| <b>Name</b>           | The description of an existing probability rule.                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Edit</b>           | Click the edit icon (  ) next to a rule to advance to the <a href="#">Probability Rule Wizard</a> screen, where you can review or edit the rule.<br><b>Note:</b> If the <a href="#">Probability Rule Wizard</a> screen is already open in another tab, you advance to that screen, where the previously-selected rule is displayed. |
| <b>Delete</b>         | Click the delete icon (  ) next to a rule to delete the rule from <i>Order Orchestration</i> .<br>This option is available only if the rule has not been assigned to an organization, location type, or location. See the <a href="#">Probability Location</a> screen for information on rule assignment.                           |

## Calculations

**Purpose:** Use the **Calculations** window to review, create, or delete calculations that you can include in probability rules. Calculations allow you to add flexibility in how you present availability information in locate items search results or select a location for Routing Engine assignment. In order to include a calculation as part of a rule, you must first set it up at this window.

**Example:** You might set up a calculation of Available quantity Reduce by [%] 10 so that you can create a rule that displays a lower available quantity. For example, if the complete rule is Always Available Quantity Equal [=] Available Quantity Reduce By

[%] 10, and the available quantity for a product location based on your last update is 500, the search results display an available quantity of 450.

Used for the Routing Engine module.

There are two basic ways to use a calculation as part of a rule: as part of a *test*, or as the *result*. Any existing calculations are available for selection in the [Probability Rule Wizard](#) at either the [Conditions](#) or [Then](#) screen.

- *Test calculation:* Allows you to specify when to apply a rule. For example, you might want to apply a certain rule only if the available quantity plus the next PO quantity for a product location is less than the requested quantity for the locate items request. You create the calculation: Available Quantity Plus [+] Next PO Quantity. You can then include this calculation in a rule such as:

If Available Quantity Plus [+] Next PO Quantity Less Than [<]  
Requested Quantity

Then Exclude Location

- *Result calculation:* Allows you to perform a calculation against the available quantity, next PO date, or next PO quantity displayed in the locate items search results. For example, you might want to add 5 days to the next PO date if the PO is for a certain group of products that is known to ship late. You create the calculation: Next PO Date Plus Days 5. You can then include this calculation in a rule such as:

If Department Equal To [=] XYZ

Then Next PO Date Equal [=] Next PO Date Plus Days 5

You could also create a rule using the Always test and the calculation, such as:

Always Next PO Date Equal [=] Next PO Date Plus Days 5

#### Note

If the calculation is based on the Next PO date plus a number of days, but the product location does not have a Next PO date, the Routing Engine avoids returning an error by basing the next PO date calculation on a date of January 1, 1970. In this situation, the locate items response might include a date such as 1970-01-21.

**For more information:** See:

- overview on probability rules: [Using Probability Rules](#)
- complete instructions for setting up rules, including sample rules and calculations: [Probability Rule Wizard](#)

**How to display this window:** Click *Calc* at the [Probability Rules](#) screen.

#### Note

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Probability Rules* authority can display this screen. See [Roles](#) for more information.

| <b>Calculation</b>        | <p>The contents of a calculation you have created.</p> <p><b>Note:</b> The calculation displayed on the screen cannot exceed 40 positions; additional characters are truncated. For example, the calculation of Available Quantity Plus [+] Next PO Quantity is displayed on the screen as Available Quantity Plus [+] Next PO Quan.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Delete</b>             | <p>Select the delete icon () next to a calculation to delete the calculation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

### Valid operators for elements

Quantities and amounts: [Available Quantity](#), [Cost](#), [Daily Sell Through Quantity](#), [Minimum Sell Quantity](#), [Next PO Quantity](#), Requested quantity, [Sell Quantity/Multiple](#), [Sales Velocity](#), [Selling Price](#), or [Shrink Rate %](#)

Dates: [Last Updated](#) date, [Next PO date](#), or Today

The following table provides information on the resulting calculations when you apply these operators.

| Operator        | Sample Calculation                              | Sample Result/Comments                                                                                                                                                                                                                                                    |
|-----------------|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reduce by [%]   | Available quantity Reduce by [%] 10             | Reduces the available quantity for the product location by 10%. If the first quantity is a negative number, such as -10, the result is a lower negative number, such as -11.                                                                                              |
| Increase by [%] | Daily sell through quantity Increase by [%] 10  | Increases the daily sell-through quantity for the product location by 10%. If the first quantity is a negative number, such as -10, the result is a higher negative number, such as -9.                                                                                   |
| Plus [+]        | Next PO quantity Plus [+] 10                    | Adds 10 to the next PO quantity for the product location. If the first quantity is a negative number, such as -10, the result is a higher number, such as 0.                                                                                                              |
| Minus [-]       | Available Quantity Minus [-] Daily Sell Through | Subtracts the daily sell-through quantity for the product location from the available quantity. If the available quantity is a negative number, such as -10, the result is a lower number, such as -15.                                                                   |
| Divide [/]      | Available Quantity Divide [/] Minimum Sell Qty  | Divides the available quantity for the product location by the minimum sell quantity. If the first number is a negative number, such as -10, the result is a higher number, such as -5. If the second number is 0, the rule is invalid, and Order Orchestration skips it. |
| Multiply [*]    | Requested Quantity Multiply [*] Sell Qty        | Multiplies the requested quantity in the locate items request by the Sell quantity/multiple for the product location. If one of the numbers is negative, such as -10, the result is a lower number, such as -40.                                                          |
| Plus Days       | Next PO Date (MM/DD/YYYY) Plus Days 5           | Increases the next PO date for the product location by the number of days. If the next PO date is 07/01/2013 and the number of days specified is 5, the result is 07/06/2013.                                                                                             |
| Minus Days      | Next PO Date Minus Days 3                       | Decreases the next PO date for the product location by the number of days. If the next PO date is 08/15/2013 and the number of days specified is 3, the result is 08/12/2013.                                                                                             |

## Probability Rule Wizard

**Purpose:** Use the **Probability Rule Wizard** to create or edit probability rules.

Used for the Routing Engine module.

**What are probability rules used for?** Rules alter the inventory information returned in locate items search results and used to assign delivery or ship-for-pickup orders. For example, you can set up a rule to reduce the available quantity displayed for a product location that has a high sell-through rate. If you base order assignment on available quantity, this rule might cause the Routing Engine to assign an order to a different location.

**Inventory quantity export:** You can use probability rules to calculate the expected available quantity that you export to an integrated system, both by sending incremental updates through a web service, and through a pipe-delimited extract file. See [Probability Rules Update and Incremental Quantity Web Service](#) for more information.

**Steps to create a probability rule:**

1. **Rule Type:** indicate whether the rule has any qualifications (an “if” statement) or should always apply when assigned to a location; also, you can specify or change the name of a rule
2. **Conditions:** specify the conditions that must be met for a rule with an “if” statement
3. **Then:** specify the calculation to apply when the rule meets the qualifications (if there is an “if” statement) or to always apply (for an “always” rule)
4. **Review:** review the rule before you accept your entries or changes

**Note**

When advancing through the wizard to create or edit a probability rule, there may be a small lag time until the screen displays the updated data.

**How to assign rules?** Use the [Probability Location](#) screen to assign probability rules and review the rules already assigned to locations.

**Margin?** Since margin is a calculated field, you can use the [Calculations](#) window, available at the [Probability Rules](#) screen, to create a margin calculation, which you can then use in a probability rule.

**For more information:** See [Probability Rule Overview](#) for a complete discussion on setting up, assigning, and testing rules.

**Probable quantity rules:** You use the [Probable Quantity Rules](#) screen rather than this screen to create probable quantity rules, which update the [probable quantity](#) that a system, such as your ecommerce site, can use as an estimate of an item’s availability. For more information on probable quantity rules and calculation of the probable quantity, see:

- the [Probable Quantity Rules](#) screen
- the [Probable Quantity Location](#) screen
- the *Probable Qty Export* tab at the [System](#) screen

**How to display the wizard:** You can launch the **Probability Rule Wizard** from the [Probability Rules](#) screen by:

- clicking *New*, or
- clicking the edit icon (  ) next to an existing rule
- clicking *Edit* at the [Browse Probability Rules](#) window

**Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Probability Rules* authority can display this screen. See [Roles](#) for more information.

## Probability Rule Overview

**What do rules do?** Rules let you modify product search results (for example, locate items) and Routing Engine assignment by:

- changing the available quantity, PO quantity, or PO date to use for a product search response or to evaluate whether to assign an order to the location; or,
- excluding the location from the product search response or from consideration for order assignment

### When can a rule apply?

- *Rule conditions:* A rule assigned to a location, location type, or organization can apply unconditionally, or based on conditions you set up based on dates, quantities, information about the order, or information about the product.
- *Probability location options:* When you assign a rule to a location, type, or organization, you can specify a range of valid dates, indicate whether it applies to online or offline inventory information, or flag it as inactive.

**Basic steps:** The basic steps to setting up a probability rule are:

1. *Create the rule and details:* Use the *Probability Rule Wizard* to create the rule and its details. Details include:
  - the [Rule Type](#) that determines whether the rule applies (*If* or *Always*)
  - for an “if” rule, the [Conditions](#) that a product location must meet for the rule to apply
  - the **result** of the rule; that is, which field to modify for the search results or order assignment, or whether to exclude product locations from the search results or order assignment based on whether they meet the criteria for the rule

#### Note

*Calculation:* You have the option to create a calculation to use as part of the rule test, or to apply as part of the rule results (for example, Available Quantity + Next PO Quantity). Use the [Calculations](#) window, available at the [Probability Rules](#) screen, to work with calculations. See [About Calculations](#) for a brief overview.

2. *Assign the rule* to one or more organizations, location types, or locations: Use the [Probability Location](#) screen to specify which locations should be affected by the rule. As part of assigning a rule at any of these levels, you can also specify:
  - a “from” date, “to” date, both, or neither, when the rule is effective
  - whether the rule applies only to locations with off-line availability information, on-line availability information, or both
  - whether the rule is active or inactive

3. *Test the rule:* Perform test locate items searches or order creation using a testing tool or from an integrated system, and confirm that the results are what you expect.

### ! Important

In order for probability rules to apply, you need to have the Use Probability Rules preference set to Yes at the [Preferences](#) screen.

## About Calculations

You can specify more complex conditions to apply, or results to display, by using calculations. For example, if you would always like to reduce the available quantity for a location by its shrink rate, you can set up a rule such as: Always Available Quantity Equal [=] Available Quantity Reduce By [%] Shrink

This rule includes the calculation Available Quantity Reduce By [%] Shrink.

**Where can you use a calculation?** You might use a calculation as the:

- Element (first field) or Element or Value (third field) for a rule at the *Condition* step
- Element or Value (third field) for a rule at the *Then* step

Use the [Calculations](#) window to create or work with calculations.

## Using the Probability Wizard

The steps to create a rule are to set the:

1. [Rule Type](#)
2. [Conditions](#)
3. [Then](#)
4. [Review](#)

**For more information:** See [Probability Rule Overview](#) for background.

## Rule Type

**Purpose:** Use this step in the *Probability Rule Wizard* to:

- specify the name of a new rule or change the name of an existing rule
- set up the rule, including specifying whether the rule has an “if” statement with conditions that a product location must meet in order for the rule to apply, or whether the rule applies unconditionally when it is assigned to a location (an “always” rule)

**How to display:** At the [Probability Rules](#) screen:

- click *New*, or
- click the edit icon (  ) next to an existing rule

### Completing this step:

1. Enter the [Rule Name](#). If you entered a name at the [Probability Rules](#) screen or are editing an existing rule, the name defaults here, but you can override it. The name cannot exceed 40 positions, and can include spaces and special characters.

**Note**

You cannot enter a rule name that is an exact match to an existing rule; however, you can enter a rule name that matches an existing rule except for case or a trailing space.

2. Select the [Type of Rule](#) to indicate whether the rule has an “if” statement with conditions, or is an “always” rule that applies unconditionally.
3. If the rule has just the action and no additional tests to perform, then you set the Type of Rule set to *Always*. These rules are simple statements: for example, Always Available quantity Equals [=] Available quantity - Daily Sell Through Qty).
4. If you want to apply one or more tests against the product location to determine whether to apply the rule, then the Type of Rule must be *If*.

**Next step:** When you create an *If* rule, you use the [Conditions](#) step to specify one or more conditions. Click *Next* to advance to the:

- [Conditions](#) step if the Type of Rule is *If*
- [Then](#) step if the Type of Rule is *Always*
- Click *Cancel* to return to the [Probability Rules](#) without saving your entries.

| Field               | Description                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Rule Name</b>    | Enter the name of the rule. The <a href="#">Probability Rules</a> screen and the <a href="#">Probability Location</a> screen display this name to identify the rule. The name can be up to 40 positions, and can include spaces and special characters. If you entered a name at the <a href="#">Probability Rules</a> screen or are editing an existing rule, the name defaults here, but you can override it. |
| <b>Type of Rule</b> | Select: <ul style="list-style-type: none"> <li>• <i>If</i> = when you assign the rule, it applies only if the product location meets the conditions you set up through the <i>Conditions</i> step.</li> <li>• <i>Always</i> = when you assign the rule to a location, it performs the action unconditionally. If you select this setting, you advance next to the <i>Then</i> step.</li> </ul>                  |

## Conditions

**Purpose:** Use this step in the *Probability Rule Wizard* to set up the conditions that a product location must meet in order for the rule to apply.

**How to display:** You advance to this step from the [Rule Type](#) step if you selected *If* as the Type of Rule. You do not advance to this step if the Type of Rule is *Always*.

## Specifying a condition

A rule that has a *Rule Type* of *If* requires at least one condition.

**Examples:**

1. *Element:* Possible elements are:
  - Availability information for a product location: [Available Quantity](#) or [Available to Promise](#), [Next PO date](#), and [Next PO Quantity](#). You can use these values as part of a test for a rule or in a calculation as well as updating them in the search results.

**Examples:**

- If **Available quantity** is less than requested quantity
- Always set **Next PO date** equal to Today plus 5 days
- Attributes for a product location: Product attributes are [Cost](#), [Daily Sell Through Quantity](#), [Minimum Sell Quantity](#), [On Clearance](#), [Sales Velocity](#), [Sell Quantity/Multiple](#), [Selling Price](#), [Shrink Rate %](#), and [Status](#). You can use these values as part of the test for a rule or in a calculation.

*Examples:*

- If **Sell quantity** is less than available quantity
- If **Daily sell-through quantity** is more than requested quantity
- If **Status** is Inactive
- Product or system product information: [Category](#), [Class](#), [Department](#), [Master Style](#), or [System Product](#) code. You can use these values as part of the test for a rule.

*Examples:*

- If **Category** is equal to 9867
- If **Master style** is not equal to AB100
- Date: You can compare the [Last Updated](#) date for a product location with the current date (Today), or with specific dates.

*Example:* If **Today** is after the next Next PO date.

- Information about the order or request: Express Carrier, Order Type, Originating System, or Requested Quantity. You can use these values as part of the test for a rule.

*Example:* If the order uses an *Express Carrier*.

*About rules based on the express carrier setting:* If a delivery or ship-for-pickup order is submitted without a carrier specified, the Routing Engine checks the *Express* setting of the Default Carrier specified at the **Preferences** screen. When a request is not associated with an order ([locate items](#), [product availability search](#)), the Routing Engine also uses the Default Carrier if the transaction type is *DELIVERY* or *SHIPFORPICKUP*. Otherwise, for a *PICKUP* transaction type, the Routing Engine always considers the Express setting to be *No*.

- *Calculations:* If you have used the [Calculations](#) window to create any calculations, any existing calculations are listed below the system-supplied elements, and you can select one to use as part of a test. For example, use the Available Quantity Reduce By [%] Shrink calculation as part of a rule that starts: If Available Quantity Reduce By [%] Shrink Less Than [<] Requested Quantity
2. **Operator:** The operator identifies the relationship between the Element and the Element or Value. Possible operators are:
- *Quantity or Amount:* If the Element represents a quantity (Available Quantity, Next PO Quantity, Sell Qty/Multiple, Shrink Rate, or Sales Velocity) or an amount (Selling Price, Cost), possible operators are:
    - Equal to [=]
    - Not equal to [!=]
    - Less than [<]
    - Less than or equal to [<=]
    - Greater than [>]
    - Greater than or equal to [>=]

- *Value or code*: If the Element represents a code or a value (Category, Class, Master Style, Status, System Product Code, Order Type or Originating System), possible operators are:
  - Equal to [=]
  - Not equal to [≠]

**Note:** If the selected value is Express Carrier or On Clearance, then the only available operator is Equal to [=].
- *Date*: If the Element represents a date (Last Updated Date, Next PO Date, Today, or a date calculation), possible operators are:
  - Before
  - After
- *Calculation*: The appropriate operators depend on the type of element used in the calculation. For example, if the calculation involves the quantity, then appropriate operators are the same as those listed above for other quantities.

3. *Element or Value*: The element or value that the rule is comparing with the element or calculation in the second field. For example, if the line is: If Available Less Than [<] Requested Quantity, then the rule is comparing the Requested Quantity with the Available Quantity selected from the Element field.

You can select an element or calculation, or enter a value, that is the same type of information as the selected Element. For example, if the Element is Next PO Quantity or Available Quantity Reduce By [%] 10, then your selection or entry must be a quantity. If the Element is a:

- *Quantity*: You can select:
  - [Available Quantity](#) (but [Available to Promise](#) is used if it is different from the available quantity)
  - [Next PO Quantity](#)
  - [Sell Quantity/Multiple](#)
  - [Minimum Sell Quantity](#)
  - [Daily Sell Through Quantity](#)
  - [Shrink Rate %](#)
  - [Sales Velocity](#)
  - Requested Quantity
  - a calculation using a quantity (for example, Available quantity minus [-] Shrink Rate)
  - or you can select *Enter value...* and enter a quantity. The *Enter value...* option is at the bottom of the drop-down list.
- *Date*: You can select:
  - [Next PO date](#)
  - [Last Updated](#) date
  - Today
  - a calculation using a date (for example, Next PO date plus [+] 2)
  - or you can select *Enter value...* and enter a date in the format specified through the [Users](#) screen. The *Enter value...* option is at the bottom of the drop-down list.

- **Amount:** You can select [Selling Price](#), [Cost](#), or a calculation using amount.
- **Defined Value or code:**
  - Express Carrier or On Clearance: select *Yes* or *No*
  - Order Type: select *Pickup*, *Delivery* or *Ship For Pickup*
  - Status: select *Active*, *Inactive*, or *Discontinued*
  - Originating System: select any system in the organization, with the exception of a vendor system or Store Connect system
  - Any other defined value (Category, Class, Department, Master Style, or System Product Code): you can select *Enter value...* and enter a value. For example, you can set up a condition such as `If System Product Code Equal To [=] AB200`. The *Enter value...* option is at the bottom of the drop-down list.

### **Note**

When you enter a value, your entry is not validated; however, when the Routing Engine evaluates a probability rule, matching is case-sensitive.

**Completing entry of the condition:** Click *Add* to add the condition, or click *Reset* to clear your entries in the Element, Operator, and Element or Value fields.

### **Multiple conditions?**

If rules can specify one or more conditions, and each condition begins with an Or or an And:

- **Or:** If the product location meets *either* or *any* of the conditions, then apply the rule. For example, if you would like to add 5 days to the next PO date for *either* product AB100 or product AB200, you might create a rule such as:

If System Product Code Equal To [=] AB100

Or System Product Code Equal To [=] AB200

Then Next PO Date Equal [=] Next PO Date Plus Days 5

- **And:** If the product location must meet *both* or *all* of the tests, then apply the rule. For example, if you would like to decrease the available quantity by 20% for product locations where *both* the available quantity is less than 10 *and* the next purchase order date is earlier than the current date, you might create a rule such as:

If Available Quantity Less Than [<] 10

And Next PO Date Before Today

Then Available Quantity Equal [=] Available Quantity Reduce By [%]  
20

### **Changing a condition**

Highlight an existing condition at the top of the screen so that you can use the Element, Operator, and Element or Value fields to change the condition. See *Specifying a condition*, above, for information on your options when setting up a condition.

Click *Change* to accept your changes to the condition.

### **Deleting a condition**

If the rule has multiple conditions, highlight an existing condition at the top of the screen and click *Delete* to remove the condition. This option is available only for Or or And conditions.

**Rearranging conditions**

If the rule has at least 3 conditions (the If condition and at least 2 Or or And conditions), highlight an existing Or or And conditions condition at the top of the screen and drag it up or down to the new position.

**Accepting or rejecting your entries**

Click *Next* to advance to the *Then* step.

Click *Cancel* to reject all changes to the rule, including those made at the *Rule Name* step, and return to the [Probability Rules](#) screen. If you were creating a new rule, the rule is not saved.

Optionally, click *Previous* to return to the *Rule Type* step.

**Fields at this step**

| Field          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Element</b> | <p>The quantity, date, or field to compare with the second <i>Element or Value</i> when determining whether to apply the rule. Calculations are listed below the other possible elements.</p> |

| Field                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Operator</b>         | <p>Possible operators are:</p> <ul style="list-style-type: none"> <li>• <i>Quantity or amount:</i> If the Element represents a quantity (Available Quantity, Next PO Quantity, Sell Qty/Multiple, Shrink Rate, or Sales Velocity) or an amount (Cost, Selling Price), possible operators are: <ul style="list-style-type: none"> <li>– Equal to [=]</li> <li>– Not equal to [!=]</li> <li>– Less than [&lt;]</li> <li>– Less than or equal to [&lt;=]</li> <li>– Greater than [&gt;]</li> <li>– Greater than or equal to [&gt;=]</li> </ul> </li> <li>• <i>Value or code:</i> If the Element represents a code or a value (Category, Class, Master Style, Status, System Product Code, Order Type or Originating System), possible operators are: <ul style="list-style-type: none"> <li>– Equal to [=]</li> <li>– Not equal to [!=]</li> </ul> <p>If the selected value is Express Carrier or On Clearance, then the only available operator is Equal to [=].</p> </li> <li>• <i>Date:</i> If the Element represents a date (Last Updated Date, Next PO Date, Today, or a date calculation), possible operators are: <ul style="list-style-type: none"> <li>– Before</li> <li>– After</li> </ul> </li> </ul> |
| <b>Element or Value</b> | <p>Depending on the selection in the <a href="#">Element</a> field, your options at the Element or Value field are:</p> <ul style="list-style-type: none"> <li>• Quantity element: select a quantity element or calculation, or enter a value</li> <li>• Amount element (Cost or Selling Price): select an amount element or calculation, or enter a value; can include a decimal</li> <li>• Date element: select a date element or calculation, or enter a date in the format specified through the <a href="#">Users</a> screen.</li> <li>• Defined value element: <ul style="list-style-type: none"> <li>– Express Carrier or On Clearance: select <i>Yes</i> or <i>No</i></li> <li>– Order Type: select <i>Pickup</i>, <i>Delivery</i>, or <i>Ship For Pickup</i></li> <li>– Originating System: select any system in the organization, with the exception of a vendor system or Store Connect system</li> <li>– Status: select <i>Active</i>, <i>Inactive</i>, or <i>Discontinued</i></li> <li>– Any other defined value (Category, Class, Department, Master Style, or System Product Code): enter a value</li> </ul> </li> </ul>                                                                       |

**Note**

When you enter a value, your entry is not validated; however, when the Routing Engine evaluates a probability rule, matching is case-sensitive.

## Then

**Purpose:** Use this step to specify the result of the rule. Possible results are:

- change the available quantity, PO quantity, or PO date to use for a locate items response or evaluate whether to assign an order to the location
- exclude the location from the locate items response or from consideration for order assignment through the Routing Engine

**How to display:** You advance to this step from the:

- *Conditions* step if you selected *If* as the Type of Rule at the *Rule Type* step
- *Rule Type* step if you selected *Always* as the Type of Rule at the *Rule Type* step

**Exclude location:** Select Exclude location to have a product location excluded from search results or order assignment by the Routing Engine. For an If rule, the product location must match the conditions set up at the *Conditions* step.

**Note**

A probability rule set to Exclude location does not prevent Order Orchestration from assigning an order to a location if the SubmitOrder request specifies the location as the fulfilling location. The rule only prevents the location from being included in the locate item search results and automatic assignment using the Order Orchestration rules.

**Alter a field for the product location:** If you do not select Exclude Location, specify the field to update and how to update it:

- *Element:* Possible elements to alter are:
  - [Available Quantity](#)
  - [Next PO Quantity](#)
  - [Next PO date](#)
- *Equal [=]:* This is the only possible operator.
- *Element or Value:* The resulting element or value must correspond to the Element:
  - [Available Quantity:](#) Possible element or value settings are:
    - \* [Next PO Quantity](#)
    - \* [Sell Quantity/Multiple](#)
    - \* [Minimum Sell Quantity](#)
    - \* [Daily Sell Through Quantity](#)
    - \* [Shrink Rate %](#)
    - \* [Sales Velocity](#)
    - \* Requested Quantity
    - \* a calculation using a quantity (for example, Available quantity minus [-] Shrink Rate)
    - \* or you can select *Enter value...* and enter a quantity. The *Enter value...* option is at the bottom of the drop-down list.
  - [Next PO Quantity:](#) Possible element or value settings are:
    - \* [Available Quantity](#) (but the [Available to Promise](#) is used if it is different from the available quantity)
    - \* [Sell Quantity/Multiple](#)
    - \* [Minimum Sell Quantity](#)
    - \* [Daily Sell Through Quantity](#)

- \* [Sales Velocity](#)
- \* [Shrink Rate %](#)
- \* Requested Quantity
- \* a calculation using a quantity (for example, Available quantity minus [-] Shrink Rate)
- \* or you can select *Enter value...* and enter a quantity. The *Enter value...* option is at the bottom of the drop-down list.
- [Next PO date](#): Possible element or value settings are:
  - \* [Last Updated](#) date
  - \* Today
  - \* a calculation using a date (for example, Next PO date plus [+] 2)
  - \* or you can select *Enter value...* and enter a date in the format specified at the specified through the [Users](#) screen. The *Enter value...* option is at the bottom of the drop-down list.

**For more information:** See the *Conditions* step for details on the fields at this screen.

### Accepting or rejecting your entries:

Click *Next* to advance to the *Review* step.

Click *Cancel* to reject all changes to the rule and return to the [Probability Rules](#) screen. If you were creating a new rule, the rule is not saved.

Optionally, click *Previous* to return to the *Conditions* step (for an If rule) or the *Rule Type* step (for an Always rule).

### Review

**Purpose:** Use this step to review a rule you have created or changed, and to accept or reject the rule.

**How to display:** You advance to this step from the *Then* step.

This step displays the rule you have created or changed using the *Probability Rule Wizard*.

**Rule not eligible Inventory Quantity Export Calculation:** A message indicates if the rule cannot apply to the inventory quantity export, since the records are created without being associated with an order. This message is displayed for rules that are based on express carrier, order type, originating system, last updated date, today, or requested quantity as a condition. See the [Probability Rules Update and Incremental Quantity Web Service](#) for more information.

Click *Save* to accept your changes and save the rule, or click *Cancel* to reject all changes to the rule and return to the [Probability Rules](#) screen. If you were creating a new rule, the rule is not saved.

Optionally, click *Previous* to return to the *Then* step.

### Sample Rules

The following table presents sample rules and includes the desired result, the steps to creating the rule, and the appearance of the rule once it is created.

**First steps in creating rule details:** The steps presented below tell you how to create rule details through the *Probability Rule Wizard*.

**To assign the rule:** After you create a rule, you need to use the [Probability Location](#) screen to apply the rule at the location, location type, or organization level, including specifying additional rule options such as sequence number, type (on-line only, off-line only, or both), date range, and whether the rule is active or inactive. See [Testing a Rule](#) for more information.

**Desired result:** Always exclude location 20 from locate items searches.

**Use when?** You might use this rule for a new store location that has begun stocking inventory but is not yet open for business.

| In the probability rule wizard                                                                                                                                                                                                                                                                  | Finished Rule          |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------|
| <ul style="list-style-type: none"> <li>At the <i>Rule Type</i> step, set the <b>Type of Rule</b> to <i>Always</i> and click <i>Next</i></li> <li>At the <i>Then</i> step, select <i>Exclude Location</i> and click <i>Next</i></li> <li>At the <i>Review</i> step, click <i>Save</i></li> </ul> | AlwaysExclude Location |

**Desired result:** Always decrease the available quantity by the shrink rate.

**Use when?** You might use this rule for locations with a high shrink rate, in order to avoid disappointing customers with inaccurate availability information.

| Calculation setup                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | In the probability rule wizard                                                                                                                                                                                                                                                                                                                                                                                                                                          | Finished Rule                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------|
| <p><i>First, create a calculation:</i><br/>Before you can create this rule, you first need to create a calculation to include in the rule result, specifying how to reduce the available quantity in the search results. You use the <a href="#">Calculations</a> window to work with calculations. You can advance to this screen by clicking <i>Calc</i> at the <a href="#">Probability Rules</a> screen.</p> <p>At the <i>Calculations</i> window:</p> <ol style="list-style-type: none"> <li>In first field, select <i>Available quantity</i></li> <li>In the second field, select <i>Reduce by [%]</i></li> <li>In the third field, select <i>Shrink rate</i></li> <li>Click <i>Save</i></li> </ol> <p>This creates the calculation:<br/>Available Quantity<br/>Reduce By [%] Shrink<br/>rate. Select <i>Cancel</i> to return to the <i>Probability Rules</i> screen.</p> | <ol style="list-style-type: none"> <li>At the <i>Rule Type</i> step, set the <b>Type of Rule</b> to <i>Always</i> and click <i>Next</i></li> <li>At the <i>Then</i> step:</li> <li>select <i>Available quantity</i> in the first field</li> <li>select <i>Equal [=]</i> in the second field</li> <li>select <i>Available Quantity Reduce By [%] Shrink</i> in the third field</li> <li>Click <i>Next</i></li> <li>At the <i>Then</i> step, click <i>Save</i></li> </ol> | Always Available<br>Quantity Equal<br>[=] Available<br>Quantity Reduce<br>By [%] Shrink |

**Desired result:** If the available quantity is less than the sell-through quantity, then present the available quantity as 0.

**Use when?** You might use this type of rule for locations with a high sell-through rate, especially if Order Orchestration does not receive real-time online inventory reporting.

| In the probability rule wizard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Finished Rule                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| <ol style="list-style-type: none"> <li>1. At the <i>Rule Type</i> step, set the <b>Type of Rule</b> to <i>If</i> and click <i>Next</i></li> <li>2. At the <i>Conditions</i> step:</li> <li>3. In the first field, select <i>Available quantity</i></li> <li>4. In the second field, select <i>Less Than [&lt;]</i></li> <li>5. In the third field, select <i>Daily Sell Through Qty</i></li> <li>6. Click <i>Add</i><br/>The If statement is added to the conditions area at the top of the screen.</li> <li>7. Click <i>Next</i></li> <li>8. At the <i>Then</i> step:</li> <li>9. In the first field, select <i>Available quantity</i></li> <li>10. In the second field, select <i>Equal [=]</i></li> <li>11. In the third field, select <i>Enter value...</i>, and enter <i>0</i> in the window</li> <li>12. Click <i>Next</i></li> <li>13. At the <i>Review</i> step, click <i>Save</i></li> </ol> | If Available Quantity<br>Less Than [<] Daily<br>Sell Through Qty<br>Then Available Quantity<br>Equal [=] 0 |

**Desired result:** If the available quantity is less than 10 and the next expected PO date is earlier than today, reduce the available quantity by 20%.

**Use when?** You might use this type of rule to build a margin of error for situations when purchase orders ship late.

| Calculation setup                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | In the probability rule wizard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Finished Rule                                                                                                                                                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><i>First, create a calculation:</i><br/>Before you can create this rule, you first need to create a calculation to include in the rule result, specifying how to reduce the available quantity in the search results. You use the <a href="#">Calculations</a> window to work with calculations. You can advance to this screen by clicking <i>Calc</i> at the <a href="#">Probability Rules</a> screen.</p> <p>At the <i>Calculations</i> window:</p> <ol style="list-style-type: none"> <li>1. In the first field, select <i>Available quantity</i></li> <li>2. In the second field, select <i>Reduce by [%]</i></li> <li>3. In the third field, select <i>Enter value...</i> and enter 20 in the window</li> <li>4. Click <i>Save</i></li> </ol> <p>This creates the calculation: Available Quantity Reduce By [%] 20. Select <i>Cancel</i> to return to the <a href="#">Probability Rules</a> screen.</p> | <ol style="list-style-type: none"> <li>1. At the <i>Rule Type</i> step, set the <b>Type of Rule</b> to <i>If</i> and click <i>Next</i></li> <li>2. At the <i>Conditions</i> step: <ul style="list-style-type: none"> <li>• In the first field, select <i>Available quantity</i></li> <li>• In the second field, select <i>Less Than or Equal To [≤]</i></li> <li>• In the third field, select <i>Enter value...</i>, and enter 10 in the window</li> </ul> </li> <li>3. Click <i>Add</i><br/>The If statement is added to the conditions area at the top of the screen.</li> <li>4. Add an additional condition at the <i>Conditions</i> step with <i>And</i> selected: <ul style="list-style-type: none"> <li>• In the first field, select <i>Next PO Date</i></li> <li>• In the second field, select <i>Before</i></li> <li>• In the third field, select <i>Today</i></li> </ul> </li> <li>5. Click <i>Add</i><br/>The And statement is added to the conditions area at the top of the screen.</li> <li>6. Click <i>Next</i></li> <li>7. At the <i>Then</i> step: <ul style="list-style-type: none"> <li>• In the first field, select <i>Available quantity</i></li> <li>• In the second field, select <i>Equal [=]</i></li> <li>• In the third field, select the calculation created above (Available Quantity Reduce By [%] 20)</li> </ul> </li> <li>8. Click <i>Next</i></li> <li>9. At the <a href="#">Review</a> step, click <i>Save</i></li> </ol> | <p>If Available Quantity Less Than or Equal To [≤] 10<br/>And Next PO Date Before Today<br/>Then Available Quantity Equal [=] Available Quantity Reduce By [%] 10</p> |

**Desired result:** If product is AB200 or product is AB300, add 5 days to the next PO date.

**Use when?** You might use this type of rule to build a margin of error for products that you expect to typically ship late.

| Calculation setup                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | In the probability rule wizard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Finished Rule                                                                                                                                           |

**Desired result:** If the available quantity divided by the sell quantity is less than the requested quantity, exclude the location.

**Use when?** You might use this rule for products you sell in a specified unit quantity, such as tires.

| Calculation setup                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | In the probability rules wizard                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Finished Rule                                                                                                |

At the <i>Review</i> step, click <i>Save</i></li> </ol> | <p>If Available Quantity Divide [/] Sell Qty/M Less Than [&lt;] Requested Quantity Then Exclude Location</p> |

**How to update multiple fields?** If you would like to update more than one field in the search results based on the same condition, you need to create a separate rule for each field.

For example, you might want to both reduce the available quantity displayed in search results, and increase the next PO date by 5 days for a certain master style that sells quickly and typically ships late. To do so, you could create the following rules:

1. *Rule to reduce the available quantity:* If Master Style Equal To [=] KABSKU3 Then Available Quantity Equal [=] Available Quantity Reduce By [%] 10
2. *Rule to increase the next PO date:* If Master Style Equal To [=] KABSKU3 Then Next PO Date Equal [=] Next PO Date Plus Days 5

### Testing a Rule

**Why test?** Probability rules and their application can be quite complex. Before you start using a rule in a production environment, it is worthwhile to make sure that your rule settings have the intended result. Testing is even more important if you will use multiple rules that update different fields, or that are specified in different levels in the location hierarchy.

**Before you start:** Select a product that exists in representative locations and systems. Depending on the rule and your requirements, you might want to use a product with product locations that:

- are in both an online system and an offline system

- include rule attributes or metrics which are set to a positive number, a negative number, blank, or 0. For example, what if the rule says to divide the available quantity by the selling multiple, but no selling multiple is specified for a product location? What happens if the available quantity is a negative number or 0? (In a situation where a rule would require Order Orchestration to divide a number by 0, Order Orchestration skips the rule and evaluates the next rule in the hierarchy.)

#### Troubleshooting:

- **If no rules apply:** Do you have the Use Probability Rules preference set to Yes at the [Preferences](#) screen?
- **If the rule does not apply to a product location as expected:**
  - **Rule active?** Use the [Probability Location](#) screen to confirm that the rule is active and not prohibited from the location based on date range. Start at the lowest level (location) and work upward to location type and finally organization.
  - **Correct type?** If the probability rule assignment at the [Probability Location](#) screen indicates a Type of off-line only or on-line only, use the [Systems](#) screen to confirm that the system matches the selected type. Even if the system is flagged as online at the Systems screen, Order Orchestration considers it off-line if it cannot obtain an interactive inventory update from the system. This might occur if communications are down between Order Orchestration and the external system.
  - **Did you fail to save the rule details?** If you forgot to click Save when using the *Probability Rule Wizard*, your entries were not saved.
  - **Did Order Orchestration skip the rule because it would have required dividing by 0?** Check the information for the product location.
  - **Field already updated by another rule?** For example, if two rules apply to the same field (such as available quantity), and one has a lower sequence number, Order Orchestration might apply that rule first and never evaluate the rule with the higher sequence number.
  - **If the rule does not apply at all:** If the *Probability Rules* setting at the [Event Logging](#) screen is set to *Detailed*, Oracle staff will be able to use the logs to review any probability rule errors or activity.
  - Confirm that the effect of the rule is not obscured by rounding. For example, if the rule indicates to reduce the available quantity by the shrink rate, and if a shrink rate of 5% is applied to an available quantity of 10, the resulting available quantity of 9.5 is rounded up and displayed as 10.
  - **Does the rule involve the requested quantity?** Certain systems, such as Order Administration, do not include a requested quantity for a locate items search unless you search from order entry.
  - **Does the rule relate to the available quantity?** If the [Available Quantity](#) differs from the [Available to Promise](#) quantity for a product location, the probability rule uses the [Available to Promise](#) quantity. For example:
    - \* The available quantity is 100, and the available to promise quantity is 80. If the rule requires that the available quantity be greater than 90, the rule does not apply.
    - \* The available quantity is 50, the available to promise quantity is -10, and the next PO quantity is 100. If the rule specifies to set the available quantity to available quantity plus next PO quantity, the resulting available quantity is 90 (-10 + 100).

# Browse Probability Rules

**Purpose:** Use the **Browse Probability Rules** window to review probability rules you have set up through the [Probability Rule Wizard](#).

Used for the Routing Engine module.

**For more information:** For a brief overview of probability rules, see [Using Probability Rules](#); and for more details, see [Probability Rule Overview](#).

**Rule not eligible Inventory Quantity Export Calculation:** A message indicates if the rule cannot apply to the inventory quantity export, since the records are created without being associated with an order. This message is displayed for rules that are based on express carrier, order type, originating system, last updated date, today, or requested quantity as a condition. See the [Inventory Quantity Export](#) for more information.

**How to display this window:** Click a probability rule once at the [Probability Rules](#) screen.

## Note

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Probability Rules* authority can display this screen. See [Roles](#) for more information.

## Options at this window

|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>edit the displayed probability rule</b>  | Click <i>Edit</i> to advance to the <a href="#">Probability Rule Wizard</a> screen.                                                                         |
| <b>review the next probability rule</b>     | Click the next icon (  ) to display the next probability rule.          |
| <b>review the previous probability rule</b> | Click the previous icon (  ) to display the previous probability rule. |

## Fields at this window

| Field               | Description                                                                                                                    |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <b>Name</b>         | The description of the probability rule.<br>The name can be up to 40 positions, and can include spaces and special characters. |
| <b>Rule details</b> | The details of the rule you created through the <a href="#">Probability Rule Wizard</a> .                                      |

# Probability Location

**Purpose:** Use the **Probability Location** screen to:

- assign probability rules to an organization, location type, or location
- change settings, including sequence number, type, date range, and active/inactive flag, for a probability location assignment
- review the probability rules that are assigned to an organization, location type, or location

Used for the Routing Engine module.

**For more information:** See [Probability Rule Wizard](#) for an overview on probability rules, and for information on creating and testing rules, and for sample rules.

**Probable quantity rules:** You use the [Probable Quantity Location](#) screen rather than this screen to assign probable quantity rules, which update the [probable quantity](#) that a system, such as your ecommerce site, can use as an estimate of an item's availability. For more information on probable quantity rules and calculation of the probable quantity, see:

- the [Probable Quantity Rules](#) screen
- the [Probable Quantity Location](#) screen
- the *Probable Qty Export* tab at the [System](#) screen

**How to display this screen:** Select *Probability Location* from the [Home Screen](#) or from the [Products Menu](#).

#### Note

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Probability Location* authority can display this screen. See [Roles](#) for more information.

## Assigning Rules

**When do rules apply?** Rules do not apply to product locations until you assign them at the [Probability Location](#) screen. The way Order Orchestration determines whether to apply a rule is described below.

**Evaluate rules?** When it receives a locate item request or a submit order request that does not specify a fulfilling location, Order Orchestration evaluates a product location for probability rules if:

- the *Use probability rules* preference applies to the organization; see the [Preferences](#) screen
- the location is within the search radius, if proximity rules apply; see [Proximity Locator Searching](#)
- the requested product is stocked in the location (that is, the product location exists)

**Evaluate a specific rule?** In order for Order Orchestration to evaluate a product location for a specific probability rule, it reviews the probability location:

- *status:* The probability location assignment for the rule must have a status of *Active*.
- *date range:* Specifying a “from” or “to” date for the probability location is optional; however, if either is specified, the current date must be on or after the “from” date (if any) and before the “to” date (if any) for the rule to apply.
- *on-line or off-line?* The probability location *Type* specifies whether the rule applies to on-line inventory information, off-line information, or both. The *Type* specified for the probability location must match the type of inventory to be supplied for the product location in this locate items search, based on whether Order Orchestration receives an interactive inventory inquiry response from the system when it processes the locate items search. See [inventory level type](#) for more information.
- *Field already updated?* Once Order Orchestration has updated a field in the locate items or submit order search results (the available quantity, the next expected purchase order date,

or the next expected purchase order quantity for a product location), it stops evaluating rules that update that particular field.

#### Note

Probability rules do not actually update the field in the product location record; they only update the information returned in the search results for a locate items request or used to select the product location for a submit order request.

- *Exclude location?* If a probability location rule specifies to exclude a product location, and the product location meets the criteria for that rule, then that product location is excluded from the locate item or Routing Engine shopping search results regardless of whether another rule has applied to any of the fields.

**Rule hierarchy:** In evaluating probability locations, Order Orchestration uses the same hierarchy described under [Proximity Locator Searching](#), namely:

1. lowest level: [location](#)
2. next level: [location type](#)
3. highest level: [organization](#)

This hierarchy applies independently to each of the fields that can be updated through probability rules. For example, you can have:

- a rule to update the next purchase order date set up at the location level
- rules to update the available quantity at the location level and at the location type level; in this case, the rule set up at the location level takes precedence and is evaluated first

Once Order Orchestration updates a field, it stops evaluating other rules related to that same field. For example, if a rule at the location level updated the available quantity, a rule at the location type level that is also related to available quantity is not evaluated. However, a rule that specifies to exclude a location overrides any other rule, regardless of its position in the hierarchy.

**Setting up rule conditions at each level:** You can set the conditions for a particular rule differently at any point in the hierarchy. For example, you can specify a date range for a particular location, but leave the “from” and “to” dates blank at the location type level. Order Orchestration always starts checking at the lowest level (that is, [location](#)) and works its way up through the hierarchy until it finds a setting. However, be sure to avoid setting up rule conditions so complex that the results are not easily predictable.

**What if multiple rules exist at the same level?** It is possible to assign multiple rules at the same level, either location, location type, or organization. In this situation, Order Orchestration first evaluates the rule with the lowest sequence number.

#### Options at this screen

| Option | Procedure |
|--------|-----------|
|--------|-----------|

**review the levels for rule assignment or review**

1. Your *Default Organization* defined through the [Users](#) screen is selected by default, but you can override it. A blue arrow (→) next to the organization name indicates if there are any rules assigned at any level within the organization. Optionally, you can select a different organization

2. Optionally, click the plus sign next to the organization to display each [Location Type](#) for the organization if they are not already displayed. Again, a blue arrow next to the location type name indicates if there are any rules assigned at any level within the location type.

3. If the organization includes a location type that does not include any locations, the location type is not displayed.
4. You might need to increase the zoom in your browser in order to display the blue arrows.
5. The hierarchy may not be displayed correctly until you assign a *Default Organization* through the [Users](#) screen to the default admin user. See [Assign the default organization to the default user](#) for more information.
6. Optionally, click the plus sign next to a location type to display each *Location* for the type if they are not already displayed. A blue arrow next to a location indicates if there are any rules assigned to that particular location.

**Sort order:** This screen sorts all displayed records in alphanumeric order within each organization. In other words, organizations are listed alphanumerically by name, as are location types within an organization, and locations within a location type. Since the sort is

| Option                                                                                             | Procedure                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| select location type or location for rule assignment or review, or select a different organization | <p>alphanumeric, numeric codes are listed before alphabetical codes; for example, location 123 is listed before location ABC.</p> <p>Highlight the location type or location to display the rules that are currently assigned at that level, or select a different organization from the drop-down list.</p> <p>Note that the currently selected location level is indicated above any assigned rules.</p> |

|                                      | <ol style="list-style-type: none"><li>1. Enter a <i>Seq (sequence number)</i> to use for the rule assignment. Rules with the lowest sequence numbers are evaluated first, and when you add a new rule, Order Orchestration reassigns the sequence numbers.</li><li>2. Select the <i>Name</i> of the rule you would like to assign from the drop-down list.</li><li>3. Set the <i>Type</i> field to <i>Off-line</i> only, <i>On-line</i> only, or leave it set to <i>Both</i> to indicate whether the rule is conditional based on an interactive inventory update. See <a href="#">inventory level type</a> for a discussion.</li><li>4. Optionally, enter an <i>From (Effective From Date)</i> to have the rule become effective on that date.</li><li>5. Optionally, enter an <i>To (Effective To Date)</i> in to have the rule no longer effective on that date.</li></ol> |
|                                      | <div><p> <b>Note</b></p><p>You can specify an Effective From Date, an Effective To Date, both, or neither.</p></div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                                      | <ol style="list-style-type: none"><li>6. Optionally, reset the <i>Active</i> flag if the rule should not be created in active status.</li><li>7. Click <i>Save</i> to create the new rule assignment.</li></ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| update a probability rule assignment | <ol style="list-style-type: none"><li>1. Use the navigational fields in the left-hand pane to select the organization, location type, or location where the rule should apply, as described above.</li><li>2. Click the assignment to highlight it. The rule and its current settings default to the fields at the top of the screen.</li><li>3. Use the fields at the top of the screen to enter the updated information as needed. You can change the <i>Seq (sequence number)</i>, <i>Type</i>, <i>From (Effective From Date)</i>, <i>To (Effective To Date)</i>, and <i>Active</i> flag.</li><li>4. Click <i>Save</i> to apply your changes.</li></ol>                                                                                                                                                                                                                    |
| delete a probability rule assignment | <ol style="list-style-type: none"><li>1. Use the navigational fields in the left-hand pane to select the organization, location type, or location where the rule should apply, as described above.</li><li>2. Click the delete icon () next to the rule to delete it.</li></ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

 **Note**

Deleting a rule at the organization or location type level does not automatically delete a rule assignment for the same rule at a lower level in the hierarchy. Also, deleting a rule assignment does not delete the rule itself.

## Fields at this screen

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Seq (sequence number)</b> | <p>The sequence in which Order Orchestration should evaluate rules assigned at this level. A lower sequence number indicates to evaluate the rule earlier; that is, a rule with a sequence number of 10 is evaluated before one with a sequence number of 20. Optional entry.</p> <p><i>Rule entries and sequence number assignments:</i> Order Orchestration maintains sequence numbers that are multiples of 10, and resequences existing rules to accommodate your entries:</p> <ul style="list-style-type: none"> <li>• <b>First rule assignment:</b> The first rule assignment takes sequence number 10.</li> <li>• <b>To create a new highest-priority rule:</b> If you enter a sequence number lower than 10, the rule is assigned sequence number 10, and the existing rules are assigned higher sequence numbers that are multiples of 10. For example, if there were rules assigned sequence numbers 10 and 20, and you enter sequence number 1, the new rule is assigned sequence number 10 and the existing rules change to 20 and 30.</li> <li>• <b>To insert a rule into the existing hierarchy:</b> If you enter a sequence number that is between 2 currently assigned numbers, the rule is assigned the next multiple of 10, and the higher rules are resequenced accordingly. For example, if you have rules assigned to sequence numbers 10 and 20, and you enter a sequence number of 15, the new rule is assigned sequence number 20 and the existing rule that was assigned sequence number 20 changes to sequence number 30.</li> <li>• <b>To add a rule a new lowest-priority rule:</b> If you enter a sequence number that is higher than any currently assigned sequence number, the rule is assigned the next available multiple of 10. For example, if you have rules assigned sequence numbers 10, 20, and 30, and you enter a sequence number of 99, the new rule is assigned sequence number 40.</li> </ul> <div data-bbox="725 1266 839 1299"> <p><b>Note</b></p> <p>If you do not enter a sequence number, Order Orchestration assigns the rule to the next available multiple of 10. For example, if there is currently a rule assigned sequence number 20, Order Orchestration assigns the new rule sequence number 30.</p> </div> <ul style="list-style-type: none"> <li>• <b>Updating a rule:</b> When you update a rule assignment and enter a sequence number, Order Orchestration uses the same logic described above to determine the sequence number assignment; however, if the sequence number is blank when you update an existing rule assignment, the updated rule is reassigned sequence number 10, and the remaining rules are resequenced.</li> </ul> <p>See <a href="#">Probability Rule Overview</a> for more information on how Order Orchestration applies probability rules to product locations.</p> |
| <b>Name</b>                  | The Name of the rule. You can select a rule by highlighting its name in the drop-down box. Required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Type</b>                  | Indicates whether to apply the rule to off-line product locations, on-line product locations, or both. Defaults to <i>BOTH</i> . Required. See <a href="#">inventory level type</a> for a discussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Field                             | Description                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>From (Effective From Date)</b> | The date when the rule becomes effective. Optional.                                                                                                                                                                                                                                                                                                                                       |
| <b>To (Effective To Date)</b>     | The first date when the rule is no longer effective. Optional.                                                                                                                                                                                                                                                                                                                            |
| <b>Active</b>                     | Indicates whether Order Orchestration should evaluate the rule or not to determine whether to apply it to a product location. Possible settings are: <ul style="list-style-type: none"> <li>• <b>Yes:</b> Order Orchestration should evaluate the rule and apply it if the product location qualifies.</li> <li>• <b>No:</b> Order Orchestration should not evaluate the rule.</li> </ul> |
| <b>Navigational fields</b>        | These fields are in the left-hand side of the screen, below the heading information. See <i>review the levels for rule assignment or review</i> , above, for information on advancing through these fields to display rule assignments for a specific organization, location type, and location.                                                                                          |
| <b>Organization</b>               | A <a href="#">organization</a> . From the <i>Default Organization</i> defined through the <a href="#">Users</a> screen, but you can override it.                                                                                                                                                                                                                                          |
| <b>Location Type</b>              | A <a href="#">location type</a> .                                                                                                                                                                                                                                                                                                                                                         |
| <b>Location</b>                   | A <a href="#">location</a> . The location code is also displayed.<br><br><i>Rule assigned?</i> A blue arrow (→) next to the organization, location type, or location indicates if there are any rules assigned at that level or below.                                                                                                                                                    |

**Note**

To refresh the display of the blue arrows based on your activity at this screen, close the **Probability Location** screen and re-enter.

**Selected level**

When you highlight an [organization](#), [location type](#), or [location](#) in the left-hand pane, the code and description are displayed in the center of the screen above any rules that apply to the selection.

**Results fields**

**How to update an assigned rule:** See *update a probability rule assignment*, above.

**Seq (Sequence Number)**

The sequence in which Order Orchestration should evaluate the rule compared with other rules assigned at this level. Order Orchestration assigns sequence numbers in multiples of 10. A lower sequence number indicates to evaluate the rule earlier; that is, a rule with a sequence number of 10 is evaluated before one with a sequence number of 20. See [Probability Rule Overview](#) for more information on how Order Orchestration applies probability rules to product locations.

| Field                      | Description                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name                       | The Name of the rule.                                                                                                                                                                                                                                                                                                                                                                       |
| Type                       | Indicates whether to apply the rule to off-line product locations, on-line product locations, or both. See <a href="#">inventory level type</a> for a discussion.                                                                                                                                                                                                                           |
| From (Effective From Date) | The date when the rule becomes effective. If no date is specified, the rule is effective without regard to start date.                                                                                                                                                                                                                                                                      |
| To (Effective To Date)     | The first date when the rule is no longer effective. If no date is specified, the rule is effective without regard for end date.                                                                                                                                                                                                                                                            |
| Active                     | Indicates whether Order Orchestration should evaluate the rule to determine whether to apply it to a product location. Possible settings are: <ul style="list-style-type: none"> <li><i>Selected:</i> Order Orchestration should evaluate the rule and apply it if the product location qualifies.</li> <li><i>Unselected:</i> Order Orchestration should not evaluate the rule.</li> </ul> |
| Delete                     | Select the delete icon (  ) next to a probability rule assignment to delete the rule assignment.                                                                                                                                                                                                          |

**Note**

If the name of the rule is too long to display in the space allotted, you can position your cursor over this field to display the full name.

## Probable Quantity Rules

**Purpose:** Use the **Probable Quantity Rules** screen to review or work with existing probable quantity rules, or create new rules.

Used for the Routing Engine module.

**What is a probable quantity rule?** A probable quantity rule is a probability rule that applies only to calculation of the [probable quantity](#), an estimate of available quantity that a system, such as your ecommerce site, can retrieve in order to more accurately present an item's availability.

**Calculated when?** The probable quantity export program calculates the probable quantity. See the [Inventory Quantity Export](#) of the **System** screen for information on scheduling or running the export program.

**Assigning and applying rules:** You use the [Probable Quantity Location](#) screen to assign a rule to a location type or to a location. If you specify a system product or master style as criteria for the rule, the rule applies only to product locations that match your entries.

Each rule applies only to the location type or location where it is assigned.

 **Note**

Probable quantity rules based on department, class, or category are not currently supported; also, probability rules assigned to a specific location might not be applied during the probable quantity export. See [Evaluating Probable Quantity Rules](#) for a discussion.

**Rule hierarchy:** See [Evaluating Probable Quantity Rules](#) for a discussion of how the probable quantity update program selects a probability rule if a product location qualifies for multiple rules.

**Routing Engine probability rules:** See the [Probability Rule Wizard](#) for more information on probability rules that apply to locate items searches and order assignment, rather than the probable quantity calculation.

**How to display this screen:** Select *Probable Rules* from the [Products Menu](#).

 **Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Probable Quantity Rules* authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                                         | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>select a rule for review or maintenance</b> | <p>Click the edit icon (  ) next to a rule to advance to the <a href="#">Edit Probable Quantity Rule</a> window.</p>                                                                                                                                                                                                                                                                                                                                              |
| <b>delete a rule</b>                           | <p>Select the delete icon (  ) next to a rule to delete it.</p> <p><b>Note:</b> You cannot delete a rule that is assigned to any location types or locations. Use the <a href="#">Probable Quantity Location</a> screen to review or work with rule assignments.</p>                                                                                                                                                                                              |

## New Probable Quantity Rule

**Purpose:** Use the **New Probable Quantity Rule** window to complete creation of a probable quantity rule.

Used for the Routing Engine module.

**What is a probable quantity rule?** A probable quantity rule is a probability rule that applies only to calculation of the [probable quantity](#), an estimate of available quantity that a system, such as your ecommerce site, can retrieve in order to more accurately present an item's availability.

**Calculated when?** The probable quantity update program calculates the probable quantity. See the [Inventory Quantity Export](#) at the **Schedule Jobs** screen for information on scheduling or running the probable quantity update program, and see [Evaluating Probable Quantity Rules](#) for a process overview and background.

**Assigning and applying rules:** You use the [Probable Quantity Location](#) screen to assign a rule to a location type or to a location. If you specify a system product or master style as criteria for the rule, the rule applies only to matching product locations.

Each rule applies only to the location type or location where it is assigned.

**Rule hierarchy:** See [Evaluating Probable Quantity Rules](#) for a discussion of how the probable quantity update program selects a probability rule if a product location qualifies for multiple rules.

**Routing Engine probability rules:** See the [Probability Rule Wizard](#) for more information on probability rules that apply to locate items searches and order assignment rather than to the probable quantity calculation.

**How to display this screen:** Enter a Rule Name of up to 40 positions at the [Probable Quantity Rules](#) screen and click *New*.

### Note

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Probable Quantity Rules* authority can display this screen. See [Roles](#) for more information.

### Creating a rule

To complete creation of a probable quantity rule:

1. Optionally, edit the Rule Name you entered at the previous screen.
2. Optionally, specify selection criteria for the rule:
3. System Product code, or
4. Master Style, or
5. Department, Class, or Category
6. Select the Operator that indicates how to increase, decrease, or set the probable quantity.
7. Enter the Value that indicates how to calculate the probable quantity.
8. Click *Save*.

## Edit Probable Quantity Rule

**Purpose:** Use the **Edit Probable Quantity Rule** window to review or edit a probable quantity rule.

Used for the Routing Engine module.

**What is a probable quantity rule?** A probable quantity rule is a rule that applies only to calculation of the [probable quantity](#), an estimate of available quantity that a system, such as your ecommerce site, can retrieve in order to more accurately present an item's availability.

**Calculated when?** The probable quantity update program calculates the probable quantity. See the [Inventory Quantity Export](#) at the **Schedule Jobs** screen for information on scheduling or running the probable quantity update program, and see [Evaluating Probable Quantity Rules](#) for a process overview and background.

**Assigning and applying rules:** You use the [Probable Quantity Location](#) screen to assign a rule to a location type or to a location. If you specify a system product or master style as criteria for the rule, the rule applies only to matching product locations.

Each rule applies only to the location type or location where it is assigned.

**Rule hierarchy:** See [Evaluating Probable Quantity Rules](#) for a discussion of how the probable quantity update program selects a probability rule if a product location qualifies for multiple rules.

**Routing Engine probability rules:** See the [Probability Rule Wizard](#) for more information on probability rules that apply to locate items searches and order assignment rather than the probable quantity calculation.

**How to display this screen:** Click the edit icon (  ) for an existing rule at the [Probable Quantity Rules](#) screen.

**Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Probable Quantity Rules* authority can display this screen. See [Roles](#) for more information.

Fields at this window

| Field                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Rule Name</b>           | The description of the rule. Up to 40 positions. Required.                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Optional Conditions</b> | Optionally, use the following fields to restrict the rule to products that match the specified criteria. The rule must be assigned to the product location's location type or location in order to apply.<br>All entries are free-form text.                                                                                                                                                                                                |
| <b>System Product</b>      | The <a href="#">system product</a> code identifying the product in a particular system that is eligible for the rule. Up to 35 positions. Optional.<br>If you specify a system product, you cannot also specify a master style, department, class, or category.                                                                                                                                                                             |
| <b>Master Style</b>        | The <a href="#">master style</a> identifying system products that are eligible for the rule. Up to 35 positions. Optional.<br>If you specify a master style, you cannot also specify a system product, department, class, or category.                                                                                                                                                                                                      |
| <b>Department</b>          | The department identifying products eligible for the rule. See the <a href="#">New Product</a> screen for background. Up to 40 positions. Optional. <ul style="list-style-type: none"> <li>If you specify a department, you cannot also specify a system product or a master style.</li> <li>If you specify a class or a category as well as a department, the product must match all entered values for the rule to apply.</li> </ul>      |
| <b>Class</b>               | The class identifying products that are eligible for the rule. See the <a href="#">New Product</a> screen for background. Up to 40 positions. Optional. <ul style="list-style-type: none"> <li>If you specify a class, you cannot also specify a system product or a master style.</li> <li>If you specify a department or a category as well as a class, the product must match all entered values for the rule to apply.</li> </ul>       |
| <b>Category</b>            | The category identifying products that are eligible for the rule. See the <a href="#">New Product</a> screen for background. Up to 40 positions. Optional. <ul style="list-style-type: none"> <li>If you specify a category, you cannot also specify a system product or a master style.</li> <li>If you specify a department or a class as well as a category, the product must match all entered values for the rule to apply.</li> </ul> |
| <b>Calculation</b>         | The following fields define the calculation applied by the rule.                                                                                                                                                                                                                                                                                                                                                                            |

| Field           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## Probable Quantity Location

**Purpose:** Use the **Probable Quantity Location** screen to assign probable quantity rules to location types or locations.

Used for the Routing Engine module.

**What is a probable quantity rule?** A probable quantity rule is a probability rule that applies only to calculation or update of the [probable quantity](#), an estimate of available quantity that a system, such as your ecommerce site, can retrieve in order to more accurately present an item's availability.

**Calculated when?** The probable quantity update program calculates the probable quantity. See the [Inventory Quantity Export](#) at the **Schedule Jobs** screen for information on scheduling or running the probable quantity update program, and see [Evaluating Probable Quantity Rules](#) for background.

**Creating rules:** Use the [Probable Quantity Rules](#) screen to review and work with probable quantity rules.

**Assigning multiple rules:** Only one rule can apply when calculating the probable quantity. If a product location qualifies for multiple rules, based on rule criteria and assignment, the program applies only the *last possible rule* as follows to calculate the [probable quantity](#):

- First, evaluate rules assigned to the location type:
  - no matching required
  - matching master style

matching system product

- Next, evaluate rules assigned to the location, using the same sequence listed above.

*Example:* For a particular product, rules have been assigned to:

1. the location type, specifying a matching master style
2. the location, without any matching required
3. the location, specifying a matching system product

**Result:** The rule that is assigned at the location level and specifies a matching system product is applied to the product location and updates the `probable_qty`.

You can assign up to 10 rules at any one level.

For accurate calculation of the `probable_qty`, do not apply multiple probable quantity rules at the same level and with the same criteria.

**How to display this screen:** Select *Probable Quantity Location* from the [Products Menu](#).

 **Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Probable Quantity Location* authority can display this screen. See [Roles](#) for more information.

### Options at this screen

| Option                                          | Procedure                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| review the levels for rule assignment or review | <ol style="list-style-type: none"><li>The <i>Default Organization</i> defined through the <a href="#">Users</a> screen defaults, but you can override it. A blue arrow (➡) next to the organization name indicates if there are any rules assigned at any level within the organization. Optionally, you can select a different organization.</li></ol> |

- Optionally, click the plus sign next to the organization to display each [Location Type](#) for the organization if they are not already displayed. Again, a blue arrow next to the location type name indicates if there are any rules assigned at any level within the location type.

- Optionally, click the plus sign next to a location type to display each [Location](#) for the type if they are not already displayed. A blue arrow next to a location indicates if there are any rules assigned to that particular location.

**Sort order:** This screen sorts all displayed records in alphanumeric order within each organization. In other words, organizations are listed alphanumerically by name, as are location types within an organization, and locations within a location type. Since the sort is alphanumeric, numeric codes are listed before alphabetical codes; for example, location 123 is listed before location ABC.

**Note:** The hierarchy may not be displayed correctly until you assign a *Default Organization* to the default admin user through the [Users](#) screen.

| Option                                                                                                    | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>select location type or location for rule assignment or review, or select a different organization</b> | <p>Highlight location type or location to display the rules that are currently assigned at that level, or select a different organization from the drop-down list.</p> <p>Note that the currently selected location level is indicated above any assigned rules.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>assign a probable quantity rule</b>                                                                    | <ol style="list-style-type: none"> <li>1. Use the navigational fields in the left-hand pane to select the organization and location type or location where the rule should apply, as described above. You can assign a rule at only one level at a time; however, rules you set at the location type level apply to locations of that type, unless they are overridden by another rule at the location level.</li> <li>2. Use the Rule field at the top of the screen to select the rule</li> <li>3. Click <b>Save</b> to assign the rule.</li> </ol> <p><b>Rule not displayed?</b> If you create or update the name of a probable quantity rule while the <b>Probable Quantity Location</b> screen is open, the new or renamed rule is not available for assignment until you close the <b>Probable Quantity Location</b> screen and reopen it.</p> |
| <b>remove a probable quantity rule assignment</b>                                                         | <ol style="list-style-type: none"> <li>1. Use the navigational fields in the left-hand pane to select the organization and location type or location where the rule should apply, as described above.</li> <li>2. Click the delete icon () next to the rule to delete it.</li> </ol> <p><b>Note:</b> Deleting a rule assignment at the location type level does not automatically delete a rule assignment of the same rule at the location level. Also, deleting a rule assignment does not delete the rule itself.</p>                                                                                                                                                                                                                                        |

### Fields at this screen

| Field                      | Description                                                                                                                                                                                                                                                                           |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Rule</b>                | The description of the probable quantity rule, as entered at the <a href="#">New Probable Quantity Rule</a> window or the <a href="#">Edit Probable Quantity Rule</a> window. Select a rule from the dropdown field to assign it to the currently selected location type or location. |
| <b>Navigational fields</b> | These fields are in the left-hand side of the screen, below the heading information. See above for information on advancing through these fields to display rule assignments for a specific location type or location.                                                                |
| <b>Organization</b>        | A <a href="#">organization</a> . From the <i>Default Organization</i> defined through the <a href="#">Users</a> screen, but you can override it.                                                                                                                                      |
| <b>Location Type</b>       | A <a href="#">location type</a> .                                                                                                                                                                                                                                                     |

| Field          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Location       | <p>A <a href="#">location</a>. The location code is also displayed.</p> <p><b>Note:</b> Rules assigned at the location level are eligible to be applied only if another activity, such as an inventory import, updates the product location.</p> <p><i>Rule assigned?</i> A blue arrow (  ) next to the organization, location type, or location indicates if there are any probable quantity rules assigned at the location type or location level.</p> <div><p> <b>Note</b></p><p>To refresh the display of the blue arrows based on your activity at this screen, close the <b>Probable Quantity Location</b> screen and re-enter.</p></div> |
| Selected level | When you highlight an <a href="#">organization</a> , <a href="#">location type</a> , or <a href="#">location</a> in the left-hand pane, the code and description are displayed in the center of the screen above any rules that apply to the selection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Rule           | The description of each probable quantity rule currently assigned at the displayed level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Delete         | Select the delete icon (  ) next to a probable quantity rule assignment to delete the rule assignment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Locations Menu

- [Organizations and Preferences](#)
  - [Preferences](#): Used for the Routing Engine module. Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Drop Ship Preferences](#): Used for the Supplier Direct Fulfillment module. Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [Store Connect Preferences](#): Used for the Store Connect module. Available if Use Store Connect is selected at the [Tenant](#) screen.
- [Order Orchestration Preference Overrides](#): Used for the Routing Engine module. Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Edit Order Orchestration Preference Override](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Browse Order Orchestration Preference Override](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- [Locations](#)
  - [New Location](#)
  - [Edit Location](#)
  - [Location Attributes](#): Used for the Routing Engine module.
    - \* [New Location Attribute](#): Used for the Routing Engine module.
    - \* [Edit Location Attribute](#): Used for the Routing Engine module.
- [Location Bulk Updates](#): Used for the Routing Engine module.
- [Fulfillment Zones](#): Used for the Routing Engine module. Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Fulfillment Zone Wizard](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Browse Fulfillment Zones](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- [Vendors](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen. Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [New Vendor](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [Edit Vendor](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.

## Organizations and Preferences

**Purpose:** Use the **Organizations and Preferences** screen to advance to the [Preferences](#), [Drop Ship Preferences](#), or [Store Connect Preferences](#) screen for an organization.

**Location relationships:** See [Organization, System, and Location](#) for an overview of the relationships among **Order Orchestration** elements, including organizations.

**How are organizations created?** You need to create each organization through the [Organizations](#) screen in Modern View. See [Setting Up Data for the Routing Engine Module](#) for background.

**How to display this screen:** Select *Organizations and Preferences* from the [Home Screen](#) or from the [Locations Menu](#).

**Note**

Only users with *Organization and Preferences* authority can display this screen. See [Roles](#) for more information.

### Options at this screen

| Option                                                               | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>search for an organization</b>                                    | <p>Use one or both of the fields at the top of the screen to restrict the search results to matching organizations:</p> <ul style="list-style-type: none"> <li>Enter a full or partial organization code in the <i>Organization</i> field to restrict your results to organizations starting with your entry.</li> <li>Enter a full or partial name in the <i>Name</i> field to restrict your results to organizations whose names contain your entry.</li> <li>Click <i>Search</i>.</li> </ul> <p><b>Case?</b> Both the Organization and the Name fields on this screen are case-sensitive for searching; for example, an entry of O does not match an organization of Org.</p>                           |

### Fields at this screen

| Field                 | Description |
|-----------------------|-------------|
| <b>Search fields:</b> |             |

| Field                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization</b>                    | See <a href="#">organization</a> . The organization code can be 1 to 10 positions long, can include spaces and special characters, and must be unique within Order Orchestration.<br>Case-sensitive for searching; for example, an entry of org does not match an organization code of Org.                                                                                                                                                                                                                                                                                                                |
| <b>Name</b>                            | The name of an organization. The name can be from 1 to 35 positions long and can include spaces and special characters.<br>Case-sensitive for searching; for example, an entry of org does not match an organization name of Org.                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Results fields:</b>                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Organization</b>                    | See <a href="#">organization</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Name</b>                            | The name of an organization. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>System</b>                          | The <a href="#">default system</a> for the organization. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Order Orchestration Preferences</b> | Click the <i>Order Orchestration Preferences</i> icon (  ) for an organization to advance to the <a href="#">Preferences</a> screen, where you can work with Routing Engine settings and other controls available at the <a href="#">organization</a> , <a href="#">location type</a> , or <a href="#">location</a> level.                                                                                                                                                                                              |
| <b>Drop Ship Preferences</b>           | Click the <i>Drop Ship Preferences</i> icon (  ) for an organization to advance to the <a href="#">Drop Ship Preferences</a> screen, where you can work with Supplier Direct Fulfillment preferences related to the Vendor Portal and related emails.                                                                                                                                                                                                                                                                   |
| <b>Store Connect Preferences</b>       | Click the <i>Store Connect Preferences</i> icon (  ) for an organization to advance to the <a href="#">Store Connect Preferences</a> screen, where you can work with preferences related to the Store Connect module.<br><b>Note:</b> The <a href="#">Store Connect Preferences</a> screen is available only if you have flagged a system as the <a href="#">Store Connect Default</a> . See the <a href="#">Systems</a> screen or <a href="#">Setting Up Data for the Store Connect Module</a> for more information. |

## Preferences

**Purpose:** Use the **Preferences** screen to work with options such as the *Order Orchestration Settings Tab* and other controls available at the [organization](#), [location type](#), or [location](#) level. Within the preferences, for example, you can indicate whether to use [proximity locator](#) logic or probability rules, and how the Routing Engine works.

Used for the Routing Engine module.

**Drop ship preferences:** Use the [Drop Ship Preferences](#) screen to set preferences related to the Supplier Direct Fulfillment module.

**Store Connect preferences:** In addition to completing the **Preferences** screen, use the [Store Connect Preferences](#) screen to set additional preferences related specifically to the Store Connect module.

**Location relationships:** See [Data Hierarchy](#) for an overview of the **Order Orchestration** organization, system, and location hierarchy.

**Applying a preference:** Set each preference at the lowest level in the hierarchy where it should apply. When determining the preference for an individual location, Order Orchestration

uses the first defined preference it finds, starting at the location level and then working up to the location type level, then finally the organization level. For example, if you set a preference to *Not Defined* at the location level, the setting at the location type level applies.

**Example:**

*Required result:* All US stores should use proximity locator logic except for the Natick store. The US store locations are assigned to the [location type](#) of *US Store*.

*Correct preference settings:* Set Use Proximity Locator for US Stores to Yes, but set it to No for the Natick store location only.

**! Important**

You need to set all preferences at the organization level before integrating any external systems with Order Orchestration. If you leave any of the preferences at this level set to blank, there will be errors when you attempt to begin processing messages between Order Orchestration and any system that uses the organization.

**Additional settings:** In addition to the **Preferences** screen, the following screens include settings that control the function of the Routing Engine:

| To set up:                                    | Use the:                                                                                                                                                                                                                                                                                                                      |

**For more information:** See [Setting Up Data for the Routing Engine Module](#) for a checklist to use when setting up an organization.

**How to display this screen:** Click the Order Orchestration Preferences icon () for an organization at the [Organizations and Preferences](#) screen.

**Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Organization and Preferences* authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                                                                                                           | Procedure                                                                                                                                                                                                                       |
|------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>review preferences at a specific level</b><br>See <i>Fields at this screen</i> , below, for more information. | <ol style="list-style-type: none"> <li>When you first advance to this screen, it displays the preferences at the level of the organization you selected at the <a href="#">Organizations and Preferences</a> screen.</li> </ol> |

- Click the plus sign next to the [organization](#) in the left-hand pane to display each [location type](#) for the organization if they are not already visible.

- Location-type-level preferences:** You can display the preferences for a location type by highlighting the location type name in the left-hand pane.
- Click the plus sign next to a [location type](#) in the left-hand pane to display each [location](#) for the type.

- Location-level preferences:** You can display the preferences for a location by highlighting the location name in the left-hand pane.

If you click the name of a location type or an organization in the left-hand pane, the tree-structure collapses to that level. For example, if you click the name of an organization while it is expanded to show location types, it collapses back to the organization level.

**Note:** The hierarchy may not be displayed correctly until you assign *Default Organization* through the [Users](#) screen to the default admin user. See [Assign the default organization to the default user](#) for more information.

| Option                              | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| set preferences at a specific level | <ol style="list-style-type: none"><li>1. Use the left-hand pane to advance to the correct <a href="#">organization</a>, <a href="#">location type</a>, or <a href="#">location</a> where the preference setting should apply. Order Orchestration starts checking preference settings at the location level and works upward; if the setting is set to <i>Pi</i> for a location, it next checks the location type level, using the organization level only if both the location-level and location type-level settings are set to <i>Not Defined</i>.</li><li>2. Set or reset the preferences as needed. See <i>Fields at this screen</i>, above, for descriptions of the various preferences. Leave a preference set to <i>Not Defined</i> to have Order Orchestration skip this level and go to the next level in the hierarchy for the preference setting. For example, leave a preference set to <i>Not Defined</i> at the location level to have Order Orchestration check the setting at the location type level. These settings are required at the organization level.</li><li>3. Click <i>Save</i>.</li></ol> |

Fields at this screen

| Field               | Description                                                                                                                                                                                                                                                                 |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Heading Information | The information displayed at the top of the screen varies depending on whether you are working with preferences for a specific location or location type, or for the organization itself.                                                                                   |
| Organization        | When you first advance to this screen, the location hierarchy is collapsed to the level of the organization you selected at the <a href="#">Organizations and Preferences</a> screen. The organization code is separated from the organization description by a hyphen (-). |

See *review preferences at a specific level*, above, for more information on how to work with preferences for an organization.

Settings at the organization level:

- The *Use Probability Rules* and *Order Orchestration Settings Tab* are available at the organization level only.
- The remaining preferences are *Use Proximity Locator*, *No Offline Response Action*, and tab settings: *Fulfillment Tab*, *Standard Brokering Tab*, and *Weighted Brokering Tab*. These preferences are available at all levels (organization, location type, and location); however, the organization-level settings apply if you do not set these preferences at the location type level or the location level.

**Important:** You should set all preferences at the organization level in order to avoid unpredictable results.

| Field | Description                                                                                                                         |
|-------|-------------------------------------------------------------------------------------------------------------------------------------|
| Type  | When you highlight a <a href="#">location type</a> in the left-hand pane, its code and name are displayed at the top of the screen. |

**Settings at the location type level:**

- The *Use Proximity Locator*, *No Offline Response Action*, and *Fulfillment Tab* settings at the location type level apply to locations of that type unless they are overridden at the location level. These settings override any settings at the organization level.
  - If a setting is set to *Not Defined* at the location type level, the organization-level setting applies.
- See *review preferences at a specific level*, above, for more information on how to work with preferences for a location type.

|          |                                                                                                                       |
|----------|-----------------------------------------------------------------------------------------------------------------------|
| Location | When you highlight a location in the left-hand pane, its code and description are displayed at the top of the screen. |
|----------|-----------------------------------------------------------------------------------------------------------------------|

**Settings at the location level:**

- The *Use Proximity Locator*, *No Offline Response Action*, and *Fulfillment Tab* settings at the location level apply to the selected location and override any settings at the location type or organization level.
  - If a setting is set to *Not Defined* at the location level, the location type-level setting, if any, applies; otherwise, if the setting is set to *Not Defined* at the location-type level, the organization-level setting applies.
- See *review preferences at a specific level*, above, for more information on how to work with preferences for a location type.

**Navigational Fields**

**Note**

These fields are in the left-hand side of the **Preferences** screen, below the heading information. See *review preferences at a specific level*, above, for information on advancing through these fields to display preferences for a specific organization, location type, and location.

| Field                                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Use Proximity Locator</b>                                                           | <p>Indicates whether to use proximity locator search logic when searching for a location that could fulfill an order, restricting search results to locations within the specified search area.</p> <p><b>Yes</b> = Use <a href="#">proximity locator</a> search logic. If a location is not within the search area specified for a <a href="#">locate items</a> or <a href="#">product availability search</a> request, do not include the location in the search results. Also, the Routing Engine can use distance as a criterion for the <a href="#">submit order message</a>, or when an order is rejected by a fulfilling or sourcing location and needs to be “reshopped,” for locations where this setting applies. If you set this field to Yes, you need to specify an address for each location that should be subject to proximity rules.</p> <p><b>No</b> = Include a location in the search results regardless of its distance from the customer’s location or the pickup location. Also, the Routing Engine cannot use distance as a criterion for the <a href="#">submit order message</a> or when an order is “reshopped.”</p> <p><b>Not Defined</b> = Check a higher level setting to determine whether to use proximity locator search logic. This setting is not available at the organization level.</p> <p>Order Orchestration uses the <a href="#">Data Hierarchy</a> to determine whether this preference applies to a particular location, checking for a Yes or No setting at the location level, then at the location type level, and finally at the organization level.</p> <p><b>If some locations do not use proximity:</b> You might use proximity locator search logic for some locations in your enterprise, such as retail stores, and not for others, such as warehouses, in order to route orders to warehouses first. Any locations that are not set up as eligible for proximity searching are returned in search results with a distance of 0 from the requesting location. For example, if you use the Routing Engine and have proximity as your first search criterion, search results are returned in ascending sequence based on distance from the requesting location; as a result, any eligible locations that are not eligible for proximity locator searching are listed first in the response message.</p> <p><b>For more information:</b> See <a href="#">Proximity Locator Searching</a> in the overview for a discussion.</p> |
| <b>Default Distance</b>                                                                | <p>The maximum distance, in the selected distance unit of measure, that the Routing Engine should search within when looking for fulfilling locations for pickup or delivery orders. Not used for ship-for-pickup orders, which use the <i>Sourcing Distance</i> instead. Defaults to 4000, but you can override it. Required.</p> <p>In situations when <a href="#">Turn-by-Turn Distance Evaluation for Delivery Orders</a> takes place, the <i>Maximum Turn-by-Turn Distance</i> applies instead. See <a href="#">Turn-by-Turn Distance Evaluation for Delivery Orders</a> for a discussion.</p> <p><b>Note:</b> This setting is available at the organization level only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Distance unit of measure (unlabeled field to the right of the Default Distance)</b> | <p>Select either miles (default) or kilometers to control the unit of measure for the Default Distance.</p> <p><b>Note:</b> This setting is available at the organization level only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Field                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Use Offline Newer Than:</b>    | <p>Indicates whether to use <a href="#">offline inventory</a> information in responding to a locate items or product availability request if the inventory information for product locations for a requested item in that system was updated within a given period of time, indicated as HH:MM:SS. For example, set this field to 1:30:00 in order to use off-line inventory information for each related <a href="#">product location</a> if the information for any product location for the item in that system was updated in the last hour and a half. When inventory information for product locations in the system was updated within the time frame specified, Order Orchestration does not send an <a href="#">inventory inquiry</a> to an online system.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>Order Orchestration sends an <a href="#">inventory inquiry</a> to a system for an item only if it already has a record of a <a href="#">product location</a> for the item in that system. As a result, if there was not previously a product location for the item in a particular system, but one was created for the item since the last time you imported products and locations from the system, then Order Orchestration does not send an inventory inquiry to the system and so is not notified of the new product location.</li> <li>This setting is available at the organization level only.</li> </ul> |
| <b>No Offline Response Action</b> | <p>Indicates how to handle an <a href="#">online system</a> in the locate items response or product availability response when Order Orchestration cannot receive an inventory update from the system. Options are:</p> <ul style="list-style-type: none"> <li><i>Use offline</i> = Use the current <a href="#">offline inventory</a></li> <li><i>Exclude from response</i> = Do not include the product locations in the response to the <a href="#">locate items</a> request</li> <li><i>Not Defined</i> = Check a higher level setting to determine the response action. This setting is not available at the organization level.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Use Probability Rules</b>      | <p>Select this flag to use probability rules when performing locate items searches and other processes that search for fulfilling or sourcing locations. This option is available only at the organization level. See <a href="#">Using Probability Rules</a> and the <a href="#">Probability Rule Wizard</a> for more information.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>This setting is available at the organization level only.</li> <li>This setting does not need to be selected for the processing described under <a href="#">Probability Rules Update and Incremental Quantity Web Service</a> to take place.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Acknowledge Order Before Brokering</b> | <p>Select this flag to have the Order Orchestration acknowledge the submit order request before selecting a fulfilling or sourcing location for an order. This option enables the Order Orchestration to respond more quickly to submit order requests, especially if you process large, multi-line orders. If this flag is selected, when a system submits a delivery order that does not specify a fulfilling location, or a ship-for-pickup order that does not specify a sourced location:</p> <ul style="list-style-type: none"> <li>Order Orchestration validates just basic order information, such as address, products, and originating system and location, before acknowledging the order in the submit order response message.</li> <li>The order lines are initially assigned to the <i>IN PROCESS</i> location, which is a virtual location used temporarily until Order Orchestration completes the fulfilling or sourcing location selection process, including all shopping logic such as fulfillment zone evaluation, interactive inventory updates, and probability rules.</li> <li>Order Orchestration creates the <i>IN PROCESS</i> location if it does not already exist. This location is: <ul style="list-style-type: none"> <li>assigned to the same system and location type as the default shipping (unfulfillable) location</li> <li>created with the Pickup Available, Delivery Available, Ship For Pickup Sourcing Available, Ship For Pickup Receiving/Pickup Available, Backorder Available, Ship For Pickup Sourcing Available, Ship For Pickup Receiving/Pickup Available flags all set to No</li> <li>assigned the name <i>Brokered Order Temporary Location</i></li> </ul> </li> </ul> <p><b>Note:</b> If you create the <i>IN PROCESS</i> location instead of letting Order Orchestration create it automatically, you need to make sure that the above-listed flags are all set to No.</p> <ul style="list-style-type: none"> <li>The submit order response message always specifies the <i>IN PROCESS</i> location for a delivery order unless the request message specified a fulfilling location, and for a ship-for-pickup order unless the request message specifies a sourced location.</li> <li>The order is created with a hidden <i>in_process</i> flag that is set to Y until Order Orchestration completes location assignment for the order. As long as this flag is set to Y, no lines on the order are eligible to be included in the fulfillment response message.</li> <li>The originating system needs to submit a status inquiry request after initial order creation to determine the selected fulfilling or sourcing location.</li> <li>If a line is in any other status besides <i>new_order</i> (for example, if the originating system cancels an order or line) while it is still assigned to the <i>IN PROCESS</i> location, Order Orchestration does not assign the order to an actual fulfilling or sourced location.</li> <li>Order Orchestration does not assign a rejected order or line to the <i>IN PROCESS</i> location; instead, it “reshops” the order or line immediately.</li> <li>If an order or line is still assigned to the <i>IN PROCESS</i> location when Order Orchestration receives a status update to cancel it, Order Orchestration does not attempt to find a fulfilling or sourcing location for the order or line.</li> </ul> <p><b>Cleanup process:</b> A cleanup job runs automatically every two hours to check for any orders or lines that were created more than two hours earlier and that are still assigned to the <i>IN PROCESS</i> location, and completes processing for these orders or lines.</p> <p>This flag is selected by default. Clear this flag to have Order Orchestration complete the fulfilling or sourcing location selection</p> |

| <b>Use Zone Fulfillment</b> | Select this flag if the Routing Engine should assign orders only to a primary or secondary location specified for the order's shipping address through the <a href="#">Fulfillment Zone Wizard</a> . See <a href="#">Fulfillment Zones</a> and the <a href="#">Fulfillment Zone Wizard</a> for more information.<br><b>Note:</b> This setting is available at the organization level only. |

| Field                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Exclude Locations with Zero Availability</b> | <p>Controls whether the Routing Engine considers each product location whose <a href="#">available to promise quantity</a> is 0 or less when determining which locations could fulfill or source an order.</p> <p><b>Why select?</b> Selecting this option enhances the performance of the Routing Engine module by reducing the number of product locations to evaluate.</p> <p>If this preference is selected, locations whose available to promise quantities are 0 or less are not considered for:</p> <ul style="list-style-type: none"> <li>• locate items searches</li> <li>• product availability searches</li> <li>• submit order requests</li> <li>• “reshopping” rejected orders or lines</li> </ul> <p>This setting applies to delivery, pickup, and ship-for-pickup order requests and searches.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>• Any locations that are flagged as <i>Backorder Available</i> are not excluded, regardless of whether the current available to promise quantity is 0 or less.</li> <li>• This preference applies only if there are no <a href="#">online systems</a> in your organization.</li> </ul> <p><b>Can prevent probability rule application:</b> If this preference is selected, product locations with quantities of 0 or less are excluded before the Routing Engine applies any probability rules. If you might use probability rules to increase the available quantity in locations for Routing Engine evaluation, you should consider whether selecting this preference might produce an undesired result.</p> <p><i>Example:</i> You assign a probability rule that adds the next PO quantity to a product location’s available quantity. When the Exclude Locations with Zero Availability preference is selected, the Routing Engine does not apply this probability rule if a product location’s current available to promise quantity is 0 or less unless the location supports backorders.</p> <p>If this preference is not selected, the Routing Engine evaluates each possible product location, including applying any assigned probability rules, regardless of whether the current available to promise quantity is 0 or less.</p> <p>If this preference is not selected, the Routing Engine does not automatically exclude product locations whose available to promise quantities are 0 or less before performing other evaluation steps, such as probability rules.</p> |

**Note**

This setting is available at the organization level only.

