you to manage your in-house reservations, pseudo room type reservations (for example, group masters), and any house account reservations.

You can filter reservations using the **Search by name or confirmation** field and by using any of the following information:

- Guest last name or guest first name (only full name searches)
- Reservation company or source or travel agent name
- Confirmation number

Or you can use the **Advanced Filter** option to find reservations by combining any of the following search criteria:

- Guest First Name and Guest Last Name (partial name searches possible)
- Membership Number
- Confirmation Number
- Company name
- Travel Agent name
- Source name
- Room Type
- VIP Code
- Block Code

To view more information, tap or click on a reservation and the reservation detail screen opens.

The reservation detail screen includes information such as:

- Basic Profile information, such as Guest Name, Guest Alternate Name, Primary Phone Number and Email Address, Membership Information.
- Basic Stay Details, including Rate Code, Rate Amount per night, Total Cost of Stay, Balance.
- Packages allocated to the reservation

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> If more than two packages are allocated to the reservation, only the first two are displayed.

- Preferences assigned to the reservation

> **Note**
>
> If more than two preferences are assigned to the reservation, only the first two are displayed.

- Indicators include the First Time Guest / Return Guest indicator.

PWA - Package Consumption

Prerequisites for PWA - Package Consumption

Package Consumption replaces the need to generate and distribute In-House reservations with package reports by providing real-time, interactive package validation and consumption tracking using a mobile device.

To view available packages for consumption per reservation, create **Package Categories** and associate them with **Package Codes**. For example, if you would like to track the consumption of Breakfast packages, create a Package Category "Breakfast" and associate all breakfast packages to that Package Category.

Using Package Consumption

1. Tap or click **Package Consumption** in the Ask Oracle module.
2. Select the relevant **Package Category** from the drop-down list.
3. All In-House reservations are sorted by room number.

> **Note**
>
> Room numbers may appear multiple times, if Share Reservations are checked into the same room.

4. You can search by room number or guest name using the quick search option at the top of the screen.
5. Tap or click on a room/reservation to view more details and to mark all or some of the packages available as consumed.

> **Note**
>
> You can also long press on the room/reservation in the listing screen to Mark All Packages Consumed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

6. Tap or click on the switch next to the Package description to mark it consumed or press the **Consume All** button in the top right corner. Each Package associated with the reservation appears according to its quantity.

> **Note**
>
> Once the total quantity of Packages available for the selected room/reservation is consumed, the **Consume All** button becomes unavailable.

7. The **Available versus Consumed Package Quantities** are displayed for information purposes at the top of the room/reservation detail screen.
8. To view Company, Travel Agent, Group or Accompanying Guest names, tap or click on the **Associated Profiles** link.

Part IV
Administration

The OPERA Cloud Administration menu enables the configuration and setup of Enterprise, Inventory, Financial, Booking, Client Relations, and Interfaces components. These components enable customer-facing and back office functions, channel and other external interfaces, user roles and tasks, and single and multi-property operations. You define your system by creating parameters, codes, rates, accounts, rules, types, groups, reasons, and a myriad of other configurations.

Central The **Managed By** column in search results indicates the origin of the configuration as either from Enterprise Management or configured directly in OPERA Cloud.

> **Note**
>
> The user activity for configuration is purged from the changes log after 180 days.

Copyright © 2016, 2025, Oracle and/or its affiliates.

11

Enterprise Administration

The Enterprise menu is for those responsible for global property and control settings, and configuring main interfaces, scheduling batch processes and reports, and managing images used throughout the system.

Prerequisites for Enterprise Administration

This chapter of the OPERA Cloud User Guide lists the prerequisites for Enterprise Administration menu.

Prerequisites for Deleting Page Composer Customization

OPERA Cloud Tasks

Group: Enterprise Admin

Tasks: Manage Customizations

- Delete Customizations for Chains
- Delete Customizations for Hubs/Properties
- Delete Personalizations for Other Users
- Delete Personalizations for Current User

Prerequisites for Presentation Panel Tabs

OPERA Cloud Tasks

Group: Enterprise Admin

Tasks: User Interface Management

- Presentation Styles:
  - New/Edit Presentation Styles
  - Delete Presentation Styles

Prerequisites for User Defined Fields and Values

OPERA Cloud Tasks

Group: Enterprise Admin

Tasks: User Interface Management

User Defined Fields

- New/Edit Flexible Dynamic Fields
- Delete Flexible Dynamic Fields

User Interface Management

User Interface Management options are used in conjunction with Page Composer to support customization of the OPERA Cloud user interface.

You can configure a list of values for flex (that is, user defined fields) fields, configure display styles for the various presentation pages, and delete user, property/hub, or chain customizations.

Deleting Page Composer Customization

Prerequisites for Deleting Page Composer Customization

The Delete Customization feature enables you to delete Page Composer customization and personalization changes made by users at the Chain, Hub, or Property levels.

When a page panel is customized or personalized a custom file is created for storing the changes. Multiple changes made to the same area are stored within the custom file and deleting this file deletes all customization or personalization changes.

The Delete Customization screen provides the option to delete these files from a central location, thereby, enhancing the existing Delete Customization option in panels where customization is available.

The search results on the Delete Customization screen show the custom file name, user, updated date, and screen where the customization and/or personalization was made.

Deleting Customizations

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **Manage Customizations**.
2. In the Search fields, select a **Customization Layer** (Chain, Hub, Property, or User) and optionally enter a **Customization Area**, then click **Search**.
    a. **Chain**: Allows deletion of Chain-level customization. Delete Chain Customization is only available for users assigned **Delete Customization for Chains** tasks through a chain role.
    b. **Hub**: (Only available for users logged in at Hub level). A user logged in at the Hub level may delete customization at the logged in Hub.
    c. **Property**: A user logged in at the Hub level may select a property to delete property-level customization. A user logged in at the Property level can only delete customization for the property currently logged in at.
    d. **User**: A user with the **Delete Users Personalization** task may delete personalization for self and personalization for other users. A user with the **Delete Personalization** task can only delete his or her own personalization.
3. The search results area provides columns for Path, Screen, File Name, User, and Updated Date.
    a. **Path**: Shows the breadcrumbs path where customization or personalization was made.
    b. **Screen**: The screen or area where the customization or personalization was made.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **File Name**: Shows the internal file name for the customized or personalized area.

d. **User**: The name of the user who last made a change to the listed area.

e. **Updated Date**: The date and time when the last change was made to the listed area.

4. Select the customization file(s) you want to delete and click **Delete**.

5. Click **Delete** again to confirm the deletion.

Configuring Presentation Panel Tabs

Prerequisites for Presentation Panel Tabs

Use presentation panel tabs to preselect the details panels to appear on Presentation Pages in both the Application and Administration areas of OPERA Cloud. The presentation pages available in the application are Manage Profile, Manage Reservations, Manage Block, Manage Event, Manage Activity and Manage Accounts Receivable. When a user selects a different panel tab, the details panels update on the presentation page. You can configure up to seven panel tabs for each presentation page, each with a maximum of five panels selected. You must select one panel tab as the default to display when the presentation page is opened for the first time by a user. Panel Tab configuration applies to all properties.

Adding Presentation Panel Tabs

You can configure up to seven panel tabs for each presentation page. When a user selects a different tab, the selected Details panels update on the presentation page.

> **Note**
>
> A maximum of five panels can be selected.

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **Presentation Panel Tabs**.

2. Click **New** and complete the following.

   a. **Location**:

      i. **Application**: Select an application presentation page to setup.

      ii. **Administration**: Select an administration presentation page to setup.

   b. **Screen**: Select the presentation page from the list.

   c. **Tab Label**: Enter the name that appears for the panel tab label, for example, **Tab 1**.

      i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

   d. **Sequence**: Set the display order for the panel tab. This is the order in which the tab appears on the presentation page.

   e. **Default**: Select check box to make this panel tab the default for when the presentation page is opened for the first time by a user.

   f. **Panels**: Select up to a maximum of five panels in **Available Panels** and click the right arrow buttons to move your selection over to the **Selected Panels**. These are the details panels that appear on the presentation page when this panel tab is selected.

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. Use the up / down arrows to set the display order of the **Select Panels**.

> **Note**
>
> All panels are listed regardless of active OPERA Controls.

3. Click **Save**.

Editing Presentation Panel Tabs

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **Presentation Panel Tabs**.
2. Enter search criteria, then click **Search**.
3. From the search results, select the panel tab, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Make the desired changes.
5. Click **Save**.

Deleting Presentation Panel Tabs

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **Presentation Panel Tabs**.
2. Enter search criteria, then click **Search**.
3. From the search results, select the panel tab, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

UDF Groups and Values

Prerequisites for User Interface Management

When customizing a page and panel using Page Composer you can reference a UDF Group in the field properties of a flex field to create a list field. When a user clicks the list icon for the flex field, a list of values appears, allowing the user to select one or multiple values.

In order to setup a list of values you first configure a User Defined Field (UDF) Group and then configure the UDF values for the UDF group.

For example, if you wanted a flex field for guest vehicle type on the profile overview panel, you would

1. Configure a UDF Group for **Vehicle Type**.
2. Configure the list of vehicle types for the UDF Group **Vehicle Type**.

Configuring UDF Groups

Adding UDF Groups

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **UDF Groups**.
2. Click **New** and complete the following information:

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. **Code**. Enter the group name for the field.

b. **Description**. Enter a description that explains the group name.

c. **Data Type**. Select the down arrow to choose the data type for the field values of this group (Character or Numeric).

d. **Data Length**. Enter the length for field values in this group.

3. Click **Save** or click **Save and Continue** to add more groups.

Editing UDF Groups

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **UDF Groups**.
2. Enter search criteria, and click **Search**.
3. From search results, select the UDF group, then click the vertical ellipsis **Actions** menu select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting UDF Groups

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **UDF Groups**.
2. Enter search criteria, and click **Search**.
3. From search results, select the UDF group, then click the vertical ellipsis **Actions** menu select **Delete**.
4. Click **Delete** to confirm.

Configuring UDF Values

Configure the list of values to appear for a specific UDF Group.

For example, you might have a Vehicle Type flex field on profiles containing the values GM, Ford, BMW, Mercedes, Honda, and so on. These values would then be linked to the Vehicle Type UDF Group.

Adding UDF Values

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **UDF Values**.
2. Click **New** and complete the following information:

   a. **Group**: Select the UDF group from the list. For more information, see Configuring UDF Groups.

   b. **Code**: Enter the code for the user defined value.

   c. **Description**: Enter a description for the user defined value.

3. Click **Save** or click **Save and Continue** to add another.

Editing UDF Values

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **UDF Values**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Enter search criteria and click **Search**.
3. Select the UDF value then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting UDF Values

1. From the **Administration** menu, select **Enterprise**, select **User Interface Management**, and then select **UDF Values**.
2. Enter search criteria and click **Search**.
3. From search results, select the UDF value then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Copying Configuration Codes to Multiple Properties

When the **Multi Property** OPERA Control is active you can copy configuration from one property (or template) to other properties when working from a Hub location . This ability simplifies configuration and also ensures consistency of configuration throughout all properties. Provisioning of a new property can be easily achieved through the copy of the relevant configuration from a template or from other properties where applicable. OPERA Cloud provides two methods of copying configuration depending on the functionality.

Copying Property Configuration to Other Properties

1. From the **Administration** menu, select a **Configuration** menu and navigate to the desired configuration screen.
2. Select the source Property in which the configuration codes reside and click **Search**.
3. Click the vertical ellipsis **Actions** menu next to the New button, and click **Copy**.
4. In the Configure Parameters panel complete the following:
    a. **Source Property**: Select the Source Property with the configuration you want to copy.
    b. **Codes**: Select the configuration codes to copy from the list.
    c. **Target Properties**: Select the properties to copy the configuration codes to (the properties listed are linked to your Hub location).
    d. Click **Save**.
    e. In the Review and Copy Codes panel:
        i. Verify the target property/properties and configuration code(s).
    f. Click **Copy And Continue**.
    g. In the Confirmation panel:
        i. Verify that no errors appear.
    h. Click **Print**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Your browser opens a separate tab showing the details of your copy process. If errors appear in the Confirmation area, close the tab and select the application tab to make changes as necessary.

Copying Template Configuration to Properties

> **Note**
>
> Your assigned role must be granted the **Template Configuration** and **New/Edit Template** tasks. For more information, see OPERA Tasks — General.

1. From the **Administration** menu, select a **Configuration** menu and navigate to the desired configuration screen.
2. Select the **Template** tab.
3. Click the vertical ellipsis **Actions** menu (next to the **New** button), and click **Copy**.
4. In the Configure Parameters panel complete the following:
   a. **Codes**: Select the configuration codes to copy from the list.
   b. **Target Properties**: Select the properties to copy the configuration codes to (the properties listed are linked to your Hub location).
   c. Click **Save**.
      i. In the Review and Copy Codes panel, verify the target property/properties and configuration code(s).
      ii. Click **Copy And Continue**.
      iii. In the Confirmation panel, verify that no errors appear.
      iv. Click **Print**.

> **Note**
>
> Your browser opens a separate tab showing the details of your copy process. If errors appear in the Confirmation area, close the tab and select the application tab to make changes as necessary.

Chain and Property Management

Chain and Property Management enables you to configure a variety of options related to your chain, brands, and properties along with their locations, facilities, and local attractions. The available options are dependant on the active controls at your property.

Configuring Properties

Copyright © 2016, 2025, Oracle and/or its affiliates.

Properties are provisioned on activation of the **Oracle Hospitality OPERA Cloud Foundation** or **Oracle Hospitality OPERA Cloud Central Management Services** subscription.

Update the **General Information** and **Property Controls** sections to determine specific settings for OPERA Cloud.

Other properties details are required for property brochure and multi property/central reservations operations.

Editing Properties

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Properties**.
2. Enter search criteria and click **Search**.
3. Select the property in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.

> **Note**
>
> Details panels selected in the default or previously selected Presentation Panel tab appear. For more information, see Presentation Pages

Configuring Property Airports

Adding Property Airports

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Properties**.
2. Enter search criteria and click **Search**.
3. Select the property in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Select the **Airports** link.
   a. Click **New** and enter the following details:
      i. **Code**: Select an Amenity from the list. For more information, see Configuring Amenities .
      ii. **Description**: Description will default based on Code selected; you can update if needed.
      iii. **Website**: Enter airport website URL.
      iv. **Driving Directions**: Enter driving directions from the airport to the property, or geographical direction of the airport from the property.
      v. **Driving Time**: Enter the time needed to drive between the airport and the property.
      vi. **Distance**: Enter the distance of the airport from the hotel property.
      vii. **Distance Type**: Select the distance measurement (for example, miles, kilometers).
      viii. **Sequence**: Enter a sequence number that determines the position of this airport in listings.
      ix. **Transportation**: Select the transportation carriers/services available at the airport. For more information, Configuring Property Transportation.

    k. **Max Adults in Family**: Enter the maximum number of adults for a family room.
    l. **Max Child in Family**: Enter the maximum number of children for a family room.
    m. **Executive Floor Number**. Enter the starting floor of executive floor.
    n. **Room Amenities**: Enter details for standard room amenities.
4. Click **Save**.

Configuring Property Local Attractions

Adding Property Local Attractions

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Properties**.
2. Enter search criteria and click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the property in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Click **New** and enter the following details:
        i. **Code**: Select an Attraction from the list. See Configuring Attractions.
        ii. **Description**: Description will default based on Code selected; you can update if needed.
        iii. **Category**: Select an Attraction category from the list. See Configuring Attraction Categories.
        iv. **City**: Enter the City (suburb) name.
        v. **State**: Select a State from the list.
        vi. **Website**: Enter the Attraction company website address.
        vii. **Distance**: Enter distance from your property.
        viii. **Distance Type**: Select the distance type (measure) from the list.
        ix. **Driving Time**: Enter the driving time to attraction.
        x. **Price Range**: Enter the price range of the attraction.
        xi. **Hours**: Enter the hours of operation.
        xii. **Sequence**: Enter a display sequence.
        xiii. **Latitude**: Enter the location of the Attraction (available using Google Maps).
        xiv. **Longitude**: Enter the location of the Attraction (available using Google Maps).
        xv. **General Directions**: Enter directions to the Attraction.
4. Click **Save**.
5. Repeat to add another Attraction.

Editing Property Local Attractions

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Properties**.
2. Enter search criteria and click **Search**.
3. Select the local attraction in the search result, then click the vertical ellipsis**Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Property Local Attractions

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Properties**.
2. Enter search criteria and click **Search**.
3. Select the local attraction in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Property Localization

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Properties**.
2. Enter search criteria and click **Search**.
3. Click **Edit** and enter the following details:
   a. **Business ID**: Enter the company ID.
   b. **Business Registration Code**: Enter the business registration code.
   c. **Fiscal Year Begin Month**: Select a month from the list.
   d. **Fiscal Year Begin Day**: Select a day from the list.
   e. **Business Premise ID 1**: Enter a property identifier to include on the customized folio.
   f. **Business Premise ID 2**: Enter a property identifier to include on the customized folio.

   > **Note**
   >
   > Additional fields specific to a country or region may appear in this panel. For more information, see Oracle Hospitality Localization Center for Hotel.

4. Click **Save**.

Editing Property Controls

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Properties**.
2. Enter search criteria and click **Search**.
3. Click **Edit** and enter the following details:
   a. **Sell Controls**
      i. **Hotel Code**: Enter a property code (unique code in multi-property operations).
      ii. **Begin Date**: Enter date the property is scheduled to become active and start accepting reservations.
      iii. **End Date**: End date the property is no longer considered active/operational.
      iv. Central **Remote Property**: Select check box to indicate the property is a remote property integrated through OXI. (Available when the **Central Sales** OPERA Control is active).
         i. Select an option representing the active license / subscription at the remote property:
            - **OPERA Property Sales and Catering**: OPERA Property Sales and Catering.
            - **SEM Essentials**: OPERA Cloud Service, Sales and Event Management Essentials Edition.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **SEM Standard**: OPERA Cloud Service, Sales and Event Management Standard Edition.
- **SEM Premium**: OPERA Cloud Service, Sales and Event Management Premium Edition.

b. **Application Mode**

   i. **Chain Mode**: Not used. (Read Only).

Configuring Airports

Configure the airports nearby and accessible to your property. Airports and associated transport services are displayed in the property brochure to assist reservation agents.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Airport codes are created by selecting the **Template** tab. Once created, you can copy Airport codes to specific properties using the **Copy** action. See Copying Configuration Codes to Multiple Properties for more information.

Adding Airports

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Airports**.
2. Click **New** and complete the following:
   a. **Code**: Enter the Airport code.
   b. **Description**: Enter the Airport name.
   c. **Website**: Enter Airport website URL.
   d. **Driving Directions**: Enter driving directions from the airport to the property, or geographical direction of the airport from the property.
   e. **Driving Time**: Enter the time needed to drive between the airport and the property.
   f. **Distance**: Enter the distance of the airport from the hotel property.
   g. **Distance Type**: Select the distance measurement (e.g., miles, kilometers).
   h. **Sequence**: Enter a sequence number that determines the position of this airport in listings.
   i. **Transportation**: Select the transportation carriers/services available at the airport. See Transportation for details.
3. Click **Save**.

Editing Airports

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Airports**.
2. Enter search criteria and click **Search**.
3. Select the airport in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Airports

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Airports**.
2. Enter search criteria and click **Search**.
3. Select the airport in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** and confirm the deletion.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Configuring Amenities

Configure the various amenities available at your properties. Amenities are classes as either General or Meeting and referenced in Property configuration.

If some amenities are seasonal enter date range accordingly.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Amenities are created by selecting the **Template** tab. Once created, you can copy Amenities to specific properties using the **Copy** action. See Copying Configuration Codes to Multiple Properties for more information.

Adding Amenities

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Amenities**.
2. Click **New** and complete the following
   a. **Code**: Enter a code for the amenity .
   b. **Description**: Enter the name of the amenity.
   c. **Type**: Select a type from the list: General or Meeting.
   d. **Start Date**: Enter or select a start date.
   e. **End Date**: Enter or select an end date.
   f. **Sequence**: Enter a sequence number that determines the position of this amenity in listings.
   g. **Notes**: Enter any notes regarding this amenity.
3. Click **Save**.

Editing Amenities

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Amenities**.
2. Enter search criteria and click **Search**.
3. Select the amenity in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Amenities

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Amenities**.
2. Enter search criteria and click **Search**.
3. Select the amenity in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Click **Delete** to confirm.

Configuring Departments

Use departments to group your employees into operational areas; a department is then assigned to each user. You must also select a department when adding a block trace or reservation trace.

Adding Departments

Department codes can be a maximum of 10 alpha-numeric characters.

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Departments**.
2. Click **New** and complete the following fields:
    a. **Global/Property**: Select **Global** to configure a department that is available in all properties or select **Property** to configure a department for a specific property.
    b. **Code**: Enter a code for the department (for example, `BAN`, `CAT`, `ENG`, or `EXE`).
    c. **Description**: Enter the full name for the department (for example, Banquets, Catering, Engineering, or Executive Office).
        i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
    d. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.
    e. **Email Address**: Enter the email address for the department. When delivery methods are configured for the department, this is the department's default email address.
3. Click **Save**.

Editing Departments

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Departments**.
2. Enter search criteria and click **Search**.
3. In the search results, select the department then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Departments

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Departments**.
2. Enter search criteria and click **Search**.
3. In the search results, select the department then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Electronic Registration Card Templates

Prerequisites for Electronic Registration Cards

An electronic registration card is displayed on a tablet device when a user selects the action to create an eSign Registration Card for an arrival reservation. The guest can initial and sign the electronic registration card and the resulting file is saved as an attachment on the reservation. For more information, see Managing eSignature Registration Cards.

Use Electronic Registration Card Template configuration to define the content and layout of the templates using a **WYSIWYG** editor. If desired, you can configure templates for various membership types. When the **Multi Language** OPERA Control is active, you can configure templates per language; OPERA Cloud displays the template according to the language selected in the guest profile. If a template is not configured for a specific language, OPERA Cloud displays a default registration card according to the **Base Language** selected in Property configuration .

Electronic registration cards templates can also be configured per Membership Type.
In multi-property operations, you can copy templates to other properties.

Adding Electronic Registration Card Templates

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and select **Electronic Registration Card**.
2. Click **New** and complete the following:
   a. **Property**: Enter or select the property or properties. You can select multiple properties when operating from a Hub location.
   b. **Language**: Enter or select the Language(s) (Available when the **Multi Language** OPERA Control is active)
   c. **Membership Types**: Enter or select membership type(s).
   d. Select **Rich Text** to use the **WYSIWYG** editor or select **Source** to view and edit HTML source code.
   e. Add or paste (CTRL+V) text and then format the text according to your needs. For more information, see Using the Rich Text Editor.
   f. Click **Save**.

Previewing Electronic Registration Card Templates

Use the Preview feature to view the appearance of your template.

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and select **Electronic Registration Card**.
2. Enter search criteria, then click **Search**.
3. Select a template in the search result, then click the vertical ellipsis **Actions** menu and select **Preview**.
4. Click the **X** to close the preview.

Editing Electronic Registration Card Templates

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and select **Electronic Registration Card**.
2. Enter search criteria, then click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select a template in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Make the desired changes. For more information, see Using the Rich Text Editor

      > **Note**
      >
      > To delete a merge code, place cursor in front or behind the Merge Code and click either the delete key or the backspace key.

   b. Click **Save**.

Copying Electronic Registration Card Templates

You can copy (clone) templates to current or other properties, other languages, and/or membership types as needed. As part of the copy process you can customize the layout of the new template(s), for example, copy the layout, update the boilerplate text, and change to a different language in the new template.

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and select **Electronic Registration Card**.
2. Enter search criteria, then click **Search**.
3. Select a template in the search result, then click the vertical ellipsis **Actions** menu and select **Copy**.
   a. In the **Target Electronic Registration Card Details** section, select the destination property, the language of the new template, and a **Membership Type**.
   b. Make required changes by editing text, merge codes, images.
   c. Click **Save**.

Deleting Electronic Registration Card Templates

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and select **Electronic Registration Card**.
2. Enter search criteria, then click **Search**.
3. From search results, select the row level vertical ellipsis of the template and select **Delete**.
4. Click **Delete** to confirm.

Configuring Hubs

Hubs are used in combination with Chain and Property roles to control user access to properties, property data and specific functionality in each property.

A **DFLT_[TENANT]** default hub is created upon provisioning, and all properties provisioned for your tenancy are associated to this hub. You can configure additional hubs and associate a subset of properties with one or multiple hubs; enabling you to cluster properties according to your business need. There are various OPERA Controls to setup for each hub you configure. For more information, see Configuring OPERA Controls.

You can configure additional hubs and associate a subset of properties with one or more hubs; enabling you to cluster properties according to your business need.

Hub(s) are then assigned to users, granting access to the properties allocated to the hub. See Managing Users.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> You can only manage hubs that are assigned to you. Hubs created by other users and not assigned to you will not be listed in search results.

Adding Hubs

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Hubs**.
2. Click **New** and enter the following details:
   a. **Hub**: Enter a Hub.
   b. **Name**: Enter the full descriptive name for the Hub/CRO.
   c. **Address**: Enter the street address.
   d. **City**: Enter the city location for the Hub/CRO from the list.
   e. **Postal Code**: Enter the zip or postal code number.
   f. **Country**: Select the country location for the Hub/CRO from the list.
   g. **State**: Select the state location for the Hub/CRO from the state list of values.
   h. **Telephone**: Enter an international phone number for the Hub/CRO.
   i. **Toll Free**: Enter a toll–free 1-800 number for the Hub/CRO.
   j. **Email**: Enter the email address to associate with the Hub.
   k. **Currency**: Select the currency for the Hub/CRO. This is used as the default for all currency calculations unless specified elsewhere.
   l. **Currency Format**: Select the currency format for the Hub.
   m. **Short Date Format**: Select a format type for the short date.
   n. **Long Date Format**: Select a format type for the long date (for example, ddth Month YYYY or Month ddth YYYY).
   o. **Time Format**: Select the time format from the list of values. This is the format for the time stamp used by the property
   p. **Time Zone**: Select the time zone where the Hub/CRO is located.
   q. **Base Language**: Select a base language for the Hub.
3. Click **Save**.

Assigning Properties to Hubs

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Hubs**.
2. Enter search criteria then click **Search**.
3. Enter hub in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Click the **Manage** link located under the Associated Properties section.
   b. Under **Available Properties**, select the property you want to associate with the hub and click the down arrow to move the selected property to the **Associated Properties** grid.
4. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Hubs

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Hubs**.
2. Enter search criteria then click **Search**.
3. Select the hub in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Hubs

1. From **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Hubs**.
2. Enter search criteria then click **Search**.
3. Select the hub in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Job Titles

You can configure job titles for employees at your property for the purpose of associating a specific job to the person.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Job Titles are created by selecting the **Template** tab. Once created, you can copy Job Titles to specific properties using the using the **Copy** action. Refer to Copying Configuration Codes to Multiple Properties for more information.

Adding Job Titles

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Job Titles**.
2. Click **New** and complete the following fields:
   a. **Job Code**. Enter a code for the job title (for example, BAN, CM, SET, or GM).
   b. **Description**. Enter the full name for the job code (for example, Banquet Manager, Catering Manager, Convention Setup Manager, or General Manager).
   c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
3. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Job Titles

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Job Titles**.
2. Enter search criteria and click **Search**.
3. In the search results, select the code then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Job Titles

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and then select **Job Titles**.
2. Enter search criteria and click **Search**.
3. In the search results, select the code then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Property Brochure Master Data

Property Details and the Property Brochure reference information and images configured in various other areas of OPERA Cloud Administration. Refer to the following links for configuring master data content used in the Property Brochure.

Property Note Types

Airports

Transportation

Configuring Property Detail Categories

Adding Property Detail Categories

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Detail Categories**.
2. Click **New** and complete the following
   a. **Code**: Enter a code for the Property Detail Category.
   b. **Description**: Enter a description for the Property Detail Category.

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).

c. **Sequence**: Enter a display sequence.

3. Click **Save** or **Save and Continue** to add another.

Editing Property Detail Categories

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Detail Categories**.
2. Enter search criteria and click **Search**.
3. Select the property detail category, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Property Detail Categories

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Detail Categories**.
2. Enter search criteria and click **Search**.
3. Select the property detail category, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm

.

Configuring Property Details

When the **Multi Property** OPERA Control is active, new Property Details are created by selecting the **Template** tab. Once created, you can copy Property Details to specific properties using the **Copy** action. For more information, see Copying Configuration Codes to Multiple Properties. Select the **Verified** check box to require property detail values to be selected from a list defined in the template; else any value can be entered when adding property detail values to a property.

Adding Property Details

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Details**.
2. Click **New** and complete the following
   a. **Code**: Enter a code for the Property Detail.
   b. **Category**: Select the Property Details Category from the list. For more information, see Configuring Property Detail Categories.
   c. **Data Type**: Select a data type from the list
   d. **Sequence**: Enter a display sequence.
   e. **Verified**: Select check box to enforce selection from a list when adding property detail values to properties.
   f. **Description**: Enter a description for the property detail

Copyright © 2016, 2025, Oracle and/or its affiliates.

g. Click **Save**.

Editing Property Details

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Details**.
2. Enter search criteria and click **Search**.
3. Select the property details, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Property Details

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Details**.
2. Enter search criteria and click **Search**.
3. Select the property details, hen click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Adding Property Detail Values

> **Note**
>
> When the **Verified** check box is selected for the Property Details record, property detail values must be selected from the records defined in the template; else any value can be entered when adding property detail values for a property.

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Details**.
2. Enter search criteria and click **Search**.
3. Select the property details, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Click **New** and complete the following:
   a. **Code**: Enter a code for the property detail value.
   b. **Description**: Enter a description for the property detail value (maximum 2000 bytes).
   c. **Sequence**: Enter a display sequence.
   d. Click **Save**.

Editing Property Detail Values

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Details**.
2. Enter search criteria and click **Search**.
3. Select the property details, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update the property details values.
   b. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Property Detail Values

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Details**.
2. Enter search criteria and click **Search**.
3. Select the property details, then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Select the property details value, then click the vertical ellipsis **Actions** menu and select **Delete**.
    b. Click **Delete** to confirm.
    c. Click **Save**.

Configuring Property Types

Create categories of various types of properties that will be referenced in Property Configuration. Use Property Types to categorize your properties by their characteristics (Resort, 4 Star, Apartment, and so on).

Adding Property Types

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Types**.
2. Click **New** and complete the following
    a. **Code**: Enter a code for the property type.
    b. **Description**: Enter a description for the property type.
        i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
    c. **Sequence**: Enter a display sequence.
3. Click **Save** or **Save and Continue** to add another.

Editing Property Types

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Types**.
2. Enter search criteria and click **Search**.
3. Select the property type in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Property Types

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Property Types**.
2. Enter search criteria and click **Search**.
3. Select the property type in the search result, then click the vertical ellipsis **Actions** menu **Delete**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Click **Delete** to confirm.

Configuring Closing Scripts

Prerequisites for Closing Scripts

A closing script is displayed to reservation agents after completing or updating a guest reservation made through the Look to Book Sales screen. Agents can read the script to callers to confirm the details of their reservation.

You can configure different closing scripts for various membership types When the **Multi Language** OPERA Control is active, you can configure closing scripts in multiple languages for multi-lingual reservation agents and callers.

Adding Closing Scripts

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and select **Closing Scripts**.
2. Click **New** and complete the following.
    a. **Location**
        i. **Hub**: Select to configure a closing script for the hub.
        ii. **Property**: Select to configure a closing script for properties.
            i. **Property**: Enter or select properties from the list. You can select multiple properties from a hub location
        iii. **Language**: Select languages from the list. (Available when the **Multi Language** OPERA Control is active).
        iv. **Membership Type(s)**: Select membership type from the list. If not selected, the script applies to all.
        v. Select **Rich Text** to use the Rich Text Editor or select **View Source** to view and edit HTML source code.
            i. Enter or paste text in the applicable language to the script body and insert merge codes for reservation and profile values where required. These merge codes are replaced with actual values when the closing script is generated. For more information, see Using the Rich Text Editor.

            > **Note**
            >
            > The flex field merge codes are related to the reservation.

        vi. Click **Save** when finished.
3. Confirm or select the **Property** or **Hub**. You can select multiple properties when your session is initialized from a Hub location.
4. Confirm or select the **Language(s)** if the **Multi Language** function is active in OPERA Controls.
5. Enter or select the **Membership Type(s)**. If one is not selected, the script applies to all membership types.
6. Select **Rich Text** to use the Rich Text Editor or select **View Source** to view and edit HTML source code.

Copyright © 2016, 2025, Oracle and/or its affiliates.

7. Enter or paste **CTRL+V** text (in the applicable language) to the script body and insert merge codes for reservation and profile values where required. These merge codes are replaced with actual values when the closing script is generated. See Using the Rich Text Editor.

> **Note**
>
> The flex field merge codes are related to the reservation.

8. Click **Save** when finished.

Editing Closing Scripts

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and select **Closing Scripts**.
2. Enter search criteria, then click **Search**.
3. Click **Edit**.
4. Make the desired changes.
5. Click **Save**.

Deleting Closing Scripts

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management**, and select **Closing Scripts**.
2. Enter search criteria, then click **Search**.
3. Click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Attraction Categories

Create categories for attractions, such as amusement parks, historic sites, zoos, or museums. This categorisation provides users with the ability to search for a category of attractions first and then view the individual attractions within that category.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Attraction Categories are created by selecting the **Template** tab. Once created, you can copy Attraction Categories to specific properties using the **Copy**action. See Copying Configuration Codes to Multiple Properties for more information.

Adding Attraction Categories

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Attraction Categories**.
2. Click **New** and complete the following
   a. **Code**: Enter an attraction category code.
   b. **Description**: Enter the description for the attraction category.

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).

c. **Sequence**: Enter a display sequence.

3. Click **Save**.

Editing Attraction Categories

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Attraction Categories**.
2. Enter search criteria and click **Search**.
3. Select the attraction category in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Attraction Categories

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Attraction Categories**.
2. Enter search criteria and click **Search**.
3. Select the attraction category in the search result, then click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** and confirm the deletion.

Configuring Attractions

Local attractions such as amusement parks, theme parks, historic sites, zoos, and museums can be created and described.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Attractions are created by selecting the **Template** tab. Once created, you can copy Attractions codes to specific properties using the **Copy** action. See Copying Configuration Codes to Multiple Properties for more information.

Adding Attractions

1. From the **Administration** menu, select **Enterprise**, select**Chain and Property** and select **Attractions**.
2. Click **New** and complete the following
   a. **Attraction Code**: Enter an attraction code.
   b. **Attraction Name**: Enter the description for the attraction (Walt Disney World, Sears Tower, Air and Space museum, Regal Casino, The Galleria).
   c. **Attraction Category**: Select the attraction category which the attraction belongs
   d. **City**: Enter the city where the attraction is located.

Copyright © 2016, 2025, Oracle and/or its affiliates.

e. **State**: Select the state from the list
f. **Distance**: Enter the distance from the property to the attraction.
g. **Distance Type**: Select the distance type (miles, kilometers, blocks) for the distance
h. **Driving Time**: Time required to drive to the attraction from the property.
i. **Price Range**: Enter the lowest to the highest cost this attraction charges.
j. **Hours of Operation**: The hours (time frame) this attraction is open.
k. **Latitude**: Enter latitude for location of attraction
l. **Longitude**: Enter longitude for location of attraction
m. **General Directions**: General directions related to finding or navigating to the attraction.

3. Click **Save**.

Editing Attractions

1. From the **Administration** menu, select **Enterprise**, select**Chain and Property** and select **Attractions**.
2. Enter search criteria and click **Search**.
3. Select the attraction, click the vertical ellipsis and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Attractions

1. From the **Administration** menu, select **Enterprise**, select**Chain and Property** and select **Attractions**.
2. Enter search criteria and click **Search**.
3. Select the attraction, click the vertical ellipsis and select **Delete**.
4. Click **Delete** and confirm the deletion.

Configuring Chain

Prerequisites for Configuring Chain

Your chain is provisioned on activation of the Oracle Hospitality OPERA Cloud Foundation subscription.

For multi property operations, you can activate profile sharing across all properties.

- With profile sharing active, the **Property** field is multi-select and non-mandatory in search panels; you can set a default property however. See Changing Your Location in Central or Multi Property Operations.
- With profile sharing inactive, the **Property** field is single selection and mandatory in Look to Book and reservation search, and the ability to move reservations to other properties is disabled.

Editing Chain Details

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management** and select **Chain**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Click **Edit** and update the details
   a. **Name**: Enter a name for the chain.
   b. **Description**: Enter a description for the chain.
3. Click **Save**.

Enabling Shared Profiles

> **Note**
>
> Your PIN is required to enable profile sharing; the option cannot be disabled once enabled.

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property Management** and select **Chain**.
2. Click **Edit**.
   a. Toggle **Shared Profiles** on to enable sharing of profiles across all properties.
   b. Click **Save**.
   c. Enter **PIN** and click **Enable** to enable share profiles.

Configuring Note Types

Notes are available for documenting various kinds of information that can then be made available at points throughout OPERA Cloud. For example, notes can be added to profiles, to reservations, to events, to business blocks and so on. Notes can be accessed in a variety of ways, but generally you can view and manage notes by selecting the **Notes** details link from the **I Want to . . .** or presentation page

Adding Note Types

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Note Types**.
2. Click **New** and complete the following:
   a. **Notes Group**: Select the note group from list for which this note type belongs.
   b. **Code**: Enter a code for this note type.

> **Note**
>
> Note type codes cannot contain ampersands (&). Any note type code containing an ampersand will only display the characters just before/just after the ampersand. For example a note type code of S&C would display only as SC.

   c. **Description**: Enter a description for this note type code.
   d. **Display Seq**: Enter a number that controls the position of the note type in the Note Types in list. If left blank, notes will appear in alphabetical order.

Copyright © 2016, 2025, Oracle and/or its affiliates.

e. **Internal**: Select check box to designate notes of this note type as internal by default. Internal notes are not output on stationery or on reports (unless the report explicitly allows display of Internal Notes).

f. **Override Internal**: Select this check box to allow a user to override the internal checkbox when adding a note.

> **Note**
>
> If **Internal** is selected and **Override Internal** is not selected, a note of this note type will be designated as internal and a user cannot update the designation. If **Internal** is selected and **Override Internal** is also selected, a note of this note type will, by default, be designated as internal, but a user may update the check box to remove the internal designation. If **Override Internal** is selected and **Internal** is not selected, the note of this type will not be designated as internal, but the **Internal** checkbox will be available for the user to update.

g. **Default Note Type**: Select check box to specify the current note type as the default. The default note type will display whenever a note of that notes group is created. This applies to AR Account Notes, Business Block Notes, Profile Notes, Event Notes, Contract Notes and Property Notes When the Default Note Type has Default Note Text applied to it (see Default Note Text below), the default note text will also display when the note type is defaulted.

h. **Default Note Text**: Select check box to setup a default note text to populate to the comments field when adding a note.

   i. Click **New** to add a default note.

      i. **Global**: Select to setup default note for all properties

      ii. **Property**: Select to setup default note for a specific property

         i. **Property**: Select a property from the list

      iii. **Note Text**: Enter the note text to default to new note.

   ii. Click **Save**.

   iii. To edit, click the vertical ellipsis **Actions** menu and select **Edit**.

   iv. To delete, click the vertical ellipsis **Actions** menu and select **Delete**.

3. Click **Save**.

Editing Note Types

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Note Types**.
2. Enter search criteria and click **Search**.
3. Select the note type in search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. **Inactive**: Once a note type has been applied to a note, it cannot be deleted. Use the Inactive check box to remove the note type from use. Inactive notes will not be displayed in OPERA Cloud and will be treated as if they have been deleted. Inactive notes will be purged after 7 days by the purge process.

6. Click **Save**.

Deleting Note Types

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Note Types**.
2. Enter search criteria and click **Search**.
3. Select the note type in search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** and confirm.

Configuring Transportation

Set up the transportation services available to and from your property. Transportation details are displayed in the property brochure .

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Transportation codes are created by selecting the **Template** tab. Once created, you can copy Transportation to specific properties using the **Copy** action. See Copying Configuration Codes to Multiple Properties for more information.

Adding Transportation

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Transportation**.
2. Click **New** and complete the following
   a. **Transportation Code**: Enter the transportation code.
   b. **Label**: Enter a single-character code to designate this transportation carrier.
   c. **Description**: Enter a description of the transportation service.
   d. **Note**: This entry is required in order to make this carrier available in Airport setup. See Airports for details.
   e. **Phone**: Enter the phone number for this transportation carrier.
   f. **Distance**: The distance from the property to the transportation center/company.
   g. **Distance Type**: A distance type (miles, kilometers, blocks) for the transportation
   h. **Price Range**: Enter the lowest to the highest cost this transportation carrier charges for its services.
   i. **Notes**: Enter supplementary annotations or remarks about the transportation carrier that may be helpful to a reservation agent.
   j. **Display Sequence**: Enter the display sequence for items to appear in lists by assigning them a numeric order.
3. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Transportation

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Transportation**.
2. Enter search criteria and click **Search**.
3. Select the code in search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Transportation

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Transportation**.
2. Enter search criteria and click **Search**.
3. Select the code in search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** and confirm.

Configuring Service Request Priorities

Prerequisites for Configuring Service Request Priorities

Service Requests are used for incident, complaint or general request tracking and can be associated with a guest profile, reservation or room. Configure the various service request priorities used when Managing Service Requests.

Adding Service Request Priorities

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Service Request Priorities**.
2. Click **New** and complete the following:
   a. **Code**: The Service Request code.
   b. **Description**: The description of the Service Request Priority
      i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   c. **Sequence**: Enter a display sequence.
3. Click **Save**.

Editing Service Request Priorities

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Service Request Priorities**.
2. Enter search criteria and click **Search**.
3. Select the service request priority in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.

Copyright © 2016, 2025, Oracle and/or its affiliates.

5. **Inactive**: When selected the code will become inactive and by will not be displayed in the search list results.
6. Click **Save**.

Deleting Service Request Priorities

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Service Request Priorities**.
2. Enter search criteria and click **Search**.
3. Select the service request priority in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Service Request Codes

Prerequisites for Configuring Service Request Codes

Service Requests are used for incident, complaint or general request tracking and can be associated with a guest profile, reservation or room. Configure the various service request types used when Managing Service Requests.

Adding Service Request Codes

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Service Request Codes**.
2. Click **New** and complete the following
   a. **Code**: Enter a code for the service request.
   b. **Description**: Enter a description for the service request.
   c. **Department**: Select department from the list to associated with this Service Request.
   d. **Restrict Changes**: Select check box to restrict changes. When selected, the Service Request Code cannot be edited or deleted unless the Override Change Restriction user task is assigned to the user's role.
   e. Click **Save**.

Editing Service Request Codes

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Service Request Codes**.
2. Enter search criteria and click **Search**.
3. Select the service request in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. **Inactive**: Use the Inactive check box to remove the service request code from use. Inactive codes will not be displayed in OPERA Cloud and will be treated as if they have been deleted.
6. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Service Request Codes

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Service Request Codes**.
2. Enter search criteria and click **Search**.
3. Select the service request in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Communication Methods

OPERA Cloud supports a variety of communication methods for exchanging data with external systems using OXI (OPERA Xchange Interface). The following standard communication methods are preconfigured:

- **Email** - HTML or ASCII text email.
- **Printer** - Hardcopy printer.
- **VID** - Video conferencing.
- **Data** - Lead data exchange.
- **Fax** - Facsimile.

You can configure additional communication methods if required.

Adding Communication Methods

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Communication Methods**.
2. Click **New** and complete the following
    a. **Code**: Enter a code for the communication method.
    b. **Description**: Enter a description of the communication method.
        i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
    c. **Sequence**: Enter a display sequence.
3. Click **Save** or **Save and Continue** to add another.

Editing Communication Methods

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Communication Methods**.
2. Enter search criteria and click **Search**.
3. Select the communication method, in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Communication Methods

1. From the **Administration** menu, select **Enterprise**, select **Chain and Property** and select **Communication Methods**.
2. Enter search criteria and click **Search**.
3. Select the communication method, in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm

Configuring Delivery Status

Prerequisites for Configuring Delivery Status

Delivery status codes are used while displaying the reservation delivery status in the Reservation Delivery History panel.

Codes 1 - 5 are populated by default and correspond to information returned from OPERA Cloud eXchange Interface; the descriptions can be edited as required.

Adding Delivery Statuses

1. From the **Administration** menu, select **Enterprise** select **Chain and Property** and select **Delivery Status**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the delivery status.
   b. **Description**: Enter the description of the delivery status.
      i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   c. **Sequence**: Enter a sequence number that determines the position of this delivery status in lists.
3. Click **Save**.

Editing Delivery Statuses

1. From the **Administration** menu, select **Enterprise** select **Chain and Property** and select **Delivery Status**.
2. Enter search criteria, click **Search**.
3. Select a delivery status, click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Delivery Statuses

1. From the **Administration** menu, select **Enterprise** select **Chain and Property** and select **Delivery Status**.
2. Enter search criteria, click **Search**.
3. Select a delivery status, click the vertical ellipsis **Actions** menu and select **Delete**.

4. Click **Delete** to confirm.

Configuring Corporate Information

Prerequisites for Configuring Corporate Information

Corporate Information details are specified in Property Configuration, providing for chain-specific use cases; the Corporate Information data is available to external systems through Oracle Hospitality Integration Platform.

Configuring Brand Codes

Configure the various brands available in your chain. Brand codes are then associated with properties.

Adding Brand Codes

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Brand Codes**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the Brand Code.
   b. **Description**: Enter a description for the Brand Code.
   c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
   d. **Sequence**: Enter a display sequence.
3. Click **Save**.

Editing Brand Codes

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Brand Codes**.
2. Enter search criteria and click **Search**.
3. Select the brand code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update details.
5. Click **Save**.

Deleting Brand Codes

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Brand Codes**.
2. Enter search criteria and click **Search**.
3. Select the brand code in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Business Units

Adding Business Units

1. From the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Business Units**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the Business Unit.
   b. **Description**: Enter a description for the Business Unit.
   c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
   d. **Sequence**: Enter a display sequence.
3. Click **Save**.

Editing Business Units

1. From the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Business Units**.
2. Enter search criteria and click **Search**.
3. Select the business unit, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update details.
5. Click **Save**.

Deleting Business Units

1. From the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Business Units**.
2. Enter search criteria and click **Search**.
3. Select the business unit, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Department Codes

Adding Department Codes

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information** and then select **Department Codes**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the Department Code.
   b. **Description**: Enter a description for the Department Code.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).

d. **Sequence**: Enter a display sequence.

3. Click **Save**.

Editing Department Codes

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information** and then select **Department Codes**.
2. Enter search criteria and click **Search**.
3. Select the department code, click the vertical ellipsis **Actions** menu and select **Edit**
4. Update the details.
5. Click **Save**.

Deleting Department Codes

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information** and then select **Department Codes**.
2. Enter search criteria and click **Search**.
3. Select the department code, click the vertical ellipsis **Actions** menu and select **Delete**
4. Click **Delete** to confirm.

Configuring Divisions

Adding Divisions

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Divisions**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the Division.
   b. **Description**: Enter a description for the Division.
   c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
   d. **Sequence**: Enter a display sequence.
3. Click **Save**.

Editing Divisions

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Divisions**.
2. Enter search criteria and click **Search**.
3. Select the division, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.

Copyright © 2016, 2025, Oracle and/or its affiliates.

5. Click **Save**.

Deleting Divisions

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Divisions**.
2. Enter search criteria and click **Search**.
3. Select the division, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Hotel Categories

Adding Hotel Categories

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Hotel Categories**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the Hotel Category.
   b. **Description**: Enter a description for the Hotel Category.
   c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   d. **Sequence**: Enter a display sequence.
3. Click **Save**.

Editing Hotel Categories

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Hotel Categories**.
2. Enter search criteria and click **Search**.
3. Select the hotel category, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Hotel Categories

1. Select the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Hotel Categories**.
2. Enter search criteria and click **Search**.
3. Select the hotel category, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Operating Units

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Operating Units

1. From the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Operating Units**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the Operating Unit.
   b. **Description**: Enter a description for the Operating Unit.
   c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   d. **Sequence**: Enter a display sequence.
3. Click **Save**.

Editing Operating Units

1. From the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Operating Units**.
2. Enter search criteria and click **Search**.
3. Select the operating unit, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update details.
5. Click **Save**.

Deleting Operating Units

1. From the **Administration** menu, select **Enterprise**, select **Corporate Information**, and then select **Operating Units**.
2. Enter search criteria and click **Search**.
3. Select the operating unit, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Flexible Dynamic Fields

Prerequisites for Configuring Flexible Dynamic Fields

Flexible Dynamic Fields for profile use can be created by selecting the Area **Profile**. You must select the Profile Types on which the field should be available. Flexible Dynamic Fields for reservation use can be created by selecting the area **Reservation**.

Adding Flexible Dynamic Fields for Profiles

1. Select the **Administration** menu, select **Enterprise**, select **Flexible Dynamic Fields** and then select **Flexible Dynamic Fields Configuration**.
2. Click **New** and enter the following details:
   a. **Area**: Select a Profile.
   b. **Code**: Enter a unique code for the flexible dynamic field.
   c. **Description**: Enter a description of the flexible dynamic field.
   d. **Sequence**: Enter a sequence number for displaying the flexible dynamic field.

Copyright © 2016, 2025, Oracle and/or its affiliates.

e. **Profile Types**: Select applicable profile types from the list.

f. **Mandatory Field**: Select check box if the flexible dynamic field is mandatory.

g. **Enable LOV**: Select checkbox if the field values are selected from a list of values

   i. **LOV Group**: Select the LOV group the Flexible Dynamic Field should use. For more information, see UDF Groups and Values.

   ii. **Allow Multi-Select**: Select check box to allow multiple values to be selected from the list

h. Click **Save**.

Adding Flexible Dynamic Fields for Reservations

1. Select the **Administration** menu, select **Enterprise**, select **Flexible Dynamic Fields** and then select **Flexible Dynamic Fields Configuration**.
2. Click **New** and enter the following details:

   a. **Area**: Select **Reservation**.

   b. **Code**: Enter a unique code for the flexible dynamic field.

   c. **Description**: Enter a description of the flexible dynamic field.

   d. **Sequence**: Enter a sequence number for displaying the flexible dynamic field.

   e. **Mandatory** Field: Select check box if the flexible dynamic field is mandatory.

   f. **Enable LOV**: Select checkbox if the field values are selected from a list of values

      i. **LOV Group**: Select the LOV group the Flexible Dynamic Field should use. For more information, see Configuring UDF Groups.

      ii. **Allow Multi-select** : Select check box to allow multiple values to be selected from the list.

   g. Click **Save**.

Editing Flexible Dynamic Fields for Profiles or Reservations

1. Select the **Administration** menu, select **Enterprise**, select **Flexible Dynamic Fields** and then select **Flexible Dynamic Fields Configuration**.
2. Enter search criteria and click **Search**.
3. Select the flexible dynamic fields code, click the vertical ellipsis **Actions** menu and select **Edit**

   a. Update the details.

   b. **Inactive**: Select check box to inactivate the code. Inactivating a code does not delete the code from profiles.

   c. Click **Save**.

Deleting Flexible Dynamic Fields for Profiles or Reservations

Codes cannot be deleted when selected in a profile. Instead you can update code to **Inactive** if no longer required.

1. Select the **Administration** menu, select **Enterprise**, select **Flexible Dynamic Fields** and then select **Flexible Dynamic Fields Configuration**.
2. Enter search criteria and click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the flexible dynamic fields code, click the vertical ellipsis **Actions** menu and select **Delete**
4. Click **Delete** to confirm.

Configuring Images

Prerequisites for Configuring Images

Use Image Management to configure images you'd like to display within various areas of OPERA Cloud, including a property logo image to output on stationery such as the guest registration card, folios and receipts.

You can either upload images from your device or workstation, or reference external images available on your website or content management system.

Using Image Management, you can configure images for the following configuration:

- **Articles**: Images for Articles displayed in OPERA Cloud Mobile > Post It.
- **Attractions**: Images such as theme parks, historic sites, and so on. Attractions these to appear in the property brochure.
- **Floor Plan**: Layouts of each floor. You can configure areas for the rooms on these floor plan images. For more information, see Configuring Floor Plans . Floor plan images are used in Rooms Management and Front Desk. See Viewing Floor Plans for more information.
- **Function Space**: Function space images that can be viewed from the Function Diary. See Function Space Management for more information.
- **Item Inventory**: Images of equipment, products, supplies, or services that are sold in reservations or events.
- **Logo**: Images of your property's logo. See Configuring Property Brochure Master Data for more information. The property logo image also appears on stationery and reports.
- **Maps**: Add a locator or road map and directions to your property for the property brochure maps and directions. See Configuring Property Brochure Master Data for more information.
- **Nationality**: Images that symbolize different nationalities. See Managing Nationality Codes for more information.
- **Out Of Order / Service**: Images assigned to Out of Order and Out of Service codes as visual aides. See Configuring Out of Order and Out of Service Reasons for more information.
- **Package**: Images representing packages and package components. Configure these for Reservations and Book Now enhancements. See Package Codes for more information.
- **Property**: Property images to appear in the property brochure. See Configuring Property Brochure Master Data for more information.
- **Room**: Images of specific rooms by room number/room name. See Configuring Room Codes for more information.
- **Room Condition**: Images that indicate room conditions. See Room Conditions for more information.
- **Room Maintenance**: Images for room maintenance requests. See Configuring Room Maintenance Codes for more information.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Room Type**: Images of types, such as king or deluxe. See Configuring Room Types for more information.
- **Site Plan**: Images of the property layout, buildings, pools, restaurants, and so on. See Configuring Property Brochure Master Data for more information.
- **Track It Type**: Images that symbolize the different types of Track It items. See Configuring Track It Types for more information.
- **Membership**: Images that symbolize different membership levels. See Configuring Membership Type Levels for more information.

Adding Images

You can upload images in PNG, JPG, JPEG, and GIF file formats. Images larger than 300 KB are automatically scaled and compressed upon upload.

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, then select **Image Type** .
2. Click **New** and complete the following:
    a. **Code**: Select a code from the list.
    b. **Sequence**: Enter a sequence.
    c. **Set Image as Primary**: Select check box to set as the primary image.
    d. **Website**: Enter website URL.
    e. **Description**: Enter a description.
    f. Choose Image Source.
        i. Image from Device.
            i. Click **Choose Image** to upload image from your device or workstation.
            ii. Navigate to the folder, select an image and click **Open**.
        ii. External Image using URL. Select to reference an external web image.
            i. **URL**: Enter or paste the image URL.
    g. Click **Save**.

Editing Images

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, then select **Image Type** .
2. Enter search criteria then click **Search**.
3. Select an image in the search result, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update details and image.
5. Click **Save**.

Deleting Images

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, then select **Image Type** .
2. Enter search criteria then click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select an image in the search result, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Floor Plans

Prerequisites for Configuring Floor Plans

Floor plan configuration enables you to upload floor plan images and then draw areas (for rooms) on the image and link those areas to rooms.

Adding Floor Plans

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, and then select **Floor Plan**.
2. Click **New** and complete the following fields:
   a. **Floor Plan**: Enter a floor number.
   b. **Description**: Enter a description of the floor plan.
3. Click **Choose Image** and select an image to upload. This can be a PNG, JPG, JPEG, or a GIF file.

> **Note**
>
> External web images are not supported for floor plans.

4. Click **Save**.

Editing Floor Plans

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, and then select **Floor Plan**.
2. Enter search criteria and click **Search**.
3. Select the floor plan in the search results, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration
5. Click **Save**.

Deleting Floor Plans

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, and then select **Floor Plan**.
2. Enter search criteria and click **Search**.
3. Select the floor plan in the search results, then click the vertical ellipsis **Actions** menu and select **Delete**
4. Click **Delete** to confirm.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Mapping Rooms to an Area Drawn on Floor Plans

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, and then select **Floor Plan**.
2. Enter search criteria and click **Search**.
3. In the search results, click the **vertical ellipsis** for the floor plan and select **Map Rooms**.
4. In the Controls panel, activate the **Draw** control.
5. To begin drawing regions for each room on the image, click in the image, drag to draw the shape, and click again to finish.
    a. To draw rectangles or squares, activate the **Rectangle/Square** control in the Controls panel, click the first point / corner of the rectangle or square, and then move your cursor to the opposite corner and click again to complete it.
    b. To draw circles, activate the **Circle** control in the Controls panel, click where you want to draw the circle, drag to increase the size of the circle, and click again to complete it.
    c. To draw polygons, activate the **Polygon** control in the Controls panel, click each point of the polygon, and then click the first point (red point) again to complete the shape.
    d. To copy or paste onto the image, activate the **Copy/Paste** control in the Controls panel, click the shape you want to copy, and then click the area on the image where you want to paste it.
    e. To move a shape, activate the **Move** control in the Controls panel, click the shape to pick it up, drag it to the new position, and then click again to drop it in place.
    f. To delete a shape, active the **Delete** control in the Controls panel and then click the shape you want to delete.
    g. To cancel a shape, move your cursor outside the drawing area.
6. Click **Clear All** to clear any shapes you have drawn.
7. Click **Edit/Update Selections** to link a selection (room region) from the floor plan to a respective room number.
    a. Search for and select the required room number for the selected room region.
8. Click **Save** when finished.

Configuring Property Image for the Property Brochure

You can add an image PNG, JPG, JPEG, or GIF formats on the business card; the image selected as the primary image appears in the business card.

Adding Property Brochure

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, and then select **Property**.
2. Select or confirm the **Property** name.
3. Click **New** and enter the following details:
    a. Enter or select the Property name.
    b. Select Set Image as Primary and provide a description of the image.
    c. Select either the image or URL path to the image:

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. Click **Choose Image** to upload an image from your local computer.

ii. Or, enter the **URL** path of a secured website image in the External Image via URL field to display an image from the internet or from an internal content management system.

4. Click **Save**.

Editing Property Brochure

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, and then select **Property**.
2. Select or confirm the **Property** name and click **Search**.
3. Click the vertical ellipsis **Actions** menu on the image and select **Edit**.
4. Use **Choose an Image Source** to select the image from either your computer or from a secured website image or content management system.
5. Select **Set Image as Primary** checkbox.
6. Click **Save**.

Deleting Property Brochure

1. From the **Administration** menu, select **Enterprise**, select **Image Management**, and then select **Property**.
2. Select or confirm the **Property** name and click **Search**.
3. Click the vertical ellipsis **Actions** menu on the image and select **Delete**.
4. Click **Delete** to confirm.

About OPERA Controls

OPERA Controls determine the functionality enabled and the associated business logic and defaults.

In multi-property operations, some OPERA Controls are global, indicated by and impact all properties. Your role must be granted the **Edit Global Controls** task to update global OPERA Controls. Other OPERA Controls are hub-level, indicated by affecting properties allocated to the hub. Your role must be granted to the **Edit Hub Controls** task to update hub-level OPERA Controls.

For **OPERA Cloud Service, Property Management Professional / Enterprise Foundation** or **OPERA Cloud Service, Property Management Standard Edition** subscribers, the OPERA Control functions you activate count towards the limits imposed for your subscription, with the exception of functions offered complimentary, which are indicated with

.

For the **OPERA Cloud Sales and Event Management** or **OPERA Cloud Central Management Services** subscribers, the additional add-ons OPERA Controls available are determined by your specific subscription. For more information, see Sales and Event Management Functionality Matrix .

For the **OPERA Cloud Service, Loyalty subscribers**, additional add-on OPERA Controls are available. For more information, see Loyalty Functionality Matrix.

For **OPERA Cloud Service, Casino and Gaming Management** subscribers, additional OPERA Controls are available.

OPERA Cloud Subscription Matrices

This topic outlines the feature matrices available for the various implementation scenarios in OPERA Cloud.

Sales and Event Management Functionality Matrix

Table 11-1 Sales and Event Management Functionality Matrix

Feature	Description	Reference	OPERA Cloud Foundation	OPERA Cloud Sales & Event Management Essentials Edition	OPERA Cloud Sales & Event Management Standard Edition	OPERA Cloud Sales & Event Management Premium Edition	Central Sales
Sales							
Activities	Sales activity management for Contacts and Sales Accounts	For more information, see Activities	✗	✓	✓	✓	✓
Activity Auto Traces	Rule-based activity generation for Contacts, Sales Accounts, Blocks and Activities.	For more information, see About Sales Activities Auto Traces	✗	✗	✓	✓	✓
Sales Manager Goals	Define Sales Manager Goals for Group Rooms & Catering, Transient Rooms, and Activities.	For more information, see Configuring Sales Manager Goals	✗	✗	✗	✓	✗
Opportunities	Manage blocks and events opportunities and track the business lost and won.	For more information, see Managing Opportunities	✗	✗	✗	✓	✗
Leads	Create sales leads and send to selected properties.	For more information, see Managing Central Sales Leads	✗	✗	✗	✗	✓
Sales Account Forecast	Define the expected revenue and room nights on sales accounts for specific periods of time.	For more information, see Managing Sales Account Forecast	✗	✗	✗	✓	✗

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-1 (Cont.) Sales and Event Management Functionality Matrix

Feature	Description	Reference	OPERA Cloud Foundation	OPERA Cloud Sales & Event Management Essentials Edition	OPERA Cloud Sales & Event Management Standard Edition	OPERA Cloud Sales & Event Management Premium Edition	Central Sales
Sales Accounts, Sales Information	Sales Account attributes such as Business Potential, Scope, Influence, Competition.	For more information, see About Sales Information	✓	✓	✓	✓	✓
Relationships	Define associations between individuals, companies, travel agents, sources and contacts. Relationships can be used to facilitate the distribution of negotiated rates and supports roll up statistics.	Managing Profile Relationships	✓	✓	✓	✓	✓
Contacts	Manage Contact profiles, and associate to Sales Accounts.	Managing a Guest or Contact Profile	✓	✓	✓	✓	✓
Sales Owner	Track the assigned Sales Agent for Accounts and Contacts.	Managing a Sales Account Profile	✓	✓	✓	✓	✓
Block Management							
Business Blocks	Business block management - multiple date and room type allocation.	For more information, see Blocks	✓	✓	✓	✓	✗
Block Traces	Actionable date-driven reminders for specific blocks.	For more information, see Managing Blocks Traces	✓	✓	✓	✓	✗
Block Restrictions	Set rate restrictions on blocks.	For more information, see Managing Block Restrictions	✓	✓	✓	✓	✗

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-1 (Cont.) Sales and Event Management Functionality Matrix

Feature	Description	Reference	OPERA Cloud Foundation	OPERA Cloud Sales & Event Management Essentials Edition	OPERA Cloud Sales & Event Management Standard Edition	OPERA Cloud Sales & Event Management Premium Edition	Central Sales
Rooming List / Import	Block reservation import functionality.	For more information, see Group Rooming Lists	✓	✓	✓	✓	✗
Master/Sub Allocations	Sub Allocations pull inventory from a Master Allocation.	For more information, see Master and Sub-Allocations	✓	✓	✓	✓	✗
Master/Sub Blocks	Parent-sub hierarchy for group blocks, for single or multiple properties.	For more information, see About Master and Sub Blocks	✓	✓	✓	✓	✗
Elastic Blocks	Ability to book group reservations outside of the block dates, or for room types not included in the block.	For more information, see Non-Elastic, Elastic, Sell Limits, and Shoulder Dates	✓	✓	✓	✓	✗
Tour Series	Reoccurring blocks on a define frequency.	For more information, see Creating a Tour Series	✓	✓	✓	✓	✗
• Quick Room Grid • Ranking • Lowest Guaranteed Rate • Non-Compete • Conversion	Enables additional fields in Business Blocks.	For more information, see OPERA Controls — Blocks	✗	✗	✗	✓	✗

Account Reports	Account Production Reports	For more information, see Profiles Reports	✓	✓	✓	✓	✗

Loyalty Functionality Matrix

The following table outlines the functionality available for the various implementation scenarios:

- An Oracle Hospitality OPERA Cloud Foundation subscription only.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- An Oracle Hospitality OPERA Cloud Foundation subscription, with the Loyalty Membership Configuration OPERA Control active, and integrated with:
  - OPERA Customer Loyalty Tracking Cloud Service (OXI)
  - External loyalty solution (OHIP)
- An Oracle Hospitality OPERA Cloud Foundation and Oracle Hospitality OPERA Cloud Service, Loyalty subscription. For more information, see Guest Loyalty Programs.

Table 11-2 Loyalty Functionality Matrix

Claim Management	For more information, see • Configuring Membership Claim Adjustment Limits • Configuring Membership Claim Types • Configuring Membership Claim Origins	✗	✗	✓

Configuring OPERA Controls

The OPERA Control descriptions indicate when a function is provided complimentary and does not affect your OPERA Cloud subscription.

Tip

Use **View Options** to toggle display of internal control name and indicators. Indicates global controls. Indicates Hub controls. To immediately reflect any OPERA Control changes, click the **Reload Application** link.

1. Select your location.
2. From the **Administration** menu, select **Enterprise**, then select **OPERA Controls**.
3. OPERA Control groups are listed down the left side panel; select a control group to display various OPERA Controls.
4. Select an **OPERA Controls** to update
5. Activate or update the OPERA Control to suit your requirements.

Copyright © 2016, 2025, Oracle and/or its affiliates.

OPERA Controls — Accounts Receivables

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Accounts Receivables group.

Table 11-3 OPERA Controls — Accounts Receivables Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ACCOUNTS RECEIVABLES [ACCOUNTS_RECEIVABLES]		Activates functionality for management of all debtor accounts and invoices along with the associated collection processes such as generating statements and reminder letters.
FINANCE CHARGES [AR_FINANCE_CHARGES]		Enables the ability to post a calculated percentage or fixed amount charge based on reminder cycle days – typically used for charging late payment fees
	DEFAULT FINANCE CHARGES TRANSACTION CODE SETTING [AR_FINANCE_CHARGES_TRN_CODE]	Identifies the transaction code used when automatically generating finance charges on an accounts receivables account.
FIXED CHARGES [AR_FIXED_CHARGES]		Enables the ability to auto-post a charge to an Accounts Receivables (AR) account based on defined posting cycle – daily, weekly, monthly
Complimentary **TRACES** [AR_TRACES]		Enables the ability to record an actionable date-driven reminder on an Accounts Receivables (AR) account

Table 11-4 OPERA Controls — Accounts Receivables Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
AR PAYMENT RECEIPT [AR_PAYMENT_RECEIPT]		Ability to generate AR Payment Receipts with a receipt sequence number and receipt type PAR_AR. Allows a Prefix, Suffix and Unique ID to be defined for AR Payment Receipt numbers.
	AR PAYMENT RECEIPT UNIQUE ID VALUE [AR_PAYMENT_RECEIPT_UNIQUE_VALUE]	The numeric or alphanumeric value for Unique ID on each AR Payment Receipt in the property.
	PREFIX FOR AR PAYMENT RECEIPT [AR_PAYMENT_RECEIPT_PREFIX]	The prefix for AR Payment Receipt sequence numbers in the property.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-4 (Cont.) OPERA Controls — Accounts Receivables Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	SUFFIX FOR AR PAYMENT RECEIPT [AR_PAYMENT_RECEIPT_SUFFIX]	The suffix for AR Payment Receipt sequence numbers in the property.
AUTOMATIC TRANSFER OF DIRECT BILL FOLIOS [AUTO_TRANSFER_AR]		Activates the automatic transfer of direct bill settled folios from front office to their respective accounts receivables during End of Day routine. When inactive all front office folios settled to direct bill must be manually transferred to their AR Accounts via the Transfer Front Office option.
CHARGES TRANSFER [AR_POSTINGS_TRANSFER]		Enables the ability to transfer individual charges from one AR invoice to another AR invoice across different AR accounts. **Note** The **No Modify Invoice** OPERA Control and the **Folio No Reprint** OPERA Controls must be inactive.
CONSOLIDATE CREDIT CARDS [CONSOLIDATE_CC]		Activates the automatic compression of credit card settlements to an invoice and transfer of the invoice to an AR account during the End of Day process. When inactive, all credit card settlements must be manually compressed into an invoice and the invoice manually transferred to their respective AR Accounts.
CREATE INVOICES WITH NEGATIVE AMOUNTS [CREATE_INVOICES_WITH_NEGATIVE_AMOUNTS]		Allow creation of invoices in AR with a total amount less than zero (that is, credit notes).
CREDITS AGING [AGE_CREDIT]		When active, unallocated payments will be included the respective aging buckets calculations. When inactive, unallocated payments always remain in the “Current” age bucket.
DELAY DAYS REPORT [DELAY_DAYS_REPORT]		Ability to create an **AR Unpaid Invoices** report with delay days defined on the account type.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-4 (Cont.) OPERA Controls — Accounts Receivables Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
INVOICE FINALIZE DATE [AR_CLOSE_INVOICE]		Enables functionality to finalize each invoice to prevent any further modifications. The invoice aging can then be based on the finalized date. Refer DATE FOR AGING setting.
MARK INVOICES AS PRINTED [AR_INVOICES_PRINTED_CHECK]		After generating a statement, mark the invoices listed on the statement as printed. This indicator appears in invoice management.
NO MODIFY INVOICE [AR_NOMODIFY_INVOICE]		Prevents an invoice from being modified (adjusted) after it is generated. Any adjustment must be made via a new invoice (that is, credit note). The **CREATE INVOICES WITH NEGATIVE AMOUNTS** parameter should be activated when this parameter is active.
PAYMENT DUE DAYS [PAYMENT_DUE_DAYS]		Ability to define on an Accounts Receivable Account, the number of days after which an invoice should be paid. If the Month End Calculation check box is also selected, the specified number of days will be added to the last day of the month when the invoice was generated, to determine the date the invoice should be paid.
SIMPLE REMINDER [SIMPLE_REMINDER]		When the parameter is active, the Reminder Details screen sorts reminder letters in the order in which they were set up, starting with the first letter configured. This is typically the order in which these letters are generated for reminder letter mailings. There may be more than one letter "queued" to be generated for the account depending on the age of the account balance and which letters have already been generated. When the parameter is inactive, reminder letters are sorted based on the number of days in the reminder cycle, lowest to highest. For this parameter setting, reminder letters are generated depending on the age of the account balance, not on which letters have already been mailed. For example, assuming there are 30, 60, and 90-day cycles, if the account balance is 63 days old when letters are generated, the 60 day letter is sent, regardless of whether the 30 day letter was sent.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-4 (Cont.) OPERA Controls — Accounts Receivables Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
STATEMENT NUMBERS [STATEMENT_NUMBERING]		Assigns a number to all AR statements generated, enabling you to search and manage invoices by statement number reference. Note - You must customize an AR statement template, using the sample_statement_numbering template, and reference your custom template in all AR account types as the template to generate.
UNALLOCATED PAYMENTS ON REMINDERS [UNALLOCATED_PAYMENT_ON_REMINDER]		When the parameter is active, any unallocated payments in an AR account will be included on the AR reminder letter generated.

Table 11-5 OPERA Controls — Accounts Receivables Settings

SETTING	DESCRIPTION
AR INVOICE ADJUSTMENT PERIOD [ADJUSTMENT_ALLOWANCE]	Specifies allowance Period for Adjustments (DWMYU). This parameter is used to determine how long a charge can remain open to adjustment after it was posted in (or transferred to) Accounts Receivable. The possible entries here are: • D = within 1 day • W = up to one week • M = up to one month • Y = up to one year • U = unlimited time (the transaction may be adjusted any length of time after its posting).
ACCOUNT PICTURE [ACCOUNT_PICTURE]	Defines the account number format mask used when creating new AR accounts. • X represents alphanumeric characters. • A represents letters. • 9 represents numbers. • Dash (-) is used to separate values by using double quotation marks "-". A dash cannot be at the end of the account number format. For example, XA99"-"99 permits values such as ZD35-93, 2E76-12, and so on.
AGING LEVEL DETAILS [AGING_LEVEL_DETAILS]	Defines the aging periods for invoices. Set the ending number of days, and OPERA Cloud calculates the next beginning number. For example, if you enter 30 in the first field, aging period one (current) is 0 - 30 days. OPERA Cloud calculates that aging period two begins at day 31 and asks you to supply the end day for that period, such as 60. OPERA Cloud calculates the beginning of aging period three as day 61 and asks for the end of this aging period, and so on. This pattern continues until you have filled out all five fields. The last field calculates automatically as everything over the last number you entered.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-5 (Cont.) OPERA Controls — Accounts Receivables Settings

SETTING	DESCRIPTION
CREDIT CARD TRANSACTION CODE [AR_CREDIT_TRX_CODE]	Identifies the transaction code to use when consolidating credit cards settlements as an invoice in AR.
DATE FOR AGING [DATE_FOR_AGING]	Ages invoices based on this date value. • ART (AR Transfer from Front Office Date) • INC (Invoice Finalized Date) • COD (Check Out Date) • ING (Invoice Generation Date)
DEFAULT AR FOLIO STYLE [AR_FOLIO_STYLE]	Identifies the folio style used when printing a folio from accounts receivables.
DEFAULT MARKET CODE [AR_MARKET_CODE]	Identifies the default market code for new postings and new invoices.
DEFAULT ROOM CLASS [AR_ROOM_CLASS]	Identifies the default room class for new postings, new invoices, and payments.
DEFAULT SOURCE CODE [AR_SOURCE_CODE]	Identifies the default source code for new postings and new invoices.
MANDATORY AR ACCOUNT FOR DIRECT BILL PAYMENT TYPE [MANDATORY_AR_ACCOUNT_FOR_DIRECT_BILL_PAYMENT_TYPE]	Create Reservation or check-in is not possible with Direct Bill payment for a reservation with no AR Account.
MINIMUM REMINDER DAYS [MINIMUM_REMINDER_DAYS]	Identifies the number of minimum days between sending 2 reminder letters to the same account.
OLD BALANCE TRANSACTION CODE [AR_BAL_TRX_CODE]	Identifies the old balance transaction code.
RESTRICT FOLIO TYPES FOR PARTIAL TRANSFER OF INVOICES [RESTRICT_FOLIO_TYPES_TRANSFER_INVOICE]	Selected folio types restrict users from changing the invoice amount to be transferred between accounts.
ZERO INVOICE PURGE DAYS [ZERO_INVOICE_PURGE_DAYS]	Number of days to purge zero balance invoices.

OPERA Controls — Activity

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Activity group. You can configure these functions, parameters, and settings only if you have the Oracle Hospitality OPERA Cloud Service, Sales, and Event

Copyright © 2016, 2025, Oracle and/or its affiliates.

Management Standard Edition or Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition subscription.

Table 11-6 OPERA Controls — Activity Functions

FUNCTION	DESCRIPTION
Complimentary **ACTIVITIES** [ACTIVITIES]	Enables the ability to create and manage appointments and to-do tasks. Activities are assigned to users for completion and can be linked to Accounts, Contacts and Blocks. (Enabled on activation of OPERA Cloud Sales & Event Management Essentials, Standard or Premium subscription).
Complimentary **AUTO TRACES** [AUTO_TRACES]	Provides the ability to configure Trace Codes and Definitions rules to auto create activities based on specific conditions. Trace codes can be associated to Activities, Accounts, Contacts or Blocks. Trace codes are selected in Activities, Accounts, Contacts or Blocks. (Enabled on activation of OPERA Cloud Sales & Event Management Standard or Premium subscription).

Table 11-7 OPERA Controls — Activity Parameters

PARAMETER	DESCRIPTION
ACTIVITY RESULTS [ACTIVITY_RESULTS]	When active you can configure and select resolution values for a completed Activity.

Table 11-8 OPERA Controls — Activity Settings

SETTING	DESCRIPTION
ACTIVITY PURGE DAYS [ACTIVITY_PURGE_DAYS]	Activities with a Completed Date greater than these many days in the past are purged. It will also purge non Activity records (emails) that were created earlier than these many days in the past. If no value is entered, no records in the activity change log will be purged.
DEFAULT DURATION [DEFAULT_DURATION]	The default activity duration (in minutes).
DEFAULT NUMBER OF DAYS TO KEEP TO DO ACTIVITIES ON ACTIVITY DASHBOARD TILE [DAYS_TO_KEEP_TO_DO_ITEMS_ON_CALENDAR]	Default Number of Days To Do's should be shown on Activity Dashboard Tiles.
DEFAULT START TIME [DEFAULT_STARTTIME]	The default start time (HH24:MI) for activity creation.

OPERA Controls — Blocks

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Cloud Controls Blocks group.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-9 OPERA Controls — Blocks Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **BUSINESS BLOCK** [BUSINESS_BLOCK]		Enables the ability to reserve multiple rooms of various room types between a start and end date range. Rooms can be held in non-deduct or deduct status and the inventory held can be washed manually or automatically based on a wash cycle. Individual reservations are then input via rooming list to deduct rooms from the block inventory rather than house inventory. (Enabled on activation of OPERA Cloud Sales & Event Management Essentials, Standard or Premium subscription).
BLOCK FORECAST GRID [BLOCK_FORECAST_GRID]		Enables the ability to enter Forecast Rooms Nights and Forecast Rate Amounts which helps to create reports in Reporting & Analytics.
	AUTOLOAD FORECAST GRID [AUTOLOAD_FORECAST_GRID]	Auto-populates the Forecast Rooms grid with the Original room grid and Forecast Rates grid with True Net Rate value which excludes transaction codes on Room revenue, generates, taxes and packages
BLOCK RESTRICTIONS [SET_BLOCK_PICKUP_RESTRICTIONS]		Enables the ability to set restrictions for specific block and specific room types by date.
Central **CENTRAL SALES** [CENTRAL_SALES]		Enables the ability to create a Central Sales Hub where sales agents can manage central sales activities, manage sales accounts and create central sales leads to send to selected properties. For more information, see About Central Sales.
Complimentary **GROUP ROOMS CONTROL** [GROUP_ROOMS_CONTROL]		Enables the Group Rooms Control (GRC) availability screen. The screen displays a daily summary of block inventory by status and displays Contracted, Blocked, Pick Up and Available Rooms by block. (Enabled on activation of OPERA Cloud Sales & Event Management Essentials, Standard or Premium subscription).
IMPORT ROOMING LIST [GROUP_ROOMING_LIST_IMPORT]		When enabled, Import Rooming List is available in the Rooming List. This allows the ability to utilize .xls or .xlsx files to be uploaded, formatted and submitted into the Rooming List for more efficient reservation creation for Block Reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-9 (Cont.) OPERA Controls — Blocks Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	Central **TOKENIZE AND IMPORT CREDIT CARDS FOR ROOMING LIST** [GROUP_ROOMING_LIST_IMPORT_CREDIT_CARDS]	When OPI Credit Card payment is enabled, credit cards are supported to be encrypted and tokenized for the Import Rooming List.
MASTER SUB ALLOCATIONS [MASTER_SUB_ALLOCATIONS]		Master and Sub allocation for allows for more control over the number of rooms designated for wholesale reservations by allowing for all required inventory to be placed on the Master so that the Sub-Allocation can pull its inventory from the Master. The Master Allocation, in turn pulls the allotted inventory from house availability.
MASTER SUB BLOCKS [MASTER_SUB_BLOCKS]		Enables a 'roll-up' parent/sub hierarchy for group blocks for single or multiple properties. Updates to master blocks can be automatically synchronized to all sub-blocks.
	SYNCHRONIZE MASTER SUB BLOCKS PARAMETER [SYNCHRONIZE_MASTER_SUB]	Enables the synchronization of data from the master block to the sub block.
Premium Complimentary **OPPORTUNITIES** [OPPORTUNITIES]		Allows to quickly capture blocks and events inquiries and to track the business lost and won.
	CONVERT OPPORTUNITY TO BLOCK STATUS [CONVERT_OPP_TO_BLK_STATUS]	When converting an Opportunity to block, the new block will be created in the selected status.
	RELEASE OPPORTUNITY STATUS [RELEASE_OPP_STATUS]	When Opportunity is released, it will turn into status set here.
	DEFAULT MARKET CODE FOR OPPORTUNITY [DEFAULT_MARKET_CODE_OPP]	Allows to default the value for the Market Code for Opportunity. Market Code is hidden from Create Opportunity screen, but can be customized if needed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-9 (Cont.) OPERA Controls — Blocks Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	DEFAULT SOURCE CODE FOR OPPORTUNITY [DEFAULT_SOURCE_CODE_OPP]	Allows to default the value for the Source Code for Opportunity. Source Code is hidden from Create Opportunity screen, but can be customized if needed.
Complimentary **SALES ALLOWANCE** [SALES_ALLOWANCE_ACTIVE]		Sales Allowance Functionality allows you to set an availability ceiling for group block rooms on a daily basis; requiring sales agents to have the **Overbook Sales Allowance** user task granted to overbook the sales allowance.
	BLOCK ORIGIN FOR SALES ALLOWANCE [BLOCK_ORIGIN_FOR_SALES_ALLOWANCE]	Block Origin Codes to deduct the block allocation against the Sales Allowance. Values: • SC: Conference Sales Person At Property • CS: Conference Sales Person At Central • PMS: Reservation Sales Person At Property • ORS: Reservation Sales Person At Central • EXT: External System At Null
Premium Complimentary **SALES MANAGER GOALS** [SALES_MANAGER_GOALS]		Enables the ability to setup Sales Manager Goals for Group Rooms & Catering, Transient Rooms, and Activities
TOUR SERIES [TOUR_SERIES]		The tour series functionality allows the setup of reoccurring blocks on a define frequency.
	TOUR SERIES HANDLING [TOUR_SERIES_HANDLING]	Determines if a Tour Series is created as a simple copy from original or as sub-blocks. • Simple Copy. • Master/Sub - allows for updates made to the master block to be applied to all or selected sub tour blocks.
Complimentary **TRACES** [BLOCK_TRACES]		Enables the ability to setup actionable date-driven reminders for specific blocks.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-10 OPERA Controls — Blocks Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ALIAS [BOOKING_ALIAS]		Enables the entry of alias name that can be used instead of a Block name when searching for a block.
ALLOW RATE EDITING WITH RATE CODE [ALLOW_RATE_EDITING_WITH_RATE_CODE]		Provides the ability to change the rate amounts on a block room grid even when a rate code has been linked to the block.
AUTO ASSIGN SUB BLOCK CODE [AUTO_SUB_BLOCK_CODES]		Automatically generates sub block codes. Enables Periodic Tour Series in addition to custom tour series. When Inactive (N),Periodic Tour Series option is not available in Tour Series functionality.
BLANK BUSINESS BLOCK START DATE [DEFAULT_BLANK_BB_START_DATE]		Sets the start date to blank for new block. If not active the Start Date is defaulted to the current business date.
BLOCK CODE TEMPLATE [BLOCK_CODE_TEMPLATE]		Activates the block code template pattern used for Central Reservation Systems.
	TEMPLATE PATTERN SETTING [BUSINESS_BLOCK_TEMPLATE]	Specifies the block code format to be used when a new block is created. Allows the user to configure the naming convention used in automatically generating block codes for new blocks. MON can be used as a code to insert the first three letters of the current month. Many properties have specific block template requirements for Central Reservation Systems. Note: this pattern must match the Block Code Generation Pattern.
BLOCK CONTRACT GRID [BLOCK_CONTRACT]		Shows the contract as a selectable option in the room rate grid. Contract grid is used to track the inventory commitments for a block. The Contact grid does not affect house inventory, it is only used for tracking purposes.
	AUTOLOAD CONTRACT GRID PARAMETER [AUTOLOAD_CONTRACT_GRID]	When active, the Original Grid is auto loaded into Contract grid. User has an option to 'Stop Auto Load Contract' on a block level.
BLOCK OWNER LOCKING [BLOCK_OWNER_LOCKING]		Once activated, user can select from what block status forward a block owners field will be uneditable.
	BLOCK OWNER LOCKING STATUS SETTING [BLOCK_OWNER_LOCKING_STATUS]	Specifies the status at which the Owner field becomes locked within the block status flow.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-10 (Cont.) OPERA Controls — Blocks Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Premium **BLOCK RANKING** [RANKING]		Enables a Ranking field on blocks. The Ranking list field can be used to indicate the rank (or priority) of a block. This field will be editable on for blocks having a status configured as INQUIRY or NON DEDUCT. Ranking is displayed on the Group Rooms Control screen, Function Diary, and the Business Block Short List reports.
BLOCK RATE CODE NO OVERLAP [BLOCK_RATECODE_NO_OVERLAP]		Disables blocks with overlapping dates from having the same rate code.
BUSINESS BLOCK TYPE [BUSINESS_BLOCK_TYPE]		This feature allows users to attach a "category of business" designation to each booking. For example, they can identify the booking as a wedding, a tour, a conference, a meeting, a convention, and so on. This information can be used later for reporting purposes.
CATERING ONLY BLOCK [CATERING_ONLY]		Controls the functionality of the Catering Only check box in the following manner: • If the parameter is set to Y and the check box is checked on a block, the Room Details section on the Block Details is hidden. In addition, Room & Rate Grid is not available for this block. User will not be able to allocate inventory for 'Catering Only' block. However, block reservations are allowed for this type of blocks. 'Catering Only' check box is also used in reports. • If the parameter is set to N and the check box is checked on a block, no changes applied to the block and the check box is ONLY used for reports.
Premium **CONVERSION** [CONVERSION]		Enables Conversion field to be available on business blocks. Block conversion gives sales managers a way to assign a likelihood of conversion to blocks.
COPY WITH DATE OPTION [COPY_WITH_DATE_OPTION]		Copies blocks with the option to select a date range from the source block.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-10 (Cont.) OPERA Controls — Blocks Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
CUTOFF [CUTOFF]		Do you want OPERA Cloud to automatically release non-picked up block rooms back to the house on a given date or do you wish to manual manage the release of allocations? Allotted rooms for a group that are not picked up by a certain date or number of days prior to the group's arrival can be released back to house inventory for pickup by other group or individual reservations. To release all unused allotments at one time, the cutoff function is used. Rooms can be cut off for an individual block or for all blocks at one time. If the cutoff functionality is not activated, then OPERA Cloud will internally see the cutoff values for each of the days of the block as the actual block date and as such internally the rooms will be cutoff on the night that they were due to be used. This function does not affect the manual Cutoff button. A block can still be cutoff manually through the Cutoff button. **Note** The Allotment Cutoff night audit procedure must be activated in order for the guest room to be released on the cutoff date/ days entered in the block. If this procedure is not active, the cutoff date can be used for reference in activities and included on proposals and contracts. For more information, see End of Day (Night Audit) Procedures

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-10 (Cont.) OPERA Controls — Blocks Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	CUTOFF SCHEDULE [CUTOFF_SCHEDULE]	Enables an ability to configure a schedule for cutoff days for blocks.
ELASTIC BLOCK [ELASTIC_BLOCK]		Activates the elastic block functionality that gives ability to book group reservations outside of the block dates, or for room types not included in the block.
	Complimentary **SELL LIMITS** [SELL_LIMITS]	This function provides the ability to define a set number of rooms per room type that can be borrowed from house availability once the total rooms within the block have been picked up. Once the maximum number of rooms in the limit is reached, the user must have the appropriate permissions to continue pick up of reservation above the sell limit. Sell limits are not deducted from inventory and are based on house availability.
	SHOULDER DATES [SHOULDER_DATES]	If the block is marked as Elastic or Sell Limits in the Inventory Control section of the Block Details, shoulder dates can be added to the block prior to the start date and/or following the end date of the block. These dates are marked with red corner on the Rooms Grid. These 2 fields can be used to define a shoulder period start date and shoulder period end date. The start shoulder period will run from the Shoulder Start date until the start date of the block. The shoulder end period will run from the end date of the block to the Shoulder End date.
	MAXIMUM SHOULDER DAYS [MAX_SHOULDER_DAYS]	Some guests may arrive earlier or depart later than the start or end date for a block. This parameter controls the maximum number of days that the start or end date can exceed the group's dates.
INCLUDE INQUIRY IN NONDEDUCT INVENTORY CALCULATIONS [INCLUDE_INQUIRY_IN_NONDEDUCT]		Include Inquiry figures in the non-deduct total calculation in the Group Rooms Control and Function Diary screens.
ENFORCE BLOCK CODE PATTERN LENGTH [ENFORCE_BLOCKCODE_TEMPLATE_LENGTH]		Enforces the maximum length based on the block code pattern for manual entry when the block code template is not defined. This control is only visible when the control fpr Block Code Template is not active.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-10 (Cont.) OPERA Controls — Blocks Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Premium **LOWEST GUARANTEED RATE** [RATE_PROTECT]		Enabled a Rate Protect checkbox on blocks. This is an indicator that no other groups should be booked using rates lower than those assigned to the block that is indicated as rate protect. The rate protect flag can be applied to all or selected dates of the identified block. (OPERA Cloud does not enforce this restriction.) An indicator is displayed on the Group Rooms Control screen for any date that has a rate protect booking.
MULTI BLOCK RATES [MULTI_BLOCK_RATES]		When the parameter is active, users can select the Rate Codes for the block from a multi-select Rate Code LOV on the Create Block and Block Details screen. The multiple selected rates display on the Rooming List Pickup screen. If the parameter is not active, the Rate Code LOV only provides a single rate code selection.
	MAXIMUM BLOCK RATES [MAXIMUM_BLOCK_RATES]	If multiple rate codes are selected for a block, the Rate Code field will display a total count of them as a special indiator. If you select more than one rate code, one rate code must be selected as the primary rate code. The primary rate you select will be displayed in Rate Code field and carried over to the Room Grid. If the Elastic check box is selected, or if the Inventory Control value is Elastic or Sell Limits, you may select rate codes to apply to Allotments, Begin and End Shoulder periods, as applicable.
NAME VALIDATION IN ROOMING LIST [NAME_VALIDATION_ROOMING_LIST]		When enabled, first and last name entries in Rooming List rooming list will require a minimum number of alpha-numeric characters. Last name requires 2 characters and first name requires 1 character. When disabled name field entries will not be validated
Premium **NON_COMPETE** [NON_COMPETE]		Makes Non-Compete flag available on business blocks. The Non Compete flag on a block can be used to indicate that no competing accounts (accounts having the designated NC Industry code) should be booked at the same time as this block. The non compete flag may be applied to all or selected dates of the identified block. (OPERA Cloud does not enforce this restriction.) An indicator is displayed on the Group Rooms Control screen and Function Diary for any date that has a non compete booking.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-10 (Cont.) OPERA Controls — Blocks Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
OCCUPANCY SPLIT PER ROOM TYPE [USE_OCCUPANCY_FOR_ROOMBLOCK]		Determines whether rates for blocks can be split by occupancy or not. When the parameter is Y, room grids will be built based on room type and occupancy. The number of rooms for each occupancy level must be entered separately. This will result in a more accurate forecasting of the number of persons arriving with a group as well as the total revenue if rooms are priced differently based on the number of people in the room. When the parameter is set to N, room grids are built using only the total number of rooms of each room type and forecasted revenues are based on single occupancy of all rooms.
Premium **QUICK ROOM GRID** [QUICK_ROOM_GRID]		When activated, you can select Room Type, Number of Rooms and Rate Amount to be populated into the grid upon saving the block.
RATE CODE MANDATORY BLOCK HEADER [MANDATORY_RATE_CODE_BLOCKS]		Determines whether or not a rate code is a mandatory field for blocks. If rate code is not mandatory, blocks can be made without a rate code.
RESTRICT BORROWING FROM OTHER ROOM TYPES [RESTRICT_BORROWING_FROM_OTHER_ROOM_TYPES]		Restricts the ability to borrow from other room types when one or more room types are sold out within non-elastic blocks.
RETURN BLOCK TO HOUSE [BLK_TO_HOUSE]		After a block has been cutoff, this parameter can either return the unused rooms (cancelled block reservations or no shows from a block) to house availability or maintain them for the group. If this is not active, the rooms for cancelled reservations will always be returned to the block first, even after the cutoff date. However, the next night audit will cut the rooms off again.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-10 (Cont.) OPERA Controls — Blocks Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ROOM TRANSACTION CODE ON BLOCK [ROOM_TRX_CODE_ON_BLOCK]		When active, the field Room Revenue Transaction Code is available on the block, Room Details section of the Block Details screen. It identifies the Transaction Code to be used when posting the room charge for reservations linked to the block. If the code entered is a valid Lodging Transaction Code, that Transaction Code is used when posting Room Revenue for Reservations linked to the current block. If the Transaction Code is not valid, or the field is left blank, then the Transaction Code linked to the Rate Code will be used. Or, if no Rate Code is attached to the Block, the Default Transaction Code will be used.
SHIFT DATE [SHIFT_DATE]		Enables the ability to move a block to a new arrival and departure dates when a block grid already exists. If there are any reservations (beside PM reservations) attached to the block, you will not be able to shift dates for the booking.
UNIQUE BLOCK CODE [UNIQUE_BLOCKCODE]		This parameter controls whether or not each block must have a unique block code. If the control is set to "N", the same block code can be used for several blocks. In the user interface, this will change certain features such as selecting a block code on a reservation, as the user will in the case of duplicate codes need to select the block they want to use based on and assuming that a different block name has been entered. Internally, OPERA Cloud stores the block ID so it know exactly which block the reservation is associated to for the purposes of availability, statistics, etc.
USE SINGLE BLOCK STATUS FOR ROOMS AND CATERING [USE_SINGLE_BLOCK_STATUS]		This parameter is only available when OPERA Cloud Controls Catering Eventsis active. It controls the visibility of the Block Catering Status the Block. When this parameter is active, the Catering Status is hidden. Instead, the rooms, catering, and event statuses are controlled by the Block Status. When this parameter is set to N, the Catering Status and Room Status are visible on a block.
USE QUOTE REFERENCE NUMBER [USE_QUOTE_REFERENCE_NUMBER]		Displays a Quote Reference Number field in Block Presentation and made available in the SC Quote report. For more information, see Quote Report (sample_sc_quote)

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-10 (Cont.) OPERA Controls — Blocks Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
WASH SCHEDULE [WASH_SCHEDULE]		Enables you to configure the wash schedule.
WEB FUNCTION SPACE CONFIG [WEB_FUNCTION_SPACE_CONFIG]		When active, users can configure a function space with the meeting rooms on the web options even though the property does not have the license code active.

Table 11-11 OPERA Controls — Blocks Settings

SETTING	DESCRIPTION
BLOCK CODE GENERATION PATTERN [DEFAULT_BLOCK_CODE_TEMPLATE]	Defines the block code pattern to auto generate the block code. Allows the user to configure the naming convention used in automatically generating block codes for new blocks. If Block Code Template is active, the Block Code Generation Pattern must match the **Template Pattern Setting** OPERA Control. Valid values: • 'Y', 'YY', 'YYYY' for year • 'M', 'MM', for month number • 'MON' for the month name • 'D', 'DD' for the day number • 'A' for any alpha
BLOCK CODE VALIDATION RULE [BLOCK_CODE_VALIDATION_RULE]	Controls the validation of when a specific block code can be reused. **Note** This setting is only available when the **Unique Block Code** OPERA Control is inactive. Valid values: • NON_OVERLAPPING_DATES • START_OF_INVENTORY_WEEK
CALCULATE BLOCK STATISTICS [CALCULATE_BLOCK_STATISTICS]	To improve performance, specify a nights value determining when Room and Revenue totals are not automatically calculated in the Block Overview panel. Blocks with nights exceeding this setting display a Calculate action for the totals to be calculated and displayed on-demand. For example, if set to 90 and the block is 91 nights, the block room nights and revenue will not be calculated when you access block presentation until you select the **Calculate** link.
CATERING STATUS WHEN COPYING AN EVENT [COPY_CATERING_STATUS]	Identifies the catering status when copying an event. Valid values: • All status codes where the catering deduct inventory = N and starting status = Y.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-11 (Cont.) OPERA Controls — Blocks Settings

SETTING	DESCRIPTION
COPY BOOKING NOTES [COPY_BOOKING_NOTES]	Copies booking notes by default. Valid values: • Yes • No
COPY BOOKING STATUS [COPY_BOOKING_STATUS]	Identifies the booking status while copying a booking. Valid values: • All status codes where the starting status = Y.
DEFAULT VALUE FOR INVENTORY CONTROL [DEFAULT_VALUE_FOR_INVENTORY_CONTROL]	Defaults the value for inventory control for new blocks. Values: Elastic / Non-Elastic / Sell-Limit (Available when the **Sell Limit** OPERA Control is active).
Premium **DEFAULT PACKAGE UPON BLOCK CREATION** (DEFAULT_PACKAGE_BLOCK_CREATION)	The selected packages codes or package groups will be added when creating a new a block, master block or sub allocation.
DATE DEFINITE [DATE_DEFINITE]	Defines the status used for tracking the date when the business block turned status was updated to Actual. This date is available in OPERA Reporting & Analytics.
DATE PROSPECT [DATE_PROSPECT]	Defines the status used to track the date the business block turned Prospect. This date will be used in OPERA Reporting & Analytics.
DATE TENTATIVE [DATE_TENTATIVE]	Defines the status used to track the date the business block turned Tentative. This date will be used in OPERA Reporting & Analytics.
DEFAULT CATERING STATUS [DEFAULT_BLOCK_CATERING_STATUS]	This is the default catering status assigned to a block when new blocks are created. Valid values: All status codes where the catering deduct inventory = N and starting status = Y.
DEFAULT NEW BLOCK STATUS [DEFAULT_NEW_BLOCK_STATUS]	Identifies the default block status for new blocks. Valid values: • All status codes where the starting status = Y.
MAXIMUM BLOCK AVAILABLE DAYS [MAXIMUM_BLOCK_AVAILABLE_DAYS]	Defines the maximum number of days from the current business date, for which a block can be created.
MAXIMUM BLOCK ADVANCED BOOKING DAYS [MAX_BLOCK_ADV_BOOKING_DAYS]	Defines how far into the future from the current business date a group block can be created.
MAXIMUM NUMBER OF NIGHTS FOR BLOCK RESERVATION [MAXIMUM_NIGHTS_FOR_BLOCK_RESERVATIONS]	Defines the maximum number of nights a block reservation can be booked.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-11 (Cont.) OPERA Controls — Blocks Settings

SETTING	DESCRIPTION
MAXIMUM NUMBER OF BLOCK DAYS [MAX_BLOCK_DAYS]	Defines the maximum number of nights allowed for a block.
PROFILE PROMPT FOR BLOCKS [PROMPT_PROFILE_BB]	This control determines if the user will be prompted to associate a profile to a block if one has not been attached. The control can be set to N (None), P (Prompt) or R (Require a profile for all blocks).
PROPERTY LEAD BLOCK OWNER [PROPERTY_LEAD_BLOCK_OWNER]	Defines the owner to assign to property leads received from Central Sales. This owner is also assigned to the "CSL" activity created for property leads received. For more information, see Sales Activities.
REPORT CURRENCY ABBREVIATION [REPORT_CURRENCY_ABBREVIATION]	Allows you to define the currency abbreviation (thousand (K) or million (M)) to be used for the display of revenue **Amount** on the following reports when the **Amount** column width does not permit the display of the full amount (Available when the **Business Blocks** OPERA Control is active). • Catering Pace / Progress Reports REP_CATERING_PROGRESS • Daily Catering Forecast REP_EV_FORECAST • Function Space Utilization Report REP_FS_UTILIZATION • Meal Type Forecast by Day (BI) REP_MEAL_TYPE_FORECAST_BI • Menu Information Report REP_MENUINFO • Monthly Catering Forecast REP_MONTH_FORECAST • Sales Manager Progress (BI) REP_MGR_PROGRESS_BI • Catering Progress (BI) REP_CATERING_PROGRESS_BI • Daily Forecast REP_DAILY_FORECAST
PROPERTY LEAD NEW BLOCK STATUS [PROPERTY_LEAD_NEW_BLOCK_STATUS]	Defines the (non-deduct) block status for property leads received when the **Opportunities** OPERA Control is not active.
REPORT CURRENCY ABBREVIATION [REPORT_CURRENCY_ABBREVIATION]	Allows a property to define the currency abbreviation to be used for the display of revenue amounts for specific Sales and Event Management Reports where space does not permit the full amount to display. (Available when the **Business Blocks** OPERA Control is active.
REPORTING PERIOD [REPORTING_PERIOD]	Default the reports to Calendar or Fiscal definitions.
ROOMING LIST RESERVATION METHODS [RESV_METHOD_TYPE]	Identifies the reservation methods that enable entry of the rooming list due date. Valid values: • All booking methods.
REPORTING PERIOD [REPORTING_PERIOD]	Default the reports to Calendar or Fiscal periods.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-11 (Cont.) OPERA Controls — Blocks Settings

SETTING	DESCRIPTION
SELECTIVE BLOCK BUSINESS EVENTS [SELECTIVE_BLOCK_BUSINESS_EVENTS]	Specifies the external systems available in Block Exchange link to which business event data is sent for the block. **Note** You cannot remove external systems if selected in current / future blocks.
TURN BOOKING INTO ACTUAL UPON [TURN_BOOKING_INTO_ACTUAL_UPON]	Turns a booking into status ACTUAL upon booking arrival / booking departure. Valid values: • ARRIVAL (bookings turn to ACTUAL on the booking arrival date) • DEPARTURE (bookings turn to ACTUAL on the booking departure date) Default • NOTUSED (bookings do not turn to ACTUAL) When **Not Used** is selected, the booking will NOT be automatically updated to ACTUAL status, users will have to change the booking status manually.

OPERA Controls — Cashiering

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Cashiering group.

