This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

## 17 Oracle Legal Notices

---

# Preface

Oracle Retail Order Orchestration Cloud Service includes the following modules:

- Routing Engine: Distributed order broker that determines inventory availability across the enterprise, and uses advanced business rules to select locations that can fulfill orders.
- Supplier Direct Fulfillment: Web-based vendor portal enabling vendors to share purchase orders and shipping information to simplify drop shipment.
- Store Connect: Web portal that enables store associates to process and fulfill omni-channel orders.

## Overview

This guide outlines the screens you use for configuring Order Orchestration Cloud Service and reviewing existing orders, purchase orders, and other existing data such as products and locations.

We welcome your comments and suggestions to improve the content. Please send us your feedback at [retail-doc\\_us@oracle.com](mailto:retail-doc_us@oracle.com).

## Audience

This document is intended for the users and administrators of the Oracle Retail Order Orchestration Cloud Service.

## Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>

## Customer Support

To contact Oracle Customer Support, access My Oracle Support at the following URL:

<https://support.oracle.com>

When contacting Customer Support, please provide the following:

- Product version and program/module name
- Functional and technical description of the problem (include business impact)
- Detailed step-by-step instructions to re-create
- Exact error message received
- Screen shots of each step you take

## Oracle Help Center (docs.oracle.com)

Oracle Retail product documentation is available on the Oracle Help Center at <https://docs.oracle.com/en/industries/retail/index.html>.

## Comments and Suggestions

Please give us feedback about Oracle Retail Help and Guides. You can send an e-mail to: [retail-doc\\_us@oracle.com](mailto:retail-doc_us@oracle.com)

## **Oracle Retail Cloud Services and Business Agility**

Oracle Retail Order Orchestration Cloud Service is hosted in the Oracle Cloud with the security features inherent to Oracle technology and a robust data center classification, providing significant uptime. The Oracle Cloud team is responsible for installing, monitoring, patching, and upgrading retail software.

Included in the service is continuous technical support, access to software feature enhancements, hardware upgrades, and disaster recovery. The Cloud Service model helps to free customer IT resources from the need to perform these tasks, giving retailers greater business agility to respond to changing technologies and to perform more value-added tasks focused on business processes and innovation.

Oracle Retail Software Cloud Service is acquired exclusively through a subscription service (SaaS) model. This shifts funding from a capital investment in software to an operational expense. Subscription-based pricing for retail applications offers flexibility and cost effectiveness.

# 1

## Order Orchestration Routing Engine Overview

**Overview:** Order Orchestration provides a gateway to inventory availability across all sales channels. When used with a call center, store point-of-service, ecommerce, or other customer-facing application, Order Orchestration enables you to offer your customers multiple purchasing options, such as store pickup. You can use Order Orchestration's Routing Engine module to automatically select the best location to fulfill customer orders across the enterprise, and to track customer orders from creation through fulfillment. In addition, with Order Orchestration's statistical data, you can optimize inventory disbursement to ensure appropriate stock levels in each salable location.

**About Supplier Direct Fulfillment:** See the [Supplier Direct Fulfillment Overview](#).

**About Store Connect:** See the [Store Connect Overview](#).

## The Routing Engine

**Overview:** Use Order Orchestration's Routing Engine module to:

- determine whether products are available across the enterprise
- select the best location to source an order or line, either automatically based on criteria that you set for the enterprise, or by providing a list of possible locations
- help the customer select a location where s/he can pick up an order
- create orders across the enterprise
- notify locations about assigned orders
- track order or line status

### Types of Orders

The types of orders that the Routing Engine supports are described briefly below.

- [Delivery Order](#)
- [Pickup Order](#)
- [Ship For Pickup Order](#)
- [Summary of Order Types](#)

#### Important

When you create a new organization in Order Broker 20.0 or higher, ship for pickup orders are automatically enabled, and in this case retail pickup and ship-to-store orders are not supported. When you update to Order Broker 21.0 or higher, ship for pickup orders are automatically enabled in all existing orders, and in this case retail pickup and ship-to-store orders are converted to ship-for-pickup orders.

**For more information:** See [About Ship-for-Pickup Orders](#) for background.

### Delivery Order

The Routing Engine can select a location to ship an order to the customer, or staff can designate a location. You would typically use this option to ship an order even though the desired products are backordered in the originating location.

*Example 1:* The customer wants to buy a product from a retail location, but the product is out of stock. The location submits the order to the Routing Engine, specifying that the order be shipped directly to the customer from a nearby distribution center.

*Example 2:* The customer orders a product on the web storefront. Since the product is currently backordered in the warehouse, the order management system submits the order to Order Orchestration for fulfillment. The Routing Engine automatically selects a location to fulfill the order, and the selected location ships the product directly to the customer.

### Pickup Order

A location submits a pickup order to the Routing Engine when the customer has already selected a location where s/he would like to pick the order up and where the inventory is available. You would typically use this option to enable the customer to pick up the order at a nearby store that already has the inventory on-hand rather than wait for shipment.

*Example:* The customer contacts the call center to see if a product can ship from the warehouse. Since the product is currently backordered in the warehouse, the CSR helps the customer select a nearby store where the product is currently in stock, so the customer can pick it up there.

### Ship For Pickup Order

A ship-for-pickup order is one that the customer picks up at a designated location, and that can have a separate placing, sourcing, and pickup location, although any two of these locations can be the same.

*Example 1 (three different locations):* The customer places an order on the web site (location A) and wants to pick the order up at location B. The Routing Engine “shops” the order and selects location C as the sourcing location. Location C ships the inventory to location B, where the customer can pick it up.

*Example 2 (placed location and pickup location are the same):* The customer places an order at location A and also wants to pick the order up at location A. The Routing Engine “shops” the order and selects location B as the sourcing location. Location B ships the inventory to location A, where the customer can pick it up.

*Example 3 (sourced location and pickup location are the same):* The customer places an order by phone (location A) and wants to pick the order up at location B. When the order is submitted to the Routing Engine, the requested item is available at location B, so it is selected as the sourcing location. Once the order is ready at location B, the customer picks it up.

This order flow resembles the pickup order.

*Example 4 (placed location and sourced location are the same):* The customer places an order by phone (location A) and wants to pick the order up at location B. The distribution center has the inventory available, and ships it to location B. Once the order is ready at location B, the customer picks it up.

The pickup location for a ship-for-pickup order must be specified in advance, and cannot be changed. The sourcing location can also be specified in advance, or the Routing Engine can select the sourcing location. If the selected sourcing location cannot source the order, then the order can be “reshopped” so that another sourcing location is assigned.

**Summary of Order Types**

The different types of orders are summarized below.

**! Important**

When you create a new organization in Order Broker 20.0 or higher, ship for pickup orders are automatically enabled, and in this case retail pickup and ship-to-store orders are not supported. When you update to Order Broker 21.0 or higher, ship for pickup orders are automatically enabled in all existing orders, and in this case retail pickup and ship-to-store orders are converted to ship-for-pickup orders.

**For more information:** See [About Ship-for-Pickup Orders](#) for background.

| Purpose                                     | Delivery                                                                                    | Pickup                                                                                                                          | Ship for Pickup                                                                                                                                              |

### Selecting the Location for a Pickup Order (LocateItems)

**Purpose:** The submit order message for a pickup order needs to specify the fulfilling location and system. You can use the locate items message to request a listing of locations that should be able to fulfill an order for one or more products in a specified area.

**Which locations have a product available for pickup?** A pickup order means that the customer will pick up the product(s) in a location where the inventory is available, and it does not need to be transferred from a different location. If the request message indicates that the fulfillment type is a pickup:

- The response message lists each location where the product is stocked, is flagged as Pickup Available, and has a quantity available that meets or exceeds the quantity specified in the request message; also, the response provides information such as the available quantity and the date and quantity of the next expected purchase order. If the customer requests more than one item, the response message lists locations where all requested items are available for pickup.
- Once the customer specifies the location where s/he would like to pick up the product(s), you can then send the SubmitOrder request message, providing the customer information, requested products, and selected location.

#### Note

Optionally, the request message can specify a [requested location](#) if the customer has a preferred store and wants to check on availability in that store only.

**For more information:** See [Calculating the Available to Promise Quantity](#) and [Using Probability Rules](#) for information on factors that affect the available quantity.

*Example:*

A customer wants to pick up an item at a nearby store. The LocateItems request indicates:

- the item (AB100 in a quantity of 5)
- the postal code where the customer is located (01581)
- the distance (in miles or kilometers) that the customer is willing to travel (15 miles)

The LocateItems response lists:

- store location 23: 10.72 miles from the customer

- store location 57: 13.51 miles from the customer

The response also includes the available quantity in each location, information on any open purchase orders, and the store's address.

**Cannot split:** Pickup orders cannot be split across multiple fulfilling locations. To split a pickup order, the originating system needs to submit the request for each location as a separate order.

**Exclude Locations with Zero Available?** If the Exclude Locations with Zero Availability setting at the [Preferences](#) screen is selected, any possible product locations whose current available to promise quantities are 0 or less are excluded from consideration before the application of any potential probability rules.

**Gift wrap?** If the gift\_wrap tag in the request is set to Y and the [Use Attribute Rules](#) flag is selected at the **Preferences** screen, only locations that are flagged to support gift wrap are eligible for the pickup order.

### Locate Items Sort Order, Pickup Request

If Use Weighted Brokering Rules is selected at the **Preferences** screen, the locations are listed in proximity sequence.

If Use Weighted Brokering Rules is not selected (Standard Brokering), the locations returned in the response are sorted based on the same Order Orchestration criteria that apply to delivery orders unless you use the **Order Orchestration Preference Overrides** screens to set up preference overrides. Otherwise, the organization-level settings apply to all systems and order types, and the number of eligible locations exceeds the Maximum No. Responses, it is possible that the store location closest to the customer might not be included in the search results, even if it has the requested item(s) available.

*Example:* On Hand Count is the first criterion under the *Order Orchestration Settings* at the **Preferences** screen, and the Maximum No. Responses is set to 5.

The available quantity of the requested item in each eligible location is:

1. 100 in location A, 20 miles away
2. 90 in location B, 25 miles away
3. 80 in location C, 19 miles away
4. 70 in location D, 15 miles away
5. 60 in location E, 10 miles away
6. 50 in location F, 5 miles away

Because location F is the sixth location, it is not included in the search results, even though it is the closest to the customer's address.

However, if you use the **Order Orchestration Preference Overrides** screen to set up an override for the system to sort first on proximity when the order type is Pickup, then location F is returned first in the search results.

**For more information:** See [Calculating the Available to Promise Quantity](#) and [Using Probability Rules](#) for information on factors that affect the available quantity.

### Selecting a Location for a Delivery Order

**Overview:** You can have the Routing Engine select the fulfilling location for a delivery order.

**Splitting orders or lines?** The Allow Split Order preference controls whether it is possible to split a delivery order across multiple fulfilling locations. If this preference is selected, the Routing Engine splits orders if needed to fulfill the order, and the submit order message can specify multiple fulfilling locations for an order. If the Allow Split Line preference is also selected, the Routing Engine splits the quantity of a single order line across multiple fulfilling locations if necessary.

**Weighted or standard brokering?** The Use Weighted Brokering Rules setting at the **Preferences** screen controls how the Routing Engine “shops” for fulfilling locations:

- **Standard brokering:** If Use Weighted Brokering Rules is *not* selected, the Routing Engine selects fulfilling locations based on the Standard Brokering criteria, including proximity, on-hand count, location priority, last order assigned, and sales velocity rank.
- **Weighted brokering:** If Use Weighted Brokering Rules is selected, the Routing Engine filters the list of eligible fulfilling locations for an order and submits the list, along with information on the order line(s) and configuration data, such as weighted brokering settings, to the Science Engine module for brokering. The Science Engine evaluates the data and either assigns the fulfilling location(s) or returns a reason code indicating why the order or line(s) could not be fulfilled.
- Weighted brokering is used to select fulfilling locations for the Submit Order message, Product Availability message, and “reshopping” an order or line; however, it is not used for the Locate Items message. Locations in the Locate Items response are listed in order of proximity, and do not reflect any Science Engine calculations.

You can use weighted brokering to select fulfilling locations that are more profitable. For example, you can give preference to locations that have a lower labor cost or to product locations where the in-store margin (selling price - cost) is lower than the margin for an online sale.

The use of each method to select fulfilling locations is described below.

## Locate Items Request for Delivery Order

### ① Note

Selecting a sourcing location for a ship-for-pickup order is very similar. See [About Ship-for-Pickup Orders](#) for key differences.

**Which locations have the product(s) available for shipment or transfer?** A delivery order means that the product(s) should be shipped to the customer's home.

### ① Note

The locations where a product is available for pickup might differ from the locations where a product is available for shipment, based on the settings of the Pickup Available, and Delivery Available flags. For example, you might flag your retail store locations as Pickup Available and your warehouse as Delivery Available.

**Grouping shipments?** The Group Shipment Locations setting at the **Preferences** screen controls how the LocateItems response works for delivery requests:

- If the Group Shipment Locations preference unselected, the response message lists locations where the available quantity should be able to fulfill the order. The logic is described below.
- If the Group Shipment Locations preference is selected, the Routing Engine uses the same logic described below for when the preference is unselected; however, the response does not include details on each location that can fulfill the order. Instead, the response just includes the virtual (non-existent) location, indicating that the order can be fulfilled through the Routing Engine.

The chart below illustrates the logic used to select locations to include in the response message if the Group Shipment Locations preference is unselected, the Allow Split Order preference is selected, the request message does not specify a [requested location](#), and splitting is not prohibited based on carrier. If the request is subject to [zone fulfillment](#), then the eligible locations considered are restricted to the primary or alternate locations specified for the zone.

### ① Note

The response includes the virtual location even when the only locations that meet the criteria are backordered, if they are flagged as Backorder Available.

**Basic evaluation:** To be included in the LocateItems response message without splitting a potential order or line, a location must:

- have a quantity available that is not less than the requested quantity after applying any active probability rules, or be flagged as Backorder Available. If the request specifies more than one product the response message includes locations only if they stock both (or all) products in the request message.
- be flagged as Delivery Available

- be within the proximity specified in the LocateItems request message based on the postal code indicated (**Note:** The SubmitOrder message does not specify a proximity radius)
- Not be excluded:
  - because it is within the same system as the requesting location, if the Disallow shopping within same system flag is selected at the **System** screen.
  - based on the Maximum No. Responses specified for the organization.
  - because the total number of delivery or ship-for-pickup orders assigned for fulfillment or sourcing for the current date meets or exceeds the Maximum Daily Orders limit specified at the [Preferences](#) screen. This evaluation takes place only if the Use Maximum Order Limits preference is selected; see [Using Maximum Daily Order Assignment](#) for more information.
  - based on any probability rules for which the location(s) or items are eligible. These rules apply before determining which locations to include in the response, and the availability information (available quantity, next purchase order date, and next purchase order quantity) to provide. For example, if a probability rule for a location indicates to reduce the available quantity by 10, Order Orchestration subtracts 10 from the availability quantity that is indicated in the response message.

**Exclude Locations with Zero Available?** If the Exclude Locations with Zero Availability setting at the [Preferences](#) screen is selected, any possible product locations whose current available to promise quantities are 0 or less are excluded from consideration before the application of any potential probability rules.

**Gift wrap?** If the gift\_wrap tag in the request is set to Y and the [Use Attribute Rules](#) flag is selected at the **Preferences** screen, only locations that are flagged to support gift wrap are eligible.

**Zone fulfillment?** If you use zones for fulfillment and the shipping address is within a zone, only locations specified for the zone are eligible for selection through the Routing Engine. See [Using Zones for Fulfillment](#) for more information.

**Specific location requested?** If the request message specifies a requested location such as the customer's favorite store, then the response message includes only the requested location in the response, regardless of the Order Orchestration rules set up at the **Preferences** screen or whether the location is otherwise eligible (for example, through zone fulfillment, or whether it is within the same system if the Disallow shopping within same system flag is selected for the system). See the [requested location](#) for more information.

**Do Not Split Order For Carrier?** If the specified ship via matches the Do Not Split Order For Carrier specified at the **Preferences** screen and the fulfillment type is delivery, then the Routing Engine does not consider whether the request could be fulfilled by splitting the order across multiple locations.

**If weighted brokering is enabled:** Because weighted brokering is not evaluated when processing the Locate Items message, the Locate Items response simply lists eligible locations in order of proximity, and does not reflect any Science Engine calculations.

**For more information:** See [Calculating the Available to Promise Quantity](#) and [Using Probability Rules](#) for information on factors that affect the available quantity.

### Location Selection

If Use Weighted Brokering Rules is selected at the **Preferences** screen, the locations are listed in proximity sequence. The Weighted Brokering rules do not apply to LocateItems request processing, and the Science Engine is not used for a Locate Items search.

If Use Weighted Brokering Rules is *not* selected at the [Preferences](#) screen (Standard Brokering), the Routing Engine uses the method described below to select locations for delivery orders.

**Overrides:** When selecting locations, the Routing Engine uses the Order Orchestration criteria in the order specified at the **Preferences** screen unless you have used the [Edit Order Orchestration Preference Override](#) screen to set an override sort preference for the system, order type, and Express carrier setting:

- Proximity
- Location Priority
- On Hand Count
- Last Order Assigned
- Sales Velocity Rank

These criteria are ranked at the **Preferences** screen or the [Edit Order Orchestration Preference Override](#) screen to indicate which criterion to apply first. For example, if the Proximity criterion has a setting of 1, the closest locations are listed first, followed by locations that are farther from the requesting location. See [Selecting a Location for a Delivery Order](#).

**Note**

The Last Order Assigned and Sales Velocity Rank criteria are optional.

If [zone fulfillment](#) applies, then the criteria above apply to the primary or alternate locations specified for the zone. See [Using Zones for Fulfillment](#) for a discussion.

If the Disallow shopping within same system flag is selected at the **System** screen for the requesting location's system, then the criteria above apply only to locations in other systems.

**How many locations listed?** If the Group Shipment Locations preference is unselected, the Routing Engine checks the Maximum No. Responses setting to determine how many possible locations to include in the Locateltems response. If not all eligible locations are included, the response eliminates locations based on the Order Orchestration selection criteria specified at the **Preferences** screen or the **Edit Order Orchestration Preference Override** screen. For example, if the first criterion is proximity, and the Maximum No. Responses is set to 5, the 5 closest qualifying locations are included.

If the request specifies a [requested location](#), then only the requested location is included in the response, and it is included regardless of whether the location is within the related zone when [zone fulfillment](#) applies.

**Splitting orders?** When it receives a request, the Routing Engine always checks first to see if there is a location that could fulfill the entire order. Otherwise, if there is not a single location that can fulfill the order and the Allow Split Order preference is:

- selected, the Routing Engine next checks whether assigning a single line to multiple locations can make it possible to fulfill the order. In this case, the response lists the locations that have the item available.
- unselected, the Routing Engine does not attempt to split any order lines.

**Splitting lines?** If the Allow Split Order preference is selected, but assigning the individual lines to different locations does not make it possible to fulfill the order completely, the Routing Engine next checks the Allow Split Line setting at the **Preferences** screen to determine whether it can attempt to fulfill the order by splitting the quantity for a single item across multiple locations. If the Allow Split Line preference is:

- selected, the Routing Engine next checks whether the order can be fulfilled by assigning the individual lines to different locations. If the order would be split, the Routing Engine evaluates each order line individually based on your Preferences settings. In this case, the sequence in which the locations are listed in the response indicates their eligibility based on your preferences.

- unselected and the order could not be fulfilled without splitting, the Routing Engine indicates that the order cannot be fulfilled.

**Splitting lines with backorder available?** The `LocateItems` response message lists locations that could partially fulfill an order line regardless of whether any of these locations are flagged as Backorder Available. However, when you send the `SubmitOrder` message, the Routing Engine splits the line across locations using your specified criteria until it comes to the location flagged as Backorder Available; when it comes to this location, the Routing Engine assigns the remaining quantity of the item. See [LocateItems Sequence and Splitting Examples \(Standard Brokering\)](#) for an example.

**Partially fulfill?** If splitting the order or the lines does not make it possible to completely fulfill the order, the `LocateItems` response indicates the locations that could fulfill individual lines on the order. Lines that could not be completely fulfilled, even after splitting the line across locations, are indicated in the response with the message `Product not available within search criteria`.

**Do Not Split Order For Carrier?** If the specified ship via matches the Do Not Split Order For Carrier specified at the **Preferences** screen and the fulfillment type is delivery, then the Routing Engine does not consider whether the request could be fulfilled by splitting the order across multiple locations.

 **Note**

When determining whether a location can fulfill an order, the Routing Engine first checks for locations that have the required quantity on-hand; however, if there are no locations with the quantity on-hand, the Routing Engine considers locations flagged as Backorder Available.

### LocateItems Sequence and Splitting Examples (Standard Brokering)

#### Note

Selecting sourcing locations for a ship-for-pickup order is very similar. See [About Ship-for-Pickup Orders](#) for key differences.

**Location sequence in response:** When the Routing Engine receives a request message for a delivery order and you are not using the Group Shipment Locations option, the sequence of the locations listed in the response message indicates the order in which the Routing Engine would select a location for fulfillment of the order.

*Example:* If your preferences indicate to select a location first based on proximity, the first location listed in the response is the location closest to the customer's address based on postal code. If two or more locations are the exact same distance from the customer's address, the Routing Engine checks the next criterion, such as available quantity.

**Zone fulfillment?** If you use zones for fulfillment and the shipping address is within a zone, only locations specified for the zone are eligible to be included in the response when the fulfillment type is DELIVERY. See [Using Zones for Fulfillment](#) for more information.

**Specific location requested?** If the request message specifies a requested location such as the customer's favorite store, then the response message includes only the requested location in the response, regardless of the Order Orchestration rules set up at the **Preferences** screen

or whether the location is otherwise eligible through zone fulfillment or if the location has exceeded the maximum number of orders and you are [Using Maximum Daily Order Assignment](#). See the [requested location](#) for more information.

**Maximum order limits?** When the Use Maximum Order Limits preference is selected for the organization, the LocatelItems response message for a delivery request excludes locations if the number of orders assigned for the current date meets or exceeds the Maximum Daily Orders limit specified at the **Preferences** screen. See [Using Maximum Daily Order Assignment](#) for more information.

**Gift wrap?** If the `gift_wrap` tag in the request is set to Y and the [Use Attribute Rules](#) flag is selected at the **Preferences** screen, only locations that are flagged to support gift wrap are eligible.

**Criteria based on location:** The Order Orchestration search criteria of proximity, last order assignment, or priority number are based on the location itself, so the sequence of locations in the response message is not affected by the products requested.

**Example: Highest priority Order Orchestration setting is Proximity (set at either the Preferences screen or through the Order Orchestration Preference Overrides screen)**

Product AB100 and product BC200 available in:

- location 10: 10.21 miles from the customer's location based on postal code
- location 20: 7.88 miles from the customer's location based on postal code

*Result:* The response lists location 20 before location 10.

#### Note

If a product is available in a location that has the Use Proximity Locator preference unselected, then the distance calculated from the customer's location is always 0. If you use the Proximity Order Orchestration criterion, you might apply this preference to your distribution center in order to have it always be the "preferred" location for delivery requests.

**Location sequence based on available quantity if multiple products requested:** If your Order Orchestration search criteria at the **Preferences** screen or the **Edit Order Orchestration Preference Override** screen are based primarily on on-hand count, this location sort logic is based on the combined available quantity for all requested products in each location where the products are available.

**Example: Highest priority Order Orchestration setting is On Hand Count (set at either the Preferences screen or through the Order Orchestration Preference Overrides screen)**

*Example:*

- Product CD100:
  - 400 available in location 11
  - 50 available in location 22
- Product DE200:
  - 10 available in location 11
  - 75 available in location 22

*Result:* If the message requests:

- just CD100: location 11 is listed first (available quantity of 400 is greater than 50)
- just DE200: location 22 is listed first (available quantity of 75 is greater than 10)
- both CD100 and DE200: location 11 is listed first (combined available quantity of 410 (400 + 10) greater than combined available quantity of 125 (50 + 75))

**Note**

If your response includes locations with a negative quantity (included because the Backorder Available flag is selected), then it is possible that the first location listed might not have all requested products in stock, even when you are searching based on on-hand count. For example, location 33 has an average available quantity of 25 (20 of product EF300 and -5 of product FG400), while location 44 has an average available quantity of 6 (7 of EF300 and 5 of FG400). In this situation, location 33 is listed first in the response message.

**For more information:** See [Calculating the Available to Promise Quantity](#) and [Using Probability Rules](#) for information on factors that affect the available quantity.

**Location sequence based on sales velocity rank if multiple products requested:** If your Order Orchestration search criteria at the **Preferences** screen or the **Edit Order Orchestration Preference Override** screen are based primarily on sales velocity rank, this location sort logic is based on the combined sales velocity for all requested products in each location where the products are available.

**Example: Highest priority Order Orchestration setting is sales velocity rank (low to high, set at either the Preferences screen or through the Order Orchestration Preference Overrides screen)**

- Product CD100:
  - sales velocity is 40 in location 11
  - sales velocity is 5 in location 22
- Product DE200:
  - sales velocity is 10 in location 11
  - sales velocity is 30 in location 22

*Result:* If the message requests:

- just CD100: location 11 is listed first (sales velocity of 40 is greater than 5)
- just DE200: location 22 is listed first (sales velocity of 30 is greater than 10)
- both CD100 and DE200: location 11 is listed first (combined sales velocity of 45 (40 + 5) greater than combined sales velocity of 40 (10 + 30))

**Note**

If a product location has a sales velocity setting of 0 (for example, because the system has not yet reported a sales velocity), this setting counts as the lowest possible sales velocity.

**Sequence if splitting:** If the Allow Split Order preference is selected and the Routing Engine would not be able to fulfill an order for all requested items without splitting it across multiple locations, the response lists the possible locations in a different sequence for each requested item.

**Example: Highest priority Order Orchestration setting is On Hand Count (set at either the Preferences screen or through the Order Orchestration Preference Overrides screen), splitting order**

- Product GH100
  - 10 available in location 55
  - 20 available in location 66
- Product HI200
  - 15 available in location 66
  - 43 available in location 77
- Product IJ300:
  - 17 available in location 88
  - 23 available in location 99

*Result:* If the message requests all 3 items, the response lists the locations for each based on the available quantity of each item in each eligible location:

- GH100: location 66 (20 available) before location 55 (10 available)
- HI200: location 77 (43 available) before location 66 (15 available)
- IJ300: location 99 (23 available) before location 88 (17 available)

**For more information:** See [Calculating the Available to Promise Quantity](#) and [Using Probability Rules](#) for information on factors that affect the available quantity.

**Splitting order if not all items available:** If the Allow Split Order preference is selected, then the response indicates which items could be fulfilled, and which items are not available in the quantity requested.

**Example: Splitting order, not all items available in requested quantities**

- Product KL100, requested quantity 1:
  - 10 available in location 12
  - 20 available in location 23
- Product MN200, requested quantity 5:
  - 15 available in location 34
  - 4 available in location 45
- Product OP300, requested quantity 7: 2 available in location 56

*Result:* If the message requests all 3 items, the response indicates:

- KL100: lists location 12 and location 23
- MN200: lists location 34; location 45 not listed since available quantity of 4 is less than requested quantity of 5
- OP300: indicates Product not available within search criteria

**For more information:** See [Calculating the Available to Promise Quantity](#) and [Using Probability Rules](#) for information on factors that affect the available quantity.

**Maximum number of responses:** The response does not include more locations than the Maximum No. Responses specified at the **Preferences** screen, even if the Allow Split Line preference is selected and the order line would need to be split over more locations than permitted under the Maximum No. Responses.

**Example: Splitting items, locations required to fulfill requested quantity exceeds Maximum No. Responses**

- Product QR100, requested quantity 10:
  - 2 available in location 67
  - 2 available in location 78
  - 2 available in location 89
  - 3 available in location 90
  - 3 available in location 91
- Maximum No. Responses = 3

*Result:* The response lists location 90 (3 available), location 91 (3 available), and location 67 (2 available). Although the response lists a total quantity available of 8, the additional locations not listed in the response have sufficient inventory to fulfill the entire quantity if the order line is split.

**For more information:** See [Calculating the Available to Promise Quantity](#) and [Using Probability Rules](#) for information on factors that affect the available quantity.

**Grouping shipments and splitting orders:** If the Group Shipment Locations and Allow Split Order preferences are selected, the response indicates which of the requested items are available in the quantities indicated; however, if the Allow Split Order preference is unselected, then if any requested item is not available in the requested quantity, then the entire order is considered to be not available.

**Example: Grouping shipments, one requested item not available**

- Product KL100, requested quantity 1:
  - 10 available in location 12
  - 20 available in location 23
- Product MN200, requested quantity 5:
  - 15 available in location 34
  - 4 available in location 45
- Product OP300, requested quantity 7: 2 available in location 56

*Result:*

If the message requests all 3 items and Allow Split Order is selected, the response indicates:

- KL100 and MN200: indicates available in the virtual location
- OP300: indicates Product not available within search criteria

If the message requests all 3 items and Allow Split Order is unselected, the response indicates Product not available within search criteria for all 3 items

**For more information:** See [Calculating the Available to Promise Quantity](#) and [Using Probability Rules](#) for information on factors that affect the available quantity.

**Splitting an order line if a location is flagged as Backorder available:** If the Allow Split Order and Allow Split Line preferences are both selected, then the Routing Engine splits a single line across multiple locations. However, if one of the locations it would select is flagged as Backorder Available, then that location serves as a catch-all to fulfill the remaining quantity of the order line.

**Example: Splitting an order line across multiple locations with one location flagged as Backorder available**

- Product KL100, requested quantity 15:
  - 3 available in location 12
  - 7 available in location 23
  - 2 available in location 37
  - 1 available in location 49
  - 2 available in location 82

*Result:*

- If the Maximum No. Responses is not set less than 5 and the first Order Orchestration criterion is On Hand Count, the response lists the locations in the following order:
  - 7 available in location 23
  - 3 available in location 12
  - 2 available in location 37
  - 2 available in location 82
  - 1 available in location 49
- However, if location 37 were flagged as Backorder Available, when you submitted an order line for a quantity of 15, the Routing Engine splits the line across locations as follows:
  - 7 assigned to location 23
  - 3 assigned to location 12
  - 5 assigned to location 37

**Submit Order Request for Delivery Order (Standard Brokering)**

The following process applies when Use Weighted Brokering Rules is not selected.

**Note**

The process for selecting a sourcing location for a ship-for-pickup order is very similar. See [Enable Ship-For-Pickup?](#) for key differences.

**Location designated?** The originating location can specify the location(s) to fulfill a delivery order and indicate the selected location(s) in the submit order message. For example, you might use the locate items request and response to initially generate a list of possible locations, and then select a location from this list to designate in the submit order request. When the fulfilling location is designated in the submit order request, the Routing Engine confirms that each location is eligible to fulfill the order, based on:

- *Location eligible?* The Delivery Available flag at the [Preferences](#) screen must be selected.
- *Backorder eligible?* If the location does not have the requested quantity of each item on the order available after checking on inventory if it's in an online system, and applying any probability rules (less any reserved quantity or fulfilled quantity; see [Calculating the Available to Promise Quantity](#)), the Backorder Available flag at the [Preferences](#) screen must be selected.

If a designated location is not eligible based on the above criteria, the Routing Engine returns an error to the submit order request message. However, if the location is otherwise eligible, the Routing Engine assigns the order to the specified location even if the location is:

- not within the related zone when you use [zone fulfillment](#), or
- excluded based on probability rules, or
- within the same system as the requesting system, even if the Disallow shopping within same system flag is selected for the system.

**Gift wrap?** If the `gift_wrap` tag in the request is set to Y and the [Use Attribute Rules](#) flag is selected at the **Preferences** screen, only locations that are flagged to support gift wrap are eligible.

 **Note**

Regardless of the setting of the Allow Split Order and Allow Split Line preferences, the Routing Engine does not split an order or line when the fulfilling location is specified in the request message.

**If location not designated:** The Routing Engine uses the same logic to select a fulfilling location for a delivery order when it receives a locate items request as when it receives a submit order request without a fulfilling location specified. The Routing Engine checks each location stocking the requested item(s):

- Excludes the location that generated the order.
- If the shipping address falls within a fulfillment zone, restricts the results to the primary locations specified for the zone. See [Using Zones for Fulfillment](#) for a discussion.
- If the Disallow shopping within same system flag is selected for the system of the requesting location, excludes all other locations for that system.
- Applies any proximity rules to determine whether a location is an acceptable distance from the customer's shipping address.
- If the `gift_wrap` tag in the request is set to Y and the [Use Attribute Rules](#) flag is selected at the **Preferences** screen, only locations that are flagged to support gift wrap are eligible.
- Considers locations only if the Delivery Available flag at the [Preferences](#) screen is selected.
- Excludes a location if the total number of delivery orders assigned for the current date meets or exceeds the Maximum Daily Orders limit specified at the **Preferences** screen. This evaluation takes place only if the Use Maximum Order Limits preference is selected; see [Using Maximum Daily Order Assignment](#) for more information.
- Determines the Available to Promise quantity: see [Calculating the Available to Promise Quantity](#).
- Applies any probability rules to determine whether to include the location and to calculate the available quantity to use for evaluation purposes. For example, you might have a

probability rule to exclude a location if the available quantity is less than 2, or a rule to include the quantity expected to be received on an upcoming purchase order in the available quantity.

### Note

If the Exclude Locations with Zero Availability setting at the [Preferences](#) screen is selected, any possible product locations whose current available to promise quantities are 0 or less are excluded from consideration before the application of any potential probability rules.

- After performing the above calculations, considers each location as eligible only if it has at least the requested quantity available for each requested item (less any reserved quantity and fulfilled quantity; see [Calculating the Available to Promise Quantity](#)), or if it is flagged as Backorder Available.
- If there is more than one eligible location at this point, applies the Order Orchestration selection criteria specified at the [Preferences](#) screen or the [Edit Order Orchestration Preference Override](#) screen to select the locations eligible to fulfill the order. You assign each of the five criteria with a rank to indicate which criterion to use first. The selection criteria are:
  - *Proximity*: Set this criterion to *Closest* to select the eligible location closest to the customer's address. You might choose this setting to save on shipping costs.
  - *Location Priority*: Set this criterion to *Low to High* to select the eligible location whose location priority is the lowest number. The location priority is a number you assign to a location, location type, or organization to control the Routing Engine search logic.
  - *On-hand count*: Set this criterion to *High to Low* to select the eligible location where the Available to Promise quantity of the product is highest. You might use this setting to avoid depleting the inventory in any one location.
  - *Last order assigned*: Set this criterion to *Variable* to select the eligible location whose last order assignment date and time was the earliest. You might choose this setting to create an even distribution of orders among eligible locations. This criterion is optional.
  - *Sales velocity rank*: Set this criterion to *Low to High* to select the eligible location where the product's [Sales Velocity](#) is lowest. This criterion is optional.
  - *Criterion ranking*: The Routing Engine uses the criterion with the highest rank to select the fulfilling location. If there is a "tie" (for example, if two locations have the same Available to Promise quantity or the same location priority), the Routing Engine uses the next criterion based on assigned rank.

**Example:** The On-hand Count preference is ranked at 1 with an Order of *Descending* (highest to lowest), so the Routing Engine selects the location with the highest Available to Promise quantity. If there are two locations with the same available quantity, the Routing Engine checks the selection criterion ranked at 2: this is Location Priority, and it has an Order of *Ascending* (lowest to highest). As a result, the Routing Engine selects the location whose Location Priority is 1 over a location whose Location Priority is 5.

**Using alternate locations for a fulfillment zone:** If the shipping address falls within a fulfillment zone and the order cannot be assigned using the primary locations specified for the zone, the Routing Engine next uses the steps above to attempt to assign the order using the alternate locations for the zone. If the order can using the alternate locations for the zone and you split orders, the Routing Engine then uses the steps above to attempt to assign the order across both the primary and alternate locations for the zone. See [Using Zones for Fulfillment](#) for a discussion.

**Acknowledge order before brokering?** If the Acknowledge Order Before Brokering preference is selected, the Order Orchestration does not select a fulfilling location before sending the submit order response message; instead, it confirms that the order information, such as address, products, and originating location, is valid, assigns the order to a temporary *IN PROCESS* location, and then sends the response message as to an order acknowledgment. The Order Orchestration then proceeds with location selection. The originating system can send a status inquiry request afterward to determine the assigned location(s). See [Acknowledge Order Before Brokering](#) for a discussion.

**Order rejected?** When a location rejects an order or line, the Routing Engine goes through the same selection criteria again; however, it excludes any location that has already rejected the order or line. Also, when you split orders, if the entire order is rejected, the Routing Engine does not attempt to assign all lines to the same fulfilling location; instead, it searches for locations for each line individually.

**Note**

Even if the original submit order request message specified a fulfilling location, the Routing Engine uses its standard selection logic when the assigned location rejects the order or line.

**If the Routing Engine cannot find a location for fulfillment:** If at any point the Routing Engine receives a submit order message and cannot find an eligible location to ship the order or line, or if an order or line is rejected by an assigned location and the number of Search Retries specified at the [Preferences](#) screen is exceeded, the Routing Engine assigns the order or line to the Default Unfulfillable Location specified at the [Preferences](#) screen. By assigning an order or line to the Default Unfulfillable Location, the Routing Engine is flagging the order or line as unfulfillable. When the requesting system receives a status inquiry response message indicating that an order or line is assigned to this location, this indicates to the system that it either needs to fulfill the order or line using its internal processes or cancel the order or line.

**Example: Splitting an order at initial submission with subsequent rejection**

- Product KL100, requested quantity 2:
  - 1 available in location 12
  - 1 available in location 23

*Result:*

- Order created, with 1 unit assigned to location 12 and 1 unit assigned to location 23.

**Note**

If only 1 unit were available when the submit order message was received, the Routing Engine would have assigned the entire order to the default unfulfillable location.

*Example: When a split order line rejected:*

*Result:*

- The Routing Engine puts the second order line in unfulfillable status; however, the order is still open if location 12 can fulfill the first order line.

**For more information:** See [Calculating the Available to Promise Quantity](#) and [Using Probability Rules](#) for information on factors that affect the available quantity.

### Submit Order Request for Delivery Order (Weighted Brokering)

The following process applies when Use Weighted Brokering Rules is selected.

#### **Note**

Selecting a sourcing location for a ship-for-pickup order is very similar. See [About Ship-for-Pickup Orders](#) for key differences.

**Location designated?** The originating location can specify the location(s) to fulfill a delivery order and indicate the selected location(s) in the submit order message. For example, you might use the locate items request and response to initially generate a list of possible locations, and then select a location from this list to designate in the submit order request. When the fulfilling location is designated in the submit order request, the Routing Engine confirms that each location is eligible to fulfill the order, based on:

- *Location eligible?* The Delivery Available flag at the **Preferences** screen must be selected.
- *Backorder eligible?* If the location does not have the requested quantity of each item on the order available after checking on inventory if it's in an online system, and applying any probability rules (less any reserved quantity; see [Calculating the Available to Promise Quantity](#)), the Backorder Available flag at the **Preferences** screen must be selected.

If a designated location is not eligible based on the above criteria, the Routing Engine returns an error to the submit order request message. However, if the location is otherwise eligible, the Routing Engine assigns the order to the specified location even if the location is:

- not within the related zone when you use zone fulfillment, or
- excluded based on probability rules, or
- within the same system as the requesting system, even if the Disallow shopping within same system flag is selected for the system.

**Gift wrap?** If the gift\_wrap tag in the request is set to Y and the [Use Attribute Rules](#) flag is selected at the **Preferences** screen, only locations that are flagged to support gift wrap are eligible.

#### **Note**

Regardless of the setting of the Allow Split Order and Allow Split Line preferences, the Routing Engine does not split an order or line when the fulfilling location is specified in the request message.

**If location not designated:** When Use Weighted Brokering Rules is selected, the Routing Engine submits a listing of eligible locations to the Science Engine, along with additional data to enable the Science Engine to select the fulfilling location(s) for the order. However, before submitting the information to the Science Engine, the Routing Engine filters the list of eligible locations to those that stock the requested item(s), and:

- Excludes the location that generated the order.

- If the shipping address falls within a fulfillment zone, restrict the list to the primary locations and secondary locations specified for the zone. See [Using Zones for Fulfillment](#) for a discussion.
- If the Disallow shopping within same system flag is selected for the system of the requesting location, excludes all other locations for that system.
- Applies any proximity rules to determine whether a location is an acceptable distance from the customer's shipping address.
- Considers locations only if the Delivery Available flag at the **Preferences** screen is selected.
- Excludes a location if the total number of delivery orders assigned for the current date meets or exceeds the Maximum Daily Orders limit specified at the **Preferences** screen. This evaluation takes place only if the Use Maximum Order Limits preference is selected; see [Using Maximum Daily Order Assignment](#) for more information.
- Determines the Available to Promise quantity: see [Calculating the Available to Promise Quantity](#).
- Applies any probability rules to determine whether to include the location and to calculate the available quantity to use for evaluation purposes. For example, you might have a probability rule to exclude a location if the available quantity is less than 2, or a rule to subtract 10% from the reported available quantity for certain locations.

#### Note

If the Exclude Locations with Zero Availability setting at the **Preferences** screen is selected, any possible product locations whose current available to promise quantities are 0 or less are excluded from consideration before the application of any potential probability rules.

- After performing the above calculations, considers each location as eligible only if it has at least the requested quantity available for each requested item (less any reserved quantity; see [Calculating the Available to Promise Quantity](#)), if the order might be split across the eligible locations that collectively have the requested quantity, or if the location is flagged as Backorder Available.

**Do Not Split Order For Carrier?** If the specified ship via matches the Do Not Split Order For Carrier specified at the **Preferences** screen and the fulfillment type is delivery, then the Routing Engine does not consider whether the request could be fulfilled by splitting the order across multiple locations.

**Submission to Science Engine:** The Routing Engine then submits the list of eligible locations to the Science Engine. The information sent to the Science Engine includes:

- Order line information: order type, request ID, line number, product code, selling price
- Configuration information: Weighted Brokering criteria (the percentage weights assigned for Labor Cost, Gross Margin, Proximity, On Hand Quantity, and Sales Velocity, as well as the Priority for evaluating sales velocity), Allow Split Order setting, Allow Split Line setting, and Maximum Order Splits setting
- Information on each eligible product location: Product code, System code, Location code, Available to Promise quantity after subtracting any reserved quantity and applying any probability rules, distance, zone group level (primary or secondary), Backorder Available setting, On Clearance setting, Selling Price, Cost, Sales Velocity, and the location's Labor Cost

**Criteria for fulfilling location assignment:** The Science Engine uses similar criteria for fulfilling location assignment to standard brokering criteria, except in each of the following scenarios, if more than one location could fully or partially fulfill the order, select a location based on weighted brokering rules:

1. *Single location?* If a single location could fulfill the entire order with its on-hand quantity, use that location, selecting a primary location if the order is subject to fulfillment zone processing; otherwise,
2. *Fulfill by splitting order?* If Use Split Order is selected, and the entire order could be fulfilled across more than one location by splitting the order, but not the line quantities, with the locations' on-hand quantities and without exceeding the Maximum Order Splits, use these locations. If the order is subject to fulfillment zone processing, split the order only across primary locations; otherwise,
3. *Fulfill by splitting order and lines?* If Use Split Order and Use Split Line are selected, and the entire order could be fulfilled across more than one location by splitting the order and line quantities with the locations' on-hand quantities and without exceeding the Maximum Order Splits, use these locations. If the order is subject to fulfillment zone processing, split the order and lines only across primary locations; otherwise,
4. *Fulfill by splitting order in primary or alternate locations in zone?* If the order is subject to fulfillment zone processing, Use Split Order is selected, and the entire order could be fulfilled across more than one Primary or alternate location by splitting the order, but not the line quantities, with the locations' on-hand quantities and without exceeding the Maximum Order Splits, use these locations; otherwise,
5. *Fulfill by alternate locations in zone?* If the order is subject to fulfillment zone processing and could not be fulfilled by assignment to primary locations, but a single alternate location could fulfill the entire order with its on-hand quantity, use that location; otherwise,
6. *Fulfill by splitting order and lines in primary or alternate locations in zone?* If the order is subject to fulfillment zone processing, Use Split Order and Use Split Line are selected, and the entire order could be fulfilled across more than one Primary or alternate location by splitting the order and line quantities with the locations' on-hand quantities and without exceeding the Maximum Order Splits, use these locations; otherwise,
7. *Fulfill by assignment to backorder location(s)?* If any eligible locations are flagged as Backorder Available, select one of these locations with the highest on-hand quantity. The order and lines can also be split as in the above scenarios, as long as the Maximum Order Splits is not exceeded.

See [Science Engine Examples](#) for information on how the Science Engine evaluates potential locations based on the weighted brokering criteria passed, and see [Primary and Alternate Search Hierarchy: Weighted Brokering](#) for details on fulfillment zone processing.

**Response from Science Engine:** The Science Engine returns one of the following responses:

- **Fulfillable:** The complete quantity of the order is fulfillable, based on the available to promise quantity without relying on backorder fulfillment.  
The Science Engine returns the location(s) to the Routing Engine.
- **Fulfillable through backorder:** The order line(s) are fulfillable only by assigning one or more units or lines to a backorder location because the full quantities are not available.

The Science Engine returns the location(s) to the Routing Engine, but also provides a reason code identifying how it selected the location(s). The following reason codes are stored in the UNFULFILLABLE\_REASON\_CODE in the XOM\_STATUS\_HISTORY table; however, no Transaction Note is displayed at the Order screen:

- 4000: An order or line had to be assigned to a backorder location that was currently without sufficient inventory, because the entire order could not be assigned to locations

with sufficient inventory without exceeding the Maximum Order Splits. For example, an order includes a line for 1 unit of item A, and another line for 2 units of item B. Location 100 can fulfill the line for item A. Locations 200 and 300 each have 1 unit item B. The Maximum Order Splits is set to 2. If location 200 supports backorders, the line with 2 units of item B is assigned there.

- 5000: An order or line had to be assigned to a backorder location that was currently without sufficient inventory, because there were no locations that had the inventory on-hand; however, this was not the result of the Maximum Order Splits setting being exceeded.
- 8000: An order or line could have been assigned to locations with inventory if split order or line were allowed; but since the order or line could not be split, it was assigned to a backorder location that was currently without sufficient inventory.
- Unfulfillable: The order line(s) are not fulfillable even by assigning one or more units or lines to a backorder location, either because backorder locations are not available or because of a limit to splitting the order or lines.

The Science Engine returns a reason code identifying why the order could not be fulfilled. The following reason codes are stored in the UNFULFILLABLE\_REASON\_CODE in the XOM\_STATUS\_HISTORY table:

- Exceed Maximum Number of Splits: The Science Engine returned a code indicating that the entire order could not be fulfilled without exceeding the Maximum Order Splits, so the entire order is unfulfillable. This response can occur for a single-line order that could have been fulfilled by splitting the line, but split line is not enabled. A reason code of 1000 is stored as the UNFULFILLABLE\_REASON\_CODE in the XOM\_STATUS\_HISTORY table.
- Not Enough Inventory and No Backorder Location: The Science Engine returned a code indicating that the entire order, or a line on the order, could not be fulfilled because there was not sufficient inventory on-hand, and there was not an eligible location that supported backorders. A reason code of 2000 is stored as the UNFULFILLABLE\_REASON\_CODE in the XOM\_STATUS\_HISTORY table if the entire order was unfulfillable, and a reason code of 3000 is stored for an individual line that was unfulfillable while other line(s) could be fulfilled.
- Not Fulfilled due to Split Not Allowed: The Science Engine returned a code indicating that the entire order could not be fulfilled without splitting one or more order lines, and Allow Split Line was not selected. The same message is displayed if the order could not be fulfilled without splitting the order, and Allow Split Order was not selected. A reason code of 7000 is stored as the UNFULFILLABLE\_REASON\_CODE in the XOM\_STATUS\_HISTORY table if the entire order was unfulfillable, and a reason code of 6000 is stored for an individual line that was unfulfillable while other line(s) could be fulfilled.

**Acknowledge order before brokering?** If the Acknowledge Order Before Brokering preference is selected, the Routing Engine confirms that the order information, such as address, products, and originating location, is valid, assigns the order to a temporary IN PROCESS location, and then sends the response message as an order acknowledgment regardless of whether it has already received the response from the Science Engine. The originating system can send a status inquiry request afterward to determine the assigned location(s). See [Acknowledge Order Before Brokering](#) for a discussion.

**Order rejected?** When a location rejects an order or line, the Routing Engine again submits the order or line to the Science Engine; however, it excludes any location that has already rejected the order or line from the list of eligible locations.

**Note**

Even if the original submit order request message specified a fulfilling location, the Routing Engine uses its standard location eligibility logic for submission to the Science Engine when the assigned location rejects the order or line.

**If the Science Engine cannot find a location for fulfillment:** If at any point the Routing Engine receives a submit order message and Science Engine cannot find an eligible location to ship the order or line, or if an order or line is rejected by an assigned location and the number of Search Retries specified at the **Preferences** screen is exceeded, the Routing Engine assigns the order or line to the Default Unfulfillable Location specified at the **Preferences** screen. By assigning an order or line to the Default Unfulfillable Location, the Routing Engine is flagging the order or line as unfulfillable. When the requesting system receives a status inquiry response message indicating that an order or line is assigned to this location, this indicates to the system that it either needs to fulfill the order or line using its internal processes or cancel the order or line.

When the requesting system receives a status inquiry response message indicating that an order or line is assigned to this location, this indicates to the system that it either needs to fulfill the order or line using its internal processes or cancel the order or line.

**Science Engine Examples**

The Science Engine uses the information passed from the Routing Engine, including the weighted brokering criteria, to select locations if there is more than one eligible location or an order or line needs to be split for fulfillment.

Each of the weighted brokering criteria that have percentage weights greater than 0 are considered.

| Example Description                                                                                                                                                                                          | Example                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><i>Example 1:</i> Select by margin (select the location where the difference between the in-store Selling Price and the Cost is lowest, since it is more profitable to source the online order there)</p> | <p>In this example:</p> <ul style="list-style-type: none"> <li>• The <i>Weighted Percentages</i> include a Gross Margin setting of 100%. The remaining percentages are set to 0.</li> <li>• The unit price specified for the order line is 10.00 for a quantity of 1.</li> <li>• There are 2 eligible locations: <ul style="list-style-type: none"> <li>– Location A has a Selling Price of 5.00 with a Cost of 2.00.</li> <li>– Location B has a Selling Price of 6.00 with a Cost of 2.00.</li> </ul> </li> </ul> <p>The margin = the order line unit price - the product location Selling Price - the product location Cost.</p> <p>For <i>location A</i>, the calculation is: <math>(10.00 - 5.00 - 2.00) * 1 = 3.00</math>, where:</p> <ul style="list-style-type: none"> <li>– 10.00 = the order line unit price</li> <li>– 5.00 = the product location Selling Price</li> <li>– 2.00 = the product location Cost</li> <li>– 1 = the unit quantity</li> <li>– 3.00 = overall score</li> </ul> <p>The calculation includes multiplying by the unit quantity, but in this case the unit quantity is 1</p> <p>For <i>location B</i>, the calculation is: <math>(10.00 - 6.00 - 2.00) * 1 = 2.00</math>, where:</p> <ul style="list-style-type: none"> <li>– 10.00 = the order line unit price</li> <li>– 6.00 = the product location Selling Price</li> <li>– 2.00 = the product location Cost</li> <li>– 1 = the unit quantity</li> <li>– 2.00 = overall score</li> </ul> <p><i>Result:</i> The Science Engine selects location A, because it has the higher score. An in-store purchase in location A results in a lower margin than location B, so it is more profitable to assign the online order to location A.</p> <p>The Margin displayed for the Product Location differs from the margin calculation performed by the Science Engine. The Science Engine's calculation includes the order line unit price, while the Margin displayed for a Product Location is simply the in-store Selling Price minus the Cost.</p> |

| Example Description                                                                                                                                                                   | Example                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Example 2:</i> Select by net profit (select the location where the overall profit is lowest after factoring in the order unit price, in-store Selling Price, Cost, and Labor Cost) | <p>In this example:</p> <ul style="list-style-type: none"> <li>The <i>Weighted Percentages</i> include a Gross Margin setting of 60% and a Labor Cost setting of 40%. The remaining percentages are set to 0.</li> <li>The unit price specified for the order line is 10.00 for a quantity of 1.</li> <li>There are 2 eligible locations: <ul style="list-style-type: none"> <li><i>Location A</i> has a Selling Price of 5.00 with a Cost of 2.00. As in Example 1, the result of the Gross Margin calculation is 3.00. The Labor Cost for Location A is 4.00.</li> <li><i>Location B</i> has a Selling Price of 6.00 with a Cost of 2.00. As in Example 1, the result of the Gross Margin calculation is 2.00. The Labor Cost for Location B is 2.00.</li> </ul> </li> </ul> <p>For location A, the calculation is <math>(60\% * (10.00 - 5.00 - 2.00) * 1) - (40\% * (4.00))</math>, or <math>1.8 - 1.6 = 0.2</math>.</p> <ul style="list-style-type: none"> <li>60% = Gross Margin weight</li> <li>10.00 = the order line unit price</li> <li>5.00 = the product location Selling Price</li> <li>2.00 = the product location Cost</li> <li>1 = the unit quantity</li> <li>40% = Labor Cost weight</li> <li>4.00 = Labor Cost</li> <li>0.2 = overall score</li> </ul> <p>For location B, the calculation is <math>(60\% * (10.00 - 6.00 - 2.00) * 1) - (40\% * (2.00))</math>, or <math>1.2 - 0.8 = 0.4</math>, where:</p> <ul style="list-style-type: none"> <li>60% = Gross Margin weight</li> <li>10.00 = the order line unit price</li> <li>6.00 = the product location Selling Price</li> <li>2.00 = the product location Cost</li> <li>1 = the unit quantity</li> <li>40% = Labor Cost weight</li> <li>2.00 = Labor Cost</li> <li>0.4 = overall score</li> </ul> <p><b>Result:</b> The Science Engine selects location B. After factoring in the higher Labor Cost for location A and the lower Labor Cost for location B, the Science Engine determines that location B is more profitable.</p> |

### Note

When you set the *Weighted Percentages* to include both Gross Margin and Labor Cost by applying percentages greater than 0, the Science Engine uses Labor Cost only as part of the net profit calculation by subtracting it from the margin weight as described above. However, if the **Weighted Percentages** include just Labor Cost and have the Gross Margin percentage set to 0, then the Science Engine uses Labor Cost by itself, based on its percentage weight.

| Example Description                                                                                                                                                                                                                                                         | Example                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <i>Example 3:</i> Select the best location based on weighted percentages that include both profitability and other criteria. Unlike the other examples, this scenario includes criteria that are not the same units: in this case, currency (such as dollars) and quantity. | <p>In this example:</p> <ul style="list-style-type: none"> <li>The <i>Weighted Percentages</i> include a Labor Cost setting of 40% and an On Hand setting of 60%.</li> <li>There are 2 eligible locations: <ul style="list-style-type: none"> <li><i>Location A</i> has a Labor Cost of 12.25 and an Available to Promise quantity of 10.</li> <li><i>Location B</i> has a Labor Cost of 7.75 and an Available to Promise quantity of 7.</li> </ul> </li> </ul> <p><i>Determining the base value:</i> The Science Engine identifies that the more desirable Labor Cost is 7.75, for Location B, and the more desirable Available to Promise quantity is 10, for location A. The Science Engine uses the more desirable value for each of the criteria as the base for calculation. For each criterion, the Science Engine divides the location's value by the base. If the location's value is the same as the base, the result is 1.</p> <p>For Location A, the calculation is <math>(-40\% * (12.25 / 7.75)) + (60\% * (10/10))</math>, or -0.032, where:</p> <ul style="list-style-type: none"> <li>-40% = Labor Cost weight</li> <li>12.25 = location's Labor Cost</li> <li>7.75 = base Labor Cost</li> <li>60% = On Hand weight</li> <li>10 = location's Available to Promise quantity, which is also the base Available to Promise quantity</li> </ul> <p>For Location B, the calculation is <math>(-40\% * (7.75 / 7.75)) + (60\% * (7/10))</math>, or 0.02, where:</p> <ul style="list-style-type: none"> <li>-40% = Labor Cost weight</li> <li>7.75 = location's Labor Cost, which is also the base Labor Cost</li> <li>60% = On Hand weight</li> <li>7 = location's Available to Promise quantity,</li> <li>10 = base Available to Promise quantity</li> </ul> <p><i>Result:</i> The Science Engine selects location B. Its lower Labor Cost outweighs the higher Available to Promise quantity of location A.</p> |

### Using Attribute Rules for Delivery Orders

You can set up custom attributes to filter the locations eligible to source orders, or where orders can be picked up.

Custom attributes are used only if [Use Attribute Rules](#) is selected at the **Preferences** screen.

These rules apply when filtering locations for `LocateItems`, `ProductAvailability`, and `SubmitOrder` requests. They also apply when “reshopping” orders as a result of a `StatusUpdate` request or when the order is rejected through the user interface. If there have been any changes to the attribute assignments to locations or the product since the order line was created, the current attribute assignments apply.

#### Note

This setting also controls whether to filter locations when gift wrap is required.

### Examples:

| Attribute Usage                                                                                                                                                                                | How to Implement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

**Attribute setup options:** You can use the following options when setting up attribute definitions:

- Attribute Type: Attributes can filter eligible locations based on:
  - Location and Product:* The location must be consistent with an attribute defined for the product. The attribute might be a universal requirement, such as the engraving required example above, or specified on a case-by-case basis, such as the optional engraving example.
  - Location:* The location must be consistent with an attribute defined for the originating location. The requirement might apply to the pickup location for a pickup order, or to the sourcing location for a delivery order.
- Product Type:* Although you can create attributes with an Attribute Type of Product, these attributes are informational only and not used to route orders.
- Data Type: Possible attribute data types are:

- *Boolean*: The attribute is used to route orders if the Boolean is assigned to the product or originating location, such as the engraving examples above. An assigned Boolean is interpreted as True. Negative Boolean attributes are not supported.
- *List*: Defines a list of valid values, such as the brand example above. When the attribute is used to route orders, there must be a match with one of the list values.
- *Text*: Similar to the *List* data type, except it is not validated against a defined list of values.
- *Number*: Similar to the *List* data type, except it is not validated against a defined list of values, and must be numeric.
- **Allow Multiple:**
  - *Locations*: Controls whether the attribute can be assigned more than once to a single location with different values and the same Location Use (*Originating*, *Sourcing*, or *Pickup*). For example, a location can support multiple brands. Even if the attribute is set to not allow multiples, a different attribute value can be assigned to the location for each different location use; for example, a location can support engraving when it is a sourcing location, but not when it is a pickup location. Regardless of the Allow Multiple setting, only a single value can be assigned to a location when the Location Use is **Originating**.
  - *Products*: Controls whether the attribute can be assigned more than once with different values to the same product.

The Allow Multiple setting does not apply to Boolean attributes, and cannot be selected.

**Filter based on multiple attributes?** It is possible for multiple location, or product and location attributes to filter eligible locations. For example, one attribute can filter locations that do not support engraving, while another attribute can filter locations based on brand. All attributes apply, regardless of whether:

- They have been assigned to the product or any potential sourcing or pickup locations;
- They are passed in the *LocatelItems*, *ProductAvailability*, or *SubmitOrder* request message;
- They were initially applied to the order line at the time that it was created, and it is now being “reshopped.”

A location is excluded if it does not qualify based on all location or product and location attributes. For example, the *Brand* attribute is applied to location 1 with a Location Use of *Originating* and a value of *ABC*, and a *LocatelItems* request from location 1 passes the *Brand* attribute with a value of brand *DEF* with a *Pickup* fulfillment type. Only locations that are assigned both *ABC* and *DEF* with a Location Use of *Pickup* can be eligible as pickup locations.

**Assigning attributes to locations or products:** Use the [New Location Attribute](#) and [New Product Attribute](#) screens to assign attributes.

## Turn-by-Turn Distance Evaluation for Delivery Orders

**Overview:** If you use the Oracle Maps Cloud Service API for proximity location, you can use turn-by-turn distance evaluation, rather than straight-line distance evaluation, for delivery orders that use a specified carrier.

**Useful when?** You might use this option to choose fulfilling locations based on the actual driving distance from the fulfilling location to the customer's address. This way, you can avoid routes with a longer driving distance if, for example, an additional few miles are required to cross a bridge to get from a store location to the customer's address, even though the store

location and the customer's address are directly across a river from one another, or if a U-turn is required to drive to the customer's address.

**Process overview:** Order Orchestration uses the integration with Oracle Maps Cloud Service to determine the turn-by-turn distance of potential fulfilling locations as follows:

- Submits the customer location to Oracle Maps Cloud Service determine its longitude and latitude.
- Pre-qualifies potential locations based on straight-line distance:
  - Calculates the straight-line distance from each potential fulfilling location, based on the latitude and longitude of each.
  - Eliminates any location whose straight-line distance exceeds the maximum distance, either defined in the web service request or from the [Maximum Turn-by-Turn Distance](#) defined at the *Preferences* screen, as described below, or that does not have a latitude and longitude defined.
- Submits a turn-by-turn request to Oracle Maps Cloud Service, providing the latitude and longitude of the customer's location as the starting location, and the latitude and longitude of each potential fulfilling location within the specified maximum distance from the customer's location.
- When Oracle Maps Cloud Service returns the actual turn-by-turn distances, Order Orchestration omits any locations whose turn-by-turn distance exceeds the defined maximum distance from consideration. For example, the maximum distance is defined as 15 miles. The distance for location A was 14.78 miles based on the initial pre-pass calculation, but is 15.5 miles based on the turn-by-turn calculation. As a result, location A is not included in the list of eligible locations.

**When does turn-by-turn distance evaluation take place?** This calculation takes place when:

- You use Order Maps Cloud Service, and have completed the Geocode setup at the [Tenant-Admin](#) screen, including entering a valid [Turn-by-Turn Distance URL](#).
- The carrier specified for the request or order matches the [Carrier for Turn-by-Turn Distance Evaluation](#) specified at the **Preferences** screen.
- Order Orchestration needs to find a fulfilling location for a delivery order in response to:
- *Locate items:* When:
  - The fulfillment\_type in the [locate items](#) request is DELIVERY, and
  - The <ship\_via> is the [Carrier for Turn-by-Turn Distance Evaluation](#).

The [Maximum Turn-by-Turn Distance](#) and unit of measure are used.

If the request message specifies a requested\_location, only that location is returned in the response message, with a distance of 0.0.
- *Product availability:* When:
  - A type of is DELIVERY is specified in the [product availability search](#) request and,
  - The ship\_via is the [Carrier for Turn-by-Turn Distance Evaluation](#).

The range\_distance and range\_unit, if any, specified in the request are used; otherwise, the [Maximum Turn-by-Turn Distance](#) and unit of measure are used.
- *Submit Order request:* When:
  - The transaction\_type\_id is DELIVERY in the [submit order message](#), and
  - The ship\_via is the [Carrier for Turn-by-Turn Distance Evaluation](#).

The submit order request does not specify a distance or unit of measure, and the [Maximum Turn-by-Turn Distance](#) and unit of measure are always used.

*Status Update rejecting the order or line:* When:

- The order type for the order specified in the [status update](#) request message rejecting the order or line is DELIVERY, and
- The ship via is the [Carrier for Turn-by-Turn Distance Evaluation](#).

The status update request does not specify a distance or unit of measure, and the [Maximum Turn-by-Turn Distance](#) and unit of measure are always used when the order or order line is rejected.

- *Rejecting an order or line in order inquiry:* When:
  - You change the status to rejected at the [Order](#) screen or the [Edit Order Item](#) window, if the order type is DELIVERY, and
  - The ship via is the [Carrier for Turn-by-Turn Distance Evaluation](#).

There is no option to specify a distance or unit of measure in order inquiry, and the [Maximum Turn-by-Turn Distance](#) and unit of measure are always used in this case.

### Troubleshooting:

- As with straight-line distance evaluation, the [Shop Order When Proximity Unknown](#) preference controls how to handle submit order requests when the proximity cannot be determined. See that preference for more information.
- The [Trace Shopping Log](#) screen indicates when a location is eliminated from consideration based on distance, including turn-by-turn distance, with a Reason of *Proximity Distance*. The distance used as a criterion is indicated.
- Turn-by-turn distance evaluation is enabled for a maximum of 50 locations within the requested distance. If there are more than 50 locations, the search will fail.

#### ① Note

- When you configure [Carrier for Turn-by-Turn Distance Evaluation](#) at the **Preferences** screen, Order Orchestration does not confirm that the [Turn-by-Turn Distance URL](#) is configured at the **Tenant-Admin** screen.
- Similarly, Order Orchestration does not check whether there are any organizations configured for turn-by-turn distance at the **Preferences** screen if you do not set the Turn-by-Turn Distance URL setting at the **Tenant-Admin** screen.

**For more information:** See [Using the Oracle Maps Cloud Service API](#) for background and additional setup information.

### Same-Day Delivery

The routing engine supports identifying and tracking same-day delivery orders using the following messages:

- *Requests and responses for existing orders:* A delivery\_service\_level of "SAME\_DAY" is returned for an existing order when the order type is DELIVERY and the submit order request message creating the order included a ship via code matching the [Carrier for Turn-by-Turn Distance Evaluation](#) preference setting for the organization.
  - Fulfillments Response

- Order Inquiry Status Response
- Order Status List Response
- Order Search Response
- *Product Availability Response*: Included in the response when a fulfillment type of *DELIVERY* and ship via code that matches the [Carrier for Turn-by-Turn Distance Evaluation](#) preference setting for the organization are specified in the request.

The `delivery_service_level` attribute is available only when a version of 23.2 is specified in the request.

**Delivery ID:** The `delivery_id` is a unique identifier generated by the originating application that requests to book a courier for a same-day delivery order, and will be passed in a fulfilled status update request message. This attribute is available in the following version 23.2 messages:

- Status Update request
- Order Inquiry Status response
- Order Status List response
- Order Search response

## Troubleshooting Fulfillment or Sourcing Location Selection

Because there are various factors that can affect how the Routing Engine eliminates potential locations from selection as fulfilling locations (order “shopping”), you can use the [Trace Shopping Log](#) screen as needed to research shopping logic and resolve questions. This screen provides a listing of the potential product locations for an order, and indicates the reason, if any, why each location is eliminated, including:

- Not supporting the order type
- Not having sufficient inventory
- Probability rule
- Maximum order limit
- Zone fulfillment
- Proximity distance
- Shopping within system not allowed
- Not supporting gift wrap
- Attribute incompatibility

### Note

Oracle recommends that you turn on shopping logic tracing to research questions related to how the routing engine is selected locations, but to otherwise keep tracing turned off in order to enhance system performance.

**For more information:** See the [Trace Shopping Log](#) for a discussion and more details.

### Acknowledge Order Before Brokering

If the Acknowledge Order Before Brokering flag is selected at the [Preferences](#) screen, Order Orchestration generates the submit order response before selecting a fulfilling location for a

delivery order. This option enables Order Orchestration to respond more quickly to submit order requests, especially if you process large, multi-line orders.

If this flag is selected, when a system submits a delivery order that does not specify a fulfilling location:

- Order Orchestration validates just basic order information, such as address, products, and originating system and location, before acknowledging the order in the submit order response message.
- The order lines are initially assigned to the *IN PROCESS* location, a virtual location used temporarily until Order Orchestration completes the fulfilling location selection process, including all shopping logic such as fulfillment zone evaluation, interactive inventory inquiry, and probability rules.
- Order Orchestration creates the *IN PROCESS* location if it does not already exist. This location is:
  - assigned to the same system and location type as the default shipping (unfulfillable) location
  - created with the Pickup Available, Delivery Available, Backorder Available, Ship For Pickup Sourcing Available, Ship For Pickup Receiving/Pickup Available flags at the **Preferences** screen all set to *No*
  - assigned the name *Brokered Order Temporary Location*
- The submit order response message always specifies the *IN PROCESS* location for a delivery order unless the request message specified a fulfilling location.
- The order is created with a hidden *in\_process* flag that is set to *Y* until Order Orchestration completes location assignment for the order. As long as this flag is set to *Y*, no lines on the order are eligible to be included in the fulfillment response message.
- The originating system needs to submit a status inquiry request after initial order creation to determine the selected fulfilling location.
- If the originating system cancels an order or line while it is still assigned to the *IN PROCESS* location, Order Orchestration does not assign the order to an actual fulfilling location.
- Order Orchestration does not delay processing or assign a rejected order or line to the **IN PROCESS** location; instead, it “reshops” the order or line immediately.
- If an order or line is still assigned to the **IN PROCESS** location when Order Orchestration receives a status update to cancel it, or if the line is in any status other than *new\_order*, Order Orchestration does not attempt to find a fulfilling location for the order or line.

