5 About Oracle Reports

A Troubleshooting

General Troubleshooting Tips A-1
Installation and Configuration Log Files A-2
   Installation Log Files A-2
   Configuration Log Files A-3
Preface

This document covers requirements, instructions, and troubleshooting tips for installing and configuring Oracle Forms.

Audience

This guide is intended for users who are installing Oracle Fusion Middleware for the first time and are comfortable running some system administration operations, such as creating users and groups, adding users to groups, and installing operating system patches on the computer where you products will be installed. Users in UNIX systems who are installing need root access to run some scripts.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Related Documents

You can refer the Oracle Fusion Middleware Library for additional information.

- For 12c Oracle Forms information, see Oracle Forms Documentation Library.
- Oracle Forms Developer Online Help, available from the Help menu in Oracle Forms Developer.
- For Oracle Forms white papers and other resources, see Oracle.com.
- For upgrade information, see Fusion Middleware Upgrade Documentation.
- For release-related information, see Fusion Middleware Release Notes.

Conventions

The following text conventions are used in this document:
<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td><strong>monospace</strong></td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Installation and Configuration Overview

This chapter provides a summary and roadmap for Oracle Forms installation and configuration.

Note:
Although Oracle Reports is included in this release, it has been deprecated. Refer the 12.2.1.3.0 Documentation Library for installation information specific to Oracle Reports.

The following sections are included
- Oracle Forms Components
- Secure Oracle Forms With Identity Management
- Installation and Configuration Roadmap for Oracle Forms
- Installation and Configuration Roadmap for Standalone Form Builder

Oracle Forms Components

Provides the list of Oracle Forms components which are available for installation.

The components are as follows:
- Oracle Forms
  - Oracle Form Builder
  - Oracle Forms Deployment
- Oracle HTTP Server
- Oracle Common Configuration Infrastructure
  - CIE CAM Shared Config
  - Enterprise Manager Plugin for Forms
- Infrastructure
  - Database Client Components 12.1.0.2.0
  - FMW Upgrade 12.2.1.4.0
  - OPatch version 13.9.1.0.0

Secure Oracle Forms With Identity Management

If you want to have your Oracle Forms installation protected by an Identity Management tier, you must secure Oracle Forms with Oracle Access Manager.
Your Oracle Forms installation can only be secured with Identity Management if you are configuring your components in deployment mode.

**Securing Oracle Forms With Oracle Access Manager**

Refer to the Fusion Middleware Supported System Configurations Guide to determine which Oracle Access Manager and Internet Directory versions have been certified for use with this release.

To install and configure Oracle Internet Directory with Oracle Access Manager, you have to perform the following task:

1. Install Oracle Identity and Access Management, as described in Preparing to Install and Configure Oracle Access Management
2. Configure a WebLogic Server domain for Oracle Access Manager, as described in Preparing to Install and Configure Oracle Access Management
3. Integrate Oracle Access Manager with Oracle Internet Directory, as described in Configuring the Oracle OAM Suite Domain

If you have an existing Oracle Internet Directory with Oracle Single Sign-On, you can upgrade to Oracle Internet Directory with Oracle Access Manager, as described in Upgrading Oracle Forms

### Installation and Configuration Roadmap for Oracle Forms

This roadmap provides an overview of the steps required to install Oracle Forms.

Review the tasks you have to perform for a typical Oracle Forms installation and configuration.

> **Note:**
> If you are planning to use the Standalone Form Builder installation option, see Table 1-2

Installing and Configuring Oracle Forms

This chapter describes how to install and configure Oracle Forms. The following topics are covered:

• Preparing to Install
• Installing Oracle WebLogic Server (FMW Infrastructure)
• Installing Oracle Identity and Access Management
• Installing and Configuring Oracle Forms
• Installing Oracle Forms in Silent Mode
• Oracle Forms Accessibility Information

Preparing to Install

Before you begin installing Oracle Forms, it would be helpful if you understand the installation requirements. To prepare for your Oracle Forms installation, verify that your system meets the basic requirements, then obtain the correct installation software.

