

Oracle Utilities Meter Solution Cloud Service

Overview Guide

Release 26.4

G50338-02

April 2026

The Oracle logo, consisting of a solid red square with the word "ORACLE" in white, uppercase, sans-serif font centered within it.

ORACLE®

Copyright © 2026, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

5 Oracle Utilities Cloud Services EU Data Act Reference Guide

1

Introduction

Welcome to the Oracle Utilities Meter Solution Cloud Service Overview Guide. This document provides an overview of Oracle Utilities Meter Solution Cloud Service, including:

- [Meter Solution Cloud Service Overview](#)
- [Implementation Support and Live Operate Services](#)
- [Oracle Utilities Cloud Services Third Party Software and Licenses](#)
- [Oracle Utilities Cloud Services EU Data Act Reference Guide](#)

2

Meter Solution Cloud Service Overview

This chapter provides an overview of the Oracle Utilities Meter Solution Cloud Service, including:

- [Welcome to Oracle Utilities Meter Solution Cloud Service](#)
- [Oracle Utilities Meter Solution Cloud Service Applications](#)
- [Oracle Utilities Meter Solution Cloud Service Documentation](#)
- [Regional Availability and Dedicated Region Cloud @ Customer Validation](#)
- [Supported Client Platforms and Browsers](#)
- [Supported Integrations](#)
- [High-Level Roles and Responsibilities](#)
- [Performance Guidelines](#)
- [Functional Limitations and Restrictions](#)
- [Operational Readiness Advisory](#)

Welcome to Oracle Utilities Meter Solution Cloud Service

Oracle Utilities Meter Solution Cloud Service is used to maintain information about meters and the service points at which they are installed. The solution provides a means of recording measurements and events associated with meters in the field as well as the ability to compute usage for the recorded measurements, and process smart meter commands.

Oracle Utilities Meter Solution Cloud Service comprises the following functional areas:

- **Asset Management and Device Management:** Repository of physical assets, including meters and components.
- **Device Installation:** Maintenance of service points and the installation of meters in the field. This includes the means of registering outside systems to Oracle Utilities Meter Data Management for provider/consumer-specific processing of meter events and activities.
- **Validation, Editing, and Estimation (VEE):** Maintenance of measurement data and the engine used to validate and modify that data as it comes in.
- **Usage Management:** Calculation of billable usage recorded on devices, applying factors and dividing the usage into configurable time of use periods.
- **Aggregation:** Summarization of measurement data for reporting and analysis purposes.
- **Data Synchronization:** Synchronization of data between Oracle Utilities Meter Data Management and other Oracle Utilities applications (including Oracle Utilities Operational Device Management and Oracle Utilities Customer Care and Billing). Note: Separate licenses and middleware tools may be required for these integrations.
- **Oracle Utilities DataConnect:** Extraction of consumption and master data for use in external systems.
- **Smart Grid Gateway:** Payload Processing and Smart Meter Commands.

- Service Order Management: Used to manage field service work like start service or disconnect for non-pay.
- Oracle Utilities Cloud Service Foundation: tools used to orchestrate and automate infrastructure related processes, migrate data from legacy applications into the cloud service, and manage batch scheduling and processing using the SaaS Batch Scheduler.
- Oracle Utilities Analytics Visualization: a suite of analytics applications that provides access to data for self service exploration, discovery, visualization, and analysis. It includes rich pre-built analytical data models, metrics, and key performance indicators that allow you to derive strategic insights from your data.

AI Features in Oracle Utilities Meter Solution Cloud Service

This section outlines Artificial Intelligence (AI)-based features in Oracle Utilities Meter Solution Cloud Service.

AI-based features in Oracle Utilities applications are not enabled by default. Unless noted otherwise, customers must opt-in to these features.

Table 2-1 Meter Solution Cloud Service AI Features

Feature Name	Description	Type of AI	Enabling/Disabling
Machine Learning Anomaly Scoring	Machine Learning Anomaly Scoring is a method of processing incoming initial measurement data designed to use Artificial Intelligence and Machine Learning neural network models to recognize "normal" versus anomalous measurement values, and only perform Validation, Editing, and Estimation (VEE) processing for measurements deemed to be anomalous. See Machine Learning Anomaly Scoring and Configuring Machine Learning Anomaly Scoring in the <i>Oracle Utilities Customer Cloud Service User Guides</i> for more information.	Machine Learning	Machine Learning Anomaly Scoring is not enabled by default. It relies on machine learning models that must be deployed as part of your cloud service implementation.

Oracle Utilities Meter Solution Cloud Service Applications

Oracle Utilities Meter Solution Cloud Service includes the following applications:

- Oracle Utilities Meter Data Management
- Oracle Utilities Smart Grid Gateway
- Oracle Utilities Smart Grid Gateway Adapter for Itron OpenWay

- Oracle Utilities Smart Grid Gateway Adapter for Landis+Gyr
- Oracle Utilities Smart Grid Gateway Adapter for Sensus RNI
- Oracle Utilities Smart Grid Gateway Adapter for Silver Spring Networks
- Oracle Utilities Smart Grid Gateway MV-90 Adapter for Itron
- Oracle Utilities Service Order Management
- Oracle Utilities Operational Device Management
- Oracle Utilities Cloud Service Foundation
- Oracle Utilities Analytics Visualization
- Oracle Utilities Testing Accelerator
- Oracle Analytics Publisher
- Oracle REST Data Services

Oracle Utilities Meter Solution Cloud Service Documentation

Configuration and use of Oracle Utilities Meter Solution Cloud Service is described in the following documentation:

- Oracle Utilities Meter Solution Cloud Service User Guides, comprising:
 - Oracle Utilities Meter Solution v26.4 Business User Guide
 - Oracle Utilities Meter Solution v26.4 Administrative User Guide
- Oracle Utilities Cloud Services 26.4 documentation, including:
 - Oracle Utilities Cloud Service Foundation Administrative User Guide
 - Oracle Utilities Cloud Services Administration Guide
 - Oracle Utilities Cloud Services Database Changes Guide
 - Oracle Utilities Cloud Services Frequently Asked Questions Guide
 - Oracle Utilities Cloud Services Implementation Guide
 - Oracle Utilities Cloud Services Live Operations Guide
 - Oracle Utilities Cloud Services Security Guide
- Oracle Utilities Cloud Services Activation Guide
- Oracle Utilities Cloud Services Cloud Operations Guide
- Oracle Utilities Cloud Services Cloud Service Console User Guide
- Oracle Utilities Cloud Service Update Policy Guide
- Oracle Utilities Testing Accelerator documentation
- Oracle Utilities Analytics Visualization User Guide

Regional Availability and Dedicated Region Cloud @ Customer Validation

Oracle Utilities cloud services are supported in specific geographic and Oracle Cloud Infrastructure (OCI) regions

In addition, several Oracle Utilities cloud services have been validated on Oracle Dedicated Region Cloud @ Customer (DRCC).