**Cleanup process:** A cleanup job runs automatically every hour to check for any orders or lines that were created more than an hour earlier and that are still assigned to the *IN PROCESS* location, and completes processing for these orders or lines.

Use the *Reschedule All* option at the [View Active Schedules](#) screen to resolve any scheduling issues for the cleanup job. Note that the *Reschedule All* option does not restart jobs that are in Paused status (⏸). Jobs stay in Paused status only briefly before Order Orchestration restarts them automatically.

**Note**

This cleanup job also attempts to send failed requests to RICS when you use [Order Fulfillment through RICS Integration](#).

The Acknowledge Order Before Brokering flag is selected by default. If this flag is not selected, Order Orchestration completes the fulfilling location selection process as it receives and creates each order, and specify selected fulfilling locations in the submit order response message.

### Using Product Availability Search for a Pickup or Delivery Order

The Product Availability search message is similar to the `LocateItems` search, except that the Product Availability search:

- can include more than one transaction type (pickup or delivery) in a single request, and each type can include its own search range distance
- does not include product location details for delivery searches; instead, it indicates:
  - if the entire requested quantity can be satisfied; otherwise,
  - if a partial quantity of the requested items can be satisfied, the maximum Available to Promise quantity of each item
- for a pickup request, always returns each item location that could partially fulfill the requested quantities of all requested items

**Weighted brokering:** If Use Weighted Brokering Rules is selected, product availability searches use the same process as the one described under [Selecting the Location for a Pickup Order \(LocateItems\)](#) and [Selecting a Location for a Delivery Order](#):

- Pickup: The Product Availability response includes the list of eligible pickup locations that have the item(s) available, sorted in order of proximity
- Delivery: The Routing Engine sends the list of eligible locations, along with related data, to the Science Engine, which returns the responses described under [Selecting a Location for a Delivery Order](#); the Routing Engine uses this information to populate the Product Availability response

### Determining eligible locations and available quantities:

- If Use Weighted Brokering Rules is *not* selected: Most of the existing Order Orchestration preferences and settings (such as proximity, Fulfillment criteria, probability rules, zone fulfillment, and the Backorder Available setting) apply to product availability searches essentially as they do to `LocateItems` requests.
- If Use Weighted Brokering Rules is selected: See [Selecting a Location for a Delivery Order](#) for details on how the Routing Engine filters the list of eligible location and the information sent to the Science Engine

**About the maximum available quantity:** The Product Availability response message indicates a `maximum_available` quantity for items on delivery searches only if the full requested quantity(ies) of all items are not available in eligible locations. See below for examples on how the `maximum_available` quantity is used.

### Product Availability Search: Pickup

When the Product Availability request specifies a PICKUP search type:

- If there is at least one eligible location that could fulfill the specified quantities of all requested items, or are flagged as Backorder Available, the `response_description` is `Success`, and the response includes details on the product location(s).
- if there are no eligible locations that could fulfill partial quantities or are flagged as Backorder Available, the `response_description` is `Product not available within search criteria`, and the response does not include any product locations.

- If there is at least one eligible location that could fulfill partial quantities of all requested items, or that stock the item and are flagged as Backorder Available, the `response_description` is `Product not available within search criteria`, and the response includes details on the product location(s).

*Example:* The search request specifies item A with a quantity of 5, and item B with a quantity of 10. The `response_description` is `Product not available within search criteria`, and the response includes details on a location that has:

- 5 of item A (full quantity) and 9 of item B (partial quantity)
- 1 of item A (partial quantity) and 1 of item B (partial quantity)
- 5 of item A (full quantity) and none of item B, but is flagged as Backorder Available

#### **Note**

The Maximum No. Responses setting at the **Preferences** screen does not limit the number of locations returned when the product availability type is **PICKUP**, and the sort order is not based on the Order Orchestration criteria specified at the **Preferences** screen or through the **Order Orchestration Preference Overrides** screen.

### Product Availability Search: Delivery/Single Item

**Note**

Determining whether a ship-for-pickup order can be sourced is very similar. See [About Ship-for-Pickup Orders](#) for key differences.

When the Product Availability request specifies a DELIVERY search type for a single item, the Product Availability response message includes a response\_description of SUCCESS, and does not indicate a maximum\_quantity, if:

- there is at least one eligible location that could fulfill the specified quantity of the requested item, or
- the requested quantity could be fulfilled by splitting the line across multiple eligible locations, and the Use Split Line preference is set to Yes, or
- there is at least one eligible location that is flagged as Backorder Available

Otherwise, the response message indicates Product not available within search criteria, and specifies the maximum\_available quantity of the item. The maximum\_available quantity is:

- the total available quantity across all eligible locations if the Use Split Line preference is set to Yes; otherwise,
- the highest available quantity for any eligible location.

If there are no eligible locations with a quantity available, the maximum\_available is 0.

If Use Weighted Brokering Rules is selected, the Routing Engine uses the Science Engine to obtain this information; otherwise, the Routing Engine obtains the information.

*Examples:* If item AB100, quantity 10 requested:

| Scenario                                                                                                                                                                                                                                                                                              | Result                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Eligible locations include: <ul style="list-style-type: none"> <li>• location A, 11 available, OR</li> <li>• location B, 5 available, and location C, 6 available, and Use Split Line = Yes, OR</li> <li>• location C, 2 available, and Backorder Available preference applies to location</li> </ul> | response_description: Success<br>maximum_available: not indicated                                                                                                                                              |
| Eligible locations include: <ul style="list-style-type: none"> <li>• location A, 2 available</li> <li>• location B, 1 available</li> </ul> Neither location A or location B flagged as Backorder Available                                                                                            | response_description = Product not available within search criteria<br>If Use Split Line = <ul style="list-style-type: none"> <li>• Yes: maximum_available = 3</li> <li>• No: maximum_available = 2</li> </ul> |
| Eligible locations include: <ul style="list-style-type: none"> <li>• location A, 2 available</li> <li>• location B, 0 available, but flagged as Backorder Available</li> </ul>                                                                                                                        | response_description: Success<br>maximum_available: not indicated                                                                                                                                              |
| No eligible locations have any available quantity or are flagged as Backorder Available                                                                                                                                                                                                               | response_description = Product not available within search criteria<br>maximum_available: 0                                                                                                                    |

### Product Availability Search: Delivery/Multiple Items and Split Order = No

#### Note

Determining whether a ship-for-pickup order can be sourced is very similar. See [About Ship-for-Pickup Orders](#) for key differences.

When the Product Availability request specifies a DELIVERY search type for multiple items and the Use Split Order preference is set to No, the Product Availability response message includes a response\_description of SUCCESS, if:

- there is at least one eligible location that could fulfill the specified quantities of all the requested items, or
- there is at least one eligible location that stocks all the requested items and is flagged as Backorder Available

Otherwise, the response message indicates Product not available within search criteria.

**Maximum\_available never returned:** Regardless of whether the response message indicates Success or Product not available within search criteria, when the Product Availability request specifies a DELIVERY search type for multiple items and the Use Split Order preference is set to No, the Product Availability response message never includes the maximum\_available for the items.

*Examples:* If item AB100 and item CD200, quantity 10 each requested:

| Scenario                                                                                                                                                                                                                                                                                                                                                                                        | Result                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| Eligible locations include location A: <ul style="list-style-type: none"> <li>AB100: 15 available</li> <li>CD200: 11 available</li> </ul> Location A can fulfill the requested quantities.                                                                                                                                                                                                      | response_description: Success                                       |
| Eligible locations include: <ul style="list-style-type: none"> <li>location A:               <ul style="list-style-type: none"> <li>AB100: 15 available</li> <li>CD200: 3 available</li> </ul> </li> <li>location B:               <ul style="list-style-type: none"> <li>AB100: 0 available</li> <li>CD200: 16</li> </ul> </li> </ul> No single location can fulfill the requested quantities. | response_description = Product not available within search criteria |
| Eligible locations include location A, flagged as Backorder Available: <ul style="list-style-type: none"> <li>AB100: 3 available</li> <li>CD200: 0 available</li> </ul> Although the location does not have sufficient inventory to fulfill the requested quantities, it is flagged as Backorder Available.                                                                                     | response_description: Success                                       |

**ProductAvailability: Delivery, Split Order = No**

### Product Availability Search: Delivery/Multiple Items and Split Order = Yes

#### ① Note

Determining whether a ship-for-pickup order can be sourced is very similar. See [About Ship-for-Pickup Orders](#) for key differences.

When the Product Availability request specifies a DELIVERY search type for multiple items and the Use Split Order preference is set to Yes, the Product Availability response message

includes a `response_description` of SUCCESS, and does not indicate a `maximum_quantity` for any items, if:

- there is at least one eligible location that could fulfill the specified quantities of the requested items, or
- the requested quantities of the items could be fulfilled by splitting the order across multiple eligible locations, or by splitting any of the lines across multiple eligible locations if the Use Split Line preference is set to Yes, or
- any of the items that could not have their requested quantities fulfilled by eligible locations as described above are stocked in eligible locations that are flagged as Backorder Available

Otherwise, the response message indicates Product not available within search criteria, and specifies the `maximum_available` quantity of the item.

**What does the `maximum_available` represent?** When the full quantities are not available for all requested items and the Use Split Order preference is set to Yes, the `maximum_available` quantity is determined as follows:

- If a full or partial quantity of one or more items is available across all eligible locations:
  - if the Use Split Line preference is set to Yes, the `maximum_available` is the total available quantity for the item across all eligible locations
  - otherwise, if the Use Split Line preference is set to No, the `maximum_available` quantity is the highest available quantity in any single eligible location
- if a partial quantity of one or more items is available across all eligible locations, and one or more items are not available:
  - if the unavailable item(s) are stocked in any eligible locations flagged as Backorder Available, the `maximum_available` quantity for the unavailable item(s) is the requested quantity; otherwise,
  - the `maximum_available` quantity for unavailable items is 0.

*Examples:* If item AB100 and item CD200, quantity 10 each requested:

| Scenario                                                                                                                                                                                                                                                                                                                                                        | Result                                                                                                                                                                                                             |

## About Ship-for-Pickup Orders

### ! Important

When you create a new organization in Order Broker 20.0 or higher, ship for pickup orders are automatically enabled, and in this case retail pickup and ship-to-store orders are not supported. When you update to Order Broker 21.0 or higher, ship for pickup orders are automatically enabled in all existing orders, and in this case retail pickup and ship-to-store orders are converted to ship-for-pickup orders.

**What is a ship for pickup order?** A ship for pickup order is one that the customer picks up at a specified location, and that can be sourced by either the placing location, the pickup location, or a third location. For example:

- order placed in location A, inventory sourced from location B, and customer picks up in location C
- order placed in location D, inventory sourced from location E, and customer picks up in location D
- order placed in location F, inventory sourced from location F, and customer picks up in location G
- order placed in location H, inventory sourced from location J, and customer picks up in location J

See [Ship For Pickup Order](#) for illustrations of possible order flows.

**Typical ship for pickup order flow:**

- Pickup location selected: The customer selects a location for order pickup.
- Inventory available? The placing location confirms that the inventory can be sourced.

**Note**

The ProductAvailability message can be used both to search for pickup locations and to confirm that the merchandise is available for sourcing, given the fulfillment rules set up for the organization, including proximity, location zones, split order/line options, and probability rules. The LocateItems request can also search for sourcing locations, but does not support searching for pickup locations for ship-for-pickup orders.

- Order created: The order is created, and the pickup location specified. Optionally, the SubmitOrder request can also specify the sourcing location, or the Routing Engine can select it.
- Sourcing location notified? If the sourcing location is different from the placing location, the sourcing location receives notification of the order through the Fulfillments response message.

Sourcing location ships to pickup location? If the sourcing location is different from the pickup location:

- The sourcing location updates the status to Intransit when the order ships.
- The pickup location receives notification of the order through the Intransit response message. This message is similar to the fulfillments response message, but includes only ship-for-pickup orders that are in transit to the selected pickup location.
- The pickup location receives the order.
- Order fulfilled: When the customer picks up the order, the pickup location updates the status to Fulfilled.

**Can the pickup location reject the order?** If the pickup location rejects the order, this indicates that there was a problem with the transfer from the sourcing location, such as a damaged or missing shipment. As a result, the Routing Engine “reshops” the order.

**Note**

**Important:** Before converting an existing organization to support ship-for-pickup orders, confirm that all integrating systems can also support ship-for-pickup orders.

**Using LocatelItems to Find a Sourcing Location for Ship-For-Pickup**

When a LocatelItems request specifies a fulfillment type of SHIPFORPICKUP, it also needs to specify the location where the customer wants to pick up the order. In this situation, the LocatelItems request serves to confirm that the inventory is available for sourcing. Both the requesting location and the pickup location can be included in the search results if they have the requested inventory available and are otherwise eligible, since they can also serve as the sourcing location for a ship-for-pickup order.

*Example:* The LocatelItems request requests availability for an item, with the ship-for-pickup location A. The response includes locations A, B, and C, indicating that location A can be both the sourcing location and the pickup location.

Potential sourcing locations must be flagged as Ship For Pickup Sourcing Available, based on the setting at the Preferences screen.

When calculating proximity, the Routing Engine uses the ship-for-pickup location specified in the LocatelItems request message and the Sourcing Distance specified at the **Preferences** screen. The distance passed in the LocatelItems request is not used.

**Gift wrap?** If the `gift_wrap` tag in the request is set to Y and the [Use Attribute Rules](#) flag is selected at the **Preferences** screen, only locations that are flagged to support gift wrap are eligible as pickup locations for the pickup order. The sourcing location for a ship-for-pickup order does not need to support gift wrap.

**Custom product or location attributes?** See [Using Attribute Rules for Ship-for-Pickup Orders](#) for a discussion on how you can use custom attributes to filter eligible locations.

Aside from these differences, using LocatelItems to find a sourcing location is the same as the process described under [Selecting a Location for a Delivery Order](#).

The LocatelItems request does not support searching for pickup locations for a ship-for-pickup order. The ProductAvailability request should be used instead to generate a list of locations eligible for pickup or ship-for-pickup orders, as well as indicating whether the merchandise is available for sourcing.

**Using Product Availability Search for a Ship-for-Pickup Order**

When the ProductAvailability request specifies a fulfillment type of SHIPFORPICKUP, the response indicates:

- whether the requested inventory is available for sourcing, and
- the eligible pickup locations, excluding potential pickup locations if there is no existing system product for the system

In many respects, the product availability search for a ship-for-pickup order is similar to searching for delivery orders. The key differences are described below.

*Selecting a Sourcing Location for a Ship-for-Pickup Order*

The ProductAvailability search uses the following rules when searching for sourcing locations:

- Potential sourcing locations are identified based on the Ship For Pickup Sourcing Available setting at the Preferences screen.

- The Sourcing Distance specified at the Preferences screen always applies when searching for a sourcing location. The range\_distance from the product availability request applies only when selecting the list of eligible pickup locations. When calculating proximity for the sourcing location, the Routing Engine uses the address specified in the ProductAvailability request message.
- Both the requesting (placing) location and the pickup location are evaluated as potential sourcing locations.
- If the requested item(s) are not available for sourcing in the full requested or partial quantity(ies), no pickup locations are returned in the response.
- *Selecting a Pickup Location for a Ship-For-Pickup Order*

The submit order message for a ship-for-pickup order needs to specify the pickup location and system. You can use the product availability message to request a listing of locations that should be able for pickup of a ship-for-pickup order near the customer's location. A system product must exist in the potential pickup location's system.

| Sourcing Scenario                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Example                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Is the requested item available for sourcing?</b> In order for the product availability response to include any eligible pickup locations, it is necessary for at least a partial quantity of the requested item be available at an eligible sourcing location. If there is more than one item specified in the request, then at least one of the items must be at least partially available.</p> <p><b>Which locations are eligible to be pickup locations for a ship-for-pickup order?</b> A ship-for-pickup order means that the customer will pick up the product(s) in a location where the inventory might already be available, or it might need to be transferred from a different location. If the product availability request message indicates that the fulfillment type is a ship-for-pickup:</p> <ul style="list-style-type: none"> <li>• The response message lists each location which is flagged as Ship For Pickup Receiving/Pickup Available and is within the specified range distance of the customer's address. The response message also indicates whether the full requested quantity(ies) of the specified product(s) are available at any eligible sourcing locations.</li> <li>• Once the customer specifies the location where s/he would like to pick up the product(s), you can then send the SubmitOrder request message, providing the customer information, requested products, and selected pickup location.</li> </ul> | <p><i>Example:</i></p> <p>A customer wants to pick up an item at a nearby store. The ProductAvailability request indicates:</p> <ul style="list-style-type: none"> <li>• the item (AB100 in a quantity of 5)</li> <li>• the customer's address, including the postal code where the (01581)</li> <li>• the distance (in miles or kilometers) that the customer is willing to travel (15 miles)</li> </ul> <p>Provided the full requested quantity of AB100 is available at any sourcing locations, the ProductAvailability response returns a description of Success, indicating that the item can be sourced, and lists:</p> <ul style="list-style-type: none"> <li>• store location 23: 10.72 miles from the customer</li> <li>• store location 57: 13.51 miles from the customer</li> </ul> <p>If only 4 units of the product are available, the response indicates Product not available within search criteria, and lists the maximum_available quantity of 4.</p> |

**If the placed (originating) location is specified as the sourcing location:** The SubmitOrder message can indicate a sourcing location that is the same as the placed (originating) location. In this situation:

- The Routing Engine does not search for a sourcing location.
- The Routing Engine does not confirm that the inventory is available at the placed/sourcing location.

- The Reserved Quantity is not increased.
- The order count is not increased for calculation of Maximum Daily Orders.
- The order is not included in the fulfillments response message to the placed/sourcing location.

If the sourcing location is not specified in the request, it is possible for the Routing Engine to select the placed location to source the order. In this situation, the Routing Engine treats the order the same way as any other ship-for-pickup order; for example, the Reserved Quantity is increased, the order count is increased, and the order is included in the fulfillments response message.

#### ProductAvailability: Evaluate pickup locations for SHIPFORPICKUP fulfillment type

Aside from these differences, using the ProductAvailability request to find availability and pickup locations for a ship-for-pickup order is the same as the process described under [Using Product Availability Search for a Pickup or Delivery Order](#).

#### Using Attribute Rules for Ship-for-Pickup Orders

You can set up custom attributes to filter the locations eligible to source orders, or where orders can be picked up.

Custom attributes are used only if [Use Attribute Rules](#) is selected at the **Preferences** screen.

These rules apply when filtering locations for LocatelItems, ProductAvailability, and SubmitOrder requests. They also apply when "reshopping" orders as a result of a StatusUpdate request or when the order is rejected through the user interface. If there have been any changes to the attribute assignments to locations or the product since the order line was created, the current attribute assignments apply.

**Note**

This setting also controls whether to filter pickup locations when gift wrap is required.

**Examples:**

| Attribute Usage                                                                                                                                          | How to Implement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Location 100 is associated with brand ABC. Your organization includes store locations associated with multiple brands, but only locations that are associated with Brand ABC can serve as pickup locations for the brand. The sourcing location does not need to be associated with the originating brand. | <p><b>Setup:</b></p> <ul style="list-style-type: none"> <li>Create a custom attribute: <ul style="list-style-type: none"> <li>Attribute Type: <i>Location</i> <ul style="list-style-type: none"> <li>* Data Type: <i>List</i></li> <li>* Ship For Pickup Match Type: Set to <i>Pickup</i></li> <li>* List Values: All possible brands for your organization</li> <li>* Allow Multiple: Selected</li> </ul> </li> </ul> </li> <li>Assign the attribute value of each supported brand to each location that can originate or serve as a pickup location for orders. <ul style="list-style-type: none"> <li>Location 100: Orders originating here are always associated with brand ABC. Assigned a Value of <i>ABC</i> with a Location Use of <i>Originating</i>.</li> <li>Location 200: Supports pickup of orders for brands ABC and DEF. Assigned Values of <i>ABC</i> and <i>DEF</i>, both with a Location Use of <i>Pickup</i>.</li> <li>Location 300: Supports pickup of orders for brand ABC. Assigned a Value of <i>ABC</i> with a Location Use of <i>Pickup</i>.</li> </ul> </li> </ul> <p><b>Web service responses:</b> The <i>LocateItems</i> response, <i>ProductAvailability</i> response, <i>SubmitOrder</i> response filter eligible locations to Location 200 and Location 300, because they are both assigned a Value of <i>ABC</i> with a Location Use of <i>Pickup</i>.</p> |

**Note**

The same results would occur if, instead of assigning the brand attribute with a Value of *ABC* and a Location Use of *Originating* to location 100, the brand attribute was passed in the request message with a value of *ABC*.

**Attribute setup options:** You can use the following options when setting up attribute definitions:

- Attribute Type: Attributes can filter eligible locations based on:
  - Location and Product:* The location must be consistent with an attribute defined for the product. The attribute might be a universal requirement, such as the engraving required example above, or specified on a case-by-case basis, such as the optional engraving example.
  - Location:* The location must be consistent with an attribute defined for the originating location. The requirement applies to the pickup location for a pickup and to the sourcing location for a delivery order. For a ship-for-pickup order, the requirement can apply to the sourcing location, the pickup location, or both, based on the Ship For Pickup Match Type set for the attribute definition.
  - Product Type:* Although you can create attributes with an Attribute Type of Product, these attributes are informational only and not used to route orders.
    - \* Data Type: Possible attribute data types are:
    - \* *Boolean:* The attribute is used to route orders if the Boolean is assigned to the product or originating location, such as the engraving examples above. An

assigned Boolean is interpreted as True. Negative Boolean attributes are not supported.

- \* *List*: Defines a list of valid values, such as the brand example above. When the attribute is used to route orders, there must be a match with one of the list values.
- \* *Text*: Similar to the *List* data type, except it is not validated against a defined list of values.
- \* *Number*: Similar to the *List* data type, except it is not validated against a defined list of values, and must be numeric.
- Allow Multiple:
  - \* *Locations*: Controls whether the attribute can be assigned more than once to a single location with different values and the same Location Use (*Originating*, *Sourcing*, or *Pickup*). For example, a location can support multiple brands. Even if the attribute is set to not allow multiples, a different attribute value can be assigned to the location for each different location use; for example, a location can support engraving when it is a sourcing location, but not when it is a pickup location. Regardless of the Allow Multiple setting, only a single value can be assigned to a location when the Location Use is **Originating**.
  - \* *Products*: Controls whether the attribute can be assigned more than once with different values to the same product.

The Allow Multiple setting does not apply to Boolean attributes, and cannot be selected.
- Ship For Pickup Match Type: Controls whether the attribute needs to match the sourcing location, the pickup location, or both the sourcing and the pickup location for a ship-for-pickup order. Does not apply to delivery or pickup orders.

**Filter based on multiple attributes?** It is possible for multiple location, or product and location attributes to filter eligible locations. For example, one attribute can filter locations that do not support engraving, while another attribute can filter locations based on brand. All attributes apply, regardless of whether:

- They have been assigned to the product or any potential sourcing or pickup locations;
- They are passed in the *LocatelItems*, *ProductAvailability*, or *SubmitOrder* request message;
- They were initially applied to the order line at the time that it was created, and it is now being “reshopped.”

A location is excluded if it does not qualify based on all location or product and location attributes. For example, the *Brand* attribute is applied to location 1 with a Location Use of *Originating* and a value of *ABC*, and a *LocatelItems* request from location 1 with a *Pickup* fulfillment type passes the *Brand* attribute with a value of brand *DEF*. Only locations that are assigned both *ABC* and *DEF* with a Location Use of *Pickup* can be eligible as pickup locations.

### Considerations for Upgrade to 21.0

If ship-for-pickup orders were not previously enabled in your organization prior to the 21.0 update:

- *Integrating systems must support ship-for-pickup*: Do not upgrade to 21.0 if any integrating systems do not support a third location besides the originating (placed) location and the pickup location.

- *Existing orders permanently converted:* When ship-for-pickup orders are enabled, all delivery and ship-for-pickup orders are converted to ship-for-pickup orders, and cannot be changed back.
- *Reset fulfillment options:* After ship-for-pickup orders are enabled, you need to use the Preferences screen to set the options at the Fulfillment tab, including the Sourcing Distance. You can also use the Order Orchestration Preference Overrides screens to set up overrides.
- *Reschedule reports:* After converting an existing organization to support ship-for-pickup orders, you should recreate any currently scheduled Order Status or Unfulfillable reports.
- *Ship-to-store orders and Store Connect use:*  
If you previously processed ship-to-store orders and use Store Connect, these orders will be converted to ship-for-pickup orders, which cannot be fulfilled through the Store Connect user interface.

### Additional Differences When Ship-For-Pickup is Enabled

Additional web service and screen differences to note when ship-for-pickup orders are enabled in an organization are described below.

#### *Routing Engine Setup for Ship-For-Pickup*

When ship-for-pickup orders are enabled, the Fulfillment tab of the organization's Preferences screen includes:

- **Sourcing Distance:** Indicates the maximum distance a potential routing location can be, based on:
  - the ship-for-pickup location, if specified (LocateItems request, SubmitOrder request, or “reshop”), or
  - the address specified in the Product Availability request
- **Ship For Pickup Sourcing Available:** Controls whether a location is eligible to source a ship-for-pickup order
- **Ship For Pickup Receiving/Pickup Available:** Controls whether a location is eligible to be a pickup location for a ship-for-pickup order

These last two options replace the Retail Pickup Available and Ship To Store Available options when ship-for-pickup orders are enabled or after the 21.0 update. These differences also apply to the **Order Orchestration Preference Overrides** screens.

Aside from these differences, Routing Engine logic works the same way when selecting a sourcing location for a ship-for-pickup order as it works when selecting a fulfilling location for a delivery order. All the brokering settings, such as split order, zone fulfillment, acknowledging orders before brokering, and probability apply the same way for ship-for-pickup processing as they would for any other type of order.

#### *SubmitOrders*

When the SubmitOrder message specifies a fulfillment type of SHIPFORPICKUP, it also needs to specify the pickup location for the order. It can also include the sourcing location. If no sourcing location is specified in the message, the Routing Engine “shops” the order as described above and selects the sourcing location.

#### *Fulfillments*

The fulfillments response message includes orders only when the request is from the sourcing location. The pickup location receives notification of incoming orders from the Intransit response.

### *Intransit*

This web service request resembles fulfillments request processing, but serves only to notify pickup locations about ship-for-pickup order that are in transit.

### *Other Web Service Differences*

Fulfillments response, status inquiry response, status list response, order search response: These response messages indicate the pickup locations for ship-for-pickup orders.

### *Screen Differences*

Certain screens display different options based on whether ship-for-pickup orders are supported:

- Preferences screen: Options available at the Fulfillment tab vary, as described above.
- Order Orchestration Preference Overrides: Different order types are available to configure based on whether ship-for-pickup is supported.
- Run Reports, Schedule Report: The sourced location is available for selection when generating the Order Status report, and the report includes the sourced location.
- Order Inquiry: When ship-for-pickup orders are enabled for an organization, the **Order Inquiry** screen has the Locations column broken out into three columns to indicate the Placed Location, Sourced Location, and Pickup Location. The search criteria also vary from those displayed for an organization that does not support ship-for-pickup orders. Similar differences apply to the **Order** screen and the **Edit Order Item** and **Display Order Item** windows.

## Troubleshooting Fulfillment or Sourcing Location Selection

Because there are various factors that can affect how the Routing Engine eliminates potential locations from selection as fulfilling locations (order “shopping”), you can use the Trace Shopping Log screen as needed to research shopping logic and resolve questions. This screen provides a listing of the potential product locations for an order, and indicates the reason, if any, why each location is eliminated, including:

- Not supporting the order type
- Not having sufficient inventory
- Probability rule
- Maximum order limit
- Zone fulfillment
- Proximity distance
- Shopping within system not allowed
- Not supporting gift wrap
- Attribute incompatibility

### **Note**

Oracle recommends that you turn on shopping logic tracing to research questions related to how the routing engine is selected locations, but to otherwise keep tracing turned off in order to enhance system performance.

**For more information:** See the [Trace Shopping Log](#) screen for a discussion and more details.

### Routing Engine Message Summary

**Overview:** The request and response messages that support the Routing Engine are briefly summarized below. See the Web Services Guide on My Oracle Support (2953017.1) for links to detailed information on each message, including layouts, sample messages, and message contents.

**LocateItems:** These messages are part of the typical flow for creating pickup orders. Their use is optional for creating other types of orders, because the Routing Engine uses the same steps to select a location for a delivery order or the sourcing location for a ship-for-pickup order as it uses to create the response to the LocateItems request.

- *Request:* Look for locations that should be able to fulfill a pickup or other type of order, or source a ship-for-pickup order, for one or more items. Includes information on the customer's location or ship-for-pickup location for proximity purposes.
- *Response:* Lists the location(s) that should be able to fulfill or source the product(s) specified in the request message. Based on your Order Orchestration settings at the [Preferences](#) screen, the response for a delivery or ship-for-pickup request can list information on individual locations, or just indicate that the product(s) can be shipped.

**Product Availability (multiple fulfillment types):** Request availability information for one or more items and one or more fulfillment types (delivery, pickup, or ship-for-pickup):

- *Request:* Look for locations that should be able to fulfill a pickup order or where the customer could pickup up a ship-for-pickup order, or confirm whether a delivery, or ship-for-pickup order could be fulfilled or sourced. Includes information on the customer's location for proximity purposes.
- *Response:* Lists the location(s) that should be able to fulfill the product(s) specified in the request message for a pickup order, or whether a delivery, or ship-for-pickup order could be fulfilled or sourced.

**SubmitOrder:** Requests creation of the order and might also request assignment of a fulfilling or sourcing location, depending on the order type. See [Types of Orders](#) for more information.

- *Request:* Includes information such as:
  - the requesting location and system
  - the requesting system's order number
  - requested item(s), quantities, prices, and tax charges
  - name and address of the sold-to customer
  - for a pickup order, the location where the customer will pick up the order
  - for a delivery or ship-for-pickup order, shipping address information
  - order total and subtotal amounts
  - optionally, special instructions
  - optionally, tender amounts and other information (**Note:** The message should not include the actual credit card account number.)
- *Response:* Once it has created the order, the Routing Engine sends a simple response message acknowledging the order, confirming the fulfilling or sourcing location and system, and indicating the request ID it has assigned to uniquely identify the order.

**Fulfillments (polling for new orders):** Each location that might need to fulfill or source any orders needs to poll the Routing Engine periodically for any newly assigned orders or lines. Alternatively, a system can submit a fulfillment request to poll for orders assigned to all its related locations.

- *Request:* A location or system identifies itself in order to request a listing of newly-assigned orders.
- *Response:* Lists details on the order, such as customer name and address, order type (pickup, delivery, or ship-for-pickup), requested items and quantities, and special order messages. If the Require Status Update flag for the location's system is unselected, then the Routing Engine sends each order just once to the fulfilling or sourcing location and does not require confirmation. See [Require Status Update for Assigned Orders?](#) below for a discussion.

**Intransit (polling for ship-for-pickup orders in transit to pickup location):** Each location that might receive any ship-for-pickup orders for customer pickup needs to poll the Routing Engine periodically for any in transit orders or lines. Alternatively, a system can submit an intransit request to poll for orders in transit to all its related locations.

- *Request:* A location or system identifies itself in order to request a listing of in transit ship-for-pickup orders.
- *Response:* Lists details on the order, such as customer name and address, requested items and quantities, and special order messages. If the Require Status Update flag for the location's system is unselected, then the Routing Engine sends each order just once to the pickup location and does not require confirmation. See [Require Status Update for Assigned Orders?](#) below for a discussion.

**StatusUpdate:** Change the status of an existing order or line. Any location can send a status update to the Routing Engine, including the originating location and the fulfilling, sourcing, and pickup location; however, certain status updates are restricted to the fulfilling, sourcing, or pickup location.

- *Request:* Identifies the requesting system and location, the order or line, and the new status to assign. Status updates apply at the order level if the Allow Split Order preference is unselected; otherwise, they apply at the line level. Also, status updates must specify the quantity to update if the Allow Partial Updates preference is selected.
- *Response:* Indicates whether the status update was successful.

 **Important**

If the Allow Partial Updates preference is selected, before a system sends a status update, it should first send a status request message so that the status update correctly identifies the current Order Orchestration line number.

**StatusRequest (order status inquiry):** At any point in the order or fulfillment process, any location can send an order status inquiry request to the Routing Engine.

- *Request:* Provides the order ID and request ID that uniquely identify the order.
- *Response:* Indicates the current order and line statuses and the name and address of the sold-to customer.

**OrderSearch (search for orders for a customer):** At any point in the fulfillment process, any location can send an order search request to the Routing Engine.

- *Request:* Includes search criteria such as information on the sold-to customer or shipping address, including name, phone number, or email address. Can also specify a date, to request a list of orders created on or after that date.
- *Response:* Includes details on all orders that meet the search criteria.

**Order Update (update the Under Review flag for an order):** At any point in the fulfillment process, a system can update the setting of the [Under Review](#) flag, indicating whether the order is eligible for fulfillment:

- *Request:* Indicate the order to update and the setting of the Under Review flag.
- *Response:* Indicate whether the update was successful.

**Order Status List (request the current status of a list of orders):** At any point in the fulfillment process, a system can request the current status of a list of up to 2000 orders:

- *Request:* Request the current status of a list of orders by specifying the request IDs, and can optionally specify to include orders based on the status of the order lines.
- *Response:* Provides the status and other summary information about the requested orders.

**Availability Update (change the current available quantity for a product location):** At any point, the system can update the available quantity for one or more product locations:

- *Request:* Specifies whether to increase, decrease, or reset the available quantity for one or more product locations. If the product location does not already exist, it is created.
- *Response:* Indicates whether each product location was updated successfully.

**For more information:** See the Web Services Guide on My Oracle Support (2953017.1).

### Require Status Update for Assigned Orders?

**Overview:** The Require Status Update flag for a system controls the updates that take place for fulfillments response processing and intransit response processing.

#### Note

A status update is not required to set the status to polled when you use [Order Fulfillment through RICS Integration](#), regardless of the setting of the [Require Status Update](#) flag.

### Fulfillments Response Message

**Fulfilling or sourcing locations:** You can specify whether the Routing Engine requires confirmation that an assigned fulfilling location, or sourcing location for a ship-for-pickup order, has been notified of an order or line included in the fulfillment response message. The Require Status Update flag setting for a system controls whether the confirmation is required.

If the Require Status Update flag is:

- **Selected** = the Routing Engine continues to include an order in the fulfillment response message to an assigned fulfilling or sourcing location or system, until the location or system sends a status update indicating that the order or order line is *polled* (all order types) or *accepted* (pickup, delivery, or ship-for-pickup orders). When the Routing Engine receives this status update, it flags the order or line as polled.

**Possible risk:** With this setting, there is a potential risk that an order could be created twice in the integrating system if, for example, that system does not complete creating the

new orders in the fulfillments response message and sending the status update messages for them before it sends a new fulfillments request message to Order Orchestration.

- Unselected = the Routing Engine includes each order or line just once in the fulfillment response message to an assigned fulfilling or sourcing location. If the order or line status was *new\_order*, it changes the status to *polled*.

**Possible risk:** With this setting, there is a potential risk that an order might not be created in the integrating system if, for example, the integrating system does not receive the fulfillments response, or fails to create all orders in the response.

**Polling count:** Each time the Routing Engine includes an order in the fulfillment response message, it increases the order line's Poll Count. Once an order's Poll Count exceeds the Polling Retries specified for the system, the order is eligible to be included in the [Polling Status Email](#), notifying the system administrator of unacknowledged orders for the location.

#### ① Note

Until the order or lines are flagged as polled, the Routing Engine continues to include the order in the fulfillment response message even after it was included in the *Order Orchestration Polling Status Email*.

### Splitting orders?

If the Allow Split Order preference is selected, each order line on a delivery order can be assigned to a different fulfilling location, or each order line on a ship-for-pickup order can be assigned to a different sourcing location, or be assigned at a different time. As a result, the Routing Engine evaluates the Poll Count of each order line separately, and does not send the *Order Orchestration Polling Status Email* unless an individual line exceeds the Polling Retries setting.

*Example:* The Polling Retries for a system is set to 5. If line 1 has a current Poll Count of 4 and line 2 has a Poll Count of 3, the Routing Engine does not include the order in the *Order Orchestration Polling Status Email*. However, if one of the lines has a current Poll Count of 6, the Routing Engine includes the order in the *Order Orchestration Polling Status Email*.

If the Allow Split Order preference is unselected, all order lines are assigned to the same fulfilling location, or sourcing location in the case of ship-for-pickup orders. In this case, the Poll Count of each order line is the same.

*Example:* The Polling Retries for a system is set to 5. If each line has a Poll Count of 4, the Routing Engine does not include the order in the *Order Orchestration Polling Status Email*. However, if each line has a Poll Count of 6, the Routing Engine includes the order in the *Order Orchestration Polling Status Email*.

**Flagging an order or order line as polled vs. polled order status:** Sending the status update flags the order or line as polled and prevents it from being included in future fulfillment response messages; however, this status update does not necessarily change the status to *polled*. For example, setting the status to *accepted* also serves to flag the order or line as polled and prevent it from being included in future fulfillment response messages.

**Consistent setup in integrated system:** It is important that the integrated system is set up consistently with the Require Status Update and related settings in Order Orchestration; otherwise, the integrated system might not send status update messages for newly assigned orders or lines, and the Routing Engine might continue to include the same orders or lines in the fulfillment response message, resulting in duplicate orders in the integrated system. For example, if the Require Status Update flag is selected for the Order Administration System

system in Order Orchestration, then the Re-Polling for Orders Brokered to OROMS (L04) system control value in Order Administration should also be selected.

**Clearing the poll count:** The Routing Engine resets the Poll Count to 0 if a fulfilling location rejects an order or order line, or if its status changes to *canceled*, *unfulfillable*, or *fulfilled*.

#### *Polling Status Email*

The Routing Engine sends this email to the System Ops Email address specified for the system at the *Orders* tab on the [System](#) screen. The email lists each order with an order line whose Poll Count has exceeded the system's Polling Retries setting.

No email is generated for orders that exceed the Polling Retries setting based on the intransit response message.

The language used for the email is based on the Language specified for the organization, and the formatting of dates, times, and numbers is also based on the organization-level settings. See the [Organizations](#) screen for more information.

**Different poll counts?** If there are multiple order lines assigned to the fulfilling location, the order might be listed more than once when multiple lines exceed the Polling Retries setting based on different Poll Count totals.

#### *Example:*

- *Same poll count:* Order 123 includes line 1 and line 2. each with a Poll Count of 5. The email lists the order once with a Times Polled of 5.
- *Different poll counts:* Order 456 includes line 1 with a Poll Count of 5, and line 2 with a Poll Count of 6. The email lists the order twice, once with a Times Polled of 5, and once with a Times Polled of 6.

**How often?** The Routing Engine uses the number of minutes indicated for the [Email Notifications](#) job to determine how often to generate the email.

\*\*\*\*ATTENTION\*\*\*\*

The following orders have been sent multiple times and not confirmed as received.

System Code: cws(Store)

Date/Time : 10/21/2016 1:53:22 PM

| Location       | Request ID | Order # | Times Polled |
|----------------|------------|---------|--------------|
| 317 Sample Loc | 68866      | 7854    | 11           |
| 317 Sample Loc | 68907      | 7857    | 10           |
| 317 Sample Loc | 68913      | 7859    | 10           |
| 317 Sample Loc | 68918      | 7861    | 9            |
| 317 Sample Loc | 68918      | 7861    | 8            |

Please do not respond to this message.

--Order Orchestration

#### **Intransit Response Message**

**Pickup locations:** In addition to controlling the updates that take place for fulfilling and sourcing locations as a result of the fulfillments response message, the Require Status Update flag also controls the updates that take place for pickup locations as a result of the intransit response message. This message is used only for ship-for-pickup order types.

If the Require Status Update flag is:

- **Selected** = the Routing Engine continues to include a ship-for-pickup order in the intransit response message to a pickup location or system, until the location or system sends a status update indicating that the order or order line is intransit polled.
- **Unselected** = the Routing Engine includes each ship-for-pickup order or line just once in the intransit response message to a pickup location, and then changes the status to intransit polled.

**Polling count:** The polling count for the order line is initially set to 0 when it is in transit. Each time the Routing Engine includes an order or line in the intransit response message, it increases the order line's Poll Count.

#### **Note**

Unlike the rules for the fulfillment response, the rules for the intransit response do not include generating the *Order Orchestration Polling Status Email* when an in transit order exceeds the Polling Retries specified for the system.

### Calculating the Available to Promise Quantity

**Overview:** Each integrated system has its own rules for calculating an item's available quantity based on the on-hand quantity, open orders, pending transfers, and other related data. In Order Orchestration, you have the option of configuring a system to subtract order lines in certain statuses from the reported available quantity in order to make the availability calculation more accurate. When an order line is in one of these statuses, that quantity in that fulfilling location is considered reserved for the order, and not available to fulfill any other orders.

*Example:* The available quantity reported by a system for a product location is 37; however, the location is assigned to fulfill an order for 4 units, and the order is in *new\_order* status, indicating that the location has not yet polled for new orders and been notified of this order assignment. As a result, the effective available quantity is actually 33 (37-4). You can configure the system to consider order lines in *new\_order* status as reserved, and subtract the total quantity of order lines in this status from the reported available quantity to determine the effective available quantity for a fulfilling location.

**Fulfilled quantity:** You can also track the [Fulfilled Quantity](#) in order to subtract it from the available quantity.

**Ship-for-pickup orders:** When the order type is ship-for-pickup, the Fulfilled Quantity is updated for the sourcing location when the order is fulfilled at the pickup location.

The [Available to Promise](#) quantity for a product location is equal to the available quantity minus the reserved and fulfilled quantity.

### Reserved Quantity Calculation

**When does Order Orchestration subtract the reserved quantity?** When Order Orchestration responds to a *LocatelItems* request or a product availability request, assigns a location for an order line, evaluates probability rules, or evaluates whether a location specified for an order can fulfill the order, it subtracts the reserved quantity from the available quantity last reported for the location. For example, if the available quantity in a product location is 10, but there are 9 units of this product on other order lines assigned to that fulfilling location in a reserved status, then Order Orchestration determines that the available quantity to return in the *LocatelItems* response message, or qualify for a new order, is 1.

**Examples:** The following table presents examples on how you might subtract the reserved quantities for two different systems:

| System Rules                                                                                                                                                                                                                                                                                                                                                                                                                                     | Sample Setup                                                                                                          | Sample Result                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>System subtracts reserved order lines:</b><br>System 123 (Order Administration) calculates available quantity as On hand - Protected - Reserved - Reserve Transfer - Backordered = Quantity available and reports the result to Order Orchestration; however, if an order is currently in <i>new_order</i> status in Order Orchestration, this indicates that system 123 has not yet polled for the order or been notified of its assignment. | You select the Include Reserved flag for system 123, and select the New_Order status.                                 | System 123 reports a quantity available of 50 for item AB100 in location 10; however, there are currently 2 units of item AB100 assigned for fulfillment to location 10 on an order in <i>new_order</i> status.<br><br>Order Orchestration subtracts the 2 units in <i>new_order</i> status and calculates a quantity available of 48.                                                                                                                       |
| System does not subtract any order lines: System 789 reports on-hand quantity to Order Orchestration as the available quantity.                                                                                                                                                                                                                                                                                                                  | You select the Include Reserved flag for system 789, and select the New_Order, Accepted, Picked, and Polled statuses. | System 789 reports a quantity available of 30 for item AB100 in location 35; however, there are currently order lines for the item assigned to this location for fulfillment in the following statuses: <ul style="list-style-type: none"> <li>• new_order: 1</li> <li>• accepted: 3</li> <li>• picked: 1</li> <li>• polled: 5</li> </ul> Order Orchestration subtracts a total of 10 units in the above statuses and calculates a quantity available of 20. |

**When you select reserved statuses:** When you configure this option for a system at the [System](#) screen, Order Orchestration automatically calculates the reserved quantity for each product location for the system by evaluating each item on order in all product locations. The number of affected product locations and order lines determines how long this calculation takes to complete.

**Activities that update the reserved quantity:** Any activity related to updating order or order line status can also update the reserved quantity for a product location if the system's Include Reserved flag is selected. These activities include:

- creating a new order through the SubmitOrder request message
- updating an existing order status through the StatusUpdate request message or through the Order screen
- receiving a fulfillments request message if the system is not configured to require a status update after polling; see [Require Status Update for Assigned Orders?](#)
- fulfilling an order through Store Connect

**Reviewing the available and reserved quantity for a product location:** You can review the reported available quantity minus the reserve quantity at the **Edit Product Location** screen.

### Fulfilled Quantity Calculation

**Subtracting the fulfilled quantity:** If tracking fulfilled quantity is selected for a system, the fulfilled quantity is also subtracted from the available quantity when calculating the Available to Promise quantity. Order Orchestration updates the fulfilled quantity for a product location when:

- a location ships a delivery order: the fulfilled quantity increases by the shipped quantity
- a customer picks up a pickup order: the fulfilled quantity increases by the picked up quantity
- a customer picks up a ship-for-pickup order: the fulfilled quantity increases by the picked up quantity at the sourcing location
- the fulfilled inventory export runs: if the Track Fulfilled Quantity field for the system is set to *Reset at Inventory Export*, the fulfilled quantity is set to 0, and the available quantity is reduced by the fulfilled quantity, calculated based on the `xom_status_history` records of the delivery or pickup orders that were included in the export
- the product import runs: if the Track Fulfilled Quantity field for the system is set to *Reset at Product Import*, the fulfilled quantity is set to 0, but the available quantity is not updated

**Examples of fulfilled quantity updates:** If the Track Fulfilled Quantity field for the system is set to *Reset at Inventory Export*:

- There are 10 units of an item in a location:
  - Available quantity = 10
  - Reserved quantity = 0
  - Fulfilled quantity = 0
  - Available to promise = 10
- An order for 3 units is assigned and is polled. If the reserved statuses include polled orders:
  - Available quantity = 10
  - Reserved quantity = 0
  - Fulfilled quantity = 3
  - Available to promise = 7
- The order is shipped:
  - Available quantity = 10
  - Reserved quantity = 3
  - Fulfilled quantity = 0
  - Available to promise = 7
- The [Fulfilled Inventory Export](#) runs:
  - Available quantity = 7
  - Reserved quantity = 0
  - Fulfilled quantity = 0
  - Available to promise = 7

See the [Track Fulfilled Quantity](#) field at the **System** screen for more examples.

**Reviewing quantities for a product location:** You can review the *Available Quantity*, *Reserved Quantity*, *Fulfilled Quantity*, and the *Quantity to Promise* at the [Edit Product Location](#) screen and the [Browse Product Locations](#) window.

**Resetting the fulfilled quantity:** You can configure a system to reset the fulfilled quantity either when the fulfilled inventory export runs, or when the product import runs. See the [System](#) screen for more information.

### Things to Note about Reserved and Fulfilled Quantity Calculation

- *Special items such as drop ships:* If a system uses special available quantities to indicate a drop ship item, you can set up a probability rule to apply the special available quantity even if there is a reserved quantity. For example, Order Administration reports a quantity available of 9999 for a drop ship item, which is not stored in inventory in the warehouse but can still be reserved on new orders. You might set up a probability rule such as:

If Category Equal To [=] DROP

Then Available Quantity Equal [=] 9999

Applying a probability rule such as this can enable you to continue using business logic based on the available quantity of 9999 to identify special items such as drop ships.

- *What if the available quantity is negative?* When you update a system to include a new status in the reserve quantity total, the effective available quantity that results for a location might be negative. For example, a location has 10 units available, with 11 units on orders that are in new\_order status. If you update the system to include new\_order items in the reserved quantity total, the resulting effective available quantity is -1; however, Order Orchestration does not update the currently assigned orders automatically. Instead, the location needs to reject the orders if it cannot fulfill them all.
- *Reserved statuses should exclude fulfilled:* Do not include fulfilled order lines in the reserved statuses selected for the Store Connect system to avoid incorrect calculation of the *Available to Promise* quantity.

**For more information:** See the [Fulfilled Inventory Export](#) for background on exporting inventory updates to a system and ways to update the fulfilled quantity.

### Reviewing or Updating Order Orchestration Orders

You can use the **Order Inquiry** and **Order** screens in Order Orchestration to review information about orders assigned to Order Orchestration for fulfillment. You can also update the orders' status, or the fulfilling or sourcing location, if you have authority. The information displayed at these screens includes:

- order number and request ID
- sold-to and ship-to customers
- originating and fulfilling locations; or placing, sourcing, and pickup locations for ship-for-pickup orders
- details on ordered items, including quantity, pricing, and tax
- current status
- status and fulfilling or sourcing location history
- special handling instructions
- ship via and tracking number
- order totals and balance due, if any

**Updating order or order line status:** A user with authority to Order Maintenance can update the status of an order (if the organization does not split orders) or the status of an order line (if the organization does split orders). If the Allow Partial Updates preference is selected, then the quantity is always required when you update status.

**Updating the fulfilling or sourcing location for an order or line:** A user with authority to Order Maintenance can update the assigned fulfilling or sourcing location for an order (if the organization does not split orders) or for an order line (if the organization does split orders). Reassignment is available only for delivery and ship-for-pickup orders. You cannot change the quantity when you change the fulfilling or sourcing location; the change always applies to the entire current quantity for the line.

**For more information:** See the [Order](#) screen for information on maintaining an order or order line.

## Examples of Order Orchestration Process Flows

The examples presented below include integrations with Order Administration System, a POS system such as Oracle Retail Xstore Suite, and a web storefront. For example, you can connect one or more Order Administration system companies, one or more Xstore locations, and your web storefront, allowing the customer to locate merchandise anywhere in this group of locations.

### Note

The sample flow below:

- is illustrative of integration with Order Administration System and Xstore. Integrations between Order Orchestration and other systems will use a somewhat different flow.
- does not reflect all current Order Orchestration options, such as the ability to split orders or lines, track reserved quantities, use zone fulfillment, or update partial line quantities.

### Example: Searching for Items

**Sample message flow:** A typical scenario for locating products might be:

1. A customer on the web storefront wants to check the availability of a particular product for pickup. The web storefront sends an inquiry, such as the locate items request, to Order Orchestration.
2. Order Orchestration's database indicates that the product is stocked in the warehouse for your Order Administration company and in several Xstore locations.
3. Order Orchestration sends an inventory inquiry request to Order Administration System and to Xstore to check the current inventory for the requested product in the locations where it is stocked.

### Note

If any system is flagged as "off-line," Order Orchestration does not attempt to check inventory on demand; instead, it uses the inventory information currently in the Order Orchestration database.

4. The inventory inquiry response provides the product's current available quantity in each location. Order Administration also provides information about any open purchase orders.

**Note**

Order Orchestration updates the availability information for the product in its own database when it receives the information from each on-line system, creating new product locations if there was not previously a record of an item in one of the system's locations.

5. Order Orchestration retrieves the availability information for any off-line locations from its own database.

**Note**

Even if a system is flagged as on-line, if Order Orchestration cannot connect to the system's database, it retrieves the availability information from its own database.

6. Order Orchestration sends the availability information back to the web storefront using the related response message. The customer then might have the option of creating a store pickup request at one of the locations where the product is available.

**Example: Creating a Delivery Order in Xstore and Fulfilling it in Order Administration**

**Overview:** The following screens illustrate the process of creating a delivery order in Xstore and sending it to Order Administration System Cloud Service for fulfillment.

**Select order type:** In Xstore, select *Customer Delivery* in order to have Order Administration System ship the order directly to the customer.

**Enter additional information and locate items:** After entering the customer's name and address and selecting the ship via, use the Locate Item option to find a location where the merchandise is available for shipment. Behind the scenes:

- Xstore sends a `LocateItems` request to the Routing Engine
- The Routing Engine queries the Order Administration database for possible fulfilling locations, or checks its own database for the most up-to-date information
- The Routing Engine applies proximity, probability, and your Order Orchestration preferences to the list of possible locations in order to determine which locations to return to Xstore, the availability information to include, and the order in which to sort the locations, for example:
  - always list distribution centers first
  - include certain locations even if the requested merchandise is backordered
  - include no more than 5 locations in the results
- The Routing Engine uses the `LocateItems` response to return the results to Xstore

**Note**

Depending on your business requirements and the type of order, you can also opt to have the Routing Engine select the fulfilling location.

**Complete order entry in Xstore:** After selection of a ship via (which must map to an Order Administration ship via code) and completion of tender entry, Xstore sends the submit order request to the Routing Engine.

**Order created in Order Orchestration:** The Routing Engine creates the order in *new\_order* status. The distribution center periodically sends a fulfillment request message to Order Orchestration to poll for newly-assigned orders.

**Order created in Order Administration:** When Order Administration receives the fulfillment response message, it uses the information to create an Order Orchestration record and the new order for processing, including:

- customer name and address information
- Xstore order number is the alternate order number
- Pricing, tax, and other order totals from Xstore
- Order Orchestration request ID saved in an order message

**Fulfillment:** Before printing a pick slip for the order Order Administration sends a status inquiry request to the Routing Engine to confirm that the order has not been canceled. As Order Administration puts the order through its normal process of pick slip printing, shipment, and billing, it sends order status updates to the Routing Engine with each change in status. When it ships the order, the information sent to the Routing Engine includes the ship via and tracking number, if available, so this information is available to Xstore when it sends its periodic status inquiry requests.

## Data Hierarchy

Order Orchestration serves as a central repository of availability information for products from each of the integrated systems. Within an organization, one system serves as the default system for item/product information, and the products from other systems are associated with that default system's product. Selecting the default system is an important step in the implementation process for Order Orchestration. For example, if you use Order Orchestration with Order Administration, then Order Administration System would typically serve as the default system, or system of record. You would create items and SKU's in Order Administration and export them to Order Orchestration, along with location-specific data and availability information.

In order to understand how Order Orchestration handles availability information, it is important to review how it stores information on the products and systems that it integrates with.

### Organization, System, and Location

The highest organizational level in Order Orchestration is the organization. The organization consists of any number of systems that will have the ability to communicate with Order Orchestration in performing searches for available inventory and, potentially, using the Routing Engine.

The organization includes various systems. A system, such as a company in Order Administration or an Xstore database, is integrated with Order Orchestration for the purposes of providing inventory availability information, requesting inventory availability information, or using the Routing Engine.

Systems can be on-line or off-line. Order Orchestration sends messages to on-line systems to get real-time inventory and waits for the responses. For off-line systems, Order Orchestration relies on the inventory information stored in Order Orchestration's own database, which is typically scheduled to be updated daily or on some other periodic basis. Order Orchestration does not send a real-time request to off-line systems.

Each time Order Orchestration receives an inventory response from an on-line system, it stores the latest availability information for the product in its database. In this way, Order

Orchestration can provide recent availability information even in the case of temporary communication problems.

A system can contain one or more locations, such as a warehouse in Order Administration or a store location in Xstore. Each location would contain inventory whose availability information should be made visible across the organization.

Each location is assigned to a location type, indicating whether it is a store, warehouse, or vendor. Location types are defined within each organization; for example, Pinnacle Company organization might include location types of Pinnacle stores and Pinnacle warehouses, while the Zenith Company organization includes Zenith stores and Zenith warehouses.

Your organization includes only the systems and locations that you have chosen to include in your Order Orchestration organization. For example, you can omit specific store locations or non-allocatable warehouses from your locations, or training or test companies from your systems.

## Product, System Product and Product Location

Order Orchestration provides availability information for the specific products that you have added to Order Orchestration's database.

A product, such as a pen, might be identified by a different code, ID or barcode across the systems in your organization; however, Order Orchestration's database cross-references this same product across the various systems. Each instance of the same product in the various systems represents a system product.

For example, you sell a pen as AB100 in Order Administration company 1. You sell the same pen as 345789123 in Xstore. For the master product AB100, you have two system products in Order Orchestration: AB100 for Order Administration System, and 345890123 for Xstore. It is also possible to use the same code for a product across more than one system; for example, you might also sell the pen as AB100 in Order Administration company 2.

### Note

If you import products from Merchandising Cloud Services applications (RMFCS), then the product code and all system product codes are the same.

If you are using Order Administration System, then the master product is defined as the item/SKU in your default Order Administration company, or system, and other system products are related to this primary product. If you are using Order Administration and Xstore, then the master product is probably defined in Xstore.

Order Orchestration stores availability information for each system product in the product location where it is stocked. For example, you stock AB100 in warehouses 2 and 3 in Order Administration, and in store location 1 and 2 in Xstore. The information included in the Order Orchestration database for each product location is:

- available quantity
- next purchase order date (date of the next expected purchase order, if any)
- next purchase order quantity (the quantity expected on the next purchase order)
- date and time when the availability information was last updated for the product location

**Product barcodes:** You can assign UPC barcodes to products in your organization for use in Store Connect. Barcodes are assigned to the product itself rather than a system product, and must be unique in your organization. See [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#) for background on importing barcodes along with products, system products, locations, and product locations.

As with the [Organization, System, and Location](#) hierarchy, you control which products and product locations to include in Order . For example, you can omit new products, or products that you sell only on your web storefront and not in your retail stores by using the OROB Eligible flag in Order Administration.

### Integrated Data Hierarchy

The following chart illustrates the complete hierarchy in Order , including relationships among [Organization, System, and Location](#) and [Product, System Product and Product Location](#).

## Proximity Locator Searching

**Overview:** In addition to locating merchandise in warehouses and stores, Order Orchestration can restrict its search to a specific geographical area. For example, if the customer wants to find a certain product in stores within 25 miles of his home, Order Orchestration restricts the search results to stores within that distance from the customer's address. Proximity logic is available for searches, such as locate items requests and for the Routing Engine.

**Supported when?** Proximity locator searching is supported only when the Use Proximity Locator option is selected at the [Preferences](#) screen. If the Geocode Address is blank at the [Tenant-Admin](#) screen, then proximity locator searching is based on the proximity location table; otherwise, if a Geocode Address is specified, proximity locator searching is based on the Oracle Maps Cloud Service.

**Method of distance evaluation:** In most cases, distance evaluation is based on straight-line (Euclidean) search. The straight-line search is based on:

- The actual street address, if provided and if Oracle Maps Cloud Service, if in use; otherwise,
- The center of the zip or postal code.

However, you can calculate turn-by-turn distance for delivery orders using a specified carrier if you use Oracle Maps Cloud Service. See *Turn-by-Turn Distance Evaluation for Delivery Orders* for a discussion.

### Using the Proximity Location Table

**How is proximity calculated?** When you use the proximity location table, proximity locator searches are based on the longitude and latitude at the center of each zip or postal code based on the density of population within the zip or postal code.

The distances indicated in the search results are not exact driving distances; instead, they are based on the population centers of the zip or postal codes. For example, if the customer's

address is in zip code 01701 and the specified product is available at a store location in zip code 01760, the indicated distance indicates the difference in longitude and latitude from the population center of 01701 to 01760; it does not indicate the actual driving distance from the customer's home.

If the customer's address is in the same zip or postal code as the location, then the distance indicated in the search results is 0.0, regardless of the actual distance between the two addresses in the zip or postal code.

Calculating proximity as described above applies only within the US and Canada.

**Rounding:** There are situations in which Order Orchestration might include locations whose distances from the customer's location are greater than the specified radius, if the number can be rounded down to the radius. For example, if the specified radius is 25 miles, and a store is 25.21 miles from the customer's location, Order Orchestration includes this location in the search results. Including these locations can be helpful, since the proximity search is not an exact driving distance from the customer's location to the store. However, the location is not included if the distance would round up to the next number rather than down to the radius. For example, if the distance calculated is 25.91 miles, Order Orchestration does not include it in the search results.

**What if the request does not specify a postal or zip code?** The proximity search relies on the postal or zip code for greatest precision; however, it is still possible to process a proximity search without this piece of information.

For example, a customer is looking for the location closest to 101 Main Street in Springfield, but does not know the zip code for this address. There are 17 zip codes in Springfield, but there is no way for Order Orchestration to determine the correct zip code for 101 Main Street. In this situation, Order Orchestration uses the first zip code in the proximity location table for Springfield as a basis for calculating the distance from the customer's location.

**What if the postal or zip code is incorrect?** If the postal or zip code does not exist in the proximity location table, or if the postal or zip code is in the table but associated with a different city, Order Orchestration includes locations in the search results, but indicates a distance of 0.

**What if the postal or zip code is formatted differently?** If a United States zip code includes more than 5 positions (for example, 12345-6789), Order Orchestration uses just the first 5 positions of the zip code in order to find more matches in the proximity location table (for example, 12345).

**Determining the latitude and longitude for a location:** Order Orchestration determines the latitude and longitude for a location when you create a new location or update a location's address, either through the import process, the [location update request](#) message, or through the [New Location](#) or [Edit Location](#) screen.

**Note**

When you use the proximity locator option, a Canadian postal code should always include the space: for example, L5R 4H1 rather than L5R4H1.

## Uploading Zip and Postal Code Information to the Proximity Database

**Proximity location table:** If you do not use the Oracle Maps Cloud Service to look up latitude and longitude, you need to populate the proximity location table before you can begin using proximity searches in Order Orchestration. This table provides the latitude and longitude for each postal or zip codes in the US and Canada.

You can use the [Proximity Uploads](#) screen in Order Orchestration to upload a comma-separated value (.CSV) file to the proximity location table.

Order Orchestration uses the information in the proximity location table only if the Geocode Address field at the [Tenant-Admin](#) screen is blank.

### Using the Oracle Maps Cloud Service API

**Overview:** Order Orchestration sends geocode requests to the Oracle Maps Cloud Service to determine latitude and longitude for customer and location addresses only if a URL is specified in the Geocode Address field at the [Tenant-Admin](#) screen. In this case, it does not use the proximity location table to calculate distance, regardless of whether the table contains any information.

**How is proximity calculated?** The exact latitude and longitude of the location or the customer's address, including the street address, is determined. Any time a street address is specified, it must be valid; otherwise, proximity calculation will be inaccurate or unpredictable.

**Turn-by-turn distance?** If you use the Oracle Maps Cloud Service API, you have the option to use [Turn-by-Turn Distance Evaluation for Delivery Orders](#), which calculates the actual driving distance. Otherwise, the distances indicated in the search results are not exact driving distances.

**What if the request does not specify a postal code or zip code?** In this case, the distances returned in the search results may not be correct.

The proximity calculation works as described above only within the US and Canada. Proximity calculations may be less exact for other countries.

### When are requests sent?

- Location addresses: Order Orchestration sends a geocode request when you create a new location or change the address of the existing location, either at the screen, through an import process, or through a web service response. The geocode request includes the first street address line, city, state or province, postal or zip code, and country code. The geocode response indicates the exact longitude and latitude for the street address.

#### Note

When you use the proximity locator option, each location's address must include a valid street address, and a Canadian postal code should always include the space: for example, L5R 4H1 rather than L5R4H1.

- Customer addresses: Order Orchestration sends a geocode address when it receives a request for a product search, such as a delivery order in the Submit Order request, a Locate Items search, or a Product Availability search. The geocode request includes the street address (optional), city, state or province, postal or zip code, and country code. The geocode response indicates the exact latitude and longitude for the street address.
- Pickup locations for ship-for-pickup orders: In the case of a ship-for-pickup order, Order Orchestration treats the pickup location address in the same way as a customer address for a delivery or pickup order, sending the pickup location's address in the geocode request, and using the pickup location's address as the central point when calculating proximity.
- Turn-by-turn requests: Sent only for delivery requests using the specified [Carrier for Turn-by-Turn Distance Evaluation](#) when turn-by-turn calculation is enabled. Order Orchestration sends a turn-by-turn request, listing the latitude and longitude of each location that has passed the initial pre-qualification based on the specified maximum distance, using the

customer's address as the central point in order to calculate the turn-by-turn distance. See [Turn-by-Turn Distance Evaluation for Delivery Orders](#) for more information.

**What if Order Orchestration does not get a geocode or turn-by-turn response?** If there is no response within the Connection Timeout interval specified at the [Tenant-Admin](#) screen, then an error is returned in the response message to the system requesting the search. For example, the response to a [locate items](#) request indicates Customer Address not found. This error might also occur if, for example, the Geocode Address is incorrect.

### Setting Proximity Preferences

**What happens when proximity search is selected?** If a location is set to use proximity searching based on the preference hierarchy described above under [Proximity Locator Searching](#), Order Orchestration calculates the location's distance from the customer before determining whether to include the location in the search results or select a location to fulfill an order or line. If the location is outside the customer's search area, Order Orchestration does not include the location in the search results, even if the product is available in that location. You might use this setting for stores where the customer can pick up the product.

**Ship-for-pickup:** In the case of ship-for-pickup orders, proximity searching includes:

- sourcing location: Proximity radius is based on the Sourcing Distance specified at the **Preferences** screen.  
pickup location: Proximity radius is based on the range distance specified in the ProductAvailability request message. Searching for pickup locations is not supported in the LocateItems or SubmitOrder messages.
- **What happens when proximity search is not selected?** If a location is set to not use proximity searching, Order Orchestration does not calculate its distance to use as a criterion for search results. If the location has the requested item(s) and it is included in the search results, the results indicate a distance of 0 from the customer's location. You might use this preference for warehouses from which you can ship the product. If your preferences indicate to search first based on proximity, such warehouses, if otherwise eligible to be included in the search results, will always be at the top.

#### Note

Even if a location such as a warehouse is not subject to proximity locator searching, it should still be created in Oracle Retail Order Orchestration with a valid address.

**Shop Order When Proximity Unknown?** If the [Shop Order When Proximity Unknown](#) flag is selected at the Preferences screen, the Routing Engine does not return an error if the customer's shipping address for an order cannot be determined. In this case, the Routing Engine:

- Uses the ship-to address, if possible; otherwise,
- Uses the address of the originating location, if possible; otherwise,
- Uses a distance of 0 as the proximity.

This preference applies only to the Submit Order request.

**If a requested location specified:** The customer ship-to address is not validated when a LocateItems request specifies a requested\_location, or the SubmitOrder request specifies a requested fulfilling or sourcing location. In this situation, the distance returned in a LocateItems response is 0.

**Turn-by-turn distance evaluation:** Turn-by-turn distance evaluation, rather than straight-line distance evaluation, is available for delivery orders using a specified carrier if you are using Oracle Maps Cloud Service. See [Turn-by-Turn Distance Evaluation for Delivery Orders](#) for background and setup information.

## Determining Whether to Use a Preference in Searches

**Overview:** Use the [Preferences](#) screen to indicate whether to use proximity or probability in locate items searches, under what conditions to use offline inventory, and for settings and search criteria related to the Routing Engine. You can set preferences at the location, location type, or organization level. Order Orchestration always starts checking at the lowest level first, and works its way up the hierarchy if a setting is blank.

For example, using proximity in searches is a Yes or No setting. At each level, you can set this preference to:

- **Yes:** use the preference in searches.
- **No:** do not use the preference in searches.
- **Blank:** go to the next level in the hierarchy to determine whether to use the preference. For example, if this setting is blank for a location, Order Orchestration checks the setting at the location type level.

This hierarchy allows you to set the preference at the highest applicable level. For example, if you never want to use proximity logic in your U.S. warehouses, you can set this preference at the location type level. However, if you always want to use probability rules, you set this preference at the organization level.

**Organization level only:** There are some preferences that you cannot set at any level below the organization, such as the Use Offline Newer Than time period, which indicates when it is not necessary for Order Orchestration to send an inventory inquiry request to an online system.

## Using Probability Rules

**Overview:** Inventory levels at different locations frequently fluctuate because of sales, returns, shrinkage, purchase order receipts, and other activities. As a result, the most recent inventory count in Order Orchestration might not accurately reflect the actual quantity available in the store or warehouse when the customer wants the product. To avoid disappointing the customer with information that might be outdated or incorrect, you can apply probability rules, based on your best predictions about inventory activity, against the inventory information provided by Order Orchestration in locate items searches or for the Routing Engine.

