This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Preface

This guide introduces the key features of the new Oracle Retail Supply Chain Collaboration Cloud Service.

Audience

This document is intended for the users and administrators of the Oracle Retail Supply Chain Collaboration Cloud Service.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Customer Support

To contact Oracle Customer Support, access My Oracle Support at the following URL:

<https://support.oracle.com>

When contacting Customer Support, please provide the following:

- Product version and program/module name
- Functional and technical description of the problem (include business impact)
- Detailed step-by-step instructions to re-create
- Exact error message received
- Screen shots of each step you take

Oracle Help Center (docs.oracle.com)

Oracle Retail product documentation is available on the Oracle Help Center at <https://docs.oracle.com/en/industries/retail/index.html>.

(Data Model documents can be obtained through My Oracle Support.)

Comments and Suggestions

Please give us feedback about Oracle Retail Help and Guides. You can send an e-mail to: retail-doc_us@oracle.com

Oracle Retail Cloud Services and Business Agility

Oracle Retail Supply Chain Collaboration Cloud Service is hosted in the Oracle Cloud with the security features inherent to Oracle technology and a robust data center classification, providing significant uptime. The Oracle Cloud team is responsible for installing, monitoring, patching, and upgrading retail software.

Included in the service is continuous technical support, access to software feature enhancements, hardware upgrades, and disaster recovery. The Cloud Service model helps to

free customer IT resources from the need to perform these tasks, giving retailers greater business agility to respond to changing technologies and to perform more value-added tasks focused on business processes and innovation.

Oracle Retail Software Cloud Service is acquired exclusively through a subscription service (SaaS) model. This shifts funding from a capital investment in software to an operational expense. Subscription-based pricing for retail applications offers flexibility and cost effectiveness.

1

Introduction

Oracle Retail Supply Chain Collaboration Cloud Service enables retailers to collaborate directly with their suppliers for preselection and ongoing evaluation of sites, production facilities, and items, and to accomplish streamlined merchandising operations, leveraging data provided by partners through a single portal with a common navigation. Oracle Retail Supply Chain Collaboration Cloud Service is composed of the following modules:

Supplier Evaluation

Supports the on-boarding, evaluation, and management of Merchandising suppliers, enabling assessment and governance of ethical, environmental, safety, and quality performance, automatically scoring and grading suppliers, and items against multiple business disciplines for actionable insight.

Functions incorporate supplier self-certification survey, item assessment, audit and action management, process management, and incident alert notifications.

Retail Supply Chain Hub

Improves collaboration between retailers and suppliers with a platform to share information integrated in the Oracle Retail suite, increasing order and fulfillment efficiency and accuracy and reducing supply chain disruption and risk through direct collaboration on merchandising operations.

Functions include supplier self-configuration and enabling collaboration on item, cost and price management, deals, inventory and sales, payments, purchase orders, customer orders, and appointments.

For more details, see the *Oracle Retail Supply Chain Collaboration Cloud Service Integration User Guide* and the *Oracle Retail Supply Chain Hub User Guide*.

Key Features

Key features of the Supplier Evaluation module include:

- **Supplier** - enables the identification, selection, and approval of suppliers.
- **Product** - supports the development and assessment of products.
- **Process** - supports the development of process briefs, plans, and workflow management.
- **Library** - enables the publication, receipt, and acceptance of policies, guidelines, and key working documents.
- **Reports** - provides a reporting tool for reporting across the system, using standard templates and custom reports.

Key features of the Retail Supply Chain Hub (SCH) module include:

- **Appointments** - allows suppliers to view the available appointments in warehouses. Suppliers can also book or cancel their appointments for Purchase Order (PO) shipments or Return to Vendor (RTV).