Oracle Cloud Infrastructure Region Availability

Oracle Utilities cloud services are supported in the following Oracle Cloud Infrastructure regions:

Geographical Region	OCI Region Name	OCI Region Identifier	OCI Region Location	OCI Region Key	Realm Key	Availability Domains	Disaster Recovery Role* (where applicable)
APAC SG001 (OC1)	Australia East (Sydney)	ap-sydney-1	Sydney, Australia	SYD	OC1	1	Primary
APAC SG001 (OC1)	Australia Southeast (Melbourne)	ap-melbourne-1	Melbourne, Australia	MEL	OC1	1	Secondary
APAC SG001 (OC1)	Singapore (Singapore)	ap-singapore-1	Singapore, Singapore	SIN	OC1	1	Primary
APAC SG001 (OC1)	Japan East (Tokyo)	ap-tokyo-1	Tokyo, Japan	NRT	OC1	1	Secondary
North America US001 (OC1)	Canada Southeast (Toronto)	ca-toronto-1	Toronto, Canada	YYZ	OC1	1	Primary
North America US001 (OC1)	Canada Southeast (Montreal)	ca-montreal-1	Montreal, Canada	YUL	OC1	1	Secondary
North America US001 (OC1)	US East (Ashburn)	us-ashburn-1	Ashburn, VA	IAD	OC1	3	Primary/ Secondary
North America US001 (OC1)	US West (Phoenix)	us-phoenix-1	Phoenix, AZ	PHX	OC1	3	Primary/ Secondary
EUROPE EU001 (OC1)	Germany Central (Frankfurt)	eu-frankfurt-1	Frankfurt, Germany	FRA	OC1	3	Primary/ Secondary
EUROPE UK001 (OC1)	UK South (London)	uk-london-1	London, United Kingdom	LHR	OC1	3	Primary/ Secondary

* Disaster Recovery roles are not currently configurable.

Oracle Dedicated Region Cloud @ Customer Validation

The following Oracle Utilities cloud services have been validated on [Oracle Dedicated Region Cloud @ Customer](#) (DRCC).

Cloud Service	Status
Oracle Utilities Billing Cloud Service (BCS)	Validated
Oracle Utilities Customer Care and Billing Cloud Service (CCBCS)	Validated
Oracle Utilities Customer Cloud Service (CCS)	Validated
Oracle Utilities Customer Cloud Service for Retail (CCS-R)	Validated
Oracle Utilities Customer Program Management Cloud Service (CPMCS)	Validated
Oracle Utilities Market Settlements Management Cloud Service (MSMCS)	Validated
Oracle Utilities Meter Solution Cloud Service (MSCS)	Validated
Oracle Utilities Rate Cloud Service (RCS)	Validated
Oracle Utilities Work and Asset Cloud Service (WACS)	Validated
Customer Experience for Utilities – Fusion Agent Service Cloud Service	Validated
Customer Experience for Utilities – Fusion Sales Cloud Service	Validated

Supported Client Platforms and Browsers

Users access Oracle Utilities cloud services via a supported web browser.

Oracle Utilities cloud services support the following operating system & web browser combinations:

Operating System	Web Browser
Windows 11	Mozilla Firefox ESR 140+ Google Chrome for Enterprise 143+ Microsoft Edge (Chromium-based) 143+ (see the Microsoft Edge Release Schedule for more information)
iPad2 iOS 10.x (Work and Asset Cloud Service ONLY)	Apple Safari 17 (selected flows and portals only)

The recommended monitor resolution is 1920 X 1080 or higher with the browser zoom level set at 100%. The application can be used with lower resolution monitors and/or at a greater than 100% browser zoom level, but users may need to use horizontal scrolling on some pages.

Supported Integrations

Oracle Utilities Meter Solution Cloud Service supports integration with a number of other products. See the following section for details:

- [Application Integrations](#)
- [Head End System Integrations](#)
- [Using Oracle Utilities Testing Accelerator with Oracle Utilities Cloud Services](#)

Application Integrations

The table below lists Oracle products and applications that can be integrated with Oracle Utilities Meter Solution Cloud Service, and provides the product name and version, cloud service version(s), and the integration platform that enables the integration.

Oracle Product	Cloud Service Version(s)	Integration Platform
Oracle Utilities Customer Care and Billing v2.9.0.0*	MSCS 26.4	Oracle SOA Suite v12.2.1.3 or higher**
Oracle Utilities Customer Care and Billing v2.8.0.0*	MSCS 26.4	Oracle SOA Suite v12.2.1.3 or higher**
Oracle Utilities Network Management System v2.5.0.x*	MSCS 26.4	Oracle SOA Suite v12.2.1.3 or higher**

* Future releases of Oracle Utilities Meter Solution Cloud Service will support integration with this version of Oracle Utilities Network Management System through the end of Premier Support.

** The above integrations require separate licenses.

Head End System Integrations

Oracle Utilities Customer Cloud Service with Advanced Meter Solution and Oracle Utilities Meter Solution Cloud Service support integration with a number of vendor- specific head end systems via Oracle Smart Grid Gateway Adapters. The table below lists the supported versions of the head end systems for each Adapter available with Oracle Utilities Cloud Service with Advanced Meter Solution and Oracle Utilities Meter Solution Cloud Service.

Adapter	Protocol	HeadEnd System Version
Adapter for Itron OpenWay	Proprietary	Itron OpenWay 3.70, 3.90, 4.1, 6.10 OpenWay Collection Manager 5.4
Adapter for Itron Field Collection System	Proprietary	Field Collection System 4.63
Adapter for Landis+Gyr	MultiSpeak 3.0 CIM 1.ov2	Gridstream Command Center 7.5, 8.1, 8.4, 8.5
Adapter for Sensus RNI	MultiSpeak 3.0 MultiSpeak 4.1	Sensus RNI 4.4, 4.5.1, 4.10, 4.12, 4.14, 4.15, 4.16
Adapter for Silver Spring Networks (Itron AMM)	Proprietary MultiSpeak 4.1	UtilityIQ Version 4.4, 4.7, 4.10, 4.12, 4.14, 5.0, 5.1, 5.2, 6.2
MV-90 Adapter for Itron	Binary file format	N/A SGG supports the .mv9 binary, mainframe data format.

Using Oracle Utilities Testing Accelerator with Oracle Utilities Cloud Services

Oracle Utilities Testing Accelerator (OUTA) is a testing framework based on Java and Selenium used for automated testing of Oracle Utilities applications and cloud services. It allows for developing, managing and executing web service and user interface based automated tests, using meta-data based approach, without any programming language. Oracle Utilities Testing Accelerator has a user friendly graphical web interface that enables people without much programming knowledge to develop automated test flows.

Along with the automation framework, Oracle Utilities Testing Accelerator includes an accelerator that supports automated testing of Oracle Utilities cloud services, such as Oracle Utilities Customer Cloud Service and Oracle Utilities Work and Asset Cloud Service. The accelerator contains several hundred re-usable components that are the modular building blocks of an automated test flow. The Oracle Utilities Testing Accelerator user interface allows for these components to be laced together to form an automated test flow. The test data can then be coupled to the automated test flow and executed using the browser-based execution engine within the Oracle Utilities Testing Accelerator web application.

The browser-based test execution engine should be used for the execution of web service based test automation flows. In addition to the web interface, Oracle Utilities Testing Accelerator includes an eclipse IDE plugin that supports the execution of tests from local desktops or laptops. This mode should be used for executing user interface based tests that are developed using the Oracle Utilities Testing Accelerator web application. The script generation engine in the Oracle Utilities Testing Accelerator web interface auto generates the scripts for user interface based tests, which can then be executed via the Eclipse IDE (with the Oracle Utilities Testing Accelerator plugin).

The following features of Oracle Utilities Testing Accelerator have been enhanced so that they work with Oracle Utilities cloud services:

1. For executing the web service based test automation flows, the Flow Configuration that contains the web service URL along with additional properties such as smtp server, etc is pre-defined to work with Oracle Utilities cloud services. Users need not create a new Flow Configuration. **See the Executing Test Flows and Executing Test Flows Using a Browser** sections in the *Oracle Utilities Testing Accelerator User Guide* for more information.
2. For generating components using the component generator tool, the complete WSDL URL need not be specified in the field, only the web service end point name needs to be provided. **See the Development Accelerator Tools and Component Generation Tool** sections in the *Oracle Utilities Testing Accelerator User Guide* for more information.
3. For fetching test data from the Oracle Utilities cloud services, the WSDL URL need not be specified, only the web service end point name should be specified. See the **Fetching Test Data From an Utilities Application** section in the *Oracle Utilities Testing Accelerator User Guide* for more information.
4. Oracle Utilities Testing Accelerator is integrated with Oracle Cloud Infrastructure Identity and Access Management (IAM) with Identity Domains when using it with cloud services. The management of users in Oracle Utilities Testing Accelerator web application should be done through IAM. See **Identity and Access Management with Identity Domains** in the *Oracle Utilities Cloud Services Administration Guide* for more information about creating and managing users.