*Example:* Store 10 is not part of an online system; Order Orchestration receives inventory updates from the store each night but not throughout the day. You can apply a probability rule that always reduces the available quantity of products in store 10 by the average sell-through rate. The average sell-through rate for product AB100 in store 10 is 15 units a day. When a customer inquires on availability for product AB100, if the current off-line available quantity for the product is 20, Order Orchestration presents the available quantity as 5.

**What is a rule?** A rule lets you specify whether to transform the availability information for a product location in the response to a locate items request message, or when the Routing Engine selects a fulfilling location. For example, rules can indicate to exclude product locations in locate items or order assignment, or to apply a calculation against one of the inventory fields in the search results (such as reducing the available quantity by 15 in the sample above). The inventory fields that a rule can update are the available quantity, the next expected purchase order date, or the next expected purchase order quantity.

**Note**

The rule does not actually update the inventory information for the product location; it only controls the information displayed in the search results or used by the Routing Engine when it assigns a fulfilling location. For example, if a rule results in reducing the available quantity to 5, this quantity is displayed in the search results for a locate items request; but the available quantity specified for the product location remains the same.

**Simple rules:** Rules can be as simple or complex as you need them to be. A simple rule might be: **always exclude location 20 from locate items searches**. See the [Sample Rules](#) for instructions on how to create each of the sample rules. You might use this rule, for example, before you open a new store location for business if you are currently stocking it with inventory, but the inventory is not yet for sale to the public. Another simple rule might be: always decrease the available quantity by the shrink rate.

**More complex rules (rules with tests):** A more complex rule applies one or more tests before determining whether to exclude a location or update one of the inventory fields. For example, a rule with one test might be: **if the available quantity is less than the sell-through quantity, then present the available quantity as 0**.

Another example of a more complex rule might allow you to add a cushion for late purchase orders. A rule might be: **if the available quantity is less than 10 and the next expected PO date is before today (i.e., the purchase order is late), reduce the available quantity by 20%**. Another rule might apply to a group of products for which shipment is typically late. A rule might be: **if system product is AB200 or system product is AB300, add 5 days to the next PO date**. Similarly, you might set up a rule based on other product attributes, such as: **if department is 1538, reduce the available quantity by 15%**.

**Assigning rules:** You can assign rules to one or more locations, location types, or organizations. For example, if you would like a rule to apply only to a particular store location, you can assign it to that location only. If you would always like to reduce the available quantity by the sell-through quantity for all U.S. stores, you would apply that rule to that location type. When you assign rules, you have the option of specifying a beginning and/or ending date, and of specifying whether the rule applies only to off-line or on-line inventory levels (see [inventory level type](#)).

Rules use a hierarchy, similar to [Proximity Locator Searching](#), in determining which rule applies to which product location. For example, if you assign a rule at the location level, it might override a rule assignment at the location type or organization level.

Within a single level, you use sequence numbers to identify the priority to rules. For example, if you have 2 rules assigned to a location type, the rule with the lower sequence number is evaluated first.

Because each rule can update only a single field, it is possible for a product location to be subject to multiple rules. Once a particular field has been subject to a rule, Order Orchestration stops evaluating rules for the product location in that search. However, a rule set up to exclude a product location overrides any rules that apply to individual fields.

**When does probability rule evaluation take place?** During a search for product locations, Order Orchestration:

- identifies the product locations that might be eligible for consideration based on proximity
- applies any probability rules
- determines which product locations are still eligible after applying the probability rules
- for a locate items search or order assignment, sorts the product locations based on the hierarchy specified at the **Preferences** screen or the **Edit Order Orchestration Preference Override** screen
- for a locate items search, eliminates any product locations that are not within the Maximum No. Responses specified at the **Preferences** screen, and returns the results

Rules do not apply when a locate item request or submit order request specifies a fulfilling or sourcing location.

**Exclude Locations with Zero Available?** If the Exclude Locations with Zero Availability setting at the [Preferences](#) screen is selected, any possible product locations whose current available to promise quantity are 0 or less are excluded from consideration before the application of any potential probability rules.

**Flexibility of rule creation:** Order Orchestration provides you with extreme flexibility in setting up rules; however, it is important that you make sure your rules are not so complex that the results are unpredictable. Oracle recommends that you test each rule that you apply to make sure that it works as you intend it to.

**Rounding:** Available quantity and next PO quantity are always presented as whole numbers in the locate items or Routing Engine search results, so that Order Orchestration rounds the result of any calculation up or down to the nearest whole number. For example, a result of 18.4 is rounded down to 18; 18.5 or higher is rounded up to 19.

**For more information:** See [Probability Rule Wizard](#) for instructions on setting up rules, rule examples, and suggestions for testing rules.

#### Note

In order to use probability rules for an organization, you must select the probability rules preference. You can set this preference only at the organization level at the [Preferences](#) screen.

## Using Zones for Fulfillment

**Purpose:** Zone fulfillment provides a means to have the Routing Engine limit order assignment to particular store or warehouse locations based on the geographical area of the order's shipping address.

*Example:* You prefer to use the distribution center in Hartford, Connecticut to ship orders to customers in the New England states, even if a location in California has a greater quantity available.

**Why use zone fulfillment?** You might use zone fulfillment to save on freight charges and expedite shipping in certain areas. Zone fulfillment logic can also increase the speed of location assignment, since it uses a limited number of eligible locations.

**Fulfillment of delivery orders and sourcing for ship-for-pickup only:** Zone fulfillment applies only to delivery and ship-for-pickup orders, and these types of locate items or product availability searches. It does not apply to store pickup orders.

**Applies to both standard brokering and weighted brokering:** Regardless of whether your organization uses standard brokering rules, or uses weighted brokering rules and assignment through the Science Engine, you can use zone fulfillment to route orders.

**How does zone fulfillment work?** When you use zone fulfillment, the Routing Engine determines whether a shipping address falls within a fulfillment zone. It then restricts the list of possible fulfilling locations to the one(s) specified for the zone. This evaluation takes place when the Routing Engine receives a submit order message, a product availability search request, a locate items request, or when an existing order is rejected by the assigned fulfilling location,

If the order cannot be fulfilled or sourced by the locations included in the zone, it is assigned to the [default unfulfillable location](#). Similarly, in the case of a [locate items](#) or product availability search, the response message indicates that the requested item(s) is/are not available.

**Primary and alternate locations:** When you set up a zone for fulfillment you can specify:

- *primary locations:* One or more locations where you prefer to place orders within the zone. At least one primary location is required.  
*alternate locations:* Optionally, one or more locations that are eligible for order assignment if the order cannot be fulfilled within the list of primary locations. You might set up alternate locations to help eliminate the possibility of losing a sale.
- **Selecting geographical areas for shipping addresses:** You can set up zones to include shipping addresses based on:
  1. *Zip code prefix range:* For example, all orders shipping in zip codes that start with 021 through 025 should ship from any of the Boston retail locations. This option is available for United States addresses only.
  2. *State or province:* For example, all orders shipping to New York, New Jersey, Pennsylvania, and Delaware ship from the east coast distribution center or the outlet store. This option is available for United States and Canadian addresses only.
  3. *Country:* For example, all orders shipping to France, Germany, and Austria ship from the Austrian distribution center. This option is available for countries other than the United States and Canada only if the Use Proximity Locator preference is unselected for your organization. Contact your Oracle representative about how to use proximity calculation for countries other than the U.S. and Canada.

When attempting to assign an order, the Routing Engine starts zone selection with the most specific criterion (zip code prefix) and works through to the most general (country). If the shipping address on the order does not match any zones, then the Routing Engine uses the standard assignment logic as set up at the **Preferences** screen or the **Edit Order Preference Override** screen.

*Example:* You have set up the following active zones:

- Portland, Maine Area: includes zip code prefixes 040 through 043
  - Northern New England: includes Maine, New Hampshire, and Massachusetts
  - United States
  - If a locate items request or the order's shipping address is in:
    - Portland, Maine, zip code 04101: use the Portland, Maine Area zone
    - Anson, Maine, zip code 04911: use the Northern New England zone
    - Providence, Rhode Island, zip code 02903: use the United States zone
    - Toronto, Canada: do not restrict order assignment by zone

**Order Orchestration selection criteria still apply:** When a shipping address falls within a fulfillment zone, the Routing Engine uses existing rules when selecting and ordering locations, except that the eligible locations are restricted to those specified for the zone. For example, if you set the Order Orchestration preferences to select first based on On Hand Count, the primary location with the highest on-hand count is selected. Also, the Routing Engine executes this process first within the primary locations before checking any alternate locations, as described above.

**If you group shipment locations:** Zone fulfillment logic still applies to locate items processing if you use the [grouping shipment locations](#) option.

**Requested location?** The Routing Engine does not use zone fulfillment logic if:

- the [locate items](#) request specifies a [requested location](#)

- the [submit order message](#) specifies a location for fulfillment

In both of these cases, the Routing Engine restricts location selection or assignment to the specified location, regardless of whether the shipping address falls within a zone that includes the location.

**How to start using zones:** The Routing Engine uses zones for fulfillment when:

- the [Use Zone Fulfillment](#) flag at the **Preferences** screen is selected, and
- the zone is flagged as *Active*

**For more information:** See the [Fulfillment Zone Wizard](#).

**Standard or weighted brokering?** The primary and alternate search hierarchy within zones varies depending upon whether Use Weighted Brokering Rules is selected. See:

- [Primary and Alternate Search Hierarchy: Standard Brokering](#)
- [Primary and Alternate Search Hierarchy: Weighted Brokering](#)

### Primary and Alternate Search Hierarchy: Standard Brokering

The following process applies if Use Weighted Brokering Rules is *not* selected.

If splitting: If you use [splitting orders](#), the Routing Engine attempts to:

1. Assign the entire order to a single location within the primary locations specified for the zone; otherwise, if this is not possible;
2. Split the order within the primary locations specified for the zone; otherwise, if this is not possible;
3. Assign the entire order to a single location within the alternate locations specified for the zone; otherwise, if this is not possible;
4. Split the order within the alternate locations specified for the zone; if this is not possible;
5. Split the order across the primary and alternate locations; if this is not possible;
6. Assign the order to the [default unfulfillable location](#).

If not splitting: If you do not split orders, the Routing Engine attempts to:

1. Assign the entire order to a single primary location specified for the zone; otherwise,
2. Assign the entire order to a single alternate location specified for the zone; otherwise;
3. Assign the order to the [default unfulfillable location](#).

### Primary and Alternate Search Hierarchy: Weighted Brokering

**Weighted Brokering and the Science Engine:** When you use weighted brokering, the Routing Engine passes information to the Science Engine indicating whether each eligible product location is in a primary or alternate location. The Science Engine then uses the same rules on order assignment and splitting as the Routing Engine uses for standard brokering. See [Submit Order Request for Delivery Order \(Weighted Brokering\)](#) for a discussion.

The following process applies when Use Weighted Brokering Rules *is* selected.

If splitting order is supported:

1. Assign the entire order within the primary locations specified for the zone; if this is not possible,
2. Assign the entire order by splitting it across the primary and alternate locations; if this is not possible;

3. Assign the entire order within the alternate locations specified for the zone; if this is not possible;
4. Assign the order to the [default unfulfillable location](#).

If not splitting:

1. Assign the entire order to a single primary location specified for the zone; otherwise,
2. Assign the entire order to a single alternate location specified for the zone; otherwise;
3. Assign the order to the [default unfulfillable location](#).

## Using Maximum Daily Order Assignment

**Purpose:** You can specify the maximum number of delivery or ship-for-pickup orders to assign to a location on a daily basis.

*Example:* Location 10 cannot be assigned more than 10 orders a day, while location 20 cannot be assigned more than 15 orders a day.

**Delivery and ship-for-pickup orders only:** The maximum daily order restriction applies to delivery or ship-for-pickup orders only. There is no daily limit to the number of store pickup orders that can be assigned to a location.

**When a location is over the daily maximum:** If a location has met or exceeded the maximum number of orders for the day, the Routing Engine:

- does not include the location in the locate items search results for a delivery or ship-for-pickup order unless it is the requested location; see [Selecting a Location for a Delivery Order](#)
- does not assign a delivery or ship-for-pickup order, or a line on a delivery or ship-for-pickup order, when a submit order message does not specify a fulfilling location
- does not assign a delivery or ship-for-pickup order, or a line on a delivery or ship-for-pickup order, when the current assigned fulfilling or sourcing location rejects the order (“reshop”)

These restrictions apply regardless of whether the location has the inventory on-hand, or is flagged as Backorder Available.

**Tracking daily order count:** The Routing Engine uses a counter for the location to track the number of delivery and ship-for-pickup orders assigned for the day. This counter is not displayed on any screen.

- Counter increased when? The daily order count increases when a delivery or ship-for-pickup order is initially assigned, or when an order is reassigned through reshopping. The counter for a location increases by one regardless of:
  - the number of lines on the order being assigned to the location
  - the quantities currently on the order lines
  - whether the order is split across multiple locations
  - whether the Routing Engine assigns the order, or the location was specified in the submit order message, or selected in order maintenance when you are assigning the order to a different location

**Note**

The counter is not increased for store pickup orders, or for selection as a pickup location for a ship-for-pickup order.

- Counter not decreased: The daily order count does not decrease if an order is rejected or canceled.
- Counter is at the location level: Even if you specify a Maximum Number of Orders for a location type, the Routing Engine tracks order assignment for each location separately and does not combine the order totals across the location type.
- Reset daily: The Routing Engine checks the daily order count date for the location each time an order is assigned, and starts the counter over at one if the last daily order count date is not the current date. Like the order counter, the daily order count date is not displayed on any screen.

**Overriding the order limit:** Even if a location is not eligible for automatic delivery or ship-for-pickup order assignment based on the daily order count, you can still:

- Request current inventory in the location by requesting the location specifically in the locate items search request (using the requested\_location, or "favorite store" element)
- Assign a delivery or ship-for-pickup order by specifying the location in the submit order request message
- Select the location through order maintenance, if you have the required authority

When you assign a location that has already met or exceeded the daily order limit, the Routing Engine continues to increase the daily order counter for the location.

**Note**

No maximum applies to the Default Unfulfillable Location where the Routing Engine assigns unfulfillable orders.

**Setup through preferences:** To use the maximum daily order assignment option:

- Select Use Maximum Order Limits at the **Preferences** screen.
- Specify the Maximum Daily Orders for the organization, and optionally at the location type level or the location level. A setting of 0 indicates that there is no limit to the number of orders that can be assigned to a location, while a setting of Not Defined indicates to check at the next level of either the location type or the organization.

When evaluating whether a maximum applies, the Routing Engine checks the Maximum Daily Orders setting for:

1. the location; otherwise,
2. If the Maximum Daily Orders is Not Defined for the location, check the location type; otherwise,
3. if the Maximum Daily Orders is Not Defined for the location type or the location, use the organization setting.

# Updating Order Status at the Line or Unit Level

**Overview:** The Allow Partial Updates preference for an organization controls whether you update order line status at the order line level or at the unit level. This option is available only if the organization has the Allow Split Order preference selected.

*Example:* An order line has a quantity of 5 units. The location has only 3 units of the item available. If the Allow Partial Updates preference is:

- selected, the assigned location can send a status update rejecting 2 units
- unselected, the location must accept or reject the entire order line

**Quantity always required:** When this is preference selected, the location sending a status update always needs to specify the quantity to update as well as the line number. Similarly, the quantity is a required field when you use the **Edit Order Item** window to update an order line.

**Creating a new order line:** If the Allow Partial Updates preference is selected, when the Routing Engine receives a status update whose quantity is lower than the total line quantity, it creates a new order line for the specified status, and decreases the quantity for the existing order line.

*Example:* Order line 1 has a quantity of 7 units and is currently in picked status. The assigned location sends a status update indicating that 3 units are fulfilled. The Routing Engine:

- creates line 2 for a quantity of 3 and a status of fulfilled
- updates line 1 to a quantity 4, and leaves the status as picked

## Note

The Routing Engine creates a new line with the next available line number. For example, if there were already 3 lines on the order, the Routing Engine creates line 4 for the 3 fulfilled units.

**Split line not required:** Although the Routing Engine effectively splits an existing line when it receives a partial quantity update, it is not necessary to have the Allow Split Line preference selected. The Allow Split Line preference controls whether to split a line at initial order assignment, not whether to split a line due to later changes in status.

**Rejecting individual units and the Search Retries setting:** The Routing Engine uses the Search Retries setting to determine the total number of times it can attempt to reassign delivery and ship-for-pickup orders when they are rejected by their fulfilling or sourcing locations. This limit applies to the entire order, regardless of whether the organization supports split orders, split lines, or partial status updates.

*Example:* The Search Retries preference is set to 2. If the organization supports:

- Split order but not split line or partial status update, the order is assigned to the Default Unfulfillable Location after the order is rejected 2 times.
- Split order and split line but not partial status update, the order line is assigned to the Default Unfulfillable Location after the total number of line rejections received and “reshop” attempts is 2, regardless of whether the rejections were for the same line or different lines.
- Split order and partial status update, the order line is assigned to the Default Unfulfillable Location after the total number of unit quantity rejections received and “reshop” attempts is

2, regardless of whether the rejections were for the same line or different lines, or whether the rejections were for the full line quantity or a partial line quantity.

**Rejecting individual units and reshopping to different fulfilling or sourcing locations:**

When the Routing Engine receives a status update rejecting a quantity of a delivery or ship-for-pickup order line, it uses its standard logic (including probability rules and zones) to assign each rejected quantity. If a location rejects a partial quantity of a line in 2 separate status updates, the Routing Engine assigns each partial quantity to a different fulfilling location.

*Example:*

- Location A rejects all 3 units of an order line in a single status update, and the Routing Engine assigns all 3 units to location B.
- Location A rejects 1 out of 3 units on an order line, and the Routing Engine assigns the unit to location B. If location A then rejects the remaining 2 units of the order line, the Routing Engine assigns the 2 units to location C.

**Current Order Orchestration line number required for status update:** When the Allow Partial Update preference is selected but the [Use Requesting System Line Number in Status Update](#) flag is not selected, or the status update does not come from the originating location, the `line_no` specified in a status update request message needs to match the current line number in Order Orchestration, and the specified quantity cannot exceed the current quantity on the order line. In order to be sure of sending the current line number, the requesting system should first send a status inquiry request before sending the status update request.

*Example:* Location A sends its line #11 for 3 units to Order Orchestration as a delivery order. In order to send a status update request to cancel the line, the location must first send a status inquiry request. The status inquiry response indicates that the current line numbers in Order Orchestration are:

- line 1 in accepted status, with a quantity of 1
- line 2 in picked status, with a quantity of 2
- The location then sends a status update request for the current quantities of lines 1 and 2, indicating to cancel both lines.

 **Note**

Sending the status inquiry first also enables the requesting system to confirm that the order line has not been canceled or fulfilled.

**Screen differences to note:** When any line on an order splits, either through initial order assignment or a partial quantity status update, then the *Detail* tab on the **Order** screen groups the split lines under the requesting system line number. If none of the lines are split, then the *Detail* tab provides maintenance or display access only through the original requesting system line number; otherwise, you need to select the current line number in Order Orchestration to maintain or display. See [Reviewing or Updating Order Orchestration Orders](#) and the [Order](#) screen for more information.

**Before turning on partial quantity updates:** Before you enable this option, it is important to confirm that updating a partial quantity of a line is supported by all systems integrating with Order Orchestration.

# Auto-Cancel Unclaimed Orders

**Purpose:** You can configure Order Orchestration to automatically cancel pickup or ship-for-pickup order lines if the customer does not pick them up after a specified number of days.

## Note

The auto-cancel option is available only if Allow Split Order is selected at the **Preferences** screen.

## Assignment of Pickup By Date

When you configure auto-cancel, Order Orchestration assigns a Pickup By Date to a line when the line is first eligible for pickup. The Pickup By Date is based on:

- The auto-cancel settings at the **Preferences** screen, indicating the number of days to wait after the line is eligible for pickup before the line can be automatically canceled. The **Preferences** screen also includes the cancel reason code to use when automatically cancelling unclaimed orders.
- The Days Open settings for the pickup location, so that any days when the location is not open are excluded from the Pickup By Date calculation.

For example, the [Auto Cancel Days of Unclaimed Pickup Orders](#) at the **Preferences** screen is set to 2 days. The pickup location is flagged as open all days except for Sunday. If the line is eligible for pickup on Saturday the 5th, the line is assigned a Pickup By Date of Tuesday the 8th, since Sunday is not included. However, if the pickup location is open on Sunday, the line is assigned a Pickup By Date of Monday the 7th.

Order Orchestration makes the Pickup By Date assignment when the line status changes to:

- *Picked*, if the order type is pickup, or if the order type is ship-for-pickup and the sourcing location is the same as the pickup location; otherwise,
- *Received*, if the order type is ship-for-pickup, and the sourcing location is different from the pickup location. In this situation, the line is not eligible for pickup until the sourcing location has transferred the inventory to the pickup location, and the pickup location has received it.

## Note

The Pickup By Date is assigned even if the order is currently under review.

When the Pickup By Date is assigned, an order history message is written, for example: Pickup By Date: 12/31/2017.

## Auto-Cancellation Updates

When the [Auto Cancel Unclaimed Pickup Orders](#) job runs, it:

- Evaluates each organization that has Allow Split Order selected.
- If [Auto Cancel Days of Unclaimed Pickup Orders](#) specifies a number of days, selects each pickup order line in picked status and with a Pickup By Date that is in the past.

- If [Auto Cancel Days of Unclaimed Ship For Pickup Orders](#) specifies a number of days, select each ship-for-pickup order line that is either in picked status with the sourcing location is the same as the pickup location, or in received status with the sourcing location different from the sourcing location, and with a Pickup By Date that is in the past.
- For each selected order line:
  - Changes the status to canceled.
  - Clears the Pickup By Date.
  - Creates a history record, displayed at the History tab of the Order screen, indicating that the order line was canceled with the [Auto Cancel Reason](#). The User ID indicated is SYSTEM and the Source is WS.
  - Sets the AUTO\_CANCELLED flag in the XOM\_ITEM table to 1.

### Sample Auto-Cancellation Flows

**Auto-cancel calculation:** An order line is eligible for cancellation by the auto-cancel job after the assigned Pickup By Date has passed, excluding any dates that are not flagged as Days Open for the pickup location.

- *Open all days:*
  - The Auto Cancel Days of Unclaimed Pickup Orders is set to 3.
  - The pickup location has all days selected as Days Open.
  - The order line is picked on Saturday, the 16th, and the Pickup By Date is set to the 19th, 3 days later.
  - When the auto-cancel job runs on the 20th, the order line is canceled.
- *Location closed on Sunday:*
  - The Auto Cancel Days of Unclaimed Pickup Orders is set to 3.
  - The pickup location has all days selected as Days Open except for Sunday.
  - The order line is picked on Saturday, the 16th, and the Pickup By Date is set to the 20th, 3 days later, omitting Sunday from the calculation
  - When the auto-cancel job runs on the 21st, the order line is canceled.
  - The job uses the Auto Cancel Reason specified at the **Preferences** screen.

### Changing an Order Line's Pickup By Date

You can change an order line's Pickup By Date:

- *Order Status Update request message:* This message enables you to change the *Under Review* setting as well as the Pickup By Date.
- *Store Connect:* The **Change Pick Up Date** window enables the store associate to change the Pickup By Date.
- *Order Inquiry:* The [Edit Order Item](#) window enables you to change the Pickup By Date assigned to an order line.

When the Pickup By Date is changed, an order history message is written, for example:  
Pickup By Date: 12/31/2017.

**Status changes clear the Pickup By Date:** Once the Pickup By Date is set for a line, a change of status clears the Pickup By Date. This occurs regardless of whether the line's status changes to fulfilled because it was picked up, or because it was canceled or rejected. When

the Pickup By Date is cleared, an order history message is written: Pickup By Date Removed.

## Report

The [Auto Cancel Report](#) provides a listing of orders that include any lines that were automatically canceled within a specified date range, and includes customer contact information. See that report for more information.

## Required Setup for Auto-Cancellation

To enable auto-cancellation of unclaimed pickup or ship-for-pickup orders:

- *Auto-cancel reason code:* Use the *Reason Codes* screen in Modern View to create the [Auto Cancel Reason](#).
- *Preferences screen:* At the *Fulfillment* tab, set:
  - [Auto Cancel Days of Unclaimed Pickup Orders](#) to enable auto-cancellation of pickup orders.
  - [Auto Cancel Days of Unclaimed Ship For Pickup Orders](#) to enable auto-cancellation of unclaimed ship-for-pickup orders.
  - [Auto Cancel Reason](#) for the auto-cancel job to use when canceling the orders.

### Note

These fields are available only if [Allow Split Order](#) is selected.

- *Locations:* Optionally, use the Days Open fields for a location to unselect any days of the week that should not be included when calculating the Pickup By Date for orders assigned to the location for pickup. Ways to create or update locations include:
  - [Importing Locations through File Storage API](#) process: When you create a new location through the location import, all days of the week listed under Days Open are selected by default. When you update an existing location through the import, the Days Open settings are not changed.
  - [New Location](#) or [Edit Location](#) screens: The Days Open settings are available at these screens.
  - [Location Bulk Updates](#) wizard: You can use this option to set the Days Open for a group of individual locations.
  - [location update request](#) message: See the Web Services Guide on My Oracle Support (2953017.1) for background on using this request message.
- *Auto-cancel job:* Use the [Schedule Jobs](#) screen to specify the time of day when the auto-cancel job should run, and to enable the job.

## Things to Note about Auto-Cancellation

### Reviewing the Pickup By Date for a line:

- When the Pickup By Date is automatically assigned to the order line, a transaction history record is created. The Pickup By Date assignment is displayed under Transaction Notes at the *History* tab of the **Order** screen.
- Web service message responses: The Pickup By Date for an order line, if assigned, is included in the responses to the Order Search response, Status List response, and Status Inquiry response messages.

- Store Connect screens: The Pickup By Date is displayed on various order detail screens in Store Connect.

The Pickup By Date is assigned even if the order is currently flagged as Under Review.

**Partial updates:** If the Allow Partial Update preference is selected, it is possible for a different Pickup By Date to be assigned to individual units on an order line, or for one unit to have a Pickup By Date while the other does not. For example, a pickup order line with two units is assigned to a pickup location. If one unit is picked on Tuesday and the other is picked on Wednesday, the line splits, and each resulting line has a different Pickup By Date.

**Existing orders without Pickup By Dates:** Any orders that were already eligible for pickup before you configure your organization for auto-cancellation will not be automatically assigned a Pickup By Date. Optionally, you can assign a Pickup By Date to an existing order through the [Edit Order Item](#) window in Order Orchestration, the **Change Pick Up Date** window in Store Connect, or through the Order Status Update request web service message.

**For more information:** See:

- *Reason Codes* screen in Modern View to create the [Auto Cancel Reason](#).
- [Preferences](#) screen to set the [Auto Cancel Days of Unclaimed Pickup Orders](#) and [Auto Cancel Reason](#), as well as the [Auto Cancel Days of Unclaimed Ship For Pickup Orders](#).
- [New Location](#) screen or the [Importing Locations through File Storage API](#) process to create locations, including the Days Open.
- [Edit Location](#) screen or [Location Bulk Updates](#) wizard to update the Days Open for locations.
- [Schedule Jobs](#) screen to schedule the auto-cancel job.
- [Edit Order Item](#) window or the Order Update request chapter in the Web Services Guide on My Oracle Support (2953017.1) to change an order line's Pickup By Date.
- [Browse Order Item](#) window or [Edit Order Item](#) window to review an order line's Pickup By Date.
- LocationUpdate request chapter in the Web Services Guide on My Oracle Support (2953017.1) for information on updating the Days Open.
- OrderSearch response chapter, Order Inquiry StatusRequestResponse chapter, or Order Status List response chapter in the Web Services Guide on My Oracle Support (2953017.1) for an integrated system to obtain an order line's Pickup By Date.

## Order Fulfillment through RICS Integration

**Overview:** Use communication through Oracle Retail Integration Cloud Service (RICS) to manage order fulfillment through the following Oracle Retail applications:

- *Inventory reservation and warehouse order communication:* Order fulfillment is through Oracle Retail Merchandising Foundation Cloud Service (RMFCS).
- *Store order communication:* Order fulfillment is through Oracle Retail Store Inventory Management (SIM) or Enterprise Inventory Cloud Service (EICS) and its UX layer Store Operations Cloud Service (SOCS).

### Note

The order fulfillment process described below is available for delivery orders only.

**Order creation:** The order creation process includes the following steps:

- *Submit order:* An integrated system, such as Order Administration or Order Administration Cloud Service, submits the order to Order Orchestration.
- *Order routing:* Order Orchestration selects one or more fulfilling locations for the delivery order, as described in the [Order Orchestration Routing Engine Overview](#).
- *Communication through RICS:* If the system associated with a fulfilling location is configured for RICS integration, Order Orchestration posts the order or order line to RICS.
- *Successful post?* If Order Orchestration receives a message indicating that the order posting was a success, the order status changes to *posted*. Order Orchestration assigns this status only to orders fulfilled through the RICS integration.
- *RICS broadcasts the order request to SIM or EICS and RMFCS:* If the assigned fulfilling location is a:
  - Warehouse: RMFCS creates the order. RICS sends a status update of *accepted* to Order Orchestration. SIM and EICS ignore the request if the fulfilling location is a warehouse.
  - Store location: SIM or EICS creates the order.Regardless of whether the assigned fulfilling location is a warehouse or a store location, RMFCS reserves inventory for the order.

#### Which orders are eligible for posting to RICS?

- *Assigned to system configured for RICS?* Only orders that are assigned to fulfilling locations in a system configured for RICS are eligible for posting.
- *Delivery orders only:* Other order types are not submitted.
- *Under review?* You need to select the Hold Under Review Orders setting for the system to indicate not to submit orders whose Under Review flag is selected, but instead to wait until the flag is cleared.

**Additional events that trigger posting an order to RICS:** In addition to posting at order creation, Order Orchestration also submits eligible orders to RICS when:

- *Rejection:* The currently assigned fulfillment location rejects the order, or you change the status to rejected through the [Order](#) screen or the [Edit Order Item](#) window, depending on whether you use split orders.

This type of rejection can also occur if a store associate cannot find inventory for the order, and cancels the order in SIM; or if warehouse staff cannot find inventory, and they cancel the order in RMFCS.

In either case, Order Orchestration “reshops” the order to a new fulfilling location.

- *Location change:* You change the assigned fulfilling location through the [Order](#) screen or the [Edit Order Item](#) window, depending on whether you use split orders.

**Releasing reservation:** Release reservation processing takes place if the [Send Release Reservation Inventory Message](#) flag is selected at the **System** screen. When an order or line assigned through RICS is canceled or rejected, Order Orchestration generates a message to RICS indicating that the reserved inventory for the order can be released. This information enables RMFCS to use the inventory for other orders, and notifies RMFCS, EICS, or SIM to update the status of the order. The status update can occur either through a web service request, or at the [Order](#) screen or the [Edit Order Item](#) window.

The release reservation message is also generated when you assign a new fulfilling location through the [Order](#) screen or the [Edit Order Item](#) window.

Order Orchestration generates the release reservation message immediately. If Order Orchestration then reshops a rejected order to another enterprise location, it posts the new order information through RICS for fulfillment.

**Note**

Order Orchestration does not send the release reservation message if the order is under review and the system is configured not to send orders that are under review, because in this situation the order was not yet posted through RICS.

**Updating order status:** RICS sends status update messages when the status of an order or line changes. These messages map to the Order Status Update Request message. When the order or line ships, the information updated can include a carton number and tracking information, as well as the shipping date from the fulfilling location.

If RICS sends a status update message and the order is already in that status, Order Orchestration does not return an error to RICS; however, the error is noted in the [RICS Log tab](#) of the **Order** screen, for example: Error updating status for request id = XXXXX line number = X - got an exception. Request already at provided status.

**Under review change notifications:** Order Orchestration submits an under review message to RICS to notify the fulfilling system when an open order that was previously submitted is now under review, or when a submitted order that was previously under review is no longer under review.

For example, this situation can occur when:

- Order Orchestration submits an order through RICS for fulfillment.
- A number of days later, the authorization expires; and when the originating system, such as Order Administration, submits a new authorization request, it is declined.
- The originating system sends an order update request to Order Orchestration to set the Under Review flag to Y.

Order Orchestration then submits the under review request to RICS, indicating not to fulfill the order at this time.

Similarly, Order Orchestration submits the under review update message to RICS when an open order that was previously under review is no longer under review, and can be fulfilled.

The under review updates are sent only when:

- The order is a Delivery order, and
- The order status is currently Posted, Polled, Accepted, or Picked, and
- The setting of the Under Review flag changes.

**Hold Under Review?** The [Hold Under Review Orders](#) flag should normally be selected at the **System** screen. When this flag is selected, an order is not initially sent to RICS when created if it is currently under review; instead, when the Under Review flag is cleared for the order, it is posted automatically as a new order to RICS, and the under review message is not generated. However, if the setting of the Under Review flag changes after the order is posted, the under review message is generated, indicating to hold the order.

**If order or release posting fails:** Posting orders or release reservation requests through RICS can fail because:

- Communication with RICS did not succeed. For example, this might occur if RICS was temporarily unavailable, the URL specified at the **System** screen was incorrect, or the request timed out.

In this case, a background job triggers submission of all of these messages on an hourly basis. The messages are posted in first-in first-out order (oldest first). The [RICS Log tab](#) of the **Order** screen displays these messages with a Retry Status of *Failed*.

- There an unrecoverable error in the information to be submitted. For example, the location code specified in the request is alphabetical rather than numeric.

In this case, Order Orchestration does not reattempt to submit these messages, because they would not succeed. The RICS log records are eligible to be purged through the daily cleanup job based on the RICS Log History retention days, described below. Order Orchestration changes the status of the order or lines to *unfulfillable*.

**RICS log:** The [RICS Log tab](#) of the **Order** screen provides further detail about activity and the messages sent and received. From this tab, you can also open the [RICS Log Message](#) window to review request or response messages.

**Reviewing order activity and messages:** The Transaction Notes at the *History* tab of the *Order* screen describe updates for orders fulfilled through the RICS integration. For example, when:

- Order Orchestration submits the order to RICS: History message is Posted to RICS.
- Order Orchestration notifies RICS to release the reservation for the order because it has been canceled or rejected: RICS Release Reservation Message Sent.
- Order Orchestration notifies RICS that the Under Review flag for an open, submitted order has been selected: Under Review: Yes; RICS Under Review Message Sent. The note indicate a setting of No if the Under Review flag has been cleared.
- There is an unrecoverable error in the information to be submitted, such as alphabetical characters in a numeric field: Unable to create RICS message.

**Required configuration:** To fulfill orders using RICS, complete the following configuration in Order Orchestration.

- *External Service configuration:* Use the [External Services](#) screen to create each Orders service, so that they will be available for selection at the [RICS Integration tab](#) at the **System** screen
- *System configuration:* Create SIM or EICS and RMFCS as systems in Order Orchestration.
- Use the [RICS Integration tab](#) at the **System** screen to configure these systems. The information you can specify at this tab includes:
  - Flagging the system as Online for RICS communication. If this flag is not selected, no communication takes place with RICS.
  - Connection and authentication information for communicating with RICS.

#### Note

The User ID specified through the [External Services](#) needs to have the Operator or Admin role in RIB in order to support sending stop and start requests at the beginning and end of the Inventory Quantity Export, indicating to pause individual inventory updates while the export runs. See [Available-to-Sell Individual Inventory Updates through Oracle Retail Integration Cloud Service \(RICS\)](#) for more information.

- Settings that control order flow, including selecting the Hold Under Review Orders flag to prevent submitting orders that are currently held for review.  
The Use Requesting System Line Number in Status Update flag at the *Orders* tab of the **System** screen should be unselected.
- *Web service authorization*: Create web service users for the *Oracle Retail Integration Cloud Service* that will be required for authentication of inbound messages to Order Orchestration. See [Web Service Authorization](#) for more information.
- *Preference settings*: Note the following settings at the [Preferences](#) screen:
  - Delivery orders only: The locations associated with the SIM and RMFCS systems should be configured in Order Orchestration to support delivery orders only. You cannot use the RICS integration to fulfill any other order types.
  - Cannot use split line or partial status update: The Allow Split Line and Allow Partial Updates preferences should not be selected for your organization. However, you can select Allow Split Order.
  - Split order: If Allow Split Order is selected at the **Preferences** screen, the Create Fulfillment Order message to RICS has the partial delivery indicator (<partial\_delivery\_ind>) tag set to Y; otherwise, it is set to N.  
Other preference settings, such as Acknowledge Order Before Brokering, do not affect the ability to fulfill orders through RICS.
- *Store and warehouse locations*: See [Importing Data from Merchandising Cloud Services \(RMFCS\) through the Omnichannel Cloud Data Service \(OCDS or Merchandising Omni Services\)](#) for information. Note that location codes must be numeric for integration through RICS.
- *RICS Log History retention days*: This field at the [Tenant-Admin](#) screen specifies the number of days to retain RICS\_LOG records before the [daily cleanup job](#) automatically deletes them. Can be from 0 to 30 days. Only successful records and records with unrecoverable errors are eligible for deletion.
- *Setup in Order Administration*: If you use Order Administration System, note the following required setup.
  - Orders originating in Order Administration System should use an originating location that matches the E-Commerce Virtual Warehouse in RMFCS. The originating location passed from Order Administration is determined by the Originating Location to Pass to OROB (M32) system control value.
  - Order Administration should have the Use OROB for Fulfillment Assignment (M31) system control value selected.
  - See the Order Administration online help, including Brokered Backorders and Enterprise Order Integration, for background on additional setup in Order Administration.

**For more information:** Contact your Oracle representative for more information on configuration required beyond settings in Order Orchestration and Order Administration.

#### Troubleshooting and things to note:

- If any order type besides a delivery order is assigned to a location in a system that uses RICS for order fulfillment, it will not be submitted to RICS. Instead, it will remain in *new order* status.
- The processing described above takes place only for systems that are configured to use RICS based on the settings at the [RICS Integration tab](#) at the **System** screen.

- RICS order fulfillment does not support fulfilling an order that includes the same item on multiple order lines, such as a ship-alone item.
- Hold under review? If the order is fulfilled through RICS order fulfillment and the [Hold Under Review Orders](#) flag for the system is selected, the order is not posted for fulfillment until you clear the Under Review flag. This flag should be selected.
- Require status update? The [Require Status Update](#) flag does not control whether the order status is automatically set to polled, since the fulfillment request message is not used.
- Retry status displayed for unrecoverable errors: When the fulfillment request message to RICS has an unrecoverable error, the Retry Status listed at the [RICS Integration tab](#) at the **System** screen is *Success*. This status indicates that the RICS log record is eligible to be purged, because Order Orchestration will not attempt to post the message again.
- It is not necessary to configure the hourly job that resubmits failed requests to RICS. This job runs automatically. It is the same job that checks for any orders that are still assigned to the In Process location if you use [Acknowledge Order Before Brokering](#).
- In process orders excluded: Orders that are currently assigned to the [IN PROCESS location](#) are not submitted until they are assigned to a location associated with a system flagged for RICS order processing. See [Acknowledge Order Before Brokering](#) for a discussion on in process orders.

**For more information:** See:

- [External Services](#) screen for information on creating the Orders external services
- [RICS Integration tab](#) at the **System** screen for additional configuration.
- [Web Service Authorization](#) for information on setting up authentication for the Oracle Retail Integration Cloud Service.
- [RICS Log tab](#) at the **Order** screen.
- [RICS Log Message](#) window.
- RICS Message Mapping in the Web Services Guide on My Oracle Support (2953017.1) for message and mapping details.

## Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database

Part of the initial setup required for Order Orchestration is to populate the database with information such as locations, products, system products, and product locations. Also, you normally update this information periodically with any new or changed products and periodic inventory updates, and have the option of adding new information at any time.

**Merchandising Cloud Services applications (RMFCS) imports:** Importing products and barcodes from Merchandising Cloud Services applications (RMFCS) uses a different process than the one described under [Import Process Overview \(Other than RMFCS File Upload through OCDS or Merchandising Omni Services\)](#). See [Importing Data from Merchandising Cloud Services \(RMFCS\) through the Omnichannel Cloud Data Service \(OCDS\) or Merchandising Omni Services](#).

**Load products from default system first:** Begin by importing products from your default system, creating records in the product, system\_product, and product\_location tables for this system. Afterward, load products from any system that is not flagged as the default in order to create the system\_product and product\_location records for that system. The default system is the one flagged as the Default at the **Systems** screen. See the description of the [Data Hierarchy](#) for a discussion of the default system.

You cannot load a product from a non-default system before first creating the product for the default system.

**Note**

Oracle recommends that you do not use UPC codes as system product codes, because UPCs are not permanently assigned to a single product.

**Job batch size:** The [Job Batch Size](#) defines the number of records for Order Orchestration to include in each batch of product, product location, and incremental inventory import records. The default setting is 1000 records.

**Case-sensitive?** Oracle recommends that when you use a file import, that you use uppercase for all import file names, regardless of whether the code identifying the importing system is all uppercase. For example, even if the system code is Xstore, the import file name could be PRODUCT\_XSTORE.TXT.

### Importing Data from Merchandising Cloud Services (RMFCS) through the Omnichannel Cloud Data Service (OCDS) or Merchandising Omni Services

You can import the following information through the Omnichannel Cloud Data Service (OCDS) or Merchandising Omni Services:

- *Warehouse locations:* The import includes only virtual warehouse locations, with the address derived from the physical warehouse associated with the virtual warehouse. The data imported does not include additional information, such as location attributes or preference settings.
- *Store locations.* The import includes store locations and addresses. The data imported does not include additional information, such as location attributes or preference settings.
- *Products and system products.* The system product code should be the same as the product code for all integrating systems. The import should take place first for the default system, in order to create the product records first before attempting to create system product records for additional systems.
- *Item image URLs:* Optionally, you can import item image URLs in order to display item images in Store Connect.
- *Inventory (product locations) for warehouse and store locations.* The available quantity is imported, but not purchase order information.
- *Product barcodes:* Optionally, you can import product barcodes so that they can be used to scan items in Store Connect.

**About OCDS or Merchandising Omni Services:** You can use OCDS or Merchandising Omni Services to import data that originates in Oracle Retail Merchandising Foundation Cloud Services.

**Note**

When Order Administration integrates with Order Orchestration for customer order fulfillment, if either product integrates with OCDS or Merchandising Omni Services, the other product also needs to be integrated with OCDS or Merchandising Omni Services.

Order Orchestration submits a web service request for each type of import, and uses the data in the response to update each target table.

**Note**

When RMFCS is the system of record for products, the product code is the same as the system product code in all systems in your organization, including the default system. For example, if the product code is 12345, then 12345 is also the system product code for all systems.

**Configuration:** To import this data from OCDS or Merchandising Omni Services, first use the Add or Edit External Services window from the [External Services](#) screen to specify:

- The URL to use when requesting data for each type of import.
- The Active flag to indicate whether each import type is currently active. For example, you might perform an initial warehouse and store inventory load and then deactivate these imports.
- Authentication information for the web service requests, as well as the wait time.

Then, use the [OCDS Integration tab](#) at the *System* screen to specify the default location types to use when creating warehouse and store locations.

**Submitting the import:** If any of the URLs defined at the Add or Edit External Services window from the [External Services](#) screen are flagged as active, data imports take place from OCDS or Merchandising Omni Services rather than from any other source. Importing data through the file storage API does not take place.

**For more information:** See [OCDS or Merchandising Omni Services Imports](#).

## File Storage API for Imports and Exports

**About the File Storage API:** The File Storage API is a RESTful web service that supports importing and exporting data: uploads, downloads, deletions, and inquiries. If the File Storage API is enabled, it handles all imports and exports through files, including:

- Imports scheduled through the *Schedule Jobs* screen:
  - products, system products, and item image URLs for display in Store Connect
  - product locations
  - locations
  - product barcodes
- Incremental inventory updates, scheduled through the **Schedule Jobs** screen
- Exports scheduled through the **Schedule Jobs** screen:
  - Inventory quantity
  - Fulfilled inventory
  - Sales order data extract

**Note**

[Importing Data from Merchandising Cloud Services \(RMFCS\) through the Omnichannel Cloud Data Service \(OCDS\) or Merchandising Omni Services](#) does not use the file storage API.

The file storage API is enabled by default for new installations of release 18.0 or higher.

**Other import and export options:** Other import and export options are handled through web service messages, including:

- *Imports:*
  - Product Update Request Message or Product Update Request JSON Message: creates or updates products, system products, and product locations
  - Availability Update Request XML Message: Updates the available quantity for product locations, or creates product locations if they do not already exist.
  - Location Update Request JSON Message: Create or update locations
  - CreateDSVendor Request Message: Create or update vendors
- *Exports:*
  - System Discovery Request and Response XML Messages: Export a list of systems
  - Location Discovery Request and Response XML Messages: Export a list of locations for a system
  - Location Detail Request and Response JSON Messages: Request detailed information on all locations for a system

See the Web Services Guide on My Oracle Support (2953017.1) for information on the above web service request messages.

**Use of the FILE\_STORAGE table:** The FILE\_STORAGE table stores data on import files and export files, as well as errors that occur during import processing. The web service requests files from, deletes files in, and puts files in this table.

**Web service requests:** Requests supported by the File Storage API and their purposes are:

- getFile: Download an export file or error file that has been generated by Order Orchestration.
- deleteFile: Delete a file record, such as an export file that has already been retrieved.
- putFile: Upload an import file to Order Orchestration. The file format can be text (.TXT file extension) or compressed (.ZIP file extension). If the file is compressed, Order Orchestration extracts the information when processing the import. No other file extensions are supported. Note: If you are uploading a zip file, then it must contain a TXT file of the same name as the ZIP file, and be in the base level of the file, with no subfolders.

The File Storage API returns an error if there is already an existing file in the table with the same name, regardless of whether the suffix is different. For example, the API returns an error if you attempt to upload a file named PRODUCT\_SYS.ZIP if there is currently a FILE\_STORAGE record named PRODUCT\_SYS.TXT.

- getFiles: Request a list of file records in the FILE\_STORAGE table.

Every request needs to specify a container. The types of containers are:

- **OROB-IMPORTS:** Import file records that can be processed through the File Storage API. For example, use the `putFile` request to create an OROB-IMPORTS record so that Order Orchestration can import the data.
- **OROB-EXPORTS:** Export file records that have been generated through the File Storage API. For example, use the `getFile` request to download an export file, or use the `deleteFile` record to delete an export that has been downloaded.
- **OROB-ERRORS:** Error file records that resulted from an import process through the File Storage API. For example, use the `getFiles` request to retrieve a list of error files that have been created.

All request messages also need to use a valid Storage web service user ID with a valid password. See [Web Service Authorization](#) for background.

#### File cleanup:

- **Import file records:** Order Orchestration deletes these file records when they are processed, although errors are retained in the OROB-ERRORS container of the file storage table.
- **Export file records:** It is the responsibility of the integrating system to delete these records. They can be deleted through the `deleteFile` request message.
- **Error files records:** These records are purged automatically through the daily cleanup job based on the number of days specified in the [File Storage](#) setting under *Retention Settings* at the **Tenant-Admin** screen.

**Reviewing or deleting file storage records:** Use the [File Storage History](#) screen to review and, optionally, delete file storage records.

**Enabling the File Storage API:** The File Storage API is enabled if the `STORAGE_ID` in the `TENANT_CONFIG` table in the Admin database is set to `database`. This entry is set by default for a new installation of Order Broker 18.0 or later. To enable File Storage after upgrading from an earlier release of Order Orchestration, contact your Oracle representative.

**Summary of File Storage API responses:** The response codes that might be returned to file storage requests include:

- 200 = The `getFile` or `getFiles` request was successful.
- 204 = The `putFile` or `deleteFile` request was successful.
- 401 = The request failed because the web service user and password were not correct.
- 403 = The file you attempted to upload from RMFCS exceeded 1 GB.
- 404 = The request failed for other reasons.

**For more information:** See the Order Orchestration File Storage API technical reference paper on My Oracle Support for more information on implementing this API.

#### Import Process Overview (Other than RMFCS File Upload through OCDS or Merchandising Omni Services)

For information on imports from RMFCS, see [Importing Data from Merchandising Cloud Services \(RMFCS\) through the Omnichannel Cloud Data Service \(OCDS\) or Merchandising Omni Services](#)

**Import processing steps:** Processing steps are parallel for all types of information:

1. The process clears outdated records from the import tables (`location_import`, `product_import`, `product_barcode_import`, and `product_import_log`) based on the Days to Keep Errors specified for the system at the [Schedule Jobs](#) screen. If a record is flagged with an error code, it remains in the import table until the Days to Keep Errors has passed and you next run an import for that system; otherwise, the process adds or updates the record or field in the target table (`location`, `product`, `system_product`, or `product_barcode`), and the record is cleared the next time you run an import for the system, regardless of whether the Days to Keep Errors has passed.

**Note**

The product location import does not use an import table; instead, it updates the `product_location` table directly.

**Note**

The product location import file name can include an optional suffix to indicate information such as the location code or a date/time stamp. Use of a file name suffix enables the inventory system to stage multiple product location import files throughout the day, and have the files processed in order when Order Orchestration runs a scheduled import. See [Importing Product Locations through File Storage API](#) for more information.

2. The process checks the `FILE_STORAGE` table for a record, created from a compressed (ZIP) file and extracted when the `FILE_STORAGE` record is created.

The process uses files or records named `LOCATION_SYS.TXT`, `PRODUCT_SYS.TXT`, `PRODUCT_LOCATION_SYS.TXT`, and `PRODUCT_BARCODE_SYS.TXT` files, where `SYS` is the system code running the import. The product location import file name can include an optional suffix to indicate information such as the location code or a date/time stamp. Use of a file name suffix enables the inventory system to stage multiple product location import

files throughout the day, and have the files processed in order when Order Orchestration runs a scheduled import.

3. For each pipe-delimited file record, the process confirms that the data is formatted correctly and can be loaded into the related import table. For example, it checks whether a record includes an incorrect number of columns, has alphabetical characters in a numeric field, includes an improperly formatted date, or includes a field that exceeds the maximum length in the database. If there are any basic formatting errors in the uploaded data, it makes a copy of the file containing just the records in error in an OROB-ERRORS record in the FILE\_STORAGE table with a message indicating the nature of the error.
4. The process deletes the record from the FILE\_STORAGE table.
5. The process creates records in the import tables (location\_import, product\_import, or product\_barcode\_import) with any records that passed the basic edit. This step does not take place for product location records.
6. The process checks the location, product, and product barcode in the respective import tables for specific data errors, such as confirming that a product or system is correct, and flags the import file records with any errors.
7. For the product location import, the records in the FILE\_STORAGE record or the PRODUCT\_LOCATION\_SYS.TXT file are checked for errors. Any entries in the record or import file that pass the edits update the PRODUCT\_LOCATION table.
8. Any records in the import table that pass the edits update the target tables. Any empty fields in the import table do not update the target table; however, in the case of location updates, the location address is treated as a unit, so if any address data is passed for a location, the entire address is replaced with the data from the import table, including clearing any fields that are empty in the import table.
9. The process writes a log record for each import process. Import history information is available for review at the [Product Imports History](#) screen. History is retained for the number of days specified in the *Job History* retention setting at the [Tenant-Admin](#) screen.
10. Details on each product, location, or barcode record in error are available on a related error report (the [Location Import Errors Report](#), [Product Barcode Import Errors Report](#), or [Product Import Errors Report](#)). Also, the process updates the information on the last process date, time, and user for the system.
11. Based on the [Location Product Import](#) setting at the **Event Logging** screen, the process generates an email notification indicating success (if all records were successfully imported) or failure (if any record could not be imported).

**Reset fulfilled quantity during product import?** If the system's [Track Fulfilled Quantity](#) field is set to *Reset During Product Import*, each product location is reset before the import process finishes. The [Last Status](#) is not updated at the **Schedule Jobs** screen until this last step is complete.

#### Note

Oracle recommends that you do not use UPC codes as system product codes, because UPCs are not permanently assigned to a single product.

**Running the process:** You can set up a periodic processing schedule at the [Schedule Jobs](#) screen. You can also run the process on demand at that screen.

**Updating or creating product locations through inventory inquiry:** When Order Orchestration requests updated inventory information from an [online system](#) as a result of a *LocateItems* request, *Product Availability* request, or *SubmitOrder* message, or when

“reshopping” a rejected order, it updates the availability information for existing product locations, or creates new product locations if they do not already exist. However, it does not send an inventory inquiry to a system unless a product location for the item and system already exists.

**Note**

Order Orchestration updates the product location records only if the [Update Offline Inventory](#) flag at the **Preferences** screen is selected.

**Using the product update or availability update request messages:**

- *Product update request message*: Enables you to create or update products, system products, and product locations; however, does not update product location attributes, and does not update item image URLs.
- *Availability update request message*: Enables you to increase, decrease, or reset the available quantity for a product location.

These options can be useful for ad hoc updates. See the *Web Services Guide* on My Oracle Support (2953017.1) for more information.

**Processing incremental inventory updates:** Optionally, you can run an update program to import updated inventory levels from an integrated system, and then calculate the probable quantity available in each of the system’s product locations after factoring in any reserved quantity and current probability rules. A system can then retrieve the updated inventory information, including calculating the probable quantity, and use this information (for example, display this quantity on the ecommerce site). See the [Incremental Inventory Import](#) for more information.

**For more information:** See:

- [System](#), [Schedule Jobs](#), and [Product Imports History](#): configuring the import process and reviewing completed imports.
- [Importing Locations through File Storage API](#), [Importing Products and System Products through File Storage API](#), [Importing Product Locations through File Storage API](#), and [Importing UPC Barcodes through File Storage API](#): import details, file layouts, and data mapping.
- [Product Barcode Import Errors Report](#), [Product Import Errors Report](#), [Location Import Errors Report](#): reviewing errors.
- *Web Services Guide* on My Oracle Support (2953017.1) information on the interactive RESTful inventory update.

**Additional Types of Import Processes (Other than RMFCS File Upload and OCDS or Merchandising Omni Services)**

The additional types of import processes you can use to create and update locations, products and system products, product locations, and product barcodes in Order Orchestration are described briefly below.

**RMFCS:** For information on imports from RMFCS, see [Importing Data from Merchandising Cloud Services \(RMFCS\) through the Omnichannel Cloud Data Service \(OCDS\) or Merchandising Omni Services](#),

## Available-to-Sell Individual Inventory Updates through Oracle Retail Integration Cloud Service (RICS)

Order Orchestration processes individual inventory updates whenever they are received from through Oracle Retail Integration Cloud Service (RICS). This information originates in Oracle Retail Merchandising Foundation Cloud Service (RMFCS) or Enterprise Inventory Cloud Service (EICS). Processing this update requires Oracle Retail Integration Cloud Service authentication; see [Web Service Authorization](#) for more information.

**Information received:** The information in the individual inventory update maps to the [availability update request](#):

- If the product location already exists, only the [Available Quantity](#) is updated with the available to sell quantity passed. The current available quantity is overwritten with the available to sell quantity passed; no calculation takes place. This update functions the same way as a method of SET passed in the availability update request message.
- If the product location does not already exist, it is created, using the system item, location, and location type passed.

If any of the information passed does not map correctly into the existing data in Order Orchestration, Order Orchestration returns an error to the RICS. Examples of incorrect data include:

- The user name and password for web service authentication are not valid.
- The item, location, or system do not exist.

See the *Availability Update Request XML Message* and *Availability Update Response XML Message* in the Web Services Guide on MOS (2953017.1) for more details.

## Import Files

For import through the [File Storage API for Imports and Exports](#), pipe-delimited files containing location, product, product location, and product barcode information are placed in the FILE\_STORAGE table through a RESTful web service. You use the [Schedule Jobs](#) screen to set up an import schedule to process the data and create or update the related records in the database.

Periodic import from files does not require the system to be flagged as Online. The Online setting at the [System](#) screen indicates that Order Orchestration obtains current inventory information from the system when the Routing Engine evaluates which locations might be able to fulfill an order. Order Orchestration updates the product location records with this information only if the [Update Offline Inventory](#) flag at the **Preferences** screen is selected.

Additional import processes are described below.

## Interactive Updates

**Interactive inventory update through RESTful service call:** If the system is flagged as Online and a URL is specified, Order Orchestration also uses a RESTful service call to request current inventory information for a specific product when it requires the information for a LocateItems request, a SubmitOrder request, or a Product Availability request, or when it needs to “reshop” a rejected order. In this case, the Remote System Service returns the information in a RESTful service response rather than in flat files.

Order Orchestration updates the product location records only if the [Update Offline Inventory](#) flag at the **Preferences** screen is selected.

**Obtaining interactive updates from SIM or EICS:** Order Orchestration can request interactive inventory updates from Oracle Retail Store Inventory Management (SIM) or

Enterprise Inventory Cloud Service (EICS). If a system is flagged as Online and a Connection Type of *SIM* is specified, Order Orchestration sends a request message to obtain interactive inventory updates for a specific product when it requires the information for a *LocateItems* request or a *SubmitOrder* request, a *Product Availability* request, or when it needs to “reshop” a rejected order.

SIM returns the current Total Stock On Hand from the store location that matches the product location in Order Orchestration, and the Available Quantity for the product location is updated with this quantity. If the Item Status in SIM or EICS is Deleted, Discontinued, or Inactive, the Available Quantity for the product location is set to 0.

Differences between Order Orchestration and SIM or EICS:

- Even if the Item Status in SIM or EICS is Deleted, Discontinued, or Inactive, the Available Quantity for the product location is set to 0. However, the product location may still be eligible for order assignment if the Backorder Available flag for the location is selected.
- The response from SIM or EICS does not update the Next PO Date or Next PO Quantity for a product location.
- SIM and EICS support a decimal position for the available quantity. If the available quantity passed from SIM includes a decimal, Order Orchestration truncates the number. For example, if SIM passes an available quantity of 12.75, the available quantity in Order Orchestration is set to 12.

### Incremental Inventory Import

Optionally, you can configure a system to periodically run an import of updates to product location records. This process enables you to schedule incremental product location updates from the integrated system. See the [Incremental Inventory Import](#) option at the **Schedule Jobs** screen for details.

## Reporting Options

**Overview:** Order Orchestration provides several operations reports. You can run reports on demand as well as schedule reports on a daily or weekly basis.

**Operations reports:** The reports provided with Order Orchestration are:

- *Auto Cancellation Report:* A list of orders that include lines that have been automatically canceled. See [Auto-Cancel Unclaimed Orders](#) for a discussion.
- *Unfulfillable Report:* A list of orders that were completely or partially unfulfillable. The information on the report includes the customer’s name, email address, and phone numbers, as well as the type of order and whether the order is fully or partially unfulfillable.
- *Order Status Report:* A list of orders which you can generate by status, type, originating or fulfilling location, region, or ship via.
- *Zone List Report:* Identifies the locations assigned to each active or inactive fulfillment zone as either a primary or alternate fulfilling location, and lists locations that are not assigned to any zones.
- *Import Errors Reports:* A list of locations that failed when importing locations, products, system products, product locations, or product barcodes.

**Report formats:** You can generate reports in PDF format; in XLS format (so that you can open the report in a Microsoft Excel®); or in both formats. You can view or download the reports from a window in Order Orchestration and can send them by email to one or more recipients.

The *Data Formats* defined for the organization control the language, numeric, and date formats on reports. See [Localization Settings](#) for more information.

**Scheduling reports:** You can create one or multiple schedules for a report, specifying which day(s) of the week and which time(s) of the day when Order Orchestration should generate the report automatically. Each schedule can specify different selection criteria, such as different order statuses, locations, or date ranges. Also, you can specify an email distribution list for each schedule of a report.

## Anonymizing Data

**Purpose:** Order Orchestration offers two options for anonymizing private data: a web service that can anonymize various types of data on demand, and a scheduled job that anonymizes closed sales orders and purchase orders based on the time period since the orders were created.

**Private data web service:** This web service includes two types of requests and responses:

- *GetPrivateData:* The GetPrivateData request can request private data for customers, orders, vendors, and users.
- *ForgetPrivateData:* The ForgetPrivateData request can inquire on whether private data for customers, orders, vendors, and users is eligible to be anonymized, or can request that the data be anonymized.

When the data is anonymized, it is converted to asterisks. Once the data is anonymized, it cannot be recovered.

**Purging customer data from completed orders:** The [Completed Order Private Data Purge](#) job enables you to anonymize customer data on completed orders based on the number of days since the orders were created (retention days).

The types of personal data that can be anonymized are:

- customer names, addresses, email addresses, and phone numbers (sold-to and ship-to) and sales orders and purchase orders
- vendor names, addresses, email addresses, and phone numbers
- Order Orchestration user names and email addresses
- Vendor user names and email addresses
- Store Connect associate names and email addresses
- brand contact names and email addresses

Orders and purchase orders are eligible to be anonymized only if they are no longer open, and a vendor is eligible to be anonymized only if there are no open purchase orders for the vendor. When a vendor is anonymized, it is flagged as inactive; however, Order Orchestration users, vendor users, and store associates are not automatically deactivated when they are anonymized.

**For more information:** See the Web Services Guide on My Oracle Support (2953017.1) for information on the web service requests that support inquiring on private data, inquiring on whether it is eligible to anonymize it, or requesting to anonymize it.

## Time Zones

**Overview:** The time zones used for Order Orchestration include the following:

- *system time zone:* Set to UTC (Coordinated Universal Time). This time zone is used for dates and times in the database and web service responses.

- *retailer's time*: The Time Zone specified at the [Tenant \(retailer information\)](#) screen. This time zone is displayed on most Order Orchestration, Store Connect, and Vendor Portal screens and in generated email notifications. It is used for scheduling imports, exports, and report generation, and to calculate the number of orders for Maximum Daily Orders.
- *user's time*: The time zone on the user's personal computer or specified in the user's browser. In most cases, the times displayed on screens and indicated in emails are in the retailer's time rather than the user's time.

**Example:** system time zone = UTC retailer's time zone = UTC - 5:00 (for example, U.S. Eastern Time) user's time zone = UTC - 8:00 (for example, U.S. Pacific Time)

| Event                            | Time Used or Displayed                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| order created                    | <p>SubmitOrder response, database update, log entries: 2:00 (system time)</p> <p>Displayed on screens in Order Orchestration and Store Connect, such as order history: 7:00 (retailer's time)</p> <p><b>Note:</b> When using a screen to search by date, such as searching based on order date, the retailer's time is used. For example, if an order was created at 01:00 (01:00 a.m.) June 29 system time, and 20:00 (10:00 p.m.) June 28 retailer's time, searching based on an order date of June 28 displays the order, while a creation date of June 29 does not.</p> |
| imports scheduled and executed   | <p><b>Schedule Jobs</b> screen: 13:00 (1:00 p.m.) (retailer's time)</p> <p>Database entry: 18:00 (6:00 p.m.) (system time)</p> <p>Confirmation email: 13:00 (1:00 p.m.) (retailer's time)</p>                                                                                                                                                                                                                                                                                                                                                                               |
| setting up probability locations | <p>The From Date and To Date at the <b>Probability Location</b> screen: no time is displayed, but date is calculated based on retailer's time.</p>                                                                                                                                                                                                                                                                                                                                                                                                                          |

Changing the time zone: Whenever the Time Zone is changed at the Tenant screen, it is necessary to update all schedules, including imports, exports, report generation, polling, and notifications.

Exceptions: Screens that use the user's time rather than the retailer's time:

- Vendor Portal:
  - landing page: dates for calculation of updates and graphs
  - Purchase Order Shipping: default shipment date
  - Invoice: default invoice date

Also, the user's time applies when prompting on a calendar entry.

## Localization Settings

The following table indicates the source of localization settings for Order Orchestration screens, reports, and emails. The currency, if indicated, is always from the order.

See the [Supplier Direct Fulfillment Overview](#) for information on localization settings used for the Vendor Portal, and see [Store Connect Overview](#) for information on localization settings used for Store Connect.

|                | Language                                                                                                                                                                                                                                                                                                                                                                                                                                  | Data Formats                                                                                                                                                                                             |
|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>reports</b> | organization; see the <a href="#">Organizations</a> screen                                                                                                                                                                                                                                                                                                                                                                                | organization                                                                                                                                                                                             |
| <b>emails</b>  | organization                                                                                                                                                                                                                                                                                                                                                                                                                              | organization                                                                                                                                                                                             |
| <b>screens</b> | locale appended to URL (for example, ? locale=fr, where fr indicates French). Supported locales are: <ul style="list-style-type: none"><li>• en_US (US English, default)</li><li>• de (German)</li><li>• es (Spanish)</li><li>• fr (French)</li><li>• it (Italian)</li><li>• ja (Japanese)</li><li>• nl (Dutch)</li><li>• pt_BR (Portuguese, Brazilian)</li><li>• ru (Russian)</li><li>• sv (Swedish)</li><li>• zh_CN (Chinese)</li></ul> | user profile, as defined when creating the user from <a href="#">IDCS or OCI IAM</a> ; however, if the locale specified for the user is not valid in Order Orchestration, a locale of en_US is assigned. |

# 2

## Setting Up Data for the Routing Engine Module

**Purpose:** Follow the steps below when completing data setup as part of Order Orchestration installation and configuration for use of the Routing Engine. You should log in to Order Orchestration as the default admin user to perform the following setup steps.

**Other setup steps:**

- See [Setting Up Data for the Supplier Direct Fulfillment Module](#) for setup required for drop ship.
- See [Setting Up Data for the Store Connect Module](#) for additional setup required for Store Connect.

**Note**

All of the Routing Engine setup described in this help topic is also required to use Store Connect.

**Allow list:** The allow list is a list of URLs that are approved for communication. Oracle staff need to make sure that all URLs, such as logos and those used for integrations, are included on the allow list for Order Orchestration. See the description of the [allow list](#) in the glossary for more information.

**“From” email addresses:** Email addresses must be approved in order to be used as a return address on an email generated by Order Orchestration. Please change the default email addresses at the **Event Logging** screen and the Cust Service From Email Alias specified at the **Store Connect Preferences** screen, and contact your Oracle Representative to have the new email addresses approved.

