

Oracle® Retail Brand Compliance Management Cloud Service Release Readiness Guide

Release 24.0.101.0

F89461-02

March 2024

The Oracle logo, consisting of a solid red square with the word "ORACLE" in white, uppercase, sans-serif font centered within it.

ORACLE®

Copyright © 2024, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

Required Spreadsheet Updates	1-7
Database Update Scripts	1-8
Enabling Identity Management Notifications	1-8
Enabling User Roles	1-8
Enabling Artwork with SSO	1-8
IDCS Changes	1-9

2 Browser Requirements

3 Noteworthy Resolved Issues

4 Deprecated Features

Preface

This guide outlines the information you need to know about Oracle Retail Brand Compliance Management Cloud Service new or improved functionality in this update, and describes any tasks you might need to perform for the update. Each section includes a brief description of the feature, the steps you need to take to enable or begin using the feature, any tips or considerations that you should keep in mind, and the resources available to help you.

Audience

This document is intended for the users and administrators of the Oracle Retail Brand Compliance Management Cloud Service.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Customer Support

To contact Oracle Customer Support, access My Oracle Support at the following URL: <https://support.oracle.com>

When contacting Customer Support, please provide the following:

- Product version and program/module name
- Functional and technical description of the problem (include business impact)
- Detailed step-by-step instructions to re-create
- Exact error message received
- Screen shots of each step you take

Oracle Help Center (docs.oracle.com)

Oracle Retail product documentation is available on the Oracle Help Center at <https://docs.oracle.com/en/industries/retail/index.html>.

(Data Model documents can be obtained through My Oracle Support.)

Comments and Suggestions

Please give us feedback about Oracle Retail Help and Guides. You can send an e-mail to: retail-doc_us@oracle.com

Oracle Retail Cloud Services and Business Agility

Oracle Retail Brand Compliance Management Cloud Service is hosted in the Oracle Cloud with the security features inherent to Oracle technology and a robust data center classification, providing significant uptime. The Oracle Cloud team is responsible for installing, monitoring, patching, and upgrading retail software.

Included in the service is continuous technical support, access to software feature enhancements, hardware upgrades, and disaster recovery. The Cloud Service model helps to free customer IT resources from the need to perform these tasks, giving retailers greater business agility to respond to changing technologies and to perform more value-added tasks focused on business processes and innovation.

Oracle Retail Software Cloud Service is acquired exclusively through a subscription service (SaaS) model. This shifts funding from a capital investment in software to an operational expense. Subscription-based pricing for retail applications offers flexibility and cost effectiveness.

1

Feature Summary

This chapter describes the feature enhancements in this release.

Noteworthy Enhancements

This guide outlines the information you need to know about new or improved functionality in the Oracle Retail Brand Compliance Management Cloud Service update and describes any tasks you might need to perform for the update. Each section includes a brief description of the feature, the steps you need to take to enable or begin using the feature, any tips or considerations that you should keep in mind, and the resources available to help you.

Note:

Where new fields, User Interface (UI) changes, or glossary entries are introduced as part of a change, the portal owner may need to apply their own translations of the core system text.

Column Definitions

- **Feature:** Provides a description of the feature being delivered.
- **Module Impacted:** Identifies the module impacted associated with the feature, if any.
- **Scale:** Identifies the size of the feature. Options are:
 - **Small:** These UI or process-based features are typically comprised of minor field, validation, or program changes. Therefore, the potential impact to users is minimal.
 - **Medium:** These UI or process-based features are typically comprised of field, validation, or program changes. Therefore, the potential impact to users is moderate.
 - **Large:** These UI or process-based features have more complex designs. Therefore, the potential impact to users is higher.
- **Delivered:** Is the new feature available for use immediately after upgrade or must the feature be enabled or configured? If no, the feature is non-disruptive to end users and action is required (detailed steps below) to make the feature ready to use.
- **Customer Action Required:** You must take action before these features can be used. These features are delivered disabled and you choose if and when to enable them.