You should also ensure that your environment and other software requirements are met.

• Reviewing Certification, System, and Interoperability Requirements
• Understand Oracle Fusion Middleware Concepts
• Obtaining the Oracle Fusion Middleware Software
• Installing Oracle Forms in a New Oracle Home
• Installing Oracle Forms as a Non-Default User
• Overview of Installation and Configuration Steps

Reviewing Certification, System, and Interoperability Requirements

Oracle recommends that you use the certification matrix and system requirements documents with each other to verify that your environment meets the requirements for installation.

1. Verifying that your environment meets certification requirements

Make sure that you install your product on a supported hardware and software configuration. See the certification document for your release on the Oracle Fusion Middleware Supported System Configurations page.

Oracle has tested and verified the performance of your product on all certified systems and environments. Whenever new certifications are released, they are added to the certification document right away. New certifications can be released at any time. Therefore, the certification documents are kept outside the documentation libraries and are available on Oracle Technical Resources.
2. **Using the system requirements document to verify certification**

   Oracle recommends that you use the Oracle Fusion Middleware System Requirements and Specifications document to verify that the certification requirements are met. For example, if the certification document indicates that your product is certified for installation on 64-Bit Oracle Linux 6.5, use this document to verify that your system meets the required minimum specifications. These include disk space, available memory, specific platform packages and patches, and other operating system-specific requirements. System requirements can change in the future. Therefore, the system requirement documents are kept outside of the documentation libraries and are available on Oracle Technology Network.

3. **Verifying interoperability among multiple products**

   To learn how to install and run multiple Fusion Middleware products from the same release or mixed releases with each other, see Oracle Fusion Middleware 12c Interoperability and Compatibility in *Understanding Interoperability and Compatibility*.

---

**Understand Oracle Fusion Middleware Concepts**

If you are new to Oracle Fusion Middleware, see About Key Oracle Fusion Middleware Concepts in *Understanding Oracle Fusion Middleware* to familiarize yourself with some concepts and terminology you will encounter.

**Obtaining the Oracle Fusion Middleware Software**

Depending on your specific needs, there are multiple locations to obtain Oracle Fusion Middleware software.

For specific information on the distributions you need to download, see the Oracle Fusion Middleware Download, Installation, and Configuration Readme Files on Oracle Technical Resources page.

To install and configure Oracle Forms, you will need to download the following software:

- The installer for a certified version of Oracle WebLogic Server (FMW Infrastructure). Make sure you refer to the certification document, as described in *Reviewing Certification, System, and Interoperability Requirements*, to determine which version of Oracle WebLogic Server (FMW Infrastructure) you should obtain.
- The installer for Oracle Forms.
- If you want to secure your Oracle Forms installation with Identity Management, you can also download Oracle Internet Directory with Oracle Access Management.

Make a note of the directory where you download each installer; you will need this information when it is time to run the installer for each product.

**Installing Oracle Forms in a New Oracle Home**

Oracle Forms must be installed inside an Oracle home directory, which is created when Oracle WebLogic Server is installed.

Oracle Forms must be installed in its own Oracle home directory that it does not share with any other Oracle Fusion Middleware products of a different version.
Installing Oracle Forms as a Non-Default User

On UNIX operating systems, the installation of Fusion Middleware products is owned and controlled as a known user (for example, “oracle”). The file permissions associated with this installation are configured to ensure the highest level of security possible, which by default are 700 (meaning all files are owned and accessible by the owner only).

Changing the default permissions settings will reduce the security of the installation and possibly your system. Therefore, making such a change is not recommended. If other user require access to particular files or executables, the UNIX sudo command (or other similar command) should be considered in lieu of changing file permissions.

Refer to your UNIX operating system Administrator's Guide or contact your operating system vendor if you need further assistance.

On Windows operating systems, the user must be a member of the Windows "Admin" group. This gives the user the proper permissions required to start and stop processes after the installation, including the Builders.