Table 11-12 OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **ADVANCED GENERATES** [ADVANCED_GENERATES]		Stops posting generates after specified days, adjustment of generates after a certain number of days.
ARTICLES [ARTICLES]		Articles allows the posting of individual items linked back to a single transaction code – mini bar items for example. Each article has a default price so users do not need to recall amount to post.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
AUTO SETTLEMENT RULES [AUTO_FOLIO_SETTLEMENT]		This functions allows for folios to be automatically settled every X number of days during the end of day routine or manually settled via the batch folio option. Useful for extended-stay properties with guests who require their balance to be settled every X days for expense claiming purposes.
	AUTO SETTLEMENT TO BE PERFORMED DURING END OF DAY [AUTO_FOLIO_SETTLE_EOD]	Activate to perform Auto Folio Settlement during the End of Day process. Enables or disables automatic settlement for end of day activities.
	TRANSFER CHARGES TO WINDOW 8 [AUTO_FOLIO_MOVE_TO_WIN]	Activates the transferring of settled charges to billing window 8.
	END OF DAY AUTO FOLIO SETTLEMENT TYPES [AUTO_FOLIO_SETTLE_TYPE]	Select Auto Folio Settlement Types to be settled automatically during the End of Day routine
	BILLING WINDOWS TO PROCESS DURING END OF DAY [AUTO_FOLIO_SETTLE_WIN]	Select windows (1-8) that would be selected by default for Auto Settlement during the End of Day process.
	DEFAULT AUTO SETTLEMENT ON RESERVATION [AUTO_FOLIO_DEF_RSV]	Specifies whether or not auto settlement is the default setting for reservations during creation. Enables or disables Auto Folio Settlement as the default value for reservation creation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	AUTO FOLIO SETTLEMENT PREFERENCE [AUTO FOLIO SETTLEMENT PREFERENCE]	Specifies the order of operations: to settle the charges and then transfer the folio, or transfer the charges and then settle the folio. Valid values: • Transfer and Settle — The charges on the selected billing windows are first transferred to window 8 and then settled to the payment method on window 8. If none of the billing windows are selected for transfer, then OPERA Cloud settles those billing windows that are associated with the selected Payment Types. The check box for Window 1 is checked by default. • Settle and Transfer — The charges on the selected billing windows are first settled based on the selected Payment Types and then transferred to window 8 if any of the windows are selected for transfer; if none of the billing windows are settled, then transfer of unsettled charges does not occur either.
	DEFAULT FOLIO STYLE [AUTO_FOLIO_DEF_STYLE]	Enables you to select the default folio style to use when printing the settled folios.
	PAYMENT METHODS [AUTO_FOLIO_PAY_TYPE]	Enables you to select the payment methods that qualify for automatic settlement. Cash and check are not eligible payment methods for automatic settlement. Valid values: • AX (American Express) • MC (Master Card) • VA (Visa) • DB (Direct Bill)
	SETTLE EVERY X DAYS SINCE LAST AUTO SETTLEMENT DAYS [AUTO_FOLIO_SETTLE_DAYS]	Enables you to configure the number of days to automatically settle the folio since the last automatic settlement was completed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
BATCH POSTING [BATCH_POSTING]		Enables the ability to post same transaction to selectable, multiple rooms in single batch transaction; the amount posted can be per room or per person.
BUDGET FORECAST [BUDGETS]		Activates the Budget Forecast functionality.
CANCELLATION HANDLING [CANCELLATION_HANDLING]		Enabled the ability to define cancellation rules and scheduled for rates and enforce deposit retention when applicable.
	AUTO DEPOSIT CANCELLATION REFUND FOR CREDIT CARDS [AUTO_REFUND_DEPOSIT_ON_CANCEL]	When a reservation is cancelled and cancellation penalty is not applicable, OPERA Cloud will automatically refund any originally posted deposit payments on the reservation that have been paid using a credit card payment method. If a deposit has been transferred from another reservation or credit card was not used for deposit payment, then user will be taken to the deposit payment screen to manually process the refund. This feature is only applicable when the **Advanced Deposit Handling** OPERA Control setting is set to 0 or 1 or 2.
	CANCEL WITH DEPOSIT [CANCEL_WITH_DEPOSIT]	Allow Reservations with Deposits to be Cancelled.
	TIERED CANCEL PENALTY SCHEDULES [TIERED_CANCELLATION_SCHEDULES]	When activated, this feature enables the configuration of Tiered Cancel Penalty Schedules, allowing multiple cancellation rules to be scheduled for reservations that meet specific criteria.
COLLECTING AGENT TAXES [COLLECTING_AGENT_TAXES]		Enables advanced tax functionality for Collecting Agent. (Available when the **Tax Types** OPERA Control is active).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
CONSUMABLE INVENTORY [CONSUMABLE_INVENTORY]		Enables the configuration of consumable inventory items and the monitoring of inventory levels through the tracking of item charges posted. **Note** Excludes OPERA Cloud Mobile when the **POST-IT** OPERA Control is active.
Complimentary **CREDIT BILL** [CREDIT_BILL]		Enables you to generate credit bills for folios. For more information, see Credit Bills for Folios. Payment transaction code used for auto generate credit bill and deposit posting upon check-in. Update the reason for Auto Credit Bill Generation against the Deposit folio during the Check in process. Room to which Deposit Tax Postings are posted.
	ALLOW POSITIVE POSTINGS FOR CREDIT BILL [ALLOW_POSITIVE_POSTINGS_FOR_CREDIT_BILL]	Allow positive amount revenue and non-revenue charges to be posted when generating a Credit Bill.
	ALLOW CREDIT BILL FOR CREDIT BILL FOLIOS [CB_ALLOW_ON_CREDIT_FOLIOS]	Credit Bills can be created for Credit Bill Folios.
	AUTO GENERATE CREDIT BILL FOR DEPOSIT UPON CHECK IN [AUTO GENERATE CREDIT BILL FOR DEPOSIT UPON CHECK IN]	If a reservation has a deposit folio, upon check in an automatic credit bill will be generated and the payment will be posted to the guest account using the payment transaction code as defined in the setting.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	CHECK ALLOW CREDIT FLAG ON FOLIO TYPES [CB_ALLOW_CREDIT_FLAG]	The Allow Credit Flag on the Folio Type will be checked to determine if a Credit Bill can be generated for that Folio Type (Country Specific functionality).
	CHECK ALREADY GENERATED [CB_ALREADY_GENERATED_CHECK]	Do not allow Credit Bill on a Folio for which a Credit Bill was already generated for a Folio.
	CHECK FOR CREDIT BILL FOLIO ON SETTLEMENT [CB_CHECK_ON_SETTLEMENT]	Check for Credit Bill Folio on Settlement for windows with negative revenue amount.
	CREDIT BILL REASONS [CREDIT_BILL_REASONS]	When active, the user will be prompted to select a reason when generating a Credit Bill.
	CREDIT BILLS CAN ONLY BE CREATED FROM FOLIO HISTORY [ALLOW CREDIT BILL ONLY FROM FOLIO HISTORY]	Credit Bills can only be created from Folio History.
	DO NOT CHECK ON DB AMOUNT [CB_DO_NOT_CHECK_ON_DB]	Credit bills can be made for folios with DB amounts.
	DO NOT CHECK ON ORIGINAL FOLIO AMOUNT [CB_DO_NOT_CHECK_ON_GROSS]	Check will not be done on the gross amount of the original folio.
	INTERNAL CREDIT BILL FOR POS ACCOUNTS [INTERNAL_CREDIT_BILL_FOR_POS_ACCOUNTS]	Credit Bills for internal POS account folios will be generated using an internal folio sequence.
	MAX CREDIT DAYS BASED ON PROFILE TYPE [CB_CHECK_ON_PROFILE_TYPE_MAX_CREDIT_DAYS] [	The number of maximum credit days to be used for Credit Bills will be based on the profile type(Individuals or Others).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	MULTIPLE CREDIT BILL FOLIO TYPES [MULTIPLE_CREDIT_BILL_FOLIO_TYPES]	Enables the ability to configure multiple credit bill folio types and associating with each fiscal folio type in order to use a separate bill number sequence for each credit bill.
	NO CREDIT BILL ON CONVERSION FOLIO TYPES [CB_CHECK_CONVERT_FLAG]	Credit Bill cannot be created for Conversion Folio Types (Country Specific functionality).
	RESTRICT TRANSACTION CODES AND AMOUNTS [CB_RESTRICT_TRX_CODES_AND_AMOUNTS]	Credit bill can have transactions and the amounts which were posted on the original folio.
	DEFAULT DEPOSIT TAX ROOM [DEFAULT_DEPOSIT_TAX_ROOM]	Room Number to which Deposit Tax Postings will be sent.
	SAME DAY CREDIT BILLS [CB_ALLOW_SAMEDAY_CREDIT]	Credit bills can be created on folios on the same date the folio was generated.
	MAXIMUM CREDIT DAYS [MAX_CREDIT_DAYS]	Defines the period in which a credit bill can be issued.
	MAXIMUM CREDIT DAYS FOR INDIVIDUALS [MAX_CREDIT_DAYS_INDIVIDUALS]	Period Definition in which a Credit Bill can be issued for Individual Guests
	MAXIMUM CREDIT DAYS FOR NON-INDIVIDUALS [MAX_CREDIT_DAYS_OTHERS]	Period Definition in which a Credit Bill can be issued for Others(Non-Individual) Guests.
	PAYMENT TRANSACTION CODE FOR AUTO GENERATE CREDIT BILL [PAYMENT TRN CODE FOR AUTO CREDIT BILL]	Payment transaction code used for Auto Generate Credit Bill for Deposit upon Check In.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	REASON FOR AUTO GENERATE CREDIT BILL [REASON FOR AUTO GENERATE CREDIT BILL]	Update the reason for Auto Credit Bill Generation against the Deposit folio during the Check-in process.
	SAME DAY CREDIT BILLS [CB_ALLOW_SAMEDAY_CREDIT]	Credit Bills can be created on Folios on the same date the Folio was generated.
DEPOSIT HANDLING [DEPOSIT_HANDLING]		Activate the Deposit and Cancellation Rules/Schedule Functionality.
	ALLOW COMPOSITE DEPOSIT HANDLING [COMPOSITE_DEPOSIT_HANDLING]	Activate to set the default values used by `postCompositeDeposit` API for posting of deposits with multiple transaction codes.
	ADVANCED DEPOSIT MATURITY AND ALLOCATION [ADVANCED_DEPOSIT_MATURITY_AND_ALLOCATION]	Applies the deposit maturity preference on the selected rate code to reservations. In addition, this gives more flexibility for managing deposits when modifications are done to reservations that impact deposits.
	USE FOLIO NUMBER FOR DEPOSIT RECEIPT [DEPOSIT_FOLNO]	Prints a folio number on the deposit receipt. If On, the next available folio number is assigned to each deposit receipt generated. If Off, a unique sequential number is assigned to each deposit receipt generated.
	ADVANCED TAX HANDLING FOR DEPOSITS [ADVANCED_TAX_HANDLING_FOR_DEPOSITS]	Enables you to set transaction codes exclusively for deposit postings.
	DEPOSIT REFUND RECEIPT [DEPOSIT REFUND RECEIPT]	Enables a Reverse (refund) action within Reservation Dep/CXL and generates a Deposit Refund Receipt.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	ENABLE MANUAL COMPOSITE DEPOSIT HANDLING [COMPOSITE_DEP_HANDLING_MANUAL]	When active, the default values used by the `postCompositeDeposit` API for posting of deposits with multiple transaction codes must be set. The Post Composite Deposit link is available in the Reservation Deposit/Cancellation screen. When posting a deposit to a reservation, the option is available to enter the deposit payment method and total deposit amount. The amount entered is posted to the transaction codes and percentage value set in Default Transaction Code 1, Deposit Default Transaction Code 1 Percentage, Deposit Default Transaction Code 2, Deposit Default Transaction Code 2 Percentage, Deposit Default Transaction Code 3, and Deposit Default Transaction Code 3 Settings. **Note** When Advanced Deposit Handling is set to 8, 9, 10, 11, 12, 13, 14, or 15, the default posting type DEPOSIT FOLIO or DEPOSIT PAYMENT must be defined in the Deposit Default Posting Type setting. The setting value DEPOSIT FOLIO displays the Composite Deposit screen when selecting the Post Composite Deposit link. The setting value DEPOSIT PAYMENT displays the Deposit payment screen when the Post Composite Deposit link is selected.
	TIERED DEPOSIT RULE SCHEDULES [TIERED_DEPOSIT_SCHEDULES]	When active, this feature allows for the configuration of Tiered Deposit Rule Schedules, enabling multiple deposit rules to be scheduled for reservations that meet specific criteria.
	ADVANCED DEPOSIT HANDLING [EXT_DEPOSIT_HANDLING]	Specifies the advanced deposit handling setting. For more information, see About Reservation Advanced Deposit Handling
	DEFAULT DEPOSIT TAX ROOM [DEFAULT_DEPOSIT_TAX_ROOM]	Room Number to which Deposit Tax Postings will be sent. (Available when the **Advanced Tax Handling for Deposits** OPERA Control is active, and **Advanced Deposit Handling** OPERA Control is set to 4 or 9.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	DEFAULT RESERVATION TYPE FOR DEPOSIT PAYMENTS [DEPOSIT_RESERVATION_TYPE]	Specifies the default reservation type for deposit payments setting.
	DEPOSIT DEFAULT POSTING TYPE [DEP_DEFAULT_POST_TYPE]	Default Deposit posting type (Deposit Payment or Deposit Folio) used by `postCompositeDeposit` API when Advanced Deposit Handling setting value is 8, 9, 10, 11, 12, 13, 14 or 15.
	DEPOSIT DEFAULT TRANSACTION CODE 1 [DEP_DEFAULT_TRX_CODE_1]	Specifies first transaction code used by `postCompositeDeposit` API for posting when creating a deposit folio.
	DEPOSIT DEFAULT TRANSACTION CODE 1 PERCENTAGE [DEP_DEFAULT_PERC_TRX_CODE_1]	Specifies percentage of Deposit posted to the first transaction code by `postCompositeDeposit` API.
	DEPOSIT DEFAULT TRANSACTION CODE 2 [DEP_DEFAULT_TRX_CODE_2]	Specifies second transaction code used by `postCompositeDeposit` API for posting when creating a deposit folio. Value can be left blank if 100 Percent of the deposit is posted to the first transaction code.
	DEPOSIT DEFAULT TRANSACTION CODE 2 PERCENTAGE [DEP_DEFAULT_PERC_TRX_CODE_2]	Specifies percentage of Deposit posted to the second transaction code by `postCompositeDeposit` API. Value can be left blank if 100 Percent of the deposit is posted to the first transaction code.
	DEPOSIT DEFAULT TRANSACTION CODE 3 [DEP_DEFAULT_TRX_CODE_3]	Specifies third transaction code used by `postCompositeDeposit` API for posting when creating a deposit folio. Value can be left blank if 100 Percent of the deposit is posted to the first transaction code, or if the total posted to the first and second transaction codes is 100 Percent of the deposit.
	DEPOSIT DEFAULT TRANSACTION CODE 3 PERCENTAGE [DEP_DEFAULT_PERC_TRX_CODE_3]	Specifies percentage of Deposit posted to the third transaction code by `postCompositeDeposit` API. Value can be left blank if 100 Percent of the deposit is posted to the first transaction code, or the total posted to the first and second transaction codes is 100 Percent of the deposit.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	DEPOSIT LEDGER TRANSACTION CODE [DEPOSIT_LED_TRX_CODE]	Specifies the internal transaction code used to transfer deposit balances from the deposit ledger to the guest ledger at the time of check in.
	DEPOSIT MATURITY PREFERENCE [DEPOSIT_MATURITY_PREFERENCE]	Sets the preference for when deposits are transferred to the reservation folio.
	DEPOSIT LEDGER TAX TRANSACTION CODE [DEPOSIT_LED_TAX_TRX_CODE]	Specifies the tax transaction code used to transfer deposit tax amounts from the deposit ledger to the guest ledger at the time of deposit creation.
	PSEUDO ROOM TO KEEP DEPOSITS [PSEUDO_ROOM_TO_KEEP_DEPOSITS]	Specifies the pseudo room where all deposits forfeited by guests are transferred.
	PSEUDO ROOM TO RETURN DEPOSITS [PSEUDO_ROOM_TO_RETURN_DEPOSITS]	Specifies the pseudo room where all deposits to be refunded are transferred.
	DEPOSIT MATURITY PREFERENCE [DEPOSIT_MATURITY_PREFERENCE]	Sets the preference for when deposits are transferred to the reservation folio.
	RESTRICT DEPOSIT FOLIO [RESTRICT_DEPOSIT_FOLIO]	Restrict Deposit Folio Setting.
EARLY DEPARTURE PENALTY [EARLY_DEPARTURE_PENALTY]		Enforces the posting of an early departure penalty if a guest reduces nights to less than min length of stay for the rate code.
	CALCULATION RULE FOR THE EARLY DEPARTURE PENALTY AMOUNT [CALCULATION_OF_EARLY_DEPARTURE_AMOUNT]	Specifies the calculation rule for the early departure penalty amount.
	EARLY DEPARTURE PENALTY FUNCTIONALITY TRANSACTION CODE [EARLY_DEPARTURE_PENALTY_TRANSACTION_CODE]	Specifies the early departure penalty functionality transaction code.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
EFOLIO EXPORT [EFOLIO_EXPORT]		Activate Efolio Export Functionality. **Note** Adding this complimentary feature will not affect the subscription-based function count.
	DELIVERY METHODS [DELIVERY_METHODS]	Specify the Delivery Methods for which Efolio Export should be initiated.
	PAYMENT METHODS [PAYMENT_METHODS]	Specify the Payment Types for which Efolio Export should be initiated.
FIXED CHARGES [FIXED_CHARGES]		Enables recurring charges to be automatically posted to guest account during the end of day routine or whenever an advanced bill is generated. The Fixed Charges feature also offers a convenient way to automatically post a fixed charge once, on a specific date of the guest's stay.
FOLIO ARRANGEMENTS [FOLIO_ARRANGEMENTS]		Folio arrangements are a way in which to group similar transactions together and print the folio using this 'cosmetic' summarized style. For example: transaction codes for breakfast food and breakfast beverage can be linked to an arrangement code for Breakfast Charge. When the guest folio is printed in arrangement code style the individual postings for food and beverage are consolidated and printed as a single line item "Breakfast Charge".
FOREIGN CURRENCY CODES [FOREIGN_CURRENCY_HANDLING]		Enables handling foreign currency payments, performing currency exchanges, configuring foreign currencies, and using the currency calculator.
	EXCHANGE SERVICE TAX [INDIA_EXCHANGE_SERVICE_TAX]	Activates the Service Tax functionality for currency exchange.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	CURRENCY EXCHANGE TAXABLE TRANSACTION CODE [CURRENCY_EXCHANGE_TAX]	Transaction code to post taxable value determined based on the calculated local amount during Foreign Currency Exchange.
	SERVICE TAX BASED ON TRANSACTION CODE GENERATES [SERVICE_TAX_BASED_ON_TRX_GENERATES]	Service tax calculated based on Transaction Code Generates attached to the Transaction Code defined in the 'Currency Exchange Taxable Transaction Code' setting. When active, the option to set up a Base Amount for the calculation will be available. The folio and receipt will be generated for currency exchanges.
	CURRENCY EXCHANGE TAXABLE OFFSET TRANSACTION CODE [CURRENCY_EXCHANGE_TAX_OFFSET]	Transaction code to post offset of taxable value determined based on the calculated local amount during Foreign Currency Exchange.
	FOREIGN CURRENCY LIMITS [FOREIGN_CURRENCY_LIMITS]	Ability to configure Per Transaction Limits, Daily Limits and Monthly Limits for foreign and local currency transactions. When active in order to post a currency exchange or cash transaction, an Individual Profile is required with Nationality and any documentation selected in the Cashiering Setting for Mandatory Documents for Foreign Currency Limits.
	SELL CURRENCY [SELL_FOREIGN_CURRENCY]	Enables selling foreign currency.
	CURRENCY EXCHANGE PAID OUT TRANSACTION CODE [CURRENCY_EXG_PAIDOUT]	Specifies the transaction code to record a currency exchange paid out.
	REFERENCE CURRENCY CODE [SUMMARY_CURRENCY_CODE]	Specifies the currency code used when printing folios.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	SERVICE TAX BASED ON TRANSACTION CODE GENERATES [SERVICE_TAX_BASED_ON_TRX_GENERATES]	Service tax calculated based on Transaction Code Generates attached to the Transaction Code defined in the 'Currency Exchange Taxable Transaction Code' setting. When active, the option to set up a Base Amount for the calculation will be available. The folio and receipt will be generated for currency exchanges.
	DAILY CURRENCY EXCHANGE LIMIT AMOUNT [DAILY_CURRENCY_EXCHANGE_LIMIT_AMOUNT]	Allowing the user to set a daily limit amount, for example 250. If left blank, no limit is set and the currency exchange functionality will behave as previously existing. If a daily limit amount is set, then a currency exchange can only be performed for an in house reservation.
	DAILY CURRENCY EXCHANGE LIMIT CODE [DAILY_CURRENCY_EXCHANGE_LIMIT_CODE]	Allowing the user to select a currency code. If left blank, local currency is assumed.
	MANDATORY DOCUMENTS FOR FOREIGN CURRENCY LIMITS [MANDATORY_DOCS_FOREIGN_CURR_LMTS]	Select the documents which are mandatory on a guest profile for Foreign Currency Limits functionality.
FOLIO QR CODE [FOLIO_QR_CODE]		When a folio is generated, OPERA Cloud generates a QR Code comprising of multiple details. Some details vary according to region of the property.
NO SHOW AND CANCELLATION POSTINGS [NOSHOW_AND_CANCELLATION_POSTINGS]		This functionality enables a property to post revenue or deposit refund against a no-show or cancelled reservation in order to recognize the revenue and clear the deposit from deposit ledger. The reservation remains in no-show status for historical and statistical purposes. When the billing screen is accessed for a canceled or no show reservation with a deposit balance a prompt asks the users if they would like to post the deposit amount to the folio.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	AUTO CANCELLATION PENALTY SETTLEMENT [AUTO_CANCELLATION_PENALTY_SETTLEMENT]	When a reservation is canceled and the deposit is matured, the outstanding balance on the reservation is automatically settled. No action will be taken if a refund is owed to the guest.
	AUTO POST CANCELLATION PENALTY [AUTO_POST_CANCELLATION_PENALTY]	When a reservation is canceled, and a cancellation penalty applies based on the attached rule, OPERA Cloud automatically calculates and posts the cancellation penalty amount to the guest's folio.
	POST REVENUE TO NO SHOWS [POST_REVENUE_TO_NO_SHOWS]	Specifies the Posts No Show charges to reservations based on No Show Posting rules and matures the deposit during the End of Day process.
	AUTO CANCELLATION PENALTY PAYMENT METHODS [AUTO_CANCELLATION_PENALTY_PAYMENT_METHOD]	Specifies the payment method which qualifies for cancellation penalty fee settlement.
	CANCELLATION PENALTY POSTING TRANSACTION CODE [CANCELLATION_PENALTY_POSTING_TRN_CODE]	Specifies the transaction code to be used to post the cancellation penalty fee.
	NO SHOW POSTING TRANSACTION CODE [NOSHOW_POSTING_TRN_CODE]	Specifies which transaction code to use during the End of Day no show posting process.
PERIOD DEFINITION [FISCAL_PERIOD_REPORTING]		Allows a property to setup fiscal periods and years, and have key reports give information based on Fiscal and/or Calendar periods.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **POST IT** [POSTIT_O9]		Activates the Post It functionality which allows users to access Post It and Fast Postings. **Note** Adding this complimentary feature will not affect the subscription-based function count.
	RESTRICT NEGATIVE SALE IN POST IT [RESTRICT_NEGATIVE_SETTLEMENTS]	In Post It, cannot complete a Sale with a negative balance.
	DEFAULT MARKET CODE FOR POST IT [PASSERBY_MARKET_CODE]	Default Market Code when using the Post It screen.
	DEFAULT SOURCE CODE FOR POST IT [PASSERBY_SOURCE_CODE]	Default Source Code when using the Post It screen.
POST STAY CHARGES [POST_STAY_CHARGES]		Allows sales charges to be posted to reservation with specific payment methods after departure of the reservation.
	AUTO OPEN FOLIO DURING EOD [AUTO_OPEN_FOLIO_DURING_ EOD]	Checked-out reservations with Post Stay Charges privileges and an open balance (payment due) are automatically converted to an open folio during end of day. (Available when the **Open Folio** OPERA Control is active).
	DEFAULT POST STAY CHARGES ON RESERVATION [POST_STAY_CHG_RSV]	Selects the check box for Post Stay Charging on the reservation Payment Instructions screen by default and reservations are enabled for posting charges after check out regardless of the payment type associated with the reservation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	OPEN FOLIO [OPEN_FOLIO]	Enables the ability to check out a reservation account and allow further charges to be posted. When the reservation is checked out with open folio status, the reservation is checked out with a payment due for an open balance; charges can continue to be manually posted to the reservation account until such time as final settlement of the account is posted and folio reservation account is closed. The **Open Folio Closing Preference** OPERA Control determines when a open folio reservation account must be closed. The **Zero Balance Open Folio Close Days** OPERA Control determines the number of days after checkout that an open folio with zero balance is automatically closed during End of Day. The Guest Ledger report lists reservations with an open folio balance. For more information, see Checking Out Reservations with Open Folio
	OPEN FOLIO CLOSING PREFERENCES [OPEN_FOLIO_CLOSING_LIMIT]	Determines when an open folio needs to be closed. Valid values: • SAMEDAY — The user cannot leave the billing screen with an open folio. • UNRESTRICTED — The user is allowed to leave the billing screen with a folio in an open status.
	RESERVATION PAYMENT TYPES [POST_RSV_PAYMENT_TYPE]	Defines the payment types that can be associated to a reservation to enable post stay charging.
	ZERO BALANCE OPEN FOLIO CLOSE DAYS [ZERO_BALANCE_OPEN_FOLIO_CLOSE_DAYS]	Specifies the number of days after checkout that an open folio with a zero balance will be automatically closed during end of day.
PRE STAY CHARGES [PRE_STAY_CHARGES]		Allows sales charges to be posted to reservation with specific payment methods prior to check in of a reservation.
	DEFAULT PRE STAY CHARGES ON RESERVATION [PRE_STAY_CHRG_RSV]	Enables the Pre Stay Charging option by default on the guests Privileges screen.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	ONLY POST IF RESERVATION IS ON QUEUE [POST_RSV_QUEUE]	Specifies that the reservation will be available for pre-stay charges only if the reservation is on queue and waiting to be checked in.
	DAYS PRIOR TO ARRIVAL [DAYS_PRIOR_TO_ARRIVAL]	Limits the number of days before the guests arrival that charges can be posted to their account.
	RESERVATION PAYMENT TYPES [PRE_RSV_PAYMENT_TYPE]	Defines the payment types that can be associated to a reservation to enable pre stay charging.
	RESERVATION TYPES [RSV_TYPE]	Defines the reservation types that can be associated to a reservation to enable pre stay charging.
ROUTING [ROUTING]		Activate Routing Functionality.
	ALLOW ROUTING OF TAX TRANSACTIONS [TAXROUTING_YN]	Enables the selection of tax transaction codes when setting room routing or window routing.
	EXCLUDE DEPOSIT FROM AUTHORIZATION BASED ON ROUTING PARAMETER [EXCLUDE_DEPOSIT_FROM_AUTH_BASED_ON_ROUTING]	Excludes deposits paid from the authorization amount when the deposit ledger transaction code is either routed to a window where the payee in the routing instructions is not the same as the guest, or it is routed to another reservation.
	EXCLUDE RATE FROM AUTHORIZATION BASED ON ROUTING [EXCLUDE_RATE_FROM_AUTH_BASED_ON_ROUTING]	Excludes the rate from authorization if the source payee name in the routing instruction is not the same as the target, and the transaction code for the accommodation exists in the routing instruction code. Also, with the Oracle Hospitality OPERA Cloud Service, Casino and Gaming Management Add-on and the comp routing is being set up to an authorizer with the Accommodation Transaction code for window 101-108, the rate is excluded from the authorization amount.
	REFRESH ROOM ROUTING [REFRESH ROOM ROUTING]	Enables transferring the transactions using the Refresh Room Routing screen whenever a room routing instruction is created, edited or deleted, so that the latest room routing instructions are applied to the existing charges.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **ROUTING LIMITS** [ROUTING_LIMITS]		Routing Limits imposes a limit on the total value of a transaction that can be routed to a sub-account; the overage remaining in the default account. **Note** The **Routing Limits** OPERA Control not visible when the **Auto Transfer Generates with Main** OPERA Control is inactive.
SCHEDULED CHECK OUT [SCHEDULED_CHECKOUT]		This feature allows for automatic checkout of reservations at a specified time. Only reservations with a zero balance can be scheduled for check out. The reservation status remains due out and be will automatically updated to checked out at the specified time, provided the account balance remains at zero.
	ROOM STATUS FOR SCHEDULED CHECK OUTS [SCHEDULED_CHECKOUT_ROOM_STATUS]	Specifies the status of the room after a scheduled check out.
Complimentary **SERVICE TYPES** [SERVICE_TYPES]		Associate a service type value with Revenue and Wrapper type transaction codes.
TRANSACTION CODE BY USER ROLE [TRANSACTION_USER_GROUPS]		Enables the ability to link transaction codes to users roles; limiting the types of charges users of specific role can post.
TRANSACTION DIVERSIONS [TRANSACTION_DIVERSIONS]		This feature enables the automatic diversion (routing) of charges for specific transaction codes to a specified pseudo room, based on a membership type and level or VIP code.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-12 (Cont.) OPERA Controls — Cashiering Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
VOUCHERS [VOUCHERS]		Enables the ability to configure voucher rules for reservations. Vouchers are auto generated during reservation check in and can be manually generated and printed prior to check in on the day of arrival. A `sample_voucher.rtf` template is available for customization in the Vouchers report group. For more information, see Configuring Voucher Rules

Table 11-13 OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ACCOUNTS RECEIVABLES SETTLEMENTS VISIBLE ON FOLIO [SHOW_AR_SETTLEMENT]		Prints the account receivables settlement payment on the folio.
ADDITIONAL FOLIO TEXT [ADDITIONAL_FOLIO_TEXT]		Shows additional fields on the folio when entered on a guest reservation.
ALLOW NEGATIVE POSTINGS [ALLOW_NEGATIVE_POSTINGS] (Charges)		Allows the posting of negative sales charges (revenue and non-revenue) to Reservation Accounts in Billing, Fast Post (Post It), and Batch Charges.
ALLOW CREDIT BILL ONLY FROM FOLIO HISTORY [ALLOW_CREDIT_BILL_ONLY_FROM_FOLIO_HISTORY]		When active credit bills can only be created from Folio History.
APPEND PREFIX FOR FOLIO NUMBER [APPEND_PREFIX_FOR_FOLIO_NUMBER]		A static numeric or alphanumeric prefix value of 4 characters can be associated with each bill number assigned in OPERA Cloud. This 4 character prefix is unique per property.
	FOLIO NUMBER PREFIX VALUE [FOLIO_NUMBER_PREFIX_VALUE]	A static numeric or alphanumeric prefix value of 4 characters that will be associated with each bill number. This value must be between 0001 to 9999 if it is entered as numeric.
	FOLIO NUMBER PREFIX VALUE VALIDATION [FOLIO_NUMBER_PREFIX_VALUE_VALIDATION]	Select the type of value that can be entered in the Folio Number Prefix Value application setting.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ALLOW DUPLICATE ACCOUNT NUMBERS [ALLOW_DUPLICATE_AR_NUMBERS]		Enables using the same accounts receivable account number on multiple accounts.
ALLOW DEFERRED TAXES [ALLOW_DEFERRED_TAXES]		Defers the calculating of VAT tax amounts until the time of reservation check out and folio generation.
	DEFERRED TAX CALCULATION BASED ON PREVIOUS GUEST TAX TYPE [DEF_TAX_CALC_BASED_ON_PREV_GUEST_TAX_TYPE]	When a posting is transferred to a sub-account (billing window) or another room reservation account, and the **Guest Profile Tax Type** is different, the Deferred Tax is calculated based on the previous **Guest Profile Tax Type** for the transferred posting. (Available when the **Tax Types** OPERA Control is active and the **Tax Type Calculation** OPERA Control is set to Profile).
AUTOMATICALLY ASSIGN ACCOUNT NUMBER [AUTOMATIC_ASSIGN_AR_NUMBER]		Assigns an accounts receivable account number automatically while creating a new account.
	DEFINE ACCOUNT SEQUENCE [DEFINE_ACCOUNT_SEQUENCE]	Uses the account sequence defined by the Start Account Number and End Account Number setting.
	START ACCOUNT NUMBER [START_ACCOUNT_NUMBER]	Specifies the start account number automatically assigned.
	END ACCOUNT NUMBER [END_ACCOUNT_NUMBER]	Specifies the end account number automatically assigned.
AUTOMATICALLY CHECK OUT ZERO BALANCE SHARED RESERVATIONS [AUTO_OPEN_SHARE_WITHS]		On check out of a shared reservation, automatically checks out share reservations with a zero balance.
AUTOMATICALLY TRANSFER GENERATES WITH MAIN TRANSACTION [TRANSFER_GENERATED_TRX]		Transfers any generates attached to a transaction code automatically if the main or parent transaction code is transferred or routed.
BATCH FOLIO PRINTING FOR ZERO BALANCE CHECK OUTS [BATCH_FOLIO_PRINT_ZERO_BAL_CHECK_OUT]		Enables folio printing option for the zero balance check out reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
BLIND CASHIER DROP [BLIND_CASH_DROP_YN]		Activates the Blind Drop Cashier Closure functionality, which hides all cash transactions from reports and cashier closure.
	ENTER SHIFT DROP AMOUNTS [ENTER_SHIFT_DROP_AMOUNTS]	Determines if the user must enter the Actual Shift drop amounts during cashier shift closure.
CALCULATE CHANGE DUE [CALCULATE CHANGE DUE]		Activates the Change Due functionality when performing a settlement with cash payment method. The payment screen shows an additional field for Amount Received and a prompt shows for change due if the cash amount received is greater than the amount due.
CONFIDENTIAL BILLING WINDOW [CONFIDENTIAL_BILLING_WINDOW]		Allows you to indicate a billing window (2-8) as confidential. When a billing window is marked confidential, folio printing is suppressed during the folio settlement for charges in that billing window.
CREDIT CARD REBATE VALIDATION [CREDIT_CARD_REBATE_VALIDATION]		Allows making a rebate by Credit Card Number. In addition, OPERA Cloud verifies the rebate amount does not exceed the previously charged amount to the credit card.
	EXCLUDE REBATE VALIDATION ON PAY-ONLY WHEN CARD NUMBER NOT AVAILABLE [SKIP_REBATE_VALIDATION_ON_PAYONLY]	Enables to exclude the rebate validation for payments made by credit/debit cards that are configured as pay-only, when the card number is not available.
CREDIT CARD TRANSACTION SURCHARGE [CC_SURCHARGE]		Enables posting a surcharge amount for a credit card transaction.
	DEFAULT SURCHARGE TRANSACTION CODE [DEFAULT_CC_SURCHARGE_TRX_CODE]	Default Transaction Code to use for Posting the Surcharge Amount.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
CUSTOM CHARGES [CUSTOM_CHARGES]		Custom Charges functionality allows you to configure a charge (ie Tax) to be posted during the End of Day Posting Room & Tax procedure and other scenarios where the room & tax charges are posted. Custom Charge posts per person, per night. In addition, you can configure exemptions to the Custom Charge, which can be setup on reservations for the entire stay or for specific dates of the stay.
	CUSTOM CHARGES TRANSACTION CODE [CUSTOM_CHARGES_TRX_CODE]	Transaction Code to be used when posting Custom Charges.
CUSTOM NUMBERS [CUSTOM_NUMBERS]		Ability to configure formulas to define the generation and printing of Custom Numbers in folios for tracking of folios.
	CUSTOM NUMBERS IN AR ACCOUNT FOLIOS [CUSTOM_NUMBERS_IN_AR]	Enables filtering of folios based on a Custom Number in Manage Account folios within Accounts Receivables.
DAILY PLANS [FOLIO_PLANS]		Configures daily plan arrangements.
DEBIT BILL [SUPPLEMENTAL_FOLIO]		Ability to generate Debit Bill/ Supplemental Folio for existing Folios. Used when additional charges are required to be posted and linked to the original folio.
DO NOT MODIFY POSTINGS [DO_NOT_MODIFY_POSTINGS]		When active, postings can only be viewed and cannot be modified/edited, adjusted, or split. Transfer and routing of transactions continue to be allowed. This OPERA Control overrules any existing Tasks related to modifying postings.
DO NOT ROUTE EXCLUSIVE TAX TO COMP WINDOW [DO NOT ROUTE EXCLUSIVE TAX TO COMP WINDOW]		Exclusive generates will remain on the guest window when the main posting is moved to a comp window. Available when the Automatically Transfer Generates with Main Transaction OPERA Control is active.
EFOLIO EXPORT [EFOLIO_EXPORT]		Activate Efolio Export Functionality.
	PAYMENT METHODS [PAYMENT_METHODS]	Specify the Payment Types for which Efolio Export should be initiated.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	DELIVERY METHODS [DELIVERY_METHODS]	Specify the Delivery Methods for which eFolio Export should be initiated: 1. **Electronic**: Sent automatically to the recipients bank. 2. **Email**: Sent as an email to the recipient. 3. **Printing**: Printed and sent by regular postal mail to the recipient.
EXCLUSIVE CASHIER ID [EXCLUSIVE_CASHIER_ID]		When active, a cashier ID can only be assigned to one user. You cannot activate this OPERA Control if any cashier ID is already assigned to multiple users.
ENFORCE FULL CREDIT PER LINE ITEM [ENFORCE_FULL_CREDIT_PER_LINE_ITEM]		When active, you cannot post charges or credits for partial amounts of tax inclusive transactions when you perform Generate Credit Bill from Folio History.
FISCAL BUSINESS EVENTS [FISCAL_BUSINESS_EVENTS]		Activates Fiscal Business Events Functionality.
	RESERVATION EVENT WITH PROFILE ELEMENTS [RESERVATION_EVENT_WITH_PROFILE ELEMENTS]	When active, the UPDATE PROFILE Fiscal Business Event, when configured, then the NEW RESERVATION and UPDATE RESERVATION fiscal business events will also contain the configured Profile elements. The parameter is inactive by Default.
	POSTING BUSINESS EVENTS FOR FISCAL [BILLING AND AR BUSINESS EVENTS]	Generate business events for Postings on billing windows 1 to 8 for Fiscal.
	FISCAL EXECUTABLE [FISCAL_EXECUTABLE]	Specifies the Fiscal Executable path and defines the location of the executable.
	FISCAL PARTNER [FISCAL_PARTNER]	Generates Business Events and partner specific payloads based on the selected setting value.
	USE FISCAL SERVICE INVOICE CURRENCY [INVOICING_CURRENCIES]	Enables a fiscal invoice currency to be selected prior to calling the fiscal system.
FISCAL CLOUD INTEGRATION [FISCAL_INTEGRATION]		Activate to enable fiscal communication with the OFIS Cloud API for Fiscal Cloud Integration.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
FISCAL FOLIO PRINTING [FISCAL_FOLIO_PRINTING]		Enables Fiscal Folio Printing Functionality.
	ASSOCIATED FOLIO DETAILS REQUIRED FOR A CREDIT BILL [ASSOCIATED_FOLIO_DETAILS_REQUIRED]	As Before generating a Credit Bill, information regarding the original bill for which the Credit Bill is being created is required. This will be sent to the Fiscal System
	DELAYED FISCAL RESPONSE [DELAYED FISCAL RESPONSE]	When active the ability to handle Delayed Fiscal Responses is available in Folio History.
	PRINT FISCAL INFORMATION FOLIO [PRINT_FISCAL_INFO_FOLIO]	Prints a fiscal folio when generating an information folio.
	PRINT FISCAL PRO-FORMA FOLIO [PRINT_FISCAL_PROFORMA_FOLIO]	Print Fiscal Folio when generating a Pro-Forma Folio. (Available when the **Supporting Documents** OPERA Control is inactive).
	PRINT FISCAL RESPONSE ON FOLIO [PRINT FISCAL RESPONSE ON FOLIO]	When active, fiscal responses will display at the bottom of the folio.
	RESEND FISCAL FOLIO [RESEND_FISCAL_FOLIO]	Re-sends the fiscal folio to the fiscal service for past generated folios.
	FISCAL SERVICE TERMINALS [FISCAL_SERVICE_TERMINALS]	When active, Fiscal Terminals can be configured for selection during folio generation.
	OFFLINE FOLIO [OFFLINE_FOLIO]	When active the ability to generate a Folio in Folio History is available when the Fiscal Service is Offline and the Payment Method is not Direct Bill.
	SUPPORTING DOCUMENTS [SUPPORTING_DOCUMENTS]	Activate to generate information folios, pro-forma folios, and confirmation letters as Supporting Documents via fiscal payloads.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
FIX BILL RESERVATION [FIX_BILL_RESERVATION]		Fixed Bill Number per Guest per Stay. When a folio number is generated, use the same number for each subsequent checkout/interim bill/advanced bill generated for the reservation regardless of the window. This bill number can be used to pull up all folio window totals in history. The folio that is settled to the Accounts Receivable account, when viewing from an Accounts Receivable account, shows the details for the respective transactions belonging to the invoice number that they were applied to. When the **Use Accounts Receivables Folio for Direct Bill Settlements** parameter is On and you are settling a Billing window that already has transactions settled to Direct Bill and has a bill number assigned, new charges without a bill number settled to a payment method other than Direct Bill use the Accounts Receivable Folio layout defined in Account Receivable Folios Report Group. This is because the folio already includes the direct bill transaction from the earlier settlement. If any one of the following parameters are set to **On**, the other parameters must be set to **Off**: **Fix Bill Reservation**, **Fix Bill Window**, **Folio No Reprint**, and **Folio Revision Number**. Therefore, only one of these parameters can be set to **On** at any given time. In addition, all in-house guests must be checked out before one of these parameters can be set to **On**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
FIX BILL WINDOW [FIX_BILL_WINDOW]		Fixed Bill Number per Folio Window per Guest per Stay. When a folio number is generated use a separate bill number for each window. Each window is located in history using a separate bill number. When the **Cashiering —Permanent Folio Storage** parameter is On, the last folio created for the Window for that day will be stored. When **Fix Bill Window** parameter is On and **Generate Zero Bill** is Off, if a payment transaction from a settled window 1 is moved to another window (for example, window 2) and the reservation is checked out again by making a payment against window 1, the folio correctly prints if the Print Folio check box is selected on the Payment screen. When the **Use Accounts Receivables Folio for Direct Bill Settlements** parameter is On and you are settling a Billing window that already has transactions settled to Direct Bill and has a bill number assigned, new charges without a bill number settled to a payment method other than Direct Bill use the Accounts Receivable Folio layout defined in Account Receivable Folios Report Group. This is because the folio already includes the direct bill transaction from the earlier settlement. If any one of the following parameters are set to **On**, the other parameters must be set to **Off**: **Fix Bill Reservation**, **Fix Bill Window**, **Folio No Reprint**, and **Folio Revision Number**. Therefore, only one of these parameters can be set to **On** at any given time. In addition, all in-house guests must be checked out before one of these parameters can be set to **On**.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
FOLIO NO REPRINT [FOLIO_NO_REPRINT]		Do not allow Folio Reprint, Split, Transfer, Adjustments or Edits of postings with Bill Numbers. Once active, this OPERA Control cannot be deactivated while there are in-house reservations. When printing a bill, those postings that have been previously printed (have a bill number) will not show on the folio. Charges that have been invoiced cannot be altered unless you first void the folio. When Voiding a Folio, the invoice is cancelled and the user can then make the necessary changes and re-issue the folio. If you void a Direct Bill invoice, the Accounts Receivable charge will also be removed. You cannot void an invoice that has already been transferred to Accounts Receivable. You cannot drag and drop transactions if the parameter is On and a folio has already been printed. If any one of the following parameters are set to **On**, the other parameters must be set to **Off**: **Fix Bill Reservation**, **Fix Bill Window**, **Folio No Reprint**, and **Folio Revision Number**. Therefore, only one of these parameters can be set to **On** at any given time. In addition, all in-house guests must be checked out before one of these parameters can be set to **On**.
FOLIO QR CODE [FOLIO_QR_CODE]		When a folio is generated, OPERA Cloud generates a QR Code that is comprised of multiple details. Some of these details are different based on the region of the property.
FOLIO REVISION NUMBER [FOLIO_REVISION_NUMBER]		Enables correcting a folio with a revision number attached.
FOLIO STYLES [FOLIO_STYLES]		Uses folio style options to select a folio style when printing folios.
FOLIO TYPE UNIQUE ID [FOLIO_TYPE_UNIQUE_CODE]		Ability to configure a numeric or alphanumeric value in the field for Unique ID on each Folio Type in the property.
FORCE CASHIER LOGIN [FORCE_CASHIER_LOGIN]		Prompts users with the cashier login screen every time cashiering functions are accessed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
GENERATE PROFORMA FOLIO [PROFORMA_FOLIO]		Creates Pro Forma folios for reservations. **Note** OPERA Control cannot be inactivated when failed supporting document records exist. For more information, see Using Supporting Documents.
GENERATE TAX REGISTRATION NUMBER [GENERATE_TAX_REGISTRATION_NO]		A registration number will be assigned to each arrival reservation during the End of Day procedure and displayed in the Tax Registration Number field in Reservation Stay Details. A registration number will not be assigned to Pseudo Room reservations.
GENERATE ZERO BILL [GENERATE_ZERO_BILL]		Enables printing an invoice that has a zero balance.
GENERATE ADVANCE BILL/ FOLIO FOR DEPOSIT [GENERATE_ADVANCE_BILL/ FOLIO_FOR_DEPOSIT]		When active, an Advance Bill/Folio is generated for the reservation when selecting to make a Deposit Payment. **Note** Charges and payment are posted to the guest ledger as pre-billing charges.
INCLUDE LINKED PROFILES [INCLUDE_LINKED_PROFILES]		Include all profiles linked to a reservation in the universal payload when you generate a fiscal folio.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
INCLUDE ACCOMPANYING GUEST PROFILES [INCLUDE_ACCOMPANYING_GUEST_PROFILES]		The accompanying guest profiles linked to a reservation are included in the universal payload when generating a fiscal folio. The parameter can be activated when the **Fiscal Folio Printing** and **Accompanying Guest** OPERA Controls are active.
MANDATORY REFERENCE NEGATIVE PAYMENTS [MANDATORY_REF_NEGATIVE_PAYMENTS]		Makes the **Reference** field mandatory on the Cashiering, Deposit and Accounts Receivable Payment screens when posting a negative payment amount using any payment method. Value entered must have minimum six non-repeating characters. **Note** The **Reference** field is also mandatory with negative payments for credit card payments only when the **Credit Card Rebate Validation** OPERA Control is active.
NEGATIVE CASH SHIFT DROP [NEGATIVE_CASH_SHIFT_DROP]		Enables cashiers to enter a negative cash shift drop when performing their shift cashier closure.
ORIGINAL INVOICE AND INVOICE TYPE FOR DB PAYMENT METHOD [ORIGINAL_INVOICE_AND_INVOICE_TYPE_FOR_DB]		Enables Original Invoice and Invoice type fields when Direct Bill (DB) payment method selected and negative amount entered on the settlement screen.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
PACKAGE ALLOWANCE CONSUMPTION WHEN NOPOST OR POST STAY FLAG [CONSUME ALLOWANCE WHEN NOPOST OR POST STAY FLAG]		Activates package allowance consumption for in-house reservations overriding No Post flag up to the allowance balance only when consumption posting via an interface, overage will not be generated. In case of manual postings against allowance, overage will be generated. Package Allowance consumption for Checked out Reservations on the day of departure until End of Day if Post Stay Privilege assigned. If No Post is checked then consumption posting only up to the Allowance balance will be accepted from an interface, Overage will not be generated however in case of manual postings against allowance overage will be generated. If No Post is not checked then after allowance consumption, Overage will be generated as applicable for interface as well as manual postings.
PACKAGE ALLOWANCE LINKING [PACKAGE_ALLOWANCE_LINKING]		Enables linking package allowances with other rooms.
PACKAGE ARRANGEMENT CODES [PACKAGE_ARRANGEMENT_CODES]		Ability to configure package arrangement folio grouping codes and select a package arrangement in packages; which will change folio styles 1,9,14,15,16,18 to print by package arrangement codes.
PERIODIC FOLIOS [PERIODIC_FOLIOS]		Enables generating folios on a periodic basis (weekly, monthly, etc.).
PERMANENT FOLIO STORAGE [PERMANENT_FOLIO_STORAGE]		Enables a property to store printed folios to be viewed/printed without re-generation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	PERMANENT FOLIO STORAGE FILE NAME FORMAT [PERMANENT_FOLIO_STORAGE_FILE_NAME_FORMAT]	Permanent Folio Storage will refer to this setting to determine the filename for the folio. Available values can be concatenated to each other to form a format string. Possible values are: <BILL_NO> <BILL_GENERATION_TIME> <BILL_GENERATION_DAY> <BILL_GENERATION_MONTH> <BILL_GENERATION_YEAR> <FOLIO_VIEW> <FOLIO_TYPE> <FISCAL_BILL_NO> Use this only when FISCAL_FOLIO_PRINTING or CREDIT_BILL parameter is on. <REVISION_NO> Use this only when FOLIO FOLIO_REVISION_NUMBER parameter is on. <QUEUE_NAME> Use this only when PRINT_QUEUE_HANDLING, FISCAL_FOLIO_PRINTING and FISCAL_XML_PAYMENTS parameters are on. <NAME_TAX_TYPE> Use this only when TAX_TYPES parameter is on.
PORTUGAL SAFT PAYMENT TYPES [PORTUGAL_SAFT_PAYMENT_TYPES]		Once active, the Export Mapping Types would get populated with the Payment Codes, which can further be mapped to their respective payment transaction codes for the Portugal SAF-T export.
POSITIVE CASHIER DROP [POSITIVE_CASHIER_DROP]		Enables cashiers to be closed with a negative shift drop. **Note** Do not allow cashier to be closed with a negative shift drop.
POST COVERS [MANUAL_POST_COVERS]		Enables the ability to manually post and adjust covers and export covers data.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
PREPAID CARDS PREPAID_CARDS		Enables the ability to manage prepaid / gift cards - issue, reload, balance inquiry, redeem and close/ cash out actions, with the integration with a stored value solution (SVS) partner.
	PREPAID CARDS OFFLINE STORAGE [PREPAID_CARDS_OFFLINE_STORAGE]	Enables offline storing of Prepaid Card for a reservation without sending the details to the Stored Value System Interface (SVS) interface.
	PREPAID MULTI RECORD PROCESSING [PREPAID_MULTI_RECORD_PROCESSING]	Enables the ability to issue and redeem multiple prepaid cards in a single transaction.
	PREPAID CARD PURCHASE TRANSACTION CODE [STORED_VALUE_PURCHASE_TRN]	Non-revenue sales charge transaction code used to post a charge for the purchase of prepaid card to reservation account. Enabled when a Stored Value System Interface (SVS) integration service is active.
PRINT POS CHECK WITH FOLIO [PRINT_POS_CHECK_WITH_FOLIO]		If this parameter is set to Y, when a folio is printed / stored/ generated for any billing window that has a POS check posted to it, the POS check details i.e. the check image will be included immediately after the line items that are displayed in the folio details section. **Note** Your customized folio template must have the POS_CHECK_IMAGE element added.
RESERVED CASHIER [RESERVED_CASHIER]		Ability to associate a Cashier ID to a specific property. The Cashier login screen displays only those cashier IDs that are associated with the logged in property.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
PURPOSE OF STAY FOR CITY TAX CALCULATION [PURPOSE_OF_STAY_FOR_CITY_TAX_CALCULATION]		Defines the default Purpose of Stay to be used by city tax package functions when no Purpose of Stay value is selected in reservation.
RESTRICT CASH/CHECK PAYMENT REVERSAL [NEGATIVE_CASH]		When active, you will not be allowed to make negative cash or check payments.
RESTRICT FOLIOS WITH DEPOSIT FOR FULL CREDIT BILL [RESTRICT_FOLIOS_WITH_DEPOSIT_FOR_FULL_CREDIT_BILL]		When activated you can only credit individual transactions if the folio for which a credit bill is going to be generated includes a deposit folio.
RESTRICT NO SHOW AND CANCELLATION FOLIOS DURING END OF DAY RESTRICT_NO_SHOW_AND_CANCELLATION_FOLIOS_DURING_END_OF_DAY		When active, End of Day **Create Guest Ledger** procedure will not automatically generate folios for No Show or Cancelled reservations when a folio has not been generated for existing transactions and a deposit balance exists or the balance of the window is zero. (Available when the **No Show and Cancellation Postings** and **Advanced Tax Handling for Deposits** OPERA Controls are active).
RESTRICT POSTING WITH QUANTITY [RESTRICT_POSTING_WITH_QUANTITY]		When active, you are unable to modify the field/column for Quantity when posting charges. All charges are posted with an internal Quantity of 1.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
RESERVATION EVENT WITH ACCOMPANYING GUEST PROFILE ELEMENTS [RESERVATION_EVENT_WITH_ACCOMPANYING_GUEST_PROFILE ELEMENTS]		When active, and if the Update Profile fiscal business event is configured, the New Reservation, Update Reservation, Check In, Check Out, and Cancel fiscal business events also contain the configured accompanying guest profile elements. **Note** The parameter can be activated when the **Accompanying Guest** and the **Fiscal Business Events** OPERA Controls are active.
ROLLUP TRANSACTIONS [ROLLUP_YN]		Displays same-day charges with matching check number as a single collapsed charge in Billing. Select **[+]** to expand and display the separate charges.
ROOM TYPE BASED CHARGE DATE RANGES [ROOM_TYPE_BASED_CHARGE_DATE_RANGES]		Allows the `ROOM_TYPE_BASED_CHARGE UDF` generate function to be configured with date ranges and amounts per date range for each Room Type Group.
ROUNDING FACTOR [ROUNDING_FACTOR]		Activates the Currency Rounding functionality for properties in countries that require monetary amounts to be rounded by a legal standard factor because certain coin denominations are discontinued.
	ROUNDING MULTIPLE [ROUNDING_MULTIPLE]	Determines the rounding multiple used. Rounding options are provided for rounding to the nearest multiple of the selected rounding multiple.
	ROUNDING MULTIPLE CODE [ROUNDING_MULTIPLE_CODE]	Determines the rounding multiple transaction code used for posting a rounding difference.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ROUTING INSTRUCTION PER DAY [DEFAULT DAILY ROUTING]		When enabled, the **Routing Instruction per Day** check box is selected by default when creating new routing instructions.
SERVICE RECOVERY ADJUSTMENT [SERVICE_RECOVERY_ADJUSTMENT]		Enables posting a service recovery adjustment.
 SHIFT DROP LOCATION AND BAG NUMBERS [SHIFT_DROP_LOCATION_AND_BAG_NUMBERS]		Ability to associate shift drop location and bag number for Cash and Others payment types during cashier shift closure.
TAX BRACKET CALCULATION [TAX_BRACKET_CALCULATION]		Enables calculation of discretionary taxes based on tax brackets when the property is in US country mode.
TAX TYPES [TAX_TYPES]		Activates the tax type functionality to calculate and post tax generates based on tax type calculation rules. Configuring Generates
	DEFAULT TAX TYPE [DFLT_NAME_TAX_TYPE]	Defines the default tax type for new reservations or new profiles; according to the Tax Type Calculation setting.
	TAX TYPE CALCULATION [TAX_TYPE_CALCULATION]	Calculate tax generates, per tax type, based on the tax type value selected in the: • Profile • Reservation
 TRANSACTION CODE OWNERSHIP [CORPORATE_PROTECTION]		Enables flagging a transaction code as owned by Central or Property and controls the ability to edit based on this flag.
TRANSACTION CODE PER ADJUSTMENT CODE [TRANSACTION_CODE_PER_ADJUSTMENT_CODE]		Ability to associate specific transaction code for each Adjustment code.
TRANSACTION DISCOUNT [TRANSACTION_DISCOUNT]		Enables the ability to configure discounts for Transaction codes & Article Codes based on the Membership Types and Levels. (Articles available when the **Articles** OPERA Control is active)

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-13 (Cont.) OPERA Controls — Cashiering Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	PREFERRED DISCOUNT MEMBERSHIP [PREFERRED_DISCOUNT_MEMBERSHIP]	Defines whether the preferred membership or primary membership is used when applying a transaction discount for passer-by transactions (Available when the **Post It** OPERA Control is active).
TRANSACTION STATUS [TRANSACTION_STATUS]		Enables adding an approval status to transactions in the posting journal and makes additional approval codes and status columns available in the posting journal.
USE ACCOUNTS RECEIVABLES FOLIO FOR DIRECT BILL SETTLEMENTS [AR_SETTLEMENT_PRINT_TASK]		Specifies direct bill folios to use the accounts receivables folio layout defined in the Account Receivable Folios Report group.
USE PREFIX FOR FOLIO TYPE [FOLIO_TYPE_PREFIX]		Allows you to configure a prefix for Folio Types. (Available when the **Fiscal Folio Printing** or the **Credit Bill** OPERA Control is active).
USE SUFFIX FOR FOLIO TYPE [FOLIO_TYPE_SUFFIX]		Allows you to configure a suffix for Folio Types. (Available when the **Fiscal Folio Printing** or the **Credit Bill** OPERA Control is active).
VOID FOLIO [VOID_BILL]		Voids guest folios. (Available when the **Folio No Reprint** OPERA Control is active).
	DO NOT NULLIFY THE VOID FOLIO'S INFORMATION [DO_NOT_NULLIFY_VOID_BILL]	On Voiding the Folio, the Folio's information will not be removed.
	CREDIT BILL FOR VOID [CREDIT_BILL_FOR_VOID]	When active, a Credit Bill is sent through the fiscal service before voiding the folio.
	SEND FISCAL FOLIO PRIOR TO VOIDING [FISCAL_FOLIO_PRIOR_TO_VOIDING]	When active, a Void Folio is sent through the fiscal service before voiding the folio.
	VOID FOLIO REASONS [VOID_BILL_REASONS]	When active the user will be prompted to select a reason when voiding a folio.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-14 OPERA Controls — Cashiering Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ADDRESS CHECK FOR FOLIO GENERATION [ADDRESS_CHECK_FOR_FOLIO_GENERATION]		List of mandatory payee address elements that will be validated at the time of folio generation.
ADDRESS CHECK PAYMENT METHODS [ADDRESS_CHECK_PAYMENT_METHODS]		In conjunction with the Setting 'Address Check For Folio Generation', this setting allows the user to select the payment methods that would require the address check validation prior to folio generation.
BANK CODE [BANK_CODE]		The identification code of the financial institution associated with the property. For example: SWIFT Code. .
BANK ID CODE [BANK_ID_CODE]		The identification code/number of the account held by the property with the financial institution. For example: IBAN Number.
BANK ID TYPE [BANK_ID_TYPE]		The type of designation used to identify an account with a financial institution. For example: IBAN.
BANK NAME [BANK_NAME]		The name of the financial institution associated with the property.
CASH SHIFT DROP [CASH_SHIFT_DROP]		Specifies the transaction code used to record a shift cash drop.
CASH TRANSACTION CODE [CASH_TRXCODE]		Specifies the cash exchange transaction code.
CHECK SHIFT DROP [CHECK_SHIFT_DROP]		Specifies the transaction code used to record a shift check drop.
CHECK TRANSACTION CODE [CHECK_TRXCODE]		Specifies the check transaction code.
CREDIT CARD WALLET [CREDIT_CARD_WALLET]		Enables you to store credit card token details on profiles and have these tokens available for the payments and add/update the credit card payment method details. (Available when **CC Vault** is enabled for ETF interface). Not available when the **Payment Services Directive** (PSD2) OPERA Control is active).
DECIMAL CALCULATION [DECIMAL_CALCULATION]		Specifies the number of decimals to maintain in the database for the calculated amount such as net amount, etc., pertaining to inclusive taxes/generates.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-14 (Cont.) OPERA Controls — Cashiering Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
DEFAULT TRANSACTION CODE FOR OUTBOUND INTEGRATION [DEFAULT_TRX_CODE_FOR_OUTBOUND]		Transaction code to be used if the transaction code mapping is not available in the data value mapping.
DELIVERY METHODS [DELIVER_ METHODS]		Specify the Delivery Methods for which eFolio Export should be initiated. • **Electronic**: Sent automatically to the recipients bank. • **Email**: Sent as an email to the recipient. • **Printing**: Printed and sent by regular postal mail to the recipient.
DEPOSIT LEDGER BALANCE FORWARD TRANSACTION CODE [DEPOSIT_LEDGER_BALANCE_FORWARD_TRANSACTION_CODE]		Defines the (other) payment transaction code used for deposit ledger System Setup - Importing Data.
DIRECT BILL SETTLEMENT CODE [AR_SETTLE_CODE]		Specifies the Transaction Code used for folios settled to Accounts Receivables.
EXCLUDE FOLIO STYLES [CONCEALED_FOLIO_STYLES]		Specifies that a folio cannot be generated using the folio styles selected. The Folio Styles screen will exclude these folio style options. These will also not be available for selection as default Accounts Receivables or Cashiering Folio Styles.
FISCAL COMMANDS [FISCAL_COMMANDS]		Send fiscal commands via the generic fiscal payload
FISCAL PARTNER [FISCAL_PARTNER]		Generates Business Events and partner specific payloads based on the selected setting value.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-14 (Cont.) OPERA Controls — Cashiering Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
FOLIO COPY LEGEND [FOLIO_COPY_LEGEND]		When generating multiple copies of folios during settlement or checkout in Billing, the associated legend (for example, Original, First Copy of Invoice, etc.) will generate on the folio. When set to Watermark, the watermark folio copy legend is available only for **Folios**, **AR Folios**, **Post It** / **Passerby Folios** report groups. **Note** Activating this setting will increase folio generation time per copy to the folio generation process. Values are: • FOLIO_COPY_NO (No folio copy indicator) • FOLIO_COPY_YES (Original merge code folio indicator) • FOLIO_COPY_WATERMARK (Watermark folio copy indicator
	ENABLE PROPERTY SPECIFIC FOLIO COPY LEGEND CONFIGURATION [USE_PROP_FOLIO_COPY_LEG_CONFIG] [FOLIO_COPY_LEGEND_FONT_SIZE] [	Ability to configure Folio Copy Legend values for a specific property. If set to **Yes**, the Folio Copy Legend values will apply only to that property. If set to **No**, the values will be configured at the chain level and will not be specific to the property. When the Folio Copy Legend setting is set to **W**, the Manage Copy Legend values will not be updated and will remain specific to the property.
	FONT SIZE OF FOLIO LEGEND TEXT [FOLIO_COPY_LEGEND_FONT_SIZE] [	Font size of folio legend text on folios.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-14 (Cont.) OPERA Controls — Cashiering Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	HORIZONTAL POSITION OF FOLIO LEGEND TEXT [FOLIO_COPY_LEGEND_XPOS]	The number of pixels from left corner of page to put the folio legend text on folios.
	VERTICAL POSITION OF FOLIO LEGEND TEXT [FOLIO_COPY_LEGEND_YPOS]	The number of pixels from the bottom of page to put the folio legend text on folios.
FONT SIZE OF FOLIO LEGEND TEXT [FOLIO_COPY_LEGEND_FONT_SIZE]		Specifies the font size of the folio legend text on folios.
GUEST LEDGER BALANCE FORWARD TRANSACTION CODE [GL_BAL_FORWARD_TRX_CODE]		Defines the sales (non-revenue) transaction code for guest ledger System Setup - Importing Data. **Note** Transaction code must not be linked to a sub-group / group with tax generates configured. Transaction code must not be enabled for manual posting.
HORIZONTAL POSITION OF FOLIO LEGEND TEXT [FOLIO_COPY_LEGEND_XPOS]		Specifies the number of pixels from the left corner of the page to put the folio legend text on folios.
VERTICAL POSITION OF FOLIO LEGEND TEXT [FOLIO_COPY_LEGEND_YPOS]		Specifies the number of pixels from the bottom of the page to put the folio legend text on folios.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-14 (Cont.) OPERA Controls — Cashiering Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
FISCAL BUSINESS EVENT RESEND/REGENERATE DAYS [FISCAL_BE_RESEND_DAYS]		Enter a number ranging from 1 to 9 days for a Fiscal Business Event with a status of FAILURE will be available for Resend to the Fiscal partner. Fiscal Business Events with other statuses will also be displayed for the same specified number of days. If no value is entered, a default value of 3 days will be used.
MAXIMUM FISCAL BUSINESS EVENTS TO RESEND [MAXIMUM_FISCAL_BUSINESS_EVENTS_TO_RESEND]		Enter the number from 1 to 100 for the number of Fiscal Business Events to be resent at one time. If no value is entered, a default value of 50 will be used.
FOLIO STYLE [FOLIO_STYLE]		Specifies the folio style used when printing a folio.
FOLIO TYPE METHOD [FOLIO_TYPE_METHOD]		Method used for Folio Type Setup.
PAYMENT METHODS [PAYMENT_METHODS]		Specifies the Payment Types for which eFolio Export should be initiated.
LOGICAL WEIGHT [LOGICAL_WEIGHT]		Logical Weight value used in validation of a Tax ID.
POS ACCOUNTS [POS_ACCOUNTS]		Folios for selected Pseudo Rooms will be generated using an internal folio sequence.
PRINT CASHIER CLOSURE REPORTS [O9_CASHIER_CLOSURE_REPORTS]		Activates the Automatically Print Cashier Closure Reports functionality, which stores the printer selected for closure reports and uses it without displaying the report configuration screen.
PRINT DEPOSIT REQUEST RECEIPTS [O9_PRINT_DEPOSIT_REQUEST_RECEIPT]		Activates the Automatically Print Deposit Request Receipts functionality.
PRINT FOLIO [O9_PRINT_FOLIO]		Activates the Automatically Print Folio functionality, which stores the printer selected for folios and uses it without displaying the report configuration screen.
PRINT PAYMENT RECEIPTS [O9_PRINT_PAYMENT_RECEIPT]		Activates the Automatically Print Payment Receipts functionality, which stores the printer selected for receipts and uses it without displaying the report configuration screen.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-14 (Cont.) OPERA Controls — Cashiering Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
PURPOSE OF STAY FOR CITY TAX CALCULATION [PURPOSE_OF_STAY_FOR_CITY_TAX_CALCULATION]		Defines the default Purpose of Stay value to be used by city tax package function when no Purpose of Stay value is selected in the reservation.
REPORTS TAX BUCKETS [REPORTS_TAX_BUCKETS]		Enables identification of 10 tax buckets, which will be included on all reports that display a breakdown of up to 10 net and tax amounts.
ROOM STATUS FOR ZERO BALANCE AND AUTO CHECK OUTS [ROOM_STATUS_FOR_ZERO_BALANCE_AND_AUTO_CHECK_OUTS]		Defines the room status for quick check outs processed as either Zero Balance or Auto check outs and the current room status is Inspected or Clean. If left null the room status is updated to Dirty .
SUPPRESS ADVANCE BILL OPTIONS [SUPPRESS_ADVANCE_BILL_OPTIONS]		Defines the options available when generating an advance bill folio. For more information, see Settling a Reservation Account Balance • **Tonight**: Current date only. • **Nights to Charge**: Enter a number of nights to charge. Entire Stay.
TAX FOLIO TRANSACTION CODES [TAX_FOLIO_TRX_CODES]		Define the Tax Transaction Code(s) to be grouped into a separate Tax Folio during settlement.

OPERA Controls — Channel Management

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Channel Management group.

Table 11-15 OPERA Controls — Channel Management Functions

FUNCTION	DESCRIPTION
AUTOMATIC PUBLISH [AUTOMATIC_PUBLISH]	Activates Automatic Publishing Functionality.
CHANNEL RESTRICTIONS [CHANNEL_RESTRICTIONS]	Chain level global function that enables setting rate and room restrictions on the channel level.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-16 OPERA Controls — Channel Management Parameters

PARAMETER	DESCRIPTION
ADS SOURCE CODE [ADS_SOURCE_CODE]	This parameter is used for EXPEDIA ads only and determines which value to use as the reservation's source code. If the parameter is enabled, use the source code from the XML message in the POS@Web value. If not enabled, use the source code value in the rate header, and if not populated, use the value in the Channel Setup, Name field.
 ADVANCED OWS PRODUCTS [ADVANCED_OWS_PRODUCTS]	Chain Level global parameter that provides ability to control enables separately sold packages to be configured as web bookable. If the parameter is on, only packages that meet the requirement of being both separately sold and web bookable are available for web booking. If the parameter is off, all separately sold packages are available for web booking.
ALLOW BLOCK BOOKING FOR GDS USING RPC [ALLOW_BLOCK_BOOKING_FOR_GDS_FORRPC]	This parameter is used to sell Room Types from a Block through the GDS only when the Block Code is mapped as a Channel Rate Code.
ALLOW BLOCK TO OVERBOOK HOUSE [ALLOW_BLOCK_TO_OVERBOOK_HOUSE] [	When this parameter is active, the Business Block Header will display an additional checkbox "Web Overbooking". Checking that box will allow the block to override availability and overbook the House if there is block availability.
ALLOW MODIFY INHOUSE RESERVATION [ALLOW_MODIFY_INHOUSE_RESERVATION]	Allows Modify In-House Reservation Dates.
ALLOW RESERVATION MODIFICATION FOR RESERVATION HAS ASSIGNED ROOMNO [ALLOW_RESERVATION_MODIFICATION_FOR_ASSIGNED_ROOMNO]	This parameter is used to prevent modification of reservation which have room number assigned.
ALTERNATE RESORTS [ALTERNATE_RESORTS]	This parameter determines whether the configured Alternate resort(s) will return in the `QueryHotelInformation` response.
 ALWAYS USE MEMBERSHIP FROM REQUEST MESSAGE . [ALWAYS_USE_MEMBERSHIP_FROM_REQUEST_MESSAGE]	Chain level global parameter that enables only the memberships sent in the create booking request messages are attached to the reservation. When this control is disabled, all memberships of the profile are attached to the reservation.
 APPEND BLOCK NAME BEFORE RATE DESCRIPTION [APPEND_BLOCK_NAME_BEFORE_RATEDESC]	Enables OWS to append a block name with a rate description.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-16 (Cont.) OPERA Controls — Channel Management Parameters

PARAMETER	DESCRIPTION
APPEND COMPANY NAME BEFORE RATEDESC [APPEND_COMPANY_NAME_BEFORE_RATEDESC]	This parameter is used for general availability for ows to append company name with rate description.
AUDIT DETAILS [AUDIT_DETAILS]	Records steps in audit details for process.
AUTO POPULATE CHANNEL ENDDATE [AUTO_POPULATE_CHANNEL_ENDDATE]	When enabled, auto-populates channel end date based on Rate Header Booking End Date.
CACHE RATIO [CACHE_RATIO]	When this parameter is set to Y, it creates entry in *ows_cache_ratio* table.
CACHED AVAILABILITY PRICE [CACHED_AVAILABILITY_PRICE]	When this parameter is activated, it allows OEDS channels to use caching mechanism for availability functions. The availability response is cached in a cache schema. If the availability request is made for the same criteria again, the response will be returned from the cache schema. This improves performance of OEDS availability calls.
CHANNEL RATE ROOM CONVERSION [CHANNEL_RATE_ROOM_CONVERSION]	This parameter enables to convert to channel rate room while fetching rate awards.
CHECK RESTRICTION ON ET [CHECK_RESTRICTION_ON_ET]	When enabled, it check restriction when travel agent ends the transaction on the reservation.
COMPANY COMM PREF ATTACH RESERVATION [COMPANY_COMM_PREF_ATTACH_RESERVATION]	When enabled, the value **YES** indicates when reservations are created through GDS or OWS, company preferences and comments as well as travel agent profile special preferences are attached to the reservations.
CONVERT OWS AND GDS COMMENTS AS TRACES [ADD_COMMENTS_GDS_SINREM_TRACE]	Wehn enabled, converts the OWS comments and GDS Service information (SIN) messages to traces in ORS. The trace date will be created with the insert date of the booking instead of the arrival date.Traces will be created using the trace department configured under the OEDS parameter setting OEDS Trace Department.
CREATE NEW PROFILE [CREATE_NEW_PROFILE]	Creates new profile if frequent guest number is invalid.
DEPOSIT CANCEL AMOUNT CURRENCY [DEPOSIT_CANCEL_AMOUNT_CURRENCY]	This parameter decides cancel and deposit amount that needs to be returned for ows and gds in property currency or rate code currency. If set to Y amount will be returned in rate code currency.
DYNAMIC REGIONAL AVAILABILITY SEARCH [DYNAMIC_REGIONAL_AVAILABILITY_SEARCH]	When enabled, regional availability search will be done dynamically instead of searching in **gds_rateroom_price** table. All records in **gds_rateroom_price** table will be deleted.
ENABLE CC SECURITY CODE FOR GDS [ENABLE_CC_SECURITY_CODE_FORGDS]	When enabled, the GDS channels are required to send the credit card verification code.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-16 (Cont.) OPERA Controls — Channel Management Parameters

PARAMETER	DESCRIPTION
ENABLE MONITORING FOR AVAILABILITY AND BOOKING REQUEST [ENABLE_MONITORING_AVAILABILITY_AND_CALENDAR_REQUEST]	Enables to monitor and log the Buffer Gets, Memory Used, and CPU Time used for General Availability, Regional Availability, Calendar Availability, and Create Booking and Modify Booking and Fetch Booking requests. Requests are logged in `gds_aduit_details` when the "Buffer Gets Threshold" OR "Memory Threshold" OR "CPU Time Threshold" setting meets the criteria.
ENABLE TRACE FOR AVAILABILITY AND BOOKING REQUEST [ENABLE_TRACE_FOR_AVAILABILITY_AND_CALENDAR_REQUEST]	Enables trace based on message ID for General Availability, Regional Availability, Calendar Availability, Create Booking, Modify Booking and Fetch Booking request.
ENHANCED MEMBERSHIP HANDLING [ENHANCED_MEMBERSHIP_HANDLING]	Activates the enhanced membership experience for the online user.
EXTERNAL RESERVATION MEMBER POINTS [EXTERNAL_RESERVATION_MEMBER_PTS]	When enabled, it inserts the number of points a guest earns per night that is sent through an external member system into reservation daily elements.
GDS CHANGE PROPERTY UPLOAD [GDS_CHANGE_PROPERTY_UPLOAD]	When enabled, sends GDS property upload messages for any update in property information.
GDS GALILEO RATECHANGE FOR PALSRQ [GDS_GALILEO_RATECHANGE_FOR_PALSRQ]	When enabled, is used for PALSRQ AND RPINRQ message for Galileo only in GDS. If disabled, the Property Availability response to Galileo will always be returned with the first night rate amount when a rate change occurs during the stay dates requested. The current Rate Change setting selected in Galileo channel setup will be ignored. If enabled, the rate amount returned to Galileo will be based on the Rate Change setting selected in Galileo channel setup.
GDS NEW PROPERTY UPLOAD [GDS_NEW_PROPERTY_UPLOAD]	When enabled, sends GDS property upload messages for new property creation.
GDS-SESSION INVENTORY CONTROL [GDS_SESSION_INVENTORY]	When enabled, it is used for PALSRQ AND RPINRQ message for Galileo only in GDS. If this parameter is set to (N), the Property Availability response to Galileo will always be returned with the first night rate amount when a rate change occurs during the stay dates requested. The current Rate Change setting selected in Galileo channel setup will be ignored. If selected (Y), the rate amount returned to Galileo will be based on the Rate Change setting selected in Galileo channel setup.
IATA EXCEPTION [IATA_EXCEPTION]	When enabled, generate the GDS exception table if booking is received without a valid IATA number.
INACTIVATE CHANNEL RATE CODE FROM PROFILE [INACTIVATE_CHANNEL_RATE_WHEN_INACTIVATING_CHANNEL_ACCESS_CODE_FROM_PROFILE]	When enabled, you can automatically deactivate a Channel Rate Code if the associated Channel Access Code is deactivated from the profile. If the Channel Rate Code is linked to multiple Channel Access Codes, it can be deactivated only when all associated Channel Access Codes across other profiles become inactive.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-16 (Cont.) OPERA Controls — Channel Management Parameters

PARAMETER	DESCRIPTION
MARKETING TEXT CHG [MARKETING_TEXT_CHG]	When enabled, the Type B booking response to the GDS Channel will return the 'BLABLA' text from the description of the Guarantee Code used instead of the marketing text.
MEMBERSHIP ENROLLMENT AT RESERVATION [MEMBERSHIP_ENROLLMENT_AT_RESERVATION]	When enabled, you can create membership at the time of booking, if the membership does not exist. This parameter is not applicable to ADS Channel.
 MODIFY CANCEL GDS BOOKING FROM WEB . [MODIFY_CANCEL_GDSBOOKING_FROMWEB]	Enabling this parameter allows guests to make changes to their bookings that do not impact the inventory or cancellations using OWS, regardless of the source of the reservation.
 MULTI THREADING INVENTORY UPLOAD PROCESS [MULTITHREADING_INV_UPLOAD_PROCESS]	Enabling this parameter allows inventory upload groups to be configured for each resort. Based on the number of groups configured, 'Micros ADS Booking Limit Service' will utilize multiple threads to process and upload inventory messages.
 MULTI THREADING RATE UPLOAD PROCESS [MULTITHREADING_RATE_UPLOAD_PROCESS]	When this parameter is enabled, rate upload groups can be configured for each resort. Based on the number of groups configured, GWIZ Rate Update Service will utilize multiple threads to process and upload rate messages.
OWS ENABLE OVERRIDING UPSOLD BOOKINGS [OWS_ENABLE_OVERRIDING_UPSOLD_BOOKINGS]	Enables channels to override a booking which has been upsold.
OWS USE HIGH SECURITY [OWS_USE_HIGH_SECURITY]	When enabled, it determines whether to do extra checks on the password in the response message for create user and update password operations in the Security web service.
 OPTIMIZE RATEPRICE QUERY [OPTIMIZE_RATEPRICE_QUERY]	Enables to use a new optimized query to get rates.
PROCESS HURDLES AS RESTRICTION FOR ADS [PROCESS_HURDLES_AS_RESTRICTION_FOR_ADS]	When enabled, the restrictions due to HURDLE are processed and uploaded to ADS System.
RECORD LOCATOR EXCEPTION [RECORD_LOCATOR_EXCEPTION]	When enabled, generates the GDS exception table if booking is received without a Record Locator.
 REMOVE CCINFO FETCH BOOKING [REMOVE_CCINFO_FETCH_BOOKING]	This parameter is used only to fetch the booking web service function. When set to **Y**, the OWS fetch booking web service will not return credit card information in the response, while all other web services will continue to do so.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-16 (Cont.) OPERA Controls — Channel Management Parameters

PARAMETER	DESCRIPTION
RETURN DAILY MEMBERSHIP POINTS [RETURN_DAILY_MEMBERSHIP_POINTS]	When enabled, return the daily membership points from reservation daily element name.
RETURN_RP3 [RETURN_RP3]	When enabled, allows two lines of Rate description in a GDS property availability response and one line of room description response.
SEARCH BY NAME AND CREDIT CARD [SEARCH_BY_NAME_AND_CREDITCARD]	This parameter enables to search the reservation by name and credit card number when credit card is attached only to the reservation and not to the profile.
SECURED MODE [SECURED_MODE]	When enabled, each Web service function follows the OPERA Permissions attached to the User Credentials being passed.
SEND CONFIRMATION LETTER AT BOOKING [SEND_CONFIRMATION_LETTER_AT_BOOKING]	When enabled, this parameter sends a confirmation letter at booking.
SET RECORD LOCATOR CUSTOM REFERENCE [SET_RECORD_LOCATOR_CUSTOM_REFERENCE]	When enabled, indicates populated custom reference no for GDS and ADS with record locator which is confirmation no from GDS and ADS.
SET RECORD LOCATOR AS EXTERNAL REFERENCE [SET_REC_LOC_AS_EXTERNAL_REFERENCE]	Purpose of the parameter is to set GDS record locator or third party CRS no as external reference no.
SHOW TAX INFORMATION [SHOW_TAX_INFORMATION]	When enabled, inserts Tax information for Type A Reservations.
TRUNCATE TABLE OEDS_REQUEST_MONITOR [TRUNCATE_OEDS_REQUEST_MONITOR]	The table **OEDS_REQUEST_MONITOR** captures and stores WEB, GDS, and ADS message traffic to troubleshoot issues with certain message requests. When selecting **Y**, this table will be truncated on the last day of each month. When selecting **N** it will not be truncated. **Note** This parameter must only be used by OPERA support staff.
UPDATE CLIENT ID NEG RATE [UPDATE_CLIENT_ID_NEG_RATE]	When enabled, updates the client id on the channel negotiated rate, based on the value in the corporate id field. When = N, the client id will not update when the profile is changed.
USE ADS CONFIRMATION NO [USE_ADS_CONFIRMATION_NO]	When enabled, it indicates use ADS confirmation number followed by first four characters of channel name as ORS confirmation number.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-17 OPERA Controls — Channel Management Settings

SETTING	DESCRIPTION
ADS IATA [ADS_IATA]	This setting determines which IATA is attached to the ADS reservations. This must be a valid IATA number that is attached to the TA profile.
ADS MODE [ADS_MODE]	This setting determines the mode in which the OPERA ADS interface should accept incoming reservations. If 'HOUSE,' then availability will be pulled from House. If 'BLOCK,' then availability will be pulled from the Block. The **BLOCK_SEARCH** field should be selected on the Channel Setup as well. If **HOUSE, BLOCK**, then availability will be pulled from the House if the **BLOCK_SEARCH** field value is empty, and availability will be pulled from the Block if the **BLOCK_SEARCH** field value is not empty.
 ADS WAIT TIME [ADS_WAIT_TIME]	This setting determines the fail-over wait time in minutes for these Micros ADS services: ARI Resend, ARI Retry, Avh Bridge, Booking Limit, and Ping. When the last update time by the service plus this time has passed, another instance of the service is allowed to run.
AVH BATCH SIZE [AVH_BATCH_SIZE]	This setting determines number of AVH messages to consolidate at a time.
AVH PROCESSING LIMIT [AVH_PROCESSING_LIMIT]	This setting determines number of AVH messages to process at a time.
AIRPORT CODE [AIRPORT_CODE]	This setting determines airport code for the ORS City, Field can not be null.
 BUFFER GETS THRESHOLD [BUFFER_GETS_THRESHOLD]	When the Buffer gets for General Availability or Regional Availability or Calendar Availability request exceeds the Buffer get threshold value, and if the **ENABLE MONITORING AVAILABILITY AND CALENDAR REQUEST** OPERA Control is enabled, the request is logged in the **gds_audit_details** table.
 BUSINESS EVENT WAIT TIME [BUSINESS_EVENT_WAIT_TIME]	This setting determines the fail-over wait time in minutes for these business event services: GWIZ Business Event Processor, Gaming Business Event, HTNG Business Event, EAS Business Event, and EQC Business Event. When the last update time by the service plus this time has passed, another instance of the service is allowed to run.
 CPU TIME THRESHOLD [CPU_TIME_THRESHOLD]	This setting determines when CPU time used for General Availability or Regional Availability or Calendar Availability request exceeds the CPU Time threshold value and if **ENABLE MONITORING AVAILABILITY AND CALENDAR REQUEST** OPERA Control is enabled, request is logged in **gds_audit_details** table.
 CANCEL WINDOW [CANCEL_WINDOW]	Chain level global setting that specifies the number of minutes after booking when the reservation can be canceled without penalty.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-17 (Cont.) OPERA Controls — Channel Management Settings

SETTING	DESCRIPTION
CHANNEL CONSUMER NAME [CHANNEL_CONSUMER_NAME]	This setting is displayed when the Global parameter **MULTI CONSUMER SETUP** is enabled and allows the property to configure Channel Consumers for each resort. Based on this configuration, the GWIZ Business Event Service will utilize multiple threads to de-queue business events for each Channel Consumer. Also, Micros ADS Hurdle Processor service utilizes multiple threads to process hurdles for each Channel Consumer.
DEFAULT OWNER FOR WEB CLAIMS [DEFAULT_OWNER_FOR_WEB_CLAIMS]	This setting determines when a new claim is inserted from WEB, the owner of the claim will be this application user.
DEFAULT RESERVATION TYPE [ACTIVITY_DB_DEFAULT_RESV_TYPE]	This setting determines Default Reservation Type that is used for the reservations booked through dashboard.
FETCH RESERVATION [FETCH_RESERVATION]	This setting allows the OPERA Web Suite Engine to retrieve reservation for either all reservations ,regardless of entry point or for only created through OWS.
FOLIO EMAILING (1-8) [FOLIO_EMAILING]	This setting allows to create and email Folios for Guest Windows 1-8.
FOLIO GENERATION [FOLIO_GENERATION]	This setting allows to print Folios for Reservations.
GDS MAXAVAIL ALTERNATE RESORT [GDS_MAXAVAIL_ALTERNATE_RESORT]	This setting indicates the number of properties that can be returned as an alternate possibility when the requested property is not available.
GDS PURGE INTERVAL [GDS_PURGE_INTERVAL]	Purge old GDS data from temporary tables after processed.
GDS TRACE DEP CODE [GDS_TRACE_DEP_CODE]	Enter trace department for GDS Service information and Remark Texts.
GLOBAL ADS MODE [GLOBAL_ADS_MODE]	This setting determines in what mode the OPERA ADS interface should accept incoming reservations. If HOUSE, availability will be pulled from the house. If BLOCK, availability will be pulled from the Block. The **BLOCK_SEARCH** field should also be selected on the Channel Setup.
GUEST ADDRESS PHONE UPDATE [GUEST_ADDRESS_PHONE_UPDATE]	This setting determines if guest address-phone information is changed during modification of booking GDS system, insert new address-phone information, or update address-phone information, or do not modify address-phone information based on value.
GUESTCONNECTION WS EP [GUESTCONNECTION_WS_EP	This setting determines the web services endpoint for GuestConnection interface.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-17 (Cont.) OPERA Controls — Channel Management Settings

SETTING	DESCRIPTION
MAX ALLOWED EXTRA [MAX_ALLOWED_EXTRA]	This setting is used during the Pegasus Rate Update where the maximum allowed extra persons is sent to the GDS allowing them to control the number of extra persons that can be booked. This does not limit bookings for Next Gen Seamless customers who are not using the Rate Update Service.
MAX ALLOWED ROLLAWAY [MAX_ALLOWED_ROLLAWAY]	This setting is used during the Pegasus Rate Update where the maximum allowed quantity of rollaway's is sent to the GDS allowing them to control the quantity that can be booked. This does not limit bookings for Next Gen Seamless customers who are not using the Rate Update Service.
MAX RATE UPDATE [MAX_RATE_UPDATE]	This setting determines the number of Rate Update message processing limit.
MAX REGIONAL RATEDAYS [MAX_REGIONAL_RATE_DAYS]	This setting determines the price table for regional availability populated for given days.
MAXIMUM INVENTORY UPDATE MESSAGE LIMIT [MAX_INVENTORY_UPDATE_MESSAGE_LIMIT]	This setting determines the maximum number of inventory records that will be processed from **gds_inventory_update** table at a time.
MEMORY THRESHOLD [MEMORY_THRESHOLD]	When memory used for General Availability or Regional Availability or Calendar Availability request exceeds the CPU Time threshold value and if **ENABLE MONITORING AVAILABILITY AND CALENDAR REQUEST** OPERA Control is enabled, request is logged in **gds_audit_details** table.
OEDS REQUEST LOG [OEDS_REQUEST_LOG]	This setting is used to disable or enable OEDS performance logging by summary or by each request.
OWS BROCHURE EMAIL SUBJ [OWS_BROCHURE_EMAIL_SUBJ]	This setting will have email subject description for send brochure operation.
OWS CALENDAR AVAILABILITY CHANNEL RATE CODE [CALENDAR_RATE_CODE]	This setting determines the Channel Rate Code which is used to return availability on calendar webservice.
OWS CALENDAR MODE [OWS_CALENDAR_MODE]	This setting provides three modes for the fetch calendar functionality: • **NONE**: Retains the original calendar functionality without any modifications. • **LOWEST**: Returns a single rate with the lowest amount in the response. • **Rate Code**: Allows you to select a specific rate code to use for the calendar functionality.
OPENCOURSE INSTALLED APPS [OPENCOURSE_INSTALLED_APPS]	This setting determines the list of interfaced OpenCourse applications.
OPENCOURSE WS EP [OPENCOURSE_WS_EP]	This setting determines the web services endpoint for OpenCourse interface.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-17 (Cont.) OPERA Controls — Channel Management Settings

SETTING	DESCRIPTION
OPENCOURSE WS PASSWORD [OPENCOURSE_WS_PASSWORD]	This setting determines the password that will be used while calling OpenCourse web services interface.
OPENCOURSE WS USERNAME [OPENCOURSE_WS_USERNAME]	This setting determines the Username that will be used while calling OpenCourse web services interface.
PROFILE NAME CASE SET [PROFILE_NAME_CASE_SET]	This setting allows the profile name to appear in the letter case type the property wishes display on the profile screen.
PURGE ACTION [PURGE_ACTION]	This setting determines the action to apply for Session purge. This cannot be null.
RATE AND INVENTORY UPLOAD PROCESS GROUP NAME [RATE_UPLOAD_PROCESS_GROUP_NAME]	When this setting is enabled, it will allow rate or inventory upload groups to be configured for each resort. Based on the number of groups configured, 'GWIZ Rate Update Service'/'Micros ADS Booking Limit Service' will utilize multiple threads to process and upload rate or inventory messages.
RATE AVAIL UPDATE WAIT TIME [RATE_AVAIL_UPDATE_WAIT_TIME]	This setting determines the fail-over wait time in minutes for these services: GWIZ Rate Update Service, GWIZ (AVSTAT), and GWIZ Property Upload Service. When the last update time by the service plus this time has passed, another instance of the service is allowed to run.
RATE PLAN TEXT [RATE_PLAN_TEXT]	Description to use when updating the Rate Plan text.
RATE RANGE CURRENCY CODE [RATE_RANGE_CURRENCY_CODE]	**This setting allows a property to specify what currency to return to the GDS for Property and Area availability in case of multi-currency chains.**
RATE UPDATE [RATE_UPDATE]	This setting determines the GDS RateUpdate Method.
REGIONAL ROLLOVER DATE [REGIONAL_ROLLOVER_DATE]	This is the last rollover date used to populate gds_rateroom_price table. If the above date is less than the max future price synchronization date (property date plus MAX_REGIONAL_RATE_DAYS) data will be inserted in the table from this date to the max future price synchronization date.
REMOTE CHECKOUT FOLIO DELIVERY [REMOTE_CHECKOUT_FOLIO_DELIVERY]	This setting determines the ability to set the Remote Check Out Folio Delivery Method to Print, E-mail or both.
REPORT SCHEDULER SERVER NAME [REPORT_APPLICATION_SERVER_NAME]	This setting determines the name of the application server that is used for generating Reports, Faxes, E-Mails and Exports files directly from the database as well as generating XML files for Fiscal Printing.
SEARCH FOR MEMBERSHIP NO .[SEARCH_FOR_MEMBERSHIP_NO]	This setting allows the match of Profile based any one of the criteria selected in addition to the Profile membership number.
SWITCH PALSRP FORMAT [SWITCH_PALSRP_FORMAT]	This setting displays the Pegasus message in STRUCTURED or SEGMENTED format.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-17 (Cont.) OPERA Controls — Channel Management Settings

SETTING	DESCRIPTION
UTILITY WAIT TIME [UTILITY_WAIT_TIME]	This setting determines the fail-over wait time in minutes for service GWIZ Session Purge. When the last update time by the service plus this time has passed, another instance of the service is allowed to run.

OPERA Controls — Commissions

The following tables outline the parameters and settings that can be configured in the OPERA Controls Commissions group.

Table 11-18 OPERA Controls — Commissions Functions

Functions	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **COMMISSIONS HANDLING** [COMM_HANDLING]		Enables the ability to calculate, manage and remit reservation commission payments by check or EFT export to travel agents and booking sources.

Table 11-19 OPERA Controls — Commissions Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
AUTOMATIC CALCULATION OF VALUE ADDED TAX OVER THE COMMISSION PAID [CALC_VAT_ON_COMMISSIONS]		Automatically calculates the value added tax over the commission paid automatically.
POSITIVE PAY CHECK EXPORT [POSITIVE_PAY_CHECK_EXPORT]		Enables positive pay checks to be exported.
SEND ZERO COMMISSIONS RECORDS TO PAYMENT PROCESSING [ZERO_COMMISSION_YN]		Sends zero commissions records to payment processing. Upon processing of commissions, the zero commissions records are sent to payment history with Paid = On. If set to Off, the zero commission records are sent directly to payment history with Paid = Off.
STOP PROCESSING REASON CODES [ENTER_HOLD_REASON_CODES]		Enables the use of commission processing reasons for holding and detaching commissions.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-19 (Cont.) OPERA Controls — Commissions Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
TRANSFER NO SHOWS AND CANCELS [TRANS_COMM_NOSHOW_CANC]		Transfers no show and cancelled reservations to the commission module.
USE PRE-PRINTED CHECKS FOR COMMISSIONS [FIXED_PRE_PRINTED_CHECK_NUMBERS]		Enables the use of pre-printed checks for commissions. This internally voids a check/stub number if a check number was used due to another check exceeding one page.

Table 11-20 OPERA Controls — Commissions Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
COMMISSION CODES NOT TO PROCESS [NO_PROCESS_COMMISSION_CODES]		Specify the commission codes to not process for commission calculation.
DEFAULT COMMISSION [DEFAULT_COMMISSION]		Specify the default commission code used if the travel agent / source has no commission code associated defined.
DEFAULT REASON CODE [DEFAULT_REASON_CODE]		Select the default hold reason code.
DEFAULT TRANSACTION CODE FOR PREPAID COMMISSIONS [DEFAULT_PREPAID_COMM]		Select the default transaction code for prepaid commissions.
EXPORT TYPE [EFT_EXPORT_FORMAT]		Select an export format for commission bank accounts setup with EFT payment method. • **HCC** : EFT Export format for Pegasus • **WTP** : EFT Export format for World Travel Payment / TACS /GCMS • **EGS**: EFT Export format for Eruca Global Services • **NPC**: EFT Export format for National Processing Company • **INF**: EFT Export format for Infinium For more information, see About Commission EFT Export File Formats

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-20 (Cont.) OPERA Controls — Commissions Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	ADDRESS [EFT_EXPORT_ADDRESS]	Address of the clearinghouse.
	COMPANY [EFT_EXPORT_COMPANY]	Clearinghouse company name.
	DELIVERY METHOD [EFT_EXPORT_SFTP_SETUP]	Set the delivery method to be used for EFT Export.
	FAX [EFT_EXPORT_FAX]	Fax number of the clearinghouse.
	FILE NAME FORMAT [EFT_EXPORT_FILE_NAME_FORMAT]	Select the file name format to be used for EFT Export file. If OPP_NPC cloud service is activated, following are the values available for this settings. XF_PROPERTY (Default value) XF_PROPERTY_DDMMYYYY XF_PROPERTY_MMDDYYYY XF_PROPERTY_DDMMYYYYHH24MI XF_PROPERTY_MMDDYYYYHH24MI ** PROPERTY :- First 6 digits of the Property ID configured in EFT Exports settings of OPERA Controls*
	HOTEL NUMBER [EFT_EXPORT_PROPERTYID_NPC]	Property ID,maximum 10 characters
	PROPERTY NAME [EFT_EXPORT_PROPERTY_NAME]	Name of the property/chain.
	TAX IDENTIFIER [EFT_EXPORT_TAX_IDENTIFIER]	Select the Tax Type required.
	TELEPHONE [EFT_EXPORT_TELEPHONE]	Telephone number of the clearinghouse.
PROFILE UPDATE RESTRICTED COMMISSION PAYMENT TYPE [PROFILE_UPDATE_RESTRICTED_PAYMENT_TYPES]		Select the Commission Payment type(s) to be considered for the Profile Update Restriction. When a Payment Type is selected here, users cannot modify the name of a profile or remove the profile from a reservation, if that profile is linked with a Commission Bank Account using the selected Payment Type.
PROFILE UPDATE RESTRICTED RESERVATION STATUS [PROFILE_UPDATE_RESTRICTED_RESV_STATUS]		Select the Reservation Status(es) to be considered for the Profile Update Restriction.

Copyright © 2016, 2025, Oracle and/or its affiliates.

OPERA Controls — Comp Accounting

Gaming

Table 11-21 Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **AUTO SETTLE COMP FOLIO** [AUTO_SETTLE_COMP_FOLIO]		Allows for the Comp Folios to be auto settled during Check-Out. Comp Folios with an Authorizer that has an associated AR Account are settled to Direct Bill. Comp Folios with an Authorizer that does not have an associated AR Account are settled to the Transaction Code in the 'Default Comp Payment Method' setting. When the 'Default Comp Payment Method' setting is left blank, the Comp Folio will be presented for manual settlement.
Complimentary **COMP REQUEST** [COMP_REQUESTS]		Allows users who may not be comp authorizers, to create comp routing requests on reservations. The request can be declined or approved by an authorizer.
Complimentary **COMP TYPES** [COMP_TYPES]		Allows configuration and association of a comp type code with a guest profile and reservation that assists you to identify guests according to their gaming expertise.

Table 11-22 Parameters

PARAMETERS	RELATED PARAMETER/ SETTING	DESCRIPTION
AUTHORIZER PIN REQUIRED [AUTHORIZER_PIN_REQUIRED]		Ask for Authorizer PIN on manual comp transfer to comp windows and when setting up comp routing.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-22 (Cont.) Parameters

PARAMETERS	RELATED PARAMETER/ SETTING	DESCRIPTION
COMP ACCOUNTING INTEGRATION SERVICE [COMP_ACCOUNTING_INTEGRATION_SERVICE]		Enables integration with an external Patron Tracking System for purpose of manage Comp Accounting.
COMP POSTING MULTI RECORD PROCESSING [COMP_POSTING_MULTI_RECORD_PROCESSING]		When active, you are able to select multiple comp postings to be sent for approval to the Patron Track System (PTS) . When inactive, you can select one record at a time to be sent for approval to the PTS. Activation is based on the capabilities of the integrated PTS.
COMP REDEMPTION [BUCKET_REDEMPTION]		Enables Comp Redemption functionality to allow redemption of local currency amounts to reservations where the guest profile has a PTS (Patron Tracking System) membership. Properties interfaced with an external gaming system receive redemption amounts from the external vendor.
COMP TRANSACTION STATUS [COMP_TRANSACTION_STATUS]		Enables the ability to manually add and update the status of transactions in the Comp Posting Journal.
DEDUCT INCLUSIVE TAX FROM COMP WINDOW [DEDUCT_INCLUSIVE_TAX_FROM_COMP_WINDOW]		When parameter is active, the transaction(s) transferred to comp window do not include the associated inclusive tax(s). If the same transaction(s) is transferred back to guest billing window, the inclusive tax(s) is reposted. If the Comp transaction code has a generate associated, then this behavior will not take place.
GENERIC AUTHORIZERS [GENERIC_AUTHORIZERS]		Enables you to create Generic Authorizers without mapping to the OPERA Cloud user. **Generic Authorizers** and **Authorized PIN Required** OPERA Controls are mutually exclusive. You cannot inactivate the OPERA Control when Generic Authorizers are present.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-22 (Cont.) Parameters

PARAMETERS	RELATED PARAMETER/ SETTING	DESCRIPTION
GENERIC COMP MEMBERSHIP NUMBER [GENERIC_COMP_MEMBER_NO]	**DEFAULT MEMBERSHIP TYPE FOR PTS**	Allows the entry of a generic membership number for comp postings.
MULTIPLE PROMOTION CODE COMP ROUTINGS [MULTIPLE_PROMOTION_CODE_COMP_ROUTINGS]		Enables the ability to configure multiple comp routing instructions for a promotion code. (Available when the **Promotions Module** and **Routing** OPERA Controls are active)
INCLUDE EXCLUSIVE TAX IN THE COMP POSTING APPROVAL [COMP_APPROVALS_INCLUDE_GENERATES]		Enables you to include the Exclusive tax transactions in the Comp posting Approval.
PTS MEMBERSHIP TYPE BASED COMP ROUTING [COMP_ROUTING_PTS_MEMBERSHIP_TYPES_ONLY]		Allow setup of Comp Routings only on reservations that have a PTS (Patron Tracking System) membership type that matches the value in the 'Default PTS Membership Type' setting.
PLAYER STATISTICS [PLAYER_STATS]		Enables the Player statistics screen which provides an up-to-the-minute display of gaming information for a guest with a player ID.
RESTRICT NEW PROFILE [RESTRICT_NEW_PROFILE]		When enabled, you are restricted from amending the primary profile linked to the reservation when comp charges exist on any of the comp windows.

Table 11-23 Settings

SETTING	RELATED PARAMETER/ SETTING	DESCRIPTION
AUTHORIZER AR TYPE [AUTHORIZER_AR_TYPE]		AR Account Type for Authorizers.
DEFAULT COMP PAYMENT METHOD [AUTO_SETTLE_COMP_FOLIO_DEFAULT_PAYMENT_METHOD]		Defines the Payment Method that will be used to settle Comp Folios that are not associated to an Authorizer's AR Account.
DEFAULT PTS MEMBERSHIP TYPE [PTS_MEMBERSHIP_TYPE]		The Default Membership Type for Gaming (Patron tracking system) used for Gaming Functionalities.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-23 (Cont.) Settings

SETTING	RELATED PARAMETER/ SETTING	DESCRIPTION
PRINT COMP FOLIO [PRINT_COMP_FOLIO]		Controls the available print options when settling comp folios (101-108).
STAGED TRANSACTIONS DURING FOLIO GENERATION [STAGED_TRX_DURING_CHECK OUT]		Determines the handling of staged transactions on comp windows during check out and interim folio process.

OPERA Controls — Country Specific

The following tables outline the settings that can be configured in the OPERA Controls Country Specific group.

Table 11-24 OPERA Controls — Country Specific Parameters

PARAMETERS	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
AUTO POST STAMP DUTY [AUTO POST STAMP DUTY]		Upon entering billing Stamp Duty will be automatically posted if the threshold is exceeded. [Italy].
CITY TAX CALCULATED AFTER CI DATE [CITY TAX CALCULATED AFTER CI DATE]		If Set to Y, the City Tax will be calculated only for the date after Check In, otherwise it will return the value for all dates [Italy].
CITY TAX VARIANCE CALCULATION BASED ON NUMBER OF NIGHTS [CITY TAX VARIANCE CALCULATION BASED ON NUMBER OF NIGHTS]		If Set to Y, the City Tax will be applied using the Night-Based Variance Model. This model uses the values specified in settings CITY TAX VARIANCE AMOUNT and CITY TAX VARIANCE AFTER NIGHTS.
CITY TAX VARIANCE CALCULATION BASED ON RATE [CITY TAX VARIANCE CALCULATION BASED ON RATE]		If Set to Y, the City Tax will be applied using the Rate-Based Variance Model. This model uses the values specified in settings FIRST through FIFTH THRESHOLD AMOUNT FOR VARIANT CITY TAX.
CUSTOMER FAKTURA VAT [CUSTOMER_FAKTURA_VAT]		When active, you can generate Customer Faktura Vat folios against Rachunek folios from Folio History [Poland].
GENERATE AR OFFICIAL RECEIPT [GENERATE_AR_OFFICIAL_REC EIPT]		Ability to create an official receipt when a payment is applied to one or more AR Invoices [PHILIPPINES].

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-24 (Cont.) OPERA Controls — Country Specific Parameters

PARAMETERS	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
USE NET RATE FOR VARIANT CITY TAX [USE NET RATE FOR VARIANT CITY TAX]		If Set to Y, the City Tax will be applied the Rate-Based Variance Model, using the NET package rate (F&B included, VAT excluded), otherwise only the NET room rate will be considered [Italy].
USE FOLIO TYPE PREFIX AND SUFFIX IN THE PL_JPK_FA EXPORT [PREFIX_SUFFIX_PL_EXPORT]	**USE PREFIX FOR FOLIO TYPE** [FOLIO_TYPE_PREFIX] **USE SUFFIX FOR FOLIO TYPE** [FOLIO_TYPE_SUFFIX]	Activate to include the Folio Type Prefix and/or Folio Type Suffix values with the Folio Number in the PL_JPK_FA Export. [Poland].

Table 11-25 OPERA Controls — Country Specific Settings

SETTING	DESCRIPTION
BLACKLIST REPORT THRESHOLD [BLACK_LIST_THRESHOLD]	Only documents above this value will be included in the Blacklist Report Export [Italy]
BLACKLIST REPORT THRESHOLD EVALUATION MODE [BLACK_LIST_USENET]	If set to NET, the threshold will be applied to the net amount of the document, otherwise the gross amount will be used for the blacklist report export [Italy].
BLACKLIST REPORT THRESHOLD TYPE [BLACK_LIST_THRESHOLD_TYPE]	Specifies if the threshold value should be applied to all documents of the payee (C = Cumulative) or individual documents (D = Document) [Italy].
CITY TAX 2ND INCREMENT AMOUNT [CITY_TAX_2ND_INCREMENT_AMOUNT]	Value of the increment to apply if the rate amount is above parameter THRESHOLD AMOUNT FOR VARIANT CITY TAX 2 [Italy].
CITY TAX 3RD INCREMENT AMOUNT [CITY_TAX_3RD_INCREMENT_AMOUNT]	Value of the increment to apply if the rate amount is above parameter THRESHOLD AMOUNT FOR VARIANT CITY TAX 3 [Italy].
CITY TAX 4TH INCREMENT AMOUNT [CITY_TAX_4TH_INCREMENT_AMOUNT]	Value of the increment to apply if the rate amount is above parameter THRESHOLD AMOUNT FOR VARIANT CITY TAX 4 [Italy].
CITY TAX 5TH INCREMENT AMOUNT [CITY_TAX_5TH_INCREMENT_AMOUNT]	Value of the increment to apply if the rate amount is above parameter THRESHOLD AMOUNT FOR VARIANT CITY TAX 5 [Italy].
CITY TAX APPLICABLE ROOM NIGHTS [CITY_TAX_APPLICABLE_ROOM_NIGHTS]	Number of nights to be considered for City Tax calculation [Italy].

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-25 (Cont.) OPERA Controls — Country Specific Settings

SETTING	DESCRIPTION
CITY TAX BUCKET NUMBER [CITY_TAX_BUCKET_NUMBER]	Number of the tax column holding City Tax postings [Italy].
CITY TAX CALCULATION START DATE [CITY_TAX_CALCULATION_START_DATE]	Date from which the City Tax will be calculated (DD-MON-YYYY) [Italy].
CITY TAX CORRECTIONS TRANSACTION CODE [CITY_TAX_CORRECTIONS_TRANSACTION_CODE]	Transaction code to be used by operators when doing Correction/Rebate/Adjustment Postings for the City Tax [Italy].
CITY TAX EXEMPTION DESCRIPTION 1 [CITY_TAX_EXEMPTION_DESCRIPTION1]	Description of exemption nr. 1. Only used in Reports [Italy].
CITY TAX EXEMPTION DESCRIPTION 10 [CITY_TAX_EXEMPTION_DESCRIPTION10]	Description of exemption nr. 10. Only used in Reports [Italy].
CITY TAX EXEMPTION DESCRIPTION 2 [CITY_TAX_EXEMPTION_DESCRIPTION2]	Description of exemption nr. 2. Only used in Reports [Italy].
CITY TAX EXEMPTION DESCRIPTION 3 [CITY_TAX_EXEMPTION_DESCRIPTION3]	Description of exemption nr. 3. Only used in Reports [Italy].
CITY TAX EXEMPTION DESCRIPTION 4 [CITY_TAX_EXEMPTION_DESCRIPTION4]	Description of exemption nr. 4. Only used in Reports [Italy].
CITY TAX EXEMPTION DESCRIPTION 5 [CITY_TAX_EXEMPTION_DESCRIPTION5]	Description of exemption nr. 5. Only used in Reports [Italy].
CITY TAX EXEMPTION DESCRIPTION 6 [CITY_TAX_EXEMPTION_DESCRIPTION6]	Description of exemption nr. 6. Only used in Reports [Italy].
CITY TAX EXEMPTION DESCRIPTION 7 [CITY_TAX_EXEMPTION_DESCRIPTION7]	Description of exemption nr. 7. Only used in Reports [Italy].
CITY TAX EXEMPTION DESCRIPTION 8 [CITY_TAX_EXEMPTION_DESCRIPTION8]	Description of exemption nr. 8. Only used in Reports [Italy].

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-25 (Cont.) OPERA Controls — Country Specific Settings

SETTING	DESCRIPTION
CITY TAX EXEMPTION DESCRIPTION 9 [CITY_TAX_EXEMPTION_DESCRIPTION9]	Description of exemption nr. 9. Only used in Reports [Italy].
CITY TAX EXEMPTION PERCENTAGE 1 [CITY_TAX_EXEMPTION_PERCENTAGE1]	Percentage of exemption for exemption nr. 1. Defines the percentage applicable to exemption 1: 100 means full exemption, 0 means no exemption, Negative values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION PERCENTAGE 10 [CITY_TAX_EXEMPTION_PERCENTAGE10]	Percentage of exemption for exemption nr. 10. Defines the percentage applicable to exemption 10: 100 means full exemption, 0 means no exemption, NEGATIVE values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION PERCENTAGE 2 [CITY_TAX_EXEMPTION_PERCENTAGE2]	Percentage of exemption for exemption nr. 2. Defines the percentage applicable to exemption 2: 100 means full exemption, 0 means no exemption, NEGATIVE values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION PERCENTAGE 3 [CITY_TAX_EXEMPTION_PERCENTAGE3]	Percentage of exemption for exemption nr. 3. Defines the percentage applicable to exemption 3: 100 means full exemption, 0 means no exemption, Negative values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION PERCENTAGE 4 [CITY_TAX_EXEMPTION_PERCENTAGE4]	Percentage of exemption for exemption nr. 4. Defines the percentage applicable to exemption 4: 100 means full exemption, 0 means no exemption, Negative values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION PERCENTAGE 5 [CITY_TAX_EXEMPTION_PERCENTAGE5]	Percentage of exemption for exemption nr. 5. Defines the percentage applicable to exemption 5: 100 means full exemption, 0 means no exemption, Negative values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION PERCENTAGE 6 [CITY_TAX_EXEMPTION_PERCENTAGE6]	Percentage of exemption for exemption nr. 6. Defines the percentage applicable to exemption 6: 100 means full exemption, 0 means no exemption, Negative values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION PERCENTAGE 7 [CITY_TAX_EXEMPTION_PERCENTAGE7]	Percentage of exemption for exemption nr. 7. Defines the percentage applicable to exemption 7: 100 means full exemption, 0 means no exemption, Negative values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION PERCENTAGE 8 [CITY_TAX_EXEMPTION_PERCENTAGE8]	Percentage of exemption for exemption nr. 8. Defines the percentage applicable to exemption 8: 100 means full exemption, 0 means no exemption, Negative values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION PERCENTAGE 9 [CITY_TAX_EXEMPTION_PERCENTAGE9]	Percentage of exemption for exemption nr. 9. Defines the percentage applicable to exemption 9: 100 means full exemption, 0 means no exemption, Negative values are interpreted as absolute, instead of percentages [Italy].
CITY TAX EXEMPTION UDF 1 [CITY_TAX_EXEMPTION_UDF1]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 1 is stored [Italy].