| <b>Shop Order When Proximity Unknown</b>      | <p>Controls searching for locations for a Submit Order request.</p> <p>When the <i>Use Proximity Locator</i> flag is selected and this flag is:</p> <ul style="list-style-type: none"> <li>Selected: The Routing Engine shops an order and uses proximity as a shopping criterion:</li> <li>Using the ship-to address, if possible; otherwise,</li> <li>Using the address of the originating location, if possible; otherwise,</li> <li>Using a distance of 0 as the proximity.</li> <li>Unselected: The Routing Engine returns an error indicating that the customer address was not found if the ship-to address cannot be identified.</li> </ul> <p>Note that all other routing engine rules still apply, including zone assignment, other brokering preference settings, and any probability rules.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Restrict Reassignment of Canceled Line</b> | <p>Select this flag to have the Order Status Update response return an error if the request message indicated to change the status of an order or line that is canceled. Use this setting to prevent a canceled order or line from being “reshopped.”</p> <p>If the Order Status Update response returns an error because the order or line is canceled, the <a href="#">History tab</a> of the <b>Order</b> screen displays a message with Transaction Notes such as <i>Picked Status Update Restricted</i>, where <i>Picked</i> is the status specified in the Order Status Update request message.</p> <p>Leave this flag unselected to enable the Order Status Update request message to reset the status of a canceled line. See the Operations Guide for more information on the Order Status Update request and response.</p> <p>If this flag is selected, you can use the <a href="#">Status Restricted Report</a> to review order lines whose status update was restricted through the Order Status Update request message.</p> <p><b>Note:</b> Regardless of the setting of this flag, you can still update the status of a canceled order through the <a href="#">Order</a> screen if you do not have splitting orders enabled, or through the <a href="#">Edit Order Item</a> window if you do have splitting orders enabled, based on the setting of the <i>Allow Split Order</i> flag.</p> |
| <b>Order Orchestration Settings Tab</b>       | <p>These settings indicate the basic rules that the Routing Engine should use when determining whether locations are eligible to:</p> <ul style="list-style-type: none"> <li>Ship a delivery order to the customer</li> <li>Transfer a ship-for-pickup order to the location where the customer will pick up the order</li> <li>Include in the LocateItems response or the Product Availability response when a system is searching for a location that can fulfill or source an order</li> <li>Assign an order or order line when it is rejected by the currently assigned fulfilling or sourcing location</li> </ul> <p>Also, these rules specify whether a location specified in the SubmitOrder request is eligible for assignment of orders of each type.</p> <p><b>Available at:</b> Organization level only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Field                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Group Shipment Locations</b> | <p>Select this flag if external systems that send <a href="#">locate items</a> requests just want to verify that the item(s) on the order is/are available for shipment or transfer, and do not need a listing of individual locations that might be able to ship an order to the customer.</p> <p><b>Background:</b> The Group Shipment Locations flag controls whether the <a href="#">locate items</a> response includes the virtual location when the <a href="#">locate items</a> request specifies a fulfillment_type of <i>DELIVERY</i> or <i>SHIPFORPICKUP</i>. The virtual location in the response message indicates that the requested item(s) can be shipped (or transferred) from a location, but does not include specifics on which locations stock the item(s), on-hand quantities, open purchase orders, etc. If the item is not available for shipment (or transfer) in any eligible location, the <a href="#">locate items</a> response message indicates that the product is not stocked.</p> <p>The virtual location is not an actual location that you need to create in Order Orchestration.</p> <p>The Group Shipment Locations flag does not affect the <a href="#">locate items</a> response message if the customer would like to pick up the item from a designated location that already has the inventory (the fulfillment_type is <i>PICKUP</i>). Also, the flag does not affect any other messages used in the Routing Engine integration, such as the <a href="#">submit order message</a>.</p> <p>Possible settings:</p> <ul style="list-style-type: none"> <li><i>Selected</i> = When the <a href="#">locate items</a> request message has a fulfillment_type of <i>DELIVERY</i> or <i>SHIPFORPICKUP</i>, and the requested item(s) is/are available for shipment, transfer, or sourcing, return the <a href="#">virtual location</a> in the <a href="#">locate items</a> response message.</li> <li><i>Unselected</i> = Do not return the virtual location in the <a href="#">locate items</a> response message; always list the locations where the item(s) is/are available for shipment, transfer, or sourcing.</li> </ul> <p><b>Note:</b> This flag affects the logic of the <a href="#">locate items</a> request and response, but does not affect any other messages.</p> |

| Field                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Partial Updates</b> | <p>Indicates whether to support status updates for individual units on an order line, rather than always updating the status of the entire order line.</p> <p><i>Example:</i> When a customer arrives at a store for a pickup order, he buys 2 units of an order line and does not want the other unit. The store location sends a status update to change 2 of the units to fulfilled, and sends another status update to change the remaining unit to canceled.</p> <p>If this field is:</p> <ul style="list-style-type: none"> <li>selected, each <a href="#">status update</a> message needs to specify the item quantity of the order line to update to the new status. When the specified item quantity is lower than the current line quantity, the Routing Engine creates a new order line for the specified quantity and decreases the quantity of the current order line. If the status update indicates to reject the quantity for a delivery or ship-for-pickup order, the Routing Engine attempts to reassign the order line quantity based on the rules described under <a href="#">Selecting a Location for a Delivery Order</a>.</li> <li>unselected, the setting of the <a href="#">Use Requesting System Line Number in Status Update</a> for the originating system controls whether a <a href="#">status update</a> from the originating location needs to specify the requesting system's line number, or the line number assigned by Order Orchestration. See the discussion of the <a href="#">Use Requesting System Line Number in Status Update</a> flag for more information.</li> </ul> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>This field is enabled only if the <i>Allow Split Order</i> field is selected.</li> <li>When a partial quantity of a line on a delivery or ship-for-store order is rejected, the Routing Engine splits the line and attempts reassignment regardless of the setting of the <i>Allow Split Line</i> field.</li> <li>If this field is selected, the unit quantity is also required at the <a href="#">Edit Order Item</a> window.</li> <li>The Routing Engine tracks the number of <i>Search Retries</i> for a delivery or ship-for-pickup order based on the total number of rejections, including each rejection of a single unit. See <i>When the Routing Engine Cannot Fulfill an Order</i>, below, for a discussion.</li> <li>When individual units on a line on a delivery or ship-for-pickup order are rejected separately, the Routing Engine assigns each rejected unit to a separate fulfilling or sourcing location.</li> <li>The Store Connect module does not support partial status updates.</li> <li>Do not select this preference if an integrating system, such as Order Administration, does not support partial quantity updates of order lines.</li> </ul> <p><b>For more information:</b> See <a href="#">Updating Order Status at the Line or Unit Level</a> for a discussion.</p> |

| Field                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Maximum No. Responses</b>          | <p>Indicates the maximum number of locations to return in the <a href="#">locate items</a> response message. You can enter any number from 1 to 9999. Required.</p> <p><b>If splitting lines:</b> The locate items response does not include more than this number of locations, even when the <i>Allow Split Line</i> field is selected and it would require more than this number of locations to fulfill or source the entire requested quantity on a delivery or ship-for-pickup order. For example, the Maximum No. Responses is set to 3, the requested quantity of an item is 10, and there are 5 eligible locations, each with a quantity of 2. The locate items response includes just the first 3 locations; however, if you submit an order for the quantity of 5, the Routing Engine assigns the full quantity across the 5 locations.</p> <ul style="list-style-type: none"> <li>• If the <i>Allow Split Order</i> field is selected, the <i>Allow Split Line</i> field is unselected, the requested quantity for a delivery or ship-for-pickup order exceeds the quantity available in all eligible fulfilling or sourcing locations, and one of the eligible locations is flagged as <i>Backorder Available</i>, the <a href="#">locate items</a> response message lists just the location(s) flagged as <i>Backorder Available</i>. This response indicates that the only way to assign the entire order is to assign the entire requested quantity to a location flagged as <i>Backorder Available</i>, even if it does not have the requested quantity on-hand.</li> <li>• This limit does not apply to the number of pickup locations returned in the ProductAvailability response message. See <a href="#">Using Product Availability Search for a Pickup or Delivery Order</a> for background.</li> </ul> |
| <b>Default Unfulfillable Location</b> | <p>The default location for the Routing Engine to use when no actual locations in the organization can fulfill or source a delivery, or ship-for-pickup order or line. When a system inquires on the current status of an order and the response indicates that the order or line is assigned to this location, this indicates that the order or line is unfulfillable.</p> <p><b>For more information:</b> See <a href="#">Setting Up Data for the Routing Engine Module</a> for setup recommendations.</p> <p><b>Important:</b> The default unfulfillable location does not represent an actual location where items are stocked; however, you <i>do</i> need to create it as a valid location in the default system for your organization.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Default Carrier</b>                | <p>The default carrier to assign to delivery or ship-for-pickup orders, if no ship_via is specified in the submit order message. Required.</p> <p><b>Pickup orders?</b> Pickup orders are assigned to the default <i>PICKUP</i> carrier, which is created automatically.</p> <p><b>For more information:</b> See the <i>Carriers</i> screen in Modern View for background.</p> <p><b>Note:</b> You cannot delete the default carrier or the default <i>PICKUP</i> carrier.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Field                                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Do Not Split Order For Carrier</b>                       | <p>Optionally, select a carrier to indicate that the Routing Engine should:</p> <ul style="list-style-type: none"> <li>Not split new delivery orders that have this carrier assigned. If the entire order cannot be assigned to a single location, it is unfulfillable.</li> <li>If the fulfillment type for the LocateItems or ProductAvailability request is delivery and the request specifies this carrier, indicate that the requested product(s) is/are available only if they could be fulfilled without splitting.</li> <li>Not reassign a rejected order line on a delivery order by splitting it across multiple locations if the order has this carrier assigned.</li> </ul> <p>Defaults to <i>Not Defined</i>. All carriers are available for selection, with the exception of the default PICKUP carrier.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>This preference applies to Routing Engine logic only when the <i>Allow Split Order</i> preference is selected.</li> <li>This setting does not prevent you from splitting an order or line manually through the <a href="#">Edit Order Item</a> window.</li> </ul> |
| <b>Turn-by-Turn Distance Evaluation for Delivery Orders</b> | <p>These fields control whether to use turn-by-turn distance evaluation, rather than straight-line distance, for delivery orders using a specified carrier.</p> <p><b>Available when?</b> Turn-by-turn distance evaluation is available only when you use the Oracle Maps Cloud Service API and only if a valid <a href="#">Turn-by-Turn Distance URL</a> is specified at the <i>Tenant-Admin</i> screen. See <a href="#">Turn-by-Turn Distance Evaluation for Delivery Orders</a> for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|                                                             | <div>  <b>Note</b> <p>These settings are available at the organization level only.</p> </div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Carrier for Turn-by-Turn Distance Evaluation</b>         | <p>The carrier that requires use of turn-by-turn distance evaluation for a delivery order, if turn-by-turn distance evaluation is enabled.</p> <p>For example, when you use a local delivery service, you need to make sure to consider the actual driving distance, rather than the point-to-point distance, when determining the locations that are actually closer to the customer's address.</p> <p>Defaults to <i>Not Defined</i>. The PICKUP and SHIP2STORE carriers are not available for selection.</p> <p>See <a href="#">Turn-by-Turn Distance Evaluation</a> for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Field                                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>Maximum Turn-by-Turn Distance</b>                  | <p>The maximum distance from the customer's address to use when evaluating possible locations for a delivery order based on turn-by-turn distance, in order to exclude locations that are too far away, and enhance performance.</p> <p><i>Example:</i> When you use a local delivery service, you want to evaluate the actual driving distance for locations only within a 10-mile radius from the customer's address, since it takes an increasingly longer time to calculate the actual driving distance for locations that are farther away.</p> <p><i>Overrides:</i> The product availability request can specify a different distance to override this default; however, this default is always used for a locate items request, submit order request, or when selecting a new fulfilling location when an order or line is rejected.</p> <p><i>Calculation method:</i> Initial evaluation of fulfillment locations takes place using straight-line distance evaluation. For example, this default is set to 15 miles, and the location's straight-line distance from the customer's address is 14.5 miles. The location is included in the turn-by-turn request to Oracle Maps Cloud Service. However, if turn-by-turn distance returned by Oracle Maps Cloud Service is 15.2 miles, the location is still excluded from the list of eligible to fulfill the delivery order.</p> <p>Defaults to 100. You can enter a whole number from 1 to 100.</p> |
| <b>Turn-by-Turn Unit of Measure (unlabeled field)</b> | <p>The unit of measure to use when calculating the maximum turn-by-turn distance. You can select kilometers or miles. Defaults to miles.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Fulfillment Tab</b>                                | <p>The Routing Engine uses these settings to determine the types of orders a location can fulfill and how to rank a location separately from other standard or weighted brokering criteria, and how many attempts to make to place an order for fulfillment. When weighted brokering is used, these settings control the product locations to submit to the Science Engine for location selection based on weighted percentages and other factors. This tab also includes settings that control the automatic cancellation of unclaimed pickup and ship-for-pickup orders.</p> <p><b>Available at:</b> The Search Retries, Sourcing Distance, Auto Cancel Days of Unclaimed Pickup Orders, Auto Cancel Days of Unclaimed Ship For Pickup Orders, and Auto Cancel Reason settings are available at the organization level only, while the other settings are available at all levels.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Pickup Available</b>                               | <p>Indicates to the Routing Engine whether a location is eligible to fulfill an order whose fulfillment type is <i>PICKUP</i>. This setting controls whether to:</p> <ul style="list-style-type: none"> <li>include the location in the response when the Routing Engine receives the <a href="#">locate items</a> request for the <i>PICKUP</i> fulfillment type</li> <li>consider the location an eligible pickup location when the Routing Engine receives the <a href="#">product availability search</a> request.</li> <li>accept the order when the Routing Engine receives a <a href="#">submit order message</a> for a pickup order.</li> </ul> <p>Set this field to <i>Yes</i> to have a location, type, or organization eligible to fulfill a pickup order, or set it to <i>No</i> if you do not want the location, type, or organization eligible for pickup orders.</p> <p>Order Orchestration uses the <a href="#">Data Hierarchy</a> to determine whether this preference applies to a particular location, checking for a <i>Yes</i> or <i>No</i> setting at the location level, then at the location type level, and finally at the organization level.</p> <p>See <a href="#">Pickup Order</a> for a discussion.</p>                                                                                                                                                                                                                       |

| Field                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Field                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Backorder Available</b> | <p>Indicates whether a location can be assigned a <a href="#">delivery order</a> for sourcing of a <a href="#">ship-for-pickup order</a>, even if it does not currently have sufficient inventory on-hand.</p> <p><i>Splitting an order line:</i> If the Allow Split Line preference is set to <i>Yes</i> and the Routing Engine needs to split a line across multiple locations in order to fulfill it, it uses a location flagged as Backorder Available as a catchall, even if the location does not have sufficient inventory on-hand to fulfill the entire quantity.</p> <p><i>Example:</i> A customer places an order for 10 units of an item. Location A has 5 available, location B has 3 available, and location C has 2 available.</p> <ul style="list-style-type: none"> <li>• If none of the locations are flagged as Backorder Available, the Routing Engine assigns: <ul style="list-style-type: none"> <li>– 5 to location A</li> <li>– 3 to location B</li> <li>– 2 to location C</li> </ul> </li> <li>• However, if location B is flagged as Backorder Available, the Routing Engine assigns 5 to location A and 5 to location B. It does not continue to assign a quantity to location C, since location B acts as the catchall.</li> </ul> <p>Set this field to <i>Yes</i> to have a location, type, or organization eligible to fulfill a delivery order, or to source a ship-for-pickup order, even if it does not currently have the requested quantity of each item on-hand, or set to <i>No</i> if you do not want the location, type, or organization selected unless it currently has the full quantity of each item on-hand.</p> <p>Order Orchestration uses the <a href="#">Data Hierarchy</a> to determine whether this preference applies to a particular location, checking for a Yes or No setting at the location level, then at the location type level, and finally at the organization level.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>• If Standard Brokering is in use, the Routing Engine still uses the Standard Brokering settings to assign partial locations for a split line until it assigns a partial quantity to a location flagged as Backorder Available, and does not omit preceding eligible locations that would otherwise be selected first. In the example above, since location A is first in the hierarchy based on your Order Orchestration Settings, it is still assigned to fulfill the first 5 units, even though location B is flagged as Backorder Available.</li> <li>• When you submit a <a href="#">locate items</a> request with a fulfillment type of <i>DELIVERY</i> or <i>SHIPFORPICKUP</i>, the response message always indicates that the items are available if an eligible location where they are stocked has the Backorder Available flag selected.</li> <li>• Do not set this field to <i>Yes</i> for the <i>Default Unfulfillable Location</i>.</li> </ul> |

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location Priority</b> | <p>Indicates to the Routing Engine the preference to give a location when selecting a location to ship a <a href="#">delivery order</a>, or source a <a href="#">ship-for-pickup order</a> when the Routing Engine uses the Location Priority criterion. This setting is considered only when only for Standard Brokering. See the description of the <i>Location Priority</i> below under <i>Standard Brokering Tab</i> for more information. The Science Engine does not use this setting.</p> <p>You can set location priority at the location, location type, and organization level. The Routing Engine checks the location setting first. If there is no Location Priority set at the location, the Routing Engine checks the location type setting; if there is no Location Priority set at the location type, the Routing Engine checks the organization.</p> <p>Order Orchestration uses the <a href="#">Data Hierarchy</a> to determine whether this preference applies to a particular location, checking for a setting from 1 to 9 at the location level, then at the location type level, and finally at the organization level.</p>                          |
| <b>Search Retries</b>    | <p>Indicates how many times to reassign a delivery or ship-for-pickup order, or lines or units on an order, to other fulfilling or sourcing locations after rejection. If a location assigned to fulfill a delivery or ship-for-pickup order or line rejects it, the Routing Engine selects the next eligible location in its search criteria to fulfill or source the order, line, or unit, as long as the Search Retries level has not been exceeded for the entire order. If an order or line is rejected by that number of locations, or if there are no additional eligible locations, the Routing Engine assigns the order or line to the <i>Default Unfulfillable Location</i>, indicating that the order or line cannot be fulfilled through the Routing Engine.</p> <p>For example, when the Search Retries limit is 2, and the order has been rejected and reassigned 2 times, the Routing Engine assigns the order to the default unfulfillable location if it is rejected a third time. See <i>When the Routing Engine Cannot Fulfill an Order</i>, above, for a discussion.</p> <p>Enter a number from 0 to 99. Available at the organization level only.</p> |

| Field | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <p><b>When the Routing Engine Cannot Fulfill an Order</b><br/> The Routing Engine uses the Search Retries setting for the organization to determine how many times it can reassign an order, or its lines or units, to other locations for shipment, transfer, or sourcing. If a location assigned to fulfill or source an order or line rejects it, the Routing Engine selects the next eligible location based on its search criteria to fulfill or source the order, line, or unit, or resubmits the data to the Science Engine, as long as the Search Retries level has not been reached for that order.</p> <p><b>Search retries total:</b> The Routing Engine tracks the total number of rejections for an order, whether the rejection is based on a single unit, a single line, or the entire order. After the search retries limit is reached, the Routing Engine assigns the order to the <i>Default Unfulfillable Location</i>, indicating that the order cannot be fulfilled through the Routing Engine. This can occur when:</p> <ul style="list-style-type: none"> <li>the order is rejected by that number of locations (non-split order), or</li> <li>individual order lines are rejected by that number of locations (split order), or</li> <li>individual units are rejected (if <i>Allow Partial Updates</i> is selected), or</li> <li>there are no additional locations that stock the requested item(s).</li> </ul> <p><i>Example:</i> The Search Retries is set to 2 for an organization. The Routing Engine assigns an order to location 12, which rejects the order because the requested item has since sold out. The Routing Engine then assigns the order to location 43, which also rejects the order. At this point, the Routing Engine assigns the order to the default unfulfillable location. The next time the placed (originating) location checks the status of the order, the assignment to the default unfulfillable location indicates that the Routing Engine was unable to find a location to fulfill the order.</p> <p><b>Splitting orders?</b> If the Allow Split Order preference is set to <i>Yes</i> and the Routing Engine assigns lines on the order independently, it compares the number of retries across the entire order with the Search Retries; it does not track the retries for each line individually. For example, the Search Retries is set to 2 and the order includes 5 lines, each assigned to a different location. If 2 lines are rejected and the Routing Engine receives a rejection for a third line, the line is assigned to the default unfulfillable location.</p> <p><b>Allow Partial Updates?</b> If the <i>Allow Partial Updates</i> preference is selected, the assigned location can reject each unit individually. In this situation, each rejection increments the search retries total.</p> <p><i>Example:</i> The Search Retries is set to 2. A location rejects 1 unit on the first line; rejects a second unit on the first line; and then rejects 1 unit on the second line. Since the Search Retries was reached by the 2 rejections on the first line, the unit on the second line is assigned to the <i>Default Unfulfillable Location</i>.</p> |

| Field                                                                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Maximum Daily Orders</b>                                                             | <p>Indicates the maximum number of delivery or ship-for-pickup orders that the Routing Engine can automatically assign to a location per day, or consider eligible when filtering locations to send to the Science Engine. Maximum daily order limits apply, and this field is enterable only if the <i>Use Maximum Order Limits</i> flag is selected. See <a href="#">Using Maximum Daily Order Assignment</a> for an overview.</p> <p>Possible settings are:</p> <ul style="list-style-type: none"> <li><i>maximum number</i>: Unselect the Not Defined flag to enter a maximum number of orders to restrict automatic assignment of delivery orders for a location to this number. Your entry can be up to 10 positions.<br/><b>Note:</b> If the Maximum Daily Orders is already set for a location or location type and you delete the current setting, the screen selects the Not Defined flag automatically. Clear the Not Defined flag to enter a different number.</li> <li><i>0</i>: There is no limit to the number of delivery or ship-for-pickup orders that the Routing Engine or Science Engine can assign to the location.</li> <li><i>Not Defined</i>: Select this setting to clear the maximum number, if any, for a location or location type, and to have the Routing Engine check the next level for a maximum daily order setting. If Not Defined is selected for a location, the setting from the location type applies; and if Not Defined is selected for both the location and the location type, the setting for the organization applies.</li> </ul> <p><b>Organization-level setting:</b> An entry of a maximum number or 0 is required at the organization level if the <i>Use Maximum Order Limits</i> flag is selected. Instead of using the backspace key to change an organization-level setting, highlight the number currently entered in this field and enter the new number.</p> |
| <b>Sourcing Distance</b>                                                                | <p>The maximum distance, in the selected distance unit of measure, that the Routing Engine should search within when looking for sourcing locations for ship-for-pickup orders, or when filtering locations for these orders to send to the Science Engine. Not used for delivery or pickup orders; which use the <i>Default Distance</i> instead. Defaults to 4000, but you can override it. Required.</p> <p>This setting is available at the organization level only, and is displayed only if the organization supports ship-for-pickup orders. See <a href="#">Enable Ship-For-Pickup?</a> for background.</p> <p>See <a href="#">Ship For Pickup Order</a> for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|-------------------------------------------------------------------------------|-------------|
| <b>Standard Brokering Tab</b><br><b>Available at:</b> The organization level. |             |

**! Important**

The settings at this tab apply to delivery or ship-for-pickup orders only if *Use Weighted Brokering Rules* is unselected.

If *Use Weighted Brokering Rules* is unselected, these fields control the criteria that the Routing Engine uses to sort locations when it selects a location to fulfill a delivery order or line, or select a sourcing location for a ship-for-pickup order or line, when it receives the SubmitOrder request message or Product Availability request message, or when it lists the locations in the locate items response for any fulfillment type. It also uses these criteria when a location assigned to fulfill the delivery order or to source the ship-for-pickup order or line rejects it, and the Routing Engine needs to look for a new fulfilling location.

**Ranking criteria:** To have the Routing Engine use a particular criterion first, rank it with a *1*, and continue assigning *2*, *3*, *4*, and *5* to other criteria that the Routing Engine should consider; however, the Last Order Assigned and Sales Velocity Rank criteria are optional. For example, to have the Routing Engine look first at On Hand Count, rank it with a *1*; to have the Routing Engine next look at Location Priority in a situation when two locations have the same on-hand count, rank Location Priority with a *2*; and so on.

**When does the Routing Engine check the second, third, and optional fourth or fifth criterion?** The Routing Engine checks the next criterion in the hierarchy only when there is more than one location with the same result for the previous criterion (a “tie-breaker”).

*Example:* If you rank Location Priority with a *1* and there is more than one eligible location with the same Location Priority, then the Routing Engine checks the next criterion in the hierarchy. On the other hand, if you rank Proximity with a *1* and all eligible locations use proximity locator logic, it is less likely that more than one location will be the exact same distance from the requesting location, so as a result it is less likely that the Routing Engine will need to check the next criterion.

**Optional criteria:** The Last Order Assigned and Sales Velocity Rank criteria are optional.

**Which locations are eligible for consideration?** The criteria apply only to locations that:

- stock the item
- have a sufficient quantity available, or have the Backorder Available flag selected
- are flagged Delivery Available for a delivery order, or Ship For Pickup Sourcing Available for a ship-for-pickup order
- are not excluded due to probability rules
- are not excluded based on zone shipping
- are not excluded based on exceeding the *Maximum Daily Orders*

**Searching for pickup locations:** When the Routing Engine receives a web service request searching for locations that could fulfill a pickup order:

- If *Use Weighted Brokering Rules* is selected: Both the LocateItems response and the Product Availability response list the locations in order of proximity.

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                          | <ul style="list-style-type: none"> <li>If <i>Use Weighted Brokering Rules</i> is unselected: The <i>LocateItems</i> response uses Standard Brokering rules, while the <i>Product Availability</i> response lists the locations in order of proximity.</li> </ul> <p><b>Criterion evaluation (ascending or descending):</b> The second flag for each of the criterion indicates how to apply the criterion. See the description of each criterion, below, for a discussion.</p> <p><b>For more information:</b> See <a href="#">Selecting a Location for a Delivery Order</a> and <a href="#">Selecting the Location for a Pickup Order (LocateItems)</a> for background.</p> <p><b>Overrides?</b> You can set up overrides to these criteria, based on the originating system and order type. In the case of delivery and ship-for-pickup order types, the express carrier flag is also considered. The override settings all default to inheriting the settings from the <b>Preferences</b> screen, but if there is an override set up that matches the information in a locate items or order request, the override criteria apply. The overrides also apply when the Routing Engine “reshops” a rejected delivery or ship-for-pickup order. See <a href="#">Order Orchestration Preference Overrides</a> for more information.</p>                                                                                              |
| <b>Proximity</b>         | <p>If the Routing Engine uses the proximity criterion:</p> <p><i>Closest</i> = select the eligible location closest to the requesting location’s, customer’s, or pickup location’s address. You might choose this setting to save on shipping costs for delivery orders or shorten the transfer time for ship-for-pickup orders.</p> <p><i>Farthest</i> = select the eligible location farthest from the requesting location’s, customer’s, or pickup location’s address</p> <p>To use proximity as an Order Orchestration criterion, you need to be using the <a href="#">proximity locator</a> and have data in the <a href="#">proximity location table</a>, or be using the <a href="#">Oracle Maps Cloud Service</a>.</p> <p><b>If some locations do not use proximity:</b> You might use proximity locator search logic for some locations in your enterprise, such as retail stores, and not for others, such as warehouses. Any locations that are not set up as eligible or proximity searching are returned in search results with a distance of 0 from the requesting location. For example, if you use the Routing Engine and have proximity as your first search criterion, search results are returned in ascending sequence based on distance from the requesting location; as a result, any eligible locations that are not eligible for proximity locator searching are listed first in the response message.</p> |
| <b>On Hand Count</b>     | <p>If the Routing Engine uses the on-hand count criterion:</p> <p><i>Low to High</i> = select the eligible location whose available quantity is lowest.</p> <p><i>High to Low</i> = select the eligible location whose available quantity is highest. You might use this setting to avoid depleting the inventory in any one location.</p> <p>If there are multiple products requested, use the total available quantity in each location for evaluation.</p> <p>The determination of the available quantity is subject to probability rules and <a href="#">reserved quantity</a> calculation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Location Priority</b> | <p>If the Routing Engine uses the location priority criterion for delivery or ship-for-pickup orders:</p> <p><i>Low to High</i> = select the eligible location with the lowest-number location priority to ship, transfer, or source the order</p> <p><i>High to Low</i> = select the eligible location whose location priority is the highest number</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Field                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Last Order Assigned</b> | <p>If the Routing Engine uses the last order assignment criterion:</p> <p><i>Constant</i> = select the eligible location whose last order assignment date and time (for any item or items) was the most recent. However, you would not ordinarily use this criterion with a setting of <i>Constant</i>, as this would cause the Routing Engine to persistently select the same location to fulfill orders until such point when that location is unable to fulfill an order; at that time, the Routing Engine would persistently pick another location to fulfill orders.</p> <p><i>Variable</i> = select the eligible location whose last order assignment date and time (for any item or items) was the earliest. You might choose this setting to create an even distribution of orders or lines among eligible locations.</p> <p>The Routing Engine checks the <code>create_timestamp</code> field in the <code>xom_order</code> table when evaluating locations for this criterion. It updates this field when it assigns an order or line (for any item or items) to a location for shipment or transfer.</p> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>The Routing Engine does not update the <code>create_timestamp</code> for an order if the fulfilling location rejects the assignment and the order or lines are reassigned to a new location.</li> <li>This criterion is optional. Set it to <i>Not Used</i> to exclude it from Routing Engine logic.</li> </ul> |
| <b>Sales Velocity Rank</b> | <p>If the Routing Engine uses the sales velocity rank criterion:</p> <p><i>Low to High</i> = select the eligible location whose <a href="#">Sales Velocity</a> is lowest.</p> <p><i>High to Low</i> = select the eligible location whose <a href="#">Sales Velocity</a> rank is highest.</p> <p>If there are multiple products requested, use the total sales velocity in each location for evaluation.</p> <p>This criterion is optional. Set it to <i>Not Used</i> to exclude it from Routing Engine logic.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Field                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Weighted Brokering Tab</b> | Available at: Organization level only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|                               | <div>  <b>Important</b><br/>           The settings at this tab apply only if <i>Use Weighted Brokering Rules</i> is selected.         </div> <p><b>Which locations are eligible for consideration?</b> The weighted brokering percentages apply only to locations that have not been filtered out of those sent to the Science Engine. To be eligible, a location must:</p> <ul style="list-style-type: none"> <li>• stock the item</li> <li>• have a sufficient quantity available, or have the Backorder Available flag selected</li> <li>• be flagged Delivery Available for a delivery order, or Ship For Pickup Sourcing Available for a ship-for-pickup order</li> <li>• not be excluded due to probability rules</li> <li>• not be excluded based on zone shipping</li> <li>• not be excluded based on exceeding the <i>Maximum Daily Orders</i></li> <li>• not be excluded based on proximity</li> </ul> <p><b>For more information:</b> See <a href="#">Selecting a Location for a Delivery Order</a> and <a href="#">Selecting the Location for a Pickup Order (LocatelItems)</a> for background.</p> <p><b>Overrides?</b> You can set up overrides to these percentages, based on the originating system, order type, and express carrier flag setting. The override percentages all default to inheriting the settings from the Preferences screen, but if there is an override set up that matches the information in an order request, the override criteria apply. The overrides also apply when the Routing Engine “reshops” a rejected delivery or ship-for-pickup order. See <a href="#">Order Orchestration Preference Overrides</a> for more information.</p> |
| <b>Maximum Order Splits</b>   | <p>Indicates the maximum number of times the Science Engine can split an order when selecting fulfilling or sourcing locations.</p> <p><i>Example:</i> An order includes 3 items, and each item is available only in a separate location. The Maximum Order Splits is set to 2. The result is that the entire order is unfulfillable. The Transaction Notes at the History tab of the Order screen indicates Exceed Maximum Number of Splits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Weighted Percentages</b>   | <p>The following fields indicate the relative weight to give each of the criteria used by the Science Engine to select a fulfilling or sourcing location. General rules are:</p> <ul style="list-style-type: none"> <li>• The Total Weights must add up to 100% if <i>Use Weighted Brokering Rules</i> is selected.</li> <li>• Each field is optional. If you leave a field blank, a percentage of 0 is applied.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Labor Cost</b>             | <p>The percentage weight for the Science Engine to assign the location's <a href="#">Labor Cost</a> when selecting locations from the filtered list submitted by the Routing Engine. The labor cost identifies the cost to pick, pack, and ship an order at the location.</p> <p><i>Used how?</i> The location with the lowest labor cost is preferred.</p> <p>Enter any percentage from 0 to 100. The Total Weights must equal 100 if <i>Use Weighted Brokering Rules</i> is selected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gross Margin</b>   | <p>The percentage weight for the Science Engine to assign the product location's <a href="#">Margin</a> when selecting locations from the filtered list submitted by the Routing Engine. The margin identifies the regular <a href="#">Selling Price</a> minus the <a href="#">Cost</a> for the product location; however, if the product location is flagged as <a href="#">On Clearance</a>, then the Science Engine uses a selling price of .01 for the calculation of margin.</p> <p><i>Example:</i> If the selling price for a product location is 100.00, and the cost is 10.00, then the Science Engine uses a margin of 90.00 (100.00-10.00). However, if the item is flagged as on clearance, then the Science Engine uses a margin of -9.99.</p> <p><i>Used how?</i> The location with the lowest margin is preferred, because that location has the lowest profit for in-store sales.</p> <p>Enter any percentage from 0 to 100. The Total Weights must equal 100 if <i>Use Weighted Brokering Rules</i> is selected.</p> |
| <b>Proximity</b>      | <p>The percentage weight for the Science Engine to assign the product location's distance from the customer's address.</p> <p><i>Used how?</i> The location that is the shortest distance from the customer's address is preferred.</p> <p>Enter any percentage from 0 to 100. The Total Weights must equal 100 if <i>Use Weighted Brokering Rules</i> is selected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>On Hand Count</b>  | <p>The percentage weight for the Science Engine to assign to the available quantity for the product location when selecting locations from the filtered list submitted by the Routing Engine. The quantity used is the <a href="#">Available to Promise</a> after applying any probability rules.</p> <p><i>Used how?</i> The product location that has the highest on-hand count is preferred.</p> <p>Enter any percentage from 0 to 100. The Total Weights must equal 100 if <i>Use Weighted Brokering Rules</i> is selected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Sales Velocity</b> | <p>The percentage weight for the Science Engine to assign to the <a href="#">Sales Velocity</a> for the product location when selecting locations from the filtered list submitted by the Routing Engine.</p> <p><i>Used how?</i> The <i>Priority</i> setting determines whether the product location that has the highest or lowest setting is preferred.</p> <p>Enter any percentage from 0 to 100. The Total Weights must equal 100 if <i>Use Weighted Brokering Rules</i> is selected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Priority</b>       | <p>Select one of the following settings when determining how the Science Engine should evaluate Sales Velocity:</p> <ul style="list-style-type: none"> <li>• Largest to Smallest (default): The highest sales velocity is preferred</li> <li>• Smallest to Largest: The lowest sales velocity is preferred</li> </ul> <p>Required if the Sales Velocity percentage is greater than 0.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Total Weights</b>  | <p>Indicates the total of all weighted percentages. Updated as you edit percentages. The total must be 100% if <i>Use Weighted Brokering Rules</i> is selected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## Drop Ship Preferences

**Purpose:** Use the **Drop Ship Preferences** screen to set organization-level preferences related to the Supplier Direct Fulfillment module.

**For more information:** See [Setting Up Data for the Supplier Direct Fulfillment Module](#) for more information on setup related to Supplier Direct Fulfillment.

**How to display this screen:** Click the *Drop Ship Preferences* icon () for an organization at the [Organizations and Preferences](#) screen.

 **Note**

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Organization and Preferences* authority can display this screen. See [Roles](#) for more information.

**Fields at this screen**

| Field                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>Organization</b>                    | The <a href="#">organization</a> you selected at the <a href="#">Organizations and Preferences</a> screen. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Vendor Portal tab</b>               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Vendor Landing Page -- Settings</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Logo URL</b>                        | <p>Optionally, enter the URL for the logo to display in the upper left corner of Vendor Portal screens. The URL should use https rather than http.</p> <p><b>File format:</b> The image file can be in JPG, PNG, or GIF format.</p> <p><b>Image dimensions:</b> The recommended size is 250x35.</p> <p>If your entry does not point to an existing image file, no logo is displayed on Vendor Portal screens.</p> <p>Optionally, you can click the magnifying glass () to preview the image at the recommended size.</p> <p><b>Note:</b> Oracle staff need to make sure that this URL is added to the <a href="#">allow list</a>.</p> |
| <b>Landing Page Refresh</b>            | <p>Controls how often, in minutes, to refresh the information displayed at the Vendor Portal landing page. The default refresh interval is 15 minutes. Your entry cannot exceed 3 positions (999 minutes).</p> <p>The information on the Vendor Portal landing page also refreshes automatically when the vendor logs out and logs back in.</p>                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Portal UI Timeout</b>               | <p>Enter the number of minutes that an inactive Vendor Portal session should remain open before timing out. Once a vendor user's session times out, the vendor user is presented with the Inactivity Timeout screen. The vendor user can then log in again, or close the browser window. Your entry can be from 1 to 20 minutes. The default setting is 20 minutes. Required.</p> <p><b>Note:</b> Oracle recommends that the vendor user logs out of the Vendor Portal and does not just close the browser or browser tab; otherwise, the user user will not be able to log back into the Vendor Portal until the SSO session is cleared.</p>                                                                              |

| Field                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Portal UI Lock Out</b>     | <p>The number of unsuccessful, sequential login attempts that triggers Order Orchestration to disable a vendor user account. When a vendor user attempts to log in with an inactive account, the Vendor Portal displays a general error indicating that the login failed.</p> <p><i>Example:</i> If you set this number to 4, a vendor user account is made inactive after the entry of 4 incorrect passwords in a row.</p> <p><i>Reset:</i> An vendor user's counter is reset:</p> <ul style="list-style-type: none"> <li>• after a successful login (for example, if there are 3 unsuccessful login attempts, followed by a successful login, the counter is reset to 0)</li> <li>• when you re-enable the vendor user account at the <a href="#">Vendor User Profiles</a> screen or the <a href="#">Vendor User Profile</a> screen</li> </ul> <p>Your entry can be 1 to 99 login attempts. The default setting is 5. Required.</p> |
| <b>Very Late Days</b>         | <p>The number of days in the past the due date for an unshipped, uncanceled purchase order line needs to be to be considered "very late" for the charts on the Vendor Portal landing page. Your entry must be at least 2 and can be up to 9 positions. See <a href="#">Purchase order aging chart</a> for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Retailer Email Address</b> | <p>The email address to use as the "to" address on the email generated when a vendor clicks the E-mail the Retailer link on the Vendor Portal landing page. See <a href="#">Information on the Vendor Portal landing page</a> for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Email Subject</b>          | <p>The subject line to use on the email generated when a vendor clicks the E-mail the Retailer link on the Vendor Portal landing page. See <a href="#">Information on the Vendor Portal landing page</a> for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>VPA Url</b>                | <p>The URL of the vendor portal to include as a link in email notifications to the vendor. Should be in the format of <code>http://SERVERNAME:7003</code>, where SERVERNAME is the name of the server and 7003 is the port number.</p> <p><b>Format in email:</b> The link is in parentheses, and includes the URL you specify here, appended by <code>/LocateVPA/</code>. For example, if you enter <code>example.com</code>, the email includes a link to <code>example.com/LocateVPA/</code> in parentheses. If you do not enter a URL here, the email includes a link to <code>/LocateVPA/</code> in parentheses.</p> <p><b>Note:</b> The VPA Url does not automatically append the vendor's locale to the link embedded in the email. The same URL is embedded for all vendors.</p> <p><b>For more information:</b> See <a href="#">Supplier Direct Fulfillment Module Email Notifications Summary</a>.</p>                      |
| <b>Announcement</b>           | <p>The announcement to display on the Vendor Portal landing page. See the screen image under <a href="#">Information on the Vendor Portal landing page</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Invoice -- Settings</b>    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Field                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Max POs / Invoice</b>              | <p>The maximum number of pack slip shipments that a vendor can include on an invoice. An entry between 1 and 999999 is required.</p> <p><b>Controls Invoice Number Length:</b> CWDirect and Order Administration support an invoice number of up to 11 positions; if the invoice includes multiple purchase orders, these systems append a numeric suffix to the number, including a hyphen (for example, INV456-01, INV456-02, etc.). Your entry in this field controls the maximum length of the invoice number that a vendor can create, preventing Order Orchestration from creating an invoice with a number that is too long for these systems.</p> <p><i>Example:</i> If you support a maximum of 100 purchase orders per invoice, then Order Orchestration reserves 4 positions for the hyphen and the numeric suffix from the maximum of 11, supporting invoice numbers such as INV4567-500. If you support a maximum of 99 purchase orders, then Order Orchestration reserves only 3 positions for the hyphen and the numeric suffix.</p> |
| <b>Invoice Number Length</b>          | Calculated based on the Max POs / Invoice setting as described above. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Integrated Shipper -- Settings</b> | <b>For more information:</b> See <a href="#">Integrated Shipping Setup, Troubleshooting, and Mapping: Supplier Direct Fulfillment</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Integration Enabled</b>            | <p>Controls whether the Integrated Shipping screen is available to vendors so that they can confirm shipments through integration with an integrated shipping system such as ADSI.</p> <p><b>Link in Messages and Tasks area on Landing Page:</b> If this preference is selected, the number of purchase orders in process link in the <i>Messages and Tasks</i> area of the Vendor Portal landing page takes the vendor user to the <b>Integrated Shipping</b> screen. Otherwise, if this preference is not selected, the link takes the vendor user to the <b>Purchase Order Shipping</b> screen.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                             |

When this flag is selected, you need to:

- enter a return address at the *New Brand* or *Edit Brand* screen in Modern View. This address prints on the shipping label when the vendor confirms shipments through the **Integrated Shipping** screen.
- use the [Boxes](#) screen in Modern View to define the dimensions of a box used to ship one or more items using an integrated shipping system and whether the box is available in the Supplier Direct Fulfillment module.

| Field                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Email tab</b>                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>PO Status Notification</b>       | Select this flag and enter one or more email addresses to receive an email notification when the vendor:<br><ul style="list-style-type: none"> <li>puts a purchase order line on hold, or releases it from hold</li> <li>revises the delivery date of a purchase order line</li> <li>enters a Reason Description for a purchase order line, even without changing its hold status or delivery date</li> <li>accepts or rejects an address change or cancellation request</li> </ul> At least one email address is required if the flag is selected.<br>Separate each additional email address with a semicolon and no space. |
| <b>Upload Error Notification</b>    | Select this flag and enter one or more email addresses to receive an email notification when the vendor uploads a file of shipment confirmations or invoices that result in any errors. At least one email address is required if the flag is selected.<br>Separate each additional email address with a semicolon and no space.                                                                                                                                                                                                                                                                                             |
| <b>Invoice Balance Notification</b> | Select this flag and enter one or more email addresses to receive an email notification when the vendor submits an invoice that includes an <a href="#">out-of-balance</a> line. At least one email address is required if the flag is selected. See the <a href="#">Out-of-balance invoice notification email to retailer</a> for a sample.<br>Separate each additional email address with a semicolon and no space.                                                                                                                                                                                                        |

### Integrated Shipping Setup, Troubleshooting, and Mapping: Supplier Direct Fulfillment

**Required setup:** The setup required for shipping through an integrated system such as ADSI includes:

- *Drop Ship Preferences:* the settings described above under [Integrated Shipper -- Settings](#) at the **Drop Ship Preferences** screen.
- *Brand return address:* The brand return address information is used as the return address on the shipping label, and must include:
  - contact name and company name
  - street address line 1
  - U.S. city, state/province, and postal code
  - phone number of 10 positions, plus any formatting (for example, (508) 555-1111). The brand phone number is used if there is not a day or evening phone number for the purchase order shipping address.
- *Carrier codes:* The service codes set up in the integrated shipping system should match the carrier codes set up and assigned to vendors in Order Orchestration. If the service codes include leading zeros, then the carrier codes must match; for example, 1 is not a match for 01.

- **Boxes:** The dimensions of the box used with each shipment is required for all purchase orders using an integrated shipping system. If your vendors use the Integrated Shipping screen to confirm shipments, the system requires you to select the box size on the Estimated Weight and Dimensions window. The vendor user can select one of the predefined box sizes or manually define the length, width, and height of the box.
- **Vendor contact address:** The vendor contact address is used as the originating address, and must include:
  - street address line 1
  - U.S. city, state/province, and postal code
  - phone number of 10 positions, plus any formatting (for example, (508) 555-1111).
- **Vendor user authority:** In order to use the **Integrated Shipping** screen, vendor users require Integrated Shipping authority. See [Roles](#) for more information.
- **allow list:** If a vendor attempts to ship through integration with ADSI and the URL is not on the [allow list](#), the Vendor Portal screen opens a pop-up window indicating an unhandled ADSI error. Also, an error message is written to the server log.

#### Restrictions for integrated shipping:

- **International shipping not supported:** Shipping to addresses outside of the United States is not currently supported through the **Integrated Shipping** screen.
- **Address line and apartment/suite:** Address line 2 cannot exceed 35 positions; also, the apartment/suite number is appended to address line 2. If the address line 2 exceeds 35 positions, ADSI truncates the line for a Federal Express carrier, and returns an error for a UPS carrier.
- **Newgistics not supported:** Shipping with Newgistics is not supported for drop shipments.

To help identify possible response delays, the response time is logged.

- **Duplicate service codes:** If you set up multiple service codes in ADSI for the same carrier, the first service code is used on the shipment regardless of whether it was the carrier selected for the purchase order. For example, if you set up both service code 10 and service code 20 in ADSI as UPS Next Day, and the vendor confirms the shipment using carrier 20, service code 10 is returned from the integrated shipping system.
- **Rate shopping:** If the vendor confirms a shipment using a rate-shopping service code, and ADSI returns a code that is not currently a valid carrier in Order Orchestration, Order Orchestration automatically creates the carrier code, but does not assign the new carrier to the vendor.

#### Integrated Shipping Mapping: Supplier Direct Fulfillment

## Preview Image

**Purpose:** Use the **Preview Image** window to preview the logo URL for a brand at the dimensions used for display or printing.

Used for the Supplier Direct Fulfillment module and the Store Connect module.

**How to display this window:** Click the preview icon (  ) next to the Logo URL field:

- *New Brand* or *Edit Brand* screen in Modern View: The Logo URL field is available in the *Brand Logo* folder under the *Preferences* tab. Indicates the logo to print on the graphical pack slip and pullsheet. The idea dimensions are 225 x 50.
- [Drop Ship Preferences](#) screen: The Logo URL field is available under the *Vendor Portal* tab. Indicates the logo to display in the upper left corner of Vendor Portal screens. The ideal dimensions are 250 x 35.
- [Store Connect Preferences](#) screen: The Logo URL field is available under the *General* tab. Indicates the logo to print on the packing slip. The ideal dimensions are 29x18.

### Note

Oracle staff need to make sure that this URL is added to the [allow list](#).

# Store Connect Preferences

**Purpose:** Use the **Store Connect Preferences** screen to set preferences related to the Store Connect module.

**For more information:** See [Setting Up Data for the Store Connect Module](#) for more information on setup related to the Store Connect module, and see the [Store Connect Overview](#) for background.

**How are orders assigned to Store Connect locations?** The Order Orchestration preferences set up at the [Preferences](#) screen control the assignment of delivery orders to all locations, including Store Connect locations. These preferences also apply to ship-for-pickup or store pickup order assignment; for example, a Store Connect location must be flagged as Pickup Available. See the [Preferences](#) screen for more information.

**How to display this screen:** Click the *Store Connect Preferences* icon () for an organization at the [Organizations and Preferences](#) screen. This screen is available only if you have flagged a system as the [Store Connect Default](#). See the [Systems](#) screen or [Setting Up Data for the Store Connect Module](#) for more information.

 **Note**

Available if Use Store Connect is selected at the [Tenant](#) screen. Only users with *Organization and Preferences* authority can display this screen. See [Roles](#) for more information.

**Fields at this screen**

| Field                | Description                                                                                                                                   |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| Organization         | The code and name of the <a href="#">organization</a> you selected at the <a href="#">Organizations and Preferences</a> screen. Display-only. |
| Store Connect System | The code and name of the system flagged as the <a href="#">Store Connect Default</a> for the organization. Display-only.                      |

|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Associate UI Timeout | <p>Enter the number of minutes that an inactive store associate session should remain open before timing out.</p> <p><b>Inactivity warning:</b> Three minutes before the associate’s session is due to time out, an <b>Inactivity Timeout</b> window indicates when the session will expire and provides an option to log out of SSO or extend the session.</p> |

|          |                                                                                                                                    |
|----------|------------------------------------------------------------------------------------------------------------------------------------|
|          | <p>Your entry can be 15 to 1440 minutes. The default setting is 15 minutes. Required.</p>                                          |
| Logo URL | <p>Enter the URL of the logo in the upper left corner of each Store Connect screen. The URL should use https rather than http.</p> |

**Note**

The recommended logo size is 29 x 18, but can be larger if it is proportional to these dimensions.

*Preview:* Click the magnifying glass (  ) to preview the logo as it will appear on the screen.

If you leave this field blank, then the screen does not include a logo.

If a logo URL is specified, but there is no logo at the specified URL, then the screen displays a broken image icon.

**Note:** Oracle staff need to make sure that this URL is added to the [allow list](#).

| Field                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order Age Hours</b>        | <p>Enter the number of hours within which store associates should process new delivery, pickup, or ship-for-pickup orders:</p> <ul style="list-style-type: none"> <li><i>delivery orders</i> should be shipped within this number of hours</li> <li><i>pickup orders</i> should be picked and ready for pickup within this number of hours</li> <li><i>ship-for-pickup orders</i>: <ul style="list-style-type: none"> <li>the sourcing location should ship the order to the pickup location within this number of hours</li> <li>the pickup location, if it is also the sourcing location, should have the order picked and ready for pickup within this number of hours</li> </ul> </li> </ul> <p>Your entry should be a whole number from 1 to 999, or it should be blank. This setting is available at the Store Connect system level only.</p> <p><b>Calculated how?</b> The age is calculated based on the date and time when the oldest open (uncompleted) line was created:</p> <ul style="list-style-type: none"> <li><i>delivery orders or the sourcing location for ship-for-pickup orders</i>: the date and time when the oldest line still in polled, accepted, or picked status was created (that is, not yet shipped)</li> <li><i>pickup orders or the pickup location when it is also the sourcing location for ship-for-pickup orders</i>: the date and time when the oldest line still in polled or accepted status was created (that is, not yet picked)</li> </ul> <p><b>When an order's age meets this number of hours:</b> A red triangle is displayed next to the <i>Age</i> on Store Connect screens, and the date itself is in red, indicating that the order has exceeded your service level, as in the following example. Note that the order date is still highlighted even if the order is under review and cannot yet be fulfilled. ▲ 12/7/2021</p> <p>The indicator indicates that store associate action is required, so it is not displayed for pickup or ship-for-pickup orders that have been processed for store associates and are ready for customer pickup, regardless of when the order was created.</p> <p><b>Displayed on which screens in Store Connect:</b> The order age indicator is displayed at the New Orders, Ready to Pick, and Ready to Ship screens in Store Connect screens for orders that exceed the Order Age Hours, as described above.</p> <p><b>If no Order Age Hours specified:</b> If you leave this field blank, then the Store Connect screens never display the order date in red, bold text. You should either enter a number of hours from 1 to 99 or leave the field blank; 0 is not a valid entry. This setting is available at the Store Connect system level only.</p> <p><b>Reshopped delivery orders:</b> If the original store location assigned to fulfill a delivery order rejects the order, the order's age is still calculated based on the original date and time. When the order is assigned to a different store location, the order date may be displayed in red, bold text even though the order is new to the second store.</p> <p>The same calculation applies to reassigning the sourcing the location for ship-for-pickup orders.</p> <p><b>Orders placed outside of a store location's business hours:</b> The calculation of order age does not reflect whether the order was placed during the store location's regular business hours. For example, if the order is created at 6 o'clock, and the store location opens at 10 o'clock, the order's age is calculated as 4 hours.</p> |
| <b>Unclaimed Orders Hours</b> | This field is not currently implemented.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Field                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Type</b>                         | <p>When you expand the <a href="#">System</a> to highlight a <a href="#">location type</a> in the left-hand pane, the location type's code and name are displayed. A blue arrow next to the location type indicates that you have set a printing preference at that level or lower.</p> <p>This setting, if any, applies if there is no setting at the location level. If the setting is <i>Not Defined</i> at both the location and location type level, the setting for the Store Connect system applies.</p>                                                                                                                                                                                                                                                                              |
| <b>Location</b>                     | <p>When you expand the <a href="#">location type</a> to highlight a <a href="#">location</a> in the left-hand pane, the location's code and name are displayed.</p> <p>If Print Pick List Pull Sheet is set to <i>Not Defined</i> at the location level, the location type-level setting, if any, applies; and if Print Pick List Pull Sheet is set to <i>Not Defined</i> at the location type level, the system-level setting applies.</p>                                                                                                                                                                                                                                                                                                                                                  |
| <i>Printing Preference settings</i> | The preference settings at the Printing tab are described below.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Print Pick List Pull Sheet</b>   | <p>Indicates whether to generate the Pick List Pull Sheet. Options at each level are Yes, No, and Not Defined. You can set this preference at three levels:</p> <ol style="list-style-type: none"> <li>1. The Store Connect system level</li> <li>2. The Store Connect location type level</li> <li>3. The individual store location level</li> </ol> <p>If the setting is Not Defined at the location level, then the location type level setting applies. If the setting is also Not Defined at the location type level, then the Store Connect system setting applies.</p> <p>The Pick List Pull Sheet is generated when the store associate accepts the order. If multiple orders are accepted at the same time, the details for all accepted orders are included on the Pull Sheet.</p> |

| Field                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Print Pack Documents</b>           | <p>Indicates whether to generate the Packing Slip for a delivery or pickup order, and the shipment label for a delivery order. You can set this preference at three levels:</p> <ol style="list-style-type: none"> <li>1. The Store Connect system level</li> <li>2. The Store Connect location type level</li> <li>3. The individual store location level</li> </ol> <p>If the setting is Not Defined at the location level, then the location type level setting applies. If the setting is also Not Defined at the location type level, then the Store Connect system setting applies.</p> <p>Options at each level are:</p> <ul style="list-style-type: none"> <li>• None: Do not print pack documents.</li> <li>• Order Accept: Print pack documents when the order is accepted.</li> <li>• Pick: Print pack documents when the order is picked.</li> <li>• Order Accept and Pick: Print pack documents when the order is accepted and when the order is picked.</li> <li>• Fulfillment: Print pack documents when a delivery order is shipped or when a pickup order is picked up.</li> <li>• Not Defined: Use the setting from the higher level; for example, if the setting for a location is Not Defined; use the setting from the location type level.</li> </ul> <p>The associate can still print the Packing Slip on demand from most screens in Store Connect if the order has been accepted and not yet fulfilled.</p> <p><b>Note:</b> Unless a setting of Fulfillment applies to the store location, the correct items and quantities may not be reflected in the Packing Slip if the associate performs a partial shipment or pickup.</p> |
| <b>Print Pack Document at Receipt</b> | <p>Indicates whether to generate the Packing Slip for a ship-for-pickup order when it is received at the Receive Order screen at the pickup location. You can set this preference to Yes or No at three levels:</p> <ol style="list-style-type: none"> <li>1. The Store Connect system level</li> <li>2. The Store Connect location type level</li> <li>3. The individual store location level</li> </ol> <p>A setting of Yes or No is available at all levels, and a setting of Not Defined is also available at the location type level and the store location level. If the setting is Not Defined at the location level, then the location type level setting applies. If the setting is also Not Defined at the location type level, then the Store Connect system setting applies.</p> <p>At the pickup location, you can also print the Packing Slip at the Ready To Pick Up screen.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Field                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Print Pack Document at Intransit</b>    | <p>Indicates whether to generate the Packing Slip for a ship-for-pickup order when it shipped from the sourcing location to the pickup location at the Ship Order screen. You can set this preference to Yes or No at three levels:</p> <ol style="list-style-type: none"> <li>1. The Store Connect system level</li> <li>2. The Store Connect location type level</li> <li>3. The individual store location level</li> </ol> <p>A setting of Yes or No is available at all levels, and a setting of Not Defined is also available at the location type level and the store location level. If the setting is Not Defined at the location level, then the location type level setting applies. If the setting is also Not Defined at the location type level, then the Store Connect system setting applies.</p> <p>At the sourcing location, you can also print the Packing Slip at the Ready to Pick and Ready to Ship screens.</p> <p><b>Note:</b> Printing the pack document when the order is intransit is recommended if your organization supports partial shipments, so that the quantities on the pack document reflect the actual units selected for shipment to the pickup location. Also, the pack document can be used as a reference in the sourcing location for the quantities shipped.</p> |
| <b>Shipping Preferences tab (Shipping)</b> | <p><i>Shipping Service Configuration</i></p> <p><b>Shipping preference hierarchy:</b> In order to use ADSI or the Standard Shipping Service to ship delivery orders at any Store Connect location, you need to specify the shipping service and complete the additional fields at this tab at the Store Connect system level. You must then set the <a href="#">Shipping Service</a> preference at the system level, and can also set it at the location type or location level. The hierarchy is:</p> <ol style="list-style-type: none"> <li>1. Use the setting at the location, if any.</li> <li>2. If the setting for the location is <i>Not Defined</i>, use the setting at the location type, if any.</li> <li>3. If the setting for the location type is <i>Not Defined</i>, use the setting for the Store Connect system.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Navigational fields</b>                 | These fields are in the left-hand side of the screen, below the heading information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>System</b>                              | <p>When you first advance to this tab, the location hierarchy is displayed in the left-hand pane, collapsed to the level of the Store Connect system for the organization you selected at the <a href="#">Organizations and Preferences</a> screen.</p> <p><i>Shipping Service specified?</i> The system code and system name are displayed. A blue arrow (→) is always displayed next to the system, and is also displayed next to a location type or location to indicate if you have specified a Shipping Service of either <i>ADSI</i> or <i>Manual</i> at that level or lower.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Type</b>                                | <p>When you expand the <a href="#">System</a> to highlight a <a href="#">location type</a> in the left-hand pane, the location type's code and name are displayed. A blue arrow next to the location type indicates that you have set a shipping preference at that level or lower.</p> <p>This setting, if any, applies if there is no setting at the location level. If the setting is <i>Not Defined</i> at both the location and location type level, the setting for the Store Connect system applies.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <i>Shipping Preference settings</i>  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Shipping Service</b>              | <p>Use this drop-down field to select the shipping service to use for shipments from Store Connect.</p> <p><b>Defining shipping services:</b> Shipping service types are ADSI or Standard Shipping. Shipping services are configured through the <a href="#">External Services</a> screen. See that screen for background.</p> <p><b>Inactive?</b> Inactive services are indicated in the shipping service name, for example: <i>Standard Shipping (Inactive)</i>. If the selected shipping service that applies to a location is currently inactive, only manual shipping is available in Store Connect.</p> <p><b>Manual:</b> Following the list of shipping services defined at the Manage External Services screen, the <i>Manual</i> shipping option is available. When the <i>Manual</i> shipping option applies at a store location, no shipping service is available.</p> <p><b>Not Defined:</b> If the setting is <i>Not Defined</i>, the higher-level setting applies, as described above. This setting is not available at the Store Connect system level.</p> <p><b>Note:</b> If the shipping service that applies to a store location changes while a store associate is currently logged into Store Connect, the change does not actually take effect until the user logs out and then logs back in.</p>                                                                                                                                                                         |
| <b>Shipping Label Return Address</b> | <p>Select the location to submit to ADSI or the Standard Shipping Service as the return address for shipments:</p> <ul style="list-style-type: none"> <li>• <i>Placed Location</i> : The location that originated the order</li> <li>• <i>Fulfilling Location</i> (default): The store location fulfilling the order</li> <li>• <i>Selected Location</i>: Another location in your organization. If you select this option, the Location for Return Address field opens, so you can select the location to use as the return address.</li> </ul> <p><b>Note:</b> The return address location must include:</p> <ul style="list-style-type: none"> <li>• contact name and company name</li> <li>• street address line 1</li> <li>• U.S. city, state/province, and postal code</li> <li>• phone number of 10 positions, plus any formatting (for example, (508) 555-1111). The store location phone number is used if there is not a day or evening phone number for the order shipping address.</li> </ul> <p>All locations for all systems within your organization are available for selection.</p> <p>Available only at the Store Connect system level, and only if the Shipping Service is set to Standard Shipping Service or ADSI. Required if the Shipping Service is <i>ADSI</i>.</p> <p>See the <a href="#">Edit Location</a> screen for more information on setting up locations.</p> <p>A change to the shipping label return address takes effect immediately in Store Connect.</p> |

| Field                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>Logo URL (email)</b>                                | <p>The URL for the logo to include on email notifications to customers. The URL should use https rather than http. Not currently implemented. Emails include the image at a size 225 x 50 pixels. See <a href="#">Store Connect Email Notifications Summary</a> for a list of email notifications to customers.</p> <p><b>Preview the logo:</b> After entering the URL, click the preview icon (  ) to preview the image at 225 x 50.</p> <p><b>Note:</b> Oracle staff need to make sure that this URL is added to the <a href="#">allow list</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

## Order Orchestration Preference Overrides

**Purpose:** Use this screen to work with overrides to the *Order Orchestration Settings* for your organization, set up at the [Preferences](#) screen. These preference settings control the ranking of fulfilling or sourcing locations for order assignment, or the sort order of fulfilling or sourcing locations returned in the locate items message.

*Example:* You can have the Routing Engine rank locations for a pickup request based first on proximity, while it ranks locations for a delivery request based first on available quantity.

#### Criteria that you can override:

- If weighted brokering is not enabled: If the *Use Weighted Brokering Rules* setting at the [Preferences](#) screen is not selected at the *Preferences* screen, the settings you can override are the Order Orchestration criteria of Proximity, On Hand Count, Location Priority, Last Order Assigned, and Sales Velocity. The Routing Engine uses these criteria when selecting the fulfilling or sourcing location for an order or responding to a locate items or product availability request.
- If weighted brokering is enabled: If the *Use Weighted Brokering Rules* setting at the *Preferences* screen is selected, the settings you can override are the Order Orchestration criteria of Labor Cost, Gross Margin, Proximity, On Hand Count, Sales Velocity, and Priority. The Routing Engine uses these criteria when selecting the fulfilling or sourcing location for an order or responding to a locate items or product availability request.

**For more information:** See the *Fulfillment Tab* at the **Preferences** screen for background.

**Inherit from Preferences?** This screen displays all possible overrides, which are created automatically when you create and set preferences for systems that can originate orders; however, each is set, by default, to inherit the settings from the **Preferences** screen. Changing an override is optional, and unless you make a change, the Routing Engine uses the default preference settings. If you do change an override, you can change it back to the default settings at any time.

**Types of overrides:** There is a separate override available for each combination of order type, originating system, and express carrier setting:

- order type or search type of Delivery, Pickup or Ship For Pickup
- Indicates how the order should be fulfilled: shipped directly to the customer ([delivery order](#)), picked up at a specified location ([pickup order](#)), or transferred from a sourcing location to a pickup location ([ship-for-pickup order](#))
- Based on:
  - the order type specified in the SubmitOrder request for a new order
  - the order type assigned to an existing delivery or ship-for-pickup order that is rejected by the fulfilling, sourcing, or pickup location, so that the Routing Engine searches for another location
  - the fulfillment type specified for a locate items or product availability request
- originating system:
  - This is the system that originally submits the order; or, in the case of the locate items message, this is the system submitting the search request.
  - The Routing Engine always uses the override setting for the originating system when routing an order, even if the order has been rejected, and it is finding another fulfilling location (“reshopping” the order).

#### Note

There is no override available for the default vendor system, since this system never originates orders, locate items requests, or product availability requests to the Routing Engine.

- Express carrier:

- Based on the Express setting for the carrier on a delivery or ship-for-pickup order.
- If there is no carrier specified in the SubmitOrder message for a delivery or ship-for-pickup order, the Routing Engine uses the override setting based on the Express setting for the [Default Carrier](#) specified at the **Preferences** screen. The default carrier's setting also applies for locate items and product availability requests with fulfillment types of DELIVERY or SHIPFORPICKUP.

**Note**

The option to condition by express carrier does not apply to a pickup order.

**Summary of possible combinations per system:** For each system in the organization that can submit sales orders, the following override combinations are created automatically with the settings inherited from the **Preferences** screen:

- Delivery, Express carrier
- Delivery, not Express carrier
- Pickup
- Ship-for-pickup, Express carrier
- Ship-for-pickup, not Express carrier

**Pickup location preferences:** When the Routing Engine receives a web service request searching for locations that could fulfill a pickup order:

- If *Use Weighted Brokering Rules* is unselected: The LocateItems response uses Standard Brokering rules from the [Preferences](#) screen, while the Product Availability response lists the locations in order of proximity.
- If *Use Weighted Brokering Rules* is selected: Both the LocateItems response and the Product Availability response list the locations in order of proximity.

**Note**

Because the Standard Brokering Rules never apply to searches for pickup orders when *Use Weighted Brokering Rules* is selected, the [Browse Order Orchestration Preference Override](#) window does not display any preference rules for a pickup order type. Although you can work with the Standard Brokering Rules at the [Edit Order Orchestration Preference Override](#) screen, these settings are never used if you use weighted brokering.

**Vendor system?** Since the default vendor system cannot submit sales orders or search for product availability, it does not have preference overrides.

**Store Connect system?** Typically, overrides set for the Store Connect system are not used, since Store Connect does not create orders.

Used for the Routing Engine module.

**How to display this screen:** Select *Preference Override* from the [Home Screen](#) or from the [Locations Menu](#). You must complete the [Preferences](#) screen for an organization before you can work with overrides.

 **Note**

- Available if Use Routing Engine is selected at the [Tenant](#) screen.
- You can work with preference overrides only if you have completed the [Preferences](#) screen for the organization.
- When you create an organization, you need to first select Save at the **Preferences** screen in order to create the override combinations to display at this screen. Saving preferences is required before you can submit locate items requests and orders to the Routing Engine.
- Only users with *Order Orchestration Preference Overrides* authority can display this screen. See [Roles](#) for more information.

| <b>Organization</b>             | See <a href="#">organization</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Order Type</b>               | <p>Indicates the order type that is subject to the override. Possible order types are:</p> <ul style="list-style-type: none"> <li>• Delivery</li> <li>• Pickup</li> <li>• Ship For Pickup</li> </ul> <p>To determine the order type, the Routing Engine uses:</p> <ul style="list-style-type: none"> <li>• SubmitOrder requests: the <i>transaction_type_id</i></li> <li>• LocateItems requests or ProductAvailability requests: the <i>fulfillment_type</i></li> <li>• “reshopping” a rejected order: the order type of the rejected order</li> </ul>                                                                                                                                                                                                                                                                                          |
| <b>Originating System</b>       | Indicates the system that originates the order, locate items request, or product availability request that is subject to the override. The vendor default system is not displayed, since it cannot originate sales orders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Express Carrier</b>          | <p>A green check (  ) indicates that delivery, and ship-for-pickup orders are subject to the override only if the Express setting is selected. The Routing Engine determines the Express setting for a request by:</p> <ul style="list-style-type: none"> <li>• Submit order requests: the <i>ship_via</i>, if specified in the request; otherwise, the setting of the <i>Default Carrier</i> specified at the <b>Preferences</b> screen</li> <li>• Locate items requests and product availability requests: the setting of the <i>Default Carrier</i> specified at the <b>Preferences</b> screen</li> <li>• “Reshopping” a rejected order: the setting of the carrier on the rejected order</li> </ul> <p>This setting does not apply to pickup orders.</p> |
| <b>Inherit from Preferences</b> | <p>A green check (  ) indicates the Routing Engine is currently set to use the default settings from the <b>Preferences</b> screen rather than an override.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Edit</b>                     | <p>Select the edit icon (  ) next to an override to advance to the <a href="#">Edit Order Orchestration Preference Override</a> screen.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## Edit Order Orchestration Preference Override

**Purpose:** Use the **Edit Order Orchestration Preference Override** screen to review or update preference overrides that apply to an order type and originating system. In the case of a delivery or ship-for-pickup order, the Routing Engine also uses the override only if the Express setting is consistent with the carrier on the order.

**For more information:** See the [Order Orchestration Preference Overrides](#) screen for a discussion.

Used for the Routing Engine module.

**How to display this screen:** Click the edit icon (  ) for an override at the [Order Orchestration Preference Overrides](#) screen.

- Available if Use Routing Engine is selected at the [Tenant](#) screen.
- Only users with *Order Orchestration Preferences Overrides* authority can display this screen. See [Roles](#) for more information.
- If [Use Weighted Brokering Rules](#) is selected at the *Preferences* screen, the [Weighted Percentages](#) are displayed; otherwise, the fields from the *Standard Brokering* tab at the *Preferences* screen are displayed.
- If the **Edit Order Orchestration Preference Override** screen was already open in another tab when you clicked the edit icon, you advance to this screen with the previously-selected override displayed.

**Pickup location preferences:** When the Routing Engine receives a web service request searching for locations that could fulfill a pickup order:

- If [Use Weighted Brokering Rules](#) is unselected: The *LocateItems* response uses Standard Brokering rules from the [Preferences](#) screen, while the Product Availability response lists the locations in order of proximity.
- If [Use Weighted Brokering Rules](#) is selected: Both the *LocateItems* response and the Product Availability response list the locations in order of proximity.

### Note

Because the Standard Brokering Rules never apply to searches for pickup orders when [Use Weighted Brokering Rules](#) is selected, the [Browse Order Orchestration Preference Override](#) window does not display any preference rules for a pickup order type. Although you can work with the Standard Brokering Rules at the Edit Order Orchestration Preference Override screen, these settings are never used if you use weighted brokering

### Updating override settings

To set up an override from the default **Preference** settings:

1. Unselect the Inherit from Order Orchestration Preferences flag to make the remaining fields enterable.
2. Edit the preference settings. See the [Fulfillment Tab](#) at the **Preferences** screen for background.
3. Select Save when you are done.

**Set back to inheriting defaults:** To change the override to go back to the default preference settings, select the Inherit from Order Orchestration Preferences flag and select Save.

| <b>Express Carrier</b> | <p>Indicates whether an order needs to use an express carrier to be subject to the override. Display-only. Possible settings are:</p> <ul style="list-style-type: none"> <li>• <b>Y:</b> <ul style="list-style-type: none"> <li>– Orders that specify an express carrier are subject to the override if they match the Order Type (delivery or ship-for-pickup orders only)</li> <li>– If the <a href="#">Default Carrier</a> specified at the <b>Preferences</b> screen has the express carrier selected and the order matches the Order Type, this carrier's setting applies, so that delivery or ship-for-pickup order requests that do not specify a carrier are subject to the override, as well as locate items requests with delivery or ship-for-pickup transaction types</li> </ul> </li> <li>• <b>N:</b> <ul style="list-style-type: none"> <li>– Orders that do not specify an express carrier are subject to the override if they match the Order Type (delivery or ship-for-pickup orders)</li> <li>– If the <a href="#">Default Carrier</a> specified at the Preferences screen does not have the express carrier selected and the order matches the Order Type, this carrier's setting applies, so that delivery or ship-for-pickup order requests that do not specify a carrier are subject to the override, as well as locate items requests with delivery or ship-for-pickup order transaction types</li> </ul> </li> </ul> |

**Note**

The Express Carrier flag is always set to *N* when the Order Type is Pickup.

**Order Orchestration Preference Override****Inherit from Organization and Preferences**

Possible settings:

- Selected (default): the Order Orchestration settings specified at the **Preferences** screen apply to this originating system, order type, express carrier type combination, and the current settings are displayed below
- Unselected: the override settings specified at this screen apply to this originating system, order type, and express carrier type combination

**For more information:** For a discussion on the following fields, see the [Standard Brokering Tab](#) in the **Preferences** help topic.

**Note**

The following fields, which control standard brokering, are displayed only if [Use Weighted Brokering Rules](#) is not selected at the **Preferences** screen; otherwise, the fields from the [Weighted Brokering Tab](#) are displayed.

**Proximity**

See [Proximity](#).

**On Hand Count**

See [On Hand Count](#).

## Browse Order Orchestration Preference Override

**Purpose:** Use the **Browse Order Orchestration Preference Override** window to review the Order Orchestration criteria overrides that apply to a particular order type and express carrier setting for an originating system.

Used for the Routing Engine module.

**How to display this window:** Click to highlight an Order Orchestration preference override at the [Order Orchestration Preference Overrides](#) screen.

Used for the Routing Engine module.

### Note

- Available if Use Routing Engine is selected at the [Tenant](#) screen.
- You can work with preference overrides only if you have completed the [Preferences](#) screen for the organization.
- When you create an organization, you need to first select Save at the **Preferences** screen in order to create the override combinations to display at this window.
- If [Use Weighted Brokering Rules](#) is selected at the *Preferences* screen, the [Weighted Percentages](#) are displayed; otherwise, the fields from the *Standard Brokering* tab at the Preferences screen are displayed.
- Only users with *Order Orchestration Preference Overrides* authority can display this window. See [Roles](#) for more information.

**Pickup location preferences:** When the Routing Engine receives a web service request searching for locations that could fulfill a pickup order:

- If [Use Weighted Brokering Rules](#) is unselected: The *LocatItems* response uses Standard Brokering rules from the **Preferences** screen, while the Product Availability response lists the locations in order of proximity.

- If [Use Weighted Brokering Rules](#) is selected: Both the LocateItems response and the Product Availability response list the locations in order of proximity.

### Note

Because the Standard Brokering Rules never apply to searches for pickup orders when [Use Weighted Brokering Rules](#) is selected, the Browse Order Orchestration Preferences window does not display any preference rules for a pickup order type. Although you can work with the Standard Brokering Rules at the [Edit Order Orchestration Preference Override](#) screen, these settings are never used if you use weighted brokering.

## Locations

**Purpose:** Use the **Locations** screen to work with locations where you sell or stock inventory to be visible for [locate items](#) requests or product availability requests, or that can place or fulfill orders through the Routing Engine, or that can originate a purchase order fulfilled through Supplier Direct Fulfillment.

**What is a location?** A location is a place where a product is sold or stocked. A location can be a warehouse or store where you keep actual inventory, or it can also be a virtual location such as a web storefront or a vendor. Locations are defined within an [organization](#) both by the [system](#) to which they belong and their [location type](#).

**How are locations created?** Typically, you create locations through an integration with an external system. For example, locations are created as part of the product import process; see [OCDS or Merchandising Omni Services Imports](#) or [Importing Locations through File Storage API](#). You can also create them through the Location Update request JSON message; see the Web Services Guide on My Oracle Support (2953017.1) for more information.

**Note**

Once you have created locations in Order Orchestration, you can then import them into the Store Connect module.

**Location address:** It is important that the location address be accurate, since the location address is used as the ship-to address for ship-for-pickup orders.

**Location relationships:** See [Organization, System, and Location](#) for an overview of the relationships among **Order Orchestration** elements, including locations.

**Order Administration integration:** Locations that correspond to Order Administration warehouses must have codes identical to the Order Administration warehouse codes.

**How to display this screen:** Select *Locations* from the [Home Screen](#) or from the [Locations Menu](#).

**Note**

Only users with *Locations* authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                       | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>Delete</b> | <p>Select the delete icon (  ) next to a location to delete the location from Order Orchestration. You can delete a location only if there is not an existing record for the location of any:</p> <ul style="list-style-type: none"> <li>• Product locations.</li> <li>• Attributes assigned to the location, or to product locations for the location.</li> <li>• Store associate users with authority to log into the location.</li> <li>• Fulfillment zones that include the location.</li> <li>• Order status history for an order lines in the location, or order lines that are assigned to the location.</li> <li>• Orders originating in the location.</li> </ul> |

## New Location

**Purpose:** Use the **New Location** screen to create a [location](#), including the address, telephone numbers, and other related information such as the store rank and hours.

### Note

Typically, you create locations through integrations with external systems. For example, locations might be created as part of the product import process; see [OCDS or Merchandising Omni Services Imports](#) or [Importing Locations through File Storage API](#).

**Location relationships:** See [Data Hierarchy](#) for an overview of the **Order Orchestration** organization, system, and location hierarchy. Also, see the [Locations](#) screen for more information on how locations are created in Order Orchestration.

**Location address:** It is important that the location address be accurate, since the location address is used as the ship-to address for ship-for-pickup orders.

**How to display this screen:** Enter the required information to create a new location at the [Locations](#) screen and click *New*.

### Note

- If you click *Cancel* after advancing to the New Location screen, the location is not created.
- You must complete the [Preferences](#) screen for an organization before you can create any locations for it. See [Setting Up Data for the Routing Engine Module](#) for an overview.
- Only users with *Locations* authority can display this screen. See [Roles](#) for more information.

## Completing creation of a location

Enter any of the fields described below and click *Save*, or click *Cancel* to return to the *Locations* screen without creating the location.

### Note

Any changes you make at this screen can be overwritten the next time you import location information, as described in [Importing Locations through File Storage API](#).

**Required, optional fields:** The Name is always required. All of the remaining information on this screen is optional, although the screen displays a warning message before you can create a location without a State/Province, Country, and Postal Code, because these fields are required to use the [proximity locator](#). The remaining fields are optional, however:

- If you use the [proximity locator](#) in your organization, you should always enter a valid address, regardless of whether the location is subject to proximity locator searching (for example, a warehouse).
- Canadian postal codes should be entered with a space: for example, L5R 4H1 rather than L5R4H1.
- *locateitems response*: the name and address information for the location that is displayed in the [locate items](#) response is derived from your entries at this screen.
- *ADSI integration in Store Connect*: The name and address may also be submitted to ADSI when the store associate ships an item, based on the setting of the [Shipping Label Return Address](#) specified at the **Store Connect Preferences** screen. The return address location must include:
  - contact name and company name
  - street address line 1
  - U.S. city, state/province, and postal code
  - phone number of 10 positions, plus any formatting (for example, (508) 555-1111). The store location phone number is used if there is not a day or evening phone number for the order shipping address
- *submit order request for a pickup order*: If a submit order request for a pickup order originates from a location without an address that includes a valid postal code, Order Orchestration returns an error indicating that the location does not have sufficient inventory of the requested item.

 **Note**

- If you click *Cancel* at this screen, the location is not created.
- You need to advance to the [Preferences](#) screen and click *Save* to have the Routing Engine begin including the new location in *locate items* results and to make the location eligible for submit order assignment.
- If you use [proximity locator](#), when you create a new location with a postal code, Order Orchestration determines its latitude and longitude using either the [Oracle Maps Cloud Service](#) or the [proximity location table](#), depending on your configuration, and saves this information as part of the location record. The screen displays an error message if the Geocode URL is required, but not specified at the **Tenant** screen. See [Proximity Locator Searching](#) for an overview.

**Fields at this screen**

| Field                        | Description                                                                                                                                                                 |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Informational fields:</b> |                                                                                                                                                                             |
| <b>Organization</b>          | The <a href="#">organization</a> you selected at the <a href="#">Locations</a> screen. Required. The organization code and name are displayed, separated by a hyphen (-).   |
| <b>Type</b>                  | The <a href="#">location type</a> you selected at the <a href="#">Locations</a> screen. Required. The location type code and name are displayed, separated by a hyphen (-). |
| <b>Location</b>              | The location code you entered at the <a href="#">Locations</a> screen. Required. The location code only is displayed.                                                       |
| <b>System</b>                | The <a href="#">system</a> you selected at the <a href="#">Locations</a> screen. Required. The system code and name are displayed, separated by a hyphen (-).               |

**Location detail fields:**

 **Note**

Most of the fields on this screen are optional and informational only. The exceptions are the *Name* field, which is always required, and the *Country* and *Postal code*, which are required if *Use Proximity Locator* is selected for the organization at the [Preferences](#) screen. The name and address information for the location that is displayed in the [locate items](#) response is derived from your entries at this screen.

Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>State/Province</b> | Your entry can be up to 3 positions. Required to use the <a href="#">proximity locator</a> , although you can create a location without completing this field. Should be a valid ISO code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Postal Code</b>    | <p>The ZIP or postal code for the location. Your entry can be up to 10 positions. Required to use the <a href="#">proximity locator</a>, although you can create a location without completing this field.</p> <ul style="list-style-type: none"> <li>Canadian postal codes should be entered with a space: for example, L5R 4H1 rather than L5R4H1.</li> <li>If a submit order request for a pickup order originates from a location without an address that includes a valid postal code, Order Orchestration returns an error indicating that the location does not have sufficient inventory of the requested item.</li> </ul>                                                                                                                                                                                                                                                           |
| <b>Country</b>        | Your entry can be up to 3 positions. Required to use the <a href="#">proximity locator</a> , although you can create a location without completing this field. Should be a valid ISO code.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Attributes</b>     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Labor Cost</b>     | <p>Used to “shop” an order for fulfillment or sourcing as part of the weighted brokering method (see <a href="#">Submit Order Request for Delivery Order (Weighted Brokering)</a> for background) when determining the cost to pick, pack, and ship an order. Your entry can be a maximum of 19 positions, including up to 15 positions before the decimal and 4 positions after. It can also be 0 (0.000), but cannot be a negative number, and should not include a currency symbol. Optional.</p> <p>You can also update the labor cost through the <a href="#">Location Bulk Updates</a> wizard.</p>                                                                                                                                                                                                                                                                                     |

| Field                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Gift Wrap</b>                 | <p>Select this flag to indicate that the location supports gift wrap; otherwise, leave it unselected. It defaults to unselected.</p> <p><b>Used when?</b> If the <a href="#">Use Attribute Rules</a> flag is selected for the organization at the <b>Preferences</b> screen, locations are filtered based on this setting when the LocateItems request, SubmitOrder request, or ProductAvailability request indicates that the item requires gift wrap, or if the order line is rejected and reshopped.</p> <p>For a ship-for-pickup order, it is the pickup location that needs to support gift wrapping rather than the sourcing location. See <a href="#">Enable Ship-For-Pickup?</a> for background.</p> <p><b>Note:</b> This field is not updated through the location import, but it is updated through the LocationUpdate request message.</p>                                                                                                                                                                                                   |
| <b>Days Open</b>                 | <p>The Auto Cancel Unclaimed Pickup Orders job uses the Days Open settings to determine when to cancel an unclaimed pickup or ship-for-pickup order. Only days that are selected here are included in the calculation. See <a href="#">Auto-Cancel Unclaimed Orders</a> for a discussion and setup information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Days Open for Auto-Cancel</b> | <p>Use these fields to indicate which days of the week should be included to determine when a pickup or ship-for-pickup order is eligible for automatic cancellation. If a day is not selected, it is not included in the calculation.</p> <p>All days of the week are available for selection.</p> <p><i>Updating these fields:</i> All days of the week are selected by default when you create a new location through this screen, the LocationUpdate request message, or the <a href="#">Importing Locations through File Storage API</a> process. You can change the settings at the <a href="#">Edit Location</a> screen, or through the <a href="#">Location Bulk Updates</a> wizard.</p> <p>If you change a location's Days Open for Auto Cancel settings, this does not affect the Pickup By Date that has already been assigned to any order lines for the location.</p> <p>Updating an existing location through the <a href="#">Importing Locations through File Storage API</a> process does not update the Days Open for Auto-Cancel.</p> |

## Edit Location

**Purpose:** Use the **Edit Location** screen to work with a [location](#), including the address, telephone numbers, and other related information such as the store rank and hours.

**Location relationships:** See [Data Hierarchy](#) for an overview of the **Order Orchestration** organization, system, and location hierarchy. Also, see the [Locations](#) screen for more information on how locations are created in Order Orchestration.

**Location address:** It is important that the location address be accurate, since the location address is used as the ship-to address for ship-for-pickup orders.

**Updated how?** The location information displayed at this screen can be updated by:

- a periodic refresh from an external system (such as product import processing from Order Administration, or an import from [OCDS or Merchandising Omni Services](#)); see [Importing Locations through File Storage API](#) or [OCDS or Merchandising Omni Services Imports](#)
- entry at this screen

**How to display this screen:** Click the edit icon (  ) for a location at the [Locations](#) screen.

**Note**

- Only users with *Locations* authority can display this screen. See [Roles](#) for more information.
- If the **Edit Location** screen was already open in another tab when you clicked the edit icon, you advance to this screen with the previously-selected location displayed.
- When you create or update locations through an import, entries you make at this screen may be overwritten the next time the import runs.

**Updating a location**

Update any of the fields described below and click *Save*, or click *Cancel* to return to the [Locations](#) screen without making any changes.

**Note**

- Any changes you make at this screen can be overwritten the next time you import location information, as described in [Importing Locations through File Storage API](#).
- If you use [proximity locator](#), when you change the address for a location, Order Orchestration determines its new latitude and longitude using either the [Oracle Maps Cloud Service](#) or the [proximity location table](#), depending on your configuration, and updates this information for the location record.

**Required, optional fields:** The Name is always required. All of the remaining information on this screen is optional, although the screen displays a warning message before you can create a location without a State/Province, Country, and Postal Code, because these fields are required to use the [proximity locator](#). The remaining fields are optional, however:

- If you use the [proximity locator](#) in your organization, you should always enter a valid address, regardless of whether the location is subject to proximity locator searching (for example, a warehouse).
- Canadian postal codes should be entered with a space: for example, L5R 4H1 rather than L5R4H1.
- *locateitems response*: the name and address information for the location that is displayed in the [locate items](#) response is derived from your entries at this screen.
- *ADSI integration in Store Connect*: The name and address may also be submitted to ADSI when the store associate ships an item, based on the setting of the [Shipping Label Return Address](#) specified at the **Store Connect Preferences** screen. The return address location must include:
  - contact name and company name
  - street address line 1
  - U.S. city, state/province, and postal code
  - phone number of 10 positions, plus any formatting (for example, (508) 555-1111). The store location phone number is used if there is not a day or evening phone number for the order shipping address

- *submit order request for a pickup order:* If a submit order request for a pickup order originates from a location without an address that includes a valid postal code, Order Orchestration returns an error indicating that the location does not have sufficient inventory of the requested item.

### Fields at this screen

| Field                        | Description                                                                                                   |
|------------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>Informational fields:</b> |                                                                                                               |
| <b>Organization</b>          | See <a href="#">organization</a> . The organization code and name are displayed, separated by a hyphen (-).   |
| <b>Type</b>                  | See <a href="#">location type</a> . The location type code and name are displayed, separated by a hyphen (-). |
| <b>Location</b>              | See <a href="#">location</a> . The location code only is displayed.                                           |
| <b>System</b>                | See <a href="#">system</a> . The system code and name are displayed, separated by a hyphen (-).               |

### Location detail fields:

#### Note

Most of the fields on this screen are optional and informational only. The exceptions are the *Name* field, which is always required, and the *Country* and *Postal code*, which are required if [Use Proximity Locator](#) is selected for the organization at the [Preferences](#) screen. The name and address information for the location that is included in the [locate items](#) response is derived from your entries at this screen.

| <b>Extension</b>      | Your entry can be up to 10 positions.                                                                                                                                                                    |
| <b>Fax</b>            | Your entry can be up to 20 positions.                                                                                                                                                                    |
| <b>Address</b>        |                                                                                                                                                                                                          |
| <b>Address</b>        | Your entry in each of the four fields can be up to 50 positions.                                                                                                                                         |
| <b>City</b>           | Your entry can be up to 35 positions.                                                                                                                                                                    |
| <b>State/Province</b> | Your entry can be up to 3 positions. Required to use the <a href="#">proximity locator</a> , although you can create a location without completing this field. Should be a valid ISO code.               |
| <b>Postal Code</b>    | The ZIP or postal code for the location. Your entry can be up to 10 positions. Required to use the <a href="#">proximity locator</a> , although you can create a location without completing this field. |

 **Note**

- Canadian postal codes should be entered with a space: for example, L5R 4H1 rather than L5R4H1.
- If a submit order request for a pickup order originates from a location without an address that includes a valid postal code, Order Orchestration returns an error indicating that the location does not have sufficient inventory of the requested item.

**Country** Your entry can be up to 3 positions. Required to use the [proximity locator](#), although you can create a location without completing this field. Should be a valid ISO code.

**Attributes**  
**Labor Cost**

Used to “shop” an order for fulfillment or sourcing as part of the weighted brokering method (see [Submit Order Request for Delivery Order \(Weighted Brokering\)](#) for background) when determining the cost to pick, pack, and ship an order. Your entry can be a maximum of 19 positions, including up to 15 positions before the decimal and 4 positions after. It can also be 0 (0.000), but cannot be a negative number, and should not include a currency symbol. Optional.

You can also update the labor cost through the [Location Bulk Updates](#) wizard.

**Gift Wrap**

Select this flag to indicate that the location supports gift wrap; otherwise, leave it unselected. It defaults to unselected.

**Used when?** If the [Use Attribute Rules](#) flag is selected for the organization at the **Preferences** screen, locations are filtered based on this setting when the LocateItems request, SubmitOrder request, or ProductAvailability request indicates that the item requires gift wrap, or if the order line is rejected and reshopped.

For a ship-for-pickup order, it is the pickup location that needs to support gift wrapping rather than the sourcing location. See [Enable Ship-For-Pickup?](#) for background.

**Note:** This field is not updated through the location import, but it is updated through the LocationUpdate request message.

| Field                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Geocode</b>                   | If you use <a href="#">proximity locator</a> and the location has a postal code, Order Orchestration determines a location's latitude and longitude using either the <a href="#">Oracle Maps Cloud Service</a> or the <a href="#">proximity location table</a> , depending on your configuration, and saves this information as part of the location record.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Latitude</b>                  | The location's latitude. Set automatically when you create or update a location if you use <a href="#">proximity locator</a> . See <a href="#">Proximity Locator Searching</a> for an overview. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Longitude</b>                 | The location's latitude. Set automatically when you create or update a location if you use <a href="#">proximity locator</a> . See <a href="#">Proximity Locator Searching</a> for an overview. | <b>Days Open</b>                 | The Auto Cancel Unclaimed Pickup Orders job uses the Days Open settings to determine when to cancel an unclaimed pickup or ship-for-pickup order. Only days that are selected here are included in the calculation. See <a href="#">Auto-Cancel Unclaimed Orders</a> for a discussion and setup information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Days Open for Auto-Cancel</b> | <p>Use these fields to indicate which days of the week should be included to determine when a pickup or ship-for-pickup order is eligible for automatic cancellation. If a day is not selected, it is not included in the calculation.</p> <p>All days of the week are available for selection.</p> <p><i>Updating these fields:</i> All days of the week are selected by default when you create a new location through the <a href="#">New Location</a> screen, the LocationUpdate request message, or the <a href="#">Importing Locations through File Storage API</a> process. You can change the settings at this screen, or through the <a href="#">Location Bulk Updates</a> wizard.</p> <p>If you change a location's Days Open for Auto Cancel settings, this does not affect the Pickup By Date that has already been assigned to any order lines for the location.</p> <p>Updating an existing location through the <a href="#">Importing Locations through File Storage API</a> process does not update the Days Open for Auto-Cancel.</p> |

## Location Attributes

**Purpose:** Use the **Location Attributes** screen to review or work with attributes that are applied to a location.

Used for the Routing Engine module.

**For more information:** See [Using Attribute Rules for Delivery and Pickup Orders](#) and [Using Attribute Rules for Ship-for-Pickup Orders](#) for background and see [Attribute Definitions](#) for information on creating and working with attribute definitions.

**How to display this screen:** Select the attribute icon () for a product at the [Locations](#) screen.

| <b>Value</b>        | <p>The value of the location attribute. The value can be:</p> <ul style="list-style-type: none"> <li>text, if the Data Type of the attribute is <i>Text</i> or <i>List</i></li> <li>numeric, if the Data Type of the attribute is <i>Text</i>, <i>List</i>, or <i>Number</i></li> <li>true, if the Data Type of the attribute is <i>Boolean</i></li> </ul> <p>A text or list value can be up to 50 positions. Numbers can be up to 25 positions, including commas, decimal points, or minus signs. Truncated if it exceeds the allotted space.</p>                                                                                                                                                                                                                                                                                                        |
| <b>Location Use</b> | Indicates whether the attribute applies to the location if it is the <i>Originating</i> , <i>Pickup</i> , or <i>Sourcing</i> location for an order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Data Type</b>    | <p>Indicates the type of data that can be defined through the attribute. Available data types are:</p> <ul style="list-style-type: none"> <li><i>Boolean</i>: Indicates whether a condition is true for the location; for example, use a Boolean attribute to identify each location that supports oversized items.</li> <li><i>List</i>: Used to define a list of valid values that can be assigned to a location; for example, this might be a list of brands that the location supports. Each value can be up to 50 positions.</li> <li><i>Number</i>: Indicates that the value defined through the attribute must be numeric. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li> <li><i>Text</i>: Indicates that the value defined through the attribute is text. Values can be up to 50 positions.</li> </ul> |
| <b>Edit</b>         | Select the edit icon (  ) next to a location attribute to open the <a href="#">Edit Product Attribute</a> window.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Delete</b>       | Select the delete icon (  ) next to a location attribute to delete the attribute from the location.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## New Location Attribute

**Purpose:** Use the **New Location Attribute** window to apply an attribute to a location.

Used for the Routing Engine module.

**For more information:** See [Using Attribute Rules for Delivery and Pickup Orders](#) and [Using Attribute Rules for Ship-for-Pickup Orders](#) for background.

**How to open this window:** Click *New* at the [Location Attributes](#) screen.

### Note

Available if Use Routing Engine is selected at the [Tenant](#) screen.