High-Level Roles and Responsibilities

This section outlines high-level roles and responsibilities involved in the deployment, configuration, and maintenance of Oracle Utilities cloud services, and the party responsible for each. The **Owner** column in the tables below indicates the party responsible for each role and responsibility.

Hardware, Storage, Technology, and Application Software

Role and Responsibility	Owner
Provide, deploy and monitor hardware and storage	Oracle
Provide, deploy, run and monitor all required technology (such as containers, operating systems, databases, clustering, monitoring, tracing)	Oracle
Provide, deploy, run and monitor all Oracle Utilities base application software	Oracle
Plan, prepare, and perform configurations for uninterrupted operations, in case of a Disaster Recovery (DR) event	Customer

Security

Role and Responsibility	Owner
Monitor cloud service infrastructure security	Oracle
Administer Oracle network security	Oracle
Administer customer network security (for example Cloud Guard, enable Multi-factor Authentication, review users, logs, and so on), including integrating with the Oracle networks	Customer
Configure & maintain cloud service users and access	Customer
Integrate with Oracle networks	Customer
Pro-actively monitor and maintain unexpired, secured, and valid TLS / SSL Certificates on customer-specific DNS entries requested for outbound traffic from the Oracle Cloud Infrastructure (OCI) network.	Customer
Perform security monitoring via Access Logs	Customer

Database

Role and Responsibility	Owner
Database administration services (monitoring, administration, etc)	Oracle
Backup and Restore	Oracle
Backup retention	Oracle
Data replication for Disaster Recovery (where applicable)	Oracle
Disaster Recovery database fail-over	Oracle

Role and Responsibility	Owner
Refresh of a target environment from an existing environment, such as from PROD to TEST (upon customer request and within prescribed limits)	Customer and Oracle
Information Lifecycle Management, including activities such as adding historical months partitions, running compression, and dropping old partitions to maintain storage usage within subscribed limits	Customer
Information Lifecycle Management - Add future month partitions (ONLY)	Oracle
Provide a daily off-peak time window during which Oracle can perform required database maintenance activities, and during which the customer will minimize the usage of the cloud service so as to avoid any performance-related issues during the defined time window.	Customer
Extract, analyze, and provide (as requested) Performance Hub reports from environments.	Customer

Implementation, Configuration, and Extensions

Role and Responsibility	Owner
Plan and execute implementation project	Customer
Perform configuration of enterprise software features and functions	Customer
Execute functional, system, load and performance testing of configuration and extensions	Customer
Ensure operational readiness	Customer

Patching and Upgrading

Role and Responsibility	Owner
Patch and upgrade underlying infrastructure software	Oracle
Patch and upgrade Oracle Utilities base application software	Oracle
Decide the cloud service upgrade schedule (within prescribed limits)	Customer
Trigger environment upgrades (Development, Test and Production)	Customer
Perform regression testing of configuration and extensions after patching / upgrades	Customer
Make changes as needed in custom configuration and extensions after patching / upgrades	Customer

Batch Processing

Role and Responsibility	Owner
Monitor underlying batch infrastructure	Oracle
Provide infrastructure logs for batch incidents	Oracle

Role and Responsibility	Owner
Resolve infrastructure batch issues	Oracle
Determine batch schedule	Customer
Monitor batch stream/job completion	Customer
Perform first level investigation of batch issues	Customer
Provide customer logs of batch incidents	Customer
Resolve functional batch issues and stream/job restart	Customer
Resolve data issues	Customer

Cloud Service Delivery and Performance

Role and Responsibility	Owner
Provide scalable and elastic cloud services	Oracle
Provide core services and tools, including:	Oracle
<ul style="list-style-type: none"> • Embedded infrastructure and platform services • An extensible application framework • Highly configurable product features and functions • Content Migration Assistant • Data Migration Tools • Generalized/Specialized Data Extract 	
Ensure quality of maintenance packs and updates	Oracle
Resolve performance issues related to core services and tools	Oracle
Configure features, and implement extensions	Customer
Perform functional and performance testing of configuration and extensions	Customer
Perform analysis of performance issues, including the use of Performance Hub reports	Customer
Resolve performance issues related to configuration, extensions, and data using business, batch and access logs, as well as Performance Hub reports	Customer
Subscribe to any additional resources required	Customer

Support

Role and Responsibility	Owner
Triage, analyze, and resolve issues with the cloud service	Oracle
Triage, analyze, and resolve issues with configuration and extensions	Customer
Review and analyze browser HAR (HTTP Archive) files in case of any online performance issues	Customer
Raise Service Requests via My Oracle Support and provide all requested information	Customer

Data Migration

Role and Responsibility	Owner
Provide data migration tools (SQL Loader, validation batch controls and so on)	Oracle
Provide guidelines on data migration via online documentation	Oracle
Triage, analyze, and resolve issues with the data migration tools via My Oracle Support	Oracle
Define, review and execute data migration strategy in-line with the provided data migration tools	Customer
Review and follow documentation on data migration	Customer
Validate the Cloud Subscription Metrics with data migration scope metrics	Customer
Configuration and development work required for data migration	Customer
Data cleansing	Customer
Plan and execute data migration mock runs (Oracle suggests a minimum of three) to confirm successful testing results and ensure a clean data migration process.	Customer
Triage, analyze, and resolve data migration issues	Customer
Plan, review and execute cut-over activities	Customer
Create and execute plug-in driven batch programs to correct data errors during critical project milestones and after go-live, if needed	Customer

Integration

Role and Responsibility	Owner
Provide productized integrations (where explicitly agreed).	Oracle

Note

Productized integrations require customer-specific configuration and (optionally) extension.

Integrate Oracle Utilities cloud services with all other services or applications	Customer
---	----------

GoldenGate Replication for Enterprise SaaS

Role and Responsibility	Owner
Deploy source components into the customer designated source environment	Oracle

Role and Responsibility	Owner
Support the source components of the replication extract services as part of Enterprise SaaS	Oracle
Subscribe to all required SaaS and technology prerequisites	Customer
Deploy, configure and operate target components	Customer
Ensure technical specialists are available on the project during initial implementation and ongoing live operate	Customer
Performance test and size the target components	Customer
Support the target components	Customer
Maintain the target data, indexes, etc.	Customer

Performance Guidelines

This section provides a number of performance-related guidelines and recommendations to take into account when implementing Oracle Utilities Meter Solution Cloud Service. This includes guidelines related to the following:

- [Benchmarking, Scalability, Elasticity and Performance](#)
- [Initial Measurement Data and Event Processing](#)
- [Usage Transactions](#)
- [User Interfaces](#)
- [Commands and Events](#)
- [General Topics](#)

Benchmarking, Scalability, Elasticity and Performance

Oracle Utilities cloud services such as Billing Cloud Service, Customer Care and Billing Cloud Service, Customer Cloud Service (with Advanced Meter Solution) and Meter Solution Cloud Service are important components of a utility's solution set, and are:

- **Mission critical** in terms of revenue generation
- **Highly configurable** as many aspects of the solution are designed to be configured to meet market specific requirements
- **Compute intensive**, as many validation and calculation rules need to be applied during daily processing
- **Time sensitive**, as processing must be completed daily, on schedule and within a predefined (and strict) batch window

These cloud services have been designed and built from the ground up with all of these concepts in mind, but successfully implementing and operating them depends on a *shared responsibility model* with respect to Benchmarking, Scalability and Performance.

