Preface

Welcome to the Oracle Utilities Customer Care and Billing Analytics Metric Reference Guide.

This document describes the Oracle Utilities Customer Care and Billing Analytics metrics (such as dashboards, analyses, and subject areas) available in Oracle Utilities Analytics Warehouse Dashboards. These metrics are used in pre-built analyses, and/or available for customers to use in building new analyses or extending existing analyses using Oracle Analytics Server.

Conventions

The following notational conventions are used in this document:

Notation	Indicates
boldface	Graphical user interface elements associated with an action, terms defined in text, or terms defines in the glossary
<i>italic</i>	Book titles, emphasis, or placeholder variables for which you supply particular values
monospace	Commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter

Acronyms

The following terms are used in this document:

Term	Expanded Form
CCB	Oracle Utilities Customer Care and Billing
OAW	Oracle Utilities Analytics Warehouse
OAS	Oracle Analytics Server

Chapter 1

Dashboard Content Reference

Oracle Utilities Analytics Warehouse Dashboards, Release 2.8.0.0, provides analysis of the data from Oracle Utilities Customer Care and Billing using Oracle Analytics Server built-in metrics. Non-spatial analytics, information that is not tied to geography, is represented in a series of dashboards showing tables, bar graphs, pie charts, and gauges. Spatial analytics, or information that is geographically related, use Oracle Analytics Server integrated Map Viewer technology to represent events, map data, and other geographical information.

This chapter describes the Oracle Utilities Analytics Warehouse Dashboards content for Oracle Utilities Customer Care and Billing. The dashboards are grouped by the following analytics:

- [Credit & Collections Analytics](#)
- [Customer Analytics](#)
- [Revenue Analytics](#)

Credit & Collections Analytics

This section describes the metrics available in Credit & Collections Analytics of Oracle Utilities Analytics Warehouse Dashboards. The metrics analyze accounts in arrears, and write offs to the customers.

Oracle Utilities Analytics Warehouse Dashboards for Oracle Utilities Customer Care and Billing provides the Credit & Collections analytics content in the following dashboards:

- [Overview](#)
- [Arrears](#)
- [Collectibles](#)
- [Pay Plans](#)
- [Payment Arrangements](#)
- [Write Offs](#)

Overview

The Overview dashboard provides a high-level overview of arrears, collectibles, write offs data, pay plans, and payment arrangements for the selected period.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Credit & Collections Analytics > Overview**.

The dashboard includes the following dashboard pages. The data for current fiscal or calendar year and month is displayed by default. You may modify the criteria per requirement.

- [Overview - Arrears](#)
- [Overview - Collection](#)

Overview - Arrears

The Overview - Arrears dashboard page compares arrears against revenue.

Arrears (31+ Days) Compared to Revenue

Property	Details
Description	This analysis provides a percentage of the arrears for 31+ days compared against the total revenue amount in the selected fiscal period. Percentage = $100 * (\text{Arrears (31+ days)} / \text{Revenue})$
Purpose	Business users can get an insight into how well payments are made on time.

Property	Details
Representation	<p>The gauge shows the percentage, using different colors to denote how the business users perceive the calculated result. The needle movement in the gauge towards yellow or red indicates a need to pay more attention on the payment collection scenarios.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows the calculated result and the relevant data.</p>
Drill Down	The Arrears (31+ Days)/ Revenue column link drills down to the Arrears dashboard for more details about the respective arrears.
Source Object	SA Snapshot Fact
OAS Subject Area	CCB - SA Snapshot
Metrics	31+ Days, Revenue Amount, Arrears (31+ Days) / Revenue

Overview - Collection

The Overview - Collection dashboard page provides an overview of the effectiveness of collection and write off processes, and also pay plans and payment arrangements.

Collection Process Effectiveness

Property	Details
Description	<p>This analysis shows the level of success in collecting the arrears payments, in the selected month, in relationship to collections.</p> <p>Collection Process Effectiveness % = $100 (1 - (\text{Arrears at Start} / \text{Arrears at End}))$</p>
Purpose	This analysis provides insight into the success rate of collecting arrears payments. Business users can determine the effectiveness of the collection processes used to collect the arrears payments.
Representation	<p>The gauge shows the percentage, using different colors to denote how the business users perceive the calculated result. The needle movement in the gauge towards yellow or red indicates a need to pay more attention on the payment collection scenarios.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows the percentage of successful collection amount versus the original arrears amount, and the relevant data.</p>
Drill Down	The Collection Process Effectiveness column link drills down to the Collectibles dashboard to view the respective collectibles in detail.
Source Object	Collectible Process Fact
OAS Subject Area	Collectible Process
Metrics	Collection Process Effectiveness, Arrears at Start, Arrears at End

Write Off Process Effectiveness

Property	Details
Description	<p>“Arrears at start” specifies the amount of arrears being collected by the write off process (captured when a write off process is initiated). “Arrears at end” is the amount of arrears remaining when the write off process completes (ideally, this should be zero if the outstanding debt is collected from the customer).</p> <p>This analysis shows the level of success in collecting the arrears payments, in the selected month, in relationship to write offs.</p> <p>Write Off Process % = $100 * (1 - (\text{Arrears at End} / \text{Arrears at Start}))$</p>
Purpose	<p>This analysis provides insight into the success rate of write off arrears payments. Business users can determine the effectiveness of the write off processes used to collect the arrears payments. It is typically used to measure the effectiveness of 3rd party collections vendors.</p>
Representation	<p>The gauge shows the percentage, using different colors to denote how the business users perceive the calculated result.</p> <p>The needle movement in the gauge towards yellow or red indicates a need to pay more attention on the payment collection scenarios.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows the percentage of successful write offs versus the original arrears amount, and the relevant data.</p>
Drill Down	<p>The Collection Process Effectiveness column link drills down to the Collectibles dashboard to view the respective collectibles in detail.</p>
Source Object	Uncollectible Process Fact
OAS Subject Area	CCB - Uncollectible Process
Metrics	Write Off Process Effectiveness, Arrears at Start, Arrears at End

Pay Plans

Property	Details
Description	<p>A “pay plan” is an agreement with a customer to make scheduled payments on specific dates to clear off the customer’s debt.</p> <p>This analysis shows the total number of pay plans classified by their statuses for the previous three months.</p>
Purpose	<p>This analysis provides a bird’s eye view of the pay plans in the last three months, along with their statuses. Business users can identify the recently happening trends based on the statuses.</p>
Representation	<p>The bar graph displays the number of pay plans active or ended in a month and their status, for the previous three months.</p> <p>The X-axis represents the month. The Y-axis represents the number of pay plans. Hover over the graph for more details.</p>

Property	Details
Drill Down	The graph bars drill down to the Current Status dashboard page in the Pay Plans dashboard for the status of pay plans created in that month.
Source Object	Pay Plan Snapshot Fact
OAS Subject Area	CCB - Pay Plan Snapshot
Metrics	Pay Plan Count

Payment Arrangement Success Rate

Property	Details
Description	<p>A “payment arrangement” is an agreement with a customer to pay off their debt as installments as part of their future bills (sometimes referred to as “current bill plus”).</p> <p>This analysis shows the success rate of payment arrangement for the selected month.</p> <p>Payment Arrangement Success Rate = $100 * ((\text{Active} + \text{Kept Payment Arrangement}) / \text{Total Payment Arrangement})$</p>
Purpose	Business users can analyze the rate at which customers are paying off their debts and bringing the payment arrangements to a closure.
Representation	<p>The gauge shows the percentage, using different colors to denote how the business users perceive the calculated result.</p> <p>The needle movement in the gauge towards yellow or red indicates a need to pay more attention to customers paying off their debt through payment arrangements and the various payment arrangement scenarios that are implemented.</p> <p>Note: The range for green, yellow and red can be customized.</p>
Drill Down	The gauge drills down to the Overview page of Payment Arrangements dashboard.
Source Object	Payment Arrangement Snapshot Fact
OAS Subject Area	CCB - Payment Arrangement Snapshot
Metrics	Success Rate

Arrears

The Arrears dashboard provides an overview of the distribution and trends of arrears in a geographical region for the selected period.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Credit & Collections Analytics > Arrears**.

The dashboard provides the following dashboard pages. The data for current fiscal year and month is displayed by default. You may modify the criteria per requirement.

- [Distribution](#)
- [Arrears Map](#)
- [Trend](#)
- [Details](#)

Distribution

The Distribution dashboard page provides a snapshot of the comparison between revenue and arrears, and also shows how the arrears are distributed across various customer classes, jurisdiction, premise types, and service types.