**Fields at this window:** Complete the fields described below and click *Save*, or click *Cancel* to return to the [Location Attributes](#) screen without creating the location attribute.

| Field           | Description                                                                                                                                                                            |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location</b> | See <a href="#">location</a> . The location you selected at the <a href="#">Locations</a> screen. The location code is separated from the location name by a hyphen (-). Display-only. |

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Location Use</b>   | <p>Select whether the attribute applies to the location when it is the <i>Originating</i>, <i>Pickup</i>, or <i>Sourcing</i> location for an order. Required.</p> <p>In the case of a ship-for-pickup order, the <i>Ship For Pickup Matching Type</i> selected for the attribute definition must also indicate to use this attribute when filtering locations; for example, the Ship For Pickup Match Type must be set to <i>Sourcing</i> or <i>Both</i> in order to use a location attribute whose Location Use is set to <i>Sourcing</i> to filter orders. However, this restriction does not apply to delivery or pickup orders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Attribute Code</b> | <p>After selecting the Location Use, select the Code identifying an attribute you can apply to a location. All attribute definitions that could be applied to the selected location are available for selection. Attributes are available for selection if:</p> <ul style="list-style-type: none"> <li>• they were created with an Attribute Type of <i>Location</i> or <i>Product and Location</i>, and</li> <li>• if the Location Use is:</li> <li>• <i>Sourcing or Pickup</i>: Attributes are available for selection as long as they have not already been applied to the selected location with the same Location Use, unless the Allow Multiple flag was selected. For example, you might select the Allow Multiple flag for a list attribute identifying brands, and apply multiple brands to a location for sourcing or pickup.</li> <li>• <i>Originating</i>: Attributes are not available for selection if they have already been applied to the selected location, regardless of whether the Allow Multiple flag is selected for the attribute.</li> </ul> <p>If the attribute has not already been applied using the same Location Use, then it can be applied again to the location.</p> <p>Once you select an Attribute Code, the Description and Data Type are displayed above the Value field.</p> <p>The Attribute Code is not available for selection until after you select the Location Use.</p> <p>Required.</p> |
| <b>Description</b>    | <p>The description of the selected attribute. Displayed after you select the Attribute Code. Display-only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Data Type</b>      | <p>Indicates the type of data that can be defined through the selected attribute. Possible data types are:</p> <ul style="list-style-type: none"> <li>• <i>Boolean</i>: Indicates whether a condition is true for the location; for example, set to true if the location supports engraving.</li> <li>• <i>List</i>: Used to define a list of valid values that can be assigned to a location; for example, this might be a list of brands that the location can support for sourcing or pickup. Each value can be up to 50 positions.</li> <li>• <i>Number</i>: Indicates that the value defined through the attribute must be numeric. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li> <li>• <i>Text</i>: Indicates that the value defined through the attribute is text. Values can be up to 50 positions.</li> </ul> <p>Displayed after you select the Attribute Code. Display-only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Field        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Value</b> | Use this field to enter or select the value for the location attribute. If the Data Type is: <ul style="list-style-type: none"><li>• <i>Boolean</i>: Automatically selected and cannot be changed.</li><li>• <i>List</i>: Select the Value from the displayed options defined for the attribute. Only Values for the attribute that are not already assigned to the location are available for selection.</li><li>• <i>Number</i>: Enter a numeric value. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li><li>• <i>Text</i>: Enter a numeric or text value. Can be up to 50 positions.</li></ul> Required, except that a Boolean defaults to selected and is display-only. |

## Edit Location Attribute

**Purpose:** Use the **Edit Location Attribute** window to change the value for a location attribute.

Used for the Routing Engine module.

**For more information:** See [Using Attribute Rules for Delivery and Pickup Orders](#) and [Using Attribute Rules for Ship-for-Pickup Orders](#) for background.

**How to open this window:** Click the edit icon (  ) at the [Location Attributes](#) screen.

### Note

Available if Use Routing Engine is selected at the [Tenant](#) screen.

Fields at this window:

### Note

Boolean location attributes cannot be edited. You can delete a Boolean attribute if it should not apply to the location.

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>Attribute Code</b> | The Code identifying the attribute applied to a location. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Description</b>    | The description of the selected attribute. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Field            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Data Type</b> | <p>Indicates the type of data that can be defined through the selected attribute. Possible data types are:</p> <ul style="list-style-type: none"> <li>• <i>Boolean</i>: Indicates whether a condition is true for the location; for example, set to true if the location supports engraving.</li> <li>• <i>List</i>: Used to define a list of valid values that can be assigned to a location; for example, this might be a list of brands that the location can support for sourcing or pickup. Each value can be up to 50 positions.</li> <li>• <i>Number</i>: Indicates that the value defined through the attribute must be numeric. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li> <li>• <i>Text</i>: Indicates that the value defined through the attribute is text. Values can be up to 50 positions.</li> </ul> <p>Display-only.</p> |
| <b>Value</b>     | <p>Use this field to enter or select the value for the location attribute. If the Data Type is:</p> <ul style="list-style-type: none"> <li>• <i>Boolean</i>: Automatically selected and cannot be changed.</li> <li>• <i>List</i>: Select the Value from the displayed options defined for the attribute. Only Values for the attribute that are not already assigned to the location are available for selection.</li> <li>• <i>Number</i>: Enter a numeric value. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li> <li>• <i>Text</i>: Enter a numeric or text value. Can be up to 50 positions.</li> </ul> <p>Required, except that a Boolean defaults to selected and is display-only.</p>                                                                                                                                                  |

## Location Bulk Updates

**Purpose:** Use the **Location Bulk Updates** wizard to set the Labor Cost, the Days Open for Auto Cancel, or both, for one or more locations within a system. You can select the locations to update based on:

- Location Type
- Country
- State or Province
- Region
- Rank

The *Review* step of the wizard indicates the total number of locations eligible for update. The eligible locations are not listed, and no report is produced when you submit the update, but the locations are updated automatically.

**About Labor Cost:** The Labor Cost for a location is used to “shop” an order for fulfillment or sourcing as part of the [Locatelitems Sequence and Splitting Examples \(Standard Brokering\)](#) method when determining the cost to pick, pack, and ship an order.

**About Days Open for Auto Cancel:** A location’s Days Open for Auto Cancel settings are used to indicate which days of the week to exclude when calculating the Pickup By Date for a pickup or ship-for-pickup order line assigned to the location. Once the Pickup By Date has passed, the order line is eligible to be canceled by the Auto Cancel Unclaimed Pickup Orders job. See [Auto-Cancel Unclaimed Orders](#) for a discussion.

**Note**

If you change a location's Days Open for Auto Cancel settings, this does not affect the Pickup By Date that has already been assigned to any order lines for the location.

**How to display this screen:** Select *Location Bulk Updates* from the [Locations Menu](#).

**Note**

Only users with *Location Bulk Updates* authority can display this screen. See [Roles](#) for more information.

**Specify Location Bulk Update Rule**

**Purpose:** Use this first step in the Location Bulk Update wizard to specify the organization and system where the updates should take place. This step opens when you select *Location Bulk Updates* from the [Locations Menu](#).

**Fields at this screen**

| Field               | Description                                                                                                                                                                                                         |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization</b> | The <a href="#">organization</a> where the bulk updates to the Labor Cost should take place. The Default Organization defined through the <a href="#">Users</a> screen defaults, but you can override it. Required. |
| <b>System</b>       | The <a href="#">system</a> where the bulk updates to the Labor Cost should take place. Only systems associated with the selected Organization are available for selection. Required.                                |

**Completing this step:**

1. Optionally, select a different Organization for the bulk location updates.
2. Select the System where the updates should take place.

Click *Next* to continue to the [Define Conditions](#) step, or click *Cancel* to exit the Location Bulk Updates wizard without saving your entries.

**Define Conditions**

**Purpose:** Use this second step in the Location Bulk Updates wizard to specify the criteria to use when determining which locations to update.

**Adding one or more:** Select one or more values from the displayed fields and then select *Add*. The criteria are added to the *Conditions* area at the top of the screen. At least one criterion is required.

*Examples:*

- Select a *Location Type* and select *Add*, or
- Select a *Country* and *State / Province* and select *Add*, or
- Select a *Location Type*, *Region*, and *Rank*, and select *Add*

If you select multiple criteria, they are added automatically as *And* criteria, indicating that all selected criteria must be true for the location to be updated.

**Adding additional criteria:**

- Select either:
  - *And*, indicating that all the existing criteria plus the new criteria you are adding must be true for the location to be updated, or
  - *Or*, indicating to update the location if either of the two sets of criteria are true
- Select one or more value from the displayed fields and select *Add*. The criteria are added to the Conditions area at the top of the screen.

*Examples:*

- Location Type = POS *And* Region = 12: Only locations whose location type is POS and are in region 12 are eligible for update
- Location Type = POS *Or* Region = 12: Locations are eligible for update if their location type is POS or their region is 12

**Note**

You can select just one country and state combination at a time.

**Removing a criterion:** Highlight the criterion in the *Conditions* area at the top of the screen and select *Delete*.

**Resetting criteria:** To clear the currently selected fields, select *Reset*.

**Completing this step:** Select:

- *Next* to continue to the *Then* step.
- *Previous* to return to the *Define Conditions* step.
- *Cancel* to exit the Bulk Location Update wizard and discard your entries or changes.

**Fields at this step**

| Field                                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>And / Or</b>                                            | Select: <ul style="list-style-type: none"> <li>• <i>And</i> to have both the new criteria you add, and the existing criteria displayed in the <i>Conditions</i> area at the top of the screen, apply when selecting locations eligible for update</li> <li>• <i>Or</i> to have either the new criteria you add, or the existing criteria displayed in the <i>Conditions</i> area at the top of the screen, apply when selecting locations eligible for update</li> </ul> These options are displayed only after you have added at least one set of criteria as conditions for update. In this case, one option is required. |
| <b>At least one of the following criteria is required.</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Location Type</b>                                       | The <a href="#">location type</a> that is eligible for the update.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Country</b>                                             | The country where eligible locations are located.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>State / Province</b>                                    | The state, province, or territory where eligible locations are located. You can select a state, province, or territory only if you first select a country that has a defined list of states, provinces, or territories.                                                                                                                                                                                                                                                                                                                                                                                                     |

| Field         | Description                                                                                                                                                     |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Region</b> | The region assigned to eligible locations. The region is a user-defined code. Case-insensitive; a region of New England is a match for a region of NEW ENGLAND. |
| <b>Rank</b>   | The rank assigned to eligible locations. The rank is a user-defined code. Case-sensitive; a rank of ABC is not a match for a rank of abc.                       |

**Then**

**Purpose:** Use this step to define the Labor Cost, Days Open for Auto-Cancel, or both to apply to all eligible locations.

**How to display:** You advance to this step by clicking *Next* at the *Define Conditions* step.

**About Labor Cost:** The Labor Cost for a location is used to “shop” an order for fulfillment or sourcing as part of the [LocatelItems Sequence and Splitting Examples \(Standard Brokering\)](#) method when determining the cost to pick, pack, and ship an order. Your entry can be up to 19 positions, including 15 positions before the decimal and 4 positions after. It can also be 0, but cannot be a negative number, and should not include a currency symbol.

Select the Select to Update flag to make the labor cost field enterable, and then enter a labor cost to update the locations.

**About Days Open for Auto Cancel:** A location’s Days Open for Auto Cancel settings are used to indicate which days of the week to exclude when calculating the Pickup By Date for a pickup or ship-for-pickup order line assigned to the location. Once the Pickup By Date has passed, the order line is eligible to be canceled by the Auto Cancel Unclaimed Pickup Orders job. See [Auto-Cancel Unclaimed Orders](#) for a discussion.

Select the Select to Update flag to make the days of the week flags selectable, and then clear (unselect) any days that should not be counted as open for calculating the Pickup By Date.

**Note**

The days of the week fields do not look different when you change the Select to Update flag, but are selectable after the change to that flag.

**Completing this step:** Select:

- *Next* to continue to the *Review Rule* step.
- *Previous* to return to the *Define Conditions* step.
- *Cancel* to exit the Bulk Location Update wizard and discard your entries or changes.

**Review Rule**

**Purpose:** Use this step to review the Location Bulk Update criteria; the Labor Cost, Days Open for Auto-Cancel, or both to apply; the number of locations to be updated; and to accept or reject your entries or changes.

**How to display:** You advance to this step by clicking *Next* at the *Then* step.

Information displayed here includes:

- the organization and system selected at the *Specify Location Bulk Update Rule* step

- the Records to Update, indicating the number of locations that meet the criteria defined at the *Specify Location Bulk Update Rule* step and the *Define Conditions* step. This number of locations will be updated with the Labor Cost specified at the *Then* step if you select *Update*. If there are no locations that meet the criteria, the number 0 is highlighted in red
- the conditions specified at the *Define Conditions* step
- the Labor Cost specified at the *Then* step
- the Days Open for Auto-Cancel selected at the *Then* step

**Completing this step:** Select *Update* to accept the criteria and Labor Cost, Days Open for Auto-Cancel, or both and update all eligible locations, or click *Cancel* to close the screen without submitting the update. You can also select *Previous* to return to the *Then* step.

## Fulfillment Zones

**Purpose:** Use the **Fulfillment Zones** screen to review or work with zones you use to restrict availability searches and delivery or ship-for-pickup order assignment by geographical area.

*Example:* To expedite shipping and save on freight, you prefer to use the distribution center in Hartford, Connecticut to ship orders to customers in the New England states, even if a location in California has a greater quantity available.

Used for the Routing Engine module.

**For more information:** See [Using Zones for Fulfillment](#) for an overview, and see the [Fulfillment Zone Wizard](#) for more information on setting up and troubleshooting zones.

**Zone List Report:** You can use the [Zone List Report](#) to review the zones where locations are assigned as either primary or alternate fulfilling locations. See that report for more information.

**How to display this screen:** Select *Fulfillment Zones* from the [Home Screen](#) or from the [Locations Menu](#).

### Note

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Fulfillment Zones* authority can display this screen. See [Roles](#) for more information.

### Options at this screen

| Option                               | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Fulfillment Zone Wizard

- Purpose:** Use the **Fulfillment Zone Wizard** to create or edit zones you can use to restrict locate item searches and fulfillment or sourcing assignment to particular store or warehouse locations based on the order's shipping or pickup address.
- Used for the Routing Engine module.
- Steps to creating a zone:**
1. [Specify Zone Name](#): specify the name for a zone, the organization where it applies, and optionally flag it as active.
  2. [Zone includes Shipping Addresses in](#): specify the geographical areas included in the zone.
  3. [Define locations](#): specify the locations that are eligible to fulfill orders in the zone. Optionally, you can define one or more secondary locations to use if an order cannot be fulfilled by the primary location(s).
  4. [Review Zone](#): review the zone before you accept your entries or changes.
- When does the Routing Engine start using a zone?** The Routing Engine does not restrict orders or locate items searches to a zone unless:
1. the [Use Zone Fulfillment](#) flag at the **Preferences** screen is selected, and

- the zone is flagged as *Active*

**For more information:** See [Using Zones for Fulfillment](#) for an overview.

**How to display:**

- creating a zone:* click **New** at the [Fulfillment Zones](#) screen
- changing or reviewing a zone:*
- click the edit icon (  ) next to a zone at the [Fulfillment Zones](#) screen, or
- click **Edit** at the [Browse Fulfillment Zones](#) window

**Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with [Fulfillment Zones](#) authority can display this screen. See [Roles](#) for more information.

**In this topic:** Steps in the Fulfillment Zone Wizard:

- [Specify Zone Name](#)
- [Zone includes Shipping Addresses in](#)
- [Define locations](#)
- [Review Zone](#)
- [Troubleshooting Zone Fulfillment](#)

**Specify Zone Name**

**Purpose:** Use this first step in the Fulfillment Zone Wizard to specify the Name of the zone, indicate whether the zone is currently *Active*, and optionally to select a different organization.

**How to display:**

- creating a zone:* click **New** at the [Fulfillment Zones](#) screen
- changing a zone:*
- click the edit icon (  ) next to a zone at the [Fulfillment Zones](#) screen, or
- click **Edit** at the [Browse Fulfillment Zones](#) window

**Fields at this screen**

| Field               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization</b> | <p>The <a href="#">organization</a> where the zone controls location selection. Only orders associated with this organization are subject to the zone fulfillment restrictions. Required. The organization from the <a href="#">Fulfillment Zones</a> screen defaults here, but you can override this default when you are creating a new zone. You cannot change the organization for an existing zone.</p> <p><i>Controls displayed locations:</i> When you advance to the <a href="#">Zone includes Shipping Addresses in</a> step, only locations associated with this organization are available for selection.</p> |

| Field     | Description                                                                                                                                                                                                                                                |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Zone Name | The name of a zone. Zone names can be 1 to 40 positions in length and must be unique in Order Orchestration, not just within the <a href="#">organization</a> . The name can include special characters and spaces.                                        |
| Active    | Indicates whether the Routing Engine should start using the zone fulfillment restrictions immediately after you complete the wizard. Defaults to unselected. You can also change the setting of this flag at the <a href="#">Fulfillment Zones</a> screen. |

**Note**

The Routing Engine does not use zone fulfillment restrictions unless the [Use Zone Fulfillment](#) flag at the **Preferences** screen is selected, even if the zone is flagged as *Active*.

**Completing this step:**

- Optionally, select a different [organization](#) from the [Organization](#) drop-down box to indicate the organization where the zone restrictions should apply. The organization defaults from the [Fulfillment Zones](#) screen. The organization controls the locations available for selection when you set up the zone.

**Note**

This option is available only when you are creating a zone.

- Enter or change the [Zone Name](#). Names can be 1 to 40 positions long and must be unique in Order Orchestration, not just within the [organization](#). If you entered a name at the [Fulfillment Zones](#) screen, it defaults here. The name can include special characters and spaces.
- Optionally, select the [Active](#) flag to have the zone become active as soon as you complete the Fulfillment Zone Wizard. The flag is unselected by default. You can also change the setting later at the [Fulfillment Zones](#) screen.

Click *Next* to continue to the [Zone includes Shipping Addresses in](#) step, or click *Cancel* to exit the Fulfillment Zone Wizard without saving your entries.

**Zone includes Shipping Addresses in**

**Purpose:** Use this second step in the Fulfillment Zone Wizard to specify the geographical areas to include in the zone. The Routing Engine uses the zone to select fulfilling or sourcing locations if the shipping address on a delivery or ship-for-pickup order, locate items request, or product availability request falls within the geographical areas you specify here.

**Rules for Selecting Geographical Areas for the Zone**

**Options for geographical area selection:** You can set up a zone to include shipping addresses in:

- one or more ranges of three-position zip code prefixes (SCFs) within the United States, or

- one or more states, provinces, or territories within a country, or a combination of states, provinces, or territories in multiple countries, or
- one or more countries

**Combining options:** A zone can include more than one of the above options as long as the countries are not the same so that the areas do not overlap with another active zone.

*Example:* A zone might include shipping addresses in:

- a range of zip code prefixes (SCFs) in the United States, plus one or more provinces in Canada
- one or more provinces in Canada, plus Greenland (entire country)
- a range of zip code prefixes in the United States, plus Canada (entire country)

**Invalid combinations:** To avoid an overlap, a single zone cannot include different types of options for the same country, such as:

- the entire United States plus a particular state or zip code prefix range
- a particular state in the United States plus a zip code prefix range
- Canada plus a particular province of Canada

**Multiple active zones cannot specify the same option:** You cannot set up more than one active zone within an [organization](#) that specifies the same geographical option. For example, you cannot set up two active zones in the same organization that both specify Massachusetts. Also, you cannot set up two active zones in the same organization that specify overlapping zip code prefix ranges. However, the same zone restrictions can exist within any number of inactive zones.

**Hierarchy for zone selection:** You can set up different zones that include the same geographical areas, but at different levels; for example, you might have a zone that includes Massachusetts, and another zone that includes a zip code prefix range of 021 through 024, and another zone that specifies the United States. When determining which zone applies, the Routing Engine uses the following hierarchy:

1. Use the zone that matches the shipping address based on zip code prefix range; otherwise,
2. Use the zone that matches the shipping address based on state, province, or territory; otherwise,
3. Use the zone that matches the shipping address based on country; otherwise,
4. Do not restrict location assignment by zone; just use the rules set up at the [Preferences](#) screen.

**Note**

Using fulfillment zones for countries other than the United States and Canada is supported only if the Use Proximity Locator preference is unselected for the organization.

| <b>Selected geographical locations (fields at the top of the screen)</b>  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Country</b>                                                            | The country included in the zone.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>State / Province</b>                                                   | A state, province, or territory of the country that is included in the zone.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Zip Code Prefix Range</b>                                              | The beginning and ending three-position zip code prefixes to include in the zone. Specifying a zip code prefix range is available for U.S. addresses only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Geographical selection fields (fields at the center of the screen)</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Country</b>                                                            | <p>Select a country to include in the zone. I</p> <p>You can select multiple countries. For example, you can select both the United States and Canada.</p> <p>The countries are in alphabetical order.</p> <p><i>To select an entire country:</i> Select the country from the dropdown list and click <i>Add</i>.</p> <p><i>To make the <a href="#">State / Province</a> field active:</i> Select a country, such as Canada, that has a defined list of states, provinces, or territories.</p> <p><i>To make the <a href="#">Zip Code Prefix From</a> and <a href="#">Zip Code Prefix To</a> fields enterable:</i> Select the United States.</p> <p><i>Restrictions:</i></p> <ul style="list-style-type: none"> <li>You cannot select a country if the zone already includes a state, province, or territory, or a zip code prefix range in that country.</li> <li>You cannot select a country that is already assigned to another zone in the <a href="#">organization</a>, even if the other zone is inactive.</li> </ul> |

**Note**

Using fulfillment zones for countries other than the United States and Canada is supported only if the Use Proximity Locator preference is unselected for the organization.

| Field            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| State / Province | <p>Optionally, select a state, province, or territory to include in the zone. This option is available only if there is a defined list of states, provinces, or territories for the selected Country.</p> <p>States, provinces, and territories are in alphabetical order.</p> <p>Leave this field unselected if:</p> <ul style="list-style-type: none"><li>the zone includes the entire country, or</li><li>the zone includes a zip code prefix range in the United States</li></ul> <p>You can select multiple states, provinces, or territories in one or more countries. For example, you can select:</p> <ul style="list-style-type: none"><li>both the United States /Maine and Canada/Ontario, or</li><li>both the United States/New York and the United States/New Jersey</li></ul> |

**Note**

You do not specify a state when adding a zip code prefix range to a zone; you should specify the United States and the zip code range only.

*To select a state, province, or territory:*

- Select a country that supports states or provinces, such as Canada, from the Country dropdown list.
- The State/ Province list becomes active. Select the state, province, or territory from the dropdown list.
- Click *Add*.

*Restrictions:*

- You cannot select a state, province, or territory if the zone already includes the country, or if the zone already includes a zip code prefix range for that country (U.S. only).
- You cannot select a state, province, or territory that is already assigned to another zone in the [organization](#), even if the other zone is inactive.

| Field                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Zip Code Prefix From</b><br><b>Zip Code Prefix To</b> | <p>Enter the first and last three-position numeric zip code prefix (SCF) to include in the zone. For example, you can enter 015 and 017 to include the zip codes from 01501 through 01799. This option is available for the United States only. When you enter a zip code prefix range, you cannot also enter a state.</p> <p>To select a zip code prefix range:</p> <ol style="list-style-type: none"><li>1. Select the United States from the Country dropdown list.</li><li>2. Complete the Zip Code Prefix From and the Zip Code Prefix To fields with three-position zip code prefixes.</li></ol> <div><p><b>Note</b></p><p>Do not select a state from the State / Province dropdown list.</p></div> <ol style="list-style-type: none"><li>3. Click <i>Add</i>.</li></ol> <p><i>Restrictions:</i></p> <ul style="list-style-type: none"><li>• You cannot enter a zip code prefix range if the zone already includes a U.S. state or the entire United States.</li><li>• You cannot enter a range that overlaps a range included in a different zone in the <a href="#">organization</a>, even if the other zone is inactive.</li><li>• The screen does not validate that your entries are existing SCF codes for the United States; however, your entries must be numeric.</li></ul> |

#### Adding a geographical area to a zone:

1. Select the geographical areas to include in the zone. For each geographical area, enter either:
  - a country, or
  - a country and state, province, or territory, or
  - the United States and a zip code prefix rangeSee the field descriptions above for more information.
2. Click *Add* to add the area to the zone. The screen displays an error if your entry is already assigned to this or another zone, or if it is not a valid entry for the current zone; otherwise, it adds the area to the list at the top of the screen.
3. Optionally, click *Reset* to clear the current selection from the State / Province dropdown or the current entries in the Zip Code Prefix From and Zip Code Prefix To fields.

#### Changing an existing area for the zone:

1. Highlight the geographical area in the list at the top of the screen to have the information default to the middle of the screen.
2. Edit the information as needed.
3. Click *Change*.

#### Deleting a geographical area from a zone:

1. Highlight the geographical area in the list at the top of the screen.
2. Click *Delete*.

**Completing this step:** Click:

- *Next* to continue to the [Define locations](#) step.
- *Previous* to return to the [Specify Zone Name](#) step.
- *Cancel* to exit the Zone Fulfillment Wizard and discard your entries or changes.

### Define locations

**Purpose:** Use this step to select the primary and, optionally, alternate locations that can fulfill delivery or ship-for-pickup orders shipping within the zone and to include in locate items searches. You select primary and alternate locations by dragging the locations to the correct area of the screen.

**How to display:** You advance to this step by clicking *Next* at the [Zone includes Shipping Addresses in](#) step.

**Which locations are available for selection?** This screen includes all locations in the [organization](#), regardless of whether the locations are currently flagged to support shipment (for delivery orders) or sourcing (for ship-for-pickup orders) based on the settings at the [Preferences](#) screen. However, the [default unfulfillable location](#) is not available for selection.

**Types of locations at this screen:** This screen includes:

- *Eligible Locations:* Locations with the organization that are not currently selected as either a primary or alternate search location for the zone. Locations that remain in the eligible location listing are never selected for delivery or ship-for-pickup orders shipping within the zone or included in locate items searches.
- *Primary Search Locations:* The preferred location(s) for assignment of delivery or ship-for-pickup orders that are shipping within the zone. If there are multiple primary search locations specified that might be able to fulfill the order, the Routing Engine uses the criteria specified at the [Preferences](#) screen to select locations. If an order can be fulfilled within the primary locations, the Routing Engine does not consider the alternate search locations, regardless of the [Preferences](#) settings for your organization.
- *Alternate Search Locations:* The location(s) to select if the primary search locations could not fulfill the order or meet the locate items search criteria. If there are multiple alternate search locations that might be able to fulfill the order, the Routing Engine uses the criteria specified at the [Preferences](#) screen to select locations.

**How do locations default to the Primary Search Locations list?** If any of the locations in the organization match the state / province or zip code prefix range specified at the [Zone includes Shipping Addresses in](#) step, these locations default to the Primary Search Locations list when you are creating a new zone; however, you can move these locations to a different list, or move other eligible locations to the Primary Search Locations list.

### Fields at this screen

| Field           | Description                                                                                                                                                                                                                      |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 | The following information is displayed for Eligible Locations, Primary Search Locations, and Alternate Search Locations. See the <a href="#">New Location</a> screen for more information.                                       |
| <b>Location</b> | The code identifying a location. Location codes can be 1 to 10 positions in length, and must be unique for the system.                                                                                                           |
| <b>Name</b>     | The name describing the location. Location names can be 1 to 40 positions in length, and do not need to be the same as the name or description of the location in the integrated system, such as Order Administration or Xstore. |

| Field                 | Description                                                                                                                                                                |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>City</b>           | The city where the location is located. Can be up to 35 positions.                                                                                                         |
| <b>State/Province</b> | The state, province, or territory where the location is located. Can be up to 3 positions. Validated against the ISO code.                                                 |
| <b>Country</b>        | The code identifying the country. Can be a two-position alpha, three-position alpha, or three-position numeric code, validated against the ISO 3166 list of country codes. |
| <b>Postal Code</b>    | The U.S. ZIP code or Canadian postal code for the location.                                                                                                                |
| <b>Rank</b>           | The rank you have assigned to the location. Informational. Up to 10 positions.                                                                                             |
| <b>Region</b>         | The region you have assigned to the location. Informational. Up to 20 positions.                                                                                           |
| <b>System</b>         | The <a href="#">system</a> where the location is located.                                                                                                                  |

### Selecting primary and alternate search locations:

- Drag locations from among the Eligible Locations, Primary Search Locations, and Alternate Search Locations lists as needed to specify the preferred and alternate locations for the zone. You can also:
- select multiple locations at once by holding the CTRL key and clicking each additional location
- select a group of locations by clicking the first one and then holding down the SHIFT key when you click the last one
- Optionally, sort on a column, expand a column, or rearrange columns before selecting locations. For example:
- Click the Region column heading to sort locations by region.
- Position the cursor between the Name and City column headings until the cursor turns into a double-pointed arrow, then drag the City column heading to the right to enlarge the Name column.
- Position the cursor on the Rank column heading, drag the entire column to the left, and drop it between the Location and Name columns.
- Filter: Optionally, enter a full or partial location field to restrict the displayed locations to your entry. For example, enter a Postal Code of 016 to restrict the listed locations to those whose postal codes start with 016.

### Completing this step: Click:

- *Next* to continue to the [Review Zone](#) step.
- *Previous* to return to the [Zone includes Shipping Addresses in](#) step.
- *Cancel* to exit the Zone Fulfillment Wizard and discard your entries or changes.

### Review Zone

**Purpose:** Use this step to review a zone you have created or changed, and to accept or reject your entries or changes.

**How to display:** You advance to this step by clicking *Next* at the [Define locations](#) step.

This step displays the zone you have created or changed using the [Fulfillment Zone Wizard](#). See the [Specify Zone Name](#) step for information on the geographical locations included in the

zone, and see the [Define locations](#) step for information on the primary and alternate locations for the zone.

#### Zone restrictions for active zones:

- A zone restriction (for example, state, province, or territory within a country) can exist in just a single active zone, but
- The same zone restriction can exist within any number of inactive zones.

As a result, the Fulfillment Zone wizard applies the following rules:

- You can't create a new active zone that includes a zone restriction that already exists within another existing active zone.
- You can't activate an existing inactive zone if it includes a zone restriction that is already within an existing active zone.
- You can't add a zone restriction to an active zone if the restriction is already included in another existing active zone.

**Completing this step:** Click *Save* to accept your changes and save the zone, or click *Cancel* to reject all changes to the zone and return to the [Fulfillment Zones](#) screen. If you click *Cancel* while creating a new zone, the zone is not saved.

Optionally, click *Previous* to return to the [Define locations](#) step.

**When does the Routing Engine start using a zone?** The Routing Engine does not restrict delivery or ship-for pickup orders or search responses to a zone unless:

- the [Use Zone Fulfillment](#) flag at the **Preferences** screen is selected, and
- the zone is flagged as *Active*

#### Troubleshooting Zone Fulfillment

**Purpose:** The following table provides possible explanations for questions related to zone fulfillment.

| Issue/Question                                                       | Possible Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| The Routing Engine is not using zones to select fulfilling locations | <ul style="list-style-type: none"> <li>• <i>Zone not active?</i> Check the <a href="#">Fulfillment Zones</a> screen to make sure the zone is currently flagged as active.</li> <li>• <i>Preference not selected?</i> Check the Use Zone Fulfillment setting at the <a href="#">Preferences</a> screen.</li> <li>• <i>Locations do not support order type?</i> Check the settings of the Delivery Available or Ship For Pickup Sourcing Available flags at the <a href="#">Preferences</a> screen. You can change this setting at the organization, location type, and location level; the most specific setting takes precedence.</li> <li>• <i>Location excluded based on probability rules?</i> Probability rules can still exclude a location even when you use zone fulfillment. See the <a href="#">Probability Rule Overview</a> for background.</li> <li>• <i>Country not U.S. or Canada?</i> Zone fulfillment for countries other than the United States and Canada is supported only if the Use Proximity Locator preference is unselected for the organization.</li> <li>• <i>Country for address not specified?</i> If a locate items request does not specify a country and no country is associated with the requesting location, zone fulfillment restrictions do not apply and all locations for the organization are eligible to be included in the response (subject to the settings at the <a href="#">Preferences</a> screen and any probability rules).</li> </ul> |

| Issue/Question                               | Possible Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Can you override location selection by zone? | <ul style="list-style-type: none"><li>• <i>Locate Items can specify a requested_location:</i> If a <a href="#">locate items</a> request specified a <a href="#">requested location</a>, the response includes just the requested location regardless of whether the location is associated with the zone for the shipping address.</li><li>• <i>SubmitOrder can specify a fulfilling location:</i> If the <a href="#">submit order message</a> specifies a fulfilling location, the Routing Engine assigns the order to the location regardless of whether the location is associated with the zone for the shipping address.</li></ul> |

## Browse Fulfillment Zones

**Purpose:** Use the **Browse Fulfillment Zones** window to review a zone, including the geographical areas that it includes, and the primary and alternate locations selected to fulfill or source delivery or ship-for-pickup orders in those areas.

Used for the Routing Engine module.

**How to display this window:** Click a zone once at the [Fulfillment Zones](#) screen.

### Note

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Fulfillment Zones* authority can display this screen. See [Roles](#) for more information.

### Options at this window

| Option                   | Procedure                                                                                                                                       |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| edit the displayed zone  | Click <i>Edit</i> to advance to the <a href="#">Fulfillment Zone Wizard</a> .                                                                   |
| review the next zone     | Click the next icon (  ) to display the next zone.          |
| review the previous zone | Click the previous icon (  ) to display the previous zone. |

### Fields at this window

| Field        | Description                                                                                                           |
|--------------|-----------------------------------------------------------------------------------------------------------------------|
| Organization | The <a href="#">organization</a> where the zone applies to location selection for delivery or ship-for-pickup orders. |
| Zone Name    | The name of the zone.                                                                                                 |

| Field  | Description                                                                                                |
|--------|------------------------------------------------------------------------------------------------------------|
| Active | Indicates whether the zone fulfillment restrictions currently apply to delivery or ship-for-pickup orders. |

**Note**

Zone fulfillment does not apply unless the [Use Zone Fulfillment](#) flag at the **Preferences** screen is selected, even if the zone is flagged as *Active*.

**Zone includes Shipping Addresses in**

The geographical areas that are restricted to the primary or alternate locations specified for the zone. If a shipping address is included in the geographical areas for more than one zone, the Routing Engine uses the zone with the most specifically-defined area: for example, if one zone specifies a matching country, and another zone specifies a matching state or province, the zone with the matching state or province applies.

*Country:* A country where orders are subject to the zone restrictions.

*State/Province:* A state or province where orders are subject to the zone restrictions. Can be specified for the United States or Canada only.

*Zip Code Prefix Range:* A range of zip code prefixes where orders are subject to the zone restrictions. Can be specified only within the United States.

**Primary Search Locations**

The locations that the Routing Engine should select to fulfill or source a delivery or ship-for-pickup order shipping to the geographical areas listed under Zone includes Shipping Addresses in.

- *Location:* The code identifying the location.
- *Name:* The name of the location.
- *System:* The system associated with the location.

**Note**

You can use the [Fulfillment Zone Wizard](#) to review additional information about each location, such as rank, region, city, state/province, country, and postal code.

| Field                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Alternate Search Locations</b> | <p>The alternate locations that the Routing Engine can select to fulfill or source a delivery or ship-for-pickup order shipping to the geographical areas listed under Zone includes Shipping Addresses in, if the primary locations cannot fulfill the order.</p> <ul style="list-style-type: none"> <li>• <i>Location:</i> The code identifying the location.</li> <li>• <i>Name:</i> The name of the location.</li> <li>• <i>System:</i> The system associated with the location.</li> </ul> |

**Note**

You can use the [Fulfillment Zone Wizard](#) to review additional information about each location, such as rank, region, city, state/province, country, and postal code.

## Vendors

**Purpose:** Use the **Vendors** screen to work with vendors who fulfill drop ship orders.

**What is a vendor?** A vendor fulfills drop ship purchase orders processed through the Supplier Direct Fulfillment module.

**Default vendor system required:** Before you create any vendors, you need to use the [System](#) screen to create the [default vendor system](#) for your organization. The default vendor system needs to have the Vendor Default flag at the [System](#) screen selected. You do not need to set any other values for the default vendor system.

**Ways to create a vendor:** An integrated system such as Order Administration System can create a vendor by:

- sending the [CreateDSVendor](#) message to Order Orchestration. This message can include the vendor's address and contact information, including phone numbers and an email address.
- sending a [CreateDSOrder](#) message to Order Orchestration for a vendor who does not already exist in Order Orchestration. When you create a vendor this way, the Contact and Return Address information is blank.
- clicking *Create* at this screen; see [create a new vendor](#) below for more information.

**Preference and Carrier default settings:** When you create a vendor through the CreateDSVendor or CreateDSOrder messages:

- *Preferences:* All the vendor's settings at the *Preferences* tab are blank or zero, except that the Generate Format for the pack slip is set to *Both PDF and CSV*, and the PDF Form Type is *Graphical*.
- *Carrier assignments:* The vendor is automatically assigned to all active carriers.

You can use the [Edit Vendor](#) screen to change any of these defaults.

**Order Administration integration:** Vendors in Order Orchestration that correspond to Order Administration vendors must have codes identical to the Order Administration vendor codes. Order Administration uses numeric vendor codes and does not support non-numeric codes.

**Vendor anonymized?** If the vendor data has been [anonymized](#), asterisks are displayed for the name, telephone, and email address:

\*\*\* \*\*\*  
  
\*\*\*

Also, if the vendor data has been anonymized, searching by vendor name is not supported.  
A vendor is eligible to be anonymized only if there are no open purchase orders. When the vendor is anonymized, it is flagged as inactive.

See [Anonymizing Data](#) for background.

**How to display this screen:** Select *Vendors* from the [Home Screen](#) or from the [Locations Menu](#).

**Note**

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Vendors* authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                     | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>create a new vendor</b> | <p>Each of the fields at the top of the screen is required. Also, you need to create a <a href="#">default vendor system</a> for the organization before you can create any vendors.</p> <ol style="list-style-type: none"><li>1. Optionally, select a different <a href="#">organization</a> from the Organization drop-down box. See <a href="#">Data Hierarchy</a> for more information on how locations are assigned to organizations.</li></ol> <div><p><b>Note</b></p><p>You must complete the <a href="#">Preferences</a> screen for an organization before you can select it.</p></div> <ol style="list-style-type: none"><li>2. Enter a Vendor Code. The code must be unique within the selected organization, and can be 1 to 10 positions in length.</li><li>3. Enter a Vendor Name. The name can be 1 to 40 positions in length.</li><li>4. Click <i>New</i>. If:<ul style="list-style-type: none"><li>• a vendor with the same Vendor Code already exists for the organization, Order Orchestration displays an error message.</li><li>• you did not complete the required fields, Order Orchestration displays an error message.</li><li>• there is no <a href="#">default vendor system</a> for the organization, Order Orchestration displays an error message.</li><li>• your entries were accepted, you advance to the <a href="#">New Vendor</a> screen, where you can enter additional information about the vendor. However, if you click <i>Cancel</i> after advancing to the <a href="#">New Vendor</a> screen, the vendor is not created.</li></ul></li></ol> <p><b>Order Administration integration:</b> Vendors in Order Orchestration that correspond to Order Administration vendors must have codes identical to the Order Administration vendor codes.</p> |

| Option                                    | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| search for a vendor                       | <p>Your Default Organization, defined through the <a href="#">Users</a> screen, is selected by default, but no vendors are displayed. Click <i>Search</i> to retrieve the first 50 vendors for your organization, or use any combination of the fields at the top of the screen to restrict the search results to matching vendors:</p> <ol style="list-style-type: none"><li>1. Optionally, select a different <a href="#">organization</a> from the <i>Organization</i> drop-down box to restrict your results to that organization.</li></ol> <div><p><b>Note</b></p><p>You can select a blank organization to remove this field from your selection criteria.</p></div> <ol style="list-style-type: none"><li>2. Optionally, enter a full or partial vendor code in the Vendor Code field to restrict your results to vendors whose codes start with your entry.</li><li>3. Optionally, enter a full or partial vendor name in the Vendor Name field to restrict your results to vendors whose names contain your entry. If a vendor has been <a href="#">anonymized</a>, you cannot search for it by vendor name.</li><li>4. Optionally, select a setting in the <a href="#">Active</a> dropdown field to restrict your results to vendors whose statuses match your selection.</li><li>5. Click <i>Search</i>.</li></ol> <p><b>Case:</b> The vendor code and name are case-insensitive for searching; for example, an entry of n matches a vendor of Northern.</p> |
| activate or deactivate a vendor           | <p>The inactive icon () indicates that the vendor is not currently active and that <a href="#">vendor users</a> cannot currently log into the <a href="#">Vendor Portal</a>; otherwise, the active icon () indicates that the vendor is active, and vendors can log in. To switch between the settings, click the icon that is currently displayed. When a vendor is <a href="#">anonymized</a>, it is flagged as inactive.</p> <div><p><b>Note</b></p><p>Flagging a vendor as inactive does not prevent creating new purchase orders for the vendor.</p></div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| select a vendor for review or maintenance | <p>Click the edit icon () to advance to the <a href="#">Edit Vendor</a> screen, where you can review or work with additional information about the vendor, such as address, preferences, and assigned carriers.</p> <div><p><b>Note</b></p><p>If the <a href="#">Edit Vendor</a> screen is already open in another tab, you advance to that screen, where the previously-selected vendor is displayed.</p></div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Option          | Procedure                                                                                                                                                                                                                                                          |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| delete a vendor | Select the delete icon (  ) next to a vendor to delete the vendor from Order Orchestration. You can delete a vendor only if there are no existing purchase orders for the vendor. |

Fields at this screen

| Field                     | Description                                                                                                                                                                         |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search/new fields:</b> |                                                                                                                                                                                     |
| <b>Organization</b>       | See <a href="#">organization</a> . Required to create a new vendor. From the <i>Default Organization</i> defined through the <a href="#">Users</a> screen, but you can override it. |

 **Note**

You must complete the [Preferences](#) screen for an organization before you can select it.

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Vendor Code</b> | The code identifying the vendor. Required to create a new vendor. Can be 1 to 10 positions in length. Vendor codes in Order Administration are always numeric and a maximum of 7 positions.<br>Case-insensitive for searching; for example, an entry of n matches a vendor of Northern.                                                                                                                              |
| <b>Vendor Name</b> | Vendor names can be 1 to 40 positions in length, and do not need to be the same as the name or description of the vendor in the integrated system, such as Order Administration System. Required to create a new vendor. If a vendor has been <a href="#">anonymized</a> , you cannot search for it by vendor name.<br>Case-insensitive for searching; for example, an entry of n matches a vendor name of Northern. |
| <b>Active</b>      | Indicates whether the vendor is currently active and whether <a href="#">vendor users</a> can currently log into the <a href="#">Vendor Portal</a> . Optionally, select a setting in the Active dropdown field to restrict your results to vendors whose status match your selection.                                                                                                                                |

 **Note**

Flagging a vendor as inactive does not prevent creating new purchase orders for the vendor.

**Results fields:**

| <b>Edit</b>      | <p>Select the edit icon () to advance to the <a href="#">Edit Vendor</a> screen.</p> <div data-bbox="873 1083 1468 1304"> <p><b>Note</b></p> <p>If the <a href="#">Edit Vendor</a> screen is already open in another tab, you advance to that screen, where the previously-selected vendor is displayed.</p> </div>                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Delete</b>    | <p>Select the delete icon () next to a vendor to delete the vendor from Order Orchestration. This option is available only if there are no existing purchase orders for the vendor.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## New Vendor

**Purpose:** Use the **New Vendor** screen to complete creation of a new vendor, including:

- specifying the vendor's contact information and addresses and the vendor's return address
- setting up vendor preferences, including:
  - integration information, if this is an integrated vendor rather than one who uses the Vendor Portal screens
  - pack slip and pullsheets generation settings
  - invoicing options
  - email notification options

- editing the carriers that are eligible by default for shipments from this vendor

Used for the Supplier Direct Fulfillment module.

**Other ways to create a vendor:** See the [Vendors](#) screen for a discussion of ways to create a vendor.

**How to display this screen:** Begin creation of a new vendor at the [Vendors](#) screen.

#### Note

- If you click *Cancel* after advancing to the **New Vendor** screen, the new vendor is not created.
- Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Vendors* authority can display this screen. See [Roles](#) for more information.
- If the **New Vendor** screen was already open in another tab when you clicked the *New* button, you advance to this screen with the previous new vendor information displayed.

| <b>Preferences tab</b> | Each vendor preference category is available by clicking the folder in the left-hand tab.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

**Integration options** Use these fields to configure the integration between the vendor's system and Order Orchestration, so the vendor can receive new purchase orders and confirm shipments through JSON messages rather than using the Vendor Portal screens.

See the [Vendor Integration](#) for background, and the *Vendor Integration Guide* for more details.

**Enable Integration** If this flag is selected, the Vendor Portal includes the **Get Purchase Orders** screen rather than the **Select Purchase Orders** screen.

*Difference between the screens:* Use of the **Get Purchase Orders** screen to prompt an integrated vendor's system to request purchase orders is not currently implemented, while the **Select Purchase Orders** screen generates the purchase order documents as well changing the purchase order's status to In Process.

*Recommendation:* Even though the **Get Purchase Orders** screen is not currently implemented, Oracle recommends that the Vendor Portal include the **Get Purchase Orders** screen rather than the **Select Purchase Orders** screen for an integrated vendor, in order to prevent a vendor user from inadvertently changing a purchase order's status to In Process before the vendor's system requests it through a JSON message. This flag is display-only on the **Vendor Configuration** screen in the Vendor Portal.

| Field                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Require Acknowledgement</b> | <p>If this flag is selected, a purchase order's status doesn't change to <i>In Process</i> when the integration initially sends the purchase order to an integrated vendor system, and no pack slip or pullsheet is generated based on the settings at the <a href="#">Pack Slip options</a> folder; instead, the integrated system needs to send an acknowledgment to update the status of the purchase order or generate the pack slip and pullsheet, if specified for the vendor.</p> <p>This flag is display-only on the <b>Vendor Configuration</b> screen in the Vendor Portal.</p> |
| <b>Vendor Client Id</b>        | <p>Indicates the client ID for the integrated vendor to use when authenticating the getDSOrders, setDSAcknowledge, and setDSConfirm messages. Required for an integrated vendor to successfully submit these messages.</p> <p>Optionally, select a client ID to assign to the vendor. Only client IDs that have been assigned Vendor web service access and have not been assigned to another vendor are available for selection. See the <a href="#">Manage External Application Access</a> screen and the <a href="#">Edit Web Services</a> window for more information.</p>            |

**Note**

The screen does not display an error message if you select the Enable Integration flag but do not select a client ID for the vendor. Also, if you remove vendor web service access for the client through the [Edit Web Services](#) window, the client ID is removed from the vendor automatically.

| <b>Require Invoice # at Shipping</b> | <p>Controls whether entry of an invoice number is required at the <b>Purchase Order Shipping</b> screen in the Vendor Portal:</p> <ul style="list-style-type: none"> <li>selected = Entry of the Invoice # is required at the <b>Purchase Order Shipping</b> screen in the Vendor Portal. If this field is selected, you must also select the <b>Uses Invoices</b> field, so that the Invoice # field is available for entry at the <b>Purchase Order Shipping</b> screen.</li> </ul> <div style="border: 1px solid #ccc; padding: 10px; margin: 10px 0;"> <p><b>Note</b></p> <p>You cannot select this option unless the <b>Uses Invoices</b> preference, above, is selected.</p> </div> <ul style="list-style-type: none"> <li>unselected (default) = Entry of the Invoice # is not required at the <b>Purchase Order Shipping</b> screen in the Vendor Portal. If the <b>Allow Invoices</b> field is selected, then entry of an invoice is optional at the <b>Purchase Order Shipping</b> screen.</li> </ul> <p>If this setting is selected, then a <a href="#">vendor user</a> cannot confirm shipments at the <b>Purchase Order Shipping</b> screen without authority to create invoices. See <a href="#">Vendor User Profiles</a> for background on assigning authority to vendor users.</p> <p>This setting does not affect the <b>Integrated Shipping</b> screen or the <b>Purchase Order Shipping Upload</b> screen in the Vendor Portal; it applies to the <b>Purchase Order Shipping</b> screen only.</p>                                                                                                                                                                                                 |
| <b>Unit Cost Threshold</b>           | <p>The maximum percentage by which the unit cost on an invoice can exceed or fall below the original cost and still be approved automatically. If the vendor overrides the unit cost to an amount that exceeds or falls below the original cost by more than this percentage, the invoice goes into <i>Held</i> status for your review upon submission.</p> <p><i>Example:</i> The Unit Cost Threshold is set to 10%, and the original unit cost on a shipped purchase order line is \$10.00. If the vendor overrides the unit cost to:</p> <ul style="list-style-type: none"> <li>between \$11.00 and \$9.00, the invoice goes into <i>Approved</i> status when the vendor submits it, because the unit price is still within the 10% threshold.</li> <li>\$11.01 or higher, or to \$8.99 or lower, the invoice goes into <i>Held</i> status when the vendor submits it. Also, you receive the <a href="#">Out-of-balance invoice notification email to retailer</a> if the <i>Invoice Balance Notification</i> flag is selected and an email address is specified at the <i>Email</i> tab of the <a href="#">Drop Ship Preferences</a> screen.</li> </ul> <p>Order Orchestration evaluates each shipped line on the invoice individually, not the invoice as a whole. If any individual line breaches the threshold, Order Orchestration holds the invoice.</p> <p>The default setting is 10%. If you set this value to 0%, the invoice goes into <i>Held</i> status if the vendor changes the unit cost at all.</p> <p>Required.</p> <p><b>Note:</b> This threshold applies to unit cost only, and does not account for any additional charges, such as header or detail freight, handling, or other charges.</p> |

| Field                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Carriers tab</b>        | <p>Use this tab to indicate which carriers the vendor can use for shipping drop ship orders. Only carriers flagged as Active are available at this tab. All other fields at this tab are display-only; use the <i>Carriers</i> screen in Modern View to work with these settings for a carrier.</p> <p><b>Assigned by default:</b> When you create a new vendor, all active carriers are assigned to the vendor by default. Also, when you create a new active carrier, it is automatically assigned to all existing vendors by default.</p> <p><b>Automatic creation of carrier:</b> When you create a new carrier through the CreateDSOrder message, Order Orchestration creates a new carrier record, using a description of <i>Auto Created XYZ</i>, where XYZ is the <code>carrier_cd</code> passed in the message. The carrier is automatically assigned to all existing vendors as an active carrier, with the Tracking # Required, Weight Required, and Rate Required flags all unselected, indicating that the vendor does not need to supply this information when confirming a shipment for the carrier.</p> <p><b>For more information:</b> See the <i>Carriers</i> screen in Modern View for more information on setting up carriers.</p> |
| <b>Assigned</b>            | Indicates whether the vendor is authorized to use this carrier for shipment of drop ship orders. All carriers are selected by default when you create a new vendor. Click the Assigned checkbox to change the assignment status of the carrier for the vendor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Carrier Description</b> | The description of the carrier. A description such as Auto Created 99, where 99 is the carrier code, indicates that the carrier was created automatically through the CreateDSOrder message. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Tracking # Required</b> | Selected if the vendor must provide a tracking number for each shipment using this carrier; otherwise, the tracking number is optional. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Weight Required</b>     | Selected if the vendor must provide the shipping weight for each shipment using this carrier; otherwise, the shipping weight is optional. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Rate Required</b>       | Selected if the vendor must provide the shipping rate for each shipment using this carrier; otherwise, the shipping rate is optional. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Edit Vendor

**Purpose:** Use the **Edit Vendor** screen to review or update a vendor, including:

- specifying the vendor's contact information and addresses and the vendor's return address

- setting up vendor preferences, including:
  - integration information, if this is an integrated vendor rather than one who uses the Vendor Portal screens
  - pack slip and pullsheet generation settings
  - invoicing options
  - email notification options
  - data formats for screens and emails
- editing the carriers that are eligible by default for shipments from this vendor

Used for the Supplier Direct Fulfillment module.

**Vendor anonymized?** When a vendor has been [anonymized](#), asterisks are displayed for the vendor's name and all contact and return address data.

A vendor is eligible to be anonymized only if there are no open purchase orders for the vendor. When the vendor is anonymized, it is flagged as inactive.

See [Anonymizing Data](#) for background.

**How to display this screen:** Click the edit icon (  ) for an existing vendor at the [Vendors](#) screen.

- Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Vendors* authority can display this screen. See [Roles](#) for more information.
- If the **Edit Vendor** screen was already open in another tab when you clicked the edit icon, you advance to this screen with the previous vendor information displayed.

Optional.</li> <li>Postal Code (ZIP code): alphanumeric, 20 positions. Optional; but if entered, validated against the proximity_location or through the <a href="#">Oracle Maps Cloud Service</a> if the <a href="#">Use Proximity Locator</a> preference is selected.</li> </ul> |

| Field                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Preferences tab</b>                     | <p>Each vendor preference category is available by clicking the folder in the left-hand tab.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Integration and PO Schedule options</b> | <p>Use these fields to configure the integration between the vendor's system and Order Orchestration, so the vendor can receive new purchase orders and confirm shipments through JSON messages rather than using the Vendor Portal screens.</p> <p>See the <a href="#">Vendor Integration</a> for background, and the <i>Vendor Integration Guide</i> for more details.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Enable Integration</b>                  | <p>If this flag is selected, the Vendor Portal includes the <i>Get Purchase Orders</i> screen rather than the <i>Select Purchase Orders</i> screen.</p> <p><i>Difference between the screens:</i> Use of the <i>Get Purchase Orders</i> screen to prompt an integrated vendor's system to request purchase orders is not currently implemented, while the <i>Select Purchase Orders</i> screen generates the purchase order documents as well changing the purchase order's status to In Process.</p> <p><i>Recommendation:</i> Even though the <i>Get Purchase Orders</i> screen is not currently implemented, Oracle recommends that the Vendor Portal include the <i>Get Purchase Orders</i> screen rather than the <i>Select Purchase Orders</i> screen for an integrated vendor, in order to prevent a vendor user from inadvertently changing a purchase order's status to In Process before the vendor's system requests it through a JSON message.</p> <p>This flag is display-only on the <i>Vendor Configuration</i> screen in the Vendor Portal.</p> |
| <b>Require Acknowledgement</b>             | <p>If this flag is selected, a purchase order's status doesn't change to <i>In Process</i> when the integration initially sends the purchase order to an integrated vendor system, and no pack slip or pullsheet is generated based on the settings at the <i>Pack Slip options</i> folder; instead, the integrated system needs to send an acknowledgment to update the status of the purchase order or generate the pack slip and pullsheet, if specified for the vendor.</p> <p>This flag is display-only on the <b>Vendor Configuration</b> screen in the Vendor Portal.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Vendor Client Id</b>  | <p>Indicates the client ID for the integrated vendor to use when authenticating the getDSOrders, setDSAcknowledge, and setDSConfirm messages. Required for an integrated vendor to successfully submit these messages.</p> <p>Optionally, select a client ID to assign to the vendor. Only client IDs that have been assigned Vendor web service access and have not been assigned to another vendor are available for selection. See the <a href="#">Manage External Application Access</a> screen and the <a href="#">Edit Web Services</a> window for more information.</p> <p><b>Note:</b> The screen does not display an error message if you select the Enable Integration flag but do not select a client ID for the vendor. Also, if you remove vendor web service access for the client through the <a href="#">Edit Web Services</a> window, the client ID is removed from the vendor automatically.</p> <p>This ID is display-only on the <b>Vendor Configuration</b> screen in the Vendor Portal.</p> |
| <b>Pack Slip options</b> | <p>Use these options to control the documents generated when the vendor selects purchase orders for fulfillment.</p> <p><b>Additional setup:</b> Use the <i>Preferences</i> tab for the brand for additional settings related to the pack slip and pullsheet, including the brand logo, the form programs, and the pack slip message. See <i>New Brand</i> screen in Modern View for field descriptions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Generate Format</b>   | <p>Indicates the format in which to generate the pack slip for the vendor. Possible settings are:</p> <ul style="list-style-type: none"> <li>• <i>Both PDF and CSV</i> (default) = Generate both a PDF of the pack slip and a CSV file containing the information on the pack slip.</li> <li>• <i>CSV</i> = Generate a CSV file containing the information on the pack slip, but no PDF.</li> <li>• <i>PDF</i> = Generate a PDF of the pack slip, but no CSV file.</li> </ul> <div data-bbox="725 1220 839 1253" data-label="Section-Header"> <p><b>Note</b></p> </div> <div data-bbox="764 1270 1442 1358" data-label="Text"> <p>If the PDF Form Type is set to <i>None</i>, no PDFs or CSVs are generated for the pack slip, regardless of the setting of the Generate Format field.</p> </div>                                                                                                                                                                                                                 |
| <b>PDF Form Type</b>     | <p>Controls the format of the PDF of the pack slip:</p> <ul style="list-style-type: none"> <li>• <i>Graphical</i> (default) = The pack slip PDF includes graphical elements, including the logo specified for the brand.</li> </ul> <div data-bbox="725 1554 839 1585" data-label="Section-Header"> <p><b>Note</b></p> </div> <div data-bbox="764 1604 1430 1665" data-label="Text"> <p>See the <i>New Brand</i> or <i>Edit Brand</i> screens in Modern View for information on setting up the brand logo.</p> </div> <ul style="list-style-type: none"> <li>• <i>Non-Graphical</i> = The pack slip PDF does not include any graphical elements. You would use this setting if the vendor prints the pack slip PDF onto pre-printed forms.</li> <li>• <i>None</i> = No pack slip PDF is generated, regardless of the setting of the Generate Format field.</li> </ul>                                                                                                                                             |

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Print Batch PullSheet</b> | Controls whether to generate a batch pullsheet to aid in picking stock when the vendor generates pack slips. If this option is: <ul style="list-style-type: none"><li>selected = A graphical PDF pullsheet is generated when the vendor generates pack slips.</li><li>unselected (default) = No pullsheet is generated when the vendor generates pack slips.</li></ul>                                                                                                                                                                                                                                                                                                        |
| <b>Invoices options</b>      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Uses Invoicing</b>        | Controls general support for invoicing in the Vendor Portal: <ul style="list-style-type: none"><li>selected = The Invoice # field is available in the Vendor Portal at the <b>Purchase Order Shipping</b> screen, and the Vendor Portal landing page displays the number of purchase orders eligible for invoicing.</li><li>unselected (default) = The Invoice # field is not available in the Vendor Portal at the <b>Purchase Order Shipping</b> screen, and the Vendor Portal landing page does not display the number of purchase orders eligible for invoicing. Also, with this setting you cannot select the Require Invoice # at Shipping preference, below.</li></ul> |

**Note**

This setting does not control the ability to create invoices; this ability is controlled by the [vendor user](#)'s authority based on assigned roles. See [Vendor User Profiles](#) for background.

| Field                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Require Invoice # at Shipping</b> | <p>Controls whether entry of an invoice number is required at the <b>Purchase Order Shipping</b> screen in the Vendor Portal:</p> <ul style="list-style-type: none"><li>selected = Entry of the Invoice # is required at the <b>Purchase Order Shipping</b> screen in the Vendor Portal. If this field is selected, you must also select the Uses Invoices field, so that the Invoice # field is available for entry at the <b>Purchase Order Shipping</b> screen.</li></ul> <div data-bbox="727 487 839 520"><p><b>Note</b></p></div> <p>You cannot select this option unless the Uses Invoices preference, above, is selected.</p> <ul style="list-style-type: none"><li>unselected (default) = Entry of the Invoice # is not required at the <b>Purchase Order Shipping</b> screen in the Vendor Portal. If the Allow Invoices field is selected, then entry of an invoice is optional at the <b>Purchase Order Shipping</b> screen.</li></ul> |

**Note**

- If this setting is selected, then a [vendor user](#) cannot confirm shipments at the **Purchase Order Shipping** screen without authority to create invoices. See [Vendor User Profiles](#) for background on assigning authority to vendor users.
- This setting does not affect the **Integrated Shipping** screen or the **Purchase Order Shipping Upload** screen in the Vendor Portal; it applies to the **Purchase Order Shipping** screen only.

| Field                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Unit Cost Threshold</b>       | <p>The maximum percentage by which the unit cost on an invoice can exceed or fall below the original cost and still be approved automatically. If the vendor overrides the unit cost to an amount that exceeds or falls below the original cost by more than this percentage, the invoice goes into <i>Held</i> status for your review upon submission.</p> <p><i>Example:</i> The Unit Cost Threshold is set to 10%, and the original unit cost on a shipped purchase order line is \$10.00. If the vendor overrides the unit cost to:</p> <ul style="list-style-type: none"> <li>• between \$11.00 and \$9.00, the invoice goes into <i>Approved</i> status when the vendor submits it, because the unit price is still within the 10% threshold.</li> <li>• \$11.01 or higher, or to \$8.99 or lower, the invoice goes into <i>Held</i> status when the vendor submits it. Also, you receive the <a href="#">Out-of-balance invoice notification email to retailer</a> if the <i>Invoice Balance Notification</i> flag is selected and an email address is specified at the <i>Email</i> tab of the <a href="#">Drop Ship Preferences</a> screen.</li> </ul> <p>Order Orchestration evaluates each shipped line on the invoice individually, not the invoice as a whole. If any individual line breaches the threshold, Order Orchestration holds the invoice.</p> <p>The default setting is 10%. If you set this value to 0%, the invoice goes into <i>Held</i> status if the vendor changes the unit cost at all.</p> <p>Required.</p> <p><b>Note:</b> This threshold applies to unit cost only, and does not account for any additional charges, such as header or detail freight, handling, or other charges.</p> |
| <b>Emails options</b>            | <p>These fields control the email notifications automatically sent to the vendor.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                  | <div>  <b>Note</b> <p>With authority to the <i>Preferences</i> secured feature, the vendor administrator can also update these fields.</p> </div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>PO Notification</b>           | <p>Select this flag to send an email notification to the email address(es) indicated when you send new purchase orders to the vendor for fulfillment or when you submit an address change, cancellation request, or cost change. |-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Invoice Balance Notification</b> | <p>Select this flag to send an email notification to the email address(es) indicated when you approve or reject an invoice that includes any <a href="#">out-of-balance</a> lines. At least one email address is required if the flag is selected.</p> <p>See the <a href="#">Supplier Direct Fulfillment Module Email Notifications Summary</a> for more information.</p> <p>Separate each additional email address with a semicolon and no space.</p> |
| <b>Data Formats options</b>         | <p>These fields control:</p> <ul style="list-style-type: none"> <li>the language to use on pullsheets, and for emails to the vendor</li> <li>the date/time and numeric formats to use: <ul style="list-style-type: none"> <li>on vendor pullsheets</li> <li>for emails to the vendor</li> <li>on Vendor Portal screens for the vendor</li> </ul> </li> </ul>                                                                                            |

**Note**

- The language displayed on Vendor Portal screens is controlled by the locale code appended to the URL for the Vendor Portal.
- The vendor's locale is not appended to the Vendor Portal link embedded in the email. The same URL is embedded for all vendors.
- With authority to the *Preferences* secured feature, the vendor administrator can also update these fields.

| Field                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Carriers tab</b>        | <p>Use this tab to indicate which carriers the vendor can use for shipping drop ship orders. Only carriers flagged as Active are available at this tab. All other fields at this tab are display-only; use the <i>Carriers</i> screen in Modern View to work with these settings for a carrier.</p> <p><b>Assigned by default:</b> When you create a new vendor, all active carriers are assigned to the vendor by default. Also, when you create a new active carrier, it is automatically assigned to all existing vendors by default.</p> <p><b>Automatic creation of carrier:</b> When you create a new carrier through the CreateDSOrder message, Order Orchestration creates a new carrier record, using a description of <i>Auto Created XYZ</i>, where XYZ is the <code>carrier_cd</code> passed in the message. The carrier is automatically assigned to all existing vendors as an active carrier, with the Tracking # Required, Weight Required, and Rate Required flags all unselected, indicating that the vendor does not need to supply this information when confirming a shipment for the carrier.</p> <p><b>For more information:</b> See the <a href="#">Carriers</a> screen in Modern View for more information on setting up carriers.</p> |
| <b>Assigned</b>            | Indicates whether the vendor is authorized to use this carrier for shipment of drop ship orders. All carriers are selected for the vendor by default if they are flagged as Active at creation. If a carrier was created as inactive and afterward flagged as Active, it is then selected for the vendor. Click the Assigned checkbox to change the assignment status of the carrier for the vendor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Carrier Code</b>        | The code identifying the carrier. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Carrier Description</b> | The description of the carrier. A description such as Auto Created 99, where 99 is the carrier code, indicates that the carrier was created automatically through the CreateDSOrder message. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Tracking # Required</b> | Selected if the vendor must provide a tracking number for each shipment using this carrier; otherwise, the tracking number is optional. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Weight Required</b>     | Selected if the vendor must provide the shipping weight for each shipment using this carrier; otherwise, the shipping weight is optional. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Rate Required</b>       | Selected if the vendor must provide the shipping rate for each shipment using this carrier; otherwise, the shipping rate is optional. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

  - [Vendor Aging Summary Report](#)

## Run Reports

**Purpose:** Use the **Run Reports** screen to run reports interactively.

**Scheduling reports:** You can use the [Schedule Report](#) window to schedule reports to run on particular days and times.

Viewing generated reports

When you use this screen to run a report:

- *PDF version:* If you generate a PDF version of the report, it opens in a separate tab within Order Orchestration, using a PDF viewer. You can then use your browser's standard options to print or save a copy of the generated report. You can also review the report later through the [View Reports](#) screen.
- *Spreadsheet version:* If you generate an XLSX version of the report, it is available for download (using your browser's default file download process) so you can work with it in a spreadsheet application; however, a new tab opens in Order Orchestration indicating that the report will open in a spreadsheet application. It is not necessary to keep this tab open. You can also review the report later through the [View Reports](#) screen.

**Note**

If you have difficulty opening the XLSX file version of the report from the browser, save the report file and then open it with your spreadsheet application.

**Email?** Optionally, you can send a generated report in either PDF or Excel format to one or more email addresses.

Each generated report is also available for review at the [View Reports](#) screen.

**Note**

The ability of a [retailer user](#) to generate specific reports is not controlled by role. For example, if a retailer user has authority to generate reports, but does not have authority to drop ship options, the user can still generate drop ship reports.

**How to display this screen:** Select *Run Reports* from the [Home Screen](#) or from the [Reports Menu](#).

**Note**

Only users with *Run Reports* authority can display this screen. See [Roles](#) for more information.

| <b>Report Options</b>                       | Not all options are provided for all Drop Ship and Operations reports. The field listings below indicate which reports use each option. Required fields are indicated with a red asterisk (*).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Fields                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization</b>     | <p>The <a href="#">organization</a> to include on the report. Your Default Organization defined through the <a href="#">Users</a> screen defaults, but you can override it. Required for all Operations reports.</p> <p><b>Used for:</b> All reports. Required for all.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Order Type</b>       | <p>Optionally, select the <a href="#">order type</a> to include on the Order Status Report or the Status Restricted Report, or leave this field blank to include all order types on the report.</p> <p><b>Note:</b> The order types available for selection vary, depending on whether the selected organization supports ship-for-pickup orders. See <a href="#">Enable Ship-For-Pickup?</a> for background.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a> and the <a href="#">Status Restricted Report</a>.</p>                                                                                                                                                                                                                                                                          |
| <b>Order Status</b>     | <p>Optionally, select the <a href="#">order status</a> to include orders in this status at the order level or line level on the Order Status Report or the Status Restricted Report, or leave this field blank to include all statuses on the report. If you use <a href="#">splitting orders</a>, the report includes orders that match this status at either the order level or the line level.</p> <p><i>Example:</i> An order includes a line in new order status, and another line in unfulfillable status. The order-level status is open. The order is included on the report if you select any of these statuses (new order, unfulfillable, or open) as a selection criterion.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a> and the <a href="#">Status Restricted Report</a>.</p> |
| <b>Placed Location</b>  | <p>Optionally, select the <a href="#">placed location</a> to include on the Order Status Report or the Unfulfillable report, or leave this field blank to include all placed locations on the report. Only locations associated with the selected <a href="#">organization</a> are available for selection. Applies to any order type.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a> and the <a href="#">Unfulfillable Report</a>.</p>                                                                                                                                                                                                                                                                                                                                                     |
| <b>Sourced Location</b> | <p>Optionally, select the <a href="#">sourcing location</a> to include on the Order Status Report or the Unfulfillable report, or leave this field blank to include all sourced locations on the report. Only locations associated with the selected <a href="#">organization</a> are available for selection.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a> and the <a href="#">Unfulfillable Report</a>.</p>                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Pickup Location</b>  | <p>Optionally, select the <a href="#">pickup location</a> to include on the Order Status Report, Unfulfillable report, or Auto Cancel Report, or leave this field blank to include all pickup locations on the report. Only locations associated with the selected <a href="#">organization</a> are available for selection. Applies to pickup or ship-for-pickup orders.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a>, the <a href="#">Unfulfillable Report</a>, and the <a href="#">Auto Cancel Report</a>.</p>                                                                                                                                                                                                                                                                         |
| <b>Location</b>         | <p>Optionally, select the <a href="#">location</a> (primary or alternate) to include on the Zone List Report or the Status Restricted Report, or leave this field blank to include all locations on the report. Only locations associated with the selected <a href="#">organization</a> are available for selection.</p> <p><b>Used for:</b> The <a href="#">Zone List Report</a>. Also used for the <a href="#">Status Restricted Report</a> to restrict the report to Order Status Update requests submitted by a particular location.</p>                                                                                                                                                                                                                                                                |

| Fields                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Region</b>         | <p>Optionally, select the region to include on the Order Status Report or the Auto Cancel Report, or leave this field blank to include all regions, and locations without an assigned region, on the report.</p> <p><b>About regions:</b> The region is a user-defined field specified for a <a href="#">location</a>. Prompt on this field to select from a list of all regions currently assigned to locations in the selected <a href="#">organization</a>.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a> and the <a href="#">Auto Cancel Report</a>.</p> <div data-bbox="873 535 990 569" data-label="Section-Header"> <p><b>Note</b></p> </div> <div data-bbox="912 588 1438 760" data-label="Text"> <p>You cannot generate a report based on any location fields and the region. If you select any of the location fields, the Region field becomes unselectable. Similarly, if you select a Region, the location fields become unselectable.</p> </div> |
| <b>Ship Via</b>       | <p>Optionally, enter the ship via to include on the Order Status Report, or leave this field blank to include all orders on the report regardless of the assigned ship via.</p> <p><b>About ship vias:</b> The ship via code is a user-defined field passed in the ship_via element in the <a href="#">submit order message</a>. It is displayed on the Header tab of the <a href="#">Order</a> screen. This ship via does not necessarily match the Shipping Agent, listed at the History tab of the Order screen, which is typically the ship via that actually shipped the order.</p> <p>Must exactly match the ship via on the order header. For example, an entry of <i>FedEx</i> matches a ship via of <i>FedEx</i>; however, <i>Fed</i> is not a match.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a>.</p>                                                                                                                                              |
| <b>Vendor</b>         | <p>Optionally, select a vendor to restrict the report to purchase orders or invoices for that vendor, or leave this field blank to include all purchase orders or invoices on the report regardless of the vendor.</p> <p>Vendors that have been <a href="#">anonymized</a> are listed as asterisks.</p> <p><b>Used for:</b> All Drop Ship reports.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Invoice Status</b> | <p>Optionally, select an <a href="#">invoice status</a> to restrict the report to invoices that are currently in that status, or leave this field blank to include all invoices on the report regardless of status.</p> <p><b>Used for:</b> The <a href="#">Invoice Detail Report</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Rolling Dates</b> | <p><b>About rolling dates:</b> When you select a rolling date option, Order Orchestration calculates the dates to include, so that you do not need to enter a <i>From</i> and <i>To</i> date; instead, the screen fills these dates in for you based on your selection. You can also use these dates when you schedule reports to produce the desired date range when Order Orchestration generates the reports on different dates. Required for the Import Error reports, the Order Status report, and Unfulfillable Reports and the Drop Ship reports if you do not enter a <i>From</i> and <i>To</i> date. See <a href="#">Rolling date options</a> for details.</p> <p><b>Used for:</b> The <a href="#">Auto Cancel Report</a>, <a href="#">Product Barcode Import Errors Report</a>, <a href="#">Product Import Errors Report</a>, <a href="#">Location Import Errors Report</a>, <a href="#">Order Status Report</a>, <a href="#">Status Restricted Report</a>, <a href="#">Unfulfillable Report</a>, <a href="#">PO Item Status Report</a>, <a href="#">Vendor Aging Detail Report</a>, <a href="#">Vendor Aging Summary Report</a>, and <a href="#">Invoice Detail Report</a>.</p> <p><b>Note:</b> Import errors that occurred on earlier dates are available to include on the <a href="#">Location Import Errors Report</a>, <a href="#">Product Import Errors Report</a>, and <a href="#">Product Barcode Import Errors Report</a> only if they have not been cleared based on the Days to keep errors setting for the <a href="#">Product Import</a> at the <a href="#">Schedule Jobs</a> screen. See that screen for more information.</p> |
| <b>From</b>          | <p>Specify the first order, activity, or due date to include in the report. Required if you do not select a <a href="#">Rolling Dates</a> option. The From date cannot be earlier than the To date.</p> <p><b>Used for:</b> The <a href="#">Auto Cancel Report</a>, <a href="#">Product Barcode Import Errors Report</a>, <a href="#">Product Import Errors Report</a>, <a href="#">Location Import Errors Report</a>, <a href="#">Order Status Report</a>, <a href="#">Status Restricted Report</a>, <a href="#">Unfulfillable Report</a>, <a href="#">PO Item Status Report</a>, <a href="#">Vendor Aging Detail Report</a>, <a href="#">Vendor Aging Summary Report</a>, and <a href="#">Invoice Detail Report</a>.</p> <p><b>Note:</b> Import errors that occurred on earlier dates are available to include on the <a href="#">Product Barcode Import Errors Report</a>, <a href="#">Location Import Errors Report</a>, and <a href="#">Product Import Errors Report</a> only if they have not been cleared based on the Days to keep errors setting for the <a href="#">Product Import</a> at the <a href="#">Schedule Jobs</a> screen. | <b>Export to PDF</b> | <p>Leave this flag selected to generate a PDF version of the report for review in a PDF viewer. The report opens in a separate tab within Order Orchestration and is available for review through the <a href="#">View Reports</a> screen; also, the report is attached to the email for all email addresses specified in the <i>Email List</i>. Required if you do not select Export to Excel. You can export to PDF, export to CSV for a spreadsheet application, or both.</p> <p><b>Used for:</b> All reports.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Fields                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Export to Excel</b> | <p>Select this flag to generate an .XLSX version of the report that you can open in a spreadsheet application. The file is available for download when you generate the report, and is attached to the email for all email addresses specified in the <i>Email List</i>; also, a new tab opens indicating that the report is available in CSV for a spreadsheet application. Required if you do not select Export to PDF. You can export to PDF, export to CSV for a spreadsheet application, or both.</p> <p><b>Note:</b> If you have difficulty opening the XLSX version of the report from the browser, save the report and then open in with your spreadsheet application.</p> <p><b>Used for:</b> All reports.</p> |
| <b>Email List</b>      | <p>Optionally, enter one or more email addresses to receive the generated report as an email attachment. Must be in the format of name@host.ext. If you select both the Export to PDF and Export to Excel flags, each email address receives two separate emails, each with one of the selected export formats attached. See the <a href="#">Generated report email</a> for an example and more information.</p> <p>Separate each email address with a semicolon (;). Your entries can be up to 255 positions in total.</p>                                                                                                                                                                                             |

### Rolling date options

You can use rolling date options to select the date range to include in the [Order Status Report](#) and [Unfulfillable Report](#) and the Drop Ship reports. You can select rolling date options at the *Run Reports* screen when you run reports interactively, and at the [Schedule Report](#) window for scheduled reports.

**How dates control the orders to include on Drop Ship and Operations reports:** Selection is based on the date range as follows:

- [Product Barcode Import Errors Report](#), [Product Import Errors Report](#), and [Location Import Errors Report](#): the date when the import error occurred

#### Note

Import errors that occurred on earlier dates are available to include on the [Product Barcode Import Errors Report](#), [Product Import Errors Report](#), and [Location Import Errors Report](#) only if they have not been cleared based on the Days to keep errors setting for the [Product Import](#) at the [Schedule Jobs](#) screen. See that screen for more information.

- [Auto Cancel Report](#): the most recent date when a line on the order was automatically canceled.
- [Order Status Report](#): the date when the order was created.
- [Status Restricted Report](#): the date when the request to change the order status was received, and the transaction history record was created.
- [Unfulfillable Report](#): the date when the order or line became unfulfillable.
- [Invoice Detail Report](#): The invoice date specified by the vendor. This may not be the same as the date when the vendor created the invoice.

- [PO Item Status Report](#): the po\_entered\_date specified in the [CreateDSOrder](#) message. This may not be the same as the date when the purchase order was sent to Order Orchestration.
- [Vendor Aging Detail Report](#): the current due date for the purchase order line. If the vendor has revised the due date, the revised date is used. The date may be in the future.
- [Vendor Aging Summary Report](#): the current due date for the purchase order line. If the vendor has revised the due date, the revised date is used. The date may be in the future.

| Option                                                                                                                                                                                                                            | Report includes orders or activities that occurred during:                                  | Example                                                                   |

| This Month                                                                                                                                                                                                                        | the current calendar month, including today.                                                | Today = 9/17<br>Report includes 9/1 through 9/17                          |
| This Year                                                                                                                                                                                                                         | the current calendar year, including today.                                                 | Today = 9/17<br>Report includes 1/1 through 9/17                          |
| <b>Future date ranges:</b> The following future date ranges would typically be used for the <a href="#">Vendor Aging Detail Report</a> or the <a href="#">Vendor Aging Summary Report</a> , which are selected based on due date. |                                                                                             |                                                                           |
| Next 7 Days                                                                                                                                                                                                                       | the next 7 days, including the current date                                                 | Today = 11/17<br>Report includes 11/17 through 11/24                      |

| Option       | Report includes orders or activities that occurred during: | Example                                              |
|--------------|------------------------------------------------------------|------------------------------------------------------|
| Next 30 Days | the next 30 days, including the current date               | Today = 11/17<br>Report includes 11/17 through 12/17 |
| Next 60 Days | the next 60 days, including the current date               | Today - 11/17<br>Report includes 11/17 through 1/16  |
| Next 90 Days | the next 90 days, including the current date               | Today = 11/17<br>Report includes 11/17 through 2/15  |

### Generated report email

**Overview:** Order Orchestration sends an email such as the following to each email address specified in the *Email List* when you generate the report dynamically through the *Run Reports* screen, and when the report runs automatically because you scheduled it with the [Schedule Report](#) window.

When you select both the Export to PDF and the Export to Excel options, each recipient in the *Email List* receives two emails: one containing the PDF file, and one containing the XLSX file.

### The components of the email are:

|                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

The file name is <code>ob_unfulfillable_report.ssmith.20171006.12345612.xlsx</code> where:</p> <ul style="list-style-type: none"> <li>• <code>ob_unfulfillable_report</code> is the name of the BI Publisher template file name</li> <li>• <code>ssmith</code> is the user ID of the person who generated the report, either dynamically at the <i>Run Reports</i> screen or who scheduled the report through the <a href="#">Schedule Report</a> window</li> <li>• <code>20171006</code> is the date generated in YYYYMMDD format</li> <li>• <code>12345612</code> is the time generated in HHMMSSSS format (24-hour time)</li> <li>• <code>.xlsx</code> is the report format</li> <li>• If your email server blocks the PDF or XLSX files as suspicious attachments, the files could be renamed as <code>Untitled.dat</code>. You can save the file and assign it the correct extension (PDF or XLSX), or you can request that your system administrator add the Order Orchestration server to an allow list so that the attachments are no longer blocked.</li> <li>• If the report name before the file extension of pdf or xlsx exceeds 60 positions, it is truncated.</li> </ul> |

# Schedule Reports

**Purpose:** Use the **Schedule Reports** screen to work with schedules you set up to have Order Orchestration automatically generate reports.

*Example:* You can schedule the [Unfulfillable Report](#) to run daily for individual locations, and also schedule the report to run weekly and include all locations. You can designate different email addresses to receive each version of the report.

**Resolving a scheduling issue:** If a report does not run as scheduled, you can use the *Reschedule All* option at the [View Active Schedules](#) screen to stop and restart the schedules for all jobs and periodic programs, such as report generation.

Note that the *Reschedule All* option does not restart jobs that are in Paused status (⊘). Jobs stay in Paused status only briefly before Order Orchestration restarts them automatically.

**How to display this screen:** Select *Schedule Reports* from the [Home Screen](#) or from the [Reports Menu](#).

 **Note**

Only users with *Schedule Reports* authority can display this screen. See [Roles](#) for more information.

**Options at the screen**

| Option                       | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Schedule Name     | <p>Describes the schedule you create so that Order Orchestration can generate the report on a periodic basis, using the settings from the <a href="#">Schedule Report</a> window. The schedule name can be up to 50 positions and can include special characters and spaces.</p> <p>You can create multiple schedules for a single report, with each schedule using different settings and running on different days of the week or at different times. For example, you can set up the <a href="#">Order Status Report</a> to run on Monday morning at 7:00 and include all statuses and locations, and also set up the report to run every afternoon at 5:00 p.m. (17:00) for a specific location or status, and each schedule can have a different email distribution list.</p> <p>Case-insensitive for searching; for example, an entry of n matches a report schedule of New Orders.</p> |

| Schedule Days  | <p>The day(s) of the week for Order Orchestration to generate the report using the settings from the <a href="#">Schedule Report</a> window:</p> <ul style="list-style-type: none"><li>• Su = Sunday</li><li>• M = Monday</li><li>• Tu = Tuesday</li><li>• W = Wednesday</li><li>• Th = Thursday</li><li>• F = Friday</li><li>• Sa = Saturday</li></ul> |
| Schedule Times | <p>The time on the selected days when Order Orchestration should generate the report using the settings from the <a href="#">Schedule Report</a> window. Format is based on the settings from the <a href="#">Users</a> screen. If there is more than one time specified, the word <i>Multiple</i> is displayed.</p>                                    |
| Edit           | <p>Click the edit icon (  ) next to a report schedule to open the <a href="#">Schedule Report</a> window, where you can review or change the report schedule.</p>                                                                                                      |
| Delete         | <p>Click the delete icon (  ) next to a report schedule to delete the schedule.</p>                                                                                                                                                                                    |

## Schedule Report

**Purpose:** Use the **Schedule Report** window to create or change a schedule for a Drop Ship or Operations (Routing Engine) report.

**Fields can vary:** The fields available at this screen vary depending on the report, and are described in the field descriptions below.

**Creating multiple schedules for a report:** You can create multiple schedules for a single report. For example, you might want to generate reports of open orders assigned to different fulfilling locations, and send the reports by email to different staff members.

**Time zone:** The dates and times are based on the [retailer's time](#), which may be different from your local time zone.

**How to display:**

- Create a new schedule at the [Schedule Reports](#) screen, or
- Select the edit icon (  ) for an existing schedule at the [Schedule Reports](#) screen

 **Note**

You can also review a summary of the report schedule by moving the cursor over the active (  ) or inactive (  ) icon at the [Schedule Reports](#) screen.

**Creating or editing a schedule:** Enter or change the information at this window and click Save. See the field descriptions below for more information.

**Fields at this window**

| Fields                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Report Name</b>     | <p><i>Drop Ship report:</i></p> <ul style="list-style-type: none"> <li>• <a href="#">Invoice Detail Report</a></li> <li>• <a href="#">PO Item Status Report</a></li> <li>• <a href="#">Vendor Aging Detail Report</a></li> <li>• <a href="#">Vendor Aging Summary Report</a></li> </ul> <p><i>Operations (Routing Engine) report:</i></p> <ul style="list-style-type: none"> <li>• <a href="#">Auto Cancel Report</a></li> <li>• <a href="#">Location Import Errors Report</a></li> <li>• <a href="#">Order Status Report</a></li> <li>• <a href="#">Product Barcode Import Errors Report</a></li> <li>• <a href="#">Product Import Errors Report</a></li> <li>• <a href="#">Status Restricted Report</a></li> <li>• <a href="#">Unfulfillable Report</a></li> <li>• <a href="#">Zone List Report</a></li> </ul> |
| <b>Schedule Name</b>   | <p>Enter a name to describe the schedule you have created so that Order Orchestration can generate the report on a periodic basis, using the settings from the <i>Schedule Report</i> window. The schedule name can be up to 50 positions and can include special characters and spaces. Required.</p> <p>You can create multiple schedules for a single report, with each schedule using different settings and running on different days of the week or at different times, and sent to different email distribution lists.</p>                                                                                                                                                                                                                                                                                |
| <b>Report Options</b>  | <p>Not all options are available for all reports. The field listings below indicate which reports use each option. Required fields are indicated with a red asterisk (*).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Organization</b>    | <p>The <a href="#">organization</a> to include on the report. The <i>Default Organization</i> defined through the <a href="#">Users</a> screen, but you can override this default. Required for all Operations reports.</p> <p><b>Used for:</b> All reports. Required for all.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Order Type</b>      | <p>Optionally, select the <a href="#">order type</a> to include on the Order Status Report, or leave this field blank to include all order types on the report.</p> <p><b>Note:</b> The order types available for selection vary, depending on whether the selected organization supports ship-for-pickup orders. See <a href="#">Enable Ship-For-Pickup?</a> for background.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a>, the <a href="#">Auto Cancel Report</a>, and the <a href="#">Status Restricted Report</a>.</p>                                                                                                                                                                                                                                                                     |
| <b>Order Status</b>    | <p>Optionally, select the <a href="#">order status</a> to include orders with this status on the order level or line level on the Order Status Report, or leave this field blank to include all statuses on the report. If you use <a href="#">splitting orders</a>, the report also includes orders that have lines in this status.</p> <p><i>Example:</i> An order includes a line in new order status, and another line in unfulfillable status. The order-level status is open. The order is included on the report if you select any of these statuses (new order, unfulfillable, or open) as a selection criterion.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a> and the <a href="#">Status Restricted Report</a>.</p>                                                                  |
| <b>Placed Location</b> | <p>Optionally, select the <a href="#">placed location</a> to include on the Order Status Report or the Unfulfillable report, or leave this field blank to include all placed (originating) locations on the report. Only locations associated with the selected <i>Organization</i> are available for selection. Applies to any order type.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a> and the <a href="#">Unfulfillable Report</a>.</p>                                                                                                                                                                                                                                                                                                                                                    |

| Fields                                                                                                                                                                                                                                                                                                                                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sourced Location</b>                                                                                                                                                                                                                                                                                                                                | <p>Optionally, select the <a href="#">sourcing location</a> to include on the Order Status Report or the Unfulfillable report, or leave this field blank to include all sourced locations on the report. Only locations associated with the selected <a href="#">organization</a> are available for selection.</p> <p><b>Used for:</b> The <a href="#">Order Status Report</a> and the <a href="#">Unfulfillable Report</a>.</p>                                                                                                                     |
| <b>Pickup Location</b>                                                                                                                                                                                                                                                                                                                                 | <p>Optionally, select the <a href="#">pickup location</a> to include on the Order Status Report or the Unfulfillable report, or leave this field blank to include all pickup locations on the report. | <b>Rolling Dates</b>     | <p><b>About rolling dates:</b> When you select a rolling date option, Order Orchestration calculates the dates to include. See <a href="#">Rolling date options</a> for details.</p> <p><b>Used for:</b> The <a href="#">Auto Cancel Report</a>, <a href="#">Product Barcode Import Errors Report</a>, <a href="#">Product Import Errors Report</a>, <a href="#">Location Import Errors Report</a>, <a href="#">Order Status Report</a>, <a href="#">Status Restricted Report</a>, <a href="#">Unfulfillable Report</a>, <a href="#">PO Item Status Report</a>, <a href="#">Vendor Aging Detail Report</a>, <a href="#">Vendor Aging Summary Report</a>, and <a href="#">Invoice Detail Report</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Export to PDF</b>     | <p>Leave this flag selected to generate a PDF version of the report in a PDF viewer. Required if you do not select Export to Excel. You can export to PDF, export to CSV for a spreadsheet application, or export to both.</p> <p><b>Used for:</b> All reports.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Export to Excel</b>   | <p>Select this flag to generate an .XLSX version of the report that you can open in a spreadsheet application. Required if you do not select Export to PDF. You can export to PDF, export CSV for a spreadsheet application, or both.</p> <p><b>Used for:</b> All reports.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Email List</b>        | <p>Optionally, enter one or more email addresses to receive the generated report as an email attachment. Must be in the format of name@host.ext. If you select both the Export to PDF and Export to Excel flags, each email address receives two separate emails, each with one of the selected export formats attached. See the <a href="#">Generated report email</a> for an example and more information.</p> <p>Separate each email address with a semicolon (;). Your entries can be up to 255 positions in total.</p> <ul style="list-style-type: none"> <li>The summary window available at the <a href="#">Schedule Reports</a> screen displays the word <i>Multiple</i> if there is more than one email address listed for a report schedule.</li> <li>If your email server blocks the PDF or XLSX files as suspicious attachments, the files could be renamed as Untitled.dat. You can save the file and assign it the correct extension (PDF or XLSX), or you can request that your system administrator add the Order Orchestration server to an allow list so that the attachments are no longer blocked.</li> </ul> |
| <b>Schedule Interval</b> | <p>Use these fields to specify whether to run a report automatically using the selected settings, and the day(s) and time(s) when the report should run. For an existing schedule, the last time you updated the schedule and the last time the report was run are displayed at the bottom of the window.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Activate Schedule</b> | <p>Select this field to activate the schedule so that Order Orchestration will generate the report at the selected day(s) and time(s), or leave this field unselected if you do not want to have Order Orchestration generate the report according to this schedule. You can also activate a schedule by clicking the inactive icon () at the <a href="#">Schedule Reports</a> screen, or deactivate a schedule by clicking the active icon () at the <a href="#">Schedule Reports</a> screen.</p> <p><b>Locale:</b> The current locale used to control the language displayed on screens and in reports is indicated to the right of this field. The default locale is <i>en</i> (English). Contact your Oracle representative for information on changing the locale.</p>                                                                                                                                                                               |

| Fields                                                                                                                                                                                                                                                | Description                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Day of Week                                                                                                                                                                                                                                           | Select each day of the week when Order Orchestration should automatically generate the report using the selected settings. At least one day is required when you set up a schedule, although you do not need to activate the schedule.                                                                                                                                                                              |
| <div><div> <b>Note</b></div><div>The dates and times are based on the <a href="#">retailer's time</a>, which may be different from your local time zone.</div></div> |                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Time                                                                                                                                                                                                                                                  | Enter one or more times, in HH:MM (24-hour) format when the report should run on each of the selected days of the week. The hour and minute entries should be zero-filled so they are each 2 positions: for example, 08:01 rather than 8:01. Separate multiple times with a comma but no space: for example, 08:00, 12:00, 18:00. At least one time is required, although you do not need to activate the schedule. |
| Last Updated                                                                                                                                                                                                                                          | The most recent date and time when the report schedule was updated, or the date the schedule was created if it has never been updated. Format is based on the settings from the <a href="#">Users</a> screen. The user ID of the person who created the schedule is to the right.                                                                                                                                   |
| Last Run                                                                                                                                                                                                                                              | The most recent date and time when Order Orchestration generated the report using the selected settings. Format is based on the settings from the <a href="#">Users</a> screen.                                                                                                                                                                                                                                     |

## View Reports

**Purpose:** Use the **View Reports** screen to review reports generated previously, whether they were run dynamically at the [Run Reports](#) screen or automatically on a scheduled basis through the [Schedule Report](#) window.