Overview of Installation and Configuration Steps

To complete the installation and configuration of Oracle Forms, this section lists the basic steps you have to perform.

Installation and Configuration Steps

Perform the following steps to complete the installation and configuration of Oracle Forms:

- Install WebLogic Server Infrastructure.
- Install Forms.
- Run Repository Creation Utility (RCU).
- Run Configuration Wizard.
- Start all servers to complete configuration.

Installing Oracle WebLogic Server (FMW Infrastructure)

Oracle Forms requires Oracle WebLogic Server (FMW Infrastructure), which creates the Oracle home directory during installation.

The Oracle Fusion Middleware certification document for a specific release provides information about the minimum required Oracle WebLogic Server (FMW Infrastructure) version. See the certification document for your release on the Oracle Fusion Middleware Supported System Configurations page.
Downloading the Correct Installer for Your Operating System

To obtain the Oracle WebLogic Server (FMW Infrastructure) installer, see Obtaining the Oracle Fusion Middleware Software.

Finding Oracle WebLogic Server (FMW Infrastructure) Installation Instructions

Follow the Oracle WebLogic Server (FMW Infrastructure) installation instructions, as described in Installing Oracle WebLogic Server and Coherence for WebLogic Server MT. The WebLogic Server installation must be completed so that an Oracle home directory is created; you do not have to create a WebLogic Server domain as the Oracle Forms installer will allow you to do this for your Oracle Forms products.

If you are installing on Microsoft Windows operating system, after your Oracle WebLogic Server (FMW Infrastructure) installation is complete, perform the steps in the following section.

Stopping Node Manager Before Installing Oracle Forms (Windows Only)

If you are installing Oracle Forms on a Microsoft Windows operating system, you must ensure that the Node Manager utility that was installed with Oracle WebLogic Server is stopped before you begin the installation:

1. Verify the Oracle WebLogic Server Node Manager utility is stopped. If it is running, end the process.
2. Determine if the nodemanager.properties file is present in the WebLogic_Home \common\nodemanager directory.
   a. If the nodemanager.properties file is not present, continue installing Oracle Forms.
   b. If the nodemanager.properties file does exist, open it and verify that the ListenPort parameter is included and that it is set. If the ListenPort parameter is not included or set, edit the nodemanager.properties file so that it is similar to the following, where NODE_MANAGER_LISTEN_PORT represents the port the Node Manager listens on, such as 5556:

   ```
   ListenPort=NODE_MANAGER_LISTEN_PORT
   ```

Installing Oracle Identity and Access Management

Oracle Identity and Access Management helps to secure Oracle Forms installation.

Your Oracle Forms installation can be protected with Identity Management (see Secure Oracle Forms With Identity Management). If you choose to secure your Oracle Forms with Oracle Internet Directory and Oracle Access Manager, you must download and install these products if you do not already have them.

Oracle Identity and Access Management must be installed in a separate Oracle home directory from your Oracle Forms installation (see Installing Oracle Forms in a New Oracle Home). For performance reasons, Oracle recommends that Oracle Forms is installed on a separate machine from your Oracle Identity Management product.

Installing and Configuring Oracle Forms

You have to perform a series of steps to install and then configure Oracle Forms using the configuration wizard.

The following sections are included:

- Starting the Oracle Forms Installer
- View the Installation Log Files
- Configuring Your Oracle Inventory (UNIX)
- Installing Using Oracle Universal Installer
- Using the Repository Creation Utility
- Configuring Forms Using the Configuration Wizard
- Configuring Form Builder Standalone 12c Using the Configuration Wizard

Starting the Oracle Forms Installer

To start the installer, navigate to the directory where you have downloaded the Forms compressed folder containing the installer files.

On Windows operating system, extract the compressed folder.

`fmw_12.2.1.4.0_fr_win64_Disk1_1of2.zip`

An executable `.exe` file is extracted which you have to double-click to start the installer.

