## Introduction

The CMN\_PROFILE\_ENTERPRISE table contains values that control the behavior of all enterprises in the Oracle Argus Insight application.

You can update many of these values by modifying the Profile Switches in the List Maintenance tab on the ADMINISTRATION TOOLS page in Oracle Argus Insight.

Other values you can access and update only through direct SQL statements.

In addition to the CMN\_PROFILE\_ENTERPRISE table, the CMN\_PROFILE\_GLOBAL table contains values that control the behavior of Oracle Argus Insight. For more information about the modifying the profile global switches, see the *Oracle Argus Insight Common Profile Global Table Guide* and the following:

- [Internal Use Rows](#)
- [About the Columns in the CMN\\_PROFILE\\_ENTERPRISE Table](#)
- [Examples of Modifying the CMN\\_PROFILE\\_ENTERPRISE Table](#)

## Internal Use Rows

During the initial Factory Data load when the database is created, the system creates several *Internal Use* rows. As the name implies, these rows of values are for Oracle Argus Insight internal use only.

Do not modify any values in the internal use rows.

## About the Columns in the CMN\_PROFILE\_ENTERPRISE Table

Each profile switch described in this guide includes the following information:

- **Section**—Lists the name of the section within the CMN\_PROFILE\_ENTERPRISE table that has the profile switch. The sections are as follows:
  - SYSTEM
  - DATABASE
- **Key**—Lists the unique name for the profile switch.
- **Company Defined**—Indicates the method you can use to modify the profile switch:
  - **0** = Indicates you can modify this profile switch only by issuing direct SQL statements. You should modify these profile switches with assistance from Oracle Support.
  - **1** = Indicates you can modify this profile switch either by using the options in the List Maintenance tab in the Oracle Argus Insight application or by issuing direct SQL statements.
- **Name**—Lists the name of the profile switch as displayed in the List Maintenance tab in the Oracle Argus Insight application.

- **Default Value**—Lists the default value, if defined.
- **Description**—Provides more information about the function of the profile switch.

## Examples of Modifying the CMN\_PROFILE\_ENTERPRISE Table

This section provides sample SQL for how to update and insert values in the CMN\_PROFILE\_ENTERPRISE table in the database.

Note that values, as specified, are case sensitive.

### Updating an Existing Value

To update an existing value in the CMN\_PROFILE\_ENTERPRISE table:

```
UPDATE CMN_PROFILE_ENTERPRISE set value = '10'  
WHERE section = 'DATABASE' AND key = 'ABC' AND ENTERPRISE_ID = 2;  
commit;
```

### Inserting a New Row of Values

To insert a new row of values into the CMN\_PROFILE\_ENTERPRISE table:

```
INSERT into CMN_PROFILE_ENTERPRISE (section, key, company_defined,  
name, value, description, enterprise_id)  
values ('DATABASE', 'ABC', '0', 'ABC', '10', 'ABC_DEF_XYZ', 2);  
commit;
```