Who is Responsible for Scalability, Elasticity and Performance?

This is a shared responsibility between Oracle and the customer/implementer. Oracle is responsible for the following in terms of the *base cloud service*:

- Scalability

- Elasticity
- Benchmarking
- Configurability
- Extensibility
- Performance of base product functionality, including:
 - Embedded infrastructure and platform services
 - Application framework
 - Base product features and functions
 - Content Migration Assistant
 - Data Migration Tools
 - Generalized/Specialized Data Extract

To verify the above, Oracle performs regular scalability benchmarking to confirm general solution scalability and elasticity, including:

- Vertical (scaling up), such as effectively utilizing more power (CPU, RAM, etc)
- Horizontal (scaling out), such as effectively utilizing more machines/servers

This scalability benchmarking is run on reference configurations and on very high data volumes, for example:

- 10M Billable Service Customers (CCS)
- 20M+ Utilities Device Data Channels for (MSCS)

The customer/implementer is responsible for the following in terms of the *specific implementation*:

- Performance optimization of customer configuration & extension logic
- Correction of customer data issues
- Functional testing
- Performance testing (initial and regression)
- Analysis of performance related issues

Customers/implementers should plan to run performance testing to verify that their final configuration and implementation-specific workload meets expectations and preserves general solution scalability and elasticity.

Performance testing is:

- Executed by the customer/implementer
- Uses customer specific (final) configuration
- Run on final expected customer data migration volumes and so requires data migration to be complete, configuration to be finalized / functionally tested, and the solution running in a production sized environment (a full sized Test environment is provided for this purpose)

Initial Measurement Data and Event Processing

- **Initial Measurement and Event Loading:** The initial measurement data and event loading processes should be scheduled to avoid overlap with other intense processes. For instance, do not produce bill determinants when loading meter readings.

In addition, when processing measurement data coming from head end systems, payload files should be broken up into multiple files of approximately the same size (containing approximately 100 measurement records each) to allow for parallel processing.

When processing files of varying sizes, the `chunkSize` parameter can be used to facilitate improved processing throughput by distributing work across multiple batch threads. See **Common Parameters** in the *Oracle Utilities Meter Solution Administrative User Guide* for more information about the `chunkSize` parameter.

Due to high data volumes, web services should NOT be used to upload daily measurements. Projects should use Smart Grid Gateway payload processing to help avoid performance problems.

- **Direct Measurement Processing:** We recommend using Direct Measurement Processing for initial load IMDs, which has a performance boost over legacy IMD initial load processing while also saving considerable storage.
- **When using Legacy Measurement Processing:** The system includes a number of Initial Measurement Data (IMD) monitor batch processes that can be used to minimize performance issues when adding large numbers of historical or backlog readings. These use the IMD as the processing work unit instead of the Device Configuration. This prevents situations in which an error on an IMD rolls back processing for all of the IMDS for a given device configuration. These include:
 - D1-IMDV2 (IMD Monitor - Physical Devices V2): used to process initial measurements related to physical devices
 - D1-IMDD2 (IMD Monitor - Deferred IMDs V2): used to process previously held or deferred IMDs
 - D1-IMDM2 (IMD Monitor - Unattached MCs V2): used to process IMDs for standalone measuring components without a Device Configuration such as weather or price data

Refer to the Detailed Descriptions of these batch processes for additional information about each.

- **VEE Rules:** Any VEE Rules, whether provided as part of base product or custom developed, should be configured to query no more than 30 cumulative days of historical data (i.e., High/Low) to achieve an efficient data loading process.
- **Raw Data:** The raw data section of the initial measurement data record should not be populated in a production environment.
- **Tracing:** Use the **Trace** section of the **IMD Log** to troubleshoot VEE rules. When an initial measurement data is in *Pending* status, the **Trace On** button can be used to trace all VEE Rules fired during initial measurement data processing. Once processing is complete, view the **Log** tab of the initial measurement data and review the results in the **IMD Trace Log** zone. For any custom developed VEE rules, the average run time should be no longer than the average run time of other base product VEE rules.
- **VEE and Usage Rule Configuration:** VEE and usage rule configurations can affect performance; test runs are needed during implementation to tune these processes.
- **Initial Measurement Data Business Objects:** Avoid modifying the initial measurement data business objects.

Refer to **Initial Measurement Loading Recommendations** in the **Best Practices** section of the *Oracle Utilities Meter Solution Administrative User Guide* for more details and recommendations.

Usage Transactions

- **Number of Usage Transactions:** The number of usage transactions per day should not exceed 20% of the total service point volume.
- **Daily Scalar Usage Rule:** The Daily Scalar Usage usage rule should be used when calculating usage for frequently read scalar channels (one or more reading per day). This rule only exports the beginning and ending readings.
- **Vector and Service Quantity Math Rule:** Only use the Vector and Service Quantity Math rule when other usage rules cannot perform the same calculations. For example, although the Vector and Service Quantity Math rule can perform TOU mapping, you should use the Get TOU Mapped Usage rule if TOU mapping functionality is the only requirement.
- **Measurement Data in Usage Transactions:** Minimize the amount of measurement data included in the Usage Transaction results, as individual interval records included with the usage transaction will slow down processing. Saving derived interval data and sending the data to an external system via the **Save Interval Vector** and **Extract Interval Data** options on the Vector and Service Quantity Math and Get Interval Data usage rules can have a noticeable impact on usage transaction processing. Usage transaction processing can be improved by up to 45% if extraction of interval data is eliminated. Use of these options should be limited to situations in which they are absolutely required.
- **Interval Data Export:** Usage transactions should not be used as an ETL tool to perform the mass export of interval data.

User Interfaces

- **Zones:** For better performance, user interface zones should be initially collapsed when not required for 90% or more of business processes. The initial state of zones (collapsed or not) can be controlled via the **Portal Preferences** tab on the **User** portal.
- **Number of Records:** The number of records returned to the user interface for a zone should be limited to 50 rows when building custom zones against large transactional tables.
- **Screen Troubleshooting:** To troubleshoot a screen in the user interface, click **Preferences** in the top right corner of the application and choose the **Portal Preferences** tab. Choose the appropriate portal and set all zones to "Initially Collapsed". Navigate back to the screen that has performance issues, expand the zones one by one, and measure the execution time of each zone. This should be an accurate step-by-step representation of the full screen execution.
- **Performance Optimization:** For optimal user interface performance, laptop users should ensure their computer is in high performance mode.

Commands and Events

- **Meter Events:** Only meter events that have significant business value should be imported into the cloud service. These are generally events that involve billing or outage processes. Superfluous events such as hourly meter communication confirmations should not be sent to the service.
- **Meter Commands:** Meter command processing should be configured such that it does not slow billing processes and can be supported by the advanced metering infrastructure (AMI) network. For example, meters should not be pinged every five minutes.

General Topics

- **Performance Tests:** Performance tests should be performed on all configurations to ensure daily processing windows are adequate. This includes configurations for: usage rules, VEE rules, aggregations processes, and so on.
- **Solution Changes:** Oracle should be consulted before significant solution changes are made. For example, adding new meter channels, adding a large number of meters, network changes, or new integrations, and so on.

Functional Limitations and Restrictions

This section outlines some specific limitations and restrictions regarding the functionality of Oracle Utilities Meter Solution Cloud Service beyond those identified in the service description, including:

- [Usage and Event Data Formats](#)
- [Smart Meter Commands](#)
- [Common Functionality](#)

Usage and Event Data Formats

Usage and event data being imported into Oracle Utilities Meter Solution Cloud Service can be imported using one of the following vendor-specific adapters:

- Itron OpenWay
- Landis+Gyr
- Sensus RNI
- Silver Spring Networks
- MV-90 Adapter for Itron

For custom file formats, implementation can use the Adapter Development Kit Native Format or the Adapter Development Kit to build custom data conversion process.