Arrears Compared to Revenue

Property	Details
Description	<p>This analysis shows the comparison between arrears and revenue in the selected month and for each service type, thus facilitating a quick view of the outstanding debt in that month.</p> <p>Comparison % = $100 * (\text{Arrears for 31+ days} / \text{Total Revenue})$</p> <p>Note: The arrears buckets can be configured to include values, such as > 60 days, > 90 days, etc.</p>
Purpose	Business users can determine the outstanding debt across various service types in the selected month.
Representation	<p>The View By drop down slices the data by customer class, jurisdiction, premise type, or service type.</p> <p>The table shows the comparison between the arrears for 31+ days and the total revenue for each service type.</p>
Drill Down	The 31+Days Arrears column link drills down to the Trend dashboard page to view the respective bill cycle details.
Source Object	SA Snapshot Fact
OAS Subject Area	CCB - SA Snapshot
Metrics	31+ Days Arrears / Revenue, 31+ Days Arrears, Revenue

Arrears Distribution

Property	Details
Description	<p>This analysis shows how the arrears pending for 91+ days are distributed in each service type and in each service agreement type.</p> <p>For example: You can chose different buckets, such as 31+ days, 15-30 days, 31-60 days, 61-90 days, 91+ days.</p> <p>$\% = \text{Bucket Amount in Arrears for View By Choice} / (\text{Sum of all buckets for View By}) * 100$</p>
Purpose	Business users can view the total arrears, and their distribution, by various age buckets and customer segments for the selected period.
Representation	<p>The View By drop down slices the data by customer class, jurisdiction, premise type, or service type, with the corresponding age buckets.</p> <p>The pie chart shows how the arrears in each service type are distributed.</p> <p>The table shows the percentage distribution of each service agreement type against each service type for the selected period.</p>
Drill Down	The 91+ Days and the Percentage column links drill down to the Details dashboard page for more specific details.
Source Object	SA Snapshot Fact
OAS Subject Area	CCB - SA Snapshot
Metrics	Arrears Total, Percentage of Arrears

Arrears Map

The Arrears Map dashboard page provides a bird's eye view of arrears by region.

Arrears by Region

Property	Details
Description	This analysis provides a geographical view to quickly analyze the outstanding debts in a specific region and in the selected period.
Purpose	This analysis shows the customer debt broken down by various regions, thus helping the business users to plan effective collection processes.

Property	Details
Representation	<p>The color-coded region on the map shows the arrears amount by age buckets in that area. The postal code shows the master-detail implementation in the table.</p> <p>The View By drop down slices the data by customer class, jurisdiction, premise type, or service type.</p> <p>The Postal Code drop down lists the various postal codes on the map.</p> <p>The table displays the current outstanding arrears amount and the arrears amount in respective age buckets, against each customer segment. The data is based on the postal code selected on the map.</p>
Drill Down	Click <i>any</i> of the table links (corresponding to the age buckets) to drill down to the Details dashboard page for arrears-specific details.
Source Object	SA Snapshot Fact
OAS Subject Area	CCB - SA Snapshot
Metrics	Current Balance, 15-30 days, 31+Days, 31-60 Days, 61-90 Days, 91+ Days

Trend

The Trend dashboard page summarizes the customer arrears' trend as a percentage of billed revenue for the selected period.

Arrears as % of Billed Revenue

Property	Details
Description	This analysis provides a snapshot of the customer debt as a percentage of revenue over a 15-month period (earlier to the selected month).
Purpose	Business users can determine how well the bills are being paid by customers.
Representation	<p>The first stacked bar graph shows the percentage of debt against the total revenue. This information provides an indication of how well the bills are being paid.</p> <p>The second stacked bar graph shows the actual amount of debt against the total revenue to analyze how well the bills are being paid.</p> <p>Revenue contains only billed amount. The table displays the debt stored in various buckets based on its age - 31-60 days, 61-90 days, and 91+ days.</p>
Drill Down	The 31-60 Days , 61-90 Days , and 91+ Days column links drill down to the Details dashboard for more specific details.

Property	Details
Source Object	SA Snapshot Fact
OAS Subject Area	CCB - SA Snapshot
Metrics	Revenue Amount, 31-60 Days, 61-90 Days, 91+ Days

Details

The Details dashboard page provides detailed information about the arrears at account level.

Arrears Detail

Property	Details
Description	This analysis shows a list of the top 100 accounts (in each customer class) with the highest 31+ days' arrears amounts in the selected month.
Purpose	The accounts at the top of the list are the ones with highest arrears. Business users can plan effective collection processes to collect the arrears amount.
Representation	The table displays the customer class and various age buckets for each customer account.
Drill Back	The Account column link drills back to the Account Maintenance page in the Oracle Utilities Customer Care and Billing system.
Source Object	SA Snapshot Fact
OAS Subject Area	CCB - SA Snapshot
Metrics	Current Balance, 15-30 Days, 31-60 Days, 61-90 Days, 91+ Days, 31+ Days
	Note: Additional arrears measures (buckets) can be customized.

Collectibles

The Collectibles dashboard provides an overview of the collection amount and various processes initiated to collect that amount.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Credit & Collections Analytics > Collectibles**.

The dashboard provides the following dashboard pages. The data for current calendar year and month is displayed by default. You may modify the criteria per requirement.

- [Distribution](#)
- [Collection Process](#)

- [Process Template](#)
- [Collectible Amount](#)
- [Collection Duration](#)
- [Analysis](#)
- [Details](#)

Distribution

The Distribution dashboard page provides a snapshot of the distribution of collection processes.

Collection Process Effectiveness Distribution

Property	Details
Description	<p>This analysis helps to understand any variations in collection process effectiveness across multiple dimensions, such as jurisdiction, premise type, city, postal code, and customer class, or a combination of any of these.</p> $\text{Effectiveness \%} = 100 * ((\text{Arrears at Start} - \text{Arrears at End}) / \text{Arrears at Start})$
Purpose	The collection process effectiveness is broken down by various customer segments, helping the business users to identify if there is a need to adopt tailored collection processes for different segments.
Representation	<p>The View By drop down slices the data by customer class, premise type, or jurisdiction.</p> <p>The table shows the percentage of successful collections amount versus the original arrears amount.</p>
Drill Down	The Premise Type, Customer Class, or Jurisdiction column links drill down to the Collection Process and Collection Duration dashboard pages for more details.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Arrears at Start, Arrears at End, Effectiveness

Active Collection Process Volume

Property	Details
Description	This analysis provides a summary of the count of collection processes created (to collect arrears payments from the customers) in the selected month.
Purpose	This analysis compares the volume of the current month against the average of the last three months. Business users can analyze the count of accounts ending up in the collection compared to previous periods.

Property	Details
Representation	<p>The gauge shows the percentage of collection processes in the current month compared to the average of the previous three months. It uses different colors to denote how the users perceive the calculated result.</p> <p>The needle movement in the gauge towards yellow or red indicates a need to pay more attention on payment collection scenarios.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows the collection processes created in the last three months, their collective average, and a calculated value (collection processes in the current month divided by the average of last three months).</p>
Drill Down	The Current Month / Average of Last 3 Months column link drills down to the Collection Process dashboard page for more specific details.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Current Month / Average of Last 3 Months, Average of Last 3 Months

Collection Process

The Collection Process dashboard page shows the trend of collection processes created and their effectiveness in a 15-month period across various segments.

Collection Process Effectiveness

Property	Details
Description	<p>This analysis provides a detailed view of how effectively the collection processes are used to collect arrears payments from customers for the previous 15 months.</p> <p>Effectiveness % = $100 * ((\text{Arrears at Start} - \text{Arrears at End}) / \text{Arrears at Start})$</p>
Purpose	This analysis shows the effectiveness trend across various segments. Business users can pinpoint the segments which are least successful in collecting debts, and thus analyze the need for additional efforts.

Property	Details
Representation	<p>The View By drop down slices the data by customer class or jurisdiction.</p> <p>The bar graph displays the effectiveness of the collection processes in the selected customer segment for the previous 15 months.</p> <p>The table shows the arrears at the start and end of each month, along with the collection process effectiveness, in the selected customer segment.</p>
Drill Down	The Effectiveness column link drills down to the Process Template, Analysis , and Details dashboard pages for respective details.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Arrears at Start, Arrears at End, Collection Process Effectiveness

Active Collection Process Volume

Property	Details
Description	This analysis provides insight into the distribution of the total number of collection processes run to collect all the outstanding customer debt, for previous 15 months (from the selected month), across various customer segments.
Purpose	Higher number of collection processes indicates higher efforts in collecting the billed amount.
Representation	<p>The View By drop down slices the data by customer class or jurisdiction.</p> <p>The bar graph shows the count of collection processes run to collect arrears in the selected segment and in the selected period.</p>
Drill Down	The Collection Processes column link drills down to the Collectible Amount dashboard page for more details.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Count of Collection Processes

Process Template

The Process Template dashboard page provides a snapshot of the performance, usage, and effectiveness of the collection process templates.

5 Worst Performing Collection Process Templates

Property	Details
Description	This analysis shows the top five worst performing collection process templates in the selected month.
Purpose	Business users can identify the collection process templates that are not performing well.
Representation	<p>The bar graph shows the percentage of arrears collected in a month across various collection process templates. The X-axis represents the templates. The Y-axis represents the percentage. Hover over the bars for specific details.</p> <p>The table displays the completed or cancelled processes for each collection process template in the selected month. It also shows the arrears at start, at end, and the percentage of arrears collected.</p> $\% \text{ of Arrears Collected} = 100 * ((\text{Arrears At End} - \text{Arrears At Start}) / \text{Arrears At Start})$
Drill Down	The labels on the X-axis of the bar graph have the master-detail interaction with the Event Effectiveness analysis on the same dashboard page. Clicking on the label of a specific template name will refresh the Event Effectiveness analysis to show the data for this specific template.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Arrears At Start, Arrears At End, Number of Completed or Canceled Processes, % of Arrears Collected

5 Best Performing Collection Process Templates

Property	Details
Description	This analysis shows the top five best performing collection process templates in the selected month.
Purpose	Business users can identify the collection process templates that are performing the most.
Representation	<p>The bar graph shows the percentage of arrears collected in a month across various collection process templates. The X-axis represents the templates. The Y-axis represents the percentage. Hover over the bars for specific details.</p> <p>The table displays the completed or cancelled processes for each collection process template in the selected month. It also shows the arrears at start, at end, and the percentage of arrears collected.</p> $\% \text{ of Arrears Collected} = 100 * ((\text{Arrears At End} - \text{Arrears At Start}) / \text{Arrears At Start})$