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-25 (Cont.) OPERA Controls — Country Specific Settings

SETTING	DESCRIPTION
CITY TAX EXEMPTION UDF 10 [CITY_TAX_EXEMPTION_UDF10]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 10 is stored [Italy].
CITY TAX EXEMPTION UDF 2 [CITY_TAX_EXEMPTION_UDF2]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 2 is stored [Italy.
CITY TAX EXEMPTION UDF 3 [CITY_TAX_EXEMPTION_UDF3]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 3 is stored [Italy].
CITY TAX EXEMPTION UDF 4 [CITY_TAX_EXEMPTION_UDF4]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 4 is stored [Italy].
CITY TAX EXEMPTION UDF 5 [CITY_TAX_EXEMPTION_UDF5]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 5 is stored [Italy].
CITY TAX EXEMPTION UDF 6 [CITY_TAX_EXEMPTION_UDF6]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 6 is stored [Italy].
CITY TAX EXEMPTION UDF 7 [CITY_TAX_EXEMPTION_UDF7]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 7 is stored [Italy].
CITY TAX EXEMPTION UDF 8 [CITY_TAX_EXEMPTION_UDF8]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 8 is stored [Italy].
CITY TAX EXEMPTION UDF 9 [CITY_TAX_EXEMPTION_UDF9]	Ordinal number of the UDFN field where the number of persons to be exempted due to reason 9 is stored [Italy].
CITY TAX INCREMENT AMOUNT 1 [CITY_TAX_1ST_INCREMENT_A MOUNT]	Value of the increment to apply if the rate amount is above parameter THRESHOLD AMOUNT FOR VARIANT CITY TAX 1 [Italy].
CITY TAX POSTINGS TRANSACTION CODE [CITY_TAX_POSTINGS_TRANSA CTION_CODE]	Transaction code used to perform Postings for the City Tax [Italy].
CITY TAX PRICE PER PERSON CALCULATION [CITY_TAX_PRICE_PER_PERSON _CALCULATION]	Price to be applied to each person eligible for City Tax calculation [Italy].
CITY TAX THRESHOLD AMOUNT FOR VARIANT 1 [FIRST_THRESHOLD_AMOUNT_ FOR_VARIANT_CITY_TAX]	If the rate amount is below this threshold, the value specified by parameter CITY TAX INCREMENT AMOUNT 1 will be added to the city tax amount [Italy].
CITY TAX THRESHOLD AMOUNT FOR VARIANT 2 [SECOND_THRESHOLD_AMOU NT_FOR_VARIANT_CITY_TAX]	If the rate amount is below this threshold, the value specified by parameter CITY TAX INCREMENT AMOUNT 2 will be added to the city tax amount [Italy].
CITY TAX THRESHOLD AMOUNT FOR VARIANT 3 [THIRD_THRESHOLD_AMOUNT _FOR_VARIANT_CITY_TAX]	If the rate amount is below this threshold, the value specified by parameter CITY TAX INCREMENT AMOUNT 3 will be added to the city tax amount [Italy].

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-25 (Cont.) OPERA Controls — Country Specific Settings

SETTING	DESCRIPTION
CITY TAX THRESHOLD AMOUNT FOR VARIANT 4 [FOURTH_THRESHOLD_AMOUNT_FOR_VARIANT_CITY_TAX]	If the rate amount is below this threshold, the value specified by parameter CITY TAX INCREMENT AMOUNT 4 will be added to the city tax amount [Italy].
CITY TAX THRESHOLD AMOUNT FOR VARIANT 5 [FIFTH_THRESHOLD_AMOUNT_FOR_VARIANT_CITY_TAX]	If the rate amount is below this threshold, the value specified by parameter CITY TAX INCREMENT AMOUNT 5 will be added to the city tax amount [Italy].
CITY TAX VARIANCE AFTER NIGHTS [CITY_TAX_VARIANCE_AFTER_NIGHTS]	Number of nights after which the City Tax amount will be varied based on the setting CITY TAX VARIANCE VALUE [Italy].
CITY TAX VARIANCE AMOUNT [CITY_TAX_VARIANCE AMOUNT]	Amount used to change City Tax after the number of nights specified in setting CITY TAX TO VARY AFTER NIGHTS [Italy]
COUNTRIES FOR BLACKLIST REPORT [BLACK_LIST_COUNTRIES]	Comma separated list of countries to be included in the Blacklist report (it_fiscal_blist) [Italy]
EUROPEAN UNION COUNTRIES [EUROPEAN_UNION_COUNTRIES]	Comma separated list of countries referenced by the Italy E-Invoice Exports (IT_E-INVOICE,IT_E-INVOICE_DAY) and Italy E-Invoice Wrapper Exports (IT_E-INVOICE_W,IT_E-INVOICE_W_DAY) [Italy], and referenced by the Polish Export (PL_JPK_FA) [Poland].
STAMP DUTY TRANSACTION CODE [STAMP_DUTY_TRANSACTION_CODE]	The transaction code that will be used for posting Stamp Duty tax.
STAMP DUTY THRESHOLD [STAMP_DUTY_THRESHOLD]	When the gross amount of exempt transactions exceeds this threshold the stamp duty tax will be automatically posted.
STAMP DUTY VALUE [STAMP_DUTY_VALUE]	The amount of tax that will be posted once the Stamp Duty threshold is exceeded.

OPERA Controls — Credit Card

The following tables outline the parameters and settings that can be configured in the OPERA Controls Credit Card group.

Table 11-26 OPERA Controls — Credit Card Functions

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-26 (Cont.) OPERA Controls — Credit Card Functions

Complimentary **CHIP AND PIN** [CHIP_AND_PIN]		Activates the Chip and PIN functionality. **Note** Either the Online Settlement parameter must be On or the Authorization Settlement at Checkout setting must be configured. The Batch Settlement parameter cannot be On.
	CHIP AND PIN PAYMENT METHOD [CHIP_AND_PIN_PAY_LOV]	Specifies the credit card types that should exhibit Chip and PIN functionality when using a Chip and PIN enabled terminal.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-26 (Cont.) OPERA Controls — Credit Card Functions

PAY BY LINK [PAY_BY_LINK_YN]	Enables the Pay By link feature to generate a credit card payment link email.

Table 11-27 OPERA Controls — Credit Card Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ADVANCED AUTHORIZATION RULES [ADVANCED_AUTHORIZATION_RULES]		Enables the Automatic Credit Card Authorization Scheduling functionality.
AUTOMATIC AUTHORIZATION [AUTO_AUTH_ACTIVE_YN]		Turns on the Automatic Credit Card Authorization Scheduling functionality. The **Automatic Authorization Interval Time** setting and the **Automatic Authorization Failure No Post Flag** and **Exclude No Post Reservations From Automatic Authorization** parameters are visible when the Automatic Authorization parameter is On and a credit card interface is configured in the property.
	AUTOMATIC AUTHORIZATION INTERVAL TIME [AUTO_AUTH_INTERVAL]	Specifies the interval in minutes after completion of an automatic credit card authorization and the start of the next instance. Minimum of 60 minutes.
	USE FOLIO BALANCE FOR AUTOMATIC CREDIT CARD AUTHORIZATION [USE_FOLIO_BALANCE_FOR AUTOMATIC_CREDIT_CARD AUTHORIZATION]	Automatic Credit Card Authorization will process the full folio balance authorization only if the balance of the folio exceeds already authorized amount.
	AUTOMATIC AUTHORIZATION FAILURE NO POST FLAG [AUTOMATIC_AUTH_FAILURE_NO_POST_FLAG]	When active, the reservation **No Post** checkbox is automatically selected when the credit card authorization fails.
	EXCLUDE NO POST RESERVATIONS FROM AUTOMATIC AUTHORIZATION [EXCLUDE_NO_POST_RESERVATIONS_FROM_AUTOMATIC_CC_AUTH]	When active, reservations with the **No Post** check box selected are not included in any automatic processes for Credit Card Authorizations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-27 (Cont.) OPERA Controls — Credit Card Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	AUTOMATIC AUTHORIZATION UNCHECK NO POST [AUTOMATIC_AUTH_UNCHECK_NO_POST_FLAG]	For reservations with the **No Post** check box selected, if a successful automatic Credit Card Authorization is obtained then uncheck the **No Post** check box.
	EXCLUDE RESERVATIONS FROM AUTOMATIC AUTHORIZATION [EXCLUDE_NO_POST_RESERVATIONS_FROM_AUTOMATIC_CC_AUTH]	Enables the ability to exclude reservations from the automatic credit card authorization process.
BATCH SETTLEMENT [CC_BATCH_SETTLEMENT]		Activates Batch Settlements functionality for supported systems, where payments/ settlements posted in OPERA Cloud are kept for later processing in batch as part of the end-of-day routine or manually initiated . This parameter and Online Settlement parameter are mutually exclusive.
CREDIT CARD TYPE CHECK/USAGES [CC_USAGE_CHOICES]		Enables a cross check between the credit card type and usages for that card type. This is used for any credit card types where a separate transaction code is applied to each specific usage of the card.
	BLACKLIST CARD CHECK [BONUS_CHECK_VALIDATION]	Flag to specify if the system should perform Bonus Check Validations.
CREDIT LIMIT OVERAGE PAYMENTS [CREDIT_LIMIT_OVERAGE_PAYMENTS]		Enables the processing of automatic payments for the total balance of a folio when the balance is equal or higher than the credit limit set for that credit card payment method. Automatic Credit Limit Overage payments are processed based on the Credit Limit Overage Payments Interval Time setting. Provides additional controls to automatically make credit card payments in folios when the credit limit is equal or exceeds, as well allows users to access the Credit Limit Overages screen and process payments on demand. Note: the Online Settlement parameter must be On for the property.
	DEFAULT CREDIT LIMIT OVERAGE PAYMENTS AUTO PAY [DEFAULT_OVERAGE_PAYMENTS_AUTO_PAY]	When this parameter is On, the Credit Limit Auto Pay check box on new reservations is selected by default.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-27 (Cont.) OPERA Controls — Credit Card Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	CREDIT LIMIT OVERAGE PAYMENT FAILURE NO POST FLAG [OVERAGE_PAYMENT_FAILURE_NO_POST_FLAG]	When this parameter is On, the No Post check box is automatically selected when a Credit Limit Overage payment fails in a reservation. When the Credit Limit Overage Payment Failure No Post Flag parameter is Off, a reservation that has failed to apply a payment to any folio window during the Credit Limit Overage process, the No Post check box for that reservation will remain unchanged from its current status. When the Credit Limit Overage Payment Failure No Post Flag parameter is On, a reservation that has failed to apply a payment to any folio window during the Credit Limit Overage process, the “No Post” check box for that reservation will be selected setting it to No Post.
	EXCLUDE NO POST RESERVATIONS FOR CREDIT LIMIT OVERAGE PAYMENTS PARAMETER [EXCLUDE_NO_POST_RESERVATIONS_FOR_OVERAGE_PAYMENTS]	When this parameter is On, reservations is indicated as No Post are not processed in Credit Limit Overages. When the Exclude No Post Reservations For Credit Limit Overage Payments parameter is Off, reservations that have been indicated as No Post are included in the Credit Limit Overage process. When the Exclude No Post Reservations For Credit Limit Overage Payments parameter is On, reservations that have been indicated as No Post are excluded from the Credit Limit Overage process.
	CREDIT LIMIT OVERAGE PAYMENTS INTERVAL TIME [OVERAGE_PAYMENTS_INTERVAL_TIME]	Specifies the interval in minutes after completion of an automatic Credit Limit Overage processing of Payments and the start of the next instance. The minimum value is 30 minutes. When set to 0 minutes, the automatic Credit Limit Overage processing of payments will not be executed. When a time interval is set in the Credit Limit Overage Payments Interval Time setting, the Automatic Credit Limit Overage process will start on the set interval of time after a previous instance of the process has been completed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-27 (Cont.) OPERA Controls — Credit Card Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	CREDIT LIMIT OVERAGE PAYMENT METHODS [CREDIT_LIMIT_OVERAGE_PAYMENT_METHODS]	Set the Credit Card Payment Methods to qualify for automatic Credit Limit Overage processing of payments. The processing of automatic payments cannot begin unless at least one credit card payment method is selected for the Credit Limit Overage Payment Methods setting. Only cards of the selected payment method are processed.
CUSTOM TOKEN PROVIDER [CUSTOM_TOKEN_PROVIDER_YN]		Activates when integrated with a Custom Token Provider that provides a token for exchanging credit card numbers in non-vaulted properties.
MANUAL AUTHORIZATION NOTIFICATION [MANUAL_AUTH]		Delivers an authorization message to the credit card processing vendor when a manual credit card authorization code is obtained and entered in the reservation. This is available if the credit card interface uses web-enabled transaction processing via VPN or secure HTTP.
OPI CLOUD CREDIT CARD PROCESSING [OPI_CLOUD_CREDIT_CARD_PROCESSING]		Activates OPI credit card delivery, and disables IFC Controller for credit card processing.
	EXTERNALLY PROCESSED CREDIT CARD PAYMENTS [EXT_PROCESSED_CC_PAYMENTS]	OPERA Cloud stores details for Credit Card payments processed externally through OPI Cloud. When this control is active, and the external system sends a Deposit payment API request with the vendorTranId, approvalCode, and citId values, the OPERA Cloud application skips the payment call to OPI and records the deposit payment details.
OPI CLOUD TOKEN PROXY SERVICE [OPI_TOKEN_PROXY_SERVICE]		Enables Token Proxy Service configuration on the OPI tenant portal and supports the token exchange process through the OPI Cloud interface. This feature is applicable only for the Reservation Sales Screen (OPERA Cloud Central Management Services), OPERA Distribution Channel Cloud Services and the Oracle Hospitality Integration Platform. **OPI Token Proxy Service** OPERA Control and **OPI Cloud Credit Card Processing** OPERA Controls are mutually exclusive.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-27 (Cont.) OPERA Controls — Credit Card Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ONLINE SETTLEMENT [CC_ONLINE_SETTLEMENT]		Activates Online Settlements functionality for supported systems, to allow sending to the bank payments/settlements upon processing in OPERA Cloud, This parameter and Batch Settlement parameter are mutually exclusive.
	TEMPORARILY STORE OFFLINE SETTLEMENTS [CC_OFFLINE_SETTLEMENT]	Stores failed online settlements (due to the credit card interface not running) and processes them offline at the end of the day.
PAYMENT SERVICES DIRECTIVE [PAYMENT_SERVICES_DIRECTIVE]		Enables Payment Services Directive (PSD2) specifications for processing of credit card payments and settlements when an EFT interface is configured at the property. A Card Present checkbox is displayed in the following screens: • Look to Book Sales • Deposit Payment • Check-In Verify Payment • Payment Instructions • Authorization and History • Billing Payment • House Posting Account • Post It Payment • Passer By Payment • Accounts Receivable Payment • By default, the **Card Present** check box is unchecked. It remains unchecked if the credit card is manually entered and is automatically checked if the credit card is not manually input or received through an interface. The CIT (Customer Initiated Transaction) value is available in the Viewing Changes Log Details. (Not available when the **Credit Card Wallet** OPERA Control is active).
PRE-AUTHORIZE CREDIT CARDS PRIOR TO CHECK IN [CC_PRE_CHECK_IN_AUTHORIZATION]		Enables the ability to pre-authorize credit cards for reservations up to 10-days prior to arrival; using the authorization rule selected in the reservation.
PROMPT FOR TERMINAL [PROMPT_FOR_TERMINAL]		Allows a terminal to be selected for credit card transactions.
SEND TOTAL TAX IN SETTLEMENTS [SEND_TOTAL_TAX]		Specifies if the system is required to send Total Tax amounts in settlement requests to the interface.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-28 OPERA Controls — Credit Card Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
AUTHORIZATION REVERSAL ALLOWED [AUTH_REVERSAL_ALLOWED_LOV]		Specifies the credit card types that have authorization reversal permitted by the credit card vendor. Existing authorizations for selected credit card types are reversed if a different credit card or method of payment is used at check out.
AUTHORIZATION AT CHECK IN [AUTH_AT_CHECKIN_LOV]		Specifies the credit card types that require an automatic authorization at check in.
AUTHORIZATION DURING STAY/DEPOSIT [AUTH_DURING_STAY_LOV]		Specifies the credit card types that permit manual and automatic authorization checks for deposits, and following check in and prior to check out and settlement. This setting must be enabled to permit authorizations by the End of Day routine.
	NIGHT AUDIT REMOTE AUTHORIZATION [NIGHT_AUDIT_REMOTE_AUTH]	Enables End of Day remote authorization, where available.
AUTHORIZATION SETTLEMENT AT CHECK OUT [AUTH_STLMT_AT_CHECK_OUT_LOV]		Specifies the credit card types for authorization and settlement during check out.
DAYS TO PURGE CREDIT CARD AUTHORIZATION LOG [PURGE_CC_AUTH_LOG_DAYS]		Specifies the number of days when the credit card authorization log is removed. Valid values: • Any number of days can be entered. If left blank, then the purge occurs every 30 days.
DAYS TO PURGE CREDIT CARDS [DAYS_TO_PURGE_CREDIT_CARDS]		Global setting that specifies the number of days when the credit card information is removed when no transactions or reservations are active.
DEPOSIT ADDRESS VERIFICATION [ADDRESS_VERIFICATION_LOV]		Specifies the credit card types that require the billing address during payment.
DEPOSIT CVV2 CHECK [CVV2_CHECK_LOV]		Specifies the credit card types for which the Credit Card Security Code (CVV2) is required when making a payment.
HOTEL ID [CC_HOTEL_ID]		Specifies the hotel ID.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-28 (Cont.) OPERA Controls — Credit Card Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
SETTLEMENT AUTHORIZATION CODE [SETTLEMENT_AUTHORIZATION_CODE]		Specifies the authorization code used at settlement if multiple authorization codes exist.

OPERA Controls — End of Day

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls End of Day group.

Table 11-29 OPERA Controls — End of Day Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **AUTOMATIC END OF DAY** [SCHEDULED_EOD]		Enables the ability to schedule the automatic execution of End of Day at a specified start time.
	AUTOMATIC END OF DAY EMAIL [SCHEDULED_EOD_EMAIL]	Specify the email addresses to receive the automatic end of day status emails. Multiple email addresses can be entered with comma separator.
	AUTOMATIC END OF DAY EMAIL LANGUAGE [SCHEDULED_EOD_EMAIL_LANG]	Email sent during Automatic End of Day is translated to the selected language.
INCOME AUDIT [INCOME_AUDIT]		Enables Income Audit functionality - enabling you to advance the business date during end of day, but not close the business date. Final reports and procedures are not run when business date is not closed. You can perform audit tasks on the open business date during regular business hours and then close the business date once final revenue adjustments are made. Income audit allows for five business dates to remain open. Final reports are generated once business date is closed. For more information, see Income Audit.
	INCOME AUDIT CASHIER SETTING [INCOME_AUDIT_CASHIER_ID]	Specifies the cashier ID for income audit postings. This setting is only available when the **Income Audit** OPERA Control is active.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-30 OPERA Controls — End of Day Parameters

PARAMETER	DESCRIPTION
ARRIVALS WITH DEPOSIT BALANCE [ARRIVALS WITH DEPOSIT BALANCE CHECK]	Activates an additional check for arrivals with a deposit balance is added to the End of Day procedures. During this check, the End of Day processing will halt if there are any arrival reservation identified and cannot be continued until all of these reservations are checked in or their deposit balance is zero (refunded or retained). This parameter is available when the Deposit Handling OPERA Control is active.
AUDIT [AUDIT]	Forces the validation of transaction code totals during the night audit.
AUTO ASSIGN CHECK NUMBER [AUTO_CHKNO]	Assigns an internal check number to accommodation and generated tax charges, as well as fixed charges. This is useful when the **Rollup Transactions** (by check number) OPERA Control is active. For more information, see OPERA Controls — Cashiering.
AUTO CLOSE CASHIERS [AUTO_CLOSE_CASHIERS]	Closes all cashiers automatically that have not been closed.
AUTO CONTINUE [AUTO_CONTINUE]	Continues the night audit automatically without asking the user to continue after every process.
AUTO NO SHOW ARRIVALS [AUTO_NOSHOW_ARRIVALS]	Updates due in reservations to no show status.
MULTIPLE END OF DAYS [MULTIPLE_END_OF_DAYS]	Enables the ability to run the End of Day multiple times using the Manage Business Date utility. For more information, see Managing Business Date.
EXCLUDE CHECKED-IN RESERVATION FROM STAY PROJECTIONS [EXCL_CI_RES_STAY]	When active, checked in reservations are not considered for stay projections. (Available when the **External Loyalty Program** OPERA Control is active).
MULTIPLE END OF DAYS [MULTIPLE_END_OF_DAYS]	Enables the user to automatically run the End of Day multiple times.
STATE CHECK [STATE_CHECK]	Warns users and provides a way to update the state of a reservation's profile while running the End of Day.
WEATHER OR NOTES [WEATHER_NOTES]	Warns users and provides a way to add weather or notes.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-31 OPERA Controls — End of Day Settings

SETTING		DESCRIPTION
AUTO UPDATE BUSINESS DATE MINUTES [AUTO_ROLL_DATE_MINUTES]		Minutes to wait before OPERA Cloud updates the Business Date.
COUNTRY CHECK [COUNTRY_CHECK]		Warns users and provides a way to update the country of a reservation's profile while running the End of Day. Valid values: • CHECK IN / END OF DAY • END OF DAY • NO COUNTRY CHECK
END OF DAY EMAIL ADDRESS [EOD_EMAIL_ADDRESS]		Specifies the recipient email address for EOD reports configured to be delivered by emailed; as well for delivery the of the EOD completion email. Enter multiple email addresses using a comma to separate addresses.
MAXIMUM NUMBER OF OPEN BUSINESS DATES [MAXIMUM NUMBER OF OPEN BUSINESS DATES]		Specifies the number of business dates that can remain open without completing the Print Final Reports process of End of Day. Valid values: • 1-365
NIGHT AUDIT CASHIER [NIGHT_AUDIT_CASHIER_ID]		Specifies the cashier ID for End of Day postings.
ROLLING NO SHOW [OWNER_NOSHOW]		Reservations with reservation type selected in the parameter will not be automatically no showed during End of Day. Instead the arrival date will be extended to the next day.
	ROLLING NO SHOW PREFERENCE [ROLLING_NOSHOW_PREFERENCE]	Determines whether the arrival date will be automatically rolled until the departure day (default) or the last night of the reservation.

OPERA Controls — Events

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-32 OPERA Controls — Events Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Premium Complimentary **ALTERNATE SPACE** [ALTERNATE_SPACE]		When enabled, a function space can be configured to require an alternate space as a back-up, whenever the function space is selected for an Event. A typical use case for this functionality is for outside function space that requires a back-up in the event of inclement weather. When the space requiring an alternate space is selected for an event, you are prompted and required to select an additional space(s). When an alternate space(s) is assigned, an additional event(s) is automatically created to reserve the alternate space(s) for the same date and times as the original event.
Premium Complimentary **BATCH UPDATE EVENT RESOURCES** [BATCH_UPDATE_EVENT_RESOURCES]		Enables the ability to add resources to multiple events within the same block and to edit or delete common resources for multiple events within the same block.
	UPDATE ALTERNATE MASTER EVENT STATUS [ACTUALIZE_ALTERNATE_MASTER]	When active, the status for the primary event will be changed to Actual when the process to update event status is activated via the Scheduled Time to Update Event Status to Actual setting. This will release the Alternate Space being held as a backup.
	ALTERNATE SPACE EVENT NAME SETTING [ALTERNATE_SPACE_EVENT_NAME]	Default name for an event in an Alternate Space.
Complimentary **CATERING PACKAGES** [EVENT_PACKAGES]		Activate Catering Packages Functionality. **Note** Adding this complimentary feature will not affect the subscription-based function count.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-32 (Cont.) OPERA Controls — Events Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	COMBINE PACKAGE EVENTS IN BEO [COMBINE_PACKAGE_EVENTS_IN_BEO]	When active, a Print Package Events Combined check box is enabled in BEO report parameters. When the check box is selected the attendee count for package events with the same Block ID, Event Name, Event Type, Event Dates, Event Status, Event Times and Function Space are summed to output a total number of attendees.
	EXCLUDE SPACE FROM PACKAGE [EXCLUDE_SPACE_FROM_EVENT_PACKAGES]	When active, the checkbox for Include Space in Package will be unchecked by default allowing the space to be charged separately from the package price.
Complimentary **CATERING EVENTS** [CATERING_EVENTS]		Enables the ability to schedule an event and block a function space for a specific date and time. Events can be reserved in non-deduct or deduct status. (Enabled on activation of OPERA Cloud Sales & Event Management Essentials, Standard or Premium subscription).
Complimentary **EVENT POSTING** EVENT_POSTING]		Enables the ability to post the actual charges for an event directly to the posting master account for the related block.
	DEFAULT CATERING FOLIO STYLE [DEFAULT_CATERING_FOLIO_STYLE]	The Folio Style is automatically used when generating a Folio for Catering.
	UPDATE CHECK NUMBER WITH EVENT ID [UPDATE_CHECK_NUMBER_WITH_EVENT_ID]	Populate the Check Number field with the Event ID in Event Posting.
Complimentary **EVENT RESOURCES** [EVENT_RESOURCES]		Enables the ability configure menus and inventory items and attach them to catering events. These event resources are used to build the details of the event and produce the Banquet Event Order. (Enabled on activation of OPERA Cloud Sales & Event Management Essentials, Standard or Premium subscription).
	EVENT REVENUE ACTUALIZATION [EVENT_EDIT_ACTUALS]	Setting determines whether catering revenue is tracked at the event or resource level.
	Premium **CUSTOM RESOURCES** [CUSTOM_RESOURCES]	Provides the ability to create custom menu items and items from the Manage Resource screen.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-32 (Cont.) OPERA Controls — Events Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	Premium **QUICK INSERT** [QUICK_INSERT]	Enables the ability to add Menus and Items via a configured code.
	Premium **RESOURCE DISCOUNT** [RESOURCE_DISCOUNT]	When active, from the block a discount percentage can be applied to all menus and any items marked as discountable.
Complimentary **EVENT TEMPLATES** [EVENT_TEMPLATES]		Enables the ability to create a collection of events and their associated menus, inventory items, and function space. These events are configured together to allow for quickly adding them to a block in one action. Once added to a block, they function as independent events with their own individual pricing.
Complimentary **EVENT WAITLIST** [EVENT_WAITLIST]		Enables the ability to reserve function space already reserved for another block in a deduct from inventory status. These events are put on a waitlist in the order they have been created, but that order can be manually updated. If the function space becomes available, the waitlisted event with the first priority will automatically come off the waitlist and be moved to a deduct from inventory status.
	WAITLIST ACTIVITY TYPE [WAITLIST_ACTIVITY_TYPE]	This activity type is used to notify a user that an event, which was waitlisted, has been assigned to a function space.
Complimentary **FORECAST EVENT REVENUE** [FORECAST_EVENT_REVENUE]		Enables you to configure default revenue forecasts by date and revenue types.
	Premium **ADVANCED EVENT FORECAST HANDLING** [ENHANCED_EVENT_FORECAST_HANDLING]	When enabled, the revenue forecast can also include Market Code. If the control for Booking Type is active, Booking Type will also be available.
	CONSUMPTION MENU FORECASTING [CONSUMPTION_MENU_FORECASTING]	Allows for a Menu Price to be added to a Consumption Menu in Menu Configuration and when editing a Menu that has been attached to an Event.
	COPY FORECAST FIGURES [COPY_FORECAST_FIGURES]	Copy Event Forecast Figures when copying an Event.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-32 (Cont.) OPERA Controls — Events Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	USE FORECAST REVENUE [USE_FORECAST_VALUE_ONLY]	The On the Books Revenue calculation will use the forecasted revenue until "Use Forecast Revenue" checkbox is unchecked.
Premium Complimentary **GUEST ROOM AS MEETING ROOM** [GUESTROOM_AS_MEETINGROOM]		When active, catering events can be booked in guest rooms that are configured for events. The Meeting checkbox will be available for room types configured as physical rooms, allowing a property to identify the room types that can be utilized for catering events. In Room configuration, when the room is associated to a Room Type marked for meetings, a new checkbox for Events will be available for selection. When this checkbox is selected, the user will be able to configure the room to be used for events by adding setup styles, rental codes, and additional information. When an event is booked in a guest room, a reservation will automatically be created to ensure that the room cannot be booked by another guest. The arrival and departure dates will be determined by the start and end time of the event and the values in the setting for Event Start Time Rooms and Event End Time Rooms.
	EVENT START TIME ROOMS [EVENT_START_TIME_ROOMS]	Rooms will be deducted from inventory the previous day for Events starting prior to this time
	EVENT END TIME ROOMS [EVENT_END_TIME_ROOMS]	Rooms will be deducted from inventory the following day for Events ending after this time.
Premium **IMPORT EVENTS** [IMPORT_EVENTS]		Enables the ability to create events for a specific block from an imported CSV file.
Premium Complimentary **ITEM TEMPLATES** [ITEM_TEMPLATES]		Enables the ability to configure groupings of items commonly sold together, regardless of their item class. When an item template is selected for an event, all items are added along with their respective pricing.
Premium Complimentary **MULTI CHOICE MENUS** [MULTI_CHOICE_MENUS]		Enables the ability to configure a menu where the guest has the ability to choose from several options which menu items will be included in the menu.

Table 11-32 (Cont.) OPERA Controls — Events Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Premium Complimentary **MULTI EDIT EVENTS** [MULTI_EDIT_EVENTS]		Enables the ability to select and edit multiple events in a single process.
Complimentary **QUICK EVENT** [QUICK_EVENT]		Enables the ability to create a new event and auto-create a block simultaneously
	QUICK EVENT BOOKING TYPE [QUICK_EVENT_BOOKING_TYPE]	Default Business Block Type for Quick Event Creation
	QUICK EVENT MARKET CODE [QUICK_EVENT_MARKET]	Default Business Block Market Code for Quick Event Creation
	QUICK EVENT RATE CODE [QUICK_EVENT_RATE_CODE]	Default Business Block Rate Code for Quick Event Creation
	QUICK EVENT SOURCE CODE [QUICK_EVENT_SOURCE]	Default Business Block Source Code for Quick Event Creation
	QUICK EVENT DEFAULT RES TYPE [DEFAULT_RESTYPE_DEDUCT]	Default Reservation Type for Quick Event Creation. The values listed here are based on the status selected in the parameter setting 'Default New Block Status'.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-32 (Cont.) OPERA Controls — Events Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **SIMPLE EVENTS** [DIARY]		Activates Simple Catering Events and Function Diary functionality in OPERA Cloud PMS. With Simple Events, you can schedule events for a specific date and time, specify the number of attendees, event type , setup style and assign a function space. Event notes can be added to track the various resource requirements for the event. Simple Events then appear in the Function Diary. For more information, see Simple Events. **Note** The Simple Events function is not available when the Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition or Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition is active.
Complimentary **SUB EVENTS** [SUB_EVENTS_ACTIVE]		Enables the ability to create events that are linked to other events, either in the same function space or a different space. These events can then be printed together on Banquet Event Orders to illustrate their connected nature.
	DEFAULT SUB EVENT RATE CODE [DEFAULT_SUB_EVENT_RATE_CODE]	Default Sub Event Rate Code.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-33 OPERA Controls — Events Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ADVANCED FUNCTION SPACE HANDLING [ENHANCED_FUNCTION_SPACE_HANDLING]		When active, function space can be configured as a Combo room or mark as a Shareable Space. Additionally, rental codes can be configured and associated to function space to set a default prices for room rental.
	BOOK SHAREABLE SPACE AS EXCLUSIVE [SHARED_FUNCTION_SPACE]	When enabled, users are able to override the shareable functionality and reserve the space for a single event.
	EXCLUDE EVENT FROM FORECAST BASED ON FUNCTION SPACE [EXCLUDE_EVENT_FROM_FORECAST]	When active, enables the ability to identify function spaces for which booked events should be excluded from forecast reporting by default.
	DEFAULT SPACE REVENUE TYPE [DEFAULT_SPACE_REVENUETYPE]	Defines the default revenue type that will populate when configuring rental amounts for function space.
CATERING MEAL PERIODS [CATERING_MEALTYPES]		Provides the ability to configure meal periods and link event types to a specific meal period for reporting purposes.
COPY EVENT NOTES [COPY_EVENT_NOTES]		Copy Event Notes when copying an Event.
COPY FORECAST FIGURES [COPY_FORECAST_FIGURES]		Copy Event Forecast Figures when copying an Event.
COPY RESOURCE NOTES [COPY_RESOURCE_NOTES]		Copy Resource Notes when copying a Resource.
ITEM INVENTORY WARNING [ITEM_INVENTORY_WARNING]		Show Inventory Warnings for Items.
KEEP EVENT DETAILS ON TYPE CHANGE [KEEP_EVENT_DETAILS_ON_TYPE_CHANGE]		Keep Event Details as they are when the event type is changed.
MENU ITEM DEMAND [MENU_ITEM_DEMAND_FACTOR]		Expose demand factor on menu items when configuring menus.
RESOURCE COST [RESOURCE_COST]		Expose cost fields for catering resources.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-33 (Cont.) OPERA Controls — Events Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
WARN WHEN SPACE BOOKED [WARN_WHEN_SPACE_BOOKED_NONDEDUCT]		User will receive a warning message indicating the space is booked by another event.

Table 11-34 OPERA Controls — Events Settings

SETTING	DESCRIPTION
CATERING REVENUE PRICE TYPE [CATERING_REVENUE_PRICE_TYPE]	Defines whether Catering Revenue Prices are entered as Gross or Net Values. The setting is referenced when generating the Daily Forecast Report.
MEASUREMENT [MEASUREMENT]	Specifies the measurement system used for the function space. Valid values: • METRIC • IMPERIAL
NO SPACE WARNING IN EVENT SEARCH [WARN_NO_SPACE_EVENT_SEARCH]	Status for which users will be warned that one or more events exist that do not have space assigned. The message will only appear when the search criteria includes Block ID. Valid values: Multi-select from the configured status codes.
SCHEDULED TIME TO UPDATE EVENT STATUS TO ACTUAL [SCHEDULED_TIME_UPDATE_EVENT_STATUS]	Activates a background process to run within 30 minutes of the specified time to automatically change the event status to Actual for qualifying events. Events which are in a status that can be updated to Actual and are on the current date will be updated.

OPERA Controls — Exports

The following tables outline the functions, parameters and settings that can be configured in the OPERA Controls Exports group.

Table 11-35 OPERA Controls — Exports Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **GENERAL EXPORTS** [GENERAL_EXPORTS]		Activates the ability to configure and generate General, Membership, and Back Office export files.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-36 OPERA Controls — Exports Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
INCLUDE CC ACCRUALS IN CITY LEDGER EXPORT [BOF_INCL_CC_ACCRUALS]		When active, includes credit card accruals in Back office City Ledger Export.
USE BACK OFFICE EXPORT MAPPING [BACKOFFICE_EXPORT_MAPPING]		Activates export mapping for back office exports.
USE COUNTRY SPECIFIC EXPORTS [COUNTRY_EXPORTS]		Activates the Export functionality for country specific requirements.
	GROUP MASTER UDF FIELD [GROUP_MASTER_UDF]	Specifies the two digit numeric value of the reservation UDFC field for the group master flag (IT-Alloggiati). Valid values: • 01–40
	CMFLEX PROPERTY KEY [CMFLEX_KEY]	Specifies the property key for CMFlex export [Brazil].
	CMFLEX FISCAL QUEUE NAME [CMFLEX_QUEUE_NAME]	Specifies the fiscal queue name for CMFlex export [Brazil].
	CMFLEX PROFILE UDF FIELD CORRESPONDING TO CNPJ [CMFLEX_UDF_CNPJ]	Specifies the profile UDF field corresponding to CNPJ for CMFlex export [Brazil].
	CMFLEX PROFILE UDF FIELD CORRESPONDING TO INSC EST [CMFLEX_UDF_INSC_EST]	Specifies the profile UDF field corresponding to Insc. Est. for CMFlex export [Brazil].
	CMFLEX PROFILE UDF FIELD CORRESPONDING TO INSC MUN [CMFLEX_UDF_INSC_MUN]	Specifies the profile UDF field corresponding to Insc. Mun. for CMFlex export [Brazil].
	CMFLEX PROFILE UDF FIELD CORRESPONDING TO CPF [CMFLEX_UDF_CPF]	Specifies the profile UDF field corresponding to CPF for CMFlex export [Brazil].

Table 11-37 OPERA Controls — Exports Settings

SETTING	DESCRIPTION
ISTAT HOTEL ID [ISTAT_HOTEL_ID]	Hotel ID for Istat Reports/Exports [ITALY]

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-37 (Cont.) OPERA Controls — Exports Settings

ISTAT HOTEL KEY [ISTAT_HOTEL_KEY]	Hotel KEY for Istat Export, Lazio Region only [ITALY]
ISTAT NUMBER OF BEDS [ISTAT_NUMBER_OF_BEDS]	Number of Beds for Istat Reports/Exports [ITALY]
ISTAT NUMBER OF RESTROOMS [ISTAT_NUMBER_OF_RESTROOMS]	Number of Restrooms for Istat Reports/Exports [ITALY]
ISTAT NUMBER OF ROOMS [ISTAT_NUMBER_OF_ROOMS]	Number of Rooms for Istat Reports/ Exports [ITALY]

OPERA Controls — Front Desk

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Front Desk group.

Table 11-38 OPERA Controls — Front Desk Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ADVANCE CHECK IN [ADVANCE_CHECK_IN]		Master control that activates the Advance Check In functionality, which provides the option of flagging one or multiple arrival reservations as Advance Checked In reservations with the option to also record the estimated time of return to the property. Housekeeping is alerted of the ETR when performing their tasks.

> **Note**
>
> Pseudo room reservations cannot be identified for Advance Check In.

> **Note**
>
> To flag a reservation for Advance Check In the reservation must have a valid payment method.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-38 (Cont.) OPERA Controls — Front Desk Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	AUTO CHECK IN OF ADVANCED CHECKED IN RESERVATIONS [AUTO_CHECK_IN_ADVANCE_CHECK_IN_RES]	Automatically checks in Advance Checked In reservations when the room housekeeping status of the reservation's room number matches the room housekeeping status set in the Room Status for Auto Check In of Advance Checked In Reservations. Available when Advance Check In function is Active. When turned On makes the following available: • Room Status for Auto Check In of Advance Checked In Reservations setting Enables the Auto Check In Processor in the Toolbox Utilities - Processors
	AUTO CHECK IN END TIME [AUTO_CHECK_IN_END_TIME]	When a time (HH24:MI) has been defined in this setting, the Auto Check In processor will stop processing advanced checked in reservations at that time each day. (Available when the **Advance Check In** OPERA Control is active and the **Auto Check In of Advance Checked In Reservations** OPERA Control is active).
	AUTO CHECK IN MINUTES BEFORE [AUTO_CHECK_IN_MINUTES_BEFORE_ETA]	When a minute value is defined in this setting, the Auto Check In processor will process advanced checked in reservations that have reached the defined Room Status and have an Estimated Time of Arrival (ETA) that many minutes before the ETA. (Available when the **Advance Check In** OPERA Control is active and the **Auto Check In of Advance Checked In Reservations** OPERA Control is active.)
	AUTO CHECK IN START TIME [AUTO_CHECK_IN_START_TIME]	When a time (HH24:MI) has been defined in this setting, the Auto Check In processor will start processing advanced checked in reservations that have reached the configured room status at that time each day. (Available when the **Advance Check In** OPERA Control is active and the **Auto Check In of Advance Checked In Reservations** OPERA Control is active).
	EXCLUDE ROOM CONDITIONS [AUTO_CHECK_IN_EXCL_ROOM_CONDITIONS]	Rooms with the Room Condition(s) configured in this setting will be excluded from the Auto Check In process. (Available when the **Advance Check In** and **Room Conditions** OPERA Controls are active and the **Auto Check In of Advance Checked In Reservations** OPERA Control is active).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-38 (Cont.) OPERA Controls — Front Desk Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	EXPECTED TIME OF RETURN (ETR) [EXPECTED_TIME_OF_RETURN]	Enables the option to provide an Expected Time of Return (ETR) and/or an Expected Time of Return Comment on reservations, and adds ETR search capabilities for arrival reservations when an ETR is provided. Available when the Advance Check In function is Active. Expected Time of Return value is in property time format. Expected Time of Return comment allows up to 200 characters.
	ROOM STATUS FOR AUTO CHECK IN OF ADVANCE CHECKED IN RESERVATIONS [ROOM_STATUS_FOR_AUTO_CHECK_IN_ADVANCE_CHECK_IN_RES]	Defines the room housekeeping status (or multiple statuses) that triggers the Auto Check in for Advance Checked In reservations. Available when Auto Check In of Advance Checked In Reservations parameter is turned On. Values for the room housekeeping status are multi–select from all room housekeeping statuses available at the property. Default list values are Clean and Dirty room status. This list can also show values for Inspected, Pickup and Out of Service when their respective OPERA Control functions for “Inspected Status”, “Pickup Status” and “Out of Service” in Room Management are active. Note: If a value is not set in the Room Status for Auto Check In of Advance Checked In Reservations setting, Advance Checked In reservations will not be automatically checked in even though the Auto Check In Advance Checked In Reservations parameter is On.
DO NOT MOVE ROOM [DO_NOT_MOVE_ROOM]		Enables a Do Not Move flag on the reservation once a room is assigned. Only users with elevated privilege can remove the do not move flag and modify the room number value.
ENHANCED ROOM ASSIGNMENT [ENHANCED_ROOM_ASSIGNMENT]		When active, users will have the ability to define the Rating/Points for specific Reservation attributes. OPERA Cloud will then use this logic when conducting a Room Assignment during Pre-Arrival planning or at the time of arrival. **Note** Cannot be used in conjunction with Room Type Auto Room Assign parameter.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-38 (Cont.) OPERA Controls — Front Desk Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
GUEST LOCATORS [LOCATORS]		Enables the ability to set a temporary location for a particular guest in order to inform other users, such as telephone operators, of the guests¿ current whereabouts on or off premises.
LOG IT [LOGBOOK]		Enables the ability to create log book entries for various departments.
PRE-REGISTRATION CHECK IN [INTERNET_CHECK_IN]		Activates the pre registration functionality, flagging the reservation as pre-registered for check-in through third-party mobile app or hotel website.
	PRE-REGISTRATION EXTERNAL SYSTEM ALERT [INTERNET_CHECK_IN_ALERT_CODE]	Stores the external system alert code used for alerts created for internet checked-in reservations.
	PRE-REGISTRATION EXTERNAL SYSTEM TRACE [INTERNET_CHECK_IN_TRACE_DEPT]	Stores the external system trace department code used for traces created for internet checked-in reservations.
SERVICE REQUESTS [SERVICE_REQUESTS]		The ability to add a service request to guest and/or reservation for follow-up at a future date. Service Recovery is used to report incidents that occur and require actionable follow-up and subsequent closure by other staff members.
WAKE UP CALLS [WAKEUP]		Enables the ability to setup PBX wakeup calls for reservations.
Complimentary **ESIGN REGISTRATION CARD** [ESIGN_REGISTRATION_CARD]		Enable eSign Registration Card functionality on reservations for obtaining electronic signature and initials.
	DAYS TO PURGE E-SIGNED REGISTRATION CARDS [ESIGN_REGISTRATION_CARD]	Number of days for e-Signed Registration Cards to be purged after a reservation is checked out. (Maximum setting is 3650 days).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-39 OPERA Controls — Front Desk Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
AUTO CHECK IN ARRIVAL PSEUDO ROOMS [AUTO_CHECKIN_ARRIVAL_PSEUDO_ROOM]		Pseudo room arrival reservations are automatically checked in during End of Day via two additional steps. • "Pseudo Rooms Not Checked In" executes prior to update of the business date. • "Pseudo Room Arrivals Next Day" executes after update of the business date. **Note** Pseudo room types are not identified for Housekeeping to skip the check for Clean/Inspected status.
AUTO CHECK IN PSEUDO ROOMS AFTER CHECK OUT [AUTO_CHECKIN_PSEUDO_ROOM]		Pseudo room type reservations indicated as "Always Checked In" in Reservation Payment Instructions are automatically copied and checked in after they are checked out. Only applies to pseudo room types setup for Always Checked In.
AUTO CHECK OUT [AUTO_CHECK_OUT]		Auto Check Out provides the ability to initiate a process that will automatically post payments and settle billing windows for departing reservations and then proceed with checking them out. Folios or receipts will not be printed or emailed during this process.
AUTO DEPOSIT COLLECTION [AUTO DEPOSIT SCREEN]		The deposit screen on reservations with existing deposit schedules will automatically appear when the user saves the reservation and it may also take the user one step further and automatically open the deposit payment form with deposit amount pre-populated based on configuration.
BLANK OUT METHOD OF PAYMENT FOR ARRIVAL RESERVATIONS [BLANK_OUT_METHOD_OF_PAYMENT_FOR_ARRIVALS]		Blank out (remove) the method of payment during the check in process for arrival reservations without an existing credit card authorization.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-39 (Cont.) OPERA Controls — Front Desk Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
GENERATE KEY PACKETS [CUSTOMIZED_KEY_PACKET_LABELS]		Activates the key packets functionality which allows the Property to generate Key Packet labels for individual or block reservations.
MANDATORY ROOM MOVE REASONS [MANDATORY_ROOM_MOVE_REASONS]		Activating this Parameter will make the Reason field mandatory on the Room Move screen.
REGISTRATION CARDS [REGISTRATION_CARDS]		Activates registration card functionality.
	DEFAULT REGISTRATION CARD [DEFAULT_REGISTRATION_CARD]	Sets the registration card used by default for all check ins.
	GENERATE REGISTRATION CARDS AT CHECK IN [PRINT_REGCARD_AT_CI]	Generates registration cards at check in. Valid values: • Never Generate • Prompt To Generate • Select Destination
	PRINT REGISTRATION CARDS FOR ACCOMPANYING GUESTS [PRINT_REGISTRATION_CARDS_FOR_ACCOMPANYING_GUESTS]	Enables the printing of individual registration cards for each accompanying guest from a reservation. The Registration Cards parameter and the Accompanying Guest function must be On for this parameter to be available.
	AGE THRESHOLD TO PRINT REGISTRATION CARD [AGE_THRESHOLD_TO_PRINT_REGISTRATION_CARD]	Guests for this age or older are eligible for an individual registration card when their profile is used as an accompanying guest. Select a numeric value to represent the minimum age required for a guest to have an individual registration card. The Print Registration Cards for Accompanying Guests parameter must be active for this setting to be available
RESERVATION ROOM FEATURES AND FLOORS [RESERVATION_ROOM_FEATURES]		This parameter is used in conjunction with Room Feature and Floor preferences associated with reservations and profiles. When active, Room Feature and Floor preferences associated with the reservation are displayed in Room Assignment. When inactive, Room Feature and Floor preferences associated with the profile are displayed in Room Assignment.
RESERVATIONS SMOKING PREFERENCE [RESERVATION_SMOKING_PREFERENCE]		If active when Assigning a room number for a reservation, populates the Smoking Preference filter based on the Reservation Smoking Preference, not the Profile Smoking Preference.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-39 (Cont.) OPERA Controls — Front Desk Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ROOM FEATURE VALIDATION [ROOM_FEATURE_VALIDATION]		Enables an information message when the Room Features that are requested on a reservation/profile are not present in the configuration of the room that is being assigned (including Auto Assign), re-assigned or selected during a room move.
ROOM TYPE AUTO ROOM ASSIGN [ROOM_TYPE_AUTO_ROOM_ASSIGN]		Enables an **Auto Room Assign** check box at property level in Room Type configuration. By selecting the Auto Room Assign check box, OPERA Cloud will auto-assign a room number to new reservations when a reservation is made for the room type and a room has not been manually assigned for the reservation. This functionality will occur only for newly created reservations should this parameter be active.
SWAP/SHIFT ROOMS [SWAP/SHIFT_ROOMS]		Allows the assigned room on two reservations, with matching room type and arrival date, to be swapped or shifted. A room can be shifted from one reservation to another, leaving one of the reservations unassigned.
TELEPHONE BOOK / OPERATOR [TEL_BOOK_OPERATOR]		The telephone book is available to maintain contact information for local theaters, restaurants, taxi stands, airlines, churches, employee directory, other properties, etc. Use the Telephone Operator to perform reservation searches and to quickly manage guest messages, traces, wake up calls, and guest locators from a single screen.

Table 11-40 OPERA Controls — Front Desk Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
AUTO ASSIGN ETD - ETA BUFFER [AUTO_ASSIGN_ETD_ETA_BUFFER]		Defaults the time in minutes as a buffer between the ETD of the departing reservation and the ETA of the Arriving reservation when processing the Auto Room Assignment.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-40 (Cont.) OPERA Controls — Front Desk Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
CHECK IN PREPAY RULES [CHECK_IN_PREPAY_RULES]		Ability to post in advance anticipated accommodation charges and collect payment of reservation: • **Advanced Folio Payment**: Ability to manually post Advance bill charges and collect advanced payment for total cost of stay. • **Advanced Folio Posting** : Ability to auto-post Advance Bill Charges and collect advanced payment for total cost of stay.
	ADVANCE FOLIO PAYMENT TYPE [ADVANCE_FOLIO_PAYMENT_TYPE]	Reservation prepay rules apply to the selected payment methods. **Note** Direct Bill (AR transfer) is not eligible for selection.
	AUTO ADVANCED BILL PAYMENT METHOD [AUTO_ADVANCED_BILL_PAYMENT_METHOD]	Defines the payment methods for the prepayment of the Advanced Bill. (Available when the **Check In Prepay Rules** OPERA Control is set to **Advanced Folio Posting**).
	MINIMUM NUMBER OF NIGHTS [ADVANCE_PAYMENT_MIN_NIGHTS]	Minimum Number of nights to enforce Reservation Prepay Rules.
	PREPAY FOLIO [PREPAY_FOLIO]	Enables credit card auto-settlement for reservation updates resulting in additional total cost of stay charges payable by the guest. Auto payment processing executes hourly and is based on the credit card details in Window 1. Payment activity is recorded in the changes log with Advance Payments action type.
CUSTOM CHECK IN STEPS [EXPOSE_ADDITIONAL_CHECKIN_TRAIN_STOPS]		Allows adding steps to the Check In, and provides the option to set the order in which these steps show. The Room Selection and Review Payment steps are required and selected by default.
DEFAULT RATE CODE(S) FOR WALK IN RESERVATIONS [DEFAULT_RATECODE_WALKIN_RESERVATIONS]		Default Rate Code(s)to be used when conducting an availability search for Walk in Reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-40 (Cont.) OPERA Controls — Front Desk Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	DEFAULT CHECK IN STEP [DEFAULT_CHECK_IN_STEP]	When the parameter is on, the Check In defaults to the first step selected in the Custom Check In Steps setting. When the parameter is off, the Check In defaults to the first step that requires attention. When no step requires attention, the Check In defaults to the Verify Payment step.
DEFAULT SOURCE CODE FOR WALK IN RESERVATIONS [DEFAULT_SOURCECODE_WALKIN_RESERVATIONS]		Default Source Code for Walk In Reservations.
ROOM DISPLAY ORDER [ROOM_DISPLAY_ORDER]		In the room lookup screens, the order of the rooms displayed can be least used ascending, least used descending, back to back ascending, back to back descending, ascending, descending or by display sequence based on the parameter set here.
ROOM MOVE ROOM STATUS ROOM_MOVE_ROOM_STATUS		During a Room Move, this is the default status of the departing room.

OPERA Controls — General

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls General group.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-41 OPERA Controls — General Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **AUTO CONFIGURE OXI-OPERA INTERFACE SETUP** [AUTOCREATE_INTERFACE_CONFIGURATIONS]		Auto configures all pre-requisite interface setup needed for integrating OPERA Cloud Central with OPERA PMS at individual property level. **Note** This function is not meant for Non-OPERA PMS or other OXI-HUB interfaces. **Tip** • Activate this function if you want to integrate with PMS for the property. • Inactivation can wipe-out the interface configuration.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-41 (Cont.) OPERA Controls — General Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **AUTO CONFIGURE OXI-OPERA INTERFACE SETUP FOR ALL PROPERTIES** [AUTOCREATE_INTERFACE_CONFIGURATIONS_GLOBAL]		Auto configures all pre-requisite interface setup needed for integrating OPERA Cloud Central with OPERA PMS for all properties in the chain. This function is not meant for Non-OPERA PMS or other OXI-HUB interfaces. **Note** This function is not meant for Non-OPERA PMS or other OXI-HUB interfaces. **Tip** • Activate this function if you want to integrate with PMS for all properties of the chain. • Inactivation can wipe-out the interface configurations for all properties.
Complimentary Central **CENTRAL SALES** [CENTRAL_SALES]		Enables the ability to create a Central Sales Hub where sales agents can manage central sales activities, manage sales accounts and create central sales leads to send to selected properties.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-41 (Cont.) OPERA Controls — General Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary Central **CLOUD HUB INTEGRATION** [ACTIVATE_PMS_INTEGRATION]		Activates Cloud Hub Integration functionality by auto-creating OXI-OPERA central interface configurations for the property. **Note** • Activate this function to integrate PMS for the property. • Before activation, review external property code and make sure correct value is updated. • This function cannot be activated if the Property has no Interface configurations. • Inactivation can stop processing messages for the property. • To configure and activate/ inactivate Cloud Hub integration for specific properties, always use the property-level functions.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-41 (Cont.) OPERA Controls — General Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary Central **CLOUD HUB INTEGRATION FOR ALL PROPERTIES** [ACTIVATE_PMS_INTEGRATION_GLOBAL]		Activates Cloud Hub Integration functionality by auto-creating OXI-OPERA central interface configurations for all properties in the chain. **Note** • Activate this function if you want to integrate PMS for all properties of the chain. • Before activation, review external property code and make sure correct value is updated. • This function cannot be activated if none of the Properties has Interface configurations. • Inactivation can stop processing messages for all properties.
Complimentary **FILE ATTACHMENTS** [ATTACHMENTS]		Enables the ability to attach files (<10MB) to Profiles, Reservations, Blocks and Activities. • Reservation and Block attachments are retained for the life of the reservation or block and purged after departure. • Activity attachments are purged along with the purge of an Activity. • Profile attachments are purged along with the purge of a Profile.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-41 (Cont.) OPERA Controls — General Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **LEGACY OWS INTEGRATION** [OWS_INTEGRATION]		Activates Legacy OPERA Web Services (SOAP) Integration.
Complimentary **MULTI LANGUAGE** [GUEST_LANGUAGE]		Enables the ability to add localized code descriptions for generating localized stationery. This function also actives alternate name functionality which allows properties to record guest names in the national character set for searching and output on guest stationery.
Complimentary **OWNER** [OWNER]		Provides the ability to define and associate a sales owner code for each account (company/agent) profile and business block. The owner code can be referenced for filter criteria within reporting and searching within the application. (Enabled on activation of OPERA Cloud Sales & Event Management Essentials, Standard or Premium subscription).
SCHEDULED REPORTS [REPORT_SCHEDULER]		Activates Scheduled Reports Functionality.
TEXT MESSAGE HANDLING [SMS_CONFIRMATIONS]		Activates integration to SMS service providers for SMS text message delivery of confirmations, guest messages and queue room ready notifications to guests plus queue rush rooms alerts to housekeeping room attendants. Requires a subscription with local SMS service provider that supports email-to-sms or HTTP POST.
TRACK IT [TRACK_IT]		Track-It enables the management of tasks for the delivery and collection of guest luggage, vehicles, parcels, and other items which need to be tracked. Track-It also supports tracking of lost and found items. Track-It functionality is also available on a smartphone via the OPERA Cloud /mobile web application.
	DEFAULT PARCEL LOCATION [DEFAULT_PARCEL_LOCATION]	Specifies the default location for Parcel type.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-41 (Cont.) OPERA Controls — General Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	DEFAULT PARCEL ACTION [DEFAULT_PARCEL_ACTION]	Specifies the default action for Parcel type.
	DEFAULT PARCEL TYPE [DEFAULT_PARCEL_TYPE]	Specifies the default type for Parcel type.
	DEFAULT VALET LOCATION [DEFAULT_VALET_LOCATION]	Specifies the default location for Valet type.
	DEFAULT VALET ACTION [DEFAULT_VALET_ACTION]	Specifies the default action for Valet type.
	DEFAULT VALET TYPE [DEFAULT_VALET_TYPE]	Specifies the default type for Valet type.
	DEFAULT BAGGAGE LOCATION [DEFAULT_BAGGAGE_LOCATION]	Specifies the default location for Baggage type.
	DEFAULT BAGGAGE ACTION [DEFAULT_BAGGAGE_ACTION]	Specifies the default action for Baggage type.
	DEFAULT BAGGAGE TYPE [DEFAULT_BAGGAGE_TYPE]	Specifies the default type for Baggage type.
	DEFAULT LOST LOCATION [DEFAULT_LOST_LOCATION]	Specifies the default location for Lost type.
	DEFAULT LOST ACTION [DEFAULT_LOST_ACTION]	Specifies the default action for Lost type.
	DEFAULT LOST TYPE [DEFAULT_LOST_TYPE]	Specifies the default type for Lost type.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-42 OPERA Controls — General Parameters

PARAMETER	SETTING	DESCRIPTION
ACCESS EXCLUSION [ACCESS_EXCLUSION]		Enables access exclusion for the block. When a block access exclusion is configured for a business block, specific central reservation offices (CROs) cannot edit the block (i.e., add a new reservation or modify an existing reservation in the block; cancel a reservation in the block, or both).
ACTIVATE TEMPLATE TASKS ON ALL DEPENDENT PROPERTY ROLES [TEMPLATE_TASK_ACTIVATION_ON_PROPERTY_ROLES]		Activates newly selected or deselected template tasks for all dependent property roles.
DEVICE SELECTION FOR CHANGES LOG TRACKING [DEVICE_SELECTION_FOR_CHANGES_LOG_TRACKING]		Enables display of device (client workstation) selection during user login for user activity tracking in the changes log. (Available with **South Korea Country** mode).
ENABLE WATERMARK FOR REPORTS [REPORT_WATERMARK]		Enables adding a watermark to all reports created in PDF format.
	CONFIGURE WATERMARK SETTINGS [REPORT_WATERMARK_MODE]	Specifies the watermark settings to be applied to all reports in all properties where watermark functionality is active. This setting can be overridden by customizing watermarks on the report group or individual report level.
FLEXIBLE DYNAMIC FIELDS [FLEXIBLE_DYNAMIC_FIELDS]		Enables the ability to configure Flexible Dynamic Fields for use on Profiles.
GUIDED LEARNING [GUIDED_LEARNING]		Enables in-application guided learning.
INFORMATION COLLECTION [INFORMATION_COLLECTION]		Activate Information Collection functionality to allow for the collection of information at specific locations in OPERA Cloud. This includes the ability to configure which type of information collection functionality is active in the property.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-42 (Cont.) OPERA Controls — General Parameters

PARAMETER	SETTING	DESCRIPTION
	DEFAULT METHOD FOR FOLIO DESTINATION[DEFAULT_METHOD_FOLIO_DESTINATION]	Select the method which can be used as the default on the Folio Destination window for which the instruction to print and/or email will be included in the universal payload. • PRINT: Print the fiscal folio • EMAIL: Email the fiscal folio. • EMAIL_AND_PRINT: Email and Print the fiscal folio.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-42 (Cont.) OPERA Controls — General Parameters

PARAMETER	SETTING	DESCRIPTION
	INFORMATION COLLECTION METHODS [INFORMATION_COLLECTION_METHODS]	Select the method(s) which will be used for Information Collection functionality. • BR_PROFILE_INFO — Profile Information with Universal Payload tags (Brazil) (PROFILE_OPTIONS, Global Level) • BR_RESERVATION_INFO — Reservation Information with Universal Payload tags (Brazil) (RESERVATION_OPTIONS, Global Level) • EFOLIO_EXPORT — EfolioExport (BEFORE_SETTLEMENT, Global Level) • FOLIO_DESTINATION: Email and/or Print fiscal folios from the fiscal printer (BEFORE_SETTLEMENT, Global Level). • IT_FATTURA_E_INVOICE — Italy Fattura e-Invoice (RESERVATION_OPTIONS, Global Level) • IT_LOTTERY_NO — Lottery Number (BEFORE_SETTLEMENT, Global Level) • PROFILE_EINVOICE_ADDRESS — Profile eInvoice Address field with Universal Payload tag (PROFILE_OPTIONS, Global Level) • PURCHASE_ORDER_DETAILS — Reservation Purchase Order information. • SA_CUSTOMER_TYPE — Custom Type for Profile (PROFILE_OPTIONS, Global Level) • TW_E_INVOICE — Taiwan e-Invoice (BEFORE_SETTLEMENT, Global Level) • ONLINE_OFFLINE_RESERVATION: You can set each reservation as an Online or Offline as required for country specific exports BH_DAILY_SUMMARY and BH_DAILY_SUMMARY_DAY. • DECLARATION_OF_INTENT: Declaration of Intent Number and Receipt Date (PROFILE_OPTIONS, Global Level). • FOLIO_PROFILE_VALIDATION: – If Payee Profile is an Individual Profile, ID Type, ID Number and UDFC10 fields are validated and user is prompted if values are empty. – If Payee profile is a Company profile, TAX1_NO and UDFC10 fields are validated and user is prompted if values are empty.

Table 11-42 (Cont.) OPERA Controls — General Parameters

PARAMETER	SETTING	DESCRIPTION
		• VAT_NO_TAX_ID : VAT Number validation for Tax ID field (BEFORE_SETTLEMENT, Global Level) • VAT_NO_ID_TYPE: VAT Number validation for a selected ID Type. For example, ID or PASSPORT (BEFORE_SETTLEMENT, Global Level) • TAXABLE_DATE: Taxable Date (BEFORE_SETTLEMENT, Global Level) • IN_PAN_VALIDATION: VAT Number validation for a selected ID Type. • VISIT_PURPOSE: Visit Purpose (RESERVATION_OPTIONS, Global Level) (RESERVATION_OPTIONS, Global Level)
	PAYEE COUNTRY VAT NUMBER VALIDATION [PAYEE_COUNTRY_VAT_VALIDATION]	Country from the payee profile primary address used for validation with Information Collection Methods VAT_NO_ID_TYPE and VAT_NO_TAX_ID.
	PROFILE ID TYPES FOR VAT NUMBER VALIDATION [PROFILE_ID_VAT_VALIDATION]	Profile ID types used for validation with Information Collection Method VAT_NO_ID_TYPE.
	PROFILE TYPE FOR VAT NUMBER VALIDATION USING ID TYPE [PROFILE_VAT_VALIDATION_ID_TYPE]	Payee profile type used for validation with Information Collection Method VAT_NO_ID_TYPE
	THRESHOLD AMOUNT FOR VAT NUMBER VALIDATION [THRESHOLD_AMT_VAT_VALIDATION]	Payee profile type used for validation with Information Collection Method VAT_NO_TAX_ID.
	PROFILE TYPE FOR VAT NUMBER VALIDATION USING TAX ID [PROFILE_VAT_VALIDATION_TAX_ID]	The threshold amount (net amount) to be reached for validation with Information Collection Methods VAT_NO_ID_TYPE and VAT_NO_TAX_ID.
	PAYEE COUNTRY FOR PAN NUMBER VALIDATION USING TAX ID 2 [PAYEE_COUNTRY_PAN_VALIDATION]	Country from the payee profile primary address used for validation with Information Collection Method IN_PAN_VALIDATION.
	THRESHOLD AMOUNT (CASH) FOR PAN NUMBER VALIDATION USING TAX ID 2 [THRESHOLD_AMT_PAN_VALIDATION]	The Cash transaction threshold amount for validation with Information Collection Method IN_PAN_VALIDATION.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-42 (Cont.) OPERA Controls — General Parameters

PARAMETER	SETTING	DESCRIPTION
	TRANSACTION CODES (CASH) FOR PAN NUMBER VALIDATION USING TAX ID 2 [CASH_TRANSACTION_CODE_PAN_VALIDATION]	Cash transaction codes used for validation with Information Collection Method IN_PAN_VALIDATION.
 INTERFACE USER CLIENT IP AUTHORIZATION [INTERFACE_USER_IPS_VALIDATION]		Disable or enable Client IP Address Authorization for Interface Users.
 MULTI PROPERTY [MULTI_PROPERTY]		Activates template configuration and/or property-to-property copying of configuration.
NUMERIC KEYBOARD FOR ROOM NUMBER [DEVICE_NUMERIC_KEYBOARD]		Activates the mobile device keyboard to default to the numeric keyboard on selection of the Room Number field.
PROPERTY BROCHURE [PROPERTY_BROCHURE]		The Property Brochure is a resource that central sales, reservations, and on-property staff can use to obtain detailed information about services, facilities, accommodation at your property, and details on transportation options and local attractions in surrounding areas of your property. The Property Brochure can include high-quality photographs of your property accommodations and facilities and information on popular local attractions, dining and retail, local airports, transportation services, and other facilities.
 PROPERTY ROLES WITHOUT TEMPLATE [PROPERTY_ROLES_WITHOUT_TEMPLATE]		Enables you to create property roles and assign tasks to the roles without needing to copy roles from template.
RESTRICT CREDIT CARD MANUAL ENTRY [RESTRICT_CC_MANUAL_ENTRY]		Prohibits manual inputting of credit card details in payment windows.
SITE PLAN [SITE_PLAN]		The Site Plan is available to display images of the property, facilities, amenities or other subject matter such as diagrams that are useful to staff.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-42 (Cont.) OPERA Controls — General Parameters

PARAMETER	SETTING	DESCRIPTION
STORE IP ADDRESS IN CHANGES LOG [STORE_IP_ADDRESS_USER_ACTIVITY_LOG]		When active the IP Address will be displayed in the Changes Log.
VIEW RECENTLY USED RECORDS [RECENT_USED_RECORDS_MENU]		Enables the View Recently Viewed Records list within the **I Want To** menu for Profile, Reservation, Event, Sales Activities and Block search screens.

Table 11-43 OPERA Controls — General Settings

SETTING	DESCRIPTION
BACKGROUND [OPERA9_BACKGROUND]	The color of the strip displayed at the top of the application.
CENTRAL CURRENCY CODE [CENTRAL_CURRENCY_CODE]	Defines the currency code used for Membership Calculation Rules and Redemption when applying exchange rates to Membership revenue and/or for viewing estimated rates in the Reservation Sales Screen availability in the preferred currency.
CUSTOM TRANSLATION TYPE [CUSTOM_TRANSLATION_TYPE]	Specifies the chain specific custom translation.
DEFAULT SEARCH MODE [DEFAULT_SEARCH_MODE]	Specifies the default search type used in Manage Profiles, Blocks, and Reservations.
GAMING ID [GAMING_ID]	Determines where the Gaming ID is stored.
GOVERNMENT ID [GOVERNMENT_ID]	The government identification associated with the property.
PROPERTY TAX ID [PROPERTY_TAX_ID]	Specifies the tax identification number for the property.
PROXY CREDENTIALS [PROXY_CREDENTIALS]	N/A

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-43 (Cont.) OPERA Controls — General Settings

SETTING	DESCRIPTION
PROXY SERVER [PROXY_SERVER]	N/A
PROXY SERVER BYPASS [PROXY_SERVER_BYPASS]	N/A
STATIONERY SUBSTITUTION LANGUAGE [STATIONERY_FALLBACK_LANGUAGE]	Select a substitution (fallback) language to use when a stationery template is not configured for a specific profile language. Applicable when the **Multi Language** OPERA Control is active. **Note** This control does not apply to Alerts, Confirmations, Key Labels, Registration Cards, AR Account setup, Commission Bank Account setup, as these support template selection from a list of values.
TENANT ID [TENANT_ID]	Tenant ID for launching Reporting and Analytics from Reports menu.
WEEKEND DAYS [WEEKEND_DAYS]	Specifies the weekend days.

OPERA Controls — IFC

The following tables outline the parameters and settings that can be configured in the OPERA Controls IFC group.

Table 11-44 OPERA Controls — IFC Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **PROPERTY INTERFACES** [PROPERTY_INTERFACES]		Enables property interface configuration and management options.
	Complimentary **VIDEO CHECKOUT** [VIDEO_CHECKOUT]	Activate Video Check Out Functionality. Allows the guest to view their folio and check out from their room via the in-room television.
	DISPLAY KEY PIN [DISPLAY_KEY_PIN]	Enables display of Key PIN on the Create Key page and in Reservation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-44 (Cont.) OPERA Controls — IFC Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	EXCLUSIVE TAXES WILL BE POSTED AS ITEMIZERS BY THE POS INTERFACE [EXCL_TAX_BY_IFC]	Posts exclusive taxes as Itemizers by the POS interface.
	MULTIPLE GUEST ROOM KEY [MULTIPLE_GUEST_ROOM_KEY]	Enables a Guest Details for Multiple Keys section in Property interface Control, to create multiple keys for a reservation with accompanying guests. You can define credit limits for these keys and guests can charge to the reservation account prior to or after check-in.
	USE ALL LINKED BACK TO BACK RESERVATIONS FOR ROOM KEY START AND END DATES [USE_ALL_B2B_ST_END_DATES]	Activate this parameter to default the first reservation's check in date and last reservation's check out date of the Back to Back reservations on the create key panel as start date and end date of the Room Key.
	DEFAULT KEY SELECTION [DEFAULT_KEY_SELECTION]	Sets the default room key option for all reservations in Create Keys. • **Per Adult**: This selection will appear by default for all the reservations in 'Create Keys' screen. • **Per Reservation**: Sets the default number of keys to encode per reservation from Create Keys (1-10).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-44 (Cont.) OPERA Controls — IFC Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	DEFAULT KEYS EXPIRY TIME [DEFAULT_KEYS_EXPIRY_TIME]	For room key card use: The setting to use as the default value for the **Valid Until Time** field in the Create Key screen. Values are reservation Expected Time of Departure (ETD) or the OPERA Controls setting Key Expiry Time as the default on the Valid Until Time field in Create Key screen. The Valid Until Time value sets the time of the day after which the room key card expires. If creating a duplicate key, the previous key Valid Until Time is the default value. Rules: If left blank, the Valid Until Time field in the Create Key screen defaults to the reservation ETD (Expected Time of Departure). If there is no ETD set, then the OPERA Controls setting for Key Expiry Time is used. If the Key Expiry Time setting is not set, then the default is set at 12:00 PM.
	IFC CLOUD LOG LEVEL [IFC_CLOUD_LOG_LEVEL]	Overrides the log level of the requests received by OPERA CLOUD from IFC interface. The default is WARNING. This can be set to FINE or FINEST only while troubleshooting an issue with Property Interfaces.
	KEY EXPIRY DAYS [KEYS_EXPIRY_DAYS]	Specifies the number of days after the check out date for the key card to expire.
	KEY EXPIRY TIME [KEYS_EXPIRY_TIME]	Specifies the time of the day when the key card expires.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-44 (Cont.) OPERA Controls — IFC Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	KEY RESPONSE [KEY_RESPONSE]	Determines whether OPERA will wait to display the Door Locking System's response to the UI or broadcast the key response when it is available. Valid values: • NONE • WAIT (select to display the Door Locking System's response to the UI) • BROADCAST (broadcast the key response when it is available)
	KEY VALID START TIME [KEY_VALID_START_TIME]	For room key card use: The time of day default value for the Valid Start Time field in the Create Key screen. Value is in 24 hour time format. The Valid Start Time value sets the time that the room key card is enabled for use. When left blank the Valid Start Time (when available on the Create Key Screen) populates with the current property system time. If creating a duplicate key, the previous key Valid Start Time is the default value. **Note**: The Valid Start Time field is available on the Create Key screen when the Property Interface Control **Send Valid Start Date/Time** check box is checked.
	PURGE IFC LOG DAYS [PURGE_IFC_LOG_DAYS]	Specifies number of days to purge IFC Errors, Failed Messages & Transaction Log Tables. If left blank the data will be purged after 180 days.
	ROOM NUMBER TO WHICH ANY LOST INTERFACE POSTINGS WILL BE SENT [DEFAULT_POSTING_ROOM]	Specifies the room number to which any lost posting (that is, when the reservation information is not valid) is sent.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-44 (Cont.) OPERA Controls — IFC Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	VIDEO CHECK OUT EMAIL [VIDEO_CO_EMAIL]	Address used to receive Video Check Out folios. When this setting is configured and when a Video Checkout of a reservation is done, copy of folios are emailed based on this configured email.
	VIDEO CHECK OUT START TIME [VIDEO_CO_START]	Time of Day the Video Check Out is to start.
	VIDEO CHECK OUT STOP TIME [VIDEO_CO_STOP]	Time of Day the Video Check Out is to stop.

OPERA Controls — Inventory Management

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Inventory Management group.

Table 11-45 OPERA Controls — Inventory Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
RESTRICTIONS [ADVANCE_RATE_RESTRICTION]		Ability to set restrictions on rates and room types for specific dates. Rate strategies rules can be configured to automate restrictions being applied to rates.
	ALWAYS DISPLAY HOUSE LEVEL RESTRICTIONS [ALWAYS_DISPLAY_HOUSE_LEVEL_RESTRICTIONS]	Ability to always see restrictions at the House level.
	RATE CATEGORY RESTRICTIONS [RESTRICTION_RATECATEGORY]	Enables setting restrictions at the rate category level.
	RESTRICTION TYPE [RESTRICTION_TYPES]	Specifies the restriction types available at the property. Valid values: • Arrival • Departure • Stay Through • Length of Stay • Advance Booking • Length of Stay Not Available

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-45 (Cont.) OPERA Controls — Inventory Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ROOM CLASS [ROOMCLASS_YN]		Room class functionality enables the allocation of room types to a room class hierarchy. Within OPERA Cloud Services all search panels and reports can be filtered by room class. This is useful for properties with a club floor(s) or different styles of accommodation that operationally need to exclude other rooms types for daily processing.
ROOM POOL [ROOM_POOLS]		Enables the ability to group multiple room types together into a generic room type for the purpose of blocking generic room types in block room grids (summary room types).
ROOM ROTATION [ROOM_ROTATION]		Activates functionality to manage room ownership and to rotate the assignment of rooms (with exception of pseudo rooms) based on configurable rotation point rules, ensuring a balanced assignment of rooms to reservations.
	COMPONENT ROOMS ROTATION POINTS [COMPONENT_ROOMS_ROTATION_POINTS]	When active, rotation points are calculated for all rooms comprising an occupied component suite and rotation points are calculated for a component suite when a room comprising the component suite is occupied. (Available when the **Component Suites** OPERA Control is active).
	OWNER ROOM GRADE [UNIT_GRADE]	When active, a Grade must be associated with all inventory rooms that are marked as "Owner Room". A Grade associated with an owner room is used to determine the room display order in the Room Assignment and Room Diary screens in conjunction with the value selected in the **Room Order Preference for Owner Rooms** OPERA Control.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-45 (Cont.) OPERA Controls — Inventory Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	ROOM OWNER PREFERENCE FOR OWNER ROOMS [ROOM_ORDER_PREFERENCE]	This setting works in conjunction with the **Room Display Order** OPERA Control to determine if owner rooms are displayed before or after non-owner rooms when performing a search for multiple room types in Room Diary and Room Assignment. • With the Owner Room Grade OPERA Control active: – If **Rooms With Grade First** is selected, OPERA Cloud will first display rooms with a grade assigned for the selected room types. These will be followed by those rooms without grade assigned in the order set in the **Room Display Order** OPERA Control. – If ROOMS WITH GRADE LAST is selected, OPERA Cloud will first display rooms without a grade assigned in the order set in the **Room Display Order** OPERA Control followed then by those rooms with grade assigned. • With the **Owner Room Grade** OPERA Control inactive: – If ROOMS WITH POINTS FIRST is selected, OPERA Cloud will first display room types with Rotation Points Setup first. These will be followed by those rooms without Rotation Points Setup defined in the order set in the ROOM DISPLAY ORDER OPERA Control. – IF ROOMS WITH POINTS LAST is selected, OPERA Cloud will first display rooms without Rotation Setup/Points in the order set in the ROOM DISPLAY ORDER OPERA Control followed then by those room types with Rotation Points Setup.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-45 (Cont.) OPERA Controls — Inventory Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	FORECAST ROTATION POINTS [FORECAST_ROTATION_POINTS]	Determines if future stays (based on check-out date) are considered in rotation points overview. • When inactive, only past reservations (and Out of Order / Service days) are considered in the calculation of rotation points used to determine the order in which rooms are available for assignment on the Room Assignment screen. • When active, future reservations within the rotation period (or until a fixed length number of days past the period end date as defined by the Number of Days to Forecast OPERA Control) are considered in this calculation.
	NUMBER OF DAYS TO FORECAST [FORECAST_X_DAYS]	Defines the number of days beyond the period end date to forecast rotation points. Changes to this setting will result in a recalculation of all rooms.
SELL LIMITS [SELL LIMITS]		Enables overbooking functionality to control the number of rooms that can be booked per room type beyond the physical inventory. Sell limits could also be an under-booking value to prevent the full room inventory from being sold.

OPERA Controls — Look To Book Sales Screen

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Look To Book Sales Screen group.

Table 11-46 OPERA Controls — Look To Book Sales Screen Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Central Complimentary **RESERVATION SALES SCREEN** [RESERVATION_SALES]		Enables the Central Reservation Sales Screen for call center / multiple property reservation management.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-46 (Cont.) OPERA Controls — Look To Book Sales Screen Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	Central **AUTO TURNAWAY** [AUTO_TURN_AWAY]	Enables the ability to automatically record a denial when there is no availability and the call is ended from the availability screen.
	 MULTIPLE DISPLAY SETS [MULTI_DEFAULT_DISPLAY_SETS]	Enables displaying of multiple display sets in the Reservation Sales Screen availability. When activated, the Default display sets for Reservation Sales Screen will display in the availability results. When inactive, the property level default display sets will display in the availability results. Please configure at least one default display set below to show in default availability search.
	 DEFAULT DISPLAY SET 1 [MULTI_DISPLAY_SET_1]	Default display set to display in the Reservation Sales Screen availability.
	 DEFAULT DISPLAY SET 2 [MULTI_DISPLAY_SET_2]	Default display set to display in the Reservation Sales Screen availability.
	 DEFAULT DISPLAY SET 3 [MULTI_DISPLAY_SET_3]	Default display set to display in the Reservation Sales Screen availability.
	RESERVATION SALE SCREEN RATE CARD VIEW [RSS_RATE_CARD_VIEW]	Select a preferred display of the rate and room type detail on the Reservation Sales Screen availability results rate cards.
TURNAWAY FUNCTIONALITY [TURNAWAYS]	Enables the tracking of denied or refused reservations and the associated reason for the turnaway of the reservation for statistical purposes.	

Table 11-47 OPERA Controls — Look To Book Sales Screen Parameters

PARAMETER	DESCRIPTION
 AUTOMATIC CREATION OF PROFILE [AUTO_CREATE_PROFILE]	Automatically creates a profile when no records match the name entered in the search area.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-47 (Cont.) OPERA Controls — Look To Book Sales Screen Parameters

PARAMETER	DESCRIPTION
DEFAULT BLANK ARRIVAL DATE [DEFAULT_BLANK_ARRIVAL_DATE]	Sets the arrival date to blank for new reservations in Look To Book Sales screen and Reservation Sales Screen (Available when the **Reservation Sales Screen** OPERA Control is active).
DISPLAY RATE DESCRIPTION [LTB_DISPLAY_RATE_DESC]	Shows the rate description on the Look To Book Sales screen and Reservation Sales Screen (Available when the **Reservation Sales Screen** OPERA Control is active).
DISPLAY RATE LONG INFORMATION [LTB_DISPLAY_RATE_LONG_INFO]	Shows the rate long information on the Look To Book Sales screen and Reservation Sales Screen (Available when the **Reservation Sales Screen** OPERA Control is active).
DISPLAY RATE SHORT INFORMATION [LTB_DISPLAY_RATE_SHORT_INFO]	Shows the rate short information on the Look To Book Sales screen and Reservation Sales Screen (Available when the **Reservation Sales Screen** OPERA Control is active).
DISPLAY ROOM DESCRIPTION [LTB_DISPLAY_ROOM_DESC]	Shows the room description on the Look To Book Sales screen and Reservation Sales Screen (Available when the **Reservation Sales Screen** OPERA Control is active).
DISPLAY ROOM LONG DESCRIPTION [LTB_DISPLAY_ROOM_LONG_DESC]	Shows the room long description on the Look To Book Sales screen and Reservation Sales Screen (Available when the **Reservation Sales Screen** OPERA Control is active).
HIDE MEMBERSHIP RATE RULE DISPLAY SET [HIDE MEMBERSHIP RATE RULE DISPLAY SET]	Hides the membership rate rule display set on the Look-to-Book screen.
RESERVATION CONFIRMATION SCREEN [RESERVATION_CONFIRMATION_SCREEN]	When active, the Reservation Confirmation screen is displayed once a new reservation is confirmed from the Look to Book Sales Screen. From this screen you can return to the Look to Book Sales Screen to create another reservation, or go to the newly created reservation to manage the new booking.
SHOW ALTERNATE PROPERTIES [DEFAULT_ALTERNATE_PROPERTIES]	Shows alternate properties while checking availability in Look To Book Sales screen and Reservation Sales Screen (Available when the **Reservation Sales Screen** OPERA Control is active).
SHOW PROFILE DISCOUNTED RATES [SHOW_PROFILE_DISCOUNTS_IN_RATE_AVAILABLITY]	Apply profile discounts to the negotiated rates displayed in Look to Book Sales screen and Reservation Sales Screen (Available when the **Reservation Sales Screen** OPERA Control is active).
TOTAL COST OF STAY & RATE INFORMATION MULTI-NIGHT OPTIMIZATION [RATE_INFORMATION_OPTIMIZATION]	This is a chain-level parameter. When this parameter is active, the handling of Total Cost of Stay & Rate Information on Look To Book Sales screen and Book Now screen will be optimized for multi-night reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-48 OPERA Controls — Look To Book Sales Screen Settings

SETTING	DESCRIPTION
AUTO EXPAND AVAILABILITY FOR PROPERTIES [AUTO_FETCH_PROP_AVAIL_COUNT]	Shows the property availability for this number of properties when searching in Look To Book Sales screen.
BLOCK CREATION PROMPT THRESHOLD ROOMS [BLOCK_CREATION_THRESHOLD_ROOMS]	Specifies the number of rooms threshold to prompt for block creation in the Look to Book Sales screen at the time of Book Now.
DEFAULT AVAILABILITY OPTION [DEFAULT_AVAILABILITY_OPTION]	Includes closed rates for rate availability according to this selection. Valid values: • Only Available Rates — When the Closed check box is not selected, any closed rates are not shown. • Include Closed Rates — When the Closed check box is not selected, any closed rates are not shown.
DEFAULT AVAILABILITY VIEW [DEFAULT_AVAILABILITY_VIEW]	Specifies the display set view in the Look to Book screen. Valid values: • Initial Display Set • All Display Sets
DEFAULT DISPLAY SET [O9_DEFAULT_DISPLAY_SET]	Specifies the display set for the Availability grid. Valid values: • All active display sets.
DEFAULT RESERVATION TYPE FOR A NEW RESERVATION [RESERVATION_TYPE]	Specifies the reservation type for a new reservation. Valid values: • All configured reservation types that are active for the property.
LTB ARRIVAL DATE HANDLING [DEFAULT_BLANK_ARRIVAL_DATE]	Specifies the LTB Arrival Date Handling.
LTB ARRIVAL DATE HANDLING FOR HUB [DEFAULT_BLANK_ARRIVAL_DATE_HUB]	Specifies the LTB Arrival Date Handling for Hub.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-48 (Cont.) OPERA Controls — Look To Book Sales Screen Settings

SETTING	DESCRIPTION
PROPERTY ORDER [PROPERTY_ORDER]	Specifies the property order pattern on the Look to Book screen and Reservation Sales Screen (Available when the **Reservation Sales Screen** OPERA Control is active). • MOSTAVAIL: Most available rooms in descending order • LEASTAVAIL: Least available rooms in ascending order • MOSTPERCAVAIL: Highest percentage of available rooms in descending order • LISTPERCAVAIL: Percentage of available rooms in ascending order • SHORTESTDISTANCE: Shortest distance • DEFAULT: property configuration and search criteria (e.g. distance from city.)
RESERVATION ORIGIN CODE [DEFAULT_ORIGIN_CODE]	Specifies the origin code for new reservations.
RESERVATION SALES SCREEN DEFAULT ORIGIN CODE [DEFAULT_CHANNEL_CODE]	Default origin code during booking via the Reservation Sales Screen.
RESERVATION SALES SCREEN DEFAULT SOURCE CODE [DEFAULT_SOURCE_CODE]	Default source code during booking via the Reservation Sales Screen.
RESERVATION SALES SCREEN PROPERTY BROCHURE DISPLAY [RSS_PROPERTY_BROCHURE_DISPLAY]	Select a preferred property brochure display in the Reservation Sales Screen.

OPERA Controls — Membership

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Membership group.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-49 OPERA Controls — Membership Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
AUTO ISSUE AWARDS [AUTO_ISSUE_AWARDS]		Enables the **Issue Awards** option through the **Calculate Membership Points** menu to issue "OTHER" awards for qualified members, and exhausts the members' Available Award Points.
Complimentary **AWARD POINTS REDEMPTION** [AWARD_REDEMPTION]		Activates the redemption of Loyalty Membership Awards. Including: Rate, Upgrade, Package, Payment and Other Awards.
	Complimentary **LOYALTY PAYMENT AWARD** (MEM_AW_PAY)	Provides the ability to offer Loyalty Payment Awards which allow qualified members to use their Award points to pay a portion or all of their bill.
	Complimentary **LOYALTY PAYMENT AWARD WITH ELIGIBLE TRANSACTIONS** [MEM_AW_PAY_ELIGIBLE]	Provides the ability to offer Loyalty Payment Awards which allow qualified members to use their Award points to pay a portion or all of their reservation account balance. A Point Redemption check box is enabled in Configure Transaction Codes, allowing you to identify transaction codes as Eligible for Loyalty Payment Awards. Only transaction codes that are identified as eligible, and posted onto the reservation account, are considered for Payment Award "Payment with Points."
	LOYALTY PACKAGE AWARD [MEM_AW_PKG]	Provides the ability to offer Loyalty Package Awards which allow qualified members to use their Award points to book sell separate award packages as part of their reservation.
	MEMBER UPGRADE AWARD PROMPT ALL DATES (AUTO_UPGRADE_PROMPT_ALL_DATES)	Activates the display of an Upgrade Award prompt on qualified reservations regardless of arrival date. When inactive, the prompt will only display for qualified reservations arriving on the current date and will not display for ones arriving on future dates.
DISPLAY RESERVATION AWARDS [AWARDS_MODULE]		When active, **Eligibility Code, Award Code, Award Number** fields can be added using Page Composer and displayed on reservation Daily Details. This information can be populated by integrated loyalty or central reservation solutions as indication and tracking of Awards applied or Earning eligibility.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-49 (Cont.) OPERA Controls — Membership Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	FOLIO MESSAGE ELIGIBILITY CODE(S) [FOLIO_MESSAGE_ELIGIBILITY_CODES]	Enter comma separated eligibility codes that indicate a reservation night is eligible for earning award/tier points. Eligibility Codes can be sent with the reservation from a third-party central reservation system or from OPERA Customer Loyalty Tracking Cloud Service.
Complimentary **ENROLLMENT** [ENROLLMENT]		Activates the ability to enroll guests and contacts in a membership program managed in an external loyalty solution.
	ENROLLMENT SYSTEMS INTEGRATED WITH OPERA CLOUD (TYPES) THAT ARE ACTIVE TO OPERA CLOUD (ENROLLMENT_TYPE)	Determines the Enrollment Types available when performing an enrollment for a guests or contacts. • Loyalty • Gaming
Complimentary **MEMBERSHIP CLAIMS** [MEMBERSHIP_CLAIMS]		Activates the Membership Claims functionality, enabling the ability to manage Membership Claims and configure Claim Adjustment Limits, Claim Origins, and Claim Types.

Table 11-50 OPERA Controls — Membership Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
CROSS BRAND RECOGNITION [CROSS_BRAND_RECOGNITION]		Activates the ability to recognize Loyalty Members (of a central loyalty membership program) with a pop up message when accessing their reservation. This will help the user identify where this guest originally enrolled and treat accordingly.
	DEFAULT ENROLLMENT SOURCE (DEFAULT_MEMBERSHIP_SOURCE)	Determines the default Enrollment Source which identifies where the Guest was enrolled and will be added to the membership number for Cross Brand Recognition. Either populate the setting using free form text to use as the Enrollment Source, or leave it empty and the Chain Code where the user is logged in will be used.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-50 (Cont.) OPERA Controls — Membership Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
DEFAULT MEMBERSHIP FLAG [DEFAULT_MEMBERSHIP_FLAG_ON_RATE_HEADER]		When active, the rate code Membership checkbox in Financial Details is automatically selected for new rate codes; ensuring the rate code is eligible for point calculation rule configuration.
Loyalty **LEVEL BENEFITS** [LEVEL_BENEFITS]		Level benefits are used to control the level associated to a primary membership. When a level benefit is associated to a membership, the member level will maintain the associated level, unless the member level is higher than the level associated to the level benefit.
ECERTIFICATE REDEMPTION [ECERTIFICATE_REDEMPTION]		Activates the ability for e-certificates issued to the guest profile in OPERA Loyalty to be redeemed in OPERA Cloud PMS as part of a reservation.
LOYALTY MEMBERSHIP CONFIGURATION [OCIS_MEM_CONF]		Activates the ability to configure Membership Class, Membership Types, Status Codes and Qualifying Rates for your primary loyalty membership type when integrated with an external loyalty solution.
MASK MEMBERSHIP NUMBERS [MASK_MEMBERSHIP_NUMBERS]		When active, membership **Card Numbers** are masked by default, and users with the **View Membership Number** task assigned can view the unmasked **Card Number** in the Profile Membership panel.
MEMBER PROFILE UPDATE RESTRICTION [MEMBER_PROFILE_UPDATE_RESTRICTION]		When enabled, once a reservation exists for a member profile, updates to the profile last name, first name, middle name are disabled. Additionally, profile merge is disabled. Users will also be unable to change the profile linked to the reservation.
MEMBERSHIP POINTS EXCEPTION [MEMBERSHIP_EXCEPTION]		Activates the Membership Points Exception functionality wherein exceptions are detected based on the Membership Points exception configuration (For example, Multiple Room Limit, Back to Back Stay, etc).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-50 (Cont.) OPERA Controls — Membership Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
MEMBERSHIP LINK [MEMBERSHIP_LINK]		Activates the ability to link a Profile Membership, of the property Default Membership Type, to a reservation with a different profile for informational purposes only. No Loyalty points will be generated by OPERA Cloud Loyalty or OPERA 5 Loyalty.
MEMBERSHIP RATE RULES [MEMBERSHIP_RATES]		Activates membership rate rules that allows to link a rate code to a membership type/membership level.
	GUARANTEED AVAILABILITY FOR MEMBERS [MEMBER_GUARANTEED_AVL]	Activates guaranteed availability functionality for members.
	GUARANTEED AVAILABILITY WITH RESTRICTION HANDLING [GUARANTEED_RATE_REST_HANDLING]	Allows to select a preferred handling of the guaranteed rates with a restriction during booking. (Available when **Guaranteed Availability for Members** OPERA Control is active. Values: • SHOW_RESTRICTIONS (default): Show applicable rate restrictions during booking • DIRECT_BOOKING: Allow direct booking of the restricted guaranteed rates without showing the restrictions **Note** Applicable in both LTB and RSS booking flows.
MEMBERSHIP PROMOTIONS [MEMBERSHIP_PROMOTIONS]		Enables the configuration of promotions codes for memberships. (Available when the **Promotions Module** OPERA Control is active).
PREFERRED CARD [MEM_PREF_CARD]		Activates the **Preferred Card** checkbox in the profile Membership panel; allowing the guest to determine which Membership type generates points for their stay.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-50 (Cont.) OPERA Controls — Membership Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
LOYALTY MEMBERSHIP CONFIGURATION OCIS_MEM_CONF		Activates the ability to configure Membership Class, Membership Types, Status Codes and Qualifying Rates for your primary loyalty membership type, and redeem awards in OPERA Cloud when integrated with an external loyalty solution.

Table 11-51 OPERA Controls — Membership Settings

SETTING	DESCRIPTION
DEFAULT GLOBAL ENROLLMENT CODE [DEFAULT_ENROLLMENT_CODE]	Determines the Enrollment Code that populates automatically when performing an enrollment or adding membership details to a profile from a HUB location.
DEFAULT MEMBERSHIP TYPE [DEFAULT_MEMBERSHIP_TYPE]	Determines the Membership Type that populates automatically in the Memberships panel when adding membership details to a profile, enrolling a profile or when linking a profile membership to a reservation.
DEFAULT PROPERTY ENROLLMENT CODE [DEFAULT_PROPERTY_ENROLLMENT_CODE]	Determines the Enrollment Code that populates automatically when performing an enrollment or adding membership details to a profile from a Property location. **Note** If the **Default Property Enrollment Code** is not configured, the enrollment code would default from **Default Global Enrollment Code**, when performing an enrollment or adding membership details to a profile from a Property location.