Smart Meter Commands

Oracle Utilities Meter Solution Cloud Service supports smart meters commands as described in the Smart Grid Gateway Adapter documentation (see [Oracle Utilities Meter Solution Cloud Service Documentation](#)). Additional smart meter command functionality must be implemented external to Oracle Utilities Meter Solution Cloud Service. This includes the following:

- Extensions to currently supported smart meter commands for supported head- end systems (see [Head End System Integrations](#))
- New smart meter commands beyond those currently supported
- Commands for non-supported head-end systems

Common Functionality

Oracle Utilities Meter Solution Cloud Service includes functionality used by multiple Oracle Utilities cloud services. Some of the functionality provided with Oracle Utilities Meter Solution Cloud Service is restricted, and can only be used if specific cloud services have been licensed.

The table below indicates the specific functional areas included with each of the listed cloud services.

- "Yes" indicates that the functional area is included with the product.
- "No" indicates that the functional area is not included with the product.

In order to use functionality listed as "not included", customers must license the product that includes the desired functionality.

Functionality	Oracle Utilities Meter Solution Cloud Service	Oracle Utilities Market Settlements Management Cloud Service
Measurement and Service Data Model	Yes	Yes
Validation and Editing Functionality	Yes	Yes
Estimation and Forecasting Functionality	Yes	Yes
Measurement Services and Aggregations	Yes	Yes
Consumer Level Usage and Bill Determinant Calculations	Yes	No
Wholesale Usage Bill Determinant Calculations	Yes	Yes
Usage Calculations for Settlement Processes	No	Yes
Usage and Event Upload Statistics Processing	Yes	Yes
Smart Meter Command Processing	Yes	No
Outage Integration	Yes	No
Service Order Management	Yes	No
DataConnect	Yes	No
Settlement Processes	No	Yes
Wholesale Gas Operations	No	Yes

Functional Areas

The table below describes the functional areas provided with the Oracle Utilities meter solution products.

Functional Area	Description
Measurement and Service Data Model	The measurement and service data model contains database tables and related functionality used to define and store meters, devices, unmetered items, service points, and measurement data.
Validation and Editing Functionality	The engine that provides the core functionality used to run validation and editing rules on usage data. This does not include technical validations such as valid format, valid number of readings, and so on.
Estimation and Forecasting Functionality	Processes to estimate missing usage and forecast future energy use.
Measurement Services and Aggregation	Measurement services are used to process meter reading data and manipulate measurements to support billing or other downstream processes.
Consumer Level Usage and Bill Determinant Calculations	The usage engine and usage rules provide the core functionality used to perform consumer usage and bill determinant calculations based on measurement data.

Functional Area	Description
Wholesale Usage Bill Determinant Calculations	The usage engine and usage rules provide the core functionality used to perform settlement and wholesale billing calculations based on measurement data. The term wholesale relates to purchasing and selling large quantities of energy between energy companies.
Usage Calculations for Settlement Processes	The usage engine and usage rules provide the core functionality used to perform settlement.
Usage and Event Upload Statistics Processing	Processing and compiling upload statistics related to upload of usage and device events.
Smart Meter Command Processing	Executing smart meter commands and communicating with a head-end system for purposes of issuing commands such as remote connect, commission meter, etc.
Outage Integration	Communicating with Oracle Utilities Network Management System, including sending/receiving bulk ping commands, receiving device events from Oracle Utilities Meter Solution Cloud Service, and suppression of device event notifications (allowing a suppression activity to be configured for a meter or service point so that specified device event notifications will not be sent to Oracle Utilities Network Management System).
Service Order Management	Orchestration of service orders that involve field work and/or smart meter commands through integration with customer information systems, mobile field work systems, and head-end systems.
DataConnect	Components used to extract interval measurements data and master data for integration with external energy management systems.
Settlement Processes	Components used for settlement processes: schedules, unaccounted for energy (UFE) calculations, capacity calculations, procurement, and true up processes.
Wholesale Gas Operations	Components used for wholesale gas operations: nominations, bids, scheduling and transportation.
Forecasting Rules	Rules used to forecast future energy use.

Operational Readiness Advisory

This section outlines suggested validations as part of operational readiness testing:

- Confirm batch stability, day over day execution according to your production schedule, and that performance is within acceptable production window.
- Leverage production converted data, along with actual production files for critical batch inputs, including usage/reads, payments and other billing input files when testing batch execution
- Confirm stable batch execution for a full month of bill cycles, plus the first three (3) cycles of the subsequent month to ensure consistency in batch execution across all bill cycles
- Review daily To Do entry volumes and confirm them to be acceptable based on available staffing

- Update database partitioning prior to go live. See **Go-Live Checklist** in the **Information Lifecycle Management** chapter of the *Oracle Utilities Cloud Services Implementation Guide*.

3

Implementation Support and Live Operate Services

This chapter describes implementation support and live operate services for Oracle Utilities Meter Solution Cloud Service:

- [Implementation Support Services](#)
- [Live Operate Services](#)

Implementation Support Services

Implementation Support Services are services that relate to the initial set up of Oracle Utilities cloud services. If Implementation Support Services are included in your Oracle Utilities cloud service(s), it will be stated in the relevant services descriptions.

The scope of the Implementation Support Services provided by Oracle is limited and currently includes (but it not limited to) the following:

Oracle will work to:

- Provide pre-configured templates (where available). These templates may be limited in scope (and may not completely align with the scope of the implementation project) and may only be available in the English language.
- Provide Utility Reference Model and other documentation describing the business processes that are the basis for the template configuration.
- To the extent necessary and under exceptional circumstances, execute scripts (authored by the customer) to resolve data issues.
 - Scripts submitted for execution to correct data issues will be subject to review for compliance with Oracle's Software Security Assurance standards. Scripts that do not comply will be returned for correction; resubmission will require a further compliance review with approval before execution will be scheduled.
 - There is a limit of four (4) script reviews in any calendar month. Review requests beyond this entitlement may be subject to additional fees.

Customers/Implementers retain complete responsibility for all other aspects of implementing the cloud service, including (but not limited to):

- Overall setup project management, including responsibility for management of the scope, the project plan/schedule and budget.
- End-user training activities and organizational change management.
- Leading and managing the user system review.
- Designing and testing all configurations and extensions to ensure they do not adversely affect performance.
- Identifying, designing, documenting and implementing any business process changes and system operation processes.

- Coordinating with external vendors or service providers to manage dependencies that could impact the overall project scope and schedule.
- Designating a project manager who shall be responsible for coordinating all customer/implementation related activities and responsibilities with respect to provisioning these Oracle Cloud Services.
- Business process change activities including end-user communication (e.g., status updates, newsletters, forums, etc.).
- Planning and executing all testing activities.
- All cut-over and roll-out activities.
- Business intelligence or data warehouse implementation/integration (if required).
- Procuring, setting up or otherwise provisioning any additional hardware, software or services as required.
- Providing any network hardware and/or software that may be required to connect to the Oracle Utilities cloud service(s).
- All data conversion/migration/cleansing activities such as:
 - Extracting, transforming and loading data into migration staging tables
 - Using cloud service data conversion tools (where available) to load data into the production environment
 - Creating or updating any required validation scripts
 - Any/all data cleansing activities that may be required (NB: these must be done in the source application(s) and not directly in the cloud service environment(s))
- Providing all in-scope data conversions and interfaces in formats supported by the relevant Oracle Utilities cloud service(s).
- The following interface/integration related activities:
 - Building and testing of any interfaces to or from the Oracle Utilities cloud service(s) (unless stated otherwise)
 - Any ongoing synchronization and interface monitoring activities between customer owned Customer Information System(s) (CIS) and Oracle Utilities cloud service(s)
 - Complete end to end integration flows using template interfaces
 - Any configuration of interfaces external to the Oracle Utilities cloud service(s) that are required to match the published specification for interfacing with the Oracle Utilities cloud service(s)

The provision of these Implementation Support Services is contingent on the following:

- Any integration middleware used to implement any integration will not be hosted within any Oracle Utilities cloud service(s).
- Turnaround time will be no longer than two (2) working days unless otherwise agreed. Turnaround time refers to time taken by the customer/implementation team to respond to and confirm design elements and decision points during the performance of the Implementation Support Services.