Table 1-1 Noteworthy Enhancements

Feature	Module Impacted	Scale	Delivered	Customer Action Required?
Text Editor Replacement	All	Small	Yes	No

Table 1-1 (Cont.) Noteworthy Enhancements

Feature	Module Impacted	Scale	Delivered	Customer Action Required?
JET UI Security	Admin	Medium	Yes	Yes
Auto Prompt for Audit Submission	Supplier	Small	Yes	No
Post Launch Section	Product	Medium	Yes	Yes

Text Editor Replacement

The current *CK Editor* rich text editor component used for formatting text in fields, such as News items and Ingredients lists, is replaced with the *Tiny MCE* text editor.

JET UI Security

A new JET UI based security administration facility replaces the current ECHO UI Permissions spreadsheet upload, for the new JET UI based screens only.

The new model utilizes the existing method of allocating users combinations of Authority Profiles and Roles to determine their level of access to the application's functionality (including navigation, actions, and APIs), and its data. The permissions are defined as sets of policies in XML files rather than a spreadsheet of rules.

The core set of default system-delivered security policies can be overridden by the client, with the system administrator having access to a new maintenance facility in the Admin area.

The overrides are applied by uploading XML files containing the custom rules. The files may represent a single rule as part of a simple *flat* structure, or a group of rules as part of a more complex *hierarchical* structure.

The enhancement includes the following features:

- The security rules are defined as **policies** and **policy sets**, in XML files, grouped by these **policy types**:
 - Tasks - for controlling access to menu options.
 - Filters - for applying filters to data.
 - Fields - for controlling access to list view columns and form fields.
 - Actions - for controlling access to list view and form actions.
 - Redactions - for forming subsets of data, such as to remove associated child data that is not required.
 - Decisions - for controlling whether a UI component is shown or hidden.
- A predefined set of **combining algorithms** determine how the policies are applied and whether the rule is to permit or deny access:
 - PermitPreferred - If any rules in the policy generate a PERMIT result, then PERMIT is the result. If any rules in the policy generate a DENY result and no

rule generates a PERMIT result, then DENY is the result. If no rules are matched, then the result is NO_MATCH. Used for Tasks and Actions.