**Reports available regardless of whether emailed:** Regardless of whether you select the [Email List](#) option at the [Run Reports](#) screen or the [Schedule Report](#) window, the reports are still available at this screen.

**How long are reports retained?** The File Storage setting in the *Retention Settings* section of the [Tenant](#) screen defines how long to retain generated report files until they are eligible to be deleted automatically by the [daily cleanup job](#).

**How to display this screen:** Select *View Reports* from the [Home Screen](#) or from the [Reports Menu](#).

### Note

Only users with *View Reports* authority can display this screen. See [Roles](#) for more information.

### Options at this screen

| Option                                      | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>search for a report</b>                  | <p>Use the search fields to search for reports across the <i>Drop Ship</i> and <i>Operations</i> (Routing Engine) folders. Optionally:</p> <ul style="list-style-type: none"> <li>Enter a full or partial <a href="#">Report Name</a> to display reports that begin with your entry or match it exactly.</li> <li>Select a <a href="#">Report Date</a> to display reports that you generated on that date, either on demand at the <a href="#">Run Reports</a> screen or by scheduling the report through the <a href="#">Schedule Report</a> window.</li> <li>The <a href="#">Submitted By</a> field defaults to your user ID. Clear this field to display reports generated by all users, or enter a different user ID to display reports generated by the specified user.</li> </ul> <p>Click <i>Search</i>.</p> <p><b>Case:</b> The Report Name is case-insensitive for searching; for example, an entry of <i>order</i> matches a report name starting with <i>Order</i>. However, the Submitted By field is case-sensitive for searching; for example, an entry of <i>JSMITH</i> does not match a user ID of <i>jsmith</i>.</p> <p>You can also:</p> <ul style="list-style-type: none"> <li>Click the minus sign next to the <i>Drop Ship</i> or <i>Operations</i> (Routing Engine) folder to collapse a folder. These folders are open by default, displaying all generated reports for the user ID in the <a href="#">Submitted By</a> field.</li> <li>Sort the displayed reports by clicking the column heading. For example, click the <a href="#">Report Name</a> column heading to display reports in alphabetical order by name.</li> </ul> |
| <b>view a PDF version of a report</b>       | <p>Click the PDF icon (  ) to open the generated report in your browser using a PDF viewer. You can then use your browser's standard options to print or save a copy of the generated report. A PDF version is available only if you selected the Export to PDF option at the <a href="#">Run Reports</a> screen or the <a href="#">Schedule Report</a> window.</p> <p><b>Default program?</b> The report opens in a PDF viewer only if it is the default program associated with the PDF file extension.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>download an XLSX version of a report</b> | <p>Click the spreadsheet icon (  ) to download the XLSX file for review in a spreadsheet application. A spreadsheet version is available only if you selected the Export to Excel option at the <a href="#">Run Reports</a> screen or the <a href="#">Schedule Report</a> window.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

#### Note

If you have difficulty opening the XLSX file of the report from the browser, save the report file and then open it with your spreadsheet application.

| Option                           | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <div>  <b>Note</b> <p>If you have difficulty opening the XLSX version of the report from the browser, save the report and then open it in your spreadsheet application.</p> </div> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Delete                                                                                                                                                                                                                                                              | <p>Click the delete icon (  ) to delete the generated report.</p> <p><b>How long are reports retained?</b> The File Storage setting in the <i>Retention Settings</i> section of the <a href="#">Tenant</a> screen defines how long to retain generated report files until they are eligible to be deleted automatically by the daily cleanup process.</p>                                                                                                                                                   |

## Auto Cancel Report

**Purpose:** Use the **Auto Cancel Report** to generate a list of Order Orchestration orders that include any lines that have been automatically canceled. The information on the report includes the customer's name, email address, and phone numbers, as well as the type of order.

**Order types on the report:** This report lists pickup orders or ship-for-pickup orders that include lines that were automatically canceled.

**Automatically canceled lines only:** Order lines that were canceled by an integrated system, through order inquiry, or in Store Connect do not cause the order to be listed on this report. There is an auto-canceled flag that indicates that the line was canceled through the [Schedule Jobs](#) scheduled job; only order lines that have this flag selected cause an order to be listed on the report.

**Does not include future cancellations:** Order lines that are eligible for auto-cancellation do not cause the order to be listed on the report. Only order lines that have already been canceled cause the order to be listed.

**If multiple auto-canceled lines:** If an order includes more than one line that was automatically canceled during the date range and other criteria selected for the report, it is listed just once on the report, with the most recent cancellation date indicated.

**For more information:** See [Auto-Cancel Unclaimed Orders](#) for background.

Used for the Routing Engine module.

**How to generate this report:** At the [Run Reports](#) screen:

- Click the plus sign next to the *Operations* folder in the left-hand navigation pane.
- Highlight the *Auto Cancel Report*. The center of the screen displays the related *Report Options*.
- Select:
  - Organization: The [organization](#) to include on the report. Your Default Organization defined through the [Users](#) defaults, but you can override it. The data formats defined for the organization's locale are used on the report.
  - Pickup Location: Optionally, select a single [location](#) to select only orders that were assigned to that location for pickup. Only locations associated with the selected [organization](#) are available for selection. Otherwise, leave this field blank to include orders with any automatically canceled lines regardless of the selected pickup location.
  - Region: Optionally, select a single [Region](#) to have the report include only orders with locations assigned to that region. Regions that are assigned to locations associated with the selected organization are available for selection. The region is a user-defined field specified for a location. Because this is a user-defined field, a region entered with any trailing blank spaces is not a match for the same region entered without the trailing blanks.
  - Date range: Select either:
    - \* Rolling Dates: One of the date ranges available from this field to include orders that include any lines that were automatically canceled during this range of dates. See [Rolling Dates](#) for more information; or,
    - \* From and To dates: Enter or select the first and last dates to include. The report includes orders that include lines that were automatically canceled during this range of dates. The From and To dates can be the same, and can be the current date.
- Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
- Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

**Note**

You must select either Export to PDF or Export to Excel, or both.

- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

- Click *Run Report*.

**For more information:** See [Viewing generated reports](#).

**Language and formats:** The language, date, time, and number formats on the report are from the data formats defined for the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the customer's email address exceeds the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title
- Report Criteria heading:
  - Locations: If a specific pickup location was selected to include on the report, this location code and name is listed; otherwise, the heading lists *All*.
  - Date Range: The range of dates entered at the [Run Reports](#) screen, or calculated based on the [Rolling Dates](#) selection at the [Run Reports](#) screen or the [Schedule Report](#) window.
  - Region: If a specific region was selected to include on the report, this region is listed; otherwise, the heading lists *All*.
- The location code and name for each pickup location included on the report. For each order that includes any lines that were automatically canceled during the date range for this pickup location:
  - [Request ID](#) assigned by Order Orchestration.
  - [Order Number](#) assigned by the originating system.
  - Date Canceled: The date when an order line was canceled. If lines were canceled on multiple dates, this is the most recent date.
  - Customer Name: The sold-to customer's first and last name, if both were passed in the [submit order message](#); otherwise, this is the company name.
  - Email address: The email address passed for the sold-to customer in the [submit order message](#). Truncated if it exceeds the allotted space.
  - Day phone: The first phone number passed for the sold-to customer in the [submit order message](#) (phone1). Up to 12 positions.
  - Evening: The second phone number passed for the sold-to customer in the [submit order message](#) (phone2). Up to 12 positions.

**Note**

Order Orchestration does not apply any formatting to the phone numbers passed in the submit order message.

- Order Type: Possible order types on the report are:
  - *Pickup*: See [pickup order](#).
  - *Ship-for-pickup*: See [ship-for-pickup order](#).

The footer on each page of the report lists:

- the date and time when the report was generated
- the current page number and total number of pages (for example, *Page 1 of 6*)

# Location Import Errors Report

**Purpose:** Use the **Location Import Errors Report** to review errors related to locations that occurred during the import into Order Orchestration using the process described under [Importing Locations through File Storage API](#). You can schedule imports or run them on demand through the [Schedule Jobs](#) screen.

**Successfully imported locations not listed:** Only location import records that resulted in error are listed on the report. For example, if the import process included 500 locations, and 495 locations were created or updated without error, the report lists the 5 errors.

**Invalid address?** The import process creates a location record even if the address specified in the import file is incomplete or invalid. In this case, the location is not listed on the errors report. If the location is not included as expected in inventory search results or order assignments, you can use the [Edit Location](#) to verify or correct the address.

**Correcting import errors:** See [Understanding location import errors](#) for more information.

**Database table:** The errors listed on this report are from the location\_import table. Records in that table with a processed code of 40 are not included in the report, as these updates processed successfully.

**For more information:** See [Importing Locations through File Storage API](#).

Used for the Routing Engine module.

**How to generate this report:** Available if Use Routing Engine is selected at the [Tenant](#) screen. At the [Run Reports](#) screen:

1. Click the plus sign next to the *Operations* folder in the left-hand navigation pane.
2. Highlight the *Location Import Errors Report*. The center of the screen displays the related *Report Options*.
3. Select:
  - Organization: The [organization](#) to include on the report. From the *Default Organization* defined through the [Users](#) screen, but you can override it. The data formats defined for the organization's locale are used on the report.
  - Date range: Select either:
    - Rolling Dates: One of the date ranges available from this field to include location imports that failed during this range of dates. See [Rolling Dates](#) for more information; or,
    - From and To dates: Enter or select the first and last dates to include. The report includes location imports that failed during this range of dates. The From and To dates can be the same, and can be the current date.

## Note

**Note:** If the error occurred earlier than the Days to Keep Errors specified for the [Product Import](#) at the [Schedule Jobs](#) screen, it is not retained in the table or eligible to print on the report.

- Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.

- Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

**Note**

You must select either Export to PDF or Export to Excel, or both.

- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

4. Click *Run Report*.

**For more information:** See [Viewing generated reports](#).

**Language and formats:** The language, date, time, and number formats on the report are from the data formats defined for the organization's locale.

**Contents:**

- Organization Name and report title
- Report Criteria heading:
  - Locations: *All*.
  - Date Range: The range of dates entered at the *Run Reports* screen, or calculated based on the *Rolling Dates* selection at the *Run Reports* screen or the [Schedule Report](#) window.
- [Import ID](#). Each import ID starts on a new page.
- [System](#) code
- For each error with the same [Import ID](#):

Location code: The [location](#) to import from the external system.

Location type: The [location type](#) assigned to the location, describing one or more locations within an organization. Each location type indicates the [location category](#) (store, warehouse, or vendor), and can also provide additional information, such as "East Coast Stores" or "Outlet Stores."

- Name: The name of the location.
- City: The city for the location's address.
- State: The state for the location's address.
- Postal: The postal code for the location's address.
- Country Code: The country code for the location's address.
- Error: See [Understanding location import errors](#).

The footer on each page of the report lists:

- the date and time when the report was generated
- the current page number and total number of pages (for example, *Page 1 of 6*)

The data formats defined for the organization's locale control the formatting of the report.

### Understanding location import errors

| Error Code | Error Message                           | Possible Reasons                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10         | System Record Not Found                 | The <a href="#">System</a> code specified is invalid. This error does not occur for <a href="#">OCDS or Merchandising Omni Services Imports</a> , because the import is always scheduled or run on demand for a specific system, and this is the system code that is used. An invalid system code can also occur if the field exceeded the maximum allowed length. In this case, the description of the error in the error file is <code>System code length</code> .                                                                        |
| 55         | Location Type Code Invalid              | The <a href="#">location type</a> code specified is invalid. This error does not occur for <a href="#">OCDS or Merchandising Omni Services Imports</a> , because the import is always scheduled or run on demand for a specific store or warehouse default location type, as specified at the <a href="#">OCDS Integration tab</a> of the <b>System</b> screen. In this case, the description of the error in the error file is <code>Location_type_code length</code> .                                                                    |
| 56         | Locations Import Failed - Other Error   | Can indicate that a field exceeded the maximum allowed length. In this case, the description of the error is included in the error file, for example <code>Address_line one too long</code> .<br><br>Also, if a single-position code, such as the Active flag or the Delivery flag, was not set to a valid value, an example of the description of the error in the error file is <code>Q is Invalid for Column Active</code> .<br><br>The following errors are not included on the report, but they are included in the import error file. |
| 71         | Missing Location Name                   | The location <a href="#">Name</a> is missing and is a required field. This error occurs if the location name is passed as blank from OCDS or Merchandising Omni Services.                                                                                                                                                                                                                                                                                                                                                                   |
| 72         | Missing Location Code                   | The <a href="#">location</a> code is missing and is a required field. This error occurs if the location code is passed as blank from OCDS or Merchandising Omni Services.                                                                                                                                                                                                                                                                                                                                                                   |
| 73         | Prov,Country,Postal combination invalid | There was a problem with the state or province, country, and postal code or zip code for the location.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 75         | The Address combination is invalid.     | An error was returned through the <a href="#">Oracle Maps Cloud Service</a> ; however, the location was still created. This error can occur, for example, when a five-position postal code is passed for a Canadian address.                                                                                                                                                                                                                                                                                                                |

**Note**

No errors are listed on the report if the number of columns in the flat file is invalid. In this case, a general error is listed at the [Product Imports History](#) screen. See [Importing Locations through File Storage API](#) for background.

## Order Status Report

**Purpose:** Use the **Order Status Report** to generate a list of Order Orchestration orders created within a certain date range, indicating their current status.

Used for the Routing Engine module.

**Selection options:** Optionally, you can restrict the orders on the report by:

- order type
- order or line status
- placed (originating) location
- sourced location for a delivery, pickup, or ship-for-pickup order
- pickup location for a pickup or ship-for-pickup order, if the selected organization supports ship-for-pickup orders (see [Enable Ship-For-Pickup?](#) for background)
- region assigned to a location currently associated with the order
- ship via on the order

**How to generate this report:** At the [Run Reports](#) screen:

1. Click the plus sign next to the *Operations* folder in the left-hand navigation pane.
2. Highlight the *Order Status Report*. The center of the screen displays the related *Report Options*.
3. Select:
  - Organization: The [organization](#) to include on the report. From the *Default Organization* defined through the [Users](#) screen, but you can override it. The data formats defined for the organization's locale are used on the report.
  - Order Type: Optionally, select a single [order type](#) to have the report include only orders of that type. Otherwise, leave this field blank to include all eligible orders regardless of type.
  - Order Status: Optionally, select a single order status to have the report include only orders of that status, and orders that include lines of that status if you use [splitting orders](#). See [Order and Line Statuses](#) for background. Otherwise, leave this field blank to include all eligible orders regardless of status.

*Example:* An order includes a line in new order status, and another line in unfulfillable status. The order-level status is open. The order is included on the report if you select any of these statuses (new order, unfulfillable, or open) as a selection criterion.

- Placed Location: Optionally, select a single [location](#) to have the report include only orders that originated in that location. Only locations associated with the selected [organization](#) are available for selection. Otherwise, leave this field blank to include eligible orders originating in all locations in the organization.
- Fulfilling Location: Optionally, select a single [location](#) to have the report include only orders that include at least one line that is currently assigned to that location for

fulfillment or pickup. Only locations associated with the selected [organization](#) are available for selection. Otherwise, leave this field blank to include eligible orders regardless of where they are assigned. **Note:** This field is displayed only if the selected organization does not support ship-for-pickup orders. See [Enable Ship-For-Pickup?](#) for background.

- Sourced Location: Optionally, select a single [location](#) to have the report include only ship-for-pickup orders that are currently assigned to the specified location as a [sourcing location](#). Only locations associated with the selected [organization](#) are available for selection. Otherwise, leave this field blank to include eligible orders assigned to any locations in the organization. **Note:** This field is displayed only if the selected organization supports ship-for-pickup orders; see [Enable Ship-For-Pickup?](#) for background.
- Pickup Location: Optionally, select a single [location](#) to have the report include only ship-for-pickup orders that are currently assigned to the specified location as a [pickup location](#). Only locations associated with the selected [organization](#) are available for selection. Otherwise, leave this field blank to include eligible orders assigned to any locations in the organization. **Note:** This field is displayed only if the selected organization supports ship-for-pickup orders; see [Enable Ship-For-Pickup?](#) for background.
- Region: Optionally, select a single [Region](#) to have the report include only orders with locations assigned to that region. Regions that are assigned to locations associated with the selected organization are available for selection. The region is a user-defined field specified for a location. Because this is a user-defined field, a region entered with any trailing blank spaces is not a match for the same region entered without the trailing blanks.

**Note**

You cannot generate the report based on any location fields and the region. If you select any of the location fields, the Region field becomes unselectable. Similarly, if you select a Region, the location fields become unselectable.

- Ship Via: Optionally, enter a single [Ship Via](#) to have the report include only orders that have this ship via assigned at the order level.

**Note**

The ship via code is a user-defined field passed in the ship\_via element in the [submit order message](#). It is displayed on the *Header* tab of the [Order](#) screen. This ship via does not necessarily match the Shipping Agent, listed at the *History* tab of the **Order** screen, which is typically the ship via that actually shipped the order.

- Date range: Select either:
  - Rolling Dates: Select one of the date ranges available from this field to include orders that were created in Order Orchestration during this range of dates. (This date might not be the same as the [Date Ordered](#) listed at the [Order Inquiry](#) screen.) See [Rolling Dates](#) for more information on rolling date options); or,
  - From and To dates: Enter or select the first and last dates to include. The report includes orders that were created in Order Orchestration during this range of dates. The From and To dates can be the same, and can be the current date.

- **Export to PDF:** Select this option to generate a PDF version of the report that you can review in a PDF viewer.
- **Export to Excel:** Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

**Note**

You must select either Export to PDF or Export to Excel, or both.

- **Email List:** Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

4. Click *Run Report*.

**For more information:** See [Viewing generated reports](#).

**Language and formats:** The language, date, time, and number formats on the report are from the data formats defined for the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the customer name exceeds the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title
- Report Criteria heading: Each of the selection options entered at the [Run Reports](#) screen or the [Schedule Report](#) window is indicated here. The report lists *All* for each option that you did not select as a restriction.
  - Order Type
  - Order Status

**Note**

If you selected a status as a selection criterion and the order is split, the order-level status might not match the status you selected. For example, an order includes a line in new order status, and another line in unfulfillable status. The order-level status is open. The order is included on the report if you select any of these statuses (new order, unfulfillable, or open) as a selection criterion.

- Placed Location
- Fulfill Location (listed only if the organization does not support ship-for-pickup orders)
- Sourced Location (listed only if the organization supports ship-for-pickup orders)
- Pickup Location (listed only if the organization supports ship-for-pickup orders)

- Region

**Note**

See [Enable Ship-For-Pickup?](#) for background.

- Ship Via
- Date Range: The range of dates entered at the [Run Reports](#) screen, or calculated based on the *Rolling Dates* selection at the [Run Reports](#) screen or the [Schedule Report](#) window

For each order included on the report:

- Order Type: Each [order type](#) starts on a new page and lists the following information for each order:
  - Request ID: The [request ID](#) assigned by Order Orchestration to identify the order.
  - Order #: The [order number](#) assigned by the originating system.
  - Order Status: The current order status. See [Order and Line Statuses](#) for more information.
  - Ship Via: The [Ship Via](#) code and description, separated by a hyphen, currently assigned to the order. Up to 18 positions.
  - Date Created: The date when the order was created in Order Orchestration. This date might not be the same as the *Date Ordered* listed at the [Order Inquiry](#) screen. The report includes orders that were created in Order Orchestration within the range of dates entered at the [Run Reports](#) screen, or calculated based on the *Rolling Dates* selection at the [Run Reports](#) screen or the [Schedule Report](#) window.
  - Customer Name: The sold-to customer's first and last name, if both were passed in the [submit order message](#); otherwise, this is the company name. Up to 21 positions. Asterisks print if the customer has been [anonymized](#).
  - If the organization does not support ship-for-pickup orders:
    - \* Placed Location: the placed (originating) location code and name, separated by a hyphen (for example, 1 - Main Distribution Center).
    - \* Fulfilling Location: the current fulfilling location code and name, separated by a hyphen (for example, 1 - Main Distribution Center). The word *Multiple* indicates that the order is split across multiple fulfilling locations.
  - Locations (if the organization supports ship-for-pickup orders):
    - \* Placed Location: the placed (originating) location code and name, separated by a hyphen (for example, 1 - Main Distribution Center). Included for a [pickup order](#), [delivery order](#), or [ship-for-pickup order](#).
    - \* Sourced Location: the [sourcing location](#) code and name, separated by a hyphen (for example, 1 - Main Distribution Center). Included for a [pickup order](#) or [ship-for-pickup order](#). The word *Multiple* indicates that the order is split across multiple sourced locations. In the case of a [pickup order](#), the sourced location is also where the order is picked up.
    - \* Pickup Location: the current fulfilling location code and name, separated by a hyphen (for example, 1 - Main Distribution Center). Included for a [ship-for-pickup order](#).

- \* Shipment Location: the current [sourcing location](#) code and name, separated by a hyphen (for example, 1 - Main Distribution Center). The word *Multiple* indicates that the order is split across multiple sourced locations. Included for a [delivery order](#).
- Count: The total number of separate orders of the order type in Order Orchestration. For this report, each [request ID](#) is considered a separate order, even if they share the same [order number](#) from the originating system.

The footer on each page of the report lists:

- the date and time when the report was generated
- the current page number and total number of pages (for example, *Page 1 of 6*)

The data formats defined for the organization's locale control the formatting of the report.

## Product Barcode Import Errors Report

**Purpose:** Use the **Product Barcode Import Errors Report** to review errors related to product UPC barcodes that occurred during the import into Order Orchestration using the process described under [Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#), or through [OCDS or Merchandising Omni Services Imports](#). You can schedule imports or run them on demand through the [Schedule Jobs](#) screen.

**Successfully imported product barcodes not listed:** Only product UPC barcode import records that resulted in error are listed on the report. For example, if the import process included 500 product UPC barcodes, and 495 product UPC barcodes were created or updated without error, the report lists the 5 errors.

**Correcting import errors:** See [Understanding product UPC barcode import errors](#) for more information.

**Database table:** The errors listed on this report are from the PRODUCT\_BARCODE\_IMPORT table.

**For more information:** See [Importing UPC Barcodes through File Storage API](#).

Used for the Routing Engine module.

**How to generate this report:** Available if Use Routing Engine is selected at the [Tenant](#) screen. At the [Run Reports](#) screen:

1. Click the plus sign next to the *Operations* folder in the left-hand navigation pane.
2. Highlight the *Product Barcode Import Errors Report*. The center of the screen displays the related *Report Options*.
3. Select:
  - Organization: The [organization](#) to include on the report. From the *Default Organization* defined through the [Users](#) screen, but you can override it. The data formats defined for the organization's locale are used on the report.
  - Date range: Select either:
    - Rolling Dates: One of the date ranges available from this field to include errors that occurred during the range of dates. See *Rolling Dates* at the [Run Reports](#) screen for more information; or,
    - From and To dates: Enter or select the first and last dates to include. The report includes errors that occurred during this range of dates. The From and To dates can be the same, and can be the current date.

**Note**

If the error occurred earlier than the Days to Keep Errors specified for the [Product Import](#) at the [Schedule Jobs](#) screen, it is not retained in the table or eligible to print on the report.

- Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
- Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

**Note**

You must select either Export to PDF or Export to Excel, or both.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**4. Click *Run Report*.**

**For more information:** See *Viewing generated reports* at the [Run Reports](#) screen.

**Language and formats:** The language, date, time, and number formats on the report are from the data formats defined for the organization's locale.

**Contents:**

- Organization Name and report title
- Report Criteria heading:
  - Locations: *All*.
  - Date Range: The range of dates entered at the [Run Reports](#) screen, or calculated based on the *Rolling Dates* selection at the *Run Reports* screen or the [Schedule Report](#) window.
- [Import ID](#). Each import ID starts on a new page.
- [System](#) code
- For each error with the same [Import ID](#):
  - Product code: The product code identifying the product in the [default system](#).
  - System product code: The [system product](#) code identifying the product in the external system specified in the import file name. The system product code might differ from the [product](#) code if the external system is not the [default system](#) for the organization.
  - Error: See [Understanding product UPC barcode import errors](#).

The footer on each page of the report lists:

- the date and time when the report was generated

- the current page number and total number of pages (for example, *Page 1 of 6*)

The data formats defined for the organization's locale control the formatting of the report.

### Understanding product UPC barcode import errors

| Error Code | Error Message                        | Possible Reasons                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10         | System Record Not Found              | The <a href="#">System</a> code specified is invalid.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 15         | System Product/Product Code mismatch | <p>The system product code does not exist for the <a href="#">System</a> code specified in the import file. This product barcode import error can be the result of a product import error; for example, it can occur if:</p> <ul style="list-style-type: none"> <li>you created a new product in your integrated systems, and did not run the import process for the default system before the other systems in the organization</li> <li>the import process included product barcodes but not the corresponding products or system products</li> <li>there was other invalid data in the product import that prevented the import process from creating the product or system product</li> </ul> |
| 58         | Invalid Barcode Type                 | A barcode type of UPC-A or EAN-13 was not specified.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Product Import Errors Report

**Purpose:** Use the **Product Import Errors Report** to review errors related to products or system products that occurred during the import into Order Orchestration using the process described under [Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#), or through [OCDS or Merchandising Omni Services Imports](#). You can schedule imports or run them on demand through the [Schedule Jobs](#) screen.

**Successfully imported products and system products not listed:** Only product import records that resulted in error are listed on the report. For example, if the import process included 500 products or system products, and 495 products or system products were created or updated without error, the report lists the 5 errors.

**Correcting import errors:** The best way to correct import errors is to correct the product record in the integrated system. The next time you process imports for the system, the product will be created or updated correctly. Otherwise, if you attempt to create or update the product using the Order Orchestration screens, the record cannot be updated correctly with each future scheduled import. You can use the [Schedule Jobs](#) to schedule the next import process, or to run it on demand.

**Database table:** The errors listed on this report are from the product\_import table.

**Note**

Some errors that can occur from the data in the flat import file are not written to the related import database table, so in that case the error is noted only in the error file and not on the related report, for example: an invalid number of columns in the flat file, a numeric field that contains alphabetical data, or a date that is not formatted correctly.

**For more information:** See the [Importing Products, System Products, and Item Image URLs through File Storage API](#) or [OCDS or Merchandising Omni Services Imports](#).

Used for the Routing Engine module.

**How to generate this report:** Available if Use Routing Engine is selected at the [Tenant](#) screen. At the [Run Reports](#) screen:

1. Click the plus sign next to the *Operations* folder in the left-hand navigation pane.
2. Highlight the *Product Import Errors Report*. The center of the screen displays the related *Report Options*.
3. Select:
  - Organization: The [organization](#) to include on the report. From the *Default Organization* defined through the [Users](#) screen, but you can override it. The data formats defined for the organization's locale are used on the report.
  - Date range: Select either:
    - Rolling Dates: One of the date ranges available from this field to include orders that became fully unfulfillable or partially unfulfillable during this range of dates. See *Rolling Dates* at the [Reports](#) screen for more information; or,
    - From and To dates: Enter or select the first and last dates to include. The report includes orders that became fully unfulfillable or partially unfulfillable during this range of dates. The From and To dates can be the same, and can be the current date.

**Note**

Product import activity is retained only for the [Days to Keep Errors](#) specified at the [Schedule Jobs](#) screen. For example, if the Days to Keep Errors is set to 7, you cannot generate the report for any dates earlier than the last 7 days.

- Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
- Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

**Note**

You must select either Export to PDF or Export to Excel, or both.

- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

**4.** Click *Run Report*.

**For more information:** See *Viewing generated reports* at the [Reports](#) screen.

**Language and formats:** The language, date, time, and number formats on the report are from the data formats defined for the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the department description exceeds the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title
- Report Criteria heading:
  - Locations: *All*.
  - Date Range: The range of dates entered at the *Run Reports* screen, or calculated based on the *Rolling Dates* selection at the *Run Reports* screen or the [Schedule Report](#) window.
- [Import ID](#). Each import ID starts on a new page.
- [System](#) code
- For each error with the same [Import ID](#):
  - [Product](#) code: Identifies the item in the [default system](#).
  - System product code: The [system product](#) code identifying the product in the external system. The system product code might differ from the [product](#) code if the external system is not the [default system](#) for the organization.
  - [Master Style](#): Optional field. Order Orchestration updates this field for the product only if it passed from the [default system](#).

**Note**

Normally, you would never change the master style for a product in Order Orchestration.

- product [Name](#): Order Orchestration updates this field for the product only if it is passed from the [default system](#). Product names can be 1 to 40 positions in length.
- [Department](#): The description of the product's department. Order Orchestration updates this field for the product only if it is passed from the [default system](#). The department description can be 1 to 40 positions in length, and is informational only. Optional field.

**Note**

If your [default system](#) is an Order Administration company, this field is the description of the item/SKU's Long SKU Department. Long SKU departments are used to identify items within a retail hierarchy.

- **Class:** The description of the product's class. Order Orchestration updates this field for the product only if it is passed from the [default system](#). The class description can be 1 to 40 positions in length, and is informational only. Optional field.

**Note**

If your [default system](#) is an Order Administration company, this field is the description of the item/SKU's Long SKU Class. Taken from the base item rather than the SKU if this is a SKU'd item. Long SKU classes can be used together with long SKU departments to identify items within a retail hierarchy.

- **Category:** The description of the product's category. Order Orchestration updates this field for the product only if it is passed from the [default system](#). The category description can be 1 to 40 positions in length, and is informational only. Optional field.

**Note**

If your [default system](#) is an Order Administration company, this field is the description of the item/SKU's Long SKU Division. Long SKU divisions can be used together with long SKU departments and classes to identify items within a retail hierarchy.

- Error: See [Understanding product import errors](#).

The footer on each page of the report lists:

- the date and time when the report was generated
- the current page number and total number of pages (for example, *Page 1 of 6*)

The data formats defined for the organization's locale control the formatting of the report.

### Understanding product import errors

| Error Code | Error Message                | Possible Reasons                                                                                                                                                                                                                                                                                                                       |
|------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 10         | System Record Not Found      | The <a href="#">System</a> code provided is not a valid <a href="#">system</a> in Order Orchestration. This error does not occur for <a href="#">OCDS or Merchandising Omni Services Imports</a> , because the import is always scheduled or run on demand for a specific system.                                                      |
| 11         | Product description required | The product <a href="#">Name</a> provided was a blank space and did not include any additional information. The product description is required regardless of whether the external system is the <a href="#">default system</a> ; however, the information is used only to create or update the <a href="#">product</a> record itself. |

| Error Code | Error Message                          | Possible Reasons                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## Unfulfillable Report

**Purpose:** Use the **Unfulfillable Report** to generate a list of Order Orchestration orders that became fully or partially unfulfillable for all placing (originating) locations, or for a specific location. The information on the report includes the customer's name, email address, and phone numbers, as well as the type of order and whether the order is fully or partially unfulfillable.

Used for the Routing Engine module.

**Order types on the report:** This report lists delivery, ship-for-pickup, or pickup orders that became unfulfillable.

**How to generate this report:** At the [Run Reports](#) screen:

1. Click the plus sign next to the *Operations* folder in the left-hand navigation pane.
2. Highlight the *Unfulfillable Report*. The center of the screen displays the related *Report Options*.
3. Select:
  - Organization: The [organization](#) to include on the report. From the Default Organization defined through the [Users](#) screen, but you can override it. The data formats defined for the organization's locale are used on the report.
  - Placed Location: Optionally, select a single [location](#) to select only orders that originated in that location on the report. Only locations associated with the selected [organization](#) are available for selection. Otherwise, leave this field blank to include unfulfillable orders originating in all locations in the organization.
  - Date range: Select either:
    - Rolling Dates: One of the date ranges available from this field to include orders that became fully or partially unfulfillable during this range of dates. See [Rolling Dates](#) for more information; or,
    - From and To dates: Enter or select the first and last dates to include. The report includes orders that became fully or partially unfulfillable during this range of dates. The From and To dates can be the same, and can be the current date.
  - Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
  - Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

### Note

You must select either Export to PDF or Export to Excel, or both.

- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

**4.** Click *Run Report*.

**For more information:** See [Viewing generated reports](#).

**Language and formats:** The language, date, time, and number formats on the report are from the data formats defined for the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the customer's email address exceeds the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title
- Report Criteria heading:
  - Locations: If a specific originating location was selected to include on the report, this location code and name is listed; otherwise, the heading lists *All*.
  - Date Range: The range of dates entered at the [Run Reports](#) screen, or calculated based on the [Rolling Dates](#) selection at the [Run Reports](#) screen or the [Schedule Report](#) window.
- The location code and name for each placing (originating) location included on the report. For each order that became fully or partially unfulfillable during the date range for this placing location:
  - [Request ID](#) assigned by Order Orchestration.
  - [Order Number](#) assigned by the originating system.
  - Date Created: The date when the order was created in Order Orchestration. Might not be the same as the [Order Date](#).
  - Customer Name: The sold-to customer's first and last name, if both were passed in the [submit order message](#); otherwise, this is the company name. Asterisks print if the customer has been [anonymized](#).
  - Email address: The email address passed for the sold-to customer in the [submit order message](#). Asterisks print if the customer has been [anonymized](#).

**Note**

The email address is truncated if it might exceed the estimated space for the column based on the number of characters. If the email address is truncated, the characters to the right of a punctuation mark, such as a period, are omitted. For example, if the customer's email address is james.k.polk@example.com, it is truncated to james.k.polk@example on the report.

- Day phone: The first phone number passed for the sold-to customer in the [submit order message](#) (phone1). Up to 12 positions.

- Evening: The second phone number passed for the sold-to customer in the [submit order message](#) (phone2). Up to 12 positions.

**Note**

Order Orchestration does not apply any formatting to the phone numbers passed in the submit order message.

- Unfulfillable type:
  - *Entire*: the entire order is currently unfulfillable, and became partially or completely unfulfillable during the selected date range. For example, one line on an order became unfulfillable last week, and the remaining line on the order became unfulfillable this week. The order is listed on the report with an unfulfillable type of Entire, regardless of whether you generate the report with a date range that includes last week or this week.
  - *Partial*: some units or lines on the order became unfulfillable within the selected date range, and the order is still only partially unfulfillable. It is possible that the remaining lines or units on the order have since been fulfilled or are still open.

**Note**

A partial unfulfillable status is possible only if your organization is [splitting orders](#).

- Order Type: Possible order types on the report are:
  - *Delivery*: See [delivery order](#).
  - *Pickup*: See [pickup order](#).
  - *Ship For Pickup*: See [ship-for-pickup order](#)

The footer on each page of the report lists:

- the date and time when the report was generated
- the current page number and total number of pages (for example, *Page 1 of 6*)

The data formats defined for the organization's locale control the formatting of the report.

## Zone List Report

**Purpose:** Use the **Zone List Report** to identify which locations are assigned to fulfillment zones as either primary or alternate fulfilling or sourcing locations, and which locations are not assigned to any zones.

Used for the Routing Engine module.

**Primary and alternate locations:** When you use [zone fulfillment](#), the Routing Engine attempts to assign delivery or ship-for-pickup orders shipping within the zone area to the locations you designate as primary for the zone. If the Routing Engine cannot assign an order within the list of primary locations, it attempts to assign the order to one of the alternate locations.

**For more information:** See [Using Zones for Fulfillment](#) for an overview and complete description of zone fulfillment logic, and see [Fulfillment Zone Wizard](#) for information on setting up zones.

**How to generate this report:** At the [Run Reports](#) screen:

1. Click the plus sign next to the *Operations* folder in the left-hand navigation pane.
2. Highlight the *Zone List Report*. The center of the screen displays the related *Report Options*.
3. Select:
  - Organization: The [organization](#) to include on the report. Your Default Organization defined through the [Users](#) screen defaults, but you can override this default. The data formats defined for the organization's locale are used on the report.
  - Location: Optionally, select a single [location](#) to include only that location on the report. With this setting, the report includes zones only if that location is specified as a primary or alternate fulfilling or sourcing location. Only locations associated with the selected [organization](#) are available for selection. Otherwise, leave this field blank to include all locations in the organization.

**Note**

The [Default Unfulfillable Location](#) is not eligible to be included on this report.

- Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
- Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

**Note**

You must select either Export to PDF or Export to Excel, or both.

- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

4. Click *Run Report*.

**For more information:** See [Viewing generated reports](#).

**Language and formats:** The language, date, time, and number formats on the report are from the data formats defined for the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the location code and name exceed the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title
- Report Criteria heading: If a specific originating location was selected to include on the report, this location code and name is listed; otherwise, the heading lists *All*.

- Specific location? If the report is for a specific location, for each zone in the organization where the location is assigned the report lists:
  - Zone name
  - Active? This flag is set to Y if the zone is currently active; otherwise, the flag is set to N
  - Search Location Type for the zone: either *Primary* or *Alternate*
  - If the location is not assigned to any zones, it is listed under Unassigned Locations
- All locations? If the report is for all locations, for each zone in the organization:
  - Zone name
  - Active? This flag is set to Y if the zone is currently active; otherwise, the flag is set to N
  - Location code and name, separated by a hyphen (for example, 1 - Main Distribution Center)
  - Search Location Type for the zone, either *Primary* or *Alternate*
  - Locations that are not assigned to any zones are listed under Unassigned Locations

**Note**

The [Default Unfulfillable Location](#) is not included on this report.

The footer on each page of the report lists:

- the date and time when the report was generated
- the current page number and total number of pages (for example, *Page 1 of 6*)

The data formats defined for the organization's locale control the formatting of the report.

## PO Item Status Report

**Purpose:** Use the **PO Item Status Report** to generate a list of purchase order lines created within a certain date range, indicating their current status.

Used for the Supplier Direct Fulfillment module.

**Selection options:** Optionally, you can restrict the orders on the report by:

- [vendor](#)
- [brand](#)
- current [line status](#)

**How to generate this report:** Available if Use Vendor Portal is selected at the [Tenant](#) screen. At the [Run Reports](#) screen:

1. Click the plus sign next to the *Drop Ship* folder in the left-hand navigation pane.
2. Highlight the *PO Item Status Report*. The center of the screen displays the related *Report Options*.
3. Select:
  - Organization: The [organization](#) to include on the report. From the *Default Organization* defined through the [Users](#) screen, but you can override it. The data formats defined for the organization's locale are used on the report.

- Vendor: Optionally, select a single [vendor](#) to have the report include only purchase order lines for that vendor. Otherwise, leave this field blank to include all eligible purchase order lines regardless of vendor.
- Brand: Optionally, select a single [brand](#) to have the report include lines only on purchase orders for that brand. Otherwise, leave this field blank to include all eligible purchase order lines regardless of brand.
- Line Status: Optionally, select a single [line status](#) to have the report include lines only if they are currently in that status. Otherwise, leave this field blank to include all eligible purchase order lines regardless of status.
- Date range: Select either:
  - Rolling Dates: Select one of the date ranges available from this field to include purchase orders with created dates (based on the po\_entered\_date from the [CreateDSOrder](#) message) during this range of dates. See *Rolling Dates* at the [Run Reports](#) screen for more information on rolling date options); or,
  - From and To dates: Enter or select the first and last dates to include. The report includes purchase orders with created dates (based on the po\_entered\_date from the [CreateDSOrder](#) message) during this range of dates. The From and To dates can be the same, and can be the current date.
- Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
- Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

**Note**

You must select either Export to PDF or Export to Excel, or both.

- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

**4. Click [Run Report](#).**

**For more information:** See *Viewing generated reports* at the [Run Reports](#).

**Language and formats:** The language, date, time, and number formats on the report are from the data formats defined for the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the item description exceeds the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title

- Report Criteria heading: Each of the selection options entered at the *Run Reports* screen or the [Schedule Report](#) window is indicated here. The report lists *All* for each option that you did not select as a restriction.
  - Vendor
  - Brand
  - Line Status
  - Date Range: The range of dates entered at the *Run Reports* screen, or calculated based on the *Rolling Dates* selection at the *Run Reports* screen or the [Schedule Report](#) window
- Report results: The results are sorted alphabetically by vendor name, alphabetically by brand name, alphanumerically by item code, and then in chronological order, and include:
  - The vendor name for each vendor that has purchase order lines included on the report. Asterisks print if the vendor has been [anonymized](#).
  - The brand name for each brand that has purchase order lines included on the report.There is a page break and subtotal for each vendor/brand combination.
- For each purchase order line included on the report:
  - Item No: Your item number or code.
  - Vendor Item No: The vendor's item number or code. Vendor item records are created in Order Orchestration when Order Orchestration receives a purchase order from the originating system. When the purchase order originates in Order Administration, this is the vendor item number (WVNI).
  - Item Description: Your description of the item.
  - PO No: The purchase order number assigned by the originating system.
  - Sales Order No: The number or code identifying the order in the originating system.
  - Line Status: The current [line status](#).
  - Created Date: The date when the purchase order was created (based on the `po_entered_date` from the [CreateDSOrder](#) message).
  - Due Date: The current due date for the item.
  - Batch ID: The ID number to identify the batch of pack slips. Included only if the vendor has generated pack slips.
- Totals: The total number of separate purchase order lines and purchase orders for the vendor and brand.
- Grand Totals: The total number of separate purchase order lines and purchase orders for the vendor, across all brands.

The footer on each page of the report lists:

- the date and time when the report was generated, in MM/DD/YYYY HH:MM AM format
- the current page number and total number of pages (for example, *Page 1 of 6*)

The organization's locale controls the formatting of the report.

# Vendor Aging Detail Report

**Purpose:** Use the **Vendor Aging Detail Report** to review a list of purchase order lines that are not yet either shipped or canceled. The report lists lines that are currently in Held, In Process, or New Order status within a specified range of current due dates.

Used for the Supplier Direct Fulfillment module.

**Selection options:** Optionally, you can restrict the purchase order lines listed on the report by:

- [vendor](#)
- [brand](#)
- current [line status](#)

**How to generate this report:** Available if Use Vendor Portal is selected at the [Tenant](#) screen. At the [Run Reports](#) screen:

1. Click the plus sign next to the *Drop Ship* folder in the left-hand navigation pane.
2. Highlight the *Vendor Aging Detail Report*. The center of the screen displays the related *Report Options*.
3. Select:
  - Organization: The [organization](#) to include on the report. From the *Default Organization* defined through the [Users](#) screen, but you can override it. The organization's locale controls the data formats used on the report.
  - Vendor: Optionally, select a single [vendor](#) to have the report include only lines on purchase orders that are assigned to that vendor. Otherwise, leave this field blank to include all eligible purchase order lines regardless of vendor.
  - Brand: Optionally, select a single [brand](#) to have the report include only purchase order lines associated with that brand. Otherwise, leave this field blank to include all eligible purchase order lines regardless of brand.
  - Line Status: Optionally, select a [line status](#) of Held, In Process, or New Order to have the report include only purchase order lines that are currently in the selected status. Otherwise, leave this field blank to include all eligible purchase order lines regardless of status.
  - Date range: Select either:
    - Rolling Dates: Select one of the date ranges available from this field to include purchase order lines that have current due dates during this range of dates. See [Rolling Dates](#) for more information on rolling date options); or,
    - From and To dates: Enter or select the first and last current due dates to include purchase order lines whose current due dates are during this range of dates. The From and To dates can be the same, and can be the current date.

**Revised due date?** If the vendor has revised the due date for a purchase order line, the report uses the revised due date to determine whether to include the line on the report. Lines whose revised due dates are within the date range are included, even if their original due dates are not within the range of dates.

- Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
- Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

**Note**

You must select either Export to PDF or Export to Excel, or both.

- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

**4. Click *Run Report*.**

**For more information:** See [Viewing generated reports](#).

**Language and formats:** The language, date, time, and number formats on the report are based on the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the item description exceeds the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title
- Report Criteria heading: Each of the selection options entered at the [Run Reports](#) screen or the [Schedule Report](#) window is indicated here. The report lists *All* for each option that you did not select as a restriction.
  - Vendor
  - Brand
  - Line Status
  - Date Range: The range of dates entered at the [Run Reports](#) screen, or calculated based on the [Rolling Dates](#) selection at the [Run Reports](#) screen or the [Schedule Report](#) window
  -
- Report results: The results are sorted alphabetically by vendor name, alphabetically by brand name, alphanumerically by item code, and then in chronological order, and include:
  - The vendor name for the vendor that has purchase order lines included on the report. Asterisks print if the vendor has been [anonymized](#).
  - The brand name for the brand that has purchase order lines included on the report. There is a page break and subtotal for each vendor/brand combination.
- For each purchase order line included on the report:
  - Item No: Your item number or code, including the SKU code, if any.
  - Vendor Item No: The vendor's item number or code. Vendor item records are created in Order Orchestration when Order Orchestration receives a purchase order from the originating system. When the purchase order originates in Order Administration, this is the vendor item number (WVNI).

- Item Description: Your description of the item.
- Units: The total number of open units for the item, brand, and vendor.
- Value: Your extended purchase order unit price for the item, brand, and vendor. Truncated if it exceeds the allotted space of up to 13 positions, including separating characters such as periods and commas.
- Line Status: The current [line status](#).
- Due Date: The current due date for the item.
- Future Due Days: The number of days remaining until the due date. Included only if the current due date is in the future. Calculated by subtracting the current date with the current due date for the item. For example, if today's date is 8/24 and the current due date is 8/25, the Future Due Days is 1.
- Past Due Days: The number of days that the purchase order line is past due. Included only if the current due date is the same as the current date, or is in the past. Calculated by subtracting the current due date for the item from the current date. For example, if today's date is 8/24 and the current due date is 8/22 the Past Due Days is 2.
- Totals: The total number of units and extended value for the vendor and brand. Extended value is truncated if it exceeds the allotted space of up to 13 positions, including separating characters such as periods and commas.
- Grand Totals: The total number of units and extended value for the vendor, across all brands. Extended value is truncated if it exceeds the allotted space of up to 13 positions, including separating characters such as periods and commas.

The footer on each page of the report lists:

- the date and time when the report was generated, in MM/DD/YYYY HH:MM AM format
- the current page number and total number of pages (for example, *Page 1 of 6*)

The locale defined for the organization controls the formatting of the report.

## Vendor Aging Summary Report

**Purpose:** Use the **Vendor Aging Detail Report** to review a summary of the total units and values of items on purchase order lines that are not yet either shipped or canceled. Lines whose statuses are currently in Held, In Process, or New Order status are included in the totals for each item, vendor, and brand for the specified range of dates.

Used for the Supplier Direct Fulfillment module.

**Selection options:** Optionally, you can restrict the purchase order lines included in the totals on the report by:

- [vendor](#)
- [brand](#)
- current [line status](#)

**How to generate this report:** Available if Use Vendor Portal is selected at the [Tenant](#) screen. At the [Run Reports](#) screen:

1. Click the plus sign next to the *Drop Ship* folder in the left-hand navigation pane.
2. Highlight the *Vendor Aging Summary Report*. The center of the screen displays the related *Report Options*.

**3. Select:**

- Organization: The [organization](#) to include on the report. From the *Default Organization* defined through the [Users](#) screen, but you can override it. The organization's locale controls the data formats used on the report.
- Vendor: Optionally, select a single [vendor](#) to have the report totals include only lines on purchase orders that are assigned to that vendor. Otherwise, leave this field blank to have the totals include all eligible purchase order lines regardless of vendor.
- Brand: Optionally, select a single [brand](#) to have the report totals include only purchase order lines associated with that brand. Otherwise, leave this field blank to include all eligible purchase order lines regardless of brand.
- Line Status: Optionally, select a [line status](#) of Held, In Process, or New Order to have the report totals include only purchase order lines that are currently in the selected status. Otherwise, leave this field blank to have the totals include all eligible purchase order lines regardless of status.
- Date range: Select either:
  - Rolling Dates: Select one of the date ranges available from this field to have the totals include purchase order lines that have current due dates during this range of dates. See [Rolling Dates](#) for more information on rolling date options); or,
  - From and To dates: Enter or select the first and last current due dates to have the totals on the report include purchase order lines whose current due dates are during this range of dates. The From and To dates can be the same, and can be the current date.

**Revised due date?** If the vendor has revised the due date for a purchase order line, the report uses the revised due date to determine whether to include the line on the totals on the report. Lines whose revised due dates are within the date range are included in the totals, even if their original due dates are not within the range of dates.

- Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
- Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

**Note**

You must select either Export to PDF or Export to Excel, or both.

- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

**4. Click *Run Report*.**

**For more information:** See [Viewing generated reports](#).

**Language and formats:** The language, date, time, and number formats on the report are based on the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the item description exceeds the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title
- Report Criteria heading: Each of the selection options entered at the [Run Reports](#) screen or the [Schedule Report](#) window is indicated here. The report lists *All* for each option that you did not select as a restriction.
  - Vendor
  - Brand
  - Line Status
  - Date Range: The range of dates entered at the [Run Reports](#) screen, or calculated based on the *Rolling Dates* selection at the *Run Reports* screen or the *Schedule Report* window
- Report results: The results are sorted alphabetically by vendor name, alphabetically by brand name, alphanumerically by item code, and then in chronological order, and include:
  - The vendor name for the vendor that has purchase order lines included in the totals on the report. Asterisks print if the vendor has been [anonymized](#).
  - The brand name for the brand that has purchase order lines included in the totals on the report.There is a page break and subtotal for each vendor.
- For each item included on the report for a brand and vendor:
  - Item No: Your item number or code, including the SKU code, if any.
  - Vendor Item No: The vendor's item number or code. Vendor item records are created in Order Orchestration when Order Orchestration receives a purchase order from the originating system. When the purchase order originates in Order Administration, this is the vendor item number (WVN).
  - Item Description: Your description of the item.
  - Units: The total number of units on the purchase order line.
  - Value: Your extended purchase order unit price to the vendor.
- Total: The total number of units and extended value for the vendor and brand.
- Grand Total: The total number of units and extended value for the vendor, across all brands.

The footer on each page of the report lists:

- the date and time when the report was generated, in MM/DD/YYYY HH:MM AM format
- the current page number and total number of pages (for example, *Page 1 of 6*)

The locale defined for the organization controls the formatting of the report.

# Invoice Detail Report

**Purpose:** Use the **Invoice Detail Report** to review a list of invoices and the lines they include. The report lists invoices by status within a specified range of dates.

Used for the Supplier Direct Fulfillment module.

**For more information:** For background on the information on this report, see the [Invoice](#) screen.

**Selection options:** Optionally, you can restrict the invoices listed on the report by:

- [vendor](#)
- current [invoice status](#)

**How to generate this report:** Available if Use Vendor Portal is selected at the [Tenant](#) screen. At the [Run Reports](#) screen:

1. Click the plus sign next to the *Drop Ship* folder in the left-hand navigation pane.
2. Highlight the *Invoice Detail Report*. The center of the screen displays the related *Report Options*.
3. Select:
  - Organization: The [organization](#) to include on the report. Your Default Organization defined through the [Users](#) screen defaults, but you can override this default. The organization's locale controls the data formats used on the report.
  - Vendor: Optionally, select a single [vendor](#) to have the report include only lines on purchase orders that are assigned to that vendor. Otherwise, leave this field blank to include all eligible invoices regardless of vendor.
  - Invoice Status: Optionally, select an [invoice status](#) to have the report include only invoices that are currently in the selected status. Otherwise, leave this field blank to include all eligible invoices regardless of status.
  - Date range: Select either:
    - Rolling Dates: Select one of the date ranges available from this field to include invoices whose invoice dates, as specified by the vendor, are during this range of dates. See [Rolling Dates](#) for more information on rolling date options); or,
    - From and To dates: Enter or select the first and last invoice dates to include invoices whose invoice dates, as specified by the vendor, are during this range of dates. The From and To dates can be the same, and can be the current date.
4. Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
5. Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.

## Note

You must select either Export to PDF or Export to Excel, or both.

6. Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

**7. Click *Run Report*.**

**For more information:** See [Viewing generated reports](#).

**Language and formats:** The language, date, time, and number formats on the report are based on the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the description of the invoice exceeds the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title
- Report Criteria heading: Each of the selection options entered at the [Run Reports](#) screen or the [Schedule Report](#) window is indicated here. The report lists *All* for each option that you did not select as a restriction.
  - Vendor
  - Invoice Status
  - Date Range: The range of dates entered at the [Run Reports](#) screen, or calculated based on the [Rolling Dates](#) selection at the [Run Reports](#) screen or the [Schedule Report](#) window
- Report results: The results are sorted alphabetically by vendor name and status, and alphanumerically by invoice number, and include:
  - The name of the [vendor](#) that has invoices included on the report.
  - The [invoice status](#)

There is a page break and subtotal for each vendor/status combination.

- For each invoice included on the report:
  - Invoice No: The invoice number specified by the vendor.
  - Invoice Date: The date specified by the vendor when creating the invoice. The current date defaults when the vendor creates an invoice at a Vendor Portal screen, but the vendor can override it.
  - Description: This column can display:
    - \* Description: The description of the invoice, if any, entered by the vendor. This description is on the top line for the invoice, on the same line as the invoice totals (including total Merch Amount, Freight Amount, Handling Amount, Other Amount, and Total Amount for the invoice) and Gross Due Date. Each of these additional fields is described below. If the vendor did not enter a description, this field is blank, and the invoice totals are to the right.
    - \* Header Level Charges: This text indicates that the line displays the header-level charges, if any, for the invoice. The vendor can specify header-level charges, detail-level charges, or both. Possible charges are Freight Amount, Handling Amount, and Other Amount. The total of these three header-level charge amounts

is displayed as the Total Amount on the Header Level Charges line. Amounts of 0.00 are listed if the vendor did not enter any of the header-level charges.

- \* Purchase Order and Line #: The purchase order number and purchase order line number that have a shipment included in the invoice. Each shipment on the invoice is listed separately, even if shipments are for the same purchase order and line number.
- Merch Amount:
  - \* For the invoice header (same line as the invoice Description, if any): the total extended cost of all invoice detail lines, calculated using the current invoice unit costs.
  - \* For Header Level Charges: blank.
  - \* For invoice detail lines: the total extended cost of the line, calculated using the current invoice unit cost and the invoice quantity. The invoice quantity is based on the shipment quantity and may not include the entire purchase order line quantity.
- Freight Amount:
  - \* For the invoice header (same line as the invoice Description, if any): the total of header-level and detail freight charges, if any.
  - \* For Header Level Charges: the header-level freight charge, if any.
  - \* or invoice detail lines: the detail-level freight charge, if any.
- Handling Amount:
  - \* For the invoice header (same line as the invoice Description, if any): the total of header-level and detail handling charges, if any.
  - \* For Header Level Charges: the header-level handling charge, if any.
  - \* For invoice detail lines: the detail-level handling charge, if any.
- Other Amount:
  - \* For the invoice header (same line as the invoice Description, if any): the total of header-level and detail “other” charges, if any.
  - \* For Header Level Charges: the header-level “other” charge, if any.
  - \* For invoice detail lines: the detail-level “other” charge, if any.
- Total Amount:
  - \* For the invoice header (same line as the invoice Description, if any): the total of merchandise and all charges.
  - \* For Header Level Charges: the total header-level charges, if any.
  - \* For invoice detail lines: the total detail-level merchandise and charges.
- Gross Due Date: The Invoice Date plus the Gross Days specified for the invoice.
- Totals: The total merchandise, freight, handling, other, and total amount for the vendor and invoice status.
- Grand Totals: The total merchandise, freight, handling, other, and total amount for all vendors and invoice statuses included in the report.

The footer on each page of the report lists:

- the date and time when the report was generated, in MM/DD/YYYY HH:MM AM format
- the current page number and total number of pages (for example, *Page 1 of 6*)

The locale defined for the organization controls the formatting of the report.

## Status Restricted Report

**Purpose:** Use the **Status Restricted Report** to generate a list of order lines with transaction history records indicating that an Order Status Update request indicated to change the status, but the update was prevented because the order line was in fulfilled status, or because the order was in canceled status, and the [Restrict Reassignment of Canceled Line](#) preference was selected.

Used for the Routing Engine module.

**How to generate this report:** At the [Run Reports](#) screen:

1. Click the plus sign next to the *Operations* folder in the left-hand navigation pane.
  2. Highlight the *Status Restricted Report*. The center of the screen displays the related *Report Options*.
  3. Select:
    - Organization: The [organization](#) to include on the report. Your Default Organization defined through the [Users](#) screen defaults, but you can override this default. The organization's locale controls the data formats used on the report.
    - Order Type: Optionally, select a single order type to include on the report. Available order types are Delivery, Pickup and Ship-for-Pickup. If no order type is selected, all orders can be included on the report, regardless of type.
    - Order Status:  
Optionally, select a status of either Canceled or Fulfilled. An order line is included if it was in the selected status regardless of whether the entire order was in that status.
    - Date range: Select either:
      - Rolling Dates: One of the date ranges available from this field to include order lines that had a requested status update restricted during this range of dates. See [Rolling Dates](#) for more information; or,
      - From and To dates: Enter or select the first and last dates to include. The report includes orders that became fully or partially unfulfillable during this range of dates. The From and To dates can be the same, and can be the current date.
    - Export to PDF: Select this option to generate a PDF version of the report that you can review in a PDF viewer.
    - Export to Excel: Select this option to generate the report in .XLSX format, which you can open in a spreadsheet application.
-  **Note**

You must select either Export to PDF or Export to Excel, or both.
- Email List: Optionally, enter one or more valid email addresses, separated by semicolons (;), to receive the report.

**Note**

If you select both Export to PDF and Export to Excel, each email recipient receives two separate emails, each with a version of the report attached.

**4. Click *Run Report*.**

**For more information:** See [Viewing generated reports](#).

**Language and formats:** The language, date, time, and number formats on the report are based on the organization's locale.

**Truncated data?** If the data in any column exceeds the allotted width, it is truncated. For example, if the customer's email address exceeds the allotted width of that column, any additional characters beyond that width are omitted. The specific number of characters that fit in each column varies because different characters have different widths: for example, a W is wider than an I.

**Contents:**

- Organization Name and report title
- *Report Criteria* heading:
  - [Order Type](#): If a specific order type was selected, this order type is listed; otherwise, the heading lists *All*.
  - [Order Status](#): If an order status of Canceled or Fulfilled was selected, this status listed; otherwise, the heading lists *All*.
  - Date Range: The range of dates entered at the [Run Reports](#) screen, or calculated based on the [Rolling Dates](#) selection at the [Run Reports](#) screen or the [Schedule Report](#) window.
- Orders are grouped by status. A status of Canceled or Fulfilled is listed above the group of orders. These are the only two statuses included on the report. For lines that are in the indicated status, and had a restricted status update:
  - [Request ID](#) assigned by Order Orchestration.
  - [Order Number](#) assigned by the originating system.
  - Line #:  
The order line number assigned by Order Orchestration.
  - Item:  
The code identifying the product in the default system for the organization.
  - Description:  
The description of the product.
  - Transaction Date:  
The date for the order transaction history record created when the status update was restricted.
  - Restricted Status:  
The status that was restricted from being applied to the order line.
  - Location:  
The code and description of the location that submitted the status update request. Truncated if the code and description exceed the available space.

– [Order Type](#):

Possible order types on the report are:

- \* *Delivery*: See [delivery order](#).
- \* *Pickup*: See [pickup order](#).
- \* *Ship For Pickup*: See [ship-for-pickup order](#)

*Count*: The total number of order lines listed on the report for each status.

The footer on each page of the report lists:

- the date and time when the report was generated
- the current page number and total number of pages (for example, *Page 1 of 6*)

The locale defined for the organization controls the formatting of the report.

 **Note**

If an order had multiple restricted status updates on the same date, it is included only once on the report for that date.

# 12

## Systems Menu

### Note

Screens indicated with an asterisk (\*) are available from the *Systems* dropdown menu but not from the *Systems* area of the home screen.

# View Active Schedules

**Purpose:** Use the **View Active Schedules** screen to:

- Review jobs that are currently scheduled to run, or that have existing history. Only jobs whose *Schedule Enabled* flag is selected at the [Schedule Jobs](#) screen, or that have existing job history that has not been purged, are displayed here.
- Start or reschedule all scheduled jobs and other scheduled programs such as imports, exports, and report generation. You might use the *Reschedule All* option to resolve an issue with scheduled jobs and programs. You also use this option at initial Order Orchestration configuration to start all jobs and tasks, or after applying an upgrade.

History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

*History icon always shown:* The history icon to review job history is available for all jobs listed on this screen, regardless of whether the Schedule Enabled flag at the Schedule Jobs screen is selected for the job. However, history is available for review only if the job has run at least once, and it has any history records that have not been purged.

**How to display this screen:** Select *View Active Schedules* from the [Systems Menu](#). The landing page does not have a shortcut to this screen.

**Note**

Only users with View Active Scheduled authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                                   | Procedure                                                                                                                                                                               |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>search for a scheduled job</b>        | Optionally, select a <a href="#">Job Name</a> , <a href="#">Organization</a> , and/or <a href="#">System</a> and click <i>Search</i> to display the scheduled job.                      |
| <b>select a scheduled job for review</b> | Highlight a scheduled job to open the <a href="#">Browse Active Schedules</a> window. This window displays the schedule interval and the related time or minutes for the scheduled job. |

**Note**

Searching by organization or system is supported only for jobs that are specific to an organization or system. See the [Job Name](#) field a summary description of each job.

| Option                                   | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>review history for a job</b>          | <p>Click the history icon (  ) in the <i>History</i> column for a record to open the related history screen:</p> <ul style="list-style-type: none"> <li>• <a href="#">Auto Cancel Unclaimed Pickup Orders History</a></li> <li>• <a href="#">Completed Order Private Data Purge</a></li> <li>• <a href="#">Daily Clean Up Job History</a></li> <li>• <a href="#">Email Notifications Job History</a></li> <li>• <a href="#">Fulfilled Inventory Export History</a></li> <li>• <a href="#">Generate Pickup Reminder Email History</a></li> <li>• <a href="#">Identity Cloud User Synchronization History</a></li> <li>• <a href="#">Incremental Imports History</a></li> <li>• <a href="#">Inventory Quantity Export History</a></li> <li>• <a href="#">Order Administration Status Recovery</a></li> <li>• <a href="#">Product Imports History</a></li> <li>• <a href="#">Sales Order Data Extract Job History</a></li> </ul> <p>Although you can advance to the related history, screen, no history is displayed if the job has not yet run, or if existing history records were purged.</p> |
| <b>reschedule all</b>                    | <p>Select <i>Reschedule All</i> to stop and restart all scheduled jobs and programs. You might use this option:</p> <ul style="list-style-type: none"> <li>• When you first configure Order Orchestration and need to enable all jobs and programs to run as scheduled.</li> <li>• After an upgrade is applied to Order Orchestration.</li> <li>• To correct an issue with scheduled jobs and programs.</li> </ul> <p>Only users with Reschedule All authority have this option.</p> <p><b>Which jobs and programs?</b> This option schedules, or stops and reschedules all of the jobs listed at this screen, plus:</p> <ul style="list-style-type: none"> <li>• Scheduled reports (<a href="#">Schedule Reports</a>).</li> <li>• In Process cleanup job (see <a href="#">Acknowledge Order Before Brokering</a> for background)</li> </ul>                                                                                                                                                                                                                                                                                                                                   |

**Note**

The Reschedule All option does not change the status of jobs that are in Paused status (  ). Order Orchestration automatically restarts these jobs after a brief pause.

| <b>Job Name</b> | <p>A job that is currently scheduled. Optionally, select a listed job and select <i>Search</i> to display the schedule information for that job. Jobs that can be scheduled and displayed here are:</p> <p><i>Auto Cancel Unclaimed Pickup Orders:</i> Cancels unclaimed pickup or ship-for-pickup orders based on the settings of the <a href="#">Auto Cancel Days of Unclaimed Pickup Orders</a> and <a href="#">Auto Cancel Days of Unclaimed Ship For Pickup Orders</a> at the <b>Preferences</b> screen. This job runs daily at a specified time. See <a href="#">Auto-Cancel Unclaimed Orders</a> for a discussion.</p> <p><i>Completed Order Private Data Purge:</i> Anonymizes customer data on sales orders that closed (fulfilled, canceled, unfulfillable, completed) and purchase orders that have been closed (shipped, complete, or canceled) and that are older than a specified number of days. See <a href="#">Completed Order Private Data Purge</a> for a discussion.</p> <p><i>Daily Clean Up:</i> Clears outdated information on a daily basis. See the <a href="#">Daily Clean Up</a> job for details. This job runs daily at a specified time.</p> <p><i>Email Notifications:</i> Generates email notifications to store locations, vendors, customers, retailers, or systems operations staff based on the unprocessed records that are currently in the EMAIL_NOTIFICATION table. This job runs at the specified minute interval: for example, generate email notifications every 5 minutes. See the <a href="#">Email Notifications</a> job for details.</p> <p><i>Fulfilled Quantity Export:</i> Generates a pipe-delimited file of recent order fulfillments, so the inventory system of record can use this information to update its own inventory based on activity in Order Orchestration. See the <a href="#">Fulfilled Inventory Export</a> job for details.</p> <p><i>Generate Pickup Ready Reminder Emails:</i> Generates pickup-ready reminder emails to customers whose pickup orders have not been picked up within the number of <i>Aged Hours</i> defined for the job. See the <a href="#">Generate Pickup Ready Reminder Emails</a> job for details.</p> <p><i>Identity Cloud Service Synchronization:</i> Creates users in Order Orchestration based on the data that has been set up in IDCS or OCI IAM. See the <a href="#">Identity Cloud User Synchronization</a> job for details.</p> <p><i>Incremental Inventory Import:</i> Uses the contents of a pipe-delimited import file to update product location records for the system. See the <a href="#">Incremental Inventory Import</a> job for details.</p> <p><i>Inventory Quantity Export:</i> Creates a pipe-delimited export file providing the current totals for products or product locations based on updates to product location quantities, including applying probable quantity or probability rules. Also, supports a web service to respond to requests for current inventory quantity changes based on probability rules. See the <a href="#">Inventory Quantity Export</a> job for details.</p> <p><i>Order Administration Status Recovery:</i> Sends status changes to Order Administration Cloud Service that occurred after a specified date entered within Order Orchestration Cloud Service. See the <a href="#">Order Administration Status Recovery</a> job for details.</p> <p><i>Product Import:</i> Imports and updates information that includes products, system products, product locations, locations, and product barcodes. See the <a href="#">Product Import</a> job for details.</p> <p><i>Sales Order Data Extract:</i> Creates export files containing data related to orders with any activity within a specified date range. See the <a href="#">Sales Order Data Extract</a> for details.</p> <p>Jobs that are not flagged as enabled at the <a href="#">Schedule Jobs</a> screen are not listed in the results here.</p> |

| Field                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization</b>    | See <a href="#">organization</a> . From the <i>Default Organization</i> defined through the <a href="#">Users</a> screen, but you can override it.<br><br>Filtering displayed jobs based on organization takes place only for the jobs that are associated with a specific organization: these are the Probable Quantity Export, Fulfilled Quantity Export, Product Import, Probable Quantity Export, and Incremental Inventory Import, and Sales Order Data Extract.                                     |
| <b>System</b>          | See <a href="#">system</a> . Optionally, select a system the drop down list in order to display jobs run for the selected system. If you first select an Organization, only systems associated with that organization are displayed.<br><br>Filtering jobs based on organization takes place only for the jobs that are associated with a specific system: these are the Probable Quantity Export, Fulfilled Quantity Export, Product Import, Probable Quantity Export, and Incremental Inventory Import. |
| <b>Results fields:</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Job Name</b>        | See the <a href="#">Job Name</a> , above, for information.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Organization</b>    | The <a href="#">organization</a> code is displayed only for jobs related to a specific organization: these are the Probable Quantity Export, Fulfilled Quantity Export, Product Import, Probable Quantity Export, and Incremental Inventory Import, and Sales Order Data Extract.                                                                                                                                                                                                                         |
| <b>System</b>          | The code identifying the <a href="#">system</a> associated with the scheduled job. The system code is displayed only for those jobs related to a specific system: these are the Probable Quantity Export, Fulfilled Quantity Export, Product Import, Probable Quantity Export, and Incremental Inventory Import.                                                                                                                                                                                          |
| <b>System Name</b>     | The name describing the system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Last Updated</b>    | The last date and time when the schedule was updated for the job, and the ID of the user who performed the update.                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Last Run</b>        | The last date and time when the job ran.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Next Run</b>        | The next date and time when the job is scheduled to run.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Field    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

# Auto Cancel Unclaimed Pickup Orders History

**Purpose:** Use the **Auto Cancel Unclaimed Pickup Orders History** screen to review the auto cancel unclaimed pickup orders jobs that have taken place or the one that is currently running, if any.

Used for the Routing Engine module.

**For more information:** See [Auto Cancel Unclaimed Pickup Orders](#) for an overview on the automatic cancellation process and background information.

**How to display this screen:** Click the history icon (  ) next to the Auto Cancel Unclaimed Pickup Orders entry for a system at the [View Active Schedules](#) screen.

**Note**

- Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *View Active Schedules* authority can display this screen. See [Roles](#) for more information.
- Available only if the [Auto Cancel Unclaimed Pickup Orders](#) schedule is currently enabled, or if there are any auto cancel unclaimed pickup order records that have not been purged.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

**Options at this screen**

| Option                                   | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search for an auto-cancel process</b> | Use the <a href="#">Job Number</a> , <a href="#">Start Date</a> , or <a href="#">Status</a> fields to restrict the displayed jobs to those that match your entries and click <i>Search</i> : <ul style="list-style-type: none"><li>• <i>Job Number</i> = Optionally, enter an job ID number to display this job only.</li><li>• <i>Start Date</i> = Optionally, enter a date to display jobs that took place on that date.</li><li>• <i>Status</i> = Optionally, select a status of:<ul style="list-style-type: none"><li>– <i>Error</i> to display a job that ended in error.</li><li>– <i>Running</i> to display a job that is currently running for the system.</li><li>– <i>Failed</i> to display jobs that included any records in error.</li><li>– <i>Success</i> to display jobs that completed without any errors.</li></ul></li></ul> |

**Note**

You cannot select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

**Understand general errors** If an error occurred for a process itself, it is displayed in the *Error* field.

| Error  | <p>Error message, if any. For example, a message is written when the job status is reset, for example: Running job status was reset by user SYSTEM on 11/28/2021 04:29 PM. Up to 255 positions.</p> <p>See <a href="#">Auto Cancel Unclaimed Pickup Orders</a> for background and troubleshooting information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## Browse Active Schedules

**Purpose:** Use the **Browse Active Schedules** window to review how frequently or at what time an active job is scheduled to run.

**How to display this window:** Highlight a schedule at the [View Active Schedules](#) screen.

### **Note**

Only users with View Active Schedules authority can display this window. See [Roles](#) for more information.

### Fields at this window

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Job Name</b>          | <p>The name of the active job. Available jobs are:</p> <p><i>Auto Cancel Unclaimed Pickup Orders:</i> Cancels unclaimed pickup or ship-for-pickup orders based on the settings of the <a href="#">Auto Cancel Days of Unclaimed Pickup Orders</a> and <a href="#">Auto Cancel Days of Unclaimed Ship For Pickup Orders</a> at the <b>Preferences</b> screen. This job runs daily at a specified time. See <a href="#">Auto-Cancel Unclaimed Orders</a> for a discussion.</p> <p><i>Completed Order Private Data Purge:</i> Anonymizes customer data on sales orders that closed (fulfilled, canceled, unfulfillable, completed) and purchase orders that have been closed (shipped, complete, or canceled) and that are older than a specified number of days. See <a href="#">Schedule Jobs</a> for a discussion.</p> <p><i>Daily Clean Up:</i> Clears outdated information on a daily basis. See the <i>Daily Clean Up</i> job for details. This job runs daily at a specified time.</p> <p><i>Email Notifications:</i> Generates email notifications to store locations, vendors, customers, retailers, or systems operations staff based on the unprocessed records that are currently in the EMAIL_NOTIFICATION table. This job runs at the specified minute interval: for example, generate email notifications every 5 minutes. See the <i>Email Notifications</i> job for details.</p> <p><i>Fulfilled Quantity Export:</i> Generates a pipe-delimited file of recent order fulfillments, so the inventory system of record can use this information to update its own inventory based on activity in Order Orchestration. See the <i>Fulfilled Inventory Export</i> job for details.</p> <p><i>Identity Cloud Service Synchronization:</i> Creates users in Order Orchestration based on the data that has been set up in IDCS or OCI IAM. See the <i>Identity Cloud User Synchronization</i> job for details.</p> <p><i>Incremental Inventory Import:</i> Uses the contents of a pipe-delimited import file to update product location records for the system. See the <i>Incremental Inventory Import</i> job for details.</p> <p><i>Probable Quantity Export:</i> Creates a pipe-delimited export file providing the current totals for products or product locations based on updates to product location quantities, including applying probable quantity rules. See the <a href="#">Inventory Quantity Export</a> job for details.</p> <p><i>Product Import:</i> Imports and updates information that includes products, system products, product locations, locations, and product barcodes. See the <a href="#">Product Import</a> job for details.</p> <p><i>Sales Order Data Extract:</i> Creates export files containing data related to orders with any activity within a specified date range. See the <a href="#">Sales Order Data Extract</a> for details.</p> |

| <b>Minutes</b>           | If the Schedule Interval is <i>Minutes</i> , this is the number of minutes the system waits between triggering the job to run. Otherwise, not displayed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Day of Week</b>       | If the Schedule Interval is <i>Weekly</i> , this is the day of the week when the job is scheduled to run. Otherwise, not displayed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Field | Description                                                                                                            |
|-------|------------------------------------------------------------------------------------------------------------------------|
| Time  | If the Schedule Interval is <i>Daily</i> or <i>Weekly</i> , this is the time of day when the job runs (24-hour clock). |

**Scroll up or down:** Click the next arrow () to display the next active schedule, if any.

Similarly, click the previous arrow () to display the previous active schedule, if any.

## Completed Order Private Data Purge History

**Purpose:** Use the **Completed Order Private Data Purge History** screen to review the completed order data purge jobs that have taken place or the one that is currently running, if any.

**For more information:** See [Completed Order Private Data Purge](#) for an overview on the email notifications process and background information.

**How to display this screen:** Click the history icon () next to the Completed Order Private Data Purge entry at the [View Active Schedules](#) screen.

 **Note**

- Only users with *View Active Schedules* authority can display this screen. See [Roles](#) for more information.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

| <b>Search fields</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Job Number</b>    | A unique ID number assigned by Order Orchestration to identify a job.<br><b>Note:</b> A job is associated with a single job number, regardless of whether Order Orchestration breaks it out into multiple batches for processing.                                                                                                                                                                                                                                                       |
| <b>Start Date</b>    | The date and time when the job started.                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Status</b>        | Optionally, select a status from the drop down list and click <i>Search</i> to display jobs that are currently in that status. Possible statuses are: <ul style="list-style-type: none"><li>Error (✖): The entire job failed.</li><li>Rejected (🚫): The job was rejected because another instance of the job was in process.</li><li>Running (🏃): The job is currently running.</li><li>Success (✅): The job ran successfully, even if one or more individual records failed.</li></ul> |

#### Note

You can select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running, and then Order Orchestration restarts it automatically.

## Daily Clean Up Job History

**Purpose:** Use the **Daily Clean Up Job History** screen to review the daily cleanup jobs that have taken place or the one that is currently running, if any.

**For more information:** See [Daily Cleanup](#) for an overview on the email notifications process and background information.

**How to display this screen:** Click the history icon (📄) next to the Daily Clean Up entry at the [View Active Schedules](#) screen.

### **Note**

- Only users with *View Active Schedules* authority can display this screen. See [Roles](#) for more information.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

### Options at this screen

| Option                                    | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search for a daily cleanup process</b> | <p>Use the <a href="#">Job Number</a>, <a href="#">Start Date</a>, or <a href="#">Status</a> fields to restrict the displayed jobs to those that match your entries and click <i>Search</i>:</p> <ul style="list-style-type: none"> <li>• <i>Job Number</i> = Optionally, enter a job ID number to display this job only.</li> <li>• <i>Start Date</i> = Optionally, enter a date to display jobs that took place on that date.</li> <li>• <i>Status</i> = Optionally, select a status of: <ul style="list-style-type: none"> <li>– <i>Error</i> to display a job that ended in error.</li> <li>– <i>Running</i> to display a job that is currently running for the system.</li> <li>– <i>Failed</i> to display jobs that included any records in error.</li> <li>– <i>Success</i> to display jobs that completed without any errors.</li> </ul> </li> </ul> |

**Note**

You cannot select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

|                                  |                                                                                       |
|----------------------------------|---------------------------------------------------------------------------------------|
| <b>Understand general errors</b> | If an error occurred for a process itself, it is displayed in the <i>Error</i> field. |

| <b>Start Date</b>    | The date and time when the job started.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Status</b>        | <p>Optionally, select a status from the drop down list and click <i>Search</i> to display jobs that are currently in that status. Possible statuses are:</p> <ul style="list-style-type: none"> <li>• Error (✗): The entire job failed.</li> <li>• Rejected (⚠): The job was rejected because another instance of the job was already running.</li> <li>• Running (🔄): The job is currently running.</li> <li>• Success (✓): The job ran successfully, even if one or more individual records failed.</li> </ul> |

**Note**

You can select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running, and then Order Orchestration restarts it automatically.

**Results fields:**

| Field               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Job Number</b>   | A unique ID number assigned by Order Orchestration to identify a job.<br><b>Note:</b> A job is associated with a single job number, regardless of whether Order Orchestration breaks it out into multiple batches for processing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Start Date</b>   | The date and time when the job started.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>End Date</b>     | The date and time when the job ended.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Duration</b>     | The amount of time it took for the job to run. HH:MM:SS format, but displayed in MM:SS format if the job took less than an hour.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Submitted By</b> | Indicates how the job was submitted. Set to the user ID of the user who submitted the job, set to SYSTEM if it ran as scheduled, or set to the client ID used to authenticate the <a href="#">run job API</a> request message.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Status</b>       | Indicates the result of the job: <ul style="list-style-type: none"> <li>A green check(✓) indicates that the job was successful, even if one or more individual records failed.</li> </ul> <div data-bbox="722 793 839 829" data-label="Section-Header"><b>Note</b></div> <div data-bbox="761 844 1442 909" data-label="Text"> <p>The green check is also displayed if there were no records to process.</p> </div> <ul style="list-style-type: none"> <li>A red X (✗) indicates that an error occurred and the job failed.</li> <li>A yellow triangle (⚠) indicates that the job was rejected because another instance of the job was already running.</li> <li>A running man (🏃) indicates that the job is currently running.</li> <li>A pause icon (⏸) indicates that the job has paused briefly while it switches to another server to finish running. This status might be displayed only briefly.</li> </ul> |
| <b>Error</b>        | Error message, if any. For example, a message is written when the job status is reset, for example: Running job status was reset by user SYSTEM on 11/28/2021 04:29 PM. Up to 255 positions. See <a href="#">Email Notifications</a> for background and troubleshooting information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Email Notifications Job History

**Purpose:** Use the **Email Notifications Job History** screen to review the email notifications jobs that have taken place or the one that is currently running, if any.

Used for the Routing Engine module.

**For more information:** See [Email Notifications](#) for an overview on the email notifications process and background information.

**How to display this screen:** Click the history icon (📄) next to the Email Notifications entry at the [View Active Schedules](#) screen.

**Note**

- Only users with *View Active Schedules* authority can display this screen. See [Roles](#) for more information.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

**Options at this screen**

| Option                                           | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search for an email notifications process</b> | <p>Use the <a href="#">Job Number</a>, <a href="#">Start Date</a>, or <a href="#">Status</a> fields to restrict the displayed jobs to those that match your entries and click <i>Search</i>:</p> <ul style="list-style-type: none"><li>• <i>Job Number</i> = Optionally, enter an job ID number to display this job only.</li><li>• <i>Start Date</i> = Optionally, enter a date to display jobs that took place on that date.</li><li>• <i>Status</i> = Optionally, select a status of:<ul style="list-style-type: none"><li>– <i>Error</i> to display a job that ended in error.</li><li>– <i>Running</i> to display a job that is currently running for the system.</li><li>– <i>Failed</i> to display jobs that included any records in error.</li><li>– <i>Success</i> to display jobs that completed without any errors.</li></ul></li></ul> |

**Note**

You cannot select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

**Understand general errors**

If an error occurred for a process itself, it is displayed in the *Error* field.

**Fields on this screen**

| Field                | Description                                                                                                                                                                                                                                  |

Up to 255 positions.</p> <p>See <a href="#">Email Notifications</a> for background and troubleshooting information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

# Identity Cloud User Synchronization History

**Purpose:** Use **Identity Cloud User Synchronization History** screen to review the identity cloud user synchronization jobs that have taken place or are currently running. The screen displays up to 50 records.

**For more information:** See [Identity Cloud User Synchronization](#) for an overview on the identity cloud user synchronization job and background information.

**How to display this screen:** Click the history icon (  ) next to an Identity Cloud User Synchronization job at the [View Active Schedules](#) screen.

## Options at this screen

**Note**

- Only users with *View Active Scheduled* authority can display this screen. See [Roles](#) for more information.
- Available only if there are any identity cloud service synchronization records that have not been purged.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

| Option                           | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Search for a synchronization job | <p>Use the <a href="#">Job Number</a>, <a href="#">Start Date</a>, or <a href="#">Status</a> fields to restrict the displayed synchronization jobs to those that match your entries and click <i>Search</i>:</p> <ul style="list-style-type: none"><li>• <i>Job Number</i> = Optionally, enter an job ID number to display this synchronization job only.</li><li>• <i>Start Date</i> = Optionally, enter a date to display synchronization jobs that took place on that date.</li><li>• <i>Status</i> = Optionally, select a status of:<ul style="list-style-type: none"><li>– <i>Error</i> to display a synchronization job that ended in error.</li><li>– <i>Running</i> to display a synchronization job that is currently running for the system.</li><li>– <i>Rejected</i> because another instance of the job was already running.</li><li>– <i>Failed</i> to display synchronization jobs that included any records in error.</li><li>– <i>Success</i> to display synchronization jobs that completed without any errors.</li></ul></li></ul> |
| Understand general errors        | <p>If an error occurred for a synchronization job itself, it is displayed in the <i>Error</i> field.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

**Note**

You cannot select a status of *Paused*; however, a job stays in this status only briefly when it switches to another server to complete running.

## Fields on this screen

| Field                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Inventory Records | The total number of records in the synchronization.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Inventory Errors  | The total number of records that failed to synchronize. See <a href="#">Identity Cloud User Synchronization</a> for background and troubleshooting information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Incremental Imports History

**Purpose:** Use **Incremental Imports History** screen to review the incremental inventory imports that have taken place or are currently running.

Used for the Routing Engine module.

**For more information:** See [Incremental Inventory Import](#) for an overview on the incremental inventory import process and background information.

**How to display this screen:** Click the history icon (📄) next to an Incremental Inventory Import entry for a system at the [View Active Schedules](#) screen.

**Note**

- Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *View Active Scheduled* authority can display this screen. See [Roles](#) for more information.
- Available only if the [Incremental Inventory Import](#) is currently enabled, or if there are any incremental inventory import records that have not been purged.
- If the **Incremental Imports History** screen was already open in another tab when you clicked the history icon, you advance to this screen with the incremental imports history of the previously-selected organization and system displayed.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

**Options at this screen**

| Option                              | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search for an import process</b> | <p>Use the <a href="#">Job Number</a>, <a href="#">Start Date</a>, or <a href="#">Status</a> fields to restrict the displayed imports to those that match your entries and click <i>Search</i>:</p> <ul style="list-style-type: none"><li>• <i>Job Number</i> = Optionally, enter an job ID number to display this import process only.</li><li>• <i>Start Date</i> = Optionally, enter a date to display imports that took place on that date.</li><li>• <i>Status</i> = Optionally, select a status of:<ul style="list-style-type: none"><li>– <i>Error</i> to display an import process that ended in error.</li><li>– <i>Running</i> to display an import process that is currently running for the system.</li><li>– <i>Failed</i> to display import processes that included any records in error.</li><li>– <i>Rejected</i> to display import processes that were rejected because another import process, or a conflicting job, was running.</li><li>– <i>Success</i> to display import processes that completed without any errors.</li></ul></li></ul> |

**Note**

You cannot select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

|                                  |                                                                                               |
|----------------------------------|-----------------------------------------------------------------------------------------------|
| <b>Understand general errors</b> | If an error occurred for an import process itself, it is displayed in the <i>Error</i> field. |
|----------------------------------|-----------------------------------------------------------------------------------------------|

**Fields on this screen**

| Field               | Description                                                                                                                                                                                                          |

## Inventory Quantity Export History

**Purpose:** Use the **Inventory Quantity Export History** screen to review the inventory quantity exports that have taken place or are currently running.

Used for the Routing Engine module.

**For more information:** See [Fulfilled Inventory Quantity Export](#) for an overview on the inventory quantity export process and background information.

**How to display this screen:** Click the history icon (🕒) next to the Inventory Quantity Export entry for a system at the [View Active Schedules](#) screen.

**Note**

- Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *View Active Schedules* authority can display this screen. See [Roles](#) for more information.
- Available only if the [Fulfilled Inventory Quantity Export](#) is currently enabled, or if there are any inventory quantity export records that have not been purged.
- If the **Inventory Quantity Export History** screen was already open in another tab when you clicked the history icon, you advance to this screen with the inventory quantity export history of the previously-selected organization and system displayed.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

**Options at this screen**

| Option                              | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search for an export process</b> | <p>Use the <a href="#">Job Number</a>, <a href="#">Start Date</a>, or <a href="#">Status</a> fields to restrict the displayed exports to those that match your entries and click <i>Search</i>:</p> <ul style="list-style-type: none"> <li>• <i>Job Number</i> = Optionally, enter an job ID number to display this export process only.</li> <li>• <i>Start Date</i> = Optionally, enter a date to display exports that took place on that date.</li> <li>• <i>Status</i> = Optionally, select a status of: <ul style="list-style-type: none"> <li>– <i>Error</i> to display an export process that ended in error.</li> <li>– <i>Running</i> to display an export process that is currently running for the system.</li> <li>– <i>Failed</i> to display export processes that included any records in error.</li> <li>– <i>Rejected</i> to display export processes that were rejected because the job, or a conflicting job, was already running.</li> <li>– <i>Success</i> to display export processes that completed without any errors.</li> </ul> </li> </ul> |

**Note**

You can select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

|                                  |                                                                                               |
|----------------------------------|-----------------------------------------------------------------------------------------------|
| <b>Understand general errors</b> | If an error occurred for an export process itself, it is displayed in the <i>Error</i> field. |
|----------------------------------|-----------------------------------------------------------------------------------------------|

## Sales Order Data Extract Job History

**Purpose:** Use the **Sales Order Data Extract Job History** screen to review summary information on the sales order data extracts that have taken place for an organization.

Used for the Routing Engine module.

**How to display this screen:** Click the history icon (📄) for an organization at the [View Active Schedules](#) screen.

 **Note**

- Only users with *View Active Scheduled* authority can display this screen. See [Roles](#) for more information.
- Available only if the [Sales Order Data Extract](#) is currently enabled, or if there are any data extract records that have not been purged.
- If the **Sales Order Data Extract Job History** screen was already open in another tab when you clicked the history icon, you advance to this screen with the order data extract history of the previously-selected organization displayed.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

**Maximum number of orders:** The extract fails if the total number of orders to extract exceeds 500,000. If this occurs, use the Extract Orders with Activity From and To at the [Schedule Jobs](#) screen to run the extract for smaller segments by specifying date ranges to include each time, rather than including all orders.

**For more information:** See the [Sales Order Data Extract](#) for information on generating the extract, and see [Sales Order Data Extract Files](#) for information on the data included in the extract files.

|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search for an extract process</b> | <p>Use the <a href="#">Job Number</a>, <a href="#">Start Date</a>, or <a href="#">Status</a> fields to restrict the displayed extract to those that match your entries and click <i>Search</i>:</p> <ul style="list-style-type: none"><li>• <a href="#">Job Number</a> = Optionally, enter an extract job number to display this extract process only.</li><li>• <a href="#">Start Date</a> = Optionally, enter a date to display extracts that started on that date.</li><li>• <a href="#">Status</a> = Optionally, select a status of:<ul style="list-style-type: none"><li>– <i>Error</i> to display an extract process that ended in error.</li><li>– <i>Rejected</i> if the submitted export was rejected due to a conflict with another instance of the job that was already running.</li><li>– <i>Running</i> to display an extract process that is currently running for the organization.</li><li>– <i>Failed</i> to display extract processes that included any records in error.</li><li>– <i>Success</i> to display extract processes that completed without any errors.</li></ul></li></ul> |

 **Note**

You cannot select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

**Understand general errors**

If an error occurred for an extract process itself, it is displayed in the *Error* field. This might occur if, for example, the number of orders to extract exceeded the limit of 500,000.

| <b>Error</b>         | The error that occurred, if any.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Order Records</b> | The total number of order records included in the export process. This total can include both sales orders and purchase orders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Product Imports History

**Purpose:** Use the **Product Imports History** screen to review summary information on the product, product location, location, and UPC imports that have taken place for a system. See [Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#) for an overview of the import process.

Used for the Routing Engine module.

**How to display this screen:** Click the history icon () next to a Product Import entry for a system at the [View Active Schedules](#) screen.

### **Note**

- Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *View Active Scheduled* authority can display this screen. See [Roles](#) for more information.
- Available only if the [Product Import](#) is currently enabled, or if there are any product import records that have not been purged.
- If the **Product Imports History** screen was already open in another tab when you clicked the history icon, you advance to this screen with the product imports history of the previously-selected organization and system displayed.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

Reviewing import errors:

- *Reports:* Use the [Location Import Errors Report](#), [Product Import Errors Report](#), and [Product Barcode Import Errors Report](#) to review any errors that occurred related to location, product, or barcode imports.
- *Error files:* Errors related to product location imports are tracked in an import error flat file that is available through the file storage API. See [Product Location Import Error Files](#) for more information.