Property	Details
Drill Down	<p>The labels on the X-axis of the bar graph have the master-detail interaction with the Event Effectiveness analysis of the same dashboard page.</p> <p>Clicking on the label of a specific template name will refresh the Event Effectiveness analysis to show the data for this specific template.</p>
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Arrears At Start, Arrears At End, Number of Completed or Canceled Processes, % of Arrears Collected

5 Most Used Collection Process Templates

Property	Details
Description	This analysis shows the top five collection process templates that are most used to collect customer debts. The data is displayed for the selected month.
Purpose	Business users can identify the collection process templates that are used frequently.
Representation	<p>The bar graph shows the number of collection or canceled processes in each template. The X-axis represents the templates. The Y-axis represents the number of collection processes. Hover over the bars for specific details.</p> <p>The table displays the completed or canceled processes for each collection process template in the selected month. It also shows the arrears at start, at end, and the percentage of arrears collected.</p> $\% \text{ of Arrears Collected} = 100 * ((\text{Arrears At End} - \text{Arrears At Start}) / \text{Arrears At Start})$
Drill Down	<p>The labels on the X-axis of the bar graph have the master-detail interaction with the Event Effectiveness analysis of the same dashboard page.</p> <p>Clicking on the label of a specific template name will refresh the Event Effectiveness analysis to show the data for this specific template.</p>
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Arrears At Start, Arrears At End, Number of Completed or Canceled Processes, % of Arrears Collected

Event Effectiveness

Property	Details
Description	This analysis shows the effectiveness of the collection event types based on the percentage of arrears collected on its related collection processes. The data is shown for the selected month.
Purpose	Business users can analyze which types of collection events are more effective and which types are not.
Representation	<p>The first Template drop down box filters the pie chart to show event effectiveness slices for the selected collection process template.</p> <p>The pie chart shows the distribution of collection event types in the selected template and in the selected month.</p> <p>The second Template drop down box filters the tabular report to show event effectiveness details for the selected collection process template.</p> <p>The table displays the number of effective processes against each collection event type in the selected template. It also shows the arrears at start, at end, and the percentage of arrears collected, along with the duration.</p> <p>$\% \text{ of Arrears Collected} = 100 * (\text{Arrears at Start} - \text{Arrears at End} / \text{Arrears at Start})$</p>
Drill Down	The Collection Event Type column link drills down to the Details dashboard page for specific details.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Effective Processes, % of Total, Duration (Days), Arrears at Start, Arrears at End, % of Arrears Collected

Collectible Amount

The Collectible Amount dashboard page provides a snapshot of the distribution of the collectible amount in the selected month.

Collectible Amount

Property	Details
Description	Collectible amount is the amount due from a customer for which an organization initiates collection processes. This analysis displays the maximum, minimum, and average collectible amounts for the previous 15 months.
Purpose	Business users can identify any unusual collectible amounts or emerging trends in a particular month.

Property	Details
Representation	Both the graph and the table show the maximum, minimum, and average collectible amounts for each of the previous 15 months.
Drill Down	No drill down
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Maximum Amount, Minimum Amount, Average Amount

Collectible Amount Distribution

Property	Details
Description	This analysis provides insight into the distribution of collection amounts broken down by various customer segments for the previous 15 months.
Purpose	Business users can analyze how the arrears at the start of each month are distributed in the selected customer segment.
Representation	<p>The View By drop down slices the details by customer class or jurisdiction.</p> <p>Both the graph and the table display the arrears at the start of each month for the previous 15 months and across the selected customer segment.</p> <p>Use the slider to view the arrears at the start of a particular month.</p>
Drill Down	No drill down
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Arrears at Start

Collection Duration

The Collection Duration dashboard page provides an overview of the time taken to complete the collection processes and also shows the distribution across various segments.

Collection Duration

Property	Details
Description	This analysis displays the maximum, minimum, and average collection durations for the previous 15 months. It provides insight into the time taken by the collection processes to collect the arrears amount for the selected period.

Property	Details
Purpose	This analysis shows how long the collection processes take at a minimum, maximum, and average to close. Business users can thus analyze the lead time in collecting debt.
Representation	Both the graph and the table display the maximum, minimum, and average collection duration for each month, for the previous 15 months. If the organization has data for fewer months, the graph displays values for only those existing months. Hover over the graph for the month and duration (in hours) details.
Drill Down	The Average Duration (Hours) column link drills down to the Details dashboard page for more specific details.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Maximum Duration (Hours), Minimum Duration (Hours), Average Duration (Hours)

Collection Duration Distribution

Property	Details
Description	This analysis shows the distribution of collection duration broken down by the selected customer segment for the previous 15 months. It provides insight into the distribution of the time taken by the collection processes to collect the arrears amount for the selected period.
Purpose	Business users can analyze the lead time in collecting debts across various customer segments.
Representation	<p>The View By drop down slices the details by customer class or jurisdiction.</p> <p>Use the slider to display the collection duration distribution against each customer segment for a particular month.</p> <p>The graph displays the collection duration against each customer segment in the selection month (from the slider). Hover over the graph for the customer segment and duration (in hours) details.</p> <p>The table displays the collection duration against each customer segment for the previous 15 months.</p>
Drill Down	The graph and the Collection Duration (Hours) column link drill down to the Details dashboard page for respective details.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Collection Duration (Hours)

Analysis

The Analysis dashboard page primarily generates ad hoc reports where business users can pick the dimension attributes and view the effectiveness based on the selected attributes.

Collection Analysis

Property	Details
Description	<p>This analysis provides insight into the collection process effectiveness in more detail by allowing users to group data by various customer segments and geography.</p> <p>Note: The result is the percent of successful collection amount versus the original arrears amount.</p>
Purpose	Business users can analyze how effectively the collection processes are operating in various areas in the selected customer segments.
Representation	<p>The View By drop down slices the data by customer class or jurisdiction, with a combination of city or postal code.</p> <p>The table displays the arrears at the start and end of the selected period, and the collection process effectiveness against the selected customer segments. The effectiveness percentages in red and yellow indicate a need for higher efforts in collecting debts.</p> <p>Effectiveness % = $100 * ((\text{Arrears at Start} - \text{Arrears at End}) / \text{Arrears at Start})$</p>
Drill Down	The Effectiveness column link drills down to the Details dashboard page for more specific details.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Collection Duration (Hours)

Details

The Details dashboard page provides detailed information about the collectibles at account level.

Effectiveness Details

Property	Details
Description	This analysis shows a list of the first 100 accounts (in each customer class) with highest collection process effectiveness in the selected month.
Purpose	The accounts at the top of the list are the ones that the user is least successful in collecting payments for arrears. Business users can plan effective collection processes to collect the arrears amount.

Property	Details
Representation	The table displays the customer class, arrears at start, arrears at end, and collection process effectiveness for each customer account.
Drill Back	The Account column link drills back to the Control Central page in the Oracle Utilities Customer Care and Billing system.
Source Object	Collectible Process Fact
OAS Subject Area	CCB - Collectible Process
Metrics	Arrears at Start, Arrears at End, Effectiveness

Write Offs

The Write Offs dashboard provides insight into the write off processes and the effectiveness of the third-party programs in collecting debts.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Credit & Collections Analytics > Write Offs**.

The dashboard provides the following dashboard pages. The data for current calendar year and month is displayed by default. You may modify the criteria per requirement.

- [Distribution](#)
- [Write Off Process](#)
- [Write Off Amount](#)
- [Write Off Duration](#)
- [Analysis](#)
- [Details](#)

Distribution

The Distribution dashboard page provides a snapshot of the distribution of write off processes in the selected month.

Write Off Process Effectiveness Distribution

Property	Details
Description	This analysis shows how the write off process effectiveness is distributed across various customer segments in the selected period. Effectiveness % = $100 * ((\text{Arrears at Start} - \text{Arrears at End}) / \text{Arrears at Start})$
Purpose	At this point all collection efforts have been exhausted and the utility turns the collection efforts over to a 3rd party collection agency.

Property	Details
Representation	The View By drop down slices the data by customer class, jurisdiction, or premise type. The table shows the percentage of successful collections amount versus the original arrears amount.
Drill Down	The <i>customer segment</i> table link drills down to the Write Off Process and Write Off Duration dashboard pages for more specific details.
Source Object	Uncollectible Process Fact
OAS Subject Area	CCB - Uncollectible Process
Metrics	Arrears at Start, Arrears at End, Effectiveness

Write Off Process Volume

Property	Details
Description	This analysis provides a summary of the count of write off processes created (to collect debts from the customers) in the selected month.
Purpose	This analysis compares the current month's volume against the average of the last three months. Business users can analyze how effective the third-party programs are in collecting debts.
Representation	The gauge shows the percentage of write off processes in the current month compared to the average of the previous three months. It uses different colors to denote how the users perceive the calculated result. The needle movement in the gauge towards yellow or red indicates a need to pay more attention on debt collection scenario. Note: The range for green, yellow and red can be customized. The table shows the write off processes created in the last three months, their collective average, and a calculated value (write off processes in the current month divided by the average of last three months).
Drill Down	The Current Month / Average of Last 3 Months column link drills down to the Write Off Process and Write Off Amount dashboard pages for more specific details.
Source Object	Uncollectible Process Fact
OAS Subject Area	CCB - Uncollectible Process
Metrics	Count, Current Month / Average of Last 3 Months, Average of Last 3 Months

Write Off Process

The Write Off Process dashboard page shows the trend of write off processes created and their effectiveness in a 15-month period.