OPERA Controls — Profile

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Profile group.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **ADVANCED TITLE** [ADVANCED_TITLE]		Allows you to define multi-word salutations for the same title and language using suffix designations.
Complimentary **BATCH PROFILE UPDATE** [BATCH_PROFILE_UPDATE]		Enables batch updating of multiple profiles according to profile update actions and criteria. All batch profile updates are executed with a batch job that can be tracked in OPERA Chain Scheduler.
Complimentary **CONTACTS** [CONTACTS]		Enables the creation of contact profiles linked to company or agent profiles. A guest profile can be identified as a contact profile also. Contacts can be linked to reservations as the reservation contact. (Enabled on activation of OPERA Cloud Sales & Event Management Essentials, Standard or Premium subscription).
	ADDRESS TYPE TO COPY WHEN CREATING LINKED PROFILE [COPY_ACC_CON_ADDRESSTYPE_COPY]	Specifies the address information copied automatically when creating a linked profile based on the address type. Valid values: • All configured address types
	DEFAULT CONTACT ADDRESS TYPE [DEFAULT_CONTACT_ADDRESSTYPE]	Specifies the default contact address type. Valid values: • All configured address types
	DEFAULT PHONE TYPE FOR A CONTACT [DEFAULT_CONTACT_PHONETYPE]	Select the Phone Type that is the Default Phone Type when creating Contact Profiles. When the **Mandatory Communication Details** OPERA Control is active, the selected Phone Type is mandatory when creating Contact profiles.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 (Cont.) OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	PHONE TYPE TO COPY WHEN CREATING LINKED PROFILE [COPY_ACC_CON_PHONETYPE_COPY]	Specifies the phone information copied automatically when creating a linked profile based on the phone type. Valid values: • Indicates the profile types for which the profile lookup can be conducted Valid values: – D - Guest – C - Company – T- Travel Agent – S - Source – G - Group All configured communication types
Complimentary **FUTURE & PAST STAYS** [FUTURE_AND_PAST_STAYS]		Enables viewing information from existing future and past reservations connected to a profile.
Complimentary **GUEST PROFILE MATCH** [GUEST_PROFILE_MATCH]		Enables the ability to fetch a guest profile using `getProfileMatch` through Oracle Hospitality Integration Platform (OHIP), based on the specific criteria such as First Name, Last Name, Membership Type and Number, Identification Type and Value, Email address, ClientID, and Subscription Type and Value. Last Name is mandatory required along with at least one criteria to fetch a Profile with `getProfileMatch` API.
	CLIENT ID [GUEST_CLIENT_ID]	Determines if the Client ID is to be considered, only when performing a profile search using `getProfileMatch` through Oracle Hospitality Integration Platform (OHIP).
	EMAIL ADDRESS [GUEST_EMAIL_ADDRESS]	Determines if the Email Address is to be considered, only when performing a profile search using `getProfileMatch` through Oracle Hospitality Integration Platform (OHIP).
	FIRST NAME [GUEST_FIRST_NAME]	Determines if the First Name is to be considered, only when performing a profile search using `getProfileMatch` through Oracle Hospitality Integration Platform (OHIP).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 (Cont.) OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	IDENTIFICATION TYPE AND VALUE [GUEST_IDEN_TYPE_VALUE]	Determines if the Identification Type and Value is to be considered, only when performing a profile search using `getProfileMatch` through Oracle Hospitality Integration Platform (OHIP).
	LAST NAME [GUEST_LAST_NAME]	Determines if the Last Name is to be considered, only when performing a profile search using `getProfileMatch` through Oracle Hospitality Integration Platform (OHIP). (This OPERA Control is always active when the **Guest Profile Match OPERA Control** is active).
	MEMBERSHIP TYPE AND NUMBER [GUEST_MEMBERSHIP_TYPE_NUMBER]	Determines if the Membership Type and Number is to be considered, only when performing a profile search using `getProfileMatch` through Oracle Hospitality Integration Platform (OHIP).
	SUBSCRIPTION TYPE AND VALUE [GUEST_SUBS_TYPE_VALUE]	Determines if the Subscription Type and ID is to be considered, only when performing a profile search using `getProfileMatch` through Oracle Hospitality Integration Platform (OHIP).
Complimentary **IATA COMPANY TYPE** [IATA_COMP_TYPE_ACTIVE]		Provides the ability to define a Travel Agent or Company Type on the profile.
	PAD CORPORATE NUMBER DIGITS [PAD_CORPNO_DIGITS]	Indicates the number of digits, the Corporate number will be padded on the left side with 0.
	PAD IATA NUMBER DIGITS [PAD_IATA_DIGITS]	Indicates the number of digits, the IATA number will be padded on the left side with 0.
Complimentary **INCOGNITO** [INCOGNITO]		Enables the ability to identify specific guests as incognito and use a pseudonym (celebrities, for example).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 (Cont.) OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **KEYWORD** [KEYWORD]		Allows any number of keywords to be attached to a profile in order to associate a variety of identifying information with the profile. This information can be entered in the Keyword field when searching for profiles and as a filter for reporting.
Central **MEMBER REFERRAL** [MEMBER_REFERRAL]		Enables the ability to attach an existing member profile to a new member enrollment, or existing member. This referral allows the members to earn points based on the enrollment.
PROFILE AUTO MERGE [PROFILE_AUTO_MERGE]		Enables the ability to configure profile auto match rules and the ability to manage the auto-merge process result.
Complimentary **PROFILE LOOKUP** [LOOKUP]		Enables the ability to perform profile lookup in integrated systems and download profiles to OPERA Cloud.
	DEFAULT LOOKUP DISPLAY [DEFAULT_LOOKUP_DISPLAY]	When active, profile lookup results default to the external system specified in the **Default External System for Lookup** OPERA Control. Available only when the **External Lookup Behavior** OPERA Control is set to **Simultaneous**.
	DEFAULT EXTERNAL SYSTEM FOR LOOKUP [DEFAULT_EXTERNAL_SYSTEM_FOR_LOOKUP]	The Default External System for Lookup. Applicable when External Lookup Behavior setting = Simultaneous or Force. A value can only be selected when Outbound configuration is setup at Global (Chain) level.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 (Cont.) OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	EXTERNAL LOOKUP BEHAVIOR SETTING [EXTERNAL_LOOKUP_BEHAVIOR]	This setting controls how the Profile Look Up results will be displayed. There are three options available. • When set to **Force**, External Lookup will be done when no matches are found in OPERA Cloud. Results tab for default external interface will be displayed if no local matches are found. • When set to **Simultaneous**, external profile lookup will be done regardless of matches found in OPERA Cloud. Tabs for the OPERA Cloud local results and external system results will be populated. • When set to **Manual**, external profile lookup will not be automatically performed. User will have the ability to select a tab for the external system they would like to see results from.
	PROFILE TYPES FOR LOOKUP [PROFILE_LOOKUP_TYPES]	Indicates the profile types for which the profile lookup can be conducted. Valid values: • D - Guest • C - Company • T- Travel Agent • S - Source • G - Group
Complimentary **PROFILE MAILING PRIVACY** [PRIVACY]		Enables the privacy tab in the Correspondence panel, displaying fields related to guest to opt-in or opt-out of receiving promotional mailings.
	PRIVACY DEFAULT [PRIVACY_DEFAULT_OPTED_IN]	Defaults the following options in the Correspondence panel for new Guest and Contact profiles: • Include in Promotional Mailings / Email • Allow contact via phone • Allow contact via SMS / Text Message • Send information from Third Parties • Participate in Market Research • Allow Contact through Email.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 (Cont.) OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **PROFILE PROTECTION** [PROFILE_PROTECT]		Enables the ability to lock a profile subscribed with an external system, to prevent updates in OPERA Cloud. Users with the Override Profile Protection tasks assigned to the role(s) may override the protection.
	PROFILE PROTECTION TYPE [PROFILE_PROTECTION_TYPE]	Enables specifying the type of profile protection. By Profile Type, allows you to configure profile protection rules per profile type. By Profile, enables a protection flag in the profile overview panel of each profile; when active the profile protection rules are then applied. Valid values: • **By Profile Type**: Configure profile protection rules per profile type. • **By Profile**: Enables a protection flag in the profile overview panel of each profile; when active the profile protection rules are then applied. See Configuring Profile Protection.
Complimentary **PROFILE REVENUE STATISTICS** [PROFILE_REVENUE_STATISTICS]		Displays revenue bucket summary information in Profile Stay Statistics, Revenue Statistics tab.
Complimentary **PURGE COMPANY PROFILE** [PURGE_COMPANY_PROFILE]		Enables the ability to purge Company profiles
	Purge Days for Company Profile [INACTIVE_DAYS_FOR_COMPANY_PURGE]	Define the number of days of no profile activity (E.g. Block/Activities/ Reservation/Folio) after which Company profiles are purged. Defaults to 365 if no value is configured. Valid values: 1 - 3650
	PURGE DAYS FOR INCOMPLETE COMPANY PROFILE [PURGE_COMPANY_INCOMPLETE_PROFILE_DAYS]	Define the number of days of no profile activity and without Address1, Address2, and a defined Communication Method (E.g.: Email, Phone, or Fax) after which Company profiles are purged. Valid values: Any number of days.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 (Cont.) OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **PURGE CONTACT PROFILE** [PURGE_CONTACT_PROFILE]		Enables the ability to purge Contact profiles. (Available when the **Contacts** OPERA Control is active).
	PURGE ADDRESS COUNTRY FOR CONTACT PROFILE [PURGE_CONTACT_ADDRESS_COUNTRY]	Purges Contact profiles with no profile activity for the selected country code based on days configured in the **Purge Days for Contact Profile** OPERA Control. This works in conjunction with the **Purge Last Stay Days for Contact Profile** and **Purge Minimum Stay for Contact Profile** OPERA Controls.
	PURGE DAYS FOR CONTACT PROFILE [INACTIVE_DAYS_FOR_CONTACT_PURGE]	Define the number of days of no profile activity (E.g. Block/Activities/ Reservation/Folio) after which Contact profiles are purged. This works in conjunction with the **Purge Last Stay Days for Contact Profile**, **Purge Minimum Stay for Contact Profile**, and **Purge Address Country for Contact Profile** OPERA Controls. Defaults to 365 if no value is configured. Valid values: 1 - 3650
	PURGE DAYS FOR INCOMPLETE CONTACT PROFILE[PURGE_CONTACT_INCOMPLETE_PROFILE_DAYS]	Define the number of days of no profile activity and without Address1, Address2, and a defined Communication Method (for example, phone, fax, or email) after which Contact profiles are purged. Valid values: Any number of days.
	PURGE LAST STAY DAYS FOR CONTACT PROFILE [PURGE_CONTACT_LAST_STAY_DAYS]	Define the number of days of no stay activity after which Contact profiles are purged. This works in conjunction with the **Purge Days for Contact Profile**, **Purge Minimum Stay for Contact Profile**, and **Purge Address Country for Contact Profile** OPERA Controls. Valid values: Must be greater than the number of the **Purge Days for Contact Profile** setting.
	PURGE MINIMUM STAYS FOR CONTACT PROFILE [PURGE_CONTACT_MIN_STAYS]	Define the minimum number of stays required for a Contact profile not to be purged. This works in conjunction with the **Purge Days for Contact Profile**, **Purge Last Stay Days for Contact Profile**, and **Purge Address Country for Contact Profile** OPERA Controls. Valid values: 1 - 20, or null.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 (Cont.) OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **PURGE GROUP PROFILE** [PURGE_GROUP_PROFILE]		Enables the ability to purge Group profiles.
	PURGE DAYS FOR GROUP PROFILE [INACTIVE_DAYS_FOR_GROUP_PURGE]	Define the number of days of no profile activity (E.g. Block/Activities/ Reservation/Folio) after which Group profiles are purged. Defaults to 365 if no value is configured. Valid values: 1 - 3650.
	PURGE DAYS FOR INCOMPLETE GROUP PROFILE [PURGE_GROUP_INCOMPLETE_PROFILE_DAYS]	Define the number of days of no profile activity and without Address1, Address2, and a defined Communication Method (E.g.: Email, Phone, or Fax) after which Group profiles are purged. Valid values: Any number of days.
Complimentary **PURGE SOURCE PROFILE** [PURGE_SOURCE_PROFILE]		Enables the ability to purge Source profiles.
	PURGE DAYS FOR SOURCE PROFILE [INACTIVE_DAYS_FOR_SOURCE_PURGE]	Define the number of days of no profile activity (E.g. Block/Activities/ Reservation/Folio) after which Source profiles are purged. Defaults to 365 if no value is configured. Valid values: 1 - 3650.
	PURGE DAYS FOR INCOMPLETE SOURCE PROFILE [PURGE_SOURCE_INCOMPLETE_PROFILE_DAYS]	Define the number of days of no profile activity and without Address1, Address2, and a defined Communication Method (E.g.: Email, Phone, or Fax) after which Source profiles are purged. Valid values: Any number of days.
Complimentary **PURGE TRAVEL AGENT PROFILE** [PURGE_TRAVEL_AGENT_PROFILE]		Enables the ability to purge Travel Agent profiles.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 (Cont.) OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	PURGE DAYS FOR TRAVEL AGENT PROFILE [INACTIVE_DAYS_FOR_TRAVEL_AGENT_PURGE]	Define the number of days of no profile activity (E.g. Block/Activities/ Reservation/Folio) after which Travel Agent profiles are purged. Defaults to 365 if no value is configured. Valid values: 1 - 3650.
	PURGE DAYS FOR INCOMPLETE TRAVEL AGENT PROFILE [PURGE_TRAVEL_AGENT_INCOMPLETE_PROFILE_DAYS]	Define the number of days of no profile activity and without Address1, Address2, and a defined Communication Method (E.g.: Email, Phone, or Fax) after which Travel Agent profiles are purged. Valid values: Any number of days.
Complimentary **RELATIONSHIPS** [RELATIONSHIPS]		When enabled, various relationships between the profiles can be established. Family relationship such as mother-daughter or corporate relationship such as parent-company and subsidiary are configurable. Rate entitlements (negotiated rates) can also be inherited to related profiles using relationships. (Enabled on activation of OPERA Cloud Sales & Event Management Essentials, Standard or Premium subscription).
	RELATIONSHIPS RATE INHERIT [RELATIONSHIPS_RATE_INHERIT]	Enables profiles to inherit negotiated rates from associated profile relationships.
Complimentary **SMART PROFILE** [SMART_PROFILE]		Allows you to manage incoming profiles in OPERA Cloud Central through Cloud Hub and ensure profile integrity. SMART Profiles enables you to review summary data, identify profiles with invalid data, and find potential matching profiles.
SCHEDULED ACTIVITIES [PROFILE_ACTIVITIES]		Provides the ability to view and manage scheduled leisure activities when integrated with a leisure activity management solution. For more information, see Configuring Scheduled (Leisure) Activities.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-52 (Cont.) OPERA Controls — Profile Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **STAY RECORDS** [STAY_RECORDS]		Enables the ability to create, import, and view Stay Records in profile Stay Statistics. Stay Records are yearly statistics of guest stays generated during Night Audit with the "Process Guest Stay Data" procedure, summarized by Revenue Groups, and are the basis for the creation of Membership Transactions, used to calculate member Awards and Tier points. **Note** The configuration of Membership Revenue Groups and Membership Revenue Types is required to display revenue summary in Stay Records. With an OPERA Cloud Service, Loyalty subscription, Stay Records can automatically create Membership Transactions.
Complimentary **VIP** [VIP_STATUS]		Provides the ability to track VIP level on guest profiles and filter reservation searches and reports based on VIP value. Global Alerts and Auto Attach can also reference VIP status.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-53 OPERA Controls — Profile Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ACCOUNT FORECAST [ACCOUNT_FORECAST]		Enables the ability to setup room night and revenue forecast on sales account profiles. Forecast is setup per property and by calendar month or fiscal period according to the **Reporting Period** OPERA Control.
ADDRESS VALIDATION [ADDRESS_VALIDATION]		Enables real-time postal address validation via Oracle partner solutions. Requires an account with a supported address validation partner. **Note** Profile sharing must be active.
	ADDRESS VALIDATION SYSTEM [ADDRESS_VALIDATION_SYSTEM]	Defines the integrated address validation solution.
	ADDRESS VALIDATION PROFILE TYPES [ADDRESS_VALIDATION_PROFILE_TYPES]	Defines the profile types for address validation.
	ADDRESS VALIDATION COUNTRY CODES [ADDRESS_VALIDATION_COUNTRY_CODES]	Defines the address countries for address validation.
ALLOW DUPLICATE IDS [ALLOW_DUPLICATE_IATA]		Allows duplicate IDs (CorpID, IATA, SourceID) for Company, Travel Agent, and Source profile types.
AUTO GENERATE CLIENT ID [AUTO_GENERATE_CLIENT_ID]		Automatically generates an ID for newly created Profiles. This ID is referred to as Client ID for Guest/ Group, Corporate ID for Company, and IATA for Travel Agent /Source.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-53 (Cont.) OPERA Controls — Profile Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	GENERATE ID FOR PROFILE TYPES [AUTO_GENERATE_ID_TYPES]	Indicates the profile types where the ID should be generated automatically.
BYPASS CORP ID VALIDATION [BYPASS_CORP_ID_VALIDATION]		When enabled, if the value in the **Corp ID** field is prefixed with ZZ , OPERA Cloud does not validate the Corp ID.
DUPLICATE COMMUNICATION [DUPLICATE_COMMUNICATION]		Allows duplicate communication values across different communication types.
EXTENDED ACCOUNT NAME SEARCH [EXTENDED_ACCOUNT_NAME_SEARCH]		Account Name search to include Name 2 and Name 3 for Company, Travel Agent and Source profiles. Using this search may increase the search time.
IATA SEARCH VIA OPERA CLOUD DISTRIBUTION [IATA_SEARCH_OC_DISTRIBUTION]		Enables the search of Travel Agent Profiles by IATA numbers via OPERA Cloud Distribution. IATA number must be an exact match.
E-CERTIFICATE REDEMPTION [ECERTIFICATE_REDEMPTION]		Activates the e-Certificate functionality.
EXCLUDE RESTRICTED PROFILES FROM PURGE [PURGE_EXCLUDE_CASH_BL_IND]		Exclude Restricted Profiles from purge routine.
IATA SEARCH VIA OPERA CLOUD DISTRIBUTION [IATA_SEARCH_OC_DISTRIBUTION]		Enables the search or Travel Agent Profiles by IATA numbers via OPERA Cloud Distribution. IATA number must be an exact match. An OPERA Cloud Distribution subscription is required.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-53 (Cont.) OPERA Controls — Profile Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
IATA VALIDATION [IATA_YN]		Enables real time validation of IATA numbers entered in Travel Agent profiles using an Outbound request to the IATA (CheckACode) Webservice. **Note** A subscription to the IATA CheckACode service is required.
	IATA OVERRIDE [IATA_OVERRIDE]	When this parameter is enabled, you can override IATA validation and enter an invalid IATA number after the system gives a warning. This parameter is dependent on the IATA VALIDATION parameter.
MANDATORY COMMUNICATION DETAILS [MANDATORY_COMMUNICATION_DETAILS]		Enables mandatory communication entry during profile creation and guest enrollment according to the **Guest Email Type**, **Guest Phone Type**, **Company Phone Type**, and **Default Phone Type for a Contact** OPERA Control settings.
MANDATORY COMMUNICATION DETAILS [MANDATORY_COMMUNICATION_DETAILS]		Enables mandatory communication entry during profile creation and guest enrollment according to the Guest Email Type, Guest Phone Type, Company Phone Type, and Default Phone Type for a Contact OPERA Control settings.
MERGE CONTACT WITH DIRECT GUESTS [MERGE_CONTACT_GUEST]		Enables merge of Contacts with Direct Guests.
MERGE PROFILE OWNERS [MERGE_PROFILE_OWNERS]		Enables to Control if Owners are Merged with Profiles.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-53 (Cont.) OPERA Controls — Profile Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
OVERRIDE ENVELOPE GREETING [OVERRIDE_ENVELOPE_GREETING]		Override the current value of envelope greeting whenever title is changed.
ORPHAN STAY PROFILE PROCESSING [ORPHAN_STAY_PROFILE_PROCESSING]		When the **Attach Orphan Stays for the past 1000 days** job is executed, the system checks if the profile related to the stay record exists in **OPERA Cloud Central**. If the profile is not found, the system verifys if the profile is suspended or if the subscription is specifically for profile stays. If the profile is not in OPERA Cloud Central, a request is sent to the Property Management System (PMS) through Cloud Hub to fetch the profile. Once the profile is successfully created in OPERA Cloud Central, it is processed, and the results are considered by the **Attach Orphan Stays for past 1000 days** job during a subsequent run. This entire process, including the potential suspension or processing of the profile, is monitored by the job to ensure that orphan stays are correctly attached.
PERSONAL INFORMATION PROTECTION [PERSONAL_INFORMATION_PROTECTION]		Activates additional security procedures which include anonymization of profile data.
	NUMBER OF DAYS UNTIL ANONYMIZATION [NUMBER_OF_DAYS_FOR_ANONYMIZATION]	Defines the number of days after the last activity occurs in which the requested profile can be anonymized.
PROFILE DISCOUNTS [PROFILE_DISCOUNTS]		Enables configuring discounts for negotiated rates.
	DEFAULT PROFILE DISCOUNT REASON SETTING [DEFAULT_PROFILE_DISCOUNT_REASON]	Specifies the default discount reason in the Discount Reason field of the reservation when a profile with a discount is attached. Valid values: • All configured reservation discount reasons.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-53 (Cont.) OPERA Controls — Profile Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	PROFILE DISCOUNTS PRIORITY SETTING [PROFILE_DISCOUNTS_PRIORITY]	Specifies the priority when applying profile discounts on a reservation when multiple eligible profiles exist. Valid values: • Profile Type (Company, Travel, Guest, Group, Contact) • Lowest
 PROFILE EMAIL VALIDATION [PROFILE_EMAIL_VALIDATION]		Enables real-time email address validation for the Profile Communication panel through a partner solution at the chain level. Requires an account with a supported email validation vendor.
 PROFILE NAME VALIDATIONS [PROFILE_NAME_STRING]		Enables the configuration of Profile Name Validation and performs a match and validation based on the Profile Type and Name String configured for Company, Travel Agent, and Source profiles.
 PROFILE PHONE VALIDATION [PROFILE_PHONE_VALIDATION]		Enables real-time phone validation for Profile Communication panel through partner solution at chain level. Requires account with supported phone validation vendor.
 PROPERTY ACTION CODES [PROPERTY_ACTIONCODES]		Determines if profile action codes are property specific [Y] or centrally administered [N].
 PUBLISH PROFILE BUSINESS EVENTS WITH MODIFIED NEGOTIATED RATES [PUBLISH_PROFILE_BE_UPDATED_NEG_RATES]		When active, only New, Modified and Deleted Negotiated Rates are included in the Profile Business Events.
 RESTRICT PROFILE MERGE WITH CURRENT AND FUTURE RESERVATIONS [DISALLOW_PROF_MERGE_CURR_FUT_RESV]		Enables merging source and travel agent profiles with current or future reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-53 (Cont.) OPERA Controls — Profile Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
RESTRICTION / FLAGGED REASONS [RESTRICTION_FLAGGED_REASONS]		Enables specifying a list of values for profile flagged and AR identified reasons.
SALES INFORMATION [SALES_INFORMATION]		Enables the Sales Information panel for Company, Travel Agent, Source, and Contact profiles. Sales information is used to track sales related details such as account type, territory and business potential. Accounts and contacts can also be added to mailing lists and reports. For more information, see Managing Sales Information.
	PROPERTY COMPETITION CODES [PROPERTY_COMPETITION_CODES]	Determines if property competition codes are property specific [Y] or centrally administered [N].
	PROPERTY PRIORITY [PROPERTY_PRIORITY]	Determines if profile priority codes are property specific [Y] or centrally administered [N].
	PROPERTY ROOMS POTENTIAL CODES [PROPERTY_ROOMS_POTENTIALS]	Determines if property rooms potential codes are property specific [Y] or centrally administered [N].
STORE EXTERNAL EMAILS [STORE_EXTERNAL_EMAILS]		Activates the ability to view and save emails received from partner systems through the Oracle Hospitality Integration Cloud Service. When the Contact OPERA Control is active for Contact profiles it is available with: • Oracle Hospitality OPERA Cloud Service, Sales and Event Management Standard Edition OR • Oracle Hospitality OPERA Cloud Service, Sales and Event Management Premium Edition

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-53 (Cont.) OPERA Controls — Profile Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
SUBSCRIPTION MANAGEMENT [SUBSCRIPTION_MGMT]		Activates profile subscription management functionality. When OPERA Cloud is integrated to a system that manages profiles, profiles can be subscribed to that system. When a profile is updated, the changes can be automatically updated to all subscribed systems.
	EXTERNAL SYSTEM TO AUTO SUBSCRIBE PROFILES [EXTERNAL_SYSTEM_TO_AUTO_SUSCRIBE_PROFILES]	Select the external database(s) to auto create subscriptions when creating a new profile.
SUSPENDED PRIMARY MEMBERSHIP PROFILES [SUSPENDED_PRIMARY_MEMBERSHIP_PROFILES]		Activates the management of Suspended Primary Membership Profiles for use with OPERA Xchange Interfaced Property Management Systems.
	EXCLUDE MINI PROFILE IN MANAGE PROFILE SEARCH [EXCLUDE_MINI_PROFILE_IN_MANAGE_PROFILE_SEARCH]	When active, will exclude to show the Mini Profile in Manage Profile search. Mini Profile is created temporarily as part of Suspended Profile process.
	INCLUDE MINI PROFILE IN MANAGE PROFILE SEARCH [INCLUDE_MINI_PROFILE_IN_MANAGE_PROFILE_SEARCH]	When active, will include to show the Mini Profile in Manage Profile search. Mini Profile is created temporarily as part of Suspended Profile process.
TAX ID VALIDATION [TAX_ID_VALIDATION]		Ability to validate the Tax ID number entered on the profile. **Code**: `INDIA_TAX_ID_GSTIN_UIN` **Description**: India Tax ID validation for GSTIN/UIN number.
	TAX1 NO FIELD [TAX1_NO_FIELD]	Select the Tax ID validation function that will be associated with the `TAX1_NO` field
	TAX2 NO FIELD [TAX2_NO_FIELD]	Select the Tax ID validation function that will be associated with the `TAX2_NO` field

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-54 OPERA Controls — Profile Settings

SETTING	DESCRIPTION
COMPANY ADDRESS TYPE [COMPANY_ADDRESS_TYPE]	The Default Address Type for new non-guest profiles.
DATA RESIDENCY PROFILE NATIONALITY [DATA_RESIDENCY_PROFILE_NATIONALITY]	For selected nationalities, redirect the create and update of profile actions using Profile Residency Outbound Integration.
NON GUEST PHONE TYPE [NON_GUEST_PHONE_TYPE]	Select the Phone Type that is the default Phone Type when creating Sales Accounts (Company, Travel Agent, Source) and Group profiles. When the **Mandatory Communication Details** OPERA Control is active, the selected Phone Type is mandatory when creating Sales Accounts and Group profiles.
DEFAULT MEMBERSHIP TYPE [DEFAULT_MEMBERSHIP_TYPE]	Populates the selected membership type automatically when adding a new membership to a profile and the membership used for linking a profile membership to a reservation. Valid values: • All active membership types.
GUEST ADDRESS TYPE [INDIVIDUAL_ADDRESS_TYPE]	Select the default address type when creating guest profiles or enrolling guests. Valid values: • All configured address types, except for the Protected address type.
GUEST EMAIL TYPE [GUEST_EMAIL_TYPE]	Select the Email Type that is the default Email Type when creating guest profiles or enrolling guests. When the **Mandatory Communication Details** OPERA Control is active, the selected Email Type is mandatory when creating guest profiles or enrolling guests.
GUEST PHONE TYPE [INDIVIDUAL_PHONE_TYPE]	Select the Phone Type that is the default Phone Type when creating guest profiles or enrolling guests. When the **Mandatory Communication Details** OPERA Control is active, the selected Phone Type is mandatory when creating guest profiles or enrolling guests.
HOUSEKEEPING PROFILE NOTE TYPE [HOUSEKEEPING_PROFILE_NOTE_TYPE]	Select the Note Type within the Individual/Contact Note Group to auto populate to the reservation housekeeping Room Instructions; displayed in the Task Sheet Companion and output on several Task Sheet Report styles.
PURGE ADDRESS COUNTRY FOR GUEST PROFILE [PURGE_ADDRESS_COUNTRY]	Purges guest profiles with no profile activity for the selected country code based on days configured in the **Purge Days for Guest Profile** OPERA Control. This works in conjunction with the **Purge Last Stay Days for Guest Profile** and **Purge Minimum Stay for Guest Profile** OPERA Controls.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-54 (Cont.) OPERA Controls — Profile Settings

SETTING	DESCRIPTION
PURGE DAYS FOR GUEST PROFILE [INACTIVE_DAYS_FOR_GUEST_PURGE]	Defines the number of days of no profile activity after which guest profiles are purged. This works in conjunction with the Purge Days for Incomplete Guest Profile, Purge Last Stay Days for Guest Profile, Purge Minimum Stay for Guest Profile, and Purge Address Country for Guest Profile OPERA Controls. Defaults to 365 if no value is configured. Valid values: 1 - 3650.
PURGE DAYS FOR INCOMPLETE GUEST PROFILE [PURGE_INCOMPLETE_PROFILE_DAYS]	Defines the number of days of no profile activity and without Address1, Address2, and a defined Communication Method (for example, phone, fax, or email) after which guest profiles are purged. This works in conjunction with the Purge Days for Guest Profile, Purge Last Stay Days for Guest Profile, Purge Minimum Stay for Guest Profile, and Purge Address Country for Guest Profile OPERA Controls. Valid values: Any number of days.
PURGE LAST STAY DAYS FOR GUEST PROFILE [PURGE_LAST_STAY_DAYS]	Defines the number of days of no stay activity after which guest profiles are purged. This works in conjunction with the Purge Days for Guest Profile, Purge Minimum Stay for Guest Profile, and Purge Address Country for Guest Profile OPERA Controls. Valid values: Must be greater than the number of the Purge Days for Guest Profile setting.
PURGE MINIMUM STAYS FOR GUEST PROFILE [PURGE_MIN_STAYS]	Defines the minimum number of stays required for a guest profile not to be purged. This works in conjunction with the Purge Days for Guest Profile, Purge Last Stay Days for Guest Profile, and Purge Address Country for Guest Profile OPERA Controls. Valid values: 1 - 20, or null.
RESTRICT PROFILE FIELDS CHANGES AFTER FOLIO CREATION [O9_RESTRICT_FOLIO_PROFILE_CHANGES]	Restrict users from updating selected profile details once a folio is created for a Payee and/or Guest profile. Valid values: • Name: Changes are not allowed to Name, First Name or Title of the Guest Profile • TAX ID: Changes are not allowed to TAX ID or TAX ID2 fields of the Payee profile

OPERA Controls — Rate Management

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Rate Management group.

> **Note**
>
> The following Yield Management OPERA Controls are available with either an Oracle Hospitality OPERA Cloud Foundation or Oracle Hospitality OPERA Cloud Central Management Services subscription.
>
> - Yield Management
> - Yield Market Types
> - Multiple Yield Market Types

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-55 OPERA Controls — Rate Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ADVANCED DYNAMIC BASE RATES [ADVANCED_DYNAMIC_BASE_RATES]		Advanced Dynamic Base Rates Functionality. Dependent rates can be configured in which they are dynamically based off of other rate codes by rate set.
	BAR APPLIED TO RATE DETAIL [BAR_APPLIED_TO_RATE_DETAIL]	When the Advanced Dynamic Base Rates application function is active, BAR will be applied to the selected Pricing schedule.
	BAR DETAILS DISPLAY OPTION [BAR_DETAILS_DISPLAY_OPTION]	When active and in conjunction with the application parameter BAR APPLIED TO RATE DETAIL is active, BAR Amount, BAR Type and Rounding can be set on the Pricing schedule level.
ADVANCED PACKAGES [ADVANCED_PACKAGES]		Enables allowance based package items to be configured. Allowances defines a maximum spend only with the actual revenue for the package item posted via an external system such as point of sale or video system . OPERA Cloud accurately tracks allowances and revenue offset and handles any under-consumption or overage.
BASE RATES [BASE_RATES]		Enables a rate code pricing schedule to be derived from pricing schedule of another rate code, adjusted by a flat amount of percentage. When the pricing schedule is updated from the parent rate all derived rates are adjusted accordingly.
	BASE RATE EXTRA PERSON CALCULATION [BASE_CALC_EXTRA_PERSON]	Applies base rate calculations to extra adult and extra child amounts.
BEST AVAILABLE RATES [BEST_AVAILABLE_RATES]		Enables logic to determine and display the best available rate per room type in the Look to Book sales screen for new reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-55 (Cont.) OPERA Controls — Rate Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	BEST AVAILABLE RATE TYPE [BEST_AVAILABLE_RATE_TYPE]	Valid values: • **BAR BY DAY** — up to 25 rate codes per day may be scheduled for consideration of the Best Available Rate. Look to Book will return up to 4 rate amounts per room type for the Best Available Rate. • **BAR BY LOS** — the Best Available Rate will be determined based on the Length of Stay. Only one rate code per Length of Stay per day may be scheduled as the Best Available Rate. Look to Book will only display 1 rate amount per room type as the Best Available Rate. • **BEST BAR BY DAY** — out of all Best Available Rates only the best rate code (lowest price) will display in Look to Book. You can also setup BAR based rate codes to derive the rate amount from the Best BAR rate code's amount.
	DEFAULT TO HIGHEST BAR [DEFAULT_TO_HIGHEST_BAR]	This parameter enables check box on the rate code definition to force BAR dependent rates to calculate its rate amount based on the highest BAR rate instead of defaulting to its own rate detail when all BAR Rates are closed.
	RATE GROUPS [RATE_GROUPS]	When enabled, out of all Best Available Rates, only the 'best' rate code for each rate group is displayed. You can also setup BAR Based rate codes to calculate the rate amount based on the Best BAR rate code's amount of a particular rate group. (Available when the **Best Available Rate Type** OPERA Control = Best BAR By Day).
CHILD RATES BY DEFINED BUCKETS [CHILD_RATES]		Controls display of child rate fields in rate configuration and Look to Book Sales screen - the rate amount for stay is calculated based on child age range buckets.
	FREE CHILD RATES BY DEFINED BUCKETS [FREE_CHILD_RATES]	Controls whether child rate bucket fields (0 - 2, etc.) appear; Enables free stay for one child when x-number of children are booked per room.
	MIN AGE RATE BUCKET 1 SETTING [MIN_CHILD_AGE_BUCKET1]	Defines the lower number of bucket 1 (i.e., the 0 of 0 - 2).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-55 (Cont.) OPERA Controls — Rate Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	MAX AGE RATE BUCKET 1 [MAX_CHILD_AGE_BUCKET1]	Defines the upper number of bucket 1 (i.e., the 2 of 0 - 2).
	MIN AGE RATE BUCKET 2 [MIN_CHILD_AGE_BUCKET2]	Defines the lower number of bucket 2 (i.e., the 4 of 4 - 6).
	MAX AGE RATE BUCKET 2 [MAX_CHILD_AGE_BUCKET2]	Defines the upper number of bucket 2 (i.e., the 6 of 4 - 6).
	MIN AGE RATE BUCKET 3 [MIN_CHILD_AGE_BUCKET3]	Defines the lower number of bucket 3. That is 8 of 8 - 10).
	MAX AGE RATE BUCKET 3 [MAX_CHILD_AGE_BUCKET3]	Defines the upper number of bucket 3 That is 8 of 8 - 10).
	RATE BUCKET 4 [CHILD4_LABEL]	Specifies the label for the fourth rate bucket. Rate amounts cannot be defined for this bucket in rate code configuration. The field and label only show in reservations.
	RATE BUCKET 5 [CHILD5_LABEL]	Specifies the label for the fifth rate bucket. Rate amounts cannot be defined for this bucket in rate code configuration. The field and label only show in reservations.
DAILY RATES [DAILY_RATES]		When active the price for a rate can be defined on a daily basis rather than date range. A maximum of 10 daily rate codes can be configured for per property.
	ADVANCED DAILY RATES [ADVANCED_DAILY_RATES]	An Advanced Daily Rate behaves like a regular Daily Rate with the exception that the pricing schedule is derived from a source "Advanced Daily Base Rate", instead of manually entering a pricing schedule.
	DAILY RATES MAX DAYS SETTING [DAILY_RATES_MAX_DAYS]	Specifies the maximum number of days that can be configured for the daily rates functionality.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-55 (Cont.) OPERA Controls — Rate Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
DAY TYPES [DAY_TYPES]		Day type codes can be configured to either increased or decreased the rate for eligible rate codes on selected dates on a calendar. Without having to create new pricing schedules rates can be adjusted on specific days throughout a year for event such as a public holiday or Easter. **Note** OTAs and other external systems do not support day type rate adjustments.
DYNAMIC BASE RATES [DYNAMIC_BASE_RATES]		Enables you to setup derived rate codes which dynamically calculates price based on daily or regular rate code, with option to compare with a static pricing schedule on derived rate to offer the lowest rate of the two.
NEGOTIATED RATES [NEGOTIATED_RATES]		Ability to save one or more rate codes on a profile. When creating new reservation for existing profile in Look to Book sales screen OPERA Cloud displays the negotiated rate for profile to ensure the correct rate is quoted to the caller.
	NEGOTIATED RATE DISTRIBUTION WITH SOURCE DATE RANGE [NEGOTIATED_RATE_DISTRIBUTION_WITH_SOURCE_DATE_RANGE]	Enables the ability to distribute a negotiated rate code based on the date range defined at the source property.
OCCUPANT THRESHOLD PRICING METHOD [OCCUPANT_THRESHOLD_PRICING_METHOD]		Enables the pricing method that calculates an extra charge based on the occupants.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-55 (Cont.) OPERA Controls — Rate Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **PROMOTIONS MODULE** [PROMOTIONS_MODULE]		Promotions enables rates codes to linked to a promotion code and sold via query for promotion from Look to Book sales screen; limited used coupons can also be generated for promotions.
	HIDE PROMOTION RATES [HIDE_PROMOTION_RATES]	Hides rate codes attached to promotions in the Look to Book Sales screen unless selecting the specific promotion code.
	PROMOTION COUPON CODES [PROMOTION_COUPON_CODES]	The ability to generate limited use coupon codes linked to a promotion code.
RATE CODE APPROVAL [RATE_CODE_APPROVAL]		Allows to set a layer of approval for all Rates prior to them being activated for use across the Enterprise.
RATE CODE UPLOAD TO ORACLE DISTRIBUTION [MYFIDELIO_RATE_UPLOAD]		When active, a new component checkbox will be displayed in rate code configuration allowing users to select which rate codes should be uploaded to the Oracle Distribution. This should only be enabled if your OPERA Cloud ORS has an Oracle Distribution central connector.
RATE SEASONS [RATE_SEASONS]		Rate seasons enable season codes to be configured with start and end dates. When configuring pricing schedules the season code can be selected.
RATE TIERS [RATE TIERS]		Activates rate tier functionality to configure length of stay tiers and rate schedules by defined lengths of stay.
	RATE TIER DETAILS [RATE_TIER_DETAILS]	Defines the length of stay tiers that rate schedules can be created under. Valid values: • 1-2 • 3-7 • 8-20 • 21+

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-55 (Cont.) OPERA Controls — Rate Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	RATE TIERS CALCULATION [RATE_TIERS_CALCULATION]	Allows the Rate Tier amounts to be based on the Entire Stay of the reservation, the First Tier, or on a Daily Basis. • **DAILY**: The rate is calculated per day, applying the configured tiers and specific amounts based on the corresponding day range. • **FIRST TIER**: The rate for the entire stay is determined by the amount specified in the first tier, irrespective of the duration of the stay. • **ENTIRE STAY**: The rate for the entire stay is determined by the tier that aligns with the total number of nights.
REVENUE POSTING BY ROOM TYPE/ROOM CLASS [RATE_HEADER_MULTIPLE_ROOM TRN_CODE_LINKAGE]		Enables linking multiple transaction codes by Room Class / Room Type on the Financial Details. **Note** If the Revenue Posting by Market Code control is active, this function is used as a secondary posting method.
SUPPRESS RATE [SUPPRESS_RATE]		Enables functionality to support confidential rates - rate pricing is displayed with strike-through text in Look to Book sales screen and the reservation stay details. Only users with the View Suppressed Rate Details task granted are able to view the rate amount details. For more information, see Configuring Rate Code Financial Details
Complimentary **YIELD MANAGEMENT** [YIELD_ MANAGEMENT]		Activates Yield Management functionality.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-55 (Cont.) OPERA Controls — Rate Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	MULTIPLE YIELD MARKET TYPES [MULTIPLE_YIELD_MARKET TYPES]	When active, you can add multiple Yield Market Types on a Rate Code and select a single Yield Market during the Look To Book availability search.
	YIELD MARKET LOOKUP [YIELD_MARKET_LOOKUP]	Perform a lookup of yield market type and guest value in an integrated Yield Management solution.
	YIELD MARKET TYPES [YIELD_MARKET_TYPES]	Activates Yield Market Type Hurdle Functionality.
	CUSTOMER VALUE [CUSTOMER_VALUE]	The UDF selected defines the flex field that the Customer Value returned from the Yield Management solution is temporarily stored when a yield market lookup is performed.
	DEFAULT YIELD MARKET TYPE [DEFAULT_YIELD_MARKET_ TYPE]	Defines the Default Yield Market type for Rate Codes and in Look to Book search.
	YIELD MARKET LOOKUP MEMBERSHIP TYPE [YIELD_MARKET_LOOKUP_ MEMBERSHIP_TYPE]	When the defined Membership is entered on the Look to Book , a Yield Market Lookup will be performed. For all other Membership Types, the Yield Market Lookup will not be performed.
	EXTERNAL SYSTEM FOR HURDLE RATE [EXT_SYS_FOR_HDL_RATE]	Select the external system for Hurdle Rate calculation.

Table 11-56 OPERA Controls — Rate Management Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ABILITY TO QUOTE RATES IN FOREIGN CURRENCIES [MULTI_CURRENCY]		Enables the ability to configure rate and package pricing in a foreign currency and post the associated charges in your properties local currency, based on a daily exchange rate. The **Foreign Currency Handling** OPERA Control must be active. For more information, see OPERA Controls — Cashiering.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-56 (Cont.) OPERA Controls — Rate Management Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	REFERENCE CURRENCY CALCULATION [REFERENCE_CURRENCY_CALCULATION]	Determines how the reference currency appears on the folio. Valid values: • CURRENT — The reference currency amounts are based on the exchange rate calculation for the date the folio is printed/previewed. • ACTUAL — The reference currency amounts are based on the exchange rate calculation for the date the transaction was posted.
ADVANCED RATE CODE POSTING RHYTHM [ADVANCED_RATE_CODE_POSTING_RHYTHM]		When activated you can define posting rhythms for specific date ranges. You can indicate if the posting rhythm can be repeated within the Stay or Sell segment within the Stay.
EXTERNALLY EXCLUDED PACKAGES [EXTERNALLY_EXCLUDED_PACKAGES]		When active, you have the option to configure packages as 'Externally Excluded'. Externally Excluded Packages cannot be added to, deleted from, or modified on reservations from external systems and are only be managed directly within OPERA Cloud.
EXTERNAL AVAILABILITY, RATES AND INVENTORY [EXTERNAL_AVAILABILITY_RATE_INVENTORY]		Enables the ability to source availability and pricing using service locator from an external application without requiring Fixed Rates.
GUEST AGE CATEGORIES **[GUEST_AGE_CATEGORIES]**		Enables the ability to configure guest age categories in order to configure pricing schedules for each guest age category.
	[GUEST_AGE_CATEGORY_1] GUEST AGE CATEGORY 1	Defines the guest age label for category 1
	[GUEST_AGE_CATEGORY_1_TYPE] GUEST AGE CATEGORY 1 TYPE	Defines the guest age type for category 1
	[GUEST_AGE_CATEGORY_2] GUEST AGE CATEGORY 2	Defines the guest age label for category 2
	[GUEST_AGE_CATEGORY_2_TYPE] GUEST AGE CATEGORY 2 TYPE	Defines the guest age type for category 2
	[GUEST_AGE_CATEGORY_3] GUEST AGE CATEGORY 3	Defines the guest age label for category 3

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-56 (Cont.) OPERA Controls — Rate Management Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	[GUEST_AGE_CATEGORY_3_TYPE] GUEST AGE CATEGORY 3 TYPE	Defines the guest age type for category 3
	[MAX_GUEST_AGE_CATEGORY 1] MAX GUEST AGE CATEGORY 1	Defines the maximum age for age category 1 (eg 2 of 0-2)
	[MAX_GUEST_AGE_CATEGORY 2] MAX GUEST AGE CATEGORY 2	Defines the maximum age for age category 2 (eg 5 of 3-5)
	[MAX_GUEST_AGE_CATEGORY 3] MAX GUEST AGE CATEGORY 3	Defines the maximum age for age category 3 (eg 10 of 8-10)
	[MIN_GUEST_AGE_CATEGORY_1] MIN GUEST AGE CATEGORY 1	Defines the minimum age for age category 1 (eg 0 of 0-2)
	[MIN_GUEST_AGE_CATEGORY_2] MIN GUEST AGE CATEGORY 2	Defines the minimum age for age category 2 (eg 3 of 3-5)
	[MIN_GUEST_AGE_CATEGORY_3] MIN GUEST AGE CATEGORY 3	Defines the minimum age for age category 3 (eg 8 of 8-10)
DEFAULT MEMBERSHIP FLAG [DEFAULT_MEMBERSHIP_FLAG_ON_RATE_HEADER]		Selects the Membership check box automatically for all newly created rate codes.
IDENTIFY OWNER RATE CODE [IDENTIFY_OWNER_RATE_CODE]		Enables the ability to identify rate codes as an owner rate code. No Show reservations with an owner rate code are not updated to No Show status during End of Day; instead, the Arrival Date is automatically updated to the next business day. The Rolling No Show Preference OPERA Control determines whether the Arrival Date is updated until the departure day (default) or updated up to the day prior to the departure day.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-56 (Cont.) OPERA Controls — Rate Management Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
IDENTIFY OWNER RATE CODE ATTRIBUTES [FLAG_OWNER_RATE_CODE]		Enables the restriction of a rate code to be used exclusively for Owner and/or Owner Referral reservations. Additionally, it enables the rate code to be applied to rolling no-shows, which means that the arrival date of reservations that were not honored by owners or referrals can be moved forward as part of the end-of-day process. This works in conjunction with the OPERA Control for Rolling No Show Preference, which determines whether the arrival date is adjusted to remain until the departure day (default) or updated to the day before the departure date.
MAXIMUM RATE ALLOWED [MAXIMUM_RATE_ALLOWED]		Enables entry of a maximum rate amount for single and double rate amounts on the Rate Schedules screen. This amount is evaluated at the time of booking and substituted for any night where the discount calculated for the rate exceeds the maximum rate amount.
MINIMUM RATE ALLOWED [MINIMUM_RATE_ALLOWED]		Enables entry of a minimum rate amount for single and double rate amounts on the Rate Schedules screen. This amount is evaluated at the time of booking and substituted for any night where the discount calculated for the rate is lower than the minimum rate amount.
PACKAGE PRICING AND AVAILABILITY ATTRIBUTES [PACKAGE PRICING AND AVAILABILITY ATTRIBUTES]		Enables specifying begin and end sell dates on a package and specifying min/max nights and min/max persons for each date range on a package.
PACKAGES SOLD SEPARATELY [PACKAGES_SOLD_SEPARATELY]		Enables flagging packages as Sell Separate in configuration.
PRIVILEGED RATES [PRIVILEGED_RATES]		Exposes Privileged Rate Code and Privileged Rate Restriction check boxes in the rate code definition panel.
RATE CODE POSTING RHYTHM [DISCOUNT_FREE_NTS]		When active you can define if the rate code amount posts every night or every X nights.
RATE CODE RESTRICTIONS [RESTRICTION_RATECODE]		Enables setting restrictions at the rate code level.
RATE FLOOR [RATE_FLOOR]		Activates rate floors functionality to set a minimum rate amount for rate schedules.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-56 (Cont.) OPERA Controls — Rate Management Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	RATE FLOOR LEVEL OF CONTROL [RATE_FLOOR_LEVEL_OF_CONTROL]	This setting determines at which level rate floors are set. • **RATE LEVEL**: Enables rate floor configuration at the rate code level (all room types). • **ROOM TYPE LEVEL**: Enables rate floor configuration at the room type level.
 RATE OWNERSHIP HANDLING [RATE_OWNERSHIP]		Exposes additional columns on the rate code protection screen for property and central. Also enables flagging rate codes as property or centrally owned.
REFRESH MANUALLY ADDED PACKAGES [REFRESH MANUAL PACKAGES]		Refreshes the attributes of manually added packages on a reservation based on the existing package configuration.
REVENUE POSTING BY MARKET CODE [REVENUE_POSTING_BY_MARKET_CODE]		Determines if revenue posts based on Rate Code Configuration or Market Code Mappings.
SHOW ADD SEPARATE LINE PACKAGES TO RATES IN THE LTB [INCL_PRINT_SEP_PKGS_IN_RATE_QUERY]		Includes packages that are 'Add Rate Separate Line' in the rate amount in the Look To Book Sales screen.
TICKET PACKAGES [TICKET_PACKAGES]		Enables packages to be identified as a ticket and for tickets to be associated to a reservation and show in a ticket panel for action.

Table 11-57 OPERA Controls — Rate Management Settings

SETTING	DESCRIPTION
BASE RATES MAX NUMBER [BASE_RATES_MAX_NUMBER]	Defines maximum number of rate codes attached to a based rate code. Valid values: By default value is 75 and can be increased up to 300 max limit.
DEFAULT PACKAGE TRANSACTION CODE [DFLT_PKG_TRAN_CODE]	Defines the default transaction code for packages on rate codes.
DEFAULT TRANSACTION CODE [DFLT_TRAN_CODE]	Defines the default transaction code for rate codes. Valid values: • All transaction codes associated with a Revenue group and In House Sales = N, In House Payment = N, and In House Deposit = N. This excludes comp transaction codes.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-57 (Cont.) OPERA Controls — Rate Management Settings

SETTING	DESCRIPTION
PACKAGE ATTRIBUTES FOR EXTERNAL RATES [PACKAGE_ATTRIBUTES_FOR_EXTERNAL_RATES]	Enables selecting attributes so that the packages with selected attributes can be attached to externally controlled rate codes. Valid values: • Included in Rate • Add Rate Separate Line • Add Rate Combined Line
PACKAGE AVAILABILITY CONTROLS [PACKAGE AVAILABILITY CONTROLS]	The ability to select specific values activates certain configuration options for package elements and validations when attaching them to a reservation, either manually or through a rate code. Valid value: • DAYS OF THE WEEK • MIN ADV BOOKING DAYS
PACKAGE AVAILABILITY CONTROLS [PACKAGE_AVAILABILITY_CONTROLS]	Ability to configure packages with specific days of the week valid value - DAYS OF THE WEEK.
PACKAGE LOSS [PACKAGE_LOSS]	Defines the package loss transaction code. Valid values: • All transaction codes except those marked as internal only.
PACKAGE PROFIT [PACKAGE_PROFIT]	Defines the package profit transaction code. Valid values: • All transaction codes except those marked as internal only.
RATE INFORMATION TEMPLATE [RATE_INFO_TEMPLATE]	Defines the rate information template to configure generic text that is common for most rate codes. When configuring rate plans, the rate information template for the property can be populated in the rate code's long information field and further modified to suit the individual rate code as needed.

OPERA Controls — Reservations

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Reservations group.

Table 11-58 OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **ACCOMPANYING GUEST** [ACCOMPANYING_GUEST]		Allows for additional guest profiles to be associated with a reservation to identify multiple guests occupying one room. Eliminates needing to create share reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	ACCOMPANYING GUEST THRESHOLD FOR MANDATORY RELATIONSHIP [MANDATORY_RELATIONSHIP_AGE_THRESHOLD]	Defines the age threshold for which an Accompanying Guest requires a Birth Date and Relationship with the primary guest profile. The reservation cannot be checked in if either the Birth Date or a Relationship are missing for the Accompanying Guest when the age is equal to or less than the age threshold.
	ATTACH AND DETACH FOR ACCOMPANYING GUESTS[ATTACH_DETACH_ACCOMPANYING_GUEST]	When enabled, accompanying guests are detached but still remain associated with a reservation.
ADVANCED DAILY DETAILS [ADVANCED_DAILY_DETAILS]		Provides the ability to create and update multiple segments for different rooms or room types on the same reservation. Allows you to manage Scheduled Room Moves for the different segments of a reservation and provides visual indication in Reservations and Housekeeping.
	ALLOW CHECK IN OF MULTI SEGMENT RESERVATIONS PARTIALLY ASSIGNED [ALLOW_CHECK_IN_MULTI_SEGMENT_RESVS_PARTIALLY_ASSIGNED]	When enabled, multiple segment reservations can be checked in when at least the first segment of the reservation is assigned a room. When the control is disabled, all segments of the reservation require an assigned room to complete the check in of the reservation.
Complimentary **ADVANCED DISCOUNT** [ADVANCED_DISCOUNT_REASONS]		The Advanced Discount functionality will enable calculation rules on the discount reasons that can be attached to reservation with the auto attach functionality.
ALERTS [ALERTS]		Alerts can be manually entered for a specific reservation and set to display on screen or print. Global alerts rules can also be configured with conditions as to when the alert should trigger. When the condition is met the alert appears on screen or is printed..
	POPUP ALERTS [FULLSCREEN_ALERTS]	Shows alerts in a pop-up.
	WELCOME OFFER [WELCOME_OFFER_ALERT]	Activates the welcome offer alert functionality to offer certain predefined choices for the guest to select upon check in.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	WELCOME OFFER PAYMENT TRANSACTION CODE [WELCOME_OFFER_PAYMENT_TRANSACTION_CODE]	Defines the transaction code used to settle the Post It transaction selected during the welcome offer process so that it is posted to the PM room specified in the Reservations: Welcome Offer Posting Master application setting.
	WELCOME OFFER OPTIONS [WELCOME_OFFER_OPTIONS]	Specifies the options available for the guest to select as a welcome offer. Valid values: • eCoupons: Select eCoupon codes to attach to a reservation. • Items: Select and associate a value from item inventory to the reservation. • Post It: Select an article from the Post It screen, post and settle to a PM room.
	WELCOME OFFER POSTING MASTER [WELCOME_OFFER_PM_ROOM]	Defines the Posting Master that the Post It transaction is settled to during the welcome offer process.
ALWAYS ALLOW REINSTATING RESERVATIONS [ALWAYS_ALLOW_REINSTATE]		When this feature is enabled, reservations can be reinstated as long as the stay dates are on or after the current business date. If the feature is disabled, reservations with an arrival date in the past that are marked as either **Cancelled** or **No Show** cannot be reinstated.
Complimentary **BACK TO BACK HANDLING FOR LINKED RESERVATIONS** [BACK_TO_BACK_HANDLING_FOR_LINK_RESERVATIONS]		When active, users have the ability to select as Back to Back Linked Reservations that are consecutive in stay to facilitate the room assignment, check out, and check in of these reservations. Visual indication is available in Reservations, Room Diary, Room Management, and Task Sheets.
	ALLOW RESERVATIONS WITH DIFFERENT GUEST PROFILES TO BE SELECTED AS BACK TO BACK [BACK_TO_BACK_HANDLING_FOR_LINK_RESV_WITH_DIFF_GUEST_PROFILES]	When enabled, reservations with different profiles can be selected as Back to Back Reservations.
AUTO MASS CANCELLATION [AUTO_MASS_CANCELLATION]		When active, reservations are considered for auto cancellation based on the way the reservation type is configured.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	AUTO MASS CANCELLATION TIME [AUTO_MASS_CANCELLATION_TIME]	Defines the time when the Auto Mass Cancellation job is started each day. A specified time is required when **Auto Mass Cancellation** OPERA Control is active.
Complimentary **CALLER INFORMATION** [CALLER_INFORMATION]		Caller information can be entered and tracked for all new and updates to reservation. Caller history details is then available.
Complimentary **CONFIRMATION LETTERS** [CONFIRMATION_LETTERS]		Enables the ability to setup one or more confirmation (and cancellation) letters on reservations then generate the letter for a selected reservation or for multiple reservations in a batch process. You can also customize confirmation letters using a rich text editor. **Note** OPERA Control cannot be inactivated when failed supporting records exist. For more information, see Using Supporting Documents.
	CONFIRMATION LETTER TO OPTIONAL EMAIL [CONF_OPTIONAL_EMAIL]	When enabled, it provides an optional email address for sending the confirmation. This email will not be saved on the profile, but is available for resending the confirmation if necessary.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	CONFIRMATION LETTER TO PARTNER SOLUTION [CONFIRMATION_EMAIL_TO_PARTNER]	When enabled, all confirmation letters will be emailed to a partner solution. **Note** To include the intended recipient's e-mail address in the confirmation, the `ConfirmationEmailXML` element can be added to your confirmation RTF templates as well as the subject/body of Confirmation Letter Email Delivery configuration. For more information, see Configuring Delivery Management.
	CONFIRMATION LETTER FOR CANCEL RESERVATION [CONFIRMATION_LETTER_CANCEL_RESERVATION]	Confirmation Letter to be generated when a Reservation is Cancelled.
	DEFAULT PROPERTY COMPANY CONFIRMATION LETTER [DEFAULT_PROPERTY_COMPANY_CONF_LETTER]	Default Property Confirmation Letter to be used for Company Profiles.
	DEFAULT PROPERTY CONTACT CONFIRMATION LETTER [DEFAULT_PROPERTY_CONTACT_CONF_LETTER]	Default Property Confirmation Letter to be used for Contact Profiles.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	DEFAULT PROPERTY GROUP CONFIRMATION LETTER [DEFAULT_PROPERTY_GROUP_CONF_LETTER]	Default Property Confirmation Letter to be used for Group Profiles.
	DEFAULT PROPERTY GUEST CONFIRMATION LETTER [DEFAULT_PROPERTY_GUEST_CONF_LETTER]	Default Property Confirmation Letter used for Guest Profiles.
	DEFAULT PROPERTY SOURCE CONFIRMATION LETTER [DEFAULT_PROPERTY_SOURCE_CONF_LETTER]	Default Property Confirmation Letter used for Source Profiles.
	DEFAULT PROPERTY TRAVEL AGENT CONFIRMATION LETTER [DEFAULT_PROPERTY_TR_AGENT_CONF_LETTER]	Default Property Confirmation Letter used for Travel Agent Profiles.
	PARTNER EMAIL ID FOR CONFIRMATION LETTER [PARTNER_EMAIL_ADDRESS]	This setting stores the recipient email address of the partner, to override the Confirmation letter send operation. If this setting is left blank, the confirmation letter email is sent to the (guest/caller) recipient email address designated by the user.
COPY RESERVATION [ADD_ON]		Enables the ability to copy (clone) a reservation and make further modifications as needed.
CREDIT RATINGS [ADVANCED_POLICIES]		Credit ratings are profile-based and can be referenced in deposit and cancellation rule configuration. When creating a new reservation or block the credit rating for the linked profile is considered in the calculation of the deposit and cancellation schedule.
Complimentary **FIXED RATES** [USE_FIXED_RATE_FUNCTIONALITY]		Enables the ability to manually override the rate amount based on rate code pricing schedule and fix the amount for date(s).
	ALWAYS USE FIXED RATES [ALWAYS_FIXED_RATES]	Stores all reservations created or modified in the system as fixed rate reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	DISCOUNT FOR FIXED RATE [USE_DISCOUNT_FOR_FIXED_RATE]	Calculates the discount for the fixed rate.
	SHARE RATE SPLITTING FOR FIXED RESERVATIONS [SHARE_RATE_SPLITTING_FOR_FIXED_RESERVATIONS]	Enables share rate splitting on reservations marked as fixed with the same rate code.
ITEM INVENTORY [ITEM_INVENTORY]		Enables functionality to track items that can be added to a reservation or sold via a package code; the stock inventory levels are then tracked as items are sold. The availability of inventory items can then be viewed for each date.
	ITEM INVENTORY POOL [ITEM_INVENTORY_POOL]	Activates the item inventory pool functionality, which enables items to be sold with a maximum pool ceiling quantity.
	ALLOW INVENTORY ITEMS OUTSIDE OF STAY DATES [ALLOW_INV_ITMS_OUTSIDE_STAY]	When activated, Inventory Items can be configured as Outside of Stay Dates which enable you to attach the item beginning before and/or ending after the stay dates of the Reservation.
	SELL CONTROL ITEMS [SELL_CONTROL_ITEMS]	When active, the sale of the item will be restricted if there is no inventory available for the selected dates. Users with the task for Override Item Sell Control will be able to book items when there is no inventory available for the selected dates.
Complimentary **MERGE RESERVATIONS** [MERGE_RESERVATIONS]		Enables the option to merge one or more reservations to a main reservation if stay nights are sequential.
	ALLOW MERGE RESERVATIONS FOR FUTURE ARRIVALS [ALLOW_MERGE_FUTURE_ARRIVALS]	When active,the merge reservation option is available for current and future arrivals.If inactive,the merge reservation option is available only for today's arrivals.
	CANCEL REASON CODE FOR MERGE RESERVATIONS [CANCEL_REASON_MERGE_RESERVATIONS]	Choose the Cancel Reason code to be used while reservations(s) are cancelled due to Reservation Merge.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
MESSAGES [MESSAGES]		Enables the ability to enter, notify, and print messages for a guest. Messages can be sent to all guests, individually, by group block and other filter criteria. Messages can be indicated received or not received and printed a user-configurable format. With the appropriate interfaces active the messages will trigger the message-waiting lamp on the telephone in guest room or will send the message directly to the video system.
Complimentary **MOVE RESERVATION WITH SAME RATE AMOUNT** [MV_RSV_SAME_RT_AMT]		Enables the ability to move reservations to another property while retaining the rate amount.
	MOVE FIXED CHARGES WITH RESERVATION [MV_FIXED_CHARGES]	Enables the ability to move fixed charges with reservation . Fixed charge transaction code must be configured in the destination property. (Available when the **Fixed Charges** OPERA Control is active).
	MOVE SELL SEPARATE PACKAGES WITH RESERVATION [MV_SELL_SEPERATE_PKG]	Enables the ability to move sell separate packages with reservation. Package code must be configured in the destination property.
	DEFAULT RESERVATION MOVE RATE CODE [DFLT_RSV_MOVE_RATE_CODE]	The default rate code to be used when the reservation rate code is not configured in the destination property.
Complimentary **PROFILES PER DAY** [PROFILES_PER_DAY]		Enables the ability to define profiles linked to a reservation on a daily basis.
	PROFILES PER DAY PROFILE TYPES [PROFILES_PER_DAY_PROFILE_TYPES]	Selected profile types can be associated to specific days or segments on a reservation. Profile types not selected, are only available to be associated for the entire reservation and not on a per day basis.
RESERVATION AUTO-ATTACH ELEMENTS [RESV_AUTO_ATTACH]		When enabled it is possible to configure rules to auto-update new reservations created in OPERA Cloud or received from integration system and populate values to fields and details based on a defined condition. For example – a reservation for a VIP may be auto-updated with a package item for fruit platter or a trace to housekeeping for special amenities to be placed in the room.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
RESERVATION CONTACT [RESERVATION_CONTACT]		Specifies whether contact profiles functionality is used/shown on the Reservation screen.
RESERVATION DISCOUNTS [RESERVATION_DISCOUNTS]		When enabled discount fields for flat amount, percentage and reason are enabled on reservation details. The rate amount for eligible rate code can then be adjusted for a reservation by the specified discount amount or percentage.
RESERVATION PREFERENCE SOURCES [CONSOLIDATED_PREFERENCES]		Displays the source system that added the reservation preference.
RESERVATION TRACES [RESERVATION_TRACES]		Enables the ability to setup actionable date-driven reminders for specific department on a reservation.
RESERVATION UPGRADE [RESERVATION_UPSELL]		Activates the upgrade functionality to control the price of the upgrade and when it is offered. A reservation upgrade option, based on user tasks, is available while booking a new reservation, changing the stay details of an existing reservation, and to offer to arriving guests during the check in process, for reservations that match the upgrade rules and settings.
	ALLOW FIXED RATE RESERVATIONS [ALLOW_FIXED_RATE]	Enables upgrading reservations that have a fixed rate code attached.
	ALLOW RESERVATION DISCOUNTS [ALLOW_RESERVATION_DISCOUNTS]	Enables reservations that have discounts already attached to be available for upgrade.
	ROOM STATUS [ROOM_TYPE_ROOM_STATUS]	Determines the minimum housekeeping status of a room to be offered for upgrade during check-in.
	MAXIMUM LENGTH OF STAY [MAXIMUM_LENGTH_OF_STAY]	Determines the maximum length of stay for a reservation to be considered for an upgrade.
	MAXIMUM NUMBER OF OFFERS DISPLAYED [MAXIMUM_NUMBER_OF_OFFERS]	Specifies the maximum number of upgrade offers available.
	TRANSACTION CODE [TRANSACTION_CODE]	Specifies the transaction code used to post the upgrade charge. Lists all transaction codes with the **Manual Post** checkbox unchecked.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	OCCUPANCY LEVEL DETAILS [UPSELL_OCCUP_LEVELS]	Defines the number and ranges for the occupancy levels.
Complimentary **RESERVATION UPGRADE - POWERED BY NOR1 PRiME** [ADVANCED_RESERVATION_UPSELL]		(READ ONLY) Requires an active Nor1 subscription and is enabled in Nor1. OPERA Cloud displays Nor1 upgrade offers in reservation stay details and during the check in process, for reservations that match the Nor1 upgrade rules and settings. For more information, see Nor1 Hotel Upsell Solutions. **Note** Cannot be enabled when the **Reservation Upgrade** OPERA Control is active.
Complimentary **ROOM DIARY** [ROOM_DIARY]		The Room Diary provides a chart view of Inventory rooms and the reservations assigned for a selected date range in the past or future. The Room Diary also indicates rooms scheduled for Out of Order or Out of Service status.
SHARES [SHARES]		Enables the ability to create a share reservations; with more than one reservation allocated to a room for the same stay dates, with the option to split the rate between each reservation and posting charges to each reservation account.
	AUTOMATICALLY CHECK IN SHARE RESERVATIONS [AUTO_CHECKIN_SHARE_WITH_RESERVATION]	Share reservations are presented for Check In one after the other.
	CUSTOM SPLIT FOR SHARES [CUSTOM_SPLIT_SHARE]	Activates the ability to create sharing reservations with custom split rate amounts.
	ENFORCE CREDIT CARD ENTRY FOR CREDIT CARD GUARANTEED DURING BREAK SHARE [CC_REQUIRED_ON_BREAK_SHARE]	During separate share, a list of credit card guaranteed reservations which does not have credit card details will be presented in addition to the payment screen to enter new credit card details to be attached to those reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-58 (Cont.) OPERA Controls — Reservations Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	ENFORCE SAME RATE CODE FOR SHARING GUESTS [FORCE_SAME_RATE_CODE_AMONG_SHARES]	• When inactive, share reservations have different rate codes. A pop-up is presented for users to choose and apply changes to all shares when rate code is updated. • When active, OPERA Cloud will force the same rate code for all sharing reservations.
	ENFORCE SAME STAY DATES FOR SHARING GUESTS [FORCE_SAME_STAY_AMONG_SHARES]	Activates the ability to maintain the same stay dates among sharing reservations.
	ROUTE TRANSACTIONS TO PAYEE [ROUTE_ALL_TRANSACTIONS_TO_SHARE]	When active, the **Route Transactions to Payee** field defaults with a value in Look to Book, or when combining or creating a share reservation, to auto-route all charges to the selected payee.
	DEFAULT SHARE PRICE DISTRIBUTION METHOD [DEFAULT_SHARE_PRICE_DISTRIBUTION_METHOD]	Defines the default Share Price Distribution option when share reservations are combined or created. When a value is not defined, you are required to select a Share Price Distribution option when creating a share reservation.
	DEFAULT RESERVATION TYPE FOR SHARES CREATED FROM PROFILE [RESERVATION_TYPE_FOR_PROFILE_SHARE]	Default Reservation Type for Share Reservations created through shares panel using a profile.
WAITLIST [WAITLIST_RESERVATION]		Enables the ability to create reservation in waitlist status and confirm the reservation at a future date when the room type or rate availability is open.
	SHOW WAITLIST FOR OPEN RATES [SHOW_WAITLIST_FOR_OPEN_RATES]	Shows the waitlist for open rates on the Look To Book Sales screen. Enables the ability to create reservation in waitlist status and confirm the reservation at a future date when the room type or rate availability is open.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-59 OPERA Controls — Reservations Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ACTIVATE THE SELL MESSAGE FUNCTIONALITY [SELL_MESSAGE]		Activates the setup and display of date-driven sell messages to reservation and sales agents in Look to Book, Reservation, GRC, Business Block and Function Diary.
ALWAYS SHOW SELL MESSAGES [ALWAYS_SHOW_SELL_MESSAGES]		When inactive, users will not see sell messages in the reservation presentation. Unless, it is a new reservation.
ATTACH TRAVEL AGENT / SOURCE PROFILES TO RESERVATIONS [ALLOW_TA_AND_SOURCE_ON_RESV]		Allow attachment of Travel Agent and Source profiles to reservations.
AUTO DEPOSIT COLLECTION [AUTO DEPOSIT SCREEN]		For reservations with existing deposit schedules, the deposit panel will automatically display when user saves the reservation and it may also take the user one step further and automatically open the deposit payment form with deposit amount pre-populated based on configuration.
CLOSING SCRIPT NEW AND UPDATE RESERVATION [ENDSCRIPT]		Display the Closing Script while creating or updating a reservation on the Look To Book Sales Screen.
COMPONENT VERIFICATION [COMPONENT_VERIFICATION]		Component suite availability is deducted when a room comprising a component suite is assigned to a reservation. When inactive, component suite available is tracked at the room type level. (Available when the **Component Suites** OPERA Control is active).
COPY PROFILE RESERVATION NOTES TO RESERVATION [RESERVATION_COMMENTS]		Reservation Notes on profile will be automatically copied to new reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-59 (Cont.) OPERA Controls — Reservations Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
CREATE INTERNAL CHARGE NUMBER [CREATE_INTERNAL_CHARGE_NUMBER]		Controls the automatic creation of an internal charge number for each reservation. When this parameter is set to Off, no internal charge number will be automatically created for any reservation. When this parameter is set to On, OPERA Cloud will automatically create an internal charge number for each new reservation. The charge number is created at the time that a reservation is created in the property management system. The system will also create an internal charge number when a new reservation is inserted from a third party system. In other words, when this parameter is set to On, the system will create an internal charge number when a confirmation number is generated. Note that when a reservation is moved from one property to another, a new charge card number will be created as the moved to property may support a different format.
	CHARGE NUMBER PATTERN PREFIX [CHARGE_NUMBER_PATTERN_PREFIX]	Enables you to define a specific alpha or numeric code with which the hotel charge card number should begin. Adds a prefix to all newly generated hotel charge card numbers. For example, enter DL in this field if you want all hotel charge card numbers to begin with the letters DL.
	CHARGE NUMBER PATTERN [CHARGE_NUMBER_PATTERN]	Defines the pattern to be used when generating hotel charge card numbers. Multiple selections can be defined for the pattern. For example, you can press Ctrl and click to select PROPERTY and NAME ID from the multi-selection pane. This will tell the system to use the property code and the guest's name ID when creating new hotel charge card numbers. Leave this field blank to use the default Oracle Sequence Number.
	CHARGE NUMBER PATTERN SUFFIX [CHARGE_NUMBER_PATTERN_SUFFIX]	Enables you to define a specific alpha or numeric code with which the hotel charge card number should end. For example, enter ORL in this field if you want all hotel charge card numbers to end with the letters ORL.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-59 (Cont.) OPERA Controls — Reservations Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	CHARGE NUMBER MAXIMUM SIZE [CHARGE_NUMBER_MAXIMUM_SIZE]	Enables you to define any size limitations to the hotel charge card number. The resulting charge number must contain between five and 60 characters. This is dependent on any restrictions for the 3rd party system.
CREDIT RATINGS [ADVANCED_POLICIES]		Credit ratings are profile-based and can be referenced in deposit and cancellation rule configuration. When creating a new reservation or block, the credit rating for the linked profile is considered in the calculation of the deposit and cancellation schedule.
 DO NOT VALIDATE RATE CODE FOR OHIP RESERVATIONS [DO_NOT_VALIDATE_RATE_CODE_FOR_EXTERNAL_RESERVATIONS]		When active, reservations received via the Oracle Hospitality Integration Platform bypass rate code validation. **Note** For reservations with an invalid rate code, rate affecting changes made in OPERA Cloud (for example: extending the departure date) requires selection of a valid rate code.
ENFORCE THE MINIMUM OCCUPANCY SET ON THE ROOM TYPE [ENFORCE_ROOM_TYPE_MIN_OCCUPANCY]		When enabled, the Minimum Occupancy value set in room type configuration is considered for availability search at the time of booking. When disabled, the Default Occupancy value set in room type configuration is considered for availability search booking reservations.
EXTERNAL NOTIFICATIONS [RESERVATION_EXTERNAL_NOTIFICATIONS]		Ability to flag a reservation for guest opt-in to receive external notifications related to their stay. Note: Business event configuration and subscription are required to receive notification when this flag is updated on a reservation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-59 (Cont.) OPERA Controls — Reservations Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
FLOOR PLAN [FLOOR_PLAN]		Floor Plans provide a graphical layout of floors, rooms, and other physical features such as stairways, air conditioning closet, elevators, and so on. Floor plans can use color coding for room status and provide room-specific information, including the property name, room number, front office status, room status, room type, and reservation status. (Available with an OPERA Cloud Foundation or OPERA Cloud Central Management Services subscription).
GUEST PAY ONLY FILTER WITHIN THE RATE INFO SCREEN [GUEST_PAY_FILTER_IN_RATE_INFO]		Ability to see the Guest Pay Only Filter within the Rate Info screen.
MANDATORY METHOD OF PAYMENT [MANDATORY_MOP]		Method of Payment is Mandatory at the Time of Reservation.
MULTIPLE MEMBERSHIPS VIEW [MULTIPLE_MEMBERSHIPS_VIEW]		Ability to view up to three selected reservations memberships in the selected views.
	RESERVATION MEMBERSHIP 1 [RESERVATION_MEMBERSHIP_1]	First membership to display in the reservation details.
	RESERVATION MEMBERSHIP 2 [RESERVATION_MEMBERSHIP_2]	Second membership to display in the reservation details.
	RESERVATION MEMBERSHIP 3 [RESERVATION_MEMBERSHIP_3]	Third membership to display in the reservation details.
MANDATORY ROOM MOVE REASONS [MANDATORY_ROOM_MOVE_REASONS]		Activating this Parameter will make the Reason field mandatory on the Room Move screen.
POPULATE PRIMARY PROFILES FOR RESERVATIONS [POPULATE_PRIMARY_PROFILES_FOR_NEW_RESV]		Populate Primary Company, Travel Agent, and Source profiles for the Guest for New Availability searches.
PROPERTY CALENDAR [PROPERTY_CALENDAR]		Activates the property calendar functionality.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-59 (Cont.) OPERA Controls — Reservations Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
RATE CODE MANDATORY FOR BLOCK PICKUP [RATE_CODE_MANDATORY_BLOCK]		Rate Code Mandatory for Reservations picked up from block.
REFRESH RATES FOR EXTENSION DATES ONLY [REFRESH_RATES_FOR_EXTENSION_DATES_ONLY]		Refresh rates for extension dates only when extending the stay period on an existing reservation.
REINSTATE EARLY DEPARTURE TO LAST DEPARTURE DATE [REINSTATE_TO_LAST_DEPARTURE_DATE]		When reinstating an Early Departure, the departure date to default to the departure date prior to checkout.
ROOM TYPE AUTO POPULATE [ROOM_TYPE_AUTO_POPULATE]		Enables Auto Populate check box at Property Level for Room Type Configuration. By selecting this Auto Populate check box, this room type will automatically default for all new Rate Codes in the Room Type field on the Rate Code Header screen.
ROOM TYPE TO CHARGE [ROOM_TYPE_CHARGE]		Exposes the Room Type to Charge field for reservations. With this Room Type to Charge field, it is possible to have a reservation be inventoried on one room type and charged as if it was of another differing room type.
TA RECORD LOCATOR [TA_RECORD_LOCATOR]		Allow Travel Agent Record Locator entry and search on Reservation Screen
TAX FREE GUESTS [TAX_FREE_GUESTS]		Allows the User to make a distinction between Taxable and Tax Free Guests (by Adults & Children) that will be reported on the statistical report for stat_countrybyday as indicated on each reservation.
TRANSPORTATION [TRANSPORTATION]		Enables the Transportation panel in reservation; for entry of arrival and departure transportation requirements. Reservation transport requirements can be listed on the Transport Requirements report.
UNIQUE CONFIRMATION NUMBER FOR LINKED RESERVATION [UNIQUE_LINKED_RES_CONF_NO]		Unique Confirmation Number for Linked Reservation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-59 (Cont.) OPERA Controls — Reservations Parameters

PARAMETER	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
ECOUPONS [ECOUPONS]		Activates the eCoupons functionality which allows a property to configure eCoupon code specific for items that can be redeemed in outlets via the Point of Sales system by a guest which will be posted automatically to the specific posting master room.
	ATTACH ECOUPON PRIOR TO THE ARRIVAL DATE [ATTACH_ECOUPONS_PRIOR_ARRIVAL]	When active, eCoupons can be attached to a reservation as soon as the reservation is created. When inactive, the eCoupon panel will be displayed under a reservation only from its arrival date and the user can attach eCoupons only when the reservation arrival date is reached.

Table 11-60 OPERA Controls — Reservations Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
AUTOMATICALLY REFRESH RATES ON RESERVATION [AUTO RATE REFRESH CRITERIA]		Automatically refresh rates on reservation based on the selected values.
COMMISSION PAY [COMMISSION_PAY]		Select to Pay Commission to the Travel Agent only, Source only or both the Travel Agent and Source attached to the Reservation.
DEFAULT BLOCK EXTERNAL REFERENCE TYPE FOR RESERVATIONS [DEFAULT_BLOCK_EXT_ID_TYPE]		Determines the External Reference Type copied to Block Reservations created. (Available when the **Business Blocks** OPERA Control is active.
 DEFAULT CHAIN COMPANY CONFIRMATION LETTER [DEFAULT_CHAIN_COMPANY_CONF_LETTER]		Default Chain Confirmation Letter used for Company Profiles.
 DEFAULT CHAIN CONTACT CONFIRMATION LETTER [DEFAULT_CHAIN_CONTACT_CONF_LETTER]		Default Chain Confirmation Letter to be used for Contact Profiles.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-60 (Cont.) OPERA Controls — Reservations Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
DEFAULT CHAIN GROUP CONFIRMATION LETTER [DEFAULT_CHAIN_GROUP_CONF_LETTER]		Default Chain Confirmation Letter to be used for Group Profiles.
DEFAULT CHAIN GUEST CONFIRMATION LETTER [DEFAULT_CHAIN_GUEST_CONF_LETTER]		Default Chain Confirmation Letter used for Guest Profiles.
DEFAULT CHAIN SOURCE CONFIRMATION LETTER [DEFAULT_CHAIN_SOURCE_CONF_LETTER]		Default Chain Confirmation Letter to be used for Source Profiles.
DEFAULT CHAIN TRAVEL AGENT CONFIRMATION LETTER [DEFAULT_CHAIN_TR_AGENT_CONF_LETTER]		Default Chain Confirmation Letter to be used for Travel Agent Profiles.
DEFAULT SELECT ANOTHER PROFILE SEARCH CRITERIA [DEFAULT_SEARCH_CRITERIA]		Default search criteria when selecting another profile for a reservation.
EXTERNAL REFERENCE TO DISPLAY [EXTERNAL_REF_NUMBER_TO_DISPLAY]		External Reference to display in Reservations Additional Details.
GUEST STAY INDICATION [GUESTSTAY_INDICATION]		Controls how the Guest Stay Indicator will show in each Reservation.
MANDATORY AR ACCOUNT FOR DIRECT BILL PAYMENT TYPE [MANDATORY_AR_ACCOUNT_FOR_DIRECT_BILL_PAYMENT_TYPE]		Create Reservation or check-in is not possible with Direct Bill payment for a reservation with no AR Account.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-60 (Cont.) OPERA Controls — Reservations Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
MAXIMUM NUMBER OF NIGHTS [RESV_MAX_NIGHTS]		The Maximum Number of Nights a Reservation can be booked. If a user has the Max Rooms Upper Limit task granted, effective max rooms will be the higher setting between this and Hub level Room Limit Per Reservation setting otherwise lower setting will be effective. The maximum allowed value for this setting is 999.
MAXIMUM NUMBER OF NIGHTS — HUB LEVEL [MAX_NO_OF_NIGHTS]		The Maximum Number of Nights a Reservation can be Booked and the maximum length on a business block header. This value is also used to determine In House Bookings that display within the Business Block screen. The maximum allowed value for this setting is 999.
MAXIMUM NUMBER OF ROOMS PER RESERVATION [RESV_MAX_ROOMS]		The Maximum Number of Rooms a Reservation can be booked. If user have a Max Rooms Upper Limit task, effective max rooms will be the higher setting between this and Hub level Room Limit Per Reservation setting otherwise lower setting will be effective.
MAXIMUM RESERVATION ADVANCED BOOKING DAYS [MAX_RESV_ADV_BOOKING_DAYS]		Controls how far into the future from the current business date a reservation can be created.
PURGE RESERVATION ATTACHMENTs [PURGE_RESERVATION_ATTACHMENTS]		Number of days to purge reservation attachments for checked out, cancelled and no-show reservations. • 30 Days • 90 Days • 180 Days • 730 Days (Default) (Available when the **File Attachments** OPERA Control is active).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-60 (Cont.) OPERA Controls — Reservations Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
RESERVATION COLOR DEFINITION [RESERVATION_COLOR_DEFINITION]		A color indicator can be applied to either a reservation or to a guest as a quick reference to users when performing searches. The description for the colors can be anything that is required to uniquely identify specific reservations or guests. • MARKET_CODE - Use color of the market code selected in the reservation • MEMBERSHIP_LEVEL - Use color of the Levels for Default Membership Type (only visible when a value is defined for Profiles > Default Membership Type) • VIP_LEVEL - Use color of the VIP Level of the Guest (visible when the VIP function is active) • RESERVATION - Use a color selected in the Reservation (Stay Details - Display Color field) • NONE - No Colors
RESERVATION NOTIFICATION DEFAULT CANCELLATION REASON CODE [RN_CANCEL_REASON]		Default Cancellation Reason applied to a Reservation in OPERA Cloud, when the Cancellation Reason Code in the `postCancelReservation` operation request body is either null or invalid, and the `reservationNotification` element set to true. Applicable only when `postCancelReservation` is called through Oracle Hospitality Integration Platform (OHIP).
RESERVATION NOTIFICATION DEFAULT GUARANTEE CODE [RN_GUARANTEE_CODE]		Default Guarantee Code applied to a Reservation in OPERA Cloud when the Guarantee Code in either the `postReservation` and `putReservation` operations request body is null or invalid, and the `reservationNotification` element set to true. Applicable only when `postReservation` and `putReservation` is called through Oracle Hospitality Integration Platform (OHIP).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-60 (Cont.) OPERA Controls — Reservations Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
RESERVATION NOTIFICATION DEFAULT MARKET CODE [RN_MARKET_CODE]		Default Market Code applied to a Reservation in OPERA Cloud. OPERA Cloud will first apply the Market Code in the request body of `postReservation` and `putReservation`. If that is null or invalid, OPERA Cloud will next use the Market Code set on the Rate Plan code. If that is null, then the Market Code in the Reservation Notification Default Market Code setting will be used as long as the `reservationNotification` element is set to true in `postReservation` or `putReservation` request body. Applicable only when `postReservation` and `putReservation` is called through Oracle Hospitality Integration Platform (OHIP).
RESERVATION NOTIFICATION DEFAULT PAYMENT METHOD [RN_PAYMENT_METHOD]		Default Payment Method applied to a Reservation in OPERA Cloud, should the Payment Method in the `postReservation` and `putReservation` REST API request body be null or invalid, and the `reservationNotification` element set to true. Applicable only when `postReservation` and `putReservation` is called through Oracle Hospitality Integration Platform (OHIP).
RESERVATION NOTIFICATION DEFAULT RATE PLAN CODE [RN_RATE_PLAN]		Default Rate Plan Code applied to a Reservation in OPERA Cloud, should the Rate Plan Code in the `postReservation` and `putReservation` REST API request body be null or invalid, and the `reservationNotification` element set to true. Applicable only when `postReservation` and `putReservation` is called through Oracle Hospitality Integration Platform (OHIP).
RESERVATION NOTIFICATION DEFAULT ROOM TYPE [RN_ROOM_TYPE]		Default Room Type applied to a Reservation in OPERA Cloud, should the Room Type code in the `postReservation` and `putReservation` REST API request body be null or invalid, and the `reservationNotification` element set to true. Applicable only when `postReservation` and `putReservation` is called through Oracle Hospitality Integration Platform (OHIP).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-60 (Cont.) OPERA Controls — Reservations Settings

SETTING	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
RESERVATION NOTIFICATION DEFAULT SOURCE CODE [RN_SOURCE_CODE]		Default Source Code applied to a Reservation in OPERA Cloud. OPERA Cloud will first apply the Source Code in the request body of `postReservation` and `putReservation`. If that is null or invalid, OPERA Cloud will next use the Source Code set on the Rate Plan code. If that is null, then the Source Code in the Reservation Notification Default Source Code setting will be used as long as the `reservationNotification` element is set to true in `postReservation` or `putReservation` request body. Applicable only when `postReservation` and `putReservation` is called through Oracle Hospitality Integration Platform (OHIP).
ROOM LIMIT PER RESERVATION — HUB LEVEL [PER_RESERVATION_ROOM_LIMIT]		Maximum Number of Rooms Sold per Reservation.

OPERA Controls — Room Management

The following tables outline the functions, parameters, and settings that can be configured in the OPERA Controls Room Management group.

Table 11-61 OPERA Controls — Room Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
Complimentary **ADVANCED TASK SHEETS** [TASK_ASSIGNMENT]		Activates Task Sheet Assignment functionality. Allows creation of Task Sheets using the Generation of Task Sheets which provides customizable assignments based on the property needs. Task Sheets can be assigned using multiple codes to complete specific tasks for the rooms in the Task Sheet. Task Codes can be created in the Task Sheets jump within Accommodation Management. For more information, see Task Sheets

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-61 (Cont.) OPERA Controls — Room Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	TASK COMPANION TIMER [TASK_COMPANION_TIMER]	Enables you to set the timer on the Task Companion and define if it should count up or down. Valid values: • **DEC**— Displays time decreasing. • **INC**— Displays time increasing. • **OFF**— Does not display time.
	ADDITIONAL TASK SHEETS [ADDITIONAL_TASK_ASSIGNMENTS]	Additional task sheets to be created during the 'Generate Automatic Task Assignment' process. Leaving this setting blank keeps the original task assignment functionality. Valid values: • DND (Do Not Disturb task sheet) — All rooms that are set to do not disturb on the Guest Service Status screen are assigned to a separate task sheet. This setting is only available when Guest Service Status is active. • NSR (No Service task sheet) — An additional task sheet is created that contains all rooms that are not scheduled for service.
BUILDING MANAGEMENT [BUILDINGS]		Provides the ability to configure Buildings and Building Groups and associate Rooms to the Buildings. This configuration can be used with the Task Sheet Work flow functionality to breakout task sheets by buildings. For more information, see • Configuring Building Groups • Configuring Buildings
COMPONENT SUITES [COMPONENT_SUITES]		Ability to configure component suites that are comprised of two or more existing room types/rooms that can then be sold and managed as their own room type/ rooms. For more information, see Configuring Room Types.
DISCREPANT ROOMS [DISCREPANT_ROOMS]		Ability to track discrepancies between the status of a room according to the Front Office, and the status of a room according to Housekeeping. For more information, see Managing Room Discrepancies.
	Complimentary **PERSON DISCREPANCY** [PERSON_DISCREPANCY]	Provides the ability to track discrepancies between the number of persons on the reservation and the number of persons in the room according to Housekeeping.
GUEST SERVICE STATUS [GUEST_SERVICE_STATUS]		Ability to set and manage the Do Not Disturb, Service Declined and Make Up Room guest service status for in house reservations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-61 (Cont.) OPERA Controls — Room Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	RESET GUEST SERVICE STATUS DURING END OF DAY [RST_GUEST_SERVICE_STATUS_EOD]	Ability to reset the Guest Service Statuses selected in this OPERA Control Setting to **No Status Selected** during the End of Day. Available values are Do Not Disturb, Make Up Room and Service Declined.
HOLD ROOMS [HOLD_ROOMS]		Ability to place rooms into a hold status for a specified duration of time, preventing them from being available for room assignment by other users. For more information, see Configuring Hold Room Conditions.
Complimentary **HOUSEKEEPING BOARD** [HSK_BOARD]		The Housekeeping Board provides you with room and room status information plus reservation and profiles details for each room, if applicable. Using the Housekeeping Board you can search and update the status of a room or a range of rooms.
HOUSEKEEPING TASK SCHEDULING [FACILITY_MANAGEMENT]		Task scheduling functionality allows for configuration of housekeeping tasks such as Full Service, Light touch, and so on, and facility codes for the items associated with the facility task (such as Hand towel, Bath Amenities, Pillowcase). Task schedules are then configured for each room type with OPERA Cloud determining which task to schedule per day per room. Users with rights can override the computed schedule to customize according to guests unique requirements. Task forecast reports are also available to assist with labor forecasting.
	ADVANCED CREDIT RULES [TASK_ASSIGNMENT_WORKFLOW]	When active, a new option will be available in the Housekeeping Credit for Room Task Rules setting, allowing a property to allocate credits based on configured rules. Credit Rules are also available when the Housekeeping Credits setting is set to either Room or Facility.
	ADVANCED TASK SCHEDULING [ADVANCED_FACILITY_TASKS]	Ability to schedule tasks based on the Rate Codes, Specials, Market Codes, Membership Levels and VIP codes on the reservation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-61 (Cont.) OPERA Controls — Room Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
INSPECTED STATUS [USE_INSPECTED_STATUS]		Activates the additional room status called inspected. • When the **Inspected Status** OPERA Control is active, inspected status rooms display a green icon to indicate that a room is in a status ready for check in, clean status rooms display a blue icon. • When the **Inspected Status** OPERA Control is inactive, clean status rooms display a green icon , to indicate that a room is in a status ready for check in.
MAINTENANCE [MAINTENANCE]		Ability to manage and track room maintenance requests. For more information, see Room Maintenance .
Complimentary **OUT OF ORDER** [OUT_OF_ORDER]		Ability to set rooms Out of Order for a certain amount of time, which will prevent the assignment of these rooms to reservations. An Out of Order room is taken out of inventory and cannot be sold. For more information, see Managing Out of Order Rooms.
	OUT OF ORDER DEFAULT REASON CODE [OUT_OF_ORDER_DEFAULT_REASON_CODE]	Default Reason Code to be used for new Out of Order records.
Complimentary **OUT OF SERVICE** [OUT_OF_SERVICE]		Ability to set rooms Out of Service for a certain amount of time. Out of Service rooms can still be assigned to reservations and do not affect inventory. For more information, see Managing Out of Service Rooms.
	OUT OF SERVICE DEFAULT REASON CODE [OUT_OF_SERVICE_DEFAULT_REASON_CODE]	Default Reason Code to be used for new Out of Service records.
PICKUP STATUS [PICKUP_STATUS]		Activates the additional room status called pickup.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-61 (Cont.) OPERA Controls — Room Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
QUEUE ROOMS [QUEUE_ROOMS]		Ability to place reservations on queue, which denotes priority rooms for hotel operations. Queue rooms affect the cleaning order within the task sheet companion. For more information, see Managing Reservation Queue Status.
	QUEUE RUSH TEXT DEFAULT NUMBER [QRUSH_TEXT_DEFAULT_NUMBER]	Defines the default mobile number to which queue rush messages will be sent.
ROOM CONDITIONS [HOUSE_ASSIGNMENT]		Ability to hold specific rooms aside from being blocked by the front office without affecting inventory. For more information, see Managing Room Conditions.
Complimentary **TASK SHEET** [SIMPLE_TASK_SHEET]		When active, you will be able to create task sheets with fixed options. When Housekeeping Task Scheduling is active, you will be able to run task sheets for multiple tasks. When **Housekeeping Task Scheduling** OPERA Control is inactive, tasks are not considered and instead rooms with the selected room status(es) will be placed on the task sheets. For more information, see Task Sheets.
TURNDOWN [TURNDOWN]		Allows for rooms to be marked for Turndown and the creation of Turndown Task Sheets, using the Generation of Task Sheets process.
	TURNDOWN SERVICE [TURNDOWN_SERVICE]	This setting controls what the **Turndown** check box on a reservation is based on. • When set to **Room**, reservations that are assigned to a room that has the Turndown checkbox checked within room configuration will have the Turndown checkbox checked for the duration of the stay. • When set to **Reservation Attribute** reservations will have the Turndown checkbox checked when the reservation has any of the attributes attached that are configured in the Turndown Attribute settings (Market Code, Membership Type, Membership Level, Rate Code, Room Type, Special Request Code, VIP Level).
	TURNDOWN SERVICE ATTRIBUTE - MARKET CODE [TURNDOWN_ATTRIBUTE_MARKET_CODE]	Provides the ability to define Market Codes to have the Turndown checkbox checked automatically for reservations with the selected Market Code(s).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-61 (Cont.) OPERA Controls — Room Management Functions

FUNCTION	RELATED FUNCTION / PARAMETER / SETTING	DESCRIPTION
	TURNDOWN SERVICE ATTRIBUTE - MEMBERSHIP Level [TURNDOWN_ATTRIBUTE_MARKET_CODE]	Provides the ability to define Membership Levels to have the Turndown checkbox checked automatically for reservations with the selected Membership Level(s). These Membership Levels are based on the Membership Type defined in the **Default Membership Type** OPERA Control.
	TURNDOWN SERVICE ATTRIBUTE - MEMBERSHIP TYPE [TURNDOWN_ATTRIBUTE_MEMBERSHIP_TYPE]	Provides the ability to define Membership Types to have the Turndown checkbox checked automatically for reservations with the selected Membership Type(s).
	TURNDOWN SERVICE ATTRIBUTE - RATE CODE[TURNDOWN_ATTRIBUTE_RATE_CODE]	Provides the ability to define Rate Codes to have the Turndown checkbox checked automatically for reservations with the selected Rate Code(s).
	TURNDOWN SERVICE ATTRIBUTE - ROOM TYPE[TURNDOWN_ATTRIBUTE_ROOM_TYPE]	Provides the ability to define Room Types to have the Turndown check box checked automatically for reservations with the selected Room Type(s).
	TURNDOWN SERVICE ATTRIBUTE - SPECIAL[TURNDOWN_ATTRIBUTE_SPECIAL]	Provides the ability to define Specials to have the Turndown check box checked automatically for reservations with the selected Special(s).
	TURNDOWN SERVICE ATTRIBUTE - VIP LEVEL[TURNDOWN_ATTRIBUTE_VIP_LEVEL]	Provides the ability to define VIP Levels to have the Turndown check box checked automatically for reservations with the selected VIP Level(s).
Complimentary **UNIT STATUS** [UNIT_STATUS]		When active, Out of Order & Out of Service reason configuration is replaced with user-configurable unit statues with Deduct Inventory and/or Included in Occupancy Statistics for Reporting and Analytics. (Available when the **Out of Order** and **Out of Service** OPERA Controls are active).
	RETURN_TIME_REQUIRED [RETURN_TIME_REQUIRED]	Indicates the time when a room becomes available after being marked as out of order (OOO) or out of service (OOS).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-62 OPERA Controls — Room Management Parameters

PARAMETER	DESCRIPTION
ATTENDANT CONSOLE [ATTENDANT_CONSOLE]	Activates the Attendant Console screen, which enables you to evaluate the time taken to service a room, view task completion percentage, total and completed number of credits, and relative location of a housekeeping attendant. The information is gathered from the Mobile Task Sheet Companion or Task Sheet Companion, which attendants use to manage the rooms assigned to their task sheet.
ATTENDANT SCHEDULE [ATTENDANT_SCHEDULE]	Activates housekeeping attendant scheduling functionality. This parameter can only be activated if Housekeeping Task Scheduling is active and Housekeeping Credits is set to Facility.
CONNECTING ROOMS [CONNECTING_ROOMS]	Ability to denote rooms that are connected to each other. When active, this will affect how the rooms are presented on the Room Diary and the Room Assignment screens.
HOUSEKEEPING SECTIONS [HOUSEKEEPING_SECTIONS]	Ability to configure Sections and Section Groups and associate Rooms to those Sections. This configuration can be used when auto generating task sheets.
ROOM NUMBER PARITY [HOUSEKEEPING_ROOM_PARITY]	Ability to filter the Housekeeping Board results by even and odd Rooms.
TASK COMPANION ASSISTANCE [TASK_COMP_ASSIST_NOTIF]	Activates the ability to send Notifications from the Task Companion.
TASK SHEET COMPLETION [COMPLETE_TASK_SHEETS]	When active, the ability to complete task sheets is available. Completing a task sheet stores all task sheet related data up until the point of completion. Changes made afterward do not affect the stored data.
TASK SHEET TEMPLATE [TASK_SHEET_TEMPLATE]	Allows the creation of task sheet templates, to be used when auto generating task sheets.

Table 11-63 OPERA Controls — Room Management Settings

SETTING	DESCRIPTION
DEFAULT DAY USE ROOM STATUS [DEFAULT_DAY_USE_ROOM_STATUS]	Define the default Room Status of a Day Use Reservation which is automatically assigned at check out. The room status hierarchy is either **Dirty** -> **Clean** -> **Pickup** -> **Inspected** (when the **Inspected Status** OPERA Control is active) or **Dirty** -> **Pickup** -> **Clean** (when the **Inspected Status** OPERA Control is not active). Rooms with a current room status that is higher in the hierarchy than the room status in this setting will not be changed. If no room status is selected here, you will be presented with the Room Status screen during the check out process. Valid values: • CLEAN • DIRTY • INSPECTED (available when Inspected Status is active) • PICKUP (available when Pickup Status is active)

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-63 (Cont.) OPERA Controls — Room Management Settings

SETTING	DESCRIPTION
DEFAULT ROOM STATUS FOR ROOM ASSIGNMENT SCREENS [DEFAULT_ROOM_STATUS]	Defaults the selected Room Status check boxes in the Room Assignment screens.
DEFAULT LINEN CHANGE FREQUENCY [DEFAULT_LINEN_CHANGE_FREQUENCY]	Sets the default change frequency for linens, which is indicated on task sheets. The number provided indicates the number of days in between linen changes. For example, if the value is 2, linens will be added to the task sheet to be changed every second day that the reservation is in-house. Valid values: • 1+ This setting is available when the **Task Sheets** OPERA Control is active and the **Housekeeping Task Scheduling** OPERA Control is inactive.
HOUSEKEEPING CREDITS [HOUSEKEEPING_CREDITS]	Defines how housekeeping credits are calculated for task sheets. Valid values: • NONE • ROOM • FACILITY TASK (available when **Housekeeping Task Scheduling** OPERA Control is active). • `ROOM_TASK_RULE` (calculated based on room, task weight, and assignment credit rules; available when **Housekeeping Task Scheduling** and **Advanced Credit Rules** OPERA Controls are active). For more information, see Configuring Scheduled Task Credit Rules
MAX CREDITS PER ATTENDANT [HK_MAX_CREDITS_PER_ATTENDANT]	Defines the maximum number of credits per attendant.
TASK COMPANION TRACES [HK_TRACE_DEPT]	Select department(s) associated to Housekeeping Traces for displaying current business date traces within the Task Companion.
TRAVELING TASK CREDITS [TRAVELING_TASK_CREDITS]	Defines the number of credits that are being added to a task sheet with rooms from multiple floors. The number of credits entered here will be added for each additional floor.
UPDATE OCCUPIED ROOM STATUS [UPDATE_OCCUPIED_ROOM_STATUS]	The night audit procedure `hkpgk.update_room_status_proc` will update all occupied rooms to the room status selected here. If no status is selected then the room status of the occupied rooms will not be changed. Valid values: • DI (dirty) • CL (clean) • PU (pickup; available when Pickup Status is active) • IP (inspected; available when Inspected Status is active)

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-63 (Cont.) OPERA Controls — Room Management Settings

SETTING	DESCRIPTION
UPDATE VACANT ROOM STATUS [UPDATE_VACANT_ROOM_STATUS]	The **Updating Room Statuses** end of day procedure will update all vacant rooms with a higher room status in the hierarchy to the status selected here. If no status is selected then the room status of vacant rooms will not be changed. The room status hierarchy is either **Dirty** -> **Clean**-> **Pickup** -> **Inspected** (when **Inspected Status** OPERA Control is active) or **Dirty** -> **Pickup** -> **Clean** (when **Inspected Status** OPERA Control is inactive). The **Custom** option enables the ability to configure date ranges and a number of days value by room type for vacant rooms to be updated. For more information, see Configuring Vacant Room Status Update Rules. Valid values: • DI (dirty) • CL (clean) • PU (pickup; available when Pickup Status is active) • IP (inspected; available when Inspected Status is active) • Custom
UPDATE THE ROOM STATUS FOR NO SHOW AND CANCELED RESERVATIONS [UPDATE_NO_SHOW_ASSIGNED_ROOM_STATUS]	The **Updating Room Statuses** end of day procedure will update all rooms assigned to No Show reservations to the room status selected here. If no status is selected, the "no show assigned rooms" room status will not change. If a reservation with an assigned room number gets canceled on the expected day of arrival, the reservation shall adhere to this set room status at the time of cancellation.

Configuring Track It

Prerequisites for Track It

Track It is used to manage the storage and delivery of guest luggage and parcels; parking of vehicles (valet), and tracking of lost items.

Prior to using Track It, the Track It Types, Track It Locations, and Track It Actions must be configured.

You can then setup defaults for new Track It tickets in General OPERA Controls.

You can also configure images (icons) for Track it Types. Refer to Configuring Images.

Track It Types

Track It types are typically items, vehicles, and other valuables belonging to guests. OPERA Cloud lets you organize Track It Types into four pre-defined Track It groups: Baggage, Parcel, Valet, and Lost. Properties configure the Track It types and the groups into which the types belong. The following is an example:

Table 11-64 Track It Type Examples

Group	Track It Type Examples
Baggage	Golf Bag, Laptop Bag, Suitcase, Suit-bag
Parcel	Package, Envelope, Flowers

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-64 (Cont.) Track It Type Examples

Group	Track It Type Examples
Lost	Eyeglasses, Jewelry, Clothing, Shoes, Watch
Valet	Pickup Truck, Sedan, SUV, Minivan

You can assign Track It types to multiple Track It groups, for example, Suitcase, Laptop, and Golf Clubs might belong to both the Baggage group and the Lost group.

Track It Locations

Track It locations identify the whereabouts of Parcel, Baggage, Lost, or Valet tickets. For example:

- Parcel, Baggage, or Lost locations might include Storage Room, Guest Room, Front Desk, Building A, Conference Services Desk, Purser, and so on.
- Valet locations might be Carpark L1/Zone1, Carpark L1/Zone2, Car Wash Bay, Driveway, or Porte Cochère.

A location can be defined for multiple Track It groups, and you can configure an unlimited number of locations for each Track It group (for example, Parcel, Baggage, Lost, and Valet).

Track It Actions

Track It actions are the tasks for a Track It ticket in each Track It group for which you can take action. For example:

- For Parcel or Baggage tickets, actions might be Store in Hold, Deliver to Room, and so on.
- For Lost group, actions might be Hold for Guest or Deliver to Room.
- For Valet group, actions might include Park Vehicle, Retrieve Vehicle, Refuel, Wash, and so on.

Actions have a status which indicates whether the Track It ticket is unresolved/open or resolved/closed .

An Action type 'Deliver' would be marked as Open status, whereas an Action type 'Delivered,' 'Done,' or 'Completed' would be marked as closed (resolved).

For example, you could configure and make available in all Track It groups an Action type 'DONE' with a closed status.

You can configure an unlimited number of actions for each Track It group (that is, Parcel, Baggage, Lost, and Valet).

Configuring Track It Types

Adding Track It Types

1. From the **Administration** menu, select **Enterprise**, select **Track It,** and then select **Track It Types**.
2. Click **New** and enter the following details:
   a. **Property**: Enter or select the property.
   b. **Code**: Enter a code that uniquely identifies the Track It type.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **Description**: Enter a description of the Track It type.

d. **Website** : Enter an website URL for this type. For example, for FedEx or UPS Parcel types, you might want to provide the URL of the tracking site. For immediate access to the tracking site, the web link appears on the Track It ticket details when this type is assigned to the ticket.

e. **Track It Group**: Select the Track It Groups to which the type is available.

f. **Sequence**: Enter an optional sequence number indicating the type and order of appearance in a list.

g. **Send Message**: Select the check box to prompt user to add a message to the reservation when tickets of this type are added to the reservation. (Available when the **Guest Messages** OPERA Control is active).

   i. Select a message text to be sent to the reservation. For more information, see Configuring Guest Messages.

h. Click **Save**.

Editing Track It Types

1. From the **Administration** menu, select **Enterprise**, select **Track It**, and then select **Track It Types**.
2. Enter search criteria and click **Search**.
3. Select the track it type in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. **Inactive**: Select the check box to make the **Type** inactive. Inactive types are unavailable when creating or editing ticket records (you cannot delete Types if they have been associated with a ticket number, but you can make them inactive).
5. Update the details.
6. Click **Save**.

Deleting Track It Types

1. From the **Administration** menu, select **Enterprise**, select **Track It,** and then select **Track It Types**.
2. Enter search criteria and click **Search**.
3. Select the track it type in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Track It Locations

Adding Track it Locations

1. From the **Administration** menu, select **Enterprise**, select **Track It**, and then select **Track It Locations**.
2. Click **New** and enter the following details:.

   a. **Property**: Enter or select the property.

   b. **Code**: Enter a unique code that identifies the location.

   c. **Track It Group**: Select the Track It groups to which the location is available.

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Sequence**: Select the sequence number that determines the position of the location in lists.

3. Click **Save**.

Editing Track It Locations

1. From the **Administration** menu, select **Enterprise**, select **Track It**, and then select **Track It Locations**.
2. Enter search criteria and then click **Search**.
3. Select the code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update the configuration.
   b. **Inactive**: Select to make the location inactive. Inactive locations are unavailable when creating or editing ticket records.
4. Click **Save**.

Deleting Track It Locations

1. From the **Administration** menu, select **Enterprise**, select **Track It**, and then select **Track It Locations**.
2. Enter search criteria and then click **Search**.
3. Select the code in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Track It Actions

Adding Track it Actions

1. From the **Administration** menu, select **Enterprise**, select **Track It**, and then select **Track It Actions**.
2. Click **New** and enter the following details:.
   a. **Property**: Enter or select the property.
   b. **Code**: Enter a unique code that identifies the action.
   c. **Status**: Select Open or Closed for the action status.
      i. Open actions are open / unresolved.
      ii. Closed actions are completed / resolved.
   d. **Track It Group**: Select the Track It Groups to which the action is available.
   e. **Sequence**: Select the sequence number that determines the position of the action in lists.
3. Click **Save**.

Editing Track It Actions

1. From the **Administration** menu, select **Enterprise**, select **Track It**, and then select **Track It Actions**.
2. Enter search criteria and then click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Update the configuration.
    b. **Inactive**: Select to make the Track it Action inactive. Inactive Track it Actions are unavailable when creating or editing ticket records.
    c. Click **Save**.

Deleting Track It Actions

1. From the **Administration** menu, select **Enterprise**, select **Track It**, and then select **Track It Actions**.
2. Enter search criteria and then click **Search**.
3. Select the code in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Localized Code Descriptions

When the **Multi Language** OPERA Control is active you can add localized code descriptions to output on stationery, based on the **Language** selected in the profile linked to a block, reservation, AR Account and so on. When no localized description is configured for a language, the primary description is used.

Adding Translations

1. Click **Add Translation**.
2. **Language**: Select a language from the list
3. **Translation**: Enter the translation for the description in the language selected.
4. Click **OK**.

Editing Translations

1. Click **Manage Translation**.
    a. Update **Translation** for any language listed.
    b. Click **OK**

Deleting Translations

1. Click **Manage Translation**.
    a. Click **Remove** for any language listed.

Configuring OPERA Chain Scheduler

Prerequisites for Configuring Scheduler

Use OPERA Chain Scheduler to manage the scheduling of batch jobs; this feature is only available from a Hub location.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Multiple batch jobs can be processed concurrently.

Table 11-65 The following batch jobs are available

Job	Description
Membership Tier Management	This procedure processes membership upgrades, downgrades, and renewals for Loyalty memberships based on the Membership Type Level Rules and Configuring Membership Type Point Calculation and Tier Management configured.
Extend Membership Points	This procedure extends membership points based on the Grace Period and the Activity Period defined in Configuring Membership Type Point Calculation and Tier Management .
Auto Merge Profiles	This procedure matches and merges profiles according to the profile merge rules configured. See Configuring Profile Merge Rules. • When profile sharing is inactive for your chain, only profiles registered for a specific resort are considered for match. • The manual profile merge conditions apply. See Merging Profiles. • Profile merge activity is tracked in the Changes Log: Profile Group, Merge Profile. Activity Type by Opera-Scheduler User.
Attach Orphan Stays for past 30 days	This procedure identifies orphan stay records created in the last 30 days and links them to the correct profile. The stay records may not have been originally linked because the profile was staged, or did not exist at the time the stay was uploaded; but has since been processed.
Attach Orphan Stays for past 1000 days	When Opera Control Orphan Stay Profile Processing is Active this procedure identifies orphan stay records created in the last 999 days and links them to the correct profile. The stay records may not have been originally linked because the profile was staged, or did not exist at the time the stay was uploaded; but has since been processed. This Job should be scheduled on the monthly basis only. **Note** This has no impact on the Process Orphan Stay within 30 days Job Schedule.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 11-65 (Cont.) The following batch jobs are available

Job	Description
Calculate Membership Points	This procedure calculates membership points when the Points Calculation Method is set to Batch mode, based on the Configuring Membership Type Rules (Point Calculation Rules) and applies points to the member based on their activity (membership transactions).
Expire Membership Points	This procedure expires membership points when the Points Calculation Method is set to Batch mode, based on the Award Point Expiry Date defined in Configuring Membership Type Point Calculation and Tier Management .
Pending Profile Subscriptions	This procedure distributes profiles to external systems and creates profile subscriptions accordingly.

Searching Job Procedures

Batch jobs that are **Completed**, **Scheduled**, **Disabled** can be searched using the following search criteria:

1. **Running**: Select this check box to view the jobs that are currently in the queue and are processing. This is the default screen when the **OPERA Chain Scheduler** is first accessed.
2. **From Date**: (Available when the **Running** option button is selected) Enter the date from when you would like to view the jobs that have already run and still have an active Job ID.
3. **User Name**: Select the user from the list, to filter the search with the user who initiated the Batch Jobs. (Available only when you have the **Manage OPERA Chain Scheduler** task).
4. **Job Id**: Enter a portion, or all, of the Job Id. This ID, containing the job name and number, is assigned by the system to the process. It appears in a prompt before processing the batch.

Adding Job Procedures

1. From the **Administration** menu, select **Enterprise** menu, then select **OPERA Chain Scheduler**.
2. Click **New** and complete the following:
   a. Select a Procedure:
      i. **Job Procedure**: Select the Batch Job from the list.
   b. Scheduler Start and End Dates:
      i. **Start Date**: Enter or select the start date
      ii. **End Date**: Enter or select the end date
      iii. **Start Time**: Enter a start time HH:MM (24 hour clock)
      iv. **End Time** Enter a end time HH:MM (24 hour clock)

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> The hub time zone is used when specified, else UTC time zone is used.

c. Recurrence Pattern:

   i. **Once**: Select this option if you want to run the Batch Job once

   ii. Repeat:

      i. **Hours**: Select the number of hours for which the Batch Job needs to be run repeatedly.

      ii. **Days**: Select the number of days for which the Batch Job needs to be run repeatedly.

      iii. **Weeks**: Select the number of weeks for which the Batch Job needs to be run repeatedly, along with the **Days of Week**.

      iv. **Months**: Select the number of months for which the Batch Job needs to be run repeatedly, along with the **Week Number to Repeat** and the**Days of Week**.

   iii. Click **Submit**.

Editing Job Procedures

1. From the **Administration** menu, select **Enterprise** menu, then select **OPERA Chain Scheduler**.
2. Enter search criteria, then click **Search**.
3. Select the batch job in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the batch jobs details.
5. Click **Submit**.

Deleting Job Procedures

1. From the **Administration** menu, select **Enterprise** menu, then select **OPERA Chain Scheduler**.
2. Enter search criteria, then click **Search**.
3. Select the batch job in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Disabling Job Procedures

Only scheduled Batch Jobs can be disabled

1. From the **Administration** menu, select **Enterprise** menu, then select **OPERA Chain Scheduler**.
2. Enter search criteria, then click **Search**.
3. Select the batch job in the search result , then click the vertical ellipsis **Actions** menu and select **Disable**.

Enabling Job Procedures

Only disabled Batch Jobs can be enabled

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **Administration** menu, select **Enterprise** menu, then select **OPERA Chain Scheduler**.
2. Enter search criteria, then click **Search**.
3. Select the batch job in the search result, then click the vertical ellipsis **Actions** menu and select **Enable**.

Running Job Procedures

Only scheduled Batch Jobs can be run

1. From the **Administration** menu, select **Enterprise** menu, then select **OPERA Chain Scheduler**.
2. Enter search criteria, then click **Search**.
3. Select the batch job in the search result, then click the vertical ellipsis **Actions** menu and select **Run Job**.

Viewing Log for Batch Jobs

1. From the **Administration** menu, select **Enterprise** menu, then select **OPERA Chain Scheduler**.
2. Enter search criteria, then click **Search**.
3. Click on the **Job ID**.
    a. Enter search criteria, then click **Search**.

Accommodation Management

Accommodation Management enables you to configure a variety of options related to room inventory and rooms management (housekeeping). The available options are dependant on the active controls at your property.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Housekeeping Section Groups and Sections

Housekeeping Section Groups and Sections can be used to group rooms into sections or divisions meaningful to the housekeeping attendants with respect to floor numbers, various buildings, and group of rooms typically cleaned by one attendant during the day or turndowns during the evening. OPERA Cloud allows for both day and evening sections, where the day section is for regular room cleaning and the evening section is for turndown service. When you print the housekeeping report, the dirty rooms can be divided into the sections defined here. This simplifies the process of assigning rooms to attendants for daily cleaning.

Configuring Housekeeping Section Codes

Adding Housekeeping Section Codes

To create housekeeping section codes, do the following:

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Housekeeping Section Codes**.
2. Click **New** and complete the following details:
    a. **Code**: Enter the housekeeping section code. It can only contain numbers.
    b. **Description**: Enter an appropriate description for housekeeping section code.
    c. **Section Group**: Enter the section group to which the section code belongs. For more information, see Configuring Housekeeping Section Groups
    d. **Target Credit**: Enter the target credit for this section when processing the breakout by section.
    e. (view only) **Rooms**: The number of rooms that are associated with this section.
    f. (view only) **Credits**: The credit value for all the rooms associated to that section. (This is the sum of the base credits).
    g. **Sequence**: Enter a number to determine the order in which housekeeping section codes are displayed when listed.
    h. Click **Save** to save and exit or click **Save and Continue** to save the Housekeeping Section Code and add another.

Editing Housekeeping Section Codes

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Housekeeping Section Codes**.
2. Enter search criteria then click **Search**.
3. Select the code in the search result then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. **Inactive**: Select the check box to make the section code inactive. Inactive housekeeping sections are not available for selection when assigning rooms to the day and evening sections on the Manage Rooms screen
6. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Housekeeping Section Codes

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Housekeeping Section Groups**.
2. Enter search criteria then click **Search**.
3. Select the code in the search result then click the vertical ellipsis **Actions** men and select **Delete**.
4. Click **Delete** to confirm.

Configuring Housekeeping Section Groups

Adding Housekeeping Section Groups

Housekeeping Section Groups can be used as hard stops when you Generate Task Sheets.

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Housekeeping Section Groups**.
2. Click **New** and complete the following details:
   a. **Property**: Enter or select the property.
   b. **Code**: Enter the housekeeping section group code. It can contain only numbers.
   c. **Description**: Enter an appropriate description for housekeeping section group code.
   d. **Target Credit**: Enter the target credit for this section group when processing the breakout by section.
   e. **Sequence**: Enter a number to determine the order in which housekeeping section group codes are displayed when listed.
3. Click **Save** or click **Save and Continue** to save the Housekeeping Section Group and add another.

Editing Housekeeping Section Groups

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Housekeeping Section Groups**.
2. Enter search criteria then click **Search**.
3. Select the code in the search result then click the vertical ellipsis **Actions** men and select **Edit**
4. Update the configuration.
5. **Inactive**: Select the check box to make the section code inactive.
6. Click **Save**.

Deleting Housekeeping Section Groups

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Housekeeping Section Groups**.
2. Enter search criteria then click **Search**.
3. Select the code in the search result then click the vertical ellipsis **Actions** men and select **Delete**.
4. Click **Delete** to confirm.

Configuring Housekeeping Attendant Information

Prerequisites for Configuring Housekeeping Attendant Information

OPERA Cloud enables you to store housekeeping attendant information, daily assignments, and tracks credits or number of rooms cleaned by each attendant. Housekeeping attendants can be assigned to a section or a floor number. Housekeeping attendants can be identified by name or by an attendant number and listed with an active or inactive status. Also, the Housekeeping Attendant functionality lets you create attendant schedules, which identify attendants, their assigned section or floor, working days, and other information. After creating schedules, you can assign the attendants to housekeeping task sheets.

Adding Housekeeping Attendants

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, select **Housekeeping Attendants**.
2. Click **New** and enter the following information.
    a. **Code**: Enter a unique code to identify the housekeeping attendant. The code can contains a maximum of 8 alpha-numeric characters.
    b. **Description**: Enter the name or information of the housekeeping attendant.
    c. **Application User**: Search and select the application user that you want to associate the attendant. This is required for a housekeeping room attendant to view their assigned task sheet(s) in Using the Task Sheet Companion or mobile task companion based on the attendant assigned to the task sheet. For more information, see Managing Task Sheets.
    d. **Section**: Enter the section that you want to assign to the attendant.
    e. **Floor**: Enter the floor number that you want to assign to the attendant.
    f. **Mobile Number**: Attendant's mobile phone number. This number can be used to contact the attendant when the General > Text Message Handling application function is Active. For example, text messages can be sent to attendant's cell phones when the Queue Rush Rooms feature is used. See Queue Rush Rooms for details.
    g. **Working Days**: Select to remove the day(s) of the week from the attendant's schedule. By default, all days of the week are assigned to the attendant. This information is used when assigning task sheets to Attendants. The attendants are shown as available for task sheet assignment on days that are selected here.
    h. Click **Save**.