 **Note**

Some errors that can occur from the data in the import file are not written to the related import database table, so in that case the error is noted only in the error file or record, and not on the related report, for example: an invalid number of columns in the import file, a numeric field that contains alphabetical data, or a date that is not formatted correctly.

Options at this screen

| Option                              | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search for an import process</b> | <p>Use the <a href="#">Job Number</a>, <a href="#">Start Date</a>, or <a href="#">Status</a> fields to restrict the displayed imports to those that match your entries and click <i>Search</i>:</p> <ul style="list-style-type: none"><li>• <a href="#">Job Number</a> = Optionally, enter an import ID number to display this import process only.</li><li>• <a href="#">Start Date</a> = Optionally, enter a date to display imports that took place on that date.</li><li>• <a href="#">Status</a> = Optionally, select a status of:<ul style="list-style-type: none"><li>– <i>Error</i> to display an import process that ended in error.</li><li>– <i>Rejected</i> to display an import process that was rejected because another instance of the same job, or of a conflicting job, was in process.</li><li>– <i>Running</i> to display an import process that is currently running for the system.</li><li>– <i>Failed</i> to display import processes that included any records in error.</li><li>– <i>Success</i> to display import processes that completed without any errors.</li></ul></li></ul> |

 **Note**

You cannot select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

| <b>UPC Records</b>       | <p>Top row: The total number of product UPC barcode records included in the import process, including any records that were in error.</p> <p>Bottom row: The total number of product UPC barcode import records that were in error. If there were any errors, you can use the <a href="#">Product Barcode Import Errors Report</a> to review them.</p>                                                                                                                                                                   |
| <b>Image Records</b>     | <p>Top row: The total number of product image records included in the import process, including any records that were in error. Product images are displayed in Store Connect.</p> <p>Bottom row: The total number of product image import records that were in error. A product import image record could be in error because the URL for the image was not formatted correctly.</p> <p>See <a href="#">Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database</a> for an overview.</p> |

## View Job History

**Purpose:** Use the **View Job History** screen to review jobs that have run.

*History icon always shown:* The history icon to review job history is available for all jobs listed on this screen, regardless of whether the Schedule Enabled flag at the Schedule Jobs screen is selected for the job. However, history is available for review only if the job has run at least once, and it has any history records that have not been purged.

The screen displays up to 100 job history records in reverse chronological order (newest to oldest). If necessary, use the search fields at the top of the screen to restrict the displayed job history records.

**How to display this screen:** Select *View Job History* from the [Systems Menu](#). The landing page does not have a shortcut to this screen.

### Note

Only users with View Job History authority can display this screen. See [Roles](#) for more information.

**History screens for individual jobs:** You can also use the history icon (  ) at the [View Active Schedules](#) screen to advance to a screen displaying all unpurged history records for the selected job. See that screen for more information.

History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

**Options at this screen**

| Option                                 | Procedure                                                                                                                                                                          |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>search for a job history record</b> | Optionally, select a <i>Job Name</i> , <i>Organization</i> , and/or <i>System</i> , <i>Start Date</i> , or <i>End Date</i> , and click <i>Search</i> to display the scheduled job. |

 **Note**

Searching by organization or system is supported only for jobs that are specific to an organization or system. See the *Job Name* field a summary description of each job.

|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Job Name</b> | <p>A job that has run at least once, and not all history has been purged. Optionally, select a listed job and select <i>Search</i> to display the history records for that job. Jobs that can be displayed here are:</p> <p><i>Auto Cancel Unclaimed Pickup Orders</i>: Cancels unclaimed pickup or ship-for-pickup orders based on the settings of the <a href="#">Auto Cancel Days of Unclaimed Pickup Orders</a> and <a href="#">Auto Cancel Days of Unclaimed Ship For Pickup Orders</a> at the <b>Preferences</b> screen. This job runs daily at a specified time. See <a href="#">Auto-Cancel Unclaimed Orders</a> for a discussion.</p> <p><i>Completed Order Private Data Purge</i>: Anonymizes customer data on sales orders that closed (fulfilled, canceled, unfulfillable, completed) and purchase orders that have been closed (shipped, complete, or canceled) and that are older than a specified number of days. See <a href="#">Completed Order Private Data Purge</a> for a discussion.</p> <p><i>Daily Clean Up</i>: Clears outdated information on a daily basis. See the <a href="#">Daily Clean Up</a> job for details. This job runs daily at a specified time.</p> <p><i>Email Notifications</i>: Generates email notifications to store locations, vendors, customers, retailers, or systems operations staff based on the unprocessed records that are currently in the EMAIL_NOTIFICATION table. This job runs at the specified minute interval: for example, generate email notifications every 5 minutes. See the <a href="#">Email Notifications</a> job for details.</p> <p><i>Fulfilled Quantity Export</i>: Generates a pipe-delimited file of recent order fulfillments, so the inventory system of record can use this information to update its own inventory based on activity in Order Orchestration. See the <a href="#">Fulfilled Inventory Export</a> job for details.</p> <p><i>Generate Pickup Ready Reminder Emails</i>: Generates pickup-ready reminder emails to customers whose pickup orders have not been picked up within the number of <i>Aged Hours</i> defined for the job. See the <a href="#">Generate Pickup Ready Reminder Emails</a> job for details.</p> <p><i>Identity Cloud Service Synchronization</i>: Creates users in Order Orchestration based on the data that has been set up in IDCS or OCI IAM. See the <a href="#">Identity Cloud User Synchronization</a> job for details.</p> <p><i>Incremental Inventory Import</i>: Uses the contents of a pipe-delimited import file to update product location records for the system. See the <a href="#">Incremental Inventory Import</a> job for details.</p> <p><i>Inventory Quantity Export</i>: Creates a pipe-delimited export file providing the current totals for products or product locations based on updates to product location quantities, including applying probable quantity or probability rules. Also, supports a web service to respond to requests for current inventory quantity changes based on probability rules. See the <a href="#">Inventory Quantity Export</a> job for details.</p> <p><i>Order Administration Status Recovery</i>: Sends status changes to Order Administration Cloud Service that occurred after a specified date entered within Order Orchestration Cloud Service. See the <a href="#">Order Administration Status Recovery</a> job for details.</p> <p><i>Product Import</i>: Imports and updates information that includes products, system products, product locations, locations, and product barcodes. See the <a href="#">Product Import</a> job for details.</p> <p><i>Sales Order Data Extract</i>: Creates export files containing data related to orders with any activity within a specified date range. See the <a href="#">Sales Order Data Extract</a> for details.</p> <p>Jobs that are not flagged as enabled at the <a href="#">Schedule Jobs</a> screen are not listed in the results here.</p> |

| Field                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization</b>    | See <a href="#">organization</a> . From the <i>Default Organization</i> defined through the <a href="#">Users</a> screen, but you can override it.<br><br>Filtering displayed jobs based on organization takes place only for the jobs that are associated with a specific organization: these are the Probable Quantity Export, Fulfilled Quantity Export, Order Administration Status Recovery, Product Import, Probable Quantity Export, and Incremental Inventory Import, and Sales Order Data Extract.                                     |

If you first select an Organization, only systems associated with that organization are displayed.<br><br>Filtering jobs based on organization takes place only for the jobs that are associated with a specific system: these are the Probable Quantity Export, Fulfilled Quantity Export, Order Administration Status Recovery, Product Import, Probable Quantity Export, and Incremental Inventory Import. |
| <b>Start Date</b>      | The date and time when the job started.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>End Date</b>        | The date and time when the job ended.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Results fields:</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Job Name</b>        | See the <i>Job Name</i> , above, for information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Job Number</b>      | A unique ID number assigned by Order Orchestration to identify a job.<br><b>Note:</b> A job is associated with a single job number, regardless of whether Order Orchestration breaks it out into multiple batches for processing.                                                                                                                                                                                                                                                                                                               |
| <b>Organization</b>    | The <a href="#">organization</a> code is displayed only for jobs related to a specific organization: these are the Probable Quantity Export, Fulfilled Quantity Export, Order Administration Status Recovery, Product Import, Probable Quantity Export, and Incremental Inventory Import, and Sales Order Data Extract.                                                                                                                                                                                                                         |
| <b>System</b>          | The code identifying the <a href="#">system</a> associated with the scheduled job. The system code is displayed only for those jobs related to a specific system: these are the Probable Quantity Export, Fulfilled Quantity Export, Order Administration Status Recovery, Product Import, Probable Quantity Export, and Incremental Inventory Import.                                                                                                                                                                                          |
| <b>System Name</b>     | The name describing the system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Start Date</b>      | The date and time when the job started.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>End Date</b>        | The date and time when the job ended.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Duration</b>        | The number of minutes and seconds it took the job to run, in MM:SS format. Displayed only for the Incremental Inventory Import, Product Import, and Sales Order Extract.                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Submitted By</b>    | Indicates how the job was submitted. This could be the ID of the user who submitted or scheduled the process, or the client ID used to authenticate the <a href="#">run job API</a> request message.<br><br>SYSTEM is displayed as the user ID if the job ran successfully through a schedule; however, if a scheduled job was rejected, the ID of the user who scheduled the job is displayed.                                                                                                                                                 |

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>Status</b>            | <p>Indicates the result of the most recent import process:</p> <ul style="list-style-type: none"> <li>A green check (✓) indicates that no errors occurred.</li> </ul> <div style="border: 1px solid #ccc; padding: 10px; margin: 10px 0;"> <p><b>Note</b></p> <p>The green check is also displayed if there were no records to import.</p> </div> <ul style="list-style-type: none"> <li>A red X (✗) indicates that an error occurred for at least one record in the import.</li> <li>A yellow triangle (⚠) indicates that the import was rejected because another instance of the same job, or of a conflicting job, was in process.</li> <li>A running man (🏃) indicates that the import is currently running.</li> <li>A pause icon (⏸) indicates that the job has paused briefly while it switches to another server to finish running.</li> </ul> <p>This field is blank if you have not yet run the import process for the system, or if the job is anything other than the Incremental Inventory Import, Product Import, Inventory Quantity Export, or Sales Order Data Extract.</p> |
| <b>Status Start Date</b> | Displays Status Start Date entered when the Order Administration Status Recovery job was run.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

## Schedule Jobs

**Purpose:** Use the **Schedule Jobs** screen to work with scheduled jobs.

**Displaying the jobs available to schedule:** Use the folders on the left-hand pane to display the related jobs available for scheduling:

- Data Hygiene folder:* Includes the [Completed Order Private Data Purge](#) and the [Daily Clean up](#) job.
- Exports folder:* Includes the [Fulfilled Inventory Export](#), [Inventory Quantity Export](#), and [Sales Order Data Extract](#) jobs.
- Imports folder:* Includes the [Identity Cloud User Synchronization](#), [Incremental Inventory Import](#), and [Product Import](#) jobs.
- Orders folder:* Includes the [Auto Cancel Unclaimed Pickup Orders](#) job, the [Email Notifications](#) Job and the [Generate Pickup Ready Reminder Emails](#) Job

Highlight a job in the left-hand pane to display schedule information and options in the right-hand area.

See each job below for more information.

**Resolving scheduling issues:** The Reschedule All option at the [View Active Schedules](#) screen stops and restarts the schedules for all jobs in the case of an unexpected interruption. Also, you use this option to start running all scheduled jobs and programs when first configuring Order Orchestration, or after an upgrade is applied.

Note that the Reschedule All option does not restart jobs that are in Paused status () . Jobs stay in Paused status only briefly before Order Orchestration restarts them automatically.

 **Note**

Do not attempt to schedule jobs before creating systems.

**Dates and times:** The dates and times are based on the [retailer's time](#), which may be different from your local time zone. As a result, you need to calculate the difference between your local time and the system time to have the scheduled import take place at the desired time.

**Job notifications:** If the [Event Notifications](#) settings are configured at the Event Logging screen, a job notification message is generated each time one of the scheduled jobs runs. See [Event Notifications](#) settings and the Job Notification Messages appendix of the Web Services Guide on My Oracle Support (2953017.1) for more information.

**Status email:** If a job for a specific system is rejected because a conflicting job was already running, Order Orchestration generates a status email to the Administrative Email specified at the [Event Logging](#) screen, indicating:

- System Code: The system submitting the job.
- Blocking System Code: The system that submitted the job that blocked the job.
- Date/Time File Rejected
- Run By: The user ID of the person who submitted the job, or set to SYSTEM if the job was scheduled.

**Which jobs conflict?** You cannot run any of the following jobs at the same time:

- [Inventory Quantity Export](#)
- [Incremental Inventory Import](#)
- [Product Import](#)

**Run Job API:** You can also use the Run Job API to submit a job, as an alternative to submitting the job on demand or scheduling it at this screen. See the Web Services Guide on My Oracle Support (2953017.1) for background.

#### Fields at this Screen

**How to display this screen:** Select Schedule Jobs from the [Systems Menu](#). The landing page does not have a shortcut to this screen.

#### Note

Only users with Schedule Jobs authority can display this screen. See [Roles](#) for more information.

### Completed Order Private Data Purge

The Completed Order Private Data Purge job in the Data Hygiene folder anonymizes customer data on sales orders that closed (fulfilled, canceled, unfulfillable, completed) and purchase orders that have been closed (shipped, complete, or canceled) and that are older than the number of days specified in the Days Old field.

The Completed Order Private Data Purge job in the Data Hygiene folder anonymizes customer data on sales orders that closed (fulfilled, canceled, unfulfillable, completed) and purchase orders that have been closed (shipped, complete, or canceled) and that are older than the number of days specified in the Days Old field.

If the same external order number is assigned to multiple sales or purchase orders, each purchase order is purged only if it is closed and is older than the retention days. For example, order number 12345 is assigned to two purchase orders created on February 1 and another was created on February 6. If the current date is February 15 and the retention days is set to 10, then the third purchase order cannot yet be purged.

The order's age is calculated based on the CREATE\_TIMESTAMP from the XOM\_ORDER table or the CREATED\_DATE from the PO\_HEADER table. This is the date and time when Order Orchestration created the sales order or purchase order, which might be different from when the order was created in the originating system.

**About anonymization:** When the customer data is anonymized, all information is replaced with asterisks. Anonymized data cannot be recovered. Data that is anonymized includes sold-to and ship-to customer names, address, email addresses, and phone numbers for sales orders and purchase orders. Even if a field, such as one of the address lines, did not previously contain data, the purge populates the field with asterisks. See [Anonymizing Data](#) for a discussion.

A Transaction Note is written for each order line: Private Data Anonymized.

### Scheduling the Completed Order Data Purge

- Select the [Day of Week](#) when the job should run.
- Enter the [Time](#) when the job should run in 24-hour format (HH:MM).
- Enter the Days Old an order or purchase order must be to be eligible for anonymization.
- Select [Schedule Enabled](#).

- Select Save.
- Select Cancel to exit the screen.

Optionally, select [Run Now](#) to run the job immediately.

Orders across all organizations are anonymized.

### Completed Order Data Purge Fields

- [Schedule Enabled](#)
- [Schedule Interval](#): Set to Weekly. Display-only.
- [Day of Week](#)
- [Time](#)
- **Days Old**: The number of days old a completed order must be to be eligible for purge.
- [Run Now](#)
- [Last Updated](#)
- [Last Run](#)
- [Next Run](#)

**History**: Use the [Completed Order Private Data Purge History](#) screen to review completed order data purge jobs that have run.

For more information: See the Web Services Guide on My Oracle Support (2953017.1) for information on web service requests that support inquiring on private data and requesting to anonymize it.

### Daily Clean Up

The Daily Clean Up job in the Daily Hygiene folder clears outdated information, including:

- Pack slip records generated through the Vendor Portal, after the number of days specified in the Pack Slip Files field under Retention Settings at the Tenant-Admin screen.
- Reports, after the number of days specified in the File Storage field under Retention Settings at the Tenant-Admin screen.
- File storage records, after the number of days specified in the File Storage field under Retention Settings at the Tenant-Admin screen.
- Pack slip records generated through Store Connect, after one day.
- Shipping label records generated for integrated shipping with ADSI, in either the Vendor Portal or Store Connect, after one day.
- Email notification records, after three days.
- Product import error files and part files, after the number of days specified in the Product Import Error Files field under Retention Settings at the Tenant-Admin screen, if Cloud Storage is used.
- Records in the RICS\_LOG table of messages between Order Orchestration and Oracle Retail Integration Cloud Service (RICS), based on the number of days specified in the RICS Log History field under Retention Settings at the **Tenant-Admin** screen. See [Order Fulfillment through RICS Integration](#) for background.

RICS log records whose Retry Status is Failed are not eligible to be purged.

- Job history records which are older than the Job History setting at the [Tenant-Admin](#) screen. See the [View Job History](#) screen to review job history.

- Audit records for audited tables that have exceeded the audit retention days specified in the CTL\_APP\_CONFIG table in the database. The retention days is set 183 days (6 months) by default, and is not displayed on any screen. The audited tables include Preferences, Preference Overrides, Drop Ship Preferences, Job Schedule, System, and Web Service Users. Contact your Oracle support representative if the retention setting needs to be changed.
- Shopping logic trace records shopping logic trace records for closed, completed, canceled, and unfulfillable orders, when the records are older than the number of days specified in the Trace Log History field under Retention Settings at the Tenant-Admin screen. screen, if shopping logic tracing is enabled; see [Trace Shopping Log](#) for background.
- Records in the XOM\_ITEM\_DUPLICATE table that are older than 180 days. This table contains a record for each order line that was not created in Order Orchestration because a duplicate was found. Duplicate records are retained for 180 days for troubleshooting by Oracle Support.
- Records in the XOM\_ITEM\_DUP\_CHECK table that are older than 2 days. This table contains a record of each submitted order, which is used temporarily only for the duplicate checking process before order creation.

### Scheduling the Daily Clean Up Job

1. Enter the [Time](#) in 24-hour format (HH:MM) when the job should run.
2. Optionally, select [Schedule Enabled](#).
3. Optionally, select [Run Now](#) to run the job immediately.
4. Select Save.
5. Select Cancel to exit the screen.

### Daily Clean Up Fields

- [Schedule Enabled](#)
- [Schedule Interval](#) : Set to Daily. Display-only.
- [Time](#)
- [Run Now](#)
- [Last Updated](#)
- [Last Run](#)
- [Next Run](#)

**Daily Cleanup History:** Use the [Daily Clean Up Job History](#) screen to review daily cleanup jobs that have run.

**For more information:** See the [Tenant-Admin](#) screen for information on Retention Settings fields.

### Fulfilled Inventory Export

**Purpose:** Use the Fulfilled Inventory Export to generate a pipe-delimited file of recent order fulfillments, so the inventory system of record can use this information to update its own inventory based on activity in Order Orchestration.

Export updates: The export program:

- identifies each order line within the system since the last time the export was run, based on the export update date and time in the xom\_status\_history table:

- delivery and pickup orders: the order line assigned to the location for fulfillment has gone into fulfilled status
- ship-for-pickup orders: the order line assigned to the location for sourcing (transferring or shipping the item to the pickup location) has gone into intransit status
- for each order line whose fulfilled or intransit quantity was included in the export, updates the export update date and time in the `xom_status_history` table
- for each product location included in the export:
  - if the Track Fulfilled Quantity setting is Reset During Inventory Export, sets the Fulfilled Quantity to 0
  - decreases the Available Quantity by the total quantity of fulfilled order lines included in the export, based on the quantity from the `xom_status_history` table
  - updates the Last Updated Date for the product location
- generates the export file, creating the export record in the `FILE_STORAGE` table. The CONTAINER setting for the record is OROB-EXPORT. You can use the File Storage API to download export file records from the `FILE_STORAGE` table. See [File Storage API for Imports and Exports](#) for details.

**Fulfilled Inventory Export History:** Use the [Fulfilled Inventory Export History](#) screen to review fulfilled inventory exports that have run.

For more information: See the [Fulfilled Inventory Export File](#).

Fulfilled quantity used in availability calculation: Both the [Reserved Quantity](#) and the [Fulfilled Quantity](#) are subtracted from the product location's [Available Quantity](#) when calculating the [Available to Promise](#) quantity. See [Calculating the Available to Promise Quantity](#) for an overview.

Typically, you would set the [Track Fulfilled Quantity](#) field at the System screen to Reset During Inventory Export. See that field.

### Fulfilled Inventory Export File

- File format: The file is pipe-delimited (|).
- File location: The `FILE_STORAGE` table.
- File naming: Named `FULFILLED_QUANTITY_EXTRACT_SYSCD_220831_165819.csv`, where SYSCD is the code for the system, and 150831\_165819 the date (August 31, 2022) and time when the file was created, in the retailer's time.

### File contents:

- Location code: The code identifying the location that shipped the delivery order, where the pickup order was picked up, or that shipped or transferred the ship-for-pickup order.
- **Order type:** Either DELIVERY, PICKUP, SHIPFORPICKUP.
- **Order number:** The number or code identifying the order in the originating system.
- **System product code:** The number or code identifying the item in the fulfilling system.
- **Quantity fulfilled:** The quantity of the item shipped, picked up, or in transit.
- **Unit price:** The unit price of the item on the order.
- **Date and time:** The date and time when the item was shipped or picked up. YYYY-MM-DDTHH:MM:SS:XXX format, where XXX is milliseconds (for example, 2022-11-15T16:15:34.710).

### Scheduling the Fulfilled Inventory Export

- Click the plus sign next to the Fulfilled Inventory Export job in the left-hand panel to display a list of existing organizations.

**Note**

The list of organizations is available only if Use Routing Engine is selected at the [Tenant-Admin](#) screen.

- Click the organization whose fulfilled inventory data should be extracted. When you select an organization, the systems within the organization are displayed.

- When you select an organization, the [Fulfilled Inventory Export Fields](#) are displayed to the right.
- Select one or more [Days of Week](#) when the job should run.
- Use the [Time](#) field to enter each time when the job should run, in 24-hour format (HH:MM). If entering multiple times, separate each with a comma and no spaces.
- Optionally, select [Run Now](#) to run the job immediately.
- Optionally, select [Schedule Enabled](#).
- Select Save.
- Select Cancel to exit the screen.

#### Fulfilled Inventory Export Fields

- [organization](#)
- [system](#)
- [Schedule Enabled](#)
- [Schedule Interval](#): Set to Day(s) of Week. Display-only.

- [Next Run](#)

## Inventory Quantity Export

The different options for calculating the available quantity for inventory export include using probable quantity rules; using probability rules; and not using rules. The required settings for each are described below.

### ! Important

Configure the export for only one system in your organization to support the export for all eligible systems within the organization. The selected system does not need to be the organization default.

Difference between probable quantity rules and probability rules: Probable quantity rules are used only to calculate the probable quantity to pass to an integrated system, such as an ecommerce site, while probability rules apply dynamically to determine the available quantity when Order Orchestration receives a request, such as a Submit Order request or a Locate Items request.

Use probability rules for the inventory quantity update to provide a consistent calculation both interactively and through the batch updates described here.

- [Typical Inventory Quantity Export Usage](#)
- [Scheduling the Inventory Export](#)
- [Inventory Quantity Rules Settings](#)
- [Summary of Inventory Quantity Export Fields](#)
- [Probability Rules Update and Incremental Quantity Web Service](#)
- [Probable Quantity Update and Export](#)
  - [Aggregate by Product](#)
  - [Probable Quantity](#)
  - [Evaluating Probable Quantity Rules](#)
  - [Probable Quantity Export File Layout and Contents](#)
- [Inventory Quantity Export Using Available to Promise Quantity \(No Rules\)](#)

## Typical Inventory Quantity Export Usage

An example of how you might use the inventory quantity export would be an ecommerce system that requires an estimate of availability for display at the ecommerce site:

- System A is your ecommerce system. For this system:
  - The [Inventory Qty Export](#) flag is not selected, because the system does not require its own product locations in the export file.
  - At the Inventory Quantity Export settings at the **Schedule Jobs** screen, the Enabled flag is selected, a schedule is defined, and a [Safe Stock Method](#) method is selected.

- Systems B and C are additional systems in your organization that can fulfill orders. For these systems, the [Inventory Qty Export](#) flag is selected, because updated inventory should be included in the inventory quantity export file.
- If the [Safe Stock Method](#) is set to Probable Quantity Rules or No Rules, the inventory quantity export runs when scheduled for system A, and includes all product locations in systems B and C that have been updated since the last inventory quantity export for system A.
- If the [Safe Stock Method](#) is set to Probability Rules:
  - Whenever Order Orchestration receives the inventory count web service request, it responds with the requested number of updated product location records since the most recent request.
  - The inventory quantity export runs when scheduled for system A, and includes all product locations in systems B and C that have an available quantity greater than zero.
- The calculation of the quantities in the export file, and the web service response, when using probability rules, is based on the selected [Safe Stock Method](#).

Note:

The Default Unfulfillable Location is not included in the inventory quantity export.

See below for more details.

**Note**

The Default Unfulfillable Location is not included in the inventory quantity export

See below for more details.

**Pausing inventory updates through RICS:** If [Available-to-Sell Individual Inventory Updates through Oracle Retail Integration Cloud Service \(RICS\)](#) are enabled, these updates need to pause during the inventory export process in order to prevent database contention. To support this requirement, if the Online flag at the [RICS Integration tab](#) on the System screen is selected:

- When the inventory quantity export begins, it first sends a stop request to RICS.
- Then when the export completes, it sends a start request to RICS.

The message is sent to the URL specified for the Orders Service at the RICS Integration tab on the System screen.

**Note**

To support sending the stop and start requests, the User ID specified for the Orders Service at the Add or Edit window, available from the [External Services](#) screen, needs to have the Operator or Admin role in RIB.

**Maximum number of records exported?** When the export is generated through the `getInventoryQuantity` request message, the export file includes up to the number of records specified for the `inventory.qty.export.max.threshold` in the `CTL_APP_CONFIG` table. This threshold is set to 500 by default. See the Web Services Guide on My Oracle Support (2953017.1) for more information.

**Export file placement:** The export creates the export file in the FILE\_STORAGE table. The CONTAINER setting for the record is OROB-EXPORT. You can use the File Storage API to download export file records from the FILE\_STORAGE table.

Inventory Quantity Export History: Use the [Inventory Quantity Export History](#) screen to review inventory quantity exports that have run.

### Scheduling the Inventory Export

- Click the plus sign next to the Inventory Export job in the left-hand panel to display a list of existing organizations.

#### Note

The list of organizations is available only if Use Routing Engine is selected at the [Tenant-Admin](#) screen.

- Click the organization whose inventory quantity data should be exported. When you select an organization, the systems within the organization are displayed.

#### Note

When the [Safe Stock Method](#) is set to Probability Rules, you cannot schedule the job to run more than once a day. With this setting, the system can instead receive incremental inventory updates through the Get Inventory Quantity web service, described in the Web Services Guide on My Oracle Support (2953017.1).

- Use the **Days of Week** to select each day when the export job should run.
- Use the **Time** field to enter each time when the job should run, in 24-hour format (HH:MM). If entering multiple times, separate each with a comma and no spaces.

**! Important**

To avoid a system slow-down or degrading performance, do not run the Inventory Quantity Extract more than once a day or during peak processing time.

- When you select a system in the organization, the [Summary of Inventory Quantity Export Fields](#) are displayed to the right. See the [Inventory Quantity Rules Settings](#) for details on the [Safe Stock Method](#), [File Output Type](#), and [Incremental Updates](#) fields, and see [Inventory Quantity Rules Settings](#), below, for details on configuration options.
- Optionally, select [Schedule Enabled](#).
- Select Save.
- Select Cancel to exit the screen.

**Inventory Quantity Rule Settings***Probability Rules Settings:*

- Overview: Provides incremental updates to an external system through a web service, applying probability rules set up through the [Probability Rules](#) and [Probability Location](#) screens, as well as a pipe-delimited file containing a full overlay of all product locations where the available quantity is greater than zero.
- Configuration:
  - [Safe Stock Method](#): Set to Probability Rules.
  - [File Output Type](#): Set to Full Overlay, and cannot be changed.
  - [Incremental Updates](#): Set to Probability Rules to enable a background process to perform the probability calculation and queue updated product location records to return in the response to the inventory quantity web service; otherwise, set to No Update.

**Additional configuration requirements:**

- Select the [Inventory Qty Export](#) flag at the Inventory tab of the System screen for each system that should have product locations included in the export.
- Set the [PQE Startup Threads](#) at the Tenant-Admin screen to a number from 1 to 100 to enable the background process that performs the probable quantity calculation.
- If needed, create the web service user ID to authenticate the incremental update web service for the Admin web service; see [Web Service User](#) for background.

For more information: See [Probability Rules Update and Incremental Quantity Web Service](#). Also, see the RESTful Get Inventory Quantity Updates chapter in the Web Services Guide on My Oracle Support (2953017.1) for information on the web service that returns incremental inventory quantity updates.

**Probable Quantity Rules Settings:**

- Overview: Provides a pipe-delimited file that includes either totals aggregated by product or all changed records for individual product locations after applying probable location rules, set up through the [Probable Quantity Rules](#) and [Probable Quantity Location](#) screens.
- Configuration:
  - [Safe Stock Method](#): Set to Probable Quantity Rules.
  - [File Output Type](#): Set to either Aggregate by Product or Changed Records. See [Aggregate by Product](#) for a discussion.

- [Incremental Updates](#): Set to No Update, and cannot be changed.

For more information: See [Probable Quantity Update and Export](#).

#### No Rules Settings:

- Overview: Provides a pipe-delimited file that includes either totals aggregated by product or all changed records for individual product locations after applying probable location rules.
- Configuration:
  - [Safe Stock Method](#): Set to No Rules.
  - [File Output Type](#): Set to either Aggregate by Product or Changed Records. See for a discussion. [Aggregate by Product](#)
  - [Incremental Updates](#): Set to No Update, and cannot be changed. Only the pipe-delimited file is available.

**For more information:** See the [Inventory Quantity Export Using Available to Promise Quantity \(No Rules\)](#).

#### Summary of Inventory Quantity Export Fields

- [Schedule Enabled](#)
- [Schedule Interval](#): Set to Day(s) of Week. Display-only.
- [Time](#)
- [Safe Stock Method](#)
- [File Output Type](#)
- [Incremental Updates](#)

#### Job Summary

- [Last Updated](#)
- [Last Run](#)
- [Next Run](#)
- [Last Status](#)

For more information: See the [Tenant-Admin](#) screen for information on Retention Settings fields.

#### Probability Rules Update and Incremental Quantity Web Service

**Required configuration:** See [Inventory Quantity Rules Settings](#) for details on configuring the inventory quantity export for probability rules and to support the Get Inventory Quantity Updates web service to support incremental updates.

**Difference between probable quantity rules and probability rules:** Probable quantity rules are used to calculate the probable quantity to pass to an integrated system, such as an ecommerce site, while probability rules apply dynamically to determine the available quantity when Order Orchestration receives a request, such as a Submit Order request or a Locate Items request.

#### Tracking Probability Rules for Incremental Updates on Inventory Availability

The probability rule export uses a background process that evaluates changes that might affect the quantity that is expected to be available in product locations. This information is queued in the database so that Order Orchestration can send current information, including the new

“probable quantity” based on probability rules, for updated product locations, when requested by an integrating system. This job runs if:

- Both the **Safe Stock Method** and the **Incremental Updates** are set to Probability Rules, and
- The [PQE Startup Threads](#) at the Tenant-Admin screen is set to any number from 1 to 100.

Note that the field returns in the web service is labeled as the probable quantity, but it is a projected inventory count based on probability rules, not on probable quantity rules.

Which systems? The background process evaluates product locations for all systems within the organization that have the [Inventory Qty Export](#) flag at the Inventory tab of the System screen selected.

Which updates trigger probability rule calculation? The background process monitors the following data that could be factors in applying probability rules, and calculates the updated quantity to return in the inventory quantity web service.

- **Product location updates:** Changes to the available quantity or reserved quantity based on status updates, minimum sell quantity, sales velocity, shrink rate, daily sell-through quantity, sell quantity/multiple, and the fulfilled quantity. See the [Browse Product Locations](#) window for information on these fields.
- **Product updates:** Changes to the category, class, or department, if a product location exists.
- **System product updates:** A change to the master style, if a product location exists.

Also, creating a new product location triggers the probability rule calculation.

#### Things to note:

- Probability rules based on express carrier, order type, originating system, last updated date, today, or requested quantity are not considered when performing the probability rule calculation.
- Probability rules based on the product location's next PO date or next PO quantity are not considered when performing the probability rule calculation for the web service update; however, they are applied to the data in the inventory quantity extract file, described below.
- Reserved quantity updates that take place through changing the statuses selected at the [Reservation tab](#) of the System screen do not trigger probability rule calculation for the web service update; however, these changes do factor into the calculation for the full overlay export file.
- If a probability rule set to Exclude Location applies, the probable quantity indicated for the product location in the web service update is zero, and the product location is not included in the extract file.
- The [Default Unfulfillable Location](#) and the [IN PROCESS location](#) are not included in the probability rule calculation.
- The [Use Probability Rules](#) preference does not need to be selected for the processing described here to take place.

**Get Inventory Quantity Updates web service:** Order Orchestration responds with recent inventory updates when it receives a request through the inventory quantity web service. The requesting system can specify the number of updated product locations to include in the response, and Order Orchestration tracks which updates have been sent in the web service, and which are queued for an upcoming web service request. See the Get Inventory Quantity Updates chapter in the Web Services Guide on My Oracle Support (2953017.1) for information on this web service.

## Full Overlay Inventory Quantity Extract File

File name: The generated full overlay inventory quantity extract file generated through the [Probability Rules Update and Incremental Quantity Web Service](#) is named INVENTORY\_QUANTITY\_EXTRACT\_SYSTEM\_200220\_123456.txt, where SYSTEM is the system code and 200220\_123456 is the date and time. The text file is in a zip file of the same name, for example INVENTORY\_QUANTITY\_EXTRACT\_SYSTEM\_200220\_123456.zip.

Which records included? This file includes all product locations for the organization that currently have an available quantity greater than zero. Also, only product locations associated with a system whose [Inventory Qty Export](#) flag is selected are included.

The [Use Probability Rules](#) preference does not need to be selected for this extract file to be generated.

File placement: When the export runs, the program creates the export record in the FILE\_STORAGE table. The CONTAINER setting for the record is OROB-EXPORT. You can use the File Storage API to download export file records from the FILE\_STORAGE table.

File contents: The pipe-delimited file contains the following fields, including a header row containing the column names:

- SYSTEM\_CD: The code identifying the system associated with the product location.
- PRODUCT\_CD: The system product code in the organization's default system.
- LOCATION\_CD: The code identifying the location in the system.
- AVAILABLE\_QTY: The current on-hand quantity for the product location, before applying any calculations.
- RESERVED\_QTY: The reserved quantity for the product location, based on the statuses selected at the [Reservation tab](#) of the System screen, and updated through status updates to the order line.
- PROBABLE\_QTY: The calculated value after applying any eligible probability rules.

### Note

- The PROBABLE\_QTY value here is not the same as the probable quantity calculated using probable quantity rules, as described under [Probable Quantity Update and Export](#).
- Probability rules based on express carrier, order type, originating system, last updated date, today, or requested quantity are not considered when calculating the probable quantity.
- If a probability rule is set to Exclude Location applies, the product location is not included in the extract file.
- The [Default Unfulfillable Location](#) is not included in the probability rule calculation.
- The [Use Probability Rules](#) preference does not need to be selected for the file to be generated as described here.

Job notifications: If the [Event Notifications](#) settings are configured at the Event Logging screen, a job notification message is generated each time the export job runs. See [Event Notifications](#) settings and the Job Notification Messages appendix of the Web Services Guide on My Oracle Support (2953017.1) for more information.

## Probable Quantity Update and Export

**Required configuration:** See [Inventory Quantity Rules Settings](#) for details on configuring the inventory quantity export for probable quantity.

If the [File Output Type](#) is set to Changed Records, the probable quantity update and export:

- Subtracts the current reserved quantity for updated product locations.
- Subtracts the fulfilled quantity for product locations, populated if it has not been cleared by the [Fulfilled Inventory Export](#).
- Updates the probable quantity field, if necessary, in the product location table in Order Orchestration, as well as the probable updated date. See [Probable Quantity](#), below, for a discussion.
- Creates a pipe-delimited export file for all product locations in the organization whose probable quantities were updated since the last time the export ran for the system running the update and export, provided the [Inventory Qty Export](#) flag is selected at the Inventory tab of the System screen.

For more information: See [Probability Rules Update and Incremental Quantity Web Service](#) for information on exporting inventory quantities based on probability rules rather than based on probable quantity rules.

About probable quantity update and export:

- [Aggregate by Product](#)
- [Probable Quantity](#)
- [Evaluating Probable Quantity Rules](#)
- [Probable Quantity Export File Layout and Contents](#)

### Aggregate by Product

If you have selected the probable quantity export and the [File Output Type](#) is set to Aggregate by Product, the update and export:

- Sums the quantities for each product across product locations, regardless of whether there has been any activity since the last export.
- Creates a pipe-delimited export file containing the products and totals. In this situation, the file does not include the location code.

**No other uses of probable quantity:** Order Orchestration does not use the probable quantity field in any calculation, return it in any web service, or display it on any screen. Its only use is to be available for in the probable quantity export.

Which product locations are included in the export file? If [File Output Type](#) is set to Changed Records, the export file includes product locations that:

- Are part of a system that has the [Inventory Qty Export](#) flag selected.
- Have been updated since the last time the export file was generated for the requesting system.

**Job notifications:** If the [Event Notifications](#) settings are configured at the Event Logging screen, a job notification message is generated each time the export job runs. See [Event Notifications](#) settings and the Job Notification Messages appendix of the Web Services Guide on My Oracle Support (2953017.1) for more information.

## Probable Quantity

**Usage:** If the [Safe Stock Method](#) field is set to **Probable Quantity Rules**, the probable quantity export program updates the probable\_qty and the probable\_updated fields in the product location table. The probable\_qty is not used in any additional process or displayed on any screen in Order Orchestration; however, it is included in the probable quantity export so that a remote system, such as your ecommerce system, can display a more accurate picture of an item's availability, without the need for interactive inquiries.

However, if the [Safe Stock Method](#) field is set to No Rules, the system uses the [available to promise quantity](#) as the probable quantity.

**Which product locations evaluated?** If the [Safe Stock Method](#) field is set to Probable Quantity Rules, when the inventory quantity export program runs for a system, it evaluates, and potentially updates, the probable\_qty for all product locations that are flagged as eligible to be included in the export file (based on a probable\_updated field set to NULL). The product location is flagged as eligible by setting this field set to NULL when:

- A product import, including the incremental inventory import, updates the product location.
- You update a product location at the Edit Product Location screen.
- The product location is updated through an interactive inventory update (for example, triggered by a submit order request or a locate items search).
- You assign a probable quantity rule, modify an assigned probable quantity rule, or delete a probable quantity rule assignment for the location type that includes the location through the Probable Quantity Location screen, even if the product does not qualify for that particular rule.

When the probable quantity export program evaluates and resets the probable qty based on whether the [Safe Stock Method](#) flag is selected, it updates the probable\_updated field with the current date and time, indicating that the product location is not currently eligible for probable quantity update until the next activity that updates the probable\_updated field.

**Backorders?** For the purposes of calculating the probable quantity for export, a negative available quantity is treated the same way as an available quantity of zero.

**Calculation details:** To determine the probable\_qty for a product location, the program uses the following rules:

1. The calculation starts with the current on-hand quantity (the available\_qty in the product\_location table).
2. The update calculates the available to promise quantity by:
  - Subtracting the reserved quantity, if any, based on the Reserved Statuses at the [Reservation tab](#) at the System screen.
  - Subtracting the fulfilled quantity, if any, for recently fulfilled orders in the store location that have not been reset to 0 through the [Fulfilled Inventory Export](#).
3. If:
  - The [Safe Stock Method](#) field is set to No Rules, or if no probable quantity rules apply to the product location based on the location type, the probable\_qty = the available to promise .
  - Otherwise, if the [Safe Stock Method](#) field is set to Probable Quantity Rules, and there are any probable quantity rules that apply to the product location based on the location type, then the probable\_qty is calculated by applying the probable quantity rule to the available to promise quantity.

About probable quantity rules: Probable quantity rules can add or subtract a quantity, increase or decrease by a percentage, or set the probable\_qty to a specified quantity.

**Examples:**

If the available to promise quantity (Available quantity - reserved quantity) = 10 and...

- Probable quantity rule is Available + 5, then the probable\_qty is 15.
- Probable quantity rule is Available - 15, then probable\_qty is 0.
- Probable quantity rule is 5, then probable\_qty is 5.
- Probable quantity rule is Available - 10%, then probable\_qty is 9.

If the available to promise quantity is negative: The program still applies the probable quantity rule if the available to promise quantity is negative. For example, if the available to promise quantity is -3, but the probable quantity rule indicates to add 10, then the probable\_qty is 7. However, if the result after applying the probable quantity rule is still negative, then the probable\_qty is 0.

Probable quantity rules that apply a percentage increase or decrease do not affect the probable\_qty if the available to promise quantity is less than 0. The result is still negative, so the probable\_qty is still 0. For example, if the available to promise quantity is -5, and the rule increases the quantity by 25%, the result is still less than 0, so the probable quantity is 0.

**Evaluating Probable Quantity Rules**

You can set up probable quantity rules based on:

- matching system product code, or
- matching master style code
- matching department, class, or category
- no required matching

Also, you can assign probable quantity rules at the location type level or at the location level.

If multiple probable quantity rules could apply to the same product location, the program applies only the last possible rule as follows to calculate the probable\_qty:

First, evaluate rules assigned to the location type:

- 1: no matching required
- 5: matching master style
- 6: matching system product

Next, evaluate rules assigned to the location, using the same sequence listed above; however, rules assigned at the location level might not apply if there was no additional activity, such as a product import, that flagged the product location as eligible for probable quantity calculation.

Example: For a particular product, rules have been assigned to:

- the location type, specifying a matching master style
- the location, without any matching required
- the location, specifying a matching system product

**Result:** The rule that is assigned at the location level and specifies a matching system product is applied to the product location and updates the probable\_qty.

**! Important**

Rules assigned at the location level are eligible to be applied only if another activity, such as an inventory import, updates the product location.

For accurate calculation of the `probable_qty`, do not apply multiple probable quantity rules at the same level and with the same criteria.

**Date and time updated:** When it updates the `probable_qty`, the program also updates the `probable_updated` date and time in the product location table. This update occurs regardless of whether the `probable_qty` was updated solely because of a change in probability rule assignment.

**What if the `probable_qty` doesn't change?** If the `probable_qty` does not change as a result of the probable quantity update program, the program does not update the `probable_updated` field unless the `probable_updated` field was set to NULL because of one of the activities listed above.

**Example:** If a user advances to the Edit Product Location screen in Order Orchestration and then clicks Save, this changes the `probable_qty` and `probable_updated` date for the product location to NULL; as a result, the update program includes this product location in its updates, and the product location is then eligible to be included in the extract file, even if there has not been any actual inventory change or change to the resulting `probable_qty`.

**① Note**

Even if the `probable_qty` for a product location is more than zero, this does not indicate if the location supports a particular transaction type, such as pickup.

**Probable Quantity Export File Layout and Contents**

**File placement:** When the probable quantity export runs, the program creates the export record in the `FILE_STORAGE` table. The `CONTAINER` setting for the record is `OROB-EXPORT`. You can use the File Storage API to download export file records from the `FILE_STORAGE` table.

**File naming:** The file name is `Probable_Quantity_Extract_SYS_220702_123456.txt`, where `SYS` is the system (in all uppercase) running the export, and `150702` is the date when the file was generated, in `YYMMDD` format, and `123456` is the time when the file was generated, in `HHMMSS` format, and in the retailer's time.

File contents:

- **SYSTEM\_CD:** The code identifying the system associated with the product.
- **PRODUCT\_CD:** The system product code for the item in the system generating the extract. The process trims any blank, trailing spaces.
- **LOCATION\_CD:** The code identifying the location. This field is not included when the Aggregate by Product flag is selected. In this case, the following quantities are totals across all eligible product locations, and all products are included in the export file regardless of whether there has been any activity since the last export.
- **AVAILABLE\_QTY:** The current on-hand quantity of the product, without factoring in any reserved quantity or rules. From the `available_qty` in the `product_location` table, or the total available quantity across all product locations if the Aggregate by Product flag is selected.

- **RESERVED\_QTY:** The current quantity reserved for the product, based on the selected Reserved Statuses for the system. From the reserved\_amt in the product\_location table, or the total reserved quantity across all product locations if the Aggregate by Product flag is selected.
- **PROBABLE\_QTY:** See [Probable Quantity](#).

### Inventory Quantity Export Using Available to Promise Quantity (No Rules)

**Required configuration:** See [Inventory Quantity Rules Settings](#) for details on configuring the inventory quantity export to include the [available to promise quantity](#) when the [Safe Stock Method](#) is set to No Rules.

**Aggregate by product:** If the [Safe Stock Method](#) is set to No Rules and the [File Output Type](#) is set to Aggregate by Product, the export:

- Sums the quantities for each product across product locations, regardless of whether there has been any activity since the last export.
- Creates a pipe-delimited export file containing the products and totals for all products that are part of a system that has the [Inventory Qty Export](#) flag selected. In this situation, the file does not include the location code.

**Changed records:** If the [Safe Stock Method](#) is set to No Rules and the [File Output Type](#) is set to Changed Records, the export file includes product locations that:

- Are part of a system that has the [Inventory Qty Export](#) flag selected.
- Have been updated since the last time the export file was generated for the requesting system.

**File layout:** The same as the [Probable Quantity Export File Layout and Contents](#), except that the PROBABLE\_QTY is set to the [available to promise quantity](#).

**File placement:** When the export runs, the program creates the export record in the FILE\_STORAGE table. The CONTAINER setting for the record is OROB-EXPORT. You can use the File Storage API to download export file records from the FILE\_STORAGE table.

**Job notifications:** If the [Event Notifications](#) settings are configured at the Event Logging screen, a job notification message is generated each time the export job runs. See [Event Notifications](#) settings and the Job Notification Messages appendix of the Web Services Guide on My Oracle Support (2953017.1) for more information.

### Sales Order Data Extract

You can use the sales order data extract to export data related to sales orders and purchase orders. The data that you can extract includes:

- sold-to and ship-to customers
- customization details
- items ordered
- status history

The extract writes the information to pipe-delimited files, which are bundled into a compressed zip file. See [File Storage API for Imports and Exports](#) for more information on obtaining export files, and see [Sales Order Data Extract Files](#) for information on the naming and contents of these files.

**Extract by organization:** You need to schedule this job separately for each organization whose order data should be extracted. Click the plus sign next to the job name in the left-hand panel to display a list of existing organizations.

**Note**

The list of organizations is available only if Use Routing Engine is selected at the [Tenant-Admin](#) screen.

**Scheduling the Sales Order Data Extract**

- Click the plus sign next to the Sales Order Data Extract job in the left-hand panel to display a list of existing organizations.

- Click the organization whose sales data should be extracted. When you select an organization, the [Sales Order Data Extract Fields](#) are displayed to the right.

**Note**

The list of organizations is available only if Use Routing Engine is selected at the [Tenant-Admin](#) screen.

**Use the Schedule Interval field to select:**

- Day(s) of Week to have the extract run at a regular time on one or more days of the week to periodically extract all orders with any activity since the last extract, or,
- Initial Load to extract:
  - All order data, if you do not specify an Extract Orders with Activity From and Activity To date, or
  - Data for orders that have had activity during the Activity From and Activity To dates.

**Note**

The job fails if the total number of orders to extract exceeds 500,000. If this occurs, you can use the Initial Load option with the Activity From and Activity To dates to complete the extract of historical orders in increments until the extract is up to date. For example, if there is a total of 750,000 orders from the past year, you might use the Initial Load option with the Activity From and Activity To dates to break the extract into two six-month increments, each for less than the 500,000-order limit.

- If you selected a Schedule interval of Day(s) of the Week, select one or more [Days of Week](#) when the job should run.
- Enter the [Time](#) when the job should run.
- If you selected Initial Load as the [Schedule Interval](#), optionally enter the Extract Orders with Activity From and To, as described above.

- Optionally, select [Run Now](#) to run the job immediately.
- Optionally, select Include Private Data to have the extract files include personal data, such as name, address, and email address; otherwise, leave this flag unselected to have personal data for customers replaced with asterisks or with text such as \*\*\*\*\* Data Privacy Blocked \*\*\*\*\*.

**Note**

User names are not replaced in the extract files, regardless of the setting of the Include Private Data flag.

- Optionally, select [Schedule Enabled](#).
- Select Save.
- Select Cancel to exit the screen.

Optionally, select [Run Now](#) to run the job immediately.

### Sales Order Data Extract Fields

- Organization: The code and name of the organization selected in the left-hand panel. Display-only.
- Schedule Interval:
  - Day(s) of Week to have the extract run at a regular time on one or more days of the week to periodically extract all orders with any activity since the last extract, or,
  - Initial Load to extract:
    - \* All order data, if you do not specify an Activity From and Activity To date, or
    - \* Data for orders that have had activity during the Activity From and Activity To dates.

See [Scheduling the Sales Order Data Extract](#), above, for a discussion.

Note:

Also updated by Run Job API: The setting of this field is updated when the [Run Job API](#) is used to submit this job.

- Day(s) of Week: Use these fields to select one or more Day(s) of Week when the job should run.
- Time: The time of day, in HH:MM format (24-hour clock) when the job runs. Required, regardless of the selected Schedule Interval.
- Extract Orders with Activity From and To: Optionally, enter a From and To date to include order data for orders with activity during this date range. These fields are enterable only when the Schedule Interval is set to Initial Load.

**Note**

Also updated by Run Job API: The settings of these fields are updated when the [Run Job API](#) is used to submit this job.

- **Include Private Data:** Select this flag to include personal data, such as names, addresses, and email addresses in the data extract files; otherwise, leave this flag unselected to have this information anonymized. See [anonymized](#) in the glossary for more information.

**Note**

**Also updated by Run Job API:** The setting of this field is updated when the [Run Job API](#) is used to submit this job.

- [Run Now](#) enables you to run the job immediately.

### Job Summary

- [Last Updated](#)
- [Last Run](#)
- [Next Run](#)

**Sales Order Data Extract Job History:** Use the [Sales Order Data Extract Job History](#) screen to review sales order data extracts that have run.

For more information: See [Sales Order Data Extract Files](#) for information on the content of the extract files.

### Identity Cloud User Synchronization

About identity cloud service user synchronization: Use IDCS (Oracle Identity Cloud Service) or OCI IAM (Oracle Cloud Infrastructure Identity and Access Management) to create users for omnichannel applications, including Order Orchestration and Order Administration. Users that exist in IDCS or OCI IAM are then created in Order Orchestration:

- Through the Identity Cloud User Synchronization job, or
- Automatically, when the user logs into Order Orchestration.

Users are created in Order Orchestration with the default authority defined from IDCS or OCI IAM, described below.

If you need to create Store Associate users and/or Vendor users in addition to Order Orchestration users, see the processes described below.

**Note**

The Identity Cloud User Synchronization job does not delete, deactivate, or update authority for any user records, including vendor users and store associates, in Order Orchestration. Use the related screen in Order Orchestration to update users once they have been created.

Web service authentication: The Identity Cloud User Synchronization job does not create web service users. See [Web Service Authorization](#) on creating web service users.

### Required Setup for Identity Cloud Service User Synchronization

**Note**

Begin the user synchronization process after setting up other required data in Order Orchestration, including your organization, preferences, systems, and roles. See [Setting Up Data for the Routing Engine Module](#) for more information.

The following steps describe creating Order Orchestration (retailer) users.

**Configuring the default user:** The default user is created automatically, with a user name of Identity Cloud Default User. This is not an actual user record that can log into Order Orchestration; instead, it serves as a template for creating actual users. You cannot delete the default user.

Before creating additional, actual users, update the default user with the settings to apply to actual users when they are created in Order Orchestration:

- Role assignments with a Role Type of Retailer, controlling the default authority to Order Orchestration screens. See [Roles](#) for more information.
- The Default Organization selected through the [Users](#) screen that controls system product code to display as the Item # at the [Order](#) screen.

You can modify the configuration of the default user if you will import multiple groups of users into Order Orchestration. For example, you could first configure the default user with just order inquiry and maintenance authority, import a group of users, and then reconfigure the default user with different authority for the next group of users.

**Setup and Creation of Order Orchestration Users in IDCS or OCI IAM**

You can use the following process in IDCS or OCI IAM to create users and control their attributes through group assignment, using the application record in IDCS or OCI IAM for Order Orchestration. The application record typically has a Name such as RGBU\_OBCS\_UAT\_APPID.

- Create one or more groups to use for assignment of roles to users. For example, create an ob\_users group to use for creation of regular users, and an ob\_admin group to use for creation of admin users. Assign the group to the appropriate application role in IDCS or OCI IAM: either OBCS\_Admin or OBCS\_User.
- Create each user in IDCS or OCI IAM, specifying the user's first name, last name, user name, and email address. The user name be lower case and cannot be longer than 256 positions.
- Assign each created user to the appropriate group.
- Assign each group to the Order Orchestration application in IDCS or OCI IAM.
- Assign each user to the appropriate application role in IDCS or OCI IAM.
- Assign or reset the password for each user in IDCS or OCI IAM. This triggers an email to the email address specified for the user, who can log in using either the user name defined in IDCS or OCI IAM if it does not exceed 10 positions, or the email address.

**Note**

If an Order Orchestration user logs in after configuration in IDCS or OCI IAM, this creates the user record in Order Orchestration; otherwise, the record is created through the import job, described below.

After completing the required setup describe above, run the Identity Cloud User Synchronization job to import new users from IDCS or OCI IAM. Each new user is created in Order Orchestration with the settings from IDCS or OCI IAM:

- The admin flag is selected if the user is assigned to the OBCS\_Admin application role in IDCS or OCI IAM.
- The role-based authority is from the default user's current settings.

**After creation:** Once users are created in Order Orchestration, you can maintain them; for example, you can change the email address, date formats, user name, authority, and default organization for Order Orchestration users, and you can flag a user as inactive so that the user cannot log in. You can also delete the users from Order Orchestration, although this does not delete the corresponding records in IDCS or OCI IAM.

**Note**

The synchronization job does not update existing users in Order Orchestration.

### Creating Vendor Users

If you also need to create vendor users in Order Orchestration, use the following process:

- In Order Orchestration, create one or more vendors. See the [Vendors](#) screen for more information.
- In Order Orchestration, create one or more role assignments with a Role Type of Vendor, controlling the default authority to Vendor Portal screens. See [Roles](#) for more information..
- In IDCS or OCI IAM, create each vendor group and assign it to the OBCS\_Vendor\_User role.
  - New vendor groups should be created as 'OBCS|<environment>|<system>|<vendor>', where:
    - \* <environment> is the current environment.
    - \* <system> is the system code identifying the default vendor system.
  - <vendor> is the code identifying the vendor.
- In IDCS or OCI IAM, create each vendor user and assign it to the vendor user group associated with the same vendor. See [Setup and Creation of Order Orchestration Users in IDCS or OCI IAM](#) for background on creating the user in IDCS or OCI IAM and notes about defining the user name.
- Optionally, assign the Vendor to a user after user creation within the Vendor User Profiles screen under the "Requires Vendor" option. The "Requires Vendor" column indicates if the user has access to the OBCS\_Vendor\_User role in IDCS or OCI IAM but was not assigned to a valid vendor upon creation of the user profile. A vendor must be associated to a user to allow the user to log into the Vendor Portal.

**Note**

Assign the vendor user only to the vendor user group associated with the correct vendor. Order Orchestration does not support assigning a vendor user to more than one vendor.

- Run the Identity Cloud User Synchronization job again to import new vendor users from IDCS or OCI IAM. The vendor users are assigned role-based authority based on the vendor role types set up through the Roles screen with the Identity Cloud User Default flag selected.

**Note**

The synchronization job does not update existing vendor users in Order Orchestration.

**Creating Store Associate users**

If you also need to create store associate users in Order Orchestration, use the following process:

- In Order Orchestration, create the default Store Connect system for your organization. See the [Systems](#) screen for more information.
- In IDCS or OCI IAM, create each store connect group and assign it to the OBCS\_Store\_User role.  
  
The group should be created as 'STC-', where is the system code identifying the default Store Connect system.
- In IDCS or OCI IAM, create each store associate user and assign it to the store user group associated with the appropriate system or directly to the OBCS\_Store\_User role. See [Setup and Creation of Order Orchestration Users in IDCS or OCI IAM](#) for background on creating the user in IDCS or OCI IAM.
- In Order Orchestration, run the Identity Cloud User Synchronization job again to import new store associate users from IDCS or OCI IAM.
- Use the [Users](#) screen to finish configuration of the store associate user, including assigning one or more locations and flagging the user as active.
  - The message No Store Connect Locations Assigned at the [Users](#) screen indicates that the store associate user requires location assignment.
  - The message **User does not have access to Store Connect** at the [Users](#) screen indicates that the store associate user requires the OBCS\_Store\_User role to be assigned in IDCS or OCI IAM. Once the role is assigned, this message is removed, and "Store Connect" displays under the Access column of the Users list page.

**Note**

- The synchronization job does not update existing store associate users in Order Orchestration.
- An associate user ID that exceeds 30 positions in length can cause display issues in Store Connect.

Assigning the OBCS\_User or OBCS\_Store\_User role to an existing user in IDCS or OCI IAM: When you use the Users screen to assign a new role or Store Connect location to an existing user, this can assign them the related access in Order Orchestration and add the related role in IDCS or OCI IAM, as follows:

- **Assigning the OBCS\_User role:** Occurs when you assign a role at the user at the Roles tab from the [Users](#) screen, if the user was not already assigned Order Orchestration access.
- **Assigning the OBCS\_Store\_User role:** Occurs when you assign a Store Connect location at the Store Connect tab from the [Users](#) screen, if the user was not already assigned Store Connect access.

Note that removing the role or the Store Connect location assignment from the user does not remove the Order Orchestration or Store Connect access, or update IDCS or OCI IAM.

### Scheduling the Identity Cloud User Synchronization Job

- Enter the Time in HH:MM format (24-hour clock) when the job should run.
- Select [Schedule Enabled](#).
- Optionally, select [Run Now](#) to run the job immediately.
- Select Save.
- Select Cancel to exit the screen.

**Synchronization job history:** Use the [Identity Cloud User Synchronization History](#) screen to review history of the synchronization job.

### Identity Cloud User Synchronization Fields

- [Schedule Enabled](#)
- Schedule Interval: Set to Daily. Display-only.
- [Time](#): The time of day, in HH:MM format (24-hour clock) when the job runs. Required.
- [Run Now](#)
- [Last Updated](#)
- [Last Run](#)
- [Next Run](#)

### Incremental Inventory Import

**Overview:** The incremental inventory update checks for an incremental inventory record in the FILE\_STORAGE table.

Identifying the incremental inventory file: The file in the FILE\_STORAGE table needs to be named INCREMENTAL\_INVENTORY\_SYS\_xxx.TXT, where SYS is the system code and xxx is a user-defined alphanumeric sequence number. The sequence number indicates to the program the order in which to process multiple import files for the system. For example, if the files are named INCREMENTAL\_INVENTORY\_ABC\_AB1.TXT and INCREMENTAL\_INVENTORY\_ABC\_AB.TXT, the program first processes the file with the AB1 sequence number, and then the file with the AB2 sequence number. If there are records for the same product location in both import files, the record from the second file overwrites the first.

You cannot submit an import if another import process, including the product import, is already running in your organization.

**Job Batch Size:** The [Job Batch Size](#) controls the number of records to process in each batch.

- The program creates or updates the product location records in the Order Orchestration database.
- If there are any errors that prevent the program from processing a record in one of the files, the program creates an error record in the FILE\_STORAGE table. The CONTAINER setting for the record is OROB-ERRORS. You can use the File Storage API to download export file records from the FILE\_STORAGE table.

Errors that might occur include an invalid number of columns, alphabetical characters in a numeric field, or a numeric field that is null: for example, the next PO quantity is blank rather than 0 or another number.

- If the Incremental Inventory Import field at the Event Logging screen is set to Administrator, the program sends the [Incremental Inventory Import Status Email](#) to your system administrator (the Administrative Email addresses) if the incremental inventory update fails.

**Records imported regardless of system:** The incremental inventory update program processes all records in the pipe-delimited file or FILE\_STORAGE record if they are product locations for the organization, regardless of whether they are associated with the system selected for import; however, if they are not associated with the organization, they are skipped and are not reported as errors.

**Resolving a scheduling issue:** If the import does not run as scheduled, you can use the Reschedule All option at the [View Active Schedules](#) screen to stop and restart the schedules for all jobs and periodic programs.

Note that the Reschedule All option does not restart jobs that are in Paused status. Jobs stay in Paused status only briefly before Order Orchestration restarts them automatically.

**Incremental Imports History:** Use the [Incremental Imports History](#) screen to review incremental imports that have run.

**Job notifications:** If the [Event Notifications](#) settings are configured at the Event Logging screen, a job notification message is generated each time the import job runs. See [Event Notifications](#) settings and the Job Notification Messages appendix of the Web Services Guide on My Oracle Support (2953017.1) for more information.

### Sample Incremental Inventory Import File

The pipe-delimited incremental inventory import file needs to include the following fields. The first row is the header information, which is informational only, and the following row is the product location data to update.

```
SYSTEM_CD|LOCATION_CD|PRODUCT_CD|AVAILABLE_QTY|NEXT_PO_QTY|
NEXT_PO_DATE
```

```
6|1|PEN123|100|123|2022-08-27
```

### Incremental Inventory File Mapping

- `system_cd`: The code identifying the system importing the updated inventory for the product locations into Order Orchestration. Alphanumeric, 10 positions. Required.
- `location_cd`: The code identifying the location where the product is stocked in the external system. Alphanumeric, 10 positions. Required.
- `product_cd`: The system product code identifying the product in the external system. The system product code might differ from the product code if the external system is not the default system for the organization. Alphanumeric, 35 positions. Required.

- **available\_qty:** The current quantity of the product available to sell in this location as of the time of the import process. A negative quantity, preceded by a minus sign (-), indicates that the item is backordered. Numeric, 6 positions. Required, but can be set to 0.
- **next\_po\_qty:** The quantity ordered for this product on the next purchase order for this location. Numeric, 6 positions. Required, but can be set to 0.
- **next\_po\_date:** The next date when a purchase order for this product is expected for delivery in this location. Datetime format; if set to YYYY-MM-DD, a time of 12:00:00 AM is appended. Can be empty, even if there is a next\_po\_qty.

### Incremental Inventory Import Status Email

Order Orchestration sends this email to the Administrative Email address specified at the [Event Logging](#) screen if the incremental inventory program was unable to import the pipe-delimited file and if the Email Notifications flag for the Incremental Inventory Import option is set to Administrator.

The language used for the email is based on the Language specified for the organization, and the formatting of dates, times, and numbers is also based on the organization-level settings. See the [Organization](#) screen for more information.

The Uploaded By entry always indicates a user of SYSTEM.

### Scheduling the Incremental Inventory Import Job

- Click the plus sign next to the Incremental Inventory Import job in the left-hand panel to display a list of existing organizations.

#### Note

The list of organizations is available only if Use Routing Engine is selected at the [Tenant-Admin](#) screen.

- Click the organization where incremental inventory data should be imported. When you select an organization, the systems within the organization are displayed

 ... Auto - Au  
 ... AUD  
 ... AUOI  
 ... AUP  
 ... AUS

- When you select a system, the [Incremental Inventory Import Fields](#) are displayed to the right.
- Enter the Time in HH:MM format (24-hour clock) when the job should run.
- Optionally, select [Schedule Enabled](#).
- Optionally, select [Run Now](#) to run the job immediately.
- Select Save.
- Select Cancel to exit the screen

#### Incremental Inventory Import Fields

- [Schedule Enabled](#)
- Schedule Interval: Set to Daily. Display-only.
- Time: The time of day, in HH:MM format (24-hour clock) when the job runs. Required.

#### Job Summary

- [Schedule Enabled](#)
- [Run Now](#)
- [Last Run](#)
- [Next Run](#)

**For more information:** See the [Tenant-Admin](#) screen for information on Retention Settings fields.

#### Order Administration Status Recovery

**Overview:** The Order Administration Status Recovery job is used to send status changes to Order Administration Cloud Service that occurred after a specified date and time that has been entered in Order Orchestration Cloud Service.

This job can be run to correct any out-of-sync statuses due to timing issues after an application update of a customer or other unplanned reasons.

#### Important

Since this job triggers status updates for everything that occurred after a specified date, caution should be used when setting the date and determining the timing of when this is run.

#### Scheduling the Order Administration Status Recovery job:

- On the Schedule Jobs screen, from the left-hand panel under the Data Hygiene folder, click the plus sign next to the Order Administration Status Recovery job to display a list of existing organizations and systems.

The following criteria must be met in order to run the status recovery job:

- Status Start Date — The Status Start Date must be today or in the past, it cannot be in the future.
- Schedule Date — Schedule Date is a required field. It is validated only if Schedule Enabled flag is selected.
- Invalid Time — Time format is HH:mm. (validated only if Schedule Enabled flag is selected).
- For additional information, see the following:
  - [View Active Schedules](#)
  - [Order Administration Status Recovery](#)
  - [View Job History](#)

#### Note

All fields are immediately reset after the Status Recovery job is run.

### Error handling

- The Status Recovery Job should only run for the system whose Order Administration Cloud Service System flag is enabled. If the flag is not enabled, the following message is displayed both in the logs as well as in the history screen.

Order Administration Status Recovery job can only be run if the "Order Administration Cloud Service System" flag is enabled for the system {}.

- The job will not be run if it is already running for any other system (not restricted to the current org). In this case, the job will go to the REJECTED status and needs to be either rescheduled or re-run using run now option.
- New status updates coming in are paused until the job is done running. After the job execution, if any updates happened to the order, then Order Orchestration Cloud Service fetches the new statuses and sends them out after the job finishes.
- If the job was previously scheduled and later, a Run Now operation was performed, then, after the Run Now completes successfully, the schedule is disabled and the job does not execute during the scheduled time.
- This job cannot be run or scheduled through the Job Scheduler API.

### Product Import

**Process overview:** See [Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#) for an overview.

**Omnichannel Cloud Data Service (OCDS)** or Merchandising Omni Services imports: Importing store and warehouse locations, products, inventory, barcodes, and product images from [OCDS or Merchandising Omni Services](#) also uses a different process from the one described under [Import Process Overview \(Other than RMFCS File Upload through OCDS or Merchandising Omni Services\)](#). If you have used the Add or Edit External Service window from the [External Services](#) screen to enable any of the available imports from OCDS or Merchandising Omni Services, submitting an import at the Schedule Jobs screen triggers the

request(s) to OCDS or Merchandising Omni Services for data, rather than any of the other import options described here. Also, the fields described under [OCDS or Merchandising Omni Services Integration](#) are used to control the import from OCDS or Merchandising Omni Services. See [OCDS or Merchandising Omni Services Imports](#) for background and more information.

**Import products from the default system first to prevent import errors:** It is important to schedule the product import for the [default system](#) before the other systems in the organization. Order Orchestration requires that the product exist in the default system before you can create the system products or product locations for the other systems. However, if you import products from Merchandising Cloud Services applications (RMFCS), each product has the same product and system product code across systems, and the product code is created automatically if it does not already exist in the default system.

**! Important**

Oracle recommends that you run this job daily at a time when demands on the system are limited, and when it does not interfere with the database backup.

**Additional consideration when scheduling import processes for systems:**

- Oracle recommends that you allow about 30 minutes between scheduled import processes to help make sure that each process completes before the next one begins.
- If you are using File Storage, a copy of each import file must be uploaded to the OROB-IMPORTS container of the FILE\_STORAGE table through a putFile request message.

**i Note**

Each import is optional. For example, you can run the import for products and product locations without also importing locations, UPC barcodes, or images. When the import runs, it includes any import files it finds for the system in the OROB-IMPORTS container.

**File cleanup:** Product import error files are cleared by the Daily Clean Up job; see [Daily Clean Up](#) for more information. Product Import history is retained for the number of days specified in the Job History retention setting at the [Tenant-Admin](#) screen.

For more information: See:

- Process overview: [Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#) for background on the import process, including [File Storage API for Imports and Exports](#).
- Imports through OCDS or Merchandising Omni Services: [OCDS or Merchandising Omni Services Imports](#).
- Additional supported imports:
  - Location imports: [Importing Locations through File Storage API](#) and [Location Import Errors Report](#).
  - Product, system product, and image URL imports: [Importing Products, System Products, and Item URLs through File Storage API](#) and [Product Import Errors Report](#).
  - Product location imports: [Importing Product Locations through File Storage API](#).

- Product UPC barcode imports: [Importing UPC Barcodes through File Storage API](#) and [Product Barcode Import Errors Report](#).

### Product Import Status Email

When the import process is complete, Order Orchestration sends an email to the email address(es) specified at the [Administrative email](#) field at the [Event Logging](#) screen if the Email Notifications flag for the Location Product Import option is set to Administrator.

The language used for the email is based on the Language specified for the organization, and the formatting of dates, times, and numbers is also based on the organization-level settings. See the [Organizations](#) screen for more information.

# of Upc Records in Error 0

Please do not respond to this message.

--Order Orchestration

### Information in this email includes:

- **Success or failure:** The email indicates that the process failed if any product, product location, location, or UPC records failed to update; otherwise, it indicates a success.
- **System code:** the [system](#) scheduled for import, or the selected system when you ran the import on demand.
- **Import ID:** A unique ID number assigned by Order Orchestration to identify an import process. This number is displayed at the [Product Imports History](#) screen and listed on the [Location Import Errors Report](#), [Product Import Errors Report](#), and [Product Barcode Import Errors Report](#).
- **Uploaded By:** the user ID of the person who scheduled the import process, or ran it on demand.

- **# of Product Records:** The total number of product records that were successfully created or updated as a result of the import process.
- **# of Product Records in Error:** The total number of product import records that were in error for this import process.
- **# of Product Location Records:** The total number of product location records that were successfully created or updated as a result of this import process.
- **# of Product Location Records in Error:** The total number of product location import records that were in error for this import process.
- **# of Location Records:** The total number of location records that were successfully created or updated as a result of this import process.
- **# of Location Records in Error:** The total number of location import records that were in error for this import process.
- **# of Upc Records:** The total number of product UPC barcodes that were successfully created or updated as a result of this import process.
- **# of Upc Records In Error:** The total number of UPC barcodes that were in error for this import process.

**Always generated?** If the Email Notifications flag for the Location Product Import option at the [Event Logging](#) screen is set to Administrator, Order Orchestration generates this email regardless of whether the import process ran because you scheduled it, or you ran it on demand.

**Negative number?** A negative number of records generally indicates that an error occurred.

**If number of records and number of records in error are both 0:** The email lists a number of records and a number of records in error as 0 if there was no import file to process. This situation might occur if:

- You did not import a particular type of record; for example, there were no product barcodes to import; or
- The name of an import file did not match the naming convention; for example, a product barcode file was named PRODUCT\_BARCODE.TXT (no system specified) or PRODUCT\_BARCODE\_SYS.txt (the txt extension was lowercase).

In any of these cases, the email indicates that the import was successful.

**For more information:** See the [Product Imports History](#) screen and the [Location Import Errors Report](#), [Product Import Errors Report](#), and [Product Barcode Import Errors Report](#) for more troubleshooting information related to these imports.

#### Note

Some errors that can occur from the data in a flat import file are not written to the related import database table, so in that case the error is noted only in the error file and not on the related report; for example: an invalid number of columns in the flat file or an empty file.

## Scheduling the Product Import Job

First, advance to Product Import options

- Click the plus sign next to the Product Import job in the left-hand panel to display a list of existing organizations.

### Note

The list of organizations is available only if Use Routing Engine is selected at the [Tenant-Admin](#) screen.

- Click the organization where data should be imported. When you select an organization, the systems within the organization are displayed.

- When you select a system, the [Scheduling the Product Import Job](#) are displayed to the right.

Then schedule the import for an integrated system

- When you select an organization, the [Scheduling the Product Import Job](#) are displayed to the right.
- Select one or more [Days of Week](#) when the job should run.
- Use the [Time](#) field to enter the time when the job should run, in 24-hour format (HH:MM). Entry of more than one time is not supported.
- Optionally, change the [Days to Keep Errors](#) to any number from 1 to 99.
- If you are running the [OCDS or Merchandising Omni Services Imports](#), complete the additional OCDS Options if [OCDS Configured](#) is set to Yes.
- Select [Schedule Enabled](#).
- Optionally, select [Run Now](#) to run the job immediately.
- Select Save.
- Select Cancel to exit the screen.

**Reviewing results:** You can review the import process at the [Product Imports History](#) screen, and you can review errors through the [Product Barcode Import Errors Report](#), [Product Import Errors Report](#), and [Location Import Errors Report](#).

### Product Import Job Fields

- [Schedule Enabled](#)
- [Run Now](#)

- [Schedule Interval](#): Set to Day(s) of Week. Display-only.
- [Days of Week](#)
- [Time](#): The time of day, in HH:MM format (24-hour clock) when the job runs. Required.
- [Days to Keep Errors](#)

**OCDS Options (If OCDS is configured):**

- [Schedule Interval Options](#)
- [Date \(in OCDS Options\)](#)
- [Time](#)

**Job Summary**

- [Last Updated](#)
- [Last Run](#)
- [Next Run](#)

**For more information:** See the [Tenant-Admin](#) screen for information on Retention Settings fields.

**Auto Cancel Unclaimed Pickup Orders****Scheduling the Auto Cancel Unclaimed Pickup Orders Job**

- Enter the Time in HH:MM format (24-hour clock) when the job should run.
- Optionally, select [Schedule Enabled](#).
- Optionally, select [Run Now](#) to run the job immediately.
- Select Save.
- Select Cancel to exit the screen.

**Auto Cancel Unclaimed Pickup Order Fields**

- [Schedule Enabled](#)
- Schedule Interval: Set to Daily. Display-only.
- Time: The time of day, in HH:MM format (24-hour clock) when the job runs. Required.
- [Last Updated](#)
- [Last Run](#)
- [Next Run](#)
- [Run Now](#)

**Auto Cancel Unclaimed Pickup Orders History:** Use the [Auto Cancel Unclaimed Pickup Orders History](#) screen to review auto-cancel jobs that have run.

For more information: See [Auto-Cancel Unclaimed Orders](#) for a discussion.

**Email Notifications**

This job generates email notifications to store locations, vendors, customers, retailers, or systems operations staff based on the unprocessed records that are currently in the EMAIL\_NOTIFICATION table.

**Scheduling the Email Notifications Job**

- Use the Minutes field to enter the number of minutes to wait before generating any emails to store locations, vendors, customers, retailers, or systems operations staff. Your entry must be a number from 1 to 59.
- Optionally, select [Schedule Enabled](#).
- Optionally, select [Run Now](#) to run the job immediately.
- Select Save.
- Select Cancel to exit the screen.

### Email Notifications Fields

- [Schedule Enabled](#)
- Schedule Interval: Set to Minutes. Display-only.
- [Last Updated](#)
- [Last Run](#)
- [Next Run](#)
- [Run Now](#)

**History:** Use the [Email Notifications Job History](#) screen to review email notifications jobs that have run.

### Generate Pickup Ready Reminder Emails

You can use the generate pickup ready reminder emails job to send emails to customers indicating that their pickup orders or ship-for-pickup orders are ready for pickup, based on whether the date and time when they were picked or received is older than the number of Aged Hours defined for the job.

The email will be generated to the customer each time the job runs until the order is picked up or canceled. Emails are not generated for orders that are under review, or that are not assigned to a Store Connect location.

**Generate by organization:** You need to schedule this job separately for each organization that needs to generate pickup-ready reminder emails. Click the plus sign next to the job name in the left-hand panel to display a list of existing organizations.

#### Note

The list of organizations is available only if Use Routing Engine is selected at the [Tenant-Admin](#) screen. Also, only organizations that have a Store Connect system defined are displayed.

### Scheduling the Generate Pickup Ready Reminder Emails Job

- Click the plus sign next to the Generate Pickup Ready Reminder Emails job in the left-hand panel to display a list of existing organizations.

- Click the organization where you want to generate the reminder emails. When you select an organization, the [Generate Pickup Ready Reminder Email Fields](#) are displayed to the right.

**Note**

The list of organizations is available only if Use Routing Engine is selected at the [Tenant-Admin](#) screen.

- Optionally, select [Schedule Enabled](#).
- Optionally, select [Run Now](#) to run the job immediately.
- Select each [Day of Week](#) when the job should run.
- Select the [Time](#) when the job should run.
- Specify the Aged Hours to indicate how many hours after a pickup order is picked, or a ship-for-pickup order is picked (if the sourcing location is the same as the pickup location) or received (if the sourcing location ships the items to the pickup location), that it is eligible to receive the pickup reminder.
- Select Save.
- Select Cancel to exit the screen.

#### Generate Pickup Ready Reminder Email Fields

- [Schedule Enabled](#)
- [Run Now](#)
- Schedule Interval: Set to Day(s) of Week. Display-only.
- [Day of Week](#)
- [Time](#)
- [Aged Hours](#)

#### Job Summary

- [Last Updated](#)
- [Last Run](#)
- [Next Run](#)

**Generate Pickup Ready Reminder Emails Job History:** Use the [Generate Pickup Reminder Email History](#) screen to review pickup ready reminder generation jobs that have run.

For more information: See the [Store Connect Overview](#) for background.

## Fields at this Screen

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Days to Keep Errors</b> | <p>For the <a href="#">Product Import</a>, enter the number of days to retain product import history in the product_import, product_location_import, location_import, product_import_ecommerce_log, and product_import_log tables after an import process completes. Each time you run the import process for a system, it deletes these records if the indicated number of days has passed.</p> <p>Once these records are deleted, you cannot review errors through the <a href="#">Location Import Errors Report</a>, <a href="#">Product Import Errors Report</a>, and <a href="#">Product Barcode Import Errors Report</a>.</p> <p>Note: The process also creates records in the import tables for records that are not in error. These records are eligible to be cleared through the <a href="#">Daily Cleanup</a> job after the number of days specified in the Job History field at the <a href="#">Tenant-Admin</a> screen. You can review these job history records at the <a href="#">Product Imports History</a> screen or the <a href="#">View Job History</a> screen.</p> <p>Enter a number from 1 to 99. Required if the Enabled flag is selected. Default = 7.</p> <p>Included only for the <a href="#">Product Import</a>.</p> <p>Also updated by Run Job API: The setting of this field is updated when the <a href="#">Run Job API</a> is used to submit this job.</p> |
| <b>Aged Hours</b>          | <p>For the <a href="#">Generate Pickup Ready Reminder Emails</a> job, indicates how many hours after a pickup order is picked that it is eligible to receive the pickup reminder.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>OCDS Configured</b>     | <p>For the <a href="#">Product Import</a>, set to Yes if OCDS or Merchandising Omni Services is configured; otherwise, set to No. Display-only. See below for more information.</p> <p>Included only for the <a href="#">Product Import</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>OCDS Integration</b>    | <p>The following three fields are used for the <a href="#">Product Import</a>. The Schedule Interval Options, Date, and Time fields described below are available only when the system supports imports from OCDS or Merchandising Omni Services. See <a href="#">OCDS or Merchandising Omni Services Imports</a> for background. Also, they are used only when you submit the import on demand.</p> <p>If the OCDS import is not enabled for any type of data, then the standard import through the file storage API takes place.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Field                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## Sales Order Data Extract Files

The [Sales Order Data Extract](#) generates a zip file containing a set of pipe-delimited files, which contain the following types of information on sales orders and purchase orders:

- sold-to customer
- customization
- items
- order totals, locations, and other general order data
- order shipments
- ship-to customer
- status history

**File naming:** The zip file is named EXPORT\_DATA\_ORGANIZ\_CD\_20190825\_045700, where ORGANIZ\_CD is the organization code, 20190825 is the date generated in YYYYMMDD format, and 045700 is the time generated in HHMMSS format.

See [File Storage API for Imports and Exports](#) for information on receiving the exported files.

### In this topic:

- [XOM\\_CUSTOMER](#)
- [XOM\\_CUSTOMIZATION](#)
- [XOM\\_ITEM](#)
- [XOM\\_ORDER](#)
- [XOM\\_ORDER\\_SHIPMENT](#)
- [XOM\\_SHIPPING](#)
- [XOM\\_STATUS\\_HISTORY](#)

### For more information: See:

- [Sales Order Data Extract](#) for information on scheduling the extract and creating the extract files.
- [View Sales Order Data Extract Job History](#) for information on reviewing extract job history.

## XOM\_CUSTOMER

The table below lists the fields in the XOM\_CUSTOMER pipe-delimited file, containing extracted data on the customer who placed each order. The information is found in the XOM\_CUSTOMER table in the database.

The complete file name is

EXPORT\_DATA\_XOM\_CUSTOMER\_ORGANIZ\_CD\_20190825\_045700.dat, where ORGANIZ\_CD is the organization code, 20190825 is the date generated in YYYYMMDD format, and 045700 is the time generated in HHMMSS format.

The file contains a header row. The heading for each column is indicated in the table below.

**Personal data?** If the Include Private Data flag was not selected when the export was generated, the data for all personal data fields in the file are replaced with the text \*\*\*\*\* Data Privacy Blocked \*\*\*\*\*. The fields that can be masked include:

- Name fields
- Address fields, with the exception of the city, territory (province or state), and postal (zip) code
- Phone numbers

The information might also be masked because the order has already been [anonymized](#). In this case, the data is replaced with a row of asterisks.

**Field attributes:** The field attributes listed below are based on what is supported through the database and the [submit order message](#), or in the [CreateDSOrder](#) request message in the case of a purchase order.

**For more information:** See the of the [Order](#) screen for more information on customer-related fields in context, and see the [Purchase Order](#) screen for information on customer-related fields on purchase orders.

| Column Heading | Attributes       | Description                                                           |
|----------------|------------------|-----------------------------------------------------------------------|
| REQUEST_ID     | Numeric, 10      | A unique number assigned by Order Orchestration to identify an order. |
| ORDER_ID       | Alphanumeric, 30 | The number identifying the order in the originating system.           |
| LAST_NAME      | Alphanumeric, 50 | The last name of the sold-to customer.                                |
| MIDDLE_NAME    | Alphanumeric, 50 | The middle name of the sold-to customer.                              |
| FIRST_NAME     | Alphanumeric, 50 | The first name of the sold-to customer.                               |
| PREFIX         | Alphanumeric, 50 | The prefix to the sold-to-customer's name, such as Dr. or Ms.         |
| SUFFIX         | Alphanumeric, 50 | The suffix to the sold-to customer's name, such as Jr.                |
| ADDRESS_1      | Alphanumeric, 50 | The first line of the sold-to customer's address.                     |
| ADDRESS_2      | Alphanumeric, 50 | The second line of the sold-to customer's address.                    |
| ADDRESS_3      | Alphanumeric, 50 | The third line of the sold-to customer's address.                     |

| Column Heading       | Attributes        | Description                                                                 |
|----------------------|-------------------|-----------------------------------------------------------------------------|
| ADDRESS_4            | Alphanumeric, 50  | The fourth line of the sold-to customer's address.                          |
| CITY                 | Alphanumeric, 50  | The city or town of the sold-to customer's address.                         |
| TERRITORY            | Alphanumeric, 50  | The state, province, or territory of the sold-to customer's address.        |
| POSTAL_CODE          | Alphanumeric, 50  | The zip or postal code of the sold-to customer's address.                   |
| DAY_PHONE            | Alphanumeric, 50  | The daytime phone number of the sold-to customer.                           |
| EVENING_PHONE        | Alphanumeric, 50  | The evening phone number of the sold-to customer.                           |
| EMAIL                | Alphanumeric, 250 | The email address of the sold-to customer.                                  |
| COUNTRY              | Alphanumeric, 3   | The code identifying the country of the sold-to customer's address.         |
| COMPANY_NAME         | Alphanumeric, 50  | The name of the sold-to customer's company.                                 |
| CUSTOMER_NO          | Alphanumeric, 30  | The code identifying the customer in the originating system.                |
| APT                  | Alphanumeric, 50  | The apartment or suite of the sold-to customer's address.                   |
| TAX_EXEMPTION_NUMBER | Alphanumeric, 50  | Future use.                                                                 |
| UNFORMATTED_PHONE    | Alphanumeric, 50  | The customer's daytime phone number with any formatting characters removed. |

### XOM\_CUSTOMIZATION

The table below lists the fields in the XOM\_CUSTOMIZATION pipe-delimited file, containing extracted data on any customization or special handling for order lines. The information is found in the XOM\_ORDER\_ITEM\_CUSTOMIZATION table in the database.

The complete file name is

EXPORT\_DATA\_XOM\_CUSTOMIZATION\_ORGANIZ\_CD\_20190825\_045700.dat, where ORGANIZ\_CD is the organization code, 20190825 is the date generated in YYYYMMDD format, and 045700 is the time generated in HHMMSS format.

The file contains a header row. The heading for each column is indicated in the table below.

**Personal data?** This file does not contain any personal data.

**Field attributes:** The field attributes listed below are based on what is supported through the database and the [submit order message](#), or in the [CreateDSOrder](#) in the case of a purchase order.

**For more information:** See the SubmitOrder Request Message and CreateDSOrder Request Message chapters in the Web Services Guide on My Oracle Support (2953017.1) for more information on how customization information is passed from the originating system.

| Column Heading     | Attributes       | Description                                                           |
|--------------------|------------------|-----------------------------------------------------------------------|
| <b>REQUEST_ID</b>  | Numeric, 10      | A unique number assigned by Order Orchestration to identify an order. |
| <b>LINE_NUMBER</b> | Numeric, 10      | The order line number receiving the customization.                    |
| <b>SEQUENCE</b>    | Numeric, 10      | A unique number to identify each record.                              |
| <b>CODE</b>        | Alphanumeric, 50 | The code used to identify the type of customization.                  |
| <b>MESSAGE</b>     | Alphanumeric     | The description of the customization.                                 |

### XOM\_ITEM

The table below lists the fields in the XOM\_ITEM pipe-delimited file, containing extracted data on the lines on orders. The information is found in the XOM\_ITEM table in the database.

The complete file name is

EXPORT\_DATA\_XOM\_ITEM\_ORGANIZ\_CD\_20190825\_045700.dat, where ORGANIZ\_CD is the organization code, 20190825 is the date generated in YYYYMMDD format, and 045700 is the time generated in HHMMSS format.

The file contains a header row. The heading for each column is indicated in the table below.

**Personal data?** This file does not contain any personal data.

**Field attributes:** The field attributes listed below are based on what is supported through the database and the [submit order message](#), or in the [CreateDSOrder](#) in the case of a purchase order.

See the [Details tab](#) at the **Order** screen for more information on order detail lines, or see the [Purchase Order](#) screen for information on purchase orders.

| Column Heading             | Attributes       | Description                                                                                         |
|----------------------------|------------------|-----------------------------------------------------------------------------------------------------|
| <b>REQUEST_ID</b>          | Numeric, 10      | A unique number assigned by Order Orchestration to identify an order.                               |
| <b>ORDER_ID</b>            | Alphanumeric, 30 | The number identifying the order in the originating system.                                         |
| <b>LINE_NUMBER</b>         | Numeric, 10      | The order line number assigned by Order Orchestration.                                              |
| <b>PRODUCT_CD</b>          | Alphanumeric, 35 | The product code for the default system in the organization.                                        |
| <b>PRODUCT_DESCRIPTION</b> | Alphanumeric, 40 | The description of the item.                                                                        |
| <b>QUANTITY</b>            | Number, 10       | The requested quantity of the item.                                                                 |
| <b>LINE_ITEM_AMOUNT</b>    | Number, 19.4     | The single-unit price for the item charged by the originating system.                               |
| <b>LINE_TAX_AMOUNT</b>     | Number, 19.4     | The total tax amount charged for a single unit of the item, passed by the originating system.       |
| <b>FULFILL_LOCATION_CD</b> | Alphanumeric, 10 | The code identifying the fulfilling location, or the sourcing location for a ship-for-pickup order. |
| <b>FULFILL_SYSTEM_CD</b>   | Alphanumeric, 10 | The code identifying the system associated with the fulfilling location.                            |

| Column Heading               | Attributes       | Description                                                                                                                                                                              |
|------------------------------|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>STATUS</b>                | Alphanumeric     | The current status of the order line. See <a href="#">Order and Line Statuses</a> for more information.                                                                                  |
| <b>STATUS_DATE</b>           | Date             | The date and time of the most recent status update.                                                                                                                                      |
| <b>EXTENDED_DATA</b>         | Alphanumeric     | Any special instructions for the purchase order line or sales order line passed by the originating system, and stored in the EXTENDED_DATA field in the XOM_ITEM table.                  |
| <b>REQUESTER_LINE_NUMBER</b> | Number, 10       | The line number in the originating system.                                                                                                                                               |
| <b>ORIGINAL_LINE_NUMBER</b>  | Number, 10       | Identifies the original line number on a sales order if the line was split. Otherwise, set to 0.                                                                                         |
| <b>ORIGINAL_QUANTITY</b>     | Number, 10       | Identifies the original quantity of the line on a sales order was split. May differ from the QUANTITY if the line was split.                                                             |
| <b>POLLED_COUNT</b>          | Number, 10       | The number of times the order line on a sales order has been polled.                                                                                                                     |
| <b>EXTENDED_FREIGHT</b>      | Number, 19.4     | The extended freight charge passed by the originating system.                                                                                                                            |
| <b>CUSTOMIZATION_CHARGE</b>  | Number, 19.4     | The charge amount for customization of the line.                                                                                                                                         |
| <b>GIFT_WRAP</b>             | Alphanumeric, 1  | Set to Y if the item should be gift wrapped; otherwise, set to N.                                                                                                                        |
| <b>SHIP_ALONE</b>            | Alphanumeric, 1  | Set to Y if the item requires shipping alone; otherwise, set to N.                                                                                                                       |
| <b>MESSAGES</b>              | Alphanumeric     | Any message passed for the order line. Stored in the NOTE table in the database.                                                                                                         |
| <b>UNIT_SHIP_WEIGHT</b>      | Numeric, 8.3     | The unit shipping weight of the item, as passed by the originating system.                                                                                                               |
| <b>BATCH_ID</b>              | Number, 10       | A number assigned to group lines for printing and updating status.                                                                                                                       |
| <b>SHIPMENT_ID</b>           | Number, 10       | Identifies a record in the <a href="#">XOM_ORDER</a> file if the item has been shipped.                                                                                                  |
| <b>PICKUP_LOCATION_CD</b>    | Alphanumeric, 10 | The code identifying the location where the customer picks up the sales order. Included only for pickup or ship-for-pickup orders.                                                       |
| <b>PICKUP_SYSTEM_CD</b>      | Alphanumeric, 10 | The code identifying the system associated with the location where the customer picks up the sales order. Included only for pickup or ship-for-pickup orders.                            |
| <b>PICKUP_BY_DATE</b>        | Date             | The date and time when the order line on a sales order is eligible to be automatically canceled.                                                                                         |
| <b>AUTO_CANCELLED</b>        | Date             | A setting of 1 indicates that the order line on a sales order was automatically canceled; otherwise, set to 0 or blank. See <a href="#">Auto-Cancel Unclaimed Orders</a> for background. |

### XOM\_ORDER

The table below lists the fields in the XOM\_ORDER pipe-delimited file, containing extracted data about the orders. The information is found in the XOM\_ORDER table in the database.