**In this topic:**

[Basic Order Orchestration Setup:](#)

- [Define tenant data](#)
- [Create the organization that will include your systems](#)
- [Create a default system for your organization](#)
- [Assign the default organization to the default user](#)
- [Create each additional system that will integrate through Order Orchestration](#)
- [Configure one or more systems for online product and inventory update](#)
- [Create location types](#)
- [Specify event logging settings](#)
- [Optionally, create additional user roles](#)
- [Import users from IDCS or OCI IAM](#)
- [Set up web service authentication](#)

- [Set up schedules](#)

[Set up Locations, Products, Inventory, and Related Information:](#)

- [Create a location for each warehouse or store location that will be included in inventory inquiry requests or Routing Engine processing](#)
- [Upload proximity data](#)
- [Schedule product imports](#)
- [Load products, system products, product locations, and locations](#)
- [Create the default unfulfillable location](#)
- [Set up default carriers and, optionally, additional carriers](#)
- [Set up preferences for your organization](#)
- [Optionally, set up preference overrides for individual originating system, order type, and Express carrier combinations](#)
- [Test locate items searching](#)
- [Test order creation](#)
- [Optionally, create fulfillment zones to control the locations eligible to fulfill delivery orders based on shipping address](#)

[Additional Optional Setup](#)

- [Create probability rules](#)
- [Assign probability rules](#)
- [Test probability logic](#)
- [Set fulfillment options for systems](#)
- [Specify reserved statuses for systems](#)
- [Set up additional import and export options for systems](#)
- [Enable auto-cancellation of unclaimed orders](#)

**For more information:** See the [Glossary](#) and the [Order Orchestration Routing Engine Overview](#) for background.

| Step                                                                                                                                                                                                                                                                                         | Procedure                                                                                                                                                                                                                                                                                                             |

| <b>Define tenant data</b><br><b>About tenant data:</b> Use the Tenant screen to enter controlling information related to your instance of Order Orchestration.                                                                                                                               | <ul style="list-style-type: none"> <li>• Select <i>Systems &gt; Tenant</i> to advance to the <a href="#">Tenant</a> screen.</li> <li>• Review and, optionally, change any of the information on the screen.</li> </ul> <p>Certain options at this screen are available only to the <a href="#">admin user</a>.</p>    |
| <b>Configure the organization that will include your systems</b><br><b>About organizations:</b> The organization is the second level in the Order Orchestration hierarchy, below the tenant. For example, all locate items searching and order creation takes place within the organization. | <b>Default organization:</b> A default organization is created in a newly provisioned Order Orchestration environment. The organization code and description is set to DEFAULT, and the locale is set to English United States. Optionally, you can use the Organizations screen in Modern View to change the locale. |

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Specify event logging settings</b><br><b>About event logging:</b> Oracle staff can specify whether to log different types of activity for Order Orchestration, and how much detail to include.                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>Oracle staff use the <a href="#">Event Logging</a> screen to set the level of logging for various activities and other Order Orchestration-wide settings.</p> <ul style="list-style-type: none"> <li>Typically, Oracle staff set all <i>Event logging</i> options at this screen to <i>Detailed</i> until you have completed final configuration of Order Orchestration.</li> <li>Typically, Oracle staff set the <i>XML logging</i> option to <i>Everything</i> until you have completed final configuration of Order Orchestration, including integration with all online systems.</li> <li>Oracle staff complete the <i>Email Notifications</i> settings for each event.</li> <li>Oracle staff complete the <i>Email Settings</i>:             <ul style="list-style-type: none"> <li>The <i>Administrative Email</i> address receives all email notifications.</li> <li>The <i>From Email</i> address appears as the originating email address for all email notifications.</li> </ul> </li> <li>Click <i>Update</i>.</li> </ul> <p><b>“From” email addresses:</b> Email addresses must be approved in order to be used as a return address on an email generated by Order Orchestration. Please change the default email addresses at the <b>Event Logging</b> screen and contact your Oracle Representative to have the new email addresses approved.</p> |
| <b>Optionally, create additional user roles</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <p>Use the <a href="#">Roles</a> screen to review the roles delivered with Order Orchestration and make sure to review the authority associated with these roles prior to assigning them to a user.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Import users from IDCS or OCI IAM</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Use the <a href="#">Identity Cloud User Synchronization</a> job to import users from IDCS or OCI IAM. If you do not use this job, users that exist in IDCS or OCI IAM are created automatically in Order Orchestration when they first log in. See the <a href="#">Identity Cloud User Synchronization</a> for more information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Set up web service authentication</b><br><b>About web service authentication:</b> By setting up and requiring user IDs and passwords for web services, you confirm that Order Orchestration authenticates the identity of the system submitting web service messages. Web service authentication is required. If Order Orchestration receives a web service request message without a valid web service user and password, the request is refused with an error: Inbound Message failed validation.<br><br><b>Note:</b> Each web service user must also be created in IDCS or OCI IAM to support authentication. | <p>Use the <a href="#">Web Service User</a> screen to create web service users for authentication. See these screens for details.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Step                                                                                             | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Set up schedules</b><br><b>Note:</b> Do not attempt to schedule jobs before creating systems. | Use the <a href="#">Schedule Jobs</a> screen to schedule daily cleanup, email generation, auto-cancel unclaimed pickup orders, and the sales order data extract.<br><br>Then use the <i>Reschedule All</i> option at the <a href="#">View Active Schedules</a> screen to enable all scheduled jobs and programs, including those configured at the <a href="#">Schedule Jobs</a> screen and elsewhere.<br><br>Note that the <i>Reschedule All</i> option does not restart jobs that are temporarily in Paused status (⊘). Order Orchestration restarts these jobs automatically. |
| <b>Set up Locations, Products, Inventory, and Related Information</b>                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Create a location for each warehouse or store location that will be included in inventory inquiry requests or Routing Engine processing</b></p> <p><b>About locations:</b> A location can represent a store, a warehouse, or a virtual location such as a web storefront. Each location is associated with an integrated system. Locations search for inventory in other locations, and can create or fulfill orders through the Routing Engine.</p> | <p>Typically, you create locations through integrations with external systems. For example, locations might be created as part of the product import process; see <a href="#">Importing Locations through File Storage API</a>.</p> <p>You can also create locations directly in Order Orchestration:</p> <ul style="list-style-type: none"> <li>• Select <i>Locations</i> &gt; <i>Locations</i> to advance to the <a href="#">Locations</a> screen.</li> <li>• Select your organization at the <i>Organization</i> drop-down box.</li> <li>• Select the location type from the <i>Type</i> drop-down box.</li> <li>• Enter a code identifying the location. The code cannot exceed 10 positions.</li> <li>• Enter a name for the location in the <i>Name</i> field. The name cannot exceed 40 positions.</li> <li>• Select the system from the <i>System</i> drop-down box.</li> <li>• Click <i>New</i> to advance to the <a href="#">New Location</a> screen.</li> </ul> <p><b>Note:</b> If you will be using proximity searching for this organization, you need to enter both a postal code and a country code. If a submit order request for a pickup order originates from a location without an address that includes a valid postal code, Order Orchestration returns an error indicating that the location does not have sufficient inventory of the requested item. The remaining fields on this screen are informational only.</p> <ul style="list-style-type: none"> <li>• Click <i>Save</i>.</li> </ul> <p><b>Order Administration integration:</b></p> <ul style="list-style-type: none"> <li>• For warehouses in Order Administration, you might want to include only allocatable warehouses.</li> <li>• The code you enter for an Order Administration warehouse should be the same as the warehouse code from the <i>OROB Location</i> field in Order Administration; however, the name does not need to be the same as the warehouse description in Order Administration.</li> </ul> <p><b>Setting up the sort order:</b> The sort at the <a href="#">Preferences</a> and <a href="#">Probability Location</a> screens is in alphanumeric order within each organization. In other words, location types are listed alphanumerically by name within an organization, as are locations within a location type. Since the sort is alphanumeric, numeric codes are listed</p> |

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <p><b>Upload proximity data</b><br/> <b>About proximity data:</b> If you are not using the <a href="#">Oracle Maps Cloud Service</a>, uploading proximity data enables you to search for merchandise or assign orders based on the approximate distance from a store, warehouse, or customer address.</p> <p><b>Note:</b> This step is required only if you are using <a href="#">proximity locator</a> searching and are not using the <a href="#">Oracle Maps Cloud Service</a>. You can also perform this step at a later time.</p> <p><b>For more information:</b> See <a href="#">Proximity Locator Searching</a>.</p> | <p>before alphabetical codes; for example, location 123 is listed before location ABC.</p> <p>If you are using <a href="#">proximity locator</a> searching to restrict locate items searches to the customer's area and are not using the <a href="#">Oracle Maps Cloud Service</a>, obtain the required .CSV file of postal code information and then use the <a href="#">Proximity Uploads</a> screen to upload that information into the <a href="#">proximity location table</a>:</p> <ul style="list-style-type: none"> <li>• Select the <i>Canada, International, or United States</i> from the <i>Proximity Data Type</i> drop-down list.</li> <li>• Use the <i>Browse...</i> button to select the .CSV file on your local computer.</li> <li>• Click <i>Upload</i>. Wait until the upload status is completed.</li> </ul> |
| <p><b>Schedule product imports</b><br/> <b>About product imports:</b> The automated import process enables you to import and update product and inventory information from an integrated system.</p> <p>See <a href="#">Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database</a> for a process overview.</p>                                                                                                                                                                                                                                                                              | <p>Select <i>System &gt; Schedule Jobs</i> to advance to the <a href="#">Schedule Jobs</a> screen, and complete the steps described under <a href="#">Product Import</a> to set up, change, or review the import schedule for a system or run the import on demand.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p><b>Load products, system products, product locations, and locations</b></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>Consult the integrating system's documentation and complete the steps described under <a href="#">Scheduling the Product Import Job</a> for systems that support the import process, including Order Administration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

**Note**

**Important:**

Oracle recommends that you schedule imports daily at a time when demands on the system are limited, and when it does not interfere with the database backup, and that you do not schedule more than one import at a time against the same database.

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                            | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Create the default unfulfillable location</b></p> <p><b>About the default unfulfillable location:</b> The Routing Engine assigns an order to the default unfulfillable location when it cannot find a location to fulfill the order. You need to specify a default unfulfillable location at the <a href="#">Preferences</a> screen.</p> <p><b>Note:</b> This location needs to be associated with the organization's default system.</p> | <p>Typically, you create locations through integrations with external systems. For example, locations might be created as part of the product import process; see <a href="#">Importing Locations through File Storage API</a>.</p> <p>You can also create locations directly in Order Orchestration:</p> <ul style="list-style-type: none"> <li>• Select <i>Locations</i> &gt; <i>Locations</i> to advance to the <a href="#">Locations</a> screen.</li> <li>• Select your organization at the <i>Organization</i> drop-down box.</li> <li>• Select the location type from the <i>Type</i> drop-down box.</li> <li>• Enter a location code. The code cannot exceed 10 positions.</li> <li>• Enter a name for the location in the <i>Name</i> field. The name cannot exceed 40 positions.</li> <li>• Select the default system for your organization from the <i>System</i> drop-down box.</li> <li>• Click <i>New</i> to advance to the <a href="#">New Location</a> screen.</li> <li>• Click <i>Update</i> to save your entries.</li> </ul> <p>Set preferences for the default location to exclude it from locate item requests and order assignments:</p> <ul style="list-style-type: none"> <li>• Select <i>Organizations and</i> &gt; <i>Preferences</i> to advance to the <a href="#">Preferences</a> screen.</li> <li>• Advance to the default location and highlight it in the left-hand pane.</li> <li>• Set all of the displayed Yes/No options under <i>Fulfillment</i> (including <i>Pickup Available</i>, <i>Delivery Available</i>, <i>Ship For Pickup Sourcing Available</i>, <i>Ship For Pickup Receiving/Pickup Available</i>, and <i>Backorder Available</i>) to <i>No</i>.</li> <li>• Click <i>Update</i> to save your entries.</li> </ul> |

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <p><b>Set up default carriers and, optionally, additional carriers</b></p> <p><b>About carriers:</b> A carrier is required on each order. At a minimum you need to set up a default carrier, specified at the <a href="#">Preferences</a> screen. The default PICKUP carrier is created automatically when a SubmitOrder request is received.</p> <p>If the Submit Order message creating a delivery order:</p> <ul style="list-style-type: none"> <li>specifies a <code>ship_via</code> that matches a carrier you have set up through the <i>Carriers</i> screen in Modern View, Order Orchestration uses this carrier on the order and resets the carrier as active, if needed</li> <li>specifies a <code>ship_via</code> that does not match a carrier you have set up through the <i>Carriers</i> screen in Modern View, Order Orchestration creates the carrier and uses this carrier on the order</li> <li>does not specify a <code>ship_via</code>, Order Orchestration uses the default carrier you specify at the <a href="#">Preferences</a> screen</li> <li>For a pickup order, Order Orchestration uses the default PICKUP carrier, regardless of whether a <code>ship_via</code> is passed in the Submit Order message.</li> </ul> | <p>The following steps are required if you want to override the default carrier created during the installation or upgrade process:</p> <ul style="list-style-type: none"> <li>Advance to the <a href="#">Carriers</a> screen in Modern View.</li> <li>Optionally, enter a Code and Description. If you do not enter them here, you can enter them at the <i>New Carrier</i> window in Modern View.</li> <li>Click <i>New</i> to advance to the <i>New Carrier</i> window in Modern View.</li> <li>Repeat the steps above to create a PICKUP carrier. Order Orchestration requires this carrier in order to begin processing pickup orders.</li> <li>Select <i>Organizations and Preferences</i> and click the Order Orchestration Preferences icon () for your organization to advance to the <a href="#">Preferences</a> screen, and change the Default Carrier to the new carrier you have just created.</li> </ul> |

| Step                                                                                                                                                                                                                                                              | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Set up preferences for your organization</b><br><b>About preferences:</b> Use the <b>Preferences</b> screen to set rules governing locate item searching and order assignment. You can set preferences at the organization, location type, and location level. | <ul style="list-style-type: none"><li>• Select <i>Organizations and Preferences</i> and click the Order Orchestration Preferences icon (  ) for your organization to advance to the <a href="#">Preferences</a> screen.</li><li>• Set the preferences for the organization. See the <a href="#">Preferences</a> screen for field descriptions. You can return to the <a href="#">Preferences</a> screen later to reset any existing preferences.</li><li>• Click <i>Save</i>.</li></ul> |

 **Note**

**Important:** You need to set all Order Orchestration preferences at the organization level before integrating any external systems with Order Orchestration. See the description of the [Preferences](#) screen for complete information on setting preferences.

**Optionally, set up preference overrides for individual originating system, order type, and Express carrier combinations**  
**About preference overrides:** Use the **Order Orchestration Preference Overrides** screen to override the Order Orchestration preference settings that control sorting results for locate items searches and order assignment.

Advance to the [Order Orchestration Preference Overrides](#) screen, where you can set up overrides to the Order Orchestration sort criteria set at the **Preferences** screen.  
*Example:* You can have the Routing Engine rank locations for a pickup request based first on proximity, while it ranks locations for a delivery request based first on available quantity.

**Test locate items searching**

Test searching for products, either from an integrated system or using a standalone testing tool such as soapUI ([www.soapUI.org](http://www.soapUI.org)). Confirm that the products returned and their sort order are what you expect.  
**Note:** If Order Orchestration is not returning any locations to locate items requests, confirm that you have completed the steps described under [Set up default carriers and, optionally, additional carriers](#).

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Procedure                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Test order creation</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Test creating new orders, either sending them from an integrated system or using a standalone testing tool such as soapUI (www.soapUI.org). Confirm that the orders are created as you expect, and that updates are processed correctly across the integrated systems.                                                                            |
| <b>Optionally, create fulfillment zones to control the locations eligible to fulfill delivery orders based on shipping address</b>                                                                                                                                                                                                                                                                                                                                                  | <ul style="list-style-type: none"> <li>Use the <a href="#">Fulfillment Zone Wizard</a> to create zones based on the shipping addresses for delivery orders, indicating the locations eligible to fulfill these orders.</li> <li>Use the <a href="#">Preferences</a> screen to select the Use Zone Fulfillment preference.</li> </ul>              |
| <b>Additional Optional Setup</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                   |
| <b>Create probability rules</b><br><b>About probability rules:</b> You can use probability rules to control the information returned in merchandise search results or that the Routing Engine uses to determine where to assign orders; for example, you can apply rules to reduce the available quantity indicated for certain products, or to exclude certain product locations temporarily from search results.                                                                  | Optionally, use the <a href="#">Probability Rules</a> screen to create rules that you can apply for locate items searches and order creation. See that screen for more information.                                                                                                                                                               |
| <b>Assign probability rules</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Optionally, use the <a href="#">Probability Location</a> screen to assign probability rules to locations, location types, or the organization.                                                                                                                                                                                                    |
| <b>Test probability logic</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Test locate items searching and creating new orders to confirm that the probability rules you have set up and assigned are producing the results you expect.                                                                                                                                                                                      |
| <b>Set fulfillment options for systems</b><br><b>About system fulfillment options:</b> You can flag a system to require a status update from each assigned fulfilling location after it polls for new orders through the fulfillments request message. When you flag a system to require status updates, you also indicate the number of times that an order can be included in the fulfillments request until you include it in a notification email to your system administrator. | Optionally, use the <a href="#">System</a> screen to set the fulfillment options to indicate whether Order Orchestration requires a status update from the system for new orders. See <a href="#">Require Status Update for Assigned Orders?</a> for a discussion.                                                                                |
| <b>Specify reserved statuses for systems</b>                                                                                                                                                                                                                                                                                                                                                                                                                                        | Optionally, use the <a href="#">System</a> to specify order or order line statuses to subtract from the total available quantity for a product location, indicating that orders in these statuses are considered reserved.<br><br><b>For more information:</b> See <a href="#">Calculating the Available to Promise Quantity</a> for an overview. |

| Step                                                           | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

# 3

## Supplier Direct Fulfillment Overview

**Purpose:** Use Order Orchestration's Supplier Direct Fulfillment module to manage the fulfillment of drop ship purchase orders. The module provides a means to communicate with your vendors in the assignment and fulfillment of drop ship orders.

**Compatibility:** The Supplier Direct Fulfillment module is compatible with version 4.0+ of Order Management System, and Order Administration, and version 13.0 of CWDirect. It is also compatible with version 17.0+ of CWDirect.

**About the Routing Engine:** See the [Order Orchestration Routing Engine Overview](#).

**In this topic:**

- [Drop Ship Process Flow](#)
  - [Purchase Order Creation](#)
  - [Purchase Order Fulfillment](#)
  - [Updates to Purchase Orders](#)
  - [Invoicing](#)
  - [Email Notifications](#)
  - [Reporting](#)
- [Vendor Portal](#)
  - [Vendor Integration](#)
- [Supplier Direct Fulfillment Module Email Notifications Summary](#)
  - [Change notification emails to retailer](#)
  - [Shipment or invoice upload error notification email to retailer](#)
  - [Out-of-balance invoice notification email to retailer](#)
  - [New purchase order notification email to vendor](#)
  - [Shipment or invoice upload error notification email to vendor](#)
  - [Out-of-balance invoices approved or rejected notification email to vendor](#)
  - [Change request \(address change or cancellation\) notification email to vendor](#)
  - [Cost change notification email to vendor](#)
- [Localization Settings](#)

## Drop Ship Process Flow

**Purpose:** The basic process flow for purchase order fulfillment through the Supplier Direct Fulfillment module is described below:

- [Purchase Order Creation](#)
- [Purchase Order Fulfillment](#)

- [Updates to Purchase Orders](#)
- [Invoicing](#)
- [Email Notifications](#)
- [Reporting](#)

### Purchase Order Creation

**Create purchase orders in the originating system and send to Routing Engine:** When you create a purchase order to fulfill a drop ship item on a sales order, the system (such as Order Administration or CWDirect) sends the [CreateDSOrder](#) message to Order Orchestration. When this message creates the purchase order in Order Orchestration, Order Orchestration can notify the vendor by email, or the vendor receives notification of new purchase orders after logging into the [Vendor Portal](#).

**Information included in the purchase order:** The purchase order information sent to the vendor includes the retail brand, sold-to and ship-to customer names and addresses, order totals, carrier, and information on the drop ship items to fulfill, including special handling instructions and order and detail messages.

When Order Orchestration receives the [CreateDSOrder](#) message, in addition to creating the purchase order it also creates:

- the vendor, if it doesn't already exist; however, you need to complete entry of additional vendor information, including vendor preferences and creating any vendor users to have access to the Vendor Portal.
- the carrier, if it doesn't already exist; however, you might want to rename the carrier and modify the information required at shipment confirmation and its assignment to vendors.
- the product(s), if the requesting system is the default for the organization.
- the vendor item(s).

See [Setting Up Data for the Supplier Direct Fulfillment Module](#) for more information on configuring vendors, vendor users, and carriers.

### Purchase Order Fulfillment

**Vendor generates pack slips:** Using the [Vendor Portal](#), the vendor can generate a PDF version of a pack slip, a CSV file containing pack slip data, or both. The vendor can also generate a batch pull sheet document to use when picking stock for the purchase order. You can include your brand logo on a graphical version of the pack slip, or the vendor can generate a nongraphical pack slip if using pre-printed forms. You can also include a pack slip message.

See [Vendor Integration](#) for an overview on how a vendor can receive and confirm shipment of invoices through XML and JSON messages rather than through Vendor Portal screens.

**Vendor confirms shipment:** The vendor can confirm shipment using a screen at the [Vendor Portal](#), or can upload a CSV file containing shipment confirmation data. Confirmation through an integrated shipping system, such as ADSI, is available; in this situation, you must specify the shipping weight and box dimensions. You can specify the information required for each carrier, such as tracking number, rate, and weight; also, you can select the carriers to assign to each vendor.

### Updates to Purchase Orders

**Sending changes and updates to the vendor:** Optionally, you can send address updates or cancellation requests to the vendor through the Supplier Direct Fulfillment module.

- **Address updates:** When you change the shipping address on an order, Order Administration or CWDirect sends a [SetDSAddress Change](#) request message. If:
  - the vendor has not yet generated a pack slip for the purchase order or performed any other updates, the address update applies automatically.
  - the pack slip is in process but not yet shipped, the vendor needs to approve or reject the address change.
  - the pack slip is shipped or canceled, the address change is rejected automatically.
  - The [SetDSAddress Change](#) message specifies whether to change both the sold-to and ship-to address, or just the ship-to address.
- **Cancellation requests:** When you select to cancel a drop-shipped item, a system such as Order Administration or CWDirect sends a [setDSCancel](#) request message. If:
  - the vendor has not yet generated a pack slip for the item or performed any other updates, the line is canceled automatically.
  - the item is in process but not yet shipped, the vendor needs to approve or reject the cancellation request.
  - the item is already shipped or canceled, the cancellation is rejected automatically.
- **Cost updates:** If you change the cost of a line on a purchase order, a system such as Order Administration or CWDirect sends a [setDSCostChange](#) request message. If:
  - the vendor has not yet generated a pack slip for the item or performed any other updates, the line is canceled automatically.
  - the item is already shipped or canceled, the cancellation is rejected automatically.
  - Unlike address changes and cancellation requests, cost changes do not require the vendor's approval or rejection, even if the line is in process.

**Vendor updates to purchase orders:** Using the [Vendor Portal](#), the vendor can:

- put a purchase order line on hold or release it from hold
- change the due date for a purchase order line
- enter a comment about the purchase order line
- void and reprint a pack slip, including reducing the quantity of a purchase order line

**Checking purchase order status:** Originating systems such as Order Administration or CWDirect use the [getDSChanges](#) message to periodically request purchase order updates. Order Orchestration returns details on purchase order activity by vendors since the last request message was processed. Optionally, the originating system can indicate the maximum number of transactions to include in the response.

## Invoicing

If you provide the vendor with authority to invoicing, the vendor can generate invoices either when confirming shipment at the [Vendor Portal](#) screen, or as a separate step for one or more shipments.

### Invoice process flow:

- **Invoice creation:** The vendor can create invoices using Vendor Portal screens or by uploading a CSV file. Each invoice can include shipments for one or more purchase orders. The default information on the invoice includes the original PO unit cost and does not include any payment terms or freight, handling, or other charges at the header or detail level; however, the vendor can override these defaults.

- **Held invoice?** If the vendor does not override any of the default information, the invoice is created in *Approved* status and is eligible for posting to the originating system immediately. If the vendor overrides a PO unit cost beyond a threshold you specify, the invoice line is [out-of-balance](#) and the invoice is created in *Held* status. You need to review each *Held* invoice and either accept or reject it. Accepted invoices post to the originating system, while rejected invoices return to the vendor. The vendor can then edit the invoice or delete it.

**Posting invoices:** Originating systems use the [getDSInvoices](#) message to periodically request any new invoices posted by vendors. Order Orchestration returns details on invoices posted since the last request message was processed. Optionally, the originating system can indicate the maximum number of invoices to include in the response.

**Note**

Order Management System 15.0 or higher, or Order Administration, does not support the invoicing integration.

### Email Notifications

You can have Order Orchestration generate email notifications to:

- your staff, when the vendor changes a purchase order or line or submits an [out-of-balance](#) invoice, or when a shipment or upload invoice fails
- vendors, when you generate new purchase orders, send an address change or cancellation request, respond to an [out-of-balance](#) invoice, or when a shipment or upload invoice fails

See [Supplier Direct Fulfillment Module Email Notifications Summary](#) for more information.

### Reporting

The Supplier Direct Fulfillment module includes the following reports:

- [PO Item Status Report](#)
- [Vendor Aging Detail Report](#)
- [Vendor Aging Summary Report](#)
- [Invoice Detail Report](#)
- See [Reporting Options](#) for an overview on how to generate and schedule reports.

**Purchase order inquiry:** You can use the [Purchase Order Inquiry](#) screen to select purchase orders for review.

**Setting up data for drop ship:** See [Setting Up Data for the Supplier Direct Fulfillment Module](#) for information on the setup required in Order Orchestration before you can start using the Supplier Direct Fulfillment module, including brands, carriers, vendors, vendor users, and the roles that control their authority.

## Vendor Portal

**Purpose:** The Vendor Portal is a site where your drop ship vendors can log in and, depending on the individual's authority:

- review current information on the purchase orders assigned to them for fulfillment and their current status

- generate PDF pack slips for purchase orders or download CSV files, using a variety of selection options
- confirm shipment of purchase orders
- select individual purchase orders for inquiry
- hold or release purchase order lines
- change the due dates for purchase order lines
- accept or reject address change and cancel requests for purchase orders that are currently in process
- review and change configuration settings, such as pack slip output format and email addresses for purchase order notifications

Each [vendor user](#) sees only the purchase orders assigned to his or her own vendor for fulfillment.

The Vendor Portal resides outside your firewall so that it is accessible to vendors.

**Landing page:** When the vendor user logs into the Vendor Portal, the landing page includes:

- a pie chart summarizing the percentage of purchase orders with current, future, late, or very late due dates
- a bar chart summarizing the number of purchase orders received by the vendor for each day in the past week
- a bar chart summarizing the number of purchase orders shipped by the vendor for each day in the past week

**Note**

The vendor can restrict the chart data to a specific brand. Also, the vendor can change the range of dates included in the bar charts.

- an email link to contact you, if you have specified one
- a current special announcement from you, if you have specified one

Depending on the vendor user's authority:

- current totals of purchase orders by status, with links to related screens where the vendor can work with the purchase orders
- current totals of invoices by status and purchase orders eligible for invoicing, with links to related screens where the vendor can work with invoices
- links to all modules which the vendor user has authority to use

Links to unauthorized modules are grayed out.

### Note

The Vendor Portal requires access to the Internet to display the charts and graphs.

**For more information:** See [Information on the Vendor Portal landing page](#) for descriptions of the contents of the landing page.

## Vendor Integration

**Overview:** A vendor can receive and confirm shipment of drop ship purchase orders by:

- using the screens in the Vendor Portal for all activities, or
- using the vendor integration between Order Orchestration and the vendor's system.

A vendor can also use a combination of these options; for example, the vendor can receive purchase orders through the vendor integration, and also use the Vendor Portal screens to confirm shipments and update purchase orders.

**Included in the vendor integration:** The vendor integration includes:

- sending batches of new purchase orders to the vendor's system when the vendor's system requests them
- enabling the vendor's system to acknowledge receipt of a batch of purchase orders
- confirming shipments of purchase orders, including the carrier (ship via) used, tracking number, weight, shipment date, and freight charges

**Not included in the vendor integration:** The vendor integration does not include:

- modifying purchase orders, such as changing expected ship dates or putting a line on hold
- accepting or rejecting address changes or cancellation requests from the retailer
- receiving cost changes from the retailer
- generating invoices and submitting them to the retailer

Each of these options is available in the Vendor Portal if the vendor user has authority.

**Mapping to the vendor's system:** The vendor can use the messages described in the *Vendor Integration Guide* to map to the vendor's system, or contact a Oracle representative for information on creating unique maps.

**JSON messages:** The vendor integration uses the JSON (JavaScript Object Notation) format for its messages.

**For more information:** See the *Vendor Integration Guide* for details, and see the [Preferences tab](#) at the Create Vendor or Edit Vendor screen for related configuration.

### Supplier Direct Fulfillment Module Email Notifications Summary

A summary of the email notifications to the retailer and the vendor are described in the table below.

| Notification Type                                                               | Generated When:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Setup                                                                                                                                                                                                                                                                                                                                            |

### Change notification emails to retailer

#### Drop ship orders changed by the vendor

- *Subject line:* Drop Ship Orders Changed by [Vendor Name]
- *Sample contents:*

Vendor: [Vendor Name]

The following drop ship orders have been changed.

| Order Number | PO Number | Line | Item      | Description             | Status     | Orig Due Date | New Due Date | Reason           |
|--------------|-----------|------|-----------|-------------------------|------------|---------------|--------------|------------------|
| 12223        | 456       | 1    | BUGHAT    | CUTE BABY BUG HAT       | Held       | 03/03/2017    | 38/31/2017   | processing delay |
| 12223        | 456       | 2    | SCARF RED | FAIR TRADE COTTON SCARF | In Process | 03/03/2017    | 03/04/2017   | processing delay |

The date format is from the setting for the organization. See the [Organizations](#) screen for more information on data formats.

#### Cancellations denied by the vendor

- *Subject line:* Denied Cancellations by [Vendor Name]
- *Sample contents:*

Vendor: [Vendor Name]

The following drop ship order cancellation request(s) were denied.

| Order Number | PO Number | Line | Item   | Description       |
|--------------|-----------|------|--------|-------------------|
| 12220        | 453       | 1    | BUGHAT | CUTE BABY BUG HAT |

#### Address changes declined by the vendor

*Subject line:* Address Changes Declined By [Vendor Name]

*Sample contents:*

Vendor: [Vendor Name]

The following drop ship order address change(s) were declined.

| Order Number | PO Number |
|--------------|-----------|
| 12218        | 450       |

**Note**

This email is generated when an address change does not apply to all items on the purchase order, even if one or more items are updated with the address change.

**Shipment or invoice upload error notification email to retailer*****Shipment upload error***

- *Subject line:* Shipment Upload in Error from [Vendor Name]
- *Sample contents:*  
Vendor: [Vendor Name]  
Shipment upload could not process.  
Error: 3032 - Invalid Carrier (1) is not associated to vendor (MNO).

**Note**

The description of the error is not translated.

***Invoice upload error***

*Subject line:* Invoice Upload in Error from [Vendor Name]

*Sample contents:*

Vendor: [Vendor Name]

Invoice upload could not process.

Error: Invalid PO number: 403 Data: DETAIL,403,1,,,BU1234,1.12345,2.12345,3.12345,other desc,1.09,1

**Note**

The description of the error is not translated.

**For more information:** See the Vendor Portal online help, available from the Order Orchestration home screen, for more information on shipment or invoice upload errors.

***Out-of-balance invoice notification email to retailer***

- *Subject line:* Out of Balance Invoice from [Vendor Name]
- *Sample contents:*  
Vendor: [Vendor Name]  
An out of balance invoice has been confirmed. Access the Invoice Inquiry menu option to approve or reject held invoices.

***New purchase order notification email to vendor***

- *Subject line:* New PO Notification from [Retailer Name]
- *Sample contents:*

Organization: EZK Organization (<http://servername.example.com/LocateVPA/>)

New purchase orders are ready to be fulfilled.

**Note**

Use the VPA Url setting at the [Drop Ship Preferences](#) screen to specify the link to the [Vendor Portal](#) to include in email notifications to the vendor. The VPA Url does not automatically append the vendor's locale to the link embedded in the email. The same URL is embedded for all vendors.

**Shipment or invoice upload error notification email to vendor**

**Shipment upload error**

- *Subject line:* Shipment Upload Error from [Retailer Name]
- *Sample contents:*

Shipment upload could not process.

Error: 3032 - Invalid Carrier (1) is not associated to vendor (MNO).

**Invoice error**

*Subject line:* Invoice Upload Error

*Sample contents:*

Invoice upload could not process.

Error: Invalid PO number: 403 Data: DETAIL,403,1,,,BU1234,1.12345,2.12345,3.12345,other desc,1.09,1

**Out-of-balance invoices approved or rejected notification email to vendor**

- *Subject line:* Out of Balance Invoices Approved or Rejected by [Retailer Name]
- *Sample contents:*

Organization: [Retailer Name] (<http://servername.example.com/LocateVPA/>)

Out of balance invoices have been approved or rejected.

| Invoice Number | Invoice Status |
|----------------|----------------|
| LOC-1108E      | Posted         |

**Note**

Use the VPA Url setting at the [Drop Ship Preferences](#) screen to specify the link to the [Vendor Portal](#) to include in email notifications to the vendor. The VPA Url does not automatically append the vendor's locale to the link embedded in the email. The same URL is embedded for all vendors.

**Change request (address change or cancellation) notification email to vendor**

- *Subject line:* Change Requests from [Retailer Name]
- *Sample contents:*

Organization: [Retailer Name] (<http://servername.example.com/LocateVPA/>)

Purchase orders have requested changes. Access the Purchase Order Change Request menu option to accept or decline changes.

**Note**

Use the VPA Url setting at the [Drop Ship Preferences](#) screen to specify the link to the [Vendor Portal](#) to include in email notifications to the vendor. The VPA Url does not automatically append the vendor's locale to the link embedded in the email. The same URL is embedded for all vendors.

### Cost change notification email to vendor

- *Subject line:* Cost Changes from [Retailer Name]
- *Sample contents:*

Organization: [Retailer Name] (<http://servername.example.com/LocateVPA/>)

The following purchase orders have cost changes.

| Order Number | PO Number | Line | Item       | Description          | Cost Before | Cost After |
|--------------|-----------|------|------------|----------------------|-------------|------------|
| 12434-001    | 664       | 1    | V257BUGHAT | CUTE BUG HAT<br>BABY | \$1.00      | \$1.23     |

### Localization Settings

The following table indicates the source of localization settings for Supplier Direct Fulfillment screens, print output, and emails. The currency, if indicated, is always from the purchase order.

See the [Order Orchestration Routing Engine Overview](#) for information on localization settings used Order Orchestration foundation, and see [Store Connect Overview](#) for information on localization settings used for Store Connect.

|                    | Language                                                   | Data Formats |
|--------------------|------------------------------------------------------------|--------------|
| emails to retailer | organization; see the <a href="#">Organizations</a> screen | N/A          |
| emails to vendor   | vendor; see <a href="#">Edit Vendor</a> screen             | vendor       |
| screens            | locale appended to URL (for example, ? locale=fr)          | vendor       |
| pack slips         | organization                                               | organization |
| pull sheets        | vendor                                                     | vendor       |

# 4

## Setting Up Data for the Supplier Direct Fulfillment Module

**Purpose:** Follow the steps below at Order Orchestration screens when completing data setup for the Supplier Direct Fulfillment module as part of Order Orchestration configuration.

**Before you start:** When setting up data, you typically log into Order Orchestration as the default admin user. If you are setting up data for an additional organization in Order Orchestration and are not using the default admin user login, you need full authority to all secured features based on the roles assigned to the user. See [Roles](#) for more information and the [Users](#) screen for background.

**Integrated shipping setup:** See [Integrated Shipping Setup, Troubleshooting, and Mapping: Supplier Direct Fulfillment](#) for information on the setup required for integrated shipping with ADSI.

**Allow list:** The allow list is a list of URLs that are approved for communication. Oracle staff need to make sure that all URLs, such as logos and those used for integrations, are included on the allow list for Order Orchestration. See the description of the [allow list](#) in the glossary for more information.

**Vendor integration:** See the *Vendor Integration Guide* for information on required setup for integrated vendors. This document is available from the *Documentation* area of the [Home Screen](#)

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Basic Organizational Setup</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                            | The following steps are required if you are setting up an organization in Order Orchestration for use of the Supplier Direct Fulfillment module. Not all steps are required if you already have completed setup for use of the Routing Engine module.                                                                                                                                                                                                                                                                                                                                                                                       |
| <p><b>Define tenant data</b><br/> <b>About tenant data:</b> Use the <b>Tenant</b> screen to specify the modules you use and other information related to your installation of Order Orchestration.</p> <p><b>Note:</b> This step may not be necessary if you have already completed configuration for the Order Orchestration for this organization.</p>                                                                                                                                     | <ul style="list-style-type: none"> <li>• Select <i>Systems &gt; Tenant</i> to advance to the <a href="#">Tenant</a> screen.</li> <li>• Review and, optionally, change any of the information on the screen.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p><b>Create the organization that will include your system and vendors for the Supplier Direct Fulfillment module.</b><br/> <b>About organizations:</b> The organization is the second level in the Order Orchestration hierarchy, below the tenant. All drop ship setup and purchase order creation takes place within the organization.</p> <p><b>Note:</b> This step is not necessary if you have already completed configuration for the Order Orchestration for this organization.</p> | <ul style="list-style-type: none"> <li>• Select <i>Locations &gt; Organizations and Preferences</i> to advance to the <a href="#">Organizations and Preferences</a> screen.</li> <li>• Enter the organization code in the <i>Organization</i> field. The organization code can be 1 to 10 positions long, can include spaces and special characters, and must be unique within Order Orchestration.</li> <li>• Enter the name for the organization in the <i>Name</i> field. The name can be from 1 to 35 positions long, and can include spaces and special characters.</li> <li>• Click <i>NEW</i> to create the organization.</li> </ul> |

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>Create a default system for your organization to correspond to the system originating drop ship purchase orders.</b></p> <p><b>About systems and the default system:</b> Each system in Order Orchestration represents a group of data in application, such as a company in Order Administration System or CWDirect, and is required both for Order Orchestration usage and for Supplier Direct Fulfillment. The first system you create for an organization is automatically flagged as the default.</p> <p><b>Note:</b> This step is not necessary if you have already completed configuration for the Order Orchestration for this system.</p> | <ul style="list-style-type: none"> <li>• Select <i>Systems &gt; Systems</i> to advance to the <a href="#">Systems</a> screen.</li> <li>• Select your <a href="#">organization</a> from the <i>Organization</i> drop-down box.</li> <li>• Enter a system code in the <i>System</i> field. System codes can be 1 to 10 positions in length, can include spaces and special characters, and must be unique.</li> <li>• <i>Order Administration or CWDirect integration:</i> The code for the Order Administration or CWDirect system must match the setting of the OROB System (K50) system control value. However, names for systems do not need to be the same as the Order Administration or CWDirect company descriptions.</li> <li>• Click <i>NEW</i>.</li> <li>• At the <a href="#">System</a> screen, to complete the creation of the system, click <i>Save</i>. <b>Note:</b> <ul style="list-style-type: none"> <li>– It is not necessary to flag the system as on-line if you are using Supplier Direct Fulfillment and not the Order Orchestration, or to select any other options or enter any other data for the system.</li> <li>– The <i>Organization Default</i> flag is selected when you create the first system for an organization, and the flag cannot be unselected at this time. To designate a different system as the default, you need to create another system and flag that system as the default; this unflags the first system.</li> </ul> </li> </ul> |
| <p><b>Assign the default organization system to the default admin user.</b></p> <p><b>Note:</b> This step is not necessary if you have already completed configuration for the Order Orchestration or already created another system for Supplier Direct Fulfillment.</p>                                                                                                                                                                                                                                                                                                                                                                               | <p>Assign the <i>Default Organization</i> for the default admin user through the <a href="#">Users</a> screen.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p><b>Create a location type for the system originating drop ship purchase orders.</b></p> <p><b>About location types:</b> Types must be 1 of 3 categories (store, vendor, or warehouse) and further identify a group of locations based on the system to which they belong, such as Order Administration or CWDirect warehouses and Xstore locations.</p> <p><b>Note:</b> This step is not necessary if you have already completed configuration for the Order Orchestration for this organization.</p>                                                                                                                                                | <ul style="list-style-type: none"> <li>• Select <i>Location Types</i> in Modern View to advance to the <a href="#">Location Types</a> screen.</li> <li>• Enter a description of the location type in the <i>Location Type Description</i> field. The description cannot exceed 40 positions.</li> <li>• Enter a code for the location type in the <i>Location Type Code</i> field. The code cannot exceed 10 positions.</li> <li>• Select the correct category from the <i>Category</i> drop-down box. Typically, you would select a <i>Category</i> of <i>Warehouse</i> to identify the locations.</li> <li>• Click <i>New</i>.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <p><b>Create at least one brand.</b></p> <p><b>About brands:</b> You need to create at least one brand for an organization to use the Supplier Direct Fulfillment module. Brands. The brand controls the logo that prints on the pack slip and picking pullsheet, and the formats of these documents.</p> <p><b>Note:</b> To integrate with Order Administration or CWDirect, you must enter a brand code that matches the ID for the related retail brand (WRDB).</p>                                                                                                                                                                  | <ul style="list-style-type: none"> <li>• Advance to the <a href="#">Brands</a> screen in Modern View.</li> <li>• Select the <a href="#">organization</a> from the <i>Organization</i> drop-down box.</li> <li>• Enter the brand code in the <i>Brand Code</i> field. The brand code can be 1 to 10 positions long, can include spaces and special characters, and must be unique within the <a href="#">organization</a>; however, other organizations can have the same brand code.</li> <li>• Enter the name of the brand in the <i>Brand Name</i> field. The name can be from 1 to 40 positions long and can include spaces and special characters.</li> <li>• Click <i>NEW</i>.</li> <li>• Complete entry of the <i>New Brand</i> screen, including: <ul style="list-style-type: none"> <li>– Specifying the URL for a logo to print on the pack slip, if graphical, and picking pullsheet. The image file can be in JPG, PNG, or GIF format, and the recommended size is 225 pixels wide by 50 pixels high.</li> <li>– Program names for the pack slip and pullsheet. The default programs are <code>ob_sdf_packslip_report</code> and <code>ob_sdf_pullsheet_report</code>.</li> <li>– message to print on the pack slip.</li> </ul> </li> </ul> <p>Click <i>Save</i> when you are done. See the <i>New Brand</i> screen in Modern View for more information.</p> <p><b>Note:</b> Oracle staff need to make sure that any external URLs are added to the <a href="#">allow list</a>.</p>                                                                                                                                                                                  |
| <p><b>Create vendors and set preferences.</b></p> <p><b>About vendors:</b> Vendors fulfill drop ship purchase orders sent to them for fulfillment through Order Orchestration. When the purchase orders originate in Order Administration System or CWDirect, the vendor code in Order Orchestration needs to match the vendor code in <i>Work with Vendors (WVEN)</i>.</p> <p>Vendors use the Vendor Portal to work with drop ship purchase orders.</p> <p><b>Who can set vendor preferences?</b> Both you and the vendor administrative user, if authorized, can set vendor preferences. See <a href="#">Create vendor users</a>.</p> | <p>Ways to create vendors include:</p> <ul style="list-style-type: none"> <li>• Use the <a href="#">Vendors</a> screen (select <i>Locations &gt; Vendors</i>) to create a new vendor, using the code that matches the vendor code in Order Administration System or CWDirect. If you use this option, you can set vendor preferences at the same time. See the <a href="#">Vendors</a> screen for more information.</li> <li>• Use the <i>Download CSV Vendors</i> option (ECSV) in Order Administration or CWDirect to import vendors into Order Orchestration through the <a href="#">CreateDSVendor</a> message. If you use this option, the vendor name and address match the information from the originating system; however, you still need to use the <a href="#">Vendors</a> screen (select <i>Locations &gt; Vendors</i>) afterward to set vendor preferences.</li> <li>• Use the <a href="#">CreateDSVendor</a> message to create a vendor when using a system other than Order Administration or CWDirect. If you use this option, you still need to use the <a href="#">Vendors</a> screen (select <i>Locations &gt; Vendors</i>) afterward to set vendor preferences.</li> <li>• Create a vendor automatically when you send a drop ship purchase order to Order Orchestration through the <a href="#">CreateDSOrder</a> message. Order Orchestration creates the vendor using the vendor code, name, and email address indicated in the message. If you use this option, you still need to use the <a href="#">Vendors</a> screen (select <i>Locations &gt; Vendors</i>) afterward to set vendor preferences and optionally enter the vendor address.</li> </ul> |

| Step                                                                                                                                                                                                                                                                                                                | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <p><b>Create carriers.</b></p> <p><b>About carriers and assigning them to vendors:</b> Carriers (ship vias) deliver drop ship purchase orders. When you create a new vendor, the vendor is assigned to all active carriers by default. Similarly, when you create a new, active carrier, you have the option to assign the carrier to all vendors.</p>                                                                                                                                                              | <p>Ways to create carriers and assign them to vendors include:</p> <ul style="list-style-type: none"> <li>• Use the <a href="#">Carriers</a> screen in Modern View to create a new carrier, using the code that matches the ship via code (WVIA) in Order Administration. When you click <i>NEW</i> to create a carrier, the <i>New Carrier</i> window opens for you to specify whether a tracking number, weight, and rate are required when the vendor confirms shipment using this carrier. When you use this option: <ul style="list-style-type: none"> <li>– A window prompts you on whether to assign the carrier to all vendors automatically.</li> <li>– You can also use the <a href="#">Carriers tab</a> at the <a href="#">Edit Vendor</a> screen to change the carrier assignments for a vendor.</li> </ul> </li> <li>• Create a carrier automatically when you send a drop ship purchase order to Order Orchestration through the <a href="#">CreateDSOrder</a> message. When you use this option, Order Orchestration creates the carrier using the carrier code specified in the message: <ul style="list-style-type: none"> <li>– The carrier description, which is displayed to the vendor at the <a href="#">Vendor Portal</a>, is set to Auto Created 99, where 99 is the carrier code passed in the <a href="#">CreateDSOrder</a> message.</li> <li>– The carrier is automatically assigned to all existing vendors as an active carrier, with the <i>Tracking # Required</i>, <i>Weight Required</i>, and <i>Rate Required</i> flags all unselected.</li> </ul> </li> </ul> |
| <p><b>Set up web service authentication for integrated vendors</b></p> <p><b>About web service authentication:</b> By setting up and requiring user IDs and passwords for web services, you confirm that Order Orchestration authenticates the identity of the system submitting web service messages. If authentication is required and Order Orchestration receives a web service request message without a valid web service user and password, the request is refused with error 3005: Invalid vendor code.</p> | <p>Use the <a href="#">Manage External Application Access</a> screen to work with and create client IDs for OAuth authentication, and then use the <a href="#">Edit Web Services</a> window to assign the Vendor web service to the client ID. See these screens for details.</p> <p>Then use the <a href="#">Edit Vendor</a> screen to specify the client ID for the vendor to use. Each integrated vendor requires a unique client ID.</p> <p><b>Note:</b> Each integrated vendor must be notified of the credentials required to authenticate inbound request messages.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

### Information on the Vendor Portal landing page

**Overview:** The composition of the Vendor Portal landing page is controlled by your Drop Ship Preference settings and other configuration options. Details about these and other settings are below.

## Logo

**Logo image URL:** You can use the Logo URL field at the [Drop Ship Preferences](#) screen to specify the location of the logo on Vendor Portal screens. The URL should use https rather than http.

The recommended size is approximately 250x35.

If the URL entered does not point to an existing image file, Vendor Portal screens do not display a logo.

### Note

Oracle staff need to make sure that any external URLs are added to the [allow list](#).

## Purchase order aging chart

**Future/current/late/very late purchase orders:** The Vendor Portal landing page displays a pie chart indicating the percentages of open purchase orders based on the aging of their earliest due dates. Order Orchestration uses the following calculation to determine whether an unshipped, uncanceled purchase order is future, current, late, or very late:

- Future:** The due date is at least 7 days in the future. For example, if today is 7/17, the due date must be 7/24 or later.
- Current:** The due date is the current date or later, but no more than 6 days in the future. For example, if today is 7/17, the due date can be 7/17 through 7/23.
- Late:** The due date is earlier than the current date, but does not fall into the very late range based on the setting of the [Very Late Days](#) preference specified at the [Drop Ship Preferences](#) screen. For example, if today is 7/17 and the [Very Late Days](#) preference is set to 10 days, the due date can be 7/7 through 7/16.
- Very Late:** The due date is at least the number of days old specified in the [Very Late Days](#) preference. For example, if today is 7/17 and the [Very Late Days](#) preference is set to 10 days, the due date can be 7/6 or earlier.

**Original or revised due date:** The calculation is based on the revised due date, if the vendor has revised it; otherwise, it is based on the original due date.

**Line quantity not used in percentage calculation:** The calculation does not factor in the purchase order line quantity. For example, there is one current purchase order line with a quantity of one, and another future purchase order line with a quantity of four. The Vendor Portal landing page displays 50% current and 50% future.

**Statuses:** Purchase order lines in *New Order*, *In Process*, and *Held* status are included in the calculation. *Shipped* and *Canceled* lines are not included.

The determination of dates is based on the vendor's local time zone, rather than your time zone.

The Vendor Portal must have Internet access to display the charts and graphs.

### **Additional information for the Vendor Portal landing page**

**Link to generate an email:** The retailer email address on the Vendor Portal landing page is from the [Retailer Email Address](#) at the Drop Ship Preferences screen. When the vendor clicks the email link, the default mail program opens with the retailer email address as the "to" address, and the subject line is from the [Email Subject](#) at the Drop Ship Preferences screen.

**Announcement:** The announcement displayed on the Vendor Portal landing page is from the [Announcement](#) at the Drop Ship Preferences screen.

**Tasks and modules:** The vendor user's authority, based on the assigned roles, controls the tasks and modules that are enabled on the Vendor Portal landing page vs. those that are grayed out. See the [Roles](#) screen for background.

## Store Connect Overview

**Purpose:** Store Connect is a stand-alone Order Orchestration module whose screens enable store associates to process and fulfill delivery and pickup orders that are assigned to a store location by the Routing Engine.

**Setting up data for Store Connect:** See [Setting Up Data for the Store Connect Module](#) for information on the setup required in Order Orchestration before you can start using the Store Connect module.

### Store Connect Basics

**Overview:** When you create a Store Connect system in your organization, locations assigned to that system are accessible to store associates for processing orders through the Store Connect user interface, provided the locations are flagged to support each type of orders at the **Preferences** screen.

### How are Orders Assigned to Store Connect Locations?

The Routing Engine assigns orders to locations in the Store Connect system the same way as it assigns any other orders. The Order Orchestration preferences and fulfillment rules apply. For example, only locations flagged as *Pickup Available* at the **Preferences** screen are eligible to fulfill pickup orders.

**Supported order types:** Delivery, pickup, and ship-for-pickup orders are eligible for processing through Store Connect.

See the [Order Orchestration Routing Engine Overview](#) for background on order assignment.

#### Note

Orders assigned to Store Connect locations should include the customer's first and last name. If an order includes only the customer's company name, store associates cannot search for the order by name at Store Connect screens.

### Setting Up Store Associate Users for Store Connect

A store associate is a distinct type of user profile, with access to Store Connect screens. You assign each associate to one or more store locations. To use Store Connect, the user must be flagged as active and be assigned to at least one store location. See [Setting Up Data for the Store Connect Module](#) for more information on creating store associates.

### Using the Store Connect User Interface

**Store location login:** The Store Associate can log into a single store location at a time. If the associate is assigned to more than one location, a window opens at login requiring the selection of the store where the associate is currently working.

**Open orders only on order processing screens:** Only open orders assigned to the current store location are displayed on order processing screens. Also, if any of the items on the order are not currently open, or are assigned to a different store location for fulfillment, these items are not displayed on order processing screens. For example, a pickup order includes an item

that has been picked, and another item that has already been picked up by the customer. Only the picked item is displayed. Similarly, if a delivery order includes two order lines, one assigned to location A and the other assigned to location B, only the first item is displayed when the store associate is logged into location A.

**All Orders option:** Store Connect also provides an All Orders option, so that the associate can research all orders across the enterprise, regardless of status. Screens displaying order detail and history are available. The associate cannot process transactions for orders or lines that are not assigned to the associate's current location.

**Different screen sizes supported:** The Store Connect user interface adapts to a standard laptop-sized screen, a tablet size, or a smaller, mobile phone size.

### Logging into Store Connect

To log into Store Connect, a user must be:

- Created through the [Identity Cloud User Synchronization](#) job. See [Setting Up Data for the Store Connect Module](#) for more information.
- Flagged as *Active* at the [Users](#) screen.
- Assigned to at least one store location. See the [Users](#) screen.

The processing flows for each order type are described below.

### Processing Flow for Delivery Orders

The screens that the associate uses to process delivery orders are described briefly below.

- **New Orders:** The New Orders screen is displayed when the store associate first logs in. This screen displays all orders that have been created in Order Orchestration, assigned to the associate's current store location, and set to Polled status. The associate can accept one or more orders at this screen for processing.

Once the order is accepted, it is no longer displayed at the New Orders screen and is instead displayed at the Ready to Pick screen.

- **Pick Orders:** The Ready to Pick screen displays orders that have been accepted and are ready for picking. The associate can select an order to begin picking. At the Pick Order screen, the associate can indicate the picked quantity by increasing the units, or scanning the item barcode.

Once a delivery order is fully picked, it is no longer displayed at the Ready to Pick screen and is instead displayed at the Ready to Ship screen.

- **Ship Orders:** The Ready to Ship screen displays both delivery orders and ship-for-pickup orders that have been picked. Provided the order is not under review, the associate can select an order to begin shipping. At the Ship Order screen, the associate needs to complete the Shipping Details based on whether ADSI or the Standard Shipping Service are enabled (normal shipping) or manual shipping are enabled for the store location at the Store Connect Preferences screen:

- Normal shipping: If ADSI or the Standard Shipping Service are selected as the *Shipping Service* for the location at the Store Connect Preferences screen, the associate needs to:
  - \* Enter or confirm the package weight. If a weight was specified in the SubmitOrder request, it defaults.
  - \* Select the box size. If an irregular size is selected, the associate needs to specify the box's length, width, and height.
  - \* Optionally, select a different carrier.

**Note**

The length and weight units of measure defined at the Store Connect Preferences screen are displayed at the Ship Order screen.

See the [Manage External Services](#) screen for information on configuring ADSI or the Standard Shipping Service, which can then be selected at the Store Connect Preferences screen.

- Manual shipping: If manual shipping is selected as the *Shipping Service* for the location at the Store Connect Preferences screen, the associate may need to enter a tracking number based on the carrier settings and, optionally, change the carrier.

When the associate confirms a shipment, in addition to updating the order and generating a shipment confirmation email to the customer if configured at the [Email](#) tab of the *Store Connect Preferences* screen:

- A barcode shipping label is generated if the shipment uses ADSI or the Standard Shipping Service. Contact your Oracle representative for information on generating a shipping label if using the Standard Shipping Service.
- The Pack Slip is generated if the *Print Pack Documents* setting at the Store Connect Preferences screen is **Fulfillment**.

Once the order is fully shipped from the sourcing location, it is no longer displayed at any of the processing screens in Store Connect, although the associate can still display it through the All Orders screen.

**Additional options when shipping an order:** In addition to the options described above for other processing steps, at the Ship Order screen the associate can:

- Change to shipping the order manually, or revert to normal shipping (that is, ADSI or the Standard Shipping Service), if normal shipping was selected by default for the location.
- Change to a partial shipment. The associate can then decrease the quantity of one or more order lines before confirming shipment.
- Edit the shipping address. This step may be necessary if ADSI or the Standard Shipping Service returns an error.

### Processing Flow for Pickup Orders

**Standard processing flow:** The screens that the associate uses to process pickup orders are described briefly below. Some of the steps in processing pickup orders are the same as those described above for delivery orders.

- *New Orders:* As described above, the associate can accept one or more orders at this screen for processing.
- *Pick Orders:* The associate can select an order to begin picking. At the Pick Order screen, the associate can indicate the picked quantity by increasing the units, or scanning the item barcode.

When the associate completes picking, a pickup order is ready for pickup, provided it is not under review. Also, the pickup ready notification email is sent to the customer, if configured at the [Email](#) tab of the *Store Connect Preferences* screen. If items are picked at different times, the email is generated as each item is picked and ready for pickup.

- *Pick Up Orders:* The Ready to Pick Up screen displays pickup orders that have been picked. Provided the order is not under review, the associate can select an order to begin

confirming pickup. At the Pick Up Order screen, the associate can complete pickup of the order, or of one or more items on the order.

*Additional options when confirming pickup of an order:* In addition to the options described above for other processing steps, at the Pick Up Order screen the associate can:

- Change the order pickup date, if the customer needs more time.
- Change to a partial pickup, if the customer is not prepared to pick up the entire order at once. Optionally, the associate can then revert to a full order pickup if needed.

### Processing Flow for Ship-for-Pickup Orders

**When the sourcing location differs from the pickup location:** The screens that the associate uses to process ship-for-pickup orders are described briefly below. Some of the steps in processing ship-for-pickup orders are the same as those described above for delivery or pickup orders.

*At the sourcing location:*

- *New Orders:* As described above, the associate can accept one or more orders at this screen for processing.
- *Pick Orders:* The associate can select an order to begin picking. At the Pick Order screen, the associate can indicate the picked quantity by increasing the units, or scanning the item barcode.

When the associate completes picking for one or more items, the items are ready for shipping to the pickup location.

Once the order is fully picked, it is no longer displayed at the Ready to Pick screen and is instead displayed at the Ready to Ship screen.

- *Ship Orders:* The Ready to Ship screen displays both delivery orders and ship-for-pickup orders that have been picked. The associate can select a ship-for-pickup order to begin shipping it to the pickup location. See *Processing Flow for Delivery Orders*, above, for more information on shipping options. The status of shipped order lines changes to Intransit and then automatically to Intransit Polled.

Once the order is fully shipped, it is no longer displayed at any of the processing screens in Store Connect for the sourcing store location, although the associate can still display it through the All Orders screen.

The order is then in transit to the pickup location.

*At the pickup location:* Once the order is intransit from the sourcing location, it is displayed at the Ready to Receive screen at the pickup location.

- *Receive Orders:* At the pickup location, the Ready to Receive screen displays ship-for-pickup orders that are in transit from the sourcing locations. The associate can receive the order or, if necessary, fully or partially reject the order if, for example, one of the items was damaged in transit.

Once the order is received, the pickup ready notification to the customer is generated, provided the order is not under review. If items are received at different times, the email is generated as each item is received and ready for pickup.

- *Pick Up Orders:* The Ready to Pick Up screen displays ship-for-pickup orders that have been received. Provided the order is not Under Review, the associate can select an order to begin confirming pickup. At the Pick Up Order screen, the associate can complete pickup of the order.

*Additional options when confirming pickup of an order:* In addition to the options described above for other processing steps, at the Pick Up Order screen the associate can:

- Change the order pickup date, if the customer needs more time.
- Change to a partial pickup, if the customer is not prepared to pick up the entire order at once. Optionally, the associate can then revert to a full order pickup if needed.

**When the sourcing location is the same as the pickup location:** In this case, the processing flow is similar to a pickup order, as described above:

- The associate accepts the order.
- The associate picks the order once it is accepted. The status changes automatically from Picked to Received. At this time, provided the order is not under review, the pickup-ready email notification is generated and the order is ready for pickup.

### Auto-Cancellation of Pickup or Ship-for-Pickup Orders

**If Auto-Cancellation is enabled:** If the organization is configured to support auto-cancellation of unclaimed pickup or ship-for-pickup orders, there are related screen and email differences in Store Connect:

- A Pickup By Date is assigned to each line on a pickup or ship-for-pickup order when it is picked, based on the [Auto Cancel Days of Unclaimed Pickup Orders](#) or the [Auto Cancel Days of Unclaimed Ship For Pickup Orders](#) defined at the **Fulfillment** tab of the Preferences screen.
- The associate can edit the Pickup By Date if, for example, the customer requests additional time to pick up the order.
- The [Pickup Ready Notification to Customer \(Pickup or Ship-for-Pickup Order\)](#) email and the [Pickup Ready Reminder to Customer \(Pickup Order\)](#) email, if configured at the [Email](#) tab of the *Store Connect Preferences* screen, indicate the Pickup By Date for each item.

**Under Review?** Even if a pickup order is under review, the Pickup By Date is still assigned.

*Example:* The organization is configured to set the Pickup By Date 7 days after the order is picked. A pickup order that is under review is picked on 8/1, and the Pickup By Date is set to 8/8. The under review setting changes on 8/3, and the customer is notified that the order is ready for pickup; but the Pickup By Date is still 8/8, which is 7 days from the original date when the order was picked, not from the date when the customer was notified.

If the order is set to under review after initially being ready for pickup, the reminder email is not generated. For example, this might happen if the credit card expired. If the Under Review flag is later cleared, the order is then eligible again for email generation.

**For more information:** See [Auto-Cancel Unclaimed Orders](#) for background on requirements, configuration, and process flow for auto-cancellation.

### Additional Options and Information During Processing in Store Connect

**New Orders screen:** If *Print Pick List Pull Sheet* is selected at the Store Connect Preferences screen, Store Connect generates the pull sheet as an aide in picking the order(s). Also, if the *Print Pack Documents* setting at the Store Connect Preferences screen is **Order Accept** or **Order Accept and Pick**, the pack slip is also generated at this time.

**Additional order information:** Processing screens in Store Connect indicate if the order is:

- Under review: the words **Under Review** in red follow the order number.
- Assigned to an express shipper: indicated by the express shipping icon (  ).
- Not shipped for longer than the *Order Age Hours* defined at the Store Connect Preferences screen: indicated by red text and a triangle icon (  12/7/2021 ).

**Additional order options:** At various order list and detail screens, the associate has the option to:

- **Cancel the order:** A cancel reason is required. Note that the pickup location for a ship-for-pickup order cannot cancel the order before receiving it.
- **Reject the order:** A reject reason is required. An associate can reject an order if, for example, the store is too busy. If a delivery order is rejected, or if a ship-for-pickup order is rejected from the sourcing location, the Routing Engine attempts to reassign (“reshop”) the order as it does any other order.

**View Order screen:** A View Order screen is available by selecting View at the New Orders, Ready to Pick, Ready to Ship, and Ready to Pick Up screens. While at the View Order screen, the associate can perform the next processing step for the order; for example, if the associate selects the View option for an order at the Ready to Ship screen, the Begin Shipping option is available at the View Order screen.

### Additional Things to Note for all Order Types

**Checking status before update takes place:** Before any update to the order takes place, the system confirms that the order is still eligible for the selected update. For example, if the associate is ready to ship an order, but the order has been canceled since it was displayed on the Ship Order screen in Store Connect, the order is not updated to shipped, the Store Connect screen displays an error message, and the associate is returned to the Ready to Ship screen with the order no longer listed.

### Split Orders?

If you have the Allow Split Order preference selected, and:

- If a single line on a split order is assigned to a Store Connect location, then only that line is visible in Store Connect.
- If more than one line on an order is assigned to a Store Connect location, then the store associate has the option to process the item separately. For example, an associate can reject a single item on an order and process the remaining item(s).

If you do not have the Allow Split Order preference selected, the associate cannot process items on an order individually. The items appear to be grouped together, and there is no option to process an update against a single line.

### Viewing All Orders in Store Connect

The All Orders screen in Store Connect enables the store associate to view all orders, regardless of status or location assignment. From this screen, the associate can select:

- **View Order History** for an order to advance to the Order History screen, displaying all order history regardless of whether it is related to the current location.
- **View** for an order to advance to the View Full Order screen. This screen is similar to the View Order screen displayed through the processing steps described above, except that it is available regardless of order status, and displays all order lines, including those not assigned to the current store location.

From the View Full Order screen, the associate can also process the order based on its current status if the order is assigned to the current store location. For example, if the order has been accepted at the current store location, the Begin Picking option is available.

Notifying Store Connect Locations about New Orders

**Email notification:** Order Orchestration generates the [New Order Notification to Store Connect Location](#) email when any orders are assigned, using the email address specified for the store location, if the *Send New Order Notifications* flag at the **Email** tab of the Store Connect Preferences screen is selected.

Store Connect Email Notifications Summary

A summary of the email notifications to store locations or the customer is provided in the table below.

| Notification Type                                                | Generated When:                                                                                                                                                                                    | Setup                                                                                                                                                                                                           |
|------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Store Location Notifications                                     |                                                                                                                                                                                                    | <b>“From” email address:</b><br>Set to no-reply@omni.retail.oracle.com, and can also include an alias, if one is specified as the <a href="#">From Email Alias</a> at the <a href="#">Event Logging</a> screen. |
| <a href="#">New Order Notification to Store Connect Location</a> | An order assigned to the store location immediately changes status from <i>New Order</i> to <i>Polled</i> . ### Pickup Ready Notification to Customer (Pickup or Ship-for-Pickup Order)

**Setup:** See [Store Connect Email Notifications Summary](#).

#### Generated when?

- *Pickup order:* The store associate confirms any items on a pickup order are picked, and the order is not under review.
- *Ship-for-pickup order:* If the sourcing location is:
  - Different from the pickup location, the email is generated when the store associate confirms any items on a pickup order are received, and the order is not under review.
  - The same as the pickup location, the email is generated when the store associate confirms any items on a pickup order are picked, and the order is not under review.

If [Auto-Cancel Unclaimed Orders](#) is enabled, the Pickup By Date is assigned when the order is picked, and is listed in the email.

**Note**

- The [Pickup Ready Notification to Customer \(Pickup or Ship-for-Pickup Order\)](#) is generated only when a store associate picks a pickup order or receives a ship-for-pickup order through Store Connect. If the sourcing location for a ship-for-pickup order is the same as the pickup location, the email is generated when a store associate picks the order.
- The email is not generated for a pickup or ship-for-pickup order if the order is currently [Under Review](#); however, Order Orchestration creates a record in the email\_notification table, and when the [Under Review](#) flag is cleared, the email is eligible for generation. Regardless of whether the order is under review, if [Auto-Cancel Unclaimed Orders](#) is enabled, the Pickup By Date is still assigned at the time the order is picked.

**Note**

This email is generated only if the Email Generation Type for the [Pickup Ready Notification Email](#) at the *Email* tab of the **Store Connect Preferences** screen is set to *System Generated Email*.

**Contents:**

- *Subject line:* Your Order Is Ready For Pickup
- *Sample contents (auto-cancellation not enabled):* The following sample illustrates the email contents for a pickup or ship-for-pickup order if [Auto-Cancel Unclaimed Orders](#) is not enabled.

# Your Order Is Ready For Pickup

### Pick List Pull Sheet

**Purpose:** The associate in Store Connect can use the pick list pull sheet to pick items needed for orders.

**Sample:** The following table presents information in the base pick list pull sheet, generated if the [Pick List Pull Sheet Form](#) Store Connect preference is set to ob\_pullsheet\_report.

Language, date and time formats, and number formats are from the organization.

**Generated when?** The associate selects *Accept & Print* or *Reprint Pack List* for one or more orders, or items on an order.

| Field                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |               |                  |                         |                 |                  |                    |         |        |          |                        |        |                    |   |         |         |                         |   |          |  |      |        |                    |   |  |          |                        |   |

|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Item Description</b> | The description of the item.                                                                                                           |
| <b>Quantity Needed</b>  | The total quantity of the item needed for this order.                                                                                  |
| <b>Carrier</b>          | The code and description of the carrier to deliver the delivery or ship-for-pickup order. Listed as <i>Pick Up</i> for a pickup order. |

### Packing Slip

**Purpose:** The associate in Store Connect can use the packing slip to pick items for an order, to include when shipping a delivery order to the customer or a ship-for-pickup order to the pickup location, or to provide the customer with the items on a pickup or ship-for-pickup order.

**Sample:** The following table presents information from the base packing slip, generated if the [Pack Slip Form](#) Store Connect preference is set to ob\_packslip\_stc\_report.

Language, date and time formats, and number formats are from the organization.

**How to generate:** See the [Printing Preferences](#) tab for details on when the pack slip is automatically generated at different processing stages, including order acceptance, picking, and fulfillment, as well as receiving or shipping ship-for-pickup orders.

### SHIP TO

The shipping address for the order is below the logo. Included only for delivery or ship-for-pickup orders. Includes:

- first name, middle initial, last name (delivery order)
- company (delivery order) or location name (ship-for-pickup order)
- first address line, including the apartment or suite, if any
- three additional address lines, if any
- city, state, zip code, and country

For a delivery order, this is the customer's name and shipping address.

For a ship-for-pickup order, this is the name and address of the pickup location, as submitted by the originating system. For example, when the order originates from Order Administration, this is the name and address that defaults from the store cross reference, although it can be overridden at order creation in Order Administration System. Note that the pickup-ready email notification indicates the location name and address as specified in Order Orchestration.

| <b>Description</b>    | <b>Note:</b> If the item description is very wide, it may be truncated.                                                                                                                                                                                                                                                                                                    |
| <b>Ship Qty</b>       | The quantity of the order line.                                                                                                                                                                                                                                                                                                                                            |
| <b>Price</b>          | No price prints for an order that is flagged as a gift.                                                                                                                                                                                                                                                                                                                    |
| <b>Ext. Price</b>     | No extended price prints for an order that is flagged as a gift.                                                                                                                                                                                                                                                                                                           |
| <b>Bottom of page</b> |                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Return Address</b> | The name and address of the organization, including: <ul style="list-style-type: none"> <li>organization name</li> <li>name of your location that originated the order</li> <li>first address line, including the suite, if any</li> <li>three additional address lines, if any</li> <li>city, state, zip code, and country</li> </ul> Included only for a delivery order. |

### Localization Settings

The following table indicates the source of localization settings for Store Connect screens, reports, and emails. The currency is from the order.

See the [Order Orchestration Routing Engine Overview](#) for information on localization settings used Order Orchestration foundation, and see [Supplier Direct Fulfillment Overview](#) for information on localization settings used for Supplier Direct Fulfillment.

|         | Language                                                  | Data Formats                                               |
|---------|-----------------------------------------------------------|------------------------------------------------------------|
| screens | locale appended to URL (for example, ? locale=fr)         | store associate user; see the <a href="#">Users</a> screen |
| forms   | organization; see the <a href="#">Organization</a> screen | organization                                               |
| emails  | organization                                              | organization                                               |

## Setting Up Data for the Store Connect Module

**Purpose:** Follow the steps below at Order Orchestration screens when completing data setup for the Store Connect module as part of Order Orchestration configuration.