Write Off Process Effectiveness

Property	Details
Description	<p>When a business is not able to collect the outstanding customer debt by running write off processes, third-party collection agencies get involved in the process.</p> <p>This analysis provides a detailed view of how effectively the third-party programs are used to collect debts from customers for the previous 15 months.</p> <p>Note: The result is the percent of successful write off amount versus the original arrears amount.</p>
Purpose	Business users can analyze the outstanding customer debt for a specific period and propose necessary measures pertaining to the situation.
Representation	<p>The bar graph shows the write off process effectiveness for rolling 15 months. Hover over the graph for the write off effectiveness in a particular month.</p> <p>The table displays the arrears at the start and end of each month, along with the write off process effectiveness.</p> <p>Effectiveness % = $100 * ((\text{Arrears at Start} - \text{Arrears at End}) / \text{Arrears at Start})$</p>
Drill Down	The Effectiveness column link drills down to the Analysis and Details dashboard pages for specific details.
Source Object	Uncollectible Process Fact
OAS Subject Area	CCB - Uncollectible Process
Metrics	Arrears at Start, Arrears at End, Effectiveness

Write Off Process Volume

Property	Details
Description	This analysis provides insight into the distribution of the total number of write off processes (created in the specific period) run to collect customer debts for the previous 15 months.
Purpose	Higher number of write off processes indicates higher efforts in collecting the outstanding customer debt. Business users can analyze how to collect the write off amount for these processes.
Representation	<p>The bar graph shows the count of write off processes created (in rolling 15 months) to collect the outstanding debt from customers. Hover over the graph to view the count of write off processes in a particular month.</p> <p>The table displays the number of write off processes created in each of the previous 15 months.</p>

Property	Details
Drill Down	The Write Off Processes column link drills down to the Write Off Amount dashboard page for more details about outstanding debt.
Source Object	Uncollectible Process Fact
OAS Subject Area	CCB - Uncollectible Process
Metrics	Write Off Processes

Write Off Amount

The Write Off Amount dashboard page provides a snapshot of the distribution of write off amount for 15 months prior to the selected month.

Write Off Amount

Property	Details
Description	This analysis shows a monthly trend (maximum, minimum, and average) of the debt that is being written off after the third-party agencies try to collect the outstanding customer debt. The data is shown for the previous 15 months.
Purpose	Business users can identify any unusual write off amounts in a particular month.
Representation	Both the graph and the table show the maximum, minimum, and average write off amount for each of the previous 15 months. Hover over the graph to view the write off amount details in a particular series.
Drill Down	No drill down
Source Object	Uncollectible Process Fact
OAS Subject Area	CCB - Uncollectible Process
Metrics	Maximum Amount, Minimum Amount, Average Amount

Write Off Amount Distribution

Property	Details
Description	This analysis provides insight into the distribution of write off amounts broken down by various customer segments. The data is shown for the previous 15 months.
Purpose	Business users can analyze how the write off amounts in each month are distributed in the selected customer segment.

Property	Details
Representation	<p>The View By drop down slices the details by customer class, city, jurisdiction, postal code, or state.</p> <p>Use the slider to view the total write offs in the selected segment for a particular month.</p> <p>Both the graph and the table show the total write off process amount collected in each of the previous 15 months, in the selected segment. Hover over the graph to view the total write off amount details in a particular group.</p>
Drill Down	No drill down
Source Object	Uncollectible Process Fact
OAS Subject Area	CCB - Uncollectible Process
Metrics	Total Write-offs

Write Off Duration

The Write Off Duration dashboard page provides an overview of the time taken to complete the write off processes for the selected period.

Write Off Duration

Property	Details
Description	This analysis shows how long the write off processes took to close before the debt is either written off or collected. Only the closed write off processes for the previous 15 months are considered.
Purpose	This analysis displays the minimum, maximum, and average duration of the write off processes in each month. Business users can thus analyze the effectiveness of the third-party programs in collecting debts.
Representation	Both the graph and the table display the maximum, minimum, and average duration taken for collecting the outstanding debt amount for each month, for the previous 15 months. Hover over the graph for the month and duration (in hours) details.
Drill Down	The Average Duration (Hours) column link drills down to the Details dashboard page for more specific details.
Source Object	Uncollectible Process Fact
OAS Subject Area	CCB - Uncollectible Process
Metrics	Maximum Duration (Hours), Minimum Duration (Hours), Average Duration (Hours)

Analysis

The Analysis dashboard page primarily generates ad hoc reports where business users can pick the dimension attributes and view the write off effectiveness based on the selected attributes.

Write Off Analysis

Property	Details
Description	<p>This analysis provides insight into the write off process effectiveness in more detail by allowing users to group data by various customer segments and geography.</p> <p>Effectiveness % = $100 * ((\text{Arrears at Start} - \text{Arrears at End}) / \text{Arrears at Start})$</p>
Purpose	Business users can analyze the effectiveness in debt collection across various customer segments and regions.
Representation	<p>The View By drop down slices the data by customer class or jurisdiction with a combination of city or postal code.</p> <p>The table displays the arrears at the start and end of the selected period, and the write off process effectiveness against the selected customer segments. The effectiveness percentages in red and yellow indicate a need for higher efforts in collecting debts.</p>
Drill Down	The Effectiveness column link drills down to the Details dashboard page for more specific details.

Pay Plans

The Pay Plans dashboard provides insight into the current status, trends, and collection effectiveness of the pay plans. Users can also drill back to the source Oracle Utilities Customer Care and Billing system for further details about a specific pay plan or account.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Credit & Collections Analytics > Pay Plans**.

The dashboard provides the following dashboard pages. The data for the last completed calendar month is displayed by default. You may modify the criteria as per the requirement.

- [Current Status](#)
- [Trend](#)
- [Details](#)

Current Status

The Current Status dashboard page shows the latest status of pay plans, their collection effectiveness, and the amount remaining for collection.

Pay Plans by Status

Property	Details
Description	<p>A “pay plan” is an agreement with a customer to make payments on specific dates to clear off the customer's debt.</p> <p>This analysis helps to view the number of pay plans classified by their status in the respective payment grouped by payment methods, pay plan type, debt class, and customer class. The data is shown as of last extraction time.</p>
Purpose	Business users can analyze the status of pay plans against each segment.

Property	Details
Representation	<p>The View By drop down slices the data by pay method, pay plan type, debt class, and customer class into various statuses.</p> <p>The stacked bar graph shows the total number of pay plans against each segment, grouped under various status buckets (kept, cancelled, broken, or active). The X-axis represents the selected dimensional attribute. The Y-axis represents the pay plan count. Hover over the bars for specific values.</p> <p>The table shows the number pay plans in each status bucket against the selected dimensional attribute.</p>

Customer Analytics

This section describes the metrics available in Customer Analytics of Oracle Utilities Analytics Warehouse. The metrics analyze customer specific information.

Oracle Utilities Analytics Warehouse Dashboards for Oracle Utilities Customer Care and Billing provides the Customer analytics content in the following dashboards:

- [Overview](#)
- [Customers](#)
- [Cases](#)
- [Customer Contacts](#)

Overview

The Overview dashboard provides a high-level overview of customer information for the current month, such as customer loss and gain, customer contacts, and customer case information.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Customer Analytics > Overview**.

The dashboard provides the following analyses. The data for current calendar year and month is displayed by default. You may modify the criteria per requirement.

- [Customer Growth](#)
- [Customer Contact Volume](#)
- [Cases](#)
- [Average Case Duration](#)

Customer Growth

Property	Details
Description	This analysis provides insight into the net customer growth (customer gain/loss) for the current month and previous two months.
Purpose	Business users can analyze and interpret customer gains and losses for the selected period.
Representation	The bar graph shows the net customer gain/loss for the current month and previous two months. Hover over the bars for specific details.
Drill Down	The graph drills down to the Customers dashboard to display a detailed analysis about customers for the selected period.
Source Object	Service Agreement Fact
OAS Subject Area	CCB - Service Agreement
Metrics	Net Gain/Loss of Last 3 Months

Customer Contact Volume

Property	Details
Description	This analysis summarizes the total number of customer contacts created in the current month and previous two months.
Purpose	This analysis compares the customer contact volume of the current month against the previous two months. Business users can analyze the trend in creating new customers.
Representation	The bar graph shows the number of customer contacts created in the current month and previous two months. Hover over the bars for specific details.
Drill Down	The graph drills down to the Customer Contacts dashboard for detailed information about customer contacts.
Source Object	Customer Contact Fact
OAS Subject Area	CCB - Customer Contact
Metrics	Count of Customer Contacts

Cases

Property	Details
Description	<p>This analysis shows the total number of customer cases against each case type for the current month and previous three months. It also shows the average case count for the previous three months.</p> $\text{Cases \%} = 100 * ((\text{Number of cases for selected month}) / \text{Average of last three months})$
Purpose	Business users can analyze customer case information, such as the rate at which cases get opened and closed, case resolution, and case duration statistics.
Representation	The table shows the customer case count in the current month and last three months, the average of the last three months, a calculated result, against each case type.
Drill Down	The Case Type column link drills down to the Cases dashboard for more detailed information about customer cases.
Source Object	Case Fact
OAS Subject Area	CCB - Case
Metrics	Case Count

Average Case Duration

Property	Details
Description	<p>This analysis provides a summary of the case duration against each case type for the selected month and previous three months. It also shows the average case duration for the last three months.</p> <p>The case duration percentage is calculated as the case duration for the current month divided by the average of the last three months.</p>
Purpose	This analysis provides a clear picture of how quickly the customer cases were handled over the past few months. Business users can interpret the metrics for cases based on final outcomes.
Representation	The table shows the case duration against each case type for the current month and last three months, the average for the last three months, and a calculated result.
Drill Down	The Case Type table link drills down to the Status and Duration dashboard page for detailed information about customer cases.
Source Object	Case Fact
OAS Subject Area	CCB - Case
Metrics	Average Case Duration

Customers

The Customer dashboard provides insight into customer information, such as customer gains and/or losses.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Customer Analytics > Customers**.