`setup_fmw_12.2.1.4.0_fr_win64.exe`

On UNIX / Linux operating systems, an executable `.bin` file is extracted from the compressed folder, which starts the installer.

`unzip fmw_12.2.1.4.0_fr_linux64_Disk1_1of2.zip`

`.fmw_12.2.1.4.0_fr_linux64.bin`
**Note:**

- The Forms 12c **Disk-1** compressed installer files folder for IBM AIX operating system does not include the `rootpre.sh` script files. So, you do not need to run the `rootpre.sh` script as the root user before starting the installer. The `rootpre.sh` script was used in previous version of FMW installer to load `postwait` driver `pw-syscall`.

- When running the Forms and Reports bin installer on the IBM AIX platform, the installer may core dump when the progress reaches 98%. To work around this issue and successfully complete installation, launch the installer with the following JVM parameters:

  ```
  -J-Xmx2048m -J-XX:MaxPermSize=2048m
  ```

  Here is an example.

  ```
  ./fmw_12.2.1.4.0_fr_aix_ppc64.bin -J-Xmx2048m -J-XX:MaxPermSize=2048m
  ```

- Some platforms may have multiple download files or disks, such as **Disk-1** and **Disk-2**. You should extract all the files, for example executable `.exe` file, from the downloaded compressed (zipped) folder. If the downloaded compressed (zipped) folder contains another compressed (zipped) file, you should not extract that compressed file contained within the original compressed (zipped) folder. You should store all the extracted files from the compressed folder in the same directory before starting the installer.

---

**View the Installation Log Files**

The installer writes logs files to the `Oracle_Inventory_Location/log` (on UNIX operating systems) or `Oracle_Inventory_Location\logs` (on Windows operating systems) directory. See **Installation Log Files** for information about log files and their contents.

**Configuring Your Oracle Inventory (UNIX)**

If you are installing on a UNIX operating system, and if this is the first time any Oracle product is being installed on your system with the Oracle Universal Installer, you will be asked to provide the location of an inventory directory. This is where the installer will set up subdirectories and maintain inventory data for each Oracle product that is installed on this system.

Use the inventory screens in **Table 2-1** to configure the inventory directory and group information. For more help, select the screen name in the table, or click the Help button in the GUI.
Table 2-1  Inventory Directory and Group Screens

<table>
<thead>
<tr>
<th>Screen</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specify Inventory Directory</td>
<td>Specify the Oracle inventory directory and group permissions for that</td>
</tr>
<tr>
<td></td>
<td>directory. The group must have write permissions to the Oracle inventory</td>
</tr>
<tr>
<td></td>
<td>directory.</td>
</tr>
<tr>
<td>Inventory Location Confirmation</td>
<td>Run the <code>createCentralInventory.sh</code> script as root.</td>
</tr>
</tbody>
</table>

If you do not want to use the Oracle central inventory, you can create a file called `oraInst.loc` and in this file, include the full path of the inventory directory of your choice. For example, a typical `oraInst.loc` file would contain the following:

```plaintext
inventory_loc=/home/username/oraInventory
inst_group=group
```

Then, you can start the installer and point to the `oraInst.loc` file. For example:

```bash
./fmw_12.2.1.4.0_fr_linux64.bin -invPtrLoc /location_of_oraInst.loc_file
```

Installing Using Oracle Universal Installer

Follow these instructions to install Oracle Forms using Oracle Universal Installer. After invoking Oracle Universal Installer as described in Starting the Oracle Forms Installer:

1. *Welcome* page. This page welcomes you to the installation. Click **Next**.

2. The *Auto Updates* page appears. This page enables you to choose to automatically receive software updates for your components from Oracle Corporation. Make your choices, then click **Next**.

3. The *Installation Location* page appears. Specify the Oracle home location into which you want to install the product(s). Click **Next**.

4. The *Installation Type* page appears. You can select *Standalone Forms Builder* if you want only that functionality, or choose *Forms Deployment* to install all of the products. Click **Next**.