- **Cost Changes Management** - allows suppliers to propose cost changes for items. Retailers can review, request amendments, and ultimately approve the change request, which sends it to the Merchandising Foundation Cloud Service (MFCS) for execution.
- **Customer Orders Management** - allows suppliers to have visibility to *drop ship* customer orders, where the supplier ships directly to the customer. It also provides an option for creating a single purchase order/invoice across multiple customer orders to simplify processing for suppliers. Allows suppliers to suggest substitutes and create invoices for the order.
- **Deals Management** - provides the ability to collaborate with suppliers on the creation of vendor deals. This includes the ability to review deals created by suppliers, suggest new deals to a supplier, as well as share deal performance.
- **Financial Control** - provides suppliers visibility to payments made and documents submitted for payment.
- **Inventory and Sales** - provides suppliers with information on recent sales, and current inventory positions for items. This is especially important for a vendor managed inventory to provide the supplier with information needed for re-ordering.
- **Items Management** - allows suppliers to upload their item catalog and collaborate with users as they decide which items to carry in their assortment. Once attributes are completed and the item is approved in SCH, it is sent to MFCS. Also allows collaboration with suppliers throughout an item's lifecycle, such as when it is being discontinued.
- **Procure To Pay** - contains three modules: purchase orders, shipments, and invoices. Supports collaborating with suppliers in these areas by allowing suppliers to upload / create orders, acknowledge or suggest changes, download the order, upload / create Advance Shipment Notices (ASNs), and upload / create documents.
- **Quality Control** - provides a framework to determine which suppliers and products require quality control review on receipt. It also provides the framework to record the results of the review and the ability to take action, such as creating an RTV, inventory adjustment, and so on. Integration to MFCS allows for the execution of these actions.
- **Retail Price** - allows suppliers to propose price changes or simple promotions. Retailers can review the proposals and on approval, they will be sent to the Oracle Retail Pricing Cloud Service for execution.
- **Supplier Penalties** - allows Retailers to automatically generate penalties to Suppliers based on late/early shipments, QC failure, and PO Cancellation as well as manually entered Penalties and Custom Designed Rules for additional penalties.

Functional Overview

Register

The workspace environment enables retailers to invite their suppliers to register their corporate and facility details, and enroll users and contacts across all locations.

The synchronization of user accounts provides a single point of account creation, enablement, and site allocation. Oracle Identity Access Management (IAM) is utilized for single sign-on. Links provide direct access between the corresponding user accounts. Supplier administrators are able to manage the accounts of their users.

Certifications

Users are given the ability to register and upload certified evidence, validation, and conformance showing that the facilities meet the industry standards, specific declaration, and/or the criteria set by the certification body.

Assessments

The solution enables users to create or utilize pre-defined assessments to measure a supplier and their supply chain against different standards. Each assessment can be configured and scored according to the standard, policy, or retailer-defined needs. Each assessment is scored independently, enabling standard evaluation, and contributing to an overall performance score.

Audits

Audits provide the ability to define, schedule, and conduct on-site facility audits and visits, collaborate on non-conformances, monitor and workflow corrective actions, and determine an overall conformance score. Options include uploading third-party industry audit reports, capturing and monitoring non-conformance, and utilizing full checklist capabilities.

Governance

Policies, standards, training material, processes, guidelines, and regulations can be published into a centralized environment defined for both internal users and external suppliers. Each document can be tracked for readership and acceptance, ensuring due diligence and governance.

Change

The adoption of new policies, standards, and regulations can be communicated and tracked. The solution includes the capability to publish questionnaires or alerts to ensure and measure adoption and understanding. The workspace includes news and urgent action notifications to visibly inform all applicable users of changes, expectations, and activities.

Process

Critical stage-gate processes can be designed and created to ensure that all appropriate steps, activities, and measurements have been completed during registration, re-evaluation, new policy, and ongoing performance.

Performance

Overall performance dashboards enable monitoring each assessment, audit, certification, and adoption against each supplier, facility, and supply chain. Scores can then be aggregated by a supplier, category, standard, and policy.