The dashboard provides the following dashboard pages. The data for current calendar year and month is displayed by default. You may modify the criteria per requirement.

- [Customers Map](#)
- [Trend](#)
- [Details](#)

Customers Map

The Customers Map dashboard page identifies the areas with highest number of customers gained or lost.

Customer Net Gain/Loss

Property	Details
Description	This analysis provides a spatial representation of the number of customers gained or lost in a specific region for the selected month.
Purpose	Business users can identify and analyze the areas with maximum, minimum, and average customer gain/loss.
Representation	<p>The color-coded region on the map shows the net customer gain/loss in that area, along with its postal code.</p> <p>The postal code link broadcasts the postal code value to the Customer Gain/Loss Distribution and Customer Net Gain/Loss by Month analyses on the same dashboard page.</p>
Drill Down	No drill down
Source Object	Service Agreement Fact
OAS Subject Area	CCB - Service Agreement
Metrics	Net Gain/Loss

Customer Gain/Loss Distribution

Property	Details
Description	<p>This analysis provides insight into the distribution of customers in a geographical area (postal code) across various customer classes and service types, in the selected month.</p> <p>The data is based on the postal code selected on the Customer Net Gain/Loss map.</p>
Purpose	Business users can analyze the distribution of customer gains/losses in a geographical area for the selected period.
Representation	<p>The View By drop down slices the data by customer class or service type.</p> <p>The Postal Code drop down slices the data for the area with the respective postal code.</p> <p>The table displays the customer gain, loss, and net gain/loss against the selected customer segment for the selected postal code and in the selected period.</p>

Property	Details
Drill Down	<p>The Gain column link drills down to the Trend dashboard page to show the trend for gain in customers for the selected period and in the selected area.</p> <p>The Loss column link drills down to the Trend dashboard page to show the trend for loss of customers in the selected period and in the selected area.</p> <p>The Net Gain/Loss column link drills down to the Trend dashboard page to show the trend for net customer gain/loss for the selected period and in the selected area.</p>
Source Object	Service Agreement Fact
OAS Subject Area	CCB - Service Agreement
Metrics	Gain, Loss, Net Gain/Loss

Customer Net Gain/Loss by Month

Property	Details
Description	<p>This analysis displays a 15-month trend for the number of customers gained and lost and the net customer gain/loss in a geographical area.</p> <p>The data is based on the postal code selected on the Customer Net Gain/Loss map.</p>
Purpose	Business users can identify the geographical areas with minimum and maximum customer loss/gain.
Representation	<p>The Postal Code drop down slices the data for the area with the respective postal code.</p> <p>The bar graph shows the net customer gain or loss for the respective months in the selected geographical area. Hover over the bars for specific details.</p>
Drill Down	The graph drills down to the Trend dashboard page to display trend-specific details for the selected month.
Source Object	Service Agreement Fact
OAS Subject Area	CCB - Service Agreement
Metrics	Gain, Loss, Net Gain/Loss

Trend

The Trend dashboard page provides a snapshot of the trend for net customer gain and loss.

Customer Net Gain/Loss Trend

Property	Details
Description	This analysis displays a 15-month trend for the customers gained and lost across various customer segments.
Purpose	Business users can identify the trend for customer gain or loss and take necessary measures to prevent from customer loss, if any.
Representation	<p>The View By drop down slices the data by customer class or service type.</p> <p>The graph shows the customer gain/loss against the selected segment for previous 15 months, one month at a time. Hover over the graph bars to view the actual details.</p> <p>Use the slider to view the data for a specific month.</p>
Drill Down	The graph drills down to the Details dashboard page for account specific details.
Source Object	Service Agreement Fact
OAS Subject Area	CCB - Service Agreement
Metrics	Gain, Loss, Net Gain/Loss

Details

The Details dashboard page provides detailed information about the service agreements started and ended at account level.

Customer Details

Property	Details
Description	This analysis shows the account level details of the top 100 customers (in each customer class) with service agreements that started and/or ended on the selected month.
Purpose	The accounts at the top of the list are the ones with highest number of service agreements that started in the selected month. Business users can login to the source application and analyze the data further.
Representation	The table displays the customer class and the start/end of the service agreements for each customer account.
Drill Back	The Account table link drills back to the Account Maintenance page in the Oracle Utilities Customer Care and Billing system.
Source Object	Service Agreement Fact
OAS Subject Area	CCB - Service Agreement
Metrics	Counts of SA Started and SA Ended

Cases

The Cases dashboard provides customer case information, such as the rate at which cases get opened and closed, case resolution, and case duration statistics.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Customer Analytics > Cases**.

The dashboard provides the following dashboard pages. The data for current calendar year and month is displayed by default. You may modify the criteria per requirement.

- [Case Map](#)
- [Status and Duration](#)
- [Details](#)

Case Map

The Case Map dashboard page identifies the areas with highest number of open cases.

Cases

Property	Details
Description	This analysis provides a spatial representation of the number of customer cases opened in a specific region in the selected month.
Purpose	Business users can identify and analyze the areas where maximum customer cases are opened in the selected month.
Representation	The color-coded region on the map shows the number of customer cases in that area, along with its postal code. The <i>postal code</i> link broadcasts the postal code value to the Cases Distribution and Cases by Month analyses on the same dashboard page.
Drill Down	No drill down
Source Object	Case Fact
OAS Subject Area	CCB - Case
Metrics	Case Count

Cases Distribution

Property	Details
Description	This analysis provides insight into the distribution of customer cases in a geographical area (postal code) across various case types and customer classes, for the selected month. The data is based on the postal code selected on the Cases map.
Purpose	Business users can analyze the distribution of cases opened in an area under a specific case type, in the selected month.

Property	Details
Representation	<p>The View By drop down slices the data by customer class or case type.</p> <p>The Postal Code drop down slices the data for the area with the respective postal code.</p> <p>The pie chart shows the distribution of customer cases categorized under each customer segment for the selected postal code and in the selected period.</p>
Drill Down	The pie chart drills down to the Details dashboard page to display account specific information for the selected customer segment.
Source Object	Case Fact
OAS Subject Area	CCB - Case
Metrics	Case Count

Cases by Month

Property	Details
Description	This analysis shows a 15-month trend on how customer cases are opened or closed on a monthly basis, in the selected geographical area. The data is based on the postal code selected on the Cases map.
Purpose	Business users can analyze the rate at which customer cases are opened or closed in a particular geographical area.
Representation	<p>The Postal Code drop down slices the data for the area with the respective postal code.</p> <p>The bar graph shows the count of open or closed cases per month, for rolling 15 months, in the selected postal code. Hover over the lines for specific details.</p>
Drill Down	The graph drills down to the Details dashboard page to display account specific information.
Source Object	Case Fact
OAS Subject Area	CCB - Case
Metrics	Opened Case Count, Closed Case Count

Status and Duration

The Status and Duration dashboard page presents the metrics for cases based on the final outcome and the durations.

Case Final Outcomes

Property	Details
Description	This analysis displays the total count of cases against each final outcome (resolved, rejected, literature sent, cancelled, etc), per month, for the previous 15 months.
Purpose	The business users can analyze the case count, final outcomes, and case types for the selected period.
Representation	<p>The bar graph shows the number of customer cases against each final outcome (resolved, rejected, literature sent, cancelled, etc) for the previous 15 months. Hover over the bars for specific details.</p> <p>The table shows the number of cases per each final outcome against each case type. The data is displayed for the current month and previous 14 months.</p>
Drill Down	The Cases column link drills down to the Details page to display account specific details.
Source Object	Case Fact
OAS Subject Area	CCB - Case
Metrics	Case Count

Case Duration Statistics

Property	Details
Description	This analysis shows the monthly trend in maximum, minimum, and average duration for the customer cases created in the previous 15 months.
Purpose	The business users can identify any patterns, over time, in the duration taken for closure of customer cases.
Representation	<p>The graph shows the maximum, minimum, and average case duration as a monthly trend, for the 15 previous months. Hover over the lines for specific details.</p> <p>The table shows the maximum, minimum, and average case duration values for each month.</p>
Drill Down	No drill down
Source Object	Case Fact
OAS Subject Area	CCB - Case
Metrics	Maximum Duration, Average Duration, Minimum Duration

Case Duration Distribution

Property	Details
Description	This analysis shows the distribution of average case duration as a 15-month trend broken down into various customer segments (case type, customer class, or jurisdiction).
Purpose	Business users can analyze the distribution metrics for the respective case durations.
Representation	<p>The View By drop down slices the data by case type, customer class, or jurisdiction.</p> <p>The bar graph shows the average case duration (in days) for the respective groups in the selected customer segment. Hover over the graph bars for specific details.</p> <p>Use the slider to view the data for a specific month.</p>
Drill Down	No drill down
Source Object	Case Fact
OAS Subject Area	CCB - Case
Metrics	Average Case Duration

Details

The Details dashboard page provides detailed information about the customer cases at account level.