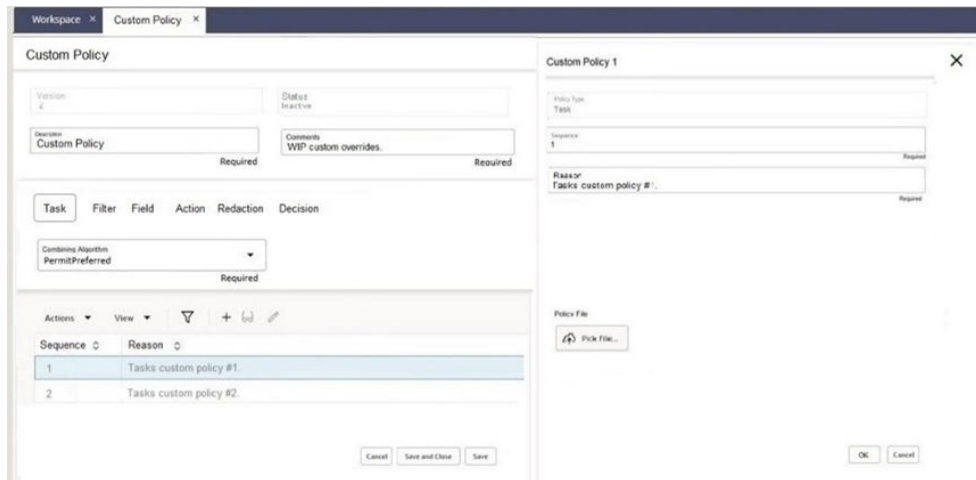

- DenyPreferred - If any rules in the policy generate a DENY result, then DENY is the result. If any rules in the policy generate a PERMIT result and no rule generates a DENY result, then PERMIT is the result. If no rules are matched, then the result is NO_MATCH. Used for Tasks and Actions.
 - LastMatch - The last rule to match is chosen as the result. If there are no matches, the result is NO_MATCH. Used for Tasks and Actions.
 - CombineAnd - If one rule is matched, the expression from that rule is the result in a singleton list. If multiple rules are matched, then the expressions from those rules are ANDed together as the result in a singleton list. If no matches are generated, then the result is an empty list. Used for Filters.
 - CombineOr - If one rule is matched, the expression from that rule is the result in a singleton list. If multiple rules are matched, then the expressions from those rules are ORed together as the result in a singleton list. If no matches are generated, then the result is an empty list. Used for Filters.
 - AllMatch - If any rules are matched, then all are returned as the result list. If no rules are matched, then an empty list is the result. Used for Redactions.
- The system-delivered core rules may be overridden or extended by client administrators using the new Security Policies maintenance facility. The Security Policy comprises a set of Policy Override records per Policy Type (so up to 6 sets of Policy Overrides). Each Policy Override record is associated to a single Policy Type and Combining Algorithm, and has a single XML file attachment.

- The **Security Policies list view** contains a single Security Policy record which may have multiple versions, of which just one is active. Alternative sets of new draft rules can be maintained, then activated when ready; prior sets of rules can be reverted to, by reactivating a deactivated set.

The custom rules are maintained as Policy Override records within the Security Policy. They act as a container for the XML files which contain the rules in code form. The core system policy rules can be downloaded as a set of XML files, for reference when building custom overrides.

- The **Security Policy form** comprises:

- A set of fields which represent the **Security Policy** record.
- A set of tabs which represent the fixed set of **Policy Types**: Task, Filter, Field, Action, Redaction, and Decision.
- A **Combining Algorithm** selector containing the option available for the policy type.
- A data grid which contains the **Policy Override** records for the selected policy type tab.
- The **actions** for maintaining the Policy Override records and exporting the XML file.
- The **Policy Override** record is a container for the override policy rules XML file. It contains:
 - * The **Policy Type** based on the which tab has been selected.
 - * The **Sequence** the rules are to be applied.
 - * A **Reason** or purpose of the override.
 - * The **Policy File** upload/download of a single XML file.

See also Post Release Tasks, and refer to the Security UI appendix in the *Oracle Retail Brand Compliance Management Cloud Service Workspace User Guide* for further details of administering the JET UI user access permissions.

Auto Prompt for Audit Submission

If the supplier forgets to submit an Audit after completing all open issues, the status is not progressed for the retailer to finalize completion of the Audit.

To avoid such delays, validation is added to the Audit to check if all Issues are *Completed*, and if so, to prompt the user with an option to set the status to *Awaiting Approval*, meaning the retailer can then progress the Audit.

The enhancement includes the following features:

- **System Parameters:** *Prompt Supplier to Set to Awaiting Sign Off* – enables the prompt for the supplier to set an Audit or Visit to Awaiting Sign Off status. Default is not enabled.

- **Audit Validation:** If the system parameter is enabled, validation will be applied when a supplier user (not a retailer user) saves and exits each Issue in an Audit that is currently at In Progress, Awaiting Corrective Action, or Awaiting Amendment status.

The validation will check if all the audit's Issues have the Completed Date entered. If so, a message will notify the user that all issues are now complete so the audit should be set to Awaiting Sign Off, with an option to change the status accordingly.

See also Post Release Tasks.

Post Launch Section

The Constructed Non Food (CNF) type Product Specification includes a section for Post Launch Information. There are cases where Post Launch information is to be captured for other specification types, and while the CNF Post Launch Information section can be added as an optional section, it cannot be specified as being a mandatory section, so must be manually added to each specification.

Therefore, a Post Launch Information section is introduced for the Food, Formulated Non Food (FNF), and Beers, Wines, and Spirits (BWS) specification types. It is not included for Produce specifications, due to their different workflow and use.

The enhancement includes the following features:

- **Glossaries: Results** - each specification type has a specific Results glossary.
- **Locking Rules:** The entire section remains editable in Active specs. The Post Launch Attachments table is locked until the specification is at Active status. The existing CNF default rules are not specification type specific, so also apply to the new Food, FNF, and BWS instances of this section.
- **Email Templates:** The action of saving the section with Comments entered triggers a notification email to be sent, using email templates HARDGOODS 01 RETAILER and HARDGOODS 01 SUPPLIER. The same email templates are shared by all specification types.
- **Specification API and RDS data:** The existing tables will include data for all specification types.
- **Report Queries:** Two new report queries are added which cover the Post Launch Information section for all specification types (including CNF):
 - **Post Launch Information Inspection Reports** - the granularity of this query is the Post Launch Information Inspection Reports table; one row output per row in the Inspection Reports table.
 - **Post Launch Information Comments** - the granularity of this query is the Post Launch Information Comments table; one row output per row in the Comments table.