Post Release Tasks

Refer to the Retail Supply Chain Collaboration Cloud Service user guides for information on post release setup and configuration tasks, including the following key documents:

- *Oracle Retail Identity Management for OCI IAM Startup Guide*
- *Oracle Retail Supply Chain Collaboration Cloud Service Security Guide*
- *Oracle Retail Supply Chain Collaboration Cloud Service Service Administrator Action List*
- *Oracle Retail Supply Chain Collaboration Cloud Service Administration Guide*
- *Oracle Retail Supply Chain Collaboration Cloud Service Implementation Guide*
- *Oracle Retail Supply Chain Collaboration Cloud Service Integration User Guide*
- *Oracle Retail Supply Chain Hub User Guide*
- *Oracle Retail Home Application Usage Guide*

Primary tasks will include the configuration and enablement of:

- User accounts and their permissions.
- System parameter settings and glossary contents.
- Integration with MFCS.
- External Systems and their permissions for access to APIs.
- Any overrides to the default system text for custom terminology or language translations.

2

Technical Overview

Oracle Retail Supply Chain Collaboration Cloud Service is a cloud native solution. The application is deployed on a Kubernetes cluster. Reporting is provided by Oracle BI Publisher which can connect to the underlying database.

The underlying container DBaaS includes one pluggable database (PDB). Transparent Data Encryption (TDE) is set during provisioning. Tablespaces that contain personal data are encrypted.

The web tier contains the perimeter network services that protects the application from the internet at large. All traffic from the web tier continues to the Web Tier Security Server (WTSS), which in turn uses the customer's Oracle Identity Cloud Service (IDCS) or Oracle Cloud Infrastructure Identity and Access Management (OCI IAM) tenancy to perform authentication.

Supply Chain Collaboration Cloud Service authenticates native rest services using OAUTH2.0 using IDCS or OCI IAM. As a common authentication pattern is used, web service users are subject to the same strong controls as application users.

3

Integration

Integration with Merchandising

The Supply Chain Collaboration Cloud Service is integrated with the Oracle Retail Merchandising Foundation Cloud Service (MFCS).

The Supply Chain Hub module interfaces with MFCS both in terms of functionality and the underlying database.

The Supplier Evaluation module has two aspects of integration with MFCS:

- Supplier Site accounts - the automatic creation of accounts when they are approved for use in MFCS, and the subsequent synchronization of key account information.
- Site Evaluation data - details of supplier site assessments and the resulting evaluation scores are shared with MFCS through an automated data feed. MFCS utilizes the data for information purposes and decision-making based on suppliers' ethical, environmental, safety, and quality performance.

Supply Chain Collaboration APIs

Supply Chain Collaboration Cloud Service has an extensive suite of APIs available for the retrieval, and in some cases, the update and creation of the application's data by external systems. The APIs are available in both production and non-production environments.

Full details of the APIs are documented in the *Oracle Retail Supply Chain Collaboration Cloud Service Implementation Guide*.

4

Support Considerations

Browser Requirements

Note

Oracle Retail assumes that the retailer has ensured its Operating System has been patched with all applicable Windows updates.

The following web browsers are supported:

- Mozilla Firefox
- Microsoft Edge
- Google Chrome (Desktop)

Microsoft has deprecated Internet Explorer 11 in Windows 10 and recommends using Edge as the default browser. Refer to the [Oracle Software Web Browser Support Policy](#) for additional information.

Customer Support Identifier

As part of the provisioning process, you will receive your Customer Support Identifier (CSI). This should be registered with My Oracle Support (MOS), which you will use to log questions or issues about these services.

The first person to request access to a CSI will be checked by Oracle to ensure the domain of their email address matches the domain associated with the CSI. Once approved, they will be made the Customer User Administrator of that CSI, and can approve others to use it. If someone else has already been made the administrator of that CSI, then an email will be sent with the request to that person for approval. For more information on the Customer User Administrator, see [MOS ID 1544004.2](#).

Note

You will not be able to register your CSI number until your production environment has been provisioned.

Supplemental Documentation

Supplemental documentation is available in the Oracle Retail Supply Chain Collaboration Cloud Service Documentation Library on My Oracle Support ([Doc ID: 3090843.1](#)).