**Routing Engine setup required first:** Complete the steps below after you have completed [Setting Up Data for the Routing Engine Module](#).

**Before you start:** When setting up data, you typically log into Order Orchestration as the default admin user. If you are setting up data for an additional organization in Order Orchestration and are not using the default admin user login, you need full authority to all secured features based on the roles assigned to the user profile. See [Roles](#) and the [Users](#) screen for background.

#### Note

To enable Store Connect, you need to select *Use Store Connect* at the [Tenant \(retailer information\)](#) screen.

| <b>Create Store Connect users.</b><br><b>About Store Connect users:</b> A Store Connect user has authority only to Store Connect screens.                                                                                                               | <p>Use the <a href="#">Identity Cloud User Synchronization</a> job to import users from IDCS or OCI IAM. Store Connect users need to have the OBCS_Store_User role assigned in IDCS or OCI IAM. See the <a href="#">Identity Cloud User Synchronization</a> for more information.</p> <p><b>Assign locations:</b></p> <ul style="list-style-type: none"> <li>You can assign a store associate to locations, as well as changing the associate's <i>Active</i> flag setting, through the Store Associate Location Assignment web service; see the Web Services Guide on My Oracle Support (2953017.1) for more information. A store associate must be assigned to at least one location in order to use Store Connect.</li> <li>You can also change these settings through the <a href="#">Users</a> screen, or use this screen to edit other information about the store associate.</li> </ul> <p><i>Note:</i> When you make any changes in IDCS or OCI IAM to an existing store associate's user role, the changes do not take effect until the user logs in. For example, if the associate is currently logged into Store Connect and you remove the OBCS_Store_User role, the associate can continue working in the current, open session.</p> |
| <b>Create reason codes.</b><br><b>About reason codes:</b> You can set up reason codes that the associate uses: <ul style="list-style-type: none"> <li>reject an order, or a line on an order</li> <li>cancel an order, or a line on an order</li> </ul> | <ul style="list-style-type: none"> <li>Advance to the <a href="#">Reason Codes</a> screen in Modern View.</li> <li>Enter a Code and Description and click <i>New</i> to open the <i>New Reason Code</i> window.</li> <li>Complete the entries at the <i>New Reason Code</i> window and click <i>Save</i>.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Step                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Create boxes.</b><br><b>About boxes:</b> Create one or more boxes to define the dimensions of a box used to ship one or more items using an automated shipping system. If the store associate confirms shipment of items on delivery orders through integration with an automated shipping system, the system requires you to select the box size on the Estimated Weight and Dimensions window. The store associate can select one of the predefined box sizes or manually define the length, width, and height of the box. | <ul style="list-style-type: none"> <li>Advance to the <a href="#">Boxes</a> screen in Modern View.</li> <li>Select <a href="#">Boxes</a> in Modern View.</li> <li>Enter the box name in the <i>Name</i> field. Box names can be 1 to 50 positions in length and must be unique in Order Orchestration. The name can include special characters and spaces. Include the dimensions of the box in the name so that this information is available when selecting a box in the Store Connect module. The name <i>Irregular Size</i>, regardless of case, is reserved by the system to allow a user to manually define the length, width, and height of a box at the Estimated Weight and Dimensions window in Store Connect.</li> <li>Advance to the <i>New Box</i> window in Modern View.</li> <li>Complete entry of the <i>New Box</i> window, including:             <ul style="list-style-type: none"> <li>the length, width, and height of the box.</li> <li>whether the box is displayed in Store Connect.</li> <li>whether the box is the default box size to display in Store Connect.</li> </ul> </li> <li>Click <i>Save</i> when you are done. See the <i>New Box</i> window in Modern View for more information.</li> </ul> |
| <b>Set up carriers.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <ul style="list-style-type: none"> <li>Use the <a href="#">Carriers</a> screen in Modern View to review the carriers that associates can use to ship delivery orders, and confirm that each carrier is flagged to Display in Store Connect. Also, you can flag express carriers.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Create external shipping services.</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Use the <a href="#">Manage External Services</a> screen suite to create and manage shipping external services. You then use the <b>Shipping</b> tab of the <a href="#">Store Connect Preferences</a> screen to assign shipping services at any level in the Store Connect hierarchy: the Store Connect system, a location type, or an individual store.</p> <p>See below for information on how existing shipping services are converted through the 21.1 update or higher.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

### Shipping Service Conversion

With the 21.1 update or higher, Order Orchestration provides a new [External Services](#) screen suite to create and manage external services. At this time, only shipping services are supported.

**Replaces Store Connect Preferences settings:** The shipping service information defined at these new screens replaces the configuration options that were formerly available at the **Shipping** tab of the [Store Connect Preferences](#) screen.

**How existing shipping preferences map to new external shipping services:** Existing JSON API or ADSI shipping services that were defined at the Store Connect Preferences screen in any organization prior to this release will automatically create external service records. You can then use the Manage External Services screens to review and update the external shipping service records. The settings are mapped as follows:

- JSON API settings entered at the Store Connect Preferences screen before this release create *Standard Shipping Service* records in the new screen suite.
- ADSI settings entered at the Store Connect Preferences screen before this release create *ADSI Shipping Service* records in the new screen suite.
- The *External Service Type* is always set to **Shipping**.
- The code used when creating each external service will be SHIP plus an incremental number. For example, the first external service record will be SHIP1, and the second will be SHIP2.
- The description assigned when creating each external service will be:
  - For ADSI: **ADSI Shipping for ORG - ORG Description**, where ORG is the organization code and ORG Description is the organization description.
  - For JSON API: **Standard Shipping for ORG - ORG Description**, where ORG is the organization code and ORG Description is the organization description.
- *Active* flag: Selected.
- *Endpoint URL*: From the *Shipper URL* defined at the Store Connect Preferences screen.
- *Shipper Reference*: From the *Shipper Name* defined at the Store Connect Preferences screen.
- *Outbound Message Version*: Set to 1 for a Standard Shipping Service. Not used for ADSI.
- *Authentication Type*: Set to the current Basic or OAuth setting for a Standard Shipping Service. Not used for ADSI.
- *User ID*: Set to the current *User ID* for a Standard Shipping Service that uses Basic authentication. Not used for ADSI.
- *Password*: Set to the current *Password* for a Standard Shipping Service that uses Basic authentication. Not used for ADSI.
- *OAuth URL*: Set to the current *OAuth URL* for a Standard Shipping Service that uses OAuth. Not used for ADSI.
- *Scope*: Set to the current *Scope* setting for a Standard Shipping Service that uses OAuth. Not used for ADSI.
- *Client ID*: Set to the current *Client ID* for a Standard Shipping Service that uses OAuth. Not used for ADSI.
- *Client Secret*: Set to the current *Client Secret* for a Standard Shipping Service that uses OAuth. Not used for ADSI.
- *Length Unit of Measure*: Set to the current *Length Unit of Measure* for a Standard Shipping Service. For ADSI, defaults to Inches and cannot be changed. Can be Inches (default) or Centimeters for a Standard Shipping Service.
- *Weight Unit of Measure*: Set to the current *Weight Unit of Measure* for a Standard Shipping Service. For ADSI, defaults to Pound and cannot be changed. Can be Pound (default), Gram, or Kilogram for a Standard Shipping Service.

**Note**

After advancing to this update, you need to:

- Review the external service records that were automatically created, and correct or delete them as necessary.
- Select the external service to use at the **Shipping** tab of the Store Connect Preferences screen, and set up the *Shipping Label Return Address*. See below for more information. These are now the only available options at the **Shipping** tab.

**Additional Integrated Shipping Setup and Troubleshooting**

**Additional required setup:** The setup required for integrated shipping in Store Connect also includes the following:

- *return address:* The [Shipping Label Return Address](#) specifies the location whose address is used as the return address on the shipping label, and should include:
  - contact name and company name
  - street address line 1
  - U.S. city, state/province, and postal code
  - phone number of 10 positions, plus any formatting (for example, (508) 555-1111). The store location phone number is used if there is not a day or evening phone number for the order shipping address.

See the [Edit Location](#) screen for more information on setting up locations.

- *Carrier codes:* The service codes set up in the integrated shipping system should match the carrier codes set up in Order Orchestration. If the service codes include leading zeros, then the carrier codes must match; for example, 1 is not a match for 01.

See *Carriers* screen in Modern View for more information on setting up carriers.

- *Boxes:* The dimensions of the box used with each shipment is required for all delivery orders using an integrated shipping system. When the store associate confirms shipment of items on delivery orders through integration with an automated shipping system, the system requires you to select the box size on the Estimated Weight and Dimensions window. The store associate can select one of the predefined box sizes or manually define the length, width, and height of the box. See the [Boxes](#) screen in Modern View.
- *originating address:* The address of the fulfilling location is used as the originating address, and must include:
  - street address line 1
  - U.S. city, state/province, and postal code
  - phone number of 10 positions, plus any formatting (for example, (508) 555-1111).

See the [Edit Location](#) screen for more information on setting up locations.

- *allow list:* If a store associate attempts to ship through integration with ADSI and the ADSI URL is not on the [allow list](#), the Store Connect screen opens a pop-up window indicating an unhandled ADSI error. Also, an error message is logged.

**Restrictions for integrated shipping:**

- *International shipping not supported:* Shipping to addresses outside of the United States is not currently supported through integrated shipping screens in Store Connect.

- *Address line and apartment/suite:* Address line 2 cannot exceed 35 positions; also, the apartment/suite number is appended to address line 2. If the address line 2 exceeds 35 positions, ADSI truncates the line for a Federal Express carrier, and returns an error for a UPS carrier.

**Note**

- *Duplicate service codes:* If you set up multiple service codes in ADSI for the same carrier, the first service code is used on the shipment regardless of whether it was the carrier selected for the order. For example, if you set up both service code 10 and service code 20 in ADSI as UPS Next Day, and the associate confirms the shipment using carrier 20, service code 10 is returned from the integrated shipping system.
- *Rate shopping:* If the associate confirms a shipment using a rate-shopping service code, and ADSI returns a code that is not currently a valid carrier in Order Orchestration, Order Orchestration automatically creates the carrier code.

# 6

## Modern View Overview

Order Orchestration Modern View provides select screens for maintaining foundation data . The screens available in Modern View enable you to create, review, update, or delete brands, carriers, boxes, and reason codes. The options available in Modern View differ somewhat from the options you use in Classic View.

- [Advancing to Modern View](#)
- [Menus and Tasks](#)
- [Standard Options for Working with Foundation Data](#)
- [Online Help](#)
- [Additional Navigation Options](#)

### Advancing to Modern View

**Advancing to Modern View:** The **Modern View** option, enabling you to advance to Modern View, is available to the right of the **Documentation** drop-down at the top of the Classic View screen.

If you have any Classic View screens open when you select this option, a message indicates that any unsaved changes will be lost. The Modern View home screen opens.

**Language:** When you advance to Modern View, the current language applies. The language is determined by the code appended to the URL; for example, a suffix of `it_IT` indicates to use Italian. If you switch to a different language while in Modern View by changing the suffix to the URL, the newly selected language for your current session is retained when you return to Classic View. See *What are the supported languages?* in the [Frequently Asked Questions](#) for a list of supported languages.

**If Modern View does not display available options correctly:** Users might not be able to see the Modern View options if they are not assigned the `OBCS_User` role or the `OBCS_Admin` role. See the Administration Guide for more information.

**Application data screens available in Modern View:** The screens available in Modern View rather than Classic View to work with application data are:

- [Attribute Definitions](#)
- [Boxes](#)
- [Brands](#)
- [Carriers](#)
- [External Services](#)
- [Location Types](#)
- [Order Reason Codes](#)
- [Organizations](#)
- [Roles](#)
- [Users](#)

Although these options may be displayed in the Classic View home page and in the drop-down menus, an error message is displayed if you attempt to select any of them.

As in Classic View, authority to each of these options is required through the [Roles](#) screen. If the user does not have authority to an option, the Modern View home page does not display it.

**Additional ways to update application data:** In addition to using the screens listed above to work with foundation data, you can also use the application data web services. See Application Data Services in the Web Services Guide on My Oracle Support (2953017.1) for more information.

**Default organization:** The organization indicated at the top of the screen is the one specified as your default at the Organizations tab from the Users screen.

## Menu and Tasks

**Menu:** In addition to selecting an option from the Modern View home screen, you can also expand the menu by expanding the icon in the upper left, and then use the menu options to advance to a specific option.

Select the Tasks icon (displayed below the word “Menu” in the above illustration) to expand the Tasks menu as illustrated above.

You can advance to a menu option by searching for it, or by selecting it from the Foundation Data menu. You can also return to the home screen from another screen by selecting **Home**.

### Standard Options for Working with Foundation Data

At each of the above-listed screens, a standard set of options is displayed. Note that the availability of options will vary depending on the type of data, existing records, and whether a particular record is selected.

Each option is available by selecting it from the Actions pull-down menu, or by clicking the related icon, as displayed above.

**Standard options:** The options available from the **Actions** menu as well as by clicking the related icon are:

- Add a new record ( + )
- Edit a record (  )
- View a record (  )
- Delete a record (  )

**Filter records:** You can filter the displayed records through a full or partial entry in one of the Filter fields above the displayed records. When you tab out of the filter field, the displayed list of records is restricted to those that match your entry. Optionally, select **Clear Filters** to remove the filters and display all records for the organization.

**Refresh displayed records:** You can use the refresh option (  ) to update the displayed records.

### Online Help

**Screen-specific help:** For each of the above screens, a screen-specific help option is available by clicking the help icon in the right of the screen title bar. The help panel slides open to the right.

The help topic then opens in a panel to the right of screen.

You can close the help panel by selecting the X.

**Entire help set:** The entire Order Orchestration help contents, including both Modern View and Classic View screens and overviews, are available in two ways:

- By clicking the help icon in the upper right corner of the screen, next to your user name.

- Clicking the Help icon at the bottom of a screen-specific help topic (  Help ) opens the entire help set with the current help topic displayed.

Additional documentation, including links to the Store Connect help, the Vendor Portal help, and the Web Services Guide on My Oracle Support (2953017.1), are available from Classic View.

## Additional Navigation Options

**Multiple organizations?** If you have multiple organizations defined in Order Orchestration, the information displayed and updated in Modern View is from your Default Organization, as defined through the Organizations tab from the [Users](#) screen.

**Changing the organization:** If you have authority to more than one organization, you can change the current organization by clicking the organization description, displayed to the right of the Oracle logo and below Order Orchestration Cloud Service in the title bar, and then selecting an organization from the list. Only organizations that you have access to, based on the list at the Organizations tab from the Users screen, are available for selection. Any options that are open close automatically when you change organizations.

**Returning to Classic View:** From Modern View, select the **Classic View** option, available by selecting the down arrow next to your user name, as illustrated above. Again, a message indicates that any unsaved changes will be lost if you have any screens open in Modern View.

**About Order Orchestration Cloud Service:** Select this option below the help icon in the upper right corner of the screen, next to your user name, to switch to the About Order Orchestration Cloud Service page. This page displays the:

- *Version:* The current version of Order Orchestration, including the release number and hot fix number, for example: 22.2.301.2, where 22.2.301 is the release number and 2 is the hot fix number.
- *Application Level:* The current build number applied to the Order Orchestration server for Modern View, including the release number, hot fix number, build number, and date stamp, for example: 22.2.301.1–2022-07-02-12-13-14-PM, where 22.2.301 is the release number, 1 is the hot fix number, and the date and time are July 2, 2022 at 12:13:14.
- *Service Level:* The current version of the Order Orchestration services, including the release number and build date stamp, for example: 22.2.301.1-20220627121314, where 22.2.301 is the release number, 1 is the hot fix number, and the date and time are June 27, 2022 at 12:13:14.

You can select **Done** at the lower right or the **X** at the upper right to return to the previous screen.

## Attribute Definitions

**Purpose:** Use the **Attribute Definitions** screen to review or work with attributes that you can create and apply to products and locations to control order routing.

Used for the Routing Engine module.

**For more information:** See [Using Attribute Rules for Delivery and Pickup Orders](#) and [Using Attribute Rules for Ship-for-Pickup Orders](#) for background.

**Assigning attributes to locations or products:** Use the [New Location Attribute](#) and [New Product Attribute](#) screens in Classic View to assign attributes.

**Reviewing location and product attribute assignments:** You can use a web service to retrieve a list of location and product attribute assignments. See the Web Services Guide on My Oracle Support (2953017.1).

**How to display this screen:** Select *Attribute Definitions* from the Modern View home screen. See the [Modern View Overview](#) for background.

 **Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Attribute Definitions* authority can display this screen. See [Roles](#) for more information.

**Options at this screen**

| Option                            | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

### Fields at the Attribute Definitions screen

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Attribute Description</b> | The description of the attribute. Can be up to 100 positions.<br>Optionally, enter a full or partial description to display attribute definitions whose descriptions match or start with your entry.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Attribute Code</b>        | The Code identifying an attribute you can apply to locations, products, or both. Attribute codes can be 1 to 40 positions in length and must be unique within the <a href="#">organization</a> . The code can include special characters, but cannot include any spaces. Any lowercase letters entered are automatically converted to uppercase.<br>Optionally, enter a full or partial code to display attribute definitions whose codes match or start with your entry.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Attribute Type</b>        | <ul style="list-style-type: none"> <li>• <i>Location</i>: The attribute can be applied to locations to filter eligible locations when routing orders. For example, if an order originates in a location associated with a particular brand, the eligible sourcing or pickup locations can be restricted to that brand.</li> <li>• <i>Product</i>: The attribute can be applied to products. Not used in routing orders.</li> <li>• <i>Location and Product</i>: The attribute can be applied to products and locations to filter eligible locations when routing orders. For example, if a product requires engraving, the eligible sourcing and pickup locations can be restricted to those that support engraving.</li> </ul> <p>Optionally, select an attribute type to display matching attribute definitions.</p>                                                                                                                        |
| <b>Data Type</b>             | <p>Indicates the type of data that can be defined through the attribute. Available data types are:</p> <ul style="list-style-type: none"> <li>• <i>Boolean</i>: Indicates whether a condition is true for the product or location; for example, use a Boolean attribute to identify each location that supports oversized items.</li> <li>• <i>List</i>: Used to define a list of valid values that can be assigned to a product or location; for example, this might be a list of brands. Each value can be up to 50 positions.</li> <li>• <i>Number</i>: Indicates that the value defined through the attribute must be numeric. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li> <li>• <i>Text</i>: Indicates that the value defined through the attribute is text. Values can be up to 50 positions.</li> </ul> <p>Optionally, select a data type to display matching attribute definitions.</p> |
| <b>Allow Multiple</b>        | <p>Set to <i>Yes</i> if multiple values for the attribute can be assigned to the same product or location; otherwise, set to <i>No</i>.</p> <p>Boolean attributes do not support allowing multiples. Also, multiple attribute values cannot be applied to a location when the attribute's Location Use for the location is set to <i>Originating Location</i>.</p> <p>Optionally, select Yes or No to display matching attribute definitions.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

**Fields at the Add, Edit, and View Attribute Definition Windows**

All fields are display-only at the View Attribute Definition window.

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Attribute Description</b> | <p>The description of the attribute. Can be up to 100 positions. Truncated if it exceeds the allotted space.</p> <p>Required at the Add or Edit Attribute Definition window.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Attribute Code</b>        | <p>The Code identifying an attribute you can apply to locations, products, or both. Attribute codes can be 1 to 40 positions in length and must be unique within the <a href="#">organization</a>. The code can include special characters, but cannot include any spaces. Any lowercase letters entered are automatically converted to uppercase.</p> <p>Required at the Add Attribute Definition window; otherwise, display-only.</p>                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Last Updated</b>          | <p>Indicates the last date and time, if any, when the attribute definition was updated. The date and time format are based on the locale defined for the organization. Note that this field displays a date and time after you select OK at the Edit Attribute Definition window only if you actually made a change to the definition.</p> <p>Displayed only at the Edit and View Attribute Definition windows.<br/>Display-only.</p>                                                                                                                                                                                                                                                                                                                                                                            |
| <b>In Use</b>                | <p>Yes indicates that the attribute is currently assigned to a product and/or a location; otherwise, set to No. If the attribute is in use, it cannot be deleted. Also, if the attribute is a list type and is in use, you cannot delete any list values, although you can add list values.</p> <p>Displayed only at the Edit and View Attribute Definition windows.<br/>Display-only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Attribute Type</b>        | <ul style="list-style-type: none"> <li>• <i>Location</i>: The attribute can be applied to locations to filter eligible locations when routing orders. For example, if an order originates in a location associated with a particular brand, the eligible sourcing or pickup locations can be restricted to that brand.</li> <li>• <i>Product</i>: The attribute can be applied to products. Not used in routing orders.</li> <li>• <i>Location and Product</i>: The attribute can be applied to products and locations to filter eligible locations when routing orders. For example, if a product requires engraving, the eligible sourcing and pickup locations can be restricted to those that support engraving.</li> </ul> <p>Required at the Add Attribute Definition window; otherwise, display-only.</p> |

| Field                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Ship For Pickup Match Type</b> | <p>Indicates whether to filter a location based on its role in fulfilling a ship-for-pickup order:</p> <ul style="list-style-type: none"> <li>• <b>Sourcing:</b> Locations must match the attribute in order to qualify to source the order. For example, if a product requires engraving, the sourcing location must support engraving, based on a matching location attribute with a Location Use of Sourcing.</li> <li>• <b>Pickup:</b> Locations must match the attribute in order to qualify as pickup locations for the order. For example, if the order was submitted under a particular brand, the pickup location must support that brand, based on a matching location attribute with a Location Use of Pickup.</li> <li>• <b>Sourcing and Pickup:</b> Both the sourcing and the pickup location for an order must match the attribute. For example, if a product is flagged as oversized, both the sourcing and the pickup location must support oversized products, based on both a matching location attribute with a Location Use of Sourcing and a matching location attribute with a Location Use of Pickup.</li> </ul> <p><b>Note:</b> This setting does not control routing of delivery or pickup orders. Required at the Add or Edit Attribute Definition window.</p> |
| <b>Data Type</b>                  | <p>Indicates the type of data that can be defined through the attribute. Available data types are:</p> <ul style="list-style-type: none"> <li>• <b>Boolean:</b> Indicates whether a condition is true for the product or location; for example, use a Boolean attribute to identify each location that supports oversized items.</li> <li>• <b>List:</b> Used to define a list of valid values that can be assigned to a product or location; for example, this might be a list of brands. Each value can be up to 50 positions.</li> <li>• <b>Number:</b> Indicates that the value defined through the attribute must be numeric. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li> <li>• <b>Text:</b> Indicates that the value defined through the attribute is text. Values can be up to 50 positions.</li> </ul> <p>Required at the Add Attribute Definition window; otherwise, display-only.</p>                                                                                                                                                                                                                                                                                                                                            |
| <b>Value</b>                      | <p>Use this field to enter each supported value that can be applied for a list attribute. For example, if the attribute is for brand, the values might be the name of each supported brand. Each value can be up to 50 positions. At least one value is required for a list attribute. If this is a Boolean, Number, or Text attribute, this field is not displayed.</p> <p>Click Add Value after entering each new value. The new value is displayed below.</p> <p>Duplicates? If you enter the same value more than once, no error is displayed; however, the duplicate is not added.</p> <p>Values are case-insensitive. For example, if you add a value of ABC123 and then try to enter a value of abc123, it is treated like a duplicate and not added, although no error is displayed.</p> <p>Existing values are listed below this field.</p> <p>Optionally, you can delete a value at the Add or Edit Attribute Definition window by selecting the delete (trash can) icon ; however, you cannot delete any values if the attribute definition is currently <i>In Use</i>.</p>                                                                                                              |

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow Multiple</b> | <p>Selected if multiple values for the attribute can be assigned to the same product or location; otherwise, unselected. Not displayed for a boolean attribute.</p> <p>Note that multiple attribute values cannot be applied to a location when the attribute's Attribute Type for the location is set to <i>Originating Location</i>.</p> <p>Optional at the Add or Edit Attribute Definition window.</p> |

## Boxes

**Purpose:** Use the **Boxes** screen to define the dimensions of a box used to ship one or more items using an integrated shipping system and whether the box is available in the Supplier Direct Fulfillment module, Store Connect module, or both. The dimensions of the box used with each shipment is required for all delivery orders and purchase orders using an integrated shipping system, as well as for shipment of any ship-for-pickup orders.

### Note

This option is used for the Supplier Direct Fulfillment module and the Store Connect module and is used only if Use Vendor Portal or Use Store Connect is selected at the [Tenant](#) screen.

**Using boxes in the Drop Ship (Supplier Direct Fulfillment) module:** If your vendors use the Integrated Shipping screen to confirm shipments, the system requires them to select the box size on the Estimated Weight and Dimensions window. The vendor user can select one of the predefined box sizes or manually define the length, width, and height of the box.

**Using boxes in the Store Connect module:** When the store associate confirms shipment of items on delivery orders through integration with an automated shipping system, the system requires you to select the box size on the Estimated Weight and Dimensions window. The store associate can select one of the predefined box sizes or manually define the length, width, and height of the box. If only one box size is flagged to display in Store Connect, that box size defaults at the Ship Order screen in Store Connect.

**Using an API to work with boxes:** You can also use an API to create, update, review, count, or delete boxes. See the Web Services Guide (MOS ID 2953017.1) for more information.

**How to display this screen:** Select *Boxes* from the Modern View home screen. See the [Modern View Overview](#) for background.

### Note

Only users with *Boxes* authority can display this screen. See [Roles](#) for more information.

### Fields at the Boxes screen

| Field                             | Description                                                                                                                                                                                                       |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Description</b>                | The description of the box. Up to 50 positions. Alphanumeric.                                                                                                                                                     |
| <b>Available in Store Connect</b> | Indicates if the box is available in the Store Connect module (the Available in Store Connect field is selected for the box).<br>Used only if Use Store Connect is selected at the <a href="#">Tenant</a> screen. |
| <b>Available in Vendor Portal</b> | Indicates if the box is available in the Vendor Portal (the Available in Vendor Portal field is selected for the box).<br>Used only if Use Vendor Portal is selected at the <a href="#">Tenant</a> screen.        |

### Fields at the Add Box, Edit Box, and View Box Windows

All fields are enterable at the **Add Box** and **Edit Box** windows, but are display-only at the **View Box** window.

| Field                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Box Description</b> | The description of a box. Box names can be up to 255 positions in length must be unique in your organization. The name can include special characters and spaces. Do not use a description of <b>Irregular Size</b> , regardless of case, because this option is required to allow a user to manually define the length, width, and height of a box at the Estimated Weight and Dimensions window in Supplier Direct Fulfillment or Store Connect. |

#### Note

It is helpful to include the dimensions of the box in the name so that this information is available when selecting a box in the Supplier Direct Fulfillment or Store Connect module.

Required when creating or editing a box.

| Field                             | Description                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Length</b>                     | The length of the box, typically up to 5 positions with a 2-place decimal, for example: 123.45. The highest length you can enter is 999.99, and the lowest is .01.<br>Required when creating or editing a box.                                                                                                                                                                    |
| <b>Width</b>                      | The width of the box, typically up to 5 positions with a 2-place decimal, for example: 123.45. The highest width you can enter is 999.99, and the lowest is .01.<br>Required when creating or editing a box.                                                                                                                                                                      |
| <b>Height</b>                     | The height of the box, typically up to 5 positions with a 2-place decimal, for example: 123.45. The highest length you can enter is 999.99, and the lowest is .01.<br>Required when creating or editing a box.                                                                                                                                                                    |
| <b>Available in Store Connect</b> | Select this flag if the box should be available in the Store Connect module. You should select this flag if you will also select this box definition as the default in Store Connect.<br>Used only if Use Store Connect is selected at the <a href="#">Tenant</a> screen.                                                                                                         |
| <b>Default in Store Connect</b>   | Select this flag if the box should be the default available for shipping in Store Connect. If another box was previously flagged as the default for Store Connect, the flag for the previous default box is cleared.<br>Used only if Use Store Connect is selected at the <a href="#">Tenant</a> screen and if <i>Available at Store Connect</i> is selected for the box.         |
| <b>Available in Vendor Portal</b> | Select if the box is available in the Vendor Portal module. You should select this flag if you will also flag this box definition as the default in the Vendor Portal.<br>Used only if Use Vendor Portal is selected at the <a href="#">Tenant</a> screen.                                                                                                                        |
| <b>Default in Vendor Portal</b>   | Select this flag if the box should be the default available for shipping in the Vendor Portal. If another box was previously flagged as the default for the Vendor Portal, the flag for the previous default box is cleared.<br>Used only if Use Vendor Portal is selected at the <a href="#">Tenant</a> screen and if <i>Available in Vendor Portal</i> is selected for the box. |

## Brands

**Purpose:** Use this screen to work with the brands for an organization. Each organization using the Supplier Direct Fulfillment option must have at least one brand.

Used for the Supplier Direct Fulfillment module.

### What does brand control?

- The brand logo prints on the pack slip and pullsheet when the vendor generates these PDFs. When the vendor generates pack slips for multiple brands, a separate batch and PDF file is generated for each brand.
- The vendor can use brand as a selection criterion when generating pack slips or confirming shipments.

**Created how?** You must create each brand within Order Orchestration, and the brand code must match the ID for the related retail brand from Order Administration. See [Setting Up Data for the Routing Engine Module](#) for more information.

 **Note**

This option is used for the Supplier Direct Fulfillment module if Use Vendor Portal is selected at the [Tenant](#) screen.

**Using an API to work with brands:** You can also use an API to create, update, review, count, or delete brands. See the Web Services Guide (MOS ID 2953017.1) for more information.

**How to display this screen:** Select *Brands* from the Modern View home screen. See the [Modern View Overview](#) for background.

 **Note**

Only users with *Brands* authority can display this screen. See the [Roles](#) screen for more information.

| Option             | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>search for a brand</b>        | <p>The existing brands defined for your current organization are displayed. Use any combination of the fields at the top of the screen and tab through the search fields to restrict the search results to matching brands:</p> <ol style="list-style-type: none"> <li>1. Optionally, enter a full or partial brand description. When you tab through this field, the displayed brands are limited to those whose descriptions start with your entry, but that don't need to match completely. For example, if your entry is HOU, the brand with a description of House Brand is displayed.</li> <li>2. Optionally, enter a full or partial brand code in the <i>Brand Code</i> field. When you tab through this field, the displayed brands are limited to those whose codes that start with your entry, but that don't need to match completely. For example, if your entry is AC, the brand with a code of Accent is displayed.</li> </ol> <p><b>Sort displayed brands:</b> You can also sort the displayed brands by clicking the up arrow (^) or down arrow next to each field title.</p> <p><b>View options:</b> Open the View Options drop-down menu to the right of the Actions menu to manage columns, change the sort of individual columns from ascending to descending or back, or remove the search fields above the columns. See <a href="#">How to use the View options in Modern View</a> for more information.</p> <p><b>Filter options:</b> Open the Filter Options drop-down menu to the right of the refresh icon (↻) to control whether the search results need to match all the search criteria entered for multiple columns. See <a href="#">How to use the Filter Options in Modern View</a> for more information.</p> <p><b>Clear filters:</b> Select <b>Clear Filters</b> to remove the criteria entered in the filter fields.</p> |
| <b>edit a brand definition</b>   | <ol style="list-style-type: none"> <li>1. Highlight a displayed brand.</li> <li>2. Select <b>Edit</b> from the <i>Actions</i> menu or click the Edit icon (✎) to open the <b>Edit Brand</b> window. See <i>Fields at the Add Brand, Edit Brand, and View Brand Windows</i>, below, for details on fields.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

Select <b>OK</b> or press enter at the <b>Confirm Deletion</b> window to delete the brand.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

### Fields at the Brands screen

| Field                 | Description |
|-----------------------|-------------|
| <b>Search Fields:</b> |             |

| Field                    | Description                                                                                                                                                                                                   |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Brand Description</b> | The name or description of the brand. The name can be from 1 to 128 positions long and can include spaces and special characters. Displayed in the drop-down selection field on screens in the Vendor Portal. |
| <b>Brand Code</b>        | The code identifying the brand. The code can be from 1 to 20 positions long and can include spaces and special characters.                                                                                    |
| <b>Results fields:</b>   |                                                                                                                                                                                                               |
| <b>Brand Description</b> | The name or description of the brand. The name can be from 1 to 128 positions long and can include spaces and special characters. Displayed in the drop-down selection field on screens in the Vendor Portal. |
| <b>Brand Code</b>        | The code identifying the brand. The code can be from 1 to 20 positions long and can include spaces and special characters.                                                                                    |

### Fields at the Add Brand, Edit Brand, and View Brand Windows

All fields are enterable at the **Add Brand** window, and everything but the Brand Code is enterable at the **Edit Brand** window. All fields are display-only at the **View Brand** window.

| Field                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Brand Description</b> | The name or description of the brand. The name can be from 1 to 128 positions long and can include spaces and special characters. Displayed in the drop-down selection field on screens in the Vendor Portal.                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Brand Code</b>        | The code identifying the brand. Must match the ID for the related retail brand from Order Administration (WRDB) and must not already be assigned to a brand in Order Orchestration. The code can be from 1 to 20 positions long and can include spaces and special characters. Required when creating a brand. You cannot create a new brand with the same exact code as an existing brand within the organization. Note that matching is case-insensitive: you cannot create a brand with a code of ABCD if there is an existing brand with a code of abcd. Otherwise, display-only. |

### Contact Address

#### Note

The contact address fields are optional and informational only.

|                                  |                                                                                     |
|----------------------------------|-------------------------------------------------------------------------------------|
| <b>Contact Name</b>              | Up to 128 positions.                                                                |
| <b>Email(s)</b>                  | Separate multiple email addresses with a semicolon (;). Up to 2500 positions total. |
| <b>Telephone</b>                 | Up to 20 positions.                                                                 |
| <b>Extension</b>                 | Up to 10 positions.                                                                 |
| <b>Fax</b>                       | Up to 20 positions.                                                                 |
| <b>Address Lines 1 through 4</b> | Four lines, up to 128 positions each.                                               |
| <b>Suite</b>                     | The suite number. Up to 20 positions total.                                         |
| <b>City</b>                      | Up to 128 positions.                                                                |
| <b>State/Province</b>            | Up to 10 positions.                                                                 |
| <b>Country</b>                   | Up to 3 positions.                                                                  |

| Field                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Postal Code</b>               | The ZIP or postal code for the brand contact. Up to 20 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Return Address</b>            | If the <a href="#">Integration Enabled</a> flag is selected at the <a href="#">Drop Ship Preferences</a> screen, indicating that vendors can confirm shipments through an integration with shipping service such as ADSI, the return address prints on the shipping label; in this case, the <i>Telephone, Address, City, State/Province, Postal Code</i> , and <i>Country</i> are required. If you do not use integrated shipping, the fields on this tab are optional and informational only.                                                                                                                                       |
| <b>Company</b>                   | Up to 128 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Contact Name</b>              | Up to 128 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Email(s)</b>                  | Separate multiple email addresses with a semicolon (;). Up to 2500 positions total.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Telephone</b>                 | Up to 20 positions. Used as the recipient phone number for ADSI (integrated shipping) integration if there is no phone number for the purchase order recipient. Required if the <a href="#">Integration Enabled</a> flag is selected at the <a href="#">Drop Ship Preferences</a> screen.                                                                                                                                                                                                                                                                                                                                             |
| <b>Extension</b>                 | Up to 10 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Fax</b>                       | Up to 20 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Address Lines 1 through 4</b> | Four lines, up to 128 positions each. Required if the <a href="#">Integration Enabled</a> flag is selected at the <a href="#">Drop Ship Preferences</a> screen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Suite</b>                     | The suite number. Up to 20 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>City</b>                      | Up to 128 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>State/Province</b>            | Up to 10 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Country</b>                   | Up to 3 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Postal Code</b>               | The ZIP or postal code for the brand return address. Up to 20 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Preferences</b>               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Brand Logo URL</b>            | <p>The URL for the brand logo to print on the graphical pack slip and pullsheet.</p> <p>The URL should use https rather than http.</p> <p>The image prints in the upper left corner of each document if you use the default form, or if your unique form supports it.</p> <p>If you leave this field blank, no logo prints on the graphical pack slip or the pullsheet.</p> <p><b>File format:</b> The image file can be in JPG, PNG, or GIF format.</p> <p><b>Image dimensions:</b> The recommended size is 225x50.</p> <p><b>Note:</b> Oracle staff need to make sure that this URL is added to the <a href="#">allow list</a>.</p> |
| <b>Pack Slip Message</b>         | <p>The message, if any, to print on all pack slips for the brand. Prints below the sold-to customer name and address in the upper left of the pack slip. This message is also included in the Pack Slip CSV file, if generating the CSV file is specified in the Generate Format setting at the vendor's <a href="#">Preferences tab</a>.</p> <p>Your entry can be up to 255 positions, and can include line breaks (carriage returns), but you should preview the pack slip output to make sure that the message fits in the space allotted.</p>                                                                                     |

# Carriers

**Purpose:** Use this screen to work with carriers for order shipments. A carrier is required for all sales orders and purchase orders.

**Order Administration integration:** Carriers in Order Orchestration that correspond to Order Administration ship vias must have codes identical to the Order Administration ship via codes. The ship via code in Order Administration is a 2-position numeric field.

**How to display this screen:** Select *Carriers* from the Modern View home screen. See the [Modern View Overview](#) for background.

## Note

Only users with *Carriers* authority can display this screen. See the [Roles](#) screen for more information.

## Carrier creation and vendor assignment

**Assign to vendors:** When you create a new carrier with the *Active* flag selected, or when you select the *Active* flag for an existing carrier, the carrier is assigned as a valid shipper for all vendors in your organization. The carrier is displayed at the *Carriers* tab of the [New Vendor](#) and [Edit Vendor](#) screen, and the Assigned flag is selected.

Otherwise, if the carrier is not flagged as active, the carrier is not displayed at the *Carriers* tab of the [New Vendor](#) and [Edit Vendor](#) screen.

## Note

Flagging a carrier as inactive does not prevent you from assigning the carrier to a purchase order through the CreateDSOrder message, and will not prevent the vendor from generating a pack slip using an inactive carrier; however, the vendor will not be able to confirm shipment with an inactive carrier when using the **Purchase Order Shipping** screen. The vendor can confirm a shipment using an inactive carrier through the shipment upload.

You can use the [Carriers tab](#) at the [Edit Vendor](#) screen to change the carrier assignments for a vendor. Also, if you change the carrier's *Active* setting:

- if the carrier was previously inactive and you activate the vendor, the carrier becomes eligible to ship packages for vendors it is assigned to.
- if the carrier was previously active and you change the carrier to inactive, the carrier is no longer eligible to ship packages for vendors it is assigned to.

**Creating a carrier through rate shopping with ADSI:** If your vendors use the Integrated Shipping screen to confirm shipments, and the shipment specifies a rate shopping service code (carrier code), it is possible that ADSI might return a service code that is not currently a valid carrier in Order Orchestration. In this situation, Order Orchestration automatically creates the carrier code, but does not assign the new carrier to the vendor. See [Integrated Shipping Setup, Troubleshooting, and Mapping: Supplier Direct Fulfillment](#) for background.

## Carrier creation and sales order assignment

**Creating a carrier through the SubmitOrder message:** If the carrier specified in the [submit order message](#) for a delivery order does not already exist, it is assigned to the order and created automatically using the `ship_via` as the carrier *Code* and the `ship_via_description` as the carrier *Description*. The new carrier is flagged as *Active*, but no other settings are selected. The new carrier is not automatically assigned to any existing vendors, but is eligible to be automatically assigned when you create new vendors.

### Default carriers:

- **Delivery orders:** A [Default Carrier](#) is required at the [Preferences](#) screen for your organization. This is the carrier that Order Orchestration assigns to orders that do not have a ship via specified in the [submit order message](#).
- **Pickup orders:** The default *PICKUP* carrier is created automatically for your organization, and assigned to all pickup orders, when a SubmitOrder request is received. The default *PICKUP* carrier:
  - has a *Code* of *PICKUP*
  - has a default *Description* of *In Store Pick Up*, but you can change it
  - is automatically assigned to all pickup orders

You cannot delete these carriers.

Order Orchestration does not assign these default carriers to vendors.

If the carrier in the submit order message exists but is not currently flagged as active, Order Orchestration changes the setting back to active.

**Using a carrier for a delivery order in Store Connect:** The carrier on a delivery order is displayed on Store Connect screens and prints on the pick list pull sheet and packing slip; however, the store associate cannot confirm a shipment using a carrier unless both the *Display in Store Connect* and *Active* flags are currently selected.

**Specifying a carrier to prevent splitting an order:** If the [Do Not Split Order For Carrier](#) field at the **Preferences** screen specifies a carrier, the Routing Engine does not attempt to place a delivery order or line by splitting it across locations. See that setting for more information.

**Using an API to work with carriers:** You can also use an API to create, update, review, count, or delete carriers. See the Web Services Guide on My Oracle Support (2953017.1) for more information.

| Option                      | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <b>delete a carrier definition</b> | <ol style="list-style-type: none"> <li>1. Highlight a displayed carrier.</li> <li>2. Select <b>Delete</b> from the <i>Actions</i> menu or click the Delete icon (  ).</li> <li>3. Select <b>OK</b> or press enter at the <b>Confirm Deletion</b> window to delete the carrier.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                 |

### ! Important

To avoid a potential Store Connect processing error, you should not delete a carrier. If you accidentally delete a carrier, you should recreate it using the exact same code.

You cannot delete the *Default Carrier* defined at the Preferences screen, or the PICKUP carrier that is automatically assigned to pickup orders.

## Fields at the Carriers screen

| Field                      | Description                                                                                                                                                                                                                                                                                                                                      |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Carrier Description</b> | The description of the carrier. A description such as <i>Auto Created 15</i> , where <i>15</i> is the carrier code, indicates that the carrier was created automatically through the CreateDSOrder or Submit Order message. Case-insensitive for searching; for example, an entry of <i>e</i> matches a description of <i>Express Delivery</i> . |
| <b>Carrier Code</b>        | The code identifying a carrier.                                                                                                                                                                                                                                                                                                                  |
| <b>Express</b>             | Indicates if this is an express shipper. Express shippers are indicated in Store Connect with an icon:  . Used for Store Connect. Not used in Supplier Direct Fulfillment.                                                                                    |

| Field                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>Rate Required</b>            | <p>Select this flag if the vendor must provide the shipping rate for each manual shipment using this carrier; otherwise, the shipping rate is optional.</p> <p>This flag does not affect Store Connect.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Tracking Number Required</b> | <p>Select this flag if:</p> <ul style="list-style-type: none"> <li>the vendor must provide a tracking number for each manual shipment using this carrier; otherwise, the tracking number is optional.</li> <li>the store associate in Store Connect must provide a tracking number for each shipment using this carrier through the manual shipment process; otherwise, the tracking number is optional in manual shipment.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Active</b>                   | <p>Indicates whether:</p> <ul style="list-style-type: none"> <li>the carrier is visible at the <i>Carrier</i> tab of the <a href="#">New Vendor</a> or <a href="#">Edit Vendor</a> screens</li> <li>the vendor can confirm shipment of purchase orders using this carrier in the Vendor Portal</li> <li>the store associate can confirm shipment of a delivery order using this carrier in Store Connect if the <i>Display in Store Connect</i> flag is also selected</li> <li><i>Purchase orders</i>: Flagging a carrier as inactive does not prevent you from assigning the carrier to a purchase order through the CreateDSOrder message, and will not prevent the vendor from generating a pack slip using an inactive vendor; however, the vendor will not be able to confirm shipment with an inactive vendor when using the <b>Purchase Order Shipping</b> screen. The vendor can confirm a shipment using an inactive carrier through the shipment upload.</li> <li><i>Reset to Active when used on a new order</i>: When Order Orchestration creates a new sales order using an existing carrier that is not currently flagged as active, it resets this flag to active for the carrier.</li> <li><i>Store Connect</i>: Flagging a carrier as inactive does not prevent the carrier from being displayed in Store Connect, but the associate cannot confirm shipment of a delivery order using the carrier. Both the <i>Active</i> and <i>Display in Store Connect</i> flags must currently be selected for the carrier to be eligible for shipment through Store Connect.</li> <li><i>Default PICKUP carrier</i>: You cannot flag the default PICKUP carrier for Store Connect as inactive.</li> <li><i>SHIP2STORE carrier</i>: If this carrier was created in a prior release of Order Orchestration, you can flag it as inactive.</li> </ul> |

## External Services

**Purpose:** Use the External Services screen to review and work with attributes for external services used for integration, including:

- shipping in Store Connect. See Shipping Service Configuration Fields, below, for configuration details. You assign a shipping service at the [Shipping Preferences tab \(Shipping\)](#) at the Store Connect Preferences screen.
- orders received through the RICS integration. See [Order Fulfillment through RICS Integration](#) for background.

- foundation data received through the merchandising (MFCS) or OCDS integration. See [OCDS or Merchandising Omni Services Imports](#) for background.
- inventory information received through the integration with SIM or EICS. See [Additional Types of Import Processes \(Other than RMFCS File Upload and OCDS or Merchandising Omni Services\)](#) for background.

**How to display this screen:** Select *External Services* from the Modern View home screen. See the [Modern View Overview](#) for background.

**Note**

Only users with *Manage External Services* authority can display this screen. See [Roles](#) for more information.

**When upgrading from Order Broker 21.0 or earlier:** See [Shipping Service Conversion](#) for information on how shipping services are converted when you upgrade from Order Broker 21.0 or earlier, and the required steps to verify and select shipping services.

**When upgrading from Order Broker 21.1 through 23.1.101.0:** See the following sections in the System screen help topic for information on how information is converted when you upgrade, and the required steps to verify and select services:

- [RICS Integration tab](#)
- [OCDS Integration Import tab](#)
- [Inventory tab](#)
- 

**Using an API to work with external services:** You can also use an API to create, update, review, count, or delete external services. See the Web Services Guide on My Oracle Support (2953017.1) for more information.

**Options at this screen**

| Option                        | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <b>search for an external service</b>      | <p>The existing external services defined for your current organization are displayed. Use any combination of the fields at the top of the screen and tab through the search fields to restrict the search results to matching external services:</p> <ul style="list-style-type: none"> <li>Optionally, enter a full or partial description in the <i>External Service Description</i> field. When you tab through this field, the displayed external services are limited to those whose descriptions start with your entry, but that don't need to match completely. For example, if your entry is St, the external services with descriptions starting with Standard Shipping are displayed.</li> <li>Optionally, enter a full or partial code in the <i>External Service Code</i> field. When you tab through this field, the displayed external services are limited to those whose codes start with your entry, but that don't need to match completely. For example, if your entry is AD, the external service codes starting with ADSI are displayed.</li> <li>Optionally, select <b>Yes</b> or <b>No</b> in the <i>Active</i> fields to display active or inactive external services.</li> <li>Optionally, select a type from the <i>External Service Type</i> field.</li> </ul> <p><b>Sort displayed external services:</b> You can also sort the displayed external services by clicking the up arrow (^) or down arrow next to each field title.</p> <p><b>View options:</b> Open the View Options drop-down menu to the right of the Actions menu to manage columns, change the sort of individual columns from ascending to descending or back, or remove the search fields above the columns. See <a href="#">How to use the View options in Modern View</a> for more information.</p> <p><b>Filter options:</b> Open the Filter Options drop-down menu to the right of the refresh icon (↻) to control whether the search results need to match all the search criteria entered for multiple columns. See <a href="#">How to use the Filter Options in Modern View</a> for more information.</p> <p><b>Clear filters:</b> Select <b>Clear Filters</b> to remove the criteria entered in the filter fields.</p> |
| <b>update an existing external service</b> | <ol style="list-style-type: none"> <li>Highlight a displayed external service.</li> <li>Select <b>Edit</b> from the <i>Actions</i> menu or click the Edit icon (✎) to open the <b>Edit External Service</b> window. See <i>Fields at the Add External Service, Edit External Service, and View External Service Windows</i>, below, for details on fields, including which fields can be edited for an existing external service.</li> <li>Select <b>OK</b> or press enter to save your changes.</li> </ol>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>Warehouse Inventory: Active flag</b> | <p>Select this flag to enable importing inventory (products and system products) in warehouse locations through OCDS or Merchandising Omni Services.</p> <p>If this flag is selected, the Warehouse Inventory Endpoint URL is also required.</p> <p><b>Foundation Data Service Authentication Configuration:</b> Use the following fields to configure authentication for the foundation data external service.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Request Size</b>                     | <p>Defines the total number of records to request from OCDS or Merchandising Omni Services in each import request. You can set this field as high as 500,000. A non-negative number is required if the Active flag is selected for any of the import types. Defaults to 50,000.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Connection Timeout</b>               | <p>The number of seconds to wait for a response before timing out. A non-negative number is required if the Active flag is selected for any of the import types. Can be up to 9 positions. Defaults to 30 seconds.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Authentication Type</b>              | <p>Enables you to select an authentication type. Your selection in this field controls the additional fields displayed in this window, described below.</p> <ul style="list-style-type: none"> <li>• OAuth (default): For OAuth authentication, you need to enter an OAuth URL, Client ID, and Client Secret. Optionally, you can enter a Scope.</li> <li>• Basic: You need to specify a User ID and Password.</li> </ul> <div data-bbox="725 978 839 1010" data-label="Section-Header"> <p><b>Note</b></p> </div> <div data-bbox="766 1031 1438 1092" data-label="Text"> <p>Basic authentication has been announced for deprecation. Oracle recommends moving to OAuth as soon as possible.</p> </div> <ul style="list-style-type: none"> <li>• Application OAuth: You will use the Client ID and Secret defined for the Order Orchestration application at the Tenant-Admin screen. The Client ID defaults, and the secret is not displayed. Optionally, you can enter a Scope.</li> </ul> <p><b>Note:</b> OAuth support is available with Oracle Retail Merchandising Foundation Cloud Service (RMFCS) application version 21.0 or above. Older versions will continue to support Basic authentication.</p> <p>The following fields vary depending on whether the selected authentication type is Basic, Application OAuth, or OAuth.</p> |
| <b>OAuth URL</b>                        | <p>The URL to use when requesting the token for OAuth. This field is available only when the Authentication Type is OAuth.</p> <p>Alphanumeric, up to 256 positions. Required if the Authentication Type is set to OAuth.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Scope</b>                            | <p>Defines the limits that control where the token can be used, for example: rgbu:merch:system. This field is available only when the Authentication Type is OAuth or Application OAuth. Optional.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Client ID</b>                        | <p>The client ID to use when requesting the token for OAuth. Required if the Active flag is selected for any of the import types and OAuth is selected.</p> <p>This field is available only when the Authentication Type is OAuth. If the selected authentication type is Application OAuth, the client ID defined for Order Orchestration defaults and cannot be changed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Field                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Client Secret</b>            | <p>The client secret to use when requesting the token for OAuth. Required if the Active flag is selected for any of the import types and OAuth is selected.</p> <p>This field is available only when the Authentication Type is set to OAuth.</p>                                                                                                                                                                                                                                                                                                                              |
| <b>User ID</b>                  | <p>The user ID to use for authenticating the web service requests in basic authentication.</p> <p>This field is available only when the Authentication Type is Basic. Alphanumeric, up to 256 positions. Required if the Active flag is selected for any of the import types and basic authentication is selected.</p> <p><b>Note:</b> The user ID and password must be valid for authentication of the web service requests to OCDS or Merchandising Omni Services; however, no validation takes place at this screen.</p>                                                    |
| <b>Password</b>                 | <p>The password to use for authenticating the web service requests in basic authentication. Your entry is masked on the screen and encrypted in the database.</p> <p>This field is available only when the Authentication Type is Basic. Alphanumeric, up to 256 positions. Required if the Active flag is selected for any of the import types and basic authentication is selected.</p>                                                                                                                                                                                      |
| <b>Inventory Service Fields</b> | <p>Defines how to receive inventory information received through the integration with SIM, EICS, or Order Administration. See <a href="#">Additional Types of Import Processes (Other than RMFCS File Upload and OCDS or Merchandising Omni Services)</a> for background. The following fields are displayed only when you select an <i>External Service Type</i> of <b>Inventory</b>, and vary depending on the selected Inventory Service.</p>                                                                                                                               |
| <b>Inventory Service</b>        | <p>Defines whether to use SIOCS or a Standard Inventory Service. Required.</p> <p>If this field is set to SIOCS, then the <b>Inventory Service Configuration fields</b> that are displayed include settings for basic authentication (user ID and password). Otherwise, if this field is set to Standard Inventory Service, you can choose an Authentication Type of Basic, OAuth, or Application OAuth. See the <i>Authentication Type</i>, below, for more information.</p> <p>This field is available only at the Add External Service window; otherwise, display-only.</p> |

| Field                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Endpoint URL</b>             | <p>The URL where Order Orchestration should send RESTful service requests to a remote, online system for real-time inventory updates for requested items, or the URL to use for integration with SIM or EICS. Required.</p> <p>Your entry should end with <code>/getAvailable</code>.</p> <p><b>Note:</b> The Inventory Request/Response setting at the <a href="#">Event Logging</a> screen controls whether to log the inventory update request and response messages.</p> <p><b>Order Administration integration:</b> See the Work with Web Service Authentication (WWSA) menu option in the Order Administration System Classic View online help for information on setting up web service authentication. If you use the <i>Basic Authentication Type</i>, the user ID you enter at the <b>System</b> screen must be in all capital letters. Also, the URL is typically in the format of <code>http://&lt;SERVER&gt;:1234/SerenadeSeam/sxrs/Inventory/getAvailable</code>, where <code>&lt;SERVER&gt;</code> is the server name and 1234 is the port number. See Generic Web Services in the Order Administration System online help for more information.</p> <div data-bbox="873 858 990 894" data-label="Section-Header"> <p><b>Note</b></p> </div> <div data-bbox="914 913 1451 974" data-label="Text"> <p>Oracle staff need to make sure that this URL is added to the <a href="#">allow list</a>.</p> </div> |
| <b>Connection Timeout</b>       | <p><b>For more information:</b> See the <i>RESTful Inventory Request and Response Messages</i> chapter in the Web Services Guide on My Oracle Support (2953017.1) for details and more setup requirements.</p> <p>Defines the number of seconds to wait for a response to a request message before timing out and using offline inventory information from the Order Orchestration database. Up to 9 positions. Defaults to 30 seconds.</p> <p>A value of 1 or higher in this field is required.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Failed Request Threshold</b> | <p>The number of consecutive failed interactive inventory request attempts that, if exceeded, should trigger putting the inventory requests for the system in a wait time. For example, if this field is set to 5, and 6 requests in a row fail to get a response, interactive inventory requests are halted for the defined wait time. Can be set to 0, indicating that failed requests are not evaluated, or from 1 to 10000 if failed requests should be evaluated. Defaults to 0.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Failed Request Wait Time</b> | <p>The number of minutes to wait after the defined number of failed requests have been exceeded for the system. For example, if this field is set to 10, interactive inventory requests for the system are halted for 10 minutes. Can be set to 0 only if the <i>Failed Request Threshold</i> is also set to 0; otherwise, can be set to a whole number from 1 to 60. Defaults to 0.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Field                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Authentication Type</b>  | <p>Defines how to authenticate inventory requests. This field is available for a Standard Inventory Service. Not displayed for SIOCS Integration. Possible settings:</p> <ul style="list-style-type: none"> <li>• OAuth (default): You need to enter a Client ID and Client Secret. Optionally, you can enter a Scope.</li> <li>• Basic: You need to specify a User ID and Password.</li> <li>• Application OAuth: Uses the Client ID and Secret defined for the Order Orchestration application at the Tenant-Admin screen. The Client ID defaults, and the secret is not displayed. Optionally, you can enter a Scope.</li> </ul> <p>Note that 23.2.301.0 or higher release of Order Administration (formerly Order Management System) does not support basic authentication for inbound messages.</p> |
| <b>Scope</b>                | <p>Defines the limits that control where the token can be used, for example: urn:opc:ldm:myscopes. This field is available only for a Standard Inventory Service and only when the <i>Authentication Type</i> is OAuth. Not displayed for SIOCS Integration.</p> <p>Your Oracle representative can tell you whether to specify a Scope here. If you do not specify a Scope, the default applies.</p>                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Client ID</b>            | <p>The client ID to use when requesting the token for OAuth. Available for entry only for a Standard Inventory Service and only if using OAuth (not Application OAuth), and in that case, required. Not displayed for SIOCS Integration. Defaults from the Tenant-Admin screen and display-only if using Application OAuth.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Client Secret</b>        | <p>The client secret to use when requesting the token for OAuth. Available only for a Standard Inventory Service and only if using OAuth (not Application OAuth), and in that case, required.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>User ID</b>              | <p>A valid user ID to authentication inventory request messages.</p> <p>This field is available if the Inventory Service is set to SIOCS Integration, or if the Inventory Service is set to Standard Inventory Service and the Authentication Type is set to Basic; in this case, required. Alphanumeric, 256 positions.</p> <p>For integration with Order Administration (URL), you need to use the Work with Web Service Authentication (<b>WWSA</b>) menu option to set up a corresponding user ID and password for the CWServiceIn web service. The user ID you enter at the <b>System</b> screen must be in all capital letters.</p>                                                                                                                                                                |
| <b>Password</b>             | <p>The valid password for the user ID. Your entry is masked on the screen and encrypted in the database. This field is available if the Inventory Service is set to SIOCS Integration, or if the Inventory Service is set to Standard Inventory Service and the Authentication Type is set to Basic; in this case, required.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Order Service Fields</b> | <p>The following <b>Outbound Orders Service Configuration</b> fields are displayed only when the selected External Service Type is set to Orders. These fields vary depending on the selected authentication type. See <a href="#">Order Fulfillment through RICS Integration</a> for background.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Orders Service</b>       | <p>The only available setting is RICS Integration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Field                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Endpoint URL</b>        | The URL for RICS. This is the URL where Order Orchestration should send order-related and interactive inventory update messages for communication with RMFCS, EICS, or SIM. Up to 256 positions. Required.                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|                            | <div>  <b>Note</b> <ul style="list-style-type: none"> <li>The URL might be similar to <code>https://SERVERNAME:47220/rib-oms-services-web/resources/publisher</code>.</li> <li>Oracle staff need to make sure that this URL is added to the allow list.</li> </ul> </div>                                                                                                                                                                                                                                                                                   |
| <b>Connection Timeout</b>  | Defines the number of seconds to wait for a response from RICS before timing out. Defaults to 30 seconds. Numeric, 9 positions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Authentication Type</b> | Defines how to order requests. Possible settings: <ul style="list-style-type: none"> <li>OAuth (default): You need to enter a Client ID and Client Secret. Optionally, you can enter a Scope.</li> <li>Basic: You need to specify a User ID and Password.</li> <li>Application OAuth: Use the Client ID and Secret defined for the Order Orchestration application at the Tenant-Admin screen. The Client ID defaults, and the secret is not displayed. Optionally, you can enter a Scope.</li> </ul>                                                                                                                                        |
| <b>OAuth URL</b>           | The URL to use when requesting the token for OAuth. This field is available only when the Authentication Type is set to OAuth.<br>Alphanumeric, up to 256 positions. Required if the Authentication Type is set to OAuth.                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Scope</b>               | Defines the limits that control where the token can be used, for example: <code>urn:opc:idm:myscopes</code> . This field is available only when the Authentication Type is OAuth or Application OAuth.<br>Your Oracle representative can tell you whether to specify a Scope here. If you do not specify a Scope, the default applies.                                                                                                                                                                                                                                                                                                       |
| <b>Client ID</b>           | The client ID to use when requesting the token for OAuth. Required if the Authentication Type is set to OAuth. Display-only, and defaulted from the Tenant-Admin screen, if the Authentication Type is set to Application OAuth. Not displayed if the Authentication Type is set to Basic.                                                                                                                                                                                                                                                                                                                                                   |
| <b>Client Secret</b>       | The client secret to use when requesting the token for OAuth. Displayed and available for entry only if using OAuth (not Application OAuth), and in that case, required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>User ID</b>             | A valid user ID to outbound order request messages.<br>This field is available if the Authentication Type is set to Basic; in this case, required. Alphanumeric, 50 positions.<br><b>Note:</b> This user ID needs to have the Operator or Admin role in RIB in order to support sending stop and start requests at the beginning and end of the Inventory Quantity Export, indicating to pause Available-to-Sell Individual Inventory Updates through Oracle Retail Integration Cloud Service (RICS) while the export runs. It then generates a request to resume sending the update message when the update and export process is complete. |

| Field                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                             |
|----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Password</b>                              | The valid password for the user ID. Your entry is masked on the screen and encrypted in the database. This field is available if the Authentication Type is set to Basic; in this case, required.                                                                                                                                                                                                                                       |
| <b>Shipping Service Configuration Fields</b> | The following fields are displayed only when the selected External Service Type is set to Shipping. These fields vary depending on the selected shipping service and the selected authentication type.                                                                                                                                                                                                                                  |
| <b>Shipping Service</b>                      | At the Add External Service window, this field is available and required when you select the external service type of <b>Shipping</b> ; otherwise, display-only.<br>When creating an external service, select a shipping type: <ul style="list-style-type: none"> <li>• ADSI</li> <li>• Standard Shipping Service: Uses the Generic Ship Order API. See the Web Services Guide on My Oracle Support (2953017.1) for details.</li> </ul> |
| <b>Outbound Message Version</b>              | Displayed only when the selected Shipping Service is Standard Shipping Service. Currently, the only available version for the Standard Shipping Service is 1.0. Required.                                                                                                                                                                                                                                                               |
| <b>Endpoint URL</b>                          | Enter the URL to use for the integrated shipping system when the store associate confirms shipments through integrated shipping. Up to 256 positions. Included for both ADSI and Standard Shipping Service. Required.<br><b>Note:</b> Oracle staff need to make sure that this URL is added to the <a href="#">allow list</a> .                                                                                                         |
| <b>Shipper Reference</b>                     | Reference value for the shipper to identify the calling system. Included for both ADSI and Standard Shipping Service. Up to 256 positions. Optional.                                                                                                                                                                                                                                                                                    |
| <b>Authentication Type</b>                   | Included only for the Standard Shipping Service. Possible authentication types are Basic and OAuth (default). The selected authentication type controls the additional fields described below. Required.                                                                                                                                                                                                                                |
| <b>OAuth URL</b>                             | The URL to use for authentication request messages for the Standard Shipping Service. Up to 256 positions. Included only for the Standard Shipping Service and when the Authentication Type is set to OAuth; in this case, required.                                                                                                                                                                                                    |
| <b>Scope</b>                                 | The scope to specify for authentication request messages for the Standard Shipping Service. Up to 256 positions. Included only for the Standard Shipping Service and when the Authentication Type is set to OAuth. Optional.                                                                                                                                                                                                            |
| <b>Client ID</b>                             | The client ID to use for authentication request messages for the Standard Shipping Service. Up to 256 positions. Included only for the Standard Shipping Service and when the Authentication Type is set to OAuth; in this case, required.                                                                                                                                                                                              |
| <b>Client Secret</b>                         | The client secret to use for authentication request messages for the Standard Shipping Service. Up to 256 positions. Included only for the Standard Shipping Service and when the Authentication Type is set to OAuth; in this case, required.                                                                                                                                                                                          |
| <b>User ID</b>                               | The user ID to authenticate request messages for the Standard Shipping Service. Up to 256 positions. Included only for the Standard Shipping Service and when the Authentication Type is set to Basic; in this case, required.                                                                                                                                                                                                          |

| Field                         | Description                                                                                                                                                                                                                                                            |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Password</b>               | The password to authenticate request messages for the Standard Shipping Service. Up to 256 positions. Included only for the Standard Shipping Service and when the Authentication Type is set to Basic; in this case, required.                                        |
| <b>Packaging Dimensions</b>   | The Package Dimensions fields are included for both ADSI and the Standard Shipping Service.                                                                                                                                                                            |
| <b>Length Unit of Measure</b> | Defines the length unit of measure to display in the Length, Width, and Height fields at the <b>Ship Order</b> screen in Store Connect. Possible settings are Inch and Centimeter for a Standard Shipping Service. Defaults to Inches. Cannot be changed for ADSI.     |
| <b>Weight Unit of Measure</b> | Defines the weight unit of measure to display in the Package Weight field at the <b>Ship Order</b> screen in Store Connect. Possible settings are Gram, Kilogram, and Pound (default) for a Standard Shipping Service. Defaults to Pounds. Cannot be changed for ADSI. |

## Organizations

**Purpose:** Use the **Organization** screen to work with the default organization, or to create or work with additional organizations.

**Setting preferences for an organization:** Use the [Organizations and Preferences](#) screen in Classic View to advance to the screens you use to work with Order Orchestration, Drop Ship, or Store Connect preferences.

**How to display this screen:** Select *Organizations* from the Modern View home screen. See the [Modern View Overview](#) for background.

### Note

Only users with *Organization and Preferences* authority can display this screen. See [Roles](#) for more information.

### Options at this screen

| Option                            | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Location Types

**Purpose:** Use this screen to work with the [location type](#) within an organization.

**What is a location type?** The location type describes one or more locations within a [organization](#). Each location type indicates the [location category](#) (store or warehouse), and can also provide additional information, such as “East Coast Stores” or “Outlet Stores.”

**Location relationships:** See [Organization, System, and Location](#) for an overview of the relationships among Order Orchestration elements, including location types.

**Created how?** You must create each location type within Order Orchestration. See [Setting Up Data for the Routing Engine Module](#) or [Setting Up Data for the Supplier Direct Fulfillment Module](#) for more information.

**Use in OCDS or Merchandising Omni Services imports:** When you configure your system to import data from [OCDS or Merchandising Omni Services](#), you need to specify the location types to apply when creating store and warehouse locations. See the [OCDS Integration tab](#) at the System screen for more information on configuration, and see [OCDS or Merchandising Omni Services Imports](#) for background.

### Note

Only users with *Location Types* authority can display this screen. See [Roles](#) for more information.

**Using an API to work with location types:** You can also use an API to create, update, review, count, or delete location types. See the Web Services Guide on My Oracle Support (2953017.1) for more information.

**How to display this screen:** Select *Location Types* from the Modern View home screen. See the [Modern View Overview](#) for background.

### Fields at the Location Type screen

| Field                            | Description                                                                                                                                                                                                               |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location Type Description</b> | The description of the location type. The name can be from 1 to 40 positions long and can include spaces and special characters.<br>Case-insensitive for searching; for example, an entry of O matches a name of Out let. |
| <b>Location Type Code</b>        | See <a href="#">location type</a> . The name can be from 1 to 10 positions long and can include spaces and special characters.<br>Case-sensitive for searching; for example, an entry of O does not match a type of OUT.  |
| <b>Category</b>                  | Either Store or Warehouse. See <a href="#">location category</a> .                                                                                                                                                        |

### Fields at the Add, Edit, or Display Location Type windows

| Field                            | Description                                                                                                                                                                                          |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location Type Description</b> | The description of the location type. The name can be from 1 to 40 positions long and can include spaces and special characters.<br>Required at the Add or Edit Location Type windows.               |
| <b>Location Type Code</b>        | See <a href="#">location type</a> . The name can be from 1 to 10 positions long and can include spaces and special characters.<br>Required at the Add Location Type window; otherwise, display-only. |
| <b>Category</b>                  | Either Store or Warehouse. See <a href="#">location category</a> .<br>Required at the Add or Edit Location Type windows.                                                                             |

## Order Reason Codes

**Purpose:** Use this screen to work with reason codes used by store associates or managers in Store Connect to:

- reject a delivery, ship-for-pickup, or pickup order, or a line on a delivery, ship-for-pickup, or pickup order
- cancel a pickup, ship-for-pickup, or delivery order, or a line on a pickup, ship-for-pickup, or delivery order

**Cancel or reject reasons:** Use the Cancel or Reject tabs at the top of the screen to work with either cancel reasons or reject reasons.

**Auto Cancel Reason:** You can also use this screen to create the [Auto Cancel Reason](#) to use when an unclaimed pickup or ship-for-pickup order is not picked up within a specified number of days. Note that you should not deactivate the *Auto Cancel Reason* code specified at the **Preferences** screen. See [Auto-Cancel Unclaimed Orders](#) for background.