The new Post Launch Information sections will be data generated in upgraded portals, so that they are available to add to the Spec Type glossaries, but they will NOT be automatically added to the Spec Type glossaries.

Clients who may already be using the CNF Post Launch Section in other specification types may now replace that with the specification-specific sections.

See also Post Release Tasks.

Post Release Tasks & Impact on Existing Installation

The following post release tasks and impact on an existing installation must be taken into account as part of this release.

JET UI Security

If the new Workspace UI is enabled, areas presented in the JET UI have their access controlled by the new Security Policies subsystem. Any custom overrides to the core access rules, including any that have previously been applied using the ECHO Permissions spreadsheet, must be applied using the new method.

See the *Oracle Retail Brand Compliance Management Cloud Service Workspace User Guide* for details on administering the JET UI user access permissions.

Auto Prompt for Audit Submission

To enable use of the Auto Prompt for Audit Submission feature, set the *Prompt Supplier to Set to Awaiting Sign Off* system parameter in the Audits tab.

Post Launch Section

To enable use of the Post Launch Information section in Food, FNF, or BWS specifications, configure the following areas:

1. The Spec Types glossary to make the section available to the required specification types, and if a mandatory section.
2. The contents of the Results glossary for the relevant specification types.
3. The Specification Locking and Mandatory Field rules for any overrides to the default rules.
4. The HARDGOODS 01 RETAILER and HARDGOODS 01 SUPPLIER Email templates for any overrides to the default templates.
5. Any Custom Fields for the Post Launch Info section.
6. Any System Text overrides to the default text and language translations.
7. Design, build, and schedule any Reports for the Post Launch Information section.

System Text

The fix for help text not displaying (item 35859508) introduces two new System Text records:

```
view.food.productSpecification.page.olcSection.page.additionalPage.eanBarcodeFs=EAN/Barcode  
view.food.productSpecification.page.olcSection.page.additionalPage.shippingCaseCodeFs=Shipping Case Code
```

System text records are added automatically during the release process. Any translation overrides must be added manually by the retailer administrator.

Required Spreadsheet Updates

The Text Editor replacement requires an update to the Branding stylesheet.

1. Log in as an Oracle Authorized Administrator User and go to Company > Admin > System Control. Select the Branding menu item to open the Brand page. On the Branding Themes tab, click the orbc-theme.css link to download the file.
2. Open the downloaded file in a text editor, and search for the following:

```
.html-label ul {
```

This should locate a CSS style matching this:

```
.html-label ul {  
    list-style: disc inside none !important;  
}
```

This should be updated to match the following:

```
.html-label ul {  
    list-style-position: inside;  
}
```

3. Next, search for the following:

```
.html-label ol {
```

This should locate a CSS style matching this:

```
.html-label ol {  
    list-style: decimal inside none !important;  
}
```

This should be updated to match the following:

```
.html-label ol {  
    list-style-position: inside;  
}
```

4. Once the changes are made and saved to your local copy of orbc-theme.css, this needs to be uploaded back to the Branding page.
5. In the Branding page, choose the Action > Edit to enable edit mode for the page.
6. Click the *Choose File* button next to the Core Theme which should have orbc-theme.css listed.
7. Select the orbc-theme.css file that was amended above and click Open. This should upload the file to the Branding record.

8. Select Action > Save & Exit.
9. Refresh the browser using F5. The required style sheet should now be in effect.

Database Update Scripts

There are no Database Upgrade Scripts included within this release.

Enabling Identity Management Notifications

As an IDCS or OCI IAM Administrator, verify that Notifications are enabled in the corresponding Stage / Production tenant.

Enabling User Roles

If they do not already exist, configure the *Power User*, *Account Administrator*, *Assistant Technologist*, and *Site Inspector* user roles, and assign to the appropriate users.