Case Detail

Property	Details
Description	This analysis shows the account level details of the top 100 customers (in each customer class) with the highest number of cases opened and closed. The data is shown for the selected month.
Purpose	The accounts at the top of the list are the ones with highest number of cases opened or closed. Business users can login to the source application and analyze the data further.
Representation	The table displays the customer class and the count of open/closed cases, for each customer account.
Drill Back	The Account column link drills back to the Account Maintenance page in the Oracle Utilities Customer Care and Billing system.
Source Object	Case Fact
OAS Subject Area	CCB - Case
Metrics	Cases Opened, Cases Closed

Customer Contacts

The Customer Contacts dashboard provides a detailed insight into customer contact information.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Customer Analytics > Customer Contacts**.

The dashboard provides the following dashboard pages. The data for current calendar year and month is displayed by default. You may modify the criteria per requirement.

- [Distribution](#)
- [Trend](#)
- [Details](#)

Distribution

The Distribution dashboard page provides a snapshot of the distribution of customer contact volumes.

Contacts by Class

Property	Details
Description	This analysis displays the contact volume (in the selected month) by contact class and contact type.
Purpose	Business users can analyze the data and accordingly plan resources to attend to all customer requests/contacts.
Representation	<p>The pie chart shows the percentage of customer contacts for each contact class in the selected month.</p> <p>The table shows the total contact count and its percentage against various contact types in each contact class. The data is shown for the month.</p>
Drill Down	The Contacts column link drills down to the Trend or Details dashboard pages. These dashboard pages provide detailed information about the customer contact trend and also account level details of each contact.
Source Object	Customer Contact Fact
OAS Subject Area	CCB - Customer Contact
Metrics	Customer Contacts, Number of Contacts, % of Total

Top 5 Contact Types by Volume

Property	Details
Description	This analysis displays the top five contact types with the highest number of customer contacts created in the selected period.
Purpose	These statistics help the business users to monitor resource allocation to handle the customer contacts for the specific period.
Representation	The table shows the number of customer contacts created against each contact type in the selected month. The contact types are ranked per the highest customer contacts in each contact type.
Drill Down	Click the Contacts column link to navigate to the Details dashboard page for specific account level details of the selected record.
Source Object	Customer Contact Fact
OAS Subject Area	CCB - Customer Contact
Metrics	Contacts

Top 10 Customers by Volume

Property	Details
Description	This analysis displays the top ten customers that have been contacted the most in the selected month.
Purpose	These statistics help the business users to identify the customers with more interactions.
Representation	The table shows the names of customers and the number of contacts made to each customer in the selected period. The customers are ranked based on the highest contacts made.
Drill Down	The Contacts column link drills down to the Details dashboard page to show specific account level information about the selected record.
Source Object	Customer Contact Fact
OAS Subject Area	CCB - Customer Contact
Metrics	Contacts

Trend

The Trend dashboard page summarizes the customer contact volume in the selected time period.

Contacts by Day of Week

Property	Details
Description	This analysis shows the total number of customer contacts made on each day of the week for the selected month.
Purpose	Business users can analyze the resource allocation for customers. More resources will be allocated on the days when there are more contacts from customers.
Representation	The graph shows the number of customer contacts made on each day of the week. Hover over the bars for specific values.
Drill Down	No drill down
Source Object	Customer Contact Fact
OAS Subject Area	CCB - Customer Contact
Metrics	Number of Contacts

Contacts by Day of Week Hourly Summary

Property	Details
Description	This analysis shows the total number of customer contacts made on each day of the week (in the selected month) broken down into an hourly summary.
Purpose	For each day, the customer contact count is broken down into time periods that help the business users to analyze whether or not that time of day is adequately staffed.
Representation	<p>The Day of Week drop down allows you to select the week day for which you want to view the data. The weekday selected is broken down to various time buckets (12 am - 4 am, 5 am - 8 am, etc).</p> <p>The Select View drop down allows you to view the data either as a bar chart or as a radar chart.</p> <p>The graph shows the number of customer contacts made in each time bucket for the selected weekday. Hover over the graph to view specific details for the selected time bucket.</p> <p>The table shows the number of customer contacts made in each hour of the selected day of the week.</p>
Drill Down	No drill down
Source Object	Customer Contact Fact

Metrics	Contacts

Revenue Analytics

This section describes the metrics available in Revenue Analytics of Oracle Utilities Analytics Warehouse Dashboards. The metrics analyze revenue and billed usage specific information.

Oracle Utilities Analytics Warehouse Dashboards for Oracle Utilities Customer Care and Billing provides the Revenue analytics content in the following dashboards:

- [Overview](#)
- [Billed Usage](#)
- [Revenue](#)
- [Billing](#)
- [Unbilled SAs](#)

Overview

The Overview dashboard provides a high-level overview of revenue and customer segmentation for a specified period.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Revenue Analytics > Overview**.

The dashboard provides the following dashboard pages. The data for current calendar year and month is displayed by default. You may modify the criteria per requirement.

- [Overview - Revenue](#)
- [Overview - Billed Usage](#)
- [Overview - Billing](#)

Overview - Revenue

The Overview - Revenue dashboard page provides revenue and billing information for the selected period.

Revenue Comparison

Property	Details
Description	This analysis shows a comparison of revenues for three months, including the current month.
Purpose	Business users can use this analysis to gauge the business growth in the last three months.
Representation	The graph shows the revenue for each of the three months. The X-axis represents the revenue amount. The Y-axis represents the month and year. Hover over the bars for specific values. The table shows the total revenue for each of the three months.

Property	Details
Drill Down	The <i>fiscal</i> period table link drills down to the Revenue dashboard to show specific revenue information for the selected record.
Source Object	Financial Fact
OAS Subject Area	CCB - Financial
Metrics	Revenue Amount

Payments as a Percentage of Bills and Adjustments

Property	Details
Description	This analysis provides insight into the success rate of completing payments in the current month, with 100% completion as the target. Analytics include details about payments, bills, and adjustments.
Purpose	Business users can analyze how well the payments are made in the current month and further identify collection processes accordingly.
Representation	<p>The gauge shows the percentage of bills and adjustments in the current month, using different colors to denote how the business users perceive the calculated result.</p> <p>The needle movement in the gauge towards yellow or red indicates a need to pay more attention on the payment collection scenarios.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows the payments, bills and adjustments, and the percentage for the current month.</p>
Drill Down	The Payments as % of Bills and Adjustments column link drills down to the Bills and Payments dashboard page for specific details about bills and payments for the selected record.
Source Object	Financial Fact
OAS Subject Area	CCB - Financial
Metrics	Payments, Bills and Adjustments, Payments as % of Bills and Adjustments

Overview - Billed Usage

The Overview - Billed Usage dashboard page provides a snapshot of the billed usage.

Billed Usage

Property	Details
Description	This analysis compares the usage that was billed for the selected period with the same period in the previous year.
Purpose	Business users can gauge if the Kilowatt-Hours increased when compared to the same month last year, as well as an average of the last three months.
Representation	<p>The gauge shows the percentage of billed usage using different colors to denote how the users perceive the calculated result. The needle movement in the gauge towards yellow or red indicates a need to pay more attention on the usage scenarios.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows usage that was billed for the current month and the same period last year, along with the average billed usage.</p>
Drill Down	The Billed Usage (Kilowatt-Hours) Current Month column link drills down to the Billed Usage dashboard to show specific usage information about the selected record.
Source Object	Financial Fact
OAS Subject Area	CCB - Billed Usage
Metrics	Compared to Last Year, Billed Usage (UOM) Selected Month Selected Year, Billed Usage (UOM) Same Period Last Year, Average Billed Usage for Last Three Periods (UOM)

Overview - Billing

The Overview - Billing dashboard page provides a bird’s eye view of the customer billing process and its key measures, such as bill cycle effectiveness, first day billing efficiency, and days of unbilled usage.

Bill Cycle Effectiveness

Property	Details
Description	This analysis details the bill cycle effectiveness by comparing the bill segments frozen in window with the total/target bill segments in the selected month.
Purpose	Business users can gauge if the billing effectiveness is increased or decreased. Higher effectiveness would mean the configuration and billing process setup are working correctly; else business users would need to review the bill process delays.

Property	Details
Representation	<p>The gauge shows the percentage, using different colors to denote how the business users perceive the calculated result.</p> <p>The needle movement in the gauge towards yellow or red indicates a need to pay more attention on the clearing of bill segments. Hover over the gauge for specific values.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows the target bill segments that need to be cleared, the number of bill segments that were frozen/cleared in the window, and the effectiveness of bill cycle.</p> <p>Bill Cycle Effectiveness = $(100 * \text{Bill Segments Frozen in Window}) / \text{Target Bill Segments}$</p>
Drill Down	The Bill Cycle Effectiveness column link drills down to the Bill Cycle Effectiveness dashboard page to show specific billing information.
Source Object	Service Agreement Billing Fact
OAS Subject Area	CCB - Service Agreement Billing
Metrics	Target Bill Segments, Bill Segments Frozen in Window, Bill Cycle Effectiveness

First Day Billing Efficiency

Property	Details
Description	This analysis shows the billing efficiency on the first day of the bill cycle for the selected month.
Purpose	Business users can gauge the rate at which bill segments are frozen on the first day of the bill cycle.
Representation	<p>The gauge shows the percentage, using different colors to denote how the business users perceive the calculated result.</p> <p>The needle movement in the gauge towards yellow or red indicates a need to pay more attention on the clearing of bill segments on the first day of bill cycle. Hover over the gauge for specific values.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows the target bill segments that need to be cleared, the number of bill segments that were frozen/cleared on the first day, and the billing efficiency on the first day.</p> <p>First Day Billing Efficiency = $(\text{Bill Segments Frozen on First Day} * 100) / \text{Target Bill Segments}$</p>
Drill Down	The First Day Billing Efficiency column link drills down to the First Day Billing Efficiency dashboard page to show specific billing information.