**Using an API to work with order reason codes:** You can also use an API to create, update, review, count, or delete order reason codes. See the Web Services Guide on My Oracle Support (2953017.1) for more information.

**How to display this screen:** Select *Order Reason Codes* from the Modern View home screen. See the [Modern View Overview](#) for background.

 **Note**

Only users with *Order Reason Codes* authority can display this screen. See [Roles](#) for more information.

| Option                                               | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>switch between Cancel and Reject reason codes</b> | Use the <b>Cancel</b> and <b>Reject</b> tabs below the screen title to switch between the two types of order reason codes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Order Reason Code Description</b> | The description of the reason code. The description can be from 1 to 128 positions long and can include spaces and special characters.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Order Reason Code</b>             | <p>The name of the reason code. The name can be from 1 to 30 positions long and can include spaces and special characters.</p> <p>The code identifies a reason to:</p> <ul style="list-style-type: none"> <li>• reject a delivery, ship-for-pickup, or pickup order, or a line on a delivery, ship-for-pickup, or pickup order</li> <li>• cancel a delivery, ship-for-pickup, or pickup order, or a line on a delivery, ship-for-pickup, or pickup order</li> <li>• automatically cancel an unclaimed pickup or ship-for-pickup order, if the code is specified in the <i>Auto Cancel Reason</i> field at the <b>Preferences</b> screen.</li> </ul> <p>The code name can be from 1 to 30 positions long and can include spaces and special characters.</p> |
| <b>Active</b>                        | <p>Indicates whether the reason code is available for selection in Store Connect when an associate or manager is canceling or rejecting an order or line.</p> <p>Select <i>Yes</i> or <i>No</i> to display reason codes that match your selection.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

### Fields at the Add, Edit, or View Order Cancel or Order Reject Reason Code Windows

All fields are enterable at the **Create Order Reason Codes** window. All fields except the *Order Reason Code* are enterable at the **Edit Cancel Order Reason Code** or **Edit Reject Order Reason Code** window. All fields are display-only at the **View Cancel Order Reason Code** or **View Reject Order Reason Code** window.

| Field                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order Reason Code Description</b> | The description of the reason code. Can be up to 35 positions. Required when creating or editing a reason code.                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Order Reason Code</b>             | <p>The code identifying the reason to:</p> <ul style="list-style-type: none"> <li>• reject a delivery or pickup order, or a line on a delivery or pickup order</li> <li>• cancel a pickup or delivery order, or a line on a pickup or delivery order</li> <li>• automatically cancel an unclaimed pickup order, if <a href="#">Auto-Cancel Unclaimed Orders</a> is enabled</li> </ul> <p>Your entry can be up to 30 positions. Required when creating a new code; otherwise, display-only.</p> |

| Field  | Description                                                                                                                                                                                                                                                                                     |
|--------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Active | Indicates whether the reason code is available for selection by the store associate or manager when canceling or rejecting an order or line in Store Connect.<br><br>Note that you should not deactivate the <a href="#">Auto Cancel Reason</a> code specified at the <b>Preferences</b> screen |

## Roles

**Purpose:** Use the **Roles** screen to work with user roles that control:

- a [retailer user](#)'s access to screens and actions in Order Orchestration
- a [vendor user](#)'s access to screens in the [Vendor Portal](#) (available if Use Vendor Portal is selected at the [Tenant](#) screen)

**Admin user:** An [admin user](#) has authority to all screens and does not need role assignment.

**Making roles more or less specific:** You can assign each user to one or more roles; for example, you can set up one role to control access to products and another role to control access to order inquiry, and assign a user to both of these roles if needed. You can also set up a single role to control authority to all systems-related options so that you can assign all authority to administrative users more easily.

### Note

The ability of a [retailer user](#) to generate specific reports is not controlled by role. For example, if a retailer user has authority to generate reports, but does not have authority to drop ship options, the user can still generate drop ship reports.

**How to display this screen:** Select *Roles* from the Modern View home screen. See the [Modern View Overview](#) for background.

### Note

Only users with *Roles* authority can display this screen. See for more information.

### Options at this screen

| Option                   | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>search for a role</b> | <p>The existing roles are displayed. Use any combination of the fields at the top of the screen and tab through the search fields to restrict the search results to matching roles:</p> <ul style="list-style-type: none"> <li>Optionally, enter a full or partial role description in the <i>Role Description</i> field. When you tab through this field, the displayed organizations are limited to those whose descriptions start with your entry, but that don't need to match completely. For example, if your entry is 1, the roles with descriptions starting with 123 or 157 are displayed.</li> <li>Optionally, enter a full or partial code in the <i>Role Code</i> field. When you tab through this field, the displayed roles are limited to those whose codes start with your entry, but that don't need to match completely.</li> <li>Optionally, select a Role Type of Retailer or Vendor to display roles of the selected type.</li> </ul> <p>See <a href="#">Roles Screen Fields</a> for more details.</p> <p><b>Sort displayed roles:</b> You can also sort the displayed roles by clicking the up arrow (^) or down arrow next to each field title.</p> <p><b>View options:</b> Open the View Options drop-down menu to the right of the Actions menu to manage columns, change the sort of individual columns from ascending to descending or back, or remove the search fields above the columns. See <a href="#">How to use the View options in Modern View</a> for more information.</p> <p><b>Filter options:</b> Open the Filter Options drop-down menu to the right of the refresh icon (↺) to control whether the search results need to match all the search criteria entered for multiple columns. See <a href="#">How to use the Filter Options in Modern View</a> for more information.</p> <p><b>Clear filters:</b> Select <b>Clear Filters</b> to remove the criteria entered in the filter fields.</p> |

| Option            | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Option               | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>delete a role</b> | <ol style="list-style-type: none"> <li>1. Highlight a displayed role.</li> <li>2. Select <b>Delete</b> from the <i>Actions</i> menu or click the Delete icon (  ).</li> <li>3. Select <b>OK</b> or press enter at the <b>Confirm Deletion</b> window to delete the role.</li> </ol> <p><b>Note:</b> You can delete a role regardless of whether there are assigned users. When you delete the role, the role assignment is deleted for all currently assigned users.</p> |

### Roles Screen Fields

The fields available at the Roles screen are described below.

| Field                   | Description                                                                                                                                                                                                                                        |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Role Description</b> | The description of a role. Role names can be 1 to 40 positions in length. The name can include special characters and spaces.                                                                                                                      |
| <b>Role Code</b>        | The unique code identifying the role. Role codes can be from 1 to 20 positions in length and must be unique in Order Orchestration; however, you can create role codes that use the same letters with a different case, such as role01 and ROLE01. |
| <b>Role Type</b>        | Indicates whether the role can be assigned to <b>Retailer</b> user or a <b>Vendor</b> user.                                                                                                                                                        |
| <b>Menu Authorities</b> | Indicates the number of Menu Authority options are allowed for the role. See <a href="#">Menu Authority Fields</a> for a list of possible authority options.                                                                                       |

### Role Details Fields

These fields are displayed at the first tab when you are creating a new role, or when you are reviewing or updating an existing role.

#### Note

The words “Vendor Portal” are displayed next to the role name at the top of the screen if the *Vendor User Role* was selected when the role was created; otherwise, the words “Order Orchestration” next to the role name indicates that the role applies to retailer users.

| Field                   | Description                                                                                                                                                                                                                                                  |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Role Description</b> | The description of a role. Role names can be 1 to 40 positions in length. The name can include special characters and spaces. Required.                                                                                                                      |
| <b>Role Code</b>        | The unique code identifying the role. Role codes can be from 1 to 20 positions in length and must be unique in Order Orchestration; however, you can create role codes that use the same letters with a different case, such as role01 and ROLE01. Required. |

| Field                                      | Description                                                                                                                                                                                                                                                                                                                                                  |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Vendor User Role</b>                    | Select this flag when creating a role to indicate that the role will control authority to the Vendor Portal. Note that this flag is available only if the <a href="#">Use Vendor Portal</a> flag is selected at the Tenant screen for the current organization. When you select this flag, the <i>Default Vendor Role for Vendor User</i> flag is displayed. |
| <b>Default Vendor Role for Vendor User</b> | Select this flag to indicate that the role is the default to assign to vendor users. Displayed only if the <i>Vendor User Role</i> flag is selected.                                                                                                                                                                                                         |

### Menu Authority Fields

The Feature/Menu authority fields are displayed at the second tab when you are creating a new role, or by selecting Menu Authority when you are updating or reviewing an existing role. Note that different features and menus are displayed depending on whether you are working with a retailer role or a vendor role.

#### Note

The words “Vendor Portal” are displayed next to the role name at the top of the screen if the *Vendor User Role* was selected when the role was created; otherwise, the words “Order Orchestration” next to the role name indicates that the role applies to retailer users.

**Menu Authority Title:** The number of allowed options is displayed next to the Menu Authority title, for example: Menu Authority (20).

| Type of Secured Feature                                           | Feature Description                                                                                                                    | Controls Access To Screen or Window and Subsequent Screens and Windows:                                                                                                                                                                                                                                |
|-------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Eligible or Allowed User Authority: Retailer Roles Inquiry</b> | Retailer features listed below are available if the <i>Vendor User Role</i> flag is not selected for the role at the Role Details tab. |                                                                                                                                                                                                                                                                                                        |
|                                                                   | Invoice Inquiry                                                                                                                        | <a href="#">Invoice Inquiry</a>                                                                                                                                                                                                                                                                        |
|                                                                   | Invoice Maintenance                                                                                                                    | <a href="#">Approve Invoice</a> and <a href="#">Reject Invoice</a><br><b>Note:</b> Authority to Invoice Inquiry is also required for a user to advance to the <a href="#">Invoice</a> screen via the <a href="#">Invoice Inquiry</a> screen.                                                           |
|                                                                   | Order Inquiry                                                                                                                          | <a href="#">Order Inquiry</a>                                                                                                                                                                                                                                                                          |

### Assigned User Fields

The Assigned User fields are displayed at the third tab when you are creating a new role, or by selecting Assigned Users when you are updating or reviewing an existing role.

**Note**

- This tab not available for a vendor role.
- The words “Order Orchestration” next to the role name indicates that the role applies to retailer users.

**Assigned Users Title:** The number of assigned users is displayed next to the Assigned Users title, for example: Assigned Users (257). This total is updated after you save your selections by clicking Done.

This tab includes the following fields:

- **User ID:** A unique ID to identify a user. The user ID is always lowercase. Display-only; however, optionally, you can search based on user ID by entering a full or partial ID to display user IDs that contain your entry.
- **Name:** The user’s name. Display-only.  
If the user’s name has been [anonymized](#), it is displayed as 3 asterisks (\*\*\*).
- **Allow:**
  - When creating or updating: Optionally, use this flag to assign the role to the user or to remove.
  - When displaying: Set to Yes if the user has authority to the role; otherwise, set to No.

**Delivered Roles**

**Delivered retailer user roles:** The following retailer roles are delivered with Order Orchestration:

- *System Administration:* Includes authority to all available menu options.
- *System Configuration:* Includes authority to:
  - Inquiry (orders): All authority included.
  - Locations: All authority included.
  - Products: All authority included.
  - Reports: All authority included.Authority to Systems options and Foundation Data options are not included with this role.
- *Order Maintenance:* Includes authority to the Order Inquiry and Order Maintenance. Also, includes authority to run and view all reports.
- *Order Inquiry:* Includes authority to the Order Inquiry and authority to run and view all reports.
- *Drop Ship Coordinator:* Includes authority to:
  - Inquiry: Purchase Order Inquiry, Invoice Inquiry, and Invoice Maintenance.
  - Foundation Data: Boxes, Brands, Carriers, and Organizations and Preferences.
  - Products: Products. Additional *Products* authority (Probable Quantity Location, Probable Quantity Rules, Probability Location, and Probability Rules) is not delivered.
  - Locations: Vendors.
  - Reports: Run, View, and Schedule Reports.

- Systems: Vendor User Profiles.

**Delivered vendor user role:** The default vendor role, identified by the *Default Vendor Role for Vendor User* flag, controls the authority to assign when creating new vendor users. Delivered with Order Orchestration.

## Users

**Purpose:** Use the **Users** screen to review or update users, including updates to:

- name, locale, or email address
- role assignment
- organization assignment
- access to Store Connect, and Store Connect location assignment

**Users anonymized?** If a user has been [anonymized](#), asterisks are displayed as the user's name and email address.

Anonymized users can still log into Order Orchestration or Store Connect and retain their current authority unless they are deactivated.

See [Anonymizing Data](#) for background.

**Vendor user profiles:** See the [Vendor User Profiles](#) screen for information on working with vendor user profiles that control authority to the Vendor Portal.

**Web service users:** See the [Web Service Authorization](#) screen for information on working with user profiles used for web service authentication.

**Creating users:** See [Import users from IDCS or OCI IAM](#).

**Store Connect enabled?** Options related to Store Connect are available only if [Use Store Connect](#) is selected at the Tenant screen.

**How to display this screen:** Select *Users* from the Modern View home screen. See the [Modern View Overview](#) for background.

### Note

Only users with *Users* authority can display this screen. See [Roles](#) for more information.

Select <b>Edit</b> from the <i>Actions</i> menu or click the Edit icon (  ) to advance to the <b>User Details</b> tab for the selected user. Note that the user's name and access (Order Orchestration, Store Connect, or both) are indicated in the screen title.</li> <li>3. <i>Update User Details fields:</i> Optionally, change the <i>Locale</i>, <i>Name</i>, <i>Email Address</i>, or <i>Active</i> flag setting.<br/> <b>Deactivate user?</b> Note that clearing the <i>Active</i> flag setting will disable the user from Order Orchestration or Store Connect. If someone attempts to log in using an inactive user ID, the login screen displays an error: <b>Log in failed</b>.<br/> See <a href="#">User Details Fields</a>, below, for details on fields at this tab.</li> <li>4. <i>Update assigned roles:</i> Advance to the <b>Roles</b> tab by selecting the <i>Roles</i> title at the top of the screen.<br/> Optionally, enter a full or partial Role description in the filter field above the list of roles to filter the displayed retailer roles.<br/> Optionally, use the <i>Enable Role</i> flag to enable or disable a role for the user.<br/> See <a href="#">Roles Fields</a>, below, for details on fields at this tab.<br/> Note that the <a href="#">admin user</a> automatically has all authority, so does not require role assignment.</li> <li>5. <i>Update assigned organizations:</i> Advance to the <b>Organizations</b> tab by selecting the <i>Organizations</i> title at the top of the screen.<br/> Optionally, enter a full or partial organization description in the filter field above the list of organizations to filter the displayed organizations.<br/> Optionally, use the <i>Allow</i> flag to enable or disable access to an organization for the user. A user can have access to multiple locations.<br/> Optionally, use the <i>Default Organization</i> flag to select the default organization for the user. When the user advances to Modern View, this organization is displayed at the top of the screen. Also, data for this organization, such as orders, products, and locations, is displayed by default for the user in Classic View. Note that selecting a default organization deselects the current default organization for the user.<br/> If the user has access to only one organization, it is automatically set as the default.<br/> See <a href="#">Organizations Fields</a>, below, for details on fields at this tab and possible updates.</li> <li>6. <i>Update Store Connect locations:</i> If Store Connect is enabled, advance to the <b>Store Connect</b> tab by selecting the <i>Store Connect</i> title at the top of the screen.<br/> <b>Note:</b> If you assign a Store Connect location to a user that did not previously have Store Connect access, this access is added to the user.</li> </ol> |

| Option               | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

Select <b>OK</b> or press enter at the <b>Confirm Deletion</b> window to delete the user.</li> </ol> <p>You cannot delete the default user. Also, deleting a user record here does not delete the user from IDCS or OCI IAM. See <a href="#">Identity Cloud User Synchronization</a> for more information.</p>                                                                                                                                                                                                                                                                                                 |

### Users Screen Fields

| Field   | Description                                                                                                                                                                                                                                                                                          |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| User ID | A unique ID to identify a user. The user ID can be up to 255 positions in length. The user ID is always lowercase. Case-insensitive for searching.                                                                                                                                                   |
| Name    | <p>The user's name. Names can be up to 255 positions in length. If a user has been <a href="#">anonymized</a>, asterisks are displayed as the user's name. In this case, you can't search by name.</p> <p>Case-insensitive for searching; for example, an entry of j matches both John and john.</p> |

|               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Active</b> | <p>Use this flag to filter search results based on whether the users can currently log into Order Orchestration or Store Connect, or both, depending on the user's access. Select:</p> <ul style="list-style-type: none"> <li>• Yes to display users who can log into Order Orchestration or Store Connect</li> <li>• No to display users who can't log into Order Orchestration or Store Connect</li> </ul> <p>If someone attempts to log in using a deactivated user ID, the login screen displays an error: <b>Log in failed</b>.</p> |
| <b>Access</b> | Indicates whether the user is configured for access to Order Orchestration, Store Connect, both, or neither.                                                                                                                                                                                                                                                                                                                                                                                                                             |

### User Details Fields

These fields are displayed at the first tab when you are reviewing or updating a user. Use this tab to review or update basic information about the user.

| Field                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>User ID</b>       | A unique ID to identify a user. The user ID can be up to 255 positions in length. Always lowercase. The user ID is always lowercase. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Locale</b>        | <p>Controls the date, time, or number formats displayed on screens. Note that the language displayed on screens is defined by the locale appended to the URL (for example, ?<br/>locale=fr).</p> <p>See <a href="#">Valid Locales and Associated Data Formats</a> for a list of valid locales. Defaults to the locale assigned to the Order Orchestration or Store Connect user in IDCS or OCI IAM if the locale matches an existing locale in Order Orchestration. If a supported locale is not assigned to the user in IDCS or OCI IAM, Order Orchestration assigns a locale of English-United States (en_US) when a user is first created.</p> <p>Required.</p> |
| <b>Name</b>          | <p>The user's name. Names can be up to 255 positions in length. Note that changes to the user's name here apply only in Order Orchestration, including Store Connect, only, but do not affect any other applications to which the user has access.</p> <p><b>Users anonymized?</b> If a user has been <a href="#">anonymized</a>, asterisks are displayed as the user's name.</p> <p>Anonymized users can still log into Order Orchestration or Store Connect and retain their current authority unless they are deactivated.</p>                                                                                                                                  |
| <b>Email Address</b> | <p>Must be in the format of name@host.ext. You cannot enter more than one email address. Depending on your selections at the <a href="#">Event Logging</a> screen, Order Orchestration might generate an email to this email address if the user uploads proximity data; see that screen for more information. Note that changes to the user's email address here apply only in Order Orchestration, including Store Connect, only, but do not affect any other applications to which the user has access. Asterisks are displayed if the user has been <a href="#">anonymized</a>. Optional.</p>                                                                  |

|               |                                                                                                                                                                                                                                                |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Active</b> | Indicates whether the user can log into Order Orchestration or Store Connect, depending on their configuration.<br>If someone attempts to log in using a deactivated user ID, the login screen displays an error: <code>Log in failed</code> . |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### Roles Fields

These fields are displayed at the second tab when you are reviewing or updating a user. Use this tab to review or update the roles assigned to the user.

If you add a new role assignment to a user who was not previously flagged for Order Orchestration access, this access is automatically assigned, generating a request to add the OBCS\_User role in IDCS or OCI IAM; see [Identity Cloud User Synchronization](#) for background. Note, however, that removing assignment from a user does not remove Order Orchestration access.

| Field                   | Description                                                                                                                                                                                                                                                         |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Role</b>             | The description of a role. Role names can be 1 to 40 positions in length. See <a href="#">Roles</a> for more information on roles. Optionally, enter a full or partial role description in the search field to display roles whose descriptions contain your entry. |
| <b>Role Type</b>        | Set to <b>Retailer</b> .                                                                                                                                                                                                                                            |
| <b>Menu Authorities</b> | Indicates the number of Menu Authority options that are allowed for the role. See <a href="#">Menu Authority Fields</a> for a list of possible authority options.                                                                                                   |
| <b>Enable Role</b>      | Optionally, select this flag to provide the role authority to the user.<br>Note that the <a href="#">admin user</a> automatically has all authority, so does not require role assignment.                                                                           |

### Organizations Fields

These fields are displayed at the third tab when you are viewing or updating a user. Use this tab to review or update the organizations assigned to the user.

**No organizations allowed?** The tab indicates if the user is not currently assigned to an organization. Even if the user is flagged as Active, assignment to an organization is required to use Order Orchestration or Store Connect.

| Field                           | Description                                                                                                                                                                                            |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization Description</b> | The description of the organization.<br>Optionally, enter a full or partial organization description in the search field above the descriptions to display organizations that contain with your entry. |
| <b>Organization Code</b>        | The code identifying the <a href="#">organization</a> .                                                                                                                                                |

| Field                       | Description                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Allow</b>                | Select this flag for an organization to provide the user with access to the organization. A user can have access to multiple organizations.                                                                                                                                                                                                                                                |
| <b>Default Organization</b> | Use the <i>Default Organization</i> flag to select the default organization for the user. This change is effective the next time the user logs in. When the user advances to Modern View, this organization is displayed at the top of the screen. In addition, data for this organization, such as orders, products, and locations, is displayed by default for the user in Classic View. |

 **Note**

Once a default organization is saved for a user, it can be switched but it cannot be unselected.

### Store Connect Fields

These fields are displayed at this tab when you are viewing or updating a user. Use this tab to review or update the organization, and the Store Connect locations for the organization where the user can log in. Note:

- If you change the organization assignment for a user who was previously assigned to one or more Store Connect locations, all locations previously assigned to the user in the previous organization are cleared.
- If you add a new organization and location assignment to a user who was not previously flagged for Store Connect access, Store Connect access is automatically assigned, generating a request to add the OBCS\_Store\_User role in IDCS or OCI IAM; see [Identity Cloud User Synchronization](#) for background. Note, however, that removing assignment from a user does not remove Store Connect access. Also, note that a user can be associated with only one Store Connect system.
- An alert icon  indicates if no store locations are assigned to the user, regardless of whether the user is flagged for Store Connect access, and the tab displays a message indicating that no Store Connect locations have been assigned.
- This tab is displayed only if [Use Store Connect](#) is selected at the Tenant screen.
- No locations are listed if you have not yet defined locations for the Store Connect system in the organization.

| Field               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization</b> | <p>The organization that includes the Store Connect locations where the user has access. Select a new organization from the drop-down if you are assigning store locations to the user for the first time. Optionally, select a different organization if you need to remove any previously assigned locations for the user and instead assign the user to locations in a different organization.</p> <p>The locations displayed below are those associated with the selected organization. See the <a href="#">New Location</a> screen for details on the following fields.</p> |

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Location</b>       | <p>A location that the user can log into when using Store Connect. Displayed as 123 — Sample Location, where 123 is the location code and Sample Code is the location name.</p> <p>Note that if the <a href="#">default unfulfillable location</a> is listed, you should not assign it to a Store Connect user.</p> <p>Optionally, you can use the search field above the list of locations to restrict the displayed locations to those whose names contain your entry.</p> |
| <b>City</b>           | The city where the location is located.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>State/Province</b> | The state or province where the location is located.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Postal Code</b>    | The postal or zip code of the location's address.                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Region</b>         | The region defined for the location. Informational.                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Allow</b>          | Select this flag for a location to provide the Store Connect user with access to the location. A Store Connect user can have access to multiple locations.                                                                                                                                                                                                                                                                                                                   |

# 7

## Home Screen

**Purpose:** The home screen is the first screen that opens in Order Orchestration. From this screen, you can select the screens and windows listed below.

**Modern View:** See the [Modern View Overview](#) for information on advancing to Modern View and a list of the options available.

### Orders Menu:

- [Order Inquiry](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Trace Shopping Log](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Order](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
    - \* [System Products](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
    - \* [Browse Order Item](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
    - \* [Edit Order Item](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
    - \* [Order History Detail - Address Change Window](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- [Purchase Order Inquiry](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [Purchase Order](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Browse Detail Customizations](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Browse Purchase Order Detail Messages](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Display Purchase Order Item](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Purchase Order History Detail](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
- [Invoice Inquiry](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [Invoice](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Browse Invoice Detail](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Approve Invoice](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.

Products Menu: Used by the Routing Engine module.

### **Note**

Screens indicated with an asterisk (\*) are available from the *Products* dropdown menu but not from the *Products* area of the home screen.

- [Products](#)
  - [New Product](#)
  - [Edit Product](#)
  - [System Products](#)
    - \* [Edit System Product](#)
  - [Product Locations](#)
    - \* [New Product Location](#)
    - \* [Browse Product Locations](#)
    - \* [Edit Product Location](#)
  - [Product Attributes](#): Used for the Routing Engine module.
    - \* [New Product Attribute](#): Used for the Routing Engine module.
    - \* [Edit Product Attribute](#): Used for the Routing Engine module.
- [Probability Rules](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Calculations](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Probability Rule Wizard](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- [Probability Location](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- 
- \*[Probable Quantity Rules](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - \*[New Probable Quantity Rule](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - \*[Edit Probable Quantity Rule](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- \*[Probable Quantity Location](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.

[Locations Menu:](#)

**Note**

Screens indicated with an asterisk (\*) are available from the *Locations* drop-down menu but not from the *Locations* area of the home screen.

- [Organizations and Preferences](#)
  - [Preferences](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Drop Ship Preferences](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [Store Connect Preferences](#): Available if Use Store Connect is selected at the [Tenant](#) screen.
- \*[Order Orchestration Preference Overrides](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.

- \*[Edit Order Orchestration Preference Override](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- \*[Browse Order Orchestration Preference Override](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- [Locations](#)
  - [New Location](#)
  - [Edit Location](#)
  - [Location Attributes](#): Used for the Routing Engine module.
    - \* [New Location Attribute](#): Used for the Routing Engine module.
    - \* [Edit Location Attribute](#): Used for the Routing Engine module.
- [Location Bulk Updates](#): Used for the Routing Engine module.
- [Fulfillment Zones](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Fulfillment Zone Wizard](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Browse Fulfillment Zones](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- [Vendors](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [New Vendor](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [Edit Vendor](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.

[Reports Menu](#):

- [Run Reports](#)
- [Schedule Reports](#)
  - [Schedule Report](#)
- [View Reports](#)
  - Used for the Routing Engine module:
    - \* [Location Import Errors Report](#)
    - \* [Order Status Report](#)
    - \* [Product Barcode Import Errors Report](#)
    - \* [Product Import Errors Report](#)
    - \* [Unfulfillable Report](#)
    - \* [Zone List Report](#)
  - Used for the Supplier Direct Fulfillment module:
    - \* [Invoice Detail Report](#).
    - \* [PO Item Status Report](#)
    - \* [Vendor Aging Detail Report](#)
    - \* [Vendor Aging Summary Report](#)

**Note**

Screens indicated with an asterisk (\*) are available from the *Systems* dropdown menu but not from the *Systems* area of the home screen.

Systems Menu:

- [\\*View Active Schedules](#)
  - [Auto Cancel Unclaimed Pickup Orders History](#)
  - [Browse Active Schedules](#)
  - [Completed Order Private Data Purge History](#)
  - [Daily Clean Up Job History](#)
  - [Email Notifications Job History](#)
  - [Fulfilled Inventory Export History](#)
  - [Identity Cloud User Synchronization History](#)
  - [Incremental Imports History](#)
  - [Inventory Quantity Export History](#)
  - [Sales Order Data Extract Job History](#)
  - [Product Imports History](#)
- [\\*View Job History](#)
- [\\*Schedule Jobs](#)

For more information on imports:

[About Order Orchestration](#)

# 8

## Orders Menu

- [Order Inquiry](#): Used for the Routing Engine module. Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Trace Shopping Log](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
  - [Order](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
    - \* [System Products](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
    - \* [Browse Order Item](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
    - \* [Edit Order Item](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- [Purchase Order Inquiry](#): Used for the Supplier Direct Fulfillment module. Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [Purchase Order](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Browse Detail Customizations](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Browse Purchase Order Detail Messages](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Display Purchase Order Item](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Purchase Order History Detail](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
- [Invoice Inquiry](#): Used for the Supplier Direct Fulfillment module. Available if Use Vendor Portal is selected at the [Tenant](#) screen.
  - [Invoice](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Browse Invoice Detail](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Approve Invoice](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.
    - \* [Reject Invoice](#): Available if Use Vendor Portal is selected at the [Tenant](#) screen.

## Order Inquiry

**Purpose:** Use the **Order Inquiry** screen to search for and review Order Orchestration orders sent from an integrated system, such as Xstore or Order Administration, for fulfillment by another integrated system.

Used for the Routing Engine module.

**How to display this screen:** Select *Order Inquiry* from the [Home Screen](#) or the [Orders Menu](#).

 **Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. This screen is accessible to users with *Order Inquiry* authority. See [Roles](#) for more information.

**How to display orders on this screen**

When you first advance to the **Order Inquiry** screen, your Default Organization defined through the [Users](#) screen is selected by default, but no orders are displayed. Click *Search* to retrieve the last 50 orders in your organization, or select additional search criteria.

**Sort order:** The orders are sorted based on [Request ID](#). The Request ID is a unique number assigned by the Routing Engine when an integrated system assigns an order or order line to Order Orchestration for fulfillment.

**How to view order updates?** Click *Search* to refresh the screen.

 **Note**

This screen functions only after you have created at least one order in Order Orchestration.

**Customer name anonymized?** If the customer data on an order has been [anonymized](#) (deleted and replaced with asterisks), the customer name is displayed as:

\*\*\* \*\*

\*\*\*

In this case, searching by customer name or company name is not supported.

An order is eligible to be anonymized only if it is no longer open.

See [Anonymizing Data](#) for background.

**Options at this screen**

| Option            | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| search for orders | <p>When you first advance to this screen, no orders are displayed and your Default Organization defined through the <a href="#">Users</a> screen is selected by default. Use any combination of the fields at the top of the screen to restrict the search results.</p> <p><b>Case?</b> All the enterable fields on this screen are case-insensitive for searching; for example, an entry of a or A matches a name of Adams.</p> |

| Option                                                                                                   | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>review the reasons why the Routing Engine eliminated individual locations from sourcing the order</b> | <p>Click the <i>Trace Log</i> icon () to advance to the <a href="#">Trace Shopping Log</a> screen, where you can review the reasons why the Routing Engine filtered each possible location from sourcing the order.</p> <ul style="list-style-type: none"> <li>The Routing Engine traces shopping logic only if the <a href="#">Trace Shopping Logic</a> field is set to <i>Detailed</i> at the <b>Event Logging</b> screen. Typically, you would select to trace shopping logic only to research why certain locations are or aren't selected to fulfill orders.</li> <li>These history records are retained only for the number of Trace Log History days specified at the <a href="#">Tenant-Admin</a> screen; after that number of days, the <a href="#">daily cleanup job</a> automatically deletes the records.</li> <li>If the <a href="#">Trace Shopping Logic</a> screen is already open in another tab, you advance to that screen, where the previously-selected order is displayed.</li> </ul> |
| <b>view order details or update an order</b>                                                             | <p>Click the <i>Edit/Display</i> icon () to advance to the <a href="#">Order</a> screen, where you can view order details and history or update an order if you have <i>Order Maintenance</i> authority.</p> <p><b>Note:</b> If the <a href="#">Order</a> screen is already open in another tab, you advance to that screen, where the previously-selected order is displayed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

#### Fields at this screen

| Fields                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search fields</b>   | <b>Case?</b> All the enterable fields on this screen support case-insensitive searching; for example, an entry of a or A matches a name of Adams.                                                                                                                                                                                                                                                                                                                 |
| <b>Organization</b>    | See <a href="#">organization</a> . From the <i>Default Organization</i> defined through the <a href="#">Users</a> screen, but you can override it.                                                                                                                                                                                                                                                                                                                |
| <b>Request ID</b>      | <p>A unique number to identify the order within Order Orchestration. Assigned by the Routing Engine when it creates the order. Depending on your integration and the type of order, each individual order line might create a separate order in Order Orchestration, or might be included with other lines from the originating order in the external system.</p> <p><b>Note:</b> The numbers might not always be in sequential order.</p>                        |
| <b>Order Number</b>    | <p>The number or code identifying the order in the originating system. From the order <code>id</code> passed in the <a href="#">submit order message</a>. Can be up to 30 positions.</p> <p><b>Case:</b> If the originating system includes any lowercase letters in the order number, Order Orchestration converts them to uppercase when creating the order.</p> <p>Not case-sensitive for searching; an entry of A or a matches an order number of A12345.</p> |
| <b>Placed Location</b> | The location where the order originated; see <a href="#">placed location</a> for a discussion.                                                                                                                                                                                                                                                                                                                                                                    |

| Fields                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sourced Location</b> | <p>The location supplying the inventory for a <a href="#">ship-for-pickup order</a>.</p> <p><b>Multiple locations?</b> If an order includes lines assigned to multiple sourcing locations, searching based on a sourcing location produces a list of orders that include lines assigned to the specified location.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Pickup Location</b>  | The location where the customer picks up a <a href="#">pickup order</a> or <a href="#">ship-for-pickup order</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Date Ordered</b>     | The transaction date passed in the <a href="#">submit order message</a> . Might not be the same as the date when the order was created.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Order Status</b>     | <p>The order-level status, which can be different from the various line-level statuses if the Allow Split Order preference is selected. See <a href="#">Order and Line Statuses</a>.</p> <p><b>Under Review?</b> The words Under Review follow the order status in parentheses if the order's <a href="#">Under Review</a> flag is selected. You might need to adjust the column widths to display these words.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Order Type</b>       | <p>Possible order types are:</p> <ul style="list-style-type: none"> <li>• <i>Delivery</i> = The order is shipped to the customer from the fulfilling location. See <a href="#">Delivery Order</a> for a discussion.</li> <li>• <i>Pickup</i> = The customer goes to the fulfilling location, where the merchandise is already in stock, to pick up the order. See <a href="#">Pickup Order</a> for a discussion.</li> <li>• <i>Ship For Pickup</i> = The customer wants to pick up the order in a store location, and the inventory can be sourced from a location that differs from the pickup location and the originating location.</li> </ul> <p><b>Customer name anonymized?</b> If the customer data on an order has been <a href="#">anonymized</a> (deleted and replaced with asterisks), searching by the original company name, first name, or last name is not supported. See <a href="#">Anonymizing Data</a> for background.</p> |
| <b>Company Name</b>     | <p>The sold-to customer's company name, if it was passed in the <a href="#">submit order message</a>.</p> <p>Not case-sensitive for searching; an entry of A or a matches a company name of Acme.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## Trace Shopping Log

**Purpose:** Use the **Trace Shopping Log** screen to view the existing product locations that the [Routing Engine](#) considered for placement of an order or line for sourcing, and the reason why each location was filtered from selection.

**Simple trace example:** A simple shopping logic trace for a product with four product location records might include the Routing Engine evaluating the locations as follows:

1. Initial list: The Routing Engine identifies each of the four product location for the requested item.
2. The Routing Engine filters out location A because it does not support the order type, based on the *Fulfillment* settings at the **Preferences** screen.
3. The Routing Engine filters out location B because it does not have sufficient inventory of the requested item(s).
4. The Routing Engine filters out location C because it is the requesting location.

The shopping trace entries displayed for the order might include:

- First, all product locations that for the product:
  - Initial List / Location A
  - Initial List / Location B
  - Initial List / Location C
  - Initial List / Location D
- Next, location A is filtered because it does not support the order type, for example:

- Does not support Order Type / Location A
- Next, location B is filtered because it does not have sufficient inventory, for example:
  - Location has insufficient inventory / Location B
- Next, location C is filtered because it was the requesting location, for example:
  - Requesting Location / Location C

Location D is selected for the order; however, there is no entry at the *Trace Shopping Log* screen for the selected location. You can review the selected location at the [Order](#) screen.

See *Trace Log Elimination Reasons*, below, for a list of possible reasons why the Routing Engine might filter out a location.

**When the Routing Engine takes multiple passes through possible locations:** There are situations when the Routing Engine evaluates potential locations more than once and writes trace records for filtering a location each time, although one or more of the locations might ultimately be selected to fulfill or source the order.

- **If order must be split and split order is supported:** For example, an order includes two items. The Routing Engine first looks for a single location that can fulfill both order lines, but does not find a single location for both. Then, if splitting orders is selected, the Routing Engine checks whether the order can be fulfilled by splitting the lines across location A and location B.

In this type of scenario, a shopping trace entry might first indicate a reason that location A and location B are filtered; however, these two locations are ultimately selected in a subsequent pass.

- **If zone fulfillment is in use:** For example, the shipping address is within a fulfillment zone that includes both primary and alternate locations. The Routing Engine first evaluates the primary locations but does not find one or more primary locations that can fulfill the order. The Routing Engine then evaluates the alternate locations. If the order cannot be fulfilled in one or more alternate locations, the Routing Engine then evaluates whether the order can be fulfilled by splitting across any primary and alternate locations.

In these scenarios, a trace log can indicate a reason for filtering a location, although the location might ultimately be selected in a subsequent pass. For example, location A and location B are eliminated separately in the first pass, but are ultimately selected to fulfill individual order lines in a subsequent pass.

#### Note

The Routing Engine evaluates multiple locations only if your organization supports [splitting orders](#).

**Demonstrates filtering rather than selection:** Use the **Trace Shopping Log** screen to determine how locations are filtered from shopping, rather than how the remaining eligible locations are selected. Once the Routing Engine has determined the remaining locations after ineligible locations are filtered, the Routing Engine or the [Science Engine](#) selects the sourcing location based on the *Standard Brokering* or *Weighted Brokering* settings at the **Preferences** screen.

**Enabling shopping logic tracing:** Shopping log records are created only when [Trace Shopping Logic](#) at the **Event Logging** screen is set to *Detailed*.

**Note**

Oracle recommends that you turn on shopping logic tracing to research questions related to how the Routing Engine is selected locations, but to otherwise keep tracing turned off in order to enhance system performance.

**Shopping logic records created when?** You can use trace shopping log records to track how the Routing Engine eliminates potential locations for sourcing a delivery or ship-for-pickup order after:

- A [submit order message](#) is received.
- A [status update](#) request is received, rejected the order or line.
- A store associate rejects the order or line in Store Connect.
- You change the status of an order to rejected through the [Order](#) screen, if splitting orders is not enabled.
- You change the status of an order line to rejected through the [Edit Order Item](#) window, if splitting orders is enabled.

The above scenarios related to rejecting an order line include the possibility of rejecting a partial quantity of the line if the Allow Partial Updates preference is selected.

**Not created?** Trace log records are not created when:

- The Routing Engine or the Science Engine selects the sourcing location. The screen displays only reasons for eliminating a location, not reasons for selecting a location.
- There are no product locations for the item.
- The pickup location rejects a pickup or ship-for-pickup order.
- You select a different location at the **Order** screen or the **Edit Order Item** window.
- A [locate items](#) or [product availability search](#) request is received.
- The order or line is put in Unfulfillable status because the Search Retries specified at the **Preferences** screen has been met.

**Purging trace log records:** The [daily cleanup job](#) purges trace log records for closed, completed, canceled, and unfulfillable orders when the shopping date is older than number of days specified in the Trace Log History setting at the [Tenant-Admin](#) screen.

Used for the Routing Engine module.

**How to display this screen:** Click the Trace Log icon () at the [Order Inquiry](#) screen. Available if Use Routing Engine is selected at the [Tenant](#) screen, regardless of whether Trace Shopping Logic is currently enabled.

**Note**

If the **Trace Shopping Log** screen was already open in another tab when you clicked the edit/display icon, you advance to this screen with the previously-selected order data displayed.

| <b>Available Qty</b>                                                                                                                                                                                                                                                                                                                                                                                                                            | The <a href="#">available to promise quantity</a> of the item in the location at the time when the shopping took place. |
| <b>Date/Time</b>                                                                                                                                                                                                                                                                                                                                                                                                                                | The date and time when the shopping took place.                                                                         |

### Trace Log Elimination Reasons

The following table lists possible reasons why a potential sourcing location was filtered from eligibility.

| Reason                                      | Description (Reason Why Location was Filtered from Eligibility)                                                                                                                  |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Disallow shopping within same System</b> | The Disallow shopping within same system flag was selected at the <a href="#">System</a> screen, and the location is associated with the same system as the requesting location. |
| <b>Does not support Order Type</b>          | The location was not eligible to fulfill the order based on the <i>Fulfillment</i> settings at the <a href="#">Preferences</a> screen.                                           |
| <b>Does not support Sourcing orders</b>     | Ship-for-pickup orders are supported, and the location was not eligible to source the order based on the <i>Fulfillment</i> settings at the <a href="#">Preferences</a> screen.  |

| Reason                                                                                            | Description (Reason Why Location was Filtered from Eligibility)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Initial list</b>                                                                               | <p>The location was included in the initial list of potential locations for the Trace Type because there was a product location record. Initial list trace records are listed before the subsequent trace records indicating why each location is eliminated from eligibility.</p> <p><b>If no availability?</b> If you use <a href="#">standard brokering</a>, only product locations with an <a href="#">available to promise quantity</a>, or that are flagged as Backorder Available at the <b>Preferences</b> screen, are included in the initial list. Otherwise, if you use <a href="#">weighted brokering</a>, product locations with no availability are included in the initial list, but then eliminated afterward with the <a href="#">Zero Availability</a> reason.</p> |
| <b>Location at Maximum Daily Order Count</b>                                                      | <p>Use Maximum Order Limits was selected at the <a href="#">Preferences</a> screen, and the location was filtered because it had already met the <a href="#">Maximum Daily Orders</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Location cannot be fulfilled from Alternate Search Locations for Zone</b>                      | <p><a href="#">Fulfillment Zones</a> were in use and the location was not assigned as an alternate location to the zone for the shipping address.</p> <p>In this case, the fulfillment zone name is indicated as the <i>Reason Value</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Un-Requested Location</b>                                            | A different location was specified as the fulfilling or sourcing location for the order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Zero Availability</b>                                                | <p>Exclude Locations with Zero Availability was selected at the <a href="#">Preferences</a> screen, and the location was filtered because the <a href="#">available to promise quantity</a> for the product in the location is zero or less and the location does not allow backorders.</p> <p><b>Note:</b> This reason can apply only when <a href="#">weighted brokering</a> is in use.</p>                                                                                                                                                                                                                                                                                                                                                                                   |

# Order

**Purpose:** Use the **Order** screen to view the details and activity of an order, or update the order's status, or sourcing location, if you do not split orders (If you do split orders, you can use the [Edit Order Item](#) window to update an item's status, or sourcing location). This screen is accessible to users with *Order Inquiry* authority; however, all fields are display-only if the user does not have *Order Maintenance* authority. See [Roles](#) for more information.

Used for the Routing Engine module.

**Customer name anonymized?** If the customer data on an order has been [anonymized](#) (deleted and replaced with asterisks), the customer name is displayed as:

Addresses

\*\*\*\*  
\*\*\*\*  
\*\*\*\* \*  
\*\*\*\*  
Day: \*\*\*  
Eve: \*\*\*  
\*\*\*\*

See [Anonymizing Data](#) for background.

**How to display this screen:** Click the edit/display icon (  ) at the [Order Inquiry](#) screen. Available if Use Routing Engine is selected at the [Tenant](#) screen.

 **Note**

If the **Order** screen was already open in another tab when you clicked the edit/display icon, you advance to this screen with the previously-selected order displayed.

|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Maintaining an order | <p><b>Authority to maintain an order:</b> You can update an order as described below if you have <i>Order Maintenance</i> authority. See <a href="#">Roles</a> for more information.</p> <p><b>Maintenance at the order level or at the line level?</b> If the Allow Split Order preference for an organization is:</p> <ul style="list-style-type: none"><li>• <i>Unselected:</i> an order’s status, and fulfilling location or sourced location, are set at the order level.</li><li>• <i>Selected:</i> an order’s status, and fulfilling location or sourced location, are set at the line level.</li></ul> |

 **Important**

When you have *Order Maintenance* authority and the Allow Split Order preference is selected, you use the [Edit Order Item](#) window, rather than the *Order* screen, to maintain an order line’s status or sourcing location.

**Cannot change both status and sourced location:** You cannot change both the status and any location for an order or an order line at the same time. To change more than one field, first apply one change and click *Save*, then return to the **Order** screen and apply the other change.

**Caution:** Updating an order or line’s status, fulfilling location, or sourced location is a means to correct occasional issues that may occur, and not recommended for routine processing. Except for the restrictions noted below, the screen does not prohibit most status or location updates.

 **Note**

Before updating an order, you can use other screens in Order Orchestration or contact a potential fulfilling, sourced, or pickup location directly to ensure that the update does not produce subsequent issues, such as fulfilling an order twice, reopening a shipped or canceled order, sourcing an order twice, or not fulfilling an order at all.

| Option                               | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <b>update the sourcing location for a ship-for-pickup order</b> | <p>If you have authority to <i>Order Maintenance</i> and the Allow Split Order preference for the organization is unselected, you can update the fulfilling location for an order:</p> <ul style="list-style-type: none"> <li>• Select the new <a href="#">sourcing location</a>.</li> <li>• Click <b>Save</b>.</li> </ul> <p><b>Which locations are available for selection?</b> The dropdown list includes each location that is flagged as Ship For Pickup Sourcing Available.</p> <ul style="list-style-type: none"> <li>• You cannot select:</li> <li>• Any location where the order was previously assigned.</li> <li>• The <i>IN PROCESS</i> location. See the <a href="#">Acknowledge Order Before Brokering</a> preference for background.</li> </ul> |

#### Note

The window does not prevent you from selecting a location:

- where the item(s) are not available. If you do so, and if the Include Reserved flag is selected at the [System](#) screen, Order Orchestration creates a new record of the product location(s).
- that is not associated with the zone for the order's shipping location if you use [zone fulfillment](#).

**For more information:** See [Ship For Pickup Order](#) for background.

### Restrictions

- You cannot change the fulfilling location for a [pickup order](#).
- You cannot change the pickup location for a [ship-for-pickup order](#).
- When you select a location from the [fulfilling location](#) field (*Shipment*) for a delivery order, the *Order Status* field becomes display-only. In order to change both the order's status and its fulfilling location, complete one update and then return to the **Order** screen to complete the other update.
- When you select a status from the *Order Status* field for a ship-for-pickup order, the corresponding *Sourced* location field becomes display-only. In order to change both the order's status and its sourced location, complete one update and then return to the **Order** screen to complete the other update.

#### Updates:

- If you select the [default unfulfillable location](#), the status of the order changes to *unfulfillable*.
- Order Orchestration tracks the location assignment history. See the *History tab*, below.
- If the system is configured to track [reserved quantity](#) and the line is in an applicable status, Order Orchestration updates the reserved quantity for the product location or creates the product location if it does not already exist. Otherwise, Order Orchestration does not create or update a product location.

| Option                                                                                                                                                                              | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| (Field labels vary depending on the type of order) | <p><i>Placed</i> = The location that originated a <a href="#">delivery order</a> or <a href="#">ship-for-pickup order</a>.</p> <p><i>Pickup</i> = The location a customer selected to pick up a <a href="#">pickup order</a> or <a href="#">ship-for-pickup order</a>.</p> <p><i>Shipment</i> = The location shipping a <a href="#">delivery order</a>. This location might have been specified by the placed (originating) location, or selected by the Routing Engine based on the rules set up at the <a href="#">Preferences</a> screen.</p> <p><i>Sourced</i> = The location that transfers the inventory for a <a href="#">ship-for-pickup order</a> to the pickup location. This location might have been specified by the placed (originating) location, or selected by the Routing Engine based on the rules set up at the <a href="#">Preferences</a> screen.</p> <p><b>Multiple locations?</b> If the Allow Split Order preference is selected, a delivery order can be assigned to multiple locations for fulfillment, and a ship-for-pickup order can be assigned to multiple locations for sourcing. In this case, this field displays the word <i>Multiple</i> and information on each assigned location is displayed under the <a href="#">Details tab</a>. See <a href="#">Selecting a Location for a Delivery Order</a> or <a href="#">Selecting a Sourcing Location for a Ship-for-Pickup Order</a> for an overview.</p> <p><b>Update?</b> You can update the fulfilling location for a delivery order, or the sourcing location for a ship-for-pickup order, if the Order Maintenance flag for a role assigned to your user profile is selected and the Allow Split Order preference for an organization is unselected. See <i>Options at this screen</i>, above, for more information.</p> <p><b>Note:</b> An integrated system might use different terms for these locations.</p> |
| Order Status                                       | <p>See <a href="#">Order and Line Statuses</a> for possible statuses.</p> <p><b>Update?</b> You can update the order status if the Order Maintenance flag in your user profile is selected and the Allow Split Order preference for an organization is unselected. See <i>Options at this screen</i>, above, for more information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**For more information:** See [Selecting a Location for a Delivery Order](#) for some of the different scenarios that are possible in creating or updating detail lines on delivery orders if you have Order Orchestration configured to split orders or order lines. Also, see [Updating Order Status at the Line or Unit Level](#) for an overview on processing partial status updates for order lines.

| Fields                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Req. Sys. Line # (Requesting system line number)</b> | <p>The line number identifying the order line in the requesting location. From the <code>line_item_no</code> passed in the <a href="#">submit order message</a>. A single line from the requesting system can create multiple order lines in Order Orchestration if the Allow Split Line preference is selected. Also, a line can split as the result of a <a href="#">partial status update</a> if the Allow Partial Updates preference is selected.</p> <p>Even if a line is not split in Order Orchestration, the requesting system line number can be different from the line number in Order Orchestration. For example, this situation can occur if the placed (originating) location sends only the third line on a multi-line order to Order Orchestration; in this case, the line number in Order Orchestration is #1.</p> <p><b>If split:</b> If any lines on the order are split, you need to expand the line to see additional details and options. Click the plus sign next to the requesting system line number to expand:</p> |

**Line #**

The order line number assigned by Order Orchestration. May be different from the requesting system's line number if the system did not send all of the order lines to Order Orchestration for fulfillment and the version specified in the [submit order message](#) was lower than 3.0, or if an order line is split.

**If split:** If any of the lines on the order are split, the *Item #* is before the Order Orchestration Line # and is always displayed, even if you have not expanded the line by clicking the plus sign next to the *Req. Sys. Line # (Requesting system line number)*; however, the Line # and other fields are not displayed until you click the plus sign.

**Examples of line splitting:**

- Split by the Routing Engine:
  - The Routing Engine assigns the order to location A, and then Location A rejects the order
  - The Routing Engine then assigns half the quantity to location B, and half to location C. Result: the quantity in location B is now line #1; the quantity in location C is now line #2
- Partial status update: The entire quantity of 5 was originally assigned to location A, but location A rejected 3 units. Result: the quantity in location A is now line #1; the rejected quantity, now reassigned or unfulfillable, is now line #2

| Fields | Description |
|--------|-------------|
|--------|-------------|

| Req. Sys.<br>Line # | Item # | Line #                  | Q   |
|---------------------|--------|-------------------------|-----|
| 12                  | 0520   |                         |     |
|                     |        | original quantity       | →   |
|                     |        | original line number    | → 1 |
|                     |        | line created when split | → 4 |

Item #

**Different line numbers even if not split:** It is possible for the Order Orchestration line number and requesting system line number to differ if, for example, the requesting system sends line 3 of a multi-line order to Order Orchestration (requesting system line number); when the Routing Engine creates the order, it assigns a line number of 1 because it is the only order line received from the requesting system.

**Line numbers might not be consecutive:** If the Routing Engine splits a line or receives a [partial status update](#), the line numbers assigned in Order Orchestration to the resulting split lines might not be consecutive. For example, a system sends 3 lines, which produce lines 1, 2, and 3. Subsequently, the Routing Engine receives a partial update for line 1 and creates line 4 for the quantity in the updated status.

**If not split:** If none of the lines on the order are split, just a single line number is displayed.

The [system product](#) code for the user's Default Organization. If the user's Default Organization is not the same as the organization associated with the order, the system product code for the fulfilling location is displayed. Up to 26 positions.

**If split:** If any of the lines on the order are split, the Item # is before the Order Orchestration *Line #* and is always displayed, even if you have not expanded the line by clicking the plus sign next to the *Req. Sys. Line # (Requesting system line number)*.

**No item #?** If your user ID is not assigned a *Default Organization* through the [Users](#) screen, the Item # might not be displayed here.

**Note:** You can display the item description by moving your cursor over the item code.

| Fields   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Quantity | <p><b>Original quantity:</b> If the line is split, the quantity displayed on the first line without a current line number is the quantity of the item that was originally assigned to the <i>Fulfilling Location</i> or <i>Sourced Location</i>. This quantity might differ from the quantity originally submitted to Order Orchestration if the Allow Split Line preference is selected, and the Routing Engine initially split the line across multiple fulfilling or sourcing locations. Also, the original quantity in Order Orchestration might subsequently be split across multiple order lines in Order Orchestration if the original fulfilling or sourcing location rejects the assignment and the Routing Engine splits the line when it reassigns it, or if a location submits a <a href="#">partial status update</a>.</p> <p><b>Current quantity:</b> The quantity that is currently assigned to the fulfilling, sourcing, or pickup location. This quantity might be different from the original quantity if the Allow Split Line preference is selected, and the Routing Engine split the line across multiple fulfilling or sourcing locations after it was initially rejected by the first location, or if a location submits a <a href="#">partial status update</a>.</p> <p><b>Not split:</b> If the line is not split, the original and current quantities are the same. If none of the lines on the order are split, then just a single quantity is displayed.</p> |

|                     |        |        | original quantity |
|                     |        |        | current quantity  |
|                     |        |        | current quantity  |

Fulfilled Quantity

The quantity of the item shipped to the customer ([delivery order](#)) or picked up by the customer ([pickup order](#), [ship-for-pickup order](#)). Updated when the Routing Engine receives a [status update](#) message indicating that the new order, line, or quantity status is *fulfilled*.

**If split:** The total fulfilled quantity is displayed at the summary level for the line, and the fulfilled quantity for each current line number is listed below with the current line.

|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Item # | The <a href="#">system product</a> code and item description for the user's <i>Default Organization</i> defined through the <a href="#">Users</a> screen. If the user's Default Organization is not the organization associated with the order, the system product code and item description for the fulfilling or sourcing location is displayed. Up to 26 positions. |

| Fields                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Line #</b>                        | <p>The current line number at the time the activity took place. This number might differ from the current line number if the Routing Engine split the line after initial creation in Order Orchestration because the original fulfilling location rejected it.</p> <p><b>Which line number?</b> The status history entry always lists the line number referenced in the status update request, even if the status update creates a new line number.</p> <p><i>Example:</i> Line 10 currently includes 5 units in picked status. A <a href="#">partial status update</a> indicates to change the status of 3 units on the line to fulfilled status. This update changes the quantity of line 10 to 2, and creates a new line, line 11, for 3 units in fulfilled status. However, both status history entries list line number 10, since that was the line number referenced in the status update request. The Routing Engine does not write a separate status history record for the creation of line 11.</p> <p><b>Under Review update:</b> An update to the <i>Under Review</i> indicator creates a history record for each line on the order.</p> <p><b>Pickup By Date update:</b> An update to the <a href="#">Pickup By Date</a> creates a history record.</p> |
| <b>Requesting System Line Number</b> | <p>The line number identifying the order line in the requesting location. From the <code>line_item_no</code> passed in the <a href="#">submit order message</a>. A single line from the requesting system can create multiple order lines in Order Orchestration if the Allow Split Line preference is selected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Quantity</b>                      | <p>The order line quantity at the time the activity took place. Might differ from the current quantity if the line was rejected by the original fulfilling or sourcing location and split by the Routing Engine at reassignment, or if the transaction was a <a href="#">partial status update</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Status</b>                        | <p>The status as a result of the activity indicated. See <a href="#">Order and Line Statuses</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

#### Note

When an order is rejected and it cannot be reassigned and, as a result, the Routing Engine changes its status to unfulfillable, 2 history records are written: 1 for the *rejected* status, and 1 for the *unfulfillable* status.

**Under Review update:** An update to the *Under Review* indicator creates a history record using the order-level status, even if the status of an individual line is different; however, this update does not affect the actual status of individual lines.

*Example:* An order includes a line in *polled* status and a line in *new order* status, so the status of the order is *open*. You update the *Under Review* indicator for the order. The history record indicates a status of *open* on both lines, although the status of the *polled* and *new order* lines does not change.

| Fields           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <b>RICS Log tab</b> | <p>This tab displays the history for each communication between Order Orchestration and Oracle Retail Integration Cloud Service (RICS).</p> <p>This tab is displayed only if the Online flag is selected at the <a href="#">RICS Integration tab</a> of the <b>System</b> screen for at least one system in the organization.</p> <p>These records are stored in the RICS_LOG table in the database. The <a href="#">daily cleanup job</a> automatically deletes these records based on the number of days specified in the RICS Log History field at the <a href="#">Tenant-Admin</a> screen; however, if the record has a Retry Status of <i>Failed</i> it is not eligible to be purged.</p> <p><b>For more information:</b> See <a href="#">Order Fulfillment through RICS Integration</a> for background and more information.</p>                                                                                                                                                                                      |
| <b>Date/Time</b>    | The date and time when the message activity took place.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Retry Status</b> | <p>Possible statuses are:</p> <ul style="list-style-type: none"> <li>• <i>Failed</i> = The message failed to be sent to RICS, typically through some sort of communication failure. In the case of an outbound message, <ul style="list-style-type: none"> <li>RICS log records with a Retry Status of <i>Failed</i> are not eligible to be purged. Instead, a cleanup job attempts to re-send these messages every hour, in case RICS was temporarily down when they were initially sent. Messages are sent in first-in first-out (oldest first) order.</li> </ul> </li> <li>• <i>Reprocessed</i> = Order Orchestration re-sent the outbound message to RICS.</li> <li>• <i>Success</i>: <ul style="list-style-type: none"> <li>– The message was successfully sent or received, or,</li> <li>– The message failed due to invalid data, such as an alphabetical character in a numeric field; in this case, the message is not eligible to be re-sent and the RICS log entry is eligible for purge.</li> </ul> </li> </ul> |
| <b>Location</b>     | The code and description of the fulfilling location for the order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Fields               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Response Code</b> | <p>The response code identified for the success or failure. Possible response codes include:</p> <ul style="list-style-type: none"> <li>• Success = The message was successfully posted to RICS.</li> <li>• 303 = Might indicate a connection problem.</li> <li>• 500 = Might indicate that the URL was incorrect or temporarily unavailable.</li> <li>• 502 = Might indicate that the connection timed out.</li> </ul>                                                                                                                                                                                                    |
| <b>Message Type</b>  | <p>The type of message:</p> <ul style="list-style-type: none"> <li>• <i>Create Fulfillment Order</i>: The order or line was posted to RICS for fulfillment in a warehouse or store location.</li> <li>• <i>Release Order Reservation</i>: The order or line was canceled or rejected, or reassigned to a different location for fulfillment, so inventory can be released for other orders.</li> <li>• <i>Status Update</i>: The status of the order or line has changed.</li> <li>• <i>Send Under Review</i>: The setting of the Under Review flag for an open order that was previously submitted as changed.</li> </ul> |
| <b>Request</b>       | <p>Click the display icon (  ) to display the request message in the <a href="#">RICS Log Message</a> window.</p>                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Response</b>      | <p>Click the display icon (  ) to display the response message in the <a href="#">RICS Log Message</a> window.</p>                                                                                                                                                                                                                                                                                                                                                                                                                      |

## Order History Detail - Address Change Window

**Purpose:** Use the **Order History Detail - Address Change** window to review the changes made to the shipping address on a delivery order. The old ship to address is on the left side of the window and the new updated ship to address is on the right side of the window with the changes indicated in red for comparison.

Used for the Store Connect module.

**Submitting address changes:** A store associate with authority to edit the shipping address can update the address in Store Connect.

**Customer name anonymized?** If the customer data on an order has been [anonymized](#) (deleted and replaced with asterisks), the customer name is displayed as:

| Old Ship To       | New Ship To       |
|-------------------|-------------------|
| *****             | *****             |
| *****             | *****             |
| *****             | *****             |
| Apt / Unit #: *** | Apt / Unit #: *** |
| *****             | *****             |
| *****             | *****             |
| *****             | *****             |
| *****             | *****             |
| *****             | *****             |
| Day: ***          | Day: ***          |
| Eve: ***          | Eve: ***          |
| *****             | *****             |

See [Anonymizing Data](#) for background.

**How to display this window:** Select the icon (  ) in the *Details* column at the [History tab](#) of the [Order](#) screen. This icon is displayed only if a store associate updated the shipping address on a delivery order in Store Connect.

#### Fields at this window

| Field       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| User        | The user ID of the person who performed the activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Date / Time | The date and time when the shipping address change was received. Format is based on the settings defined through the <a href="#">Users</a> screen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Old Ship To | <p>The ship-to name and address before applying the change. Includes:</p> <ul style="list-style-type: none"><li>• name: prefix (such as Mr. or Dr.), first name, middle name, last name, and suffix (such as Jr. or Esq.)</li><li>• company name</li><li>• first address line</li><li>• apartment, unit, or suite number (prefixed by the label Apt / Unit #:)</li><li>• address line 2</li><li>• address line 3</li><li>• address line 4</li><li>• city, state, postal or zip code, country code</li><li>• daytime phone number (prefixed by the label Day:)</li><li>• evening phone number (prefixed by the label Eve:)</li><li>• email address</li></ul> |

#### Note

Not all of the information above might be available for each customer. Also, the Attention field, if any, is not displayed.

**Customer anonymized?** If the customer data on an order has been [anonymized](#), asterisks are displayed for the ship-to information. See [Anonymizing Data](#) for background.

|             |                                                                                                                               |
|-------------|-------------------------------------------------------------------------------------------------------------------------------|
| New Ship To | The ship-to name and address with the changes indicated in red. Includes the same name and address fields as the Old Ship To. |
|-------------|-------------------------------------------------------------------------------------------------------------------------------|

#### Note

The system does not flag changes in case; for example, updating the country from US to us, in red.

**Customer anonymized?** If the customer data on an order has been [anonymized](#), asterisks are displayed for the ship-to information. See [Anonymizing Data](#) for background.

## System Products

**Purpose:** Use the **System Products** window to review the existing [system products](#) for an item on an order.

Used for the Routing Engine module.

**How to display this window:** Available if Use Routing Engine is selected at the [Tenant](#) screen. Click the system product icon () next to an item on the [Details tab](#) of the [Order](#) screen.

All fields at this window are display-only.

| Field                 | Description                                                                                                  |
|-----------------------|--------------------------------------------------------------------------------------------------------------|
| <b>Organization</b>   | The <a href="#">organization</a> associated with the order. The code and name are separated by a hyphen (-). |
| <b>Product</b>        | The <a href="#">product</a> on the order line. The code and name are separated by a hyphen (-).              |
| <b>System</b>         | See <a href="#">system</a> .                                                                                 |
| <b>System Product</b> | See <a href="#">system product</a> .                                                                         |
| <b>Master Style</b>   | See <a href="#">master style</a> .                                                                           |

## Browse Order Item

**Purpose:** Use the **Browse Order Item** window to view the details and activity of an order line. Used for the Routing Engine module.

**How to display this window:** Click the display icon () for an item at the [Details tab](#) of the [Order](#) screen.

### Note

Available if Use Routing Engine is selected at the [Tenant](#) screen. If you have *Order Maintenance* authority and the Use Split Order preference is selected, you advance instead to the [Edit Order Item](#) window.

All fields on this window are display-only.

| Fields                               | Description                                                                                                                                                                                                                                                                                                    |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Order Number</b>                  | See <a href="#">Order Number</a> .                                                                                                                                                                                                                                                                             |
| <b>Requesting System Line Number</b> | The line number identifying the order line in the requesting location. From the <code>line_item_no</code> passed in the <a href="#">submit order message</a> . A single line from the requesting system can create multiple order lines in Order Orchestration if the Allow Split Line preference is selected. |

| Fields                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Line #</b>           | <p>The line number of the item on the order in Order Orchestration.</p> <p><b>How might the line numbers be different?</b> It is possible for the line number, requesting system line number, and original line number to differ; for example:</p> <ul style="list-style-type: none"> <li>Split by the Routing Engine: <ul style="list-style-type: none"> <li>The Routing Engine assigns the order to location A, and then Location A rejects the order</li> <li>The Routing Engine assigns half the quantity to location B, and half to location C. Result: the quantity in location B is now line #1; the quantity in location C is now line # 2</li> </ul> </li> <li>Partial status update: The entire quantity of 5 was originally assigned to location A, but location A rejected 3 units. Result: the quantity in location A is now line #1; the rejected quantity, now reassigned or unfulfillable, is now line #2</li> </ul> <p><b>Different line numbers even if not split:</b> It is possible for the Order Orchestration line number and requesting system line number to differ if, for example, the requesting system sends line 20 of a multi-line order to Order Orchestration (Requesting system line number); when the Routing Engine creates the order, it assigns a line number of 1 because it is the only order line received from the requesting system.</p> <p><b>Line numbers might not be consecutive:</b> If the Routing Engine splits a line or receives a <a href="#">partial status update</a>, the line numbers assigned in Order Orchestration to the split lines might not be consecutive. For example, a system sends 3 lines, which produce lines 1, 2, and 3. Subsequently, the Routing Engine receives a partial update for line 1 and creates line 4 for the quantity in the updated status.</p> |
| <b>Original Line #</b>  | The line number from which this line was split. Set to 0 if the line was not split after initial order creation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Item #</b>           | <p>The <a href="#">system product</a> code for the user's Default Organization. If the user's Default Organization is not in the organization associated with the order, the system product code for the fulfilling or sourcing location is displayed. Up to 26 positions. Display-only.</p> <p><b>No item #?</b> If your user ID is not assigned a Default Organization through the <a href="#">Users</a> screen, the Item # might not be displayed here.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Item Description</b> | The name of the product.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Line Status</b>      | See <a href="#">Order and Line Statuses</a> for a listing of possible statuses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Fields                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| (Field label varies depending on the type of order) | <p><i>Sourced</i> = The location that transfers the inventory for a ship-for-pickup order to the pickup location.</p> <p><i>Pickup</i> = The location that the customer selected to pick up the ship-for-pickup order.</p> <p><i>Fulfilling</i> = Specified for the following types of orders:</p> <ul style="list-style-type: none"> <li>Delivery order: The location that ships the order to the customer. This location might have been specified by the placed (originating) location, or selected by the Routing Engine based on the rules set up at the <a href="#">Preferences</a> screen.</li> <li>Pickup order: The location that the customer selected to pick up the order.</li> </ul> <p><b>Note:</b> An integrated system might use the term “fulfilling location” differently.</p>                |
| Pickup By Date                                      | <p>The last date when the customer can pick up a pickup or ship-for-pickup order line before the line is automatically canceled by the Auto Cancel Unclaimed Pickup Orders job. The Pickup By Date is assigned automatically when the order line is first eligible for pickup, based on the settings at the Fulfillments tab of the <b>Preferences</b> screen, but the date can be overridden through a web service message or at a screen.</p> <p>This field is displayed only for a pickup or ship-for-pickup order, and only if the auto-cancel option is enabled, based on the settings at the <b>Preferences</b> screen. Even if displayed, the field is blank if the order line is not ready for pickup.</p> <p>See <a href="#">Auto-Cancel Unclaimed Orders</a> for background and more information.</p> |
| Quantity                                            | <p>The quantity that is currently assigned to the fulfilling, sourcing, or pickup location. This quantity might be different from the Original quantity if:</p> <ul style="list-style-type: none"> <li>the Allow Split Line preference is selected, and the Routing Engine split the line across multiple fulfilling or sourcing locations after it was initially rejected by the first location, or</li> <li>the Allow Partial Update preference is selected, and the Routing Engine split the line because a location processed a <a href="#">partial status update</a>.</li> </ul>                                                                                                                                                                                                                           |
| Original Quantity                                   | <p>The quantity of the item that was originally assigned to the fulfilling or sourcing location. See the Quantity field, above, for a discussion.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Fulfilled Quantity                                  | <p>The quantity of the item shipped to the customer (<a href="#">delivery order</a>) or picked up by the customer (<a href="#">pickup order</a>, <a href="#">ship-for-pickup order</a>). Updated when the Routing Engine receives a <a href="#">status update</a> message indicating that the new item status is <i>fulfilled</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Price                                               | <p>The amount the customer paid for the item, preceded by the symbol of the currency on the order. The screen displays a 2-position decimal, although the database stores 4 positions. If no amount was passed from the originating system, the amount indicated is 0.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Tax</b>          | <p>The total tax amount for this order line, as passed in the SubmitOrder message. Preceded by the symbol of the currency on the order.</p> <p><b>Prorating tax for split lines:</b> If a line splits, the tax amount is prorated across the split lines. This prorating can result in a rounding discrepancies of a few pennies.</p> <p><i>Example:</i> The total tax amount for 3 units is \$1.00. If the line is split across 3 locations, the tax amount for each location is \$.33, resulting in a rounding discrepancy of a cent.</p> <p><b>Multiple tax amounts?</b> If multiple tax amounts are included (for example, GST and PST), the total tax amount is saved in the xom_item table and displayed here.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Ext. Price</b>   | <p>The price of the item times the current quantity, preceded by the symbol of the currency on the order. The screen displays a 2-position decimal, although the database stores 4 positions. If no amount was passed from the originating system, the amount indicated is 0.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Status Date</b>  | <p>The last date and time when the status of the order changed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Polled Count</b> | <p>Indicates the number of times the fulfilling or sourced location has sent a <a href="#">fulfillments message</a> for information on assigned delivery orders, or the pickup location has sent an <a href="#">intransit message</a> for information on assigned ship-for-pickup orders, and the Routing Engine has responded with a message that included this order line.</p> <p><i>Polled status updates:</i> This counter is used only if the requesting location's system has the Require Status Update flag at the <a href="#">System</a> screen selected; otherwise, the Routing Engine sets the poll count to 1 when it receives the fulfillment request message, and sets the status to <i>polled</i>.</p> <p>See <a href="#">Require Status Update for Assigned Orders?</a> for a discussion.</p> <p><i>Resetting the polled count:</i> Changing the status of an order or order line to <i>new_order</i>, <i>canceled</i>, or <i>fulfilled</i> resets the polled count to 0.</p> <p><i>Intransit status updates for ship-for-pickup orders:</i> When the sourcing location updates the status of a ship-for-pickup line to intransit, the Polled Count is set to 0. Then when the assigned pickup location sends an <a href="#">intransit message</a>, the Polled Count is reset to 1. This counter is used for ship-for-pickup orders if the Require Status Update flag for the system is selected.</p> <p><i>Resetting the polled count:</i> Changing the status of an order or order line to <i>new_order</i>, <i>canceled</i>, or <i>fulfilled</i> resets the polled count to 0.</p> |

## Edit Order Item

**Purpose:** Use the **Edit Order Item** window to view the details and activity of an item on an order, or update the item's status, or fulfilling or sourcing location.