5. The *Prerequisites Checks* page appears. This page shows you the progress of the system checking the prerequisites on your system before installation. If you are lacking any prerequisites, a message will appear telling you so. You do not need to take any actions on this page, though you can view the log from here. Click **Next**.

6. The *Installation Summary* page appears, showing you what components and features are about to be installed. If you need to make changes, click **Back**, otherwise, click **Install** to start the installation.

7. The *Installation Progress* page appears. This page shows you the progress of the installation, and will warn you if there are any problems. You can view messages and logs from this page, but typically no action is required here. When progress is complete, click **Next** (go to a *Summary* page). Alternatively, you can click **Finish**.

8. If you clicked **Next**, the *Installation Complete* page appears, showing you the components that have been installed. Click **Finish**.
Using the Repository Creation Utility

Before proceeding to the next tasks, follow the instructions in this topic to set up Repository Creation Utility (RCU) schemas for configuring Oracle Forms.

RCU is available with the Oracle Fusion Middleware Infrastructure distribution. After you install Oracle Fusion Middleware Infrastructure and create your Oracle home, you can start RCU from the ORACLE_HOME/oracle_common/bin directory. Follow these instructions to set up schemas.

Run $FMW_HOME/oracle_common/bin/rcu.sh. Unless otherwise noted, click Next to continue to the next screen.

Table 2-2 Schema Setup Steps

<table>
<thead>
<tr>
<th>Screen</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Welcome</td>
<td>This screen introduces you to RCU.</td>
</tr>
<tr>
<td>Create Repository</td>
<td>Select Create Repository, then select System Load and Product Load (default).</td>
</tr>
<tr>
<td>Database Connection Details</td>
<td>Specify RCU database connection credentials. Click Next when you have specified your credentials. The Checking Prerequisites dialog window appears. It shows the progress of prerequisites checking. Click OK, when the database checking has passed without errors, to dismiss the dialog window, and go to the next screen.</td>
</tr>
</tbody>
</table>
### Table 2-2 (Cont.) Schema Setup Steps

<table>
<thead>
<tr>
<th>Screen</th>
<th>Description</th>
</tr>
</thead>
</table>
| **Select Components**   | Select the **Create new prefix** radio button and provide a schema prefix (such as *DEMO*). You must remember the prefix and schema names for the components you are installing. It is recommended that you write down these values. Select the following components:  
  • Oracle Platform Security Services  
  • User Messaging Service (UMS)  
  **Tip:**  
  If Forms Application Deployment Services (FADS) is also planned to be configured, include User Messaging Services (UMS).  
  • Audit Services  
  • Audit Services Append  
  • Audit Services Viewer  
  **Note:**  
  Additional dependent components will automatically be selected.  
  The Checking Prerequisites pops up box appears. It shows the progress of prerequisites checking. Click **OK**, when it is complete, to dismiss the dialog window and go to the next screen. |
| **Schema Passwords**    | Leave the default **Use same passwords for all schemas** radio button selected, and enter the password in the **Password** field. You must remember the passwords you enter on this screen; you need this information during the configuration phase of product installation. It is recommended that you write down these values. |
| **Map Tablespaces**     | Use this screen to configure the desired tablespace mapping for the schemas that you want to setup. When you click **Next**, Repository Creation Utility dialog window appears, asking you to confirm that you want to create these tablespaces. Click **OK** to proceed and dismiss the dialog window.  
  A second dialog window, Creating Tablespaces appears showing the progress of tablespace creation. Click **OK**, after the tablespaces are created, to dismiss this window and go to the next screen. |
### Table 2-2 (Cont.) Schema Setup Steps

<table>
<thead>
<tr>
<th>Screen</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Summary</td>
<td>Verify the information on this screen, then click <strong>Create</strong> to begin schema setup. A System Load progress dialog window appears, showing progress. The dialog window will disappear when complete.</td>
</tr>
<tr>
<td>Completion Summary</td>
<td>Review the information on this screen to verify that the operation was completed successfully. Click <strong>Close</strong> to complete the schema setup and close RCU.</td>
</tr>
</tbody>
</table>

### Configuring Forms Using the Configuration Wizard

The Configuration Wizard helps and simplifies the task of configuring Oracle Forms.