Editing Housekeeping Attendants

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, select **Housekeeping Attendants**.
2. Enter search criteria and click **Search**.
3. In the search results, select the code and click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Make the required change.
    b. **Inactive**: Select this check box to mark the attendant inactive. If marked inactive, the housekeeping attendant is excluded from the display lists within Housekeeping. Any housekeeping attendant can be inactivated as long as they are not included in any current date task sheets.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. Click **Save**.

Deleting Housekeeping Attendants

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, select **Housekeeping Attendants**.
2. Enter search criteria and click **Search**.
3. In the search results, select the code and click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** and confirm.

Configuring Out of Order and Out of Service Reasons

Out of Order (OO) and Out of Service (OS) are two additional housekeeping statuses used to identify rooms that should not be sold due to damage, maintenance, low occupancy and so on. The difference between the two statuses is:

- **Out of Order**: rooms are removed from room inventory and are not available for assignments to reservations. OO status is typically used for rooms removed from inventory for staff accommodation or for seasonal periods of low occupancy when rooms are dormant and not sold. Out of order rooms are removed from the total room inventory counts, reducing the total number of rooms available in your hotel. Therefore, for the period a room remains out of order, 100% occupancy is calculated based on **Inventory Rooms - Out of Order** rooms. For example, if you have a 100 room property and 5 rooms are out of order, 100% occupancy is reached when 95 rooms are occupied. Rooms in Out of Service status therefore also impact Average Room Rate and RevPAR calculations.
- **Out of Service**: rooms remain in room inventory and can still be reserved for a reservation. OS status is typically used for rooms with a temporary maintenance issue not preventing sale of the room. If a room is placed Out of Service, it is available for the front desk for assignment and it remains in the total room inventory count.

> **Note**
>
> When the **Unit Status** OPERA Control is active, Out of Order and Out of Service reason configuration is replaced with unit status configuration; enabling the ability to configure unit statuses as Deduct Inventory and/or Included in Occupancy Statistics in Reporting and Analytics. For more information, see Configuring Unit Statuses.

Adding Out of Order / Service Reasons

Out of Order and Out of Service reason codes can be a maximum of 10 alpha-numeric characters.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Out of Order and Out Of Service codes are created by selecting the Template tab. Once created, you can copy Out of Order and Out Of Service codes to specific properties using the Copy action. For more information, see Copying Configuration Codes to Multiple Properties.

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **Administration** menu, select **Inventory**, select **Rooms Management**, and then select **Out of Order /Service Reasons**.
2. Click **New** and complete the following fields:
   a. **Code**: Enter a code for the OO/OS reason.
   b. **Description**: Enter a description for the OO/OS reason code.
   c. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.
3. Click **Save**.

Editing Out of Order / Service Reasons

1. From the **Administration** menu, select **Inventory**, select **Rooms Management**, and then select **Out of Order /Service Reasons**.
2. Enter search criteria and click **Search**.
3. Select the OO/OS code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Make the required changes.
   b. Click **Inactive** to make a code inactive; inactive codes are not available for selection.
   c. Click **Save**.

Deleting Out of Order / Service Reasons

> **Note**
>
> Reason code cannot be deleted if selected in the **Out of Order Default Reason Code** or **Out of Service Default Reason Code** OPERA Controls; update the setting(s) with a new value prior to deleting the code.

1. From the **Administration** menu, select **Inventory**, select **Rooms Management**, and then select **Out of Order /Service Reasons**.
2. Enter search criteria and click **Search**.
3. Select the OO/OS code in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Room Conditions

Room Condition functionality allows you to assign room condition codes to rooms, for example, to designate rooms that are available for show, rooms that are set aside for special housekeeping attention, or rooms that are to be treated differently for any other reason. Rooms that have a room condition assigned may or may not be available by default within the Room Assignment screen depending on how you configure the room condition code.

Room condition codes can also be attached to rooms to identify them for special purposes or situations. For example, rooms might be set aside for an afternoon sales tour, or for the

Copyright © 2016, 2025, Oracle and/or its affiliates.

finishing touches on a room repair, or so housekeeping can perform a final inspection, and so on.

In a multi-property environment, room conditions are created on the template level and then copied to each property. To be consistent among all hotels in the environment, best practice is to reuse existing codes for new hotels in an existing setup or agree on universal codes for all properties. When the setting for hold rooms is on, the setting is on the template level, but times for the holds are set at the property level.

Configuring Room Conditions

Prerequisites for Rooms Conditions

Adding Room Conditions

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Room Conditions are created by selecting the **Template** tab. Once created, you can copy Room Condition to specific properties using the **Copy** action. For more information, see Copying Configuration Codes to Multiple Properties

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Conditions**.
2. Click **New** and complete the following.
    a. **Code**: Enter a unique code that identifies the room condition. You can enter up to 8 letters and/or numbers. After the condition code has been saved, it may not be edited. Use the Inactive check box to make the code unavailable for further use.
    b. **Sequence**: Enter a number by entering it in the field, or using the plus and minus buttons to determines the position of the room condition code in listings. Room condition codes that do not have a sequence number are listed in alphabetical order following those codes that have a sequence number assigned.
    c. **Display in Available Room Search**: Select or deselect the check box to control whether a room having this room condition code assigned will appear by default on the Room Availability screen.
    d. **Inactive**: Select the check box to inactivate the room condition code. The inactive room conditions do not appear as a selection option when assigning room conditions.
    e. **Description**: Enter a description that explains the condition code. For example, Last sell, Missing amenity, Pet in room, Show room, and so on.
    f. **Notes**: Enter any information you want to add that pertains to the room condition.
3. Click **Save**.

Editing Room Conditions

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Conditions**.
2. Enter search criteria and click **Search**.
3. In the search result, select the room condition, then click the vertical ellipsis **Actions** menu and select **Edit**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. Update the configuration.

b. **Inactive**: Select the check box to inactivate the room condition code. The inactive room conditions do not appear in the list when setting a room conditions on rooms.

4. Click **Save**.

Deleting Room Conditions

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Conditions**.
2. Enter search criteria and click **Search**.
3. In the search result, select the room condition, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Hold Room Conditions

When the Hold Room function is Active, room condition codes HOLD1 to HOLD4 are listed by default as OPERA Cloud SID data.

The hold condition codes may be used to place rooms on hold for a set period of time —from 1 to 1440 minutes (24 hours) or for an unlimited time, depending on the HOLD condition code configuration.

A hold room can be assigned to a reservation only by the user who has placed it on hold. A special permission is required to take a room off hold if it was placed on hold by another user. The room is automatically taken off the hold, when the hold period expires and when a guest is checked into the room before the hold period elapses.

When the **Hold Room** OPERA Control is active, room condition codes **HOLD1** to **HOLD4** are available. These special room condition codes are used to place rooms on hold for a set period of time, from 1 to 1440 minutes (24 hours) or for an unlimited time, depending on the hold condition code configuration.

A hold room condition can be assigned to one or more rooms, and a separate user task is required to remove a hold condition set by another user. The room is automatically released from hold when the hold period expires or when a reservation is checked into the room before the hold period elapses.

This feature might be used in the following scenario. Assume you are assigning rooms to a group of four arriving guests/reservations who want adjoining rooms. If your property has several agents conducting room assignments simultaneously, it might be difficult or impossible to work fast enough to assign the desired four rooms to the reservations you are handling. You could, however, place the four adjoining rooms required into a **HOLD1** condition for, say, five minutes. Then you can assign those rooms to each of the reservations. After five minutes, if you have not assigned the rooms you placed on hold, they become available to other agents in available room search.

Editing Hold (Duration) Room Conditions

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Conditions**.
2. Enter search criteria for the hold room condition and click **Search**.
3. Select the hold condition to update, then click the vertical ellipsis **Actions** menu and select **Edit**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. **Minutes**: Enter the number of minutes (1 to 1440) that defines the duration of the on-hold period. Leave this field blank to set an unlimited hold period.

4. Click **Save**.

Configuring Rooms Inventory

As it is likely that your property has a variety of rooms that range in size, bedding, exposure and amenities, OPERA Cloud enables you to classify these rooms into different room types. Pricing schedules are then defined for each room type and room type availability is maintained.

When the **Room Class** OPERA Control is active all room types (including pseudo) are linked to a room class. Operational , forecast and statistical reports can be filtered by room class.

There are three varieties of room types in OPERA Cloud.

- **Physical** - Inventory room types tracked in availability; rooms configured for these room types count towards the Oracle Hospitality OPERA Cloud Service, Property Management Foundation subscription.
- **Component** - virtual room types tracked in availability as an inventory room type. Component suites do not count towards the Oracle Hospitality OPERA Cloud Foundation subscription. (Available when the **Component Suites** OPERA Control is active).
- **Pseudo** - Non-inventory room types not tracked in availability; rooms configured for these room types do not count towards the Oracle Hospitality OPERA Cloud Foundation subscription. The "PM" pseudo room type is pre-configured on provisioning of OPERA Cloud; other pseudo room types, such as **HOUSE**, **PERMNT** or **INTRFACE**, can be configured to suit your needs.

Once all inventory and pseudo room types are configured, you can configure the individual rooms. The **Room** value is alphanumeric and not necessary a room "number"; for example you could have APT1 for Apartment 1 or SUI3 for Suite 3. For more information, see Configuring Rooms. When the **Room Rotation** OPERA Control is active, you can configure rooms as Owner Rooms, allowing you to create Ownership Records linking a room to a profile, identifying the owner of the room. Additionally, when the **Owner Room Grade** OPERA Control is active, you can assign a grade to an owner room, which will aid the rotation of rooms in Room Assignment.

Premium You can setup inventory rooms to be available as function / meeting spaces for catering events.

About Component Suites

When the **Component Suites** OPERA Control is active you can also configure virtual room types which are also tracked in availability as an inventory room type. A component suite consists of multiple inter-connecting inventory rooms (of one or more room types). Rate code pricing schedules can be setup for the component suite room type. When a reservation is made for a component suite room type, OPERA Cloud deducts one room for the component suite room type, as well as rooms for each of the physical inventory room types that comprise the component suite room type.

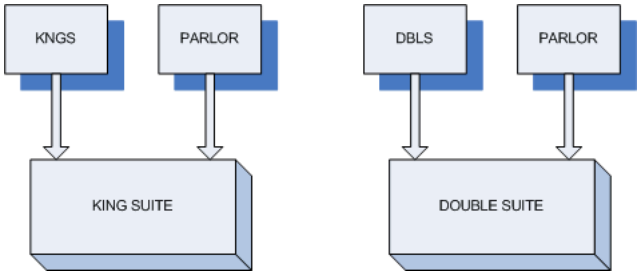
Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> For Forecast and Statistical reporting the count of physical rooms (not virtual) is considered in calculations. For example, if a Component Suite comprised of 3 rooms, is reserved for one night, OPERA Cloud indicates that the number of rooms sold for this reservation is 3, not 1.

Table 12-2 Component Suite Example

Room Type	Quantity
KNGS	1
PARLOR	2
DBLS	1

These room types are used to create the KING SUITE and DOUBLE SUITE component suite room types.



The following matrix shows room type availability when rooms of various room types are booked.

	KNGS	DBLS	PARLOR	KING SUITE	DOUBLE SUITE
Availability	1	1	3	1	1
1 KNGS booked	0	1	3	0	1
1 DBLS booked	1	0	3	1	0
1 PARLOR booked	1	1	2	1	1
2 PARLOR booked	1	1	1	1	1
1 KING SUITE booked	0	1	2	0	1
1 DOUBLE SUITE booked	1	0	2	1	0

When the **Component Verification** OPERA Control is active OPERA Cloud tracks availability of a component suite room type at the room "number" level; meaning once a room comprising a component suites is assigned to a reservation the component suites room type is deducted from inventory.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 12-3 Component Verification Example

Room Type	KNGS	PARLOR	PARLOR	PARLOR	DBLS
Room	101	102	103	104	105
Component Room	King Suite 1			Double Suite 1	

	Component Verification OPERA Control	
	Active	**Inactive**
102 PARLOR Assigned	PARLOR: 2 King Suite: 0 Double Suite: 1	PARLOR: 2 King Suite: 1 Double Suite: 1
104 PARLOR Assigned	PARLOR: 2 King Suite: 1 Double Suite: 0	PARLOR: 2 King Suite: 1 Double Suite: 1

Configuring Room Classes

Prerequisites for Room Classes

Use room classes to group a collection of room types with similar characteristics together; such as all room types on club floors or all apartment accommodation. You can create room classes to group similar room types for easier and more highly controlled room inventory management and statistical reporting. Dashboard tiles, application search panels and reports can be filtered by room class.

> **Note**
>
> Activating the **Room Class** OPERA Control after inventory and pseudo room types are configured will result in all existing room types being assigned the default **ALL** room class. Ensure you update room type configuration and select the required room class.

Adding Room Classes

> **Note**
>
> When the **Multi Property** OPERA Control is active, new room classes are created by selecting the **Template** tab. After creating the template, you can copy room classes to specific properties using the **Copy** action. For more information, see Copying Configuration Codes to Multiple Properties

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Class**.
2. Click **New** and complete the following:
   a. **Code**: Enter a unique code to identify the Room Class.

Copyright © 2016, 2025, Oracle and/or its affiliates.

b. **Description**: Enter an appropriate description for the Room Class.

c. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

d. **Sequence**: Enter a number to determine the order in which room class codes are displayed when listed. If you do not enter a sequence number, the system defaults to alphabetical order by code.

3. Click **Save**.

Editing Room Classes

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Class**.
2. Enter search criteria then click **Search**.
3. Select the room class in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Room Classes

1. From the **OPERA Cloud Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Class**.
2. Enter search criteria then click **Search**.
3. Select the room class in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Room Types

A room type code is used to identify each category of room available at your property. For example, you might configure room types that reflect the primary characteristic of the room -- Deluxe, Superior, Standard in combination with thee bedding – Twin, King, Double/Double.

Rate code pricing schedules are setup for each room type and availability is calculated and displayed by room type. OPERA Cloud also tracks revenue statistics by room type.

There are three varieties of room types in OPERA Cloud.

- **Physical** - Inventory room types tracked in availability; rooms configured for these room types count towards the Oracle Hospitality OPERA Cloud Service, Property Management Foundation subscription.
- **Component** - Virtual room types tracked in availability as an inventory room type. Component suites do not count towards the Oracle Hospitality OPERA Cloud Service, Property Management Foundation subscription. (Available when the **Component Suites** OPERA Control is active).
- **Pseudo** - Non-inventory room types not tracked in availability; rooms configured for these room types do not count towards the OPERA Cloud subscription. The "PM" pseudo room type is seeded on provisioning of OPERA Cloud, and other pseudo room types, such as "HOUSE', 'PERMNT' or 'INTRFACE' , can be configured to suit your needs.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Room Types

> **Note**
>
> When the **Multi Property** OPERA Control is active, new room types are created by selecting the **Template** tab. Once created, you can copy room types to specific properties using the **Copy** action. Some room type attributes listed below are only available once the room type has been copied to the property, based on the active OPERA Controls at the property. For more information, see Copying Configuration Codes to Multiple Properties for more information.

To create a room type, do the following:

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Type**.
2. Click **New** and enter the following details:
    a. **Types**
        i. **Physical**: Select to configure an inventory/physical room type (including component room types).
        ii. **Pseudo**: Select to configure a non-inventory/pseudo room type.
    b. **Room Type**: Enter an alpha-numeric code for the room type; maximum of 8 characters.
    c. **Component Suite**: Select check box to identify the room type as a component suite room type. (Available when the **Component Suite** OPERA Control is active).
    d. **Accessible Room Type**: Select check box to identity the room type as accessible.
    e. **Room Class**: Select a room class from the list. (Available when the **Room Class** OPERA Control is active).
    f. **Bed Type**: Select a bed configuration from the list. For more information, see Configuring Bed Types.
    g. **Yield Status**: Select a yield status from the list. (Available when the **Yield Management** OPERA Control is active).
    h. **Yield Category**: Select a yield category from the list. (Available when the **Yield Management** OPERA Control is active).
    i. **Smoking**: Select the default smoking preference for the room type (value is inherited by each room configured for this room type).
    j. **Activate Date**: Enter or select the date this room type is available in inventory.
    k. **Description**: Enter an appropriate description for the Room Type - the description should ideally describe what the Room Class is about.
        i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
    l. **Long Description**: Enter furthermore description of the Room Type. This information appears on different screens in OPERA Cloud.

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).

m. **Room Info URL**: Enter a website address with external details about the room type.

n. **Sequence**: Enter a display sequence in lists. When two or more room types have the same sequence number, they are displayed alphabetically.

o. **Meeting**: Select check box to configure the room type as a meeting room (function space). Enabled when **Type = Pseudo** or (when **Type = Physical** and the **Guest Room As Meeting Room** OPERA Control is active Premium. Check box can only be deselected when rooms associated with this room type do not have the **Events** check box selected.

p. **Housekeeping**: Select check box to enable the room for all the housekeeping functions. Rooms that are configured as pseudo and meeting can also be selected for housekeeping in order to set them for out of order and out of service.

q. **Send to IFC**: Select check box to send a check-in message to the various property interfaces (examples: Video, Door Lock, PBX).

r. **Auto Room Assign**: Select check box to auto-assign a room to new reservations (through Look to Book) when a room has not been manually assigned. (Available when the **Room Type Auto Room Assign** OPERA Control is active).

s. **Auto Populate**: Select check box to default the room type to new rate code definition.

t. **Always Checked In**: Select check box to auto-create and check in a copy of reservations for this pseudo room type after check out. (Available when the **Auto Check In Pseudo Rooms After Check Out** OPERA Control is active) .

u. **Maintenance**: Select check box to make the room type available for Maintenance requests (available when the **Maintenance** OPERA Control is active).

v. **Default Occupancy**: Enter the number of people required for a room to be occupied. When **Type** = Pseudo, enter 0.

w. **Minimum Occupancy**: Enter the minimum number of people that can occupy a room of this room type.

x. **Maximum Occupancy**: Enter the maximum number of people that can occupy a room of this room type.

y. **Maximum Adults**: Enter the maximum number of adults that can occupy a room of this room type.

z. **Maximum Children**: Enter the maximum number of children that can occupy a room of this room type.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Maximum Occupancy can be used alone or in combination with Maximum Adults and/or Maximum Children. These values are referenced throughout OPERA Cloud, for example, when a room is assigned to a reservation, when rates are set up based on occupancy, and when a room move is performed. A message prompts you when the maximum number of persons exceed for a specific room. When used alone, Maximum Occupancy sets the limit on the number of persons (adults and children) that may occupy rooms of this room type. For example, if Maximum Occupancy is 3 and Maximum Adults and Maximum Children are not defined (null values), the room could be occupied by any mix of adults and children not to exceed 3 persons: by 3 adults, or by 2 adults and 1 child, or by 1 adult and 2 children, or by 3 children, etc. When Maximum Occupancy is used with Maximum Adults and/or Maximum Children, the number of persons occupying the room may not exceed Maximum Occupancy, nor may the individual limits on the number of adults (Maximum Adults) and/or the number of children (Maximum Children) be exceeded. This means that the Maximum Adults value and the Maximum Children values cannot be individually greater than the Maximum Occupancy value.

aa. **Room Features**: Select the default room features for the room type. Reservation agents can search for room type availability by the features allocated to a room type. Selected features are copied to all rooms created for this room type and may be changed on individual rooms when the room is configured. For more information, see Configuring Room Features.

   i. Click **New**

      i. Select one or more room features from the list.

      ii. Click **Select**.

   ii. To delete a room feature, click the vertical ellipsis **Actions** menu and select **Delete**.

ab. **Room Components**: Select the room types and specify the quantity of each which make up the component room (Enabled when the **Component** check box is selected).

   i. Click **New**.

      i. **Component**: Select a room type from the list.

      ii. **Quantity**.: Enter the number of rooms of the room type.

   ii. Repeat to add another room type.

   iii. To delete, select the room type, click the vertical ellipsis **Actions** menu and select **Delete**.

3. Click **Save**.

Editing Room Types

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Type**.
2. Enter search criteria and click **Search**.
3. Select the room type in the search result, click the vertical ellipsis **Actions** menu and select **Edit**.

   a. Update configuration.

Copyright © 2016, 2025, Oracle and/or its affiliates.

b. **Inactive**: Select the mark the room type inactive. Inactive room types will not display in room type lists throughout OPERA Cloud.

> **Note**
>
> Room types can only be set inactive at the property level and if there is no inventory available for that room type. For example, the room type cannot be associated with a rate code; it cannot be associated with a current and/or future reservation; it cannot be associated with an active business block; it cannot have rooms associated with it; and it cannot be part of a component room type configuration.

4. Click **Save**.

Deleting Room Types

> **Note**
>
> A room type can only be deleted when it has no dependencies associated with it. This means that it cannot be selected in any reservations, blocks, rooms, etc. If the room type is associated to any configuration or transactional data you will receive a warning message and will not be able to delete the room type. Even when no dependencies are linked to the room type and it is being deleted, a "`When deleting a room type, past reservations and statistics will not recognize this room type.`" message is displayed. Select **Yes** to continue with the deletion or **No** to stop the deletion.

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Type**.
2. Enter search criteria and click **Search**.
3. Select the room type in the search result, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Attaching Room Types to/from Rate Code

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Type**.
2. Click the vertical ellipsis **Actions** menu and select **Attach/ Detach Room Types**.
   a. **Property**: Select a property from the list.
   b. Select **Attach Room Type** to attach the room type(s).
   c. **Room Types(s)**: Select room type(s) from the list to attach or detach.
   d. **Select Rate Code(s)**: Select rate code(s) from the list to attach or detach.
   e. **Select Rate Category**: Select a Rate Category to attach or detach.
   f. **Pricing Schedule**: Select check box to attach or detach Room type(s) to / from the pricing schedule.
   g. **Reference Room Type**: Select a room type to apply its pricing schedule to the selected room type(s).

Copyright © 2016, 2025, Oracle and/or its affiliates.

h. Click **Process**.

Detaching Room Types to/from Rate Code

> **Note**
>
> If only one room type is attached to a rate code, it cannot be detached from the Rate Code Definition or Pricing Schedule.

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Type**.
2. Click the vertical ellipsis **Actions** menu and select **Attach/ Detach Room Types**.
   a. **Property**: Select a property from the list.
   b. Select **Detach Room Type** to detach the room type(s).
   c. **Room Types(s)**: Select room type(s) from the list to attach or detach.
   d. **Select Rate Code(s)**: Select rate code(s) from the list to attach or detach.
   e. **Select Rate Category**: Select a Rate Category to attach or detach.
   f. **Pricing Schedule**: Select check box to attach or detach Room type(s) to / from the pricing schedule.
   g. **Reference Room Type**: Select a room type to apply its pricing schedule to the selected room type(s).
   h. Click **Process**.

Configuring Rooms

Use room configuration to define the individual rooms assigned to reservations. Rooms must be configured for all inventory room types and pseudo room types needed for permanent and temporary house-use accounts such as interface accounts, block posting masters and other billing requirements. A **Room** value is alphanumeric and not necessary a number; for example you could have Room "APT1" for Apartment 1 or Room "SUI3" for Suite 3. When the **Component Suites** OPERA Control is active you can also configure rooms for the component room types.

Premium You can also setup inventory rooms to be available as function (meeting) spaces for catering events.

Prior to configuring rooms ensure you've completed the configuration of:

- **Room Types**: For more information, see Room Types.
- **Room Features**: For more information, see Room Features.
- **Floors**: For more information, see Configuring Floors.
- **Buildings**: For more information, see Configuring Buildings.
- **Smoking Preferences**: For more information, see Configuring Preferences .
- **Door Lock System (DLS) Room Key Options**: For more information, see Creating Keys from the Property Interface Control Screen
- **Housekeeping Sections**: For more information, see Housekeeping Sections.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Rack Rate (Published Rate)**: For more information, see About Rate Codes.
- **Owner Grades** : (Applicable when the **Room Rotation** and **Owner Room Grade** OPERA Controls are active). For more information, see Owner Grades.

Adding Rooms

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Rooms**.
2. Click **New** and complete the following
   a. **Property**: Enter or select the property.
   b. **Room**: Enter a code for the room, with a maximum of six alphanumeric characters. Special characters are permitted with the exception of spaces. Room cannot be modified once saved.
   c. **Room Type**: Select the room type from the list. For more information, see Managing Room Types.
   d. **(View Only) Room Class**: The room class appears based on the room type selected. (Available when the **Room Class** OPERA Control is active).
   e. **Accessible Room**: Select to configure the room as an accessible room.
   f. **Description**: Enter an appropriate description for the room.
      i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
   g. **Maximum Occupancy**: Enter the maximum number of people that can occupy the room.
   h. **Published Rate Code**: OPERA Cloud uses this rate code to calculate the typical rate for the room to print variance reports and has no bearing on the reservation.
   i. **Published Rate Amount**: Enter the rate amount to calculate the rate variance. Generally, this amount is used when you do not have a standard rate code for this room or if you want to use an amount that is different from the standard rate to calculate the variance.
   j. **Floors**: Select the floor(s) on which this room is located in order to search for available rooms according to the guests' floor preference. This help users to search and assign a room according to the guest floor preference.
   k. **Square Units**: Enter the area (square feet or square meter) of the room.
   l. **Measurement**: Enter the dimensions (length and width) of the room.
   m. **Phone Number**: Enter the phone number assigned to the room.
   n. **Key Options**: Select the default key option when keys are encoded for reservations assigned to this room. Key Options depend on the capabilities of the key interface; and typically determine access to hotel areas such as club floor, gymnasium, library and so on.
   o. **Smoking**: Specify if the room is a smoking or non- smoking room. This help users to search and assign a room according to the guest smoking preference.
   p. **Turndown**: Select if the room is eligible for turndown by default (Available when the **Turndown** OPERA Control is active).
   q. **Building**:Select a building from the list (Available when the **Building Management** OPERA Control is active).

Copyright © 2016, 2025, Oracle and/or its affiliates.

r. **Sequence**: How rooms are displayed when listed on room lookup screens such as the Room Assignment and the Room Diary is determined by the **Room Display Order** OPERA Control. When the **Room Display Order** OPERA Control is set to Display Sequence, the display order is controlled by the sequence number assigned here in room configuration. Enter a number to determine the order in which room codes are displayed when listed.

s. **Events**: Select this check box to also identify the room as a functions space for allocation to events and display in the Function Diary. Check box can only be deselected when there are no future events booked in this room (Available when the **Guest Room As Meeting Room** OPERA Control is active). Premium

t. **Number of Beds**: Enter the number of beds that are located in the room. When copying a room, the Number of Beds value is copied to the new room.

u. **Owner Room**: Select check box to enable the room for selection when creating Ownership Records. (Available when the **Room Rotation** OPERA Control is active).

> **Note**
>
> A Component Suite can only be configured as an Owner Room if all the rooms comprising the Component Suite are also configured as Owner Rooms.

   i. **Owner Room Grade**: Select the grade for the room, this value is used to determine the resulting room rotation behavior based on the value selected in the **Room Order Preference for Owner Rooms** OPERA Control. (Available when the **Owner Room Grade** OPERA Control is active).

v. **Sections**:

   i. **Day Section**: Enter the day section to which the room belongs. For more information, see Configuring Housekeeping Section Codes.

   ii. **Evening Section**: Enter the evening (turn-down) section to which the room belongs. For more information, see Configuring Housekeeping Section Codes.

w. **Housekeeping Credits**:

   i. **Pickup**: Specify the number of credits (effort) needed to service a room in pickup status (Available when the **Pickup** OPERA Control is active).

   ii. **Stayover**: Specify the number of credits (effort) needed to service a stayover room (typically dirty status).

   iii. **Departure**: Specify the number of credits (effort) needed to service a departure room (typically dirty status).

   iv. **Turndown**: Specify the number of credits (effort) needed to service a room for turndown task. (Available when the **Turndown** OPERA Control is active and the **Turndown Service** OPERA Control is set to **Room**).

x. **Room Features**: Features will default from the selected room type; you can update as required.

   i. To add a feature, click **New** and search and select the room features, click **Select** .

   ii. To delete a feature, select the feature, click the vertical ellipsis **Actions** menu and select **Delete**; click **Delete** to confirm.

   iii. For more information, see Configuring Room Features.

Copyright © 2016, 2025, Oracle and/or its affiliates.

y. **Connecting Rooms**: (Available when the **Connecting Rooms** OPERA Control is active).

   i. To add a connecting room, click **New** and search, and select the require connecting room, click **Select**.

   ii. To delete a connecting room, click the vertical ellipsis **Actions** menu and select **Delete**; click **Delete** to confirm.

3. Click **Save**.

Copying (Cloning) Rooms

Use the Copy action to save time when you have many similar rooms to add. For example, if rooms 202, 206, 302, 306, 402, 406, 502, 506 have exactly the same features in your property, configure room 202 with all necessary details and use the Copy action to create the similar rooms.

Copy can also be used to create many pseudo room accounts (POST1, POST2, POST3 etc).

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Rooms**.
2. Enter search criteria and click **Search**.
3. Select the room then click vertical ellipsis **Actions** menu and select **Copy**.
4. Source room details are displayed at the top of the page and will be copied to room(s) entered below. Click New to add extra rows the Copy Rooms panel. Use the attribute entry to override the details as needed.

   a. **Room**: Enter an alpha-numeric code; a maximum of 6 characters.

   b. **Features**: Select feature(s) from the list.

   c. **Floor**: Select floor(s) from the list.

   d. **Day Section**: Select a housekeeping day section.

   e. **Evening Section**: Select a housekeeping evening section.

   f. **Stayover Credit**: Specify the number of credits (effort) needed to service a stayover room (typically dirty status).

   g. **Departure Credit**: Specify the number of credits (effort) needed to service a departure room (typically dirty status).

   h. **Pickup Credit**: Specify the number of credits (effort) needed to service a room in pickup status (Available when the **Pickup** OPERA Control is active).

   i. **Turndown Credit**: Specify the number of credits (effort) needed to service a room for turndown task (Available when the **Turndown** OPERA Control is active).

5. Click **Save**.

Editing Rooms

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Rooms**.
2. Enter search criteria and click **Search**.
3. Select the room and click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update details.
5. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Rooms

1. From the **OPERA Cloud Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Rooms**.
2. Enter search criteria and click **Search**.
3. Select the room and click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Room Hierarchy (Room) Classes

Prerequisites for Configuring Room Hierarchy (Room) Classes

Room Class hierarchies are available for selection in the Reservation Upgrade Rules configuration.

Adding Room Hierarchy Classes

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Hierarchy Classes**.
2. Click **New** and enter the following details:
   a. **Property**: Enter or select a property from the list.
   b. **From Room Class**: Select a Room Class from the list.
   c. **To Room Class**: Select one or room classes from the list.
   d. **Sequence**: Enter a number for the display sequence or the order in which the upsell room hierarchy is listed.
3. Click **Save**.

Editing Room Hierarchy Classes

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Hierarchy Classes**.
2. Enter search criteria and click **Search**.
3. Select the room class hierarchy, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update details.
5. Click **Save**.

Deleting Room Hierarchy Classes

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Hierarchy Classes**.
2. Enter search criteria and click **Search**.
3. Select the room class hierarchy, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Configuring Room Hierarchy (Room) Types

Prerequisites for Configuring Room Hierarchy (Room) Types

Room Type hierarchies are available for selection in the Reservation Upgrade Rules configuration.

Adding Room Hierarchy Types

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Hierarchy Types**.
2. Click **New** and enter the following details:
   a. **Property**: Enter or select a property from the list.
   b. **From Room Type**: Select a Room type from the list.
   c. **To Room Type**: Select one or room types from the list.
   d. **Sequence**: Enter a number for the display sequence or the order in which the upsell room hierarchy is listed.
3. Click **Save**.

Editing Room Hierarchy Types

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Hierarchy Types**.
2. Enter search criteria and click **Search**.
3. Select the room Type hierarchy, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update details.
5. Click **Save**.

Deleting Room Hierarchy Types

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Hierarchy Types**.
2. Enter search criteria and click **Search**.
3. Select the room Type hierarchy, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm

Configuring Room Features

A feature is a characteristic or attribute of the room which does not significantly affect the rate or the demand on the room. Room feature functionality makes it easier for you to search and assign rooms according to guest preferences. Room features configured here are also displayed as profile preferences (of type: room feature). See Configuring Preferences for more information.

You can think of a feature as being any attribute of the room for which specific availability does not need to be tracked. For example, room features can be rooms near or away from an elevator, rooms with accessibility facilities or rooms with a specific view. There may however

Copyright © 2016, 2025, Oracle and/or its affiliates.

be some cases where features need to be considered as a specific room type. If your property has a limited amount of rooms with an ocean view, for which a higher price is charged, then ocean view rooms would have their own room type (and room feature).

Once configured room features are selected on each room type and/or room. See Configuring Rooms for more details.

During check in or when pre-allocating rooms, OPERA Cloud can search for available rooms by room feature as well as by room type; with room feature, smoking and floor preferences defaulted from the reservation and/or profile.

> **Note**
>
> Smoking and Floor are not configured as a room feature as there are separate, distinct preference types for these.

Adding Room Features

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Room Features are created by selecting the **Template** tab. Once created, you can copy Room Feature codes to specific properties using the Copy action. See Copying Configuration Codes to Multiple Properties for more information.

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Features**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the room feature.
   b. **Description**: Enter a description of the room feature.
   c. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.
   d. **Global**: Select the make the room feature available in all properties. (Available in the template tab when the **Multi Property** OPERA Control is active).
3. Click **Save** or **Save and Continue** to add another.

Editing Room Features

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Features**.
2. Enter search criteria and click **Search**.
3. Select the room feature, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update details.
5. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Room Features

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Features**.
2. Enter search criteria and click **Search**.
3. Select the room feature, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Room Maintenance Codes

Prerequisites for Room Maintenance

Room maintenance codes are the various maintenance tasks categories selected from when creating a maintenance task requests. Users select a maintenance category and then enter additional notes to describe the maintenance issue. Examples: Air Conditioning, Plumbing, Electrical, Carpet, Other.

Adding Room Maintenance Codes

When the **Multi Property** OPERA Control is active, new Room Maintenance codes are created by selecting the Template tab. Once created, you can copy Room Maintenance codes to specific properties using the Copy action. For more information, see Copying Configuration Codes to Multiple Properties.

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Maintenance**.
2. Click **New** and complete the following:
   a. **Code**: Enter a code for the maintenance reason.
   b. **Description**: Enter a description for the maintenance reason.
   c. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.
   d. Click **Save**.

Editing Room Maintenance Codes

To edit an existing room maintenance code in your property, do the following:

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Maintenance**.
2. Enter search criteria then click **Search**.
3. Select the room maintenance code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. **Inactive**: Select check box to mark code as inactive.
6. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Room Maintenance Codes

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Maintenance**.
2. Enter search criteria then click **Search**.
3. Select the room maintenance code in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Room Pools

Prerequisites for Configuring Room Pool Mapping

Room Pools allow to you group room types together into more generic categories. Often the physical room types are too specific than what is required by sales agents creating inquiry (leads) blocks; room pools provide a way to enable a way to simply this. For example, you might create a Room Pool for STD:Standard and then map all the physical rooms type that fit this description, say Kings and Doubles, to room pool of "STD". When a sales agent books 5 STD rooms in a block, they actually book 5 rooms that are either Kings or Doubles. When configured you then map the physical room types to room pools, see Configuring Room Pool Mapping for more information.

Adding Room Pools

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Pool Codes**.
2. Click **New** and enter the following details:
    a. **Property**: Enter or confirm the property.
    b. **Room Pool**: Enter a code for the room pool.
    c. **Description**: Enter a description of the room pool.
        i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
    d. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.
3. Click **Save** or **Save and Continue** to add another room pool.

Editing Room Pools

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Pool Codes**.
2. Confirm the property and click **Search**.
3. Select the room pool, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update details.
5. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Room Pools

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Pool Codes**.
2. Confirm the property and click **Search**.
3. Select the room pool, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Room Pool Mapping

Prerequisites for Configuring Room Pool Mapping

Room Pools allow you group room types into generic categories. Often the inventory room types are too specific for what is required by sales agents creating opportunities for inquiry (leads) blocks; room pools provide a way to simplify this. For example, you might create a room pool for STD: Standard and map all the inventory rooms types that fit this description, say Kings and Doubles, to room pool of "STD". When a sales agent books five STD rooms in a block, they actually book five rooms that are either Kings or Doubles.

If existing room type mapping is modified a room pool synchronization is automatically run to update the room types for existing room inventory for opportunities, blocks, master and sub blocks and master allocations and sub allocations.

Editing Room Pool Mapping

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Room Pool Mapping**.
2. Enter search criteria, then click **Search**.
3. Click **Edit** and enter the following details for each room type:
   a. **Room Pool**: Select a Room Pool from the list. For more information, see Configuring Room Pools
   b. **Restricted**: Select check box to force rooms to be allocated using inventory room types in the Room and Rate Grid. For more information, see Managing Block Room and Rate Grid
   c. **Sequence**: Defines the order in which room inventory will be allocated to the room types.
4. Click **Save**.

Configuring Buildings

Prerequisites for Configuring Buildings

Buildings are available for the purpose of housekeeping task assignment; allowing task sheets to be generated per building. Using building as a 'hard-stop' prevents room attendants being assigned rooms in different buildings.

If you are planning to use building group configuration, configure those before configuring buildings; however building groups are optional when using buildings

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Buildings

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Buildings**.
2. Click **New** and enter the following details:
    a. **Property**: Enter or select the property.
    b. **Code**: Enter a code for the building.
    c. **Description**: Enter a description for the building.
    d. **Building Group**: Select a building group from the list.
    e. **Target Credit**: Enter the target credit for this building when processing the housekeeping task breakout by building.
    f. **Sequence**: Enter a display sequence.
3. Click **Save** or **Save and Continue** to add another.

Editing Buildings

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Buildings**.
2. Enter search criteria and click **Search**
3. Select the building in the search result, then click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update details.
5. Click **Save**.

Deleting Buildings

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Buildings**.
2. Enter search criteria and click **Search**
3. Select the building in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Building Groups

Prerequisites for Configuring Buildings

Building groups are used to group multiple building together for the purpose of housekeeping task assignment; allowing task sheets to be generated per building group. Using building groups as a 'hard-stop' prevents room attendants being assigned rooms in different building groups.

Adding Building Groups

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Building Groups**.
2. Click **New** and enter the following details:

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. **Property**: Enter or select the property.
b. **Code**: Enter a code for the building group.
c. **Description**: Enter a description for the building group.
d. **Target Credit**: Enter the target credit for this building when processing the housekeeping task breakout by building group.
e. **Sequence**: Enter a display sequence.

3. Click **Save** or **Save and Continue** to add another.

Editing Building Groups

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Building Groups**.
2. Enter search criteria and click **Search**
3. Select the building group in the search result, then click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update details.
5. Click **Save**.

Deleting Building Groups

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Building Groups**.
2. Enter search criteria and click **Search**
3. Select the building group in the search result, then click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Configuring Floor Mapping

Configuring Floor Mapping

Floor mapping is used when generating housekeeping task sheets by floor; ensuring the housekeeping room attendant doesn't have to travel between buildings or floors.

Floor mapping is only need when you have multiple buildings and the same floors exist in each of those buildings.

See Complete Floor and Building configuration first.

Editing Floor Mapping

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Floor Mapping**.
2. Enter search criteria and click **Search**.
3. Click **Manage** and complete the following
   a. **Floor**: Select a floor from the list.
   b. **Description**: Enter a description (Example: Building 1 Floor 1).
   c. **Building**: Select a building from the list.

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Target Credits**: Enter the target credit for when processing the housekeeping task breakout.

e. **Sequence**: Enter a display sequence.

4. Click **Save**.

> **Note**
>
> Click **Add Row** to add additional rows as needed.

Configuring Floors

Prerequisites for Configuring Floors

Floors are used to designate the floor of a room, and can be specific such as "1st floor", "2nd floor" or generic such as a "High" or "Low" floor. Floor is a preference group and Floors are selected as a preference in guest profiles and used as a search option when searching available rooms and viewing floor plans. Floors can also be used as a 'hard stop' for housekeeping task sheets.

> **Note**
>
> When the **Building Management** OPERA Control is inactive, floors are configured as preferences for the **Floor** preference group. For more information, see Configuring Preference Codes.

Adding Floors

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Floors are created by selecting the **Template** tab. Once created, you can copy Floors to specific properties using the Copy action. See Copying Configuration Codes to Multiple Properties for more information.

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Floors**.
2. Click **New** and enter the following details:
   a. **Floor**: Enter an alpha-numeric code for the floor; maximum of 8 characters.
   b. **Description**: Enter a description for the floor.
   c. **Sequence**: Enter a display sequence.
   d. **Global**: Select to indicate the floor is global in multi-property operations.
   e. **Housekeeping**: Select to indicate this floor is available when creating task sheets; where floor is used as the hard stop between task sheets.
3. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Floors

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Floors**.
2. Enter search criteria and click **Search**.
3. Select a delivery status, click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update configuration.
5. Click **Save**.

Deleting Floors

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Floors**.
2. Enter search criteria and click **Search**
3. Select the room and click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Configuring Bed Types

Prerequisites for Configuring Bed Types

Bed Types are referenced in room type configuration to identify the bed configuration . If a room type has more than one physical bed then configure a bed type for the combination; for example QS for Queen + Single .

> **Note**
>
> Bed types is global configuration in a multi-property operation.

Adding Bed Types

1. From the**Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Bed Types**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the bed type.
   b. **Description**:Enter a description for the bed type.
      i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   c. **Sequence**: Enter a display sequence.
3. Click **Save** or **Save and Continue** to add another.

Editing Bed Types

1. From the**Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Bed Types**.
2. Enter search criteria and click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the bed type in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**
4. Update details.
5. Click **Save**.

Deleting Bed Types

1. From the**Administration** menu, select **Inventory**, select **Accommodation Management** and then select **Bed Types**.
2. Enter search criteria and click **Search**.
3. Select the bed type in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Central Room Pools

Prerequisites for Configuring Central Room Pools

Central Central Room Pools group various room types together for the Central Sales property. Properties associated with a Central Sales hub are mapped to the Central Room Pool. See Configuring Central Room Pool Mapping.

Adding Central Room Pools

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** , and then select **Room Pool Codes**.
2. Click **New** and enter the following details:
   a. **Property**: Select the Central Sales property.
   b. **Room Pool**: Enter a code for the room pool.
   c. **Description**: Enter a description of the room pool.
      i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   d. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.
   e. Click **Save** or **Save and Continue** to add another room pool.

Editing Central Room Pools

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Pool Codes**.
2. Select the **Central Sales** property and then click **Search**.
3. Select the room pool in the search result, click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update the details.
5. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Central Room Pools

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Room Pool Codes**.
2. Select the **Central Sales** property and then click **Search**.
3. Select the room pool in the search result, click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Configuring Central Room Pool Mapping

Prerequisites for Configuring Central Room Pools

Central Room Pool Mapping is used to map central sales properties' room types to a central room pool so you can create and send Managing Central Sales Leads. For example, you might create a central room pool for standard rooms and all central sales properties' standard rooms are mapped to the standard room central room pool.

Editing Central Room Pool Mapping

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Central Room Pool Mapping**.
2. Enter or select the **property** and then click **Search**.
3. Click **Edit** and enter the following details for each room type listed:
   a. **Central Room Pool**: Select a Central Room Pool from the list. For more information, see Configuring Central Room Pools.
   b. **Restricted**: Select check box to force rooms to be allocated using inventory room types in the Block Room and Rate Grid.
   c. **Sequence**: Defines the order in which room inventory will be allocated to the room types.
   d. Click **Save**.

Configuring Vacant Room Status Update Rules

Prerequisites for Configuring Vacant Room Status Update Rules

When the **Update Vacant Room Status** OPERA Control is set to **Custom**, you can configure rules for the **Updating Room Statuses** end of day procedure to process and update rooms of select room type(s), vacant for a specified number of days, to a nominated housekeeping status. For example, you can configure rules to update vacant rooms to pickup status after 14 days; ensuring the vacant room is scheduled for a housekeeping task (for dusting and "running the taps" in the room).

> **Note**
>
> The `HK_RM_STATUS_CHANGED` changes log action type tracks all changes to room status processed by the **Updating Room Statuses** end of day procedure.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Vacant Room Status Update Rules

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Vacant Room Status**.
2. Click **New** and complete the following:
    a. **Property**: Enter or select the property.
    b. **Number of Vacant Days**: Select a value between 1 and 365.
    c. **Date From**: Enter or select a start date (defaults to current business date if not specified).
    d. **Date To**: Enter or select an end date to fix an end date.
    e. **Change Vacant Room Status To**: Select a room status from the list.
        i. **Dirty**.
        ii. **Pickup**: Available when the **Pickup Status** OPERA Control is active.
        iii. **Clean**.
        iv. **Inspected**: Available when the **Inspected Status** OPERA Control is active.
    f. **Room Types**: Select one or more room types.
        i. From the **Available** panel search and select the room types, then click **>** to move the selected codes to the **Selected** panel.
    g. Click **Save**.

Editing Vacant Room Status Update Rules

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Vacant Room Status**.
2. Enter search criteria, then click **Search**.
3. Select a vacant room status rule in the search result, then click the vertical ellipsis **Action s**menu, and select **Edit**.
4. Update the configuration.
5. Click **Save**

Deleting Vacant Room Status Update Rules

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Vacant Room Status**.
2. Enter search criteria, then click **Search**.
3. Select a vacant room status rule in the search result, then click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Configuring Unit Statuses

Prerequisites for Configuring Unit Statuses

Copyright © 2016, 2025, Oracle and/or its affiliates.

Unit statuses replace standard Out of Order and Out of Service to provide flexible options to define statuses as **Deduct Inventory** and **Include in Occupancy Statistics** (in Reporting & Analytics).

> **Note**
>
> When the **Multi Property** OPERA Control is active, new unit statuses are created by selecting the **Template** tab. Once created, you can copy unit statuses to specific properties using the **Copy** action. For more information, see Copying Configuration Codes to Multiple Properties

Adding Unit Statuses

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Unit Status**.
2. Click **New** and complete the following fields:
   a. **Property**: Enter or select the property.
   b. **Code**: Enter a code for the unit status.
   c. **Description**: Enter a descriptive explanation for the unit status.
   d. **Deduct Inventory** : Select check box to deduct inventory and display unit status in Out of Order configuration (deselect to display unit status in Out of Service configuration).
   e. **Include in Statistics**: Select check box to include the status in R&A occupancy statistics.
   f. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.
   g. Click **Save**.

Editing Unit Statuses

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Unit Status**.
2. Enter search criteria and click **Search**.
3. Select the unit status in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Make the required changes.
   b. **Inactive**: Select check box to make a code inactive; inactive codes are not available for selection.
   c. Click **Save**.

Deleting Unit Statuses

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Unit Status**.
2. Enter search criteria and click **Search**.
3. Select the unit status in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Click **Delete** to confirm.

Configuring Overbooking Protection

Distribution

The overbooking protection relates to Sellable Availability. When set, the sum of all available rooms cannot exceed the total number of rooms on the property, and the total per room type is calculated and rounded accordingly.

> **Note**
>
> You can configure Overbooking Protection only on Property level and not at HUB level. For more information, see Changing Your Location in Central or Multi Property Operations

Adding Overbooking Protection

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Overbooking Protection**.
2. Click **Create Overbooking Protection** and enter the following details in the Attribute type slide out panel:
   a. **Code**: Displays RT by default, field is read-only.
   b. **Description**: Displays Room Types by default, field is read-only.
   c. **Overbooking Protection**: Enable switch to use the overbooking protection in your Sellable Availability on Inventory. Each time you change this setting a recalculation of your inventory is required.
   d. Click **Create** and confirm the recalculation of inventory.

> **Note**
>
> If you cancel the recalculation, the overbooking protection is reverted to previous setting and you can close the screen.

Viewing Overbooking Protection

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Overbooking Protection**.
2. By default, you can view the record with all details.

Editing Overbooking Protection

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management**, and then select **Overbooking Protection**.
2. Select the record and then click **Edit**.
3. Change the **Overbooking Protection** setting.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Click **Update** and confirm the recalculation of inventory.

> **Note**
>
> If you cancel the recalculation, the overbooking protection is reverted to previous setting and you can close the screen.

Function Space Management

Prerequisites for Function Space Management

Use Function Space Management to configure the spaces available for assignment to events. Events are categorized by event type such as weddings, conferences, banquets, and so on. There is no restriction on the number of function rooms you can configure; use function space locations and function space types to categories each function space for filtering on the Function Diary. You can also configure setup styles for your function spaces and specify the type of rates charged for a function space.

Premium

You can also identify inventory rooms as function spaces (meeting rooms) for use in events. For more information, see Configuring Rooms.

Configuring Function Spaces

Prerequisites for Function Space Management

Configure Function Space for the areas used for events such as weddings, conferences, banquets, pool parties, and so on.

When the **Alternate Space** OPERA Control is active, you can nominate function spaces to require an alternate space to also be booked. This is typically used for outdoor function spaces that would require an alternate "back-up" space in the event of inclement weather. For more information, see Managing Alternate Space Events.

When the **Advanced Function Space Handling** OPERA Control is active, you can configure combination (combo) function spaces, when more than one function space can be combined and booked for an event. You can also identify function spaces as shareable and setup function space rental code details.

You can copy (clone) the setup of a function space to easily create other similar function spaces.

> **Note**
>
> Before you configure function spaces, you must configure room classes and room types, function space types, locations, setup styles, rental codes, and revenue types.

Premium When the **Guest Room As Meeting Room** OPERA Control is active, you can also setup guest inventory rooms to be used as function spaces, for more information, see Configuring Rooms.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Function Spaces

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Click **New** and complete the following:
   a. Function Space Details:
      i. **Primary Details**: Configuring Function Space Primary Details
      ii. **Additional Details**: Configuring Function Space Additional Details
      iii. **Dimensions and Details**: Configuring Function Space Dimensions and Details
   b. **Setup Styles**: Configuring Function Space Setup Styles
   c. **Rental Codes**: Configuring Function Space Rental Code Details
   d. **Combo Elements**: Configuring Function Space Rental Combination Components
3. Click **Save**.

Editing Function Spaces

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.
3. From your search results, select the **Function Space**, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration from the Function Space presentation page:

Table 12-4 Function Space Detail Links

Function Space
Primary Details
Additional Details
Dimensions and Details
Setup Styles
Rental Codes
Combo Elements

Copying Function Spaces

You can quickly copy the setup of a function space to many other function spaces using the copy action.

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criterian and then click **Search**.
3. From search results, select the **Function Space**, click the vertical ellipsis **Actions** menu and select **Copy**.
4. Enter the following fields:
   a. **Room**: Enter the code for the function space.
   b. **Space Name**: The full name of the function space.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **Short Name**: An abbreviated or alternate function space name.

d. **Custom Order (1–3)**: A custom order represents a group of selected function spaces appearing in a specific sequence. Use the three Custom Order fields to identify the Function Diary custom order (or orders) to which the current function space should belong and the position of the function space in that custom order.

e. **Combo Element**: (Available only if the source function space is marked as a combo room). Select or more function space from the list to associated with the combo room.

5. Click **Save**.

Deleting Function Spaces

You can delete a function space only when the space is not assigned to any events.

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, and click **Search**.
3. From search results, select the **Function Space**, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Function Space Primary Details

Editing Function Space Primary Details

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Click **New** and complete the following fields.
3. On the Function Space presentation page click the **Primary Details** details link.

a. Click **Edit** and complete the following:

b. **Property**: Enter or select the property.

c. **Room Type**: Select the pseudo room type for the function space from the list (example: MSPACE).

d. **Room**: Enter a code for the function space, with a maximum of eight alphanumeric characters. Special characters are permitted with the exception of spaces.

e. **Space Type**: Select the space type from the list. The space type can serve as a filter in the Function Diary. See Configuring Function Space Types.

f. **Minimum Capacity**: Enter the minimum number of people required to book this function space. When associating setup styles to a function space, this is the minimum value you can enter for minimum capacity.

g. **Maximum Capacity**: Enter the maximum number of people allowed in this function space (often the fire code maximum is used here). When associating setup styles to a function space, this is the maximum value you can enter for maximum capacity.

h. **Space Name**: Enter the full name of this function space. The name identifies the function space on the Function Diary (link: Using the Function Diary and in other screens and reports.

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

i. Click **Save**.

Configuring Function Space Additional Details

Editing Function Space Additional Details

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.
3. From your search results, select the Function Space, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Function Space presentation page click the **Additional Details** details link.
   a. Click **Edit** and complete the following.
   b. **Short Name**: An abbreviated or alternate function space name. If a Short Name is provided, it appears instead of the Space Name on the Function Diary screen. For example, you can use this field to identify the Grand Continental Ballroom A as the Ballroom A on the Function Diary, if Ballroom A is commonly recognized by staff.
   c. **Location**: Select the location where the function space is situated. You can use Location filtering in the Function Diary.
   d. **Floor**: Select the floor where the function space is located. For more information, see Configuring Floors
   e. **Custom Order 1-3**: When you are working with the Function Diary, three custom orders are available for sorting the function space display. The custom orders are included as Sort By options in the Function Diary screen. Each custom order represents a group of selected function spaces appearing in a specific sequence. Use these three fields to identify the Function Diary custom order (or orders) to which the current function space should belong and the position of the function space in that custom order.
   f. **Display in Diary**: Select the check box to show the function space in the Function Diary by default. If the check box is not selected, the function space appears in the Function Diary only if you select the filter criteria, Include Hidden Spaces check box.
   g. **Web Viewable**: Select the check box to designate this function space as viewable on a booking website.
   h. **Web Bookable**: Select the check box to designate this function space as available for booking on a booking website.
   i. **Shareable** : Select the check box if the space is shareable (if two or more events from different blocks can simultaneously use the space). When the space is shareable, you can set the maximum capacity and a limit for the maximum number of groups that can book the space for the same date and the same or overlapping time periods. When an event is booked in the space, the application validates that both the maximum capacity and maximum number of groups are exceeded. If the maximum capacity or maximum number of groups are exceeded, and you have the **Override Space Capacity** task assigned, you can continue or cancel the process. (Available when the **Advanced**

Copyright © 2016, 2025, Oracle and/or its affiliates.

Function Space Handling OPERA Control is active). Note: When scheduling an event in a space, you can designate the space as exclusive (not shareable) at the time the function space is selected. When this is the case, you cannot schedule the function space for another event at the same time. (Available when the **Book Shareable Space as Exclusive** OPERA Control is active).

> **Note**
>
> When scheduling an event in a space, you can designate the space as exclusive (not shareable) at the time the function space is selected (**Book Shareable Space as Exclusive** OPERA Control is required). When this is the case, you cannot schedule the function space for another event at the same time.
>
> i. **Maximum Groups**: If the room is shareable, enter the maximum number of groups allowed to share it. Maximum Groups controls the number of blocks that can book the space at the same time in deduct from inventory status.

j. **Accessible**: Select this check box when the space has facilities for people with an impairment or special needs.

k. **Force Alternate** : Select the check box if you want to force users to select an alternate (backup) space when this function space is booked for an event. Available when the **Alternate Space** OPERA Control is active. For more information, see Managing Alternate Space Events.

   i. **Excluded Event Types** : Available if the Force Alternate check box is selected. Use this option to select Event Types to exclude from the Force Alternate requirement. For example; if MTG (meeting) is selected as an Event Type for the Conference Room, then when booking the Conference Room for Event Type MTG, an Alternate space is not required, and you are not prompted to select one.

l. **100% Occupancy**: Defaults to 1440 minutes (24 Hours) with the creation of a function space. This value represents the amount of time the function space is considered at 100% utilization. The value is used in the Function Space Utilization (`rep_fs_utilization`) report. For more information, see Event Reports.

m. **Exclude From Forecast**: Select check box to default the **Exclude from Forecast** check box in Event Revenue Summary for events in this function space.

n. **Description**: Enter a description of the function space type, such as Grand Continental Ballroom.

   i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

o. Click **Save**.

Configuring Function Space Dimensions and Details

Editing Function Space Dimension and Details

The panel supports distance measurements in feet or meters and weight measurements in pounds or kilograms. As you add dimensions or weights in one unit, OPERA Cloud

Copyright © 2016, 2025, Oracle and/or its affiliates.

automatically computes the measurement in the other unit. Whether you have access to the Meter/Kg or Feet/Lb fields depends on the value selected in Measurement OPERA Control.

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.
3. From your search results, select the Function Space, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Function Space presentation page click the **Dimension & Details** details link.
    a. Click **Edit** and complete the following:
    b. **Area**: Area of the room (length x width).
    c. **Length**: The length dimension of the space.
    d. **Width**: The width dimension of the space.
    e. **Minimum Height**: The minimum height of the space. Minimum height might not be necessarily dictated by ceiling height. If chandeliers or similar structures are low-hanging, you might want to note them.
    f. **Maximum Height**: The maximum height of the space.
    g. **Weight**: The maximum load the floor can support in the function space.
    h. **Notes**: Any additional information of importance about the space.
    i. Click **Save**

Configuring Function Space Setup Styles

Adding Function Space Setup Styles Details

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.
3. From your search results, select the Function Space, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Function Space presentation page click the **Setup Styles** details link.
    a. Click **New** in the Setup Styles panel and complete the following fields:
        i. **Code**: Select the appropriate Setup Code. Refer to Configuring Setup Styles.
        ii. **Default**: Select the check box if this Setup Style should be selected automatically when the function space is added to an event. You can select only one Setup Style per function space as the default. Note: Selecting this check box deselects the check box on another Setup Style where it has already been selected.
        iii. **Minimum Capacity**: Enter the lowest number of attendees needed to book the function space with this setup style. If the attendee number on the event is lower than this number, OPERA Cloud prompts you about the discrepancy. The value entered here cannot be lower than the value entered in the Minimum Capacity field in the Primary Details section.
        iv. **Maximum Capacity**: Enter the highest number of attendees allowed to book this function space with this setup style. If the attendee number on the event is higher

Copyright © 2016, 2025, Oracle and/or its affiliates.

than this number, OPERA Cloud prompts you about the discrepancy. Note: the value entered here cannot be higher than the value entered in the Maximum Capacity field in the Primary Details section.

v. **Setup Time**: Enter the default number of minutes required to set this room up in the setup style. The number entered here defaults to the event when this function space and setup style are selected, but you can update the value at any time.

vi. **Setdown Time**: Enter the default number of minutes required to break down this room in this setup style. The number defaults to the event when you select this function space and setup style, but you can update the value at any time.

b. Click **Save** to save and close or click **Save and Continue** to save and add another setup style.

Editing Function Space Setup Styles Details

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.
3. From your search results, select the Function Space, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Function Space presentation page click the **Setup Styles** details link.
5. Select the **Setup Style**, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update details.
   b. Click **Save**.

Deleting Function Space Setup Styles Details

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.
3. From your search results, select the Function Space, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Function Space presentation page click the **Setup Styles** details link.
5. Select the **Setup Style**, then click the vertical ellipsis **Actions** menu and select **Delete**.
6. Click **Delete** to confirm.

Configuring Function Space Rental Code Details

When the **Advanced Function Space Handling** OPERA Control is active, you can configure rental codes and associate to function spaces to set default prices for room rental. See Configuring Rental Codes.

Adding Function Space Rental Code Details

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the function space in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Function Space presentation page click the **Rental Codes** details link.

> **Note**
>
> The Rental Code CUSTOM defaults when this panel is first selected.

   a. **Code**: Select the appropriate Rental Code from the list.
   b. **Revenue Type**: Select the appropriate Revenue Type from the list. The value selected in the **Default Space Revenue Type** OPERA Control defaults to this field.
   See: Configuring Catering Revenue Types.
   c. **Charge Type**: Select a value from the list:
      - Per Room (Flat charge amount)
      - Per Person (Amount * Number of Attendees).
   d. **Amount**: Enter the Rental Amount for this Rental Code and Function Space.
   e. **Set as Default**: Select the check box if the Rental Code should be automatically selected when you add the function space to an event. You can select only one Rental Code per function space as the default. Selecting this check box deselects it on another Rental Code where the check box is already selected.
   f. **Hourly Rate**: Select the check box if the Amount you entered should be charged based on the number of hours the function space is booked, for example, if the Amount you enter is 100.00 and space is booked on an event from 09:00 - 11:00, the Rental Amount calculates as 100.00 * 2 Hours).
   g. Click **Save** or click **Save and Continue** to save and add another rental.

Editing Function Space Rental Code Details

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.
3. Select the function space in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Function Space presentation page click the **Rental Codes** details link.
5. Select the **Rental Code**, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update details.
   b. Click **Save**.

Deleting Function Space Rental Code Details

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.
3. Select the function space in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the function space presentation page click the **Rental Code** details link.

Copyright © 2016, 2025, Oracle and/or its affiliates.

5. Select the **Rental Code**, then click the vertical ellipsis **Actions** menu and select **Delete**.
6. Click **Delete** to confirm.

Configuring Function Space Rental Combination Components

When the **Advanced Function Space Handling** OPERA Control is active, you can configure combination (combo) function spaces when more than one function space can be combined and booked for an event. Configure the actual function space components prior to setting up the combination spaces. Select the various component spaces that comprise the combination function space.

Editing Combination Function Space Components

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and select **Function Spaces**.
2. Enter search criteria, then click **Search**.
3. From your search results, select the Function Space, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Function Space presentation page click the **Combo Elements** details link.
    a. Click **Edit**.
    b. From the list in the left panel, select the function spaces that make up this combination space (you can select more than one space using the space bar), then move the selected spaces to the right panel using the **>** arrow button.
    c. Click **Save**.

Configuring Function Space Types

Use the Function Space Types screen to configure the different types of function spaces available at your property, such as Ballroom, Boardroom, or Conference. This can be helpful in the Function Diary when filtering for a suitable function space.

Function Space Types are assigned to the function space using the Function Space Setup screen. For more information, see Configuring Function Spaces.

Adding Function Space Types

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Function Space Types**.
2. Click **New** and complete the following fields:
    a. **Code**: Enter a code for the function space type, such as BALL.
    b. **Description**: Enter a description for the function space type, such as Ballroom.
        i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.

3. Click **Save** or click **Save and Continue** to add another.

Editing Function Space Types

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Function Space Types.**
2. Enter search criteria, then click **Search**.
3. Select the function space type, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Make the required change to Description or Sequence.
5. Click **Save**.

Deleting Function Space Types

You can delete a Function Space Type only if it has not been assigned to a Function Space.

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Function Space Types.**
2. Enter search criteria, then click **Search**.
3. Select the function space type, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Function Space Locations

Use the Function Space Locations screen to configure where a function space is located on the property, for example, the main building or outside. This can be helpful in the Function Diary when filtering for a suitable function space.

The Locations are assigned to the function space using the Function Space Setup screen. For more information, see Configuring Function Spaces.

Adding Function Space Locations

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Locations.**
2. Click **New** and complete the following:
   a. **Property**: Enter or confirm the property name.
   b. **Code**: Enter a code for the function space location. For example Main.
   c. **Description**: Enter a description for the function location. For example "Main Building".
      i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   d. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Function Space Locations

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Locations.**
2. Enter search criteria, then click **Search**.
3. Select the function space location in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**
4. Make the required change.
5. Click **Save**.

Deleting Function Space Locations

You can only delete a Function Space Location when it is not assigned to a Function Space.

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Locations.**
2. Enter search criteria, then click **Search**.
3. Select the function space location in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete**.

Configuring Event Types

Event Types describe the kind of activity taking place during a given meal period, such as meeting, lunch, exhibits, and so on. In addition, Event Types can streamline the booking process by defaulting start and end times. Event Types can also be linked to meal periods and used in forecasting, tracking, and posting event revenue.

Event types are also referenced in other areas of configuration, for example, when defining menus and menu items.

Adding Event Types

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Event Types**.
2. Click **New** and complete the following fields:
   a. **Code**: Enter a code for the event type.
   b. **Description**: Enter a description for the event type.
      i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
   c. Start Time: The time entered here is used as the default start time when an event is created with this Event Type. You can change the start time after it is defaulted on the event.
   d. **End Time**: The time entered here is used as the default end time when an event is created with this Event Type. You can change the end time after it is defaulted on the event.

Copyright © 2016, 2025, Oracle and/or its affiliates.

e. **Meal Period**: Select a meal period for the Meal Type Forecast report. For more information, see Configuring Meal Periods(Available when the **Catering Meal Period** OPERA Control is active).

f. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.

g. **Bookable through website**: Select check box if this event type should be available for selection when an event is booked through website.

3. Click **Save** to save and close.

Editing Event Types

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Event Types**.
2. Enter search criteria, then click **Search**.
3. Select the event type in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Make the required changes.
5. Click **Save**.

Deleting Event Types

You can delete an Event Type only if it is not configured with forecast figures or booked.

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Event Types**.
2. Enter search criteria, then click **Search**.
3. Select the event type in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Rental Codes

Prerequisites for Rental Codes

The Function Space Rental Codes are used to specify the type of rate (Daily, Hourly, Per Person, or Custom) charged for a function space.

The Rental Codes are assigned to the function space using the Function Space Setup screen. For more information, see: Configuring Function Spaces.

Adding Rental Codes

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Rental Codes**.
2. Click **New** and complete the following fields:
   a. **Code**: Enter a code for the Rental Code, such as FULL.
   b. **Description**: Enter a Description for the rental code, such as Full Day.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

d. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.

3. Click **Save** to save and close the record.

Editing Rental Codes

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Rental Codes**.
2. Enter search criteria, then click **Search**.
3. Select the rental code in the search result, and click the vertical ellipsis **Actions** menu and select **Edit**.
4. Make the required changes.
5. Click **Save**.

Deleting Rental Codes

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Rental Codes**.
2. Enter search criteria, then click **Search**.
3. Select the rental code in the search result, and click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Setup Styles

Configure the setup styles for function spaces at your property. Setup styles might include seating arrangements, furniture and equipment placements, and so on. Setup Styles are then assigned to the function spaces. For more information, see: Configuring Function Spaces.

Adding Setup Styles

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Setup Styles**.
2. Click **New** and complete the following fields:
   a. **Code**: Enter a code for the Setup Style Rental Code, such as CLS.
   b. **Description**: Enter a description of the Setup Style, such as Classroom Style.
   c. **Bookable through website**: Select this check box if this setup style should be available for selection when an event is booked through website.
      i. **Setup Time in Minutes**: Enter the number of minutes that should be booked for setup when this Setup Style is selected for an event booked through website.
      ii. **Tear Down Time in Minutes**: Enter the number of minutes that should be booked for tear down when this Setup Style is selected for an event booked through website.

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.

3. Click **Save**.

Editing Setup Styles

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Setup Styles**.
2. Enter search criteria, then click **Search**.
3. Select the setup style in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Make the required change.
5. Click **Save**.

Deleting Setup Styles

1. From the **Administration** menu, select **Inventory**, select **Function Space Management**, and then select **Setup Styles**.
2. Enter search criteria, then click **Search**.
3. Select the setup style in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Task Sheets

You can create task sheets at your property for housekeeping staff. With the optional **Housekeeping Task Scheduling** function enabled in OPERA Controls, you can also schedule these housekeeping tasks and the various housekeeping supplies for each room type.

Housekeeping Task Scheduling

Prerequisites for Housekeeping Task Scheduling

Housekeeping task scheduling enables you to set up a schedule of tasks to occur on various days during a reservation stay. Task scheduling supports operations (for example, when a light service task is scheduled daily) with a full service task occurring once a week. To configure the task schedule, you must first configure each task code and then schedule the tasks for each room type. Additionally, you can also configure task supplies (that is, soap, towels, linens) which are supplied to the room as part of the scheduled task.

Configuring Housekeeping Tasks for Scheduling

Configure the task codes that are used when configuring room type task schedules. For example, you could create tasks such as Full Service, Light Touch Up and so on.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Housekeeping Task Schedules

> **Note**
>
> When the **Multi Property** OPERA Control is active, new housekeeping task schedules are created by selecting the **Template** tab. Once created, you can copy housekeeping task schedules to specific properties using the **Copy** action. For more information, see Copying Configuration Codes to Multiple Properties.

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Tasks**.
2. Click **New** and complete the following fields:
   a. **Property**: Enter a property or search for and select a property.
   b. **Code**: Enter a housekeeping task code (for example, LIGHT, FULL, NSR, and B&B).
   c. **Description**: Enter a description for the task (for example, Light touchup, Full Service, No Service, Empty Bins, and Make Bed Only).
   d. **Colors**: Select a color code for the task type. The task's defined color populates in the date box in the housekeeping task scheduler when viewed from the reservation details link and from within the Forecast screen in Housekeeping.
   e. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.
   f. **Task Instructions**: Enter a short description of the steps required to perform this task.
   g. **Departure Room Default Task**: Select to make this task code the default departure room task. OPERA Cloud requires that one task code must be marked as the Departure Room Default Task. This task code will be assigned and forecasted for all departure rooms within Housekeeping. This is typically a full service of the room.
   h. **Guest Requested Task**: Select to indicate this task is only available when requested by the Guest. Guest requested tasks are not automatically scheduled.

      > **Note**
      >
      > A task selected as a **Guest Requested Task** cannot also be selected as a **Departure Room Default Task**. When one option is selected, the check box for the other option becomes inactive.

   i. **Linen Change**: Select to signify the Task requires a linen change. This is reflected in the Total Linen Change statistic within the Expanded Task Sheet and noted for each corresponding task in the task sheet reports and task companion.
3. Click **Save**.

Editing Housekeeping Task Schedules

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Tasks**.
2. Enter search criteria and click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the code in the search result, then click the vertical ellipsis **Action** menu and select **Edit**.
4. **Inactive**: Select check box to make a code inactive; inactive codes are not available for selection.
5. Update the configuration.
6. Click **Save**.

Deleting Housekeeping Task Schedules

1. Select the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Tasks**.
2. Enter search criteria and click **Search**.
3. Select the code in the search result, then click the vertical ellipsis **Action** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring (Room Type) Task Schedules

> **Note**
>
> When the **Multi Property** OPERA Control is active, new housekeeping task schedules are created by selecting the **Template** tab. Once created, you can copy task schedules to specific properties using the **Copy** action. For more information, see Copying Configuration Codes to Multiple Properties

> **Note**
>
> You can configure multiple schedules for the same Room Type and Task combination when one of the following components is different: Special, Rate Code, Market Code, VIP Level, Membership Type, and Membership Level.

> **Note**
>
> Housekeeping schedules based on Membership Level are reflected in the reservation Managing Reservation Housekeeping and Task Schedule when the Membership Level matches the reservation Membership Level.

Once Housekeeping Tasks and Task Supplies are configured, the next step is to schedule these tasks for each room type. Each room type task scheduled is given a priority and a frequency. If two tasks are scheduled to occur on the same day, the higher priority task is scheduled. For example, a task scheduled for every two days and a task scheduled for every five days will occur on the 10th day of the stay, and the task with the higher priority will be scheduled. Vacant dirty rooms are assigned the departure task.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Regardless of priority the departure task will be prioritized for a room when there is both a departure and arrival reservation on the same date.

For each task scheduled, you can also select the various task supplies (such as linen, soap, or shampoo) to be provided as part of the task scheduled.

Adding Room Type Task Schedules

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Schedules**.
2. Click **New** and complete the following fields:
   a. **Property**: Enter a property or search for and select a property.
   b. **Room Type**: Select the room type for which this task is being scheduled.

      > **Note**
      >
      > You can set up the Task Schedules with a blank room type. All room types that don't already have a schedule configured will utilize blank room-type schedules. However, any schedule with a blank room type will no longer be considered once a schedule for that particular room type is configured.

   c. **Task**: Select the down arrow to choose a task.
   d. **Market Codes**: Enter or select **Market Codes** to limit the scheduling of the task.
   e. **Special** : Enter or select **Special** codes to limit the scheduling of the task.
   f. **Rate Codes**: Enter or select **Rate Codes** to limit the scheduling of the task.
   g. **Priority**: Enter a number for the priority. When more than one task is scheduled for a room type, you define a priority number for each task. A priority is assigned to determine which task takes precedence when two or more tasks converge on a given day of the reservation stay dates. For example, if Full Service was scheduled for every 7 days, and Light Touch was scheduled for every 3 days, these tasks would overlap for any reservation that is in-house for 21 days. For such reservations, OPERA Cloud would choose the Full Service task with priority 1, rather than Light Touch with priority 2.
   h. **VIP Levels**: Enter **VIP codes** to limit the scheduling of the task. (Available when the **VIP** OPERA Control is active).
   i. **Credits**: Enter a credit value for the task. When the room type is a component suite room type, the credits entered will be added to each of the rooms that comprise the component suite on the task sheets. (Available when the **Housekeeping Credits** OPERA Control is set to Facility).
   j. **Membership Type**: Select a membership type from the list.
   k. **Membership Level**: Enter or select membership levels from the list.
   l. **Schedule**: Select from the following options:
      i. **Every X Days**: Select to schedule the task to occur every X number of days of the reservation. This field can be used in conjunction with the **Starting On Day** and the **Every XX Day** field to skip days in between when this task will be performed.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> If the **Start on Day** field is left blank, then the Task will start with the value entered into the **Every XX Days** field. For example, if the Arrival Date of a reservation is 04/11/11, Departure Date of 04/15/11, and has a Task schedule of Every 1 Day, then the Task would be scheduled to start on 04/12/11.

ii. **Everyday**: Select to complete the Task every day.

iii. **Departure Day Only**: (Available when the task has been configured as **Departure Room Default Task**). Select to only complete this Task on the departure date of the reservation.

iv. **Custom Schedule**: Available when the task is configured as a Guest Requested task. This task will not be scheduled automatically. You can customize the schedule from the Reservation Housekeeping and Task Schedule.

v. **Not Required**: Select to exclude certain filter options (that is, a reservation with a specific rate code) from being scheduled with a task. For example, a room type is set up with 4 different tasks for each day. A group has negotiated a lower rate and one of the tasks is excluded for this group (by rate code). Then the frequency **Not Required** can be chosen for that particular task for that Rate Code.

vi. **Arrival Day Only**: Select to schedule on arrival day only.

m. **Number of Days**: Specify how often in days, following the reservations arrival date, the task is to be completed. For example, if the task is repeated every day following the arrival date, enter 1. If the task is completed every three days, enter a 3, and so on. Optionally, you can also define days of the week when this task can take place. See the 'Days of Week' field description below for details.

n. **Starting on Day**: Enter the number of the day of the reservation on which to start the Task schedule. For example, if 3 is entered, then the Task would not be scheduled until the 3rd day of the reservation.

o. **Include on Arrival Day**: Select if you would like the task to begin schedule on the guest's arrival date.

p. **Days of the Week**: This option works in conjunction with the **Number of Days** option to enable you to control the days of the week on which this task can take place. (If no days are selected, only the Number of Days frequency is considered regardless of the day of the week on which the task falls.) Use the check boxes to select the days of the week on which the task can be scheduled. If the day when the task should take place according to the specified frequency falls on a day of the week which is not selected, the task will take place on the next available day of the week.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> If a scheduled task is designated as the Departure Room Default Task, it will be scheduled for the checked-out room regardless of the frequency or the days of the week configured for that task.
>
> For example, assume you want to specify the Full Service (FS) task should take place Every 7 Days, except when the task would fall on a weekend (Saturday and Sunday options deselected, all other days selected). When a Full Service task falls on a Saturday or Sunday, it should be pushed to the next available weekday. In addition, Light Touch (LT) cleaning should be scheduled daily (Every 1 Day), Monday through Friday.
>
> The below table provides an example of how these tasks would be scheduled for a hypothetical stay. Only the priority (FS-Full Service) task is shown on dates when two tasks converge on the same day.

Table 12-5 Task Schedule

Date	Day of the Week	Task
23-Dec	Sunday	No Service (Arrival)
24-Dec	Monday	LT - Light Touchup
25-Dec	Tuesday	LT - Light Touchup
26-Dec	Wednesday	LT - Light Touchup
27-Dec	Thursday	LT - Light Touchup
28-Dec	Friday	LT - Light Touchup
29-Dec	Saturday	No Service
30-Dec	Sunday	No Service
31-Dec	Monday	FS- Full Service
1-Jan	Tuesday	LT - Light Touchup
2-Jan	Wednesday	LT - Light Touchup
3-Jan	Thursday	LT - Light Touchup
4-Jan	Friday	LT - Light Touchup
5-Jan	Saturday	No Service
6-Jan	Sunday	No Service
7-Jan	Monday	FS- Full Service
8-Jan	Tuesday	LT - Light Touchup
9-Jan	Wednesday	LT - Light Touchup
10-Jan	Thursday	FS- Full Service (Departure Task)

q. **Message Text**: Enter a message to display when the task is selected for a custom task schedule for a reservation. For more information, see Reservation Housekeeping and Task Schedule.

3. Click **Save**.

Adding Task Supplies for Task Schedules

Once a task schedule has been setup for a room type, you can select the various supplies.

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Select the task schedule then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Under Supplies, click **New** and complete the following:
    b. **Code**: Select a supply code to add to the task.
    c. **Quantity**: Enter the number of the supply item to add to this task.
    d. Repeat these steps to add more supplies to the task scheduled.
    e. Click **Save**.

Editing Room Type Task Schedules

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Select the code and click the vertical ellipsis **Actions** menu and select **Edit**.
4. **Inactive**: Select check box to make a code inactive; inactive codes are not available for selection.
5. Update the configuration.
6. Click **Save**.

Deleting Room Type Task Schedules

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Schedules**.
2. Enter search criteria and click **Search**.
3. Select the code and click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Scheduled Task Supplies

Configure the various housekeeping supplies, such as Pillow Cases, Hand Towels, Bath Towels, Shampoo, and so on used when scheduling housekeeping tasks. You can then associate these supplies with the housekeeping task schedule setup for each room type.

Adding Scheduled Task Supplies

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Supplies**.
2. Click **New** and complete the following fields:
    a. **Property**: Enter a property or search for and select a property.
    b. **Code**: Enter a supply code (for example, PC, HT, BT, SH).
    c. **Description**: Enter a description for the housekeeping supply item (for example, Pillow Cases, Hand Towels, Bath Towels, Shampoo).

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.

3. Click **Save**.

Editing Scheduled Task Supplies

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Supplies**.
2. Enter search criteria and click **Search**.
3. Select the supply code in the search result,, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. **Inactive**: Select check box to make a code inactive; inactive codes are not available for selection.
   b. Update the configuration.
4. Click **Save**.

Deleting Scheduled Task Supplies

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Supplies**.
2. Enter search criteria and click **Search**.
3. Select the supply code in the search result,, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Scheduled Task Credit Rules

Prerequisites for Configuring Scheduled Task Credit Rules

Task credit rules enable you to add various credits to the auto-generated task sheets. Credit rules can be configured for Travel, Specials, Miscellaneous and Facility (Task Codes) and Inventory Items (Available when the **Item Inventory** OPERA Control is active). Adding these rules will make it easy to break out the rooms evenly and fairly for all attendants. When the **Building Management** OPERA Control is active, you can setup task credit rules per building. Configuring Buildings.

Adding Scheduled Task Credit Rules

1. Select the **Administration** menu, select **Inventory**, and then select **Credit Rules**.
2. Click **New** and complete the following fields:
   a. **Rule Type**: Select a rule type
      - **Traveling** - A Traveling Rule adds extra credit to a task sheet when rooms from multiple Buildings, Section Groups, Sections and/or Floors are assigned.
      - **Specials** - A Special Rule adds extra credit to a room when the defined Specials are attached to a reservation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Special rule credits are added to each one of the physical rooms that make up a component suite (available when the **Component Suites** OPERA Control is active. For example, if a Special rule is configured for a Rollaway Special code for 5 extra credits and this Special Code is selected in a reservation that is assigned to a component suite, then the 5 extra points are added to each one of the physical rooms that make up that component suite.

- **Facility Task** - A Facility Rule adds extra credit to a task sheet when certain Task Code conditions exist. If multiple Facility Task rules are true for a Task Sheet they are all applied on top of each other. For example, a rule states 5 extra credits for the Task Sheet if more than 8 departures (Task Code FS for example), another rule states 10 extra credits for the Task Sheet if more than 10 departures, and another rule states 15 extra credits for the Task Sheet if more than 12 departures. All three rules are considered and if the Task Sheet has 14 departures on it, each with 20 credits for the room/task, the total would be 310 credits (280+5+10+15). If the Max Credit is set to 300, then the last room would be moved to the next sheet as it would exceed the Max Credit.
- **Miscellaneous** - A Miscellaneous Rule adds extra credit to a Task Sheet when certain conditions exist. For example, a Rule could be set up to add credits for a team meeting or other scenarios where the attendant is occupied with anything other than cleaning a room.

> **Note**
>
> If there is a Credit Value of 60 and a Miscellaneous rule is set up for buildings 1 and 2 and if there is a team meeting held every Wednesday and an attendant has rooms from buildings 1 and 2 on their Task Assignment sheet on that day, the attendant receives the 60 credits only once.

- **Inventory Item** - An Inventory Item Rule adds extra credit to a room when the defined Inventory Item is attached to a reservation. As Items can be attached to reservations on a date basis and not only for the entire stay, the credits are only added to the task sheets for those dates the items are attached to the reservation. For example, if a rollaway item is attached for only two days of a 10-night reservation, the credit will only be added to the task sheets for those two days.

> **Note**
>
> Inventory Item rule credits are added to each one of the physical rooms that make up a component suite (available when the **Component Suites** OPERA Control is active). For example, if an Item Inventory rule is configured for a Rollaway code for 5 extra credits and this inventory item is attached to a reservation that is assigned to a component suite, then the 5 extra points are added to each one of the physical rooms that make up that component suite.

b. **Property**: Enter or select the property.

c. **Code**: Enter a code for the credit rule.

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Description**: Enter a description for the credit rule.

e. **Based On**: Select what the credits are based on. (Not available for the Miscellaneous rule type).

f. **Minimum Task Count**: Specify a threshold for each Task Assignment sheet. (Available for the Facility Task Rule Type only).

g. **Credit Value**: Specify the number of credits for each task assignment sheet.

h. **Apply To**: Select an option.

   i. **House**: Select to apply to the entire property.

   ii. **Building**: Select to apply to a specific building (Available when the **Building Management** OPERA Control is active).

      i. **Building**: Select a building from the list.

i. **Automatically Apply On**: Select the days of the week this rule is to default in the **Credit Rules** field when auto generating task sheets.

3. Click **Save**.

> **Note**
>
> All Credit Rules are cumulative; meaning that if duplicates are configured, for example, Mon, Tue, and Wed a roll-away (Special rule) is set up with 5 credits; and then Wed, Thu, and Fri it is set up with 4 credits; therefore, on Wednesdays, 9 credits are added to the task sheet.

Editing Scheduled Task Credit Rules

1. Select the **Administration** menu, select **Inventory**, and then select **Credit Rules**.
2. Enter search criteria, then click **Search**.
3. Select the credit rule, then click the vertical ellipsis **Actions** menu and select **Edit**.

   a. **Inactive**: Select check box to make a code inactive; inactive codes are not available for selection.

   b. Update the configuration.

   c. Click **Save**.

Deleting Scheduled Task Credit Rules

1. Select the **Administration** menu, select **Inventory**, and then select **Credit Rules**.
2. Enter search criteria, then click **Search**.
3. Select the credit rule, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Housekeeping Tasks

Prerequisites for Housekeeping Tasks

Configure task codes for the various housekeeping task sheets (for example, daily cleaning, mattress turning, inspections, turndown, and so on) for your property. Each task code can

Copyright © 2016, 2025, Oracle and/or its affiliates.

generate separate task sheets for room attendants to complete using the mobile task companion or by working from printed task sheet reports.

Adding Housekeeping Task Codes

1. Select the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Tasks**.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Task Codes are created by selecting the **Template** tab. Once created, you can copy Task Codes to specific properties using the **Copy** action. For more information, see Copying Configuration Codes to Multiple Properties.

2. Click **New** and complete the following fields:
   a. **Property**: Enter a property or search for and select a property.
   b. **Code**: Enter a housekeeping task code (for example, LIGHT, FULL, NSR, and B&B).
   c. **Description**: Enter a description for the task (for example, Light touchup, Full Service, No Service, Empty Bins, and Make Bed Only).
   d. **Colors**: Select a color code for the task type. The tasks defined color populates in the date box in the housekeeping task scheduler when viewed from the reservation details link and from within the Forecast screen in Housekeeping.
   e. Credit Weighing: Enter the weight for this task. Value is used to calculate the credit on the task sheet. (Available when **Housekeeping Credits** OPERA Control is set to `Room_Task_Rule`). To configure Credit Rules, see Configuring Scheduled Task Credit Rules.
   f. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.
   g. **Task Instructions**: Enter a short description of the steps required to perform this task.
   h. **Departure Room Default Task**: Select to make this task code the default departure room task. One task code must be selected as the Departure Room Default Task. This task code will be assigned and forecasted for all departure reservations for rooms setup for Housekeeping. This task is typically a full service of the room.
   i. **Guest Requested Task**: Select to indicate this task is only available when requested by the Guest. Guest requested tasks are not automatically scheduled.

> **Note**
>
> A task selected as a Guest Requested Task cannot also be selected as a Departure Room Default Task. When one option is selected, the check box for the other option becomes inactive.

   j. **Linen Change**: Select to indicate that the task requires a linen change. This is reflected in the Total Linen Change statistic within Manage Task Sheets and noted for each corresponding task in the task sheet reports and task companion.
3. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Housekeeping Task Codes

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Tasks**.
2. Enter search criteria and click **Search**.
3. Select the code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. **Inactive**: Select check box to make a code inactive; inactive codes are not available for selection.
    b. Update the configuration.
    c. Click **Save**.

Deleting Housekeeping Task Codes

1. From the **Administration** menu, select **Inventory**, select **Task Sheets**, and then select **Tasks**.
2. Enter search criteria and click **Search**.
3. Select the code in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** and confirm.

Configuring Task Sheet Room Details

Prerequisites for Configuring Task Sheet Room Details

Use this option to associate room attributes such as Floor, Building, Housekeeping sections and credits to each room in case they were not entered when the rooms were originally configured.

Editing Task Sheet Room Details

1. From the **Administration** menu, select **Inventory**, select **Accommodation Management** then select **Task Sheet Rooms**.
2. Enter search criteria and click **Search**.
3. Click **Edit** and enter details per room.
    a. **Building**: Select building code from list.
    b. **Floor**: Select a floor from the list.
    c. **Day Section**: Select a HK section from the list.
    d. **Evening (Turndown) Section**: Select a HK section from the list.
    e. **Stay over**: Enter credits for stay over (occupied dirty) status.
    f. **Departure**: Enter credits for departure (vacant dirty) status.
    g. **Pickup**: Enter credits for room in pickup status.
    h. **Turndown**: Enter credits for a turndown.
    i. **Sequence**: Enter a display sequence for the room.
4. Click **Save**.

About Room Rotation

Prerequisites for Room Rotation

Room Rotation ensures a balanced assignment of inventory and component suite rooms to reservations based on the room rotation point setup. Rotation points may be accrued per stay, per night, or per amount of revenue generated based on transaction codes selected in Configuring Rotation Revenue Transaction Codes.

Rooms eligible for ownership are identified by the **Owner Room** check box in room configuration. Profile ownership record details track individual room ownership and any authorized guests (owner referrals). For more information, see Managing Profile Ownership Records and Owner Referrals. You can view all room ownership details using Viewing Room Owners. To create an owner or owner referral reservation use the **Owner Rooms** list field in Look to Book search after selecting the owner or owner referral profile. Owned rooms can also be filtered in Room Diary.

When the **Owner Room Grade** OPERA Control is active you must also configure Owner Room Grades and select an **Owner Room Grade** value for each owner room . **Owner Room Grade** is used to determine the display sequence of rooms based on the value selected in the Room Order Preference for Owner Rooms OPERA Control. The **Room Order Preference for Owner Rooms** OPERA Control works in conjunction with the **Room Display Order** OPERA Control to determine if owner rooms should display before or after non-owner rooms when searching for multiple room types in room assignment.

When the **Component Room Rotation Points** OPERA Control is active, rotation points are calculated for all component rooms when the component suite accrues rotation points. Additionally, rotation points are added to the component suite when rotation points are accrued for the component rooms comprising the component suite.

When the **Forecast Rotation Points** OPERA Control is inactive, only past reservations (and Out of Order / Out of Service days) are considered in the rotation points calculation, used to determine the order in which rooms are available for assignment in Room Assignment. When the **Forecast Rotation Points** OPERA Control is active, future reservations within the rotation period (or until a fixed length number of days past the period end date defined by the **Number of Days to Forecast** OPERA Control) are also considered in this calculation.

Rotation adjustment reasons are required to identify why rotation points are adjusted for checked out reservation. For more information, see Managing Reservation Rotation Points.

Rotation override reasons are required during room assignment, when the room selected for a reservation is not the next room in the rotation sequence.

> **Note**
>
> For properties that are migrated with existing room rotation configuration, room rotation configuration must be configured natively in OPERA Cloud.

The following reports provide Owner related filters and/or display options:

- Business on the Books (business_on_the_books)
- Rooms (cf_rooms)
- History and Forecast (history_forecast)

- Financial Transactions with Generates (finjrnlbytrans2)
- Journal by Cashier and Transaction Code (finjrnlbytrans)
- Three Month Forecast (three_month_forecast)
- Reservation Statistics (res_statistics2)
- Reservation Statistics 1 (res_statistics1)
- Manager - Flash (manager_report)

Configuring Room Rotation Setup

Use Rotation Setup to configure Rotation Periods, Rotation Point Rules, Owner Multipliers and Out of Order / Service Multipliers. OPERA Cloud uses the rotation points configuration to recalculate rotation points scores for all eligible rooms each time the Available Room Search is launched for reservation room assignment.

Configuring Rotation Period

Rotation period allow you to define the frequency and interval that the accrued rotation points for rooms are reset. When the rotation period is reset, all current rotation point accumulations are deleted and a set of randomly generated rotation point scores are applied to all unites so that a ‘baseline; is established and each room has an equal chance of being rented. The randomly generated number is an extremely low number that is greater than zero but less than 0.00001.

Editing the Rotation Period

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.
2. Enter search criteria, then click **Search**.
3. In the Rotation Period panel, click **Edit**.
    a. **Reset Period**: Select a room point reset frequency from the list.
    b. **Start Date**: Enter or select a start date for the period.
    c. Click **Save**.

Configuring Rotation Point Rules

Rotation Point Rules allows you to configure rules which determine the formula used to accumulate points to facilitate the rotation of the assignment of rooms. Rotation Point Rules are highly customizable and can be configured to calculate points on a per night, per stay, or per revenue basis, and can be applied to specific room types, rate codes, and even specific days of the week if desired.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Rotation Point Rules

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.
2. Enter search criteria, then click **Search**.
3. In the **Rotation Point Rules** panel, click **New** and complete the following:
   a. **Property**: Enter or select the property.
   b. **Start Date**: Enter start date for the calculation rule.
   c. **End Date**: Enter end date for the calculation rule.
   d. **Type**: Select the calculation type from the list. Points may be accrued per stay, per night or per amount of revenue generated based on charges selected in Configuring Rotation Transaction Codes.
   e. **Points**: Enter the point factor for the calculation.
   f. **Referral**: Select check box if the calculation rule is applicable to referrals of the owner (if referral relationship type is setup between owner and guest profile).
   g. **Weekdays**: Select check boxes for the days of the week this calculation rule is applicable
   h. **Room Types**: Select the room types from the **Available**, panel and click **>** to move selection to the **Selected** panel.

      > **Note**
      >
      > Use the filter to search by entering a specific transaction codes and clicking **Go**. Click the double greater than arrow **>>** to move all transaction codes matching the search filter to the **Selected** panel.

   i. **Rate Codes**: Select the rate codes from the **Available** panel and click **>** to move selection to the **Selected** panel.
   j. Click **Save**.

Editing Rotation Point Rules

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.
2. Enter search criteria, then click **Search**.
3. Expand the **Rotation Point Rules** panel, select the rule, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update the details.
   b. Click **Save**.

Deleting Rotation Point Rules

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.
2. Enter search criteria, then click **Search**.
3. Expand the **Rotation Point Rules** panel, select the rule, then click the vertical ellipsis **Actions** menu and select **Delete**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Click **Delete** to confirm.

Configuring Rotation Owner (Occupied) Multiplier

Owner Multipliers allow you to configure a multiplier to be used in assigning rotation points for owner occupied rooms. Owner Multipliers can be customized based on room type, rate code as well as days of the week.

Use this option to configure a multiplier to assign rotation points to a room occupied by it's owner. Rotation Points for owner occupied rooms are calculated by first identifying a record from the Rotation Points setup for Rentals for the same room type as the owner's room, then if:

- The type for the record is **Per $ Revenue**, rotation points for owner occupied rooms are calculated as (Points x Owner Multiplier x Average Daily Rate (ADR) for all the rentals for the same room type).
- The type for the record is **Per Night or Per Stay**, the calculation uses an average of points for all the rooms for the same room type as owner occupied rooms and then multiply this by the Owner multiplier value. The Average Daily Rate is not considered in this case.

Adding Rotation Owner Multiplier

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.
2. Enter search criteria, then click **Search**.
3. In the **Owner Multiplier** panel, click **New** and complete the following:
    a. **Property**: Enter or select the property.
    b. **Start Date**: Enter or select a start date for the calculation rule.
    c. **End Date**: Enter or select an end date for the calculation rule.
    d. **Multiplier**: Enter the multiplier that will be applied against the average rate of the occupied rooms of the same room type.
    e. **Weekdays**: Select check boxes for the days of the week this calculation rule is applicable
    f. **Room Types**: Select the room types from the **Available** panel and click **>** to move selection to the **Selected** panel.

    > **Note**
    >
    > Use the filter to search by entering a specific transaction codes and clicking **Go**. Click the double greater than arrow **>>** to move all transaction codes matching the search filter to the **Selected** panel.

    g. **Rate Codes**: Select the rate codes from the **Available** panel and click **>** to move selection to the **Selected** panel.
    h. Click **Save**.

Editing Rotation Owner Multiplier

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Enter search criteria, then click **Search**.
3. Expand the **Owner Multiplier** panel, select the rule, then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Update the details.
    b. Click **Save**.

Deleting Rotation Owner Multiplier

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.
2. Enter search criteria, then click **Search**.
3. Expand the **Owner Multiplier** panel, select the rule, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Rotation Out of Order / Out of Service Multipliers

Out of Order / Service Multipliers allow you to configure a multiplier (used in conjunction with the Average Daily Rate of the room type) to be used in assigning rotation points for rooms which are Out of Order or Out of Service. These multipliers can be customized based on room type, Out of Order / Service Reason code, and days of the week. (Available when the **Out of Order and/or Out of Service** OPERA Controls are active).

Out of Order and Out of Service multipliers are used to add or subtract rotation points when an owner or property place a room in an Out of Order or Out of Service status and want to keep the rotation points calculation equitable. The points are calculated by multiplying the value in **Multiplier** with the average nightly rate of all rooms of the same room type as the room that is Out of Order or Out of Service. For example, if the average rate for all CK units is $100.00 and a room is OO for reason WATER (with a 0.1 multiplier) overnight, then 10 points are added to that room's rotation points total during the end of day. (Available when the **Out of Order and/or Out of Service** OPERA Controls are active).

Adding Rotation Out of Order / Out of Service Multipliers

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.
2. Enter search criteria, then click **Search**.
3. In the **Out of Order / Service** panel, click **New** and complete the following:
    a. **Property**: Enter or select the property.
    b. **Start Date**: Enter or select the start date for the calculation rule.
    c. **End Date**: Enter or select an end date for the calculation rule.
    d. **Multiplier**: Enter the multiplier that will be applied against the average rate of the occupied rooms of the same room type.
    e. **Weekday**: Select check boxes for the days of the week this calculation rule is applicable
    f. **Room Types**: Select the room types from the **Available** panel and click **>** to move selection to the **Selected** panel.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Use the filter to search by entering a specific transaction codes and clicking **Go**. Click the double greater than arrow **>>** to move all transaction codes matching the search filter to the **Selected** panel.

g. **OO/OS Reason**: Select the OO/OS reasons from the **Available**panel and click **>** to move selection to the **Selected** panel.

h. Click **Save**.

Editing Rotation Out of Order / Out of Service Multipliers

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.
2. Enter search criteria, then click **Search**.
3. Expand the **Out of Order / Service** panel, select the rule, then click the vertical ellipsis **Actions** menu and select **Edit**
   a. Update the details.
   b. Click **Save**.

Deleting Rotation Out of Order / Out of Service Multipliers

1. From the **Administration** menu, select **Inventory**, select **Room Rotation**, then select **Rotation Setup**.
2. Enter search criteria, then click **Search**.
3. Expand the **Out of Order / Service** panel, select the rule, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Rotation Revenue Transaction Codes

Rotation Revenue Transaction Codes determines which revenue charges are considered in rotation point calculations for revenue-based rotation rules. Typically, this is limited to accommodation charges.

> **Note**
>
> In the event that charges are routed, diverted or transferred to another room (reservation account), the original room in which the charge was posted will accrue rotation points once checked out.

Editing Room Rotation Revenue Transaction Codes

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Room Rotation Revenue Transaction Codes**.
2. Enter search criteria, then click **Search**.
3. Click **Edit**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. Select transaction codes from the **Available** panel and click **>** to move selection to the **Selected** panel.

> **Note**
>
> Use the filter to search by entering a specific transaction codes and clicking **Go**. Click the double greater than arrow **>>** to move all transaction codes matching the search filter to the **Selected** panel.

b. Click **Save**.

Configuring Owner Room Grades

Available when the **Room Rotation** and the **Owner Room Grade** OPERA Controls are active, use Owner Room Grades to configure the grades in which Owner Rooms will be evaluated. An **Owner Room Grade** value is selected in rooms configured as owner rooms, and is used to determine the resulting room rotation behavior based on the value selected in the Room Order Preference for Owner Rooms OPERA Control.

When configuring Owner Room Grades, the grades are ordered by **Sequence** number, with the lowest sequence number being the highest, most desirable grade. Rooms are assigned in Room Assignment and Batch Room Assignment grouped by **Owner Room Grade** in conjunction with the **Room Order Preference for Owner Rooms** OPERA Control.

Adding Owner Room Grades

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Owner Room Grade Codes**.
2. Click **New**and complete the following:
   a. **Property**: Enter or select a property.
   b. **Code**: Enter an alpha-numeric code to be used for the Owner Room Grade.
   c. **Description**: Enter a description of the Owner Room Grade.
      i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   d. **Sequence**: Enter a sequence number, the lowest sequence number being the highest, most desirable grade.
   e. Click **Save** or click **Save and Continue** to save this code and add another.

Editing Owner Room Grades

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Owner Room Grade Codes**.
2. Enter search criteria then click **Search**.
3. Select the owner room grade code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Owner Room Grades

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Owner Room Grade Codes**.
2. Enter search criteria then click **Search**.
3. Select the owner room grade code in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Rotation Override Reasons

A Rotation Override Reasons is required during room assignment or room move when the room selected for a reservation is not the next room in the rotation sequence, according to room rotation setup Reservation rotation override is tracked in the Changes Log for the **Override** activity type.

> **Note**
>
> In multi-property operations, rotation override reasons are available to all properties.

Adding Rotation Override Reasons

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Rotation Override Reasons**.
2. Click **New** and complete the following:
   a. **Code**: Enter code for the rotation override reason.
   b. **Description**: Enter description for the rotation override reason.
      i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   c. **Sequence**: Enter a display sequence for the rotation override reason in lists.
   d. Click **Save** or click **Save and Continue** to add another.

Editing Rotation Override Reasons

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Rotation Override Reasons**.
2. Enter search criteria, then click **Search**.
3. Select the rotation override reason, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update the configuration.
   b. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Rotation Override Reasons

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Rotation Override Reasons**.
2. Enter search criteria, then click **Search**.
3. Select the rotation override reason, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Rotation Adjustment Reasons

Rotation Adjustment Reasons are used to identify why you are adjusting the assigned rotation points for a room or for a reservation.

> **Note**
>
> In multi-property operations, rotation adjustment reasons are available to all properties.

Adding Rotation Adjustment Reasons

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Rotation Adjustment Reasons**.
2. Click **New** and complete the following:
   a. **Code**: Enter code for the rotation adjustment reason.
   b. **Description**: Enter description for the rotation adjustment reason.
      i. **Manage Translations**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   c. **Sequence**: Enter a display sequence for the rotation adjustment reason in lists.
   d. Click **Save** or click **Save and Continue** to add another.

Editing Rotation Adjustment Reasons

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Rotation Adjustment Reasons**.
2. Enter search criteria then click **Search**.
3. Select the rotation adjustment reason code, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update the configuration.
   b. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Rotation Adjustment Reasons

1. From the **Administration**, select **Inventory**, select **Room Rotation**, then select **Rotation Adjustment Reasons**.
2. Enter search criteria then click **Search**.
3. Select the rotation adjustment reason code, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete**to confirm.

About Accounts Receivable Configuration

Prerequisites for Accounts Receivable Configuration

The Accounts Receivable module enables you to manage debtors' accounts, invoices, and remittance. AR also supports management of payment collection through the production of periodic statements and reminder letters.

You can also manage and track remittance from credit card merchants accounts receivables, with specific functionality available to compress individual credit card settlements into a single invoice. The single invoice is automatically transferred to the debtor ledger account for the payment type during the End of Day.

You can activate optional functionality for the Accounts Receivable module in OPERA Controls.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Financial Charges	Enables the ability to post a calculated percentage or fixed amount charge on a monthly cycle – typically used for charging overdue payment fees.
Fixed Charges	Enables the ability to auto-post a periodic charge to an AR Account based on defined cycle – daily, weekly, monthly.
Traces	Enables the ability to add an actionable date-driven reminder on AR accounts.

The following configuration is required in order to use the Accounts Receivable module:

- OPERA Controls — Accounts Receivables
- AR Statement templates.
- Reminder Letter templates.
- AR Account Types.
  - Financial Charges
  - Reminder Letter Cycles
- Restriction Reasons.

Configuring Accounts Receivable Account Types

Account Receivable account types enable you to categorize AR accounts. The account type selected in each AR Account is used for filtering in both the application and also on reports, such as when generating an AR aging report subtotaled by account type. Account types also determine the stationery templates to use when generating statements and reminder letters.

Gaming You can also set up Comp Accounting AR types to automatically receive comp transactions for AR handling. For more information, see Comp AR Accounts.

When the **Finance Charges** OPERA Control is active a 'late payment' charge can be levied against overdue balances for accounts in each AR account type. An End of Day procedure calculates and posts the finance charges using the transaction code selected in the **Default Finance Charge Transaction Code** OPERA Control. The financial charge is posted as a separate invoice in each AR account. In the invoice, the financial charge supplement reads: "Finance Charges Posted Automatically".

Example:

The Post AR Finance Charges process is scheduled to run for an AR account type on the 18th of each month and apply a 10% charge for invoice balances older than 30 days . Today's business date is June 18:

The debtors account shows the following outstanding balances:

Invoice Date	Invoice Age	Invoice Open Balance	Account Balance	Financial Charge
Jan 13	156 days	$100	$100	
Feb 12	123 days	$200	$300	
Mar 11	99 days	$150	$450	
May 10	39 days	$100	$550	
May 11	38 days	–$100 (unallocated payment)	$450	

Copyright © 2016, 2025, Oracle and/or its affiliates.

Invoice Date	Invoice Age	Invoice Open Balance	Account Balance	Financial Charge	
May 20	29 days	$175	$625		
June 18	0 days	$45 / $55		$45 / $55	• If the $100 unallocated payment is not included in the calculation, the total amount outstanding is $550 and the financial charge applied is $55. • If the $100 unallocated payment is included in the calculation the amount outstanding is $450 and the finance charge applied is $45.

The finance charge is posted to the AR account as a new invoice dated June 18th.

The outstanding invoice created on May 20th is not included in the calculation because it is less than 30 days old.

Adding AR Account Types

1. From the **Administration** menu, select **Financial**, select **Accounts Receivables Management**, and then select **Account Types**.
2. Click New and complete the following
   a. **Property**: Enter or select the property
   b. **Type**: Enter a code for the account type
   c. **Description**: Enter a description for the account type
   d. **Credit Limit**: Enter a default credit limit for AR Accounts of this account type
   e. **Statement Mode**: Select a mode from the list
      i. **Balance Forward**: A balance as of MM/DD/YY field on the statement shows the total previous balance for the account. The last statement date and total amount from the last statement will be printed on the statement as the balance forward date and balance forward, respectively, by default, unless overridden by a date in the Balance Forward From field

Copyright © 2016, 2025, Oracle and/or its affiliates.

ii. **Individual Open Items**: All open balance invoices are listed as individual line items on the statement

f. **Reminder Cycle**: Select a reminder letter cycle

i. **Days**: Reminder letters are generated based on the number of days for which the account has had an outstanding balance. Use this option, for example, if you want to send a reminder letter for outstanding balances of 30 days, 60 days, and 90 days. These letters can be customized for each cycle.

ii. **End of Month**: Reminder letters are generated at the end of each month if the account has an outstanding balance. This option might be appropriate, for example, if you select the Balance Brought Forward Statement Mode.

i. **Letter Name**: Select a reminder template from the list

g. **Report (Aging) Delays Days**: Select a value from the list to define the aging delay days for unpaid invoices (Available when the **Delay Days Report** OPERA Control is active).

h. **Statement (Template)**: Select a customized statement from the list.

i. Select **Print Invoices without details** if you do not want to print invoice details on the statement.

ii. Select **Print Invoices with details** to print invoice details on the statement. Invoice details appear under each invoice number, along with a subtotal per invoice. Invoice details include date, individual charges, and a description.

iii. Select **Print Separate Folios** to print the statement followed by the separate folios included in the statement. When you select this option for the account type, the **Print Folios** check box is selected by default when selecting Statement Options for the AR Account.

> **Note**
>
> Invoices created AR Enter Old Balances will not have a folio number assigned and will not be printed.

i. **Finance Charges**: Available when the **Finance Charges** OPERA Control is active.

i. **Post on Day**: Enter the day in the month when the End of Day procedure should run the AR Post Finance Charge procedure for this account type.

ii. **Charges Older than (n) Days**: Enter the number of days after which an outstanding balance triggers finance charges. For determining the age of the invoices and AR balance, the clock starts on the date when the invoice is created.

iii. **Percentage**: Select to post a charge calculated as percentage of charges. Enter the percentage.

iv. **Amount**: Select to post a flat amount. Enter the amount.

v. **Include Unallocated Payments**: Select to subtract any unallocated payments from the outstanding balance before the finance charge is calculated.

j. **Daily Reminder Cycle**: When the Reminder Cycle field is set to Days, the Daily Reminder Cycles configuration lets you determine which reminder letters are generated for AR accounts with an outstanding balance for a given number of days. You can generate a different reminder letter for outstanding balances of 30 days, 60 days, 90 days etc. The date when the aging "clock" starts, and thus when the first reminder cycle begins, is determined by the **Date For Aging** OPERA Control.