The complete file name is EXPORT\_DATA\_XOM\_ORDER\_ORGANIZ\_CD\_20190825\_045700.dat, where ORGANIZ\_CD is the organization code, 20190825 is the date generated in YYYYMMDD format, and 045700 is the time generated in HHMMSS format.

The file contains a header row. The heading for each column is indicated in the table below.

**Personal data?** If the Include Private Data flag was not selected when the export was generated, the data for all personal data fields in the file are replaced with \*\*\*\*\* Data Privacy Blocked \*\*\*\*\*.

The information might also be masked because the order has already been [anonymized](#). In this case, the data is replaced with a row of asterisks.

**Field attributes:** The field attributes listed below are based on what is supported in the database and through the [submit order message](#), or in the [CreateDSOrder](#) request message in the case of a purchase order.

| Column Heading             | Attributes       | Description                                                                                                                                               |
|----------------------------|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| REQUEST_ID                 | Numeric, 10      | A unique number assigned by Order Orchestration to identify an order.                                                                                     |
| ORDER_ID                   | Alphanumeric, 30 | The number identifying the order in the originating system.                                                                                               |
| CREATE_TIMESTAMP           | Date             | The date and time when the order was created in Order Orchestration.                                                                                      |
| ORDER_TYPE                 | Alphanumeric     | Possible order types: <ul style="list-style-type: none"> <li>• DELIVERY</li> <li>• PICKUP</li> <li>• PURCHASE ORDER</li> <li>• SHIP FOR PICKUP</li> </ul> |
| ORDER_DATE                 | Date             | The transaction date passed by the originating system.                                                                                                    |
| SUBTOTAL_AMOUNT            | Number, 19.4     | The order total before taxes as passed by the originating system.                                                                                         |
| TAX_AMOUNT                 | Number, 19.4     | The total taxes for the order as passed by the originating system                                                                                         |
| TAX_DESCRIPTION            | Alphanumeric, 30 | The same as the TAX_AMOUNT.                                                                                                                               |
| TOTAL_AMOUNT               | Number, 19.4     | The total amount for the transaction as passed by the originating system.                                                                                 |
| ORIGINATING_EMPLOYEE_ID    | Alphanumeric, 10 | From the employee ID passed by the originating system, or the buyer ID for a purchase order.                                                              |
| ORIGINATING_TRANSACTION_ID | Alphanumeric, 50 | The transaction number passed by the originating system for a sales order.                                                                                |
| ORIGINATING_CHANNEL        | Number, 10       | The originating channel passed by the originating system for a sales order.                                                                               |
| ORIGINATING_LOCATION_CD    | Alphanumeric, 10 | The code identifying the originating location passed by the originating system.                                                                           |
| ORIGINATING_SYSTEM_CD      | Alphanumeric, 10 | The code identifying the system associated with the originating location, passed by the originating system.                                               |
| STATUS                     | Alphanumeric     | The current status of the order. See <a href="#">Order and Line Statuses</a> for more information.                                                        |

| Column Heading              | Attributes       | Description                                                                                                                                                                                                |
|-----------------------------|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>STATUS_DATE</b>          | Date             | The most recent date and time when the status of the order was updated.                                                                                                                                    |
| <b>EXTENDED_DATA</b>        | Alphanumeric     | The special instructions passed by the originating system.                                                                                                                                                 |
| <b>SHIP_VIA</b>             | Alphanumeric, 50 | The code identifying the carrier for the order, passed by the originating system.                                                                                                                          |
| <b>SHIP_VIA_DESCRIPTION</b> | Alphanumeric, 50 | The description of the carrier for the order, passed by the originating system.                                                                                                                            |
| <b>GIFT</b>                 | Alphanumeric, 1  | Set to Y to indicate that the order is a gift, passed by the originating system.                                                                                                                           |
| <b>FREIGHT_AMOUNT</b>       | Number, 19.4     | The total freight charges for the order, passed by the originating system.                                                                                                                                 |
| <b>BALANCE_DUE</b>          | Number 19,4      | The amount due when the order is picked up, typically used to indicate the balance due for a pickup or ship-for-pickup order. From the <code>balance_due</code> passed in the SubmitOrder request message. |
| <b>SOURCE_CODE</b>          | Alphanumeric, 50 | A code identifying the source of the sales order in the originating system. From the <code>source_code</code> passed in the SubmitOrder request message.                                                   |
| <b>POLLED_COUNT</b>         | Numeric, 10      | Set to 0.                                                                                                                                                                                                  |
| <b>REF_TRANSACTION_NO</b>   | Alphanumeric, 50 | From the <code>ref_transaction_no</code> passed in the SubmitOrder request message for a sales order.                                                                                                      |
| <b>CURRENCY</b>             | Alphanumeric, 10 | The three-position alphabetical ISO 4217 currency code for the order. From the currency passed by the originating system.                                                                                  |
| <b>ADDITIONAL_FREIGHT</b>   | Number, 19.4     | The additional freight on the order, passed by the originating system.                                                                                                                                     |
| <b>ADDITIONAL_CHARGES</b>   | Number, 19.4     | The additional charges on the order, passed by the originating system.                                                                                                                                     |
| <b>SHIP_COMPLETE</b>        | Alphanumeric, 1  | Set to Y if the order should ship complete.                                                                                                                                                                |
| <b>NOTES</b>                | Alphanumeric     | Any message passed in the <code>order_message</code> tag of the SubmitOrder request message for a sales order. Stored in the NOTE table in the database.                                                   |
| <b>GIFT_MESSAGES</b>        | Alphanumeric     | Any gift message passed by the originating system. Stored in the NOTE table in the database.                                                                                                               |
| <b>FREIGHT_TAX</b>          | Number, 19.4     | The tax on freight for the order passed by the originating system.                                                                                                                                         |
| <b>UNDER_REVIEW</b>         | Numeric, 1       | Set to 1 if the sales order is currently under review; otherwise, set to 0.                                                                                                                                |
| <b>IN_PROCESS</b>           | Alphanumeric, 1  | Set to Y if the sales order has not yet been “shopped” to a fulfilling location; otherwise, set to N.                                                                                                      |
| <b>FULFILLMENT_OVERRIDE</b> | Numeric, 1       | Set to 1 if the sourcing location was specified in the SubmitOrder request for a ship-for-pickup order; otherwise, set to 0. Defaults to 0. Only used for new orders created in 16.0 or higher.            |

**XOM\_ORDER\_SHIPMENT**

The table below lists the fields in the XOM\_ORDER\_SHIPMENT pipe-delimited file, containing extracted data on the shipments made for orders. The information is found in the XOM\_ORDER\_SHIPMENT table in the database.

The complete file name is

EXPORT\_DATA\_XOM\_ORDER\_SHIPMENT\_ORGANIZ\_CD\_20190825\_045700.dat, where ORGANIZ\_CD is the organization code, 20190825 is the date generated in YYYYMMDD format, and 045700 is the time generated in HHMMSS format.

The file contains a header row. The heading for each column is indicated in the table below.

**Personal data?** This file does not contain any personal data.

**Field attributes:** The field attributes listed below are based on what is supported through the StatusUpdate request message and the database.

| Column Heading           | Attributes        | Description                                                                                   |
|--------------------------|-------------------|-----------------------------------------------------------------------------------------------|
| <b>SHIPMENT_ID</b>       | Number, 10        | A unique number to identify a shipment.                                                       |
| <b>CARRIER_CODE</b>      | Alphanumeric, 50  | From the carrier or shipping agent passed by the originating system.                          |
| <b>TRACKING_NUMBER</b>   | Alphanumeric, 255 | From the tracking_number passed in the Order Status Update request message for a sales order. |
| <b>SHIPMENT_DATETIME</b> | Date              | The date and time of the shipment.                                                            |
| <b>FREIGHT_CHARGES</b>   | Number, 19.4      | From the freight charges in the XOM_ORDER_SHIPMENT table.                                     |
| <b>ACTUAL_WEIGHT</b>     | Number, 12.4      | The package weight.                                                                           |
| <b>FULFILLMENT_ID</b>    | Alphanumeric, 255 | A package identifier.                                                                         |

**XOM\_SHIPPING**

The table below lists the fields in the XOM\_SHIPPING pipe-delimited file, containing extracted data on the customer who receives each order. A separate record is created for each shipped line. The information is found in the XOM\_SHIPPING table in the database.

The complete file name is

EXPORT\_DATA\_XOM\_SHIPPING\_ORGANIZ\_CD\_20190825\_045700.dat, where ORGANIZ\_CD is the organization code, 20190825 is the date generated in YYYYMMDD format, and 045700 is the time generated in HHMMSS format.

The file contains a header row. The heading for each column is indicated in the table below.

**Personal data?** If the Include Private Data flag was not selected when the export was generated, the data for all personal data fields in the file are replaced with \*\*\*\*\* Data Privacy Blocked \*\*\*\*\*. The fields that can be masked include:

- Name fields
- Address fields, with the exception of the city, territory (province or state), postal (zip) code, and country code
- Phone numbers

**Field attributes:** The field attributes listed below are based on what is supported through the SubmitOrder request message and the database.

**For more information:** See the *Header* tab of the [Order](#) screen for more information on customer-related fields in context, and see the [Purchase Order](#) screen for information on customer-related fields on purchase orders.

| Column Heading       | Attributes        | Description                                                                                                                       |
|----------------------|-------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>REQUEST_ID</b>    | Numeric, 10       | A unique number assigned by Order Orchestration to identify an order.                                                             |
| <b>ORDER_ID</b>      | Alphanumeric, 30  | The number identifying the order in the originating system.                                                                       |
| <b>LINE_NUMBER</b>   | Numeric, 10       | The order line number shipped.                                                                                                    |
| <b>LAST_NAME</b>     | Alphanumeric, 50  | The last name of the ship-to customer.                                                                                            |
| <b>MIDDLE_NAME</b>   | Alphanumeric, 50  | The middle name of the ship-to customer.                                                                                          |
| <b>FIRST_NAME</b>    | Alphanumeric, 50  | The first name of the ship-to customer.                                                                                           |
| <b>PREFIX</b>        | Alphanumeric, 50  | The prefix to the ship-to customer's name, such as Dr. or Ms.                                                                     |
| <b>SUFFIX</b>        | Alphanumeric, 50  | The suffix to the ship-to customer's name, such as Jr.                                                                            |
| <b>ADDRESS_1</b>     | Alphanumeric, 50  | The first line of the ship-to customer's address.                                                                                 |
| <b>ADDRESS_2</b>     | Alphanumeric, 50  | The second line of the ship-to customer's address.                                                                                |
| <b>ADDRESS_3</b>     | Alphanumeric, 50  | The third line of the ship-to customer's address.                                                                                 |
| <b>ADDRESS_4</b>     | Alphanumeric, 50  | The fourth line of the ship-to customer's address.                                                                                |
| <b>CITY</b>          | Alphanumeric, 50  | The city or town of the ship-to customer's address.                                                                               |
| <b>TERRITORY</b>     | Alphanumeric, 50  | The state, province, or territory of the ship-to customer's address.                                                              |
| <b>POSTAL_CODE</b>   | Alphanumeric, 50  | The zip or postal code of the ship-to customer's address.                                                                         |
| <b>COUNTRY</b>       | Alphanumeric, 3   | The three-position alphabetical or numeric (ISO Spec 3166) of the ship-to customer's country.                                     |
| <b>DATE_</b>         | Date              | The date and time when the order was created.                                                                                     |
| <b>REFERENCE</b>     | Alphanumeric, 50  | The shipping tracking number. From the <code>tracking_number</code> in the Order Status Update request message for a sales order. |
| <b>VIA</b>           | Alphanumeric, 50  | The shipper for the order. From the <code>shipping_agent</code> in the Order Status Update request message for a sales order.     |
| <b>DAY_PHONE</b>     | Alphanumeric, 50  | The daytime phone number of the ship-to customer.                                                                                 |
| <b>EVENING_PHONE</b> | Alphanumeric, 50  | The evening phone number of the ship-to customer.                                                                                 |
| <b>EMAIL</b>         | Alphanumeric, 250 | The email address of the ship-to customer.                                                                                        |

| Column Heading | Attributes       | Description                                                         |
|----------------|------------------|---------------------------------------------------------------------|
| <b>COUNTRY</b> | Alphanumeric, 3  | The code identifying the country of the ship-to customer's address. |
| <b>APT</b>     | Alphanumeric, 50 | The apartment or suite of the ship-to customer's address.           |

### XOM\_STATUS\_HISTORY

The table below lists the fields in the XOM\_STATUS\_HISTORY pipe-delimited file, containing extracted data on the status history of each order. The information is found in the XOM\_STATUS\_HISTORY table in the database.

The complete file name is EXPORT\_DATA\_XOM\_STATUS\_HISTORY\_ORGANIZ\_CD\_20190825\_045700.dat, where ORGANIZ\_CD is the organization code, 20190825 is the date generated in YYYYMMDD format, and 045700 is the time generated in HHMMSS format.

The file contains a header row. The heading for each column is indicated in the table below.

**Personal data?** The EMPLOYEE\_ID in the file is not masked regardless of whether the Include Private Data flag was selected.

**Field attributes:** The field attributes listed below are based on what is supported through the SubmitOrder request message and the database.

**For more information:** See the *Header tab* of the *Header tab* screen for more information on customer-related fields in context, and see the [Purchase Order](#) screen for information on customer-related fields on purchase orders.

| Column Heading       | Attributes       | Description                                                                                                                                                                                                                                                                                                                                    |
|----------------------|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>REQUEST_ID</b>    | Numeric, 10      | A unique number assigned by Order Orchestration to identify an order.                                                                                                                                                                                                                                                                          |
| <b>ORDER_ID</b>      | Alphanumeric, 30 | The number identifying the order in the originating system.                                                                                                                                                                                                                                                                                    |
| <b>LINE_NUMBER</b>   | Numeric, 10      | The order line number related to the activity.                                                                                                                                                                                                                                                                                                 |
| <b>SEQUENCE</b>      | Number, 10       | A unique number to identify the status history record for the order.                                                                                                                                                                                                                                                                           |
| <b>ACTIVITY_DATE</b> | Date             | The date and time when the activity occurred.                                                                                                                                                                                                                                                                                                  |
| <b>STATUS</b>        | Alphanumeric     | The status of the order line at the time of the activity. See <a href="#">Order and Line Statuses</a> for more information on sales orders.                                                                                                                                                                                                    |
| <b>REASON</b>        | Alphanumeric, 50 | The description of the status code, as described for the STATUS field, above. The same as the STATUS, except: <ul style="list-style-type: none"> <li>When the activity was the removal of personal data, the reason is PII REMOVED.</li> <li>When the status changes to accepted, picked, accepted, fulfilled, the REASON is blank.</li> </ul> |
| <b>EMPLOYEE_ID</b>   | Alphanumeric, 10 | The employee ID indicated for the order creation or status change.                                                                                                                                                                                                                                                                             |
| <b>TRANS_ID</b>      | Alphanumeric, 50 | The transaction_no passed by the originating system in the SubmitOrder request message for a sales order.                                                                                                                                                                                                                                      |

| Column Heading                   | Attributes        | Description                                                                                                                                                                                                                                                                                          |
|----------------------------------|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>FULFILL_LOCATION_CD</b>       | Alphanumeric, 10  | The code identifying the location to fulfilling location, or the sourcing location for a ship-for-pickup order.                                                                                                                                                                                      |
| <b>FULFILL_SYSTEM_CD</b>         | Alphanumeric, 10  | The code identifying the system associated with the fulfilling location.                                                                                                                                                                                                                             |
| <b>SHIP_VIA</b>                  | Alphanumeric, 50  | The code identifying the carrier for the order. From the <code>ship_via</code> passed in the SubmitOrder request message or the <code>shipping_agent</code> in the Status Update message for a sales order.                                                                                          |
| <b>SHIPPING_REFERENCE</b>        | Alphanumeric, 50  | From the <code>ship_via_description</code> passed in the SubmitOrder request message or the <code>tracking_number</code> in the Status Update request message for a sales order.                                                                                                                     |
| <b>QUANTITY</b>                  | Number, 10        | The order line quantity associated with the activity.                                                                                                                                                                                                                                                |
| <b>SOURCE</b>                    | Alphanumeric      | The source associated with the activity:<br>UI = User Interface<br>WS = Web Service or API                                                                                                                                                                                                           |
| <b>ORDER_STATUS_REASON_CODE</b>  | Alphanumeric, 30  | The status reason code, if any, passed in the Order Status Update request message for a sales order.                                                                                                                                                                                                 |
| <b>ORDER_STATUS_REASON_NOTE</b>  | Alphanumeric, 254 | A note about the activity, if any, from the <code>order_status_reason_note</code> passed in the Order Status Update request message for a sales order. This field is also updated with the current Under Review status when the order is initially created, or when the Under Review status changes. |
| <b>EXPORT_DATE</b>               | Date              | The date when the sales order was exported through the <a href="#">Sales Order Data Extract</a> .                                                                                                                                                                                                    |
| <b>CARTON_NBRS</b>               | Alphanumeric, 500 | The carton numbers used to ship the sales order.                                                                                                                                                                                                                                                     |
| <b>SHIP_TO_CHANGE_ID</b>         | Number, 10        | A value in this field indicates that there has been a shipping address change for a sales order. You can review shipping address changes at the <a href="#">Order History Detail - Address Change Window</a> .                                                                                       |
| <b>UNFULFILLABLE_REASON_CODE</b> | Number, 10        | A reason code generated by the Science Engine if a sales order is partially or fully unfulfillable. See the discussion of Science Engine responses at <a href="#">History tab</a> of the <b>Order</b> screen for more information.                                                                   |
| <b>PICKUP_BY_DATE</b>            | Date              | The last date before a pickup or ship-for-pickup order is eligible to be canceled by the <a href="#">auto-cancel unclaimed orders job</a> .                                                                                                                                                          |
| <b>PICKUP_BY_DATE_CHANGED</b>    | Numeric, 1        | If set to 1, indicates to display the Pickup By Date in order history as a change.                                                                                                                                                                                                                   |

## Event Logging

**Purpose:** Oracle staff use the **Event Logging** screen to configure the logging to take place for Order Orchestration.

**Logging options:** Oracle staff can configure Order Orchestration to write logs for:

- *Routing Engine module:*

- errors only
  - deletions only (deletion logging is available only for the user interface)
  - detailed: all events are logged
  - nothing
- *Integrated Message Logging:*
    - errors only
    - all messages
    - nothing

All personally identifiable information for customers, vendors, or locations is removed from logs. Personally identifiable information includes names, address, email addresses, phone numbers, customer numbers, and tender accounts.

The personally identifiable information is replaced in the log with the text `*** Removed by Logger ***`. For example, the email address might appear in the logs as `<email>*** Removed by Logger ***</email>`.

**Email notifications:** Oracle staff can also use the **Event Logging** screen to specify the events that should trigger an email notification to the [admin user](#); the individual user who performed the action, such as an upload; both the admin user and the individual user; or not to trigger an email, as well as to configure the language to use for these emails.

**Note**

See the [System](#) screen for information on specifying the email address to receive the [Polling Status Email](#).

### Additional Logging Setup

**Log retention days:** The Server Logs setting in the *Retention Settings* section of the [Tenant](#) screen controls how many days to retain log entries until they are eligible for deletion through a scheduled process.

**How to display this screen:** Select *Event Logging* from the [Home Screen](#) or from the [Systems Menu](#).

**Note**

Only users with *Event Logging* authority can display this screen. See [Roles](#) for more information.

| Field                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Event Logging              | <div>  <b>Important</b><br/>           See <a href="#">Additional Logging Setup</a>, above, for information on additional required setup that controls the level of detail in the logs and whether to log activity.         </div>                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Probability Rules          | <p>Controls the logging to take place when applying probability rules to locate items requests and other activities that require evaluation of availability in a product location. Possible settings:</p> <ul style="list-style-type: none"> <li><i>Errors only:</i> log an error if probability rule evaluation results in an error. Default setting.</li> <li><i>Nothing:</i> do not log probability rule activity.</li> </ul> <p>Detailed logging is not supported for probability rules. See <a href="#">Probability Rule Overview</a> for background.</p>                                                                                                                                                                                                     |
| Location Product Import    | <p>Controls the logging to take place when importing product and inventory information from an external system, including the incremental import program. Possible settings are:</p> <ul style="list-style-type: none"> <li><i>Detailed:</i> log errors and write other updates when importing information.</li> <li><i>Errors only:</i> log activity only when an error occurs during imports. Default setting.</li> <li><i>Nothing:</i> do not log activity based on product or product location imports or the incremental import.</li> </ul> <p>See <a href="#">Schedule Jobs</a> and the <a href="#">Incremental Inventory Import</a> for background.</p>                                                                                                     |
| User Interface             | <p>Controls the logging to take place for activity in the Order Orchestration user interface. If this field is set to:</p> <ul style="list-style-type: none"> <li><i>Detailed:</i> Creation, update, and deletion of records are logged.</li> <li><i>Deletions:</i> Deletions only are logged.</li> <li><i>Errors Only:</i> Errors only are logged. Default setting.</li> <li><i>Nothing:</i> No screen activity is logged.</li> </ul>                                                                                                                                                                                                                                                                                                                             |
| Trace Shopping Logic       | <p>Controls whether to track why individual locations are filtered when the Routing Engine selects a location to source an order. If this field is set to:</p> <ul style="list-style-type: none"> <li><i>Detailed:</i> The reasons why the Routing Engine filters individual locations from sourcing an order are tracked, and available for review at the <a href="#">Trace Shopping Log</a> screen.</li> <li><i>Nothing:</i> Shopping logic is not traced.</li> </ul> <p>Oracle recommends that shopping logic tracing be enabled only when needed to research shopping logic questions, and otherwise tracing is turned off in order to avoid impairing performance.</p> <p><b>For more information:</b> See the <a href="#">Trace Shopping Log</a> screen.</p> |
| Integrated Message Logging | <p>All personally identifiable information for customers, vendors, or locations is removed from logs. Personally identifiable information includes names, address, email addresses, phone numbers, customer numbers, and tender accounts.</p> <p>The personally identifiable information is replaced in the log with the text <code>*** Removed by Logger ***</code>. For example, the email address might appear in the log as <code>&lt;email&gt;*** Removed by Logger ***&lt;/email&gt;</code>.</p>                                                                                                                                                                                                                                                             |

| Field                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order Orchestration Request/Response</b> | <p>Controls the logging that is related to the Routing Engine request and response messages, including geocode requests and responses if you use the Oracle Maps Cloud Service (see <a href="#">Proximity Locator Searching</a> for background). Set this option to:</p> <ul style="list-style-type: none"> <li>• <i>Everything</i>: <ul style="list-style-type: none"> <li>– Log XML messages and JSON messages, including the ProductUpdate, LocationUpdate, and LocationDetail messages and interactive inventory request messages.</li> <li>– Log incorrectly formed XML messages.</li> </ul> </li> <li>• <i>Errors Only</i>: log incorrectly formed XML messages and incorrect JSON messages. Default setting.</li> <li>• <i>Nothing</i>: do not log any activity based on Routing Engine requests and responses.</li> </ul> |
| <b>Drop Ship Request/Response</b>           | <p>Controls the logging that is related to the <a href="#">Supplier Direct Fulfillment</a> request and response XML messages. Set this option to:</p> <ul style="list-style-type: none"> <li>• <i>Everything</i>: log all messages, including log incorrectly formed XML messages.</li> <li>• <i>Errors Only</i>: log formed XML messages. Default setting.</li> <li>• <i>Nothing</i>: do not log activity.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Vendor Portal Request/Response</b>       | <p>Controls the logging that is related to communication between Order Orchestration and an <a href="#">integrated vendor</a> that use JSON messages. Set this option to:</p> <ul style="list-style-type: none"> <li>• <i>Everything</i>: log JSON messages (<a href="#">getDSOrders</a>, <a href="#">getDSShipConfirm</a>, and <a href="#">setDSAcknowledge</a> request and response messages, including incorrectly formed JSON messages.</li> <li>• <i>Errors Only</i>: log incorrectly formed JSON messages. Default setting.</li> <li>• <i>Nothing</i>: do not log activity for <a href="#">integrated vendor</a> messages.</li> </ul>                                                                                                                                                                                       |
| <b>Integrated Shipping Request/Response</b> | <p>Controls the logging that is related to the integrated shipping option in the Vendor Portal and Store Connect. Set this option to:</p> <ul style="list-style-type: none"> <li>• <i>Everything</i>: log messages between Order Orchestration and the integrated shipping provider.</li> <li>• <i>Errors Only</i>: log incorrectly formed messages. Default setting.</li> <li>• <i>Nothing</i>: do not log messages between Order Orchestration and the integrated shipping provider.</li> </ul>                                                                                                                                                                                                                                                                                                                                 |
| <b>Inventory Request/Response</b>           | <p>Controls the logging that is related to the <a href="#">availability update request</a> and response, and the inventory request and response between Order Orchestration and SIM or EICS. Set this option to:</p> <ul style="list-style-type: none"> <li>• <i>Everything</i>: log availability update request and response messages, and any errors such as an invalid request message.</li> <li>• <i>Errors Only</i>: log incorrectly formed messages. Default setting.</li> <li>• <i>Nothing</i>: do not log availability update request and response messages.</li> </ul>                                                                                                                                                                                                                                                   |
| <b>Email Notifications</b>                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Field                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>Language</b>                     | <p>Controls the language to use for proximity uploads notifications.</p> <p><b>Supported languages:</b> Only the following languages are currently available:</p> <ul style="list-style-type: none"> <li>• Brazil-Portuguese</li> <li>• China-Chinese (simplified)</li> <li>• France-French</li> <li>• Germany-German</li> <li>• Italy-Italian</li> <li>• Japan-Japanese (Gregorian calendar)</li> <li>• Netherlands-Dutch</li> <li>• Russia-Russian</li> <li>• Spain-Spanish</li> <li>• Sweden-Swedish</li> <li>• United States-English (default)</li> <li>• The selected language applies only to the <a href="#">Proximity Upload Status Email</a> generated through the <a href="#">Proximity Uploads</a> screen. The <a href="#">Incremental Inventory Import Status Email</a>, <a href="#">Product Import Status Email</a>, and <a href="#">Polling Status Email</a> use the language specified for the organization; see the <a href="#">Organizations</a> screen. Emails generated to customers or vendors are in English.</li> <li>• Your selection applies immediately after you select <b>Save</b>.</li> </ul> |
| <b>Proximity Data Load</b>          | <p>Controls the generation of email notifications when you upload proximity data through the <a href="#">Proximity Uploads</a> screen. Possible settings:</p> <ul style="list-style-type: none"> <li>• <i>Administrator</i>: generate an email notification to the <a href="#">Administrative email</a>.</li> <li>• <i>User only</i>: generate an email notification to the email specified at the <a href="#">Users</a> screen for the user who submitted the upload.</li> <li>• <i>Admin and User</i>: generate email notifications to the email specified at the for the user who submitted the upload and to the <a href="#">Administrative email</a>.</li> <li>• <i>Nothing</i>: do not generate an email. Default setting.</li> </ul> <p>See <a href="#">Proximity Upload Status Email</a> for more information.</p>                                                                                                                                                                                                                                                                                                |
| <b>Location Product Import</b>      | <p>Controls the generation of email notifications when importing product, system product, product barcode, location, and product location information from an external system. Possible settings:</p> <ul style="list-style-type: none"> <li>• <i>Administrator</i>: generate an email notification to the <a href="#">Administrative email</a>. Default setting.</li> <li>• <i>Nothing</i>: do not generate an email.</li> </ul> <p>See the <a href="#">Product Import Status Email</a> for more information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>User Interface</b>               | <p>Controls the email generation of email notifications for activity that takes place using the Order Orchestration user interface. Additional information will be provided by Oracle at a later date.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Incremental Inventory Import</b> | <p>Controls the generation of email notifications when the <a href="#">Incremental Inventory Import</a> does not run successfully. Possible settings:</p> <ul style="list-style-type: none"> <li>• <i>Administrator</i>: generate an email notification to the <a href="#">Administrative email</a> if Order Orchestration cannot retrieve updated inventory information.</li> <li>• <i>Nothing</i>: do not generate an email if Order Orchestration cannot retrieve inventory updates. Default setting.</li> </ul> <p><b>For more information:</b> See the <a href="#">Incremental Inventory Import</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Email Settings</b>               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Field                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Administrative email</b> | <p>The email address(s) to receive system-wide email notifications, including the <a href="#">Proximity Upload Status Email</a>, <a href="#">Incremental Inventory Import Status Email</a>, <a href="#">Product Import Status Email</a>, and the duplicate order alert email. This email address is also used if a job is rejected because of a conflicting job; see <a href="#">Schedule Jobs</a> for a discussion of jobs that might conflict. You can enter multiple email addresses, separating each with a semicolon (;).</p> <ul style="list-style-type: none"> <li>Order Orchestration uses this email address, rather than the email address specified for the <a href="#">admin user</a> at the <a href="#">Users</a> screen.</li> <li>If you do not specify an internal email address, contact your email systems administrator to reset your mail server configuration to enable Order Orchestration to generate emails to addresses outside your company domain.</li> </ul> <p>For more information on the duplicate order alert email, see the SubmitOrder Request Message in the Web Services Guide on My Oracle Support (2953017.1).</p> |
| <b>From Email Alias</b>     | <p>The alias to display with the “from” address for administrative emails, for example, My Email Alias &lt;no-reply-omni@oracledomain.com&gt;. The actual “from” address is set by Oracle and cannot be changed.</p> <p>Your entry can be up to 40 positions and can include letters, numbers, spaces, and special characters, and does not need to be a valid, existing email address.</p> <p>If you do not specify an email alias here, Order Orchestration generates emails using the defined “from” email address without including an alias.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Event Notifications</b>  | <p>Use these fields to configure Order Orchestration to generate a job notification web service message to an external system each time one of the following job completes:</p> <ul style="list-style-type: none"> <li><a href="#">Auto Cancel Unclaimed Pickup Orders</a></li> <li><a href="#">Completed Order Private Data Purge</a></li> <li><a href="#">Daily Clean Up</a></li> <li><a href="#">Email Notifications</a></li> <li><a href="#">Fulfilled Inventory Export</a></li> <li><a href="#">Incremental Inventory Import</a></li> <li><a href="#">Inventory Quantity Export</a></li> <li><a href="#">Product Import</a></li> <li><a href="#">Incremental Inventory Import</a></li> </ul> <p><b>For more information:</b> See the <i>Job Notification Messages</i> appendix in the Web Services Guide on My Oracle Support (2953017.1) for details on the message contents and troubleshooting information.</p>                                                                                                                                                                                                                                 |

| Field                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Job Notification URL</b> | <p>The URL to receive the job notifications. Up to 255 positions.</p> <div><p><b>Note</b></p><p>When the Authentication Type is set to <i>OAuth</i>, the URL must implement <code>getAuthToken</code> to obtain the token.</p></div> <div><p><b>Note</b></p><p>Oracle staff need to make sure that this URL is added to the <a href="#">allow list</a>.</p></div>                                                                                                                                                                           |
| <b>Message Version</b>      | <p>Indicates the version of the Job Notification message to generate when a job completes. If the message version is 2.0, the Job Notification includes the <code>jobRequestId</code>. The <code>jobRequestId</code> is also included in the Run Job API response, enabling an integrating system that uses the Run Job API to connect the Run Job request with the completion of the submitted job. The version is set to 1.0 by default.</p>                                                                                              |
| <b>Wait Time</b>            | <p>The number of seconds to wait for a response. Defaults to 30. Required.</p> <div><p><b>Note</b></p><p>A response is not required.</p></div>                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Authentication Type</b>  | <p>Indicates whether to use <i>Basic</i> or <i>OAuth</i> authentication.</p> <p>When the authentication type is <i>Basic</i>, you need to enter:</p> <ul style="list-style-type: none"><li>• <a href="#">User ID</a></li><li>• <a href="#">Password</a></li></ul> <p>When the authentication type is <i>OAuth</i>, you need to enter:</p> <ul style="list-style-type: none"><li>• <a href="#">Client ID</a></li><li>• <a href="#">Client Secret</a></li></ul> <p>See <a href="#">Manage External Application Access</a> for background.</p> |
| <b>User ID</b>              | <p>The user ID to use for authenticating the message in the system receiving the notification. This field is available only when the <a href="#">Authentication Type</a> for a URL connection is set to <i>Basic</i>; otherwise, the <a href="#">Client ID</a> field is available.</p> <p>Up to 50 positions. Required when a Job URL is specified and Basic authentication is selected.</p>                                                                                                                                                |
| <b>Password</b>             | <p>The password to use for authenticating the message in the system receiving the notification. Available only when a URL is specified and when the <a href="#">Authentication Type</a> is set to <i>Basic</i>; otherwise, the <a href="#">Client Secret</a> field is available. Required when Basic authentication is selected.</p> <p>Your entry is masked on the screen and encrypted in the database.</p>                                                                                                                               |

| Field                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Client ID</b>                      | Identifies Order Orchestration as a client application for authentication using OAuth. Available only when the <a href="#">Authentication Type</a> is <i>OAuth</i> . Required when OAuth authentication is selected.<br><b>For more information:</b> See <a href="#">Manage External Application Access</a> for background on OAuth authentication.                                                                                                                                                                                                                       |
| <b>Client Secret</b>                  | The client secret to authenticate Order Orchestration as a client application in order to obtain a token. Available only when the <a href="#">Authentication Type</a> is <i>OAuth</i> . Required when OAuth authentication is selected.<br><b>For more information:</b> See <a href="#">Manage External Application Access</a> for background on OAuth authentication.                                                                                                                                                                                                    |
| <b>Retry Attempts</b>                 | Determines the number of times to attempt to retry sending a notification if there are communication issues. If this field is set to: <ul style="list-style-type: none"> <li>0, Order Orchestration does not attempt to resend a notification.</li> <li>1-100, Order Orchestration retries sending the notification the specified number of times, using the Retry Attempt Wait Time as the interval to pause between retry attempts.</li> </ul> Defaults to 0. A value from 0 to 100 is required.                                                                        |
| <b>Retry Attempt Wait Time</b>        | The number of minutes to wait between retry attempts. Must be set to a number from 1 to 60 if the Retry Attempts is not set to 0. Defaults to 0.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b># of Current Retry Attempts</b>    | The total number of job notifications that Order Orchestration will attempt to retry after the next Retry Attempt Wait Time has elapsed. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b># of Held Failed Notifications</b> | The total number of notification attempts that have failed. This total can include multiple attempts for the same notification. Held attempts are retained so they can be retried periodically, based on the Retry Attempt Wait Time. Display-only.<br>A number of failed notifications often indicates that the URL is incorrect or not available, the port number is incorrect, or that the authentication credentials are incorrect.<br><b>Maximum retry attempts:</b> After 50,000 failed attempts, Order Orchestration stops retrying to send the job notifications. |

## Vendor User Profiles

**Purpose:** Use the **Vendor User Profiles** screen to work with vendor users that have access to the [Vendor Portal](#), deactivate vendor user logins, or delete vendor users.

**About vendor users:** Vendor users are associated with a single vendor, and when they log into the [Vendor Portal](#), only that vendor's information is available.

Each vendor record is associated with a single organization. If the same vendor fulfills drop ship purchase orders for multiple organizations, you need to create a separate vendor record for each organization.

Used for the Supplier Direct Fulfillment module.

**Vendor users anonymized?** If a vendor user has been [anonymized](#), asterisks are displayed as the vendor user's name and email.

Anonymized vendor users can still log into the Vendor Portal and retain their current authority unless they are deactivated.

See [Anonymizing Data](#) for background.

**Creating vendor users:** See [Identity Cloud User Synchronization](#).

**How to display this screen:** Select *Vendor User Profiles* from the [Home Screen](#) or from the [Systems Menu](#).

 **Note**

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Vendor User Profiles* authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                                                                                                        | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>search for a vendor user profile</b>                                                                       | <p>Optionally, use any combination of the fields at the top of the screen to restrict the search results to matching vendor user profiles:</p> <ul style="list-style-type: none"><li>• Select a different Organization to work with vendors for that organization.</li><li>• Select a Vendor to work with user profiles for that vendor.</li><li>• Enter a full or partial User ID to restrict your results to user ID's starting with your entry.</li><li>• Enter a full or partial Name to restrict your results to user profiles whose names contain your entry. You can't search by name for a vendor user who has been <a href="#">anonymized</a>.</li><li>• Enter a full or partial Email to restrict your results to user profiles whose email addresses contain your entry. You can't search by email address for a vendor user who has been <a href="#">anonymized</a>.</li><li>• Set the Disabled logins drop-down box to <i>Yes</i> or <i>No</i> to restrict your results to user profiles that match your selection, or leave this field unselected to search for user profiles regardless of this setting.</li><li>• Click <i>Search</i>.</li></ul> <p><b>Case:</b> The User ID is changed to lowercase automatically. The additional enterable fields on this screen (Name and Email) are case-insensitive for searching; for example, an entry of j matches both John and john.</p> |
| <b>change an existing vendor user's name, email, or authority, or activate or deactivate the user's login</b> | <p>Click the edit icon (  ) for a vendor user profile to advance to the <a href="#">Vendor User Profile</a> screen.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

 **Note**

If the [Vendor User Profile](#) screen is already open in another tab, you advance to that screen, where the previously-selected vendor user profile is displayed.

| Option                                                            | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>activate or deactivate the login for a vendor user profile</b> | <p>The inactive icon () indicates that the vendor user cannot currently log into the <a href="#">Vendor Portal</a>; otherwise, the active icon () indicates that the vendor user can currently log in. To switch between the settings, click the icon that is currently displayed. You can also use the Active flag at the <a href="#">Vendor User Profile</a> screen to control whether a vendor user can log in. If someone attempts to log into the Vendor Portal using an inactive user ID, the login screen displays an error: Log in failed.</p> <div data-bbox="966 604 1466 856"> <p><b>Note</b></p> <p>Even if the vendor user profile is enabled, no users for a vendor can log into the <a href="#">Vendor Portal</a> if the vendor itself is currently flagged as <i>Inactive</i> at the <a href="#">Vendors</a> screen.</p> </div> |
| <b>select a vendor user for review</b>                            | Click the vendor user profile to open the <a href="#">Browse Vendor User Profile</a> window. This window displays information about the vendor user, including the vendor user's assigned authority.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>delete a vendor user profile</b>                               | Select the delete icon (  ) next to a vendor user profile to delete the vendor user profile from Order Orchestration. You can delete a vendor user profile even if there is purchase order history for the user.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

#### Fields at this screen

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search fields:</b> |                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Organization</b>   | See <a href="#">organization</a> . Your Default Organization defined through the <a href="#">Users</a> screen defaults, but you can override it.                                                                                                                                                                                                                |
| <b>Vendor</b>         | A <a href="#">vendor</a> who fulfills drop ship purchase orders originating in an integrated system such as Order Administration. Vendor users are associated with a single vendor, and when they log into the <a href="#">Vendor Portal</a> , only that vendor's information is available. See the <a href="#">Vendors</a> screen for a discussion of vendors. |
| <b>User ID</b>        | A unique ID to identify a vendor user with authority to log into the <a href="#">Vendor Portal</a> . The user ID can be 5 to 50 positions in length. Always lowercase; entries in uppercase are automatically changed to lowercase.                                                                                                                             |
| <b>Name</b>           | The vendor user's name. Names can be 1 to 30 positions in length. Case-insensitive for searching; for example, an entry of j matches both John and john. You can't search by name for a vendor user who has been <a href="#">anonymized</a> .                                                                                                                   |

| Field                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Email</b>           | Email addresses must be in the format of name@host.ext. You cannot enter more than one email address. Optional entry. Informational only; email notifications to the vendor are sent to the emails specified at the <a href="#">Emails options</a> folder under the <i>Preferences</i> tab of the <a href="#">Edit Vendor</a> or <b>New Vendor</b> screen. Case-insensitive for searching; for example, an entry of j matches both John and j ohn. You can't search by email address for a vendor user who has been <a href="#">anonymized</a> . |
| <b>Disabled Logins</b> | Use this flag to filter search results based on whether the vendor users can currently log into the <a href="#">Vendor Portal</a> . Select: <ul style="list-style-type: none"> <li>• Yes to display vendor users who cannot log into the <a href="#">Vendor Portal</a></li> <li>• No to display vendor users who can log into the <a href="#">Vendor Portal</a></li> </ul>                                                                                                                                                                       |

**Note**

This flag is used for search only. Your selection here does not apply when you are creating a new vendor user.

**Results fields:**

|                |                                                                                                                                                                                                                                                                                                                                                                 |

| Delete | <p>Select the delete icon () for a vendor user profile to delete the vendor user profile from Order Orchestration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## Vendor User Profile

**Purpose:** Use the **Vendor User Profile** screen to review or change a vendor user profile.

Used for the Supplier Direct Fulfillment module.

**How to display this screen:**

- Click the edit icon () for an existing vendor user at the [Vendor User Profiles](#) screen. See that screen for more information.
- Click *Edit* at the [Browse Vendor User Profile](#) window.

**Vendor users anonymized?** If a vendor user has been [anonymized](#), asterisks are displayed as the vendor user's name and email.

Anonymized vendor users can still log into the Vendor Portal and retain their current authority unless they are deactivated.

See [Anonymizing Data](#) for background.

**Completing this screen:** Click *Save* when you are done to apply updates to an existing vendor user; otherwise, click *Cancel*.

**Note**

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Vendor User Profiles* authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                                                           | Procedure                                                                                                                                                                                                                                                                                                                                                                                                |

To remove a role, highlight it and drag it to the Eligible Roles area.                                                                                                                                                                                                                                                                                                   |

## Browse Vendor User Profile

**Purpose:** Use the **Browse Vendor User Profile** window to review a vendor user.

Used for the Supplier Direct Fulfillment module.

**How to display this window:** Click a vendor user profile once at the [Vendor User Profiles](#) screen.

### Note

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Vendor User Profiles* authority can display this screen. See [Roles](#) for more information.

**Vendor users anonymized?** If a vendor user has been [anonymized](#), asterisks are displayed as the vendor user's name and email.

Anonymized vendor users can still log into the Vendor Portal and retain their current authority unless they are deactivated.

See [Anonymizing Data](#) for background.

| Vendor    | The vendor you selected when creating the vendor user. When the vendor user logs into the <a href="#">Vendor Portal</a> , only this vendor's data is displayed.                                                                                                                                                                                                                             |
| User ID   | 5 to 50 positions, alphanumeric. Always lowercase.<br><b>Vendor users anonymized?</b> If a vendor user has been <a href="#">anonymized</a> , asterisks are displayed as the vendor user's name and email. Anonymized vendor users can still log into the Vendor Portal and retain their current authority unless they are deactivated. See <a href="#">Anonymizing Data</a> for background. |
| Name      | 1 to 30 positions, alphanumeric. Asterisks are displayed if the user has been <a href="#">anonymized</a> .                                                                                                                                                                                                                                                                                  |
| Email     | Informational only; email notifications to the vendor are sent to the emails specified at the <a href="#">Emails options</a> folder under the <i>Preferences</i> tab of the <a href="#">Edit Vendor</a> or <b>New Vendor</b> screen. Asterisks are displayed if the user has been <a href="#">anonymized</a> .                                                                              |
| Active    | Set to <i>No</i> if the vendor user cannot currently log into Order Orchestration; otherwise, set to <i>Yes</i> if the vendor user can currently log in. Based on the setting of the Disable Login icon at the <a href="#">Vendor User Profiles</a> screen.                                                                                                                                 |
| Authority | Indicates the roles to which the vendor user is currently assigned. See <a href="#">Roles</a> for more information.                                                                                                                                                                                                                                                                         |

 **Note**

Even if the vendor user profile is enabled, no users for a vendor can log into the [Vendor Portal](#) if the vendor itself is currently flagged as *Inactive* at the [Vendors](#) screen.

# Proximity Uploads

**Purpose:** Use the **Proximity Uploads** screen to update the zip or postal code information in the [proximity location table](#) if you use [proximity locator](#) but do not use the [Oracle Maps Cloud Service](#).

Used for the Routing Engine module.

**Areas for proximity locator searching:** You can upload U.S. zip codes. Canadian postal codes, or international postal codes for Order Orchestration to use when performing [proximity locator](#) searches.

**Required zip or postal code data:** Before you use the **Proximity Uploads** screen, you need to obtain a CSV (comma-separated value) file containing the zip or postal code information. See the [Proximity upload process overview](#) for more details.

**In this topic:**

- [Proximity upload process overview](#)
- [Proximity CSV file layouts](#)
- [Troubleshooting](#)
- [Proximity Upload Status Email](#)
- [Fields at this screen](#)

**How to display this screen:** Select *Proximity Uploads* from the [Home Screen](#) or from the [Systems Menu](#).

**Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Proximity Uploads* authority can display this screen. See [Roles](#) for more information.

### Proximity upload process overview

**Purpose:** Follow the steps below to update the zip or postal code information in the [proximity location table](#).

**Before you start:** Obtain or create the CSV (comma-separated value) file for upload. See the [Proximity CSV file layouts](#) for details on the information required in this file.

**Updating the proximity\_location table:** Perform the steps below at the **Proximity Uploads** screen.

**Note**

It is important to schedule the update at a time when proximity searching is not required on your system, since once the update starts, proximity information will not be available until the update is complete. Each time Order Orchestration updates the proximity location table, it first clears the outdated information before adding the new, current information.

1. Select the type of postal or zip code data that you are uploading from the *Proximity Data Type* drop-down list. Possible options are:
  - *Canada*
  - *International*
  - *United States*
2. In the *Country Code* field, enter the country code associated with each uploaded zip or postal code record. Updates the country\_cd field in the proximity\_location table. This is a 3-position, alphanumeric code.

3. Use the *Browse* button next to the *File Name* field to identify the CSV file to upload.

 **Note**

This file must match the *Proximity Data Type* selected, and must have a CSV extension.

4. Click *Upload*. Order Orchestration:
- Places the file in a temporary location.
  - If this is an update, clears the records with matching country codes from the proximity\_location table.
  - Adds a record to the proximity\_location table for each record in the uploaded file, using the [Country Code](#) to update the country\_cd field and the [Proximity Data Type](#) to update the country field.
  - When processing is complete, sends the [Proximity Upload Status Email](#) to the [Administrative email](#) address specified at the [Event Logging](#) screen.

**Location of archived or error files:** Order Orchestration saves a copy of each uploaded file in the FILE\_STORAGE table, using a CONTAINER of OROB-ARCHIVES if the upload was successful; otherwise, if there were errors, the CONTAINER it uses is OROB-ERRORS.

**Proximity CSV file layouts**

**United States File Layout**

The required contents of the CSV file and the target fields in the proximity\_location table for the United States are described below.

Field contents described below as (*empty*) are not passed, with no space included between the comma delimiters, as in the following sample entry:

Postal Code,City,StateCode,County,,CityTypeCode,,CityAliasName,Latitude,Longitude

 **Note**

Column headings are required.

| Field Contents    | Attributes             | Target in proximity_location table |
|-------------------|------------------------|------------------------------------|
| postal (zip) code | varchar, 10 positions  | POSTAL_CD                          |
| city              | varchar, 35 positions  | CITY                               |
| state code        | varchar, 3 positions   | STATE_PROVINCE_CD                  |
| county            | varchar, 35 positions  | COUNTY_PARISH                      |
| (empty)           | N/A                    | N/A                                |
| city type code    | nchar, 1 position      | CITY_TYPE_CD                       |
| (empty)           | N/A                    | N/A                                |
| city alias name   | varchar, 35 positions  | CITY_ALIAS_NAME                    |
| latitude          | numeric, 9.6 positions | LATITUDE                           |
| longitude         | numeric, 9.6 positions | LONGITUDE                          |

## Canada File Layout

The required contents of the CSV file and the target fields in the proximity\_location table for Canada are described below.

Field contents described below as *(empty)* are not passed, with no space included between the comma delimiters, as in the following sample entry:

Postal Code,City,State,,Latitude,Longitude

### Note

Column headings are required.

| Field Contents   | Attributes             | Target in proximity_location table |
|------------------|------------------------|------------------------------------|
| postal code      | varchar, 10 positions  | POSTAL_CD                          |
| city             | varchar, 35 positions  | CITY                               |
| province (state) | varchar, 3 positions   | STATE_PROVINCE_CD                  |
| (empty)          | N/A                    | N/A                                |
| latitude         | numeric, 9.6 positions | LATITUDE                           |
| longitude        | numeric, 9.6 positions | LONGITUDE                          |

## International File Layout

The required contents of the CSV file and the target fields in the proximity\_location table for other countries are described below. A sample entry is:

Postal Code,Latitude,Longitude,City,StateCode

### Note

Column headings are required.

| Field Contents         | Attributes             | Target in proximity_location table |
|------------------------|------------------------|------------------------------------|
| postal code            | varchar, 10 positions  | POSTAL_CD                          |
| latitude               | numeric, 9.6 positions | LATITUDE                           |
| longitude              | numeric, 9.6 positions | LONGITUDE                          |
| city                   | varchar, 35 positions  | CITY                               |
| state or province code | varchar, 3 positions   | STATE_PROVINCE_CD                  |

## Troubleshooting

**How to tell if the process is complete?** Normally, Order Orchestration generates an email to the [Administrative email](#) address specified at the [Event Logging](#) screen when the process is complete, using the Locale specified at that screen to determine the language for the email.

Your upload process could fail if:

- You select a [Proximity Data Type](#) that does not match the selected [File Name](#).

- You edit the CSV file in any way before you start the upload.
- You attempt to start an upload while another upload is still in process.

If the process fails, it is possible that proximity data will be unavailable for the country related to the CSV file, because the first thing that Order Orchestration does as part of the upload process is clear the related records from the proximity location table before rebuilding it. To correct this situation, begin the upload process again, using a complete CSV file.

If the upload remains in Uploaded status for longer than expected, contact your Oracle representative.

### Proximity Upload Status Email

Order Orchestration generates the Proximity Upload Status email to the [Administrative email](#) address specified at the [Event Logging](#) screen at the completion of the proximity upload process if the Email Notifications flag for the *Proximity Data Load* option is set to *Administrator*. The Language specified at the Event Logging screen is used.

This email includes:

- The status of the upload, i.e, whether it completed successfully or if there were errors.
- The file name uploaded.
- The size of the uploaded file.
- The user ID who performed the upload process.
- The date and time the upload started and finished.
- The number of records read, created in the proximity\_location table, and in error.

The language is based on the Language specified at the [Event Logging](#) screen.

The “from” address on the email is the [From Email](#) specified at the [Event Logging](#) screen.

*Example:*

\*\*\*\*ATTENTION\*\*\*\*

Your Proximity Upload has Completed Successfully.

Proximity Data Type: United States

File Name: generic\_postal\_code\_data.csv

File Size: 3367903 bytes

| <b>User ID</b>                                                                                                                                                                                | The ID of the user who ran the upload.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Systems

**Purpose:** Use the **Systems** screen to review or work with external databases or business entities that integrate with Order Orchestration for the Routing Engine (including, optionally, the

Store Connect module) or Supplier Direct Fulfillment. For example, a system might be a database in Xstore or a company in Order Administration System.

**System relationships:** See [Organization, System, and Location](#) for an overview of the data hierarchy in **Order Orchestration**, including products.

**Created how?** You need to use this screen to create each system that will integrate with Order Orchestration. See [Setting Up Data for the Routing Engine Module](#) or [Setting Up Data for the Supplier Direct Fulfillment Module](#) for more information.

**How to display this screen:** Select *Systems* from the [Home Screen](#) or from the [Systems Menu](#).

 **Note**

Only users with *Systems* authority can display this screen. See [Roles](#) for more information.

### Options at this screen

| Option          | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| create a system | <ol style="list-style-type: none"> <li>1. Optionally, select a different <a href="#">organization</a> from the <i>Organization</i> drop-down box. See <a href="#">Data Hierarchy</a> for more information on how systems are integrated within organizations.</li> <li>2. Enter a system code in the <i>System</i> field. System codes can be 1 to 10 positions in length, can include spaces and special characters, and must be unique.</li> </ol> |

**Note**

When creating the Store Connect system, you should not use a system code that begins with `STC-`, as these characters are used as part of the name for the user group in IDCS or OCI IAM. You can use `STC_` (with an underscore rather than a hyphen) instead.

3. Optionally, enter a name in the *Name* field. Names can be 1 to 40 positions in length and can include spaces and special characters. If you do not enter a name here, you need to enter it at the [System](#) screen when creating a system.
4. Click *New*. If:
  - the system already exists in the organization, or if you did not select an organization or enter a System code, Order Orchestration displays an error message;
  - otherwise, you advance to the [System](#) screen, where you can complete the creation of the system.

The Organization Default flag is selected when you create the first system for an organization, and the flag cannot be unselected at this time. To designate a different system as the default, you need to create another system and flag that system as the default; this unflags the first system.

**Note**

If you click *Cancel* at the [System](#) screen after clicking *New*, the system is not created.

**Order Administration integration:** The code representing the Order Administration system must match the setting of the OROB System (K50) system control value.

| Option                                           | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Edit                                                                                                                                                                                                                                   | Click the edit icon (  ) for a system to advance to the <a href="#">System</a> screen. At that screen, the settings you can review or change include: <ul style="list-style-type: none"><li>• database connection settings for product and inventory updates</li><li>• polling and status update settings</li><li>• reserved statuses to subtract from the available quantity</li></ul> |
| <div><div><div><div></div><div></div></div><div>Note</div></div><div>If the <a href="#">System</a> screen is already open in another tab, you advance to that screen, where the previously-selected location is displayed.</div></div> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Delete                                                                                                                                                                                                                                 | Select the delete icon (  ) for a system to delete the system from Order Orchestration. You can delete the system if there are no existing <a href="#">system product</a> or <a href="#">location</a> records.                                                                                                                                                                          |

# System

- Purpose:** Use the **System** screen to:
- set a [system](#) as the [default system](#) for the organization
  - indicate whether the system is an [online system](#) or [offline system](#) (Routing Engine only)

- specify how to obtain interactive inventory information for an online system (Routing Engine only)
- specify whether the system requires status updates from assigned fulfilling locations (Routing Engine only)
- specify whether the Routing Engine should place a delivery or ship-for-pickup order in another location within the system when the first selected location rejects the order (Routing Engine only)
- specify whether to create more than one delivery, ship-for-pickup, or pickup order using the same order number and line number
- specify whether to subtract the quantities on orders in certain statuses in determining the available quantity for a product location (Routing Engine only)
- create a default vendor system so that you can create vendors to fulfill drop ship orders (Supplier Direct Fulfillment module only)
- create a default Store Connect system so that you can fulfill orders through the Store Connect module
- set configuration options for integration with Oracle Retail Integration Cloud Service (RICS) for order communication with Oracle Retail Merchandising Foundation Cloud Service (RMFCS), as well as Oracle Retail Store Inventory Management (SIM) and Enterprise Inventory Cloud Service (EICS)
- set configuration options for integration with Omnichannel Cloud Data Service (OCDS) or Merchandising Omni Services to import locations, products, system products, and product locations

**System relationships:** See [Organization, System, and Location](#) for an overview of the data hierarchy in **Order Orchestration**, including products.

**First system for an organization is flagged as the default:** The Organization Default flag is selected when you create the first system for an organization, and the flag cannot be unselected at this time. To designate a different system as the default, you need to create another system and flag that system as the default; this unflags the first system.

#### How to display this screen:

- Create a new system at the [Systems](#) screen

#### Note

If you click *Cancel* after advancing to the **System** screen, the system is not created.

- Click the edit icon (  ) for an existing system code at the [Systems](#) screen

#### Note

- Only users with *Systems* authority can display this screen. See [Roles](#) for more information.
- If the **System** screen was already open in another tab when you clicked the edit icon, you advance to this screen with the previously-selected system displayed.

#### In this topic:

### Options at this screen

| Option                                           | Procedure                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Flag a system as the organization default</b> | Select the <a href="#">Organization Default</a> flag and click <i>Save</i> . When you select this flag for a system, it clears the flag for the system that was previously the organization default. See the description of the <a href="#">Organization Default</a> flag for background. |

#### Note

The system flagged as the Vendor Default should not be the default system for the organization.

| Option                                                                                                                                                           | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>Configure a system to require a status update before flagging an order as Polled</b><br>(Routing Engine only) | <ol style="list-style-type: none"><li>1. At the <i>Orders</i> tab, select the <a href="#">Require Status Update</a> flag.</li><li>2. Enter the number of <a href="#">Polling Retries</a> indicating how many times to include an order in the fulfillment response message to a fulfilling location before it is included in a notification email to the system administrator. You can enter any number from 1 to 99.</li><li>3. Optionally, enter one or more email addresses in the <a href="#">System Ops Email</a> field to receive the <a href="#">Polling Status Email</a>. If you enter multiple email addresses, separate each with a semicolon (;). Order Orchestration verifies that the email addresses you enter are formatted correctly.</li><li>4. Click <i>Save</i>.</li></ol> <p><b>For more information:</b> See <a href="#">Require Status Update for Assigned Orders?</a> for a discussion.</p> |

 **Note**

This setting does not apply to Store Connect locations, which do not use the fulfillment request and response message.

| Option                                                                                                                                                                | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Configure a system to subtract the total reserved quantity when calculating the effective available quantity of an item in a location</b><br>(Routing Engine only) | <p>You can configure a system so that, when Order Orchestration determines the current available quantity of an item in a location, it subtracts the total quantity currently reserved for orders from the reported available quantity in order to determine the effective available quantity. This calculation helps you prevent overcommitting the inventory for the location.</p> <p><i>Example:</i> The available quantity reported by a system for a product location is 37; however, the location is assigned to fulfill an order for 4 units, and the order is in <i>new_order</i> status, indicating that the location has not yet polled for new orders and been notified of this order assignment. As a result, the effective available quantity is actually 33 (37-4). You can configure the system to consider order lines in <i>new_order</i> status as reserved, and subtract the total quantity of order lines in this status from the reported available quantity to determine the effective available quantity for a fulfilling location.</p> <p>To configure the system for reserved quantity calculation:</p> <ol style="list-style-type: none"> <li>1. At the <i>Reservation</i> tab, select the <a href="#">Include Reserved</a> flag to make the <a href="#">Reserved Statuses</a> flags available for selection.</li> <li>2. Select each status that should be considered reserved, indicating that order lines in this status should be subtracted from the available quantity to avoid overcommitting the inventory.</li> <li>3. Click <i>Save</i>. The screen displays a message indicating that it is updating the reserved quantities based on your selection. The number of product locations affected by the update determines how long this calculation takes to complete.</li> <li>4. Processing the update does not affect any existing orders that are already assigned to a location for fulfillment. For example, an order is currently assigned to a location whose on-hand quantity of an item is 5. After processing the update, the on-hand quantity of the item is now -1. However, the order remains assigned to the location and is not automatically rejected.</li> </ol> <p><b>For more information:</b> See <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p> |

| Option                                                                                                                                  | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Prevent the Routing Engine from assigning delivery orders to another location in the originating system</b><br>(Routing Engine only) | <p>You can configure a system so that, when a delivery order originates in a location within that system, the Routing Engine does not assign the order to another location that is also within the system.</p> <p><i>Example:</i> System A includes locations DC1 and DC2, both distribution centers for the same enterprise sharing the same order database. When DC1 submits a delivery order, you do not want that order assigned to DC2.</p> |

 **Note**

This setting also prevents the [locate items](#) response from including locations within the system submitting the request.

To prevent order assignment to a location within the system:

1. At the *Orders* tab, select the [Disallow shopping within same system](#) flag.
2. Click *Save*.

**For more information:** See the [Disallow shopping within same system](#) flag.

### Configuring System Connections for Supported Integrations (Routing Engine)

See [Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#) for an overview, and see the [Schedule Jobs](#) screen for additional required setup. The steps to complete this screen are listed under [Options at this screen](#).

Also, see:

- [Configure a system for a RESTful web service connection for interactive inventory updates \(URL\)](#) for information on how to integrate with Order Administration System for interactive inventory updates, including SIM or EICS.
- [Configure communication with Oracle Retail Integration Cloud Service \(RICS\) for order information](#).
- [Configure communication with Omnichannel Cloud Data Service for location, product, system product, and product location imports](#).

### Order Administration Setup for Polling

If the Routing Engine sends orders to Order Administration for fulfillment, your setup related to requiring status updates should be consistent at the **System** screen in Order Orchestration and for the related system control value in Order Administration:

| Setup                                                                                                                                                                                             | Status Update Required                                                                                   | No Status Update Required |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------|---------------------------|
| <a href="#">Require Status Update</a> at the <b>System</b> screen in Order Orchestration:                                                                                                         | selected; also, complete the <a href="#">Polling Retries</a> and <a href="#">System Ops Email</a> fields | unselected                |
| Re-polling for Orders Brokered to OACS or Re-polling for Orders Brokered to OACS system control value in Order Administration (labeled Re-polling at the <b>Order Broker Values(K15)</b> screen): | selected                                                                                                 | unselected                |

**For more information:** See [Require Status Update for Assigned Orders?](#) for a discussion.

### Fields at this screen

Update any of the fields described below and click *Save*, or click *Cancel* to return to the [Systems](#) screen without making any changes. See the [Fields at this screen](#) for more information.

 **Note**

If you are creating a new system, clicking *Cancel* prevents the creation.

| Field                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Organization         | See <a href="#">organization</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| System               | <p>See <a href="#">system</a>. The system code can be 1 to 10 positions in length, can include special characters, and must be unique in Order Orchestration. Required if you are creating a system; otherwise, display-only.</p> <p><i>Order Administration integration:</i> The code representing the Order Administration system must match the setting of the OROB System (K50) system control value. However, names for systems do not need to be the same as the Order Administration company descriptions.</p>                                                                                                                                                                                                                                                                                             |
| System fields        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Name                 | The <i>Name</i> of a system. System names can be 1 to 40 positions in length and can include special characters. Required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Organization Default | <p>Select this check box to flag the system as the <a href="#">default system</a> for the organization. Products in Order Orchestration can have relationships with every integrated system, but they are defined by the default system. You should load the Order Orchestration database with the default system's products first, and then create system products for each additional integrated system.</p> <p>An organization can have only one default system.</p> <p><i>First system created:</i> The Organization Default flag is selected when you create the first system for an organization, and the flag cannot be unselected at this time. To designate a different system as the default, you need to create another system and flag that system as the default; this unflags the first system.</p> |

 **Note**

The system flagged as the Vendor Default should not be the default system for the organization.

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Vendor Default</b> | <p>Select this checkbox to flag the system as the vendor default for the organization. A vendor default system is required before you can create any vendors for the organization.</p> <p>An organization can have only one vendor default system. When you select this flag for a system, it clears the flag for the system that was previously the vendor default.</p> |

**Note**

The system flagged as the Vendor Default should not be the default system for the organization.

The vendor system cannot originate sales orders or purchase orders.

It is not necessary to specify any additional information for the vendor default system besides the organization, name, and this flag.

Used for the Supplier Direct Fulfillment module only. Available if Use Vendor Portal is selected at the [Tenant](#) screen.

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Store Connect Default</b> | <p>Select this checkbox to flag the system as the Store Connect system.</p> <p><b>About the Store Connect system:</b></p> <ul style="list-style-type: none"><li>• Locations associated with the Store Connect system are eligible for assignment to store associates, who can log into the Store Connect module to work with orders assigned to these locations.</li><li>• Delivery and pickup orders assigned to these locations are ordinarily updated by store associates working through the Store Connect screens rather than through XML messages.</li><li>• You use the <a href="#">Store Connect Preferences</a> screen to set up preferences related strictly to Store Connect, as opposed to the general Routing Engine preferences you set up at the <b>Preferences</b> screen.</li><li>• Store Connect locations do not poll for newly assigned delivery or pickup orders; instead, a background job updates new orders to polled status, making the orders available for store associates to work with. Your settings at the <a href="#">Store Connect Preferences</a> screen control when the orders are updated to polled status.</li><li>• Order Orchestration generates an email notification to the store location when new delivery or pickup orders are polled.</li><li>• Optionally, Order Orchestration generates pickup-ready notification emails to customers for pickup orders or shipment notification emails for shipped delivery orders.</li><li>• The Store Connect system cannot originate orders.</li><li>• You can import barcodes from RMFCS for this system. See <a href="#">Importing UPC Barcodes through File Storage API</a> for background.</li></ul> <p><b>For more information:</b> See the <a href="#">Store Connect Overview</a> for background.</p> |

**Note**

Once you create any locations for the Store Connect system, you cannot change the setting of this flag for the Store Connect system or for any other systems in the organization.

Used for the Store Connect module only. Available if Use Store Connect is selected at the [Tenant-Admin](#) screen.

| Field         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Inventory tab | <p>Use this tab to <a href="#">configure a system for a RESTful web service connection for interactive inventory updates (URL)</a>. Available only with the Routing Engine module.</p> <p>Note that you must first use the <a href="#">External Services</a> screen in Modern View to define Inventory external services before you can select them at this tab.</p> <p><b>Inventory integration conversion:</b> When you upgrade from Order Broker to Order Orchestration, the previous settings from the Inventory tab are used to create an Inventory record at the <a href="#">External Services</a> screen, with the following exceptions:</p> <ul style="list-style-type: none"><li>• <i>Inventory services:</i> Set to the previous settings from the Inventory tab at the System screen with the following exceptions:<ul style="list-style-type: none"><li>– External service code: Set to INVENTORY, appended with an incremental number, such as INVENTORY1 and INVENTORY2.</li><li>– External service type: Set to Inventory.</li><li>– Inventory service: Set to SIOCS Integration if the Connection Type was set to SIM; otherwise, set to Standard Inventory Service if the Connection Type was set to URL.</li><li>– Description: Set to SIOCS Integration or StandardInventoryService for SYS DESCRIPTION, based on the selected Connection Type, and where SYS is the system code, and DESCRIPTION is the description of the organization.</li></ul></li></ul> <p><b>Note:</b></p> <ul style="list-style-type: none"><li>• The 23.2.301.0 release of Order Administration (formerly Order Management System) does not support basic authentication for inbound messages. OAuth is required.</li><li>• Optionally, you can delete a migrated record in order to assign a different code, since the external service code itself cannot be changed.</li><li>• After using the External Services screen and windows to review and verify each migrated service, you need to use the System screen in Classic View to update the external services at the related tabs and verify that the information displayed there is also correct.</li></ul> |

| Field                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Online</b>               | <p>Select this check box to indicate that this is an online system, meaning that Order Orchestration requests interactive inventory updates when it receives a <a href="#">locate items</a> request, <a href="#">product availability search</a> request, or needs to select a fulfilling location for a delivery order, either as part of initial order creation or through the status update process.</p> <p>If the <i>Online</i> checkbox is selected, you need to select an <i>Inventory Service</i> at this tab.</p> <p><i>About online processing:</i> If Order Orchestration is unable to retrieve an interactive update from the system, it uses the available quantity stored in the Order Orchestration database (<a href="#">offline inventory</a>). This available quantity is updated either through a recent online inventory inquiry, or through the most recent inventory download from the system. Typically, inventory levels in the Order Orchestration database are updated daily, or whenever scheduled by your systems administrator. See <a href="#">Example: Searching for Items</a> for more information.</p> <p><i>Offline system:</i> If the check box is not selected, this is an offline system, meaning that Order Orchestration does not request interactive inventory updates; instead, it relies on the available quantity stored in the Order Orchestration database (<a href="#">offline inventory</a>). Typically, inventory levels in the Order Orchestration database are updated daily, or whenever scheduled by your system administrator.</p> <p><i>Changing to offline:</i> You can temporarily change a system from online to offline if you know that communication with the system will not be available and you would like to avoid unnecessary processing time for locate items requests.</p> <p>When you clear the checkbox, the <i>Inventory Service</i> information is retained so that you will not need to specify it again if the system goes back online.</p> <p><i>Changing to online:</i> When you change a system to online, you need to specify the URL and other inventory service information, described below.</p> <p><b>For more information:</b> See <a href="#">Configure a system for a RESTful web service connection for interactive inventory updates (URL)</a> for setup steps.</p> |
| <b>Inventory Qty Export</b> | <p>Indicates whether to include updated product locations from this system in the pipe-delimited file generated when you run the inventory quantity export for any system in the organization. This setting does not control whether a background job monitors changes that could affect probability rules calculations. See <a href="#">Inventory Quantity Export</a> for information on running the export.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Field                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Track Fulfilled Quantity</b> | <p>Indicates whether to track the fulfilled quantity for a product location when you ship a delivery order (status is fulfilled), transfer a ship-for-pickup order (status is intransit), or when a pickup order is picked up (status is fulfilled):</p> <ul style="list-style-type: none"> <li><i>Do Not Track Fulfilled:</i> Do not update a product location's fulfilled quantity when a delivery or pickup order is fulfilled, or when a ship-for-pickup order is intransit.</li> </ul> <p>Used when? You might use this setting for a system that tracks its own inventory levels, tracks order fulfillments through status inquiry requests, and keeps Order Orchestration product locations in sync through interactive inventory updates. In this case, you would not typically use the <a href="#">Fulfilled Inventory Export</a>.</p> <p><b>Note:</b> If you change to <i>Do Not Track Fulfilled</i> from another setting, the fulfilled quantities for product locations within the system are reset to 0.</p> <ul style="list-style-type: none"> <li><i>Reset During Inventory Export:</i> Update a product location's fulfilled quantity when a delivery or pickup order is fulfilled, or when a ship-for-pickup order is intransit. When the <a href="#">Fulfilled Inventory Export</a> runs, reset the product location's fulfilled quantity to 0, and subtract the fulfilled quantity from the product location's available quantity. These updates leave the product location's <a href="#">available to promise quantity</a> unchanged (available to promise = available quantity - <a href="#">reserved quantity</a> + fulfilled quantity).</li> </ul> <p>Used when? You might use this setting for a system such as Store Connect, that typically relies on Order Orchestration to manage order activity, and uses the fulfilled inventory export for updates on fulfilled orders. Tracking the fulfilled quantity enables you to avoid overstating the actual quantity available for orders.</p> |

 **Note**

If you select this setting, you should have at least one day selected for the [Fulfilled Inventory Export](#).

- Reset During Product Import:* Update a product location's fulfilled quantity when a delivery or pickup order is fulfilled, or when a ship-for-pickup order is intransit. When the [import process](#) runs, reset the product location's fulfilled quantity to 0. Do not subtract the fulfilled quantity from the available quantity; instead, update the product location's inventory information with the current information received in the import, if any. If the product location is not included in the import, the fulfilled quantity is still reset to 0.

 **Note**

The fulfilled quantity is not reset through the [Incremental Inventory Import](#), only through the [Product Import](#).

**Used when?** You might use this setting for a system that periodically updates inventory levels based on activity outside of Order Orchestration and also receives information on fulfilled orders through status update requests, but uses the fulfilled quantity to calculate a more accurate [available to promise quantity](#) in the interval between product imports.

| Field | Description |
|-------|-------------|
|-------|-------------|

**Note**

The above settings are available for selection regardless of whether the system is flagged as Online.

**For more information:** See below for examples of the calculations for each setting.

**Examples of fulfilled quantity updates**

*Track Fulfilled Quantity set to Do Not Track Fulfilled:*

A product location has:

- Available: 10
- Reserved: 0
- Fulfilled: 0
- Available to Promise: 10

The location is assigned a new delivery order for a quantity of 2:

- Available: 10
- Reserved: 2
- Fulfilled: 0
- Available to Promise: 8

The order is fulfilled:

- Available: 10
- Reserved: 0
- Fulfilled: 0
- Available to Promise: 10

The next time the system updates the product location through a periodic product and inventory import or an interactive inventory update, it resets the available quantity to the current level.

*Track Fulfilled Quantity set to Reset During Inventory Export:*

A product location has:

- Available: 10
- Reserved: 0
- Fulfilled: 0
- Available to Promise: 10

The location is assigned a new delivery order for a quantity of 2:

- Available: 10
- Reserved: 2
- Fulfilled: 0
- Available to Promise: 8

The order is fulfilled:

- Available: 10
- Reserved: 0
- Fulfilled: 2
- Available to Promise: 8

The [Fulfilled Inventory Export](#) runs:

- Available: 8
- Reserved: 0
- Fulfilled: 0
- Available to Promise: 8

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

The order can be assigned to a location in a different system, based on the rules set up at the <b>Preferences</b> screen; otherwise, it is unfulfillable. Also, the <a href="#">locate items</a> response does not include any locations within the system submitting the request, unless the <a href="#">requested location</a> is within the same system.</li> </ul> <div style="border: 1px solid #ccc; padding: 10px; margin: 10px 0;"> <p><b>Note</b></p> <p>If the <a href="#">submit order message</a> specifies a location within the same system, the order is created in the specified location regardless of the setting of this flag.</p> </div> <ul style="list-style-type: none"> <li><i>Unselected (default):</i> The Routing Engine can assign the order to another location within the system, based on the rules set up at the <b>Preferences</b> screen. Also, the <a href="#">locate items</a> response can include locations within the system submitting the request.</li> </ul> <p><b>When to disallow shopping?</b> You might use this field to disallow shopping if your order management system, such as Order Administration System, supports multiple warehouses and each warehouse is represented as a separate location in Order Orchestration.</p> |
| <b>Order<br/>Fulfillment</b>                                                                  | <p><b>Order Administration System setup:</b> If you send orders to Order Administration warehouses for fulfillment, check <a href="#">Order Administration Setup for Polling</a> for more information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Require Status Update</b> | <p><b>Fulfillment response message:</b> Indicates whether to automatically flag an order or line as <i>Polled</i> when it is included in the fulfillment response message, or to continue including it in the fulfillments response message until the assigned location sends a status update message accepting the order:</p> <ul style="list-style-type: none"> <li>• <i>Selected</i> = Order Orchestration continues to send an order or line in the fulfillments response message when the assigned fulfilling location polls for new orders until the order is flagged as <i>polled</i>: <ul style="list-style-type: none"> <li>– The order is flagged as <i>polled</i> when the location sends a status update message to with a status of <i>polled</i> or <i>accepted</i>.</li> <li>– Order Orchestration uses the order's or line's Poll Count field to track the number of times it has been included in the fulfillments response message.</li> <li>– When the order's or line's Poll Count exceeds the <a href="#">Polling Retries</a> specified for the system, Order Orchestration includes the order in the <a href="#">Polling Status Email</a> sent to the <a href="#">System Ops Email</a> specified for the system. Each item's current Poll Count is indicated on the <a href="#">Order</a> screen.</li> </ul> </li> </ul> <p><b>Possible risk:</b> With this setting, there is a potential risk that an order could be created twice in the integrating system if, for example, that system does not complete creating the new orders in the fulfillments response message and sending the status update messages for them before it sends a new fulfillments request message to Order Orchestration.</p> <ul style="list-style-type: none"> <li>• <i>Unselected</i> (default) = Flag the order or line as <i>Polled</i> when it is included in a fulfillment response message to the location; do not include the order or line more than once.</li> </ul> <p><b>Possible risk:</b> With this setting, there is a potential risk that an order might not be created in the integrating system if, for example, the integrating system does not receive the fulfillments response, or fails to create all orders in the response.</p> |

**Note**

This setting does not apply to Store Connect locations, which do not use the fulfillment request and response message. Also, it does not apply to orders fulfilled through [Order Fulfillment through RICS Integration](#).

**Intransit response message:** If the Require Status Update flag is:

- *Selected* = the Routing Engine continues to include a ship-for-pickup order in the intransit response message to a pickup location or system, until the location or system sends a status update indicating that the order or order line is intransit polled.
- *Unselected* = the Routing Engine includes each ship-for-pickup order or line just once in the intransit response message to a pickup location, and then changes the status to intransit polled.

**Polling count:** The polling count for the order line is initially set to 0 when it is in transit. Each time the Routing Engine includes an order or line in the intransit response message, it increases the order line's Poll Count.

Unlike the rules for the fulfillment response, the rules for the intransit response do not include generating the [Polling Status Email](#) when an in transit order exceeds the Polling Retries specified for the system.

| Field | Description |
|-------|-------------|
|-------|-------------|

 **Note**

The setting of this flag does not affect [Order Fulfillment through RICS Integration](#).

**Use Requesting System Line Number in Status Update**

Controls how the `line_no` in the status update request identifies the order line to update when the [Allow Split Line](#) preference is selected but the [Allow Partial Updates](#) preference is not.

*Applies to specific configuration only:* The `line_no` is interpreted as the originating system's line number ONLY if:

- the [Allow Split Order](#) and [Allow Split Line](#) preferences are selected, AND
- the [Allow Partial Updates](#) preference is unselected, AND
- the request message is from the originating location for the order, AND
- this flag is selected

Otherwise, the `line_no` identifies the current line number in Order Orchestration.

*Example:* The configuration described above is in place. The originating location submits a status update request to cancel line 1, referencing its own line number rather than the Order Orchestration line number. Line 1 originated with 4 units, but has since split across 2 locations, resulting in lines 1 and 2 in Order Orchestration for 2 units each, with an originating line number of 1. The result is that the update request cancels both order lines. Otherwise, if the configuration described above is not in place, or if the originating location did not submit the status request, only the first of the two lines is canceled.

When the organization has [Allow Split Line](#) selected and [Allow Partial Updates](#) unselected, this flag should be:

- selected* for a system such as Order Administration, which includes its line number in the status update request
- unselected* (default) for a system such as Xstore, which includes the Order Orchestration line number in the status update request

 **Note**

When the [Allow Partial Updates](#) preference is selected, the requesting system needs to first obtain the current line numbers in Order Orchestration before submitting a status update.

| Field                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Selected:</b> You can enter any number from 1 to 99</li> <li><b>2. Unselected:</b> Enter 0</li> </ul> <p>Required.</p> <p>Order Orchestration tracks the number of retries in the Poll Count field at the <a href="#">Order</a> screen.</p> <div data-bbox="824 583 941 615" data-label="Section-Header"> <p><b>Note</b></p> </div> <div data-bbox="863 634 1448 724" data-label="Text"> <p>This setting does not apply to Store Connect locations, which do not use the fulfillment request and response message.</p> </div>                                                                                                                                       |
| <b>System Ops Email</b> | <p>The email address where Order Orchestration should send the notification email listing orders that have not been acknowledged after the number of Polling Retries has been reached.</p> <p>If you enter multiple email addresses, separate each with a semicolon (;). Order Orchestration verifies that the email address you enter are formatted correctly.</p> <p>Optional, even if the Require Status Update flag is selected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Reservation tab</b>  | <p>Use this tab to indicate the order or order line statuses to subtract from a location's available quantity in order to determine the quantity that is actually available to fulfill new orders.</p> <p>Typically, the reserved statuses for a Store Connect system are <i>New Order</i>, <i>Accepted</i>, <i>Picked</i>, and <i>Polled</i>.</p> <p><b>Inventory quantity export:</b> Changes to the reserved statuses at this tab do not trigger probability rule calculation for the inventory quantity web service, as described under <a href="#">Tracking Probability Rules for Incremental Updates on Inventory Availability</a>; however, these changes do factor into the calculation for the <a href="#">Full Overlay Inventory Quantity Extract File</a>. See <a href="#">Probability Rules Update and Incremental Quantity Web Service</a> for background.</p> <p>Available only with the Routing Engine module.</p> |
| <b>Include Reserved</b> | <p>Select this check box to have Order Orchestration subtract reserved order lines from the reported available quantity for a product location. This calculation helps you prevent overcommitting inventory when assigning orders, responding to <a href="#">locate items</a> requests, or evaluating selected fulfilling locations.</p> <p>If this check box is selected, the <b>Reserved Statuses</b> listed below are available for selection. Once you select any statuses and click <i>update</i>, Order Orchestration calculates the total reserved quantity for each product location in the system currently assigned to any selected status.</p> <p><b>For more information:</b> See <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p>                                                                                                                                                  |

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reserved Statuses</b> | <p>These statuses are available for selection if you select the Include Reserved checkbox. Select each status that indicates that inventory is reserved for an open order line and should not be assigned to new orders or listed in the LocateItems response message.</p> <p><b>For more information:</b> See <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p> <p>Possible statuses are:</p> <ul style="list-style-type: none"><li>• New Order</li><li>• Accepted</li><li>• Canceled</li><li>• Picked</li><li>• Fulfilled</li><li>• Unfulfillable</li><li>• Polled</li><li>• Posted</li><li>• Processed</li><li>• Verified</li><li>• Intransit</li><li>• Intransit Polled</li><li>• Received</li><li>• Partially Fulfilled</li></ul> <p>Typically, reserved statuses for your Store Connect system are <i>New_Order</i>, <i>Accepted</i>, <i>Polled</i>, and <i>Picked</i>.</p> |

| Field                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>RICS Integration tab</b> | <p>Use this tab to set up integration with the Oracle Retail Integration Cloud Service (RICS) to communicate order information between Order Orchestration and: Oracle Retail Merchandising Foundation Cloud Service (RMFCS), as well as Oracle Retail Store Inventory Management (SIM) or Enterprise Inventory Cloud Service (EICS).</p> <p>Note that you must first use the <a href="#">External Services</a> screen in Modern View to define Orders external services before you can select them at this tab.</p> <p><b>For more information:</b> See <a href="#">Order Fulfillment through RICS Integration</a> for background.</p> <p><b>RICS integration conversion:</b> When you upgrade from Order Broker to Order Orchestration, the previous settings from the RICS Integration tab are used to create an Orders record at the <a href="#">External Services</a> screen, with the following exceptions:</p> <ul style="list-style-type: none"> <li>• External service code: Set to RICS, appended with an incremental number, such as RICS1 and RICS2.</li> <li>• External service type: Set to Orders.</li> <li>• Description: Set to RICS Orders Service for ORG -SYS DESCRIPTION, where ORG is the organization code, SYS is the system code, and DESCRIPTION is the description of the organization.</li> </ul> <p>Note that existing RICS records are migrated only if they have URLs defined.</p> |

**Note**

- Optionally, you can delete a migrated record in order to assign a different code, since the external service code itself cannot be changed.
- After using the External Services screen and windows to review and verify each migrated service, you need to use the System screen in Classic View to update the external services at the related tabs and verify that the information displayed there is also correct.

**Online**

Select this check box to indicate that this is a system is:

- Oracle Retail Merchandising Foundation Cloud Service (RMFCS), or
- Oracle Retail Store Inventory Management (SIM); or
- Enterprise Inventory Cloud Service (EICS)

Order Orchestration integrates with these systems through the Oracle Retail Integration Cloud Service (RICS).

When you select this check box, you need to specify the Outbound Orders Service information, described below.

**For more information:** See [Order Fulfillment through RICS Integration](#) for background.

**Send Release Reservation Inventory Message**

Select this check box to send an order cancellation message through RICS when an order is rejected or canceled.

| Field                           | Description                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hold Under Review Orders</b> | Select this check box to post an order through RICS to RMFCS or SIM only when the order is not currently held for review, based on its <a href="#">Under Review</a> flag. When you clear the <i>Under Review</i> flag for the order, it is then posted automatically. See <a href="#">Order Fulfillment through RICS Integration</a> for background. |

 **Note**

This flag should be selected.

| <b>OCDS Integration Import tab</b> | <p>Use this tab to set up integration with the Omnichannel Cloud Data Service (OCDS) or Merchandising Omni Services to import warehouse or store location, product, and product location information from Oracle Retail Merchandising Foundation Cloud Service (RMFCS). The product image import is also supported for the default system of the organization. When you use ODCS or Merchandising Omni Services for these imports, Order Orchestration generates web service requests for this information rather than processing an upload file.</p> <p>Note that you use the <a href="#">External Services</a> screen in Modern View to define Foundation Data services.</p> <p><b>OCDS integration conversion:</b> When you upgrade from Order Broker to Order Orchestration, the previous settings from the OCDS Integration tab are used to create an Orders record at the <a href="#">External Services</a> screen, with the following exceptions:</p> <ul style="list-style-type: none"> <li>• External service code: Set to OCDS, appended with an incremental number, such as OCDS1 and OCDS2.</li> <li>• External service type: Set to Foundation Data.</li> <li>• Description: Set to FOUNDATION DATA forSYS DESCRIPTION, where SYS is the system code, and DESCRIPTION is the description of the organization.</li> </ul> <p>Note that existing OCDS records are migrated only if they have URLs defined.</p> <div data-bbox="824 947 940 980" data-label="Section-Header"> <p><b>Note</b></p> </div> <ul style="list-style-type: none"> <li>• Optionally, you can delete a migrated record in order to assign a different code, since the external service code itself cannot be changed.</li> <li>• After using the External Services screen and windows to review and verify each migrated service, you need to use the System screen in Classic View to update the external services at the related tabs and verify that the information displayed there is also correct.</li> </ul> |
| <b>Foundation Data Service</b>     | <p>Select the foundation data service to use for an <a href="#">Online</a> system. Foundation data services are configured at the <a href="#">External Services</a> screen in Modern View.</p> <p>Leave this field set to <i>None</i> if the system does not use the foundation data integration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**For more information:** See:

- [OCDS or Merchandising Omni Services Imports](#) and [Importing Data from Merchandising Cloud Services \(RMFCS\) through the Omnichannel Cloud Data Service \(OCDS\) or Merchandising Omni Services](#) for an overview and mapping details.
- [Schedule Jobs](#) screen for information on scheduling the imports or running them on demand.

| Field                              | Description                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Default Store Location Type</b> | Select the code for a store location type to associate with the store locations imported through the Store Location URL. All location types in your organization with a Category of <i>Store</i> are available for selection. Required if the Active flag is selected for store locations and if an external service is selected at the Foundation Data Service drop-down. |

**Note**

If you change this setting after initially importing store locations, existing store location records are not updated.

**Default Warehouse Location Type**

Select the code for a warehouse location type to associate with the virtual warehouse locations imported through the Warehouse Location URL. All location types in your organization with a Category of *Warehouse* are available for selection. Required if the Active flag is selected for warehouse locations and if an external service is selected at the Foundation Data Service drop-down.

**Note**

If you change this setting after initially importing warehouse locations, existing warehouse location records are not updated.

## Tenant

**Purpose:** Use the **Tenant** screen to define enterprise-wide settings for Order Orchestration,

**How to display this screen:** Select *Tenant* from the [Systems Menu](#).

**Which Tenant screen?** When you select the **Tenant** screen:

- If you are the [admin user](#), you advance to the [Tenant-Admin](#) screen, which displays fields required for administration of the application. See that screen for more information.
- Otherwise, if you are a retailer user, you advance to the [Tenant \(retailer information\)](#) screen, which displays configuration options for a retailer user with administrative authority. See that screen for more information.

## Tenant (retailer information)

**Purpose:** Use the **Tenant** screen to define enterprise-wide settings for your enterprise's use of Order Orchestration, including those related to:

- the Order Orchestration module(s) you use
- your logo

**About tenant settings:** Tenant settings are attributes of your enterprise in Order Orchestration at a level higher than the [organization](#). Tenant-level settings apply to all your organizations in Order Orchestration.

**Order and merchandise volume:** This screen also displays total order and merchandise locator requests broken out by month for the current and prior year. This information is also available through a web service; see the Order and Locator Metric Web Service in the Web Services Guide on My Oracle Support (2953017.1) for more information.

**How to display this screen:** Select *Tenant* from the [Systems Menu](#).

**Note**

Only users with *Tenant* authority can display this screen. See [Roles](#) for more information. Also, the [admin user](#) does not have access to this screen.

**Tenant - Admin screen:** The [Tenant-Admin](#) screen displays additional settings related to cloud administration. This screen is available only to an [admin user](#).

**Fields at this screen**

Update any of the fields described below and click *Save*, or click *Cancel* to exit the screen without making any changes.

| Field       | Description                                                                                                                                                                                                                                                                            |
|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Settings    |                                                                                                                                                                                                                                                                                        |
| Tenant Logo | <p>The URL for the logo to display in Store Connect. Not currently used.</p> <p><b>Preview the logo:</b> After entering the URL, click the preview icon (  ) to preview the image at 254 x 33.</p> |

**Note**

Oracle staff need to make sure that this URL is added to the [allow list](#).