The Configuration Wizard shows a series of screens where you verify or enter information.

**Note:**

To complete the configuration, Windows DOS shells must be run with Administrator permissions and Unix shells must be owned by the same user who performed the installation (for example, `oracle`). Failure to follow this instruction may result in the configuration failing silently.

Perform the following steps in the Configuration Wizard:

1. Run the Configuration Wizard using `config.sh` (config.cmd on Windows) located in the `ORACLE_HOME/oracle_common/common/bin` directory.
2. Choose **Create a new domain**, and enter the desired domain home path.
3. Click **Next**. The **Templates** screen appears. Keep the default selection (**Create Domain using Product Templates**), and select **Oracle Forms** [forms]. Any dependent templates will be automatically selected. Additional templates, like Oracle HTTP Server and others, can be selected based on the components desired. Refer to those individual component documents for more details.
4. Click **Next**. The **Application Location** screen appears. Keep the default value for Application location.
5. Click **Next**. The **Administrator Account** screen appears. Enter the desired WebLogic Domain administration username and password. This information will be needed to access WebLogic Server Control and Fusion Middleware Control.
6. Click **Next**. The **Domain Mode and JDK** screen appears. Select the **Domain Mode** (either **Development** or **Production**). To ensure the highest degree of security, selecting **Production** is recommended. Retain the default JDK selection unless you need to use a different version the JDK.
7. Click **Next**. The **Database Configuration Type** screen appears. Enter the RCU DB connection information. This information was created when running the Repository...
Creation Utility (RCU) in an earlier step. After entering the requested information, click **Get RCU Configuration**. Verify that a successful message is presented in the Results Log panel. If an indication of success is not indicated, check the databases entries made in this step. Mostly it will only be necessary to enter data for DBMS/Service, Host Name, Port, Schema Owner, and Schema Password. Other entries can remain as the default value.

8. Click **Next**. The JDBC Component Schema screen appears. These instructions assume each Repository schema uses the same password. If not, enter the correct schema passwords.

9. Click **Next**. The JDBC Component Schema Test screen appears. If any tests fail, it may be necessary to go back and make corrections.

10. Click **Next**. The Advanced Configuration screen appears. Select Topology and System Components. Depending on the level of customization desired, other selections may be used.

    **Tip:**

    If you want to configure server templates and dynamic server, see:
    - Using Server Templates in *Understanding Domain Configuration for Oracle WebLogic Server*.
    - Creating and Configuring Dynamic Clusters in *Administering Clusters for Oracle WebLogic Server*.

11. Click **Next**. The Managed Servers screen appears. Verify that the Server Groups is set to FORMS-MAN-SVR (for Forms). This screen can also be used to add additional managed servers if desired.

12. Click **Next**. The Clusters screen appears. Default entries will be acceptable mostly, unless adding new clusters is desirable.

13. Click **Next**. The Assign Servers to Clusters screen appears. The default values will be appropriate for most cases. However, if new managed servers were added in the previous step, they should be added to the cluster here.

14. Click **Next**. The Coherence Clusters screen appears. The default values will be appropriate for most cases.

15. Click **Next**. The Machines screen appears. Use this screen to override the machine name or add addition machine names for extend domain scenarios (add remote Forms nodes).

16. Click **Next**. The Assign Servers to Machines screen appears. Move the AdminServer to the AdminServerMachine by clicking the > button.

17. Click **Next**. The Virtual Targets screen appears. Used with WebLogic Server Partitions. Refer to the WebLogic Server documentation for details.

18. Click **Next**. The Partitions screen appears. Use this screen to add Weblogic Partitions if desired. Refer to the WebLogic Server documentation for details on how to use Partitions.