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. Click **New**.
   i. **Number of Days**: Enter the number of days in the reminder cycle.
   ii. **Letter (Template) Name**: Select a reminder template from the list.
ii. Repeat to add additional letters.
iii. To edit a cycle, select the cycle and update the Days and Letter.
iv. To delete a cycle select the letter and days, click the vertical ellipsis and select **Delete**.

> **Note**
>
> When the **Simple Reminder** OPERA Control is active, the Reminder Details screen sorts reminder letters in the order in which they were set up, starting with the first letter that was configured. This is typically the order in which these letters are generated for reminder letter mailings. There may be more than one letter "queued up" to be generated for the account depending on the age of the account balance and which letters have already been generated.

> **Note**
>
> When **Simple Reminder** OPERA Control is inactive, reminder letters are sorted based on the number of days in the reminder cycle, lowest to highest. For this parameter setting, reminder letter mailings are generated depending on the age of the account balance, not on which letters have already been mailed. For example, assuming there are 30, 60, and 90-day cycles, if the account balance is 63 days old when letters are generated, the 60 day letter is sent, regardless of whether the 30 day letter was sent.

3. Click **Save**.

Editing AR Account Types

1. From the **Administration** menu, select **Financial**, select **Accounts Receivables Management**, and then select **Account Types**.
2. Enter search criteria and click **Search**.
3. Select an account type and click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update the details
   b. Click **Save**.

Deleting AR Account Types

1. From the **Administration** menu, select **Financial**, select **Accounts Receivables Management**, and then select **Account Types**.
2. Enter search criteria and click **Search**.
3. Select an account type and click the vertical ellipsis**Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Configuring AR Restricted Reasons

Prerequisites for AR Restricted Reasons Configuration

Restricted Reasons enable you to set a restricted status on an Account Receivables account created for company, travel agent, source, contact, individual, and group type profiles.

Adding AR Restricted Reasons

1. From the **Administration** menu, select **Financial**, select **Accounts Receivables Management**, and then select **Restricted Reasons**.
2. Click **New** and enter the following details:
   a. **Property**: Select or confirm the property.
   b. **Code**: Enter a code to identify the restricted reason.
   c. **Description**: Enter a description of the reason.
   d. **Sequence**: Enter a sequence number to indicate the placement of the restricted reason code when it appears in the profile account setup list of restrictions. Restricted reasons without a sequence number appear in alphabetical order following restriction reasons with a sequence number.
3. Click **Save**.

Editing AR Restriction Reasons

1. From the **Administration** menu, select **Financial**, select **Accounts Receivables Management**, and then select **Restricted Reasons**.
2. Enter search criteria, click **Search**.
3. Select a restricted reason in the search result, then click the vertical ellipsis **Actions** menu, then select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting AR Restriction Reasons

1. From the **Administration** menu, select **Financial**, select **Accounts Receivables Management**, and then select **Restricted Reasons**.
2. Enter search criteria, click **Search**.
3. Select a restricted reason in the search result, then click the vertical ellipsis **Actions** menu, then select **Delete**.
4. Click **Delete** to confirm.

Budget Forecast Entry

Use Budget Forecast to setup budgets per defined period. For Oracle Hospitality OPERA Cloud Service, Sales and Event Management subscribers, catering (event) budget forecast can be included on Room and Catering Revenue Pace `(BI)(rep_room_cat_rev_pace_bi)`,

Copyright © 2016, 2025, Oracle and/or its affiliates.

Group Room Pace(BI)(rep_group_rooms_pace_bi), and Catering Progress (BI) (rep_catering_progress_bi) reports.

Budget forecast data can also be referenced in Reporting and Analytics.

Loading Market Budget Forecast

The Market Code selection allows you to choose between **Revenue** and **Room Nights**.

1. From the **Administration** menu, select **Financial** then select **Budget Forecast**.
2. Select the **Market** tab.
3. Click **Load Budget Info**.
    a. **Property**: Enter or select the property.
    b. **Market Code**: Select a market from the list.
    c. **Year**: Select a year from the list.
    d. Budget Type
        i. **Budget**: Select to enter budget.
        ii. **Forecast**: Select to enter forecast.
    e. Budget Item
        i. **Revenue**: Select to enter revenue budget figures.
        ii. **Room Nights**: Select to enter room night budget figures.
    f. Distribute
        i. **Evenly**: Select the distribute the total evenly.
        ii. **By Month**: Select to distribute the total by month.
        iii. **By Budget Code**: Select to distribute the total by budget code.
    g. **Total**: Enter a total amount.
    h. Click **Load**.

Loading Rate Budget Forecast

The Rate Code selection allows you to choose between **Revenue** and **Room Nights**.

1. From the **Administration** menu, select **Financial** then select **Budget Forecast**.
2. Select the **Rate** tab.
3. Click **Load Budget Info**.
    a. **Property**: Enter or select the property.
    b. **Rate Code**: Select a rate code from the list.
    c. **Year**: Select a year from the list.
    d. Budget Type
        i. **Budget**: Select to enter budget.
        ii. **Forecast**: Select to enter forecast.
    e. Budget Item
        i. **Revenue**: Select to enter revenue budget figures.
        ii. **Room Nights**: Select to enter room night budget figures.

Copyright © 2016, 2025, Oracle and/or its affiliates.

f. Distribute
   i. **Evenly**: Select the distribute the total evenly.
   ii. **By Month**: Select to distribute the total by month.
   iii. **By Budget Code**: Select to distribute the total by budget code.
g. **Total**: Enter a total amount.
h. Click **Load**.

Loading Custom Code Budget Forecast

The Custom Code selection automatically switches to **Value** and eliminates the Room Nights and Revenue options.

1. From the **Administration** menu, select **Financial** then select **Budget Forecast**.
2. Select the **Custom** tab.
3. Click **Load Budget Info**.
   a. **Property**: Enter or select the property.
   b. **Custom Code**: Select a custom code from the list.
   c. **Year**: Select a year from the list.
   d. Budget Type
      i. **Budget**: Select to enter budget.
      ii. **Forecast**: Select to enter forecast.
   e. Budget Item
      i. **Value**: Select to enter by value.
   f. Distribute
      i. **Evenly**: Select the distribute the total evenly.
      ii. **By Month**: Select to distribute the total by month.
      iii. **By Budget Code**: Select to distribute the total by budget code.
   g. **Total**: Enter a total amount.
   h. Click **Load**.

Loading Transaction Code Budget Forecast

1. From the **Administration** menu, select **Financial** then select **Budget Forecast**.
2. Select the **Transaction** tab.
3. Click **Load Budget Info**.
   a. **Property**: Enter or select the property.
   b. **Transaction Code**: Select a transaction code from the list.
   c. **Year**: Select a year from the list.
   d. Budget Type
      i. **Budget**: Select to enter budget.
      ii. **Forecast**: Select to enter forecast.
   e. Budget Item

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Value**: Select to enter by value.

f. Distribute

i. **Evenly**: Select the distribute the total evenly.

ii. **By Month**: Select to distribute the total by month.

iii. **By Budget Code**: Select to distribute the total by budget code.

g. **Total**: Enter a total amount.

h. Click **Load**.

Loading Catering (Event) Budget Forecast

This data is included on the reports: Room and Catering Revenue Pace `(BI)(rep_room_cat_rev_pace_bi)`, Group Room Pace `(BI)(rep_group_rooms_pace_bi)`, and Catering Progress `(BI)(rep_catering_progress_bi)`.

1. From the **Administration** menu, select **Financial** then select **Budget Forecast**.
2. Select the **Catering** tab.
3. Click **Load Budget Info**.

a. **Property**: Enter or select the property.

b. **Year**: Select a year from the list.

c. **Catering**: Select checkbox to enter catering budget, allows for splitting of the catering budget by Catering Only Y/N to then be compared with the business blocks **Catering Only** check box.

d. **Budget Type**: Select a value from the list.

i. **Event Type** - When the Revenue option button is selected, you are able to enter catering revenue and covers budget by Event Type + Revenue Type. When Event Type is selected, the Codes button will list all of the possible Event Type + Revenue Type combinations to be selected for budgeting.

ii. **Group Market Segment** - When the Revenue option button is selected, you are able to enter catering revenue and covers budget by Market Segment + Revenue Type. When Group Market Segment is selected, the Codes button will list all of the possible Market Segment + Revenue Type combinations to be selected for budgeting.

iii. **Meal Type** - When the Revenue option button is selected, you are able to enter catering revenue and covers budget by Meal Type. When Meal Type is selected, the Codes button will list all of the possible Meal Type + Revenue Type combinations to be selected for budgeting. This option is only available when the application parameter Catering > Catering Meal Types is set to Y.

iv. **Revenue Group** - When the Revenue option button is selected, you are able to enter catering revenue and covers budget by Revenue Type. When Revenue Type is selected, the Codes button will list all of the active Revenue Types to be selected for budgeting.

e. **Revenue Type**: Select a revenue type from the list.

f. Budget Type

i. **Budget**: Select to enter budget.

ii. **Forecast**: Select to enter forecast.

g. Budget Item

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Revenue**: Select to enter revenue budget figures for the option selected in the **Budget Type** list.

ii. **Covers**: Select to enter covers budget figures for the option selected in the **Budget Type** list.

h. Distribute

i. **Evenly**: Select the distribute the total evenly.

ii. **By Month**: Select to distribute the total by month

iii. **By Budget Code**: Select to distribute the total by budget code.

i. **Total**: Enter a total amount.

j. Click **Load**.

Viewing Budget Forecast

1. From the **Administration** menu, select **Financial** then select **Budget Forecast**.
2. Select the **Market**, **Rate**, **Custom**,**Transaction** or **Catering** tab.
3. Enter search criteria, then click **Search**.

Editing Budget Forecast

1. From the **Administration** menu, select **Financial** then select **Budget Forecast**.
2. Select the **Market, Rate, Custom, Transaction** or **Catering** tab.
3. Enter search criteria, then click **Search**.
4. Click **Edit Budget Info**.
5. Enter search criteria, then click **Search**.
6. Update the details.
7. Click **Save**.

Configuring Cashiering Components

Cashiering configurations affect the control and management of financial transactions at your property. You can configure cashiering components for articles for sale, cancellation handling, deposits, folios, settlements, adjustments, cashiers, and so on.

Configuring Adjustment Reason Codes

Configure the reasons for the adjustment of charges posted to reservation accounts or AR accounts. Examples of adjustment code reasons would be a duplicate charge, error, overcharge, manager's discretion, and so on. In order to reverse direct bill settlements, a **Deletion Type** adjustment reason is required. For more information, see Reversing Direct Bill Settlement.

Adding Adjustment Reason Codes

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Adjustment Codes**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Click **New** and complete the following:.
    a. **Property**: Enter or select the property.
    b. **Code**: Enter a code to represent the adjustment reason.
    c. **Description**: Enter a description of the adjustment reason.
    d. Select one of the following **(Adjustment) Code Types**:
        i. **Adjustment**: Indicates an adjustment charge posted to the reservation or AR account.
        ii. **Deletion**: Indicates a deleted Direct Bill (AR) Settlement payment.
        iii. **Service Recovery**: Indicates resolution of an issue with a dissatisfied guest. (Available when the **Service Requests** OPERA Control is active).
        iv. **Credit Bill**: Indicates a credit bill adjustment (Available when the **Credit Bill Reasons** OPERA Control is active).
        v. **Void Folio**: Indicates a void folio adjustment (Available when the **Void Folio Reasons** OPERA Control is active).
    e. Click **Save**.

Editing Adjustment Reason Codes

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Adjustment Codes**.
2. Enter search criteria then click **Search**.
3. Select the adjustment code, then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Update the configuration.
    b. Click **Save**.

Deleting Adjustment Reason Codes

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Adjustment Codes**.
2. Enter search criteria then click **Search**.
3. Select the adjustment code, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

About Credit Card Authorization Rules

An authorization rule is a formula that determines the anticipated total expenses that will be charged to a credit card. The authorization rule, authorization history, and additional authorization options are available if payment integration is active at your property.

The authorization rule calculates the anticipated expense amount for the reservation and obtains the required credit card pre-authorization. The reservation is automatically updated with the new authorized amount and the approval code during the End of Day Credit Card Authorization (night_audit_authorization) procedure.

Copyright © 2016, 2025, Oracle and/or its affiliates.

On the day of check out, an authorization executes using the authorization rule attached to the reservation the first time the hotel performs either a manual or batch authorization. This procedure helps to eliminate an excessive number of individual authorizations on the day of check out, particularly when guests stay and use the hotel facilities on the day of departure.

Properties usually set a default authorization rule. The rule is automatically applied to each guest's reservation. You can set the default rule using the Authorization Rule setting on the Credit Cards menu screen.

You will not normally need to change the default authorization rule for a guest's credit card unless there are unusual circumstances (for example, for guests with multiple night stays and/or when multiple guests are charging to the same credit card).

The following Authorization Rules are configured in OPERA Cloud on the Administration menu> Financial>Cashiering Management>Authorization Rules screen.

Based on the **Advanced Authorization Rules** OPERA Control , there are two options are available for the setup of credit card authorization rules.

- Your property can rely on a single default authorization rule that applies to all reservations (Available when the **Advanced Authorization Rules** OPERA Control is inactive).
- Your property can apply different authorization rules based on Room Type, Room Class, Rate Code, Rate Category, Reservation Type and Source Code or a combination of the same. If none of the combinations match with the reservation, a default authorization rule will apply. (Available when the **Advanced Authorization Rules** OPERA Control is active).

Table 13-1 Authorization Rules

Rule Number	Rule Description
1	Nights x (Daily Rate)
2	Nights x (Daily Rate + Amount)
3	Nights x (Daily Rate + (Persons*Amount))
4	Nights x (Daily Rate + Percentage)
5	Amounts
6	Nights x (Percentage)
7	Nights x (Daily Rate + Amount - Daily Rate)
8	Nights x (Daily Rate + (Persons*Amount) - Daily Rate)
9	(Nights x Daily Rate) + Amount

The Daily Rate value in these authorization rules is a sum of the Room Rate + Add to Rate Packages + Fixed Charges, plus the associated taxes.

Available Rules and Examples

The Daily Rate element defined in the rules is based on rate code configuration. When a rate code is tax exclusive, the prices and generates would be taken into consideration.

If there is a reservation for Mr. and Mrs. Smith (2 adults) for 3 nights with a Rack rate code of $100, and if the Rack rate code is configured as tax exclusive with 10% city tax configured in generates, then the authorization definitions and amounts would be as follows:

Rule 1 - Nights*(Daily Rate)

Example 1: The authorization amount would be for $330.

3 * (110) = 330

Copyright © 2016, 2025, Oracle and/or its affiliates.

Rule 2 - Nights*(Daily Rate+Amount)

Example: If $20 is the default amount, the authorization amount would be for $390.

3 * (110 +20) = $390

Rule 3 - Nights*(Daily Rate + (Persons*Amount))

Example: If $20 dollars is the default amount, the authorization amount would be for $450.

3 * (110 + (2 *20) = $450

Rule 4 - Nights*(Daily Rate + Percentage)

Example: If 10% was configured in the setup, then the authorization amount would be for $363.

3 * (110) + 11 = $363

Rule 5 - Amount

Example: If the flat amount was defined for $50, then the authorization amount would be $50.

> **Note**
>
> The first authorization (from either Batch, Scheduled, or Check-in authorization) would be the Amount specified for the rule + total balance (if reservation balance is > 0).
>
> - The amount specified for the rule (if reservation balance is < 0)
> - All Subsequent authorizations (from Batch, Scheduled, End of Day)
> - Total Reservation Balance – Existing approved amount
>
> There is no difference between the incidental approval and actual approval as in the other rules.

Rule 6 - Nights*(Daily Rate * Percentage)

Example: If the configured percentage amount is 10%, then the authorization amount would be $33.

3 * (110*10/100) = $33.

Rule 7 - Nights*(Daily Rate + Amount - Daily Rate)

Example: If $20 dollars is the default amount, the authorization amount would be for $60.

3 * (110 + 20 - 110) = $60

> **Note**
>
> When the Reservations > Exclude Rate From Auth Based On Routing application parameter is set to Y, Rule 7 and Rule 8 are not available for use with authorization rule schedules.

Rule 8 - Nights*(Daily Rate + (Persons*Amount) - Daily Rate)

Example: If $20 is the flat amount, the authorization amount would be for $120.

3 * (110 + (2 * 20) - 110) = $120

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When the Reservations > Exclude Rate From Auth Based On Routing application parameter is set to Y, Rule 7 and Rule 8 are not available for use with authorization rule schedules.

Rule 9 - (Nights * Daily Rate) + Amount

Example: If $20 is the default amount, the authorization amount would be for $350.

(3 * 110) + 20 = $350

> **Note**
>
> A single flat amount is applied to the (nights * daily rate) calculation, regardless of the length of stay. This flat amount applied also includes incidental charges for the entire stay and will not obtain more authorization during the End of Day process until the existing incidental approval amount is used up.

Scenario 1

- Create a Reservation for 2 nights, Rate amount $100.00 , Tax = 15.00.
- Attached authorization rule 9 , estimated approval = (2 * 115) + 50 = $280.00.
- Checked in the reservation and $280.00 was authorized.
- Posted a charge for 20.00 on the folio.
- Verify that the Estimated Approval Amount = 0.
- Run EOD.
- No additional authorization obtained during EOD.

Scenario 2

- Create a Reservation for 2 nights, Rate amount $100.00 , Tax = 15.00.
- Attached authorization rule 9 , estimated approval = (2 * 115) + 50 = $280.00.
- Checked in the reservation and $280.00 was authorized. Posted a charge for 200.00 on the folio.
- Verify that the Estimated Approval Amount = $200.
- Run EOD.
- Additional authorization for $200 obtained during EOD.
- (This is because $200 charge will consume the original incidental $50.00 authorization and rule 9 will again calculate estimated approval amount for remaining nights as (1 night * 115.00) + 50) = 165.00 + 35.00 (reservation balance over already approved amount (315.00 - 280.00) = 200.00.

Scenario 3

- Create a Reservation for 2 nights, Rate amount $150.00, Tax = 5.25.
- Attached authorization rule 9, estimated approval = (2 * 155.25) + 50 = $360.50.
- Checked in the reservation and $360.50 was authorized.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Posted a charge for 200.00 on the folio.
- Verify that the Estimated Approval Amount = $200.
- Run EOD.
- Additional authorization for $200 obtained during EOD. (This is because $200 charge will consume the original incidental $50.00 authorization and rule 9 will again calculate estimated approval amount for remaining nights as (1 night * 155.25) + 50) = 205.25 - 5.25 (original approval 360.50 - reservation balance after EOD will be 355.25 (room /tax 155.25 + 200)) = 200.00.

Scenario 4

- Create a Reservation for 2 nights, Rate amount $100.00, Tax = 15.00.
- Attached authorization rule 9, estimated approval = (2 * 115.00) + 50 = $280.00.
- Checked in the reservation and $280.00 was authorized.
- Posted a charge for 20.00 on the folio
- Make a payment for $135 (= 1 Night + posted charge = 115 + 20).
- Verify that the Estimated Approval Amount = 165 (= Rate for the remainder of stay + amount = (1 night * 115.00) + 50.
- Run EOD.
- Additional authorization for $165 obtained during EOD.

Scenario 5

- Create a Reservation for 1 night, Rate amount $100.00 , Tax = 15.00.
- Attached authorization rule 9 , estimated approval = (1 * 115.00) + 50 = $165.00.
- Checked in the reservation and $165.00 was authorized.
- Extend the reservation stay to 2 nights.
- Verify that the Estimated Approval Amount = $115.00 (= 280.00 - 165.00).
- From Credit Card > Authorization > Additional >.
- Obtain an authorization for 115.00.
- Posted a charge for 20.00 on the folio.
- From RSEDIT click on Ellipsis next to Payment method and verify that the Estimated Approval Amount = 0.
- Run EOD.
- No additional authorization obtained during EOD.

End of Day Authorization Amount/Percentage Calculation

For Amount or Percentage values defined in authorization rules, the End of Day authorization calculation will not consider the incidental amount/percentage for nights that have already passed.

For example, a reservation for 2 nights with a cash payment method has a rate amount of 200.00 per night and 10% tax. The reservation is checked in. After check in, the guest changes the payment method to a Visa credit card with authorization rule 2 — Nights *(Daily Rate + Amount). The amount for the authorization rule is $50.00.

For this reservation, if the authorization had been obtained during check-in or before End Of Day, assuming the credit card was attached prior to check in, the authorization amount would

Copyright © 2016, 2025, Oracle and/or its affiliates.

have been $540 (2*(220+50)). If authorization is obtained during the End of Day processing, the authorization would be obtained for $490; the End of Day authorization would not consider the incidental amount ($50 in this case) in the calculation of the authorization amount, since the night of the stay has already passed.

Multiple Authorization Rules - Rule Schedules (Advanced Authorization Rules)

The Advanced Authorization Rules feature allows you to specify a schedule that defines which authorization rule will apply to a reservation based on either or both the reservation type and the source code. When an authorization rule cannot be determined by the reservation type and/or source code belonging to the reservation, a default authorization rule, specified at the property level, applies.

OPERA Cloud evaluates rule schedules based on the following order of precedence when determining which authorization rule applies to a reservation:

- Rule schedule and reservation have matching Room Type, Room Class, Rate Code, Rate Category, Reservation Type, and Source Code.
- Rule schedule and reservation having matching Room Type.
- Rule schedule and reservation having matching Room Class.
- Rule schedule and reservation having matching Rate Code.
- Rule schedule and reservation having matching Rate Category.
- Rule schedule and reservation have matching Reservation Type.
- Rule schedule and reservation have matching Source Code.
- If none of these elements results in a match, the default authorization rule is applied.

Table 13-2 Multiple Authorization Rules

Authorization Rule	Room Type	Room Class	Rate Code	Rate Category	Reservation Type	Source code
1	DLX	TOWER	AAA	NEG	6PM Hold	ORG
2	SNG					
3		TOWER				
4			AAA			
5				NEG		
6					6PM Hold	
7						ORG
8 (default)						

Configuring Advanced Authorization Rules

Adding Advanced Authorization Rules

1. From the **Administration** menu, select **Financials**, then **Cashiering Management**, then select **Authorization Rules**.
2. Click **New** and complete the following
   a. **Property**: Enter or select the property

Copyright © 2016, 2025, Oracle and/or its affiliates.

b. **Room Type**: Select a room type from the list. When you select a Room type, the associated Room Class automatically populates the Room Class field, and you cannot modify the Room Class field.

c. **Room Class**: Select a room class from the list (Available when the **Room Class** OPERA Control is active).

d. **Rate Code**: Select a rate code from the list. If you select a Rate Code, then a Rate Category attached to the Room Type will automatically be populated, and you cannot modify the Rate Category field.

e. **Rate Category**: Select a rate category from the list

f. **Reservation Types**: Select a reservation type from the list. Not available for the default (Property) authorization rule.

g. **Source Code**: Select a source code from the list. Not available for the default (Property) authorization rule.

h. **Authorization Rule**: Select an authorization rule from the list

i. **Amount**: Enter an amount to be applied to authorization calculation rule.

3. Click **Save**.

Editing Advanced Authorization Rules

1. From the **Administration** menu, select **Financials**, then **Cashiering Management**, then select **Authorization Rules**.
2. Enter search criteria and click **Search**.
3. Select the authorization rule in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Advanced Authorization Rules

1. From the **Administration** menu, select **Financials**, then **Cashiering Management**, then select **Authorization Rules**.
2. Enter search criteria and click **Search**.
3. Select the authorization rule in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Auto Folio Settlement Types

Prerequisites for Configuring Auto Folio Settlement Rules

The Auto Folio Settlement feature enables properties to set up rules for automatically settling specific guest folios during the End of Day procedure. Auto folio settlement rules are configured in the **Cashiering** group of OPERA Controls. They are implemented by creating auto folio settlement types and attaching the types to profiles.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Auto Folio Settlement Types

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Auto Folio Settlement Types**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a Code to represent the auto folio settlement type.
   b. **Description**: Enter a Description of the auto folio settlement type.
   c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   d. **Sequence**: Enter a Sequence to determine the order in which the type appears in the **Auto Folio Settlement Types** list.
3. Click **Save**.

Editing Auto Folio Settlement Types

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Auto Folio Settlement Types**.
2. Enter search criteria and click **Search**.
3. Select a settlement type, click the vertical ellipsis **Actions** menu, then select **Edit**.
   a. Update details.
   b. Click **Save**.

Deleting Auto Folio Settlement Types

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Auto Folio Settlement Types**.
2. Enter search criteria and click **Search**.
3. Select a settlement type, click the vertical ellipsis **Actions** menu, then select **Delete**.
4. Click **Delete** to confirm.

Configuring Folio Types

Using Folio Types you can generate different types of folios depending on a given set of circumstances. A specific set of task conditions is then linked to a folio type which has an associated report file. The report file, in turn, controls what information is included on a folio and how the folio looks when printed. For more information, see Oracle Hospitality Localization Center for Hotel.

> **Note**
>
> Depending on your country mode and OPERA Controls active your configuration options may be different from those explained here.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Folio Types

1. From the **Administration** menu, select **Financials**, then **Cashier Management**, then **Folio Types**.
2. Click **New** and enter the following details:
    a. **Property**: Enter or select the property.
    b. **Folio Type**: Enter the name for the folio type.
    c. **Service Type**: Select G- Goods or S- Services from list (Available when the **Service Type** OPERA Control is active).
    d. **Tax Types**: Select the tax type(s) for which the folio will be generated. (Available when the **Tax Types** OPERA Control is active).
    e. **Credit**: Select check box to define a credit folio.
    f. **Debit Bill**. Select check box to define a debit bill folio.
    g. **Credit and Deposit**: Select a check box to define the purpose of folio being configured. Only one folio type can be configured for each category.
    h. **Folio**: Select the folio template from the available list and click **[>]** to move the selected folio to the selected panel.
    i. **Tax Folio**: Select to configure the Folio Type for folios generated with Transaction Codes defined in the **Tax Folio Transaction Codes** OPERA Control.
    j. **Fiscal Guest Type**: Select from the list to configure the Folio Type for folios generated with a Payee Profile containing the same Fiscal Guest Type.
    k. **Correction**: Select to configure the Folio Type for folios generated when performing Void Folio.
    l. **Last Folio Number**: Displays the last Folio Number associated with this Folio Type.
    m. **Unique ID**: Enter a unique ID. When generating a folio, the Unique ID for the folio type is concatenated with the Folio Number and output in the header of the folio. (Available when the **Folio Type Unique ID** OPERA Control is active).
    n. **Prefix**: Enter an alpha-numneric value, up to 20 characters, in order to associate a folio number prefix with the Folio Type. (Available when the **Use Prefix for Folio Type** OPERA Control is active)
    o. **Suffix**: Enter an alpha-numneric value, up to 20 characters, in order to associate a folio number suffix with the Folio Type. (Available when the **Use Suffix for Folio Type** OPERA Control is active).
3. Click **Save**.

Editing Folio Types

1. From the **Administration** menu, select **Financials**, then **Cashier Management**, then **Folio Types**.
2. Enter search criteria and click **Search**.
3. Select the folio type in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Folio Types

1. From the **Administration** menu, select **Financials**, then **Cashier Management**, then **Folio Types**.
2. Enter search criteria and click **Search**.
3. Select the folio type in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Folio Copy Legend

Prerequisites for Configuring Folio Copy Legend

When printing multiple copies of folios the configured folio copy legend. For example, Original, First Copy of Invoice, Second Copy of Invoice and so on. Prints on the folio when the **Folio Copy Legend** OPERA Control is set to **Yes Y** or **Watermark (W)**.

You can select the folio type and enter the folio description to generate for the specific folio type.

With the **Multi Language** OPERA Control you can also add translated descriptions for the legend descriptions.

The watermark folio copy legend is available only for report groups Folios, AR Folios, Post It Folios, and Passerby Folios.

> **Note**
>
> The folio copy legend appears on a folio only when actually printing the folio (and copies of the folio) at the time of settlement or check out from the Billing screen. The folio copy legend is not included when reprinting folios through Folio History.

Editing Descriptions

1. From the **Administration** menu, select **Financial**, then **Cashier Management**, then **Folio Copy Legend**.
2. Enter search criteria and click **Search**.
3. Select a code, click **Vertical Ellipsis** and select **Edit**.
4. **Description**: Enter a description.
5. Click **Save**.

Adding Folio Copy Legends

1. From the **Administration** menu, select **Financial**, then **Cashier Management**, then **Folio Copy Legend**.
2. Enter search criteria and click **Search**.
3. Select a code, click **Vertical Ellipsis** and select **Manage Folio Copy Legend**.
4. Click **New** and enter the following details:
   a. **Folio Type**: Select a folio type from the list

Copyright © 2016, 2025, Oracle and/or its affiliates.

b. **Folio Description**: Enter a folio copy description to generate

c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

5. Click **Save**.

Editing Folio Copy Legends

1. From the **Administration** menu, select **Financial**, then **Cashier Management**, then **Folio Copy Legend**.
2. Enter search criteria and click **Search**.
3. Select a code, click the **vertical ellipsis** and select **Manage Folio Copy Legend**.
4. Select a code, click the vertical ellipsis **Actions** menu and select **Edit**.
5. Update the configuration.
6. Click **Save**.

Deleting Folio Copy Legends

1. From the **Administration** menu, select **Financial**, then **Cashier Management**, then **Folio Copy Legend**.
2. Enter search criteria and click **Search**.
3. Select a code, click the vertical ellipsis **Actions** menu and select **Manage Folio Copy Legend**.
4. Select a code, click the vertical ellipsis **Actions** menu and select **Delete**.

Configuring Folio Arrangement Codes (Folio Grouping)

Prerequisites for Configuring Folio Arrangement Codes

Arrangement codes are a way to group similar transactions together and generate the folio using this grouping. For example, if you have configured transaction codes for **Breakfast Food** and **Breakfast Beverage** separately, you can define an **Breakfast Charge** arrange code that groups these charges together. When a folio is generated in arrangement code style, the individual food and beverage charges are combined and output as a single Breakfast Charge line item; the food and beverage charge details are hidden.

Adding Folio Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Folio Arrangement Codes**.
2. Click **New** and complete the following:
   a. **Property**: Confirm or select the property.
   b. **Arrange Code**: Enter an alpha-number code.
   c. **Description**: Enter a description to appear on the folio.
      i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. Search and select transaction codes in the **Available** panel, then click the right-facing arrow to move codes to the **Selected** panel.

3. Click **Save**.

Editing Folio Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Folio Arrangement Codes**.
2. Enter search criteria and click **Search**.
3. Select the arrangement code, click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Folio Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Folio Arrangement Codes**.
2. Enter search criteria and click **Search**.
3. Select the arrangement code, click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Configuring Group Arrangement Codes (Folio Grouping)

Prerequisites for Configuring Group Arrangement Codes

Group folio groupings enable you to generate a folio for group blocks with summarized transactions for up to 12 buckets. The folio is generated as a table with charges summarized per arrangement code per date.

Folio style 18 generates as a table with charges summarized per arrangement code. Configure up to 12 buckets (groupings) and select the charge codes to summarize as a sub total in each grouping. The `sample_grp_folio.rtf` can be customized and setup in the Group Folio report group.

Adding Group Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Group Arrangement Codes**.
2. Click **New** and complete the following:
   a. **Arrange Code**: Select an arrangement code (bucket) from the list (1-12).
   b. **Description**: Enter a description to appear on the folio.
   c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   d. In the Available panel, search and select **Transaction Codes** and click the right-facing arrow to move codes to the selected panel.
3. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Group Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Group Arrangement Codes**.
2. Enter search criteria and click **Search**.
3. Select the arrangement code, click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Group Arrangement Codes

1. From the Administration menu, select **Financials**, select **Cashiering Management**, and then select **Group Arrangement Codes**.
2. Enter search criteria and click **Search**.
3. Select the arrangement code, click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Configuring Cashiers

Cashier IDs are required to track every charge and payment posted to reservation and AR accounts. In multi-property operations cashier IDs are shared across all properties, allowing a cashier to post charges and payments in any property, according to their role and hub assignment, for more information, see Managing Users.

When the **Foreign Currency Codes** OPERA Control is active, you can configure foreign currency starting amounts. These amounts are indicated when closing cashiers. For more information, see section **Configuring Cashier Starting Amounts**.

Payment and charge transaction details are then available on financial reports and cashier closure reports.

You can automate the creation and assignment of cashiers to users by configuring an LDAP template cashier and assigning users the `<ORG>_OPERACASHIER` role. The auto-created cashiers inherit the template cashier attributes such as **Starting Amount**, **Maximum Daily Uses** and so on.

A cashier ID must be configured for the **Night Audit Cashier ID** OPERA Control and the **Income Audit Cashier ID** OPERA Control when the Income Audit OPERA Control is active. Cashiers must also be configured for each property interface that posts charges to OPERA Cloud. For example, Point of Sale, Video, Minibar, PBX / Call Accounting, and Leisure: Spa / Golf.

Adding Cashiers

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, then select **Cashiers**.
2. Click **New** and complete the fields and options on the Manage Cashier screen.
    a. **Cashier ID**: Defaults to the next available cashier number in sequence. Enter a lower number to override the default.

Copyright © 2016, 2025, Oracle and/or its affiliates.

b. **Name**: Enter the cashier's name. This could be the name of a person, the name of a shift, or other descriptive term to associate with this cashier ID. (Maximum 2000 characters).

c. **Starting Amount**: Enter the **local currency** starting balance assigned to the cash drawer for employees signing on with this cashier ID.

> **Note**
>
> If you choose to work with fixed starting balances, enter the opening amount of each cashier's float (or bank) in this field. This is the amount the employee retains in the cash drawer and carries forward to the next day. If your policy requires cashiers to completely empty their cash drawer each night and deposit all the money in their banks into the safe, then your property is working without fixed starting balances and no entry is required. The starting amount is reflected on the Cashier Closure Report.

d. **Users**: Select one or more users to assign to this cashier ID. You cannot select user(s) already selected for another cashier. You cannot assign more than one user to the cashier when the **Exclusive Cashier ID** OPERA Control is active. You cannot remove a user when the cashier is open.

e. **Reserved**: Select a property from the list to assign exclusively to the cashier. You cannot select a Users when a reserved property is selected. (Available when the **Reserved Cashier** OPERA Control is active). Property cannot be changed when the cashier status is open or if the Cashier ID is explicitly associated with a user.

f. **Maximum Daily Uses**: Enter the number of times cashiers can close and re-open their cashier in one business day.

> **Note**
>
> At the end of each shift, the cashier is balanced and closed. After closing, you must re-open before you can post another transaction. You can set the maximum daily user from 0 to 9999 (unlimited). For security purposes, you might want to restrict users to one or two uses per business day. Enter the **number 1** here if you do not want a cashier reopened after it has been closed.

g. **Type**: Select a cashier type.

   i. **Cashier**: Select to configure this cashier ID for a standard user cashier. This is the default.

   ii. **Interface Cashier**: Select if the cashier ID is reserved for use by interfaces.

   iii. **LDAP Template**: Select to use this cashier ID as a template. This template is then used for automatically creating and assigning cashier IDs, to users granted the <ORG>_OPERACASHIER role, The cashier IDs created for users inherits the attributes set on this template Cashier (e.g., Starting Amount, Maximum Daily Uses, etc.). The Cashier Name is taken from the login User Name and a Cashier ID number is assigned by OPERA Cloud. Only one LDAP Template cashier ID can be created.

h. **Kiosk Cashier**: Select check box if this cashier ID is reserved for use by Kiosk applications. This cashier ID is not available for selection from the Cashier ID list of values on the Cashier Login screen. Only one Kiosk Cashier can be created and it

Copyright © 2016, 2025, Oracle and/or its affiliates.

cannot be selected as LDAP Template. This option is enabled when the OPP_KSK integration service is active.

i. **Float Over/Short**: Select check box if the cashier is able to drop above or below the required drop amount.

> **Note**
>
> OPERA Cloud maintains a running total of any differences that might occur between the cash amount posted by the cashier and the cash amount the cashier actually entered during cashier closing. OPERA Cloud adds or subtracts the difference (depending on whether the cash amount is over or short) and updates the total accordingly.

j. **Cashier**: Select to configure this cashier ID for a standard user cashier. This is the default.

k. **LDAP Template**: Select to use this cashier ID as a template. This template is then used for automatically creating and assigning cashier IDs, to users granted the **<ORG>_OPERACASHIER** role. The cashier IDs created for users inherits the attributes set on this template Cashier (e.g., Starting Amount, Maximum Daily Uses, etc.). The Cashier Name is taken from the login User Name and a Cashier ID number is assigned by OPERA Cloud. Only one LDAP Template cashier ID can be created.

l. **Interface Cashier**: Select if the cashier ID is reserved for use by interfaces.

3. Click **Save**.

Editing Cashiers

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, then select **Cashiers**.
2. Enter search criteria and click **Search**.
3. Click the row level vertical ellipsis **Actions** menu for the cashier and select **Edit**.
   a. Update the configuration.
   b. **Inactive**. Select to set the cashier inactive.

> **Note**
>
> If a Cashier ID is attached to a user or a control setting, you cannot make the cashier inactive. (A message alerts you that dependencies exist).

   c. Click **Save**.

Configuring Cashier Starting Amounts

Adding Cashier Starting Amounts

> **Note**
>
> The **Amounts** action is not available if the cashier you selected is open; close the cashier in order to add starting amounts.

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, then select **Cashiers**.
2. Enter search criteria and click **Search**.
3. Select the cashier in the search result, then click the vertical ellipsis **Actions** menu and select **Amount**.
4. Click **New** and complete following:
    a. **Currency Code**: Select a currency code from the list.
    b. **Amount**: Enter a starting amount.
    c. Click **Save**.

Editing Cashier Starting Amounts

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, then select **Cashiers**.
2. Enter search criteria and click **Search**.
3. Select the cashier in the search result, then click the vertical ellipsis **Actions** menu for the cashier and select **Amount**.
    a. Select the currency code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
    b. Update the details.
    c. Click **Save**.

Deleting Cashier Starting Amounts

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, then select **Cashiers**.
2. Enter search criteria and click **Search**.
3. Select the cashier in the search result, then click the vertical ellipsis **Actions** menu for the cashier and select **Amount**.
    a. Select the currency code in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
    b. Click **Delete** to confirm.

Configuring Custom Numbers

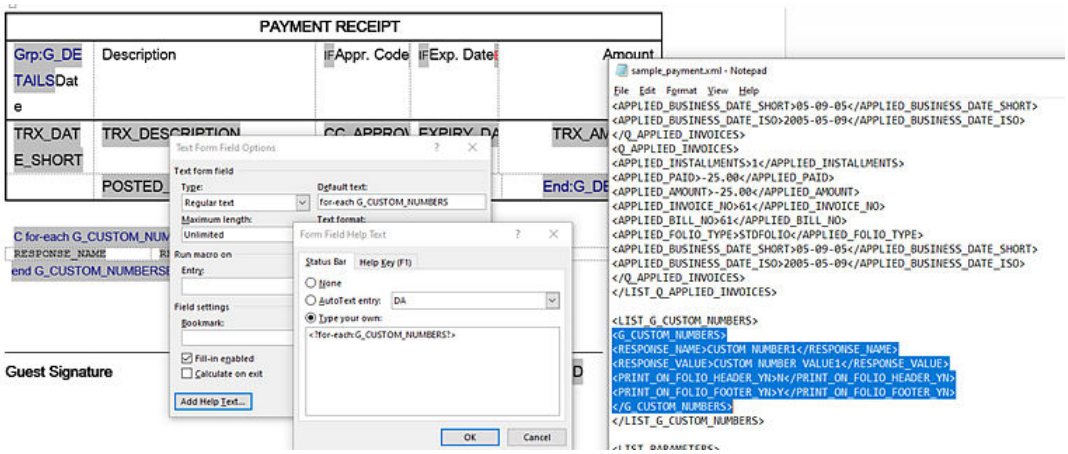
Prerequisites for Custom Numbers.

Custom numbers enable you to configure formulas and conditions for generating custom reference numbers on any type of folio or receipt. Certain countries require a number to be generated in a specific way for tracking invoices and payments, and some of these countries require certain formulas.

To configure custom numbers, you should have a general knowledge of MOD and Weights and other calculations needed for creating Advanced Formula based reference numbers. You can create custom numbers by combining values or elements of a reservation to generate the unique number. The numbers can be as basic as the confirmation number, invoice number, nationality, and so on. Or it can be a more complex calculation using Luhns Algorithm, MOD with Weights, or Structured Reference numbers.

Copyright © 2016, 2025, Oracle and/or its affiliates.

A **Custom Numbers** group is available in the XML of the sample_folio and sample_payment templates; refer to About Stationery Editor (Oracle Business Intelligence (BI) Publisher). You can insert the group into your customized template to generate the custom reference numbers on the folio or payment receipt.



Stored Custom Number(s) are also available in the Back Office Export views, `EXP_BOF_CITYLED_RECORDS`, `EXP_FOLIOTAX`, `EXP_ALL_TRANSACTION_VIEW`, and `EXP_BOF_ALL_TRANSACTIONS` with five separate columns for Custom_number1, Custom_number2, Custom_number3, Custom_number4, and Custom_number5. An additional Custom_numbers column with all stored custom numbers is available in a comma delimited string.

> **Note**
>
> To create or edit SQL expressions, use the Edit Formula box or the Edit Condition box available in the Generation Details section of the Custom Numbers screen. These panels provide selectable values to build an SQL expression using String, Number, Date, Boolean, and conversion functions. You can also select from a list of SQL functions, separators, operators, and table columns (fields) such as ADDRESS1, ADDRESS2, ARRIVAL, BILLING_CONTACT_NAME, BIRTH_COUNTRY, and so on. These columns are a combination of data from Property details, Profile, Reservation, and Folio tax tables; they are specific to the reservation for which the custom number is being generated.

> **Note**
>
> To join multiple string elements together use the '||' concatenation operator in your expression.

Examples of Basic and Advanced Custom Number Formulas:

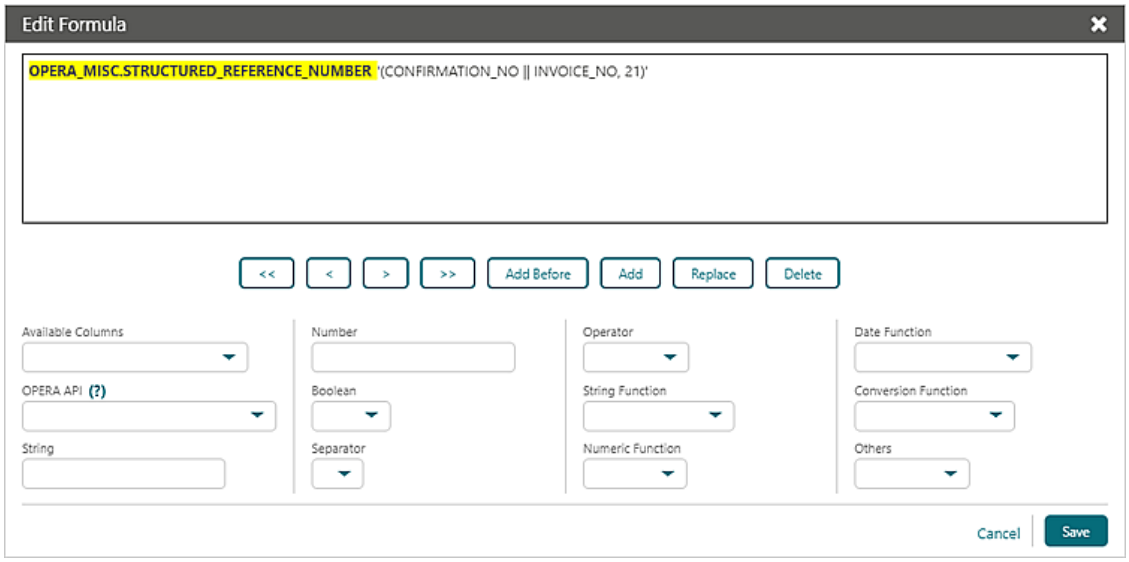
1. `RESORT || '-' || DEPARTURE || '-' || CONFIRMATION_NO`. Basic expression which generates a custom number that combines the property code, the departure date, and confirmation of a reservation; the resulting custom number could look like this: PROP1-04052020-780005823

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. `OPERA_MISC.REFERENCE_NUMBER_WITH_WEIGHTS(INVOICE_NO,731,'BACK')`Advance expression which generates a custom number using the Reference Number with Weights function, based on the invoice number field, using 7-3-1 weights calculated from the back.

Examples of Custom Number Filter:

1. To generate a custom number only for Direct (AR) Bill invoices the filter condition would be the SQL expression: INVOICE_NO is not null
2. To generate a custom number only when folio window payment type is Mastercard, the filter condition would be the SQL expression : `PAYMENT_METHOD='MC'`



Adding Custom Numbers

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Custom Numbers**.
2. Select or confirm the **Property**.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new custom numbers are created by selecting the Template tab. After creating the template, you can copy custom numbers to specific properties using the Copy action. For more information, see Copying Configuration Codes to Multiple Properties.

3. Click **New**.
4. Enter the following information:
   a. **Code**. Enter a unique code for the custom number. This identifier can be output along with the custom number on the folio or receipt –`RESPONSE_NAME` in XML.
   b. **Description**. Enter a description for the custom number.
   c. **Custom Number Type**. Select a value from the list to determine custom number type; this relates to the stationery template on which the custom number will be referenced. Options are Folio or (Payment) Receipt.

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Start Date**. Enables the custom number from this date forward.

e. **End Date**. Disables the customer number on this date.

f. **Sequence**. Enables you to specify where the new custom number appears in a sequence if you generate multiple custom numbers. A number appears automatically based on the code you select. Folio History and Receipt History show the first five configured custom numbers based on the sequence.

5. The Generation Details section enables you to create or edit basic and SQL-based reference numbers.

   a. **Custom Number Formula**: Click the pencil icon to create or edit an SQL expression for generating a custom number. For more information, see Using the Expression Editor.

   b. **Filter Condition**: Click the pencil icon to define or edit an SQL expression to specify the conditions under which the custom number is to be generated. For more information, see Using the Expression Editor.

> **Note**
>
> Refer to the Oracle Database SQL Reference Guide for details on string, date time, number and conversion functions that can be used in the expression editor.

6. Click **Save**

Editing Custom Numbers

> **Tip**
>
> Click the vertical ellipsis **Actions** menu and select **Show Inactive** to include inactive records.

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Custom Numbers**.
2. Enter search criteria and click **Search**.
3. Select the custom number in the search result, then click the vertical ellipsis **Actions** menu, and select **Edit**.

   a. Update the available fields

   b. **Inactive**. Select check box to mark this custom number inactive.

   c. Click the pencil icons to update the Custom Number Formula or the Filter Condition. For more information, see Using the Expression Editor.

   d. Click **Save**.

Deleting Custom Numbers

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Custom Numbers**.
2. Enter search criteria and click **Search**.
3. Select the custom number in the search result, then click the vertical ellipsis **Actions** menu, and select **Delete**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Click **Delete** to confirm.

Function Examples

The following example uses the same variables for all APIs (except the pms.p.date function, which is standard). The variables are Invoice Number and 987654321 (to simulate a unique number for to the property). The Output column on the right shows the number generated based on each calculation. Numbers will vary based on the variables determined by the user.

The parameters (inputs) for these functions are numeric only, for example, NUMBER: OPERA_MISC.LUHN_ALGORITHM(<NUMBER>, 'Y' or 'N'). You can combine multiple numbers in the calculation, and they can be concatenated using the String Function **| |** as shown in the following examples

Table 13-3 Functions

Functions	Description	Example	Outputs
PMS_P.BUSINESS_DATE()	Returns the current business date of the property	PMS_P.BUSINESS_DATE() -	01-JUN-20
Luhns Algorithm with Check digit OPERA_MISC.LUHN_ALGORITHM(<NUMBER>'Y' or 'N')	Luhns Algorithm with check digit	OPERA_MISC.LUHN_ALGORITHM (INVOICE_NO || 987654321 , 'Y')	86659876543216
Luhns Algorithm with no Check digit OPERA_MISC.LUHN_ALGORITHM (<NUMBER>, 'Y' or 'N')	Luhns Algorithm without check digit	OPERA_MISC.LUHN_ALGORITHM (INVOICE_NO || 987654321 , 'N')	866598765432154
Reference Number with Weights from back OPERA_MISC.REFERENCE_NUMBER_WITH_WEIGHTS (<NUMBER><NUMBER2>, 'Back' or 'Front')	NUMBER2 is max 3 digits	OPERA_MISC.REFERENCE_NUMBER_WITH_WEIGHTS (INVOICE_NO || 987654321, 731 , 'BACK')	86659876543218
Structured Reference Number without Padding OPERA_MISC.STRUCTURED_REFERENCE_NUMBER(<NUMBER>, <NUMBER2>)	Calculated reference number without padding	OPERA_MISC.STRUCTURED_REFERENCE_NUMBER (INVOICE_NO || 987654321)	RF828665987654321
Structured Reference Number with Padding OPERA_MISC.STRUCTURED_REFERENCE_NUMBER(<NUMBER>, <NUMBER2>)	Calculated reference number with left padding. NUMBER2 is maximum of 21	OPERA_MISC.STRUCTURED_REFERENCE_NUMBER (INVOICE_NO || 987654321 , 21)	RF82000000008665987654321

Configuring Custom Charges Exemption

Prerequisites for Configuring Custom Charges Exemption

Copyright © 2016, 2025, Oracle and/or its affiliates.

Custom Charges allows you to configure a charge (for example, tax) to be posted during the End of Day Posting Room & Tax procedure and other scenarios where the room & tax charges are posted. Custom Charge posts per person, per night.

In addition, you can configure exemptions to the Custom Charge, which can be setup on reservations for the entire stay or for specific dates of the stay.

This feature is used in specific countries only.

Adding Custom Charge Exemption

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Custom Charge Exemption**.
2. Click **New** and complete the following
   a. **Property**: Select or confirm the property
   b. **Exemption**: Enter a code for the custom charge exemption
   c. **Description**: Enter a description for the custom charge exemption
   d. **Start Date**: Enter or select a start date
   e. **End Date**: Enter or select an end date
3. Click **Save** or **Save and Continue** to add another.

Editing Custom Charge Exemption

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Custom Charge Exemption**.
2. Enter search criteria and click **Search**.
3. Select the custom charge, click the vertical ellipsis **Actions** menu and click **Edit**.
   a. Update details.
   b. **Inactive**. Select to inactive the custom charge.
   c. Click **Save**.

Deleting Custom Charge Exemption

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Custom Charge Exemption**.
2. Enter search criteria and click **Search**.
3. Select the custom charge, click the vertical ellipsis **Actions** menu and click **Delete**.
4. Click **Delete** to confirm.

Copying Custom Charges Exemption

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Custom Charge Exemption**.
2. Enter search criteria and click **Search**.
3. Select the custom charge, click the vertical ellipsis **Actions** menu and click **Copy**.
4. For more information, see Copying Configuration Codes to Multiple Properties.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Configuring Custom Charges

Prerequisites for Configuring Custom Charges

Use Custom Charges to configure a charge (ie city tax) to be posted during the End of Day **Post Room & Tax** procedure and other scenarios where the room & tax charges are posted. Custom Charge is calculated per person (adults and children) and posted each night. In addition, you can configure exemptions to the Custom Charge, which can be setup on reservations for the entire stay or for specific dates of the stay. A **Custom Charge and Redemption Summary** report is available to report on custom charges posted. For more information, see Financials Reports.

> **Note**
>
> This feature is used in specific countries only.

Adding Custom Charges

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Custom Charges**.
2. Click **New** and complete the following:
   a. **Property**: Select or confirm the property.
   b. **Code**: Enter a code for the custom charge.
   c. **Description**: Enter a description for the custom charge.
   d. **Price**: Enter a price (per person) for the charge.
   e. **Posting Rhythm**: Select to expose the Posting Rhythm fields.
   f. **Posting Rhythm**: Select the Posting Rhythm pattern for the Custom Charge.

      Post Every Night For X Nights

      i. **X Nights**: The number of nights for which the Custom Charge posts to the reservation. The Custom Charge stops posting to the reservation after this number of Nights.

      Post On Every X Nights Starting Y Night

      i. **Start On Night**: The stay night when the Custom Charge begins posting to the reservation with the amount defined in the Price Starting Y Night field.

      ii. **Post Every**: The stay nights interval in which the Custom Charge posts to the reservation for the amount defined in the Price Starting Y Night field.

      iii. **Price Starting Y Night**: The amount for which the Custom Charge is posted to the reservation, starting on the stay night defined in the Start On Night field.

   g. **Rule Type**: Select a rule type from the list or leave unselected for no rule.

      i. **Rate Per Person**: Calculated by dividing the Rate by the Persons to reach the Rate Per Person. Define the Custom Charge Ranges to determine the Price of the Custom Charge per person, if the Rate Per Person falls into one of the defined ranges. Should the Rate Per Person not fall into a defined range, then the Price on the Manage Custom Charges screen applies. Transaction Codes and/or Package(s) can be excluded from the Rate calculation for a Custom Charge.

Copyright © 2016, 2025, Oracle and/or its affiliates.

ii. **Rate Range From**: The lowest Rate Per Person for which the corresponding Price posts as a Custom Charge.

iii. **Rate Range To**: The highest Rate Per Person for which the corresponding Price posts as a Custom Charge.

iv. **Price**: The Price of the Custom Charges recorded for reservations with room & tax amounts in the corresponding range.

v. **Exclude Transactions**: Select the Transaction Codes to be excluded from the rate calculation for Custom Charge. The list of values does not include any Transaction Codes associated with the Payment or Wrapper Transaction Groups.

vi. **Exclude Packages**: Select the Packages to be excluded from the rate calculation for Custom Charge.

vii. **Exclude Package Groups**: Select the Package Groups to be excluded from the rate calculation for Custom Charge.

h. **Rate Percentage With Limit**: Define the Percentage to determine the Price of the Custom Charge, if the Percentage amount is less than the defined Limit. Should the Percentage amount be greater than the defined Limit, then the Limit on the Manage Custom Charges screen applies.

i. **Percentage**: The percentage of the Rate, which will be posted as the Custom Charge to a reservation.

ii. **Limit**: The maximum amount for which the Custom Charge will post to a reservation.

iii. **Exclude Transactions**: Select the Transaction Codes to be excluded from the rate calculation for Custom Charge. The list of values does not include any Transaction Codes associated with the Payment or Wrapper Transaction Groups.

iv. **Exclude Packages**: Select the Packages to be excluded from the rate calculation for Custom Charge.

v. **Exclude Package Groups**: Select the Package Groups to be excluded from the rate calculation for Custom Charge.

i. **Start Date**: Enter or select a start date.

j. **End Date**: Enter or select an end date.

3. Click **Save** or **Save and Continue** to add another.

Editing Custom Charges

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Custom Charges**.
2. Enter search criteria and click **Search**.
3. Select the custom charge, click the vertical ellipsis **Actions** menu and click **Edit**.
   a. Update details.
   b. **Inactive**: Select to inactive the custom charge.
   c. Click **Save**.

Deleting Custom Charges

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Custom Charges**.
2. Enter search criteria and click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the custom charge, click the vertical ellipsis **Actions** menu and click **Delete**.
4. Click **Delete** to confirm.

Copying Custom Charges

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and select **Custom Charges**.
2. Enter search criteria and click **Search**.
3. Select the custom charge, click the vertical ellipsis **Actions** menu and click **Copy**.
4. For more information, see Copying Configuration Codes to Multiple Properties.

Configuring Daily Plans (Folio Grouping)

Prerequisites for Configuring Daily Plans

Use the Daily Plan folio groups to consolidate charges for selected transaction codes per day.

Two Daily Plan codes are available:

- **Lodging**: The Lodging code can only include transaction codes that are configured as type Lodging or Package (wrapper).
- **Others**: The Others code can include all other sales charge transaction codes except Lodging type transaction codes, which cannot be added to the Others code group.

The two folio groups are combined into a single line on the folio as Description (for Lodging) and Description (for Others).

When the Daily Plan (Date) folio style is selected, the transaction codes associated with the Daily Plan folio group codes are consolidated on the folio as follows:

Date	Daily Plan Folio	Price
01/07/21	<Lodging Description> and <Others Description>	$220
01/08/21	<Lodging Description> and <Others Description>	$220
01/09/21	<Lodging Description>	$200

Note: The Others daily plan bucket can be set up without a description and/or without transaction codes. If a description for Others does not exist, then the “and <OTHER>” will not appended after the Lodging daily plan; the folio will simply show the description of the Lodging daily plan.

Editing Daily Plan Folio Group

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Daily Plan Codes**.
2. Select the daily plan, click the **vertical ellipsis**, and select **Edit**.
3. Enter a **Description** to appear on the folio.
    a. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. In the Available panel, search and select **transaction codes** and click to move your selected codes to the selected panel
5. Click **Save**.

Configuring Expense Arrangement Codes (Folio Grouping)

Prerequisites for Configuring Expense Arrangement Codes

Expense folio groupings enable you to generate an expense folio with summarized transactions for up to 12 expense buckets. The folio is generated as a table with charges summarized per arrangement code per date.

Adding Expense Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Expense Arrangement Codes**.
2. Click **New** and complete the following:
   a. **Arrange Code**: Select an arrangement code (bucket) from the list (1-12)
   b. **Description**: Enter a description to appear on the folio
      i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   c. In the Available panel, search and select transaction codes and click to move codes to the selected panel.
3. Click **Save**.

Editing Expense Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Expense Arrangement Codes**.
2. Enter search criteria and click **Search**.
3. Select the arrangement code, click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Expense Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Expense Arrangement Codes**.
2. Enter search criteria and click **Search**.
3. Select the arrangement code, click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Configuring Package Arrangement Codes (Folio Groupings)

Prerequisites for Configuring Package Arrangements

Package arrangement codes can link to one or more packages. See Configuring Package Codes. If the package is configured with a package arrangement code, the package-related transactions are grouped together on the folio by the package arrangement code. Grouping by package arrangement code is implemented regardless of the package configuration, for example, Included in Rate, Add to Rate /Combined Line, or Add to Rate/Separate Line.

The following folio styles are affected by this functionality.

1 - Detailed Folio (Date)

9 - Detailed Folio (Room)

14 - Summary by Check No (Date)

If no check number applies, the arrangement code is observed. Otherwise, transactions with check numbers will be grouped by reservation, check number, and date.

15 - Group Folio Subtotal (Date)

16 - Group Folio Subtotal per Guest (Date)

18 - Group Folio Subtotal per Room (Date)

Adding Package Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Package Arrangements**.
2. Click **New** and enter the following details:
    a. **Property**: Confirm or select the property.
    b. **Arrange Code**: Enter an alpha-number code.
    c. **Description**: Enter a description to appear on the folio.
        i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
3. Click **Save**.

Editing Package Arrangement Codes

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Package Arrangements**.
2. Enter search criteria and click **Search**.
3. Select the arrangement code, click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update the configuration.
5. Select **Inactive** to make the arrange code inactive.
6. Click **Save**.

Deleting Package Arrangement Codes

You cannot delete a package arrangement code that is attached to a package.

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **Administration** menu, select **Financials**, select **Cashiering Management**, and then select **Package Arrangements**.
2. Enter search criteria and click **Search**.
3. Select the arrangement code, click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Configuring Period Definition Years

Prerequisites for Configuring Fiscal Period Reporting

You can set up fiscal years based on either the calendar year (January 1 through December 31) or on any 12-month period (such as September 1 through August 31).

Adding Period Definition Years

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Period Definition Years**.
2. Select **New** and complete the following:
    a. **Property**. Confirm or select the property.
    b. **Year**. Enter the year (YYYY).
    c. **Type**.
        i. **Calendar**. Select to setup a calendar year.
        ii. **Fiscal**. Select to setup a fiscal year.
    d. **Description**. Enter a description for the year (for example, FY21).
    e. **Start Date**. Enter or select the start date for the year.
    f. **End Date**. Enter or select the end date for the year.
3. Click **Save**.

Editing Period Definition Years

You cannot edit the Start/End Date fields after the year is saved. When the Edit link is selected, the only editable field is the Description field.

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Period Definition Years**.
2. Enter search criteria and click **Search**.
3. Select the period definition year, click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update the description.
5. Click **Save**.

Deleting Period Definition Years

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Period Definition Years**.
2. Enter search criteria and click **Search**.
3. Select the period definition year, click the vertical ellipsis **Actions** menu, and select **Delete** .

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Click **Delete** to confirm.

Configuring Period Definition Periods

Prerequisites for Configuring Fiscal Period Reporting

You can set up fiscal years based on either the calendar year (January 1 through December 31) or on any 12-month period (such as September 1 through August 31). When the **Period Definition** OPERA Control is active you can also define fiscal periods for generating revenue statistics reports per period.

> **Note**
>
> The first fiscal period of the year might not start before the start date of the fiscal year, and the last fiscal period of the year might not end after the end date of the fiscal year. For example, if your fiscal year 2019 starts on July 1, 2019, then the first fiscal period in 2019 cannot begin on or before June 30, 2019.

Adding Period Definition Periods

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Period Definition Periods**.
2. Select **New** and complete the following.
3. Select **Single Period** .
4. If you select Single Period:
   a. Enter or confirm the **Property** name.
   b. Select the **Period Definition Years**. This is the calendar year in which the period will fall.
   c. Also, enter a **Period** name, a **Description** of the period (such as 3rd Quarter), and the **Start and End dates** of the year.
5. If you select Cycle Period:
   a. Enter or confirm the **Property** name.
   b. Select the **Period Definition Years**. This will be a fiscal year that you must configure prior to adding fiscal periods.
   c. Enter a **Period Prefix**. OPERA Cloud numbers the periods consecutively starting at 1 with the prefix defined in the Prefix field.
   d. Select the **Cycle** from five options. Each option offers a different length of time. Select the option that best meets your property's reporting time frame. Cycle options:
      - 1 = 4 Week (28 Day) Period
      - 2 = 4,4,5 Week Period
      - 3 = 4,5,4 Week Period
      - 4 = 5,4,4 Week Period
      - 5 = Calendar Period
6. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Period Definition Periods

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Period Definition Periods**.
2. Enter search criteria and click **Search**.
3. Select the period definition period, and click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Period Definition Periods

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Period Definition Periods**.
2. Enter search criteria and click **Search**.
3. Select the period definition period, and click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

About Foreign Currency Codes

Prerequisites for Foreign Currency Codes.

Configure currency codes to define the currencies available for buying foreign currency (where a guest exchanges foreign currency for local currency) and foreign currency settlement of reservation accounts.

Cashiers can be setup with **Starting Amounts** in multiple currencies to aid in the buying and selling (available when the **Sell Currency** OPERA Control is active) of foreign currencies. For more information, see Configuring Cashiers.

When the **Ability to Quote Rates in Foreign Currencies** OPERA Control is active, you can configure rate code (pricing) and package pricing in foreign currencies; the rate amount (price) is converted to your property currency according to the **Posting** exchange rate for the day of posting. For more information, see About Rate Codes.

Follow these steps when configuring currency codes:

1. Create currency codes representing the various foreign currencies bought and sold. When the **Foreign Currency Limits** OPERA Control is active, you can enter daily and monthly limits for each currency .
2. Set exchange rates for the currencies. Each currency code can have up to seven different exchange rates based on various exchange types (purposes). Each currency code and exchange type combination can have its own exchange rate and start date. For example, for each currency, you could define one exchange rate for posting accommodation, another exchange rate for settlements, and another exchange rate for cash exchanges. Then, you could update the accommodations posting rate monthly and update the settlement and cash exchange rates daily. For more information, see Managing Currency Exchange Rates.

The following exchange types are available:

- Exchange Cash

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Exchange Check
- Settlement (payment)
- Posting (charges)
- (Agent) Commission
- Membership
- Certificate

Configuring Foreign Currency Codes

Adding Foreign Currency Codes

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Foreign Currency Codes**.
2. Click **New** and enter the following details:
    a. **Code** : Enter a code for the currency.
    b. **Description** : Enter a description for the currency.
    c. **Decimals** : Select the number of decimals points from the list. For example 0=$1, 1=$1.0, 2=$1.00, 3=$1.000.
    d. **Currency Symbol** : Paste **cntrl+v** the currency symbol. See https://www.unicode.org/charts/PDF/U20A0.pdf.
    e. **Sell Currency** : Select to allow this currency to be sold in Currency Exchange (Available when the **Sell Currency** OPERA Control is active).
    f. **Foreign Currency Limits** : (Available when the **Foreign Currency Limits** OPERA Control is active).
        i. **Local Currency per Transaction Limit**: Enter the transaction limit for local currency transactions.
        ii. **Foreign Currency per Transaction Limit**: Enter the transaction limit for foreign currency transactions.
        iii. **Local Currency Daily Limit**: Enter the daily limit for local currency transactions.
        iv. **Foreign Currency Daily Limit**: Enter the daily limit for foreign currency transactions.
        v. **Local Currency Monthly Limit**: Enter the monthly limit for local currency transactions.
        vi. **Foreign Currency Monthly Limit**: Enter the monthly limit for foreign currency transactions.
3. Click **Save**.

Editing Foreign Currency Codes

> **Note**
>
> To view inactive codes in the result, click the vertical ellipsis **Actions** menu and select **Show Inactive**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Foreign Currency Codes**.
2. Enter search criteria and click **Search**.
3. Select the currency code, in the search result, then click the vertical ellipsis **Actions** menu, and select **Edit**.
    a. Update configuration.
    b. **Inactive**: Select to mark the currency as inactive.
    c. Click **Save**.

Deleting Foreign Currency Codes

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Foreign Currency Codes**.
2. Enter search criteria and click **Search**.
3. Select the currency code, in the search result, then click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Configuring Foreign Currency Limits

Prerequisites for Configuring Foreign Currency Limits

Foreign Currency Limits are used in specific countries only; to specify the transaction, daily and monthly limits of local and foreign currency exchange permitted.

Editing a Foreign Currency Limit

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Foreign Currency Codes**.
2. Enter search criteria and click **Search**.
3. Select the currency code, click the **vertical ellipsis** and select **Edit**.
    a. **Local Per Transaction Currency Limit**: Enter the per transaction amount limit.
    b. **Foreign Per Transaction Currency Limit**: Enter the per transaction amount limit for foreign transactions.
    c. **Local Daily Currency Limit**: Enter the daily transaction amount limit.
    d. **Foreign Daily Currency Limit**: Enter the daily transaction amount limit for foreign transactions.
    e. **Local Monthly Currency Limit**: Enter the monthly transaction amount limit.
    f. **Foreign Monthly Currency Limit**: Enter the monthly transaction amount limit for foreign transactions.
4. Click **Save**.

Configuring No Show Posting Rules

Prerequisites for Setting Up No Show Posting Rules

Copyright © 2016, 2025, Oracle and/or its affiliates.

No show posting rules facilitate a no show charge being auto-posted to no show reservations. You can configure no show posting rules for specific source codes and/or reservation types and then select a calculation rule for a no show amount to be auto-posted to the reservation.

During the end of day routine, all arrival reservations with a no show status and whose reservation type and/or source code makes them subject to a no show posting based on the rules defined will, transfer any deposit payments to the guest ledger. The appropriate no show charge posts to the reservation account.

Cashier billing functionality is available for no show reservations, and based on the no show posting rule applied, an outstanding balance (no show amount not fully offset by the deposit payment(s)) may result. Cashiers can make any adjustments to the charge or post additional settlement(s) to the reservation account to ensure a zero balance. Refer to: Managing No Show and Cancellation Deposits and Charges.

Adding No Show Posting Rules

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **No Show Posting Rules**.
2. Click **New** and complete the following:
    a. **Property**. Enter or select the property.
    b. **Reservation Type**. Select a reservation type from the list to add a rule for a specific reservation type.
    c. **Source Code**. Select a source code from the list to add a rule for the specific source code.
    d. **Posting Rule**. Select a posting rule from the list:
        i. **All Nights**. This option posts the total rate amount for all nights of the reservation. If the reservation has multiple rate codes, OPERA Cloud determines the price for each night and posts it accordingly.
        ii. **First Night**. This option posts the price of the first night of the reservation.
        iii. **Deposit Only**. This option posts an amount equal to all deposit payments received.
3. Click **Save**.

Editing No Show Posting Rules

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **No Show Posting Rules**.
2. Enter search criteria and click **Search**.
3. Select the no show rule, click the vertical ellipsis **Actions** menu, and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting No Show Posting Rules

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **No Show Posting Rules**.
2. Enter search criteria and click **Search**.
3. Select the no show rule, click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.

Translating Numbers to Words

Money amounts often must be printed in word form and/or numeric form. The most familiar example of this might be when printing the amount on a check or a receipt. The words are usually considered to be the legal expression of the amount, making accuracy essential. For example, in German, a check for €125.67 would be printed as `Eins-Zwei-Fünf Euros und Sechs-Sieben Cents`. In English, $125.67 would translate as `One Hundred Twenty Five Dollars and Sixty Seven cents (or One Hundred Twenty Five Dollars and 67/100 Cents`, depending on the format used for the printing of checks).

The Number To Words feature supports translation of numerals into words in multiple languages. By default, OPERA Cloud expresses numbers in English words.

If the Profile Language function is not being used, and the base language for the property is not English, you can use the Number To Words feature to translate the numbers into words. The translations also provided for words like “Dollars,” ”Cents,” and “and,” which might be required in expressions of written amounts.

Reports that reference a profile language, such as folios and receipts, automatically select the appropriate translation for the particular instance of the report, if available. When printing checks in Commissions Processing, the language associated with the bank account determines which language is used for the check amount written in words.

The Number to Words translation is literal (number for number) except for languages indicated by an X in the Grammatical column of the following table where grammatical idiosyncrasies are accommodated. For example, 1234.50 would be rendered as One Two Three Four Dollars and Five Zero Cents where the rendering is literal. Where a grammatical translation is provided, the amount is rendered as One Thousand Three Hundred and Four Dollars and Fifty Cents.

Managing Number to Words Code Descriptions

The Number to Words feature controls whether numerals appear in printed format as numerals or as words in several languages. You can edit the Number to Words description.

Editing Number to Words Descriptions

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, then select **Number to Words**.
2. Enter search criteria, then click **Search**.
3. Select the code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. **Description**: Update the description.
        i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions.
    b. Click **Save**.

Configuring Shift Drop Locations

Prerequisites: Shift Drop Locations and Bag Numbers

Adding Shift Drop Locations

You can configure shift drop locations for cashier shift closures. On the Cashier Closure screen, the shift drop locations you configure are associated with the cashier shift closure numbers.

1. Select the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Shift Drop Locations**.

   > **Note**
   >
   > When the **Multi Property** OPERA Control is active, new Shift Drop Locations codes are created by selecting the Template tab. Once created, you can copy Shift Drop Locations codes to specific properties using the Copy action. Refer to Copying Configuration Codes to Multiple Properties for more information.

   Click **New** and complete the following fields:

   a. **Code**. Enter a code for the Shift Drop Location.

   b. **Description**. Enter a description for the Shift Drop Location.

   c. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

   d. **Sequence**. Enter a number that controls the position of this code in lists. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.

2. Click **Save** to save and close or click **Save and Continue** if you want to configure additional shift drop locations.

Editing Shift Drop Locations

1. Select the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Shift Drop Locations**.
2. Enter search criteria and click **Search**.
3. Select the shift drop location then click vertical ellipsis **Actions** menu and select **Edit**.

   a. Make the required changes.

   b. **Inactive**: Select check box to make the shift drop location inactive; inactive codes are not available for selection.

4. Click **Save**.

Deleting Shift Drop Locations

1. Select the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Shift Drop Locations**.
2. Enter search criteria and click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the shift drop location then click vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** and confirm.

Configuring Tax Types

Prerequisites for Configuring Tax Types

The Tax Types feature enables you to define categories to identify specific guests or reservations and reference these tax types in tax generates configuration. In doing so you can setup varying tax calculations or tax exemption based on tax type. By creating Tax Type codes such as Regular Guest, Sales Tax Exempt, Diplomat and so on, you can control whether a tax generate is applied to sale charges, how the amount is calculated and also the effective dates for the posting of tax generates.

The **Tax Type Calculation** OPERA Control determines whether the tax type selected in profiles or reservations is to be used for tax generate calculations at your property. By using Page Composer you then customise the profile overview or the reservation stay details panel to add the tax type list field to the panel.

After configuring tax types, you can select a default tax type in the **Default Tax Type** OPERA Control. The value selected is set for all new profiles or reservations created, depending on **Tax Type Calculation** OPERA Control.

As an option, you can enable the Tax Exempt report when configuring Tax Types. The report gives a detailed daily breakdown of room revenue and the tax exemptions held by each guest/ reservation. For more information, see Financials Reports

Adding Tax Types

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Tax Types**.
2. Click **New** and complete the following
   a. **Property**: Enter or confirm the property.
   b. **Tax Type**: Enter a code for the tax type.
   c. **Description**: Enter a description of the tax type.
   d. As an option, complete the Tax Exempt Report Configuration selections.
3. As an option, complete the **Tax Exempt Report** configuration selection.
   a. **Exempt Days**: Specifies the number of days in the report date range after the guest becomes tax exempt.
   b. **Tax Percentage**: Sets the tax types as a percentage, such as four percent or so on.
   c. **Print Auto Adjust**: Select check box to enable printing Room Revenue for all days before the guest became tax exempt; Number of nights before the guest became tax exempt, and Tax paid on room revenue for all days before the guest became tax exempt.
   d. **Collecting Agent**: Select check box to enable tax type in Collecting Tax Agent configuration. (Available when the **Collecting Agent Taxes** OPERA Control is active). For more information, see Configuring Collecting Tax Agents.
4. Click **Save.**

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Tax Types

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Tax Types**.
2. Enter search criteria, click **Search**.
3. Select the tax type in the search result, then click the vertical ellipsis **Actions** menu, select **Edit**.
4. Update details.
5. Click **Save**.

Deleting Tax Types

1. From the **Administration** menu, select **Financial**, select **Cashiering Management**, and then select **Tax Types**.
2. Enter search criteria, click **Search**.
3. Select the tax type in the search result, then click the vertical ellipsis **Actions** menu, select **Delete** .
4. Click **Delete** to confirm.

Configuring Currency Exchange Service Taxes

Prerequisites for Configuring Currency Exchange Service Taxes

Exchange Service Taxes are used to generate and post taxes for currency exchange transactions. This feature is used in specific countries only.

Adding Exchange Service Tax Slabs

1. From the **Administration** menu, select **Financials**, then **Cashier Management** then **Exchange Service Taxes**.
2. Click **New** and enter the following details:
   a. **Amount From**: Enter a starting currency amount.
   b. **Amount To**: Enter a ending currency amount.
   c. **Percentage**: Enter a tax percentage.
   d. **Base Amount**: Enter a base amount.
   e. **Minimum**: Enter a minimum exchange amount.
   f. **Maximum**: Enter a maximum exchange amount.
3. Click **Save**.

> **Note**
>
> You will not be able to configure overlapping amount ranges.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Exchange Service Tax Slabs

1. From the **Administration** menu, select **Financials**, then **Cashier Management** then **Exchange Service Taxes**.
2. Enter search criteria and click **Search**.
3. Select the exchange service tax then click vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Exchange Service Tax Slabs

1. From the **Administration** menu, select **Financials**, then **Cashier Management** then **Exchange Service Taxes**.
2. Enter search criteria and click **Search**.
3. Select the exchange service tax then click vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Transaction Discount Rules

Prerequisites for Configuring Transaction Discount Rules

You can configure transaction discount rules to apply a percentage or flat amount discount for selected Transaction or Article codes (Available when the **Articles** OPERA Control is active), membership types and levels. Reservation membership details are referenced while applying discount percentages/amounts. If the reservation does not have membership details, OPERA Cloud references the primary profile membership details. When a charge is posted to a reservation account (using Billing, Post It, Fixed Charges, Batch Postings, or through an interface), a discount (credit) is automatically applied to the charge, with the **Reference** providing details of the discount percentage, membership type, and level. The reference details are also available for *New Posting* activity in the changes log.

> **Note**
>
> Rate code postings, including packages, deposits, debit, and credit folios are excluded from Transaction Discount. Negative postings posted via Post It / Passerby only result in posting of transaction discounts.

Adding Transaction Discount Rules

1. From the **Administration** menu, select **Financials**, then **Cashier Management**, then select **Transaction Discount**.
2. Click **New** and complete the following:
   a. **Property**: Enter or select the property.
   b. **Code**: Enter a alpha-numeric code for the discount.
   c. **Description**: Enter a description.
   d. **Code Type**: Select a code type from the list (Transaction Codes or Article Codes)

Copyright © 2016, 2025, Oracle and/or its affiliates.

e. **Rule Type**: Select a rule type from the list.
f. **Membership Type**: Select a membership type from the list.
g. **Membership Level**: Select membership level(s) from the list (optional).
h. **Percentage**: Select to apply a % discount.
    i. **Amount**: Enter a % value.
i. **Amount**: Select to apply a flat amount discount.
    i. **Amount**: Enter an amount.
j. **Sequence**: Enter or select a sequence.
k. **Transaction / Article Codes**
    i. From the **Available** panel search and select the transaction code(s) or article(s) (hold down the Ctrl key to select multiple transaction codes).
    ii. You can filter the Available list or the Selected list of transaction codes by entering a transaction code in the **Filter** field and clicking **Go**.
    iii. Click **>** to move the selected codes to the **Selected** panel.
l. Click **Save**.

Editing Transaction Discount Rules

1. From the **Administration** menu, select **Financials**, then **Cashier Management**, then select **Transaction Discount**.
2. Enter search criteria and click **Search**.
3. Select the transaction discount rule, then click vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details
5. Click **Save**.

Deleting Transaction Discount Rules

1. From the **Administration** menu, select **Financials**, then **Cashier Management**, then select **Transaction Discount**.
2. Enter search criteria and click **Search**.
3. Select the transaction discount rule, then click vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Voucher Rules

Prerequisites for Configuring Voucher Rules

Configure rules to generate vouchers during check in; using a customized `sample_voucher.rtf` template setup in the vouchers report group. Typically, these vouchers are "redeemable" for food, beverages or other products and services during a guest's stay.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Vouchers for the same membership type (and membership level, if specified) may not have overlapping dates.

Adding Voucher Rules

1. From the **Administration** menu, select **Financials**, select **Cashier Management**, then select **Vouchers**.
2. Click **New** and enter the following details:
   a. **Property**: Enter or select the property.
   b. **Membership Type**: Select a membership type from the list.
   c. **Membership Level**: Select a membership level from the list.
   d. **Start Date**: Enter or select a start date.
   e. **End Date**: Enter or select an end date.
   f. **Amount**: Enter an amount (local currency).
   g. Click **Save**.

Editing Voucher Rules

1. From the **Administration** menu, select **Financials**, select **Cashier Management**, then select **Vouchers**.
2. Enter search criteria, then click **Search**.
3. Select the voucher in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Voucher Rules

1. From the **Administration** menu, select **Financials**, select **Cashier Management**, then select **Vouchers**.
2. Enter search criteria, then click **Search**.
3. Select the voucher in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Copying Voucher Rules

See, Copying Configuration Codes to Multiple Properties

Configuring Collecting Agent Taxes

Prerequisites for Configuring Collecting Tax Agents

Copyright © 2016, 2025, Oracle and/or its affiliates.

Collecting Tax Agents is used by countries in Latin America. For more information, see Argentina - HBGU OPERA Cloud Fiscal Primary Data Document 2560521.1.

Adding Collecting Agent Taxes

1. From the **Administration** menu, select **Financials**, select **Cashier Management,** then select **Collecting Agent Taxes**.
2. Click **New** and enter the following details:
    a. **Transaction Code**: Select a tax transaction code to post the collecting agent tax.
    b. **Trigger Amount**: Enter the net amount posted to trigger generation of collecting agent tax.
    c. **Tax Type**: Select tax types from the list. Only Tax Types with the **Collecting Agent** check box selected are available.
    d. **Collecting Agent Tax Code**: Select the required Collecting Agent Tax Code. Values available are Agent Tax 1, 2, 3, 4, 5. A maximum of 5 Agent Tax Codes can be setup for each Tax Type marked as Collecting Agent.
    e. **Percent**: Enter the required tax percentage to calculate.
    f. **Tax Void**: Collecting Agent Tax Code to be used when a Collecting Agent Tax posting is voided. Entries available are Agent Tax Code 1, 2, 3, 4, 5.
    g. **Available / Selected**: Select Routing Codes and/or Transaction Codes that are considered for calculating Collecting Agent Tax.
    h. Click **Save**.

Editing Collecting Agent Taxes

1. From the **Administration** menu, select **Financials**, select **Cashier Management,** then select **Collecting Agent Taxes**.
2. Enter search criteria and click **Search**.
3. Select the collecting tax agent in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Collecting Agent Taxes

1. From the **Administration** menu, select **Financials**, select **Cashier Management,** then select **Collecting Agent Taxes**.
2. Enter search criteria and click **Search**.
3. Select the collecting tax agent in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Click **Delete** to confirm.

Commissions

Prerequisite for Commissions

Copyright © 2016, 2025, Oracle and/or its affiliates.

Commissions Administration enables you to set up bank accounts, commission codes, and related configuration to manage commission payments for travel agents and other booking sources of reservations at your property.

Configuring Commission Bank Accounts

The Commission Processing module allows the user to easily set up single or multiple bank accounts for the payment of travel agent commissions. Since properties are often dealing with a great number of different travel agents and sources, the most convenient way for them to pay commissions is to work with multiple bank accounts. International chains/properties may work with several different bank accounts: accounts for payment in the local currency and accounts for payment in foreign currencies.

Besides commission payment using checks (CHK payment method), some accounts may be designated for electronic funds transfer commission payments (EFT payment method); and yet others may be used for central payment (CENT payment method) of commissions generated at several properties. In the central payment case, a data transfer from each property provides the necessary information for the central bank to handle actual commission payment, in check or EFT form.

Travel agents and source profiles are each associated with bank accounts that handle commissions payment for that source/agent. (The bank account designated as the "default bank account" is used for paying commissions to agents and sources that do not have a bank account selected.).

Bank accounts can be set up in various ways, depending on how your organization processes commissions. Here are some of the most typical bank account configurations:

- A separate bank account to handle commission processing in each currency. For example, a bank account for American Trust to handle US dollar payments and a bank account for Bank of Montreal to handle payments in Canadian dollars.
- Multiple bank accounts to handle payments in a single currency. For example, American Trust and Bank of America each have a bank account configured in US dollars.
- One bank account to process payments in multiple currencies. Set up multiple bank accounts for the same bank, with one bank account to handle payment in each currency. For example, if American Trust handles commission payments in US dollars and in Canadian dollars, set up two identical bank accounts, except for the currency. Although OPERA Cloud uses an internal numbering system to differentiate these bank accounts, it would be advisable to give each bank account a unique Bank Name (e.g., American Trust - USD, American Trust - CAD) to make it easy to identify the accounts when working in the Commissions module.

Each bank account can have a language associated with it. This language can be used to determine the language for check printing. Thus, bank account language and bank account currency may both play a part in determining how you configure bank accounts as well as which account is associated with a particular travel agent or source profile.

Adding Commission Bank Accounts

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Bank Accounts**.
2. Click **New** and enter the following details:
    a. **Bank Code**: Unique code for this bank account.
    b. **Branch Code**: Code for the branch of the bank. Must be unique for each Bank Code.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **Bank Name**: Name of the bank account.

d. **Branch Code**: Code for the branch of the bank. Must be unique for each Bank Code.

e. **Bank Name**: Name of the bank account.

f. **Routing Number**: Bank routing number.

g. **Account Number**: Account number held by your organization at the bank.

h. **Payment Method**: Select the down arrow to choose the type of payment that is associated with this bank account. Options are:

   i. **CHK**: Commission payment by check.

      i. **Format**: Select the down arrow to choose the check format to be used to print checks for this bank account. Check formats are configured in Reports configuration (**Application** > **Reports** > **Configure Reports**) Select the Commission Check report group. Refer BI Publisher Stationery Editor.

      ii. **Next Check Number**: Next available check number in the series of checks. This number will be automatically updated each time commissions payments are processed and checks are printed.

      iii. **Min. Processing Amt**: Minimum amount of the commission for a travel agent/ source before a commission payment is processed. This is useful if you want to make sure you do not produce a check every time a commission is due but only after a reasonable commission amount has been accumulated.

      iv. **Edit Check Number**: Select this check box to allow users to change the check numbers for this account. Deselect this check box to prevent users from editing check numbers once they are assigned (this is the default).

      v. **Check Stub Lines**: The number entered here is the number of printable lines (top to bottom) on the check stub. The check stub is always displayed above the check. The number entered here should match the number set by the Maximum Records Per Page value you set when you customized the `sample_checkusd.rep`. The default maximum records per page for the `sample_checkusd` report is 18. For more information, see Customizing Reports.

   ii. **CENT-Centrally paid commissions**: This selection is essentially the same as CHK, but is provided as a separate option that can be used with central reservation systems where commissions are paid from a central bank account.

   iii. **EFT- Electronic funds transfer**: An export file is created by the commission payment process. The EFT file format is determined by the EFT Export Format OPERA Control . For more information, see About Commission EFT Export File Formats

i. **Currency**: Select a currency from the list; the same currency can be select in more than one bank account. (Available when the **Foreign Currency Codes** OPERA Control is active).

j. **Language**: Select a language for this bank account from the list. Your selection determines the language used to write amounts in words on checks when the **Multi Language** OPERA Control is active. If no language is selected here, OPERA Cloud defaults to the the base language for your property.

k. **Positive Pay Export**: Available when the **Positive Pay Check Export** OPERA Control is active. Select this check box so the bank will have the option to use the Positive Pay Export functionality. The Positive Pay Export identifies to the bank all of the Travel Agent Commission checks that have been processed by OPERA Cloud and can be

Copyright © 2016, 2025, Oracle and/or its affiliates.

paid out to the agent by the bank. For more information, see Positive Pay Checks for details.

l. **Default**: Select this check box if this bank account is to be the default in case no bank account is associated with the travel agent or source. A default bank account must be configured for a property and only one bank account can be selected as the default. An X appears in the X column for the default bank account.

m. **Default for Currency**:When an active OXI Interface is present, this option provides the ability to configure a default bank account per currency/property and to link that bank account with the profile for commission processing when OXI inserts a commission code in an OPERA Cloud profile.

3. Click **Save**.

Editing Commission Bank Accounts

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Bank Accounts**.
2. Enter search criteria and click **Search**.
3. Select the commission bank account, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Commission Bank Accounts

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Bank Accounts**.
2. Enter search criteria and click **Search**.
3. Select the commission bank account, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Commission Codes

Travel Agent commission is calculated after a reservation is checked out and is based on either of the following:

- The eligible revenue posted during the stay, usually the accommodation or package (including package items) revenue.
- A flat amount per night or per stay.

The calculation of commission is driven by commission codes and the business rules defined in them. Commission codes identify the eligible sale charge transaction codes for which to calculate commission, the commission calculation method, and any taxing method to be applied to the commission.

Properties must configure a NON or ZERO commission code for non-eligible travel agents or rate codes. This commission code, with a zero flat amount commission, calculates a zero amount payable to the agent. You can configure OPERA Cloud to transfer all zero commission payments directly to commission payment history or to list these commission payments as part of the commission payables processing.

The following hierarchy determines how OPERA Cloud calculates reservation commission:

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **Default** - A default commission code is selected for the **Default Commission** OPERA Control. For example, this could be set to 10%; paying 10% of eligible revenue.
- **Sales Account** - The commission payable can also be selected for a specific Travel Agent or Source profile, and is used if the commission payable is different from the default, for example, a specific travel agent is contracted to receive 7% of eligible revenue. For more information, see Managing Travel Agent / Source Commission Details.
- **Rate Code** - Rate codes also have an option to select a commission code, which overrides the Default and the Sales Account. For example, the rate code "SPAPKG" with a "NON" commission code would pay zero commission to any agent booking the "SPAPKG" rate code. For more information, see Configuring Rate Code Financial Details.
- **Negotiated Rate** - Negotiate rate code selected in sales account negotiated rates and rate code negotiated profiles.

Configuring Commission Codes

Adding Flat Amount Commission Codes

Flat amount commission is based on nights or stay.

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Commission Codes**.
2. Click **New** and complete the following:
   a. **Property** : Enter or select the property.
   b. **Code**: Enter an alphanumeric code to identify the commission code.
   c. **Description**: Enter a description for the commission code.
   d. **Sequence**: Enter a sequence to determine the position of the commission code in lists. Commission codes without a sequence number appear in alphabetical order following codes that have a number assigned.
   e. **Hold**: Select a Hold status if you want the commission payment held for review prior to payment:
      i. **Always**: The commission detail record always has the Hold status (H) selected. Commission detail records with this status are not processed for payment until the hold is released.
      ii. **Accounts Receivables**: The commission detail record has the Hold status (H) selected if the direct bill transaction code (defined by the Cashiering > AR Settlement Trn Code application setting) is associated with any of the folios generated by the reservation. The commission detail record also has the AR status (A) selected. AR status means the associated commission is used to offset the agent/source AR account. When records identified for AR are processed, they are removed from the list of commission details without creating a check or an EFT payment record. The Payment Activity record shows the AR status.
      iii. **Prepaid**: The commission detail record has the Hold status (H) selected if pre-paid commission payment (selected in the **Default Prepaid Commission Trn Code** OPERA Control) is associated with any of the folios generated by the reservation. The commission detail record also has the Prepaid status (P) selected. Prepaid status means that all or part of the commission is prepaid. The prepaid amount is automatically deducted from the commission payment when the commissions detail record is processed. The Payment Activity record shows the Prepaid status.
   f. **Based On**: Select **Reservation**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

g. **Amount**: Enter a flat amount of commission to be paid.

h. Calculation rule.

   i. **Per Night**: Commission amount is calculated per night of the reservation based on the **Amount** value multiplied by the number of nights.

   ii. **Per Stay**: Commission amount is calculated for the entire stay based on the **Amount** value.

i. **Tax**: Enter the tax percentage if the commission payment is taxed. The tax on a commission is automatically calculated during commission processing when the **Auto Calculate VAT** OPERA Control is active.

j. Click **Save**.

Adding Revenue Percentage Commission Codes

Revenue based commission is based on selected sales charges posted to the reservation account. A different rate of commission can be paid for weekdays and weekends.

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Commission Codes**.
2. Click **New** and complete the following:

   a. **Property** : Enter or select the property.

   b. **Code**: Enter an alphanumeric code to identify the commission code.

   c. **Description**: Enter a description for the commission code.

   d. **Sequence**: Enter a sequence to determine the position of the commission code in lists. Commission codes without a sequence number appear in alphabetical order following codes that have a number assigned.

   e. **Hold**: Select a **Hold** status if you want the commission payment held for review prior to payment:

      i. **Always**: The commission detail record always has the Hold status (H) selected. Commission detail records with this status are not processed for payment until the hold is released.

      ii. **Accounts Receivables**: The commission detail record has the Hold status (H) selected if the direct bill transaction code (defined by the Cashiering>AR Settlement Trn Code application setting) is associated with any of the folios generated by the reservation. The commission detail record also has the AR status (A) selected. AR status means the associated commission is used to offset the agent/source AR account. When records identified for AR are processed, they are removed from the list of commission details without creating a check or an EFT payment record. The Payment Activity record shows the AR status.

      iii. **Prepaid**: The commission detail record has a Hold status (H) if pre-paid commission payment (selected in the **Default Prepaid Commission Trn Code** OPERA Control) is associated with any of the folios generated by the reservation. The commission detail record also has the Prepaid status (P) selected. Prepaid status means that all or part of the commission is prepaid. The prepaid amount is automatically deducted from the commission payment when the commissions detail record is processed. The Payment Activity record shows the Prepaid status.

   f. **Based On**: Select **Revenue**.

   g. **Tax**: Enter the tax percentage if the commission payment is taxed. The tax on a commission is automatically calculated during commission processing when the **Auto Calculate VAT** OPERA Control is active.

Copyright © 2016, 2025, Oracle and/or its affiliates.

h. Click **New** and complete the following:

i. **Commission%**: Enter a commission percentage .

j. **Weekend Commission%**: Enter a commission percentage if a different commission rate is earned on revenue generated on weekends. Otherwise, the Commission % applies to all days of the week.

k. **Based on Net Amount**: Select check box to calculation commission on nett amount.

l. **Transaction Code(s)**: Select the sale charge transaction code(s) for which revenue is commissionable at the defined commission percentage.

   i. From the **Available** panel search and select the transaction code(s). Hold down the **Ctrl** key to select multiple transaction codes.

   ii. You can filter the **Available** list or the **Selected** list of transaction codes by entering a transaction code in the **Filter** field and clicking **Go**.

   iii. Click **>** to move the selected codes to the **Selected** panel.

   iv. Click **Save**.

m. Repeat to add additional transaction codes with a different percentage of commission.

n. Click **Save**.

Editing Commission Codes

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Commission Codes**.
2. Enter search criteria, then click **Search**.
3. Select the commission code in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
   a. If the commission is based on revenue, select a transaction code then click the vertical ellipsis **Actions** menu and select **Edit**.
   b. Update the configuration.
   c. Click **Save**.

Deleting Commission Codes

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Commission Codes**.
2. Enter search criteria, then click **Search**.
3. Select the commission code in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Stop Processing (Hold Payment) Reasons

Prerequisites for Stop Processing Reason Codes

When the **Stop Processing Reasons Code** OPERA Control is active, a stop processing reason must be selected when a commission payment is placed on hold. Configure the various reasons why a commission payment would be held. For more information, see Managing Commission Payment Holds.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Stop Processing (Hold Payment) Reasons

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Stop Processing Reasons**.
2. Click **New** and complete the following:
   a. **Code**: Enter a code that identifies the stop payment processing reason.
   b. **Description**: Enter a description of the code.
   c. **Sequence**: Enter a number to indicate the position of this reason code in a list of displayed values.
3. Click **Save**.

Editing Stop Processing (Hold Payment) Reasons

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Stop Processing Reasons**.
2. Enter search criteria then click **Search**.
3. Select the reason code, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Stop Processing (Hold Payment) Reasons

1. From the **Administration** menu, select **Financial**, select **Commission Management**, and then select **Stop Processing Reasons**.
2. Enter search criteria then click **Search**.
3. Select the reason code, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

About Commission EFT Export File Formats

Depending on the setup of the commission bank account, you can make commission payments using printed checks or from an electronic funds transfer (EFT) export file sent to a central clearinghouse for remittance to travel agents.

The **EFT Export Format** OPERA Control determines the file format for all commission bank accounts setup with EFT selected as the **Payment** method.

The EFT export formats available are:

- EGS (Eruca Global Services)
- HCC (Pegasus)
- INF (Infinium)
- NPC (National Processing Company)
- WTP (World Travel Payment) , also known as TACS and GCMS

On selecting a value for the **EFT Export Format** OPERA Control, additional OPERA Control settings are enabled to provide property and tax data that is included in the EFT export.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Each time you process commissions payments, an export file is generated and delivered according to the delivery method selected in the **Delivery Method** OPERA Control setting. (File System, SFTP, HTTPS).

EGS (Eruca Global Services) Commission Export

On selecting EGS for the EFT Export Format OPERA Control, additional OPERA Control settings are enabled to provide data to include in the EFT export.

OPERA Control	Description
File Name Format	File Name Format: • PROPERTYID_SEQUENCE • PROPERTYID_SEQUENCE_DDMMYY • PROPERTYID_SEQUENCE_MMDDYY • PROPERTYID_SEQUENCE_DDMMYYHH24MI • PROPERTYID_SEQUENCE_MMDDYYHH24MI
Brand/Destination ID	Brand Code/Destination ID, 2 character code.
Property ID	Property ID, maximum 10 characters, Provided by HCC if property has no code.
Property Name	Name of the property/chain.
Country of Taxing Authority	Select the country code of the property.
Tax Type	Select the tax type required.
Company	Clearinghouse company name.
Address	Address of the clearinghouse.
Telephone	Telephone number of the clearinghouse.
Fax	Fax number of the clearinghouse.
Delivery Method	Set the delivery method to be used for EFT Export: • SFTP • SFTP Legacy • HTTPS • File System (download)

Export File Data Definition

BH – Batch Header

The EGS data export file consists of four record types as described below. Each field within the records is separated by the pipe symbol. Although a field is mandated by a certain number of characters, the exact length of the data can be less than the column, but not more. In all cases, the termination of the field is again with the existence of the pipe symbol (|). For a numeric value, it is not necessary to pad either left or right with zeros. Decimal placement is based on the property data.

EGS Field Name	Length	Description
Record ID	2 Char	BH.
Property ID	10 Char	Property ID.

Copyright © 2016, 2025, Oracle and/or its affiliates.

EGS Field Name	Length	Description
Destination ID	3 Char	Brand/Destination ID.
Batch ID	16 Char	Unique batch identification number (revolving 3 digit number).
Batch Creation Date	8 Char	YYYYMMDD format.
File Creation Time	4 Char	HHMM format (military time).
Batch Description	24Char	EGS Batch: BOSSO102.hlk (5 digit property code + 3 digit revolving batch number. Batch ID will be taken plus the .HLK as the file extension.

PM - Property Maintenance

EGS Field Name	Length	Description
Record ID	2 Char	PM.
Brand Code	2 Char	Brand/Destination ID.
Chain Property ID	10 Char	Property ID.
Action Code	1 Char	A.
Property Name	30 Char	Name of the Property as shown in Property Data.
Address Line 1	25 Char	Properties Street Address.
Address Line 2	25 Char	Blank.
City	15 Char	Properties City Address.
State/Province Code	3 Char	Properties State Address.
Country Code	2 Char	Properties Country Address.
Postal Code	15 Char	Properties Postal/Zip Code.
Phone Number	20 Char	Properties Telephone Number.
Property ID - Sabre	10 Char	Blank.
Property ID Covia	10 Char	Blank.
Property ID System One	10 Char	Blank.
Property ID Pars	10 Char	Blank.
Property ID Datas II	10 Char	Blank.
Property ID JAL	10 Char	Blank.
Property ID Sita/Sahara	10 Char	Blank.
Property ID Abacus	10 Char	Blank.
Property ID Gemini	10 Char	Blank.
Property ID Galileo	10 Char	Blank.
Property ID AAA	10 Char	Blank.

RC - Report Commission (Guest Record)

Copyright © 2016, 2025, Oracle and/or its affiliates.

Reported commission records account for reservation stays, cancellations, and no-shows. Within this format, Gross is referenced as Net, and Net is referenced as Gross. For each commissionable guest, one RC record is created.

EGS Field Name	Length	Description.
Record ID	2 Char	RC.
Action Code	1 Char	A.
Guest Stay Number	12 Char	Unique identifier for guest stay (reported commission) number. (5 digits property ID + last 7 digits of reservation name ID).
Brand Code	2 Char	Brand/Destination ID.
Booking Source Code	3 Char	OTH.
Property ID	10 Char	Property ID.
PNR Number	6 Char	Blank.
Confirmation Number	12 Char	Confirmation Number.
Cancellation Number	12 Char	If reservation is of a canceled status CXL; otherwise Blank.
Corporate ID Number	12 Char	If company profile attached uses the CORPID/Member number. If no CORPID exists, use company name ID. If no company is attached, then Blank. RESERVATION GENERAL VIEW.COMPANY ID.
Travel Agency Number	8 Char	IATA number. If Blank, then use internal number.
Guest Last Name	30 Char	Guest Last Name.
Guest First name	20 Char	Guest First Name.
Status Code	2 Char	1 = Fully commissionable 4 = Cancellation, 5 = No show.
Reason Code	6 Char	Blank.
Arrival Date	8 Char	YYYYMMDD format.
Departure Date	8 Char	YYYYMMDD format.
Number of Nights	3 Digits	Nights.
Number of Rooms	3 Digits	1.
Commissionable Revenue	15 Digits	Revenue that is commissionable.
Net Commission Due	15 Digits	Net commission (Gross Commission - Tax Amount).
Adjustment Amount	15 Digits	0.00.
Net Commission Due	15 Digits	Gross Commission (Net Commission + Tax Amount).
Currency Code	3 Char	Currency Code of Bank Account.
Comments	250 Char	Blank.

Copyright © 2016, 2025, Oracle and/or its affiliates.

EGS Field Name	Length	Description.
Number of Tax Records	3 Digits	1 or 0 based on where tax has been calculated (CALC VAT ON COMMISSIONS OPERA Control).
Tax Amount	15 Digits	The calculated tax amount.
Agency Name	30 Char	Travel agent name attached to the reservation.
Agency Address 1	25 Char	Travel agent address 1 attached to the reservation.
Agency Address 2	25 Char	Travel agent address 2 attached to the reservation.
Agency City	15 Char	Travel agent city attached to the reservation.
Agency State/Province	3 Char	Required if country code = US or CA.
Agency Country Code	2 Char	Travel agent country code.
Agency Postal Code	15 Char	Travel agent postal code.
Agency Phone Number	20 Char	Travel agent telephone number.

BT - Batch Trailer

The Batch Trailer record is mandatory for all batch transfers. This record must be the last record in the file.

> **Note**
>
> The total values are not calculated, but are added up from the RC (Reported Commission) included with the file.

EGS Field Name	Length	Description
Record ID	2 Char	BT.
Total RC Records	8 Digits	Total number of RC records in this batch.
Total PM Records	8 Digits	Total number of PM records in this batch.
Total Commissionable Revenue	15 Digits	Total Commissionable revenue from which the commission is calculated.
Total Gross Commission	15 Digits	Total Net commission (Gross commission Tax Amount).
Total Adjustment Amount	15 Digits	0.00.
Total Tax Amount	15 Digits	Tax calculated on Net Commissions.
Total Net Commission Due Amount	15 Digits	Total Gross Commission (Net Commission + Tax Amount).

Copyright © 2016, 2025, Oracle and/or its affiliates.

EGS Field Name	Length	Description
Currency Code	3 Char	Use the 3 digit currency code defined in the EFT setup.

HCC (Pegasus) Commission Export

On selecting HHC for the EFT Export Format OPERA Control, additional OPERA Control settings are enabled to provide data to include in the EFT export.

OPERA Control	Description
File Name Format	File Name Format: • PROPERTYID_SEQUENCE • PROPERTYID_SEQUENCE_DDMMYY • PROPERTYID_SEQUENCE_MMDDYY • PROPERTYID_SEQUENCE_DDMMYYHH24MI • PROPERTYID_SEQUENCE_MMDDYYHH24MI
Brand/Destination ID	Brand Code/Destination ID, 2 character code.
Property ID	Property ID, maximum 10 characters, Provided by HCC if property has no code.
Property Name	Name of the property/chain.
Country of Taxing Authority	Select the country code of the property.
Tax Type	Select the tax type required.
Company	Clearinghouse company name.
Address	Address of the clearinghouse.
Telephone	Telephone number of the clearinghouse.
Fax	Fax number of the clearinghouse.
Delivery Method	Set the delivery method to be used for EFT Export: • SFTP • SFTP Legacy • HTTPS • File System (download)

Export File Data Definition

The HCC data export file consists of five record types as described below. Each field within the records is separated by the pipe symbol. Although a field is mandated by a certain number of characters, the exact length of the data can be less than the column, but not more. In all cases the termination of the field is again with existence of the pipe symbol (|). For a numeric value, it is not necessary to pad either left or right with zeros. Decimal placement is based on the property data. If no taxes are reported on the RC Report Commission, a TX Tax Record will not be created.

BH – Batch Header

Copyright © 2016, 2025, Oracle and/or its affiliates.

HCC Field Name	Length	Description
Record ID	2 Char	BH.
Property ID	10 Char	Property ID.
Destination ID	2 Char	Brand/Destination ID.
Batch ID	16 Char	Unique batch identification number (revolving 3 digit number).
Batch Creation Date	8 Char	YYYYMMDD format.
File Creation Time	4 Char	HHMM format (military time).
Batch Description	24Char	HHC Batch: BOSSO102.hlk (6 digit property code + 3 digit revolving batch number. Batch ID is taken plus the .HLK as the file extension.

PM - Property Maintenance

This should always be the second record in the file after the BH.

HCC Field Name	Length	Description
Record ID	2 Char	PM.
Brand Code	2 Char	Brand/Destination ID.
Chain Property ID	10 Char	Property ID.
Action Code	1 Char	A.
Property Name	30 Char	Name of the Property as shown in Property Data.
Address Line 1	25 Char	Properties Street Address.
Address Line 2	25 Char	Blank.
City	15 Char	Properties City Address.
State/Province Code	3 Char	Properties State Address.
Country Code	2 Char	Properties Country Address.
Postal Code	15 Char	Properties Postal/Zip Code.
Phone Number	20 Char	Properties Telephone Number.
Property ID - Sabre	10 Char	Blank.
Property ID Covia	10 Char	Blank.
Property ID System One	10 Char	Blank.
Property ID Pars	10 Char	Blank.
Property ID Datas II	10 Char	Blank.
Property ID JAL	10 Char	Blank.
Property ID Sita/Sahara	10 Char	Blank.
Property ID Abacus	10 Char	Blank.
Property ID Gemini	10 Char	Blank.
Property ID Galileo	10 Char	Blank.
Property ID AAA	10 Char	Blank.

Copyright © 2016, 2025, Oracle and/or its affiliates.

RC - Report Commission (Guest Record)

Reported commission records account for reservation stays, cancellations, and no-shows. Within this format, Gross is referenced as Net, and Net is referenced as Gross. For each commissionable guest, one RC record is created.