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Time Zone | <p>The time zone to use when setting schedules and displaying dates and times on screens, in reports, and in email notifications. This is the retailer's time zone, which can be different from the system time zone and the user's time zone. See <a href="#">Time Zones</a> for a discussion.</p> <p><b>Changing the time zone:</b> If you change the time zone, you should reset the following:</p> <ul style="list-style-type: none"><li>• Report schedules, through the <a href="#">Schedule Reports</a> screen</li><li>• Imports, through the <a href="#">Schedule Jobs</a> screen</li><li>• Incremental inventory import, probable quantity update and export, and fulfilled inventory export, at the <a href="#">System</a> screen</li></ul> |

|-------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|       | <p><b>About the Volume tables:</b> The Volume tables display totals, broken out by month for the current year and the previous year, of SubmitOrder requests and of searches for fulfilling, sourcing, or pickup locations. Totals are for all organizations in the enterprise.</p> <p><i>Activities that aren't tracked:</i> Order Orchestration does not include any of the following order-related activity in the Order or Merchandise Locator Volume tables:</p> <ul style="list-style-type: none"> <li>status inquiries, either individually or by list</li> <li>status updates, either through the status update request message or through the Order screen</li> <li>fulfillment requests or intransit requests</li> <li>order searches</li> <li>order updates (updates to the Under Review setting or the Pickup By Date)</li> <li>“reshopping” an order or line that is rejected</li> </ul> <p><i>Supplier Direct Fulfillment?</i> Activities related to the Supplier Direct Fulfillment module are not tracked in the Order or Merchandise Locator Volume tables.</p> <p><i>Things to note:</i></p> <ul style="list-style-type: none"> <li>All organizations: The totals listed include all organizations in the environment.</li> <li>Counter reset: The counters reset at the start of a new month.</li> <li>Actual date: The month incremented is based on the actual date, not the date specified in the request message. For example, a SubmitOrder request received on October 1 updates the total for October, even if the transaction date specified in the message is September 30.</li> <li>Counter always incremented by 1: Each request increments the counter by 1, regardless of the number of items, requested quantity(s), or if multiple fulfillment types are specified for a ProductAvailability request.</li> <li>Splitting order or line? The totals are incremented by just 1, regardless of whether the Allow Split Order or Allow Split Line preferences are selected and the order or line would need to be fulfilled out of multiple locations. For example, a SubmitOrder request for 2 units of item ABC123 results in 1 unit assigned to location 100 and 1 unit assigned to location 200; however, the Order Volume total is incremented by just 1.</li> <li>Unfulfillable orders: The order counter is incremented for orders that cannot be fulfilled, and are automatically assigned to the Default Unfulfillable Location.</li> <li>Order not created: The order count is <i>not</i> incremented when Order Orchestration returns an error to a SubmitOrder request if, for example, the specified product is not available in the specified location, or if the specified location does not support the order type.</li> </ul> <p><b>Troubleshooting if last month in the tables is cut off:</b> Depending on the browser you are using, the font size in your browser, the zoom level in your browser, and the Display settings for your computer, the last months in the volume tables may be cut off. Some things to try:</p> <ul style="list-style-type: none"> <li>Make sure your computer's Display setting is at 125% or less, and zoom out (-) if needed in the browser.</li> <li>Decrease the font size in the browser.</li> <li>If you prefer to leave the computer's Display setting at the default, try another browser; for example, the last month may be cut off in Firefox, but displayed correctly in Chrome.</li> </ul> |

| Field                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order Volume</b>               | <p>Displays order request totals broken out by month for the current year and the previous year. The monthly total is incremented by 1 each time the routing engine processes a SubmitOrder request.</p> <p><i>Unfulfillable?</i> The monthly total <i>is</i> incremented when an order or line on a new order is assigned to the unfulfillable location (Default Shipping Location), because there are no locations that could fulfill the order.</p> <p><i>Unavailable?</i> The monthly total is <i>not</i> incremented when the requested quantity of the item(s) is/are not available at the specified location (for example, Location does not have sufficient inventory of this item) or if the specified location does not support the order type (for example, Location (123) does not support pickup transactions).</p> <p><i>Rejected:</i> The monthly total is <i>not</i> incremented when an assigned location rejects the order or line, and Order Orchestration attempts to “reshop” it.</p> <p><i>Error?</i> The monthly total is <i>not</i> incremented when the routing engine returns an error, such as when the requested product is invalid, unless the error indicates that the requested quantity(s) of one or more items are not available for the order.</p> |
| <b>Merchandise Locator Volume</b> | <p>Displays merchandise locator requests broken out by month for the current year and the previous year. The monthly total is incremented by 1 each time the routing engine:</p> <ul style="list-style-type: none"> <li>processes a LocateItems request, regardless of the number of items in the request.</li> <li>processes a ProductAvailability request, regardless of the number of items in the request or the number of fulfillment types specified in a ProductAvailability request.</li> </ul> <p><i>Unavailable?</i> The monthly total <i>is</i> incremented regardless of whether the requested quantity(s) of the item(s) is/are available within the search criteria.</p> <p><i>Error?</i> The monthly total is <i>not</i> incremented when the Order Orchestration returns an error, except an error that indicates that the requested quantity(s) of the item(s) is/are not available within the search criteria.</p>                                                                                                                                                                                                                                                                                                                                                 |

## Tenant-Admin

**Purpose:** Use the **Tenant-Admin** screen to define enterprise-level settings for Order Orchestration, including those related to:

- the Order Orchestration module(s) used
- the retailer’s logo
- the timeout interval for Order Orchestration user sessions
- the number of unsuccessful login attempts before Order Orchestration deactivates a user ID
- the Geocode Address for integration with Oracle Maps Cloud Service

**About tenant settings:** Tenant settings are enterprise-level attributes in Order Orchestration at a level higher than the [organization](#). Tenant-level settings apply to all the retailer’s organizations in Order Orchestration.

**How to display this screen:** Select *Tenant* from the [Systems Menu](#).

 **Note**

Only an [admin user](#) can display this screen. Retailer users with Tenant authority advance instead to the [Tenant \(retailer information\)](#) screen.

**Fields at this screen**

Update any of the enterable fields described below and click *Save*, or click *Cancel* to exit the screen without making any changes.

- [Settings](#)
- [Identity Cloud Service Settings](#)
- [Retention Settings](#)
- [Geocode Settings](#)

Only the default admin user has access to fields related to administering Order Orchestration.

| Field                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Time Zone</b>                       | <p>The time zone to use when setting schedules and displaying dates and times on screens, in reports, and in email notifications. This is the retailer's time zone, which can be different from the system time zone and the user's time zone. See <a href="#">Time Zones</a> for a discussion. Display-only.</p> <p><b>Changing the time zone:</b> When the time zone here is reset by the retailer, the following should also be reset:</p> <ul style="list-style-type: none"> <li>Report schedules, through the <a href="#">Schedule Reports</a> screen</li> <li>Imports, through the <a href="#">Schedule Jobs</a> screen</li> <li>Incremental inventory import, probable quantity update and export, and fulfilled inventory export, at the <a href="#">System</a> screen</li> <li>Jobs scheduled through the <a href="#">Schedule Jobs</a> screen</li> </ul> <p><b>Note:</b> Modern View screens reflect the change in time zone the next time the user logs into Order Orchestration.</p> |
| <b>Job Batch Size</b>                  | <p>Indicates the number of records to include in each batch for all imports. The default setting is 1000, the maximum setting is 50,000, and the minimum setting is 10.</p> <p>See <a href="#">Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>PQE Startup Threads</b>             | <p>Indicates the number of threads to allot to a background job that calculates probable quantity updates for the <a href="#">Inventory Quantity Export</a>. The job checks this setting each time it starts. If this field is set to 0, no calculation takes place. Defaults to 0.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Identity Cloud Service Settings</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Client ID</b>                       | <p>The Name identifying Order Orchestration as an application in IDCS or OCI IAM. Typically formatted as RGBU_OBCS_ENV_APPID where OBCS identifies Order Orchestration and ENV identifies the environment, such as production. Alphanumeric, 255 positions. Display-only.</p> <p>Can be used as the default client ID for OAuth authentication for the <a href="#">Inventory Service</a>. See the <a href="#">Manage External Application Access</a> for more information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Retention Settings</b>              | <p>The following settings control the number of days to retain certain types of files.</p> <p><b>If set to 0 days:</b> If you set one of the following to 0 days, then all files or records are eligible to be purged the day after creation.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>File Storage</b>                    | <p>The number of days to retain:</p> <ul style="list-style-type: none"> <li>File storage records</li> <li>Generated reports</li> </ul> <p>After this number of days, the <a href="#">daily cleanup job</a> automatically deletes the database records, so it is no longer possible to:</p> <ul style="list-style-type: none"> <li>Retrieve the file storage records, or</li> <li>Print the generated reports</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

**Note**

You can also use the [File Storage History](#) screen to delete individual file storage records.

Setting this field to a whole number from 0 to 30 days is required.

| Field                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Pack Slip Files</b>            | <p>The number of days to retain pack slip records for purchase orders that have been shipped through the Vendor Portal. After this number of days, the <a href="#">daily cleanup job</a> automatically deletes the database records, so it is no longer possible for the vendor to print the pack slips. Can be from 0 to 30 days. Required.</p> <ul style="list-style-type: none"> <li>This setting does not control the retention of pack slip records generated through Store Connect. The <a href="#">daily cleanup job</a> automatically deletes these database records after one day. The store associate cannot reprint pack slips using these records.</li> <li>Used only by the <a href="#">Supplier Direct Fulfillment</a> module.</li> </ul> |
| <b>Product Import Error Files</b> | <p>The number of days to retain import error files before the <a href="#">daily cleanup job</a> automatically deletes them. Can be from 0 to 30 days. Required.</p> <p><b>For more information:</b> See <a href="#">Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database</a> and <a href="#">Incremental Inventory Import</a> for background.</p>                                                                                                                                                                                                                                                                                                                                                                     |
| <b>RICS Log History</b>           | <p>The number of days to retain records in the RICS_LOG table of messages between Order Orchestration and Oracle Retail Integration Cloud Service (RICS) before the <a href="#">daily cleanup job</a> automatically deletes them. Can be from 0 to 30 days. Required.</p> <p>RICS log records whose Retry Status is <i>Failed</i> are not eligible to be purged. The RICS log history messages are available for review at the <a href="#">RICS Log tab</a> if the system is configured for order integration through RICS. See <a href="#">Order Fulfillment through RICS Integration</a> for background.</p>                                                                                                                                          |
| <b>Trace Log History</b>          | <p>The number of days to retain trace log history records for closed, completed, canceled, or unfulfillable orders before the <a href="#">daily cleanup job</a> automatically deletes them. If the <a href="#">Trace Shopping Logic</a> field is set to <i>Detailed</i> at the <b>Event Logging</b> screen, the Routing Engine records the reasons why individual locations are eliminated when selecting a location to source an order. You can use the <a href="#">Trace Shopping Log</a> screen to review these shopping trace records; see that screen for information on tracing shopping logic.</p> <p>Can be from 0 to 30 days. Defaults to 30. Required.</p>                                                                                    |
| <b>Job History</b>                | <p>The number of days to retain job history records before the <a href="#">daily cleanup job</a> automatically deletes them.</p> <p>See the <a href="#">View Job History</a> screen to review job history.</p> <p>Can be from 1 to 30 days. Defaults to 30. Required.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Geocode Settings</b>           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

Used only when a <a href="#">Carrier for Turn-by-Turn Evaluation</a> is selected at the <b>Preferences</b> screen, and that carrier is used in a locate items, product availability, or submit order request. See <a href="#">Turn-by-Turn Distance Evaluation for Delivery Orders</a> for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Failed Geocode Request Threshold</b> | <p>Defines the number of consecutive failed interactive inventory request attempts that, if exceeded, should trigger putting the Geocode requests in a wait time. For example, if this field is set to 5, and 6 requests in a row fail to get a response, Geocode requests are halted for the defined wait time. Applies to both regular Geocode requests and to Turn-by-Turn requests. Defaults to 0. Can be left set to 0, indicating that failed requests are not evaluated, or from 1 to 10000 if failed requests should be evaluated.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Field                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Failed Geocode Request Wait Time</b> | Defines the number of minutes to wait after the defined number of failed requests have been exceeded. For example, if this field is set to 10, Geocode requests are halted for 10 minutes. Applies to both regular Geocode requests and to Turn-by-Turn requests. Defaults to 0.<br><br>Can be left set to 0 only if the Failed Geocode Request Threshold is also set to 0; otherwise, can be set from 1 to 60. |

## Web Service Authorization

**Purpose:** Use the **Web Service Authorization** screen to work with authentication requirements for Order Orchestration web services. By setting up and requiring user IDs and passwords for web services, you confirm that Order Orchestration authenticates the identity of the system submitting web service requests.

Authentication is always required. When Order Orchestration receives a web service request without a valid web service user and password, the request is refused with an error: Inbound Message failed validation.

**IDCS or OCI IAM setup required:** Each web service user must also be created in [IDCS or OCI IAM](#).

**About store locations and Xstore Office on premises:** The Xstore Office on premises solution differs from other solutions in that it serves as the parent for any related store locations. Any store locations that are assigned a parent ID do not require setup as web service users; instead, you configure external access for Xstore Office on premises, and this “parent” handles authentication for all related store locations.

When authentication is required for a request originating from any location associated with the Xstore Office parent ID, the parent ID's authentication credentials are used.

**Recognizing Xstore Office store locations:** When a request specifies a client ID that matches the format used in IDCS or OCI IAM to identify stores related to Xstore Office on premises, Order Orchestration obtains the client ID of the Xstore Office on premises application, and uses it for authentication.

Order Orchestration uses the CLOUD\_APP\_CLIENT table to track client IDs for store locations that use the Xstore Office parent ID.

### Note

Order Orchestration does not use these web service authorization settings for web service requests that Order Orchestration sends to an external system, such as the Oracle Maps Cloud Service.

**For more information:** See the Omnichannel Web Service Authentication Configuration Guide at <https://support.oracle.com/epmos/faces/DocumentDisplay?id=2728265.1> for instructions on web service authentication configuration.

**How to display this screen:** Select *Web Service Authorization* from the [Systems Menu](#).

 **Note**

Only users with *Web Service Authorization* authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Edit  | <p>Click the edit icon (  ) for a web service to advance to the <a href="#">Web Service User</a> screen, where you can work with users identifying systems that use the web service.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

## Web Service User

**Purpose:** Use the **Web Service User** screen to work with user names that identify an integrating system for web service requests. This setup is required.

**IDCS or OCI IAM setup required:** Each web service user must also be created in [IDCS or OCI IAM](#).

### Note

Order Orchestration uses web service users only for web service authentication. Unlike Order Orchestration user profiles, vendor users, or store associates, web service users do not have authority to any Order Orchestration screens.

**OAuth:** If you use [OAuth](#) for authentication of inbound web services, the User specified here is the IDCS or OCI IAM Client ID used to generate the token.

**How to display this screen:** Click the edit icon (  ) at the [Web Service Authorization](#) screen.

**Note**

Only users with *Web Service Authorization* authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                                                                                      | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## New Web Service User

**Purpose:** Use the **New Web Service User** window to create a new user identifying a system for web service authentication. This setup is required.

**Note**

Order Orchestration uses web service users for web service authentication only. Unlike Order Orchestration user profiles, vendor users, or store associates, web service users do not have authority to any Order Orchestration screens.

**How to display this window:** Click *New* at the [Web Service User](#) screen.

**Note**

Only users with *Web Service Authorization* authority can display this screen. See [Roles](#) for more information.

**Completing the creation of a web service user identifying a system for web service authentication:**

1. Enter the User or, optionally, change the entered User. The name can be up to 255 positions, and can include special (non-alphanumeric) characters and spaces.

**Note**

If you use [OAuth](#) for authentication of inbound web services, the User you specify here is the Client ID assigned when the Trusted Application (or Confidential Application) was created in IDCS or OCI IAM.

2. Click *Save* to save the user; otherwise, click *Cancel*.

**Fields at this window**

| Field | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| User  | <p>The name of a user identifying a system for authentication of messages for the web service. Up to 255 positions, and can include special (non-alphanumeric) characters and spaces. Case-sensitive for authentication. Required.</p> <p><b>Matches another user?</b> A warning message indicates if the user ID specified when you are creating a new web service user matches an existing User ID for a user of another type, such as an Order Orchestration user, Store Connect associate, or Vendor user; however, you can still create the web service user. This message also indicates if the user ID matches the Cloud Service User ID of an Order Orchestration user or a Store Connect associate.</p> <p><b>If using OAuth:</b> If you use <a href="#">OAuth</a> for authentication of inbound web services, the User specified here is the IDCS or OCI IAM Client ID used to generate the token.</p> |

# Manage External Application Access

**Purpose:** Use the **Manage External Application Access** screen to create, review, and work with external applications that integrate with Order Orchestration using OAuth, and define the web services that use OAuth authentication for inbound web service requests to Order Orchestration.

**About OAuth:** OAuth requires the requesting system to provide an access token with the web service request. Oracle Cloud Services use IDCS (Oracle Identity Cloud Service) or OCI IAM (Oracle Cloud Infrastructure Identity and Access Management) as the authenticating service. The requesting system will use its configured client ID and secret to request an OAuth token from IDCS or OCI IAM and then include that token in service requests.

In addition to being more secure, OAuth provides better performance than basic authentication.

**How requests are validated with OAuth:**

1. The requesting system first passes a client ID and a client secret to an authenticating service, such as IDCS or OCI IAM.
2. The authenticating service, such as IDCS or OCI IAM, generates a short-lived token.
3. The requesting system submits the token to the destination system, rather than a password and user ID as with basic authentication.
4. The destination system validates the token and client ID.

The following is required in order to support OAuth between Order Orchestration and other Omnichannel products, including Order Administration and Xstore Cloud Services or Xstore Office (On Premises), as well as an external system such as an ecommerce system:

- The IDCS or OCI IAM client ID and client secret for the integrating system must be created through Retail Home or an Omnichannel cloud service, if it does not already exist.
- The system receiving the web service request needs to have a record of the client ID with assigned access for the web service API.
- A system sending the web service request needs to be able to request the token from IDCS or OCI IAM.
- The system sending the web service request needs to include the token so the system receiving the web service request can validate the request.

For example, if your ecommerce system will communicate with Order Orchestration using OAuth, you can use this page to:

- Create a client ID and secret, which you can then provide to the ecommerce system.
- Create the associated web service authentication records for the ecommerce system.

**Order Orchestration Client ID:** The *Client ID* displayed at the **Tenant-Admin** screen is the *Name* identifying Order Orchestration as an application in IDCS or OCI IAM. Typically formatted as RGBU\_OBCS\_ENV\_APPID, where OBCS identifies Order Orchestration and ENV identifies the environment, such as production.

**About store locations and XOffice On Prem:** The XOffice On Prem application differs from other applications in that it serves as the parent for any related store locations. Any store locations that are assigned a parent ID are not displayed at this page; instead, you configure external access for XOffice On Prem, and this “parent” handles authentication for all related store locations.

When authentication is required for a request originating from any location associated with the XOffice On Prem parent ID, the parent ID’s authentication credentials are used.

*Example:* XOffice On Prem is the parent for location A, so the XOffice On Prem authentication credentials are used.

**For more information:** See the Omnichannel Web Service Authentication Configuration Guide on My Oracle Support (2728265.1) for web service configuration instructions.

**OAuth summary by product:**

| Product                                                      | Inbound Support                                                                                                              | Outbound Support                                    |
|--------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|
| <b>Order Broker / Order Orchestration</b>                    | Order Broker 18.2 or higher, or Order Orchestration                                                                          | Order Broker 19.1 or higher, or Order Orchestration |
| <b>Order Management System / Order Administration System</b> | 18.3 or higher; 19.0 or higher, or Order Administration System supports XOffice On Prem validation of stores with parent ID. | 19.1 or higher                                      |
| <b>Customer Engagement</b>                                   | 18.0 or higher; 18.3 or higher supports XOffice On Prem validation of stores with parent ID.                                 | not currently supported                             |

**Note**

Oracle Retail Integration Cloud Service (RICS) and Omnichannel Cloud Data Service (OCDS) do not currently support using OAuth for authentication of inbound messages. The Authentication Type for the service selected at the [RICS Integration tab](#) and the [OCDS Integration tab](#) of the **System** screen should be set to *Basic*; however, if you are using Merchandising Omni Service rather than OCDS, the Authentication Type for the service selected at the [OCDS Integration tab](#) of the **System** screen should be set to *OAuth*. Note that you configure these services, including the authorization settings, through the Add or Edit External Service window, available from the [External Services](#) screen.

**Troubleshooting:** Options at this page that require communication with Retail Home include generating a new client, regenerating the secret for a client, and assigning/unassigning scopes. Refreshing the displayed applications requires communication with IDCS or OCI IAM.

**Outbound web services using OAuth authentication:** The following outbound services support OAuth authentication:

- **Inventory Service:** Used for authentication for the inventory request message to be sent to Order Administration. Use the Add or Edit External Service window, available from the [External Services](#) screen, to define the OAuth Authentication Type, Client ID, and Client Secret for Order Administration System, and then select the service at the [Inventory tab](#) of the **System** screen. If you are using Basic authentication, it is recommended to move to OAuth.
- **Job Notification Service:** Used for authentication for the job notification message to be sent to an external application. Use the [Event Logging](#) screen, and select *OAuth* as the Authentication Type. If you are using Basic authentication, it is recommended to move to OAuth.
- **OCDS:**  
Used for authentication for RESTful web service requests that are sent to Merchandising Omni Service. Configure the service through the Add or Edit External Service window, available from the [External Services](#) screen, and then select the service at the [OCDS Integration tab](#) of the **System** screen.

**Outbound web services using basic authentication:** OAuth is not supported for the following:

- **SIM:** Used for authentication of web service requests to request inventory updates through [Additional Types of Import Processes \(Other than RMFCS File Upload and OCDS or Merchandising Omni Services\)](#). Configure the service through the Add or Edit External Service window, available from the [External Services](#) screen, and then select the service at the [Inventory tab](#) of the **System** screen.
- **RICS:** Used for authentication for the pre-order (backorder quantity update) notification message that is part of [Order Fulfillment through RICS Integration](#). Configure the service through the Add or Edit External Service window, available from the [External Services](#) screen, and then select the service at the [RICS Integration tab](#) of the **System** screen.
- **OCDS:** Used for authentication for RESTful web service requests that are sent to the Omnichannel Cloud Data Service. Configure the service through the Add or Edit External Service window, available from the [External Services](#) screen, and then select the service at the [OCDS Integration tab](#) of the **System** screen.

**Note**

If any other existing Oracle Cloud Services are configured for basic authentication and support OAuth, you should migrate these services to OAuth.

**For more information:** See the Oracle Retail Omnichannel Web Service Authentication Configuration Guide, on My Oracle Support at <https://support.oracle.com/epmos/faces/DocumentDisplay?id=2728265.1>, for information on configuring the Omnichannel products for OAuth.

**How to display this screen:** Select *Manage External Application Access* from the [Systems Menu](#).

**Note**

Only users with *Manage External Application Service* authority can display this screen. This authority is not delivered automatically, so you must assign it manually. See [Roles](#) for more information.

**Before you start:** The first time a user advances to this screen, no applications are displayed.

Select *Refresh* to request existing applications from IDCS or OCI IAM and create records for them in Order Orchestration, which are then displayed at the *Tenant-Admin* screen.

**Options at this screen**

| Option                                                                       | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>refresh the displayed applications</b>                                    | <p>Click <i>Refresh</i> to update the list of currently existing application clients from IDCS or OCI IAM:</p> <ul style="list-style-type: none"> <li>If any additional client applications are found in IDCS or OCI IAM that did not previously have records in Order Orchestration, these client application records are created in the Order Orchestration database. For example, additional client records might have been included through another product, such as Customer Engagement Cloud Services. These new client records are also displayed at the <a href="#">Web Service User</a> screen.</li> </ul> <p><i>Example:</i> When you click <i>Refresh</i>, the updated list of client applications might include client applications created through another application, such as Customer Engagement.</p> <ul style="list-style-type: none"> <li>If any client applications that previously existed in Order Orchestration have been deleted from IDCS or OCI IAM, they are deleted from Order Orchestration, and the web service authentication user records are also removed from the <a href="#">Web Service User</a> screen.</li> <li>If any client applications that previously existed in Order Orchestration have been changed in IDCS or OCI IAM, then applications are updated if the changed fields are the <i>Client ID</i> (APPLICATION_ID), <i>Description</i>, and the PARENT_APP_ID (used only when the <a href="#">Application Type</a> identifies an XOffice On Prem store location).</li> <li>When additional store locations have been created for XOffice On Prem, using the <i>Refresh</i> option creates the records in the Order Orchestration database; however, these records are not displayed at the Manage External Application Access page because they are assigned to XOffice client applications as their parent ID. The Manage External Application Access does not display any records whose parent ID is populated.</li> <li>Client application records in IDCS or OCI IAM without client ID's are not imported.</li> <li>Client application records in IDCS or OCI IAM with duplicate client ID's are tracked as duplicates in logs.</li> <li>The screen displays an error if it cannot refresh the data, typically if communication with IDCS or OCI IAM fails. See above for details on the settings used for communication with IDCS or OCI IAM.</li> </ul> |

|       | <p>This authentication is also required to receive individual updates to the available quantities for product locations through the Retail Integration Bus (RIB). See <a href="#">Available-to-Sell Individual Inventory Updates through Oracle Retail Integration Cloud Service (RICS)</a> for a discussion.</p> <ul style="list-style-type: none"> <li>• <b>Run Job:</b><br/>Includes the Run Job request message to submit a job, as an alternative to submitting or scheduling a job at the schedule jobs screen. OAuth is required for the Run Job API. See the Web Services Guide on My Oracle Support (2953017.1) for background on this API.</li> <li>• <b>Storage:</b> Includes all requests from an integrating system to upload, download, inquire on, or delete files through <a href="#">File Storage API for Imports and Exports</a>: <ul style="list-style-type: none"> <li>– putFile</li> <li>– getFile</li> <li>– getFiles</li> <li>– deleteFile</li> </ul> </li> </ul> <p><b>For more information:</b> See the Web Services Guide on My Oracle Support (2953017.1) for details on the above messages.</p> <ul style="list-style-type: none"> <li>• <b>Vendor:</b> Includes all requests submitted by an integrated vendor to Order Orchestration for the Supplier Direct Fulfillment module: <ul style="list-style-type: none"> <li>– setDSAcknowledge</li> <li>– getDSOrders</li> <li>– setDSShipConfirm</li> </ul> </li> </ul> |

#### Note

If *Vendor* access is selected, the client ID is available for selection as the [Vendor Client Id](#) for an integrated vendor at the **New Vendor** or **Edit Vendor** screen, provided the client ID has not already been assigned to a different vendor.

**For more information:** See the *Vendor Integration Guide* for details on the above messages.

| <b>Client ID</b>          | <p>The client ID uniquely identifies the client in IDCS or OCI IAM:</p> <ul style="list-style-type: none"> <li>If the Application Type is <i>XOffice On Prem</i>, the client ID is RGBU_XTROFFOP_&lt;ENV&gt;_XOFFICE_APPID, where &lt;ENV&gt; is the environment, such as PROD for production.</li> <li>If the application record was created through Order Orchestration or another omnichannel application, the client ID is formatted as RGBU_OBCS_&lt;RANDOM&gt;_APPID, where OBCS identifies the application, and &lt;RANDOM&gt; is a series of 8 random characters.</li> <li>Otherwise, if the application record was created in IDCS or OCI IAM, the client ID is a series of random characters.</li> </ul> <p>This is the Name in IDCS or OCI IAM. Note that the Display Name in IDCS or OCI IAM is the Client ID without the _APPID suffix.</p> <p>Alphanumeric, 255 positions. Display-only.</p> |
| <b>Web Service Access</b> | <p>The list of Order Orchestration inbound web service or scope to which the application has access. See <i>Web Service</i>, above, for a list of possible web services. You can use the <a href="#">Edit Web Services</a> window to work with the inbound web services. Display-only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Date Created</b>       | <p>The date when the application record was created or regenerated in Order Orchestration, which could be when the record was received from IDCS or OCI IAM, or generated during the creation of a new record through Xstore On Prem authentication, as well as through the <a href="#">Generate Application Client</a> window. Display-only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Edit Access</b>        | <p>Select the edit icon (  ) for an application to open the <a href="#">Edit Web Services</a> window, where you can review, select, or unselect the web services that the application can authorize.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>New Secret</b>         | <p>Select the new secret icon (  ) for an application to open the <a href="#">Regenerate Application Client Secret</a> window, where you can generate a new client secret to use to request an OAuth token.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

**Note**

The client ID is similar to a user ID in that it identifies a client application to the authentication service, in this case IDCS or OCI IAM. You can create client IDs through the Manage External Application Access screen, in IDCS or OCI IAM, or through other applications, such as Customer Engagement.

**Note**

This option is available only for external application clients that were created through the [Generate Application Client](#) window in Order Orchestration.

# Edit Web Services

**Purpose:** Use the **Edit Web Services for** window to review, add, or delete the web service user authentication records for an application that submits web service requests to Order Orchestration.

## Note

The description of the selected application client is indicated in the window title; for example, if the application client's description is **Client Sample**, the window title is **Edit Web Services for Client Sample**.

**How to display this screen:** Select the edit icon (  ) for an application at the [Manage External Application Access](#) screen.

## Note

Only users with *Manage External Application Access* authority can display this window. See [Roles](#) for more information.

## About Creating Access

Select or unselect any of the displayed web services or scopes. Click *OK* to update the web service access; otherwise, click *Cancel*.

Once created, the inbound web service user records are listed in the [Web Service Access](#) column at the **Manage External Application Access** page, and are also displayed at the [Web Service User](#) screen, with the User set to the Client ID for the application. The client ID can now be used for OAuth authentication for that web service.

**Delete web service access:** If you delete the web service or scope option, the inbound web service user authentication record is deleted, is no longer displayed at the [Web Service User](#), and can no longer be used for authentication for that web service.

## Web Services

- *Admin:* Includes:
  - ProductUpdate
  - LocationUpdate
  - LocationDetail
  - Email Out API
  - setDSAcknowledge
  - getInventoryAvailability
  - getDSOrders
  - setDSShipConfirm
  - Store Associate Location Assignment

**Note**

Admin authority is also required for the inventory quantity web service; see [Probability Rules Update and Incremental Quantity Web Service](#) for background.

- *Discovery*: Requests include Location discovery and System discovery.
- *Foundation Read/Write*: Provides authority to perform inquiries as well as to create, update, or delete foundation data. Grants foundation:rw scope in IDCS or OCI IAM via Retail Home. Foundation data includes:

- Boxes
- Brands
- Carriers
- Cancel or Reject Reason Codes

See Application Data Services in the Web Services Guide on My Oracle Support (2953017.1) for more information.

- *Foundation Read Only*: Provides authority to perform inquiries on foundation data as described above, but does not provide authority to make any updates. Grants foundation:r scope in IDCS or OCI IAM via Retail Home.

See Application Data Services in the Web Services Guide on My Oracle Support (2953017.1) for more information.

**Note**

Although there are additional scopes defined in IDCS or OCI IAM, they are not in use at this time and not available to assign through the Edit Web Services window

- *Locate*: Includes all requests related to the Routing Engine:
  - EchoTest
  - Fulfillments
  - Intransit
  - InventoryAvailability
  - LocateItems
  - OrderSearch
  - OrderUpdate
  - ProductAvailability
  - StatusListRequest
  - StatusRequest
  - StatusUpdate
  - SubmitOrder
- *Private Data Request*: Includes all requests to inquire on or delete private data:
  - GetPrivateData
  - ForgetPrivateData

- *Purchasing*: Includes all requests from the retailer to Order Orchestration related to the Supplier Direct Fulfillment module:

- CreateDSOrder
- CreateDSVendor
- GetDSChanges
- GetDSInvoices
- SetDSAddressChange
- SetDSCancel
- SetDSCostChange

- *Oracle Retail Integration Cloud Service*: Includes all requests received from Oracle Retail Integration Cloud Service (RICS). See [Order Fulfillment through RICS Integration](#) for background on order-related messages. *Not currently implemented.*

This authentication is also required to receive individual updates to the available quantities for product locations through the Retail Integration Bus (RIB). See [Available-to-Sell Individual Inventory Updates through Oracle Retail Integration Cloud Service \(RICS\)](#) for a discussion.

- *Run Job*: Includes the Run Job request message to submit a job, as an alternative to submitting or scheduling a job at the schedule jobs screen. OAuth is required for the Run Job API.

See the Web Services Guide on My Oracle Support (2953017.1) for background.

- *Storage*: Includes all requests from an integrating system to upload, download, inquire on, or delete files through [File Storage API for Imports and Exports](#):
  - putFile
  - getFile
  - getFiles
  - deleteFile

**For more information:** See the Web Services Guide on My Oracle Support (2953017.1) for details on the above messages.

- *Vendor*: Includes all requests submitted by an integrated vendor to Order Orchestration for the Supplier Direct Fulfillment module:
  - setDSAcknowledge
  - getDSOrders
  - setDSShipConfirm

**Note**

If *Vendor* access is selected, the client ID is available for selection as the [Vendor Client Id](#) for an integrated vendor at the **New Vendor** or **Edit Vendor** screen, provided the client ID has not already been assigned to a different vendor.

**For more information:** See the *Vendor Integration Guide* for details on the above messages.

# Generate Application Client

**Purpose:** Use the **Generate Application Client** window to:

- Generate a new client for another application, if it does not already exist in IDCS (Oracle Identity Cloud Service) or OCI IAM (Oracle Cloud Infrastructure Identity and Access Management) and it directly integrates with a cloud service.

**How to display this screen:** Select *New Client* from the [Manage External Application Access](#) screen.

## Note

Only users with *Manage External Application Access* authority can display this window. See [Roles](#) for more information.

**Before you start:** Before beginning the generation steps, you would typically select the *Refresh* option at the [Manage External Application Access](#) screen to confirm that the required client application was not already created.

**Creation steps:** If the required client application is not displayed after you select *Refresh*:

1. Complete the *Application Details*.

- [Application Type](#):

- *External*: The application integrates with IDCS or OCI IAM and an OAuth Client does not already exist in IDCS or OCI IAM.

Selecting an Application Type is required.

- [Application Description](#): Enter a brief description of the application. This will be the Description in IDCS or OCI IAM, and is informational. If you require multiple environments, such as one for production and one for stage, you can include this information in the application description. Alphanumeric, 50 positions; required.

2. Click *Generate Client* to request a new client be generated through Retail Home; otherwise, select *Cancel* to close the window without generating the client. Retail Home communicates with IDCS or OCI IAM for saving the generated client.

3. If you click *Generate Client* and the generation is successful, the window displays the *Generated Credentials*:

- The new generated [Client ID](#), and a link to copy it to the clipboard.
- The new generated [Secret](#), and a link to copy it the clipboard.

## Important

Copy and paste the new client ID and the new client secret so that you can update an external application so that it can request the token from IDCS or OCI IAM. This information will not be available later so should be stored in a secure location.

 **Note**

If your browser displays a warning message when you select the *Copy to Clipboard* option, click *Allow Access*.

The window displays an error if it cannot create the client, such as if the client ID already exists, or if communication with Retail Home fails.

Click *Done* to close the window, and click *OK* at the confirmation window to confirm that you are done copying the client ID and secret to the clipboard.

**About the generated client ID:**

- When the Application Type is *External*, the generated Client ID is RGBU\_OBCS\_<RANDOM>\_APPID, where <RANDOM> is a random string of 8 characters and OBCS identifies Order Orchestration.

**Define web service access:** After creating the client, you can define web service access. See the [Edit Web Services](#) window for more information.

**Regenerate secret:** Use the [Regenerate Application Client Secret](#) if you need to regenerate the secret for the client application.

**Fields at this screen**

| Field                                                                                                                                                                                                                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

The window indicates that the ID has been successfully copied.<br><br>The client secret to use for generating the OAuth token.<br><br>Select <i>Copy to Clipboard</i> to copy the secret to the clipboard, so that you can share it with the external application that needs to use it for OAuth authentication. The window indicates that the secret has been successfully copied. |

## Regenerate Application Client Secret

**Purpose:** Use the **Regenerate Application Client Secret** window to generate a new client secret for an existing client application.

### Note

This option is available only for external application clients that were created through Order Orchestration.

**For more information:** See [Manage External Application Access](#) for background.

**How to display this screen:** Select *New Secret* () for the application client at the [Manage External Application Access](#) screen.

### Note

Only users with *Manage External Application Access* authority can display this window. See [Roles](#) for more information.

**When you regenerate:** When you regenerate the secret, the client is deleted and recreated in IDCS (Oracle Identity Cloud Service) or OCI IAM (Oracle Cloud Infrastructure Identity and Access Management) via Retail Home and use of the new secret is required for OAuth. You need to update the external application so that it can request the token from IDCS or OCI IAM, as the previous secret is no longer valid.

**How to generate a new secret:** Click *Regenerate* and click *OK* at the confirmation window. There might be a slight delay. If the request is successful, the window displays:

- The new [Client ID](#), and a link to copy it to the clipboard.
- The new [Secret](#), and a link to copy it to the clipboard. This information will not be available later, so it should be stored in a secure location.

Copy and paste the Client ID and the new Secret if you need to share the information for an application that is not integrated with IDCS or OCI IAM, so that application can use the secret for OAuth authentication.

### Note

If your browser displays a warning message when you select the *Copy to Clipboard* option, click *Allow Access*.

The window displays an error if it cannot generate the new secret, such as if communication with Retail Home fails.

Click *Done* to close the window and click *OK* at the confirmation window to confirm that you are done copying the client ID and secret to the clipboard.

## File Storage History

**Purpose:** Use this screen to review the records in the File Storage (FILE\_STORAGE) table and optionally, delete records.

**For more information:** See [File Storage API for Imports and Exports](#) for an overview.

**How to display:** Select *File Storage History* from the [Systems Menu](#).

**Note**

Only users with *File Storage History* authority can advance to this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                                         | Procedure                                                                                                                                                                                            |
|------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>search for file storage history records</b> | Optionally, use the <a href="#">Container</a> , <a href="#">File Name</a> , and/or <a href="#">Date Stored</a> fields and click <i>Search</i> to search for one or more file storage records.        |
| <b>delete a file storage history record</b>    | Select the delete icon (  ) next to a file storage history record to delete the record from the File Storage table. |

## Fulfilled Inventory Export History

**Purpose:** Use the **Fulfilled Inventory Export History** screen to review the fulfilled inventory exports that have taken place or are currently running.

Used for the Routing Engine module.

**For more information:** See [Fulfilled Inventory Export](#) for an overview on the fulfilled inventory export process and background information.

**How to display this screen:** Click the history icon () next to the Fulfilled Inventory Export entry for a system at the [View Active Schedules](#) screen.

### Note

- Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *View Active Schedules* authority can display this screen. See [Roles](#) for more information.
- Available only if the [Fulfilled Inventory Export](#) is currently enabled, or if there are any fulfilled inventory export records that have not been purged.
- If the **Fulfilled Inventory Export History** screen was already open in another tab when you clicked the history icon, you advance to this screen with the fulfilled inventory export history of the previously-selected organization and system displayed.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

### Options at this screen

| Option                                                                                                                                                                                                                                                         | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

## Generate Pickup Reminder Email History

**Purpose:** Use the **Generate Pickup Reminder Email History** screen to review summary information on the pickup reminder email generation for an organization.

Used for the Routing Engine module.

**How to display this screen:** Click the history icon (🕒) next to the Generate Pickup Ready Reminder Emails job for an organization at the [View Active Schedules](#) screen.

**Note**

- Only users with *View Active Schedules* authority can display this screen. See [Roles](#) for more information.
- Available only if the [Generate Pickup Ready Reminder Emails](#) job is currently enabled, or if there are any email generation history records that have not been purged.
- If the **Generate Pickup Reminder Email History** screen was already open in another tab when you clicked the history icon, you advance to this screen with the pickup reminder email history of the previously-selected organization displayed.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

**For more information:** See the [Store Connect Overview](#) for background.

**Options at this screen**

| Option                                             | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>Search for an reminder email history record</b> | <p>Use the <i>Job Number</i>, <i>Start Date</i>, or <i>Status</i> fields to restrict the displayed jobs to those that match your entries and click <i>Search</i>:</p> <ul style="list-style-type: none"> <li>• <a href="#">Job Number</a> = Optionally, enter a job number to display this extract process only.</li> <li>• <a href="#">Start Date</a> = Optionally, enter a date to display jobs that started on that date.</li> <li>• <a href="#">Status</a> = Optionally, select a status of: <ul style="list-style-type: none"> <li>– <i>Error</i> to display an extract process that ended in error.</li> <li>– <i>Rejected</i> if the submitted job was rejected due to a conflict with another instance of the job that was already running.</li> <li>– <i>Running</i> to display a job that is currently running for the organization.</li> <li>– <i>Failed</i> to display processes that included any records in error.</li> <li>– <i>Success</i> to display processes that completed without any errors.</li> </ul> </li> </ul> |

**Note**

You can select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

**Understand general errors**

If an error occurred for the process itself, it is displayed in the *Error* field.

**Fields at this screen**

| Field                  | Description                                                                                                                        |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <b>Summary fields:</b> |                                                                                                                                    |
| <b>Organization</b>    | The code identifying the <a href="#">organization</a> that generated the extract process, and the description of the organization. |
| <b>Search fields:</b>  |                                                                                                                                    |

| Field             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Job Number</b> | A unique ID number assigned by Order Orchestration to identify a job. Optionally, enter a number and click <i>Search</i> to display this process only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Start Date</b> | Optionally, enter a date to display jobs that started on that date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Status</b>     | Optionally, select a status of: <ul style="list-style-type: none"> <li>• <i>Error</i> to display an extract process that ended in error if, for example, the number of orders to extract exceeded the limit of 500,000.</li> <li>• <i>Rejected</i> to display a process that was rejected because another instance of the job was already running.</li> <li>• <i>Running</i> to display a process that is currently running for the organization.</li> <li>• <i>Failed</i> to display processes that included any records in error.</li> <li>• <i>Success</i> to display processes that completed without any errors.</li> </ul> |

**Note**

You cannot select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

**Results fields:****Note**

History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

|                     |                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Job Number</b>   | A unique number assigned by Order Orchestration to identify a job.                                                                                                                                                                                                                                                                                                                       |
| <b>Start Date</b>   | The date and time when the process started.                                                                                                                                                                                                                                                                                                                                              |
| <b>End Date</b>     | The date and time when the process ended.                                                                                                                                                                                                                                                                                                                                                |
| <b>Duration</b>     | The amount of time it took for the job to run. HH:MM:SS format, but displayed in MM:SS format if the job took less than an hour.                                                                                                                                                                                                                                                         |
| <b>Submitted By</b> | Indicates how the export was submitted. This could be the ID of the user who submitted or scheduled the process, or the client ID used to authenticate the <a href="#">run job API</a> request message.<br><br>SYSTEM is displayed here if the job ran successfully through a schedule; however, if a scheduled job was rejected, the ID of the user who scheduled the job is displayed. |

| Field            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Error            | The error that occurred, if any.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Emails Generated | The total number of pickup reminder emails that were generated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

## Order Administration Status Recovery

**Purpose:** Use the **Order Administration Status Recovery** screen to send status changes to Order Administration Cloud Service that occurred after a specified date/time entered within Order Orchestration Cloud Service.

This job can be run to correct any out of sync statuses due to timing issues after an application update of a customer or other unplanned reasons.

### ! Important

Since this job triggers status updates for everything that occurred after a specified date, caution should be used when setting the date and determining the timing of when this is run.

**For more information:** See the [Order Administration Status Recovery](#) job for overview and background information.

**How to display this screen:** Click the history icon (  ) next to the Order Administration Status Recovery entry at the [View Active Schedules](#) screen.

**Options at this screen**

| Option                                    | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search for status recovery history</b> | <p>Use the <i>Job Number</i>, <i>Start Date</i>, or <i>Status</i> fields to restrict the displayed status recovery to those that match your entries and click <i>Search</i>:</p> <ul style="list-style-type: none"> <li>• <i>Job Number</i> = Optionally, enter a job ID number to display this status recovery process only.</li> <li>• <i>Start Date</i> = Optionally, enter a date to display status recovery process that took place on that date.</li> <li>• <i>Status</i> = Optionally, select a status of: <ul style="list-style-type: none"> <li>– <i>Error</i> to display a status recovery process that ended in error.</li> <li>– <i>Running</i> to display a status recovery process that is currently running for the system.</li> <li>– <i>Failed</i> to display status recovery processes that Failed to send updates.</li> <li>– <i>Rejected</i> to display status recovery processes that were rejected because the job was already running.</li> <li>– <i>Success</i> to display status recovery processes that completed without any errors.</li> </ul> </li> </ul> |

**Note**

You can select a status of Paused; however, a job stays in this status only briefly when it switches to another server to complete running.

|                                  |                                                                                               |
|----------------------------------|-----------------------------------------------------------------------------------------------|
| <b>Understand general errors</b> | If an error occurred for a status recovery itself, it is displayed in the <i>Error</i> field. |
|----------------------------------|-----------------------------------------------------------------------------------------------|

| Error         | Error message, if any. For example: Order Administration Status Recovery job can only be run if the "Order Administration Cloud Service System" flag is enabled for the system. Up to 255 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Posted Orders | The Posted Orders column represents the count of orders whose status updates were posted/reposted to Order Administration during the Order Administration Status Recovery Job execution.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Sales Order Data Extract Job History

**Purpose:** Use the **Sales Order Data Extract Job History** screen to review summary information on the sales order data extracts that have taken place for an organization.

Used for the Routing Engine module.

**How to display this screen:** Click the history icon (🕒) for an organization at the [View Active Schedules](#) screen.

### **Note**

- Only users with *View Active Scheduled* authority can display this screen. See [Roles](#) for more information.
- Available only if the [Sales Order Data Extract](#) is currently enabled, or if there are any data extract records that have not been purged.
- If the **Sales Order Data Extract Job History** screen was already open in another tab when you clicked the history icon, you advance to this screen with the order data extract history of the previously-selected organization displayed.
- History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.

**Maximum number of orders:** The extract fails if the total number of orders to extract exceeds 500,000. If this occurs, use the Extract Orders with Activity From and To at the [Schedule Jobs](#) screen to run the extract for smaller segments by specifying date ranges to include each time, rather than including all orders.

**For more information:** See the [Sales Order Data Extract](#) for information on generating the extract, and see [Sales Order Data Extract Files](#) for information on the data included in the extract files.

| <b>Error</b>         | The error that occurred, if any.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Order Records</b> | The total number of order records included in the export process. This total can include both sales orders and purchase orders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## OCDS or Merchandising Omni Services Imports

**About OCDS or Merchandising Omni Services integration:** You can use integration with the Omnichannel Cloud Data Service (OCDS) or Merchandising Omni Services to import data from Oracle Retail Merchandising Foundation Cloud Service (RMFCS). When you use OCDS or Merchandising Omni Services for these imports, Order Orchestration generates web service requests to OCDS or Merchandising Omni Services for this information rather than processing an upload file.

**Required setup:** To import data through the integration with OCDS or Merchandising Omni Services:

- Use the [External Services](#) screen in Modern View to define any required Foundation Data services.
- Use the [OCDS Integration tab](#) at the **System** screen to select the Foundation Data Service to use and the default store and warehouse location types.
- Use the [Schedule Jobs](#) screen to submit the imports. If any of the URLs are specified through the [External Services](#) screen in Modern View and are flagged as active, this screen triggers the import from OCDS or Merchandising Omni Services rather than another data import method.

See each of the imports described below for more details on required configuration and mapping.

**Confirming the version number of OCDS:** If you need to confirm the version of OCDS, you can submit a web service request to a URL such as `https://SERVER/ords/ocds/omnichannel/v1/admin/version`, where SERVER is the name of the server.

OCDS returns a response that includes something such as the following:

"version": "16.0.031",

"hotfix": "ocds-hf-003.0"

Where 16.0.031 is the version and 003 is the hot fix.

**In this topic:**

- [Store Location Import Mapping](#)
- [Warehouse Location Import Mapping](#)
- [Product Import Mapping](#)
- [Item Image URL Import Mapping](#)
- [Product Barcode Import Mapping](#)
- [Store and Warehouse Inventory Import Mapping](#)

**For more information:** See:

- [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#) for an overview on import processes and background information.
- [Schedule Jobs](#) for more information on setting up the import schedule or running the import process on demand.

## OCDS or Merchandising Omni Services Import Steps

The import steps are:

1. Use the Add or Edit windows from the [External Services](#) screen in Modern View to define any required Foundation Data services, including defining the URLs for each import to take place, flagging active imports, and completing the Foundation Data Service Configuration fields that control authentication, request size, and connection timeout. At the Add or Edit External Service windows, you can define the URLs and Active flag settings for the following types of data to import:
  - Store Location: see [Store Location Import Mapping](#)
  - Warehouse Location: see [Warehouse Location Import Mapping](#)
  - Product: see [Product Import Mapping](#)
  - Product Barcode: see [Product Barcode Import Mapping](#)
  - Product Image: see [Item Image URL Import Mapping](#)
  - Store Inventory: see [Store and Warehouse Inventory Import Mapping](#)
  - Warehouse Inventory: see [Store and Warehouse Inventory Import Mapping](#)
2. Use the [OCDS Integration Import](#) tab at the System screen to select the Foundation Data Service to use, and to set the Default Store and Default Warehouse Location Types.

If any of the URLs for external services are flagged as active through the External Services screen and the OCDS Integration Import tab at the System screen is configured, the OCDS or Merchandising Omni Services import process runs rather than any other import process.
3. Use the [Schedule Jobs](#) screen to schedule the import, or run it on demand. If you select *Run Now*, you need to also indicate whether to perform a *Full Refresh* or *Since Last Run*; however, the store location and virtual warehouse location imports always perform a full refresh. See the [OCDS Integration](#) fields at this screen for more information.

**Note**

Use caution when selecting *Full Refresh* when the active import options include store inventory or warehouse inventory, as the number of records to import can affect system performance.

**Troubleshooting:** If any of the URLs specified at the Foundation Data service at the [External Services](#) screen is incorrect, this is not listed as an error at the [Product Imports History](#) screen; however, the issue is noted as a communication error in the tenant error log file.

**Error reports:** See the [Location Import Errors Report](#) for errors that occur related to missing location name or code, and see the [Product Import Errors Report](#) for errors that occur related to the product or product description.

No report is generated for any store or warehouse inventory records; however, an error file is available through the file storage API. See [Product Location Import Error Files](#) for more information.

**Batch size:** The import process uses the Job Batch Size specified at the **Tenant-Admin** screen to indicate the maximum number of records that OCDS or Merchandising Omni Services should return at a time. This number, typically set to 1000, is appended to the request messages to OCDS or Merchandising Omni Services for each import type. Order Orchestration continues submitting requests until OCDS or Merchandising Omni Services no longer indicates that there are more records to return.

**No deletions:** The OCDS or Merchandising Omni Services import creates or updates records. No deletions take place as a result of this import.

**Note**

The request messages to OCDS or Merchandising Omni Services include "Accept - Encoding: gzip" in the request header, in order to receive compressed data in the response and enhance processing performance.

**Store Location Import Mapping**

The table below lists the fields updated for store locations through import from OCDS or Merchandising Omni Services.

**Requirements:** To import store locations from OCDS or Merchandising Omni Services, complete the following fields at Add or Edit External Service window from the [External Services](#) screen:

- Enter the *Store Location* URL and select the Active flag.
- Use the *Default Store Location Type* at the [OCDS Integration](#) tab of the System screen to select the Location Type to assign to imported store locations.

**Unmapped fields:** Any fields not listed in the following table do not exist in OCDS or Merchandising Omni Services or are not mapped or updated through the import process. To update some of these additional fields:

- Use the [Edit Location](#) screen to specify additional information, such as days open for auto-cancel or labor cost. Additional fields that you can define at the Edit Location screen, such as store hours, rank, and region, are informational only.

- Use the [Preferences](#) screen to define the types of orders that the store location is eligible to fulfill. You can set these preferences for the location type, and then optionally set overrides at the location level.

**Invalid address?** The import process creates a location record even if the address specified in the import response is incomplete or invalid. If the location is not included as expected in inventory search results or order assignments, you can use the [Edit Location](#) to verify or correct the address.

**Update Latitude and Longitude:** The import process updates the location's [Latitude](#) and [Longitude](#) when creating or updating the location, providing the location is valid. See [Proximity Locator Searching](#) for an overview.

**Days Open not updated:** The [Days Open](#) fields for a location are all automatically selected when the import process creates a new location, and the existing settings are not updated when the import process updates an existing location. You can update these fields at the [Edit Location](#) screen, or through the [Location Bulk Updates](#) wizard.

**Error report:** The [Location Import Errors Report](#) lists any errors that occur related to missing location name or code. These are the only two errors that can occur related to imported locations through OCDS or Merchandising Omni Services.

No records are deleted through the import.

**Note**

Regardless of whether you select *Run Now* or *Since Last Run* at the [Schedule Jobs](#) screen, all store locations are imported each time you submit the import.

| Field                | Attributes                  | Description                                                                                                                                                                                                                                    |
|----------------------|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>system</b>        | alphanumeric, 10 positions  | From the system selected at the <a href="#">Schedule Jobs</a> screen.                                                                                                                                                                          |
| <b>location type</b> | alphanumeric, 10 positions  | From the <a href="#">Default Store Location Type</a> specified at the <i>OCDS Integration</i> tab at the <b>System</b> screen.                                                                                                                 |
| <b>location</b>      | alphanumeric, 10 positions  | See <a href="#">location</a> . If the location code does not exist, the system creates a new location; if the location code already exists, the system updates the location.                                                                   |
| <b>name</b>          | alphanumeric, 40 positions  | Description of the store location. Always updated.                                                                                                                                                                                             |
| <b>phone</b>         | alphanumeric, 20 positions  | Optional.                                                                                                                                                                                                                                      |
| <b>fax</b>           | alphanumeric, 20 positions  | Optional.                                                                                                                                                                                                                                      |
| <b>contact name</b>  | alphanumeric, 50 positions  | Optional.                                                                                                                                                                                                                                      |
| <b>email</b>         | alphanumeric, 255 positions | The email address must be formatted as user@host.com (or other valid suffix such as .org). Order Orchestration does not validate that your entry represents an existing email address. Separate multiple email addresses with a semicolon (;). |

| Field                            | Attributes                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                  |                            | <b>Address fields:</b> The import process updates all address information if any address information was included in the import response, including clearing the data in any of the address fields that are blank or empty in the response from OCDS or Merchandising Omni Services.                                                                                                                                                                                                     |
| <b>address lines 1 through 3</b> | alphanumeric, 50 positions | Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>city</b>                      | alphanumeric, 35 positions | Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>state/province</b>            | alphanumeric, 3 positions  | Required if you use the <a href="#">proximity locator</a> . Should be a valid ISO code.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>postal code</b>               | alphanumeric, 10 positions | The ZIP or postal code for the location.<br>Required if you use the <a href="#">proximity locator</a> .<br><b>Note:</b> To prevent issues with proximity calculation, Canadian postal codes should be imported with an embedded space. For example, the correct format is Y1A 1A3 rather than Y1A1A3.                                                                                                                                                                                    |
| <b>country</b>                   | alphanumeric, 3 positions  | Required if you use the <a href="#">proximity locator</a> ; in this situation, the country code must exist in the proximity table. Should be a valid ISO code.<br><b>Note:</b> The import process creates a location record even if the address specified in the import response is incomplete or invalid. If the location is not included as expected in inventory search results or order assignments, you can use the <a href="#">Edit Location</a> to verify or correct the address. |

### Warehouse Location Import Mapping

The table below lists the fields updated for virtual warehouse locations through import from OCDS or Merchandising Omni Services.

**Requirements:** To import virtual warehouse locations from OCDS or Merchandising Omni Services, complete the following fields:

- Complete the URL for the Warehouse Location at the Add or Edit window from the [External Services](#) screen in Modern View, and select the Active flag.
- Use the *Default Warehouse Location Type* at the [OCDS Integration tab](#) at the **System** screen to select the Location Type to assign to imported warehouse locations.

**Virtual warehouses only:** The OCDS or Merchandising Omni Services integration imports virtual warehouses only; it does not import physical warehouses. Because the warehouses are virtual locations, the address information that is imported is from the physical warehouse associated with the virtual warehouse.

#### Note

The virtual warehouse is imported only if the warehouse ID (warehouseid) specified in the response message from OCDS or Merchandising Omni Services is different from the physical warehouse ID (physicalwh) in the response.

**Unmapped fields:** Any fields not listed in the following table do not exist in OCDS or Merchandising Omni Services or are not mapped or updated through the import process. To update some of these additional fields:

- Use the [Edit Location](#) screen to specify additional information, such as days open for auto-cancel or labor cost. Additional fields that you can define at the **Edit Location** screen, such as store hours, rank, and region, are informational only.
- Use the [Preferences](#) screen to define the types of orders that the warehouse location is eligible to fulfill. You can set these preferences for the location type, and then optionally set overrides at the location level.

**Days Open not updated:** The [Days Open](#) fields for a location are all automatically selected when the import process creates a new location, and the existing settings are not updated when the import process updates an existing location. You can update these fields at the [Edit Location](#) screen, or through the [Location Bulk Updates](#) wizard.

**Error report:** The [Location Import Errors Report](#) lists any errors that occur related to missing location name or code. These are the only two errors that can occur related to imported locations through OCDS or Merchandising Omni Services.

No records are deleted through the import.

#### Note

Regardless of whether you select *Run Now* or *Since Last Run* at the [Schedule Jobs](#) screen, all virtual warehouses are imported each time you submit the import.

| Field                            | Attributes                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>system</b>                    | alphanumeric, 10 positions | From the system selected at the <a href="#">Schedule Jobs</a> screen.                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>location type</b>             | alphanumeric, 10 positions | From the <a href="#">Default Warehouse Location Type</a> specified at the <i>OCDS Integration</i> tab at the <b>System</b> screen.                                                                                                                                                                                                                                                                                                                                                                             |
| <b>location</b>                  | alphanumeric, 10 positions | See <a href="#">location</a> . If the location code does not exist, the system creates a new location; if the location code already exists, the system updates the location.                                                                                                                                                                                                                                                                                                                                   |
| <b>name</b>                      | alphanumeric, 40 positions | Description of the store location. Always updated.                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>address lines 1 through 3</b> | alphanumeric, 50 positions | Optional.<br><br><b>Address fields:</b> The import process updates all address information for the physical warehouse associated with the virtual warehouse, including clearing the data in any of the address fields that are blank or empty in the response from OCDS or Merchandising Omni Services or Merchandising Omni Services. Physical warehouses are associated with virtual warehouses based on the PHYSICAL_WH defined in the WAREHOUSE table in the OCDS or Merchandising Omni Services database. |
| <b>city</b>                      | alphanumeric, 35 positions | Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>state/province</b>            | alphanumeric, 3 positions  | Required if you use the <a href="#">proximity locator</a> . Should be a valid ISO code.                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Field              | Attributes                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------------|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>postal code</b> | alphanumeric, 10 positions | The ZIP or postal code for the location.<br>Required if you use the <a href="#">proximity locator</a> .<br><br><b>Note:</b> To prevent issues with proximity calculation, Canadian postal codes should be imported with an embedded space. For example, the correct format is Y1A 1A3 rather than Y1A1A3.                                                                                                                                                                                    |
| <b>country</b>     | alphanumeric, 3 positions  | Required if you use the <a href="#">proximity locator</a> ; in this situation, the country code must exist in the proximity table. Should be a valid ISO code.<br><br><b>Note:</b> The import process creates a location record even if the address specified in the import response is incomplete or invalid. If the location is not included as expected in inventory search results or order assignments, you can use the <a href="#">Edit Location</a> to verify or correct the address. |

### Product Import Mapping

The table below lists the fields updated for products and system products through import from OCDS or Merchandising Omni Services. When the system is the default, the import creates both product and system product records; otherwise, the import creates just the system product record.

**Requirements:** See [OCDS or Merchandising Omni Services Import Steps](#), above.

The product must already exist in the organization's default system in order to create or update the system product for a non-default system.

**Error report:** The [Product Import Errors Report](#) lists any errors that occur. Typically, the only possible error that can occur is if no product description is provided.

No records are deleted through the import.

| Field                             | Attributes                 | Description                                                                                                                             |
|-----------------------------------|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>system</b>                     | alphanumeric, 10 positions | From the system selected at the <a href="#">Schedule Jobs</a> screen.                                                                   |
| <b>product and system product</b> | alphanumeric, 35 positions | Both from the item passed by OCDS or Merchandising Omni Services.<br>Not updated after initial product creation in Order Orchestration. |
| <b>description</b>                | alphanumeric, 40 positions | From the <code>description</code> passed by OCDS or Merchandising Omni Services. Truncated if it exceeds 40 positions.                  |
| <b>master style</b>               | alphanumeric, 35 positions | From the <code>itemparent</code> passed by OCDS or Merchandising Omni Services (up to 25 positions, alphanumeric).                      |
| <b>department</b>                 | alphanumeric, 40 positions | From the <code>dept</code> passed by OCDS or Merchandising Omni Services (4 positions, numeric).                                        |
| <b>class</b>                      | alphanumeric, 40 positions | From the <code>class</code> passed by OCDS or Merchandising Omni Services (4 positions, numeric).                                       |

| Field           | Attributes                 | Description                                                                                                                                       |
|-----------------|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>subclass</b> | alphanumeric, 40 positions | From the subclass passed by OCDS or Merchandising Omni Services (4 positions, numeric). Displayed as the product Category in Order Orchestration. |

### Item Image URL Import Mapping

Importing product (item) image URLs to display in Store Connect works the same way as the product import described above under [OCDS or Merchandising Omni Services Import Steps](#), above.

The *Product Image* URL should be formatted as `https://www.example.com/folder/image.png`, where:

- `http` or `https` is the protocol
- `www.example.com` is the domain or server name
- `folder` is a folder or subfolder where the image is found
- `image.png` or `image.jpg` is the name of the image

**Image image URL updated?** If the *Product Image* URL specified at the Add or Edit External Service window from the [External Services](#) screen is valid, and the URL passed for the product does not exceed 255 positions, the import uses the `imageurl` passed in the response to update the Image URL for the product.

**Errors:** If the specified item image URL is not formatted correctly, or if it exceeds 255 positions, an error is returned and is listed on the [Product Import Errors Report](#).

### Product Barcode Import Mapping

Importing product barcodes that can be used to scan items in Store Connect works the same way as the product import described above under [OCDS or Merchandising Omni Services Import Steps](#), above.

If a product barcode already exists for the product, it is not overwritten; instead, an additional barcode is created. Existing barcodes are deleted through integration with OCDS or Merchandising Omni Services if the *Action* passed is Delete. Deleted records are included in the *UPC Records* count at the [Product Imports History](#) screen.

**Errors:** Any errors are listed on the [Product Barcode Import Errors Report](#).

### Store and Warehouse Inventory Import Mapping

The table below lists the fields in the product location record that are updated through store inventory and warehouse inventory imports from OCDS or Merchandising Omni Services. Both of these imports works the same way as the product import described above under [OCDS or Merchandising Omni Services Import Steps](#), above.

**Record created?** The import creates the product location if it does not already exist, provided both the product and the location already exist for the requesting system. If both the product and the location do not already exist, the record is counted as an error.

**Errors:** No report is generated for any store or warehouse inventory records; however, an error file is available through the file storage API. See [Product Location Import Error Files](#) for more information.

Additional fields for the product location, including the Next PO Date and Next PO Quantity, are not updated.

#### Note

- You would ordinarily run these imports just once as an initial load of data; however, you have the option of using the Since Last Run option if you run the import on demand at the [Schedule Jobs](#) screen.
- Because of the potentially large number of records, it is important to run this import at a time when it will have less effect on system performance.
- The available quantity is also updated interactively through the Oracle Retail Integration Cloud Service (RICS) when [Importing Data from Merchandising Cloud Services \(RMFCS\) through the Omnichannel Cloud Data Service \(OCDS or Merchandising Omni Services\)](#) is implemented. See [Available-to-Sell Individual Inventory Updates through Oracle Retail Integration Cloud Service \(RICS\)](#) for a summary.

No records are deleted through the import.

| Field                     | Attributes                 | Description                                                                                                                                                                                                                                                                                                                   |

## Importing Locations through File Storage API

Importing locations allows you to create a [location](#), including the address, telephone numbers, and other related information such as the store rank and hours, based on information defined in a location import file from an external system.

**What is a location?** A location is a place where a product is sold or stocked. A location can be a warehouse or store where you keep actual inventory, or it can also be a virtual location such as a web storefront or a vendor. Locations are defined within an [organization](#) both by the [system](#) to which they belong and their [location type](#).

**Location address:** It is important that the location address be accurate, since the location address is used as the ship-to address for ship-for-pickup orders.

**Location relationships:** See [Organization, System, and Location](#) for an overview of the relationships among **Order Orchestration** elements, including locations.

**Required setup for file upload:** You can use the [File Storage API](#), to import locations to the location table and import location level fulfillment preferences to the preference table.

Create a pipe-delimited flat file named LOCATION\_SYS.TXT, where SYS is the associated system code, making sure to name the file in all uppercase. Create a header row and a separate row for each location you wish to import. See [Sample Location Import File](#) for a sample of the data to include in the file.

Using the [File Storage API](#), place the file in the OROB-IMPORTS container of the FILE\_STORAGE table. The file remains in this location until you run the import; see [Location Import Steps](#) for processing details

**Use of OCDS or Merchandising Omni Services:** See [OCDS or Merchandising Omni Services Imports](#) for information on importing store and virtual warehouse locations through an integration with [OCDS or Merchandising Omni Services](#).

#### Note

- Creating or updating a location through this import process does not support assigning [Location Attributes](#) to locations.
- You can also create locations through the LocationUpdate request messages. See the Web Services Guide on My Oracle Support (2953017.1) for more information.

**For more information:** See:

- [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#) for an overview on the import process and background information.
- [Schedule Jobs](#) for more information on the import schedule for an integrated [system](#), or to run the import process on demand.
- the [Product Imports History](#) screen and the [Location Import Errors Report](#) for more troubleshooting information related to the location import process.

### Location Import Steps

The import steps related specifically to location import through the [File Storage API](#):

1. The process clears outdated records from the location\_import table based on the [Days to Keep Errors](#) for the system. If a record is flagged with an error code, it remains in the import table until the [Days to Keep Errors](#) has passed and you next run an import for that system.
2. The process uses the pipe-delimited flat file named LOCATION\_SYS.TXT, where SYS is the system code that matches the system code associated with the import being processed in the OROB-IMPORTS container of the FILE\_STORAGE table. The name of the pipe-delimited file should be uppercase, including the system code, regardless of whether the system code is upper and lowercase in Order Orchestration.
3. If the process cannot move the records to the location\_import table for field edits, it moves the records in error in the LOCATION\_SYS.TXT flat file to the OROB-ERRORS container in the FILE\_STORAGE table. This can occur if, for example, the number of columns in the flat file is invalid. In this case, a general error is listed at the [Product Imports History](#) screen.

4. If the records in the location import file pass the initial edits, the process uses the information from the flat file to create records in the location\_import table. See [Location Import Mapping](#) for more information on how the data in the LOCATION\_SYS.TXT file maps to the location\_import table.
5. Next, if a record in the location import file contains an error, the system updates the record in the location\_import table with the error code.

In this situation, you can run the [Location Import Errors Report](#) to review the list of errors in the import file. Correct the records in error in the originating system and use the file storage API to replace the file.

Note that certain errors are listed on the error report with an error code of 56 and a reason of Locations Import Failed - Other Error. This can occur when, for example, an address line is too long or a one-position flag, such as the Active flag, contains an invalid character. In these cases, a more descriptive error description is included in the error file.

6. For records in the location import file that process successfully, the system:
  - Creates and updates records in the location table. If the Active field is Y, the location is listed on the [Locations](#) screen. See [Location Import Mapping](#) for more information on how the data in the location\_import table maps to the location table.
  - Updates all address information if any address information was included in the import file, including clearing the data in any address fields that are blank (containing a space) or empty in the import file. However, if all address fields are empty in the import file, the current address information is not replaced, and only non-address fields are updated with the data from the import file.
  - With the exception of address data, clears any fields that contain a blank space in the import file; otherwise, does not update any field that is empty in the import file.
  - Creates and updates records in the preferences table. These preference settings display at the location level on the [Fulfillment Tab](#) of the [Preferences](#) screen.
  - Deletes the location\_import record.
  - If you use [proximity locator](#), determines the location's latitude and longitude using either the [Oracle Maps Cloud Service](#) or the [proximity location table](#), depending on your configuration, and saves this information as part of the location record.
7. After processing all import files:
  - The process writes a log record for each import process, displayed at the [Product Imports History](#) screen.
  - Based on the [Location Product Import](#) setting at the **Event Logging** screen, after processing all import files, the process generates an email notification indicating success (if all records were successfully imported) or failure (if any record could not be imported).

The backed up files in the FILE\_STORAGE table are cleared based on the number of days specified in the Product Import Files setting in the *Retention Settings* area of the **Tenant - Admin** screen.

**Invalid address?** The import process creates a location record even if the address specified in the import file is incomplete or invalid. In this case, the location record is listed on the [Location Import Errors Report](#) with an error of 75 - The address combination is invalid. If the location is not included as expected in inventory search results or order assignments, you can use the [Edit Location](#) to verify or correct the address.

**Update Latitude and Longitude:** The import process updates the location's [Latitude](#) and [Longitude](#) when creating or updating the location. See [Proximity Locator Searching](#) for an overview.

**Days Open not updated:** The [Days Open](#) fields for a location are all automatically selected when the import process creates a new location, and the existing settings are not updated when the import process updates an existing location. You can update these fields at the [Edit Location](#) screen, or through the [Location Bulk Updates](#) wizard.

See [Auto-Cancel Unclaimed Orders](#) for background on how the [Days Open](#) fields control the update of the [Pickup By Date](#).

### Sample Location Import File

To import locations, create a pipe-delimited flat file named LOCATION\_SYS.TXT, where SYS is the associated system code. The file name should be all uppercase, including the system code, even if the system code is set up in Order Orchestration as upper and lowercase.

The following is a sample of the contents to include in the LOCATION\_SYS.TXT pipe-delimited flat file. The first row is the header information, which is informational only, and the following row is the location data.

The file must contain the following columns, with each column separated using pipes |. Each column besides the [LABOR\\_COST](#) is required; an empty column can be entered as |.

#### Note

When updating a location, data passed in the location import file overrides the existing data for the location. If a setting in the location import file contains a blank space (| ), the system clears any value currently in the field. For example, if the existing rank for the location is 1, and you the RANK field in the location import file contains a space, the system clears the value of 1 from the Rank field. However, the address fields are treated as a single unit, and if any address data is passed in the import file, the entire address is updated, including clearing any fields that are blank or empty in the import file.

### Location Import Mapping

The table below lists the fields in the location import flat file, the location\_import table, and the location and preferences tables.

**Note**

- The field names indicated below are informational. The import ignores the field names in the first row in the flat file, although it does confirm that the number of columns in the first row is consistent with the number of columns in each import record.
- See the [Edit Location](#) screen or the [Preferences](#) screen for more information on each field in context.

| Field                                                                                | Attributes                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>ShipForPickup_Pickup_Available</b> | alphanumeric, 1 position | <p>Indicates to the Routing Engine whether a location is eligible to have the customer pick up an order whose fulfillment type is <i>SHIPFORPICKUP</i>. See <a href="#">Ship For Pickup Order</a> for a discussion.</p> <p>Updates the location level <a href="#">Ship For Pickup Receiving/Pickup Available</a> field on the <a href="#">Fulfillment Tab</a> of the <a href="#">Preferences</a> screen:</p> <ul style="list-style-type: none"> <li>• If the import value was <i>Y</i>, the preference is <i>Yes</i>.</li> <li>• If the import value was <i>N</i>, the preference is <i>No</i>.</li> <li>• If the import value was blank, the preference is <i>Not Defined</i>.</li> </ul> <p><b>Mapping:</b> The system determines the location level Ship For Pickup Receiving / Pickup Available setting on the <i>Fulfillment</i> tab of the <b>Preferences</b> screen by mapping SHIPFORPICKUP_PICKUP_AVAIL in the location_import table to the PREFERENCE_VALUE for PREFERENCE_TYPE_ID 139 (receiving/pickup available) and LEVEL_ID 30 (location level) in the preferences table.</p> |
| <b>LABOR_COST</b>                     | numeric, 19,4            | <p>Used to “shop” an order for fulfillment or sourcing as part of the <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> method when determining the cost to pick, pack, and ship an order. It can be 0, but cannot be a negative number, and should not include a currency symbol. Should not exceed the specified length, or the upload record will be in error. This error is not listed on the Location Import Errors report. Optional.</p> <p><b>Note:</b> This column can be omitted entirely, instead of just leaving it blank; however, to omit the labor cost column, you must not only omit the column for each record, but also omit the column from the file headers. If no labor cost column is included for the location records, but the LABOR_COST is included in the file headers, the record is in error: <i>Invalid number of import columns, 29 passed</i>. This error is not listed on the Location Import Errors report.</p> <p>You can also update the labor cost through the <a href="#">Location Bulk Updates</a> wizard.</p>         |

## Importing Products, System Products, and Item Image URLs through File Storage API

**Purpose:** Use the [Schedule Jobs](#) screen to import locations, products and system products, product locations, item image URLs, and UPC barcodes. This help topic describes the fields you can map and update for products, system products, and item image URLs.

**Note**

This help topic does not address importing product data from OCDS or Merchandising Omni Services. See [OCDS or Merchandising Omni Services Imports](#) for more information.

**Required setup:** To import products and system products to the *product* and *system\_product* tables, create a pipe-delimited flat file named PRODUCT\_SYS.TXT, where SYS is the associated system code, making sure to name the file in all uppercase, including the system code, even if the system code is set up in Order Orchestration as upper and lowercase. Create a separate row for each product or system product. See [Sample Product Import File](#) for a sample of the data to include in the file.

The process looks for the file in the OROB-IMPORTS container of the FILE\_STORAGE table. The file remains in this location until you run the import, as described below.

- Oracle recommends that you do not use UPC codes as system product codes, because UPCs are not permanently assigned to a single product.
- Creating or updating a product through this import process does not support assigning [Product Attributes](#) to products.
- You can also create products through the ProductUpdate request messages. See the Web Services Guide on My Oracle Support (2953017.1) for more information.

**For more information:** See:

- [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#) for an overview on the import process and background information.
- [Product Import](#) for more information on setting up the product import schedule for a system, or to run the import process on demand.
- the [Product Imports History](#) screen and the [Product Import Errors Report](#) for more troubleshooting information related to the product and system product import process.

## Product and System Product Import Steps

The import steps related specifically to product and system product import:

1. The process clears outdated records from the product\_importtable based on the [Days to Keep Errors](#) for the system. If a record is flagged with an error code, it remains in the import table until the [Days to Keep Errors](#) has passed and you next run an import for that system.
2. The process uses the pipe-delimited flat file named PRODUCT\_SYS.TXT, where SYS is the system code, that is in the OROB-IMPORTS container of the FILE\_STORAGE table. The name of the pipe-delimited file should be uppercase, including the system code, even if the system code is set up in Order Orchestration as upper and lowercase.

**Job Batch Size:** The [Job Batch Size](#) controls the number of records to process in each batch.

3. If the process cannot move the records to the product\_import table for field edits, it moves the records in error in the PRODUCT\_SYS.TXT flat file to the OROB-ERRORS container of the FILE\_STORAGE table, adding a date and time stamp to the name of the file, such as PRODUCT\_SYS.TXT.20150628.153000.err. This can occur if, for example, there are an invalid number of columns in the flat file, a numeric field contains alphabetical data, a date is not formatted correctly, or the length of a field exceeds the maximum length in the

database. In this case, a general error is listed at the [Product Imports History](#) screen, and no errors are listed on the [Product Import Errors Report](#).

4. If the records in the file pass the initial edits, the process uses the information from the flat file to create records in the product\_import table. See [Product Import Mapping](#) for more information on how the data in the PRODUCT\_SYS.TXT file maps to the product\_import table.
5. Next, if there is an error based on the required data for product and system product records, the process updates the record in the product\_importable with the error code.  
  
In this situation, you can run the [Product Import Errors Report](#) to review the list of errors in the import file. Correct the records in error in the originating system and use the file storage API to replace the file.
6. If there are no errors for a product\_import record, the process creates or updates the related product record (if the import is for the default system) and system product record and the product\_import record is deleted.
7. After processing all import files:
  - The process writes a log record for each import process, displayed at the [Product Imports History](#) screen.
  - Based on the [Location Product Import](#) setting at the **Event Logging** screen, after processing all import files, the process generates an email notification indicating success (if all records were successfully imported) or failure (if any record could not be imported)

The backed up files in the archive and error containers in the FILE\_STORAGE table are cleared based on the number of days specified in the Product Import Files setting in the *Retention Settings* area of the **Tenant - Admin** screen.

### Sample Product Import File

To import products or system products, create a pipe-delimited flat file named PRODUCT\_SYS.TXT, where SYS is the associated system code. The file name should be all uppercase, including the system code, even if the system code is set up in Order Orchestration as upper and lowercase.

The file must contain the following columns, each column separated using pipes |. Each column is required; a blank column can be entered as | |.

The following is a sample of the contents to include in the PRODUCT\_SYS.TXT pipe-delimited flat file. The first row is the header information, which is informational only, and the following row is the product and system product data.

```
system_cd|department|class|sub_class|system_product|product_cd|product_description|
master_style|image_URL

6|DEPARTMENT|CLASS|CATEGORY|PRODUCT|SYSTEM_PRODUCT|Product Description|
Master Style|https://www.example.com/images/sample.png
```

The import ignores the first row in the file.

### Product Import Mapping

The table below lists the fields in the product import flat file, the product\_import table, and the product and product\_location tables.

**Note**

The flat file field names indicated below are informational. The import ignores the first row in the flat file.

| Field             | Attributes                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------|----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>system_cd</b>  | alphanumeric, 10 positions | See <a href="#">system</a> . The system code can be 1 to 10 positions in length, can include special characters, and must be unique in Order Orchestration. The system code must be a valid system for the <a href="#">organization</a> that the import process is being run, but does not need to be the same as the system running the import. Required.                                                                                                                                                                                                                                |
| <b>department</b> | alphanumeric, 40 positions | The description of the product's department. Order Orchestration updates this field for the product only if it is passed from the <a href="#">default system</a> . Informational only. Can be set to a blank.<br><b>Order Administration integration:</b> If your <a href="#">default system</a> is an Order Administration company, this field is the description of the item/SKU's Long SKU Department. Long SKU departments are used to identify items within a retail hierarchy.                                                                                                      |
| <b>class</b>      | alphanumeric, 40 positions | The description of the product's class. Order Orchestration updates this field for the product only if it is passed from the <a href="#">default system</a> . Informational only. Can be set to a blank.<br><b>Order Administration integration:</b> If your <a href="#">default system</a> is an Order Administration System company, this field is the description of the item/SKU's Long SKU Class. Taken from the base item rather than the SKU if this is a SKU'd item. Long SKU classes can be used together with long SKU departments to identify items within a retail hierarchy. |

| Field                      | Attributes                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

Long SKU divisions can be used together with long SKU departments and classes to identify items within a retail hierarchy.</p> <p><b>Order Management System 18.3 or later, or Order Administration:</b> If your <a href="#">default system</a> is an Order Management System or an Order Administration, this field is either:</p> <ul style="list-style-type: none"> <li>The description of the item/SKU's Long SKU Division, if the OROB Item Category Value (M54) system control value is set to LSDIVISION or blank. Long SKU divisions can be used together with long SKU departments and classes to identify items within a retail hierarchy.</li> <li>The item category code, if the OROB Item Category Value (M54) system control value is set to CATEGORY.</li> </ul> |
| <b>system_product_cd</b>   | alphanumeric, 35 positions | <p>The <a href="#">system product</a> code identifying the product in the external system. The system product code might differ from the <a href="#">product</a> code if the external system is not the <a href="#">default system</a> for the organization.</p> <p>If the system product code is already assigned to a different product in the system, there is no error, but the duplicate system product is not created. Required.</p> <p><b>Note:</b> Oracle recommends that you do not use UPC codes as system product codes, because UPCs are not permanently assigned to a single product.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>product_cd</b>          | alphanumeric, 35 positions | <p>The <a href="#">product</a> code identifying the item in the <a href="#">default system</a>. If the load record is creating or updating a system product, the product_cd must be a valid product in Order Orchestration. There can be only one entry for the same product code in the import file. Required.</p> <p><b>Note:</b> The import process does not flag the product as an error if the product code includes an invalid character, such as the ^ symbol; however, such special characters are not valid as part of the product code in Order Orchestration and can subsequently cause errors during standard processing.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>product_description</b> | alphanumeric, 40 positions | <p>The <i>Name</i> of a product. Order Orchestration updates this field for the product only if it is passed from the <a href="#">default system</a>. Required.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Field                  | Attributes                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>master_style_cd</b> | alphanumeric, 35 positions  | See <a href="#">master style</a> . Optional field. Order Orchestration updates this field for the product only if it passed from the <a href="#">default system</a> . Informational only. Can be set to a blank.<br><br><b>Note:</b> Normally, you would never change the master style for a product in Order Orchestration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>image_url</b>       | alphanumeric, 255 positions | Updates the <a href="#">Image URL</a> for the product, indicating where to find the product image to display in Store Connect, when passed for the product in the default system. Optional field. Must be a validly formatted URL, such as <code>https://www.example.com/folder/image.png</code> , where: <ul style="list-style-type: none"> <li>• <code>http</code> or <code>https</code> is the protocol</li> <li>• <code>www.example.com</code> is the domain or server name</li> <li>• <code>folder</code> is a folder or subfolder where the image is found</li> <li>• <code>image.png</code> or <code>image.jpg</code> is the name of the image</li> </ul> Must not exceed 255 positions.<br>If there was already an item image URL specified for the product, it is overwritten. If an item image URL was previously specified and a blank is passed in the import file, the item image URL is cleared.<br>The import does not validate that an image is found at the specified URL. |

## Importing Product Locations through File Storage API

**Purpose:** Use the [Schedule Jobs](#) screen to import locations, products and system products, product locations, and UPC barcodes. This help topic describes the fields you can map and update for product locations, including product location attributes.

### Note

This help topic does not address importing product location data from OCDS or Merchandising Omni Services or individual inventory updates through the RIB. See [OCDS or Merchandising Omni Services Imports](#) or [Available-to-Sell Individual Inventory Updates through Oracle Retail Integration Cloud Service \(RICS\)](#) for more information. However, *Product Location Import Error Files*, below, does provide information on possible product location import errors, including errors that occur through the import of store or warehouse inventory through OCDS or Merchandising Omni Services.

**Required setup:** To import product locations to the `product_location` table:

- Create a pipe-delimited flat file that includes a separate row for each product location. See [Sample Product Location Import File](#) for a sample of the data to include in the file.
- The file should be named `PRODUCT_LOCATION_SYS_NNNNN.TXT`, where `SYS` is the associated system code and `NNNNN` is an optional series of characters, such as a date/

time stamp, a location code, or both. The file name should be all uppercase, including the system code, even if the system code is set up in Order Orchestration as upper and lowercase. See the [Product Location Import Steps](#) for a discussion.

- The process looks in the OROB-IMPORTS container of the FILE\_STORAGE table. The file remains in this location until you run the import, as described below.

#### **Note**

You can also create product locations through the ProductUpdate request messages. See the Web Services Guide on My Oracle Support (2953017.1) for more information.

**For more information:** See:

- [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#) for an overview on the import process and background information.
- [Days to Keep Errors](#) for more information on setting up the import schedule for a system, or to run the import process on demand.
- the [Product Imports History](#) screen for more troubleshooting information related to the import process.

### **Product Location Import Steps**

Use the [Product Import](#) option to import product, system product, bar code, and location data from pipe-delimited files. The import steps related specifically to product location import:

1. The process uses the pipe-delimited flat file. The file should be named PRODUCT\_LOCATION\_SYSNNNNN.TXT, where:
  - SYS is the associated system code. The system code here should match the case for the code in your organization.
  - NNNNN is an optional suffix, which can include information such as a date/time stamp or a location code. The use of a date/time stamp can be useful if the integrating inventory system generates update files multiple times in a day.

*Multiple file processing:*

- If you include an optional suffix in the file name and there is more than one product location file in the FILE\_STORAGE table, the files are processed in alphanumeric order. For example, if there are files named PRODUCT\_LOCATION\_INV\_123\_20161231010101.TXT and PRODUCT\_LOCATION\_INV\_123\_20161231040101.TXT, the PRODUCT\_LOCATION\_INV\_123\_20161231010101.TXT file is processed first.
- If one file has an optional suffix and one does not, the file without the suffix is processed first.
- Numeric suffixes are sorted before alphabetical suffixes. For example, a suffix that starts with 123 is processed before a suffix that starts with DC.
- If a product location is included in more than one import file, the product location is overwritten. For example, a product location is in two files, and the first file has an available quantity of 100, while the next file processed has an available quantity of 98. After processing both files, the available quantity is set to 98.

*File name matching:*

The file name should be all uppercase, including the system code, even if the system code is set up in Order Orchestration as upper and lowercase.

The import file(s) must be in the OROB-IMPORTS container of the FILE\_STORAGE table.

**Job Batch Size:** The [Job Batch Size](#) controls the number of records to process in each batch.

2. If there are any errors in the file that prevent the process from moving each record to the product\_location table, it moves the records in error in the import file to the OROB-ERRORS container in the file storage table, adding a date and time stamp to the name of the file, such as PRODUCT\_LOCATION\_SYS.TXT.20161028.153000.bak. See *Product Location Import Error Files*, below, for more information.
3. If there are no errors for an import record, the process updates the record in the product\_location table.

#### Note

The import process ignores any files that do not conform to the file naming convention or do not match the system running the import. It does not report an error if no matching files are found in the FILE\_STORAGE table.

4. After processing all import files:
  - The process writes a log record for each import process, displayed at the [Product Imports History](#) screen.
  - Based on the [Location Product Import](#) setting at the **Event Logging** screen, after processing all import files, the process generates an email notification indicating success (if all records were successfully imported) or failure (if any record could not be imported).

The backed up files are cleared based on the number of days specified in the Product Import Files setting in the *Retention Settings* area of the **Tenant - Admin** screen.

**For more information:** See *Product Location Import Error Files*, below, for information on possible errors.

### Sample Product Location Import File

The following is a sample of the contents to include in the product location pipe-delimited flat file. The first row is the header information, and the following row is the product location data.

```
system_cd|location_cd|product_cd|available_qty|next_po_qty|next_po_date|
daily_sell_through_qty|sell_qty_multiple|minimum_sell_qty|shrink_rate|sales_velocity|status|
clearance|selling_price|cost
```

```
cwdDoc|10|cumin|100|1|2015-08-27|1|2||4|5|A|Y|19.99|2.3456
```

The import does not attempt to process the first row in the file; however, the number of columns in the header row is used to validate the number of columns, including empty columns, in each of the import records in the file. The total number of columns in the header row needs to match the number of columns for each record.

### Product Location Import Mapping

The table below lists the fields in the product location import flat file and the product\_location table.

**Availability information and attributes:** For an existing product location, the import can update either the availability information (available quantity, next PO quantity, and next PO date), any or all of the attributes, or both.

To create a new product location, the availability information is required.

**Note**

- The field names indicated below are informational. The import ignores the field names in the first row in the flat file, although it does confirm that the number of columns in the first row is consistent with the number of columns in each import record.
- If any optional fields in the import file are left blank--that is, the file includes the pipe delimiters without a space or zero between them--the import does not update these fields.

| Field                | Attributes                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>system_cd</b>     | alphanumeric, 10 positions | See <a href="#">system</a> . The system code can be 1 to 10 positions in length, can include special characters, and must be unique in Order Orchestration. The system code must be a valid system for the <a href="#">organization</a> where the import process is being run, but does not need to be the same as the system running the import. Required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>location_cd</b>   | alphanumeric, 10 positions | The <a href="#">location</a> where the product is stocked in the external system. Required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>product_cd</b>    | alphanumeric, 35 positions | The <a href="#">product</a> code identifying the item in the <a href="#">default system</a> . If the load record is creating or updating a system product, the product_cd must be a valid product in Order Orchestration. Required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>available_qty</b> | numeric, 6 positions       | The current quantity of the product available to sell in this location as of the time of the import process. Used to calculate the <a href="#">available to promise quantity</a> . A negative quantity, preceded by a minus sign (-), indicates that the item is backordered. If the quantity passed includes a decimal, it is truncated; for example, if a quantity of 5.75 is passed, the available quantity is set to 5.<br><b>Note:</b> If no available quantity is passed: <ul style="list-style-type: none"> <li>• The next PO quantity and next PO date are not updated. However, if the available quantity specified is 0 or negative, the PO information is updated.</li> <li>• The product location attributes are still updated if the product location already exists; however, the import does not create a new product location.</li> </ul> Optional, but can be set to 0. |

| Field               | Attributes           | Description                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>next_po_qty</b>  | numeric, 6 positions | The quantity ordered for this product on the next purchase order for this location. Not updated if no available quantity is passed. If the quantity passed includes a decimal, it is truncated; for example, if a quantity of 5.75 is passed, the available quantity is set to 5.<br><br>Optional, but required if the available quantity is passed.                                                                |
| <b>next_po_date</b> | datetime             | The next date when a purchase order for this product is expected for delivery in this location. YYYY-MM-DD format. If no time is specified in the file, a time of 12:00:00 AM is appended. Can be blank, even if there is a next_po_qty. Not updated if no next PO quantity is passed.<br><br><b>Note:</b> The next PO date is cleared if no date is passed in the import file, but the next PO quantity is passed. |

#### Note

If the availability fields are valid but there is an error related to one of the attributes, the product location is created or updated with the availability information.

**Attributes:** The following product attributes are available to guide selection of fulfilling or sourcing locations for orders:

- probability rules: See the [Probability Rule Wizard](#) for more information
  - [standard brokering](#): optionally, the Routing Engine can use the Sales Velocity for ranking
  - [weighted brokering](#): the Science Engine can use various product location attributes based on the configured weighted brokering percentages
- Each of the product attributes are user-defined.

| <b>shrink_rate</b>    | numeric, up to 3 positions                            | The <a href="#">Shrink Rate %</a> . This percentage can be up to 3 positions, and must be a whole number from 0 to 100. It cannot be a negative number.<br>Optional.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>sales_velocity</b> | numeric, 2 positions with an optional 2-place decimal | The <a href="#">Sales Velocity</a> . Can be blank, or any number from 0 to 99.99. It cannot be a negative number.<br>Optional.<br><br>The following columns can each be omitted entirely, instead of just leaving them blank (for example,    ); however, you must not only omit the column for all records in the import file, but also omit the column from the file headers. If the number of columns included for a product location record is different from the number of columns in the file headers, the record is in error, for example: Invalid number of import columns, 14 passed.<br><i>Example:</i> <ul style="list-style-type: none"> <li>A record with all fields included, with some optional fields blank: OBRDoc 10 cumin 100 1 2015-08-27 1 2   A Y 19.99 2.3456</li> <li>A record with the status, clearance, selling_price, and cost omitted entirely, and also some optional fields blank: OBRDoc 10 cumin 100 1 2015-08-27 1 2   </li> </ul> |
| <b>status</b>         | alphanumeric, 1 position                              | The status of the product in this location. Optional. Informational only. Possible statuses are: <ul style="list-style-type: none"> <li>A or blank = Active (default). The product can be ordered. If the status in the import file is blank, this field is set to A for a new product location, and the Status for an existing product location is not updated.</li> <li>I = Inactive. Cannot currently be ordered.</li> <li>C = Discontinued. Can still be ordered, but will be inactive at some point in the future.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>clearance</b>      | alphanumeric, 1 position                              | Indicates whether the product is on clearance in this location. Optional. Possible settings are: <ul style="list-style-type: none"> <li>Y = The product is on clearance.</li> <li>N or blank (default) = The product is not on clearance. If the status in the import file is blank, this field is set to N for a new product location, and the On Clearance setting for an existing product location is not updated.</li> </ul> Used in <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. If you use <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> and this flag is selected, the Science Engine uses a selling price of .01 to calculate margin.                                                                                                                                                                                                                                    |

| Field                | Attributes                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>selling_price</b> | numeric, 19 positions with a 4-place decimal | The single-unit selling price of the product in this location. Can be up to 19 positions with a 4-position decimal. It can also be 0, but cannot be a negative number, and should not include a currency symbol. Optional, but should be specified if Gross Margin is used in the <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation.                                                 |
| <b>cost</b>          | numeric, 19 positions with a 4-place decimal | The single-unit cost of the product in this location. Optional. It can be 0, but cannot be blank or a negative number, cannot exceed the specified field length, and should not include a currency symbol. The single-unit cost of the product in this location. Optional, but should be specified if Gross Margin is used in the <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. |

### Product Location Import Error Files

Each submitted product location record that is in error is included in a file in the OROB-ERRORS container of the FILE\_STORAGE table.