Property	Details
Source Object	Service Agreement Billing Fact
OAS Subject Area	CCB - Service Agreement Billing
Metrics	Target Bill Segments, Bill Segments Frozen on First Day, First Day Billing Efficiency

Estimated Bill Segments

Property	Details
Description	This analysis shows the estimated bill segments in the selected month.
Purpose	Business users can gauge the percentage of estimated bill segments from the total bill segments.
Representation	<p>The gauge shows the percentage, using different colors to denote how the business users perceive the calculated result.</p> <p>The needle movement in the gauge towards yellow or red indicates a need to pay more attention to the billing process on why usage is not being calculated. Hover over the gauge for specific values.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows the frozen bill segments, estimated bill segments, and the percentage of estimated bill segments.</p> <p>$\% \text{ Estimated} = 100 * (\text{Estimated Bill Segments} / \text{Frozen Bill Segments})$</p>
Drill Down	The % Estimated column link drills down to the Estimated Bill Segments dashboard page to show specific billing information.
Source Object	Service Agreement Billing Fact
OAS Subject Area	CCB - Service Agreement Billing
Metrics	Frozen Bill Segments, Estimated Bill Segments, % Estimated

Bill Segment Cancellation

Property	Details
Description	This analysis shows the percentage of bill segments that were canceled in the selected month.
Purpose	Business users can gauge bill segments that were canceled and analyze the reason behind the cancellation.

Property	Details
Representation	<p>The gauge shows the percentage, using different colors to denote how the business users perceive the calculated result.</p> <p>The needle movement in the gauge towards yellow or red indicates a need to pay more attention towards the cancellation reasons for the bill segments. Hover over the gauge for specific values.</p> <p>Note: The range for green, yellow and red can be customized.</p> <p>The table shows the target bill segments, canceled bill segments, bills pending for cancellation, and the percentage of canceled bill segments.</p> <p>$\% \text{ Canceled} = 100 * (\text{Canceled Bill Segments} / \text{Target Bill Segments})$</p>
Drill Down	The % Canceled column link drills down to the Canceled Bill Segments dashboard page to show specific billing information.
Source Object	Service Agreement Billing Fact
OAS Subject Area	CCB - Service Agreement Billing
Metrics	Target Bill Segments, Pending Cancellation, Canceled Bill Segments, % Canceled

Average Days of Unbilled Usage

Property	Details
Description	This analysis shows the average number of days for which the usage was not billed. The data is shown for the previous three months.
Purpose	Business users can analyze the unbilled usage in the selected month and compare the usage with other months.
Representation	The bar graph shows the average days of unbilled usage in each month, for the previous three months. The X-axis represents the month and year. The Y-axis represents the average days. Hover over the bars for specific details.
Drill Down	The graph bars drill down to the Unbilled SAs dashboard to show specific billing and usage information.
Source Object	Service Agreement Billing Fact
OAS Subject Area	CCB - Service Agreement Billing
Metrics	Average Days of Unbilled Usage

Billed Usage

The Billed Usage dashboard provides insight into various patterns of quantities of usage that were billed both in terms of the amount billed and the amount of usage.

To access this dashboard:

1. Go to the **Home** page.

2. Select **Dashboards > Revenue Analytics > Billed Usage**.

The dashboard provides the following dashboard pages. The data for current fiscal and/or calendar year and month is displayed by default. You may modify the criteria per requirement.

- [Billed Usage](#)
- [Analysis](#)
- [Details](#)

Billed Usage

The Billed Usage dashboard page provides a snapshot of the consumption across geographical regions.

Billed Usage by Region

Property	Details
Description	This analysis provides a spatial representation of the actual billed usage in a geographical area (postal code) for the selected month.
Purpose	Business users can identify the areas with very high or low billed usages.
Representation	The color-coded region on the map shows the billed usage in that area and the total calculated amount for the usage, along with its postal code.
Drill Down	The postal code link broadcasts the postal code value to the Billed Usage Distribution and Billed Usage by Month analyses on the same dashboard page.
Source Object	Billed Usage Fact
OAS Subject Area	CCB - Billed Usage
Metrics	Billed Usage, Calculated Amount

Billed Usage Distribution

Property	Details
Description	<p>This analysis shows the distribution of billed usage in a geographical area (postal code) across various customer classes, in the selected month.</p> <p>The postal code for which the data is shown on this analysis can also be broadcast from the Billed Usage by Region map on the same dashboard page.</p>
Purpose	Business users can analyze how the customer billed usage in the selected month is distributed in an area for various customer classes.

Property	Details
Representation	<p>The Postal Code drop down slices the data for the area with the respective postal code.</p> <p>The pie chart shows the distribution of billed usage in the selected month for different customer classes in the selected postal code.</p>
Drill Down	The pie chart drills down to the Analysis dashboard page to display the billed usage and billed amount details for the selected customer segment.
Source Object	Billed Usage Fact
OAS Subject Area	CCB - Billed Usage
Metrics	Billed Usage

Billed Usage by Month

Property	Details
Description	<p>This analysis shows a 15-month trend in the usage amount that was billed for the customers in the selected region (postal code).</p> <p>The postal code for which the data is shown on this analysis can also be broadcast from the Billed Usage by Region map on the same dashboard page.</p>
Purpose	Business users can identify the geographical areas with minimum and maximum billed usage in the previous 15 months.
Representation	<p>The Postal Code drop down slices the data for the area with the respective postal code.</p> <p>The graph displays the actual billed usage for the respective months in the selected geographical area. Hover over the bars for specific details.</p>
Drill Down	The bar graph drills down to the Analysis dashboard page for billed usage and billed amount details for the selected customer segment.
Source Object	Billed Usage Fact
OAS Subject Area	CCB - Billed Usage
Metrics	Billed Usage

Analysis

The Analysis dashboard page provides a snapshot of the billed usage and billed amount in a month.

Billed Usage Analysis

Property	Details
Description	This analysis provides insight into the actual billed usage of the customers in the selected month across different dimensions.
Purpose	Viewing usage from this perspective helps to highlight any unusual consumption and allows the business users to analyze customer segments in specific geographical areas based on the consumption patterns.
Representation	The View By drop down slices the data by customer class, with a combination of rate, premise type, jurisdiction, service type, city, or postal code. The table shows the billed usage, billed amount, and average price per unit for the selected View By options the selected month.
Drill Down	The Billed Usage (Kilowatt-Hours) column link drills down to the Analysis dashboard page for detailed information about the billed usage at account level.
Source Object	Billed Usage Fact
OAS Subject Area	CCB - Billed Usage
Metrics	Billed Amount, Billed Usage, Average Price Per Unit

Details

The Details dashboard page provides detailed information about the billed usage at account level.

Billed Usage Detail

Property	Details
Description	This analysis shows the account level details of the top 100 customers based on the billed usage. The data is shown for the selected month.
Purpose	The accounts at the top of the list are the ones for which the highest amount of usage has been billed. Business users can drill back to the source application and analyze the data further.
Representation	The table displays the customer information details based on the billed usage in the selected month.
Drill Back	The Account column link drills back to the Account Maintenance page in the Oracle Utilities Customer Care and Billing system.
Source Object	Billed Usage Fact
OAS Subject Area	CCB - Billed Usage
Metrics	Billed Usage

Revenue

The Revenue dashboard provides insight into the revenue details of customers.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Revenue Analytics > Revenue**.

The dashboard provides the following dashboard pages. The data for current year and month is displayed by default. You may modify the criteria per requirement.

- [Revenue](#)

Revenue

The Revenue dashboard page provides a snapshot of the total revenue, payments, bills, and adjustments in the selected period.

Revenue Distribution

Property	Details
Description	<p>This analysis compares the revenue for the current month with the average of previous last three months, broken down into various customer segments.</p> <p>Revenue % = Revenue for current month / Average revenue for previous three months</p>
Purpose	Business users can analyze how the revenue is distributed across specific customer segments in the selected period.
Representation	<p>The View By drop down slices the data by customer class, jurisdiction, premise type, rate, or service type.</p> <p>The table shows the distribution of revenue for different customer classes in the selected period, along with the average revenue of the last three months and a calculated result.</p>
Drill Down	The <i>Current Month</i> column link drills down to the Region and Trend dashboard pages for specific metrics related to the selection.
Source Object	Financial Fact
OAS Subject Area	CCB - Financial
Metrics	Current Month / Average Revenue Last Three Periods

Payments as a Percentage of Bills and Adjustments

Property	Details
Description	<p>This analysis provides a snapshot of payments as a percentage of bills and adjustments across various segments in the selected month.</p> <p>The payments percentage is calculated as the payments received in the current month divided by the bills and adjustments for that month in the respective customer segments.</p>
Purpose	Business users can analyze how well payments are being made by the customers.
Representation	<p>The View By drop down slices the data by customer class, jurisdiction, premise type, or service type.</p> <p>The table shows the percentage and actual amount of adjustment compared to the payments received from the customers. The data is displayed for the current month.</p>
Drill Down	The Payments column link drills down to the Bills and Payments dashboard page for specific details about bills and payments for the selected record.
Source Object	Financial Fact
OAS Subject Area	CCB - Financial
Metrics	Payments as % of Bills and Adjustments, Payments, Bills and Adjustments

Region

The Region dashboard page provides a snapshot of how different cities postal codes contribute to the total revenue.