HCC Field Name	Length	Description.
Record ID	2 Char	RC.
Action Code	1 Char	A.
Guest Stay Number	12 Char	Unique identifier for guest stay (reported commission) number. (5 digits property ID + last 7 digits of reservation name ID).
Brand Code	2 Char	Brand/Destination ID.
Booking Source Code	3 Char	OTH.
Property ID	10 Char	Property ID.
PNR Number	6 Char	Blank.
Confirmation Number	12 Char	Confirmation Number.
Cancellation Number	12 Char	If reservation is of a canceled status CXL; otherwise Blank.
Corporate ID Number	12 Char	If company profile attached uses the CORPID/Member number. If no CORPID exists, use company name ID. If no company is attached, then Blank. RESERVATION GENERAL VIEW.COMPANY ID.
Travel Agency Number	8 Char	IATA number. If Blank, then use internal number.
Guest Last Name	30 Char	Guest Last Name.
Guest First name	20 Char	Guest First Name.
Status Code	2 Char	1 = Fully commissionable, 3= Zero Commission, 4 = Cancellation, 5 = No show
Reason Code	6 Char	Blank.
Arrival Date	8 Char	YYYYMMDD format.
Departure Date	8 Char	YYYYMMDD format.
Number of Nights	3 Digits	Nights.
Number of Rooms	3 Digits	1.
Commissionable Revenue	15 Digits	Revenue that is commissionable.
Net Commission Due	15 Digits	Net commission (Gross Commission - Tax Amount).
Adjustment Amount	15 Digits	0.00.
Net Commission Due	15 Digits	Gross Commission (Net Commission + Tax Amount).

Copyright © 2016, 2025, Oracle and/or its affiliates.

HCC Field Name	Length	Description.
Currency Code	3 Char	Currency Code of Bank Account.
Comments	250 Char	Blank.
Number of Tax Records	3 Digits	1 or 0 based on where tax has been calculated (CALC VAT ON COMMISSIONS OPERA Control).
Tax Amount	15 Digits	The calculated tax amount.
Agency Name	30 Char	Travel agent name attached to the reservation.
Agency Address 1	25 Char	Travel agent address 1 attached to the reservation.
Agency Address 2	25 Char	Travel agent address 2 attached to the reservation.
Agency City	15 Char	Travel agent city attached to the reservation.
Agency State/Province	3 Char	Required if country code = US or CA.
Agency Country Code	2 Char	Travel agent country code.
Agency Postal Code	15 Char	Travel agent postal code.
Agency Phone Number	20 Char	Travel agent telephone number.

TX - Tax Record

There is one tax record for each reported commission record. This record type must immediately follow the associated RC record. Tax Record is mandatory for each commission record. This record is only required for properties sending tax information that is based on where the parameter called CALC VAT ON COMMISSION is active. If there is not a tax amount in the RC record, a TX record is not required.

HCC Field Name	Length	Description
Record ID	2 Char	TX
Brand Code	2 Char	Brand/Destination ID
Guest Stay Number	12 Char	Reservation Confirmation Number (resv name id). Same as reported in the RC record.
Taxing Authority Code	3 Char	Country of Tax Authority
Tax Type	8 Char	Tax Code
Reporting Cycle	1 Char	Blank
Net Commission Amount	15 Digits	Net Commission (Gross Commission Tax Amount)
Tax Amount	15 Digits	Tax calculated on Net Commission
Commission Amount	15 Digits	Gross Commission (Net Commission + Tax AMOUNT)

Copyright © 2016, 2025, Oracle and/or its affiliates.

HCC Field Name	Length	Description
Tax Percentage Used	6 Digits	Right four digits considered decimal positions. 10% would appear in this field as 100000.
Travel Agent Tax ID	15 Digits	If a TAX ID shown on the associated Travel Agent profile has been entered this should populate this column, otherwise the words NOT PROVIDED must appear in **TAX1 NO** field
Reporting Flag	1 Char	Blank

BT - Batch Record

The Batch Trailer record is mandatory for all batch transfers. This record must be the last record in the file.

> **Note**
>
> The total values are not calculated, but are added up from the RC (Reported Commission) included with the file.

HCC Field Name	Length	Description
Record ID	2 Char	BT.
Total RC Records	8 Digits	Total number of RC records in this batch.
Total TX Records	8 Digits	Total number of TX records in this batch.
Total PM Records	8 Digits	Total number of PM records in this batch.
Total Commissionable Revenue	15 Digits	Total Commissionable revenue from which the commission is calculated.
Total Gross Commission	15 Digits	Total Net commission (Gross commission Tax Amount).
Total Adjustment Amount	15 Digits	0.00.
Total Tax Amount	15 Digits	Tax calculated on Net Commissions.
Total Net Commission Due Amount	15 Digits	Total Gross Commission (Net Commission + Tax Amount).
Currency Code	3 Char	Use the 3 digit currency code defined in the EFT setup.

INF (Infinium) Commission Export

On selecting INF for the EFT Export Format OPERA Control, additional OPERA Control settings are enabled to provide data to include in the EFT export.

Copyright © 2016, 2025, Oracle and/or its affiliates.

OPERA Control	Description
File Name Format	Select the file name format to be used for EFT Export file: • RESORTNAME_MMDDYY_SEQUENCE • RESORTNAME_DDMMYY_SEQUENCE • RESORTNAME_MMDDYYYY_SEQUENCE • RESORTNAME_MMDDYYYYHH24MI • RESORTNAME_DDMMYYYYHH24MI
Delivery Method	Set the delivery method to be used for EFT Export: • SFTP • SFTP Legacy • HTTPS • File System (download)

Export File Data Definition

The INF data export file consists of one record type.

> **Note**
>
> Amounts do not include a decimal (for example, if the commission amount is $21.75, the Actual Commission Due amount is shown as 000002175) in the Infinium export.

Position	Length	Description
1	12	IATA # or if commission code not = "Z" = AREA CODE/ TELEPHONE #.
13	30	Travel Agent Name.
43	6	Departure Date.
49	12	OPERA Profile ID.
61	30	Guest Name.
91	6	Guest Folio.
97	3	Active/Inactive.
100	1	List Number.
101	1	Folio Reservation Status.
102	1	"H" or "R."
103	30	Travel Agent Address1.
133	30	Travel Agent Address2.
163	20	Travel Agent City.
183	10	Travel Agent Zip.
193	3	Travel Agent Country.
196	10	Travel Agent Phone #.
206	30	Travel Agent Contact Name.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Position	Length	Description
236	2	Travel Agent State.
238	5	Audit Date.
243	5	Audit Date.
248	5	Number of Rooms.
253	5	Number of Guests.
258	6	Nothing gets moved into the field.
264	1	Nothing gets moved into the field.
265	2	Commission Percentage.
267	2	Commission Percentage.
269	2	Commission Percentage.
271	2	Commission Percentage.
273	2	Commission Percentage
275	2	Commission Percentage
277	2	Commission Percentage
280	9	Room Rate.
290	9	Actual Rate.
300	9	Net Amount Due.
309	6	Primary Folio.
315	2	Number of Rooms.
317	1	Blank or "-" for negative.
318	2	Number of Guests.
320	6	Booking Date.
326	5	Audit Date.
331	6	Arrival Date.
337	2	Number of Nights.
339	10	Same as tap phone Agent Phone #.
349	5	Actual Number of Nights.
354	5	Expected number of Nights.
359	1	Blank or "-" for negative.
360	1	Actual Room Revenue.
369	9	Blank or "-" for negative.
370	9	Non Room Revenue.
379	5	Number of Guests in Room.
384	9	Actual Commission Due.
393	9	Deducted Amount.
402	1	Asterisk.
403	15	SSN or TIN.
418	13	OPERA Confirmation Number.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Position	Length	Description
431	55	Filler.

NPC (National Processing Company) Commission Export

On selecting NPC for the EFT Export Format OPERA Control, additional OPERA Control settings are enabled to provide data to include in the EFT export.

OPERA Control	Description
File Name Format	File Name Format: • XF_PROPERY • XF_PROPERTY_DDMMYY • XF_PROPERTY_MMDDYY • XF_PROPERTY_DDMMYYHH24MI • XF_PROPERTY_MMDDYYHH24MI
Property ID	Property ID, maximum 10 characters.
Property Name	Name of the property/chain.
Tax Identifier	Select the tax type required.
Company	Clearinghouse company name.
Address	Address of the clearinghouse.
Telephone	Telephone number of the clearinghouse.
Fax	Fax number of the clearinghouse.
Delivery Method	Set the delivery method to be used for EFT Export: • SFTP • SFTP Legacy • HTTPS • File System (download)
SFTP Name	Name of the SFTP endpoint. Obtain this from your system administrator.

Export File Data Definition

The NPC data export file consists of 4 record types as described below.

> **Note**
>
> All amounts are shown in the bank currency.

Vendor Record

Required - 1 per funding currency batch, multiple batches per commission file.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Field Name	Type	Start	Length	Decimals	Req'd/ Opt.	Comments
Record Type	CHAR	1	1		R	A= Vendor record for this currency batch.
Batch currency code	CHAR	2	3		r	Funding currency code for this batch. Example: NOK -= Norwegian Krone, USD = US dollars.
File date	NUMERIC	5	8		R	Date file created (mmddyyyy).
Vendor #	CHAR	13	6		R	NPC assigned number.
Vendor type	CHAR	19	1		R	2=Hotel.
Vendor name	CHAR	20	30		R	
Vendor address1	CHAR	50	30		R	
Vendor address2	CHAR	80	30		O	
Vendor city	CHAR	110	30		R	
Vendor state/ province	CHAR	140	28		O	
Vendor ZIP/postal code	CHAR	168	10		O	
Vendor contact phone #	CHAR	178	30		R	Vendor phone # for NPC Commision Express.
Vendor cust. Svc. phne #	CHAR	208	30		O	Vendor customer service phone # as it should appear on vendor's report.
Vendor email address	CHAR	238	50		O	If billing is set at vendor level, email address to which NPC can send a funds require confirmation and related billing information. Otherwise, spaces.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Field Name	Type	Start	Length	Decimals	Req'd/ Opt.	Comments
Vendor fax #	CHAR	288	30		O	If billing is set at the vendor level, fax # to that NPC can send a funds required confirmation and related billing information. Otherwise, spaces.
Vendor # records	NUMERIC	318	7		R	Total number of detail records in this currency batch. Total should include any optional tax detail records.
Vendor total amount	SIGNED NUMERIC	325	20	2	R	Total vendor commission payments for this currency batch including any optional tax detail records. No commas, decimals, or currency symbols. Required sign in the first character position. Example: 5000.00 = +00000000000005 00000.
Vendor country code	CHAR	345	2		O	Example: US = USA, DE = Germany. This is an ISO code.
Vendor customer. service phone # 2	CHAR	347	30		O	Vendor customer service phone # as it should appear on the Agent's report.
Batch currency entry cd*	CHAR	377	2		O	Default for Euro currency will be DE (German). Example: International: 123-1-123- 1234. If currency = Euro, then the country currency has to be sent also.

WTP (World Travel Payment) Commission Export

On selecting NPC for the EFT Export Format OPERA Control, additional OPERA Control settings are enabled to provide data to include in the EFT export.

OPERA Control	Description
Use Country Code for ISO Code [USE_COUNTRY_CODE_FOR_ISO_CODE]	Activate to use <what> country code as the ISO code.
File Name Format	Select the file name format to be used for EFT Export file: • PROPERTYID_SEQUENCE • PROPERTYID_SEQUENCE_DDMMYY • PROPERTYID_SEQUENCE_MMDDYY • PROPERTYID_SEQUENCE_DDMMYYHH24MI • PROPERTYID_SEQUENCE_MMDDYYHH24MI
Chain ID	Alphanumeric chain identification code, 6 characters minimum.
Location ID	Location identification code, 6-10 characters.
Chain Name	Name of the property/chain.
Reporting Currency	Select country code for reporting currency.
Transmission ID	Transmission ID provided by WTP.
Country of Taxing Authority	Select the country code of the property.
Tax Types	Select the Tax Type required.
Company	Clearinghouse company name.
Address	Address of the clearinghouse.
Phone	Telephone number of the clearinghouse
Fax	Fax number of the clearinghouse.

Copyright © 2016, 2025, Oracle and/or its affiliates.

OPERA Control	Description
Delivery Method	Set the delivery method to be used for the EFT Export: • SFTP • SFTP Legacy • HTTPS • File System (download)

Export File Data Definition

The WTP data export file consists of 11 record types as described below.

00 – File Header

The File Header record contains information about the commission transaction file. There is one File Header per commission transaction file.

WTP Field Name	Length	Description
Record Type	2 Char	00.
Filler	7 Char	Blank.
Group ID	7 Char	Group ID (Chain ID) assigned by WTP. It consists of an H followed by six digits (Hnnnnnn).
Filler	3 Char	Blank.
Date	6 Char	Date this file was created (YYMMDD).
Filler	15 Char	Blank.
Group Name	32 Char	Name of your Group or Chain.
Transmission ID	8 Char	

10 – Batch Header

A batch contains information about commission transactions for a specific location and a specific reporting currency. The Batch Header record is the first record of a batch and identifies the location and reporting currency. Following within the batch are Detail and Agency Records for each commission transaction for this location and reporting currency. The Batch Trailer record is the last record of a batch.

Each time the location or reporting currency changes, you must start a new batch. There is no limit to the number of batches within a file.

WTP Field Name	Length	Description
Record Type	2 Char	10.
Filler	7 Char	Blank.

Copyright © 2016, 2025, Oracle and/or its affiliates.

WTP Field Name	Length	Description
Location ID	7 Char	Location ID assigned by WTP for your location. This is different from the Group ID. The Location ID consists of an H followed by six digits (Hnnnnnn).
Filler	13 Char	Blank.
Reporting Currency	3 Char	Currency Code.
Remitting Currency	3 Char	Currency Code.
Filler	4 Char	Blank.
Location Name	32 Char	Name of the location.
Filler	9 Char	Blank.

11 - Detail Record One

Detail Record One contains booking information.

WTP Field Name	Length	Description
Record Type	2 Char	11

Copyright © 2016, 2025, Oracle and/or its affiliates.

WTP Field Name	Length	Description
Transaction Code	2 Char	• Transaction codes in the WTP export file are used to identify the transaction type. These codes are used in the transaction code field in Record Type 11. The following codes are used in the OPERA generated WTP EFT export file: • For Cancelled Reservations, code used is NA (Cancelled). • For No Show Reservations, code used is NS (No Show - Non- Commissionable). • For Commission record where commission payment has been manually edited to a zero amount, code used is NC (Non-Commissionable). • For Commission records where a pre-payment equal to the commission amount payable has been made, code used is NP (Previously paid or pre-paid in full). • For Commission records where a partial pre-payment is made, the code used is CB (Commission paid on original booking with or without change, that is, the changed amount is not equal to 0.00). Note: This code is also be used when the commission on the original booking was not changed. Also, use this code when other transaction codes do not better define the transaction.
Arrival Date	6 Char	Date traveler or group departed from location or, for no-shows and cancellations, date booked to depart (YYMMDD).
Departure Date	6 Char	The Departure Date must be later than or equal to the Arrival Date. Future dates are rejected.

Copyright © 2016, 2025, Oracle and/or its affiliates.

WTP Field Name	Length	Description
Booking Date	6 Char	Booking or reservation date is YYMMDD format. This must be earlier than or equal to the arrival date. If this date is unknown, Blank.
Commission Amount	15 Digit	Commission amount to be paid to the travel agency, after applying all Record 35 taxes, if applicable. This field assumes two decimal positions. For commission overpaids (Transaction Code=CO), the commission Amount field must be an absolute number. Do not use a minus (-) sign. This field will be zero filled for the following transaction codes: • NA Cancellations • NS No Shows • NC Non-commissionable • NP Previously paid (Paid in Full)
Confirmation Number	12 Char	Confirmation number for this reservation. If the confirmation number is unknown, enter Unknown in this field.
PNR Number	10 Char	Blank
Number of Rooms	3 Char	Number of rooms used, minimum of one.
Number of Nights	3 Char	Number of nights stayed, minimum of one. Do not total the number of nights with the number of rooms.
Booking Source	3 Char	OTH
Corporate ID	12 Char	Number used in granting corporate discounts. Blank.

12 - Detail Record Two

Detail Record Two contains traveler and agent information.

WTP Field Name	Length	Description
Record Type	2 Char	12.

Copyright © 2016, 2025, Oracle and/or its affiliates.

WTP Field Name	Length	Description
Travel Agency Type	2 Char	IA=IATA, ARC, or TIDS member. Use IA only if you provide a valid IATA, ARC, or TIDS number in the Travel Agency field below. Otherwise use CA. CA=Client Assigned (number created by group or location). PROFILE 1W.IATA CORP NO is null then CA otherwise IA.
Travel Agency ID	20 Char	If Travel Agency Type=IA the agency's 7 or 8-digit IATA, ARC or TIDS number. Invalid IATA, ARC, or TIDS numbers will reject the transaction. If you do not have a valid IATA, ARC or TIDS number, provide a client-assigned (CA) number. The CA number must take the form CAHnnnnnnXXXXXXXXXXX. Where CA is a constant, Hnnnnnn is the location ID and XXXXXXXXXXX is a 1-11 character CA identification. Use from 1 to 11 characters for the CA identification, starting from left to right, and leave any unused positions blank.
Traveler's Last Name	30 Char	Name of the traveler.
Traveler's First Name	20 Char	First name of the traveler. If unknown, Blank.
Reason Codes	6 Char	Blank.

13 - Detail Record Three

Detail Record Three contains the commissionable revenue, the cancellation number (if applicable), and optionally the WTP inquiry response.

WTP Field Name	Length	Description
Record Type	2 Char	13.
Cancellation Number	12 Char	Blank.
Commissionable Revenue	15 Digit	Total revenue used to calculate the transaction's commission amount. The amount must be greater than or equal to zero.
Inquiry Request Number	12 Char	Blank.
Filler	1 Char	Blank.
Resolution Code	2 Char	Blank.
Resolution Date	6 Char	Blank.
Travel Agency Contact	30 Char	Blank.

Copyright © 2016, 2025, Oracle and/or its affiliates.

15 - Agency Record One

Agency Record One identifies the travel agency and contains the first address line. Use Agency Records Two and Three to complete the mailing address. The mailing address must be both complete and deliverable. An incomplete mailing address causes the transaction to be rejected.

WTP Field Name	Length	Description
Record Type	2 Char	15.
Travel Agency's Name	30 Char	Full travel agency's name to which the commission is to be paid.
Travel Agency's first address line.	30 Char	Travel agency's street address or postal box.
Filler	18 Char	Blank.

16 - Agency Record Two

Use Agency Record Two to continue the travel agency's address begun in Agency Record One.

WTP Field Name	Length	Description
Record Type	2 Char	16.
Travel Agency's second address line	30 Char	Travel agency's second address line, street address, or postal box, if applicable; otherwise Blank.
Travel Agency's City	25 Char	Travel agency's city.
Filler	23 Char	Blank.

17 - Agency Record Three

se Agency Record Three to complete the travel agency's mailing address, begun in Agency Records One and Two.

WTP Field Name	Length	Description
Record Type	2 Char	17.
Travel Agency's State or Province	25 Char	*Required for countries that have states or provinces, such as U.S. and Canada; otherwise Blank.
Travel Agency's Country	20 Char	Travel Agency's country.
Travel Agency's Postal Code	11 Char	*Required for countries using a postal code, such as U.S., U.K., and Canada, otherwise Blank.
Filler	22 Char	Blank.

35 - Tax Record (Optional)

Copyright © 2016, 2025, Oracle and/or its affiliates.

The Tax record contains detail information about taxes reported, withheld, or paid for a given commission record. If multiple taxing authorities affect the transaction, you must provide a tax record for each applicable tax. For example, Canadian GST and Quebec PST.

WTP Field Name	Length	Description
Record Type	2 Char	35.
Country Code of Taxing Authority	2 Char	Country code of taxing authority. Choose the appropriate two-character ISO country code.
Filler	2 Char	Blank.
Tax Type Code	2 Char	Identifies the type of tax reported. Choose the appropriate tax type code.
Reporting Period Ending Date	6 Char	Blank.
Tax Reporting Period Cycle	1 Char	Blank.
Gross Commission Amount	15 Digit	Net Commission amount from which the tax is calculated.
Tax Amount	15 Digit	Tax amount included in the payment to the travel agency or withheld and paid to the taxing authority. Do not enter a minus sign for taxes withheld.
Reported Commission Amount	15 Digit	Commission amount after tax is applied to Gross Commission. Transactions are rejected unless (Reported Commission Amount)=(Gross Commission) +/- (Tax Amount).
Tax Percentage	6 Digit	Tax percentage, assuming four decimal positions. For example, 6.25% would be entered as 062500.
Travel Agency Tax ID	15 Char	Blank.
Reported Flag	1 Char	Blank.

19 - Batch Trailer

The Batch Trailer record contains summary information about the commission transactions within the batch.

WTP Field Name	Length	Description
Record Type	2 Char	19.
Filler	7 Char	Blank.
Transaction Count	5 Digit	Batch commission transaction count. (The number of Detail Record One records in this batch.)
Filler	5 Char	Blank.

Copyright © 2016, 2025, Oracle and/or its affiliates.

WTP Field Name	Length	Description
Total Commissions	15 Digit	The hash total of all commissions payments due for this batch. (The absolute sum of the Commission Amount fields in all Detail Record One records in this batch regardless of their transaction codes.) If commission overpaid transactions are in the batch, the Total Commissions might not equal the actual commissions paid.
Filler	46 Char	Blank.

99 - File Trailer

The File Trailer record contains summary information about the commission transactions in this file.

WTP Field Name	Length	Description
Record Type	2 Char	99.
Filler	7 Char	Blank.
Transaction Count	5 Digit	Total number of commission transactions for this file. (The sum of the Transaction Count fields in all Batch Trailer records in this file.)
Filler	5 Char	Blank.
Total Commissions	15 Digit	A hash total of all commissions payments due for this file, regardless of reporting currency. (The absolute sum of the Total Commissions fields in all Batch Trailer records in this file.) The Total Commissions might not equal the actual commissions paid.
Filler	46 Char	Blank.

Comp Accounting

Gaming

Prerequisites for Comp Accounting

The Oracle Hospitality OPERA Cloud Service, Casino and Gaming Management Add-on enables you to set up complimentary goods and services, referred to as "comps" or comp transactions, and offer them to guests during their stay. You set up comp accounting by adding

Copyright © 2016, 2025, Oracle and/or its affiliates.

routing instructions to the reservation to transfer selected transaction codes to one of eight special "Comp" billing windows (#101 to #108).

You can specify the sales charges to be comped (including how related taxes should be handled) and nominate staff members (called authorizers) to approve comp requests and the monetary value of the comps they authorize (per-day and per-stay). Authorizers review and evaluate requests for comps submitted by other staff members, who themselves may not be authorizers.

When integrated with a Player Tracking System (PTS), approved comps can be automatically transferred to the AR account associated with an authorizer. If no AR account is associated to an authorizer, the front desk agent / cashier selects an alternate payment method to settle the comp charges. If AR accounts are used, comp charges are managed through the Accounts Receivable module.

Comp Authorizers and Authorizer Groups

Gaming

When the **Comp Request** OPERA Control is active, authorizers can approve comp charge routing requests (that is, set up comp routing instructions for a comp routing request) or decline a comp routing request.

When you set up a user as an authorizer, you specify the transaction codes and routing codes that the authorizer can comp, specifying the per-day ceiling value or credit limit for transaction codes and/or routing codes, and specify the per-instance ceiling value for comped transactions.

Authorizers can be grouped together into Authorizer Groups so that new authorizers inherit the rate code, transaction codes, and monetary limits assigned to the group.

When an authorizer is assigned to an authorizer group, any subsequent changes to the authorizer group rate code, transaction codes, and/or monetary limits are inherited by the authorizers assigned to that group. In addition, when authorizer group changes are saved, any rate code, transaction codes, and/or monetary limits set individually for the authorizer are replaced by the authorizer group values.

Generic Authorizers

When the **Generic Authorizers** OPERA Control is active you can create generic authorizers as below:

- A generic authorizer can be created without selecting a user.
- A generic authorizer can be created by selecting more than one user.
- The same user can be assigned to multiple generic authorizers.

You specify the transaction codes and routing codes that the generic authorizer can comp. Also, specify the per-day ceiling value or credit limit for transaction codes and/or routing codes, and specify the per-instance ceiling value for comped transactions.

Daily Credit Limit and Transfer Limit

You can define a **Daily Credit Limit** and **Transfer Limit** for the comp routing and transaction codes associated with an Authorizer Group.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- The Daily Credit Limit is the credit limit which the authorizer group cannot exceed while settling the comp windows.
- The Transfer Limit is the limit which the authorizer group cannot exceed while routing or transferring charges from cash windows to comp windows.

The following guidelines apply:

- Any Authorizer assigned to the Authorizer Group inherits the same Transaction /Routing Codes, Daily Credit Limit, Transfer Limit, and Rate Code associated with the group. This takes precedence over the Transaction /Routing Codes, credit limit, limit values, and rate code defined on the specific authorizer itself.
- When you route a posting or move one to a comp window, the Daily Credit Limit / Transfer Limit values will validate the transaction. If the limit is exceeded, the transaction will not be comped.
- When creating a comp routing instruction, if the authorizer has a Transfer Limit value defined for the Transaction /Routing Codes, the lowest limit value among the selected codes is pre-populated in the Routing limits. This takes precedence over the limits defined in the Comp Routing Codes.

Authorizer Sign In Screen

When transferring comp transactions or approving routing requests by staff members, the Authorizer Sign In screen appears and users who are authorizers must enter their Authorizer ID to proceed. When the **Authorizer PIN Required** OPERA Control is active, authorizers must also enter their PIN.

The **Membership Number** and **Membership Name** from the reservation appears on the Authorizer Sign In screen when the reservation membership type matches the **Default PTS Membership Type** OPERA Control. If the membership information does not appear or if you want to change the attached membership, you can click the Profile Search link to open the Profile Search screen and search for a profile.

Configuring Comp Authorizers

Adding Comp Authorizers

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Authorizers**.
2. Click **New** and complete the following fields:
   a. **Property**: Select or confirm the property.
   b. **Authorizer ID**: Authorizer ID pre-populated with next sequence number.
   c. **Authorizer Name**: Provide an authorizer name. (Available when the **Generic Authorizers** OPERA Control is active).
   d. **External User ID**: Provide an External User ID. (Available when the **Generic Authorizers** OPERA Control is active).
   e. **User ID**: Select a **User ID** from the list of values. (Non-mandatory when the **Generic Authorizers** OPERA Control is active).
   f. **AR Account Number**: This field automatically populates when a **User ID** is selected. This is the user's AR account number.
   g. **Authorizer Group**: Select an **Authorizer Group** for the authorizer.

Copyright © 2016, 2025, Oracle and/or its affiliates.

h. **Rate Code**: This field automatically populates once an **Authorizer Group** is selected. This is the rate code assigned to the authorizer group.

3. Click **Save**.

Editing Comp Authorizers

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Authorizers**.
2. Select or confirm the **Property**.
3. Enter search criteria and click **Search**.
4. Select the authorizer, click the vertical ellipsis **Actions** menu, then select **Edit**.
5. Update the configuration.
6. Click **Save**.

Deleting Comp Authorizers

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Authorizers**.
2. Select or confirm the **Property**.
3. Enter search criteria and click **Search**.
4. Select the authorizer, click the vertical ellipsis **Actions** menu, then select **Delete**
5. Click **Delete** to confirm.

Configuring Comp Authorizer Groups

Adding Comp Authorizer Groups

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Authorizer Groups**.
2. Click **New** and complete the following fields:
   a. **Property**: Select or confirm the property.
   b. **Code**: Enter a code that identifies the authorizer group.
   c. **Description**: Enter a description of the authorizer group.
   d. **Rate Code**: Select a rate code to assign to this authorizer group. When a comp routing instruction is set up using a comp routing code (with **Inherit Rate Code** selected) and the authorizer has a rate code selected, this authorizer group rate code will be applied to the reservation and not the one selected.
3. Click **New** to associate comp routing codes and transaction codes to the authorizer group. The Manage Comp Routing Instructions screen appears.
   a. Enter the comp routing or transaction code in **Search** filter and click **Search**. You can also select **Comp Routing Codes** and/or **Transaction Codes** to filter on one of these types of codes.
   b. Highlight the comp routing or transaction codes in the **Available** pane that you want to include in this authorizer group (hold down the Ctrl key to select multiple codes).
   c. Click the **directional arrow** button to move the selected codes to the **Selected** pane.

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Daily Credit Limit**: Enter the daily credit limit for the comp routing or transaction codes. This is the credit limit which the authorizer group cannot exceed while settling the comp windows.

e. **Transfer Limit**: Enter the per-instance transfer limit for the comp routing or transaction codes. This is the limit which the authorizer group cannot exceed while routing or transferring charges from cash windows to comp windows.

4. Click **Save** to save the comp routing instruction configuration and exit the screen.
5. Click **Save** to save the authorizer group.

Editing Comp Authorizer Groups

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Authorizer Groups**.
2. Select or confirm the **Property**.
3. Enter search criteria and click **Search**.
4. Select the comp authorizer group, click the vertical ellipsis **Actions** menu, then select **Edit**.
5. Update the configuration.
6. Click **Save**.

Deleting Comp Authorizer Groups

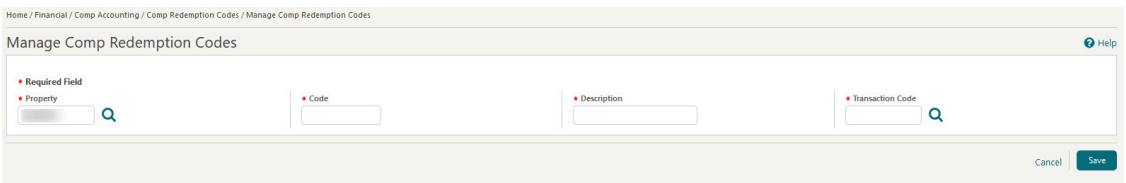
1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Authorizer Groups**.
2. Select or confirm the **Property**.
3. Enter search criteria and click **Search**.
4. Select the comp authorizer group, click the vertical ellipsis **Actions** menu, then select **Delete**.
5. Click **Delete** to confirm.

Comp Redemption Codes

Gaming

Comp Redemption enables you to configure comp redemption codes that are used to redeem comps earned by guests, who have a casino player membership, to pay for their billing charges.

Figure 13-1 Manage Comp Redemption Codes screen



Copyright © 2016, 2025, Oracle and/or its affiliates.

Configuring Comp Redemption Codes

Prerequisites for Comp Redemption Codes

Comp Redemption enables you to configure comp redemption codes that are used to redeem comps earned by guests, who have a casino player membership, to pay for their billing charges.

Adding a Comp Redemption Code

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Redemption Codes**.
2. Click **New** and complete the following fields:
    a. **Property**: Enter or select a **Property**. This value defaults to current property you are logged into.
    b. **Code**: Enter a code to identify the redemption. A maximum of 8 alphanumeric characters is allowed.
    c. **Description**: Enter a description for the redemption code. A maximum of 2000 characters is allowed.
    d. **Transaction Code**: Select a **Transaction Code**. Only payment transaction codes are available for selection based on the following conditions:
        - Transaction codes marked as Others.
        - Transaction codes marked as Cashier Payment 1-8.
        - Transaction codes not configured to be used on a reservation (that is, the **Reservation** check box on the Payment Type screen is deselected).
3. Click **Save**.

Editing a Comp Redemption Code

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Redemption Codes**.
2. Select or confirm the **Property**.
3. Enter search criteria and click **Search**.
4. Select the redemption code, click the vertical ellipsis **Actions** menu, then select **Edit**.
5. Update the configuration.
6. Click **Save**.

Deleting a Comp Redemption Code

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Redemption Codes**.
2. Select or confirm the **Property**.
3. Enter search criteria and click **Search**.
4. Select the redemption code, click the vertical ellipsis **Actions** menu, then select **Delete**.
5. Click **Delete** to confirm.

Comp Routing Codes

Gaming

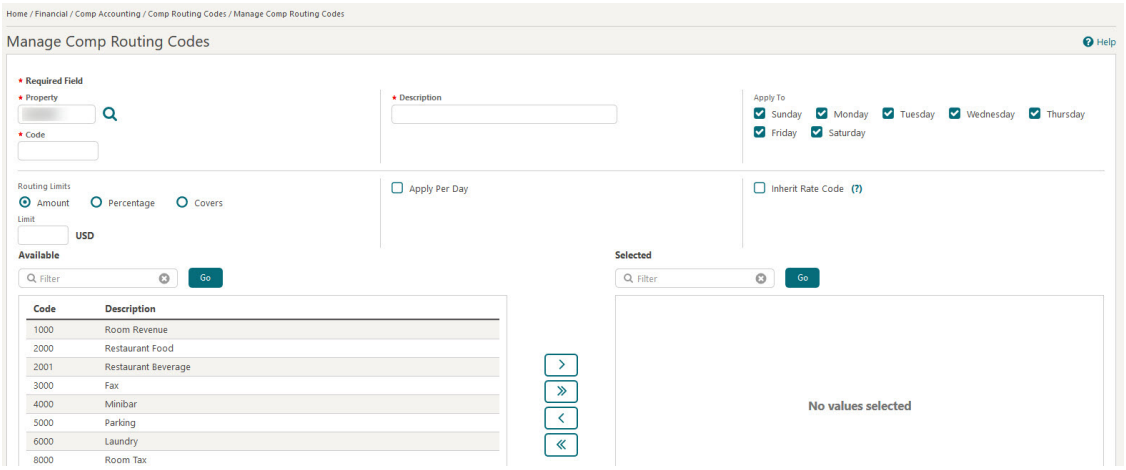
Comp Accounting enables a property to provide complimentary goods and services called comps or comp transactions to guests by routing selected transaction codes to special billing screen windows called comp windows. There are 8 comp windows available on the Billing screen (101...108).

With Comp Routing Codes, you can group comp transaction codes into meaningful units to simplify the process of setting up comp routing instructions on reservations.

Designated staff members called authorizers can set up comps by transferring or routing the selected transactions to the comp windows on a guest's Billing screen. Upon guest check out, comp transactions posted to any of the comp windows and approved by the Patron Tracking system (PTS) can automatically be transferred to special AR accounts, which are attached to the profiles of the authorizers. Thereafter, the AR accounts are handled using OPERA Cloud AR features according to the procedures the property has established.

> **Note**
>
> The PTS has final approval of all comp transactions that have been routed or transferred to a comp window. If the PTS does not approve the comp transaction, it is considered to be staged.

Figure 13-2 Manage Comp Routing Codes screen



Configuring Comp Routing Codes

Prerequisites for Comp Routing Codes

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Configure a *** Code** to route all comp charges, disabling the ability to select specific transaction codes.

Adding Comp Routing Codes

Comp Routing codes can be a maximum of 10 characters.

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Routing Codes**.
2. Click **New** and complete the following fields:
   a. **Property**: Enter or confirm the property.
   b. **Description**: Enter a description of what this code includes (for example, Room Charges, Banquet, Food & Beverage, Golf Charges).
   c. **Code**: Enter a code for the routing instruction (for example, FBA, RMZ, GOLF).
   d. **Apply To**: Select the days of the week to which this comp routing code applies.
   e. **Routing Limits**: Select one of the following for the default routing limits:
      - **Amount**: Select to specify a maximum amount for this routing instruction. The limit accepts the total amount you can route for any one reservation using this routing instruction. No limit is set if you leave the Limit field blank.
      - **Percentage**: Select to specify this routing instruction to route a percentage of the transactions associated with it. For example, enter 10 in this field to route 10% of each transaction. Generates such as taxes and service charges are also split by the designated percentage.
      - **Covers**: Select to specify a default number of covers to auto-populate in the **Covers** field on the Routing Instructions screen when this routing code is selected. Covers indicate the number of charges or transaction codes the routing code covers.
   f. **Apply Per Day**: Select to generate a separate comp routing instruction for each day of the stay. This may be useful, for example, when you want the routing limit to apply to each day of the stay rather than to the entire stay or to a range of dates.
   g. **Inherit Rate Code** (optional): Select to inherit the rate code from the comp authorizer group and have this rate code applied to the reservation. When a comp routing instruction is set up using a comp routing code with **Inherit Rate Code** selected, the rate code defined in the authorizer group will be applied to the reservation.
3. Search for and select the transaction code(s) to associate with the new comp routing code (hold down the **Ctrl** key to select multiple transaction codes).
4. Click the **Directional Arrow** button to move the codes to the selected list.
5. Click **Save**.

Editing Comp Routing Codes

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Routing Codes**.
2. Enter search criteria and click **Search**.
3. Select the comp routing code in the search result, then click the vertical ellipsis **Actions** menu, then select **Edit**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Update the configuration.
5. Click **Save**.

Deleting Comp Routing Codes

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Routing Codes**.
2. Enter search criteria and click **Search**.
3. Select the comp routing code in the search result, then click the vertical ellipsis **Actions** menu, then select **Delete**.
4. Select **Delete** to confirm.

Copying Comp Routing Codes

When the **Multi Property** OPERA Control is active, you can copy comp routing codes to other properties from a hub location.

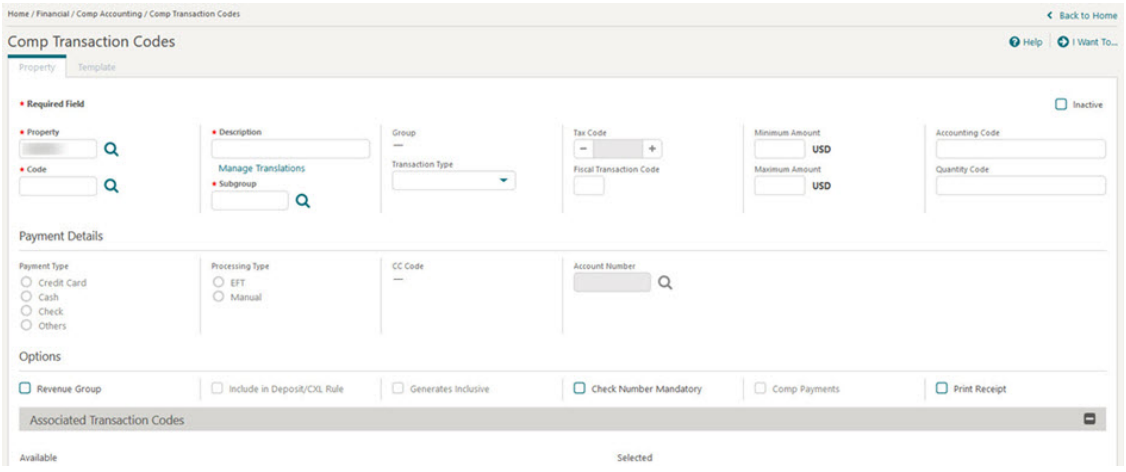
To copy comp routing codes to another property, the transaction codes included in the comp routing code must exist at the target property and have the mapping comp transaction code. For more information, see Copying Configuration Codes to Multiple Properties.

Comp Transaction Codes

Gaming

Every comp transaction that appears on a folio or an AR invoice must have a comp transaction code.

Figure 13-3 Manage Comp Transaction Codes screen



Copyright © 2016, 2025, Oracle and/or its affiliates.

Configuring Comp Transaction Codes

Adding Comp Transaction Codes

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Transaction Codes**.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new comp transaction codes are created by selecting the **Template** tab. Once created, you can copy a comp transaction code to specific properties using the **Copy** action.. See Copying Configuration Codes to Multiple Properties for more information.

2. Click **New** and complete the following fields:
   a. **Property**: Enter or confirm the property.
   b. **Code**: Enter a numeric code to represent the new comp transaction code.
   c. **Description**: Enter a description of the comp transaction code. The description appears in Billing and outputs on folios.
   d. **Manage Translation**: (Available when the **Multi Language** function is active in the **General** group in OPERA Controls.) Select this link to add translated descriptions to print translated folios for foreign guests / companies.
   e. **Subgroup** . Select a subgroup for the transaction code. Subgroup selection determines whether the transaction code is considered sales (revenue and non-revenue), payment, or wrapper based on the transaction group linked to the subgroup.

> **Note**
>
> Transaction codes that belong to the same subgroup are grouped together for the same date on the Billing screen. When printing folios, the styles are: 1, 9, 10, 11, 14, 16, 15, or 19.

   f. **Group**: The transaction group. This field automatically populates once the subgroup is selected.
   g. **Transaction Type**: Select a transaction type. Transaction types are used to cluster similar transaction codes. This field is optional, but certain reports (Financial Transactions with Generates and Financial Transactions by Folio No.) print financial information based on the transaction code type. Available options are Lodging, Food and Beverage, Telephone, Minibar, Tax, Non-Revenue, Others, or blank.
   h. **Tax Code**: When you select a Tax transaction type, this field is enabled (1-20) to define up to 20 tax bucket values for the tax type transaction code. Use these buckets to group various tax transactions into one total on the footer of the folio and in reports. For example: all GST transaction codes would have tax code = 1.
   i. **Fiscal Transaction Code**: This tells the local fiscal application how to format charges for this transaction code when building the fiscal printer XML files.
   j. **Minimum Amount**: The minimum amount allowed under the new comp transaction code. If the minimum is not met, a warning message appears.

Copyright © 2016, 2025, Oracle and/or its affiliates.

k. **Maximum Amount**: The maximum amount allowed over the new comp transaction code. Enter amounts during a manual posting. If the maximum is exceeded, a warning message appears.

l. Accounting Code.

m. Quantity Code.

3. **Options**: In this section, complete any of the following optional fields or selections:

   a. **Revenue Group**: Select this check box if this transaction code is revenue. If deselected, the charges posted to the transaction code are treated as non-revenue.

   b. **Include in Deposit/CXL Rule**: (Available if either the **Deposit Handling** application function or the **Cancellation Handling** application function is active in the **Cashiering** group in OPERA Controls.) When selected, the transaction code is included in the calculation of deposit and/or cancellation rule fees. You can use this feature to include or exclude costs such as packages, generates, and fixed charges associated with a reservation when calculating deposit requests and cancellation penalties.

   c. **Generates Inclusive**: Select this check box if generated charges (such as taxes or service charges) are included in the base amount posted. For example, a minibar charge could be tax inclusive, so when posting a 40.00 charge (and generates are set up), the guest would see $40.00 on the folio; however, internally the tax generate would be broken out ($35.00 minibar, $5.00 tax). If unchecked, tax generates are calculated from the base amount posted, and then posted separately as itemized, exclusive charges (taxes) on the folio.

   d. **Check Number Mandatory**: Select this check box if a check number must be entered when making a posting against this transaction code.

   e. **Comp Payments** (available with the OPERA Comp Accounting Cloud Service subscription): Select if this payment type is available for settlement of comp windows 101-108. A payment type without this option selected cannot be used to settle comp windows 101-108.

   f. **Print Receipt**: Select this option to print a receipt of the transaction when this comp transaction code is used.

4. **Associated Transaction Codes**: In this section, select the transaction codes you want to associate with the comp transaction code by selecting one or more codes in the **Available** pane and clicking the arrow button to move them to the **Selected** pane. You can also filter the list of available codes by entering a code in the **Filter** field and clicking **Go**.

5. Click **Save** or click **Save and Add Generates** to configure add-on charges for the comp transaction code. Generates are automatically calculated charges, such as taxes and service charges, that are added to a guest's bill when transactions are posted using this comp transaction code.

Editing Comp Transaction Codes

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Transaction Codes**.
2. Enter search criteria and click **Search**.
3. Select the comp transaction code in the search result, then click the vertical ellipsis **Actions** menu, then select **Edit**.
4. Update the configuration.
5. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Comp Transaction Codes

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and then select **Comp Transaction Codes**.
2. Enter search criteria and click **Search**.
3. Select the comp transaction code in the search result, then click the vertical ellipsis **Actions** menu, then select **Delete**.
4. Select **Delete** to confirm.

Comp Types

Gaming

Prerequisites for Comp Types

Comp Types enable you to configure codes for ranking guests based on your business requirements. For example, you might use this feature to identify guest loyalty members according to their gaming needs or expertise. You can also associate Comp Types to comp windows for specific reservations via the Reservation Routing Instructions screen.

Figure 13-4 Comp Types screen

Configuring Comp Types

Prerequisites for Comp Types

Adding Comp Types

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and select **Comp Types**.
2. Click **New** and complete the following fields:
   a. **Property**: Enter or select a Property.
   b. **Code**: Enter a code to identify the Comp Type.
   c. **Description**: Enter a description for the Comp Type.
   d. **Sequence**: Enter a number that controls the position of this code in listings. Codes without a sequence number assigned are listed in alphabetical order following codes with a sequence assigned.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Click **Save**.

Editing Comp Types

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and select **Comp Types**.
2. Enter search criteria and click **Search**.
3. Select the comp type, click the vertical ellipsis **Actions** menu and then select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Comp Types

1. From the **Administration** menu, select **Financial**, select **Comp Accounting**, and select **Comp Types**.
2. Enter search criteria and click **Search**.
3. Select the comp type, click the vertical ellipsis **Actions** menu and then select **Delete**.
4. Click **Delete** to confirm.

Comp Revenue Buckets

Gaming

With the Oracle Hospitality OPERA Cloud Service Casino and Gaming Management subscription, you can configure comp revenue buckets that contain the comp revenue statistics for a guest's comp transactions. You can also associate one or more comp transaction codes to a comp revenue bucket and set up comp revenue buckets for each property as well as copy them to other properties.

To access the **Comp Revenue Buckets** feature, select the **Administration** menu, select **Financial**, select **Transaction Management**, and then select **Revenue Bucket Codes**.

Configuring Comp Revenue Buckets

The Revenue Bucket Codes screen enables you to search for, create, edit, and delete revenue bucket codes of the Comp bucket type.

Adding Comp Revenue Bucket Codes

1. Select the **Administration** menu, select **Financial**, select **Transaction Management**, and then select **Revenue Bucket Codes**.
2. Click **New** and complete the following fields:
   a. **Property**: Select or confirm the property.
   b. **Bucket Type**: Select the **COMP** bucket type for the comp revenue bucket code.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> Comp transaction codes and standard transaction codes must be included in a Billing revenue bucket type for the charges to these transaction codes to appear on the Billing Summary screen.

c. **Code**: Enter a code that identifies the comp revenue bucket.

d. **Description**: Enter the description of the comp revenue bucket code.

e. **Bucket Value**: Enter an optional value for the comp revenue bucket code.

3. In the **Transaction Codes** panel, select the comp transaction codes you want to include in this comp revenue bucket:

   a. Enter the comp transaction code in **Available** filter or select codes from the list and click **Go**.

   b. Highlight the comp transaction codes in the **Available** pane that you want to include in this comp revenue bucket.

   c. Click the arrow button to move the selected transaction codes to the **Selected** pane.

4. Click **Save** to save and exit or click **Save and Continue** to save this Comp Revenue Bucket code and add another one.

Editing Comp Revenue Bucket Codes

1. Select the **Administration** menu, select **Financial**, select **Transaction Management**, and then select **Revenue Bucket Codes**.
2. Select or confirm the **Property**.
3. Enter search criteria and click **Search**.
4. Select the comp revenue bucket code, click the vertical ellipsis **Actions** menu, then select **Edit**.
5. Update the configuration.
6. Click **Save**.

Deleting Comp Revenue Bucket Codes

1. Select the **Administration** menu, select **Financial**, select **Transaction Management**, and then select **Revenue Bucket Codes**.
2. Select or confirm the **Property**.
3. Enter search criteria and click **Search**.
4. Select the comp revenue bucket code, click the vertical ellipsis **Actions** menu, then select **Delete**.
5. Click **Delete** to confirm.

Editing Comp Revenue Bucket Types

Since it is an OPERA Cloud System Inserted Data (SID) value, you can only edit the description for the Comp Revenue Bucket Type. Therefore, you cannot delete it and you can only update the description.

1. Select the **Administration** menu, select **Financial**, select **Transaction Management**, and then select **Revenue Bucket Types**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

2. Select or confirm the **Property**.
3. Enter search criteria and click **Search**.
4. Select the comp revenue bucket type, click the vertical ellipsis **Actions** menu, then select **Edit**.
5. Update the **Description**.
6. Click **Save**.

Configuring Fiscal Management

Prerequisites for Oracle Fiscal Integration Solution (OFIS)

Fiscal Management helps properties control and get notifications of fiscal services, view invoices and fiscal BE (business event) status, and deal with the fiscal scenarios that arise from within different countries. For countries using electronic invoices, fiscal management enables integration with partners that specialize in e-invoicing and fiscal data management. This allows your partners to access the transactional information they require for fiscal data on a country-by-country basis.

Configuring Fiscal Commands

Multiple Fiscal Commands exist, and each one contains a specific instruction for a Fiscal Partner from fiscal communication. Each Fiscal Partner has a corresponding set of Fiscal Commands that are supported for that Fiscal Partner. When you configure a Fiscal Partner in the property, those Fiscal Commands automatically populate in the Fiscal Commands configuration screen.
The Fiscal Commands configuration is available when **Fiscal Service Terminals** OPERA Control is active, is on. The Fiscal Commands available are limited to those used by the Fiscal Partner(s) configured in the property. If multiple Fiscal Partners are configured, and they use the same Fiscal Command, then one Fiscal Command record appears for each Fiscal Partner. You can inactivate a Fiscal Command if you do not want it used for the Fiscal Partner.

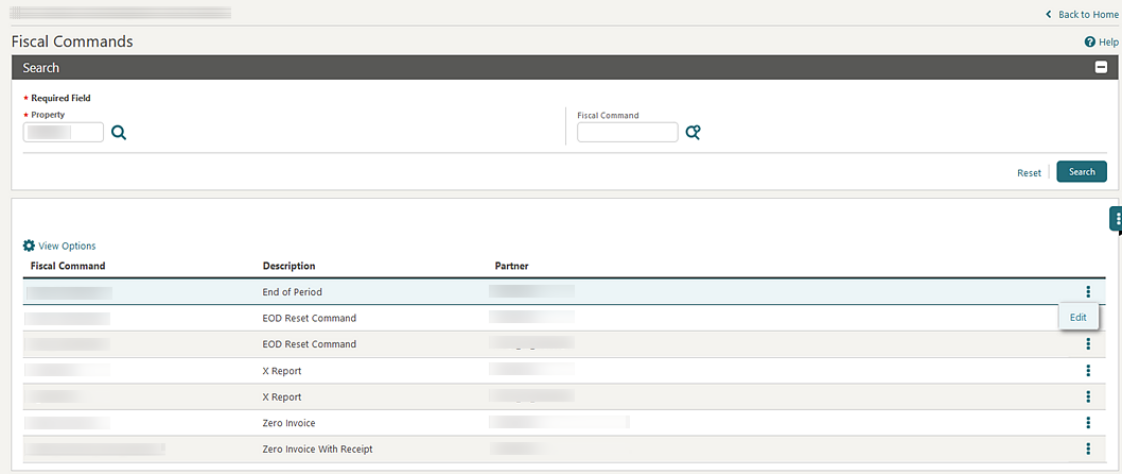
> **Note**
>
> You can select Fiscal Commands for a specific Partner and send it to a corresponding Fiscal Terminal based on this configuration.

Editing Fiscal Commands

To view inactive codes, click the vertical ellipsis **Actions** menu and select **Show Inactive**.

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, then select **Fiscal Commands**.
2. Enter search criteria and click **Search**.
3. Select the fiscal command, click the vertical ellipsis **Actions** menu, and select **Edit**.
   a. Update the details.
   b. Select the **Inactive** check box to inactivate the command.
   c. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.



Configuring Fiscal Folio Bucket Codes

Adding Fiscal Folio Bucket Codes

Fiscal Folio Bucket Codes can be configured to segregate revenue and/or payment transaction codes into organized groups for reporting purposes through the fiscal service.

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Folio Bucket Codes**.
2. Click **New** and complete the following:
    a. **Property**: Enter or select the property.
    b. **Bucket Type**: Select a bucket type from the list.
    c. **Code**: Enter a code for the bucket.
    d. **Description**: Enter a description for the bucket.
    e. **Bucket Value**: Enter a bucket value.
    f. **Transaction Codes**: Select the transaction codes to include in the fiscal folio bucket:
        i. From the **Available panel**, search and select the transaction codes (hold down the **Ctrl key** to select multiple transaction codes). You can filter the Available list or the selected list of transaction codes by entering a transaction code and clicking **Go**.
        ii. Click **>** to move the selected codes to the **Selected** panel.
    g. Click **Save** or click **Save and Continue** to add another.

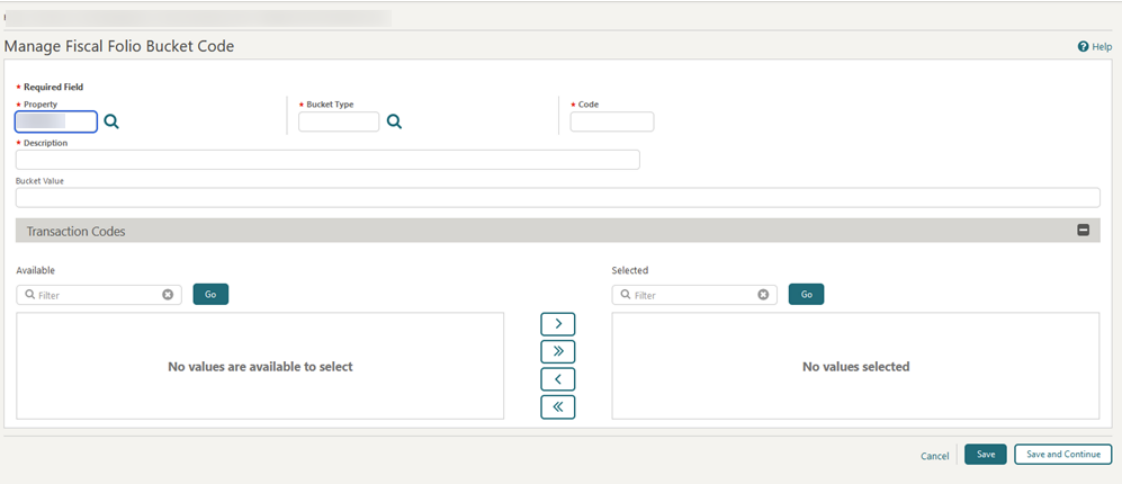
Editing Fiscal Folio Bucket Codes

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Folio Bucket Codes**.
2. Enter the search criteria and click **Search**.
3. Select the fiscal folio bucket code, click the vertical ellipsis **Actions** menu, and select **Edit**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Fiscal Folio Bucket Codes

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Folio Bucket Codes**.
2. Enter the search criteria and click **Search**.
3. Select the fiscal folio bucket code, click the vertical ellipsis **Actions** menu, and then select **Delete**.
4. Click **Delete** to confirm.



Configuring Fiscal Folio Bucket Types

When the **Fiscal Service Terminals** OPERA Control is active, you can configure fiscal terminals to designate one or more fiscal printers and/or endpoints (Address and Port) to which the fiscal service should transmit and include in the fiscal communication with Fiscal Partners. When multiple Fiscal Terminals are configured, you are prompted to select a Fiscal Terminal when performing any action (generating a fiscal folio) that communicates with a Fiscal Partner. If multiple Fiscal Terminals are configured for a Fiscal Partner, and one of the Fiscal Terminals is marked as Primary, then OPERA Cloud does not prompt you to make a Fiscal Terminal selection; the Primary Fiscal Terminal is always used.

Adding Fiscal Folio Bucket Types

Each Fiscal Folio Bucket Type represents a collection of multiple Fiscal Folio Bucket Codes where revenue and/or payment Transaction Codes can be segregated into organized groups for reporting purposes through the fiscal service.

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Folio Bucket Types**.
2. Click **New** and complete the following:
   a. **Property**: Enter or select the property.
   b. **Code**: Enter a code for the bucket type.
   c. **Description**: Enter a description for the bucket type.

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Allow Recurring Transaction Codes**: Select the check box to allow reoccurring transaction codes.

e. Click **Save** or click **Save and Continue** to add another.

Editing Fiscal Folio Bucket Types

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Folio Bucket Types**.
2. Enter the search criteria and click **Search**.
3. Select the fiscal folio bucket type, click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Fiscal Folio Bucket Types

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Folio Bucket Types**.
2. Enter the search criteria and click **Search**.
3. Select the fiscal folio bucket type, click the vertical ellipsis **Actions** menu and then select **Delete**.
4. Click **Delete** to confirm.

Configuring Fiscal Folio Parameters

Fiscal Folio Parameters are individual settings that must be configured for fiscal communication to be successful with a Fiscal Partner. Each Fiscal Partner has a corresponding template of specific Fiscal Folio Parameters that are used for fiscal communication. When you create a Fiscal Partner, the corresponding Fiscal Folio Parameters auto-populate on the Fiscal Folio Parameters screen. The configuration of these Fiscal Folio Parameters is required for successful fiscal communication with the Fiscal Partner.

In multi-property operations, you can copy fiscal folio parameters to other properties. See Copying Configurations to Multiple Properties.

Adding Fiscal Folio Parameters

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Folio Parameters**.
2. Click **New** and complete the following:
   a. **Property**: Enter or select the property.
   b. **Partner**: Select a fiscal partner from the list.
   c. **Code**: Enter a code for the parameter.
   d. **Value**: Enter a value for the parameter.
   e. **Description**: Enter a description for the parameter.
   f. Click **Save**.

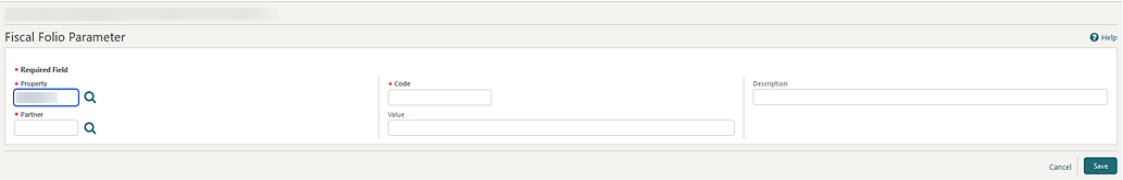
Copyright © 2016, 2025, Oracle and/or its affiliates.

Editing Fiscal Folio Parameters

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Folio Parameters**.
2. Enter search criteria and click **Search**.
3. Select the fiscal folio parameter, click the vertical ellipsis **Actions** menu, and then select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Fiscal Folio Parameters

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Folio Parameters**.
2. Enter search criteria and click **Search**.
3. Select the fiscal folio parameter, click the vertical ellipsis **Actions** menu, and select **Delete**.
4. Click **Delete** to confirm.



Configuring Fiscal Partners

Select the fiscal partner(s) for which the universal payload should be generated. A maximum of three fiscal partners can be configured, each with a priority.

Adding Fiscal Partners

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Partners**.
2. Click **New** and complete the following:
   a. **Property**: Enter or select the property.
   b. **Partner**: Select a fiscal partner from the list.
   c. **Priority**: Enter or select a priority for the partner.
   d. **Fiscal Folio Payment Methods**: Select one or more payment methods from the list.
      - When the field is blank, and you generate a fiscal folio, the universal payload generates regardless of which Payment Methods were posted to the window.
      - When the field is populated, and you generate a fiscal folio, the universal payload generates only when one of the configured Payment Methods was posted to the window.
   e. **Electronic / Fiscal Folio Profile Handling**: Select a value from the list.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- A – When you generate a fiscal folio, the universal payload generates regardless of payee profile configuration.
- N – When you generate a fiscal folio, the universal payload generates based on the configuration of the Electronic/Fiscal Folio value on the payee profile.
  - If Electronic/Fiscal Folio is blank on the payee profile, then the universal payload does not generate.
  - If Electronic/Fiscal Folio is set to No on the payee profile, then the universal payload does not generate.
  - If Electronic/Fiscal Folio is set to Yes on the payee profile, then the universal payload generates.
- Y – When you generate a fiscal folio, the universal payload generates based on the configuration of the Electronic/Fiscal Folio value on the payee profile.
  - If Electronic/Fiscal Folio is blank on the payee profile, then the universal payload generates.
  - If Electronic/Fiscal Folio is set to No on the payee profile, then the universal payload does not generate.
  - If Electronic/Fiscal Folio is set to Yes on the payee profile, then the universal payload generates.

f. **Fiscal Payloads**: Select fiscal payloads from the list.

   i. **Check Out**: At Check Out only, all transactions from all folio windows are consolidated into a single payload. Do not select this option when each folio is required to generate a separate payload.

   ii. **Folio Generation**: Each time a folio is generated with a Bill Number, the transactions from the folio window are included in the payload. Select this when each folio is required to generate a separate payload.

   iii. **Post Payment**: When selected, the universal payload generates when you perform a payment without a folio settlement. The universal payload includes the payment transaction.

> **Note**
>
> When a Fiscal Partner is configured with Post Payment, the field for Fiscal Payment Methods is available.

g. **Fiscal Payment Methods**: Select one or more payment methods from the list.

- When the field is blank, and you make a payment, the universal payload generates regardless of which Payment Method was posted.
- When the field is populated, and you make a payment, the universal payload generates only when one of the configured Payment Methods was posted.

h. **Send Folio after Fiscal Payload**: Select check box to allow the Fiscal Partner to create a copy of folio. The watermark displays on the recreated folio when the **Enable Watermark for Reports** OPERA Control is on.

3. Click **Save** or click **Save and Continue** to add another.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When a new Fiscal Partner is saved, the corresponding Fiscal Folio Parameters automatically populate from the template for that Fiscal Partner. These can be seen on the Fiscal Folio Parameters screen.

Editing Fiscal Partners

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Partners**.
2. Enter the search criteria and click **Search**.
3. Select the fiscal partner, click the vertical ellipsis **Actions** menu, and then select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Fiscal Partners

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Partners**.
2. Enter the search criteria, and click **Search**.
3. Select the fiscal partner, click the vertical ellipsis **Actions** menu, and then select **Delete**.
4. Click **Delete** to confirm.

> **Note**
>
> When you select to delete a Fiscal Partner, OPERA Cloud determines if any Fiscal Folio Parameters or Fiscal Service Terminals exist for the Fiscal Partner. If they exist, this message appears: “Partner xxxxxxxx cannot be deleted, because it is configured with Fiscal Folio Parameters and Fiscal Terminals records. The configured records must be deleted before the Partner.”

Configuring Fiscal Terminals

Adding Fiscal Terminals

Fiscal Terminals are available when the Cashiering parameter Fiscal Service Terminals is on. Fiscal Terminals can be configured when you need to designate one or more fiscal printers and/or endpoints (Address and Port) to which the fiscal service should transmit and include in the fiscal communication with Fiscal Partners.

> **Note**
>
> When multiple Fiscal Terminals are configured, you are prompted to select a Fiscal Terminal when performing any action (generating a fiscal folio) that communicates with a Fiscal Partner. If multiple Fiscal Terminals are configured for a Fiscal Partner, and one of the Fiscal Terminals is marked as Primary, then OPERA Cloud does not prompt you to make a Fiscal Terminal selection; the Primary Fiscal Terminal is always used.

Copyright © 2016, 2025, Oracle and/or its affiliates.

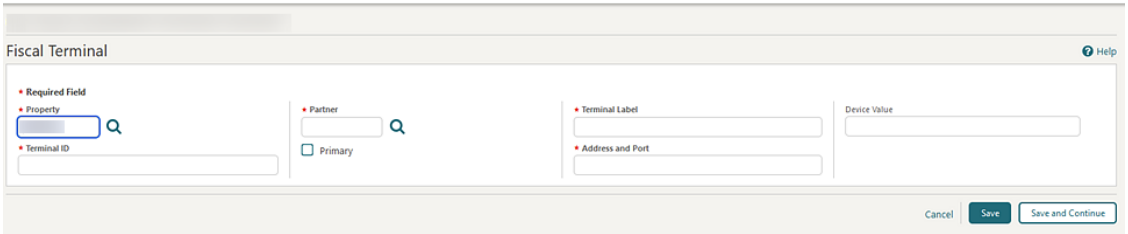
1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Terminals**.
2. Click **New** and complete the following:
    a. **Property**: Enter or select the property.
    b. **Terminal ID**: Enter a terminal identifier.
    c. **Partner**: Select a fiscal partner from the list.
    d. **Primary**: Select the check box to identify terminal as the primary terminal.
    e. **Terminal Label**: Enter a label for the terminal.
    f. **Address and Port**: Enter the URL/IP address and port of the terminal.
    g. **Device Value**: Enter a device value.
    h. Click **Save** or click **Save and Continue** to add another.

Editing Fiscal Terminals

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Terminals**.
2. Enter the search criteria and click **Search**.
3. Select the fiscal terminal, click the vertical ellipsis **Actions** menu, and then select **Edit**.
4. Update the details.
5. Click **Save**.

Deleting Fiscal Terminals

1. From the **Administration** menu, select **Financials**, select **Fiscal Management**, and then select **Fiscal Terminals**.
2. Enter **search criteria** and click **Search**.
3. Select the fiscal terminal, click the vertical ellipsis **Actions** menu, and then select **Delete**.
4. Click **Delete** to confirm.



Configuring OFIS Cloud Integrations

Prerequisites for Configuring OFIS Cloud Integrations

OPERA Fiscal Integration Solution (OFIS) Cloud enables fiscal partners or government agencies to integrate using Cloud API's.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Once OFIS Cloud configuration is complete, configure an Outbound Allowlist for the fiscal partner's **Hostname** and **Port Number**. For more information, see Configuring Outbound Domain Allow Listings

Also, ensure the **FLIP Server Address** Fiscal Folio parameter doesn't contain a value (is blank). For more information, see Configuring Fiscal Folio Parameters.

> **Note**
>
> OFIS Cloud logs are available in Oracle OCI Logging Analytics. Consult the relative Country/Fiscal Partner documentation for further details. For more information, see Oracle Hospitality OPERA Fiscal Integration.

Adding OFIS Cloud Configuration

1. From the **Administration** menu, select **Financial**, select **Fiscal Management**, then select **OFIS Cloud Configuration**.
2. Click **New** and complete the following:
    a. **Property**: Enter or select a property
    b. **Log Level**: Select a logging level from the list.
    c. Click **Add Delivery**.
        i. **Delivery**: Select a value from the list. For more information, see Configuring Fiscal Partners.
        ii. Complete the following details:
            i. **End Point URL**: Enter the web service URL provided by the fiscal partner.
            ii. **Auth Type**: Select an auth type from the list.
            iii. **Fiscal Business Events Max Retries**: Enter the number of retries (default is 3).
            iv. **Retry Interval (ms)**: Enter the retry interval in milliseconds (default is 5000).
            v. Click **Save**.
    d. Click **Save**.

Editing OFIS Cloud Configuration

1. From the **Administration** menu, select **Financial**, select **Fiscal Management**, then select **OFIS Cloud Configuration**.
2. Enter search criteria, then click **Search**.
3. Select a configuration in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
    a. Select the delivery details, then click the vertical ellipsis **Actions** menu and select **Edit**.
    b. Update the delivery details.
    c. Click **Save**.
4. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting OFIS Cloud Configuration

1. From the **Administration** menu, select **Financial**, select **Fiscal Management**, then select **OFIS Cloud Configuration**.
2. Enter search criteria, then click **Search**.
3. Select a configuration in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Copying OFIS Cloud Configuration

You can copy configuration to other properties from the hub location.

1. From the **Administration** menu, select **Financial**, select **Fiscal Management**, then select **OFIS Cloud Configuration**.
2. Enter search criteria, then click **Search**.
3. Select a configuration in the search result, then click the vertical ellipsis **Actions** menu and select **Copy**.
4. For more information, see Copying Configuration Codes to Multiple Properties.

Rate Management

Rate Management provides all the tools you need to effectively define and manage the rate structures for your hotel. Some of the things you can set up in Rate Management include rate codes, rate classes, rate categories, display sets, rate strategies, and yield management integration.

Package Codes

Prerequisites for Package Codes

Package setup involves defining package elements, which are additional products or services included in the rate or sold in addition to the rate. You can link package elements to rate codes to create predefined package rates. Or, you can add package elements directly on blocks or reservations to create ad-hoc package entitlements for reservations.

Package elements have rules that define the calculation of their price as well as the frequency of their posting; the **Item Price** for the package item is auto-posted to the reservation account during End Of Day, based on the **Frequency** specified.

When the **Item Inventory** OPERA Control is active, it is also possible to associate inventory items to a package item so that when selling the package rate or selling the package element separately through the reservation, the associate inventory items are also applied to the reservation. This is useful for associating inventory items such as extra bed and cribs to reservations and at the same time posting a charge for their supply through the package element.

When the **Advanced Package** OPERA Control is active, package elements can be configured with an **Allowance Amount** as well as **Item Price**. For package elements with an **Allowance Amount** defined, the actual sales charge is either posted manually in OPERA Cloud or posted by an integrated system a property interface such as a Point of Sale (POS) workstation or an In-room Video when consumed. With package allowances, a credit is posted to package ledger, either during check or during each night audit, and the sales charges posted to the

Copyright © 2016, 2025, Oracle and/or its affiliates.

package ledger to offset the credit. As a result the charge for the package element does not appear on the guest folio. For allowances based package elements, OPERA Cloud deducts the **Item Price** from the rate code rate amount. When multiple allowance based items are linked to a rate code the nett accommodation revenue for the reservation is the rate amount - sum (item price) for all package items included in the rate.

When the **Ability to Quote Rates in Foreign Currencies** OPERA Control is active, package element can be setup in different currencies; the **Item Price** and **Allowance Amount** are converted to your property currency using the exchange rate set for the Posting **Exchange Type** and business date of the charge. For more information, see Managing Currency Exchange Rates.

Table 13-4 Example - Package Rate Breakdown

Honeymoon	Item Price	Allowance	Calculation Rule
Rate Amount	$540		
Dinner	$45	$70	Per Adult
Breakfast	$20	$40	Per Adult
Champagne	$40	$60	Flat Amount
Nett Accommodation	$370		Based on 2 Adults

Allowance based package items also support consumption in multiple revenue centers using the setup of alternate outlets - specifying the alternate sales transaction codes permitted for the package item.

For example, a breakfast package element could be consumed in the restaurant or as a room service breakfast.

- Posted amount equal to or less than the allowance amount are posted to package ledger.
- Posted amounts exceeding the allowance amount are posted to the guest ledger account as an overage.
- Allowances not consumed or under consumed are posted to a "package profit" revenue transaction code to the package ledger, based on the item price.
- Allowance amounts exceeding the item price are automatically adjusted by a posting to "package loss" revenue transaction code to the package ledger.

Examples of allowance based package elements would be dinner or breakfast, where the sales charges for each would be post through a POS solution when the guest consumes their dinner or breakfast.

If the guest does not consume their entitlement OPERA Cloud posts the revenue to 'package profit' to balance the package ledger.

The charge for the package rate is posted to Guest Ledger using a system (non-revenue) transaction code referred to as 'Package Wrapper' - this transaction code is defined by linking a transaction code About Transaction Codes to a transaction group of type Wrapper. For package rates both the accommodation transaction code and the package wrapper transaction code must be selected on the Financials panel of the rate code About Rate Codes.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 13-5 Example - Ledger Transactions

Honeymoon	Guest Ledger	Package Ledger	Allowance	Sales Revenue	Notes
Dinner Allowance		-$90	$140		On Check-in
Champagne Allowance		-$40	$60		On check-in
Dinner		$140		$140	Posted from POS
Dinner Loss		-$50		-$50	End of Day
Champagne		$60		$60	Posted from POS
Champagne - Loss		-$20		-$20	End of Day
Honeymoon Package	$540	-$370			Package Wrapper
Accommodation		$370		$370	End of Day
Breakfast Allowance		-$40	$80		End of Day (Next Day =Y)
Breakfast - Profit		$40		$40	Breakfast not consumed On Check-out
Totals	$540	$0		$540	

Configuring Package Codes

Prerequisites for Package Codes

Adding Package Codes

1. From **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Code**.
2. Click **New** and complete the following:
   a. **Package Code Definition**
      i. See Package Code Definition.
   b. Click **Save**.
   c. **Transaction Details**
      i. See Configuring Package Code Transaction Details
   d. Click **Save**.
   e. **Posting Attributes**
      i. See Configuring Package Code Post Attributes
   f. Click **Save**.
   g. **Package Pricing**

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. See Configuring Package Code Pricing Schedule

h. Click **Save**.

3. Click **Save** or **Save and Add More Details** to go to Package Code presentation page and make further updates.

Editing Package Codes

1. From the **Administration** menu, select **Rate Management**, and then select **Package Code**.
2. Enter search criteria, click **Search**.
3. Select a package code and click the vertical ellipsis **Actions** menu, then select **Edit**.
4. Update the details.
5. Click **Save**.

Table 13-6 Package Details Links

Package Details	
Package Code Definition	Package Code Post Attributes
Package Code Pricing Schedule	Package Code Transaction Details

Deleting Package Codes

> **Note**
>
> Package codes cannot be deleted if the package is attached to a rate code; the package must first be un-associated from the rate code. Package codes cannot be deleted if the package is attached to a package group, the package must first be deselected from the package group. Package codes cannot be deleted if dependent transactional data exists; if a package code is referenced in blocks or reservations (past or future) the code cannot be deleted. Package codes attached to a canceled or no show reservation where the departure date is in the future cannot be deleted.

1. From the **Administration** menu, select **Rate Management**, and then select **Package Code**.
2. Enter search criteria, click **Search**.
3. Select a package code and click the vertical ellipsis **Actions** menu, then select **Delete**.
4. Click **Delete** to confirm.

Copying Package Codes

You can use the copy action to clone a package code within the same property, or copy package codes to other properties when the **Multi Property** OPERA Control is active.

> **Note**
>
> Change to a Hub location to copy package codes to other properties. See Changing Your Location in Multi Property Operations.

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **Administration** menu, select **Rate Management**, and then select **Package Code**.
2. Click the vertical ellipsis **Actions** menu and select **Copy**.
    a. **Source**: Select the source property.
    b. **Package Code(s)**: Select one or more package codes from the list.
    c. **Package Pricing**: Select to also copy the package pricing to the destination properties.
    d. **Target Properties**: Select one or more properties from the list.
3. Click **Save**.
    a. **Copy Package Code As**: Enter a code for new (cloned) package (same property).
    b. **Copy Description As**: Enter a description for new (cloned) package (same property).
4. Click **Copy and Continue**.
5. On the Confirmation panel, Status shows **Complete** and Status message as **Copy Template Code(s)** was successful.
6. Click **Print** to generate a report.

Configuring Package Code Definition

Editing Package Code Definition

1. From the **Administration** menu, select **Rate Management**, and then select **Package Code**.
2. Enter search criteria, click **Search**.
3. From search results, select a package code and click the **vertical ellipsis**, select **Edit**.
4. Click **Package Definition**.
5. Click **Edit**.
    a. **Property**: Enter or select the property.
    b. **Package Code**: Enter a code for the package item (maximum 20 alphanumeric characters).
    c. **Begin Sell Date**: Enter or select a begin sell date if limited availability of package.
    d. **End Sell Date**: Enter or select an end sell date if limited availability of package.
    e. **Short Description**. Enter a short description (title).
    f. **Description**: Enter a description.
    g. **Forecast Code**: Select a package forecast from the list. For more information, see Configuring Package Forecast Groups .
    h. **Package Category**: Select a Package Category from the list to associate it to your package code.
    i. **Arrangement Code**: Select a package arrangement (folio grouping) from the list.
    j. **Point (Award) Redemption** Loyalty: Select check box to indicate the package is eligible for selection in awards. (Available when the **Loyalty Package Award** OPERA Control is active). When selected, **Begin Sell Date** and **End Sell Date** are disabled for update.

Copyright © 2016, 2025, Oracle and/or its affiliates.

k. **Externally Excluded**: Select the check box to exclude the reservation package from being update-able by external systems. (Available when the **Externally Excluded Packages** OPERA Control is active).

6. Click **Save**.

Configuring Package Code Post Attributes

Editing Package Code Posting Attributes

1. From **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Codes**.
2. Enter search criteria and click **Search**.
3. Select the package code, click **vertical ellipsis** and select **Edit**.
4. Click **Posting Attributes**.
5. Click **Edit**.
   a. **Posting Type**
      i. **Included in Rate**: No separate charge appears on the guest folio or reservation. The item price is deducted from the room rate amount.
      ii. **Add To Rate - Separate Line**: If selected, the item price is posted additional to the room rate amount and printed as a separate charge on the folio.
      iii. **Add To Rate - Combined Line**: If selected, the item price is added to the rate amount and combined with the accommodation charge on the folio (increases the room rate by the item price).
   b. **Valid Start Time**: Enter the valid start time during which the allowance defined in the package element is valid. If you leave the fields blank, the allowance is valid all day
   c. **Valid End Time**: Enter the valid end time during which the allowance defined in the package element is valid. If you leave the fields blank, the allowance is valid all day
   d. **Calculation Rule**: Select a value from the list of values to indicate the calculation rule for this package. This field is used to determine how the package amount should be calculated. You have the following options:
      i. **Flat Rate (item price posted as flat rate, regardless of number of guests)**. Flat Rate is per sharer reservation; each share-with reservation will be charged the flat rate amount.
      ii. **Per Person (item price times multiplies by (number of adults plus number of children)**.
      iii. **Per Adult (item price times multiplied by the number of adults)**.
      iv. **Per Child (item price multiplied by the number of children)**: With the selection of this calculation rule and when the **Rates Defined by Buckets** or **Guest Age Categories** OPERA Controls is active, packages can be set up with different amounts per child bucket on the Package Pricing.
      v. **Per Room**: The Per Room calculation is applied to the room. If a reservation is shared, instead of applying the package per share reservation, it posts only once for the room.

Copyright © 2016, 2025, Oracle and/or its affiliates.

e. **Posting Rhythm**: Select a posting rhythm to determine the frequency of the package posting. Most posting rhythms are based off of the actual arrival date of the reservation. For more information, see Package Posting Rhythms.

f. **Formula**: Select from the list of internal functions used to calculate the item price (these functions are typically used for calculating territory or region-specific taxes). For more information, see Package Formula Functions and Oracle Hospitality Localization Center for Hotel.

g. **Sell Separate**: Select the check box to allow the package item to be selected directly in a reservation using packages panel. When selling and adding a package directly to a reservation, the rate code rate amount is displayed in Stay Details along with the adjusted room rate including the packages. If this check box is not selected, the package is only available for selection as a rate code inclusion . (Available when the **Packages Sold Separately** OPERA Control is active).

h. **Post Next Day**: Select to specify this package element allowance will be consumed the following day. For example, a breakfast allowance created during end of day, but carried forward to the following day for consumption. (Available when the **Advanced Packages** OPERA Control is active.)

i. **Forecast Next Day**: Select check box to have these package elements forecasted on the next day, irrespective if the Post Next Day check box is selected or not. Packages configured as Post Next Day only without this check box selected will not be forecasted for the next day automatically on the Package Forecast Report.

j. **Minimum Advance Booking Days**: Enter the minimum days required for advance booking of reservations arriving on this date. (Only applies when the **Sell Separate** check box is selected).

k. **Tickets**: Select to indicate that the package is a ticketing package item. (Available when **Ticket Packages** OPERA Control is active and integrated with a ticketing solution).

> **Note**
>
> When a package is set up as a Tickets Package, the Posting Rhythm can only be Post Every Night, Post Arrival Night, or Ticket Posting. A Ticket Package can be set up to Sell Separate and Add Rate Separate Line, even when the Posting Rhythm is not set to Ticket Posting. This enables the ticket package to be included in the Rate Information as part of the total cost of the stay.

l. **Catering**: Available when the **Catering Events** OPERA Control is active, this option should be checked for all PMS packages that typically are also represented by a catering event (or partially represented by a catering event), for example, a Group Breakfast that could be included in the room rate, but for which also a catering event gets created if the group takes the breakfast as a unit (such as in a catering function space).

m. **Web Bookable**: Select to make this package code available for web bookings. (Available when the **Advanced OWS Products** OPERA Control is active).

n. **Item Inventory**: (Available when the **Item Inventory** OPERA Control is active). Select the item(s) to be included in the package. Selected items will be added to the reservation and deducted from inventory.

    i. Click **New**.

        i. **Item**: Select an item from the list.

        ii. **Quantity**: Enter a quantity to assign and deduct from inventory.

Copyright © 2016, 2025, Oracle and/or its affiliates.

ii. Click **Save**.

iii. Click **vertical ellipsis** and select **Delete** to delete.

iv. Click **vertical ellipsis** and select **Edit** to edit.

6. Click **Save**.

> **Note**
>
> When configuring a Loyalty Award Package, such as Point (Award) Redemption selected in Package Code Definition, the **Posting Type** defaults to "Included in Rate" and only the **Calculation Rule, Posting Rhythm, Forecast Next Day** check box are enabled.

Configuring Package Code Pricing Schedule

Adding Package Code Pricing Schedule

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Code**.
2. Enter search criteria and click **Search**.
3. Select the package code, then click vertical ellipsis **Actions** menu and select **Edit**.
4. Click **Pricing Schedule**.
5. Click **New** and enter the following details:
   a. **Start Date**: Enter the start date for the price schedule or use the calendar tool to select dates. Date ranges for pricing records cannot overlap. By default, the package code is valid for a ten-year period starting on the date it is configured.
   b. **End Date**: Enter the end date for the price schedule or use the calendar tool to select dates. Date ranges for pricing records cannot overlap. By default, the package code is valid for a ten-year period starting on the date it is configured.
   c. **Price**: Enter the item price. This amount will be posted to the transaction code selected in Transaction Details panel.
   d. **Days**: Select the days of the week (Sunday, Monday, Tuesday, etc.) to which the package pricing are to be applied (within the defined date range).
   e. **Allowance**: If the package element is configured as an allowance, enter the amount of the allowance. This is the maximum amount which the guest can consume (example, in an outlet) and post to their reservation account. The charge is posted to the package ledger against the allowance. Any over-consumption is split and posted to the guest ledger using the **Overage** transaction code if specified. The allowance amount cannot be less than the item price.
   f. **Min Nights**: Enter a minimum number of nights for this price schedule. (See Package Pricing and Availability Attributes section).
   g. **Max Nights**: Enter a maximum number of nights for this price schedule. (See Package Pricing and Availability Attributes section).
   h. **Min Guests**: Enter a minimum number of guests for this price schedule. (See Package Pricing and Availability Attributes section).

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Max Guests**: Enter a maximum number of guests for this price schedule. (See Package Pricing and Availability Attributes section).

j. **Points**: Enter the number of points required to avail this package (Available when **Point (Award) Redemption** is selected in Package Code Definition.

6. Click **Save**.

> **Note**
>
> When configuring a Loyalty Award Package, such as, Point (Award) Redemption selected in Package Code Definition only **Start Date**, **End Date** and **Points** fields are enabled.

Editing Package Code Pricing Schedule

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Code**.
2. Enter search criteria and click **Search**.
3. Select the package code, then click vertical ellipsis **Actions** menu and select **Edit**.
4. Click **Pricing Schedule**.
5. Select the pricing schedule, then click the vertical ellipsis **Actions** menu and select **Edit**.
6. Update details.
7. Click **Save**.

Deleting Package Code Pricing Schedule

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Code**.
2. Enter search criteria and click **Search**.
3. Select the package code in the search result, then click vertical ellipsis **Actions** menu and select **Edit**.
4. Click **Pricing Schedule**.
5. Select the pricing schedule, then click the vertical ellipsis **Actions** menu and select **Delete**.
6. Click **Delete** to confirm.

Package Pricing and Availability Attributes

When the **Package Pricing and Availability Attributes** OPERA Control is active and the Redemption check box is not selected on the Package definition, Minimum and Maximum value fields can be specified for the number of Nights and Persons for each package pricing schedule.

When configuring package pricing schedules using the Package Pricing and Availability Attributes, keep in mind the following rules:

- Both the Min. and Max. fields for both the Nights and Guests must have values defined for them. Only the Min. and Max. values for either the Nights or Guests cannot be specified.
- The Min. and Max. values cannot be left blank if a value has been defined for one or more of the fields. A numeric value must be entered. All of the fields can remain blank.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- The Min/Max range for either Nights or Guests can be the same as long as the other has its range
- There must be 1 record for each date range that has no Min/Max Nights and Min/Max Persons defined and this record will serve as a default when a reservation does not qualify to receive pricing based on any of the other package details sets that are based on Min/Max Nights and Min/Max Persons for the reservation date range. OPERA Cloud will automatically create such record when configuring package pricing.
- Validation for a reservation is completed on a combination of the additional attributes.
  - The Stay Date falls between the Start Date and End Date of the package.
  - No of Nights fall between the Min/Max Nights value range.
  - No of Persons fall between the Min/Max value range.

> **Note**
>
> When package pricing is configured, each record must have at least one of the aspects, such as Date Range, Min/Max Night range and Min/Max persons range, different so that every package pricing record can be uniquely identified and there is no complete overlap. While configuring package pricing records, if OPERA Cloud identifies that the record overlap occurs based on either Date Range, Min/Max Night range or Min/Max persons range, you will be prompted if automatic adjustment should take place and if you select **Yes**, then the current record being added will be saved and existing overlapping record will be removed.

Configuring Package Code Transaction Details

Editing Package Code Transaction Details

1. From the **Administration** menu, select **Financials**, select **Rate Management**, and then select **Package Code**.
2. Enter search criteria, click **Search**.
3. Select a package code, then click the vertical ellipsis **Actions** menu then select **Edit**.
4. Click **Transaction Details**.
5. Click **Edit**.
   a. **Transaction Code**: Select a sales charge transaction code from the list; the item price will be posted to this charge code.
      i. **Tax Inclusive**: Select to indicate the item price is inclusive of taxes.
   b. **Package Allowance**: Select check box to the indicate this package is to generate an allowance rather than post the actual sales charge. (Available when the **Advanced Packages** OPERA Controls is active).
      i. **Valid Until End of Day**: Select check box to indicate this package allowance can be consumed after checkout until end of the business day. (Available when the **Package Allowance Consumption When NoPost Or Post Stay Flag** OPERA Control is active).
      ii. **Package Profit**: Select a transaction code to post any package profit (unconsumed allowances).

Copyright © 2016, 2025, Oracle and/or its affiliates.

iii. **Package Loss**: Select a transaction code to post any package loss (fully consumed allowances).

iv. **Overage**: Select a sales charge transaction code from list that will be used to post the amount that is consumed over the allowance amount of the package element (set in the Package Pricing panel). If this field is left blank, any overage is posted to the main transaction code to which the allowance was posted.

i. **Tax Inclusive**: Select check box to indicate the item price is inclusive of taxes.

v. **Alternates**: Select transaction codes that can be used as alternatives to the main package transaction code (in the Code field) for this package. For example, the package may be for restaurant breakfast food (transaction code 2000) and room service breakfast (transaction code 3000) listed as an Alternate transaction code, allowing the guest to consume the same amount for room service breakfast without penalty.

c. **Currency**: Select the currency for this package. Allowance packages and non-allowance packages set up in one currency cannot be attached to rate codes, reservations, and blocks configured in another currency. (Available when the **Ability to Quote Rates in Foreign Currencies** OPERA Control is active).

6. Click **Save**.

> **Note**
>
> When configuring a Loyalty Award Package, such as, Point (Award) Redemption selected in Package Code Definition, only **Transaction Code** and **Currency** are enabled.

Package Formula Functions

City Tax

See About City Tax Function.

Direct Bill Fee

Description

This function adds a flat fee when posting a package under the following conditions:

- The payment method for the reservation Billing Window is Direct Bill (based on the **Direct Bill Settlement** OPERA Control)

Function

```
direct_bill_fee(resv_name_id,fee_amount, UDF Name, Location,Billing Windows)
```

Parameter

Parameter	Description
in_resv_name_id	System-assigned reservation ID. Provided by the function. The default is null.
fee_amount	Fee to be posted when the direct bill payment method is selected as payment method.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Parameter	Description
UDF Name	UDF field for Y/N entry. If the value is not set, UDFC 18 defaults.
Location	RESV or PROFILE - The defined UDF is used from either reservation or profile.
Billing Windows	Select the Billing windows (1 to 8, multi-select) that must be considered before posting the Direct Bill Fee.

Example

```
direct_bill_fee(resv_name_id,20,UDFC10,'RESV',1)
```

Posts a 20 amount to Window #1 if UDFC10 is set to "Y" in Reservation.

> **Note**
>
> - If no `resv_name_id` exists, the function returns 0. Therefore, a rate query without a reservation does not include the Direct Bill Fee amount.
> - When creating a reservation the function returns a 0 until the reservation is saved and a `resv_name_id` becomes available.
> - If a package is set up as Add To Rate Combined Line and attached to a rate code or directly to a reservation, the package amount would be 0 and the reservation would therefore not include the Direct Bill Fee.
> - Refresh rates after saving reservation changes to display the correct rate.

Float Person Charge Flat

This function provides for package allowance with a Flat Amount calculation rule and a Floating Allowance per Stay posting rhythm if the number of persons is greater than 0. If the number of persons is 0, no package allowance is posted.

Function

```
float_flat_allowance_person (RESV_NAME_ID, in_price, in_allowance)
```

Parameter

Parameter	Description
RESV_NAME_ID	System-assigned reservation ID. Provided by the function.
in_price	The package price.
in_allowance	The allowance amount. If the allowance value is not entered, or if the allowance value entered is less than the price, the allowance is set equal to the price.

Example

Copyright © 2016, 2025, Oracle and/or its affiliates.

If the package formula entered is:

```
float_flat_allowance_person (RESV_NAME_ID, 10, 20)
```

and the reservation has 1 adult, the package has a 20 allowance. If the reservation has 0 adults and 0 children, no allowance is posted.

> **Note**
>
> When this UDF is entered in the **Formula** field, the **Allowance** check box is automatically selected and the **Posting Rhythm** is automatically set to Floating Allowance Per Stay. For proper functionality of this feature, the **Calculation Rule** is automatically set to Per Person even though the amount posted will be a flat amount.

PERC City Tax

This function calculates a generate amount on a room charge that has an inclusive tax component, when the inclusive component is not to be considered in the generate calculation. This function might be used, for example, where a room service tax must be calculated for a room charge that has an inclusive tax.

Function

```
perc_city_tax('RESV_NAME_ID',tax,inclusive_tax)
```

Parameter

Parameter	Description
RESV_NAME_ID	System-assigned reservation ID. Provided by the function.
tax	Tax to be applied to room charge after removing inclusive tax.
inclusive_tax	Inclusive tax included in room charge.

Example

Assume you have Room Charge transaction code 0010 that has an inclusive generate of 10% (transaction code 0195). You want to calculate a 5% Room Service Tax (transaction code 0199) as an exclusive generate on 0010.

1. Create package `RMSERVICE` with transaction code `0195`. Specify UDF formula: `perc_city_tax('RESV_NAME_ID',5,10)` and **Add Rate Separate Line** selected.
2. Create rate code ABCD with transaction code `0010` (Inclusive Tax check box selected).
3. Add package `RMSERVICE` to rate code `ABCD`. The wrapper transaction code (to which room and tax is posted) is `8002`. The Rate Detail amount = $100. The following postings appear on the folio:
   - **Room Charge** - Transaction code `8002 $100`
   - **Room Service Tax** - Transaction code `0199 $4.55`

Database details would reveal the following values underlying these postings:

Copyright © 2016, 2025, Oracle and/or its affiliates.

Trn. Code	Amount
0010	90.91
0195	9.09
0199	4.55

> **Note**
>
> When a rate code includes a package that uses the Perc City Tax formula, the Rate Info screen accessed via the Rate Query (F5) screen or from the Reservation screen will reflect the Perc City Tax calculation.

The `perc_city_tax_hamburg(resv_name_id)` UDF is used in the package configuration to calculate the city tax based on the defined purpose of the stay on the reservation. To indicate which Purpose of Stay values qualify for city tax, the description of the purpose should include '*' in the beginning of the description.

An inclusive generate must be attached to the transaction code used to configure the City Tax Package.

The UDF room rate ranges per person and the qualified city tax amounts are defined as follows and cannot be modified:

- From 0.00 to 30.00 = 1.00.
- From 30.01 to 60.00 = 3.00.
- From 60.01 to 90.00 = 5.00.
- From 90.01+, each additional 30.00 increases by increments of 2.00.

RT Extra Adult Charge

Description

This function calculates the package inclusive rate for a number of adults greater than a base number, per stated room types. Any price information provided in the Package Details is overridden by this function.

Function

```
rt_extra_adult (in_resv_name_id, X, Y, 'rmtype_1,rmtype_2,...rmtype_n')
```

Parameter

Parameter	Description
in_resv_name_id	System-assigned reservation ID. Provided by the function. The default is null.
X	Base number of adults.
Y	Amount to be added for each adult over the base number specified by X.
rmtype_1...rmtype_n	Room types to which this calculation applies. Comma separated list.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Example

Rate code LEISURE, which includes a package, is priced at $150. If the package formula entered is:

```
rt_extra_adult (in_resv_name_id, 7, 15, 'DLX,STD')
```

any adult over seven adults will add $15 to the rate query amount for the LEISURE rate on room types DLX and STD. For eight adults, the rate would be priced at $165 rather than $150.

RT Extra Adult Plus Bucket 1

Description

This function calculates the package inclusive rate for a total number of adults plus children in child bucket 1 that is greater than a base number, per stated room types. Any price information provided in the Package Details is overridden by this function. This function will automatically refresh the total rate value shown in the Reservation screen Total field when the number of adults and/or children in child bucket 1 is changed.

Function

```
rt_extra_adult_n_bucket1 (in_resv_name_id, X, Y,
'rmtype_1,rmtype_2,...rmtype_n')
```

Parameter

Parameter	Description
in_resv_name_id	System-assigned reservation ID. Provided by the function. The default is null.
X	Base number of adults plus number of children in child bucket 1.
Y	Amount to be added for each adult over the base number specified by X.
rmtype_1...rmtype_n	Room types to which this calculation applies. Comma separated list.

Example

Rate code LEISURE, which includes a package, is priced at $150. If the package formula entered is:

```
rt_extra_adult_n_bucket1(in_resv_name_id, 7, 15, 'DLX,STD')
```

Any person over seven adults plus children in child bucket 1 will add $15 to the rate query amount for the LEISURE rate on room types DLX and STD. For five adults and three children in child bucket 1, the rate would be priced at $165 rather than $150.

RT Extra Adult Plus Bucket 2

Description

This function calculates the package inclusive rate for a total number of adults plus children in child bucket 2 that is greater than a base number, per stated room types. Any price information provided in the Package Details is overridden by this function. This function will automatically

Copyright © 2016, 2025, Oracle and/or its affiliates.

refresh the total rate value shown in the Reservation screen Total field when the number of adults and/or children in child bucket 2 is changed.

Function

```
rt_extra_adult_n_bucket2 (in_resv_name_id, X, Y,
'rmtype_1,rmtype_2,...rmtype_n')
```

Parameter

Parameter	Description
in_resv_name_id	System-assigned reservation ID. Provided by the function. The default is null.
X	Base number of adults plus number of children in child bucket 2.
Y	Amount to be added for each adult over the base number specified by X.
rmtype_1...rmtype_n	Room types to which this calculation applies. Comma separated list.

Example

Rate code `LEISURE`, which includes a package, is priced at $150. If the package formula entered is:

```
rt_extra_adult_n_bucket2 (in_resv_name_id, 7, 15, 'DLX,STD')
```

Any person over seven adults plus children in child bucket 2 will add $15 to the rate query amount for the LEISURE rate on room types DLX and STD. For five adults and three children in child bucket 2, the rate would be priced at $165 rather than $150.

Package Percentage

Calculates package prices based on a percentage of rate code (inclusive) price/rate amount. For example, if the price of the rate code is $150 and the package function is configured with 10 percent, a package price of $15 is calculated.

> **Note**
>
> This function does not consider the pricing of any other packages selected for a reservation or configured on the rate code. This package function is not available if the **Advance Packages** OPERA Control is active.

Function

```
UDF_PERC_PRICE (Percentage)
```

Parameters

Parameter	Description
Percentage	Percentage of package price

Copyright © 2016, 2025, Oracle and/or its affiliates.

Example

```
UDF_PERC_PRICE (10)
```

Package Posting Rhythms

The Package Posting Rhythms can be configured from Create a New Package Code -Posting Attributes.

In the Posting Rhythms drop down list, the default selection is Post Every Night. You may make another posting rhythm choice by selecting a different option button. Some of the selections may open up fields for you to define particular features for that posting rhythm.

Table 13-7 Description of the Restrictions effecting the stay dates

Posting Rhythm Choice	Description
Post Every Night	Post this package charge every night of the stay. **Note** For Package Awards, the **Posting Rhythm** is restricted to **Post Every Night**.
Post on Arrival Night	Post this package charge only on arrival night. When a package that has this posting rhythm configured is attached to a reservation and a begin date is specified to be different than the arrival date, the user will be prompted with a message that states, "The package does not have posting rhythm which falls in the date range selected" and the package will not be attached to the reservation.
Post on Every X Nights Starting Night Y	Post this package charge every X nights, beginning the Y night of stay. You are prompted to enter the start night (e.g., night 1, night 2, night 3, etc.) and how often the posting should be repeated.
Post on Certain Nights of the Week	You are prompted to check mark the days of the week to determine the days to post this package charge.
Post on Last Night	Post this package charge on the last night of the stay only.
Post Every Night Except Arrival Night	Post this package charge on all nights of the stay except the arrival night.
Post Every Night Except Last	Post this package charge on all nights of the stay except the last night.
Do not Post on First and Last Night	Post this package charge on all nights of the stay except the first and last nights of the stay.
Custom Posting Schedule (Based on Stay)	This user defined schedule lets you enter a posting rhythm over a 14-day period, starting with the arrival date, by assigning the day (number) within a guest stay for posting this package price. For example, if you check mark boxes 3, 5, and 7, OPERA Cloud will post on the third, fifth and seventh day of the stay and will repeat this posting schedule after the 14th day through the remainder of the stay.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 13-7 (Cont.) Description of the Restrictions effecting the stay dates

Posting Rhythm Choice	Description
Custom Posting Schedule (Based on Night)	This user defined schedule lets you enter a posting rhythm over a 14 day period. The start and end of the posting period is determined as follows: • If the package is attached to a rate code: The period starts with the date when the rate code to which the package is attached becomes effective for the stay. The period ends with the date of the last night for that rate code (or the last night of the stay if the rate code remains in effect until the departure date). • If the package is attached separately to the reservation: The Begin Date specified on the reservation when the package was attached is the start date for the period. The End Date specified on the reservation when the package was attached is the end date for the period. If no Begin Date and/or End Date are specified when the package is attached to the reservation, the Begin Date is assumed to be the arrival date and the End Date is assumed to be the departure date of the reservation, irrespective of when the package is attached to the reservation.
Floating Allowance per Stay	Allow the allowance to be consumed at anytime during the guest stay.

About City Tax Package Function

The City Tax package function can be configured to calculate and post a charge according to local city requirements; the tax charge can be based on a percentage of gross or net room revenue or posted as a flat amount according to amount ranges.

The following parameters are available within the package function setup:

- **Purpose of Stay Start**: You must configure Purpose of Stay codes with the code **Description** starting with the value entered.
- **Purpose of Stay**: You must configure Purpose of Stay codes matching the codes entered.
- Predefined amount ranges. For more information, see Configuring City Tax Ranges
- Net rate amount (rate amount to consider for calculation after taxes are deducted) or Gross rate amount (rate amount to consider for calculation before taxes are deducted.
- Percentage of the applicable rate amount.
- Number of children (if child rate buckets are configured).
- Special Calculation Rule (where the city tax is calculated by the number of people in the room, and posted based on the number of adults in the room).
- Packages to Include (any package that is configured with a lodging transaction code).
- Maximum Number of Nights to Post Charge.

Purpose of Stay Configuration

Configure Purpose of Stay codes. See Configuring Purpose of Stay .

Copyright © 2016, 2025, Oracle and/or its affiliates.

If you are using **Purpose of Stay Start** parameter to identify eligible purpose of stay codes, start the **Description** field with the character specified. For example, if**Purpose of Stay Start** is *****, create code descriptions such as ***City Tax**.

OPERA Controls

The **Automatically Refresh Rates on Reservation** Reservation OPERA Control must be set to **Purpose of Stay**. See OPERA Controls — Reservations.

The **Purpose of Stay for City Tax Calculation** Cashiering OPERA Control determines a default Purpose of Stay if null in reservations. See OPERA Controls — Cashiering.

City Tax Package Code Setup

City Tax is set up as Package. Select `CITY_TAX` in the **Formula** field of Package Code Posting Attributes.

Table 13-8 Set values for the CITY_TAX parameters

Parameter	Data Type	Example	Example
Purpose of Stay Start (Starting character in Purpose of Stay Description)	String		'*'
Purpose of Stay (Codes)	String	'LSR', 'CTAX'	
(Use) Amount Ranges See Configuring City Tax Ranges.	String	'Y'	'N'
Room (Charge) 'Net' or 'Gross'	String	'Net'	'Gross
Percentage	Number	5	5
Special Calculation Rule (Dresden).			
Child One (Available if **Child Rates by Defined Buckets** OPERA Control is active).	String	'Y'	'Y'
Child Two (Available if **Child Rates by Defined Buckets** OPERA Control is active).	String	'N'	'N'
Child Three (Available if **Child Rates by Defined Buckets** OPERA Control is active).	String	'N'	'N'
Packages To Include (Lodging type transaction code).	String	'GCTAX	'GCTAX
Number of Nights to Post (Available for **Post Every Night** posting rhythm).	Number	5	5

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 13-8 (Cont.) Set values for the CITY_TAX parameters

Parameter	Data Type	Example	Example
Calculate on Discounted Amount (allows calculation of City Tax using the reservation rate amount when discounted using Discount Amount Flat/ Percentage).	String	'Y'	'N'

> **Note**
>
> Enter parameters using single quotes, except for the **Percentage** and **Number of Nights to Post** fields.

The Package Posting Attributes can be setup as Included in Rate, Add to Rate - Separate Line or Add to Rate - Combined Line.

Reservations

For a reservation to qualify for the city tax package charge, select a **Purpose of Stay** value according to the setup of the City Tax Package Code.

Purpose of Stay is added to the Stay Details panel using Page Composer.

Configuring City Tax Ranges

City tax ranges are processed when the **Amount Ranges** parameter of the `CITY_TAX` function is set to **Y**.

The applicable tax charge is posted according to the range configuration, for example:

- 0.00-10.0 = 0.00
- 10.01-25.00 = 0.50
- 25.01-50.00 = 1.00
- 50.01-100.00 = 2.00
- 100.01-150.00 = 3.00
- Each additional 50.00 increases by 1.00

Adding City Tax Ranges

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **City Tax Ranges**.
2. Click **New** and complete the following:
   a. **Property**: Enter or select the property.
   b. **Amount From**: Enter a starting amount.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **Amount To**: Enter the ending amount.

d. **Tax Amount**: Enter a tax amount.

e. **Interval Amount**: Enter an interval amount. (e.g., for every 50.00 EUR tax, increase by 1 EUR).

f. Click **Save**.

Editing City Tax Ranges

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **City Tax Ranges**.
2. Enter search criteria, then click **Search**.
3. From search results, select the city tax range, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting City Tax Ranges

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **City Tax Ranges**.
2. Enter search criteria, then click **Search**.
3. From search results, select the city tax range, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Package Groups

A package group is a collection of package elements that you define as a single unit and link to a rate code or sell separately on a reservation. Package groups allow commonly associated elements to be defined as a single unit that can be attached to a rate code or to a reservation. An example might be a Bed and Breakfast package which encompasses a room and breakfast service for a set rate.

Each package code is set up separately and a package group would then be configured with all of the selected package elements. The package group can then be added to the specific rate code or to reservations, rather than having to select multiple package elements every time. This approach has been designed to provide you with a powerful system which can handle simple or complex package combinations. Packages have a wide range of configuration options that will drive the way OPERA Cloud posts packages and tracks allowances based on each property's needs.

Packages can be attached to either a rate code, to a reservation, or to a rate code and a reservation both. Changing the package group configuration would impact all linked rate codes, which simplifies the ongoing maintenance. An example would be a package group for a breakfast allowance and parking charge that you link to multiple rate codes to create various rates offering breakfast and parking entitlements.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Package Groups

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Groups**.
2. Click **New** and complete the following:
    a. **Code**: Enter the package group code.
    b. **Description**: Enter a detailed (up to 255 characters) description of the package group.
    c. **Short Description**: Enter a brief description of the package group.
    d. **Sell Separate**: Select check box to sell package group on reservations. (Available when the **Package Sold Separately** OPERA Control is active).
    e. **Package Codes**: Click **New** to add packages, then select one or more packages from the list, then click **Attach**.
    f. Click **Save**.

Editing Package Groups

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Groups**.
2. Enter search criteria, then click **Search**.
3. Select the package group in the search result, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Package Groups

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Groups**.
2. Enter search criteria, then click **Search**.
3. Select the package group in the search result, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Package Forecast Groups

Package Forecast Groups are referenced by the Package Forecast Report which provides a forecast number of breakfasts, lunches, dinners, cocktails, tennis lessons, green fees, etc., per day. The report does not display each package element, but rather each package forecast group. This allows you to have multiple package elements combined to make one package forecast group.

Defining the package forecast groups separately gives you tremendous flexibility in the way they are used and combined.

- A rate code is based on a particular combination of forecast groups, such as a tennis package or a theater package.
- A package forecast group may be added to a number of rate codes to automatically post an associated transaction, such as tax. When the charge for the element changes, it needs

Copyright © 2016, 2025, Oracle and/or its affiliates.

to be changed only in the package element definition, and then all rate codes are automatically updated.

- Several package forecast groups may have the same name, so that related items can be posted as one. For example, the federal tax, state tax, and city/county tax can each be defined as a package forecast group all with the name TAX. It is then entered only once on each rate code.

Package Forecast Groups are referenced in package configuration.

> **Note**
>
> When the **Multi Property** OPERA Control is active, package forecast groups are created by clicking the **Template** tab. Once created, you can copy the configuration to specific properties using the **Copy** action. For more information, see Copying Configuration Codes to Multiple Properties.

Adding Package Forecast Groups

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Forecast Groups**.
2. Click **New** and complete the following:
   a. **Code**: Enter a code for the package forecast group.
   b. **Description**: Enter a description for the package forecast group.
   c. **Sequence**: Enter or select a display sequence.
3. Click **Save**.

Editing Package Forecast Groups

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Forecast Groups**.
2. Enter search criteria, and click **Search**.
3. Select the package forecast group, then click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update configuration.
   b. **Inactive**: Select check box to mark as inactive.
   c. Click **Save**.