The file name is PRODUCT\_LOCATION\_SYS.TXT.20161016.160011.bak, where PRODUCT\_LOCATION\_SYS.TXT is the name of the original import file, and 20161016.160011 are the date and time for the import, in YYYYMMDD.HHMMSS format.

**How errors are indicated in the error file:** The error file is in the same format as the product location import file, except that for each record included in the file, there is an additional column entitled `error_column`. This column indicates the column that contained an error that prevented the record from processing. For example, if the product code for an import record was invalid, the `error_column` indicates `product_cd`. The header row is included if the error is not related to the number of columns.

1. The error file does not indicate the nature of the problem with a particular field. For example, if the `error_column` indicates `selling_price`, it does not indicate whether the selling price was invalid because it included too many positions or a non-numeric character.
2. If one or more required columns are missing for a record, the error resembles `Invalid number of import columns, 10 passed`. In this situation, the header row is not included in the error file.
3. If there were no records in the import file, the `error_column` indicates `Import file has no lines to import`.

**OCDS or Merchandising Omni Services imports:** If any errors occur through the import of warehouse or store inventory through [OCDS or Merchandising Omni Services Imports](#), an error file is also created in the OROB-ERRORS folder of the file storage table, as described above. In this case, the file name includes the OCDS prefix (for example, OCDS\_PRODUCT\_LOCATION\_SYS.TXT) and the only errors that might be included in the error file are those related to location code, product code, or available quantity. The OCDS or Merchandising Omni Services import does not update all available fields in the product location table, and there are no possible errors related to the system code, because the code used is from the system you selected when running or scheduling the import at the Schedule Jobs screen.

# Importing UPC Barcodes through File Storage API

Importing UPC barcodes allows you to create UPC-A or EAN-13 barcodes for products.

**What is a UPC barcode?** A UPC barcode is an identification of a product by either a UPC-A or EAN-13 code.

**Used how?** You can use UPC barcodes in Store Connect to scan picked items on orders. See the [Store Connect Preferences](#) screen for more information.

See the [UPC](#) screen for more information.

**Required setup:** Create a pipe-delimited flat file named PRODUCT\_BARCODE\_SYS.TXT, where SYS is the associated system code. The file name should be all uppercase, including the system code, even if the system code is set up in Order Orchestration as upper and lowercase. Create a separate row for each product location. See [Sample Barcode Import File](#) for a sample of the data to include in the file.

The process looks in the OROB-IMPORTS container of the FILE\_STORAGE table. The file remains in this location until you run the import, as described below.

## In this topic:

- [Barcode Import Steps](#)
- [Sample Barcode Import File](#)
- [Product Barcode Import Mapping](#)

**For more information:** See:

- [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#) for an overview on the import process and background information.
- [Product Import](#) for more information on setting up the product import schedule for a system, or to run the import process on demand.
- the [Product Imports History](#) screen and the [Product Barcode Import Errors Report](#) for more troubleshooting information related to the product UPC barcode import process.

## Barcode Import Steps

The steps to import barcodes are:

1. The process clears outdated records from the product\_barcode\_import table based on the [Days to Keep Errors](#) for the system. If a record is flagged with an error code, it remains in the import table until the [Days to Keep Errors](#) has passed and you next run an import for that system.
2. The process uses the pipe-delimited flat file named PRODUCT\_BARCODE\_SYS.TXT, where SYS is the system code in the OROB-IMPORTS container of the FILE\_STORAGE table. The file name should be all uppercase, including the system code, even if the system code is set up in Order Orchestration as upper and lowercase.
3. If the records in the file pass the initial edits, the process uses the information from the flat file to create records in the product\_barcode\_import table. See [Product Barcode Import Mapping](#) for more information on how the data in the PRODUCT\_BARCODE\_SYS.TXT file maps to the product\_barcode\_import table.
4. Next, if there is an error based on the required data for product barcode records, the process updates the record in the product\_barcode\_import table with the error code.

In this situation, you can run the [Product Barcode Import Errors Report](#) to review the list of errors in the import file. Correct the records in error in the originating system and use the file storage API to replace the file.

5. If there are no errors for a product\_barcode\_import record, the process updates the product\_barcode table and the product\_barcode\_import record is deleted. The import process does not update existing barcode records. See [Product Barcode Import Mapping](#) for information on how the information from the file maps to the product\_barcode table.
6. After processing all import files:
  - The process writes a log record for each import process, displayed at the [Product Imports History](#) screen.
  - Based on the [Location Product Import](#) setting at the **Event Logging** screen, after processing all import files, the process generates an email notification indicating success (if all records were successfully imported) or failure (if any record could not be imported).

The backed up files in the archive and error containers are cleared based on the number of days specified in the Product Import Files setting in the *Retention Settings* area of the **Tenant - Admin** screen.

### Sample Barcode Import File

To import product barcodes, create a pipe-delimited flat file named PRODUCT\_BARCODE\_SYS.TXT, where SYS is the associated system code. The file name should be all uppercase, including the system code, even if the system code is set up in Order Orchestration as upper and lowercase.

The following is a sample of the contents to include in the PRODUCT\_BARCODE\_SYS.TXT pipe-delimited flat file. The first row is the header information, which is informational only, and the following row is the product barcode data.

```
System_CD|System_Product|Barcode|Barcode_type
12|AB12345|123456789012|UPC-A
12|CD45678|456789012345|EAN-13
```

The import ignores the first row in the file.

### Product Barcode Import Mapping

The table below lists the fields in the product barcode import flat file, the product\_barcode\_import table, and the product\_barcode table.

#### Note

The field names indicated below are informational. The import ignores the first row in the flat file.

| Field                 | Attributes                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------|----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>system_cd</b>      | alphanumeric, 10 positions | See <a href="#">system</a> . Identifies the organization where the product UPC barcode should be created, and the system where the system product exists. The system code can be 1 to 10 positions in length, can include special characters, and must be unique in Order Orchestration. The system code must be a valid system for the <a href="#">organization</a> where the import process is being run, but does not need to be the same as the system running the import. Required. |
| <b>system_product</b> | alphanumeric, 35 positions | The <a href="#">system product</a> code identifying the product in the external system. Must be valid in the system code specified. The system product code might differ from the <a href="#">product</a> code if the external system is not the <a href="#">default system</a> for the organization. Required.                                                                                                                                                                          |
| <b>barcode</b>        | alphanumeric, 40 positions | The UPC-A or EAN-13 barcode identifying the product. A barcode can be assigned to just one product in an organization, but each product can have multiple UPC-A and EAN-13 barcodes. If the barcode specified was previously assigned to a different system product, it is reassigned to the system_product indicated in the file.                                                                                                                                                       |
| <b>barcode_type</b>   | alphanumeric, 7 positions  | Valid types are <i>UPC-A</i> and <i>EAN-13</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                         |

# About Order Orchestration

**Purpose:** Use the **About Order Orchestration** window to identify the current versions of Order Orchestration components for troubleshooting purposes.

**How to display this window:** Select *About Order Orchestration...* from the [Systems Menu](#).

**Cache?** For troubleshooting purposes, select the Cache... button to see whether the instance of Order Orchestration is sharing a cache with another instance. When multiple servers share a cache, updates made to one server (such as preference changes) are available automatically to the other server.

The information displayed at the Cache window includes the number of servers in the cluster.

The Cache... button is available only to the Admin user.

All fields in this window are display-only.

| Field                 | Description                                                                                                                                                                                                                                                                                                                |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Version</b>        | The update number, such as 23.1.101.2, where: <ul style="list-style-type: none"> <li>• 23 = the last two digits of the calendar year</li> <li>• 1 = the major update number for the calendar year</li> <li>• 101 = January, represented as the quarter (1) and the month (01)</li> <li>• 2 = the hot fix number</li> </ul> |
| <b>Server level</b>   | The current build number applied to the Order Orchestration server, including the version number and the build date stamp, for example: 23.1.101.2-2023-03-15_12-34-22-AM, where 23.1.101.2 is the version number, and the date and time are March 15, 2023 at 12:34:22.                                                   |
| <b>Database level</b> | The current database level based on the version number.                                                                                                                                                                                                                                                                    |
| <b>Copyright</b>      | Oracle copyright information.                                                                                                                                                                                                                                                                                              |

# Order and Line Statuses

**Overview:** The [Allow Split Order](#) preference controls whether the lines on an Order Orchestration order can have different statuses.

These statuses do not apply to orders created through the Supplier Direct Fulfillment module.

**In this topic:**

- [Order and Line Statuses \(Splitting Preference Turned Off\)](#)
- [Order and Line Statuses \(Splitting Preference Turned On\)](#)

## Order and Line Statuses (Splitting Preference Turned Off)

When the Allow Split Order preference is unselected, all order status updates apply at the order level. With this setting, the line status and the order status are always the same.

See the [Store Connect Overview](#) for more information on how the Store Connect module displays statuses.

| Status           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>accepted</b>  | <p><b>Integrated system:</b> The assigned fulfilling or sourcing location has sent a status update indicating it can fulfill the order. If the system is flagged to Require Status Update, a status update message indicating that the order is <i>accepted</i> flags the order as <i>polled</i>, indicating that the order should no longer be included in the fulfillments response message.</p> <p><b>Store Connect:</b> A store associate has accepted the new order.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>canceled</b>  | <p>The order has been canceled and does not need to be fulfilled. A status update to cancel an order can come from any location.</p> <p>When the Routing Engine receives a status update indicating that an order is canceled, it sets the Poll Count for all order lines to 0.</p> <ul style="list-style-type: none"> <li>• If the Acknowledge Order Before Brokering preference is selected and the order is still assigned to the <i>IN PROCESS</i> location, Order Orchestration does not attempt to find an actual fulfilling location for the order. See <a href="#">Acknowledge Order Before Brokering</a> for a discussion.</li> <li>• If the status is currently canceled and the <a href="#">Restrict Reassignment of Canceled Line</a> flag at the <b>Preferences</b> screen is selected, you cannot change the status through a status update request; however, you can still change the status at the <a href="#">Order</a> screen.</li> </ul> |
| <b>fulfilled</b> | <p>The order has been:</p> <ul style="list-style-type: none"> <li>• fully shipped (delivery order)</li> <li>• picked up by the customer (pickup or ship-for-pickup order)</li> </ul> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>• When the order status is fulfilled, you can no longer change the status through the <a href="#">status update</a> request message; however, you can change it through the <a href="#">Order</a> screen.</li> <li>• When the order status changes to fulfilled, Order Orchestration assigns a fulfillment ID to each item. This fulfillment ID is stored in the <code>xom_order_shipment</code> table, and returned in the <code>fulfillment_id</code> tag in the status inquiry response message and the status list response message.</li> </ul>                                                                                                                                                         |

When the pickup location is in Store Connect, the status changes immediately from intransit to intransit polled; however, a status of intransit is still displayed in Store Connect.</p> <p>If you change the status to <b>intransit</b> through the Order screen for a ship-for-pickup order being fulfilled through Store Connect, its status is changed to <b>intransit polled</b>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>new_order</b>        | <ul style="list-style-type: none"> <li>• This is a new order that the Routing Engine has just created; or,</li> <li>• This is a new order that the Routing Engine and has just created and is still assigned to the <i>IN PROCESS</i> location if the Acknowledge Order Before Brokering preference is selected, or,</li> <li>• The order was rejected from a fulfilling or sourcing location and then reassigned to a new fulfilling or sourcing location; or,</li> <li>• This is a ship-for-pickup order that was rejected by the pickup location when the order was in <i>intransit</i>, <i>intransit polled</i>, or <i>received</i> status, indicating that the inventory was not delivered or was damaged and should be re-sourced, so the order was assigned to a new sourcing location, or,</li> <li>• If the system is flagged to Require Status Update, this is an order that was sent to a fulfilling or sourcing location through the fulfillments response message, but not yet updated to polled status.</li> </ul> <p><b>Store Connect:</b> New orders are automatically set to polled status when they are assigned to a <a href="#">Store Connect</a> location. However, if an existing order line is rejected and reassigned to a different location for fulfillment, it may remain in New Order status briefly before its status changes to Polled.</p> <p>If you change the status to <b>new_order</b> through the Order screen for an order being fulfilled through Store Connect, its status is changed to <b>polled</b>.</p> |

| Status          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>picked</b>   | <p><i>Ship-for-pickup order:</i> The location assigned to source a ship-for-pickup order is preparing to transfer the inventory to the location where the customer will pick it up. This status might also be used by the location assigned to fulfill a delivery order.</p> <p><i>Store Connect:</i> A store associate has verified that the order has been picked. If it is a pickup order and is not under review, it is eligible for pickup, and if it is a delivery order, or a ship-for-pickup order currently at the sourcing location, and is not under review, it is eligible for shipment.</p> <p><b>Note:</b> A ship-for-pickup order whose Store Connect sourcing location is the same as its pickup location automatically goes into Received status when its status is set to picked.</p> <p><b>Pickup By Date assignment:</b> If the organization is configured to Auto-Cancel Unclaimed Orders, a <i>Pickup By Date</i> is automatically assigned when a line's status changes to picked if the order type is pickup, or if the order type is ship-for-pickup and the sourcing location is the same as the pickup location.</p> <p>If you change the status to <b>picked</b> through the Order screen for a ship-for-pickup order being fulfilled through Store Connect, and if the sourcing location is also the pickup location, its status is changed to <b>received</b>.</p> |
| <b>polled</b>   | <p>The assigned fulfilling or sourcing location has been notified of the order assignment, and the order should not be included in subsequent fulfillments response messages. Only the assigned fulfilling or sourcing location can send a status update of <i>polled</i>. An order is assigned this status when:</p> <ul style="list-style-type: none"> <li>• If the system is flagged not to Require Status Update, the assigned fulfilling or sourcing location has sent the fulfillments request and been notified of this order in the response message.</li> <li>• If the system is flagged to Require Status Update, the assigned fulfilling or sourcing location has acknowledged the order.</li> </ul> <p>Flagging an order as polled does not necessarily require changing the order status to <i>polled</i>. For example, when you set the status of a ship-for-pickup order to <i>accepted</i>, this also serves to flag the order as polled.</p> <p><b>Store Connect:</b> A new order's status is immediately set to polled, and is listed on the <b>New Orders</b> screen in Store Connect.</p> <p>If you change the status to <b>new order</b> through the Order screen for an order being fulfilled through Store Connect, its status is changed to <b>polled</b>.</p>                                                                                                           |
| <b>posted</b>   | <p>The order has been posted for <a href="#">Order Fulfillment through RICS Integration</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>received</b> | <p>The transferred inventory has been received at the location where a customer is picking up a ship-for-pickup order.</p> <p><b>Note:</b> A ship-for-pickup order whose Store Connect sourcing location is the same as its pickup location automatically goes into Received status when its status is set to picked.</p> <p>If you change the status to <b>picked</b> through the Order screen for a ship-for-pickup order being fulfilled through Store Connect, and if the sourcing location is also the pickup location, its status is changed to <b>received</b>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**Additional statuses:** The Routing Engine allows the following additional statuses if they are useful for your business processes, although it does not process any additional order updates as a result of a change to any of these statuses:

- processed
- verified
- partially fulfilled

### Order and Line Statuses (Splitting Preference Turned On)

**Order:** If the Allow Split Order preference is selected, all status updates apply to the individual order lines regardless of the order type, and the Routing Engine determines the order status by evaluating the status of the lines.

#### Order-level status based on line-level status(es):

- If all of the lines on the order have the same status, apply that status at the order level; otherwise,
- If the order lines have any combination of statuses, but at least one line is in *new\_order*, *accepted*, *polled*, *picked*, *intransit*, *intransit polled*, *partially fulfilled*, *processed*, *verified*, or *received* status, the order status is *open*; otherwise,
- If all the order lines are a combination of *canceled* or *unfulfillable*, the order status is *unfulfillable*; otherwise,
- If all the order lines are a combination of *unfulfilled*, *canceled*, or *fulfilled*, the order status is *complete*.

**Line summary status if line is split:** The *Detail* tab at the [Order](#) screen also uses these rules to summarize the status of a split line. A line can split if the [Allow Split Line](#) preference is selected. Also, you can split a line by processing a partial status update if the [Allow Partial Updates](#) preference is selected.

See [Processing Flow for Delivery and Pickup Orders](#) for a summary of how the Store Connect module displays statuses.

**If Pickup By Date was assigned:** If a Pickup By Date was assigned to the order line, changing the status to any other status removes the Pickup By Date. For example, if the current status of a pickup order line was picked, changing the status to canceled or fulfilled removes the Pickup By Date. See [Auto-Cancel Unclaimed Orders](#) for background.

| Status          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>accepted</b> | <p>The assigned fulfilling or sourcing location has sent a status update indicating it can fulfill or source the order line. If the system is flagged to Require Status Update, a status update message indicating that the order line is <i>accepted</i> flags the order as <i>polled</i>, indicating that the order line should no longer be included in the fulfillments response message.</p> <p><b>Store Connect:</b> A store associate has accepted the order.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>canceled</b> | <p>The individual line has been canceled and does not need to be fulfilled. The status update to cancel a line can come from any location.</p> <p>When the Routing Engine receives a status update indicating that a line is canceled: it sets the Poll Count for that line to 0.</p> <ul style="list-style-type: none"> <li>the <i>Poll Count</i> for that line is set to zero.</li> <li>if a pickup or ship-for-pickup order line was assigned a <i>Pickup By Date</i>, the <i>Pickup By Date</i> is removed.</li> </ul> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>If the Acknowledge Order Before Brokering preference is selected and the item is still assigned to the <i>IN PROCESS</i> location, Order Orchestration does not attempt to find an actual fulfilling location for the item. See <a href="#">Acknowledge Order Before Brokering</a> for a discussion.</li> <li>If the status is currently canceled and the <a href="#">Restrict Reassignment of Canceled Line</a> flag at the <b>Preferences</b> screen is selected, you cannot change the status through a status update request; however, you can still change the status at the <a href="#">Edit Order Item</a> window.</li> </ul> |
| <b>complete</b> | <p><b>Order or line summary status:</b> The status of the lines on the order is a combination of <i>unfulfillable</i> or <i>canceled</i> and <i>fulfilled</i>. The <a href="#">Order</a> screen also displays a <i>complete</i> status for a line at the summary level if the line is split into this combination of statuses. If none of the lines are fulfilled, then the order or line summary status is <i>unfulfillable</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

#### Note

This is a system-assigned status; it is not possible to assign this status to an order or line.

| Status                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>fulfilled</b>        | <p>The line has been:</p> <ul style="list-style-type: none"> <li>fully shipped (delivery order)</li> <li>picked up by the customer (pickup or ship-for-pickup order)</li> </ul> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>When the line status is fulfilled, you can no longer change the status through the <a href="#">status update</a> request message; however, you can change it through the <a href="#">Edit Order Item</a> window.</li> <li>When the order status changes to fulfilled, Order Orchestration assigns a fulfillment ID to each item. This fulfillment ID is stored in the <code>xom_order_shipment</code> table, and returned in the <code>fulfillment_id</code> tag in the status inquiry response message and the status list response message.</li> </ul> |
| <b>intransit</b>        | <p>The location assigned to source a ship-for-pickup order has sent the inventory to the location where the customer will pick up the order.</p> <p>When a ship for pickup order or line is in <b>intransit</b> status, the Routing Engine does not change the status if the assigned fulfilling location sends a status update message indicating that the order or line is <b>polled</b>; however, it tracks the activity in the status history and does not include the line in subsequent fulfillments response messages to the assigned fulfilling location.</p> <p>If you change the status to <b>intransit</b> through the Edit Order Item window for a ship-for-pickup order being fulfilled through Store Connect, its status is changed to <b>intransit polled</b>.</p>                   |
| <b>intransit polled</b> | <p>The pickup location for a ship-for-pickup order line:</p> <ul style="list-style-type: none"> <li>has received the order line in the intransit response message, if the system is not flagged to Require Status Update; or</li> <li>has sent a status update request changing the status to <i>intransit polled</i></li> </ul> <p>This status applies only to ship-for-pickup orders. When the pickup location is in Store Connect, the status changes immediately from intransit to intransit polled; however, a status of intransit is still displayed in Store Connect.</p> <p>If you change the status to <b>intransit</b> through the Edit Order Item window for a ship-for-pickup order being fulfilled through Store Connect, its status is changed to <b>intransit polled</b>.</p>        |

| Status           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>new_order</b> | <p>Indicates that:</p> <ul style="list-style-type: none"> <li>this is a new line that the Routing Engine has just created; or,</li> <li>this is an item on a new order that the Routing Engine and has just created and is still assigned to the <i>IN PROCESS</i> location if the Acknowledge Order Before Brokering preference is selected, or,</li> <li>the line was rejected from a fulfilling or sourcing location and then reassigned to a new fulfilling or sourcing location; or,</li> <li>This is a ship-for-pickup order that was rejected by the pickup location when the order was in <i>intransit</i>, <i>intransit polled</i>, or <i>received</i> status, indicating that the inventory was not delivered or was damaged and should be re-sourced, so the order was assigned to a new sourcing location, or,</li> <li>If the system is flagged to Require Status Update, this is a line on an order that was sent to a fulfilling or sourcing location through the fulfillments response message, but not yet updated to <i>polled</i>.</li> </ul> <p>If an existing order line assigned to a Store Connect location is rejected and reassigned to a different location for fulfillment, it may remain in New Order status briefly before its status changes to <i>Polled</i>.</p> <p><b>Store Connect:</b> A new order's status automatically changes to <i>polled</i>, and the order is listed on the <i>New Orders</i> screen in Store Connect. See <a href="#">Notifying Store Connect Locations about New Orders</a> for background.</p> <p>If you change the status to <b>new_order</b> for an order being fulfilling through Store Connect at the Edit Order Item window, its status is changed to <b>polled</b>.</p> |
| <b>open</b>      | <p><b>Order or summary status only:</b> At least one line on the order is in <i>new_order</i>, <i>accepted</i>, <i>polled</i>, <i>picked</i>, <i>intransit</i>, <i>intransit polled</i>, <i>partially fulfilled</i>, <i>processed</i>, <i>verified</i>, or <i>received</i> status. The <a href="#">Order</a> screen also displays an <i>open</i> status for a line at the summary level if the line is split into this combination of statuses.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|                  | <div>  <b>Note</b> <p>This is a system-assigned status; it is not possible to assign this status to an order or line.</p> </div>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>picked</b>    | <p><b>Ship-for-pickup order:</b> The location assigned to source a ship-for-pickup order line is preparing to transfer the inventory to the location where the customer will pick it up. This status might also be used by the location assigned to fulfill a delivery order.</p> <p><b>Store Connect:</b> A store associate has verified that the order has been picked. If it is a pickup order and is not under review, it is eligible for pickup, and if it is a delivery and is not under review, it is eligible for shipment. If it is a ship-for-pickup order, it is eligible for shipment to the pickup location.</p> <p><b>Note:</b> A ship-for-pickup order line whose Store Connect sourcing location is the same as its pickup location automatically goes into <i>Received</i> status when its status is set to <i>picked</i>.</p> <p><b>Pickup By Date assignment:</b> If the organization is configured to <a href="#">Auto-Cancel Unclaimed Orders</a>, a <a href="#">Pickup By Date</a> is automatically assigned when a line's status changes to <i>picked</i> if the order type is pickup, or if the order type is ship-for-pickup and the sourcing location is the same as the pickup location. See <a href="#">Auto-Cancel Unclaimed Orders</a> for background.</p> <p>If you change the status to <b>picked</b> through the Edit Order Item window for a ship-for-pickup order being fulfilled through Store Connect, and if the sourcing location is also the pickup location, its status is changed to <b>received</b>.</p>                                                                                                                                                                                        |

| Status          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>unfulfillable</b> | <p>This is a line on a:</p> <ul style="list-style-type: none"><li>• pickup order and it has been rejected by the assigned location, or</li><li>• ship-for-pickup order and it has been rejected by the assigned pickup location, or</li><li>• delivery or ship-for-pickup order and:</li><li>• it has been rejected for sourcing or fulfillment more times than the Search Retries preference, or</li><li>• the Routing Engine could not find a fulfilling or sourcing location for the line.</li></ul> <p>When a delivery or ship-for-pickup order is unfulfillable, its assigned fulfilling or sourcing location changes to the Default Unfulfillable Location.</p> <p><b>Order or line summary status:</b> All of the lines on the order are a combination of <i>canceled</i> and <i>unfulfillable</i>. The <a href="#">Order</a> screen also displays an unfulfillable status for a line at the summary level if the line is split into this combination of statuses.</p> |

**Additional statuses:** The Routing Engine allows the following additional statuses if they are useful for your business processes, although it does not process any additional order updates as a result of a change to any of these statuses:

- processed
- verified
- partially fulfilled

| Field             | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>admin user</b> | A user with full authority to all Order Orchestration screens, including the <a href="#">Tenant-Admin</a> screen, which includes configuration options related to application administration. This is the user created at installation. You cannot delete this user.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>allow list</b> | <p>A list of URLs that are approved for communication. Retailers need to make sure that Oracle staff include all URLs, such as logos and those used for integrations, are on the allow list for Order Orchestration. URLs that need to be on the allow list include:</p> <ul style="list-style-type: none"> <li>• The Logo URL and Shipper URL (if not ADSI) at the <a href="#">Drop Ship Preferences</a> screen.</li> <li>• The Logo URL, Logo URL (packing slip), Shipper URL (if not ADSI), and Logo URL (email) at the <a href="#">Store Connect Preferences</a> screen.</li> <li>• The Logo URL at the <i>New Brand</i> screen or the <i>Edit Brand</i> screen in Modern View.</li> <li>• The Job Notification URL at the <a href="#">Event Logging</a> screen.</li> <li>• The URLs defined through the Add or Edit windows from the <a href="#">External Services</a> screen.</li> <li>• The Tenant Logo at the <a href="#">Tenant (retailer information)</a> screen or the <a href="#">Tenant-Admin</a> screen.</li> </ul> <p>The following URLs are already added to the Allow List for Order Orchestration.</p> <ul style="list-style-type: none"> <li>• The Endpoint URL for the Turn-by-Turn Distance URL at the <a href="#">Tenant-Admin</a> screen.</li> <li>• The Geocode URL to use when generating geocode requests to determine the latitude and longitude on the <a href="#">Tenant-Admin</a> screen for: <ul style="list-style-type: none"> <li>– a location, when the location is created or has its address updated, either through the <a href="#">New Location</a> or <a href="#">Edit Location</a> screens, or through the import process</li> <li>– a customer's address, in order to calculate proximity for an order or inventory request, such as the SubmitOrder or the LocateItems request message</li> </ul> </li> </ul> |

| Field                                   | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>anonymized</b>                       | <p>Customer data in Order Orchestration can be anonymized (changed to asterisks) through either the <a href="#">Completed Order Private Data Purge</a> job or through web service requests.</p> <p>Vendor and user data can be anonymized through web service requests.</p> <p>The types of personal data that can be anonymized are:</p> <ul style="list-style-type: none"> <li>customer names, addresses, email addresses, and phone numbers (sold-to and ship-to) on sales orders and purchase orders</li> <li>vendor names, addresses, email addresses, and phone numbers</li> <li>Order Orchestration user names and email addresses</li> <li>Vendor user names and email addresses</li> <li>Store Connect associate names and email addresses</li> <li>Brand contact names and email addresses</li> </ul> <p>Once data has been anonymized, it cannot be recovered. See <a href="#">Anonymizing Data</a> for an overview, and see the Web Services Guide on My Oracle Support (2953017.1) for more information on using web service requests to inquire on private data and anonymize it.</p> |
| <b>attribute</b>                        | <p><b>Product location attributes:</b> Key metrics for product locations. Possible attributes are <a href="#">Daily Sell Through Quantity</a>, <a href="#">Sell Quantity/Multiple</a>, <a href="#">Minimum Sell Quantity</a>, <a href="#">Shrink Rate %</a>, and <a href="#">Sales Velocity</a>.</p> <p>Probability rules can use product location attributes as part of their calculations. For example, you might want to set up a probability rule that specifies to reduce the available quantity displayed in locate items search results by the daily sell-through quantity for a location in an <a href="#">offline system</a>.</p> <p><b>Custom attribute definitions:</b> You can define custom attributes and assign them to locations, or to locations and products, to filter eligible locations when routing orders. See the <a href="#">Attribute Definitions</a> screen for setup information, and see <a href="#">Using Attribute Rules for Delivery and Pickup Orders</a> or <a href="#">Using Attribute Rules for Ship-for-Pickup Orders</a> for background.</p>                  |
| <b>auto-cancel unclaimed orders job</b> | <p>Cancels unclaimed pickup or ship-for-pickup orders whose <a href="#">Pickup By Date</a> has passed, based on the settings of the <a href="#">Auto Cancel Days of Unclaimed Pickup Orders</a> and <a href="#">Auto Cancel Days of Unclaimed Ship For Pickup Orders</a> at the <b>Preferences</b> screen. This job uses a Schedule Interval of <i>Daily</i>, and runs at the specified Time. See <a href="#">Auto-Cancel Unclaimed Orders</a> for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>availability update request</b>      | <p>An inbound message to increase, decrease, or reset the current available quantity for a product location without using the import process. See the Web Services Guide on My Oracle Support (2953017.1) for more information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>available to promise quantity</b>    | <p>The available quantity from the product location minus the <a href="#">reserved quantity</a> and any stc_fulfilled_quantity (displayed on the <b>Product Location</b> screen as the Fulfilled Quantity).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>brand</b>                            | <p>A retail brand associated with an organization to identify the organization to customers receiving drop shipments. The brand logo prints on the pack slip and pullsheet when the vendor generates these PDF documents.</p> <p>Each organization using the Supplier Direct Fulfillment module must have at least one brand.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>default Store Connect system</b>   | <p>The system that is available for order processing through the Store Connect module. There can be only one Store Connect default system in an organization. Defined by the <a href="#">Store Connect Default</a> flag at the <a href="#">System</a> screen. This flag controls whether:</p> <ul style="list-style-type: none"> <li>• you can assign store associates to the locations associated with the system, so they can log in and process orders through the Store Connect screens</li> <li>• to include the locations for the system in the settings you set up through the <a href="#">Store Connect Preferences</a> screen, such as the schedule to update assigned orders from <i>New Order</i> to <i>Polled</i> status</li> <li>• to generate an email notification to the store when new orders are polled</li> <li>• to generate pickup-ready notification emails for pickup orders or shipment notification emails for shipped delivery orders</li> <li>• to track the <a href="#">Fulfilled Quantity</a> for each product location, and reduce this quantity when you run the inventory export</li> </ul>                                                |
| <b>default system</b>                 | <p>The primary system for a <a href="#">organization</a>. Products in Order Orchestration can have relationships with every integrated system, but they are defined by the default system. You should load the Order Orchestration database with the default system's products first, and then create system products for each additional integrated system.</p> <p><i>Created how?</i> A default system is identified by the Default flag at the <a href="#">Systems</a> screen. You set this flag by selecting the Organization Default checkbox at the <a href="#">System</a> screen.</p> <p><b>For more information:</b> See <a href="#">Data Hierarchy</a> for an overview of the relationships among Order Orchestration elements, including systems.</p>                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>default unfulfillable location</b> | <p>The location where the Routing Engine assigns an order if it is unable to find an actual location to fulfill or source the order or line. The Routing Engine uses the <a href="#">Order Orchestration Settings Tab</a> at the <b>Preferences</b> screen, or overrides specified through the <a href="#">Order Orchestration Preference Overrides</a> screen, to determine which locations to select to fulfill or source an order or line, and the Search Retries setting at this screen to determine the number of times to reassign an order or its individual lines after rejection by a fulfilling or sourcing location.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>default vendor system</b>          | <p>The system within an <a href="#">organization</a> that is associated with any vendors. Order Orchestration identifies the default vendor system by the Vendor Default flag.</p> <p><i>Required to create vendors:</i> You cannot create a vendor for an organization until you create the default vendor system. This system should not represent an actual system that integrates with Order Orchestration.</p> <p><i>No additional information required:</i> It is not necessary to specify any additional information for the default vendor system besides entering the Name and selecting the Vendor Default flag.</p> <p><i>Only one default per organization:</i> There can be only one default vendor system for an organization. If you select the Vendor Default flag for an additional system, the flag is cleared for the current default vendor system.</p> <p><i>Automatically creates vendor location type:</i> When you create the default vendor system, Order Orchestration automatically creates a the <a href="#">DS Vendor location type</a>. This location type is also required to create vendors. You should not delete this location type.</p> |

| Field                                                                                                                                                                               | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>getDSShipConfirm</b>            | The message submitted by an <a href="#">integrated vendor</a> to confirm shipment of a purchase order. See <a href="#">Vendor Integration</a> for background, and see the <i>Vendor Integration Guide</i> for details.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>grouping shipment locations</b> | <p>The Group Shipment Locations setting at the <b>Preferences</b> screen controls how the <a href="#">locate items</a> response works for delivery or ship-for-pickup requests:</p> <ul style="list-style-type: none"> <li>• If the Group Shipment Locations preference is unselected, the response message lists locations where the available quantity should be able to fulfill or source the order.</li> <li>• If the Group Shipment Locations preference is selected, the Routing Engine uses the same logic as when the preference is unselected; however, the response does not include details on each location that can fulfill or source the order. Instead, the response just includes the virtual (non-existent) location, indicating that the order can be fulfilled or sourced through the Routing Engine.</li> </ul> <p><b>For more information:</b> See <a href="#">Selecting a Location for a Delivery Order</a> for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>IDCS or OCI IAM</b>             | <p>Order Orchestration uses IDCS (Oracle Identity Cloud Service) or OCI IAM (Oracle Cloud Infrastructure Identity and Access Management) for authentication.</p> <p><b>Setting up users for IDCS or OCI IAM:</b> Before setting up users in Order Orchestration, you need to create users in IDCS or OCI IAM, including the current email address for each user. The first time users attempt to log into Order Orchestration, they can use the Can't log in? link at the login screen to reset their passwords. IDCS or OCI IAM generates an email to the user's email address, providing a link for password reset. The user can reset the password as needed through the Can't log in? link.</p> <p>If the user ID in Order Orchestration is not the same as the user in IDCS or OCI IAM, you can use the Cloud Service User ID field to create a cross-reference between the Order Orchestration user record and the IDCS or OCI IAM user record. You might use this option if, for example, you use the user's email address as the user ID in IDCS or OCI IAM. This option is available only for Order Orchestration users and Store Connect users.</p> <p>IDCS or OCI IAM control authentication for:</p> <ul style="list-style-type: none"> <li>• Access to the Order Orchestration user interface</li> <li>• Access to the Vendor Portal (vendor users)</li> <li>• Access to the Store Connect interface (Store Connect users)</li> <li>• Web Service authentication (web service users)</li> </ul> <p><b>For more information:</b> See <a href="#">Import users from IDCS or OCI IAM</a> for background.</p> <p><b>Note:</b> IDCS or OCI IAM control authentication only, and do not control role-based authority within Order Orchestration. See the <a href="#">Roles</a> screen for more information on setting authority.</p> |
| <b>import ID</b>                   | A unique ID number assigned by Order Orchestration to identify a product and product location import. See <a href="#">Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database</a> for an overview. Part of the Routing Engine module.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Field                         | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>import process</b>         | <p>A process to import new or updated locations, products and system products, product locations, and product barcodes from an integrated system into Order Orchestration for the Routing Engine. In order to import, you need to use the <a href="#">Schedule Jobs</a> screen to schedule regular imports of new or updated products and product locations, or to run the import on demand.</p> <p><b>For more information:</b> See <a href="#">Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database</a> for background.</p>                                                                                                                                                                                                                                                                                                                                                  |
| <b>IN PROCESS location</b>    | <p>The temporary virtual location where the Order Orchestration assigns delivery orders, or the sourcing location for ship-for-pickup orders, at initial creation before selecting an actual fulfilling or sourcing location, if no fulfilling or sourcing location is specified in the submit order request.</p> <p>This location is created automatically, and:</p> <ul style="list-style-type: none"> <li>• is assigned to the organization's default system</li> <li>• is assigned to the same location type as the organization's Default Unfulfillable Location</li> <li>• has all <i>Fulfillment</i> settings at the <b>Preferences</b> screen (Pickup Available, Delivery Available, Backorder Available, Ship For Pickup Sourcing Available, Ship For Pickup Receiving/Pickup Available) set to <i>No</i></li> </ul> <p>Used only if the Acknowledge Order Before Brokering preference is selected.</p> |
| <b>integrated vendor</b>      | <p>A vendor who uses XML and JSON messages, rather than <a href="#">Vendor Portal</a> screens, to receive purchase orders and confirm shipments. See <a href="#">Vendor Integration</a> for an overview, and the <i>Vendor Integration Guide</i> for details.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>intransit message</b>      | <p>Web service request and response used to notify <a href="#">pickup locations</a> of any <a href="#">ship-for-pickup orders</a> that are in transit from the <a href="#">sourcing location</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>intransit polled order</b> | <p>An order that has been transferred from the <a href="#">sourcing location</a> to the <a href="#">pickup location</a>, and the pickup location or system has been notified through the <a href="#">intransit message</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>inventory inquiry</b>      | <p>A request for product availability sent by Order Orchestration to an <a href="#">online system</a>, in order to respond to a <a href="#">locate items</a> request or <a href="#">product availability search</a>.</p> <p><b>For more information:</b> See <a href="#">The Routing Engine</a> for a process overview.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Field                       | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>inventory level type</b> | <p>The Type for a probability location assignment. The inventory level type provides a means to apply rules differently based on how recently you received an inventory update for the product location. Possible types are:</p> <ul style="list-style-type: none"> <li>• <i>On-line only:</i> The <a href="#">product location</a> is within an <a href="#">online system</a>, and you have received an inventory inquiry response for the product location.</li> <li>• <i>Off-line only:</i> You have not received an inventory update within the time period specified at the <b>Preferences</b> screen. Even if the product location is within an online system, it is considered off-line for the purposes of probability rule evaluation if you have not received an inventory inquiry response (if, for example, the location is having communication difficulties, or if the process responsible for inventory inquiry requests and responses is not running).</li> <li>• <i>Both:</i> Evaluate the rule for the product location, regardless of whether the product location is processing inventory inquiry responses.</li> </ul> <p>Used by the Routing Engine module.</p>                                                                                                                  |
| <b>invoice status</b>       | <p>Possible invoice statuses are:</p> <ul style="list-style-type: none"> <li>• <i>Approved</i> = The invoice was approved, either automatically or by you, but has not yet posted to the originating system.</li> <li>• <i>Held</i> = The vendor has submitted the invoice, and the invoice includes at least one line that is <a href="#">out-of-balance</a> because the vendor changed the unit price by more than the Unit Cost Threshold specified for the vendor: for example, you set a threshold of 10%, and the vendor changed the unit price by 15%. The invoice remains in <i>Held</i> status until the you either approve or reject it.</li> <li>• <i>New</i> = The vendor selected the <i>Update and Save for Changes</i> option when creating the invoice, and has not yet submitted the invoice to you for posting.</li> <li>• <i>Posted</i> = The invoice has been posted to the originating system, such as Order Administration, for payment processing.</li> <li>• <i>Rejected</i> = The vendor submitted an invoice that includes an <a href="#">out-of-balance</a> line, and you rejected it. The vendor can change the invoice so that it no longer contains an out-of-balance line, or can delete the invoice.</li> </ul> <p>Used by the Supplier Direct Fulfillment module.</p> |
| <b>labor cost</b>           | <p>The Labor Cost for a location is used to “shop” an order for fulfillment or sourcing as part of the <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> method when determining the cost to pick, pack, and ship an order. You can update the labor cost through the <a href="#">Location Bulk Updates</a> wizard.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>location</b>                | <p>A place where a product is sold, stocked, or available for pickup. A location can be a warehouse or store where you keep actual inventory. It can also be a virtual location such as a web storefront or a vendor. Locations are defined within an <a href="#">organization</a> both by the <a href="#">system</a> to which they belong and their <a href="#">location type</a>. You use the <a href="#">Locations</a> screen to work with locations.</p> <p>Order Orchestration stores information on a location, including address, phone number, and hours of operation. These fields are informational only; however, the name and address information for the location that is displayed in the <a href="#">locate items</a> response is derived from your entries at the <b>Location</b> screen.</p> <p><i>Created how?</i> You must create each location within Order Orchestration in order to integrate its inventory for locate items searches and other processing. You can create locations through <a href="#">Importing Locations through File Storage API</a>, the <a href="#">New Location</a> screen, or the Location Update request JSON message. See the Web Services Guide on My Oracle Support (2953017.1) for a discussion of this request message.</p> <p><i>Location address:</i> It is important that the location address be accurate, since the location address is used as the ship-to address for ship-for-pickup orders.</p> <p><i>Sort order:</i> The sort at the <a href="#">Preferences</a> and <a href="#">Probability Location</a> screens is in alphanumeric order within each organization. In other words, organizations are listed alphanumerically by name, as are location types within an organization, and locations within a location type. Since the sort is alphanumeric, numeric codes are listed before alphabetical codes; for example, location 123 is listed before location ABC.</p> <p><i>Location code requirements:</i> The location code is alphanumeric, can be 1 to 10 positions long, and must be unique within an organization and system. For example, you can have two locations with a code of 10 in the same organization, as long as each is associated with a different system.</p> <p><b>For more information:</b> See <a href="#">Data Hierarchy</a> for an overview of the relationships among Order Orchestration elements, including locations.</p> |
| <b>location category</b>       | <p>Indicates whether each <a href="#">location type</a> is a store (S) or a warehouse (W). Each location type must be assigned to one of these categories.</p> <p><i>Created how?</i> The 2 location categories are delivered with Order Orchestration and cannot be changed.</p> <p>Order Orchestration does not evaluate locations differently based on their category; the category is informational only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>location type</b>           | <p>Describes one or more locations within an organization. Each location type indicates the <a href="#">location category</a> (store, warehouse, or vendor), and can also provide additional information, such as “East Coast Stores” or “Outlet Stores.”</p> <p><i>Created how?</i> You must create each location type through the <a href="#">Location Types</a> screen.</p> <p><i>Location type requirements:</i> The location type code can be 1 to 10 positions long and must be unique within the <a href="#">organization</a>.</p> <p><i>Display in drop-down boxes:</i> The location type code and the location type name are displayed, separated by a hyphen (-).</p> <p><b>For more information:</b> See <a href="#">Data Hierarchy</a> for an overview of the relationships among Order Orchestration elements, including location types.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>location update request</b> | <p>A web service request to create or update a location.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|--------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>master style</b>                        | <p>Indicates a basic product type. For example, the master style for a green shirt, size large, identifies the shirt itself; the color and size might represent styles in a POS system such as Xstore, and represent SKU's in an order management and fulfillment system such as Order Administration. A master style can be defined at both the <a href="#">product</a> and the <a href="#">system product</a> levels.</p> <p><i>Master style requirements:</i> The master style can be 1 to 35 positions in length.</p> <p>The master style is informational only. Normally, you would never change the master style for a product in Order Orchestration.</p> <p><b>Order Administration integration:</b> The master style for Order Administration items is the base item number; the master style is populated only for SKU'd items and is set at both the product and system product levels, assuming that Order Administration is the <a href="#">default system</a>.</p>                                                                                                               |
| <b>OAuth</b>                               | <p>OAuth is a standard for web service authentication through the use of access tokens rather than passwords.</p> <p><a href="#">IDCS or OCI IAM</a> is required for the use of OAuth. When creating a User at the <a href="#">New Web Service User</a> window, specify the IDCS or OCI IAM Client ID of the client that generates the OAuth token.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>OCDS or Merchandising Omni Services</b> | <p>You can use the Omnichannel Cloud Data Service (OCDS) or the Merchandising Omni Services to import information from across the enterprise, including data that originates in Oracle Retail Merchandising Foundation Cloud Service (RMFCS).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>offline inventory</b>                   | <p>The inventory information (<a href="#">Available Quantity</a>, <a href="#">Next PO date</a>, and <a href="#">Next PO Quantity</a>) currently stored in Order Orchestration for a product location. Order Orchestration uses the offline inventory information in merchandise locator responses for product locations in:</p> <ul style="list-style-type: none"> <li>an <a href="#">offline system</a>: always</li> <li>an <a href="#">online system</a>: if Order Orchestration cannot receive an update from the system, and the <a href="#">No Offline Response Action</a> setting at the <b>Preference</b> screen is set to <i>Use offline</i>.</li> </ul> <p>Used by the Routing Engine module.</p>                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>offline system</b>                      | <p>An offline system is one which Order Orchestration does not request real-time inventory updates when it receives a <a href="#">locate items</a> request, <a href="#">product availability search</a> request, or needs to select a fulfilling location for a delivery order, either as part of initial order creation or through the status update process; instead, it relies on the available quantity stored in the Order Orchestration database (<a href="#">offline inventory</a>) to calculate the <a href="#">Available to Promise</a> quantity. Typically, inventory levels in the Order Orchestration database are updated daily, or whenever scheduled by your systems administrator.</p> <p><i>Specified how?</i> An offline system is identified by the Online flag being blank at the <a href="#">Systems</a> screen. You clear this flag by clearing the Online checkbox at the <a href="#">System</a> screen. Order Orchestration does not clear the connection information, if any, so that you can easily change an online system to an offline system and back again.</p> |

| Field                            | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>online system</b>             | <p>An online system is one from which Order Orchestration obtains interactive inventory updates when it receives a <a href="#">locate items</a> request, <a href="#">product availability search</a> request, or needs to select a fulfilling location for a delivery order, either as part of initial order creation or through the status update process.</p> <p><i>Specified how?</i> An online system is identified by the Online flag at the <a href="#">Systems</a> screen. You set this flag by selecting the Online checkbox at the <a href="#">System</a> screen. You must also provide connection information for Order Orchestration to use when requesting product and product location updates.</p> <p><i>Obtained how?</i> Order Orchestration either sends a RESTful service request to a specified URL. See the <a href="#">System</a> screen for more information.</p> <p><i>If no update available:</i> When Order Orchestration cannot obtain an interactive inventory update, it uses the available quantity stored in the Order Orchestration database (<a href="#">offline inventory</a>) to calculate the <a href="#">Available to Promise</a> quantity, if the <a href="#">No Offline Response Action</a> setting at the <b>Preference</b> screen is set to <i>Use offline</i>. The available quantity is updated either through a recent interactive inventory update, an incremental inventory update, or through the most recent product location import from the system. Typically, inventory levels in the Order Orchestration database are updated daily, or whenever scheduled by your systems administrator. See <a href="#">Import Process Overview (Other than RMFCS File Upload through OCDS or Merchandising Omni Services)</a> for background.</p> <p>If Order Orchestration is not able to obtain an interactive inventory update, and uses the offline inventory information as a result, it considers the product location offline for the purposes of evaluating it for a <a href="#">probability rule</a>.</p> <p><i>Update Offline Inventory?</i> If the <a href="#">Update Offline Inventory</a> flag for your organization is unselected, Order Orchestration checks with the online system for current inventory levels, but does not actually update the database with this information during this process. You might omit the database update step during the location shopping process in order to streamline performance.</p> |
| <b>Oracle Maps Cloud Service</b> | <p>This integration supports sending requests for latitude and longitude to the Oracle Maps Cloud Service when:</p> <ul style="list-style-type: none"> <li>• creating a new location, or updating the address of an existing location</li> <li>• searching for inventory for an order based on the customer's address, such as through a locate items request or a submit order message</li> </ul> <p>The Oracle Maps Cloud Service is supported only when the Use Proximity Locator option is selected at the <a href="#">Preferences</a> screen, and a Geocode Address is specified at the <a href="#">Tenant-Admin</a> screen.</p> <p>If the Oracle Maps Cloud Service is not implemented, the <a href="#">proximity location table</a> is required to support proximity location searches.</p> <p><b>For more information:</b> See <a href="#">Proximity Locator Searching</a> for an overview.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>organization</b>   | <p>The highest level of the Order Orchestration data hierarchy, an organization includes the systems and products that can integrate with each other for the purposes of inventory searches, as well as the locations where products are sold or stocked. If there is more than one organization within Order Orchestration, searches do not cross from one organization to another.</p> <p>The organization-level settings include defining whether ship-for-pickup orders are enabled, and the languages and data formats to use for certain system-generated emails.</p> <p><i>Created how?</i> You must create the organization through the <a href="#">Organizations</a> screen in Modern View as the first step in setting up data in Order Orchestration.</p> <p><i>Organization requirements:</i> The organization code can be 1 to 10 positions long and must be unique within Order Orchestration.</p> <p><i>Display in drop-down boxes:</i> The organization code and the organization name are displayed, separated by a hyphen (-).</p> <p><i>Display on screens:</i> The organization code and the organization name are displayed, separated by a space.</p> <p><i>Default:</i> On screens where the organization is available for searching or creating new records, this field is from the <i>Default Organization</i> defined through the <a href="#">Users</a> screen, but you can override it.</p> <div data-bbox="873 961 990 995" data-label="Section-Header"> <p><b>Note</b></p> </div> <div data-bbox="911 1010 1450 1075" data-label="Text"> <p>You must complete the <a href="#">Preferences</a> screen for an organization before you can select it.</p> </div> <p><b>For more information:</b> See <a href="#">Data Hierarchy</a> for an overview of the relationships among Order Orchestration elements, including organizations.</p> |
| <b>out-of-balance</b> | <p>An invoice detail line is out-of-balance if the vendor changes the unit price from the original purchase order unit price by more than the Unit Cost Threshold you specify for the vendor: for example, you set a threshold of 10%, and the vendor changes the unit price by 15%. Any change to unit price, either higher or lower than the original unit price, triggers out-of-balance evaluation. When the vendor submits the invoice, it does not post automatically to the originating system; instead, it remains in <i>Held</i> status until you either approve or reject it.</p> <p>The out-of-balance icon (  ) at the <i>Detail</i> tab of the <b>Invoice</b> screen indicates if the invoice detail line is currently out-of-balance.</p> <p>Used by the Supplier Direct Fulfillment module.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>pack slip</b>      | <p>The packing document that the vendor generates for drop ship purchase orders. Depending on the vendor's preference settings, the pack slip can be in PDF format, CSV format, both, or neither.</p> <p>Used by the Supplier Direct Fulfillment module.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Field                        | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>partial status update</b> | <p>An order line status update that specifies a unit quantity lower than the total quantity currently on the order line. For example, if the customer ordered 5 units and now wants only 4 units, the system might send a status update canceling 1 unit. Supported only if the Allow Partial Updates preference is selected for the organization. See <a href="#">Updating Order Status at the Line or Unit Level</a> for an overview.</p> <p>Used by the Routing Engine module.</p> |
| <b>Pickup By Date</b>        | <p>The last date before a pickup or ship-for-pickup order is eligible to be canceled by the <a href="#">auto-cancel unclaimed orders job</a>. Assigned when an order is first eligible for pickup, based on the settings of the <a href="#">Auto Cancel Days of Unclaimed Pickup Orders</a> and <a href="#">Auto Cancel Days of Unclaimed Ship For Pickup Orders</a> at the <b>Preferences</b> screen. See <a href="#">Auto-Cancel Unclaimed Orders</a> for a discussion.</p>         |
| <b>pickup location</b>       | <p>The <a href="#">location</a> where a customer picks up a <a href="#">ship-for-pickup order</a>. Might be the same as the <a href="#">placed location</a> or the <a href="#">sourcing location</a>. See <a href="#">Enable Ship-For-Pickup?</a> for a discussion.</p>                                                                                                                                                                                                               |
| <b>pickup order</b>          | <p>An order to be picked up by the customer at a specified location, without requiring the Routing Engine to facilitate transferring the inventory to that location. See <a href="#">Pickup Order</a> for more information.</p> <p>Pickup orders are supported regardless of whether ship-for-pickup orders are enabled.</p>                                                                                                                                                          |
| <b>placed location</b>       | <p>The <a href="#">location</a> (store or warehouse) that requested that an order be shipped, transferred, or prepared for pickup through the Routing Engine.</p>                                                                                                                                                                                                                                                                                                                     |

**Note**

An integrated system might use a different term for this location.

**polled order**

An order or order line for which the assigned fulfilling or sourcing location has been notified. Order lines flagged as polled are no longer be included in the fulfillments response message. The Routing Engine flags an order line as polled automatically if the fulfilling location's system's Require Status Update flag is unselected. Otherwise, if the Require Status Update flag is selected, the assigned fulfilling or sourcing location must send a status update of either *polled* (any order type) or *accepted* (pickup or delivery orders only).

**Note**

Flagging an order or line as polled does not necessarily change the order or line status to *polled*.

See [Require Status Update for Assigned Orders?](#) for a discussion.

Used by the Routing Engine module.

| Field                    | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>probability rule</b>  | <p>You can set up rules that indicate any adjustments to make to the <a href="#">Available to Promise</a> quantity, next PO date, or next PO quantity for a product location when you display this information in merchandise locator search results; or, you can set up a rule indicating not to include a product location in search results at all under certain conditions. Probability rules let you build additional intelligence into merchandise locator searches by accounting for predictable patterns in inventory activity.</p> <p><b>Setting up rules:</b> See the <a href="#">Probability Rule Wizard</a> for information on defining and assigning probability rules, including sample rules and an overview of rule hierarchy.</p> <p>Used by the Routing Engine module.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>probable quantity</b> | <p>A quantity, stored in the product_location table, based on the <a href="#">available to promise quantity</a> after applying an assigned probable quantity rule, if any. The probable quantity is available for an external system, such as your system, to retrieve in order to provide more accurate availability information on the web storefront, but this quantity is not returned in any messages to integrated systems or displayed on any screens.</p> <p>See the <a href="#">Inventory Quantity Export</a> for background.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>product</b>           | <p>A single inventory item that you sell in systems integrated with Order Orchestration. For example, you sell a pen as AB100 in Order Administration company 1. You sell the same pen as 345789123 in Xstore. Because your Order Administration System company is your <a href="#">default system</a>, the product is identified as AB100, and each of the related items in Xstore and other integrated systems is a <a href="#">system product</a>, but all are related to the main product.</p> <p><i>Created how?</i> Products are created in Order Orchestration when you use the product import process, download items, or export products from your <a href="#">default system</a>. You can also create new products at the <a href="#">Products</a> screen. Whenever you create a product, Order Orchestration also creates a <a href="#">system product</a> for the <a href="#">default system</a>.</p> <p><i>Product code requirements:</i> The product code can be 1 to 35 positions long, and must be unique within a <a href="#">organization</a>.</p> <p><i>Display on screens:</i> The product code and the product name are separated by a space.</p> <p><b>For more information:</b> See <a href="#">Data Hierarchy</a> for an overview of the relationships among Order Orchestration elements, including products.</p> <p>Used by the Routing Engine module.</p> |

| Field                              | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>product availability search</b> | <p>The Product Availability search message is similar to the <a href="#">locate items</a> search, except that the Product Availability search:</p> <ul style="list-style-type: none"> <li>• can include more than one transaction type (delivery, pickup, and ship-for-pickup) in a single request, and each type can include its own search range distance</li> <li>• does not include product location details for delivery searches, or for sourcing locations for ship-for-pickup searches; instead, it indicates:</li> <li>• if the entire requested quantity can be satisfied; otherwise,</li> <li>• if a partial quantity of the requested items can be satisfied, the maximum available quantity of each item</li> <li>• for a pickup request, always returns each item location that could partially fulfill the requested quantities of all requested items</li> <li>• for a ship-for-pickup request, returns each location where the customer could pick up the order</li> </ul> <p><b>For more information:</b> See <a href="#">Using Product Availability Search for a Pickup or Delivery Order</a>.</p> <p>Used by the Routing Engine module.</p> |
| <b>product location</b>            | <p>A record of a product within a location where it is stocked or sold. For example, an item warehouse record in Order Administration System corresponds to a product location.</p> <p>Order Orchestration stores availability information for the product location, including the available quantity and the date and expected quantity of any open purchase orders.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**Note**

A [system product](#) must first exist for the product and system owning the selected location before you can create a product location. For example, if product AB123 does not exist in Order Administration company 10, then you cannot create a product location for AB123 in company 10's warehouse 1.

*Available quantity updated when?* For an [offline system](#), the available quantity is updated only when you run the product import process or perform an inventory download from the system. For an [online system](#), Order Orchestration also updates the available quantity, next PO date, and PO quantity for the product location when it receives a response to an inventory inquiry. Typically, inventory levels in the Order Orchestration database are updated daily, or whenever scheduled by your systems administrator.

*Created how?* Typically, you create product locations through integrations with external systems. For example, product locations might be created as part of the product import process.

**For more information:** See [Data Hierarchy](#) for an overview of the relationships among Order Orchestration elements, including product locations.

| <b>product update request</b>       | An inbound message to create a new product, system product, and product locations without using the full import process. See the Web Services Guide on My Oracle Support (2953017.1) for more information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>proximity location table</b>     | <p>A table that stores U.S. zip codes and Canadian postal codes and the longitudes and latitudes of each, so this information is available for proximity locator searches.</p> <p>This table is used for proximity searches only when the <a href="#">Oracle Maps Cloud Service</a> is not implemented.</p> <p><b>For more information:</b> See <a href="#">Proximity Uploads</a> for more information on creating or updating the data in the proximity location table, and see <a href="#">Proximity Locator Searching</a> for background.</p> <p>Used by the Routing Engine module.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>proximity locator</b>            | <p>Provides the ability to search for a product location based on its distance from the customer's location. For example, the customer wants a certain product and would like to know if it is available within 25 miles from his home. If proximity locator searching is enabled, Order Orchestration can find eligible product locations within this distance from the customer.</p> <p>Proximity location is supported either through the <a href="#">proximity location table</a>, or through the <a href="#">Oracle Maps Cloud Service</a>, depending on whether the Geocode Address is specified at the <a href="#">Tenant-Admin</a> screen.</p> <p><b>For more information:</b> See <a href="#">Proximity Locator Searching</a> for background.</p> <p>Used by the Routing Engine module.</p>                                                                                                                                                                                                                                      |
| <b>request ID</b>                   | A unique number assigned by the Routing Engine to identify an order. See <a href="#">The Routing Engine</a> for an overview.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>requested location</b>           | <p>A location specified in the <a href="#">locate items</a> request message if the customer is interested in requesting availability information for that store location only. When the request message specifies a requested location, the Routing Engine:</p> <ol style="list-style-type: none"> <li>1. ignores the distance specified in the request and does not exclude the requested location based on proximity</li> <li>2. always returns the actual location in the response message, rather than the virtual location, regardless of the setting of the Group Shipment Locations flag on the <b>Preferences</b> screen, and regardless of whether the location would otherwise be excluded because you are using <a href="#">zone fulfillment</a> or because the location is within the same system and the Disallow shopping within same system flag is selected for the system</li> <li>3. always returns a response even if the <a href="#">Available to Promise</a> quantity is less than the requested quantity</li> </ol> |
| <b>reserved quantity</b>            | <p>The quantity on all order lines assigned to this product location that are in a status indicating the inventory is reserved and should not be assigned to new orders or listed in the <a href="#">LocateItems</a> response message. See <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p> <p>Used by the Routing Engine module.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>retail pickup order retailer</b> | <p>Not currently implemented.</p> <p>The system that submits drop ship purchase orders to vendors through the Supplier Direct Fulfillment module in Order Orchestration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Field                   | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>retailer user</b>    | A user who has access to Order Orchestration screens in order to work with either the Routing Engine, possibly including Store Connect; or the Supplier Direct Fulfillment module; or both.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>retailer's time</b>  | The time to display on most screens, to use on reports and for setting schedules. Based on the Time Zone specified at the <a href="#">Tenant (retailer information)</a> screen. See <a href="#">Time Zones</a> for a discussion, and for a listing of screens that use the <a href="#">user's time</a> zone instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Routing Engine</b>   | <p>The Order Orchestration module to:</p> <ul style="list-style-type: none"> <li>• select the best location(s) to fulfill a delivery order, either automatically based on criteria that you set for the enterprise, by providing a list of possible locations</li> <li>• selects the best location(s) to source a ship-for-pickup order, either automatically based on criteria that you set for the enterprise</li> <li>• help the customer select a location for a pickup order or a ship-for-pickup order</li> <li>• determine whether inventory is available in the enterprise to fulfill a delivery or ship-for-pickup order</li> <li>• create orders across the enterprise</li> <li>• notify locations about orders assigned to each location for shipment, transfer, sourcing, or pickup</li> <li>• track order status</li> <li>• provide information on current order status upon request</li> </ul> <p>The Routing Engine can use either the <a href="#">standard brokering</a> or <a href="#">weighted brokering</a> criteria when selecting a fulfillment or sourcing location. When weighted brokering is selected, the <a href="#">Science Engine</a> selects locations based on the information that the Routing Engine provides. See <a href="#">The Routing Engine</a> for an overview.</p> |
| <b>run job API</b>      | An API that enables a system to submit a job through a web service request, as an alternative to scheduling a job at the Schedule Jobs screen or running it on demand. See the <i>Run Job API Message</i> in the Web Services Guide on My Oracle Support (2953017.1) for more information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>sales velocity</b>   | A numeric ranking you can use to indicate how well a product sells in a particular location. You can use the sales velocity ranks assigned to product locations as part of the Order Orchestration criteria for selecting fulfilling locations for orders. Numeric, 2 positions with an optional 2-position decimal. See the <a href="#">Order Orchestration Settings Tab</a> at the <b>Preferences</b> screen and the <a href="#">Order Orchestration Preference Overrides</a> screen for more information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Science Engine</b>   | The module that selects the locations for shipment, transfer, or sourcing of delivery or ship-for-pickup orders based on data submitted to it by the <a href="#">Routing Engine</a> . This engine is used for location selection only when <a href="#">Use Weighted Brokering Rules</a> is selected at the <b>Preferences</b> screen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>setDSAcknowledge</b> | The message submitted by an <a href="#">integrated vendor</a> to confirm receipt of a batch of purchase orders. If the <a href="#">Require Acknowledgement</a> flag is selected for an integrated vendor, the acknowledgement is required to change the status of the purchase orders from <i>New Order</i> to <i>In Process</i> and generate the pack slip. See <a href="#">Vendor Integration</a> for background, and see the <i>Vendor Integration Guide</i> for details.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Field                        | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>SetDSAddress Change</b>   | The request message sent from an external system, such as Order Administration, to change the address on a drop ship purchase order. The request specifies whether to change just the shipping address, or both the shipping address and the sold-to address. Address changes are: <ul style="list-style-type: none"> <li>• applied automatically if the purchase order or item is in <i>New Order</i> status</li> <li>• submitted to the vendor for review if the purchase order or line is in <i>Held</i> or <i>In Process</i> status</li> <li>• rejected automatically if the purchase order or line is in <i>Shipped</i> or <i>Canceled</i> status</li> </ul>     |
| <b>setDSCancel</b>           | The request message sent from an external system, such as Order Administration, to cancel a line on a purchase order. Cancellations are: <ul style="list-style-type: none"> <li>• applied automatically if the line is in <i>New Order</i> status</li> <li>• submitted to the vendor for review if the line is in <i>Held</i> or <i>In Process</i> status</li> <li>• rejected automatically if the line is in <i>Shipped</i> or <i>Canceled</i> status</li> </ul>                                                                                                                                                                                                     |
| <b>setDSCostChange</b>       | The request message sent from an external system, such as Order Administration, to change the cost on a purchase order. Cost changes are: <ul style="list-style-type: none"> <li>• applied automatically if the line is in <i>New Order</i> status</li> <li>• rejected automatically if the line is in <i>Shipped</i> or <i>Canceled</i> status</li> </ul>                                                                                                                                                                                                                                                                                                            |
| <b>ship-for-pickup order</b> | An order that the customer picks up, and which can have the originating, sourcing, and pickup locations be three different locations, for example: <ul style="list-style-type: none"> <li>• order placed in warehouse A, inventory sourced from location B, and customer picks up in location C</li> <li>• order placed in location D, inventory sourced from location E, and customer picks up in location D</li> <li>• order placed in location F, inventory sourced from location F, and customer picks up in location G</li> <li>• order placed in location H, inventory sourced from location J, and customer picks up in location J</li> </ul>                  |
| <b>ship-to-store order</b>   | Not currently implemented.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>sourcing location</b>     | The <a href="#">location</a> providing the inventory for a <a href="#">ship-for-pickup order</a> . Can be the same as either the <a href="#">placed location</a> or the <a href="#">pickup location</a> , but not both. If the sourced location is different from the pickup location, the sourced location transfers the inventory to the pickup location. See <a href="#">Enable Ship-For-Pickup?</a> for background.                                                                                                                                                                                                                                               |
| <b>splitting orders</b>      | If the <a href="#">Allow Split Order</a> preference is selected, the Routing Engine assigns the lines on a delivery ship-for-pickup order to multiple fulfilling or sourcing locations if it cannot find a single location that could fulfill or source the entire order. This setting also affects the locations returned in the locate items response message and the product availability response message, and requires that status updates apply at the line level rather than the order level. See <a href="#">Selecting a Location for a Delivery Order</a> or <a href="#">Selecting a Sourcing Location for a Ship-for-Pickup Order</a> for more information. |
| <b>splitting lines</b>       | If the <a href="#">Allow Split Line</a> preference is selected, the Routing Engine assigns a single order line to multiple fulfilling or sourcing locations if it cannot find a single location to fulfill or source the entire line. This setting is available only if the <a href="#">Allow Split Order</a> preference is also selected. See <a href="#">Selecting a Location for a Delivery Order</a> or <a href="#">Selecting a Sourcing Location for a Ship-for-Pickup Order</a> for more information.                                                                                                                                                           |

| Field                                     | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>system time</b>           | Set to UTC (Coordinated Universal Time).his time zone is used for dates and times in the database and web service responses. See <a href="#">Time Zones</a> for a discussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>tenant</b>                | Use the <a href="#">Tenant-Admin</a> screen to review or work with attributes of your business in Order Orchestration at a level higher than the <a href="#">organization</a> , such as specifying which modules to use. The <i>Tenant - Admin</i> screen, available if you are an <a href="#">admin user</a> , includes additional settings required for cloud administration. Tenant-level settings apply to all your organizations in Order Orchestration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>turn-by-turn distance</b> | Optionally, you can use the actual turn-by-turn distance, rather than the straight-line (Euclidean) distance, to determine which locations are eligible to fulfill a delivery order using a specified carrier. This option is available only if you use <a href="#">Oracle Maps Cloud Service</a> . See <a href="#">Turn-by-Turn Distance Evaluation for Delivery Orders</a> for an overview.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>type</b>                  | See <a href="#">location type</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>under review</b>          | <p>A selected setting indicates that the fulfilling system needs to delay shipping or fulfilling the order until the flag is cleared.</p> <ul style="list-style-type: none"> <li>It is the responsibility of the integrating systems to prevent fulfillment of an order that is under review. Order Orchestration does not prevent fulfillment based on this setting.</li> <li>The items on orders that are under review are still included in the <a href="#">reserved quantity</a> calculation.</li> </ul> <p><b>Updates:</b> You can select this flag through the initial <a href="#">submit order message</a>, and can also update this flag:</p> <ul style="list-style-type: none"> <li>through the <a href="#">OrderUpdate message</a></li> <li>at the <i>Order</i> screen, if you have Order Maintenance authority</li> </ul> <p>The History tab of the <i>Order</i> screen displays a record of each time you change the setting of this flag.</p> <p><i>Hold under review?</i> If the order is fulfilled through <a href="#">Order Fulfillment through RICS Integration</a> and the <a href="#">Hold Under Review Orders</a> flag for the system is selected, the order is submitted for fulfillment when you clear this flag. See <a href="#">Order Fulfillment through RICS Integration</a> for background.</p> |
| <b>user's time</b>           | The time zone on the user's personal computer or specified in the user's browser. This is the time used to determine the date that defaults when you click the calendar icon. In most cases, the times displayed on screens and indicated in emails are in the retailer's time rather than the user's time. See <a href="#">Time Zones</a> for a discussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>vendor</b>                | The external organization that fulfills drop ship purchase orders for the retailer. Each purchase order processed through the Supplier Direct Fulfillment module is associated with a vendor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>vendor default system</b> | <p>A vendor default system is required before you can create any vendors to fulfill drop ship orders. An organization can have only one vendor default system.</p> <p>It is not necessary to specify any additional information for the vendor default system besides the organization, name, and this flag.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>vendor item</b>           | <p>The vendor's item code. The <a href="#">CreateDSOrder</a> message specifies the vendor item code for each item on a purchase order, and Order Orchestration creates the vendor item record automatically if it does not already exist.</p> <p>Used for the Supplier Direct Fulfillment module.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Field                     | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Vendor Portal</b>      | The external website that a vendor can use to review, print, report shipments on, and create invoices for drop ship purchase orders through the Supplier Direct Fulfillment module. Each vendor user has access to screens in the vendor portal listing information related only to that purchase orders for the associated vendor.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>vendor preferences</b> | <p>Preference settings specific to a vendor, including:</p> <ul style="list-style-type: none"> <li>pack slip generation output, such as whether to generate pack slips in PDF or CSV format, and whether the pack slip PDF should be graphical or nongraphical</li> <li>email addresses to receive notifications on purchase order activity</li> </ul> <p>A vendor user can also modify these settings with the required authority.</p> <p>See the <a href="#">Preferences tab</a> at the <b>New Vendor</b> or <b>Edit Vendor</b> screen for more information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>vendor user</b>        | A separate user login to the vendor portal, providing access to the purchase orders for the associated vendor. Authority for vendor users is controlled by a separate set of roles. See <a href="#">Roles</a> for more information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>virtual location</b>   | <p>The location that the Routing Engine uses in the <a href="#">locate items</a> response message to indicate that it can fulfill an order. The Routing Engine returns the virtual location in the response message only if you use the Group Shipment Locations option, indicating that requesting systems do not need to know which locations would be able to ship an order for the requested item(s), only that the order can be shipped (<a href="#">delivery order</a>) or sourced (<a href="#">ship-for-pickup order</a>).</p> <p>The <a href="#">locate items</a> response message lists the virtual location, rather than details on actual locations, if:</p> <ul style="list-style-type: none"> <li>the Group Shipment Locations flag at the <b>Preferences</b> screen is selected</li> <li>the Routing Engine receives a LocateItems request message with the fulfillment_type set to <i>DELIVERY</i> or <i>SHIPFORPICKUP</i></li> <li>the Routing Engine has found at least one location that should be able to fulfill or source each line on an order for the requested item(s) in the specified quantity(ies), or that is flagged as Backorder Available</li> </ul> <p>You do not need to create the virtual location in Order Orchestration.</p> |
| <b>web service</b>        | A programming component made available by a web server to perform specific programming tasks. For example, there is a discovery web service to supply an external system with the systems and locations set up in Order Orchestration for an organization.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>weighted brokering</b> | <p>The selection of shipping, transfer, or sourcing locations for delivery or ship-for-pickup orders by submitting information to the <a href="#">Science Engine</a>. The information submitted includes the criteria set up under the <a href="#">Weighted Brokering Tab</a> of the <b>Preferences</b> screen, information about the order line, a list of eligible locations, and other configuration settings such as whether split order is enabled. Weighted brokering is used only if Use Weighted Brokering Rules at the <b>Preferences</b> screen is selected. See <a href="#">The Routing Engine</a> for an overview.</p> <p>You can override weighted brokering rules by system and order type through the <a href="#">Order Orchestration Preference Overrides</a> screen.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

---

| Field                   | Definition                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>zone fulfillment</b> | <p>An option to restrict location selection for delivery orders based on the shipping address for an order, or based on the requesting location in a <a href="#">locate items</a> request. You can set up zones to include addresses based on country, state or province, or zip code prefix range. Also, you can specify one or more primary store or warehouse locations to fulfill orders within the zone, as well as one or more alternate locations to use if the merchandise is not available within the primary locations.</p> <p><b>For more information:</b> See <a href="#">Using Zones for Fulfillment</a>.</p> <p>Used by the Routing Engine module.</p> |

### General Order Orchestration questions

**Why can't I work with systems, event logging, preferences, proximity uploads, or user?**

Your user roles control this access. See [Roles](#) for more information.

**How do I know which version of Order Orchestration is installed?**

Select *Systems > About Order Orchestration...* to display the [About Order Orchestration](#) window.

**Why did my Order Orchestration session time out? How can I get back in?**

The UI Timeout setting at the [Tenant](#) screen specifies how many minutes to wait before timing out an inactive user session.

**Multiple sessions using same credentials?** If you have multiple active sessions, in different tabs of the browser, for products using the same authentication credentials, logging out of one session automatically logs you out of any additional active session. For example, if you have both an Order Orchestration session and a Store Connect session, and you log out of the Store Connect session, this automatically logs you out of the Order Orchestration session as well. If you attempt to log back into one of the sessions in this situation, you might encounter a message: You are already logged in. If this occurs, you can either return to the original URL for product, or you can close the browser and log back into one or both sessions.

**Why did Order Orchestration return an error: Inbound Message failed validation?**

Order Orchestration returns this error to a web service message if authentication is required for the web service and the request message was not sent with a valid authentication. See the [Web Service Authorization](#) screen for background.

**Why are my search results not correct?**

Unless otherwise indicated, codes and names in Order Orchestration, Store Connect, and Supplier Direct Fulfillment are case-sensitive (A is not the same as a). When searching for a specific record on a screen, you must enter the case correctly; for example, if you are searching for reason code CAN, you must enter C, CA, or CAN in the code field, and not c, ca, or can.

**Will trailing blank spaces in an inbound message cause an error?**

Order Orchestration trims any trailing blank spaces from the fields in inbound messages, so trailing blank spaces do not cause an error.

**Why can't I generate reports?**

All servers must have the same required fonts installed.

**How can I open the XLSX version of a generated report?**

If the XLSX version of the report does not open automatically in your browser, save the report file and then open it in with your spreadsheet application.

**Why are report files sent as email attachments named Untitled.dat?**

If your email server blocks the PDF or XLSX files as suspicious attachments, the files could be renamed as Untitled.dat. You can save the file and assign it the correct extension (PDF or XLSX), or you can request that your system administrator add the Order Orchestration server to an allow list so that the attachments are no longer blocked.

**Why don't scheduled imports, exports, and reports run at the scheduled times?**

**Time differences:** The times displayed on screens, and used for scheduled events such as imports, exports, and report generation, are based on the [retailer's time](#) as specified at the **Tenant** or **Tenant - Admin** screen. The retailer's time may be different from your local time (the [user's time](#)). For example, if the retailer's time zone is two hours later than your local time zone, then an import scheduled at 8:00 runs at 10:00 in your local time. See [Time Zones](#) for a discussion.

**Resolving scheduling issues:** The *Reschedule All* option at the [View Active Schedules](#) screen stops and restarts the schedules for all jobs and periodic programs in the case of an interruption. Also, you use this option to start running all scheduled jobs and programs when first configuring Order Orchestration, or after applying an upgrade.

Note that the *Reschedule All* option does not restart jobs that are in Paused status (⏸). Jobs stay in Paused status only briefly before Order Orchestration restarts them automatically.

**Where can I find information on import and export file layouts and mapping?**

See [Importing Locations through File Storage API](#), [Importing Products and System Products through File Storage API](#), [Importing Product Locations through File Storage API](#), and [Importing UPC Barcodes through File Storage API](#) for import details, file layouts, and data mapping.

See the [System](#) screen for information on the probable quantity export, incremental inventory import, and fulfilled inventory export.

**Is personally identifiable information logged?**

All personally identifiable information for customers, vendors, or locations is removed from logs. Personally identifiable information includes names, address, email addresses, phone numbers, customer numbers, and tender accounts.

The personally identifiable information is replaced in the log entry with the text \*\*\* Removed by Logger \*\*\*. For example, the email address might appear in the log as <email>\*\*\* Removed by Logger \*\*\*</email>.

**Where are date, time, and numeric formats defined?**

The date, time, and numeric formats displayed on Order Orchestration screens are defined at the [Users](#) screen.

The date, time, and numeric formats in system-generated emails are defined for the organization (see the [Organizations](#) screen).

**Where are language settings defined?**

The language settings include:

1. screens: the URL used for Order Orchestration
2. system-generated emails: the Language specified for the organization (see the [Organizations](#) screen) or at the [Event Logging](#) screen

**How are product import error files cleared?**

Product import error and part files are cleared by the Daily Clean Up job; see [Schedule Jobs](#) for more information.

**How to resolve data cut off on screens or unnecessary scrollbars?**

Depending on the browser you are using, the font size in your browser, the zoom level in your browser, and the Display settings for your computer, the last months in the volume tables at the [Tenant \(retailer information\)](#) screen may be cut off, or unnecessary scrollbars may be displayed on certain screens or windows.

Some things to try:

- Make sure your computer's Display setting is at 125% or less, and zoom out (-) if needed in the browser.
- Decrease the font size in the browser.
- If you prefer to leave the computer's Display setting at the default, try another browser; for example, the last month may be cut off in Firefox, but displayed correctly in Chrome.

**Why is the online help slow to load, or why is the online help search slow?**

It may be necessary to clear your browser's cache or recent history in order to correct an online help performance issue.

**Why are screens displaying asterisks rather than personal information?**

Data can be anonymized through the [Completed Order Private Data Purge](#) job, or through a web service request. Once the data is anonymized, it is replaced with asterisks, and cannot be recovered. The types of personal data that can be anonymized are:

- Customer names, addresses, email addresses, and phone numbers (both sold-to and ship-to) on both sales orders and purchase orders
- vendor names, addresses, email addresses, and phone numbers
- Order Orchestration user names and email addresses
- Vendor user names and email addresses
- Store Connect associate names and email addresses
- Brand contact names and email addresses

See [Anonymizing Data](#) for background.

**Why aren't screens displaying the organization hierarchy correctly?**

Screens that display the organization hierarchy, such as the [Probability Location](#), [Probable Quantity Location](#), or [Preferences](#) screens, can't display this hierarchy until a default organization is defined for the default admin user. See [Assign the default organization to the default user](#) for more information.

**Why do I advance to a blank screen after logging out, rather than a login screen?**

This issue can occur when the URL for Order Orchestration includes http rather than https. The URL should always use https.

**Why does the Select Organization window open when I log into Order Orchestration?**

This window opens if you have not been assigned a *Default Organization* through the Organizations tab from the [Users](#) screen. The window displays all organizations that you have authority to, based on the *Allow* settings at the Organizations tab.

Once a *Default Organization* is assigned, you see that organization at the top of the Modern View screen, and order and customer data from that organization is displayed automatically in Classic View.

If the user doesn't have access to any organizations, the Select Organization window displays a message indicating to contact a system administrator.

**Why does a user advance to the Unauthorized Access screen when attempting to log into Order Orchestration?**

This situation can occur if the user is configured in IDCS (Oracle Identity Cloud Service) or OCI IAM (Oracle Cloud Infrastructure Identity and Access Management) for another application, such as Order Management System, but does not have access to Order Orchestration, and they attempt to log into Order Orchestration.

After the user completes entry of their IDCS or OCI IAM credentials, **Unauthorized Access** screen opens. The options at this screen are:

- *Retry*: The user can select this option to advance to Order Orchestration only if a system administrator has granted access while the **Unauthorized Access** screen is open.
- *Cancel*: Exit the screen.

**Why does a user advance to the Unauthorized Access screen when attempting to log into the Vendor Portal?**

This situation can occur if the user is configured in IDCS (Oracle Identity Cloud Service) or OCI IAM (Oracle Cloud Infrastructure Identity and Access Management) for another application, such as Order Orchestration, but does not have access to the Vendor Portal.

After the user completes entry of their IDCS or OCI IAM credentials, **Unauthorized Access** screen opens. The options at this screen are:

- *Retry*: The user can select this option to advance to the Vendor Portal only if a system administrator has granted access while the **Unauthorized Access** screen is open.
- *Logout of SSO*: Exit the screen and log out of any open applications that use the same SSO account.

**Why does a user see a message indicating that they do not have any stores assigned when attempting to log into Store Connect?**

This situation can occur if:

- The user has access to Store Connect, but has not been provided with authority to any store locations through the [Users](#) screen, or;
- The user is configured in IDCS (Oracle Identity Cloud Service) or OCI IAM (Oracle Cloud Infrastructure Identity and Access Management) for another application, such as Order Orchestration, but does not have access to Store Connect.

**What is the Inactivity Timeout screen?**

You advance to the **Inactivity Timeout** screen if your Order Orchestration session has been inactive for the number of minutes specified as the [UI Timeout](#) at the **Tenant-Admin** screen. This screen provides an option to log back into Order Orchestration by re-entering your credentials.

**Vendor Portal timeout:** A vendor user advances to the **Inactivity Timeout** screen if the Vendor Portal session has been inactive for the number of minutes specified as the [Portal UI Timeout](#) at the **Drop Ship Preferences** screen. This screen provides an option for the vendor user to log back into the Vendor Portal by re-entering credentials.

**Is it OK to log out of Order Orchestration by closing the browser tab?**

You should always log out of Order Orchestration by selecting the X on the upper right of the screen, and out of Order Orchestration Modern View by selecting Logout under your user name. If you simply close the browser tab, you may not be able to log back into Order Orchestration without closing the browser session and restarting a new session. Similarly, a vendor user should always log out of the Vendor Portal by selecting the X on the upper right.

Note that if you select Login after logging out from Modern View, you return to the Classic View home screen.

**Is it OK to have Order Orchestration open in one tab and another Oracle Retail application open in another tab if you use the same IDCS or OCI IAM credentials for both applications?**

Use care when you have Order Orchestration and another Oracle Retail application, including the Vendor Portal, open in different tabs of the same browser session if you use the same IDCS (Oracle Identity Cloud Service) or OCI IAM (Oracle Cloud Infrastructure Identity and Access Management) credentials for both. Logging out or timing out of a session for one application may affect your login status in the other application. To prevent possible issues, open each Oracle Retail application in a separate browser session rather than in different tabs of the same session.

**What are the supported languages?**

To specify a different language, append the code from this list to the end of the Order Orchestration URL:

- zh\_CN—Chinese (simplified)
- nl\_NL—Dutch
- fr\_FR—French
- de\_DE—German
- it\_IT—Italian
- ja\_JP—Japanese
- pt\_BR—Portuguese (Brazilian)
- ru\_RU—Russian
- es\_ES—Spanish
- sv\_SE—Swedish

**Switching between Classic View and Modern View:** If you advance from Classic View to Modern View, the currently selected language applies in the current session. If you are in Modern View and select a different language by changing the code at the end of the URL, the newly selected language applies when you return to Classic View in your current session.

To switch to a different language after logging out, you need to either clear your browser cache or append the new language code to the end of the URL.

### How to use the View options in Modern View

The View options drop-down is available in Modern View screens to control the columns displayed on each screen, the default sort, and how scanning works for individual columns.

This drop-down provides the following options:

- **Manage Columns:** Select this option to open a window where you can select the individual columns to display on the screen, or click X to remove a column. When you click X for a column, it moves to the right, where it is available for re-selection. All columns are selected by default.

After making any changes, you can select Reset to Defaults to restore any columns you have removed. To restore an individual column that you have removed, select Add for that column.

Click OK to apply your changes, or click Cancel to restore the defaults.

- **Sort:** Select this option to open a window where you can select any of the displayed columns and indicate whether to sort in Ascending or Descending order.
- **Query by Example:** The query by example option is selected by default, and enables you to enter search criteria above each of the columns in order to filter the displayed records to those matching your criteria. Optionally, you can deselect Query by Example to remove the blank row above the displayed records and remove the option to enter search criteria.

See each individual screen for information on how the filtering works for each field, for example, whether to display matches that start with the criteria or are an exact match.

### How to use the Filter Options in Modern View

The Filter Options drop-down is available in Modern View screens to control how the search results match the search criteria entered for multiple columns.

- **Column Match “AND”:** Records must match all entered search criteria to be displayed in search results.
- **Column Match “OR”:** Records must match at least one of the entered search criteria to be displayed in search results.

The screen displays the matching records when you tab through each search field.

## Merchandise Locator and Routing Engine questions

### Why are no products displayed at the Products screen?

When you initially install Order Orchestration, there are no products in its database. You need to perform the steps described in [Setting Up Data for the Routing Engine Module](#) and then continue importing products or items from your default system.

Another possibility is that the cached information in the browser needs to be refreshed. To prevent this issue from occurring, if you use Internet Explorer:

1. Select *Tools > Internet Options*.
2. In the **Internet Options** window, select the *Advanced* tab.
3. Scroll down to the **Security** options and select *Empty Temporary Internet Files folder when browser is closed*.
4. Click OK to apply the change.

### How can I tell when the availability information for a product location was last updated?

This information is displayed at the [Browse Product Locations](#) window. Availability information can be updated by:

1. the [import process](#)
2. responses to inventory inquiries sent by Order Orchestration, if the location is in an [online system](#)
3. entry at the [New Product Location](#) screen or the [Edit Product Location](#) screen
4. the incremental inventory update (see the *Incremental Inv Update* tab of the [System](#) screen)

### Why are there no product locations for a product?

Confirm that the location was created in Order Orchestration, as described in [Setting Up Data for the Routing Engine Module](#).

### How can I display the probability rule assignments for a location, location type, or organization?

See the [Probability Location](#) screen.

**Probable quantity rules:** You use the [Probable Quantity Location](#) screen rather than this screen to assign probable quantity rules, which update the [probable quantity](#) that a system, such as your ecommerce site, can use to estimate an item's availability. For more information, see:

- the [Probable Quantity Rules](#) screen
- the [Probable Quantity Location](#) screen
- the *Probable Qty Export* tab at the [System](#) screen

### Why can't I display the New Location screen?

You need to first set the Use Proximity Locator preference at the [Preferences](#) screen. See [Setting Up Data for the Routing Engine Module](#) for an overview.

### Why isn't an Item # displayed at the Order screen?

If your user ID is not assigned a Default Organization at the [Users](#) screen, the Item # might not be displayed at the *Details* tab on the [Order](#) screen.

### Why did a rejected order stay in rejected status?

This can occur if the [Default Unfulfillable Location](#) is not associated with the default system for your organization, because Order Orchestration cannot reshop the order unless there is a system product record for the system associated with the Default Unfulfillable Location.

**Why was an entire order assigned to the Default Unfulfillable Location when it could have been partially fulfilled?**

The Routing Engine does not initially create an order or line as partially unfulfillable. If there is no location that can fulfill the entire requested quantity of an order or line, or is flagged as Backorder Available, the entire order is assigned to the Default Unfulfillable Location.

**How can I determine why an individual location was filtered as a sourcing location for an order?**

Use the [Trace Shopping Log](#) screen to review the reasons why the Routing Engine eliminated each possible location from sourcing the order.

- The Routing Engine traces shopping logic only if the [Trace Shopping Logic](#) field is set to *Detailed* at the **Event Logging** screen. Typically, you would select to trace shopping logic only to research why certain locations are or aren't selected to fulfill orders.
- These history records are retained only for the number of Trace Log History days specified at the [Tenant-Admin](#) screen; after that number of days, the [daily cleanup job](#) automatically deletes the records.

**Supplier Direct Fulfillment and Store Connect questions**

**Why can't I create a vendor?**

You cannot create a vendor for an organization until you create the default vendor system. See the [default vendor system](#) for background.

**What is the DS Vendor location type?**

The DS Vendor location type is required for you to create vendors for your organization. Order Orchestration automatically creates the [DS Vendor location type](#) for an organization when you create the [default vendor system](#). You should not delete the DS Vendor location type.

**How to resend invoices to the order management system?**

If the order management system did not receive and create the invoices, you can resend one or more invoices by setting the `posted_date` in the `vendor_invoice` table to NULL. Order Orchestration then includes these invoices in the `GetDSInvoicesResponse` message the next time it receives the request from the order management system.

**Why does the Vendor Portal link in an email to the vendor open the Vendor Portal in a different language?**

The VPA Url specified at the [Drop Ship Preferences](#) screen defines the link to the Vendor Portal to embed in emails to vendors, while the locale appended to the Vendor Portal URL controls the language displayed on Vendor Portal screens. Because each vendor's locale is not automatically appended to the Vendor Portal link embedded in the email, clicking the link may bring the vendor to the Vendor Portal with a different language displayed.

For example, if the VPA Url specified includes a French locale, but an individual vendor uses an English locale, when the vendor clicks the Vendor Portal email in an email, the Vendor Portal opens with French displayed on screens.

**Which currency symbols are supported in emails?**

| ISO 4217 Code | Symbol | Name           | Countries                |
|---------------|--------|----------------|--------------------------|
| CAD,MXN,USD   | \$     | Dollar         | Canada, Mexico, USA      |
| EUR           | €      | Euro           | Euro Zone                |
| GBP           | £      | Pound Sterling | United Kingdom           |
| JPY           | ¥      | Yen            | Japan                    |
| KPW,KRW       | ₩      | Won            | North Korea, South Korea |
| ILS           | ₪      | New Shekel     | Israel                   |
| INR           | ₹      | Rupee          | India, Bhutan            |

| ISO 4217 Code | Symbol | Name    | Countries   |
|---------------|--------|---------|-------------|
| MNT           | ₮      | Tugrik  | Mongolia    |
| PHP           | ₱      | Peso    | Philippines |
| PYG           | ₲      | Guarani | Paraguay    |
| UAH           | ₴      | Hryvnia | Ukraine     |
| VND           | ₫      | Dong    | Vietnam     |

**Note**

If one of the above currency codes was not specified when the order was created, no currency symbol is included in the email notification.