The instructions for downloading and uploading the amended Permissions spreadsheet are as follows:

1. Log in as an Oracle Authorized Administrator user and go to Company > Admin > Roles & Permissions.
2. Open the Permissions page.
3. Download the active spreadsheet by selecting the row with *true* in the Active Permissions column, click *Download Selected*, and save locally.
4. Edit the downloaded spreadsheet, make the changes described above, then save the spreadsheet.
5. Upload the edited spreadsheet by clicking *Upload Permissions*, select the spreadsheet, and click *Ok*.
6. Apply the changes by selecting the uploaded spreadsheet row, click *Process Selected*, and then click *Ok* to confirm.

Enabling Artwork with SSO

Artwork is not a core Brand Compliance module, but a third-party add-on application. This process enables the integration with the third-party Artwork application, where it is used.

For existing installations that use the Artwork module, in order to configure single sign on (SSO) between Brand Compliance and the Artwork solution (using IDCS or OCI IAM authentication), the following steps must be taken by the Customer or their Partner:

1. Ensure the MYARTWORK external system has been created in Brand Compliance PROD and STAGE.

2. Raise an SR service requesting for creation of the Artwork Application for PROD and STAGE. The call back URLs and IDCS or OCI IAM URLs must be provided in the SR.
3. Once created, you will be able to gather the Client ID and Client Secret from IDCS or OCI IAM.

Refer to the Artwork chapter in the *Oracle Retail Brand Compliance Management Cloud Service Administration Guide* for the full process for enabling Artwork with SSO.

IDCS Changes

As part of the updates from release 20.0 onwards, there are a few changes into various records within the IDCS configuration. These changes should be considered in instances where you have adopted your own changes and configuration within IDCS.

Oracle Cloud Service Records

This section within IDCS is only accessible to Admin users of the IDCS tenancy. A new Cloud Service record is created for the release 20+ instance and is now named using the following naming structure:

- STAGE: RGBU_BCCS_STG1_BC (from RGBU_BCCS_UAT_PROD_BC)
- PROD: RGBU_BCCS_PRD1_BC (from RGBU_BCCS_PRD_PROD_BC)
- DEV: RGBU_BCCS_DEV1_BC (from RGBU_BCCS_DEV_PROD_BC)

Where the OPAL Artwork is utilized, a new Cloud Service record is created for the release 20+ instance and is now using the following naming structure:

- STAGE: RGBU_BCCS_STG1_ARTWORK (from RGBU_BCCS_UAT_PROD_ARTWORK)
- PROD: RGBU_BCCS_PRD1_ARTWORK (from RGBU_BCCS_PRD_PROD_ARTWORK)

IDCS Group Records

These are created automatically by the Brand Compliance application and the naming of the groups is updated to be aligned with the Oracle Cloud Service record. Standard groups are created for . . . Artwork, . . . BC_User, . . . Reports_Admin, . . . Retailer, and . . . Supplier. For example, RGBU_BCCS_PRD1_BC_User is the new release 20+ group naming structure, RGBU_BCCS_PRD_PROD_BC_User being the previous naming structure.

Note:

When creating new groups within an IDCS tenant, avoid using the RGBU_BCCS_PRD1_ or RGBU_BCCS_STG1_ prefix for the name of groups. Any groups created with either prefix may have their users removed from the group as part of the hourly IDCS sync process.

2

Browser Requirements

Note:

Oracle Retail assumes that the retailer has ensured its Operating System has been patched with all applicable Windows updates.

The following browsers are supported:

- Mozilla Firefox
- Microsoft Edge
- Google Chrome (Desktop)

Microsoft has deprecated Internet Explorer 11 in Windows 10 and recommends using Edge as the default browser. Refer to the [Oracle Software Web Browser Support Policy](#) for additional information.

3

Noteworthy Resolved Issues

This following table highlights specific key fixes that are included in this release. In some cases, only a percentage of the overall fixed defects are listed.