Used for the Routing Engine module.

**How to display this window:** Click the edit icon (  ) for an item at the *Details tab* of the [Order](#) screen.

 **Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. You advance to this window only if you have *Order Maintenance* authority and the Use Split Order preference is selected; otherwise, you advance to the [Browse Order Item](#) window.

### Options at this window

| Option                                    | Procedure                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>update the status of an order line</b> | <ul style="list-style-type: none"> <li>Select the new status from the <a href="#">Line Status</a> field for each line you want to change. If the Allow Partial Updates preference is selected, the <a href="#">Quantity</a> field becomes enterable.</li> <li>Optionally, enter a different quantity to process a <a href="#">partial status update</a>.</li> <li>Click Save.</li> </ul> |

**Note**

You can change the status of a canceled line here regardless of whether the [Restrict Reassignment of Canceled Line](#) preference is selected.

**Status change restrictions:**

- You cannot change the status of a fulfilled line on a [ship-for-pickup order](#) to rejected; instead, you can change the sourcing location if the status was incorrectly set to fulfilled.
- When you select a status from the [Line Status](#) field for a delivery order, the [fulfilling location](#) field for that line becomes display-only. Similarly, when you select a status from the [Line Status](#) field for a ship-for-pickup order, the [sourcing location](#) field for that line becomes display-only. In order to change both the line's status and its fulfilling or sourcing location, complete 1 update and then return to the Order screen to complete the other update.
- If the Allow Partial Updates preference is selected and you change the [Quantity](#), you cannot enter a quantity of zero or a number that exceeds the current quantity; also, you cannot change a partial quantity to *polled* or *new\_order* status.
- You cannot change the status of a full or partial order line to *open* or *complete*, since these are system-assigned statuses.

**Updates:**

- When you change the line status to *new\_order*, *canceled*, or *fulfilled*, the [Polled Count](#) for the order line is reset to 0.
- When you change the line or quantity status to *rejected*:

- delivery order: The Routing Engine reassigns the line or quantity and changes the status to *new\_order* if another eligible location exists and if the Search Retries limit hasn't been reached; otherwise, the Routing Engine changes its status to *unfulfillable*. There may be a brief delay before the update is applied.

When you use RICS order fulfillment, rejecting a line on a delivery order triggers a release reservation request for the prior location and a new fulfillment order request for the new location to RICS. See [Order Fulfillment through RICS Integration](#) for more information.

- pickup order: The Routing Engine changes the status to *unfulfillable*.
- ship-for-pickup order: The Routing Engine reassigns the line or quantity to a different sourcing location, and changes the status to *new\_order* if another eligible sourcing location exists and if the Search Retries limit

| Option | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|        | <p>hasn't been reached. For a ship-for-pickup order, a rejected status update generally indicates that the inventory was not received from the sourced location, or that it was defective. There may be a brief delay before the update is applied.</p> <ul style="list-style-type: none"><li>• If <a href="#">Auto-Cancel Unclaimed Orders</a> is enabled, a status change on a ship-for-pickup order or pickup order can update the <a href="#">Pickup By Date</a> based on the related settings from the <a href="#">Fulfillment</a> tab of the <a href="#">Preferences</a> screen; for example, changing the status from picked to canceled, rejected, or fulfilled clears the <a href="#">Pickup By Date</a>. See <a href="#">Auto-Cancel Unclaimed Orders</a> for more information on the rules that control setting the <a href="#">Pickup By Date</a> when you have auto-cancel configured.</li><li>• A status change can update the reserved quantity for the product location, depending on the setting of the <a href="#">Include Reserved</a> flag for the system and any <a href="#">Reserved Statuses</a> for the system. See the <a href="#">System</a> screen for more information.</li><li>• Order Orchestration decreases the quantity of the current line and creates a new order line in the specified status if you process a <a href="#">partial status update</a>.</li><li>• Order Orchestration tracks the status history. See the <a href="#">History tab</a>.</li><li>• The status of the order might also change, depending on its current status. See <a href="#">order status</a>.</li></ul> <p><b>For more information:</b> See <a href="#">Order and Line Statuses (Splitting Preference Turned On)</a> for more information on automatic status updates for orders fulfilled through Store Connect.</p> |

| Option                                                                            | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| update the shipment or sourced location for an item on a delivery or pickup order | <ul style="list-style-type: none"> <li>Select the new <a href="#">fulfilling location</a>.</li> <li>Click <i>Save</i>.</li> </ul> <p><b>Which locations are available for selection?</b> The dropdown list includes each location that supports the type of order:</p> <ul style="list-style-type: none"> <li>For a <a href="#">delivery order</a>, the location must be flagged as Delivery Available.</li> </ul> <p>You cannot select:</p> <ul style="list-style-type: none"> <li>Any location where the line was previously assigned, even if it no longer supports the type of order.</li> <li>The <i>IN PROCESS</i> location. See the <a href="#">Acknowledge Order Before Brokering</a> preference for background.</li> </ul> |

**Note**

The window does not prevent you from selecting a location:

- where the item is not available. If you do so, and if the Include Reserved flag is selected at the [System](#) screen, Order Orchestration creates a new record of the product location.
- that is not associated with the zone for the order's shipping location if you use [zone fulfillment](#).

**Restrictions:**

- You cannot change the fulfilling location for a [pickup order](#).
- When you select a location from the [fulfilling location](#) field for a delivery order, the *Line Status* field becomes display-only. In order to change both the line's status and its fulfilling location, complete one update and then return to the *Order* screen and select the Edit icon again to complete the other update.

**Updates:**

- If you select the [default unfulfillable location](#), the status of the order changes to *unfulfillable*.
- Order Orchestration tracks the location assignment history. See the [History tab](#).
- If the system is configured to track [reserved quantity](#) and the line is in an applicable status, Order Orchestration updates the reserved quantity for the product location or creates the product location if it does not already exist. Otherwise, Order Orchestration does not create or update a product location.

When you use RICS order fulfillment, changing the fulfilling location for a line on a delivery order triggers a release reservation request for the prior location and a new fulfillment order request for the new location to RICS. See [Order Fulfillment through RICS Integration](#) for more information.

| Option                                                          | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Order Number                  | See <a href="#">Order Number</a> . Display-only.                                                                                                                                                                                                                                                                       |
| Requesting System Line Number | The line number identifying the order line in the requesting location. From the <i>line_item_no</i> passed in the <a href="#">submit order message</a> . A single line from the requesting system can create multiple order lines in Order Orchestration if the Allow Split Line preference is selected. Display-only. |

| Fields                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Line #</b>           | <p>The line number of the item on the order in Order Orchestration. Display-only.</p> <p><b>How might the line numbers be different?</b> It is possible for the line number, requesting system line number, and original line number to differ; for example:</p> <ul style="list-style-type: none"> <li>Split by the Routing Engine: <ul style="list-style-type: none"> <li>The Routing Engine assigns the order to location A, and then Location A rejects the order</li> <li>The Routing Engine assigns half the quantity to location B, and half to location C. Result: the quantity in location B is now line #1; the quantity in location C is now line # 2</li> </ul> </li> <li>Partial status update: The entire quantity of 5 was originally assigned to location A, but location A rejected 3 units. Result: the quantity in location A is now line #1; the rejected quantity, now reassigned or unfulfillable, is now line #2</li> </ul> <p><b>Different line numbers even if not split:</b> It is possible for the Order Orchestration line number and requesting system line number to differ if, for example, the requesting system sends line 20 of a multi-line order to Order Orchestration (Requesting system line number); when the Routing Engine creates the order, it assigns a line number of 1 because it is the only order line received from the requesting system.</p> <p><b>Line numbers might not be consecutive:</b> If the Routing Engine splits a line or receives a <a href="#">partial status update</a>, the line numbers assigned in Order Orchestration to the split lines might not be consecutive. For example, a system sends 3 lines, which produce lines 1, 2, and 3. Subsequently, the Routing Engine receives a partial update for line 1 and creates line 4 for the quantity in the updated status.</p> |
| <b>Original Line #</b>  | <p>The line number in Order Orchestration from which this line was split. Set to 0 if the line was not split after initial order creation. Display-only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Item #</b>           | <p>The <a href="#">system product</a> code for the user's Default Organization. If the user's Default Organization is not the organization associated with the order, the system product code for the fulfilling or sourcing location is displayed. Up to 26 positions. Display-only.</p> <p><b>No item #?</b> If your user ID is not assigned a Default Organization through the <a href="#">Users</a> screen, the Item # might not be displayed here.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Item Description</b> | <p>The name of the product. Display-only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Line Status</b>      | <p>See <a href="#">Order and Line Statuses</a> for a listing of possible statuses, and see <i>update the status of an order line</i>, above, for instructions on updating a status, including information on processing a <a href="#">partial status update</a> if the Allow Partial Updates preference is selected.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Fields                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| (Field label varies depending on the type of order) | <p><i>Shipment</i> = The location that ships a <a href="#">delivery order</a> to the customer. This location might have been specified by the placed (originating) location, or selected by the Routing Engine based on the rules set up at the <a href="#">Preferences</a> screen.</p> <p><i>Pickup</i> = The location a customer selected to pick up a <a href="#">pickup order</a>. In this case, the field is display-only.</p> <p><i>Sourced</i> = The location that transfers the inventory for a <a href="#">ship-for-pickup order</a> to the pickup location. The sourcing location might have been specified by the placed (originating) location, or selected by the Routing Engine based on the rules set up at the <a href="#">Preferences</a> screen.</p> <p>See <i>update the shipment or sourced location for an item on a delivery order</i> or <i>update the sourced location for a ship-for-pickup order</i> above for instructions on updating the assigned location.</p> <p><b>Note:</b> If the location previously supported this order type and is now flagged at the <a href="#">Preferences</a> screen to no longer support it, no location is displayed here.</p>                                                                                                                                                                                                                                                                                                                                                                                                         |
| Pickup By Date                                      | <p>The last date when the customer can pick up a pickup or ship-for-pickup order line before the line is automatically canceled by the Auto Cancel Unclaimed Pickup Orders job. The Pickup By Date is assigned automatically when the order line is first eligible for pickup, based on the settings at the <a href="#">Fulfillments</a> tab of the <a href="#">Preferences</a> screen, but the date can be overridden through a web service message or at a screen.</p> <p>This field is available only if the <a href="#">Auto-Cancel Unclaimed Orders</a> option is enabled, and the order line is in a status indicating that it is ready for pickup:</p> <ul style="list-style-type: none"> <li> <i>Picked</i>, if the order type is pickup, or if the order type is ship-for-pickup and the sourcing location is the same as the pickup location; otherwise,           <p><i>Received</i>, if the order type is ship-for-pickup, and the sourcing location is different from the pickup location. In this situation, the line is not eligible for pickup until the sourcing location has transferred the inventory to the pickup location, and the pickup location has received it.</p> <p>In this case, the <i>Pickup By Date</i> is required, and must be in the future.</p> <p>For a pickup order assigned to a Store Connect location, a new <a href="#">Pickup Ready Reminder to Customer (Pickup Order)</a> email is generated, indicating the new <i>Pickup By Date</i>.</p> <p>See <a href="#">Auto-Cancel Unclaimed Orders</a> for background and more information.</p> </li> </ul> |

| Fields                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Quantity</b>           | <p>The quantity that is currently assigned to the fulfilling, pickup, or sourcing location. This quantity might be different from the Original quantity if:</p> <ul style="list-style-type: none"> <li>the Allow Split Line preference is selected, and the Routing Engine split the line across multiple locations after it was initially rejected by the first location, or</li> <li>the Allow Partial Update preference is selected, and the Routing Engine split the line because a location processed a <a href="#">partial status update</a>.</li> </ul> <p>This field is enterable if the Allow Partial Updates preference is selected and you specify a different <i>Line Status</i>. In this case, you can apply the new status to the entire line quantity, or process a <a href="#">partial status update</a>. See <i>update the status of an order line</i>, above, for instructions.</p> |
| <b>Original Quantity</b>  | The quantity of the item that was originally assigned to the fulfilling, sourcing, or pickup location. See the Quantity field, above, for a discussion. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Fulfilled Quantity</b> | The quantity of the item shipped to the customer ( <a href="#">delivery order</a> ) or picked up by the customer ( <a href="#">pickup order</a> or <a href="#">ship-for-pickup order</a> ). Updated when the Routing Engine receives a <a href="#">status update</a> message indicating that the new item status is <i>fulfilled</i> . Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Price</b>              | The amount the customer paid for the item, preceded by the symbol of the currency on the order. The screen displays a 2-position decimal, although the database stores 4 positions. If no amount was passed from the originating system, the amount indicated is 0. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Tax</b>                | <p>The total tax amount for this order line, as passed in the SubmitOrder message. Preceded by the symbol of the currency on the order. Display-only.</p> <p><b>Prorating tax for split lines:</b> If a line splits, the tax amount is prorated across the split lines. This prorating can result in a rounding discrepancies of a few pennies.</p> <p><i>Example:</i> The total tax amount for 3 units is \$1.00. If the line is split across 3 locations, the tax amount for each location is \$.33, resulting in a rounding discrepancy of a cent.</p> <p><b>Multiple tax amounts?</b> If multiple tax amounts are included (for example, GST and PST), the total tax amount is saved in the xom_item table and displayed here.</p>                                                                                                                                                                |
| <b>Ext. Price</b>         | The price of the item times the current quantity, preceded by the symbol of the currency on the order. The screen displays a 2-position decimal, although the database stores 4 positions. If no amount was passed from the originating system, the amount indicated is 0. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Status Date</b>        | The last date and time when the status of the order changed. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Fields              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Polled Count</b> | <p>Indicates the number of times the fulfilling or sourced location has sent a <a href="#">fulfillments message</a> for information on assigned delivery orders, or the pickup location has sent an <a href="#">intransit message</a> for information on assigned ship-for-pickup orders, and the Routing Engine has responded with a message that included this order line.</p> <p><i>Polled status updates:</i> This counter is used only if the requesting location's system has the Require Status Update flag at the <a href="#">System</a> screen selected; otherwise, the Routing Engine sets the poll count to 1 when it receives the fulfillment request message, and sets the status to <i>polled</i>.</p> <p>See <a href="#">Require Status Update for Assigned Orders?</a> for a discussion.</p> <p>Resetting the polled count: Changing the status of an order or order line to <i>new_order</i>, <i>canceled</i>, or <i>fulfilled</i> resets the polled count to 0.</p> <p><i>Intransit status updates for ship-for-pickup orders:</i> When the sourcing location updates the status of a ship-for-pickup line to intransit, the Polled Count is set to 0. Then when the assigned pickup location sends an <a href="#">intransit message</a>, the Polled Count is reset to 1. This counter is used for ship-for-pickup orders if the Require Status Update flag is selected for the system.</p> <p>Resetting the polled count: Changing the status of an order or order line to <i>new_order</i>, <i>canceled</i>, or <i>fulfilled</i> resets the polled count to 0.</p> |

## RICS Log Message

**Purpose:** Use the **RICS Log Message** window to view a request or response message for an order fulfilled through the [Order Fulfillment through RICS Integration](#).

Used for the Routing Engine module.

**How to display this window:** Click the display icon (  ) in the *Request* or *Response* column for an entry at the *RICS Log* tab of the [Order](#) screen.

### Note

Available if the Active flag is selected at the Add or Edit External Service window, available from the [External Services](#) screen, and there are any RICS log records that have not been purged.

Optionally, you can copy the message from this window so you can paste it into a text editor for troubleshooting or research purposes.

**For more information:** See [Order Fulfillment through RICS Integration](#) for background.

# Purchase Order Inquiry

**Purpose:** Use the **Purchase Order Inquiry** screen to search for and review purchase orders assigned to your vendors for fulfillment.

Used for the Supplier Direct Fulfillment module.

**Customer or vendor name anonymized?** If the vendor or customer data on a purchase order has been anonymized (deleted and replaced with asterisks), the name is displayed as:

\*\*\* \*\*

\*\*\*

If the vendor data has been anonymized, searching by vendor name is not supported.

A purchase order is eligible to be anonymized only if it is no longer open, and a vendor is eligible to be anonymized only if there are no open purchase orders for the vendor.

See [Anonymizing Data](#) for background.

**How to display this screen:** Select *Purchase Order Inquiry* from the [Home Screen](#) or the *Orders* drop-down menu.

## Note

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Purchase Order Inquiry* authority can display this screen. See [Roles](#) for more information.

**How to display purchase orders on this screen:** When you first advance to the **Purchase Order Inquiry** screen, no purchase orders are displayed. Click *Search* to display purchase orders matching your search criteria or to refresh the purchase orders displayed.

**View by purchase order or item:** You can use the View Results By option to switch the information displayed:

- *Purchase Order:* displays information about the entire purchase order, such as shipping address. With this view, if the purchase order includes more than one line, the Due Date displayed is based on the first line on the purchase order. This is the default view.  
*Item:* displays information about the line(s) on the purchase order, such as your item number, the vendor's item number, and the ordered quantity.
- Most of the same information is displayed whether you view results by purchase order or by item. The information always displayed includes the purchase order number, the sales order number, and the date when you created the purchase order.

**Sort order:** The purchase orders are sorted first based on the PO created (entered) date. Within that date, they are sorted by the date and time when the purchase order was submitted to the vendor for fulfillment.

**How to view purchase order updates?** Click *Search* to refresh the screen and show current purchase order information.

**How many records displayed?** The screen displays up to 50 purchase orders or items.

**Options at this screen**

| Option                                                                                          | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

Displayed only when View Results By is set to <i>Item</i>.</p>                                                                                                                                                                                                                                                                                                                                                                 |

| Fields  | Description                                                                                                                                                                                                                                                                                            |
|---------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Display | Click the Display icon (  ) to advance to the <a href="#">Purchase Order</a> screen, where you can review the details of the purchase order, such as the sold-to and ship-to address, items, history, and messages. |

## Purchase Order

**Purpose:** Use the **Purchase Order** screen to review detailed information about a purchase order, including:

- the sold-to and ship-to addresses
- shipping instructions and messages
- the lines on the purchase order, including any special handling instructions or line-specific messages
- history of activity related to the purchase order, such as processing and shipment, or cancellation, address change, cost change, or due date revision
- invoices that include any lines on the purchase order

Used for the Supplier Direct Fulfillment module.

**Reviewing purchase order information:** Open the tab related to the information to be reviewed:

- *Header tab:* order summary information, including the sold-to customer and the shipping address. This tab is open by default.

**Customer name anonymized?** If the customer data on a purchase order has been [anonymized](#) (deleted and replaced with asterisks), the sold-to and ship-to customer name is displayed as:

### Addresses

Sold To   \*\*\* \*\*  
\*\*\*  
\*\*\* Apt / Unit# \*\*\*  
\*\*\*  
\*\*\*  
\*\*\*  
\*\*\* \*\*  
Day: \*\*\*  
Eve: \*\*\*  
\*\*\*

See [Anonymizing Data](#) for background.

 **Note**

The [Purchase Order Information](#) at the top of the screen is always displayed regardless of which tab is open.

- *Detail tab:* the lines on the purchase order. From this tab, you can also advance to additional windows displaying:
  - customization instructions: [Browse Detail Customizations](#) window

- messages related to a line: [Browse Purchase Order Detail Messages](#) window
- additional details about a line: [Display Purchase Order Item](#) window
- *Invoices tab*: information about each invoice that includes any lines from the purchase order. From this tab, you can also advance to the [Invoice](#) screen.
- *History tab*: activity that has taken place for the purchase order. See the [History tab](#) for more information. From this tab, you can also advance to the [Purchase Order History Detail](#) window if there has been an address change request for the purchase order
- *Messages tab*: sales order or gift messages. See the [Messages tab](#) for more information.

#### Note

When you are on this screen, the information displayed is not automatically refreshed. For example, if you review the information at the Header tab and then click the *History tab*, any recent activity that has taken place while you were reviewing the Header tab is not displayed at the History tab. To refresh the information on this screen, exit the screen and then select it again from the [Purchase Order Inquiry](#) screen.

**How to display this screen:** Select *Display* for a purchase order at the [Purchase Order Inquiry](#) screen.

#### Note

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Purchase Order Inquiry* authority can display this screen. See [Roles](#) for more information.

| <b>Order Status</b> | <p>Possible statuses are:</p> <ul style="list-style-type: none"> <li>• <i>Cancelled</i>: You have cancelled the entire purchase order.</li> <li>• <i>Complete (multi-line purchase orders only)</i>: The purchase order includes more than one line, and the line statuses include a combination of <i>Cancelled</i> and <i>Shipped</i>; there are no remaining open lines.</li> <li>• <i>Held</i>: The vendor has held the line(s) on the purchase order from processing. The vendor might put a line on hold if the vendor cannot fulfill it, and is requesting that you cancel the line. When a line on a purchase order is on hold, it is not eligible for pack slip generation or to be sent to an <a href="#">integrated vendor</a>; or, if the purchase order line was already in process, the line is not eligible for shipment confirmation, and if the vendor uses the void/reprint option, the held line is omitted from the new pack slip.</li> <li>• <i>In Process</i>: The vendor has generated pack slips for the entire purchase order or the line, or sent the purchase order to the vendor's system (and the batch was acknowledged, if required) if it is an <a href="#">integrated vendor</a>.</li> <li>• <i>New Order</i>: The vendor has received the purchase order, but has not yet generated pack slips for the entire purchase order or the line; or, in the case of an <a href="#">integrated vendor</a>, the vendor has not yet received the purchase order or required acknowledgment, if required.</li> <li>• <i>Open (multi-line purchase orders only)</i>: The purchase order includes more than one line, and the line statuses include at least one line that is <i>Held</i>, <i>In Process</i>, or <i>New Order</i>.</li> <li>• <i>Shipped</i>: The vendor has confirmed shipment of the entire purchase order.</li> </ul> |
| <b>Brand</b>        | <p>The name or description of the brand associated with the purchase order. See the <i>Brands</i> screen in Modern View for background. Identified through the brand_cd in the <a href="#">CreateDSOrder</a> message. If the brand name has changed, the name in effect when the purchase order was created is displayed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Placed</b>       | <p>The code and description of the location originating the sales order. From the requesting_location_cd in the <a href="#">CreateDSOrder</a> message. Typically identifies your distribution center. Separated by a hyphen (-).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Vendor</b>       | <p>The name or description of the vendor assigned to fulfill the purchase order. Up to 40 positions. The vendor code follows in parentheses. Up to 10 positions. From the vendor_cd in the <a href="#">CreateDSOrder</a> message.</p> <p><b>Vendor name anonymized?</b> If the data for a vendor on a purchase order has been anonymized (deleted and replaced with asterisks), searching by the vendor is not supported. See <a href="#">Anonymizing Data</a> for background.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Organization</b> | <p>The name or description of the organization associated with the purchase order. See <a href="#">organization</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Fields                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                          | <p><b>Pending address change request?</b> The screen displays a message in red if there is an address change request submitted to the vendor and pending approval. Use the <a href="#">Purchase Order History Detail</a> window to review the requested change.</p> <p>This message continues to be displayed even if the vendor confirms shipment of the line(s) without accepting or rejecting the address change.</p>                                                                                                                                                              |
| <b>Header tab: Header summary fields</b> | This area displays additional summary information about the order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Next Due Date</b>                     | The earliest due date on any of the lines on the purchase order, regardless of whether the earliest due date has passed. Blank if the entire purchase order has shipped. Format is based on the settings at the <a href="#">Users</a> screen.                                                                                                                                                                                                                                                                                                                                         |
| <b>Ship Via</b>                          | The code and description identifying the preferred shipper to use for the purchase order, separated by a hyphen. From the carrier_cd for the first item in the <a href="#">CreateDSOrder</a> message. Not updated at shipment, even if the vendor specifies a different carrier. If the carrier description has changed, the description in effect when the purchase order was created is displayed.                                                                                                                                                                                  |
| <b>Gift</b>                              | Set to Y if the sales order is a gift order; in this case, no prices, charges, or totals print on the pack slip. From the gift setting in the <a href="#">CreateDSOrder</a> message.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Buyer</b>                             | The code and name of the buyer for the purchase order. From the carrier_cd for the first item in the <a href="#">CreateDSOrder</a> message. Separated by a hyphen (-).                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Shipping Instructions</b>             | <p>The general shipping instructions for the order. From the shipping_instructions in the <a href="#">CreateDSOrder</a> message. CWDirect and Order Administration System include shipping instructions such as DRP SHP ORD#00012025, where 12025 is the sales order number.</p> <p>There may be additional instructions for the purchase order, such as customization instructions, gift messages, or order messages at the <a href="#">Browse Detail Customizations</a> window, <a href="#">Browse Purchase Order Detail Messages</a> window, and <a href="#">Messages tab</a>.</p> |
| <b>Ship Complete</b>                     | Set to Y if the purchase order should be shipped in a single shipment. From the ship_complete setting in the <a href="#">CreateDSOrder</a> message. Informational only; does not control pack slip generation.                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Total</b>                             | The purchase order total, including the extended prices of all detail lines. Does not include additional charges, freight, additional freight, tax, or tax on freight. The currency symbol displayed is based on the vendor_currency_cd in the <a href="#">CreateDSOrder</a> message.                                                                                                                                                                                                                                                                                                 |

| <b>Header tab: Sales Order Summary fields</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Pay Method</b>                             | The description of the payment method on the sales order. From the <code>tender_description</code> in the <a href="#">CreateDSOrder</a> message. Set to <i>MULTI PAY</i> if the originating sales order had more than one payment method.                                                                                                                                                                                                                                                       |
| <b>Freight Charges</b>                        | The freight charges from the sales order. From the <code>freight_amount</code> in the <a href="#">CreateDSOrder</a> message. Rounded to a 2-position decimal.                                                                                                                                                                                                                                                                                                                                   |
| <b>Additional Charges</b>                     | The additional freight charges (not the additional charges) from the sales order. From the <code>order_additional_freight_charges</code> in the <a href="#">CreateDSOrder</a> message. Rounded to a 2-position decimal.                                                                                                                                                                                                                                                                         |
| <b>Paid Amount</b>                            | The amount prepaid on the sales order. From the <code>tender_amount</code> in the <a href="#">CreateDSOrder</a> message. Rounded to a 2-position decimal.                                                                                                                                                                                                                                                                                                                                       |
| <b>Tax on Freight</b>                         | The tax on freight charges from the sales order. From the <code>freight_tax</code> in the <a href="#">CreateDSOrder</a> message. Rounded to a 2-position decimal.                                                                                                                                                                                                                                                                                                                               |
| <b>Tax Charges</b>                            | The total tax for the items on the purchase order. The total of the amount from the tax for each purchase order detail included in the <a href="#">CreateDSOrder</a> message. Rounded to a 2-position decimal.                                                                                                                                                                                                                                                                                  |
| <b>Detail tab</b>                             | This tab displays information about the line(s) on the purchase order, and includes options to display additional information about the line(s).                                                                                                                                                                                                                                                                                                                                                |
| <b>Line #</b>                                 | The line number identifying the item on the purchase order. From the <code>po_line_no</code> in the <a href="#">CreateDSOrder</a> message.                                                                                                                                                                                                                                                                                                                                                      |
| <b>Item #</b>                                 | The item number or code. Hold the pointer over the Item # to display the vendor item number or code and description. From the <code>retailer_item_id</code> in the <a href="#">CreateDSOrder</a> message.                                                                                                                                                                                                                                                                                       |
| <b>Item Description</b>                       | A description of the item. Hold the pointer over the Item Description to display your description of the item. From the <code>retailer_item_description</code> in the <a href="#">CreateDSOrder</a> message.                                                                                                                                                                                                                                                                                    |
| <b>Order Qty</b>                              | The total quantity of the item ordered by the customer. From the <code>po_qty_ordered</code> in the <a href="#">CreateDSOrder</a> message.                                                                                                                                                                                                                                                                                                                                                      |
| <b>Shipped Qty</b>                            | The total confirmed shipment quantity of the item.                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Fields             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Printed Qty</b> | The total quantity of the item that the vendor currently has on a generated pack slip or extracted to the vendor's system, but not yet confirmed as shipped.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Cancel Qty</b>  | The total quantity of the item that you have cancelled.<br><b>Note:</b> CWDirect and Order Administration do not support partial quantity cancellations. Additional information on canceling a partial quantity will be provided by Oracle at a later date.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Line Status</b> | <p>The current status of the line on the purchase order. Possible statuses are:</p> <ul style="list-style-type: none"> <li>• <i>Cancelled:</i> You have cancelled the line.</li> <li>• <i>Held:</i> The vendor has held the line(s) on the purchase order from processing. The vendor might put a line on hold if the vendor cannot fulfill it, and is requesting that you cancel the line. When a line on a purchase order is on hold, it is not eligible for pack slip generation or to be sent to an <a href="#">integrated vendor</a>; or, if the purchase order line was already in process, the line is not eligible for shipment confirmation, and if the vendor uses the void/reprint option, the held line is omitted from the new pack slip.</li> <li>• <i>In Process:</i> The vendor has generated pack slips for the entire purchase order or the line, or sent the purchase order to the vendor's system (and the batch was acknowledged, if required) if it is an <a href="#">integrated vendor</a>.</li> <li>• <i>New Order:</i> The vendor has received the purchase order, but has not yet generated pack slips for the entire purchase order or the line; or, in the case of an <a href="#">integrated vendor</a>, the vendor has not yet received the purchase order or required acknowledgment, if required.</li> <li>• <i>Shipped:</i> The vendor has confirmed shipment of the line.</li> </ul> <p><b>Note:</b> The line status is different from the <i>Order Status</i> if the purchase order has more than one line, and the lines have different statuses.</p> |
| <b>Due Date</b>    | The current due date for the line. Can differ from the original due date if the vendor has entered a revised due date. Included even if the item has shipped. The original due date is from the po_line_due_date in the <a href="#">CreateDSOrder</a> message.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Custom</b>      | Select the icon (  ) in the <i>Custom</i> column to advance to the <a href="#">Browse Detail Customizations</a> window, where you can review the special handling instructions for the line. Available only if there are special handling instructions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Messages</b>    | Select the icon (  ) in the <i>Messages</i> column to advance to the <a href="#">Browse Purchase Order Detail Messages</a> window, where you can review any sales order line messages for the line. Available only if there are order line messages.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Invoices tab</b>      | <p>This tab displays information on any invoices the vendor has created for the items on the purchase order.</p> <p><b>Multiple shipments?</b> If the invoice includes multiple shipments against a single purchase order line, each shipment is listed separately.</p> <p>If the vendor deletes an invoice that is in <i>New</i> or <i>Rejected</i> status, it is no longer displayed at this tab. The vendor cannot delete an invoice in any other status.</p> <p>See <a href="#">Invoice Inquiry</a> for more information on invoices.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Line #</b>            | The line number included on the invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Item #</b>            | The item number or code identifying the shipped item included in the invoice. The description of the item is to the right, separated by a hyphen ( - ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Invoice Number</b>    | The invoice number specified by the vendor when creating the invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Invoice Date</b>      | The date the vendor specified for the invoice. Format is based on the settings at the <a href="#">Users</a> screen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Invoice Qty</b>       | The total quantity of the item included in the shipment and being billed on this invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Invoice Unit Cost</b> | <p>The vendor's unit cost for the shipment. Multiplied by the Invoice Qty.</p> <p><b>Different unit cost?</b> If the vendor specifies an invoice unit cost that exceeds or falls short of the original PO Unit Cost by more than the <a href="#">Unit Cost Threshold</a> you have specified for the vendor, the invoice detail line is <i>out-of-balance</i>. For example, if you set the threshold at 10%, and the vendor changes the invoice unit cost (higher or lower) by more than 10%, the invoice detail line is out-of-balance.</p> <p><b>Held invoice?</b> When the vendor submits an invoice that includes any <i>out-of-balance</i> lines, the invoice goes into <i>Held</i> status, and you need to either approve or reject the invoice. If you accept the invoice, it posts to the originating system. If you reject the invoice, the vendor can edit the invoice, including the Invoice Unit Cost, again, and resubmit the invoice; or the vendor can delete the invoice.</p> <p><b>Email notification to vendor:</b> The vendor receives an email notification when you accept or reject an out-of-balance invoice if indicated by the <i>Invoice Balance Notification</i> setting at the <i>Email</i> folder of the <i>Preferences</i> tab of the <a href="#">New Vendor</a> or <b>Edit Vendor</b> screen.</p> |
| <b>Display</b>           | Optionally, select the display icon (  ) to advance to the <a href="#">Invoice</a> screen, where you can review details about the invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>History tab</b>       | This tab displays an entry for each activity that occurs related to a purchase order or a line on the purchase order. See                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| Maintenance         | The vendor puts a line on hold.                                                                                                                                                                                                  | UI     | Held            | Held: Backordered (where Backordered is the Reason Description entered by the vendor)                                                              |
| Maintenance         | The vendor releases a line from hold.                                                                                                                                                                                            | UI     | previous status | Released<br><b>Note:</b> The Reason Description is not listed here even if the vendor entered one while releasing the line from hold.              |
| Maintenance         | The vendor revises the line's Due Date.                                                                                                                                                                                          | UI     | unchanged       | Maintenance Delay Revised Due Date: 06/28/2022 (where Delay is the Reason Description entered by the vendor and 6/28/2022 is the revised due date) |
| Maintenance         | The vendor enters a Reason Description without changing the line's hold status or revising the due date.                                                                                                                         | UI     | unchanged       | Maintenance Expected next week (where Expected next week is the Reason Description entered by the vendor)                                          |
| Maintenance         | The vendor deletes a Reason Description for an line that is not held and does not have a revised due date.                                                                                                                       | UI     | unchanged       | Maintenance                                                                                                                                        |
| Pack Slip Reprinted | The vendor uses the <b>Void/Reprint Pack Slip</b> screen or the <i>Reprint Pack Slip</i> option at the <b>Purchase Order</b> screen to void and reprint the pack slip.                                                           | UI     | In Process      | Indicates the new batch ID (for example, Batch ID (74)).                                                                                           |
| Pack Slip Voided    | The vendor uses the <b>Void/Reprint Pack Slip</b> screen to void but not reprint the pack slip by setting the New Print Qty of all printed lines to 0.                                                                           | UI     | New Order       | Indicates the current batch number voided (for example, Batch ID 73)).                                                                             |
| Re-opened           | The vendor confirms shipment of the entire printed quantity of a line, but there is an additional unprinted quantity because the vendor previously used the <b>Void/Reprint Pack Slip</b> screen to reduce the printed quantity. | UI     | New Order       |                                                                                                                                                    |

| Action Type  | Created When                                                                                                                                                                                              | Source | Status    | Transaction Notes       |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|-----------|-------------------------|
| Data Removal | The customer data for the purchase order was <a href="#">anonymized</a> , either through the <a href="#">Completed Order Private Data Purge</a> job, or through the ForgetPrivateData web service request | WS     | unchanged | Private Data Anonymized |

## Browse Detail Customizations

**Purpose:** Use the **Browse Detail Customizations** window to review the special handling instructions for an item on a purchase order. The special handling instructions also print on the pack slip.

Used for the Supplier Direct Fulfillment module.

**Information from CWDirect or Order Administration:** CWDirect and Order Administration send special handling instructions for drop ship items if the items use a custom special handling format, which includes a definition of each type of instruction (such as monogramming or hemming). If the drop ship items use standard special handling, which consists of free-form text, CWDirect and Order Administration System do not sent this information to Order Orchestration.

**How to display this window:** Select the icon (  ) in the *Custom* column at the *Detail tab* of the [Purchase Order](#) screen.

### Note

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Purchase Order Inquiry* authority can display this window. See [Roles](#) for more information.

### Fields at this window

| Field                | Description                                                                                                                                                                                                                             |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Line #</b>        | The purchase order line number identifying the item receiving the special handling.                                                                                                                                                     |
| <b>Vendor Item #</b> | The vendor's code or number identifying the item receiving the special handling. The description of the item follows, separated by a hyphen (-).                                                                                        |
| <b>Retailer Item</b> | The code or number identifying the item in the originating system, such as Order Administration or CWDirect. The description of the item follows, separated by a hyphen (-).                                                            |
| <b>Label</b>         | The code identifying the type of special handling instructions, such as monogramming or hemming. Identified as the Label in Order Administration or CWDirect. From the customization_code in the <a href="#">CreateDSOrder</a> message. |

| Field | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Value | <p>The instructions related to the type of special handling, such as the letters to monogram or the length to hem. If the customization message is too wide based on the number of characters and their widths (a <i>W</i> being wider than an <i>i</i>), the message may be truncated on the window. Identified as the Input in Order Administration or CWDirect. From the customization_message in the <a href="#">CreateDSOrder</a> message.</p> <p>The customization label and instructions also print on the pack slip. The pack slip can print a wider customization than the <b>Browse Detail Customizations</b> window can display; however, if the message is too wide it is truncated on the pack slip as well.</p> |

**Scroll up or down:** Click the next arrow () to display the special handling instructions, if any, for the next line on the purchase order. Similarly, click the previous arrow () to display the special handling instructions, if any, for the previous line on the purchase order.

If there are no special handling instructions for the next or previous line, the Label and Value fields displayed are blank.

## Browse Purchase Order Detail Messages

**Purpose:** Use the **Display Purchase Order Detail Messages** window to review a sales order message related to an item on a purchase order.

Used for the Supplier Direct Fulfillment module.

**Information from Order Administration or CWDirect:** Order Administration and CWDirect send order line messages for drop ship items if the items if the messages are flagged to print on picks, or on both invoices and picks (although Oracle Retail Order Administration System Cloud Service 15.0 and later, or Order Administration System does not support the invoicing integration). You use the Work with Order Line Messages screen to work with or review these message lines in Order Administration and CWDirect.

**How to display this window:** Select the icon () in the *Messages* column at the *Detail* tab of the [Purchase Order](#) screen.

### Note

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Purchase Order Inquiry* authority can display this window. See [Roles](#) for more information.

### Fields at this window

| Field         | Description                                                                                                                |
|---------------|----------------------------------------------------------------------------------------------------------------------------|
| Line #        | The purchase order line number identifying the item.                                                                       |
| Vendor Item # | The vendor's code or number identifying the item. The vendor's description of the item follows, separated by a hyphen (-). |
| Item #        | The item number or code. The description of the item follows, separated by a hyphen (-).                                   |

| Field                    | Description                                                                                                                 |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| Sales Order Line Message | A message related to the item on the sales order. From the order_line_message in the <a href="#">CreateDSOrder</a> message. |

**Scroll up or down:** Click the next arrow () to display the sales order message for the next line on the purchase order. Similarly, click the previous arrow () to display the sales order message for the previous line on the purchase order.

If there is no sales order message for the next or previous line, the Sales Order Line Message displayed is blank.

## Display Purchase Order Item

**Purpose:** Use the **Display Purchase Order Item** window to review additional details about an item on a purchase order.

Used for the Supplier Direct Fulfillment module.

**How to display this window:** Select the icon () in the *Display* column at the [Detail tab](#) of the [Purchase Order](#) screen.

 **Note**

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Purchase Order Inquiry* authority can display this window. See [Roles](#) for more information.

| review the next item     | Click the next icon (  ) to display the next item.          |
| review the previous item | Click the previous icon (  ) to display the previous item. |

### Fields at this window

| Field         | Description                                                                                                                  |
|---------------|------------------------------------------------------------------------------------------------------------------------------|
| Line #        | The purchase order line number identifying the item.                                                                         |
| Item #        | The code or number identifying the item. The description of the item follows, separated by a hyphen (-).                     |
| Vendor Item # | The vendor's item number or code. The vendor's description of the item follows, separated by a hyphen (-).                   |
| Gift Wrap     | Set to Y if the item requires gift wrap. From the order_line_gift_wrap setting in the <a href="#">CreateDSOrder</a> message. |

| Field                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Line Status</b>        | <p>The current status of the item on the purchase order. Possible statuses are:</p> <ul style="list-style-type: none"> <li>• <i>Cancelled:</i> You have canceled the line.</li> <li>• <i>Held:</i> The vendor has held the line(s) on the purchase order from processing. The vendor might put a line on hold if the vendor cannot fulfill it, and is requesting that you cancel the line. When a line on a purchase order is on hold, it is not eligible for pack slip generation or to be sent to an <a href="#">integrated vendor</a>; or, if the purchase order line was already in process, the line is not eligible for shipment confirmation, and if the vendor uses the void/reprint option, the held line is omitted from the new pack slip.</li> <li>• <i>In Process:</i> The vendor has generated pack slips for the entire purchase order or the line, or sent the purchase order to the vendor's system (and the batch was acknowledged, if required) if it is an <a href="#">integrated vendor</a>.</li> <li>• <i>New Order:</i> The vendor has received the purchase order, but has not yet generated pack slips for the entire purchase order or the line; or, in the case of an <a href="#">integrated vendor</a>, the vendor has not yet received the purchase order or required acknowledgment, if required.</li> <li>• <i>Shipped:</i> The vendor has confirmed shipment of the line.</li> </ul> <p><b>Note:</b> The line status is different from the <a href="#">Order Status</a> if the purchase order has more than one line, and the lines have different statuses. See the <a href="#">Order Status</a> for more information.</p> |
| <b>Original Due Date</b>  | <p>The due date that was specified for the line. From the po_line_due_date in the <a href="#">CreateDSOrder</a> message. Format is based on the settings from the <a href="#">Users</a> screen.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Revised Due Date</b>   | <p>The current due date for the line, if the vendor has entered a different due date. If the vendor has revised the due date more than once, the most recently entered due date is displayed. Format is based on the settings from the <a href="#">Users</a> screen.</p> <p>When the vendor revises the due date, the vendor also needs to enter a <i>Reason Description</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Reason Description</b> | <p>The reason for a change to the line on the purchase order. When the vendor revises the due date, the vendor also needs to enter a reason description. The vendor can also enter a reason description when changing a line's hold status, or for any other reason.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

Informational only.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Unit Price</b>         | <p>The vendor's single-unit price for the item. Rounded to 2 decimal positions (for example, a price of \$1.3456 is rounded to \$1.35). The currency symbol displayed is based on the <a href="#">Currency</a> specified for the purchase order. From the vendor_unit_price in the <a href="#">CreateDSOrder</a> message.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Field              | Description                                                                                                                                                                                                                           |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Ext. Price</b>  | The extended price for the item, calculated by multiplying the Ordered Qty * the Unit Price. Rounded to 2 decimal positions. The currency symbol displayed is based on the <a href="#">Currency</a> specified for the purchase order. |
| <b>UPC Code</b>    | The item's UPC code, if any. From the <code>item_upc_cd</code> in the <a href="#">CreateDSOrder</a> message.                                                                                                                          |
| <b>EAN Code</b>    | The item's EAN code, if any. From the <code>item_ean_cd</code> in the <a href="#">CreateDSOrder</a> message.                                                                                                                          |
| <b>Status Date</b> | The last date and time when the status of the line changed. Format is based on the settings from the <a href="#">Users</a> screen.                                                                                                    |

## Purchase Order History Detail

**Purpose:** Use the **Purchase Order History Detail** window to review:

- an address change applied automatically to a line because you submitted the change when the line was in *New Order* status
- an address change you requested when a line is in *In Process* or *Held* status; these address changes do not apply until the vendor accepts them

Used for the Supplier Direct Fulfillment module.

**Submitting address changes:** The system originating the purchase order, such as Order Administration or CWDirect, can submit an address change through the [SetDSAddress Change](#) message.

**Automatically rejected?** Address change requests are not available for review in this window if they arrive when the line is already in *Cancelled* or *Shipped* status. These address change requests are automatically rejected.

**Address changes for different lines on the purchase order:** Even though the address change request is related to the purchase order header, Order Orchestration evaluates the status of the individual lines on the purchase order when determining whether to apply the change, reject it automatically, or submit it to the vendor for review.

*Example:* A purchase order is in *Open* status, with one line in *In Process* status and one line in *Shipped* status. The vendor needs to approve or reject the address change for the line in *In Process* status. The address change is automatically rejected for the line in *Shipped* status.

**What if you submit multiple address changes for the same line?** If you submit a second or third address change for the same *In Process* or *Held* line before the vendor has accepted or rejected the previously rejected change, Order Orchestration automatically rejects the previous address change. In this situation, when you display the **Purchase Order History Detail** window, only the name and address information for the most recent address change is displayed.

If you submit multiple address changes for a *New Order* line before the vendor generates the pack slip, each address change is automatically applied, and is displayed at the **Purchase Order History Detail** window.

**Customer data anonymized?** If the customer data on a purchase order has been anonymized (deleted and replaced with asterisks), asterisks are displayed for the Old Ship To and New Ship To customer name, address, phone numbers, and email address:

The address change data is anonymized regardless of whether the address change applies automatically, is accepted by the vendor, or is rejected by the vendor.

See [Anonymizing Data](#) for background.

**How to display this window:** Select the icon (  ) in the *Details* column at the [History tab](#) of the [Purchase Order](#) screen. This icon is displayed only if there is an address change request that was received when the line was in *New Order*, *In Process*, or *Held* status.

**Note**

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Purchase Order Inquiry* authority can display this window. See [Roles](#) for more information.

**Window displayed for multiple history records?** If the address change was:

- *accepted by the vendor* = The window is available next to the history record marking both when the address change was requested and when the vendor approved the address change. The status indicated in both windows is *Address Change Approved*.
- *rejected by the vendor* = The window is available only next to the history record marking when the address change was requested. The status indicated is *Address Change Rejected*.

| <b>Old Ship To</b> | <p>The ship-to name and address before applying the change. Includes:</p> <ul style="list-style-type: none"> <li>• name: prefix (such as Mr. or Dr.), first name, middle name, last name, and suffix (such as Jr. or Esq.)</li> <li>• company name</li> <li>• first address line</li> <li>• apartment, unit, or suite number (prefixed by the label Apt / Unit #:)</li> <li>• address line 2</li> <li>• address line 3</li> <li>• address line 4</li> <li>• city, state, postal or zip code, country code</li> <li>• daytime phone number (prefixed by the label Day:)</li> <li>• evening phone number (prefixed by the label Eve:)</li> <li>• email address</li> </ul> <p>This information is from the <a href="#">CreateDSOrder</a> message.</p> <p><b>Note:</b> Not all of the information above might be available for each customer.</p> <p><b>Replaced with asterisks?</b> If the customer data on a purchase order has been <a href="#">anonymized</a> (deleted and replaced with asterisks), asterisks are displayed for the Old Ship To and New Ship To customer name, address, phone numbers, and email address.</p> |
| <b>New Ship To</b> | <p><b>Note:</b> The ship-to name and address with the changes indicated in red. Includes the same name and address fields as the Old Ship To. This information is from the <a href="#">SetDSAddress Change</a> message.</p> <p><b>Replaced with asterisks?</b> If the customer data on a purchase order has been <a href="#">anonymized</a> (deleted and replaced with asterisks), asterisks are displayed for the Old Ship To and New Ship To customer name, address, phone numbers, and email address.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Invoice Inquiry

**Purpose:** Use the **Invoice Inquiry** screen to select invoices for review. You can also use this screen to select *Held* invoices so you can approve or reject them.

**When is an invoice held?** Order Orchestration holds an invoice if the invoice unit cost on one or more invoice detail lines exceeds or falls below the PO unit cost by more than the [Unit Cost Threshold](#) you have specified for the vendor. For example, if you set the Unit Cost Threshold to 10%, Order Orchestration holds the invoice if any invoice detail line's cost is more than 10% higher or lower than the original PO unit cost. These lines are considered [out-of-balance](#).

When you advance to this screen, it displays a message indicating how many held invoices waiting for review, for example: There are 3 held invoices awaiting review.

**Email notification:** When a vendor submits an invoice that includes an [out-of-balance](#) line, Order Orchestration generates a notification to the *Invoice Balance Notification* email address specified at the *Email* tab of the [Drop Ship Preferences](#) screen if the *Invoice Balance Notification* flag is selected. See the [Out-of-balance invoice notification email to retailer](#) for a sample.

**Held invoices message:** When you first advance to this screen, a message indicates the number of held invoices waiting for your review.

**Resending invoices to the order management system:** If the order management system, such as Order Administration, did not receive and create the invoices, you can resend one or

more invoices by setting the `posted_date` in the `vendor_invoice` table to NULL. Order Orchestration then includes these invoices in the `GetDSInvoicesResponse` message the next time it receives the request from the order management system, such as Order Administration.

**How to display:** Select *Invoice Inquiry* from the [Home Screen](#) or the *Orders* drop-down menu.

 **Note**

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Invoice Inquiry* authority can display this screen. See [Roles](#) for more information.

### Options at this screen

| Option                                             | Procedure                                                                                                                                                                                                                                                                                                                                                                          |
|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>search for invoices</b>                         | <p>When you first advance to this screen, no invoices are displayed. To search, complete any of the <i>Search fields</i> and click <i>Search</i>.</p> <p><b>Case?</b> All the enterable fields on this screen are case-insensitive for searching; for example, an entry of a or A matches an invoice number of ABC123.</p>                                                         |
| <b>select an invoice for review or maintenance</b> | <p>Click the edit/display icon (  ) next to an invoice to advance to the <a href="#">Invoice</a> screen, where you can review the information on the invoice. If the invoice is in <i>Held</i> status, you can also use the <a href="#">Invoice</a> screen to accept or reject the invoice.</p> |

### Fields at this screen

| Fields               | Description                                                                                                                                                                                                                               |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Search fields</b> | You can use any of the search fields, alone or in combination, to restrict the invoices displayed in the <i>Search Results fields</i> .                                                                                                   |
| <b>Organization</b>  | See <a href="#">organization</a> . From the <i>Default Organization</i> defined through the <a href="#">Users</a> screen, but you can override it.                                                                                        |
| <b>Vendor</b>        | Optionally, select a vendor associated with your organization from the drop-down list to display purchase orders assigned to that vendor. The name or description of the vendor is displayed. See <a href="#">Vendors</a> for background. |

| Fields                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Invoice Status</b>        | <p>Optionally, select a status from the drop-down list and click <i>Search</i> to display invoices in that status, or leave this field blank to display invoices regardless of status. Possible statuses are:</p> <ul style="list-style-type: none"> <li><i>Approved</i> = The invoice was approved, either automatically or by you, but has not yet posted to the originating system.</li> <li><i>Held</i> = The vendor has submitted the invoice, and the invoice includes at least one line that is <a href="#">out-of-balance</a> because the vendor changed the unit price by more than the <a href="#">Unit Cost Threshold</a>; for example, you set a threshold of 10%, and the vendor changed the unit price by 15%. The invoice remains in <i>Held</i> status until the you either approve or reject it.</li> <li><i>New</i> = The vendor selected the <i>Update and Save for Changes</i> option when creating the invoice, and has not yet submitted the invoice to you for posting.</li> <li><i>Posted</i> = The invoice has been posted to the originating system, such as Order Administration or CWDirect, for payment processing.</li> <li><i>Rejected</i> = The vendor submitted an invoice that includes an <a href="#">out-of-balance</a> line, and you rejected it. The vendor can change the invoice so that it no longer contains an out-of-balance line, or can delete the invoice.</li> </ul> |
| <b>Invoice Date</b>          | Optionally, select a date from the calendar control and click <i>Search</i> to display invoices with this date, or leave this field blank to display invoices regardless of date. This is the date the vendor specified when creating the invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Invoice Number</b>        | <p>Optionally, enter a full or partial invoice number and click <i>Search</i> to display invoices whose invoice number starts with or matches your entry.</p> <p>Not case-sensitive for searching; an entry of A or a matches an invoice number of A12345.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>PO Number</b>             | <p>Optionally, enter a full or partial purchase order number and click <i>Search</i> to display invoices that include any purchase orders whose numbers start with or match your entry.</p> <p>Not case-sensitive for searching; an entry of A or a matches a purchase order number of A12345.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Order Number</b>          | <p>Optionally, enter a full or partial number or code identifying the sales order in the originating system and click <i>Search</i> to display invoices that include purchase orders for sales orders whose order numbers start with or match your entry.</p> <p>Not case-sensitive for searching; an entry of A or a matches an order number of A12345.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Search Results fields</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Vendor</b>                | The name or description of the vendor. See <a href="#">Vendors</a> for background.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Invoice Number</b>        | The invoice number the vendor specified when creating the invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Fields                | Description                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Invoice Amount</b> | The total amount on the invoice, including: <ul style="list-style-type: none"> <li>the current extended price on all invoice lines</li> <li>the freight, handling, and other charges at the invoice header level</li> <li>the freight, handling, and other charges for all invoice lines</li> </ul>                                                                         |
| <b>Invoice Date</b>   | The date the vendor specified for the invoice. Format is based on the settings at the <a href="#">Users</a> screen.                                                                                                                                                                                                                                                         |
| <b>Invoice Status</b> | The current status of the invoice. See the <a href="#">Invoice Status</a> , above, for descriptions of possible statuses.                                                                                                                                                                                                                                                   |
| <b>Display</b>        | Click the edit/display icon (  ) next to an invoice to advance to the <a href="#">Invoice</a> screen, where you can review the information on the invoice. If the invoice is in <i>Held</i> status, you can also use the <a href="#">Invoice</a> screen to accept or reject the invoice. |

## Invoice

**Purpose:** Use the **Invoice** screen to review an invoice, and to approve or reject a *Held* invoice.

**When is an invoice held?** Order Orchestration holds an invoice if the invoice unit cost on one or more invoice detail lines exceeds or falls below the PO unit cost by more than the [Unit Cost Threshold](#) you have specified for the vendor. For example, if you set the Unit Cost Threshold to 10%, Order Orchestration holds the invoice if any invoice detail line's cost is more than 10% higher or lower than the original PO unit cost. These lines are considered [out-of-balance](#).

### Approve or reject an invoice:

- Click *Approve* to open the [Approve Invoice](#) window if you do not require the vendor to edit the invoice before it is eligible to post to your system.
- Click *Reject* to open the [Reject Invoice](#) window if the vendor needs to edit the invoice before it is eligible to post to your system.

#### Note

Only users with *Invoice Inquiry* and *Invoice Maintenance* authority can advance to these windows. See [Roles](#) for more information.

**Email notification:** When a vendor submits an invoice that includes an [out-of-balance](#) line, Order Orchestration generates a notification to the *Invoice Balance Notification* email address specified at the *Email* tab of the [Drop Ship Preferences](#) screen if the *Invoice Balance Notification* flag is selected. See the [Out-of-balance invoice notification email to retailer](#) for a sample.

**How to display:** Select *Display* for an invoice at the [Invoice Inquiry](#) screen.

#### Note

- Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Invoice Inquiry* authority can display this screen. See [Roles](#) for more information.
- If the **Invoice** screen was already open in another tab when you clicked the edit icon, you advance to this screen with the previous invoice information displayed.

| <b>Invoice Information</b>                | Unlabeled area at the top of the screen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Invoice Number</b>                     | The invoice number specified by the vendor when creating the invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Organization</b>                       | The name or description of the organization associated with the invoice. See <a href="#">organization</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Merchandise</b>                        | The current extended price of all invoice lines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Currency</b>                           | A currency of USD is displayed regardless of the currency on the purchase orders included on the invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Invoice Status</b>                     | <p>Possible statuses are:</p> <ul style="list-style-type: none"> <li>• <i>Approved</i> = The invoice was approved, either automatically or by you, but has not yet posted to the originating system.</li> <li>• <i>Held</i> = The vendor has submitted the invoice, and the invoice includes at least one line that is <a href="#">out-of-balance</a> because the vendor changed the unit price by more than the <a href="#">Unit Cost Threshold</a>; for example, you set a threshold of 10%, and the vendor changed the unit price by 15%. The invoice remains in <i>Held</i> status until the you either approve or reject it.</li> <li>• <i>New</i> = The vendor selected the <i>Update and Save for Changes</i> option when creating the invoice, and has not yet submitted the invoice to you for posting.</li> <li>• <i>Posted</i> = The invoice has been posted to the originating system for payment processing.</li> <li>• <i>Rejected</i> = The vendor submitted an invoice that includes an <a href="#">out-of-balance</a> line, and you rejected it. The vendor can change the invoice so that it no longer contains an out-of-balance line, or can delete the invoice.</li> </ul> |
| <b>Vendor</b>                             | The name or description of the vendor assigned to fulfill the purchase order. Up to 40 positions. The vendor code follows in parentheses. Up to 10 positions. From the vendor_cd in the <a href="#">CreateDSOrder</a> message.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Other Charge</b>                     | The total “other” charge amount at the header level of the invoice.                                                                                                                                                                                                                                                |
| <b>Detail Freight</b>                   | The total freight charges on all invoice detail lines. You can review the freight charges for an invoice detail line at the <a href="#">Browse Invoice Detail</a> window, available by clicking the  at the <i>Detail tab</i> .   |
| <b>Detail Handling</b>                  | The total handling charges on all invoice detail lines. You can review the handling charges for an invoice detail line at the <a href="#">Browse Invoice Detail</a> window, available by clicking the  at the <i>Detail tab</i> . |
| <b>Detail Other Charge</b>              | The total “other” charges on all invoice detail lines. You can review the “other” charges for an invoice detail line at the <a href="#">Browse Invoice Detail</a> window, available by clicking the  at the <i>Detail tab</i> .   |
| <b>Header tab: Payment Terms fields</b> | Use these fields to review the payment terms, if any, the vendor has specified for the invoice.                                                                                                                                                                                                                    |

**Note**

The Vendor Portal does not validate the payment terms fields. For example, it does not confirm that the vendor enters a Discount Percent if specifying a Discount Days Due.

**Discount Percent**

The percentage discount to apply when paying the invoice within the *Discount Days Due*. Can include a 2-position decimal.

**Discount Days Due**

The maximum number of days in which to pay the invoice in order to qualify for the *Discount Percent*. Up to 3 positions.

**Gross Days**

The number of days in which payment is due for the invoice. Up to 3 positions.

| Fields                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Detail tab</b>        | <p>This tab displays information about the line(s) the vendor is billing on the invoice, and includes options to display additional information about the line(s).</p> <p><b>Separate shipments?</b> Each shipment included in the invoice is listed separately, even if the shipments are for the same item on a purchase order. For example, if the vendor ships 3 units of item ABC123 separately for purchase order 456, all 3 shipments can be included on the invoice, and each unit is listed separately at the <i>Detail</i> tab, even if each of the fields described below (PO Number, PO Line #, Order Number, Item #, etc.) is the same.</p> <p><b>Note:</b> If the vendor uploaded the invoice and consolidated multiple shipments for a PO line into a single DETAIL record with full shipped qty, then there is not a unique invoice_line_no for each shipment of the PO detail line.</p> |
| <b>PO Number</b>         | <p>The number or code identifying the purchase order in the originating system.</p> <p><b>Case:</b> If the originating system includes any lowercase letters in the purchase order number, Order Orchestration converts them to uppercase when creating the purchase order.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>PO Line #</b>         | The original purchase order line number for the shipment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Order Number</b>      | The number or code identifying the sales order in the originating system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Item #</b>            | Your item number or code. Hold the pointer over the Item # to display a description of the item.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Shipped Date</b>      | The date when the shipment occurred. Format is based on the locale selected through the <a href="#">Users</a> screen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Invoice Qty</b>       | The total quantity included in the shipment and being billed on this invoice. Each shipment creates a separate invoice detail line, even if it is for the same purchase order detail line.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>PO Unit Cost</b>      | The original unit cost from the purchase order.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Invoice Unit Cost</b> | <p>The unit cost the vendor is billing for the shipment. Multiplied by the Invoice Qty.</p> <p>If the cost entered by the vendor exceeds or falls short of the original PO Unit Cost by more than the <a href="#">Unit Cost Threshold</a>, the invoice detail line is out-of-balance: for example, you set a threshold of 10%, and the vendor changed the unit price by 15%. The invoice remains in <i>Held</i> status until you either approve or reject it.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Balanced</b>          | <p>The <a href="#">out-of-balance</a> icon () indicates if the invoice detail line is currently out-of-balance because the current Invoice Unit Cost &gt; differs from the original PO Unit Cost by the <a href="#">Unit Cost Threshold</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Display</b>           | <p>Click the <i>Display</i> icon () to advance to the <a href="#">Browse Invoice Detail</a> window to review additional information about the invoice line.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Fields                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>PO Inquiry</b>        | Click the <i>PO Inquiry</i> icon (  ) to advance to the <a href="#">Purchase Order Inquiry</a> screen, where you can review the details of the purchase order, such as the sold-to and ship-to address, items, history, and messages.                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>History tab</b>       | This tab displays an entry for each activity that occurs related to the invoice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Action Type</b>       | Possible action types: <ul style="list-style-type: none"> <li>• <i>Created</i> = The vendor created the invoice.</li> <li>• <i>Maintained</i> = The vendor maintained the invoice.</li> <li>• <i>Submitted</i> = The vendor submitted the invoice.</li> <li>• <i>Approved</i> = You approved an <a href="#">out-of-balance</a> invoice, or it was approved automatically because it was not out-of-balance.</li> <li>• <i>Rejected</i> = You rejected an <a href="#">out-of-balance</a> invoice.</li> <li>• <i>Posted</i> = The invoice posted to the originating system through the <a href="#">getDSInvoices</a> messages. In this case, the User is <i>Admin</i> and the Source is <i>WS</i>.</li> </ul>                                        |
| <b>Status</b>            | The status of the invoice as a result of the action. See the <i>Invoice Status</i> , above, for a listing of possible statuses.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Date / Time</b>       | The date and time when the action occurred. Format is based on the locale selected through the <a href="#">Users</a> screen.<br><br>The date and time can be the same for a series of actions when some of the actions take place automatically. For example, if you create an invoice that is not out-of-balance and it is submitted immediately, the Created, Submitted, and Posted actions can all have the same date and time.                                                                                                                                                                                                                                                                                                                 |
| <b>User</b>              | The user ID of the person who performed the action. A user of <i>Admin</i> indicates that the action takes place automatically without user intervention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Source</b>            | Possible sources are: <ul style="list-style-type: none"> <li>• <i>UI</i> = The action took place at a screen.</li> <li>• <i>WS</i> = The action took place through a message sent automatically between two systems (the vendor posting the invoice to the retailer's system).</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Transaction Notes</b> | Possible notes include: <ul style="list-style-type: none"> <li>• <i>Invoice created</i> (Action Type = Created)</li> <li>• <i>Ready to Post</i> (Action Type = Submitted)</li> <li>• <i>Invoice Posted</i> (Action Type = Posted)</li> <li>• <i>Updated by Vendor</i> (Action Type = Maintained)</li> <li>• <i>Out of Balance. Submitted to Retailer for Approval</i> (Action Type = Submitted)</li> <li>• <i>Retailer Rejected - explanation</i>, where <i>explanation</i> is your note when rejecting the invoice (Action Type = Rejected)</li> <li>• <i>Retailer Approved - explanation</i>, where <i>explanation</i> is your note when approving the invoice at the <a href="#">Approve Invoice</a> window (Action Type = Approved)</li> </ul> |

## Browse Invoice Detail

**Purpose:** Use the **Browse Invoice Detail** window to review information about a detail line on an invoice.

**How to display:** Select the icon (  ) in the *Display* column at the *Detail tab* of the [Invoice](#) screen.

### Note

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Invoice Inquiry* authority can display this window. See [Roles](#) for more information.

### Fields at this window

| Field                | Description                                                                                                                                                                                                                                                          |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PO Number</b>     | The number or code identifying the purchase order in the originating system.<br><b>Case:</b> If the originating system includes any lowercase letters in the purchase order number, Order Orchestration converts them to uppercase when creating the purchase order. |
| <b>Order Number</b>  | The number or code identifying the sales order in the originating system.                                                                                                                                                                                            |
| <b>PO Line #</b>     | The original purchase order line number for the shipment.                                                                                                                                                                                                            |
| <b>Item #</b>        | The code or number identifying the item. The description of the item follows, separated by a hyphen (-).                                                                                                                                                             |
| <b>Vendor Item #</b> | The vendor's item number or code. The vendor's description of the item follows, separated by a hyphen (-).                                                                                                                                                           |
| <b>Shipped Date</b>  | The date when the shipment occurred, or the shipment date indicated by the vendor, if different. Format is based on the settings at the <a href="#">Users</a> screen.                                                                                                |
| <b>Invoice Qty</b>   | The total quantity included in a shipment and being billed on this invoice.                                                                                                                                                                                          |
| <b>PO Unit Cost</b>  | The original unit cost from the purchase order.                                                                                                                                                                                                                      |

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Invoice Unit Cost</b>     | <p>The unit cost the vendor is billing for the shipment. Multiplied by the Invoice Qty.</p> <p><b>Different unit cost?</b> If the vendor specifies an invoice unit cost that exceeds or falls short of the original PO Unit Cost by more than the <a href="#">Unit Cost Threshold</a> you have specified for the vendor, the invoice detail line is <i>out-of-balance</i>. For example, if you set the threshold at 10%, and the vendor changes the invoice unit cost (higher or lower) by more than 10%, the invoice detail line is out-of-balance.</p> <p><b>Held invoice?</b> When the vendor submits an invoice that includes any <i>out-of-balance</i> lines, the invoice goes into <i>Held</i> status, and you need to either approve or reject the invoice. If you accept the invoice, it posts to the originating system. If you reject the invoice, the vendor can edit the invoice, including the Invoice Unit Cost, again, and resubmit the invoice; or the vendor can delete the invoice.</p> <p><b>Email notification to vendor:</b> The vendor receives an email notification when you accept or reject an out-of-balance invoice if indicated by the <i>Invoice Balance Notification</i> setting at the <i>Email</i> folder of the <i>Preferences</i> tab of the <a href="#">New Vendor</a> or <b>Edit Vendor</b> screen.</p> |
| <b>Extended Invoice Cost</b> | The current Invoice Unit Cost * the Invoice Qty.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Freight</b>               | The total freight charge for this invoice detail line.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Other Charges</b>         | The total “other” charge for this invoice detail line.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Other Description</b>     | A message about the invoice detail line. Informational only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Last Update</b>           | The last date and time when the vendor updated the invoice detail line. Not updated when you accept or reject an invoice. Format is based on the settings through the <a href="#">Users</a> screen.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Approve Invoice

**Purpose:** Use this window to confirm approval of an *out-of-balance* invoice.

**How to display:** Click *Approve* at the [Invoice](#) screen when you are reviewing an invoice that is in *Held* status because it is out-of-balance.