Live Operate Services

Live Operate services are services that Oracle provides to assist you with the ongoing operation of supported Oracle Utilities cloud services, once live and in production. If Live

Operate Services are included in your Oracle Utilities cloud service(s), it will be stated in the relevant services descriptions.

The scope of the Live Operate Services provided by Oracle is limited and currently includes the following:

Oracle will work to:

- Provide you with access to a Customer Success Manager ("CSM") who will deliver customer success services. To learn more about what you can expect from a CSM, please visit <https://www.oracle.com/customer-hub/utilities/working-with-customer-success/>.
- Provide access to information about incidents and changes made to any of your Oracle Utilities cloud service environment(s).
- Upon request, create and deliver a Quarterly Status Report summarizing the activities undertaken over the past quarter and those scheduled as major future events.
- Upon request, offer quarterly meetings with customer/implementation oversight team to present, review and discuss the Quarterly Status Report.
- Monitor infrastructure and application availability and resolve any incident that is within Oracle's scope or responsibility.
- Provide primary Help Desk Services from 08:00 to 17:00 your local time on Oracle working days.
- Respond to severity 1 incidents 24 hours per day, 365 days per year.
- Provide incident management and problem management services for events related to Oracle Utilities Cloud Services, including:
 - Analyzing issues and resolving any incidents that are within Oracle's scope or responsibility
 - Escalating any issues not within Oracle's scope or responsibility to you for resolution
 - Provide infrastructure logs to assist in the diagnosis and remediation of incidents within your scope or responsibility. NB: these logs may be scrubbed for security purposes and other sensitive data.

Customers remain completely responsible for all other aspects of using or otherwise operating the cloud service. Examples of customer obligations in this regard would be to:

- Assign a manager to act as the primary conduit for all issues relating to the delivery of these services.
- Provide Oracle with the dates for key business and technology events (i.e. testing calendar, refresh schedule etc.) at least thirty (30) days prior to the event.
- Assign appropriate resources to support your activities.
- Support scheduling of meetings as required.
- Participate in all scheduled meetings.
- Manage all activities, including:
 - Prioritizing work activities
 - Providing coordination across any teams and/or interested parties external to Oracle.
 - Escalation of issues to the Oracle CSM in a timely manner.
 - Providing any information required to progress service requests. Oracle is not responsible for meeting any agreed (or stated) targets or objectives if required or requested information is not forthcoming in a timely manner.

- Assigning appropriate resources to conduct all required acceptance testing for all software packages delivered.
- Accepting all software packages prior to promotion to the Production environment.
- Maintaining a contact list for all persons performing governance functions.
- Participating in Oracle's internal quality assurance processes on a mutually agreed schedule.
- Manage the Oracle Utilities cloud services, including:
 - Defining and (as necessary) modifying batch schedules to meet business needs.
 - Monitoring batch and interface processes to confirm and verify completion.
 - Defining, implementing, testing and deploying any changes to the configuration and extensions required to:
 - * Resolve incidents or problems within the customers scope or responsibility
 - * Meet evolving business needs
 - * Conform with upgrades, patches or any other Oracle Utilities cloud service requirements or prerequisites.
- Notify Oracle of any incidents detected.
- Action each SR in accordance with the relevant Oracle Cloud Hosting and Delivery Policies.
- Establish the method of communication between the incident management team and the Oracle team for each incident.
- Redirect any SRs to the correct (non- Oracle) support team if the SR is not within the scope of the Oracle Utilities cloud service(s).
- Assist the Oracle team with SR analysis of data originating outside the applications.
- Correct business data as reasonably requested by Oracle to achieve closure of an identified problem.
- Monitor customer network and network connections to ensure sufficient bandwidth and performance.
- Conduct all functional, regression, performance, system integration, acceptance and/or user acceptance testing as appropriate, and accept and approve all software changes, prior to the production roll out of any change, in accordance with any agreed-on release management process, for any change resulting from:
 - An incident remedy or fix, or
 - Any service pack update or upgrade.
- Provide suitably qualified support personnel who are able to extract, interpret, analyze and respond to information provided in the Performance Hub reports.
- Provide authorizations and/or validations for data correction and/or adjustments to the supported environments.
- Apply configuration changes that are within the customer's or implementation's scope as recommended by Oracle to prevent recurring incidents.
- At Oracle's request, provide approval through the environment change management process for the installation of fixes to prevent recurring incidents.
- Initiate documented escalation processes when the urgency of the incident has increased due to business requirements.

- Provide incident support where the remediation is within Oracle's scope or responsibility, specifically:
 - Provide Oracle with access to the user who reported the problem.
 - Provide all information as reasonably requested by Oracle and participate in diagnostics, including, but not limited to, business/access logs and Performance Hub reports.
 - Provide a test case and access to an environment where the SR incident is reproducible.
- Provide Oracle, as necessary, with access to any other support teams.
- Acknowledge that the supplied break-fix resolves the incident or problem and accept the SR closure.
- Provide internal approvals to Oracle before the migration of any change recommended by Oracle into a production environment.
- When an incident or problem is determined by Oracle to be unrelated to an Oracle Utilities cloud service or to be caused by data problems arising from data conversion or some other error, a separate, paid contract may be required to cover Oracle's time spent investigating and, if relevant, correcting the problem at Oracle's prevailing time and materials rates, and to reimburse Oracle for all reasonable out of pocket expenses.

4

Oracle Utilities Cloud Services Third Party Software and Licenses

This chapter provides information regarding third-party software used in Oracle Utilities cloud services, including:

- [Third Party Software Notices](#)
- [Third Party Software Licenses](#)

Third Party Software Notices

Required notices for open source or other separately licensed software products or components distributed in this product are identified in the following table along with the applicable licensing information. Additional notices and/or licenses may be found in the included documentation or readme files of the individual third party software.

Note

A copy of each license appears in the **Third Party Licenses** section, unless otherwise noted

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

“License” shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

“Licensor” shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

“Legal Entity” shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, “control” means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

“You” (or “Your”) shall mean an individual or Legal Entity exercising permissions granted by this License.

“Source” form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

“Object” form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

“Work” shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

“Derivative Works” shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

“Contribution” shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, “submitted” means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as “Not a Contribution.”

“Contributor” shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. **Grant of Copyright License.** Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.
3. **Grant of Patent License.** Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.
4. **Redistribution.** You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:
You must give any other recipients of the Work or Derivative Works a copy of this License;
and
You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License. You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. **Submission of Contributions.** Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.
6. **Trademarks.** This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.
7. **Disclaimer of Warranty.** Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.
8. **Limitation of Liability.** In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.
9. **Accepting Warranty or Additional Liability.** While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

GNU LESSER GENERAL PUBLIC LICENSE

Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.

51 Franklin Street, Fifth Floor, Boston, MA 02110-1301 USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts as the successor of the GNU Library Public License, version 2, hence the version number 2.1.]