Affected Component	Defect Number	Summary
General: Assignments	35861563	<p>Opening the Assignments list view causes the application to error</p> <p>When attempting to access the Assignments list view from the Workspace page using the Assignments Due panel links, the application would error. This occurred when there were Surveillance Reports in the Assignments list with no Test Scores.</p> <p>A fix to prevent the error that causes the application to error has been applied.</p>
General: Assignments	35923012	<p>Assignment Suppression</p> <p>The ability to be able to suppress the Assignments from being retrieved from the server is now included. The Urgent Assignments and the Assignments Due panel will still display on the Workspace, but the Assignments will not be loaded. The Assignment List view will also remain available, but the Assignments will not be loaded from the server.</p> <p>By default, the Assignments will continue to be available. For these to be suppressed, a Support Ticket (SR) will need to be logged requesting this to be done and the appropriate environment identified such as Stage or Production.</p>
General: Home Page Apps	34974535	<p>Duplicate Apps on Workspace</p> <p>An issue was corrected that occurred when a new app was created for the workspace that had the same name as a previously deleted app. The issue resulted in both apps being displayed on the workspace.</p>

Affected Component	Defect Number	Summary
General: News	35870043, 35871618	<p>Attempting to open News Items causes the application to error</p> <p>When attempting to open a News Item from the Urgent Items Manager on the Home page, the application errors.</p> <p>A fix has been applied so News Items can be successfully opened for reading from the UIM on the Home page.</p>
General: News	35899336	<p>Resource and News Items cannot be created</p> <p>In the JET UI, when a user with a non-default language attempts to create a News Item or Resource, the Body field is not displayed to allow the user to enter data.</p> <p>A fix has been implemented so the Body field is displayed and can be edited.</p>
General: News Item	35778715	<p>News Item Horizontal Rule</p> <p>When a horizontal rule is included in a news item body, the text that follows the horizontal rule is no longer displayed. To read the full content of the news item, the user will need to use the Read More link that is available.</p>
General: Rich Text Editor	35680678	<p>Rich Text Data Issue with Extended Characters</p> <p>An issue has been corrected with extended characters that needed to be escaped, so that they display correctly within the User Interface (such as &, <, and >).</p>
General: System Text	35785973	<p>Window not closing when importing System Text</p> <p>A fix has been made to rectify an issue when importing System Text in the Admin area, where the window failed to close.</p>
General: Users	35773062	<p>New Users Data Generator</p> <p>A fix has been made to the data generator process which creates the initial User accounts when provisioning a new environment. The process was unable to handle a space in the user's login id. This has been corrected.</p>

Affected Component	Defect Number	Summary
General: Users	35791266	<p>Error after logon when Enhanced Access Control enabled</p> <p>With Enhanced Access Control (EAC) enabled, a user would see an error after logon when they had Urgent Items.</p> <p>A change to how the Urgent Items data is generated at logon has been applied so the application will not error.</p>
General: Users	35945675, 35908627, 35657474, 35427176	<p>Error when user logs on to application</p> <p>When a user without a time zone set logs on to the application, an error is generated.</p> <p>An update has been made so the application will not error if the user does not have a time zone set.</p>
Library: Documents	35430717, 35734824	<p>Document notifications not showing in the UIM</p> <p>Documents were not showing in the UIM for users when they met the expected criteria and the document was either restricted to retailer users or individual sites.</p> <p>A change to resolve the documents not appearing in the UIM has been applied.</p>
Process: Activities	36061348	<p>All Process & Activities List View</p> <p>It was possible for a user to be able to see an Activity they were not authorized to see on the list view, but would not be able to open or work on the activity. The issue occurred for Area users who should not have seen the Activity if it was not for one of the Areas they are associated to.</p>
Process: Activities	36061726	<p>Processes & Activities - Overdue Filter Tile</p> <p>The Overdue filter tile count was not filtering out all of the appropriate records and therefore displaying a number larger than was expected.</p>