19. Click **Next**. The System Components screen appears. The default values will be appropriate for most cases. You can add additional Forms or other System Component instances on this screen (for example, extending a domain).
a. If Oracle HTTP Server (OHS) was selected in the Templates screen, the OHS component would need to be added in this step.

b. Click the Add button to add the OHS component and then click Next button.

c. Accept the default settings for the OHS Server component and then click Next button.

20. The Assign System Components to Machines screen appears. The default values will be appropriate for most cases. If OHS added in the previous step, move it to the Machines column under the Admin Server using the > button.

Note:
In case of extend domain scenario; assign the Forms System Component to the relevant Machine.

22. Click Create. The Configuration Progress screen appears.

23. Depending on the location and performance of the Repository database, this process may take a few minutes. Click Finish. The End of Configuration screen appears.

24. Start Node Manager and Admin Server to complete the configuration.
   - On Unix/Linux platforms, the shell used to start these servers the first time, must be the installation owner’s (for example, oracle).
   - On Microsoft Windows, the DOS shell used to start these servers the first time must have Administrator permissions. To enable an Administrator shell session, right-click the Command Prompt shortcut and select Run as Administrator. The shell that opens will indicate that it has Administrator privileges in its title bar.

Figure 2-1   Command Prompt with Administrator Privileges

For more information on how to start and stop servers, review Starting and Stopping Servers.
Configuring Form Builder Standalone 12c Using the Configuration Wizard

Describes how to install and configure the Form Builder Standalone environment.

Perform the following steps to configure the Form Builder Standalone environment:

1. Install the Form Builder Standalone 12c software.
   Start the Installer as described in Starting the Oracle Forms Installer. Follow the prompts. You must install into a new and empty Oracle home.

2. Launch the Form Builder Configuration Assistant using one of the following methods:
   a. Choose to run it after the Form Builder Standalone software installation.
      After the installation is complete, check the Automatically Launch Forms Builder Configuration Wizard option and click Finish.
   b. Launch the configuration tool later from the location. $FMW_HOME/forms/common/bin/config_builder.sh.
      config_builder.cmd for Microsoft Windows.

Figure 2-2   Launching the Configuration Tool in Windows

Optionally, you can specify the following arguments to perform a scripted or silent instance configuration. If you do not specify any of these, the Configuration Wizard user interface is presented.

- **autoconfig** - Specify to automatically configure a new instance named formsN where N is a sequential number starting with 1. Each time the command is run against this Oracle home, N increments by 1. The new instance is automatically created in the Oracle home.

- **formBuilderInstance** - Use this argument in conjunction the autoconfig argument to specify the path of the instance location. Specifying this parameter overrides the auto-naming behavior of the autoconfig argument. The path should be a value that does not include directories with spaces.

Here is an example of the command usage.

```
config_builder.cmd autoconfig formBuilderInstance=C:\myFormBuilder\inst1
```
3. Enter a name for the Form Builder Instance path in the Configuration Wizard, Instance Configuration screen. Click Next.

4. After configuration is complete, the Configuration Progress screen shows Configuration Succeeded message. Click Next.

5. End of Configuration screen shows the Oracle Home and Form Builder Instance location. Click Finish to exit the installer.

Verifying the Installation and Configuration

After you complete the installation and configuration of Oracle Forms, verify it was successful by performing a series of tasks.

You can verify the status of your installation by performing the tasks in any combination.

- Reviewing the Installation Logs
- Reviewing the Domain Server Logs
- Checking the Installed Products and Product Versions
- Checking Browser URLs
- Performing Basic Administration Tasks

Reviewing the Installation Logs

Check for the presence of installation log files in logs directory inside your Oracle Inventory directory.

On UNIX operating systems, if you do not know the location of your Oracle Inventory directory, you can find it in the ORACLE_HOME/oraInst.loc file.

On Windows operating systems, the location for the inventory directory is C:\Program Files\Oracle\Inventory\logs.