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public Licenses are intended to guarantee your freedom to share and change free software--to make sure the software is free for all its users.

This license, the Lesser General Public License, applies to some specially designated software packages--typically libraries--of the Free Software Foundation and other authors who decide to use it. You can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.

Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license

obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use this license for certain libraries in order to permit linking those libraries into non-free programs.

When a program is linked with a library, whether statically or using a shared library, the combination of the two is legally speaking a combined work, a derivative of the original library. The ordinary General Public License therefore permits such linking only if the entire combination fits its criteria of freedom. The Lesser General Public License permits more lax criteria for linking other code with the library.

We call this license the "Lesser" General Public License because it does Less to protect the user's freedom than the ordinary General Public License. It also provides other free software developers Less of an advantage over competing non-free programs. These

disadvantages are the reason we use the ordinary General Public License for many libraries. However, the Lesser license provides advantages in certain special circumstances.

For example, on rare occasions, there may be a special need to encourage the widest possible use of a certain library, so that it becomes a de-facto standard. To achieve this, non-free programs must be allowed to use the library. A more frequent case is that a free

library does the same job as widely used non-free libraries. In this case, there is little to gain by limiting the free library to free software only, so we use the Lesser General Public License.

In other cases, permission to use a particular library in non-free programs enables a greater number of people to use a large body of free software. For example, permission to use the GNU C Library in non-free programs enables many more people to use the whole GNU operating system, as well as its variant, the GNU/Linux operating system.

Although the Lesser General Public License is Less protective of the users' freedom, it does ensure that the user of a program that is linked with the Library has the freedom and the wherewithal to run that program using a modified version of the Library.

The precise terms and conditions for copying, distribution and modification follow. Pay close attention to the difference between a "work based on the library" and a "work that uses the library". The former contains code derived from the library, whereas the latter must be combined with the library in order to run.

GNU LESSER GENERAL PUBLIC LICENSE

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

1. This License Agreement applies to any software library or other program which contains a notice placed by the copyright holder or other authorized party saying it may be distributed under the terms of this Lesser General Public License (also called "this License"). Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data prepared so as to be conveniently linked with application programs (which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work which has been distributed under these terms. A "work based on the Library" means either the Library or any derivative work under copyright law: that is to say, a work containing the Library or a portion of it, either verbatim or with modifications and/or translated straightforwardly into another language. (Hereinafter, translation is included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for making modifications to it. For a library, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the library.

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running a program using the Library is not restricted, and output from such a program is covered only if its contents constitute a work based on the Library (independent of the use of the Library in a tool for writing it).

Whether that is true depends on what the Library does and what the program that uses the Library does.

2. You may copy and distribute verbatim copies of the Library's complete source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and distribute a copy of this License along with the Library.
You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.
3. You may modify your copy or copies of the Library or any portion of it, thus forming a work based on the Library, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:
 - a. The modified work must itself be a software library.
 - b. You must cause the files modified to carry prominent notices stating that you changed the files and the date of any change.
 - c. You must cause the whole of the work to be licensed at no charge to all third parties under the terms of this License.
 - d. If a facility in the modified Library refers to a function or a table of data to be supplied by an application program that uses the facility, other than as an argument passed when the facility is invoked, then you must make a good faith effort to ensure that, in the event an application does not supply such function or table, the facility still operates, and performs whatever part of its purpose remains meaningful.
(For example, a function in a library to compute square roots has a purpose that is entirely well-defined independent of the application. Therefore, Subsection 2d requires that any application-supplied function or table used by this function must be optional: if the application does not supply it, the square root function must still compute square roots.)

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Library, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Library, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Library.

In addition, mere aggregation of another work not based on the Library with the Library (or with a work based on the Library) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

4. You may opt to apply the terms of the ordinary GNU General Public License instead of this License to a given copy of the Library. To do this, you must alter all the notices that refer to this License, so that they refer to the ordinary GNU General Public License, version 2, instead of to this License. (If a newer version than version 2 of the ordinary GNU General Public License has appeared, then you can specify that version instead if you wish.) Do not make any other change in these notices.

Once this change is made in a given copy, it is irreversible for that copy, so the ordinary GNU General Public License applies to all subsequent copies and derivative works made from that copy.

This option is useful when you wish to copy part of the code of the Library into a program that is not a library.

5. You may copy and distribute the Library (or a portion or derivative of it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange.

If distribution of object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place satisfies the requirement to distribute the source code, even though third parties are not compelled to copy the source along with the object code.

6. A program that contains no derivative of any portion of the Library, but is designed to work with the Library by being compiled or linked with it, is called a "work that uses the Library". Such a work, in isolation, is not a derivative work of the Library, and therefore falls outside the scope of this License.

However, linking a "work that uses the Library" with the Library creates an executable that is a derivative of the Library (because it contains portions of the Library), rather than a "work that uses the library". The executable is therefore covered by this License.

Section 6 states terms for distribution of such executables.

When a "work that uses the Library" uses material from a header file that is part of the Library, the object code for the work may be a derivative work of the Library even though the source code is not. Whether this is true is especially significant if the work can be linked without the Library, or if the work is itself a library. The threshold for this to be true is not precisely defined by law.

If such an object file uses only numerical parameters, data structure layouts and accessors, and small macros and small inline functions (ten lines or less in length), then the use of the object file is unrestricted, regardless of whether it is legally a derivative work. (Executables containing this object code plus portions of the Library will still fall under Section 6.)

Otherwise, if the work is a derivative of the Library, you may distribute the object code for the work under the terms of Section 6. Any executables containing that work also fall under Section 6, whether or not they are linked directly with the Library itself.

7. As an exception to the Sections above, you may also combine or link a "work that uses the Library" with the Library to produce a work containing portions of the Library, and distribute that work under terms of your choice, provided that the terms permit modification of the work for the customer's own use and reverse engineering for debugging such modifications.

You must give prominent notice with each copy of the work that the Library is used in it and that the Library and its use are covered by this License. You must supply a copy of this License. If the work during execution displays copyright notices, you must include the copyright notice for the Library among them, as well as a reference directing the user to the copy of this License. Also, you must do one of these things:

- a. Accompany the work with the complete corresponding machine-readable source code for the Library including whatever changes were used in the work (which must be distributed under Sections 1 and 2 above); and, if the work is an executable linked with the Library, with the complete machine-readable "work that uses the Library", as object code and/or source code, so that the user can modify the Library and then relink to produce a modified executable containing the modified Library. (It is understood that the user who changes the contents of definitions files in the Library will not necessarily be able to recompile the application to use the modified definitions.)
 - b. Use a suitable shared library mechanism for linking with the Library. A suitable mechanism is one that (1) uses at run time a copy of the library already present on the user's computer system, rather than copying library functions into the executable, and (2) will operate properly with a modified version of the library, if the user installs one, as long as the modified version is interface-compatible with the version that the work was made with.
 - c. Accompany the work with a written offer, valid for at least three years, to give the same user the materials specified in Subsection 6a, above, for a charge no more than the cost of performing this distribution.
 - d. If distribution of the work is made by offering access to copy from a designated place, offer equivalent access to copy the above specified materials from the same place.
 - e. Verify that the user has already received a copy of these materials or that you have already sent this user a copy.
For an executable, the required form of the "work that uses the Library" must include any data and utility programs needed for reproducing the executable from it. However, as a special exception, the materials to be distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

It may happen that this requirement contradicts the license restrictions of other proprietary libraries that do not normally accompany the operating system. Such a contradiction means you cannot use both them and the Library together in an executable that you distribute.
8. You may place library facilities that are a work based on the Library side-by-side in a single library together with other library facilities not covered by this License, and distribute such a combined library, provided that the separate distribution of the work based on the Library and of the other library facilities is otherwise permitted, and provided that you do these two things:
 - a. Accompany the combined library with a copy of the same work based on the Library, uncombined with any other library facilities. This must be distributed under the terms of the Sections above.
 - b. Give prominent notice with the combined library of the fact that part of it is a work based on the Library, and explaining where to find the accompanying uncombined form of the same work.
 9. You may not copy, modify, sublicense, link with, or distribute the Library except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, link with, or distribute the Library is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
 10. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Library or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or

distributing the Library (or any work based on the Library), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Library or works based on it.