Affected Component	Defect Number	Summary
Process: Activities	36123315	<p>Status Filter in All Processes & Activities View</p> <p>A fix has been made to the Status quick filter tile in the All Processes & Activities list view. The issue resulted in no data being present in the tile.</p>
Process: Activities	NA	<p>Activity record status cannot be updated to Not Started</p> <p>In the JET UI, it was not possible to update the status of an Activity record from Started to Not Started, as an error was generated.</p> <p>An update to the application now enables an Activity record's status to be changed to Not Started.</p>
Process: Activities	NA	<p>Quick filter displays incorrect values</p> <p>The Responsible quick filters in the JET UI Process list views were not displaying the correct values. The Responsible quick filter criteria has been updated across the Process list views in the JET UI to ensure they display the correct values.</p>
Process: Activities	NA	<p>Process list view generates an error</p> <p>Selecting a Process record in the All Processes & Activities list view generates an error as the system attempts to fetch data for the Information Panel.</p> <p>A fix has been applied so the system can successfully retrieve the data for the Information Panel.</p>
Process: Brief Extract	NA	<p>Brief Extract displays column incorrectly</p> <p>When the Brief Extract is run from the All Processes & Activities list view in the JET UI, the Completed By column is called Name in the extract.</p> <p>The Brief Extract has been updated to use the correct column name in the extract.</p>

Affected Component	Defect Number	Summary
Process: Processes	35166764	<p>Process amendments not copied</p> <p>When a Process record is copied, the Activity Name and Critical Path fields were copied from the original template rather than the existing record.</p> <p>A fix ensures that the existing record entries are copied to a new Process record, which ensures any field changes are also propagated to the new record as expected.</p>
Product: Specifications	35687841	<p>Fields not displayed in alphabetical order</p> <p>On the Recipe and Raw Materials section, the Country where Processed and Country of Origin fields were not displaying the selected countries in alphabetical order.</p> <p>A fix has been applied to correctly display the countries in alphabetical order.</p>
Product: Specifications	35859508	<p>Help text does not display</p> <p>The help text was missing for the specification fields EAN/Barcode and Shipping Case Code under the OLC section.</p> <p>The help text for the fields has been added so the help text displays as expected.</p> <p>See the Post Release Tasks for instructions on making the necessary System Text configuration changes.</p>
Product: Specifications	35864356, 35880982	<p>Unable to apply Specification Locking Rules or Mandatory Field Rules</p> <p>When attempting to apply an updated Specification Locking Rules or Mandatory Field Rules file, the application errors as the file was not successfully loaded in.</p> <p>A fix has been applied to ensure files can be successfully loaded in and therefore the applicable rule amendments applied to the application.</p>

Affected Component	Defect Number	Summary
Product: Specifications	35879201	<p>Pack Copy details not showing in Pack Copy Language</p> <p>On FNF specifications, the ingredients are in the user's language rather than the Pack Copy Language when in read mode.</p> <p>The FNF specification has been updated to display the Pack Copy ingredients in the Pack Copy Language per the Food specification.</p>
Product: Specifications	35881031	<p>Updating specification status causes error</p> <p>When updating a specification's status from Not Progressed to the previous status of Supplier Authorized, an error was generated.</p> <p>A fix was implemented to allow a specification's status to be updated without generating an error.</p>
Product: Specifications	35954356	<p>Specifications cannot be progressed</p> <p>Validation prevents a specification, with only one Product Covered that has more than one section of the same type and that is linked to more than one Site, from being progressed.</p> <p>The specification validation process has been updated to ensure specifications configured this way can be progressed.</p>
Product: Specifications	35988807	<p>Specification errors when attempting to progress</p> <p>When attempting to progress a Counter Ticket specification to Collaborative Draft, an error is generated.</p> <p>A fix has been implemented to prevent the error and so the specification can be successfully progressed.</p>
Product: Specifications	35992694	<p>Incorrect order of Nutrients</p> <p>A fix has been made to rectify an issue with nutrients not being presented in the correct order within the Nutrition section of the Product Specification.</p>