Deleting Package Forecast Groups

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Package Forecast Groups**.
2. Enter search criteria, and click **Search**.
3. Select the package forecast group, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Configuring Rate Classes

OPERA Cloud rate structure is divided into **Rate Class, Rate Category, Rate Code**. You must define one or more rate classes, a rate class is then associated to each Rate Category. Rate classes can be used to query rates from Look to Book sales screen. Examples of rate classes could be Negotiate, Wholesale, Discounted etc.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Rate Classes are created by selecting the **Template** tab. Once created, you can copy Rate Classes to specific properties using the Copy action.- Copying Configuration Codes to Multiple Properties.

Adding Rate Classes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Classes**.

   Click **New** and enter the following details:

   a. **Property**: Enter or select the property.

   b. **Code**: Enter a code for the rate class.

   c. **Description**: Enter a description for the rate class.

   d. **Begin Date**: Enter a begin date.

   e. **End Date**: Enter an end date.

   f. **Sequence**: Enter a display sequence.

2. Click **Save**.

Editing Rate Classes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Classes**.
2. Enter search criteria and click **Search**.
3. Select the rate class, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Rate Classes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Classes**.
2. Enter search criteria and click **Search**.
3. Select the rate class, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Configuring Rate Categories

Rate Codes are associated with a rate category in order to group similar rate codes to a common rate category. For example, the rate codes `LGOV1, LGOV2, FGOV1, FGOV2` could be grouped into a rate category GOVT for all Government Department rates. All package rates codes could be associated with a rate category for Packages. Rate categories can be used to query rates from Look to Book sales screen. Rate restrictions can also be set at the Rate Category level, affecting all rate associated with the rate category.

Rate category are then associated to a rate class.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Rate Categories are created by selecting the **Template** tab. Once created, you can copy Rate Categories to specific properties using the Copy action.- Copying Configuration Codes to Multiple Properties.

Adding Rate Categories

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Categories**.
2. Click **New** and enter the following details:
   a. **Property**: Enter or select the property.
   b. **Code**: Enter a code for the rate class.
   c. **Description**: Enter a description for the rate class.
   d. **Rate Class**: Select a rate class from the list.
   e. **Begin Date**: Enter a begin date.
   f. **End Date**: Enter an end date.
   g. **Sequence**: Enter a display sequence.
3. Click **Save**.

Editing Rate Categories

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Categories**.
2. Enter search criteria, click **Search**.
3. From search results, select the rate category, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Rate Categories

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Categories**.
2. Enter search criteria, click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. From search results, select the rate category, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Rate Seasons

Prerequisites for Rate Seasons

OPERA Cloud allows rate seasons to be defined for a range of dates. For example, Summer rate season from June 1st to September 1st is to identify the peak season where your property charges higher rates. When configuring rate codes you can select a rate season to automatically populate the start/end dates. Dates for rate seasons cannot overlap each other.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Rate Seasons can only be created by clicking the **Template** tab. Once created, you can copy the configuration to specific properties using the Copy action. For more information, see Copying Configuration Codes to Multiple Properties.

Adding Rate Seasons

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Seasons**.
2. Click **New** complete the following:
   a. **Season Code**: Enter a code for the season. For example - SUM20
   b. **Description**: Enter a description for the season. For example - Summer 2020
   c. **Begin Date**: Enter or select the start date of the season
   d. **End Date**: Enter of select the end date of the season
   e. **Rate Code**: Select a rate code from the list to limit this rate season to a specific rate code. For more information, see About Rate Codes.
3. Click **Save**.

Editing Rate Seasons

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Seasons**.
2. Enter search criteria and click **Search**.
3. Select the rate season, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. Click **Save**.

Deleting Rate Seasons

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Seasons**.
2. Enter search criteria and click **Search**.
3. Select the rate season, then click the vertical ellipsis **Actions** menu and select **Delete**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. Click **Delete** to confirm..

Configuring Display Sets

Prerequisites for Configuring Display Sets

You can create Display Set codes so that reservation agents can find rate codes based on this special grouping of rates. Example of Display Sets could be such groupings as Best Available, Corporate, Discount, Promotional, Package etc.

When creating rate codes you can select the applicable display set for the rate code. If no display set is selected for one or more rate codes, these rates will be grouped and displayed under a **No Display Set** grouping in Look To Book.

The Default Display Set OPERA Control determines which set of rates displays by default in Look to Book result.

> **Note**
>
> In multi-property operations Display Sets configuration applies to all properties.
>
> Defaulted Display Sets are indicated with 🔒

Adding Display Sets

Display set codes can be a maximum of 10 alpha-numeric characters.

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Display Sets**.
2. Click **New** and enter the following details:
   a. **Code**: Enter a code for the display set.
   b. **Description**: Enter a description for the display set.
      i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
   c. **Sequence**: Enter a display sequence in lists.
3. Click **Save**.

Editing Display Sets

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Display Sets**.
2. Enter search criteria and click **Search**.
3. Select the display set, click the vertical ellipsis **Actions** menu and select **Edit**.
   a. Update details.
   b. **Inactive**: Select the make the display set inactive. Inactive codes will not display in list for selection.
4. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Display Sets

> **Note**
>
> If the display set is selected in rate code(s) it cannot be deleted.

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Display Sets**.
2. Enter search criteria and click **Search**.
3. Select the display set, click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

About Rate Codes

Rate codes form the core of OPERA Cloud reservation and block modules. Rate codes are used to define the various prices for each room type over a particular date range or rate season.

Rate codes can be configured in multiple currencies when the **Ability to Quote Rates in Foreign Currencies** OPERA Control is active. For example, for overseas travel agents, with contracts may be negotiated in US dollars, a separate rate code in US currency can be added, that will covert to local currency using a predefined exchange rate. The conversion to local currency can be defined as fixed at check in, fixed at time of reservation, current date, or fixed at block.

Rate codes are also used to support property packages that include food, beverage, leisure or other elements. By associating package elements with a rate code, it is possible to build a package of entitlements for a guest staying on the rate.

> **Note**
>
> Rate codes and related pricing schedules are purged 60 days from their end date.

Base Rates

Prerequisites for Base Rates

Overview

When the Base Rates OPERA Control is active, the pricing schedule for a rate code can be derived from another (primary) rate code, called the Base Rate. The rate code that derives its pricing schedule from the base rate is called the dependent or derived rate and is indicated as a dependent rate in the rate code configuration. Up to 75 derived rates codes can be configured for a base rate. For example, if the "RACK" rate code is a primary base rate code, secondary rate codes "CORP1" through "CORP75" can be derived from RACK.

When you select a Base Rate code from the Base Rate list of values, the pricing schedule auto-populates for the current rate code (making the current rate code a dependent rate code).

Copyright © 2016, 2025, Oracle and/or its affiliates.

Any changes to the pricing schedule in the master base rate automatically affect the pricing schedule in all derived rate codes. Up to 75 rate codes can be derived from a base rate code.

The **Amount** and **Rounding** fields enable you to vary the pricing schedule for the derived rate code by a flat or percentage amount increase or reduction on the base rate. When a rate code is based on another rate, its pricing schedule is restricted from update because the Base Rate automatically controls it. This feature is useful when you have negotiated rates with a certain percentage off the property's RACK rate code. If you have multiple negotiated rates, all with different percentages of RACK, it is easy to manage rate changes. When the RACK (primary) rate code pricing schedule changes, the pricing schedule of all derived rate codes are automatically updated.

> **Note**
>
> Derived rate codes can have packages added to the rate, but not to their pricing schedule.

> **Note**
>
> Derived rate codes cannot be based off a Daily Rate rate code.

Base Rate Extra Person Calculation

Base rate calculations are applied to extra adult and child rate amounts when the **Base Rate Extra Person Calculation** parameter is **On** in the Rate Management group in OPERA Controls. When the parameter is **Off**, the extra adult or child amount is not discounted by the amount set on the derived rate code. All amounts are calculated based on the status of the parameter at the time the rate is created or updated. Changes to the parameter affect all pricing schedules created from that point forward (previously created pricing schedules are not dynamically updated when changing the parameter. When an existing rate is modified, the status of the parameter is checked and the rate amounts are calculated and updated accordingly.

Example 13-1 Example 1: Base Rate Extra Person Calculation parameter is Off

Table 13-9 Initial Base Rate Pricing

Number of Persons	Amount
1 Adult	100
2 Adults	200
Extra Adult	50

Table 13-10 Derived Rate Pricing Results

Number of Persons	Base Rate Amount	Base Rate Calculation	Derived Rate Amount	Derived Rate Calculation
1 Adult	100	100	75	100–25
2 Adults	200	200	150	200–50

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 13-10 (Cont.) Derived Rate Pricing Results

Number of Persons	Base Rate Amount	Base Rate Calculation	Derived Rate Amount	Derived Rate Calculation
3 Adults	250	200 + 1 Extra Adult @ 50	200	150 + 1 Extra Adult @ 50*
4 Adults	300	200 + 2 Extra Adults @ 50	250	150 + 2 Extra Adults @ 50*
5 Adults	350	200 + 3 Extra Adults @ 50	300	150 + 3 Extra Adults @ 50*

> **Note**
>
> The Extra Adult amount is not discounted when the **Base Rate Extra Person Calculation** parameter is **Off**.

Example 13-2 Example 2: Base Rate Extra Person Calculation parameter is On

Table 13-11 Derived Rate Pricing Results

Number of Persons	Derived Rate Amount	Derived Rate Calculation
1 Adult	75	100 -25
2 Adults	150	200 -50
3 Adults	187.50	250 -62.50*
4 Adults	225	300 -75*
5 Adults	262.50	350 -87.50*

> **Note**
>
> When the **Base Rate Extra Person Calculation** parameter is **On**, the rate amount equals the calculated Rate Code A (Base Rate) amount minus the 25% Derived Rate discount.

Dynamic Base Rates

Prerequisites for Dynamic Base Rates

Overview

Dynamic Base Rates automatically calculate and display derived pricing during a rate availability search (as opposed to the pricing being stored and fetched when Base Rate functionality is used) in the same way the Base Rate calculates and shows them. However, the pricing schedule for Dynamic Base Rates appear the same as a standard rate's details.

Copyright © 2016, 2025, Oracle and/or its affiliates.

For example, a rate code ABC could be dynamically derived from the rate code RACK with RACK defined as a Daily Rate. When viewing the Rate Code configuration for RACK, the Daily Rate screen is available. When viewing the rate details for ABC (the rate code dynamically derived from RACK), the standard static rate code's pricing schedule is available and not the Daily Rate Code's pricing schedule.

Dynamic Base Rate from a Derived Rate

A Dynamic Base Rate's rate code can be derived from a rate code that is itself a dependent rate code.

For example, assume a base rate code RACK (Amount = 100 for 1 adult), and a rate code CORP is a dependent rate code with pricing derived from RACK (Amount = -10%). Rate code ABC is then configured as a Dynamic Base Rate with pricing derived from CORP (with flat Amount = -5.00). Rate queries would show RACK = 100, CORP = 90, and ABC = 85.

Compare with Rate Details

For a more complex rate structure, Dynamic Base Rates can be simultaneously used with both regular static rates and the calculated dynamic based rate amounts by selecting **Compare with Rate Details** on the Rate Code Type panel. When this option is enabled, the system compares the static pricing in the Rate Code configuration and the pricing calculated by the Dynamic Base Rate's rate code calculations, conducts a comparison of the two rate amounts, and then shows the lowest rate per day in the Look to Book search results.

For example, the Dynamic Base Rate calculation returns the rate amount of 90.00 for room type DLX on 01/01. This rate code (because **Compare with Rate Detail** is selected) looks at the rate amount defined for a DLX on 01/01. Assuming this is 125.00, OPERA Cloud compares the 125.00 to the calculated value of 90.00 and returns the lower of the two values, 90.00, in the Look to Book search results. However, if the rate amount defined for DLX was 85.00, OPERA Cloud would compare the Dynamic Base Rate calculation of 90.00 against the 85.00 and return the lower of the two rates, 85.00, in the Look to Book search.

By not selecting the **Compare with Rate Details** option, rate amounts defined in the Rate Code Configuration are not used when conducting the rate calculations based on the defined Dynamic Base Rate's rate code.

> **Note**
>
> With the Dynamic Base Rate functionality, you must enter at minimum a single rate detail. This defines the room types for which this dependent rate is available and also the 1 Adult rate amount used by external systems.

Combing Base and Dynamic Base Rates

You can also use both Base Rates and Dynamic Base Rates for a single rate code.

The following example explores this option. Assume the following rate codes:

- RACK (Base Rate)
- ABC is a discounted rate code (Dynamic Base Rate)
- ABC-RACK (with Base Rate and Dynamic Base Rate defined)

When viewing the rate code configuration for ABC-RACK, the rate code RACK is selected as the Base Rate code and rate code ABC as its dependent Dynamic Base Rate code. The **Compare with Rate Details** option is selected so that derived pricing is considered.

Copyright © 2016, 2025, Oracle and/or its affiliates.

When viewing ABC-RACK, a view only screen appears for the pricing schedule with its derived price taken from the Base Rate calculation.

When you search availability for ABC-RACK's pricing, OPERA Cloud dynamically fetches the rate amount from the Dynamic Base Rate's rate code (that is, ABC), returns its value, and performs the Dynamic Base Rate calculation (flat or percentage) with rounding. For this example, let's assume this returned dynamic calculation returns a rate amount of 129.99. Because the **Compare with Rate Details** option is selected, OPERA Cloud next looks at its stored values for the rate code and pulls the corresponding rate amount for the room type for the date. The pricing seen in the Rate Code configuration is determined from the rate calculation of the Base Rate. In this example, let's assume this amount is 125.25. The 129.99 is compared to the 125.25, and the lower of the two amounts, 125.25, appears within the Look to Book results.

Tiered Rates and Dynamic Base Rates

When the Dynamic Base rate code is indicated as a tiered rate code in the Rate Code Type panel, the Base Rate LOV only shows other rate codes marked as tiered rate codes for selection as the Base Rate. Assuming **Compare with Rate Detail** is not selected when the Dynamic Base rate code is selected for a Look to Book rate query, the price that appears is the rate calculated from the base rate for the appropriate length of stay.

Configuring Advanced Daily Rates

Prerequisites for Advanced Daily Rates

An Advanced Daily Rate behaves like a regular Daily Rate except that the pricing schedule is derived from the Daily Base Rate. Reservations made for an Advanced Daily Rate have rate amounts that can vary for each night of the stay. Rate amounts are calculated based on the Daily Rate level available for each stay night.

The Advanced Daily Rate configuration process:

- **Configure an Advanced Daily Base Rate**: These are the rate templates, and changes to the Advanced Daily Base rate are reflected in the Advanced Daily Rate codes. Each Advanced Daily Base rate configured is a separate rate level. Using the Advanced Daily Base rates, you can configure as many rate levels as needed. When the Advanced Daily Rate is configured, it references the Advanced Daily Base rate levels as its base rates.
- **Configure an Advanced Daily Rate**: When you select the Advanced Daily Rate, Rate Detail tab, the Daily Rate entry screen appears. On the Daily Rate Entry screen, you can set up the rate details for the rate code by selecting a date range and applying an Advanced Daily Base rate code (level) for each date.

  Up to 20 rate codes can be designated as 'Advanced Daily Rates'. The "Advanced Daily Rates" rate type checkbox gets disabled once 20 rate codes have been configured.

Adding Advanced Daily Base Rate (Rate Level)

You must create multiple Advanced Daily Base rate codes to set the rate levels by using the Creating a New Rate Code presentation page.

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Search and select a rate code or create a new rate code.
3. From the rate code Rate Code Details, click **Rate Code Type**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. To identify the rate code as Advanced Daily Base rate, select the **Advanced Daily Base** check box.
5. Click **Save**.
6. Configure the pricing schedule based on the Managing Daily Rates .

Adding Advanced (Derived) Daily Rate

Create Advanced Daily Base rate codes from the new Creating a New Rate Code presentation page.

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Click **New**.
3. Enter a **Rate Code**, enter **Start Sell Dates** and **End Sell Dates**, and enter a description of the rate code.
4. Select **Room Types** from the list.
5. Select a **Rate Category** from the list.
6. Select a **Transaction Code**.
7. In the Rate Code Type panel, select **Daily Rates** and **Advanced Daily Rate**.
8. Click **Save and Go to Presentation**.

Setting Pricing Schedule

1. Select **Pricing Schedules** link to navigate to or open the Pricing Schedule panel
2. Enter search criteria to view pricing schedule for enter Start Date, End Date, Room Class and/or room type, click **Search**.

Set Daily Rates by Date Range. You can set rates for a range up to 365 days in one update process.

1. **Apply From**: Enter or select the start date for the pricing update.
2. **Apply To**: Enter or select the end date for the pricing update
3. **Room Types**: Select the room types to which the daily rate pricing are to apply.
4. **Rate Level**: Select an Advanced Daily Base Rate from the list for each date.

> **Note**
>
> Leaving the Rate Level field blank clears the rate for the selected room types and date range.

5. **Days of Week**: Select the days of the week (Sunday, Monday, Tuesday, etc.) to which the daily rate are to be applied (within the defined date range).
6. Click **Apply Rate Changes**.
7. Set Daily Rates by Inline Edit (Table). Thirty-one dates are listed vertically per page.
   a. **Rate Level**: Select an Advanced Daily Base Rate from the list.
   b. **Clear Rates**: Select the check box to clear the rates for the room types displayed in search result.
8. Click **Apply Rate Changes.**

Copyright © 2016, 2025, Oracle and/or its affiliates.

Advanced Dynamic Base Rates

Prerequisites for Advanced Dynamic Base Rates

Overview

The Advanced Dynamic Base Rate enables you to create a rate derived from another rate (a Base Rate) or derived from both a Base Rate and a BAR Based rate. This rate structure provides flexibility by enabling you to configure the rate as either a flat amount or a percentage. In addition, you can choose to apply the BAR rate amount to the Advanced Dynamic Rate calculation and you can optionally select a rounding method. Advanced Dynamic Base Rate also offers the ability to compare the rate configuration details with other Base Rate amounts.

Compare with Pricing Schedules

The **Compare with Pricing Schedules** check box in the Advanced Dynamic Base Rate on the Rate Code Type panel to compare the rate amount calculated on the pricing schedule using the Advanced Dynamic Base Rate's base rate code and the amount calculated using the **BAR** rate and then shows the lowest rate per day in the Look to Book search results.

When the **Compare with Pricing Schedules** check box is selected , the rate amount calculated on the pricing schedule using the Advanced Dynamic Base Rate's base rate code is compared to the amount calculated using the **BAR** rate (for that date and the same number of persons and room type) and then shows the lowest rate per day in the Look to Book search results.

Bar Applied To Pricing Schedule

When **Bar Applied to Pricing Schedule** OPERA Control is active, the **Apply BAR** check box is also available on the pricing schedule under the Base Type field. Select this check Box to indicate which pricing schedule will be BAR based.

Bar Details Display Option

When **Bar Details Display Option** OPERA Control is active and the **Apply BAR** check box is selected, the BAR Base Type , BAR Base Amount and rounding fields are displayed on the pricing schedule panel and you can define a different amount/type/rounding to apply to the BAR instead of using the Base Rate fields.

Example 13-3 Example 1

- ADBR (Advanced Dynamic Base rate) = to be determined
- BASE1 (BASE rate) = $100.00
- BAR1 (BAR rate) = $80.00

Rate configuration for ADBR with only **Apply Bar** selected:

Table 13-12 Rate Code Setup

Base Amount	BAR Base Amount	Apply BAR	Compare with Rate Details
$10.00 (Flat)	10%	Yes	No

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 13-13 Look To Book Rate Availability Result

Rate Code	Nights	Adults	Amount
ADBR	1	1	$88.00

The BAR (BAR1) rate amount (with 10% added) was returned for the ADBR rate amount.

Rate configuration for ADBR with both **Apply BAR** and **Compare with Pricing schedule** options selected:

Table 13-14 Rate Code Setup

Base Amount	BAR Base Amount	Apply BAR	Compare with Rate Details
$10.00 (Flat)	10%	Yes	Yes

Table 13-15 Look To Book Rate Availability Result

Rate Code	Nights	Adults	Amount
ADBR	1	1	$88.00

The lower of the two rate amounts (between the BASE1 and BAR1) was returned for the ADBR rate code.

Example 13-4 Example 2

- ADBR (Advanced Dynamic Base rate) = to be determined
- BASE1 (BASE rate) = $50.00
- BAR1 (BAR rate) = $80.00

Rate configuration for ADBR with both **Apply BAR** and **Compare with Rate Details** options selected:

Table 13-16 Rate Code Setup

Base Amount	BAR Base Amount	Apply BAR	Compare with Rate Details
$10.00 (Flat)	10%	Yes	Yes

Table 13-17 Look To Book Rate Availability Result

Rate Code	Nights	Adults	Amount
ADBR	1	1	$60.00

The BASE (BASE1) rate amount (with $10.00 added) was returned for the ADBR rate amount. This was the lower of the two rate amounts (between the BASE1 and BAR1).

Rate configuration for ADBR with only **Apply BAR** selected:

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 13-18 Rate Code Setup

Base Amount	BAR Base Amount	Apply BAR	Compare with Rate Details
$10.00 (Flat)	10%	Yes	No

Table 13-19 Look To Book Rate Availability Result

Rate Code	Nights	Adults	Amount
ADBR	1	1	$88.00

The BAR (BAR1) rate amount with 10% added was returned for the ADBR rate amount.

About Best Available Rates

Prerequisites: Best Available Rates (BAR)

Best available rates is a pricing model, commonly used to provide the lowest possible rate for a room type on a given date. OPERA Cloud offers three types of Best Available Rate. The Best Available Rate Type OPERA Control determines the Best Available Rate handling for your property.

- **Best Available Rates by Day** — (Not supported by GDS or OWS.) You can schedule up to 25 rate codes per day and room type. For more information, see Configuring Best Available Rate Schedules. Look to Book returns four best available rate codes for the stay date, by room type.

  > **Note**
  >
  > If this setting is selected, you cannot activate the Dynamic Best Available Rates (DBAR) OPERA Control.

- **Best Available Rates by LOS** — This type of Best Available Rate allows you to schedule one rate code per length of stay per day. For more information, see Configuring Best Available Rate Schedules. Look to Book returns one rate code for the stay date and length of stay.

  > **Note**
  >
  > If this setting is selected, you cannot activate the Dynamic Best Available Rate (DBAR) OPERA Control.

- **Best BAR by Day ((BBAR)** — (Supported by GDS and OWS). You can set up multiple Best Best Available Rate by Day rate codes via selection of the **Best Available Rate** check box in the rate code type panel. Out of all Best Available Rates setup, only the best rate code (lowest price) is displayed in Look to Book Sales screen. You can also setup base rate codes with pricing derived from BBAR

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When booking reservations in OPERA Cloud using Best Best Available Rate (Best BAR) or a dependent rate (derived from BBAR), OPERA Cloud will record the BAR rate code and the amount of the first night for tracking purposes.

Dynamic BAR Based Rates

Prerequisites for Dynamic BAR Based Rates

Dynamic BAR Based Rates are rate codes dependent on and derived from Dynamic Best Available Rates (DBAR). For example, you could configure a corporate, negotiated rate called ABC and base it on the DBAR rate code of DBAR2. When you perform a rate search for guests with the negotiated ABC rate attached to their profile, using the ABC rate code and Dynamic BAR as search filters, the ABC rate is automatically returned with the discounted amount for the DBAR2 rate code according to the negotiated rate agreement.

Rates for the Dynamic BAR Based rate are calculated dynamically and are not entered in the Rate Code Configuration. When the **Dynamic BAR Based** option is selected under the Rate Code Type in the Rate Code Configuration, OPERA Cloud compares against the Best Available BAR for the stay dates checked during the rate availability search. An internal condition is used to compare rate details between the Dynamic BAR Based rate set and the calculated rate value. The lower of the two values is returned in the rate search results.

Example 13-5 Example

- If the Dynamic Best Available Rates (DBAR) rate set has a rate detail for 1 adult at $100 and the calculated value from the DBAR rate is $120, it returns $100.
- If the DBAR based rate set has a rate detail for 1 adult at $150, and the calculated value from the DBAR rate is $120, it returns $120.

General Guidelines

The following guidelines apply when using Dynamic BAR Based rates:

- DBAR rate codes serve as the base rates for Dynamic BAR Based rates.
- Negotiated rates can be added to rate codes that are BAR or BAR Based.

Process Overview

- DBAR rate codes must serve as the base rates and should already be configured for your property.
- Create a new rate code for your property derived from the DBAR rate code. Configure this new rate code from the **Administration** menu by selecting **Financial**, selecting **Rate Management**, and then selecting **Rate Codes**.
- Select the **Dynamic BAR Based** option under the Rate Code Type section on the Rate Code Configuration screen.

Dynamic Best Available Rates (DBAR)

Dynamic Best Available Rates (DBAR) enable you to manage and provide the lowest rates per day to customers at your property. When DBAR is configured, the lowest prices appear based on the availability for stay dates, room type, and length of stay. Additionally, reduced rates derived from these DBAR rate codes can also be configured for different customer types, such as corporate guests or guests belonging to a membership program. These reduced rates are

Copyright © 2016, 2025, Oracle and/or its affiliates.

calculated dynamically and appear when guests with these rate codes attached to their profiles inquire about availability.

During the DBAR configuration process, you create rate codes and assign rate levels to them. Levels are assigned for various lengths of stay (LOS). For example, a rate code might be available for an arrival date (Dec. 31) for one night. This could be assigned Level 1. A different rate level, of Level 2, could be assigned to another rate code for the same arrival date (Dec. 31) for a length of stay of two nights. Another rate level, designated as Level 4, could be assigned to another rate code for the arrival date of Dec. 31, but for a length of stay of four nights. When you search for an arrival date, room type, and length of stay at your property, the lowest rates appear in the search results, according to the established Rate Level with the rate code.

Rate codes can also be classified together and configured into groups. For example, you can configure groups for rate codes associated with the government, a corporation, or for rates calculated dynamically with DBAR functionality. Each rate code can be attached to only one group regardless of the property. Also, a Rate Level and Rate Group combination is unique, whereas no two Rate Codes can have the same Rate Group and Level defined.

Example 13-6 Example of DBAR Rate Codes and Dependent Rate Codes

Table 13-20 DBAR Rate Codes and Dependent Rate Codes (Dynamic BAR Based rate codes)

Beginning Date	Length of Stay	Room Type	Level	Group	DBAR Rate Code	DBAR Rate Amount	Dependent Rate Code (-10% based on DBAR)	Dependent Rate Code Amount (-10% based on DBAR amount)
1/19	1	A1B	1	DBAR	DBAR1	700.00	CORP_RATE	630.00
1/19	2	A1B	2	DBAR	DBAR2	800.00	CORP_RATE	720.00
1/19	3	A1B	3	DBAR	DBAR3	500.00	CORP_RATE	450.00
1/19	4	A1B	4	DBAR	DBAR4	300.00	CORP_RATE	270.00

BAR Based Rates

Best Available Rates (BAR) are the best rates available per room type for a property. You can create a rate code that is a BAR type and use it as a base code on which to base other rate codes. These dependent rate codes derived from the BAR rate code are called BAR Based rates.

Prerequisites for BAR Based Rates

General Guidelines

The following guidelines apply when using BAR Based rates:

Copyright © 2016, 2025, Oracle and/or its affiliates.

- A rate code marked as BAR Based must be of the same currency as the rate codes marked as BAR.
- Negotiated rates can be added to rate codes that are BAR or BAR Based.
- A rate code marked as BAR Based cannot also be marked as a BAR rate code.
- A rate code cannot be selected as a BAR Based rate and at the same time be selected as a Dynamic Base Rate's rate code.
- A rate code cannot be selected as a BAR Based rate and at the same time be selected as a Advanced Dynamic Base Rate's rate code.
- If the **Show Add Separate Line Pkgs to Rates on Rate Query** application parameter in the Rate Management group is **On**, OPERA Cloud ignores packages configured as Add Rate Separate Line when calculating BAR Based rate codes. For example, BAR3 is configured for 100. BAR3 has Add Rate Separate Line packages totaling 65. WEBDEAL is configured as -10% of BAR with its own Add Rate Separate Line packages totaling 50. When running an availability check through the Look to Book screen, WEBDEAL is 140 (calculated as 100 - 10% +50). The 65 Add Rate Separate Line package on BAR3 is ignored.
- When you book reservations using the Best BAR or a dependent rate (derived from the Best BAR), OPERA Cloud records the BAR rate code and the amount of the first night for tracking purposes.

Process Overview

BAR rate codes serve as the base rates for your BAR Based rates and should already be configured with the **BAR** option selected under the Rate Code Type on the Rate Code Configuration screen.

Once you have BAR rate codes configured, create a new rate code for your property derived from the Best BAR rate code. Configure this new rate code from the **Administration** menu by selecting **Financial**, selecting **Rate Management**, and then selecting **Rate Codes**. When setting up the rate code, you must verify the **Best Available Rate** option is not selected under the Rate Code Type. Instead, select the **BAR Based** option, which is available when the **Best Available Rate Type** setting is **Best BAR By Day**. With this setting, OPERA Cloud determines the Best BAR rate code and amount based on the stay dates selected.

Under Rate Code Type, enter the amount you want added or deducted from any BAR Based rate in the **Amount** field.

For example, when a profile has a corporate rate associated with it and you want to deduct 25.00 off the lowest, Best BAR price, you would enter -25. Select if this is based on a **Flat** rate or a **Percentage**. To apply rounding, select the method in the **Rounding** field. During the rate availability search, the system checks for the Best BAR rate code for the room type and stay dates. It then calculates and shows the price of that rate code, based on the search criteria you entered. For example, assume the Best BAR price for the arrival date and the room type is 125.00. With the corporate rate now configured as BAR Based, the system automatically deducts 25.00 from the Best BAR price for that guest profile and calculates the price for the room at 100.00.

Configuring Rate Codes

Prior to creating rate codes ensure you have completed the configuration of

- Market Codes
- Source Codes

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Rate Categories
- Transaction Codes
- Room Types
- Display Sets

For package rate codes ensure you have also completed the configuration of

- Package Codes
- Configuring Package Groups

Various types of rates can be configured

Rate Codes	Description
Standard Rate	Enabled the entry of pricing schedules per seasons or date range for each room type.
Daily Rates	Enables entry of price per day for each room type. A maximum of 20 daily rate / advanced daily rate codes can be configured per property. See Configuring Daily Rates
Advanced Daily Base	Advanced Daily Rate behaves like a regular Daily Rate except that the pricing schedule is derived from this Daily Base rate. Reservations made for an Advanced Daily rate have rate amounts that can vary for each night of the stay. Rate amounts are calculated based on the Daily Rate level available for each stay night. A maximum of 20 daily rates / advanced daily rate codes can be configured per property. See Configuring Advanced Daily Rates
Tiered Rates	Tiered Rates enabled the configuration of pricing schedules per length of stay for each room type. See Working with Tiered Rates
Base (Derived) Rate	Enables the pricing schedule to be derived from another (base) rate code. Any changes in the base rate's pricing schedule will automatically affect pricing on all derived rate codes. Up to 75 rate codes can be derived from a base rate code. See Base Rates
Dynamic Base (Derived) Rate	Dynamic Base Rates calculate and display derived pricing during a rate and availability search. Dynamic Base Rates can be used with both standard rate pricing and the calculated dynamic base rate pricing simultaneously. The **Compare with Rate Details** option can be selected to force OPERA Cloud to compare the static rate code pricing and the dynamically calculated pricing and display the lowest price per day during the availability search in Look to Book. See Dynamic Base Rates
Best Available Rate (BAR)	Allows configuration of rate codes that are selected for Best Available Rate comparison. There are three types of BAR rates that can be set up in OPERA Cloud: • Best Available Rates by Day • Best Available Rates by LOS - • Best BAR by Day See Best Available Rates (BAR)
Best Available Rate Based Rate	Allows for configuration of pricing schedules based on the Best Available Rate. See BAR Based Rates

Copyright © 2016, 2025, Oracle and/or its affiliates.

Rate Codes	Description
Advanced Dynamic Base Rate	An Advanced Dynamic Base Rate allows you to create a rate based on another rate (a base rate) or based on both a base rate and a BAR Based rate. This rate structure provides greater flexibility on the rate details level by allowing you to configure the rate as either a flat amount or a percentage. It offers the ability to compare Rate Details with other Base Rate amounts. See Advanced Dynamic Base Rates

Adding Rate Codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Click **New** and complete the following
   a. **Rate Code Definition**. See Configuring Rate Code Definition
   b. **Financial Details**. See Configuring Rate Code Financial Details
   c. **Rate Code Type**. See Configuring Rate Code Type
   d. **Rate Sell Controls and Distribution**. See Configuring Rate Sell Controls and Distribution.
   e. Packages
      i. Click **New** to add package items to include in the rate code.
         i. Select one or more package items or package groups.
      ii. Click **Attach**.
      iii. Click vertical ellipsis and select **Edit** to update a package item.
      iv. Click vertical ellipsis and select **Delete** to delete a package item.
      v. See Configuring Rate Code Package Inclusions.
3. Click **Save** or **Save and Goto Presentation** to continue with the rate code configuration and add a pricing schedule.

Editing Rate Codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. Select the rate code in the search result, then click vertical ellipsis **Actions** menu and select **Edit**.

> **Note**
>
> When modifying the pricing schedule or package inclusions for a rate code, existing reservation must be 'refreshed' in order to be updated with the latest pricing and package inclusions. For more information, see Editing a Reservation. All rate code detail links are available to view and update related rate code details. See the Rate Code Detail Links table below.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 13-21 Rate Code Detail Links

Rate Code Details	Profile Details	Billing
Approval Notes	Negotiated Profiles	Financial Details
Channel Distribution		
Pricing Schedule	Restrictions	Routing Instructions
Rate Code Definition		
Rate Code Type		
Rate Access Exclusion		
Rate Code Packages

Copying Rate Codes to Other Properties

When the **Multi Property** OPERA Control is active, you can copy rate code configuration to other properties from a hub location.

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. Select the rate code in the search result, then click vertical ellipsis **Actions** menu and select **Copy/Synch**.
    a. Select the **Copy Codes** action.
    b. **Source Property**: Select the source property from the list.
    c. **Select Rate Code(s)**: Select rate codes from the list.
        i. **Negotiated Rates**: Select check box to copy negotiated rates.
        ii. **Packages**: Select check box to copy packages.
        iii. **Pricing Schedules**: Select check box to copy pricing schedules.
        iv. **Rate Floor**: Select check box to copy rate floor.
    d. **Target Properties**: Select one or more properties from the list.
    e. Click **Save**.
4. Review, then click **Continue**.
5. Review confirmation, click **Print** to generate a report.

Synchronizing Rate Codes to Other Properties

When the **Multi Property** OPERA Control is active, you can synchronize rate code configuration to other properties from a hub location. The following rate code details are synchronized:

- Rate Code Definition
- Financial Details
- Rate Code Packages

Copyright © 2016, 2025, Oracle and/or its affiliates.

- Rate Controls and Distribution

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. Select the rate code in the search result, then click vertical ellipsis **Actions** menu and select **Copy/Synch**.
    a. Select the **Sync Codes** action.
    b. **Source Property**: Select the source property from the list.
    c. **Select Rate Code(s)**: Select rate codes from the list.
    d. **Target Properties**: Select one or more properties from the list.
    e. Click **Save**.
4. Review, then click **Continue**.
5. Review confirmation, click **Print** to generate a report.

Deleting Rate Codes

A rate code cannot be deleted if any of the following apply

- The rate code is a base rate which has at least one derived rate code. Base rates are available when the **Base Rates** OPERA Control is active.
- The rate code is selected in a reservation for a future date, a reservation that is Due In or In House, or a reservation that is checked out on the current business date.
- The rate code is selected in a block with an end date greater than the current business date.

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. Select the rate code and click vertical ellipsis **Actions** menu, select **Delete**.
4. Click **Delete** to confirm.

Configuring Rate Code Rate Information

Rate code information is displayed in Look to Book sales screen when details of a rate code is accessed.

When the **Multi Language** OPERA Control is active, rate information can be added in multiple languages for rates distributed across multiple properties / countries.

Editing Rate Code Rate Information

1. From the **Administration** menu, select **Financial**, then **Rate Management**, and then **Rate Codes**.
2. Enter or select the property and click **Search**.
3. From search results, select the rate code and click the vertical ellipsis, and then select **Edit**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. On the Rate Code presentation page click the **Rate Information** details link..
5. Click **Edit** and enter the following details:
    a. **URL**: Enter a website address if rate information is available externally
    b. **Short Information**: Enter the rate information that you want to make available in **Look to Book** when the **Display Rate Short Information** OPERA Control is active.
        i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
    c. **Long Information**: Enter the rate information that you want to make available in Look to Book when the **Display Rate Long Information** OPERA Control is active. (maximum of 2000 characters).
        i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).
        ii. Click **Insert Template Text** to insert the Long Information template.
6. Click **Save**.

Configuring Rate Code Type

Before changing a rate code type, ensure no pricing schedules exist.

Editing Rate Code Type

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation page click the **Rate Code Type** details link.
5. Click **Edit**.
    a. **Standard Rate**: Select to configure a standard rate code with pricing schedules by date range per room type.
    b. **Best Available Rate**: Allows for configuration of rate codes that are selected for Best Available Rate comparison. (Available when the **Best Available Rate** OPERA Control is active). For more information, see Configuring Best Available Rate Schedules.
    c. **Daily Rates**: Select the configure a Daily Rate code. Allows for configuration of pricing schedules (rate amounts) rate amounts per day. (Available when the **Daily Rates** OPERA Control is active) . For more information, see Configuring Daily Rates
    d. **Advanced Daily Base**: Select this check box if the rate is an Advanced Daily Base rate. In the pricing schedule each Advanced Daily Base rate will be configured as a separate rate level. Using the Advanced Daily Base rate, you can configure as many rate levels as needed. When Advanced Daily Rates are configured, these will use these Advanced Daily Base rate levels as its base rates. (Available when the **Advance Daily Rates** OPERA Control is active)
    e. **Advance Daily Rate**: An Advanced Daily Rate behaves like a regular Daily Rate with the exception that its pricing schedule is populated by indicating the Daily Base Rate for each date instead of manually entering the pricing schedule. (Available when

Copyright © 2016, 2025, Oracle and/or its affiliates.

the **Advance Daily Rates** OPERA Control is active). For more information, see Configuring Advanced Daily Rates.

f. **Tiered Rate**: Allows for configuration of pricing schedules (rate amounts) based on length of stay periods. (Available when the **Rate Tiers** OPERA Control is active). For more information, see About Tiered Rate Codes

g. **Base Rate**: Allows for configuration of pricing schedules (rate amounts) derived from another rate code (Available when the **Base Rates** OPERA Control is active). For more information, see Base Rates.

h. **Best Available Rate Based Rate**: Allows for configuration of pricing schedules (rate amounts) derived from the Best Available Rate (Available when the **Best Available Rates** OPERA Control is active). For more information, see BAR Based Rates.

i. **Dynamic Base Rate**: Allows for configuration of pricing schedules (rate amounts) as base and standard rates. It provides the ability to compare between the two for the lowest rate to be displayed in the sales screen. (Available when the **Dynamic Base Rate** OPERA Control is active). For more information, see Dynamic Base Rates

j. **Advanced Dynamic Base Rate**: Allows for configuration of pricing schedules (rate amounts) comprised of base rate or standard rates by date range. (Available when the **Advanced Dynamic Base Rate** OPERA Control is active). For more information, see Advanced Dynamic Base Rates.

6. Click **Save**.

Configuring Rate Code Financial Details

Editing Rate Code Financial Details

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. Click **Financial Details** and complete the following
   a. **Transaction Code**: Select the accommodation revenue transaction code.
      i. When the **Revenue Posting by Room Type/Room Class** OPERA Control is active select an accommodation transaction code per room type. See Configuring Multi Transaction Code Rate Codes.
      ii. **Tax (Generate) Inclusive**: Click check box to indicate that the pricing schedule rate amounts are inclusive of taxes. If unchecked taxes are posted additional to the price.
   b. **Package Transaction Code**: Select the package wrapper transaction code; if configuring a package rate code (inclusive of package items)
   c. **Commission Code**: Select a commission code from the list. This commission code overrides the commission code selected in a Travel Agent profile.
   d. **Commission %**: Enter a commission percentage (up to 99.99) which is used by GDS systems to determine the commission that is applicable when booking this rate code. (This value has no effect on the calculation of commissions in OPERA Cloud)
   e. **Currency Code**: Select a currency code from the list. Pricing schedules will be loaded in this currency. (Available when the **Ability to Quote Rates in Foreign Currencies** OPERA Control is active)

Copyright © 2016, 2025, Oracle and/or its affiliates.

i. **Exchange Type**: Select an exchange type from the list (Available when alternate currency code is selected) to determine what exchange rate should be used for accommodation charges.

   i. **Fixed at Check In**: Exchange rate fixed at check in date.

   ii. **Fixed at Reservation**: Exchange rate fixed at reservation creation date.

   iii. **Current Date**: Exchange rate for current business date / posting date.

   iv. **Fixed at Block**: Exchange rate fixed at date when block is opened for pickup.

f. **Folio Text**: Enter text to display on guest folio for rate code posting. Text entered here overrides the accommodation transaction code description.

   i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active.).

g. **Deposit Maturity**: Select a value from the list to indicate when any deposit payment should transfer to guest ledger. (Available when the **Advance Deposit Maturity and Allocation** OPERA Control is active)

h. **Print Rate**: Select check box to default the **Print Rate** check box in reservations Stay Details and Block Details. The **Print Rate** check box in Stay Details determines if the price (rate amount) is output on stationery such as the registration card and confirmation.

i. **Suppress Rate**: Select check box to display the rate amount with strike-through formatting  . This is used for confidential rates that must not be quoted to a caller. Only users with the **View Suppressed Rate Details** task assigned are able to view the rate amount details. (Available when the **Suppress Rate** OPERA Control is active).

j. **Discount**: Select check box to allow the reservation price (rate amount) to be discounted on ad-hoc basis. Discount Amount, Discount Percentage and Discount Reason fields are enabled in reservation stay details when this rate code is selected. (Available when the **Reservation Discount** OPERA Control is active).

k. **Day Use**: Select check box to indicate the rate code is for 0 night stays.

l. **Complimentary**: Select check box to indicate the rate code is for complimentary stays. OPERA Cloud will track reservations booked with a complimentary rate for statistical purposes.

m. **House Use**: Select check box to indicate the rate code is for internal/administration stays. OPERA Cloud will track reservations booked with a house use rate for statistical purposes.

n. **Negotiated**: Select check box to indicate that this rate code is only available as a negotiated rate that must be associated with a guest, company, source or travel agent profile. Available when the **Negotiated Rates** OPERA Control is active. For more information, see Managing Profile Negotiated Rates.

o. **Owner Rolling No Show** : Select check box to identify the rate code as an Owner Rate Code. No Show reservations with an owner rate code are not updated to No Show status during End of Day; instead, the arrival date is automatically updated to the next day. The **Rolling No Show Preference** OPERA Control determines whether the Arrival Date is updated until the departure day (default) or updated to the day prior to the departure day. Available when the **Identify Owner Rate Code Attributes** and **Room Rotation** OPERA Control are active.

Copyright © 2016, 2025, Oracle and/or its affiliates.

p. **Owner Use**: Select check box to indicate this rate code is available for Owner Reservations. Available when the **Identify Owner Rate Code Attributes** and **Room Rotation** OPERA Control is active.

q. **Owner Referral**: Select check box to indication this rate code is available for Owner Referral Reservations. Available when the **Identify Owner Rate Code Attributes** and **Room Rotation** OPERA Control is active.

r. **Point (Award) Redemption**: Select check box to indicate the rate code is eligible for selection in awards. For more information, see Configuring Membership Type Awards.

s. **Membership**: Loyalty Select check box to indicate this rate code is considered a qualified rate for reference in Configuring Membership Type Rules (Point Calculation Rules). Also see Configuring Membership Qualifying Rates.

t. **Day Type**: Select check box to enable the day type pricing schedule adjustments. (Available when the **Day Types** OPERA Control is active). For more information, see Configuring Day Types.

5. Click **Save**.

Rate Code Posting Rhythms

1. Select the **Posting Rhythms** tab to setup a "Free nights based on length of stay" promotional rate code. For more information, see About Rate Code Posting Rhythms.

   a. **Posting Rhythm**: Select **Do Not Post Every X Night** from the list.

      i. **Nights**: Enter a number for the specific posting rhythm which will define how many days a guest must stay before the rate amount will post as 0.00.

      ii. **Post Packages**: Select to post package charges and allowances on the 'free nights' .

Advanced Rate Code Posting Rhythms

1. Select the **Posting Rhythm** tab to setup "Buy X Nights, Get Y Nights Free" promotional rate code when the **Advanced Rate Code Posting Rhythm** OPERA Control is active. For more information, see Configuring Advanced Rate Code Posting Rhythms.
2. Click **Save**.

Configuring Rate Code Negotiated Profiles

Adding Rate Code Negotiated Profiles

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation page click the **Negotiated Profiles** details link.
5. Click **New**.

   a. **Name**. Enter Guest or Sales Account name and click to search

   b. **Start Date**. Enter the start date of the negotiated rate

   c. **End Date**. Enter the end date of the negotiated rate

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Sequence**. Enter a display sequence

e. **Commission Code**: Select a commission code from the list. (Available when **Commissions Handling** OPERA Control is active for Travel Agent and Source profiles.)

f. **Profile Discounts**. (Available when the **Profile Discounts** OPERA Control is active)

i. Click vertical ellipsis and select **Add**

i. **Start Date**: The start date of the rate discount

ii. **End Date**: The end date of the rate discount

iii. **Amount**: Enter the discount amount or percentage

iv. **Amount/Discount**: Flat or Percentage

v. **Days of Week**: Select the days of the week where the discount is applicable within the date range

ii. Click **Save**.

6. Click **Save**.

Editing Rate Code Negotiated Profiles

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation page click the **Negotiated Profiles** details link.
5. Enter search criteria and click **Search**
6. Select the profile and click vertical ellipsis and select **Edit**.
7. Update the details.
8. Click **Save**.

Deleting Rate Code Negotiated Profiles

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation page click the **Negotiated Profiles** details link.
5. Enter search criteria and click **Search**
6. Select the profile and click vertical ellipsis and select **Delete**.
7. Click **Delete** to confirm

Managing Rate Code Approval

Prerequisites for Managing Rate Code Approval

Rate Code Approval is a workflow for the review, approval and "publication" of rate codes.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Users are able to create and edit rate codes (with packages, pricing schedules, restrictions, channel, etc.) and another user, with rate code approval authority, must review the new / changed rate code configuration and either approve or reject the changes.

The result is that rate codes in Unapproved, Changed Unapproved or Rejected status are not displayed or available for sale in OPERA Cloud (directly or through Availability requests to OPERA Cloud).

Business Events are only triggered for rate codes when changed to Approved status or updated once in Approved status.

A user with the Rate Code Approval task assigned to their roles is able to configure rate codes immediately in Approved status.

A user without the Rate Code Approval task assigned to their roles can:

- Create rate codes in **New Unapproved** status.
- Edit **Unapproved** or **Rejected** rate codes.
- Edit **Approved** rate codes - status will update to **Changed Unapproved**.
- Create, edit or delete approval notes; this can be a free form notes to act as a communication method between rate creators and users with authority to approve the rate.
- Submit changes on **Rejected** rate codes for approval.

Approving Rate Codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. **Property**: Enter or select the Property.
3. **Approval Status**: Select a approval status from the list (New Unapproved, Changed Unapproved).
4. Enter other criteria.
5. Click **Search**.
6. Select the rate code, click **Vertical Ellipsis** and select **Edit**.
7. Click **I Want to...** and select **Approve Rate Code**.
8. To add Approval notes, see **Managing Approval Notes** below.

Rejecting Rate Codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. **Property**: Enter or select the Property.
3. **Approval Status**: Select a approval status from the list (New Unapproved, Changed Unapproved).
4. Enter other criteria.
5. Click **Search**.
6. Select the rate code, click **Vertical Ellipsis** and select **Edit**.
7. Click **I Want to...** and select **Reject Rate Code**.
8. To add Approval notes, see **Managing Approval Notes** below.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Updating Rejected Rate Codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. **Property**: Enter or select the Property.
3. **Approval Status**: Select a approval status from the list (New Unapproved, Changed Unapproved).
4. Enter other criteria.
5. Click **Search**.
6. Select the rate code, click **Vertical Ellipsis** and select **Edit**.
7. Update the configuration of the rate code
8. To add Approval notes, see **Managing Approval Notes** below.
9. Click **Save**.

Managing Approval Notes

Adding Approval Notes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. **Property**: Enter or select the Property.
3. **Approval Status**: Select a approval status from the list (New Unapproved, Changed Unapproved).
4. Enter other criteria.
5. Click **Search**.
6. Select the rate code, click **Vertical Ellipsis** and select **Edit**.
7. Click **Approval Notes**.
8. Click **New** and enter approval notes.
9. Click **Save** or click **Save and Continue** to add another note.

Editing Approval Notes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. **Property**: Enter or select the Property.
3. **Approval Status**: Select a approval status from the list (New Unapproved, Changed Unapproved).
4. Enter other criteria.
5. Click **Search**.
6. Select the rate code, click **Vertical Ellipsis** and select **Edit**.
7. Click **Approval Notes**.
8. Select the approval note, click **Vertical Ellipsis** and select **Edit**.
9. Update notes.
10. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Deleting Approval Notes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. **Property**: Enter or select the Property.
3. **Approval Status**: Select a approval status from the list (New Unapproved, Changed Unapproved).
4. Enter other criteria.
5. Click **Search**.
6. Select the rate code, click **Vertical Ellipsis**and select **Delete**.
7. Click **Delete** to confirm.

Configuring Rate Code Restrictions

Prerequisites for Rate Code Restrictions

Rate Code restrictions allow you to setup restrictions for the availability of a rate code based on a date range, specific days of the week, restriction type, and inventory level.
Rate code restrictions can also be managed through Manage Rate Restrictions or automatically using rate strategy rules.

Adding Rate Code Restrictions

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code , click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Rate Code presentation page click the **Restrictions** link.
5. Click **New** and complete the following:
    a. **Start Date**: Enter or select restriction start date. This date cannot be greater than five years from the current business date.
    b. **End Date**: Enter or select the restriction end date. This date cannot be greater than five years from the current business date.
    c. **Days of the Week**: All check boxes are pre-selected by default. Click the check box to remove the check mark for the days you do not want the restriction to be applied. For example, if a date range is for the entire month, but you do not want it to apply on Saturdays and Sundays, remove the check marks from the Saturday and Sunday check boxes.
    d. **Restriction Type**: Select a restriction type to apply to the rate code. The restriction types available depend on the **Restriction Types** OPERA Control..
        i. For more information, see Restrictions.
    e. **Inventory**: Select the inventory level for the rate restriction.
        i. **House**: Select to indicate that the restriction applies at the house (property) level.
        ii. **Room Class**: Select the room classes from list to which this restriction applies. (Available when the **Room Class** OPERA Control is active).
        iii. **Room Types**: Select the room types from list to which this restriction applies.

Copyright © 2016, 2025, Oracle and/or its affiliates.

6. Click **Save** or **Save and Continue** to save and create another rate restriction detail.

Editing Rate Code Restrictions

> **Note**
>
> Only dates and days of the week can be modified. Delete the restriction and add new restriction if other changes are needed.

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code record, click the row level vertical ellipsis**Actions** menu , and select **Edit**.
4. On the Rate Code presentation page, click the **Restrictions** link.
   a. Select the restriction in the calendar or list view.
   b. Click the vertical ellipsis **Actions** menu and select **View**.
   c. Update details.
   d. Click **Save**.

Deleting Rate Code Restrictions

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code record, click the row level vertical ellipsis **Actions** menu, and select **Delete**.
4. On the Rate Code Configuration screen in the Rate Code Overview section, click the **Restrictions** link.
5. Select the restriction in the calendar or list view.
6. Update details.
7. Click vertical ellipsis and select **Delete**.
8. Click **Delete** to confirm.

Clearing All Rate Code Restrictions for Selected Date

To clear all restrictions for a specific date:

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code, click the vertical ellipsis and select **Edit**.
4. On the Rate Code presentation page click the **Restrictions** link.
   a. Select the date in the calendar or list view.
   b. Click the vertical ellipsis **Actions** menu and select **Clear All**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. Confirm by clicking Clear All again in the confirmation dialog.

View Rate Code Restrictions Changes

To view a log of all changes to rate restrictions:

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code, click the vertical ellipsis and select **Edit**.
4. On the Rate Code presentation page click the **Restrictions** link.
   a. Click the vertical ellipsis **Actions**menu and select **Changes Log**.
   b. Enter search criteria and click **Search**.

Configuring Rate Code Pricing Schedules

Pricing Schedules define the price for one or more room types for a specified season or date range. You can also view the pricing schedules for externally protected rate code these are rate codes created and managed in an external solution; and with the **Override External Rate** task granted to your role, you can override the pricing schedule.

When adding a pricing schedule, can also select one or more package items for a pricing schedule when a special package entitlement for specific room types / date ranges apply. For example - you may wish to include Champagne for reservations in the Executive Suite only - the package item is therefore added at the pricing schedule level for the executive suite and not as a rate code inclusion for all room types. Adding the same package as a rate code package inclusion and in a pricing schedule will result in two of the same package being applied to the rate code when the room type is booked. When the **Package Pricing and Availability Attributes** OPERA Control is active the **Minimum Nights, Maximum Nights, Minimum Guests** and **Max Guests** configured in the package are displayed.

Adding Rate Code Pricing Schedule

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. In the search results, select a rate code and click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the **Rate Code Configuration**screen, click **Pricing Schedules**.
5. On the **Pricing Schedules** panel, click **Search** to view the existing **Pricing Schedules**.
6. Click **New** to enter new pricing schedule and enter the following details as mentioned in the **Table - Manage Pricing Schedule Fields and Description**.
7. If applicable, in the **Packages** panel click **Add** to search for an existing **Package Code** to add to this specific pricing schedule. Select one or more package code from the list and click **Attach** to add the package items to the price schedule.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> If a package element has already been added as a rate code inclusion and the same package element is added to a rate code pricing schedule, the nett room rate would then adjust for the price of two package elements (same package item sold twice on the rate). The packages visible in the list are those packages with a start and end date that encompass the dates for the pricing schedule being created.

Editing Rate Code Pricing Schedule

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. In the search results, select a rate code and click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the **Rate Code** presentation screen, click **Pricing Schedules**.
5. On the **Pricing Schedules** panel, click **Search** to view the existing **Pricing Schedules**.
6. Select the schedule to update and click the vertical ellipsis **Actions** menu, then click **Edit**.
7. Update pricing schedule per the **Table** below.
8. Click **Save**.

Viewing Rate Code Pricing Schedules

To view the pricing of externally protected rate codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. In the search results, select a rate code and click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the Rate Code presentation page, click **Pricing Schedules**.
5. Enter search criteria then click **Search**.
6. Select the schedule to view then click the vertical ellipsis **Actions** menu and select **View**.

Deleting Rate Code Pricing Schedule

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. In the search results, select a rate code and click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the **Rate Code** presentation screen, click **Pricing Schedules**.
5. On the **Pricing Schedules** panel, click **Search** to view the existing **Pricing Schedules**.
6. Select the schedule to delete and click the vertical ellipsis **Actions** menu, then click **Delete**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Copying a Rate Code Pricing Schedule

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. In the search results, select a rate code and click the **Vertical Ellipsis**, click **Edit**.
4. On the **Rate Code** presentation screen, click **Pricing Schedules**.
5. On the **Pricing Schedules** panel, click **Search** to view the existing **Pricing Schedules**.
6. Select the schedule to update and click the vertical ellipsis **Actions** menu, then click **Copy**.
7. Update new schedule per the **Table** below.
8. Click **Save**.

Splitting Rate Code Pricing Schedule

Use this option to split a date range from the highlighted pricing schedule date range and then specify separate pricing schedule for the new date range. The **Start Date** of the new pricing schedule must be on or after the start date of the selected pricing schedule and the **End Date** of the new pricing schedule must be on or before the end date of the selected pricing schedule.

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. In the search results, select a rate code and click the vertical ellipsis **Actions** menu and select **Edit**.
4. On the **Rate Code** presentation screen, click **Pricing Schedules**.
5. On the **Pricing Schedules** panel, click **Search** to view the existing **Pricing Schedules**.
6. Select the schedule to update and click the vertical ellipsis **Actions** menu, then click **Split**.
7. Enter **Start Date**, **End Date** and pricing as required per the **Table** below.
8. Click **Save**.

Table 13-22 Manage Pricing Schedule Fields and Description

Field	Description	
Dates	Season Code	Season codes are used to define a starting date and ending date for the highlighted pricing schedule. The pricing schedule can only be sold if the arrival and departure dates of a guest's reservation fall within that time frame. If a season is entered, the Start and End Date fields automatically fill with the defined season's begin and end date. If the Season field is not used in a new pricing schedule, you have the ability to change both the start and end dates.
	Start Date	Required field. The begin date that the pricing schedule is available. You can change dates for the pricing schedules, provided they do not overlap with another pricing schedule set with any of the same room types. If previously selecting a season code, the Start Date is already populated for you.
	End Date	Required field. The ending date that the highlighted pricing schedule is no longer available. If a season code has been entered, the End Date field is already populated for you.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 13-22 (Cont.) Manage Pricing Schedule Fields and Description

Field	Description	
	Days of the Week check boxes	Days of the week for which the specified pricing schedule may be sold. Mark the applicable days for each pricing schedule for the dates defined. The check boxes automatically default with each day marked for convenience.
Amounts	The Amounts section is for defining the rate amounts for room types based on the number of adults and/or children occupying the room.	
Adults	1 Adult - 5 Adults. Flat or added rate amounts for 1- 5 adults for the highlighted pricing schedule. When a rate amount for 2 Adults through 5 Adults is not defined, OPERA Cloud will use the amount defined for 1 Adult.	
Children in Own Room in cases	OPERA Cloud supports rates for children who are staying in a room with an adult or who are staying in a room alone without an adult. In cases where children are staying in a room with an adult, the Extra Child rate is used to determine the amount added to the adult rate. • Children on Own: These rates are for children occupying the room without an adult. • Extra Child: When there are children staying in the room with an adult, the rate for each child is determined by the child's age. The Extra Child rate is also used for children staying in their own room if no applicable "unaccompanied child" rates have been specified. For example, if 4 children are staying in their own room and rates for 1 Child, 2 Children, and 3 Children have been specified, but not a rate for 4 Children, the rate would be the rate for 3 Children plus the rate for 1 Extra Child.	
Attributes	The Attributes section assists the user in noting additional information for the pricing schedule.	
	Market Code.	Although a market code may have been defined in the Rate Code Definition, the user may have a situation where a different market code is required for a specified period of time. Enter the market code associated with the pricing schedule for the rate code. If a market code is defined on the rate code definition and on the rate schedule, the market code specified on the rate schedule overrides the rate code definition market code when auto- populating a reservation.
	Source Code	Source code associated with the pricing schedule for the rate code. If a source code is defined on the rate code definition, the source code on the pricing schedule overrides it.
	Room Types	Select the room types that are to be available for the pricing schedule set. The attached room types available for each pricing schedule displayed are automatically populated in this field once selected. You can add a new room type, provided that this room type does not yet have pricing schedules within the specified date range. You can also delete a room type from an existing pricing schedules. The room types available for a pricing schedules are the room types specified on the rate code definition.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Table 13-22 (Cont.) Manage Pricing Schedule Fields and Description

Field	Description	
	Packages	The Packages field is where package elements can be added or deleted to the active pricing schedules. If package elements have already been assigned to the rate code and then another package element has been added to the rate code's pricing schedules set, the room rate would then include the two package elements, provided the reservation stay dates fell into the date range for that pricing schedule set. The packages visible are those packages for which a package start and end date that encompass the currently highlighted pricing schedule for the rate code. For same day or next day packages, you cannot delete a package that is currently being used by an inhouse reservation from the Pricing Schedule panel.

Configuring Rate Controls and Web Channels

The available sell controls are based on the Inventory Management OPERA Controls .

Editing Rate Code Sell Controls and Web Channels

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click the **vertical ellipsis**, select **Edit**.
4. On the Rate Code, presentation page click the **Rate Controls** details link.
5. Click **Edit**.
   a. **Min Occupancy**: Enter the minimum number of persons required on the reservation for this rate code to be available
   b. **Max Occupancy**: Enter the maximum number of persons allowed on the reservation for this rate code to be available.

> **Note**
>
> Minimum and Maximum Occupancy are verified only during the initial booking process; once the reservation has been made, changes to occupancy are not verified against the minimum and maximum occupancy set on the rate code.

   c. **Min Stay Through**: Enter a value to define a minimum length of stay for the rate code.
   d. **Max Stay Through**: Enter a value to define the maximum length of stay for the rate code.
   e. **Min Advanced Booking (Days)**: Enter a value to define the minimum number of days in advance of the arrival date a reservation must be booked.
   f. **Max Advanced Booking (Days)**: Enter a value to define the maximum number of days in advance of the arrival date a reservation must be booked.

Copyright © 2016, 2025, Oracle and/or its affiliates.

g. **Rate Floor**: Enter a minimum rate amount for pricing schedules setup for this rate code. (Available when the Rate Floor OPERA Control is active).

h. **Yieldable**: Select **Yes** or **No** fto determine if the rate code is Yieldable (Available when a Y**ield Management** OPERA Control is active).

   i. **Yield As**: Select a Yieldable rate code. Rate Codes identified as Yieldable and Yield As, reference the yieldable status of the rate code selected in this field.

   ii. **Yield Market Type**: Some yield systems don't base the hurdle on rate codes but rather on markets, Select the yield market would have that hurdle applied. You can select multiple Yield Market Types when the Multiple Yield Market Types OPERA Control is active.

   iii. For more information, see Yield Management.

i. **Channel Allowed**: Select to make this rate code available through your booking channels. Select **Distribute** to open the Channel Distribution screen and publish the rate.

   i. **Restriction Update**: Used when integrated with an external channel management System. Select this to send restriction updates to the channel management system in real-time.

   ii. **Market**: Select the market code to be used for reservations received from the channel management system for this rate code.

   iii. **Rate Update**: Used when integrated with an external channel management system. Select this to send rate code/pricing schedule updates to the channel management system in real-time.

j. **Upload to Oracle Distribution**: Select to indicate this rate code is to upload to Oracle Distribution platform (Available when the Rate Upload To Oracle Distribution OPERA Control is active).

6. Click **Save**.

Configuring Rate Code Package Inclusions

Adding Packages on a Rate Code

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation page click the **Rate Code Packages** details link.
5. Click **New** and complete the following
   a. Enter search criteria and click **Search**.
   b. Select one or more package items.
   c. Click **Attach**.

Editing Packages on a Rate Code

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. From search results, select the rate code then click vertical ellipsis **Actions** menu, and select **Edit**.
4. On the Rate Code presentation page click the **Rate Code Packages** details link.
    a. Select the package item, click the vertical ellipsis **Actions** menu and select **Edit**.
        i. **Begin Sell Date**: Enter or select the start date for the rate code package item.
        ii. **End Sell Date**: Enter or select the end date for the rate code package item.
        iii. **Description**: Enter a description of the package item.
        iv. **Posting Attributes**: See Configuring Package Code Posting Attributes.
    b. **Package Pricing Exceptions**: Click **New** and complete the following:
        i. **Start Date**: Enter or select a start date for the pricing.
        ii. **End Date**: Enter or select an end date for the pricing.
        iii. **Price**: Enter an item price (add to rate or included in rate).
        iv. **Amount**: Enter an allowance amount (available when the **Advanced Package** OPERA Control is active).
        v. Click **Save**.
    c. Click **Save**.

Deleting Packages on a Rate Code

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code then click vertical ellipsis **Actions** menu, and select **Delete**
    a. On the Rate Code presentation page click the **Rate Code Packages** details link.
    b. Select the package item, click the vertical ellipsis **Actions** menu and select **Delete**.
    c. Click **Delete** to confirm.

Configuring Rate Code Access Exclusion

Use Rate Code Access Exclusion to excluded users at selected Hub(s) from managing reservations with this rate code.

Adding Rate Code Access Exclusion

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation page click the **Rate Access Exclusion** details link.
5. Click **New**.
    a. **Hub**: Select a hub(s) from the list
    b. **Begin Date**: Enter or select the start date for this exclusion .

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **End Date**: Enter or select the end date for this exclusion .

d. **Hide from Availability Screen**: Select this check box to prevent the rate code from being displayed in Look to Book to users at the select Hub(s).

e. **Allow Create/Modify Reservation**: Select this check box to allow a reservation to be created or modified by users at the selected Hub location.

f. **Allow Cancel Reservation**: Select this check box to allow a reservation to be canceled by users at the selected Hub location.

6. Click **Save**.

Editing Rate Code Access Exclusion

1. From the Administration menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation page click the **Rate Access Exclusion** details link.
5. Select the rate code exclusion, click the vertical ellipsis and select **Edit**.
   a. Update details
   b. **Inactive**. Select to inactivate this exclusion rule.
6. Click **Save**.

Deleting Rate Code Access Exclusion

1. From the Administration menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation page click the **Rate Access Exclusion** details link.
5. Select the rate code exclusion, click the vertical ellipsis and select **Delete**.
6. Click **Delete** to confirm

Configuring Rate Code Definition

> **Note**
>
> When modifying the **Rate Category** of an existing rate code, a confirmation message is displayed to update the **Start Sell** and **End Sell** dates according to the dates of the selected **Rate Category**.

Editing Rate Code Definition

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

4. On the Rate Code presentation page click the **Rate Definition** details link.
5. Click **Edit** and complete the following:
    a. **Property**: Enter or select the property
    b. **Rate Code**: Enter an alpha-numeric code (maximum **12** characters). Rate code is displayed in various areas such as Look to Book, reservation stay details and daily details and negotiated rates.
    c. **Start / End Sell Dates**: Enter the date range during which you can make a booking for this rate code; this defines the date range the rate is displayed in Look to Book (not to be confused with the stay dates / pricing schedule dates)
    d. **Privileged (Protected) Rate Code**: Select to lock the rate code and prevent users from editing or deleting it. When this check box is selected, various fields in the rate setup will be read-only to users without the Privilege Rates update task granted (Available when the **Rate Ownership** OPERA Control is active). For more information, see Configuring Rate Code Protection
    e. **Privileged Rate Restriction**: Select to lock down rate restrictions for this rate code and prevent other users from setting restrictions. Users without the Privileged Restrictions Update task granted will not be able to edit or delete rate restrictions for this rate code. Rate codes with this check box selected will not be available for selection from Rate Availability and is available for selection from Rate Code Restrictions.
    f. **Protection Type**: Select a value from the list. For more information, see Rate Code Protection
    g. **Description**: Enter a name/description of the rate code. The description is displayed in Look to Book based on the **Display Rate Description** OPERA Control
        i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
    h. **Room Types**: Select one or more room types to determine the room types eligible for setup of pricing schedules. This field may already be populated if the **Auto populate** check box is selected room type configuration. Room types may only be removed when there are no active pricing schedules configured for the room type.
    i. **Rate Category**: Select a rate category from the list. For more information, see Configure Rate Categories.
    j. **Market**: Select a default market code for new reservations from the list. For more information, see Configuring Market Codes.
    k. **Source**: Select a default source code for new reservations from the list. For more information, see Configuring Source Codes.
    l. **Display Set**: Select a display set from the list. For more information, see Configuring Display Sets.
    m. **Rate Group**: Select a rate group from the list (Available when the **Best Available Rates** and **Rate Groups** OPERA Controls are active). For more information, see Configuring Rate Groups.
    n. **Sequence**: Enter a display sequence for the rate code.
6. Click **Save**.

Configuring Rate Code Default Routing Instructions

Prerequisites for Rate Code Default Routing Instructions

When a rate code is selected (sold) for a reservation and a profile of the specified profile type (Agent, Company, Contact) is also linked to the reservation, OPERA Cloud can prompt you to attach the rate code default routing instructions to the reservation. If you reply Yes, sales charges for the specified transactions codes are automatically routed to a separate folio window in the reservation Billing screen with the linked profiles selected as the payee.

Managing Rate Code Default Routing

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation page click the **Routing Instructions** details link.
5. Click **Edit** and complete the following:
    a. **Profile Type**: Select the profile type from list that is eligible to accept charges for the chosen transaction codes
    b. **Instructions**: Select the routing codes or sales charge transaction codes that you want to route to a separate Billing folio window.
        i. In the Search panel search for routing codes and/or transaction codes, click **Search**.
        ii. Select one or more **Routing Codes** or **Transaction Codes** from the **Available** list and then click **>** to move to the selected panel.
        iii. Repeat as needed.
6. Click **Save**.

Hierarchy of Routing Instructions

It is possible that a reservation could be associated with a source, a contact, an agent, a company, and a rate code, each of which has its own associated routing instructions. In this case, the user will be prompted to select default routing instructions in the following order:

1. The **Source** profile linked to the reservation.
2. The **Agent** profile linked to the reservation.
3. The **Company** profile linked to the reservation.
4. The **Contact** profile linked to the reservation.
5. The **Rate Code** selected for the reservation.

Hierarchy of Routing Instructions for Profiles with Auto-Populate Routing Selected

When the Auto Populate check box is selected for the Profile Default Routing Instructions, then the following hierarchy is used:

1. Check the **Rate Code** has a profile type to be automatically attached to the reservation. If there is then, use this as the routing instruction on the reservation.
2. If not **Rate Code**, else check if there is an automatic routing instruction attached to the **Source** profile. If there is then, use this as the routing instruction on the reservation.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. If not **Source**, else check if there is an automatic routing instruction attached to the **Agent** profile. If there is then, use this as the routing instruction on the reservation.
4. If not **Agent**, else check if there is an automatic routing instruction attached to the **Company** profile. If there is then, use this as the routing instruction on the reservation.
5. If not **Company**, else check if there is an automatic routing instruction attached to the **Contact** profile.
6. If not **Contact**, else check if there is a routing instruction on the promotion codes.

Configuring Multi Transaction Code Rate Codes

Prerequisites for Configuring Multi Transaction Code Rate Codes.

The multi-transaction code rate code feature supports the selection of different room revenue transaction codes for individual room types or room classes. The functionality might be useful, for example, in situations where your property is divided into business units, and the lodging revenue for each unit needs to be tracked separately.

> **Note**
>
> You can use either room classes or room types to associate transaction codes to a specific rate code, but not both simultaneously. Lodging revenue generated on one reservation and routed to another room is posted to the transaction code linked to the room type or room class of the originating reservation and not that of the receiving reservation.

Adding Rate Code Multi Transaction Code Details

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria then click **Search**.
3. Select the rate code in the search result then click vertical ellipsis **Actions** menu and select **Edit**.
4. Click **Financials**.
   a. Click **Edit**.
   b. Select either **Room Type** or **Room Class**.
      i. **Transaction Code**: Select an accommodation charge transaction code for each room class or room type listed
      ii. Click **OK**.
   c. Click **Save**.

Editing Rate Code Multi Transaction Code Details

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria then click **Search**.
3. Select the rate code in the search result then click vertical ellipsis **Actions** menu and select **Edit**.
4. Click **Financials**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. Click **Edit**.

b. Click **Edit Details**.

   i. Update transaction code selection for each room class or room type listed.

   ii. Click **OK**.

c. Click **Save**.

Configuring Daily Rates

Prerequisites for Configuring Daily Rates.

Daily rates allow you to change the price schedule for each room type on a daily basis. This allows you to work with rates at a more detailed level by raising or lowering the pricing schedules for future dates "on the fly". Whether or not a yield management system is integrated with OPERA Cloud rates can be managed according to your daily needs. Daily rates can coexist with other traditional date range based rate codes.

Daily Rates can also be used with another feature called Daily Rates with Dynamic Base Rates. Daily Rates with Dynamic Base Rates provide dynamic calculations of daily rates. Through a different set up and configuration, OPERA Cloud makes the pricing schedule calculation and applies the lowest daily rate for the guest's stay, based on availability. For more information, see Dynamic Base Rates.

Up to 20 rate codes can be designated as 'Daily Rates''; the **Daily Rate** rate type checkbox is disabled once 20 rate codes are configured.

Adding Daily Rate

1. Create daily rate codes by using the Configuring Rate Codes presentation page.
2. Setup the rate code as a Daily Rate on the Rate Code Type. For more information, see Configuring Rate Code Type
3. Setup the Daily Pricing Schedule for each room type.

Configuring Daily Rates Pricing Schedule

Daily Rates pricing can be setup from the current business date for the period defined in the **Daily Rates Max Days** OPERA Control.

Click **View Options** to select optional fields to display. When the **Child Rates By Defined Buckets** or **Guest Age Categories** OPERA Control active you can select view age buckets. When the **Occupant Threshold Pricing Method** OPERA Control is active you can select to view **Occupant** options.

Adding or Updating (Replacing) Daily Rate Pricing by Date Range

1. From the **Administration** menu, select **Financial,** select **Rate Management,** and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. Select the rate code in the search result, then click vertical ellipsis **Actions** menu and select **Edit**.
4. On the Rate Code presentation screen, click **Pricing Schedules**.
5. Click **Set Rate Range**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

a. Click **Create / Replace Existing Pricing Schedule**.

b. Enter the following details to set the pricing schedule for the room class / room type and date range required.

c. **Room Class**: Select the room class(es) to which the daily rate pricing is to apply. (Available when the **Room Class function** is enabled)

d. **Room Type(s)**: Select the room types to which the daily rate pricing are to apply. All room types selected in the Rate Code Definition panel, including pseudo room types, are available.

> **Note**
>
> Included a 0.00 price for the PM pseudo room type in the event the Daily Rate code is sold in business blocks.

e. **Start Date**: Enter or select the start date for the pricing update.

f. **End Date**: Enter or select the end date for the pricing update.

g. **Days of the Week**: Select the days of the week to include within the date range you set. Deselect check boxes to exclude days within the date range.

h. **1 Adult**: Enter the 1-person occupancy price you want to apply for the date range.

i. **2 Adults**: Enter the 2- person occupancy price you want to apply for the date range.

j. **Extra Adult**: Specify an extra adult charge to add to the price for reservations with more than two adults. This extra charge is applied to the booking.

k. **Extra Child**: Specify an extra child charge to add to the price for reservations that have a child accompanied by an adult. This extra charge is applied to the booking.

l. **Child Rates by Age**: When the **Child Rates By Defined Buckets** OPERA Control is active.

    i. **Child Age Range** - Enter the price per child in this age range.

    ii. **Child Age Range** - Enter the price per child in this age range.

    iii. **Child Age Range** - Enter the price per child in this age range.

m. When the **Occupant Threshold Pricing** OPERA Control is active

    i. **Adults Threshold**: Enter the maximum threshold number for the number of adults per room and the amount to charge if this threshold number is exceeded.

    ii. **Adults Amount**: Enter an amount per adult to add to the price if adult threshold is exceeded

    iii. **Children Threshold**: Enter the maximum threshold number for the number of children per room and the amount to charge if this threshold number is exceeded.

    iv. **Children Amount**: Enter an amount per child to add to the price if child threshold is exceeded.

    v. **Occupants Threshold**: Enter the maximum threshold number for the number of occupants per room and the amount to charge if this threshold number is exceeded.

    vi. **Occupants Amount**: Enter an amount per occupant to add to the price if occupant threshold is exceeded.

6. Click **Save**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adjusting Daily Rate Pricing by Date Range

To incrementally adjust existing pricing.

1. From the **Administration** menu, select **Financial,** select **Rate Management,** and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. Select the rate code in the search result, then click vertical ellipsis **Actions** menu and select **Edit**.
4. On the Rate Code presentation screen, click **Pricing Schedules**.
5. Click **Set Rate Range**.
   a. Click **Add / Subtract Existing Pricing Schedule**.
   b. Enter the following details to set the pricing schedule for the room class / room type and date range required.
   c. **Room Class**: Select the room class(es) to which the daily rate pricing is to apply. (Available when the Room Class function is enabled)
   d. **Room Type(s)**: Select the room types to which the daily rate pricing are to apply. All room types selected in the Rate Code Definition panel, including pseudo room types, are available.

      > **Note**
      >
      > Included a 0.00 price for the PM pseudo room type in the event the Daily Rate code is sold in business blocks.

   e. **Start Date**: Enter or select the start date for the pricing update.
   f. **End Date**: Enter or select the end date for the pricing update.
   g. **Days of the Week**: Select the days of the week to include within the date range you set. Deselect check boxes to exclude days within the date range.
   h. **1 Adult**: Enter the 1-person occupancy price adjustment you want to apply for the date range.
   i. **2 Adults**: Enter the 2- person occupancy price adjustment you want to apply for the date range.
   j. **Extra Adult**: Specify an extra adult charge adjustment for reservations with more than two adults. This extra charge is applied to the booking.
   k. **Extra Child**: Specify an extra child charge adjustment for reservations that have a child accompanied by an adult. This extra charge is applied to the booking.
6. Click **Set Rate Range**.
   a. Click **Create / Replace Existing Pricing Schedule**.
   b. Enter the following details to set the pricing schedule for the room class / room type and date range required.
   c. **Room Class**: Select the room class(es) to which the daily rate pricing is to apply. (Available when the **Room Class function** is enabled)

Copyright © 2016, 2025, Oracle and/or its affiliates.

d. **Room Type(s)**: Select the room types to which the daily rate pricing are to apply. All room types selected in the Rate Code Definition panel, including pseudo room types, are available.

> **Note**
>
> Included a 0.00 price for the PM pseudo room type in the event the Daily Rate code is sold in business blocks.

e. **Start Date**: Enter or select the start date for the pricing update.

f. **End Date**: Enter or select the end date for the pricing update.

g. **Days of the Week**: Select the days of the week to include within the date range you set. Deselect check boxes to exclude days within the date range.

h. **1 Adult**: Enter the 1-person occupancy price you want to apply for the date range.

i. **2 Adults**: Enter the 2- person occupancy price you want to apply for the date range.

j. **Extra Adult**: Specify an extra adult charge to add to the price for reservations with more than two adults. This extra charge is applied to the booking.

k. **Extra Child**: Specify an extra child charge to add to the price for reservations that have a child accompanied by an adult. This extra charge is applied to the booking.

l. **Child Rates by Age**: When the **Child Rates By Defined Buckets** OPERA Control is active.

   i. **Child Age Range (0 - 2)** - Enter the price per child in this age range.

   ii. **Child Age Range (3 - 6)** - Enter the price per child in this age range.

   iii. **Child Age Range (7 - 10)** - Enter the price per child in this age range.

m. When the **Occupant Threshold Pricing** OPERA Control is active

   i. **Adults Threshold**: Enter the maximum threshold number for the number of adults per room and the amount to charge if this threshold number is exceeded.

   ii. **Adults Amount**: Enter an amount per adult to add to the price if adult threshold is exceeded

   iii. **Children Threshold**: Enter the maximum threshold number for the number of children per room and the amount to charge if this threshold number is exceeded.

   iv. **Children Amount**: Enter an amount per child to add to the price if child threshold is exceeded.

   v. **Occupants Threshold**: Enter the maximum threshold number for the number of occupants per room and the amount to charge if this threshold number is exceeded.

   vi. **Occupants Amount**: Enter an amount per occupant to add to the price if occupant threshold is exceeded.

7. Click **Save**.

Deleting Daily Rate Pricing Schedules

The Delete Daily Rate Pricing Schedules for a Date Range enables you to apply mass updates to rate amounts based on the room type, room class, days of the week, and date range entered.

Copyright © 2016, 2025, Oracle and/or its affiliates.

1. From the **Administration** menu, select **Financial,** select **Rate Management,** and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. Select the rate code in the search result, then click vertical ellipsis **Actions** menu and select **Edit**.
4. On the Rate Code presentation screen, click **Pricing Schedules**.
5. Click **Set Rate Range**.
   a. Click **Delete Existing Pricing Schedule**.
   b. Enter the following details to set the pricing schedule for the room class / room type and date range required.
   c. **Room Class**: Select the room class(es) to which the daily rate pricing is to apply. (Available when the **Room Class function** is enabled).
   d. **Room Type(s)**: Select the room types to which the daily rate pricing are to apply. All room types selected in the Rate Code Definition panel, including pseudo room types, are available.

      > **Note**
      >
      > Included a 0.00 price for the PM pseudo room type in the event the Daily Rate code is sold in business blocks.

   e. **Start Date**: Enter or select the start date for the pricing deletion.
   f. **End Date**: Enter or select the end date for the pricing deletion.
   g. **Days of the Week**: Select the days of the week to include within the date range you set. Deselect check boxes to exclude days within the date range.
   h. Click **Save**.

Adding or Editing Daily Rates Pricing Schedules Inline

The Daily Rate calendar displays all room types and their rate amounts from the Start date you searched. You can update individual rate amounts for a specific date, room type, adult and extra adult, or child directly in the calendar.

Click the navigation arrows **< >** on the calendar header to advance or revert the dates by seven days.

1. From the **Administration** menu, select **Financial,** select **Rate Management,** and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click vertical ellipsis, select **Edit**.
4. On the Rate Code presentation screen, click **Pricing Schedules**.
5. Enter search criteria then click Search.
6. Click **Edit**.
7. The rate amount fields for **1 Adult**, **2 Adult**, **Extra Adult**, and **Extra Child** are enabled for editing.
8. Click **Set Rate Range**.
   a. Click **Create / Replace Existing Pricing Schedule**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

b. Enter the following details to set the pricing schedule for the room class / room type and date range required.

c. **Room Class**: Select the room class(es) to which the daily rate pricing is to apply. (Available when the Room Class function is enabled)

d. **Room Type(s)**: Select the room types to which the daily rate pricing are to apply. All room types selected in the Rate Code Definition panel, including pseudo room types, are available.

> **Note**
>
> Included a 0.00 price for the PM pseudo room type in the event the Daily Rate code is sold in business blocks.

e. **Start Date**: Enter or select the start date for the pricing update.

f. **End Date**: Enter or select the end date for the pricing update.

g. **Days of the Week**: Select the days of the week to include within the date range you set. Deselect check boxes to exclude days within the date range.

h. **1 Adult**: Enter the 1-person occupancy price you want to apply for the date range.

i. **2 Adults**: Enter the 2- person occupancy price you want to apply for the date range.

j. **Extra Adult**: Specify an extra adult charge to add to the price for reservations with more than two adults. This extra charge is applied to the booking.

k. **Extra Child**: Specify an extra child charge to add to the price for reservations that have a child accompanied by an adult. This extra charge is applied to the booking.

l. **Child Rates by Age**: When the **Child Rates By Defined Buckets** OPERA Control is active.

   i. **Child Age Range** - Enter the price per child in this age range.

   ii. **Child Age Range** - Enter the price per child in this age range.

   iii. **Child Age Range** - Enter the price per child in this age range.

m. When the **Occupant Threshold Pricing** OPERA Control is active

   i. **Adults Threshold**: Enter the maximum threshold number for the number of adults per room and the amount to charge if this threshold number is exceeded.

   ii. **Adults Amount**: Enter an amount per adult to add to the price if adult threshold is exceeded

   iii. **Children Threshold**: Enter the maximum threshold number for the number of children per room and the amount to charge if this threshold number is exceeded.

   iv. **Children Amount**: Enter an amount per child to add to the price if child threshold is exceeded.

   v. **Occupants Threshold**: Enter the maximum threshold number for the number of occupants per room and the amount to charge if this threshold number is exceeded.

   vi. **Occupants Amount**: Enter an amount per occupant to add to the price if occupant threshold is exceeded.

9. Enter or update pricing for each date and room type as required.

10. Click **Save**.

Configuring Best Available Rate Schedules

Prerequisites for Configuring Best Available Rate Schedules

The Best Available Rates Scheduler allows you to schedule the availability of your Best Available Rates by Day and/or Length of Stay, depending on the setting selected for the **Best Available Rate Type** OPERA Control.

When you initiate an availability search from Look To Book, the Best Available Rates display set returns the best available rates scheduled for that day and/or length of stay.

> **Note**
>
> Only rate codes configured as Best Available Rate Code Type are available for scheduling.

Adding Best Available Rate Schedules

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Best Available Rate Schedule**.
2. Click **New** and complete the following fields:
   a. **Property**: Enter or select the property.
   b. **Rate Code**: Enter or select one or more rate codes from the list. Note: You can create multiple rate codes in the same action when the **Best Available Rate Type** OPERA Control is set to BAR by Day.
   c. **From Date**: Enter or select the from date of the schedule.
   d. **To Date**: Enter or select the end date of the schedule (no greater than five years after the From Date).
   e. **Days of Week**: Select the days of the week for the schedule.
   f. **Length of Stay**: Select the length of stays for the schedule (Available when the **Best Available Rate Type** OPERA Control is set to BAR by Length of Stay).
3. Click **Save** or click **Save and Continue** to add another.

Deleting Best Available Rate Schedules

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Best Available Rate Schedule**.
2. Enter search criteria and click **Search**.
3. From the search result, select the **Rate Schedule**, click the **vertical ellipsis**, and select **Delete**.

Deleting Multiple Best Available Rate Schedules

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Best Available Rate Schedule**.
2. Click **Mass Delete** and complete the following fields:
   a. **Property**: Enter or select the Property.
   b. **Rate Code**: Enter or select one or more rate codes from the list.

Copyright © 2016, 2025, Oracle and/or its affiliates.

c. **From Date**: Enter or select the from date of the schedule.

d. **To Date**: Enter or select the end date of the schedule (no greater than five years after the From Date).

e. **Days of Week**: Select the days of the week to be deleted.

f. **Length of Stay**: Select the length of stays to be deleted (enabled when the Best Available Rate Type OPERA Control is set to BAR by Length of Stay).

3. Click **Delete**.

About Occupant Threshold Pricing

Prerequisites for Occupant Threshold Pricing

With Occupant Threshold Pricing, fixed values can be setup based on the number of Adults, Children, and/or Occupants for one or more room types. Once any of these variables is exceeded for a reservation, the fixed amount specified is added to the price , per Occupant, Adult, Children or any combination as defined.

The following fields can be used independently of each other or used in combination to define the occupant threshold.

- **Adults**: Enter the maximum threshold number of adults per room and the amount to charge if the adult threshold number is exceeded.
- **Children**: Enter the maximum threshold for the number of children per room and the amount to charge if the child threshold number is exceeded.
- **Occupants**: Enter the maximum threshold number for the number of occupants per room and the amount to charge if the occupancy threshold number is exceeded.

> **Note**
>
> When the **Base Rate Extra Person Calculation** OPERA Control is active, Base Rate rules will then apply to the threshold amounts for Base Rates only. From a Dynamic Base Rate and Advance Dynamic Based Rates point of view, threshold amounts will not be included in the calculation when calculating pricing for these two rate types.

Occupant Threshold Pricing Example

Rate Code : SPECIAL

Pricing Schedule

Room Types : APT2, APT3

Adult - $100.00

Child - $100.00

Occupancy Thresholds

Adults : Threshold = 3 / Amount = $20.00

Children : Threshold = 3 / Amount = $10.00

Occupants : Threshold = 4 / Amount = $50.00

Copyright © 2016, 2025, Oracle and/or its affiliates.

Reservation

Nights = 1

Rate Code = SPECIAL

Room Type = APT3

The following lists the prices calculated based on the number of occupants for the reservation :

Adults	Children	Price	Calculation
1	1	$100.00	Below all thresholds
2	2	$100.00	Below all thresholds
3	3	$200.00	Exceeds Occupancy threshold - an additional $50.00 added for each occupant over the threshold of 4 $100.00+$50.00+$50.00
4	4	$330.00	Exceeds Adult threshold of 3 - an additional $20.00 added for every adult over the threshold Exceed Child threshold of 3 - an additional $10.00 added for every child over the threshold Exceeds Occupancy threshold of 4 - an additional $50.00 for every occupant over the threshold $100.00+$20.00+$10.00+$50.00+$50.00+$50.00+$50.00
5	5	$460.00	Exceeds Adult threshold of 3 - an additional $20.00 added for every adult over the threshold Exceed Child threshold of 3 - an additional $10.00 added for every child over the threshold Exceeds Occupancy threshold of 4 - an additional $50.00 for every occupant over the threshold $100.00+$20.00+$20.00+$10.00+$10.00+$50.00+$50.00+$50.00+$50.00+$50.00+$50.00

Note

When the **Child Rates By Defined Buckets** OPERA Control is active and prices have been specified for these child age buckets, then these prices will also be included in the calculation of the occupant threshold pricing.

About Child Age Buckets

Child Rates By Defined Buckets function lets you set separate rates based on the number of children when the children are staying in the room without an adult. Rates can be set for one child, two children, three children, and four children. When the number of children staying in a room with or without an adult is greater than the number for which separate rates have been specified, an Extra Child price is applied.

Copyright © 2016, 2025, Oracle and/or its affiliates.

The handling of children rates depends on the **Child Rates By Defined Buckets** OPERA controls; if inactive, the **Extra Child** price is used.

When there are children staying in the room with an adult, the rate for each child is determined by the child's age. The child age buckets are also used when there are children staying in the room without an adult and the number of children is greater than the number for which "Children on Own" rates are specified. In this case that the rate for any extra children is determined by the age bucket to which the youngest child in the entire group belongs. For example, if four children, ages 3, 4, 7, and 11 years are staying in their own room, and rates for 1 Child, 2 Children, and 3 Children have been specified, but not a rate for 4 Children, the rate would be the rate for 3 Children plus the rate for one child 0-5 years, because the youngest child is 3.

Excluding Child Age Buckets from Threshold Calculations

When the **Occupant Threshold Pricing Method** and **Child Rates By Defined Buckets** OPERA controls are active, child age buckets can be excluded from the occupant threshold calculations. Selecting the **Exclude** check box next to a child age bucket excludes the bucket from being used to determine if a threshold has been excluded.

Following are some examples on how this functionality works:

Example 1

- **Reservation Guests**: 2 Adults, 3 Children - 1 in each bucket
- **Pricing Schedule Value**: 1 child free per every 3 children booked per room
- **Charges Result**: 2 Adults and 2 Children will be charged for the stay, but the child in Rate Bucket 1 will not be charged

Example 2

- **Reservation Guests**: 2 Adults, 8 Children - 1 in Rate Bucket 1, 1 in Rate Bucket 2, 6 in Rate Bucket 3
- **Pricing Schedule Value**: 1 child free per every 4 children booked per room
- **Charges Result**: 2 Adults and 6 Children will be charged for the stay, but 1 child in Rate Bucket 1 and 1 child in Rate Bucket 2 will not be charged.

Free Child Rates By Defined Buckets

When the **Free Child Rates By Defined Buckets** OPERA Control is active, a **1 Child Every Free** field is visible in the rate code pricing schedule to determine, when one child is to be excluded from child rate calculation. Following are some examples on how this functionality works:

- Example 1 Reservation Guests: 2 Adults, 3 Children - 1 in each bucket

  Pricing Schedule Value: 1 child free per every 3 children booked per room

  Charges Result: 2 Adults and 2 Children will be charged for the stay, but the child in Rate Bucket 1 will not be charged
- Example 2 Reservation Guests: 2 Adults, 4Children - 1 in Rate Bucket 1, 1 in Rate Bucket 2, 2 in Rate Bucket 3

  Pricing Schedule Value: 1 child free per every 4 children booked per room

  Charges Result: 2 Adults and 3 Children will be charged for the stay, but the child in Rate Bucket 1 will not be charged.

About Rate Code Posting Rhythms

Prerequisites for Rate Code Posting Rhythm

Rate Code Posting Rhythm is used to setup a free nights based on length of stay.

> **Note**
>
> Posting rhythm functionality can be used with daily rates. When configuring a Dynamic Base Rate or an Advanced Dynamic Base Rate, the **Posting Rhythm** field defaults to the Base Rate configuration and you can change the **Posting Rhythm** to a different value. When a rate is BAR based, the **Posting Rhythm** is not inherited because there may be multiple rates configured as BAR.

The Posting Rhythms are exchanged through OXI XML messages based on the Handle Rates Posting Rhythm OXI parameter.

Do Not Post Every X Night

This functionality is used to offer a free night based on the length of stay and define which night will be offered as the free night. Optionally, you may specify whether packages (both packages attached to the rate code and packages attached to the reservation) should be posted.

> **Note**
>
> Reservation Fixed Charges are not affected by this feature and will continue to post to the reservation account.

> **Note**
>
> If the transaction code associated with the rate code has a tax generate configured using the Amount option (that is, the generate is a flat amount rather than a percentage of accommodation charge), then the tax generate will be posted to the reservation account every night even if the rate amount is not posted.

The following fields are available when Do Not Post Every X Nights is selected as the Posting Rhythm.

- **Nights**: Enter a number for the specific posting rhythm which will define how many days a guest must stay before the rate amount will post as 0.00, giving the guest a promotional free night. For example, if you enter a 3 into this field, and the guest is staying for 3 nights, the room charge for the third night accommodation will post as 0.00 in the reservation account. (The maximum value that can be entered is 14).

  > **Note**
  >
  > As the Rate Amount is posted as 0.00 for the reservation, this will not be displayed on the guest folio.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Post Packages

Available when you have defined a value for the Do Not Post Every X Nights field. Select this check box if, on the "free" night, you want to post charges for packages that are included in the rate code and packages attached to the reservation. (Selecting this check box affects only packages that have a posting rhythm, which would make them eligible for posting on the "free" night).

> **Note**
>
> When the check box is unchecked, the system will not post any associated packages with this posting rhythm. When this check box is checked, the system will post any associated packages with this posting rhythm. Any associated packages will post as they currently do today albeit inclusively or exclusively.

If the **Post Packages** check box is unchecked (such as, do not post packages) then on the free night where accommodation posts as 0.00, no packages and no allowances (loss or profit) will post. If the **Post Packages** check box is selected (such as, post packages) then on the free night where accommodation posts as 0.00, the associated packages and allowances (loss of profit) will post and will result in negative room revenue for package items included in the rate.

When a package attached to a rate code is configured as Add to Rate Combined Line or Add to Rate Separate Line and the **Post Packages** check box is selected, the rate amount on the reservation for the "free night" will still reflect the package amount, as will the Rate Information. (This behavior is the same as when you have a 0 amount rate code and an Add to Rate Combined Line package).

For example:

A rate code with a rate amount of $100 includes a $50 package that is setup as Add to Rate Combined Line. The **Posting Rhythm** for the rate code is "Do Not post every 2 nights" and Post Packages is selected. When you perform a search in Look to Book for a 2-night stay, the rate information will show the first night with Room Revenue = $100 and Package Revenue = 0. The second night will show Room Revenue = 0 and Package Revenue = $50.

Configuring Advanced Rate Code Posting Rhythms

Prerequisites for Configuring Advanced Rate Code Posting Rhythms

With the **Advanced Rate Code Posting Rhythm** OPERA Control enabled you can configure **Buy X Nights, Get Y Nights Free** promotional rate codes.

For each rate you define a required length of stay in order to receive free night(s). Multiple posting rhythm rules can be defined for a rate code, however there cannot be overlapping dates. For example, a promotion may be offered for the month of June where guests who stay 7 nights will receive 2 free nights. Additionally, you can choose to repeat the posting rhythm within a stay for multi-segment reservations and/or repeat within the sell segment.

OPERA Cloud will recognize when the free night(s) occur during the reservation and ensures no accommodation revenue is posted.

Package items selected on the rate code or sold separately in the reservation will continue to post; for zero rate **free nights** this will result in negative room revenue for package items included in the rate.

Copyright © 2016, 2025, Oracle and/or its affiliates.

Adding Advanced Posting Rhythm Rules for Rate Codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. From search results, select the rate code and click **Vertical Ellipsis**, select **Edit**.
4. Select the **Financials** link.
5. Select the **Posting Rhythms** tab.
6. Click **New** and enter the following details:
    a. **Code**: Enter a code to identify the posting rhythm rule. This field is read-only once the posting rhythm rule has been saved.
    b. **Description**: Enter a description of the posting rhythm.
    c. **Begin Sell Date**: Enter or select the start date.
    d. **End Sell Date**: Enter or select an end date.
    e. **Required Paid Nights**: Enter the number of nights required to receive free nights. The value must be between 1 and 99.
    f. **Eligible Free Nights**: Enter the number of free nights after achieving the required number of paid nights. The value must be between 1 and 99.
    g. **Repeat Within Stay for Multi-Segment**: Select to allow more than a single redemption of an advanced rate code posting rhythm offer during the entire stay.
    h. **Repeat Within Sell Segment**: Select to allow more than a single redemption of an advanced rate code posting rhythm offer within a specific sell segment within the entire reservation
    i. Click **Save**.

Editing Advanced Posting Rhythm Rules for Rate Codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.
3. Select the rate code in the search result, then click vertical ellipsis **Actions** menu select **Edit**.
    a. Click the **Financials** link.
    b. Select the **Posting Rhythms** tab.
    c. Select the Posting Rhythm rule then click the vertical ellipsis **Actions** menu and select **Edit**.
    d. Update details.
    e. Click **Save**.

Deleting Advanced Posting Rhythm Rules for Rate Codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Rate Codes**.
2. Enter search criteria and click **Search**.

Copyright © 2016, 2025, Oracle and/or its affiliates.

3. Select the rate code in the search result, then click vertical ellipsis **Actions** menu select **Edit**.
   a. Click the **Financials** link.
   b. Select the **Posting Rhythms** tab.
   c. Select the Posting Rhythm rule then click the vertical ellipsis **Actions** menu and select **Delete**.
   d. Click **Delete** to confirm.

Rate Ownership

Rate ownership handling is useful if your organization wants to identify rates that are managed by the property versus rates managed centrally. When the **Rate Ownership Handling** OPERA Control is active a **Protection Type** list field is displayed in Rate Code Definition.

Table 13-23 Four Levels of Rate Ownership

Types	Description
Property	Property Protection applies to all rate codes that are indicated as owned by Property. The Property Protection is available for editing when the **Rate Ownership Handling** OPERA Control is active. By default, all fields are editable for users with the applicable tasks granted to their user role. Users with the **Override Property Rate Protection** task granted are able to update the configuration.
Custom	Custom Protection applies to all rate codes that are generated in OPERA Cloud and whose ownership is not set to Central or Property. The Custom Protection is available for editing and by default allows for all fields to be editable by users with the applicable tasks granted to their user role. Users with the **Override Custom Rate Protection** task granted are able to update the configuration.
Central	Central Protection applies to all rate codes indicated as owned by Central. The Central Protection is available for editing when the **Rate Ownership Handling** OPERA Control is active. By default, all fields are editable for users with the applicable tasks granted to their user role. Users with the **Override Central Rate Protection** task granted are able to update the configuration.
External	External Protection applies to rate codes defined outside of OPERA Cloud in an external Central Reservations System or Revenue Management system. With External Protection, all fields and detail links are read only. Users with the **Override External Rate** task granted can update the following: • Pricing Schedule • Rate Code Definition (except Privileged Rate code and Protection Type) • Rate Code Package • Rate Code Type • Rate Control and Web Channel • Rate Information • Negotiated Profile • Routing Instructions • Financial

About Tiered Rate Codes

Prerequisites for Rate Tiers

Copyright © 2016, 2025, Oracle and/or its affiliates.

Tiered Rates allows you to setup pricing schedules by length of stay. The extended-stay concept of rate tiers is usually "the longer the guest stays, the lower the rate the guest pays". For example: a reservation with a stay within Tier 1 (1 -5 nights) would pay a rate of $180 per night; whereas a reservation that extends into the second stay tier (6-15 nights) would pay a rate of $160 per night, commencing from the first night of the stay.

Between 2 and 5 rate tiers can be configured for your property in Rate Management OPERA Controls. As the tiers are configured, the next tier set automatically defaults to the start day of +1 from the end day of the last tier. For example, if tier 1 is configured from 1 -5 days. Tier 2 automatically starts from day 6 by default and you cannot edit it unless the first tier end date is altered.

You can manage rate restrictions of tiered rates by placing a Min. Stay Through restriction or a Max Stay Through restriction at the rate code level. Any restriction placed at the rate code level is applicable to all pricing schedules, and thus tiers within that rate code. For example: If Tier 1 equals 1-5 nights, and a 3-night Min. Stay Through restriction is set at the rate code level, OPERA Cloud does not allow you to sell one-night stays and two-night stays for that rate code but will allow you to sell three-night stays and greater for that rate code.

When a tiered rate is sold in a Block allocation, OPERA Cloud uses the lowest tier for revenue forecasting.

Configuring Tiered Rates

To configure a tiered rate code, select the **Tiered Rates** check box on the Rate Code Type panel.

> **Note**
>
> OPERA Cloud prevents you from changing an existing standard rate to a tiered rate. Therefore, all rates that have at least one standard pricing schedule configured will cause the Tiered Rates check box to be disabled for update.

Base Rate fields (available when **Base Rate** OPERA Control is active) are removed when a rate code is indicated as a Tiered Rate.

The configured tiers are displayed in the Pricing Schedules panel. For example, if 2 stay tiers are configured, only 2 tiers are visible in the Pricing Schedules panel. You can add the tier pricing schedules either by date ranges or seasons.

> **Note**
>
> The Market, Source and Package fields do not appear on the Pricing Schedules panel; this is to ensure that the compiling of statistics and posting of package allowances is correct and does not cause imbalances.

For more information, see Configuring Rate Codes.

Rate Tiers Calculation

Tier amounts are applied only to the dependent rates, not the base rate Available when **Rate Tiers Calculation** OPERA Control is active.

Copyright © 2016, 2025, Oracle and/or its affiliates.

- **DAILY**: The rate amount is calculated per day, applying the configured tiers and specific amounts based on the corresponding day range.
- **FIRST TIER**: The rate amount for the entire stay is determined by the amount specified in the first tier, irrespective of the duration of the stay.
- **ENTIRE STAY**: The rate amount for the entire stay is determined by the tier that aligns with the total number of nights.

Configuring Rate Code Protection

Prerequisites for Configuring Rate Code Protection

Rate Code Protection prohibits users from updating certain attributes of a rate code. You can flag attributes as protected and limit who can make changes. User assigned to roles granted Override Custom Rate Protection, Override Property Rate Protection, Override Central Rate Protection tasks have the ability to update the protected attribute. The rate ownership is selected in rate code definition.

Editing Rate Code Protection

1. From the **Administration** menu, select **Financial**, then **Rate Management**, and then **Rate Code Protection**.
2. Enter or select the property and click **Search**.
3. Click **Edit**.
4. Expand the screen/field name sections.
5. **Rate Ownership**: Select check boxes to nominate who has the ability to make rate code changes.
    a. **Custom**: Nominate these attributes as editable for rate codes that are created within OPERA Cloud and not indicated as owned by Property or Central.
    b. **External**: Nominate these attributes as editable for rate codes that are managed by an external system.
    c. **Property**: Nominate these attributes as editable for rate codes that are identified as Property ownership (Available when the **Rate Ownership Handling** OPERA Control is active).
    d. **Central**: Nominate these attributes as editable for rate codes that are indicated as Central ownership (Available when the **Rate Ownership Handling** OPERA Control is active).
6. Click **Save**.

Configuring Promotion Groups

Prerequisites for Configuring Promotion Groups

Promotion groups provide a way to group multiple promotion programs around a common theme. For example, you might create a promotion group called Summer Program and then create separate promotion codes for special rates or amenities to offer to guests during the summer months. You must create promotion groups prior to creating promotion codes. When the **Membership Promotions** OPERA Control is active, the Profile promotion group is created automatically.

Copyright © 2016, 2025, Oracle and/or its affiliates.

> **Note**
>
> When the **Multi Property** OPERA Control is active, new Promotion Groups are created by selecting the **Template** tab. Once created, you can copy Promotion Groups to specific properties using the Copy action. See Copying Configuration Codes to Multiple Properties for more information.

Adding Promotion Groups

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Promotion Groups**.
2. Click **New** and enter the following details:
   a. **Promotion Group (Code)**: Enter a code for the Promotion group.
   b. **Promotion Group Name**: Enter a name for the Promotion group.
   c. **Program Type**: Enter the type of promotion group (e.g., radio, TV, Internet/Web, email, etc.).
   d. **Description**: Enter a description of the promotion group.
3. Click **Save** or **Save and Continue** to add another Promotion Group.

Editing Promotion Groups

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Promotion Groups**.
2. Enter search criteria and click **Search**.
3. From search results, select the promotion group, then click the vertical ellipsis **Actions** menu and select **Edit**.
4. Update the configuration.
5. **Inactive**: Select check box to mark as inactive.
6. Click **Save**.

Deleting Promotion Groups

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then select **Promotion Groups**.
2. Enter search criteria and click **Search**.
3. From search results, select the promotion group, then click the vertical ellipsis **Actions** menu and select **Delete**.
4. Click **Delete** to confirm.

Configuring Promotion Codes

Prerequisites for Promotion Codes

Promotion Coupon Codes are used to configure, track promotional campaigns. Various rate codes can be linked to a promotion code which are displayed to reservation agents in Look To Book when filtering room and rate availability based on a promotion search. When the **Hide Promotion Rates** OPERA Control is active, rate codes linked to a promotion code are not displayed in Look to Book sales screen when the promotion is not selected for the availability

Copyright © 2016, 2025, Oracle and/or its affiliates.

search. When the **Membership Promotions** OPERA Control is active, promotion codes for the Profile Promotion Group can be configured.

Prior to configuring promotion codes ensure you have configured Promotion Groups and Rate Codes.

Adding Promotion Codes

1. From the **Administration** menu, select **Financial**, select **Rate Management**, and then **Promotion Codes**.
2. Enter search criteria, then click **Search**.
3. Click **Generate** and enter the following details:

> **Note**
>
> Promotion Codes for the Profile **Promotion Group** can only be created by selecting the **Template** tab. Promotion codes for Profile **Promotion Group** that are created with the **Global** check box selected are copied to all properties and are not editable from a property location.

   a. **Property**: Confirm or select the property.
   b. **Promotion Code**: Enter an alphanumeric code for the promotion; this code cannot be changed once the promotion code is saved.
   c. **Description**: Enter the description of the promotion.
      i. **Manage Translation**: Click link to configure localized descriptions. For more information, see Configuring Localized Code Descriptions. (Available when the **Multi Language** OPERA Control is active).
   d. **Promotion Group**: Select the Promotion Group from the list. Profile group can be selected when the **Membership Promotions** OPERA Control is active.
   e. **Category**: Enter a category for the highlighted promotion code. You may enter any information, such as the membership program or level.
   f. **Booking Start Date**: Define the selling start date to determine the time frame this promotion code is active (Available only for reservation promotion codes).