### Note

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Invoice Inquiry* and *Invoice Maintenance* authority can display this window. See [Roles](#) for more information.

### Completing this window:

- Enter the reason for approving the invoice. This information is displayed to the vendor under invoice history in the Vendor Portal.
- Click *Save* to approve the invoice; otherwise, click *Cancel* to leave the invoice in *Held* status.

**Updates:** When you approve a held invoice:

- The invoice status changes to *Approved*, and then changes to *Posted* as soon as Order Orchestration receives the [getDSInvoices](#) request message from the originating system and includes the invoice in the [getDSInvoices](#) response message. This activity is tracked in invoice history; see the *History* tab of the [Invoice](#) screen.
- If indicated by your *Invoice Balance Notification* settings for the vendor at the *Email* folder of the *Preferences* tab on the [New Vendor](#) or **Edit Vendor** screen, Order Orchestration sends an email notification to the vendor that the invoice was approved. See the [Out-of-balance invoices approved or rejected notification email to vendor](#) for a sample.

**Fields at this window**

| Field                 | Description                                                                                                                                                                             |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Invoice Number</b> | The number or code assigned by the vendor to identify the invoice.                                                                                                                      |
| <b># of PO lines</b>  | The total number of shipments included in the invoice. An invoice can include multiple shipments for the same purchase order line, and can include lines from multiple purchase orders. |
| <b>Reason</b>         | The reason for approving the invoice. This information is displayed to the vendor under invoice history in the Vendor Portal. Required.                                                 |

## Reject Invoice

**Purpose:** Use this window to confirm rejection of an [out-of-balance](#) invoice.

**How to display:** You can display this window by clicking *Reject* at the [Invoice](#) screen when you are reviewing an invoice in *Held* status because it is out-of-balance.

**Note**

Available if Use Vendor Portal is selected at the [Tenant](#) screen. Only users with *Invoice Inquiry* and *Invoice Maintenance* authority can display this window. See [Roles](#) for more information.

**Completing this window:**

- Enter the reason for rejecting the invoice. This information is displayed to the vendor under invoice history in the Vendor Portal.
- Click *Save* to reject the invoice; otherwise, click *Cancel* to leave the invoice in *Held* status.

**Updates:** When you reject a held invoice:

- The invoice status changes to *Rejected*. This activity is tracked in invoice history; see the *History* tab of the [Invoice](#) screen.
- If indicated by your *Invoice Balance Notification* settings for the vendor at the *Email* folder of the *Preferences* tab on the [New Vendor](#) or **Edit Vendor** screen, Order Orchestration sends an email notification to the vendor that the invoice was rejected. See the [Out-of-balance invoices approved or rejected notification email to vendor](#) for a sample.

The vendor can edit a rejected invoice and resubmit it, or the vendor can delete the invoice.

**Fields at this window**

| Field                 | Description                                                        |
|-----------------------|--------------------------------------------------------------------|
| <b>Invoice Number</b> | The number or code assigned by the vendor to identify the invoice. |

  - [Edit Probable Quantity Rule](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.
- [Probable Quantity Location](#): Available if Use Routing Engine is selected at the [Tenant](#) screen.

## Products

**Purpose:** Use the **Products** screen to review or work with products, or items, in the **Order Orchestration** database. Products in the database are visible in locate items searches conducted from an integrated system, such as Order Administration or Xstore.

Used for the Routing Engine module.

**Product relationships:** See [Product, System Product and Product Location](#) for an overview of the relationships among **Order Orchestration** elements, including products.

**How to display this screen:** Select *Products* from the [Home Screen](#) or from the [Products Menu](#).

 **Note**

Only users with *Products* authority can display this screen. See [Roles](#) for more information.

### How are products created in the Order Orchestration database?

Typically, you create products through a product import integration with your external system of record. The process you use to download products from an integrated system varies based on the integration. See [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#) for an overview.

 **Important**

You should not normally create products by completing the entry fields at the top of the **Products** screen. Instead, you should always create and update product and related information through import from the external systems (such as **Order Administration System** or **Xstore**). See [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#) for background.

### Options at this screen

| Option                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>create a product</b><br><b>Note:</b> Normally, you should not create products using this method. By creating a product in <b>Order Orchestration</b> directly rather than using the process described under <a href="#">Importing Items/Products, Inventory, Barcodes, and Locations into the Database</a> , you run the risk that product information will be inconsistent with that in the external systems, such as <b>Order Administration</b> or <b>Xstore</b> . | <ol style="list-style-type: none"> <li>1. Optionally, select a different <a href="#">organization</a> from the <i>Organization</i> drop-down box. Your Default Organization, defined through the <a href="#">Users</a> screen, is selected by default. See <a href="#">Data Hierarchy</a> for more information on how products are integrated within organizations.<br/> <b>Note:</b> You must complete the <a href="#">Preferences</a> screen for an organization before you can select it from the drop-down box.</li> <li>2. Optionally, enter a product code in the <i>Product</i> field. Product codes can be 1 to 35 positions in length, and must be unique within the organization. If you do not enter a product code here, you can enter it at the <a href="#">New Product</a> screen.</li> <li>3. Optionally, enter a name in the <i>Name</i> field. Names can be 1 to 40 positions in length. If you do not enter a name here, you can enter it at the <a href="#">New Product</a> screen.</li> <li>4. Optionally, enter a <a href="#">master style</a> in the <i>Master Style</i> field. Master styles can be 1 to 35 positions in length. This is an optional field.</li> <li>5. Click <i>New</i>. If:             <ul style="list-style-type: none"> <li>• the product already exists in the organization, Order Orchestration displays an error message.                 <ul style="list-style-type: none"> <li>– your entries were valid, you advance to the <a href="#">New Product</a> screen, where you can complete the creation of the product.</li> </ul> </li> </ul> </li> </ol> <p><b>Note:</b> If you click <i>Cancel</i> after advancing to the <b>New Product</b> screen, the product is not created.</p> |

| Option                                     | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| search for a product                       | <p>When you first advance to this screen, no products are displayed. Your Default Organization, defined through the the <a href="#">Users</a> screen, is selected by default. Click <i>Search</i> to retrieve the first 50 products in your organization, or use any combination of the fields at the top of the screen to restrict the search results to matching products:</p> <ul style="list-style-type: none"> <li>• Select a different <a href="#">organization</a> from the from the <i>Organization</i> drop-down box to restrict your results to this organization. You can also select a blank organization to remove this field from your selection criteria.</li> <li>• Enter a full or partial product code in the <i>Product</i> field to restrict your results to product codes starting with your entry.</li> <li>• Enter a full or partial system product code in the <i>System Product</i> field to restrict your results to product codes that have any system products starting with your entry. The system product code itself is not displayed with the search results.</li> <li>• Enter a full or partial name in the <i>Name</i> field to restrict your results to products whose names contain your entry.</li> <li>• Enter a full or partial master style in the <i>Master Style</i> field to restrict your results to products whose master styles start with your entry.</li> <li>• Click <i>Search</i>.</li> </ul> <p><b>Case?</b> All the enterable fields on this screen are case-insensitive for searching; for example, an entry of a or A matches a product code of ABC1234.</p> |
| select a product for review or maintenance | <p>Click the edit icon (  ) next to a product to advance to the <a href="#">Edit Product</a> screen.</p> <p><b>Note:</b> If the <i>Edit Product</i> screen is already open in another tab, you advance to that screen, with the previously-selected product displayed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| delete a product                           | <p>Click the delete icon (  ) next to a product to delete the product from Order Orchestration.</p> <p><b>Note:</b> You can delete a product only if there is not an existing <a href="#">system product</a> or <a href="#">product location</a> for the product; however, if there are no system product or product location records, any existing product UPC codes or product attributes are deleted.</p> <p>You might need to delete a product if it was created inadvertently in the default system and later deleted there. For example, this situation can occur if you inadvertently generated extra SKU's of an item in the Order Administration. In this situation, deleting the product in Order Orchestration is necessary because deleting the SKU in the Order Administration does not automatically delete the product in Order Orchestration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| advance to the System Products screen      | <p>Click the systems icon (  ) next to a product.</p> <p><b>Note:</b>If the <a href="#">System Products</a> screen is already open in another tab, you advance to that screen, with the system products for the previously-selected product displayed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>UPC</b>        | <p>Select the UPC icon () next to a product to advance to the <a href="#">UPC</a> screen.</p> <p><b>Note:</b> If the <i>UPC</i> screen is already open in another tab, you advance to that screen, with the UPC barcodes for the previously-selected product displayed.</p>                                                                                                                                          |
| <b>Edit</b>       | <p>Select the edit icon () next to a product to advance to the <a href="#">Edit Product</a> screen.</p> <p><b>Note:</b> If the <i>Edit Product</i> screen is already open in another tab, you advance to that screen, with the previously-selected product displayed.</p>                                                                                                                                           |
| <b>Delete</b>     | <p>Select the delete icon () next to a product to delete the product from <i>Order Orchestration</i>.</p> <p><b>Note:</b> You can delete a product only if there is not an existing <a href="#">system product</a> or <a href="#">product location</a> for the product; however, if there are no system product or product location records, any existing product UPC codes or product attributes are deleted.</p> |

## New Product

**Purpose:** Use the **New Product** screen to work with a [product](#) or review the date and time when it was last updated.

Used for the Routing Engine module.

**Product relationships:** See [Product, System Product and Product Location](#) for an overview of the relationships among **Order Orchestration** elements, including products. Also, see the [Products](#) screen for more information on how products are created in Order Orchestration.

**How to display this screen:** Begin the entry of a new product at the *Products* screen and click *New*.

 **Note**

Only users with *Products* authority can display this screen. See [Roles](#) for more information.

**Completing entry of a product**

Update any of the fields described below and click *Save*, or click *Cancel* to return to the *Products* screen without saving the new product. The *Organization*, *Product*, and *Name* fields are required.

 **Note**

Any changes you make at this screen can be overwritten the next time you import product information, as described in [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#).

**Fields at this screen**

| Field                  | Description                                                                                                                                          |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization</b>    | See <a href="#">organization</a> . The organization code is separated from the organization description by a hyphen (-). Required.                   |
| <b>Product</b>         | The product code can be 1 to 35 positions long, and must be unique in your organization. See <a href="#">product</a> for more information. Required. |
| <b>Product fields:</b> |                                                                                                                                                      |
| <b>Name</b>            | The <i>Name</i> of a product. Product names can be 1 to 40 positions in length. Required.                                                            |
| <b>Master Style</b>    | See <a href="#">master style</a> . Optional.                                                                                                         |

 **Note**

Normally, you would never change the master style for a product in Order Orchestration.

|                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Image URL</b>              | <p>The URL of the product image to display in Store Connect. Up to 255 positions. Optional.</p> <p>Must be a validly formatted URL, such as <code>https://www.example.com/folder/image.png</code>, where:</p> <ul style="list-style-type: none"><li>• <code>http</code> or <code>https</code> is the protocol</li><li>• <code>www.example.com</code> is the domain or server name</li><li>• <code>folder</code> is a folder or subfolder where the image is found</li><li>• <code>image.png</code> or <code>image.jpg</code> is the name of the image</li></ul> <p>The screen does not validate that an image is found at the specified URL.</p> |
| <b>Classification fields:</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Field             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Department</b> | <p>The description of the product's department.</p> <p>The department description can be 1 to 40 positions in length, and is informational only. Optional.</p> <p><b>Order Administration System integration:</b> If your <a href="#">default system</a> is an Order Administration company, this field is the description of the item/SKU's Long SKU Department. Long SKU departments are used to identify items within a retail hierarchy.</p>                                                                                   |
| <b>Class</b>      | <p>The description of the product's class.</p> <p>The class description can be 1 to 40 positions in length, and is informational only. Optional.</p> <p><b>Order Administration integration:</b> If your <a href="#">default system</a> is an Order Administration company, this field is the description of the item/SKU's Long SKU Class. Taken from the base item rather than the SKU if this is a SKU'd item. Long SKU classes can be used together with long SKU departments to identify items within a retail hierarchy.</p> |
| <b>Category</b>   | <p>The description of the product's category.</p> <p>The Category description can be 1 to 40 positions in length, and is informational only. Optional.</p> <p><b>Order Administration integration:</b> If your <a href="#">default system</a> is an Order Administration company, this field is the description of the item/SKU's Long SKU Division. Long SKU divisions can be used together with long SKU departments and classes to identify items within a retail hierarchy.</p>                                                |

## Edit Product

**Purpose:** Use the **Edit Product** screen to work with an existing [product](#) or review the date and time when it was last updated.

Used for the Routing Engine module.

**Product relationships:** See [Product, System Product and Product Location](#) for an overview of the relationships among **Order Orchestration** elements, including products. Also, see the [Products](#) screen for more information on how products are created in Order Orchestration.

**How to display this screen:** Click the edit icon (  ) for an existing product at the *Products* screen.

Only users with *Products* authority can display this screen. See [Roles](#) for more information.

If the **Edit Product** screen was already open in another tab when you clicked the edit icon, you advance to this screen with the previously-selected product displayed.

**Updating a product:** Update any of the fields described below and click *Save*, or click *Cancel* to return to the *Products* screen without making any changes.

### Note

Any changes you make at this screen can be overwritten the next time you import product information, as described in [Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#).

| <b>Date</b>                                                                                                                                                                                                               | The last date and time when the product was updated, either through the product import process or interactively. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

# System Products

**Purpose:** Use the **System Products** screen to review or work with existing [system products](#), or create a new one.

Used for the Routing Engine module.

**What is a system product?** A system product is an identification of a product within a particular [system](#) that integrates with Order Orchestration.

**Created how?** A system product is created for a product when you import items or products from an external system, such as [OCDS or Merchandising Omni Services](#), **Order Administration System**, or **Xstore**. See [Importing Items/Products, Inventory, Barcodes, and Locations into the Database](#) for an overview.

**Product relationships:** See [Product, System Product and Product Location](#) for an overview of the relationships among **Order Orchestration** elements, including system products.

**How to display this screen:** Click the system product icon () next to a product at the [Products](#) screen.

## Note

- Only users with *Products* authority can display this screen. See [Roles](#) for more information.
- If the **System Products** screen was already open in another tab when you clicked the system product icon, you advance to this screen with the system products for the previously-selected product displayed.

## Options at this screen

| Option                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>create a system product</b><br><b>Note:</b> Normally, you should not create system products using this method. By creating a system product in <b>Order Orchestration</b> directly rather than using the process described under <a href="#">Importing Items/Products, Inventory, Barcodes, and Locations into the Database</a> , you run the risk that system product information will be inconsistent with that in the external system, such as Order Administration System or Xstore. | <ol style="list-style-type: none"> <li>1. Select a <a href="#">system</a> from the from the <i>System</i> drop-down box. Only systems within the product's <a href="#">organization</a> are available for selection.</li> <li>2. Enter a system product code in the <i>System Product</i> field. The system product code can be from 1 to 35 positions long. System products need to be unique within a system, but the same system product code can be assigned across multiple systems. For example, you cannot have more than 1 system product for AB123 in system 2, but you can have system product AB123 in systems 2, 3, and 4.</li> <li>3. Optionally, enter a <a href="#">master style</a> in the <i>Master Style</i> field. The master style can be from 1 to 35 positions long.</li> <li>4. Click <i>New</i>. If:             <ul style="list-style-type: none"> <li>• there is already a system product for this product and system, Order Orchestration clears your entries from the screen and positions the results fields to the existing product.</li> <li>• there is already a system product for a different product in the selected system, Order Orchestration displays a message indicating that the product already exists. You cannot assign the same system product code for the same system to multiple products.</li> <li>• you did not enter a system product code, Order Orchestration displays an error message.</li> <li>• the system product was created successfully, Order Orchestration adds it to the results fields.</li> </ul> </li> </ol> |
| <b>search for a system product</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <p>Use any combination of the fields at the top of the screen to restrict the search results to matching products:</p> <ul style="list-style-type: none"> <li>• Select a <a href="#">system</a> from the from the <i>System</i> drop-down box to restrict your results to this system. Only systems within the product's <a href="#">organization</a> are available for selection.<br/> <b>Note:</b>You can select a blank system to remove this field from your selection criteria.</li> <li>• Enter a full or partial system product code in the <i>System Product</i> field to restrict your results to system product codes starting with your entry.</li> <li>• Enter a full or partial master style in the <i>Master Style</i> field to restrict your results to system products whose master styles start with your entry.</li> <li>• Click <i>Search</i>.</li> </ul> <p><b>Case?</b> Both the enterable fields on this screen are case-sensitive for searching; for example, an entry of a does not match a system product code of ABC123.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>change the master style for a system product</b><br><b>Note:</b> Normally, you should never need to change the master style for a system product. Doing so might make the information in Order Orchestration inconsistent with the related information in the remote system.                                                                                                                                                                                                             | <p>Select the edit icon (  ) next to a system product to open the <a href="#">Edit System Product</a> window.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Option                         | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>delete a system product</b> | <p>Select the delete icon () next to a system product to delete the system product from <i>Order Orchestration</i>. This option is available only if there is not an existing <a href="#">product location</a> for the <a href="#">system</a> and <a href="#">product</a>.</p> <p>You might need to delete a system product if it was created inadvertently in the system and later deleted there. In this situation, deleting the system product in Order Orchestration is necessary because deleting the product in the remote system does not automatically delete the system product in Order Orchestration.</p> |

### Fields at this screen

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Edit</b>                  | Select the edit icon (  ) next to a system product to open the <a href="#">Edit System Product</a> window.                                                                                                                                                                                                                                                    |
| <b>Delete</b>                | Select the delete icon (  ) next to a system product to delete the system product from <i>Order Orchestration</i> . This option is available only if there is not an existing <a href="#">product location</a> for the <a href="#">system</a> and <a href="#">product</a> .                                                                                   |

# Edit System Product

**Purpose:** Use the **Edit System Product** window to change the [master style](#) of an existing [system product](#).

Used for the Routing Engine module.

**For more information:** See the [System Products](#) screen.

**How to display this window:** Click the edit icon (  ) at the [System Products](#) screen.

 **Note**

Only users with *Products* authority can display this screen. See [Roles](#) for more information.

**Fields at this screen**

| Field                        | Description                                                                                                           |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------|
| <b>Informational fields:</b> | All the following fields except for the Master Style are display-only.                                                |
| <b>Organization</b>          | The <a href="#">organization</a> code and name are separated by a hyphen (-).                                         |
| <b>Product</b>               | The <a href="#">product</a> code and name are separated by a hyphen (-).                                              |
| <b>System</b>                | The <a href="#">system</a> code is displayed.                                                                         |
| <b>System Product</b>        | The <a href="#">system product</a> code is displayed.                                                                 |
| <b>Master Style</b>          | Enter a new <a href="#">master style</a> and click <i>Save</i> . The master style can be from 1 to 35 positions long. |

# Product Locations

**Purpose:** Use the **Product Locations** screen to review or work with existing [product locations](#), or create a new one.

Used for the Routing Engine module. Not used by the Supplier Direct Fulfillment module.

**What is a product location?** A product location is a record of a product at a location where it is stocked or sold. For example, an item warehouse record in your order management system, such as Order Administration, corresponds to a product location. Order Orchestration keeps track of availability information for the product location, including the available quantity and the date and expected quantity of any open purchase orders. The availability information is displayed at the [Edit Product Location](#) screen.

**Created how?** Typically, you create product locations through an integration with an external system. For example, product locations are created as part of the product import process or based on the results of an [inventory inquiry](#). You can also create product locations through the [availability update request](#) or [product update request](#), as well as through [OCDS or Merchandising Omni Services Imports](#).

**Note**

A [system product](#) must first exist for the product and system owning the selected location before you can create a product location. For example, if product AB123 does not exist in system 10, then you cannot create a product location for AB123 in system 10's warehouse 1.

**Available quantity updated when?** For an [offline system](#), the available quantity is updated only when you perform the product import process from the system, or through the [availability update request](#) or [product update request](#). For an [online system](#), Order Orchestration updates the available quantity for the product location when it receives a response to an [inventory inquiry](#). Typically, inventory levels in the Order Orchestration database are updated daily, or whenever scheduled by your systems administrator.

The available quantity is also updated through the [OCDS or Merchandising Omni Services Imports](#).

**Product relationships:** See [Product, System Product and Product Location](#) for an overview of the relationships among **Order Orchestration** elements, including product locations.

**How to display this screen:** Click the product location icon () next to a product at the [Products](#) screen.

**Note**

- Only users with *Products* authority can display this screen. See [Roles](#) for more information.
- If the **Product Locations** screen was already open in another tab when you clicked the product location icon, you advance to this screen with the product locations for the previously-selected product displayed.

**Options at this screen**

| Option                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>create a product location</b><br><b>Note:</b> Normally, you should not create product locations using this method. By creating a product location in Order Orchestration directly rather than using the process described under <a href="#">Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database</a> , you run the risk that product location information will be inconsistent with that in the external system, such as Order Administration System or Xstore. | <ol style="list-style-type: none"> <li>1. Optionally, select a <a href="#">location type</a> from the <i>Type</i> drop-down box to restrict the list of locations to this type. Only location types that have been created in the product's <a href="#">organization</a> are available for selection.</li> <li>2. Enter a valid <a href="#">location</a> in the <i>Location</i> field. As you enter characters in the <i>Location</i> field, it displays locations that match your entry, and you can select a location.</li> <li>3. Click <i>New</i>. If:             <ul style="list-style-type: none"> <li>• the product location already exists, or if your entry in the <i>Location</i> field is not valid, Order Orchestration displays an error message.</li> <li>• a <a href="#">system product</a> does not already exist for this product and the system owning the location, Order Orchestration displays an error message. See <a href="#">Data Hierarchy</a> for more information.</li> <li>• your entries were valid, you advance to the <a href="#">New Product Location</a> screen, where you can enter information about availability and complete the creation of the product location.</li> </ul> </li> </ol> <p><b>Note:</b> If you click <i>Cancel</i> at the <a href="#">New Product Location</a> screen, the product location is not created.</p> |

## New Product Location

**Purpose:** Use the **New Product Location** screen to complete entry of a [product location](#) and to enter availability information.

 **Note**

Typically, you create product locations through integrations with external systems. For example, product locations might be created as part of the product import process or based on the results of an [inventory inquiry](#).

Used for the Routing Engine module.

**How to display this screen:** Select a location and click *New* at the [Product Locations](#) screen.

 **Note**

Only users with *Products* authority can display this screen. See [Roles](#) for more information.

**Completing the creation of a product location:** Update any of the fields described below and click *Save*, or click *Cancel* to return to the [Product Locations](#) screen without creating the product location.

 **Note**

Any changes you make at this screen can be overwritten the next time you import product location information, as described in [Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#).

**Fields at this screen**

| Field                        | Description                                                                                                                                                                                             |
|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>Available Quantity</b>          | <p>The quantity of the product available in this location. This information can be updated through integration with an external system, or by entry at this screen.</p> <p>Order Orchestration uses this quantity to calculate the <i>Available to Promise</i> if:</p> <ul style="list-style-type: none"> <li>the location is in an <a href="#">offline system</a>, or</li> <li>the location is in an <a href="#">online system</a>, but Order Orchestration cannot communicate with the system when it receives an <a href="#">inventory inquiry</a>, and the <a href="#">No Offline Response Action</a> setting at the <a href="#">Preferences</a> screen is <i>Use offline</i>.</li> </ul> <p><b>Note:</b> The available quantity is a maximum of 6 positions, and can be a negative number. It cannot include decimals.</p> <p><b>For more information:</b> See the <a href="#">Available to Promise</a> field at the <a href="#">Edit Product Location</a> screen for a discussion.</p> |
| <b>Reserved Quantity</b>           | Not implemented at the <b>New Product Location</b> screen. See the <a href="#">Reserved Quantity</a> at the <a href="#">Edit Product Location</a> screen for a discussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Fulfilled Quantity</b>          | Not implemented on this screen. See the <a href="#">Fulfilled Quantity</a> at the <a href="#">Edit Product Location</a> screen for a discussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Available to Promise</b>        | The <i>Available Quantity</i> minus the <i>Reserved Quantity</i> and the <i>Fulfilled Quantity</i> , if any, for the product location. This field is not implemented at the <b>New Product Location</b> screen. See the <a href="#">Calculating the Available to Promise Quantity</a> for a discussion.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Next PO Date</b>                | <p>The next date when a purchase order for this product is expected for delivery.</p> <p><b>Order Administration integration:</b></p> <p>The date is calculated using purchase order layering, in which the expected quantity on a purchase order may be “reserved” for older backorders. See the Order Administration online help for more information.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Next PO Quantity</b>            | The number of units ordered on the next purchase order. This quantity can be up to 6 positions. It cannot include decimals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Attributes</b>                  | <p>The following product attributes are available to guide selection of fulfilling or sourcing locations for orders:</p> <ul style="list-style-type: none"> <li>probability rules: See the <a href="#">Probability Rule Wizard</a> for more information</li> <li><a href="#">standard brokering</a>: optionally, the Routing Engine can use the Sales Velocity for ranking</li> <li><a href="#">weighted brokering</a>: the Science Engine can use various product location attributes based on the configured weighted brokering percentages</li> </ul> <p>Each of the product attributes are user-defined.</p>                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Daily Sell Through Quantity</b> | <p>Typically represents the average quantity of the product sold in this location on a daily basis. You might use this quantity as part of a probability rule that subtracts the daily sell-through quantity from the available quantity, especially if the location is in an <a href="#">offline system</a>.</p> <p>This quantity can be up to 6 positions, and must be a whole number. It cannot be a negative number.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Field                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Status</b>                 | <p>The status of the product in this location. You might use the status as part of a probability rule that excludes discontinued products. Possible statuses are:</p> <ul style="list-style-type: none"> <li>• Active (default) = Can be ordered.</li> <li>• Inactive = Cannot currently be ordered.</li> <li>• Discontinued = Can still be ordered, but will be inactive at some point in the future.</li> </ul> <p>Required.</p>                                                                                                                                                                                                                                                          |
| <b>Sell Quantity/Multiple</b> | <p>Typically represents the selling multiple for a product; for example, you might sell tires in quantities of 4. You might use this quantity as part of a probability rule that indicates to exclude a product location, or display an available quantity of 0, if the available quantity is lower than the sell quantity/multiple.</p> <p>This quantity can be up to 6 positions, and must be a whole number. It cannot be a negative number.</p> <p>You might also use the Minimum Sell Quantity to fulfill the same function.</p>                                                                                                                                                       |
| <b>On Clearance</b>           | <p>Indicates whether the product is on clearance in this location:</p> <ul style="list-style-type: none"> <li>• Selected = The product is on clearance.</li> <li>• Unselected (default) = The product is not on clearance.</li> </ul> <p>You might use this setting as part of a probability rule that reduces the quantity that is expected to be available to fulfill orders.</p> <p>Used in <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. If you use <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> and this flag is selected, the Science Engine uses a selling price of .01 to calculate margin.</p> |
| <b>Minimum Sell Quantity</b>  | See the Sell Quantity/Multiple, above. This quantity can be up to 6 positions, and must be a whole number. It cannot be a negative number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Selling Price</b>          | <p>The single-unit selling price of the product in this location. Can be up to 19 positions with a 4-position decimal. It can also be 0, but cannot be a negative number, and should not include a currency symbol. Optional, but should be specified if Gross Margin is used in the <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. You might use the selling price in a probability rule to exclude lower-priced items.</p>                                                                                                                                                                                                                 |
| <b>Shrink Rate %</b>          | <p>Typically represents the percentage loss experienced for the product in this location due to theft or breakage. You might use the shrink rate as part of a probability rule that reduces the available quantity by the shrink rate percentage.</p> <p>This percentage can be up to 2 positions, and must be a whole number. It cannot be a negative number.</p>                                                                                                                                                                                                                                                                                                                          |
| <b>Cost</b>                   | <p>The single-unit cost of the product in this location. Can be up to 19 positions with a 4-position decimal. It can also be 0, but cannot be a negative number, and should not include a currency symbol. Optional, but should be specified if Gross Margin is used in the <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. You might use the cost in a probability rule to exclude higher-cost items.</p>                                                                                                                                                                                                                                    |

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sales Velocity</b> | A numeric ranking you can use to indicate how well a product sells in a particular location. You can use the sales velocity ranks assigned to product locations as part of the criteria for selecting fulfilling or sourcing locations for orders, either through standard or weighted brokering. Numeric; 2 positions with an optional 2-position decimal. Can be blank, or any number from 0 to 99.99. See the Standard Brokering or Weighted Brokering tabs at the <a href="#">Preferences</a> screen for more information. |
| <b>Margin</b>         | The Selling Price minus the Cost. If no Cost is specified, the Margin is equal to the Selling Price. If a Cost is specified, but no Selling Price, the Margin is negative. If no Cost or Margin is specified or if you set them to 0, the Margin is blank or 0.0000. System-calculated when either the Selling Price or Cost is entered. Display-only.                                                                                                                                                                         |

## Browse Product Locations

**Purpose:** Use the **Browse Product Locations** window to review availability information for a [product location](#), or to check the last time this information was updated.

Used for the Routing Engine module.

**Product relationships:** See [Product, System Product and Product Location](#) for an overview of the relationships among **Order Orchestration** elements, including product locations. Also, see the [Product Locations](#) screen for more information on how product locations are created in Order Orchestration.

**Updated how?** The availability information displayed at this screen can be updated by:

- a periodic refresh from an external system (such as product import processing from the order management system, such as Order Administration System)
- entry at the [Edit Product Location](#) screen
- the [Fulfilled Inventory Export](#)
- the [availability update request](#)
- the [product update request](#)
- an on-demand refresh triggered by a [locate items](#) search or [product availability search](#) for an [online system](#)
- [OCDS or Merchandising Omni Services Imports](#)

Order Orchestration uses the availability information displayed here to select a fulfilling location, or sourcing location for a ship-for-pickup order, when:

- the location is in an [offline system](#), or
- the location is in an [online system](#), but Order Orchestration cannot communicate with the system and the [No Offline Response Action](#) setting at the [Preferences](#) screen is *Use offline*

**Systems that use purchase order layering:** The Next PO date and quantity listed might not reflect the date and quantity on the next open purchase order for a product if you integrate with a system such as Order Administration, which uses purchase order layering. In purchase order layering, the system accounts for the total quantity backordered to determine which purchase order might be able to fulfill a new order for the product. For example, the backorder quantity for a product is 115. There are 2 open purchase orders for the item, each with an order quantity of 100. Purchase order layering uses the date of the second purchase order as the Next PO

Date since the full order quantity of the first purchase order is already fully committed to prior backorders. Also, it reports that the Next PO Quantity is 85, since the first 15 on the second purchase order is also already committed.

 **Note**

It is important to run the Batch Purchase Order Layering program (BPOL) in the Order Administration before importing inventory information into Order Orchestration.

**About attributes:** The product attributes (*Daily Sell Through Quantity*, *Sell Quantity/Multiple*, *Minimum Sell Quantity*, *Shrink Rate %*, and *Sales Velocity*) are metrics that you can define for a product location in order to use them in probability rules. For example, you might want to display an available quantity of 0 if the actual available quantity is not more than the daily sell-through quantity for an off-line location. You can also have the Routing Engine use the Sales Velocity for product location ranking.

Additional attributes (*Status*, *On Clearance*, *Selling Price*, *Cost*, and *Margin*) can be used as part of [Locateltems Sequence and Splitting Examples \(Standard Brokering\)](#).

**How to display this window:** Click to highlight a product location at the [Product Locations](#) screen.

 **Note**

Only users with *Products* authority can display this screen. See [Roles](#) for more information.

**Options at this window**

| Option                                      | Procedure                                                                                                                                                        |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>review the next product location</b>     | Click the next icon (  ) to display the next product location.               |
| <b>review the previous product location</b> | Click the previous icon (  ) next to display the previous product location. |
| <b>edit the current product location</b>    | Select <i>Edit</i> to advance to the <a href="#">Edit Product Location</a> screen.                                                                               |

| <b>System</b>              | The <a href="#">system</a> code and name are separated by a hyphen (-).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Availability fields</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Available Quantity</b>  | <p>The quantity of the product available in this location as of the most recent update, before subtracting the <i>Reserved Quantity</i> and any <i>Fulfilled Quantity</i>, or applying any probability rules. This information can be updated through:</p> <ul style="list-style-type: none"> <li>a periodic refresh from an external system (such as product import processing from the order management system, such as Order Administration System)</li> <li>entry at the <a href="#">Edit Product Location</a> screen</li> <li>the <a href="#">Fulfilled Inventory Export</a></li> <li>the <a href="#">availability update request</a></li> <li>the <a href="#">product update request</a></li> <li>an on-demand refresh triggered by a <a href="#">locate items</a> search or <a href="#">product availability search</a> for an <a href="#">online system</a></li> <li>interactive updates to product locations through the Retail Integration Bus (RIB) when <a href="#">Importing Data from Merchandising Cloud Services (RMFCS) through the Omnichannel Cloud Data Service (OCDS) or Merchandising Omni Services</a> is implemented. This information originates in Oracle Retail Merchandising Foundation Cloud Service (RMFCS).</li> </ul> <p>See the discussion above under <i>Browse Product Locations</i> for more information.</p> <p>Up to 6 positions, and can be a negative number.</p> <p>Order Orchestration uses this quantity to calculate the <i>Available to Promise</i> unless it receives an update from an <a href="#">online system</a>.</p> <p><b>Probability rules:</b> Probability rules use the <i>Available to Promise</i> in tests, calculations, and results. See <a href="#">Probability Rule Wizard</a> for background.</p> |
| <b>Reserved Quantity</b>   | <p>The quantity on all order lines assigned to this product location that are in a status indicating the inventory is reserved for existing orders. The reserved quantity and any fulfilled quantity are subtracted from the <i>Available Quantity</i> to determine the <i>Available to Promise</i> quantity. Up to 6 positions.</p> <p>You can use the <a href="#">System</a> screen to select the statuses that indicate an order line is reserved.</p> <p>In the case of ship-for-pickup orders, the reserved quantity is updated at the sourcing location.</p> <p>The reserved quantity displayed here is 0 if there are no order lines in a selected status assigned to this product location.</p> <p><b>For more information:</b> See the <a href="#">Reservation tab</a> at the System screen for information on selecting reserved statuses, and see <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Field                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Fulfilled Quantity</b>   | <p>The quantity that has been fulfilled on delivery or pickup orders, or put in transit for ship-for-pickup orders, since the last fulfilled quantity export to the system, or inventory import from the system. The reserved quantity and any fulfilled quantity are subtracted from the <i>Available Quantity</i> to determine the <i>Available to Promise</i> quantity. Up to 6 positions.</p> <p>In the case of ship-for-pickup orders, the fulfilled quantity is increased at the sourcing location when the pickup location changes the status to fulfilled.</p> <p><i>Tracked when?</i> The <a href="#">Track Fulfilled Quantity</a> field at the <a href="#">System</a> screen controls whether to track the fulfilled quantity and, if so, when to reset it.</p> <p><b>For more information:</b> See the <a href="#">Track Fulfilled Quantity</a> field for a discussion of how the fulfilled quantity is tracked, and see <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p> |
| <b>Available to Promise</b> | <p><i>Used for:</i> The quantity for the system to use when determining the available quantity to return in the <code>LocateItems</code> response and the <a href="#">product availability search</a>, and to evaluate locations for order assignment. Up to 6 positions, and can be a negative number.</p> <p><i>Calculation:</i> Calculated by subtracting the <i>Reserved Quantity</i> and any <i>Fulfilled Quantity</i> from the <i>Available Quantity</i> for the product location.</p> <p>When you update the <i>Available Quantity</i> at this screen and press the <i>tab</i> key, the screen updates the <i>Available to Promise</i> quantity based on your entry.</p> <p><b>Probability rules:</b> If a probability rule applies to the product location, it is calculated based on this quantity.</p> <p><b>For more information:</b> See <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p>                                                                                |
| <b>Next PO date</b>         | <p>The next date when a purchase order for this product is expected for delivery.</p> <p><b>Order Administration integration:</b> The date is calculated using purchase order layering, in which the expected quantity on a purchase order may be “reserved” for older backorders. This information is not updated automatically from the Order Administration each time you enter or maintain a purchase order. Some other activity, such as a change to the available quantity above or below the specified threshold, is required to trigger an update from the Order Administration to Order Orchestration. See the Order Administration online help for more information.</p>                                                                                                                                                                                                                                                                                                                                     |
| <b>Next PO Quantity</b>     | <p>The number of units ordered on the next purchase order. This quantity can be up to 6 positions. It cannot include decimals.</p> <p><b>Order Administration integration:</b> This information is not updated automatically from the Order Administration each time you enter or maintain a purchase order. Some other activity, such as a change to the available quantity above or below the specified threshold, is required to trigger an update from the Order Administration System to Order Orchestration.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Last Updated</b>         | <p>The last date and time when this product location was updated through the product and inventory import process, <a href="#">Fulfilled Inventory Export</a>, <a href="#">inventory inquiry</a>, or interactively at this screen. Up to 6 positions.</p> <p>Not updated when Order Orchestration updates the <i>Reserved Quantity</i> or the <i>Fulfilled Quantity</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Field                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Attributes</b>                  | <p>The following product attributes are available to guide selection of fulfilling or sourcing locations for orders:</p> <ul style="list-style-type: none"> <li>probability rules: See the <a href="#">Probability Rule Wizard</a> for more information</li> <li><a href="#">standard brokering</a>: the Routing Engine can use the Sales Velocity for ranking</li> <li><a href="#">weighted brokering</a>: the Science Engine can use various product location attributes based on the configured weighted brokering percentages</li> </ul> <p>Each of the product attributes are user-defined.</p>                                                                                    |
| <b>Daily Sell Through Quantity</b> | <p>Typically represents the average quantity of the product sold in this location on a daily basis. You might use this quantity as part of a probability rule that subtracts the daily sell-through quantity from the available quantity, especially if the location is in an <a href="#">offline system</a>.</p> <p>This quantity can be up to 6 positions, and must be a whole number. It cannot be a negative number.</p>                                                                                                                                                                                                                                                            |
| <b>Status</b>                      | <p>The status of the product in this location. You might use the status as part of a probability rule that excludes discontinued products. Possible statuses are:</p> <ul style="list-style-type: none"> <li>Active (default) = Can be ordered.</li> <li>Inactive = Cannot currently be ordered.</li> <li>Discontinued = Can still be ordered, but will be inactive at some point in the future.</li> </ul>                                                                                                                                                                                                                                                                             |
| <b>Sell Quantity/Multiple</b>      | <p>Typically represents the selling multiple for a product; for example, you might sell tires in quantities of 4. You might use this quantity as part of a probability rule that indicates to exclude a product location, or display an available quantity of 0, if the available quantity is lower than the sell quantity/multiple.</p> <p>This quantity can be up to 6 positions, and must be a whole number. It cannot be a negative number.</p> <p>You might also use the Minimum Sell Quantity to fulfill the same function.</p>                                                                                                                                                   |
| <b>On Clearance</b>                | <p>Indicates whether the product is on clearance in this location:</p> <ul style="list-style-type: none"> <li>Selected = The product is on clearance.</li> <li>Unselected (default) = The product is not on clearance.</li> </ul> <p>You might use this setting as part of a probability rule that reduces the quantity that is expected to be available to fulfill orders.</p> <p>Used in <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. If you use <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> and this flag is selected, the Science Engine uses a selling price of .01 to calculate margin.</p> |
| <b>Minimum Sell Quantity</b>       | <p>See the Sell Quantity/Multiple, above. This quantity can be up to 6 positions, and must be a whole number. It cannot be a negative number.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Selling Price</b>               | <p>The single-unit selling price of the product in this location. Can be up to 19 positions with a 4-position decimal. It can also be 0, but cannot be a negative number, and should not include a currency symbol. Optional, but should be specified if Gross Margin is used in the <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. You might use the selling price in a probability rule to exclude lower-priced items.</p>                                                                                                                                                                                                             |

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Shrink Rate %</b>  | Typically represents the percentage loss experienced for the product in this location due to theft or breakage. You might use the shrink rate as part of a probability rule that reduces the available quantity by the shrink rate percentage.<br>This percentage can be up to 2 positions, and must be a whole number. It cannot be a negative number.                                                                                                                                                                        |
| <b>Cost</b>           | The single-unit cost of the product in this location. Can be up to 19 positions with a 4-position decimal. It can also be 0, but cannot be a negative number, and should not include a currency symbol. Optional, but should be specified if Gross Margin is used in the <a href="#">Locate Items Sequence and Splitting Examples (Standard Brokering)</a> calculation. You might use the cost in a probability rule to exclude higher-cost items.                                                                             |
| <b>Sales Velocity</b> | A numeric ranking you can use to indicate how well a product sells in a particular location. You can use the sales velocity ranks assigned to product locations as part of the criteria for selecting fulfilling or sourcing locations for orders, either through standard or weighted brokering. Numeric; 2 positions with an optional 2-position decimal. Can be blank, or any number from 0 to 99.99. See the Standard Brokering or Weighted Brokering tabs at the <a href="#">Preferences</a> screen for more information. |
| <b>Margin</b>         | The Selling Price minus the Cost. If no Cost is specified, the Margin is equal to the Selling Price. If a Cost is specified, but no Selling Price, the Margin is negative. If no Cost or Margin is specified or if you set them to 0, the Margin is blank or 0.0000. System-calculated when either the Selling Price or Cost is entered. Display-only.                                                                                                                                                                         |

## Edit Product Location

**Purpose:** Use the **Edit Product Location** screen to review or update availability information for a [product location](#), or to check the last time this information was updated.

Used for the Routing Engine module.

**Product relationships:** See [Product, System Product and Product Location](#) for an overview of the relationships among **Order Orchestration** elements, including product locations. Also, see the [Product Locations](#) screen for more information on how product locations are created in Order Orchestration.

**Updated how?** The availability information displayed at this screen can be updated by:

- a periodic refresh from an external system (such as product import processing from the Order Administration system)
- entry at the *Edit Product Location* screen
- the [Fulfilled Inventory Export](#)
- the [availability update request](#)
- the [product update request](#)
- an on-demand refresh triggered by a [locate items](#) search or [product availability search](#) for an [online system](#)
- [OCDS or Merchandising Omni Services Imports](#)

Order Orchestration uses the availability information displayed here to select a fulfilling location or a sourcing location for a ship-for-pickup order when:

- the location is in an [offline system](#), or
- the location is in an [online system](#), but Order Orchestration cannot communicate with the system and the [No Offline Response Action](#) setting at the [Preferences](#) screen is *Use offline*

Order Orchestration uses the availability information displayed here in the locate items response when:

- the location is in an [offline system](#), or
- the location is in an [online system](#), but Order Orchestration cannot communicate with the system and the [No Offline Response Action](#) setting at the [Preferences](#) screen is *Use offline*

**Systems that use purchase order layering:** The Next PO date and quantity listed might not reflect the date and quantity on the next open purchase order for a product if you integrate with a system such as Order Administration, which uses purchase order layering. In purchase order layering, the system accounts for the total quantity backordered to determine which purchase order might be able to fulfill a new order for the product. For example, the backorder quantity for a product is 115. There are 2 open purchase orders for the item, each with an order quantity of 100. Purchase order layering uses the date of the second purchase order as the Next PO Date since the full order quantity of the first purchase order is already fully committed to prior backorders. Also, it reports that the Next PO Quantity is 85, since the first 15 on the second purchase order is also already committed.

#### Note

It is important to run the Batch Purchase Order Layering program (BPOL) in Order Administration before importing inventory information into Order Orchestration.

**About attributes:** The product attributes (*Daily Sell Through Quantity*, *Sell Quantity/Multiple*, *Minimum Sell Quantity*, *Shrink Rate %*, and *Sales Velocity*) are metrics that you can define for a product location in order to use them in probability rules. For example, you might want to display an available quantity of 0 if the actual available quantity is not more than the daily sell-through quantity for an off-line location. You can also have the Routing Engine use the Sales Velocity for product location ranking.

Additional attributes (*Status*, *On Clearance*, *Selling Price*, *Cost*, and *Margin*) can be used as part of [LocateItems Sequence and Splitting Examples \(Standard Brokering\)](#).

#### How to display this screen:

- Click *Edit* for a product location at the [Browse Product Locations](#) window
- Select the edit icon (  ) for a location at the [Product Locations](#) screen
- Only users with *Products* authority can display this screen. See [Roles](#) for more information.
- If the **Edit Product Location** screen was already open in another tab when you clicked the edit icon, you advance to this screen with the previously-selected product location displayed.

#### Updating a product location

Update any of the fields described below and click *Save*, or click *Cancel* to return to the [Product Locations](#) screen without making any changes.

**Note**

Any changes you make at this screen can be overwritten the next time you import product location information, as described in [Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#).

Up to 6 positions. Display-only.</p> <p>Not updated when Order Orchestration updates the <i>Reserved Quantity</i> or <i>Fulfilled Quantity</i>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Availability fields:</b>  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Available Quantity</b>    | <p>The quantity of the product available in this location as of the most recent update, before subtracting the <i>Reserved Quantity</i> and any <i>Fulfilled Quantity</i>, or applying any probability rules. This information can be updated through:</p> <ul style="list-style-type: none"> <li>a periodic refresh from an external system (such as product import processing from the Order Administration system)</li> <li>entry at the <a href="#">Edit Product Location</a> screen</li> <li>the <a href="#">Fulfilled Inventory Export</a></li> <li>the <a href="#">availability update request</a></li> <li>the <a href="#">product update request</a></li> <li>an on-demand refresh triggered by a <a href="#">locate items</a> search or <a href="#">product availability search</a> for an <a href="#">online system</a></li> <li>interactive updates to product locations through the Retail Integration Bus (RIB) when <a href="#">Importing Data from Merchandising Cloud Services (RMFCS) through the Omnichannel Cloud Data Service (OCDS) or Merchandising Omni Services</a> is implemented. This information originates in Oracle Retail Merchandising Foundation Cloud Service (RMFCS).</li> </ul> <p>See the discussion above under <i>Edit Product Location</i> for more information.</p> <p>Order Orchestration uses this quantity to calculate the <i>Available to Promise</i> unless it receives an update from an <a href="#">online system</a>.</p> <p><b>Note:</b> The available quantity is a maximum of 6 positions, and can be a negative number. It cannot include decimals.</p> <p><b>Probability rules:</b> Probability rules use the <i>Available to Promise</i> in tests, calculations, and results. See <a href="#">Probability Rule Wizard</a> for background.</p> |

| Field                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reserved Quantity</b>    | <p>The quantity on all order lines assigned to this product location that are in a status indicating the inventory is reserved for existing orders. The reserved quantity and any fulfilled quantity are subtracted from the <i>Available Quantity</i> to determine the <i>Available to Promise</i> quantity. Up to 6 positions.</p> <p>In the case of ship-for-pickup orders, the reserved quantity is updated at the sourcing location.</p> <p>You can use the <a href="#">System</a> screen to select the statuses that indicate an order line is reserved.</p> <p>The reserved quantity displayed here is 0 if there are no order lines in a —to selected status assigned to this product location.</p> <p>Display-only.</p> <p><b>For more information:</b> See the <a href="#">Reservation tab</a> at the System screen for information on selecting reserved statuses, and see <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p>                                                                    |
| <b>Fulfilled Quantity</b>   | <p>The quantity that has been fulfilled on delivery or pickup orders, or put in transit for ship-for-pickup orders, since the last fulfilled quantity export to the system, or inventory import from the system. The reserved quantity and any fulfilled quantity are subtracted from the <i>Available Quantity</i> to determine the <i>Available to Promise</i> quantity. Up to 6 positions.</p> <p>In the case of ship-for-pickup orders, the fulfilled quantity is increased at the sourcing location when the pickup location changes the status to fulfilled.</p> <p><i>Tracked when?</i> The <a href="#">Track Fulfilled Quantity</a> field at the <a href="#">System</a> screen controls whether to track the fulfilled quantity and, if so, when to reset it.</p> <p>Display-only.</p> <p><b>For more information:</b> See the <a href="#">Track Fulfilled Quantity</a> field for a discussion of how the fulfilled quantity is updated, and see <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p> |
| <b>Available to Promise</b> | <p><i>Used for:</i> The quantity for the system to use when determining the available quantity to return in the <code>LocateItems</code> response and the <a href="#">product availability search</a>, and to evaluate locations for order assignment. Up to 6 positions, and can be a negative number. Display-only.</p> <p><i>Calculation:</i> Calculated by subtracting the <i>Reserved Quantity</i> and any <i>Fulfilled Quantity</i> from the <i>Available Quantity</i> for the product location.</p> <p>When you update the <i>Available Quantity</i> at this screen and press the <i>tab</i> key, the screen updates the <i>Available to Promise</i> quantity based on your entry.</p> <p><b>Probability rules:</b> If a probability rule applies to the product location, it is calculated based on this quantity.</p> <p><b>For more information:</b> See <a href="#">Calculating the Available to Promise Quantity</a> for an overview.</p>                                                                                       |

| Field                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Next PO Date</b>                | <p>The next date when a purchase order for this product is expected for delivery.</p> <p><b>Order Administration integration:</b> The date is calculated using purchase order layering, in which the expected quantity on a purchase order may be “reserved” for older backorders. This information is not updated automatically from Order Administration each time you enter or maintain a purchase order. Some other activity, such as a change to the available quantity above or below the specified threshold, is required to trigger an update from Order Administration to Order Orchestration. See the Order Administration online help for more information.</p> |
| <b>Next PO Quantity</b>            | <p>The number of units ordered on the next purchase order. This quantity can be up to 6 positions. It cannot include decimals.</p> <p><b>Order Administration integration:</b> This information is not updated automatically from Order Administration each time you enter or maintain a purchase order. Some other activity, such as a change to the available quantity above or below the specified threshold, is required to trigger an update from Order Administration System to Order Orchestration.</p>                                                                                                                                                             |
| <b>Attributes</b>                  | <p>The following product attributes are available to guide selection of fulfilling or sourcing locations for orders:</p> <ul style="list-style-type: none"> <li>• probability rules: See the <a href="#">Probability Rule Wizard</a> for more information</li> <li>• <a href="#">standard brokering</a>: optionally, the Routing Engine can use the Sales Velocity for ranking</li> <li>• <a href="#">weighted brokering</a>: the Science Engine can use various product location attributes based on the configured weighted brokering percentages</li> </ul> <p>Each of the product attributes are user-defined.</p>                                                     |
| <b>Daily Sell Through Quantity</b> | <p>Typically represents the average quantity of the product sold in this location on a daily basis. You might use this quantity as part of a probability rule that subtracts the daily sell-through quantity from the available quantity, especially if the location is in an <a href="#">offline system</a>.</p> <p>This quantity can be up to 6 positions, and must be a whole number. It cannot be a negative number.</p>                                                                                                                                                                                                                                               |
| <b>Status</b>                      | <p>The status of the product in this location. You might use the status as part of a probability rule that excludes discontinued products. Possible statuses are:</p> <ul style="list-style-type: none"> <li>• Active (default) = Can be ordered.</li> <li>• Inactive = Cannot currently be ordered.</li> <li>• Discontinued = Can still be ordered, but will be inactive at some point in the future.</li> </ul> <p>Required.</p>                                                                                                                                                                                                                                         |
| <b>Sell Quantity/Multiple</b>      | <p>Typically represents the selling multiple for a product; for example, you might sell tires in quantities of 4. You might use this quantity as part of a probability rule that indicates to exclude a product location, or display an available quantity of 0, if the available quantity is lower than the sell quantity/multiple.</p> <p>This quantity can be up to 6 positions, and must be a whole number. It cannot be a negative number.</p> <p>You might also use the Minimum Sell Quantity to fulfill the same function.</p>                                                                                                                                      |

| Field                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>On Clearance</b>          | <p>Indicates whether the product is on clearance in this location:</p> <ul style="list-style-type: none"> <li>Selected = The product is on clearance.</li> <li>Unselected (default) = The product is not on clearance.</li> </ul> <p>You might use this setting as part of a probability rule that reduces the quantity that is expected to be available to fulfill orders.</p> <p>Used in <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. If you use <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> and this flag is selected, the Science Engine uses a selling price of .01 to calculate margin.</p> |
| <b>Minimum Sell Quantity</b> | See the Sell Quantity/Multiple, above. This quantity can be up to 6 positions, and must be a whole number. It cannot be a negative number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Selling Price</b>         | <p>The single-unit selling price of the product in this location. Can be up to 19 positions with a 4-position decimal. It can also be 0, but cannot be a negative number, and should not include a currency symbol. Optional, but should be specified if Gross Margin is used in the <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. You might use the selling price in a probability rule to exclude lower-priced items.</p>                                                                                                                                                                                                             |
| <b>Shrink Rate %</b>         | <p>Typically represents the percentage loss experienced for the product in this location due to theft or breakage. You might use the shrink rate as part of a probability rule that reduces the available quantity by the shrink rate percentage.</p> <p>This percentage can be up to 2 positions, and must be a whole number. It cannot be a negative number.</p>                                                                                                                                                                                                                                                                                                                      |
| <b>Cost</b>                  | <p>The single-unit cost of the product in this location. Can be up to 19 positions with a 4-position decimal. It can also be 0, but cannot be a negative number, and should not include a currency symbol. Optional, but should be specified if Gross Margin is used in the <a href="#">LocateItems Sequence and Splitting Examples (Standard Brokering)</a> calculation. You might use the cost in a probability rule to exclude higher-cost items.</p>                                                                                                                                                                                                                                |
| <b>Sales Velocity</b>        | <p>A numeric ranking you can use to indicate how well a product sells in a particular location. You can use the sales velocity ranks assigned to product locations as part of the criteria for selecting fulfilling or sourcing locations for orders, either through standard or weighted brokering. Numeric; 2 positions with an optional 2-position decimal. Can be blank, or any number from 0 to 99.99. See the Standard Brokering or Weighted Brokering tabs at the <a href="#">Preferences</a> screen for more information.</p>                                                                                                                                                   |
| <b>Margin</b>                | <p>The Selling Price minus the Cost. If no Cost is specified, the Margin is equal to the Selling Price. If a Cost is specified, but no Selling Price, the Margin is negative. If no Cost or Margin is specified or if you set them to 0, the Margin is blank or 0.0000. System-calculated when either the Selling Price or Cost is entered. Display-only.</p>                                                                                                                                                                                                                                                                                                                           |

## UPC

**Purpose:** Use the **UPC** screen to review or work with existing UPC barcodes for a product, or create a new one.

**What is a UPC barcode?** A UPC barcode is an identification of a product by either a UPC-A or EAN-13 code.

**Created how?** You can create UPC barcodes for products when you download or export items or products from an external system, such as **Order Administration** or **Xstore**. See [Importing](#)

[Items/Products, Inventory, Barcodes, Images, and Locations into the Database](#) for an overview, and see [Importing UPC Barcodes through File Storage API](#) for information specific to the barcode import.

**Used how?** You can use UPC barcodes in Store Connect to scan picked items on orders. See the [Store Connect Preferences](#) screen for more information.

**Product relationships:** See [Product, System Product and Product Location](#) for an overview of the relationships among **Order Orchestration** elements, including UPC barcodes.

**How to display this screen:** Click the UPC barcode icon (  ) next to a product at the [Products](#) screen.

① **Note**

- Only users with *Products* authority can display this screen. See [Roles](#) for more information.
- If the **UPC** screen was already open in another tab when you clicked the UPC barcode icon, you advance to this screen with the UPC barcodes for the previously-selected product displayed.

Options at this screen

| Option                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>create a UPC barcode</b><br><b>Note:</b> Normally, you should not create UPC barcodes using this method. By creating a UPC barcodes in Order Orchestration directly rather than using the process described under <a href="#">Importing Items/Products, Inventory, Barcodes, Images, and Locations into the Database</a> , you run the risk that UPC barcode information will be inconsistent with that in the external system, such as Order Administration or Xstore. | <ol style="list-style-type: none"><li>1. Enter a UPC barcode in the <i>UPC</i> field.</li><li>2. Select a barcode type from the <i>UPC Type</i> drop-down box.</li><li>3. Click <i>New</i>. If:<ul style="list-style-type: none"><li>• the UPC barcode has already been assigned to any product in your organization, Order Orchestration displays an error message.</li><li>• your entries were valid, the new UPC barcode is added to the <b>UPC</b> screen.</li></ul></li></ol> <p><b>Note:</b> To reassign a barcode to a different product through the screens, you need to first delete the existing barcode record and then create the new barcode record for the other product. However, you can reassign a product barcode through the import process; see <a href="#">Importing UPC Barcodes through File Storage API</a> for more information.</p> |
| <b>search for a UPC barcode</b>                                                                                                                                                                                                                                                                                                                                                                                                                                            | <p>Use 1 or both of the fields at the top of the screen to restrict the search results to matching UPC barcodes:</p> <ol style="list-style-type: none"><li>1. Enter a full or partial barcode and click <i>Search</i> to restrict your results to barcodes matching your entry.</li><li>2. Select a <i>UPC Type</i> and click <i>Search</i> to find matching UPC barcodes.</li></ol> <p><b>Case?</b> The barcode is case-sensitive for searching; for example, an entry of a does not match a barcode of A12345.</p>                                                                                                                                                                                                                                                                                                                                          |
| <b>select a UPC barcode to edit the code</b>                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>Click the edit icon (  ) next to UPC barcode to open the <a href="#">Edit UPC</a> window.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Option                        | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>UPC Type</b>               | The barcode type. Possible types are <i>UPC-A</i> and <i>EAN-13</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Edit</b>                   | Select the edit icon (  ) to open the <a href="#">Edit UPC</a> window, where you can change the code.                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Delete</b>                 | Select the delete icon (  ) to delete the UPC barcode.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

## Edit UPC

**Purpose:** Use the **Edit UPC** window to update a UPC barcode for a product.

Used for the Routing Engine module.

**How to display this window:** Select the edit icon () for a UPC barcode at the [UPC](#) screen.

 **Note**

Only users with *Products* authority can display this screen. See [Roles](#) for more information.

**Updating the UPC barcode:** Update the UPC number and click *Save*, or click *Cancel* to return to the [UPC](#) screen without making a change.

**Fields at this window**

| Field               | Description                                                                                                                                                                                                           |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Organization</b> | See <a href="#">organization</a> . The organization code is separated from the organization description by a hyphen (-). Display-only.                                                                                |
| <b>Product</b>      | See <a href="#">product</a> . The product you selected at the <a href="#">Products</a> screen. The product code is separated from the product name by a hyphen (-). Display-only.                                     |
| <b>UPC Type</b>     | The barcode type. Possible types are <i>UPC-A</i> and <i>EAN-13</i> . Display-only.                                                                                                                                   |
| <b>UPC</b>          | The barcode number identifying a product. Up to 40 positions. Optionally, enter a new barcode and click <i>Save</i> to change the barcode. Each barcode must be assigned to only a single product in an organization. |

# Product Attributes

**Purpose:** Use the **Product Attributes** screen to review or work with attributes that apply to a product.

**Used when?** When the Attribute Type specified for the attribute is *Product and Location*, the attribute can filter locations when routing orders for the product. However, when the Attribute Type is *Product*, the attribute assignment is informational only.

**For more information:** See [Using Attribute Rules for Delivery and Pickup Orders](#) and [Using Attribute Rules for Ship-for-Pickup Orders](#) for background, and see [Attribute Definitions](#) for information on creating and working with attribute definitions.

Used for the Routing Engine module.

**How to display this screen:** Select the attribute icon () for a product at the [Products](#) screen.

**Options at this screen**

| Option                                      | Procedure                                                                                                                                                                                                                                                                                                   |
|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>apply a new attribute to the product</b> | Click <i>New</i> to open the <a href="#">New Product Attribute</a> window.                                                                                                                                                                                                                                  |
| <b>search for a product attributes</b>      | Optionally, enter a full or partial attribute code in the <i>Attribute Code</i> field to restrict your results to attributes whose codes start with your entry.<br>Optionally, select a <i>Data Type</i> to restrict your results to attributes whose Data Types match your entry.<br>Click <i>Search</i> . |

| Option                                                       | Procedure                                                                                                                                                            |
|--------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>select a product attribute for maintenance and review</b> | Click the edit icon (  ) to open the <a href="#">Edit Product Attribute</a> window. |
| <b>delete an attribute</b>                                   | Click the delete icon (  ) next to a product attribute to delete it.                |

Each value can be up to 50 positions.</li> <li><i>Number</i>: Indicates that the value defined through the attribute must be numeric. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li> <li><i>Text</i>: Indicates that the value defined through the attribute is text. Values can be up to 50 positions.</li> </ul> |
| <b>Edit</b>      | Select the edit icon (  ) next to a product attribute to open the <a href="#">Edit Product Attribute</a> window.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Delete</b>    | Select the delete icon (  ) next to a product attribute to delete the attribute from the product.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

## New Product Attribute

**Purpose:** Use the **New Product Attribute** window to apply an attribute to a product.

Used for the Routing Engine module.

**Used when?** When the Attribute Type specified for the attribute is *Product and Location*, the attribute can filter locations when routing orders for the product. However, when the Attribute Type is *Product*, the attribute assignment is informational only.

**For more information:** See [Using Attribute Rules for Delivery and Pickup Orders](#) and [Using Attribute Rules for Ship-for-Pickup Orders](#) for background.

**Assigning attributes to locations or products:** Use the [New Location Attribute](#) and *New Product Attribute* screens to assign attributes.

**How to open this window:** Click *New* at the [Product Attributes](#) screen.

### Note

Available if Use Routing Engine is selected at the [Tenant](#) screen.

**Fields at this window:** Complete the fields described below and click *Save*, or click *Cancel* to return to the *Product Attributes* screen without creating the product attribute.

| Field          | Description                                                                                                                                                                       |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Product</b> | See <a href="#">product</a> . The product you selected at the <a href="#">Products</a> screen. The product code is separated from the product name by a hyphen (-). Display-only. |

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Attribute Code</b> | <p>Select the Code identifying an attribute you can apply to a product. All attribute definitions that could be applied to the selected product are available for selection. Attributes are eligible if:</p> <ul style="list-style-type: none"> <li>they were created with an Attribute Type of <i>Product</i> or <i>Product and Location</i>, and</li> <li>they have not already been applied to the selected product, unless the Allow Multiple flag was selected</li> </ul> <p>Once you select an Attribute Code, the Description and Data Type are displayed above the Value field.</p> <p>Required.</p>                                                                                                                                                                                                                                                      |
| <b>Description</b>    | The description of the selected attribute. Display-only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Data Type</b>      | <p>Indicates the type of data that can be defined through the selected attribute. Possible data types are:</p> <ul style="list-style-type: none"> <li><i>Boolean</i>: Indicates whether a condition is true for the product; for example, set to true if the product requires engraving. Cannot be set to false.</li> <li><i>List</i>: Used to define a list of valid values that can be assigned to a product; for example, this might be a list of special handling options. Each value can be up to 50 positions.</li> <li><i>Number</i>: Indicates that the value defined through the attribute must be numeric. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li> <li><i>Text</i>: Indicates that the value defined through the attribute is text. Values can be up to 50 positions.</li> </ul> <p>Display-only.</p> |
| <b>Value</b>          | <p>Use this field to enter or select the value for the product attribute. If the Data Type is:</p> <ul style="list-style-type: none"> <li><i>Boolean</i>: Automatically selected and cannot be changed.</li> <li><i>List</i>: Select the Value from the displayed options defined for the attribute. Only Values that are not already assigned to the product are available for selection.</li> <li><i>Number</i>: Enter a numeric value. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li> <li><i>Text</i>: Enter a numeric or text value. Can be up to 50 positions.</li> </ul> <p>Required, except that a Boolean defaults to selected and is display-only.</p>                                                                                                                                                        |

## Edit Product Attribute

**Purpose:** Use the **Edit Product Attribute** window to change the value for an attribute applied to a product.

Used for the Routing Engine module.

**Used when?** When the Attribute Type specified for the attribute is *Product and Location*, the attribute can filter locations when routing orders for the product. However, when the Attribute Type is *Product*, the attribute assignment is informational only.

**For more information:** See [Using Attribute Rules for Delivery and Pickup Orders](#) and [Using Attribute Rules for Ship-for-Pickup Orders](#) for background.

**How to open this window:** Click the edit icon (  ) at the [Product Attributes](#) screen.

**Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen.

Fields at this window: Complete the fields described below and click *Save*, or click *Cancel* to return to the *Product Attributes* screen without updating the product attribute.

**Note**

Boolean product attributes cannot be edited. You can delete the product attribute if it should not apply for routing purposes.

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| <b>Value</b>          | Use this field to enter or select the value for the product attribute. If the Data Type is: <ul style="list-style-type: none"><li><i>Boolean</i>: Automatically selected and cannot be changed.</li><li><i>List</i>: Select the Value from the displayed options defined for the attribute. Only Values that are not already assigned to the product are available for selection.</li><li><i>Number</i>: Enter a numeric value. Numbers can be up to 25 positions, including commas, decimal points, or minus signs.</li><li><i>Text</i>: Enter a numeric or text value. Can be up to 50 positions.</li></ul> Required, except that a Boolean defaults to selected and is display-only.                                                                                                                                |

## Probability Rules

**Purpose:** Use the **Probability Rules** screen to review or work with rules you can apply to the inventory information displayed in locate items search results or used for Routing Engine assignment, such as reducing the available quantity in a product location that has a high sell-through rate. From this screen, you can:

- review** existing probability rules

- **create** a new rule
- **select** an existing rule to review the details on how it affects locate items results, or to change the rule
- **delete** a rule, provided it does not have existing details on how to affect locate items results
- **advance** to a window where you can review or work with calculations that you can include in probability rules

Used for the Routing Engine module.

**How to assign rules?** Use the [Probability Location](#) screen to assign probability rules and review the rules already assigned to locations.

Rules are not restricted to a single organization. You can assign rules to location types or locations in any organization.

**Probable quantity rules:** You use the [Probable Quantity Rules](#) screen rather than this screen to work with probable quantity rules, which update the [probable quantity](#) that a system, such as your ecommerce site, can use to estimate an item's availability. For more information on probable quantity rules and calculation of the probable quantity, see:

- the [Probable Quantity Rules](#) screen
- the [Probable Quantity Location](#) screen
- the [Inventory Quantity Export](#) at the [System](#) screen

**How to display this screen:** Select *Probability Rules* from the [Home Screen](#) or from the [Products Menu](#).

**For more information:** For a brief overview of probability rules, see [Using Probability Rules](#); and for more details, see [Probability Rule Overview](#).

#### **Note**

Available if Use Routing Engine is selected at the [Tenant](#) screen. Only users with *Probability Rules* authority can display this screen. See [Roles](#) for more information.

### Options at this screen

| Option                               | Procedure                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>create a probability rule</b>     | <p>Enter a rule name in the <i>Name</i> field and click <i>New</i> to advance to the <a href="#">Probability Rule Wizard</a> screen, where you can set up a rule. The name can be up to 40 positions, and can include spaces and special characters.</p> <p><b>For more information:</b> See <a href="#">Probability Rule Wizard</a> for instructions on setting up probability rules, including sample rules.</p> |
| <b>search for a probability rule</b> | <p>Enter a full or partial rule name in the <i>Name</i> field at the top of the screen and click <i>Search</i> to restrict the search results to rules whose names contain your entry.</p> <p><b>Case?</b> The rule name is case-sensitive for searching; for example, an entry of <i>a</i> does not match a rule that includes the word <i>Add</i>.</p>                                                           |

| Option                                                                            | Procedure                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>select a probability rule for maintenance</b>                                  | Click the edit icon (  ) next to a rule to advance to the <a href="#">Probability Rule Wizard</a> screen.                                                                                                                                                                                                                                        |
| <b>review a probability rule</b>                                                  | Click a probability rule once to open the <a href="#">Browse Probability Rules</a> window.                                                                                                                                                                                                                                                                                                                                         |
| <b>delete a probability rule</b>                                                  | Select the delete icon (  ) next to a rule to delete the rule from <i>Order Orchestration</i> .<br>You can delete a rule only if there are no rule details and the rule has not been assigned to an organization, location type, or location. See the <a href="#">Probability Location</a> screen for information on reviewing rule assignment. |
| <b>review or work with calculations that can be included in probability rules</b> | Click <i>Calc</i> to advance to the <a href="#">Calculations</a> window.                                                                                                                                                                                                                                                                                                                                                           |

#### Fields at this screen

| Field                 | Description                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Name</b>           | A description of the probability rule.<br>The name can be up to 40 positions, and can include spaces and special characters.<br>The rule name is case-sensitive for searching; for example, an entry of a does not match a rule that includes the word Add.                                                                                                                                                            |