Revenue by Region

Property	Details
Description	This analysis provides a spatial representation of the contribution each region/city (postal code) makes to the total revenue in the selected month.
Purpose	Business users can identify the areas with most, least, or moderate revenue generation for the selected month.
Representation	<p>The color-coded region on the map shows the total revenue amount in that area for the selected month, along with its postal code.</p> <p>The postal code link broadcasts the postal code value to the Revenue by Customer Class and Revenue by Month analyses on the same page.</p>
Drill Down	No drill down
Source Object	Financial Fact

Metrics	Revenue Amount

Revenue by Customer Class

Property	Details
Description	<p>This analysis shows the revenue amount generated in a region (postal code) across various customer classes (commercial, industrial, or residential).</p> <p>The postal code for which the data is shown on this analysis can also be broadcast from the Revenue by Region map on the same dashboard page.</p>
Purpose	Business users can analyze how the revenue is generated in an area (postal code) for various customer classes.
Representation	<p>The Postal Code drop down slices the data for the area with the respective postal code.</p> <p>The pie chart shows the distribution of revenue for different customer classes in the selected area (postal code).</p>
Drill Down	The pie chart drills down to the Trend dashboard page to display the trend in revenue generation in that region.
Source Object	Financial Fact
OAS Subject Area	CCB - Financial
Metrics	Revenue Amount

Revenue by Month

Property	Details
Description	<p>This analysis shows a 15-month trend in the revenue generation in a region (postal code).</p> <p>The postal code for which the data is shown on this analysis can also be broadcast from the Revenue by Region map on the same dashboard page.</p>
Purpose	Business users can identify the geographical areas with minimum and maximum revenue generation in the previous 15 months.
Representation	<p>The Postal Code drop down slices the data for the area with the respective postal code.</p> <p>The graph displays the actual revenue generated for the respective months in the selected geographical area. Hover over the bars for specific details. The graph also shows the yearly average revenue in the selected region.</p>

Property	Details
Drill Down	The bar drills down to the Trend dashboard page for the trend in revenue generation in the selected region.

Metrics	Revenue Amount

Trend

The Trend dashboard page provides a snapshot of the trend in revenue generation in the selected time period.

Revenue Trend

Property	Details
Description	This analysis shows the revenue generation broken down into various customer segments per month, for the previous 15 months.
Purpose	From this snapshot the business users can determine the trend in which revenue amounts are generated across various segments in the selected time period.
Representation	<p>The View By drop down slices the data by customer class, jurisdiction, premise type, rate, or service type.</p> <p>Revenue includes only billed amount. Both the graph and the table show the monthly revenue amount that is generated against the selected customer segment, for the previous 15 months. Hover over the graph bars to view specific details.</p>
Drill Down	The Revenue Amount column link drills down to the Analysis and Details dashboard pages for detailed information about the revenue generation and also account level details of each customer.

Metrics	Revenue Amount, Fiscal YTD Revenue, YTD Revenue

Bills and Payments

The Bills and Payments dashboard page provides a snapshot of payments, bills, and adjustments.

Bills & Adjustments vs Payments

Property	Details
Description	This analysis shows how effectively customers are making their payments in a month; 100% payments compared to the total bills and adjustments is the target.
Purpose	Business users can analyze whether or not customers are paying their bills on time, and if revenue generation is as per the set target.
Representation	<p>The graph shows the payments and bills and adjustments for the selected period. It also shows payments as the percentage of bills and adjustments amount, as well the set target for payments collection. Hover over the graph to view the specific details for the selected period.</p> <p>The table displays specific details about payments, bills, and adjustments for previous 15 months.</p>

Billing

The Billing dashboard provides insight into the key metrics related to the billing system, such as bill cycle effectiveness, first day billing efficiency, and estimated and canceled bill segments.

To access this dashboard:

1. Go to the **Home** page.
2. Select **Dashboards > Revenue Analytics > Billing**.

The dashboard provides the following dashboard pages. The data for the last completed calendar month is displayed by default. You may modify the criteria as per requirement.

- [Bill Cycle Effectiveness](#)
- [First Day Billing Efficiency](#)
- [Estimated Bill Segments](#)
- [Canceled Bill Segments](#)
- [Estimated Bill Segment Details](#)
- [Canceled Bill Segment Details](#)

Bill Cycle Effectiveness

The Bill Cycle Effectiveness dashboard page provides details on how effective bill cycles were historically, and also the details within a single month and also the bill cycle revenue amount trend.

Bill Cycle Effectiveness History

Property	Details
Description	This analysis shows the monthly trend in bill cycle effectiveness for the previous 15 months. It also shows a monthly comparison between the number of bill segments frozen within the billing window against the monthly target.
Purpose	Business users can analyze the trends in bill cycle effectiveness for the previous 15 months. Depending on the increase or decrease, analysts can take appropriate measures.

Property	Details
Representation	<p>The bar graph shows the number of bill segments frozen within the billing window and the target for that month. The X-axis represents the month and year. The Y1-axis represents the number of bill segments, while the Y2-axis represents the bill cycle effectiveness. The line on the graph shows the trend in bill cycle effectiveness. Hover over the bars for specific values.</p> <p>The View By drop down slices the data by various dimensional attributes, such as premise type, customer class, measurement type, service type, or jurisdiction.</p> <p>The Month Year drop down filters the data for the specific month.</p> <p>The table shows the target bill segments, bill segments frozen in window, bill segments frozen outside the window, and the bill cycle effectiveness for the selected dimensional attribute.</p> <p>Bill Cycle Effectiveness = (Bill Segments Frozen in Window * 100) / Target Bill Segments</p>
Drill Down	<p>The labels on the X-axis of the bar graph have the master-detail interaction with the tabular report and Bill Cycle Effectiveness analysis on the same dashboard page.</p> <p>Clicking on a specific Month Year label refreshes the tabular report and Bill Cycle Effectiveness analysis to show the data for the specific month and year.</p>
Source Object	Service Agreement Billing Fact

Metrics	Revenue Amount, Trend Compared to Last Month, Trend Compared to Same Month Last Year

First Day Billing Efficiency

The First Day Billing Efficiency dashboard page covers key metrics related to the efficiency of billing in the first day of the billing window.

First Day Billing Efficiency

Property	Details
Description	This analysis shows the billing efficiency on the first day of the billing window for the previous 15 months.
Purpose	Business users can gauge the rate at which bill segments are frozen on the first day of the billing window. They can also observe any trends over the 15-month period.
Representation	<p>The bar graph shows the number of bill segments frozen and targeted in each month. The X-axis represents the month and year. The Y1-axis represents the number of bill segments, while the Y2-axis represents the first day billing efficiency. The line on the graph shows the trend in the first day billing efficiency. Hover over the bars for specific values.</p> <p>The View By drop down slices the data by various dimension attributes, such as premise type, customer class, measurement type, service type, or jurisdiction. The selection is applicable for table representation.</p> <p>The Month Year drop down filters the data for the specific month.</p> <p>The table shows the target bill segments, bill segments frozen on the first day of the bill cycle, and the bill cycle effectiveness on the first day for the selected dimension attribute.</p> <p>First Day Billing Efficiency = (Frozen Bill Segments on First Day * 100) / Target Bill Segments</p>
Drill Down	<p>The labels on the X-axis of the bar graph have the master-detail interaction with the tabular report in the same analysis.</p> <p>Clicking on a specific Month Year label refreshes the tabular report to show the data for the specific Month Year.</p>
Source Object	Service Agreement Billing Fact

Metrics	Target Bill Segments, Frozen Bill Segments on First Day, First Day Billing Efficiency

Worst 5 Bill Cycles By First Day Billing Efficiency <selected month>

Property	Details
Description	This analysis shows the top five bill cycles that have the least efficiency in first day billing. The data is shown for the selected month.
Purpose	Business users can identify the bill cycles that had a high number of bill segments not getting frozen on the first day of the billing window. They can compare the performance of these bill cycles with that of the previous month.

Property	Details
Representation	<p>The bar graph shows the percentage of bill segments frozen on the first day of the billing window across various bill cycles. The X-axis represents the bill cycle. The Y-axis represents the average efficiency percentage on the first day. The lines on the graph represent the average of all bill cycles and the highest efficiency percentage of the month in a specific bill cycle bucket. Hover over the bars for specific details.</p> <p>The table displays the target bill segments and the bill segments frozen on the first day of the bill cycle. It compares the billing efficiency on the first day with that of the efficiency in the previous month, and also shows the trend in billing efficiency.</p> <p>First Day Billing Efficiency = (Frozen Bill Segments on First Day * 100) / Target Bill Segments</p> <p>Trend = Last Month Efficiency - First Day Billing Efficiency</p>
Drill Down	<p>The labels on the X-axis of the bar graph and the Bill Cycle column have the master-detail interaction with the Cumulative Percentage Of Frozen Bill Segments By Day analysis of the same dashboard page.</p> <p>Clicking on a specific Bill Cycle label will refresh the Cumulative Percentage Of Frozen Bill Segments By Day analysis to show the data for the specific Bill Cycle.</p>