11. Each time you redistribute the Library (or any work based on the Library), the recipient automatically receives a license from the original licensor to copy, distribute, link with or modify the Library subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties with this License.
12. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Library at all. For example, if a patent license would not permit royalty-free redistribution of the Library by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Library. If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply, and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice. This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

13. If the distribution and/or use of the Library is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Library under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
14. The Free Software Foundation may publish revised and/or new versions of the Lesser General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. Each version is given a distinguishing version number. If the Library specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Library does not specify a license version number, you may choose any version ever published by the Free Software Foundation.
15. If you wish to incorporate parts of the Library into other free programs whose distribution conditions are incompatible with these, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

16. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW.

EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

17. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Copyright 2000, 2001, 2002, 2003 Nara Institute of Science and Technology. All Rights Reserved.

Use, reproduction, and distribution of this software is permitted.

Any copy of this software, whether in its original form or modified, must include both the above copyright notice and the following paragraphs.

Nara Institute of Science and Technology (NAIST), the copyright holders, disclaims all warranties with regard to this software, including all implied warranties of merchantability and fitness, in no event shall NAIST be liable for any special, indirect or consequential damages or any damages whatsoever resulting from loss of use, data or profits, whether in an action of contract, negligence or other tortious action, arising out of or in connection with the use or performance of this software.

A large portion of the dictionary entries originate from ICOT Free Software. The following conditions for ICOT

Free Software applies to the current dictionary as well.

Each User may also freely distribute the Program, whether in its original form or modified, to any third party or parties, PROVIDED that the provisions of Section 3 ("NO WARRANTY") will ALWAYS appear on, or be attached to, the Program, which is distributed substantially in the same form as set out herein and that such intended distribution, if actually made, will neither violate or otherwise contravene any of the laws and regulations of the countries having jurisdiction over the User or the intended distribution itself.

NO WARRANTY

The program was produced on an experimental basis in the course of the research and development conducted during the project and is provided to users as so produced on an experimental basis. Accordingly, the program is provided without any warranty whatsoever, whether express, implied, statutory or otherwise. The term "warranty" used herein includes, but is not limited to, any warranty of the quality, performance, merchantability and fitness for a particular purpose of the program and the nonexistence of any infringement or violation of any right of any third party.

Each user of the program will agree and understand, and be deemed to have agreed and understood, that there is no warranty whatsoever for the program and, accordingly, the entire risk arising from or otherwise connected with the program is assumed by the user.

Therefore, neither ICOT, the copyright holder, or any other organization that participated in or was otherwise related to the development of the program and their respective officials, directors, officers and other employees shall be held liable for any and all damages, including, without limitation, general, special, incidental and consequential damages, arising out of or otherwise in connection with the use or inability to use the program or any product, material or result produced or otherwise obtained by using the program, regardless of whether they have been advised of, or otherwise had knowledge of, the possibility of such damages at any time during the project or thereafter. Each user will be deemed to have agreed to the foregoing by his or her commencement of use of the program. The term "use" as used herein includes, but is not limited to, the use, modification, copying and distribution of the program and the production of secondary products from the program.

In the case where the program, whether in its original form or modified, was distributed or delivered to or received by a user from any person, organization or entity other than ICOT, unless it makes or grants independently of ICOT any specific warranty to the user in writing, such person, organization or entity, will also be exempted from and not be held liable to the user for any such damages as noted above as far as the program is concerned.

5. Time Zone Database
ICU uses the public domain data and code derived from Time Zone Database for its time zone support. The ownership of the TZ database is explained in BCP 175: Procedure for Maintaining the Time Zone Database section 7.

7. Database Ownership

The TZ database itself is not an IETF Contribution or an IETF document. Rather it is a pre-existing and regularly updated work that is in the public domain, and is

intended to remain in the public domain. Therefore, BCPs 78 [RFC5378] and 79 [RFC3979] do not apply to the TZ Database or contributions that individuals make to it. Should any claims be made and substantiated against the TZ Database, the organization that is providing the IANA Considerations defined in this RFC, under the memorandum of understanding with the IETF, currently ICANN, may act in accordance with all competent court orders. No ownership claims will be made by ICANN or the IETF Trust on the database or the code. Any person making a contribution to the database or code waives all rights to future claims in that contribution or in the TZ Database.

Oracle Utilities Cloud Services EU Data Act Reference Guide

Switching and Porting Procedure

Upon termination of your Oracle Utilities Enterprise SaaS Cloud Service(s) and subject to the terms of Your Order, You may retrieve a copy of Your Content from Your production environment (“**Data Copy**”) as provided herein.

The product documentation may be used to interpret the Data Copy which is in relational format. The proprietary Oracle data model may be utilized within the usage limits specified in the service descriptions.

The Data Copy will be provided in machine readable Oracle Data Pump format. Oracle Data Pump dump files are a proprietary, binary format and are directly readable using Oracle Database (impdp) or Oracle external tables with the ORACLE_DATAPUMP access driver.

Non-Oracle databases (PostgreSQL, MySQL, SQL Server, etc.) may not natively import Data Pump files. Subject to applicable license and/or service terms and fees, You may temporarily import the Data Copy into an Oracle database (for example, on OCI), and then leverage one of the following common ways to move Oracle data to non-Oracle targets:

- Connect-based migration tools: use tools that connect to the Oracle source and generate target-native DDL/data (such as ora2pg for PostgreSQL, AWS SCT/DMS, Azure DMS). These do not consume Data Pump dumps; they read from Oracle directly.
- Intermediate Oracle step: Import the Data Pump dump into an Oracle instance, then export data to neutral formats (CSV, flat files) or use SQL Developer/SQLcl unloads; load into the target with its native tools.
- Change data capture: Use replication tools (such as Oracle GoldenGate with appropriate licenses) to stream to non-Oracle targets. These do not import Data Pump; they replicate changes.

Notes and cautions:

- Data Pump SQLFILE can generate DDL for review, but it is an Oracle-specific format and not directly usable by other engines without conversion.
- Any third-party migration tool or cloud service must be verified for alignment with the terms of Your Order and applicable security and compliance guidelines before use.

The Data Copy will be made available for download via OCI Object Storage Pre-Authenticated Request (“**PAR**”). A PAR is a special URL that grants time-limited, permission-scoped access to objects or buckets in Oracle Cloud Infrastructure without requiring the caller to have OCI credentials or IAM policies. It’s commonly used to let external users or applications upload or download specific content directly from Object Storage. After receiving the Data Copy, You are responsible for promptly verifying the integrity and completeness of the files received.

If You established and maintained a replicated copy of Your Data from Your Production environment using GoldenGate Replication for Enterprise SaaS prior to termination, subject to Your obligations including payment terms under Your order for such replicate database, You may continue to use that replicated data for the purposes of switching and porting after

termination in lieu of the above. Notwithstanding, the replication of data from the Oracle Utilities Enterprise SaaS service(s) will naturally cease.

Additional Notes and Limitations

- Oracle Utilities Enterprise SaaS offerings, including Customer Cloud Service, Meter Solution Cloud Service/MDM, and Work and Asset Cloud Service, do not include or offer for sale any "connected products" related to these services.