Affected Component	Defect Number	Summary
Product: Specifications	NA	<p data-bbox="984 275 1377 327">Email Subject displays incorrect text</p> <p data-bbox="984 338 1377 510">When exporting a Data File from the produce and product specification list views in the JET UI, the Subject field in the email notification generated had a missing literal.</p> <p data-bbox="984 520 1377 604">The missing literal has been added so the Subject field in the email notification is displayed correctly.</p>
Product: Specifications	NA	<p data-bbox="984 621 1377 674">Specification dialog window displays incorrect text</p> <p data-bbox="984 684 1377 825">When attempting to edit the review date of a specification, the Extend Review Date dialog window displays incorrect text due to a missing literal.</p> <p data-bbox="984 835 1377 951">The missing literal has been added so all the text on the Extend Review Date dialog window is correct.</p>
Reports: Ingredients Reports	35495689	<p data-bbox="984 968 1377 1020">Ingredient Where Used Report Filter Operator</p> <p data-bbox="984 1031 1377 1171">Using the Contains and Not Contains filter operators was causing unexpected results. The correct solution was to use the Equals operator.</p> <p data-bbox="984 1182 1377 1381">Contains and Not Contains have now been removed for Ingredient (INGREDIENT_INGREDIENT), Ingredient Forced Addition (INGREDIENT_FORCED_ADDITION), and Brand (BRAND_DESCRIPTION).</p>
Reports: KPI Outputs	35634947	<p data-bbox="984 1398 1377 1430">KPI Report Copy Issue</p> <p data-bbox="984 1440 1377 1577">An issue has been addressed when copying an existing KPI Report Schedule and then navigating to the Filter tab. An unrecoverable error was being displayed.</p>
Reports: Report Outputs	33668826	<p data-bbox="984 1593 1377 1625">Email link to Report Outputs</p> <p data-bbox="984 1635 1377 1822">Users with Advanced Reporting User access rights can now access the report output using the link in the notification email. Previously, they were taken to the application home page rather than to the record itself.</p>

Affected Component	Defect Number	Summary
Supplier: Assessments	35821642, 35846172	<p>Assessment Extracts are not generated</p> <p>Assessment Extracts were not generated, and the Batch Job log showed an error. The Assessment Extracts were timing out and failing. The extract process has been updated to improve performance which stops the process timing out.</p>
Supplier: Assessments	NA	<p>Assessment Template generates error</p> <p>Opening any existing Assessment Template generates an error.</p> <p>A fix has been implemented to resolve the underlying cause of the error.</p>
Supplier: Audits	35764727	<p>Audit Non-Conformance record displaying incorrect data</p> <p>When traversing Audit Non-Conformance records using the Save and Edit Next or Save and Edit Previous actions, the (Rich Text) Description fields were not displaying the correct data.</p> <p>An update ensures the (Rich Text) Description fields of the record being traversed to, are now displayed correctly.</p>
Supplier: Audits	35788153	<p>Audits - Further Comments</p> <p>An issue has been fixed with Audits where the Further Comments were editable by a Supplier Audit Editor when an Audit had reached a status of Completed, Abandoned, Failed, or Not Progressed. At these statuses, the Further Comments should only be editable by a retailer user with Audit Editor or Audit Administrator authority profile.</p>
Supplier: Audits	35954029, 35955695, 35980274	<p>Notifications sent for completed Audits</p> <p>Audit Due and Overdue email notifications are sent for Audits with a status of Completed.</p> <p>An update has been applied to resolve an error in the logic for sending Audit email notifications so email notifications are not sent for Completed Audits.</p>

Affected Component	Defect Number	Summary
Supplier: Contacts	35751619, 33617336, 35918495	<p data-bbox="984 275 1325 327">Cannot update Supplier Site contact list</p> <p data-bbox="984 338 1357 621">When attempting to add a new contact to a site, with an expired reference and Site Reference Notifications enabled, the application would error. This would happen if the new contact had a user role that was listed under the Notify Supplier/Site contacts by Email in the system parameters.</p> <p data-bbox="984 632 1357 743">A fix has been applied so the application will not error when adding a new site contact in this scenario.</p>

Deprecated Features

As part of the continuous delivery model for cloud services, features and technical components of a solution may be removed or replaced to enhance the security, performance, and overall quality of the cloud service. When this occurs, the deprecation of a feature or component will be announced in advance, allowing customers sufficient time to anticipate the change and transition to any enhanced replacement feature/component. After the deprecation is announced, the deprecated feature or component will remain in the solution until the planned removal date and will not be enhanced or made compatible with other new features.

For the full schedule of planned deprecations for this product, see the Deprecation Advisory accessed from the following MOS Documentation Library: Oracle Retail Brand Compliance Management Cloud Service Documentation Library at [Doc ID 2400174.1](#).