For information about installation log files, see Installation Log Files.

Reviewing the Domain Server Logs

You can check the domain server logs, which are located in the servers directory inside the domain home directory.

On UNIX operating systems:

DOMAIN_HOME/servers/server_name

On Windows operating systems:
Checking the Installed Products and Product Versions

The contents of your installation vary based on the options that you selected during the installation.

Check the products and product version numbers by running the opatch lsinventory -detail command from the ORACLE_HOME/OPatch directory.

Checking Browser URLs

To verify the installed products URLs are provided.

The Installation Complete screen contains URLs that can be used to access your installed and configured products, as described in the following table.

<table>
<thead>
<tr>
<th>Product or Component</th>
<th>URL</th>
</tr>
</thead>
<tbody>
<tr>
<td>Administration Server Console</td>
<td><a href="http://host:port/console">http://host:port/console</a></td>
</tr>
<tr>
<td>Enterprise Manager Console</td>
<td><a href="http://host:port/em">http://host:port/em</a></td>
</tr>
<tr>
<td>Oracle Forms</td>
<td><a href="http://host:port/forms/frmservlet">http://host:port/forms/frmservlet</a></td>
</tr>
</tbody>
</table>

Additional information:

If you installed in development mode, there would not be an Enterprise Manager Console URL to verify, and your Oracle Forms URLs would use the Administration Server port. In deployment mode, Enterprise Manager Console and EMAgent would use the Administration Server port, while Oracle Forms could be verified using their respective Managed Server ports or the Oracle HTTP Server port number.

Additionally, if your Oracle Forms are protected by Oracle Identity Management, then you will be prompted to provide login credentials when you attempt to access the Oracle Forms URLs.

Performing Basic Administration Tasks

After running the installer and configuration tool, all of your system components, the Administration Server, and Managed Servers should be manually started in order to complete the configuration process.

In the event that some of your servers or components are stopped unexpectedly, you can restart your Oracle Fusion Middleware environment by following the instructions, as described in Starting an Oracle Fusion Middleware Environment.

Your Oracle Fusion Middleware environment can also be stopped, as described in Stopping an Oracle Fusion Middleware Environment.
Installing Oracle Forms in Silent Mode

This section describes how to install Oracle Forms from the command line in silent mode.

You can use the silent installation mode to bypass the need to monitor your product installation because no graphical output is displayed and no input by the user is required. To install Oracle Forms in silent mode, use the -silent flag on the command line when you start the installer.

Silent installation does not include configuration. That is, you cannot configure Oracle Forms silently using the same silent installation commands and response file. In Oracle Fusion Middleware 11g release, you could use the content of the response file for both installing and configuring the product. But in 12c release, product configuration is a separate process. The Configuration Wizard cannot be run in silent mode (or used with response files) in 12c.

See the following sections in Installing Software with the Oracle Universal Installer, for details on silent mode:

- About Silent Installation
- About Response Files
- Running the Oracle Universal Installer in Silent Mode

After you have completed the installation in silent mode, perform the separate step-by-step process in the following sections to configure Oracle Forms using the Configuration Wizard:

- Configuring Forms Using the Configuration Wizard
- Configuring Form Builder Standalone 12c Using the Configuration Wizard

Deinstalling in Silent Mode

Follow the instructions in Running the Oracle Universal Installer for Silent Deinstallation, to deinstall Oracle Forms in silent mode.

Installing the Forms Application Deployment Services

The Forms Application Deployment Services (FADS) simplifies the process of packaging applications, deploying, configuring, and storing archived copies of the applications. Follow the instructions in this section to install and configure Forms Application Deployment Services (FADS).

The followings sections are included:

- Prerequisites for Installation
- Configuring Forms Application Deployment Services
- Run FADS Post Configuration Steps

Prerequisites for Installation

Forms Application Deployment Services is available in the latest Oracle Forms and Reports 12c shiphome.
To complete the installation and begin configuring FADS, you should install the following products in the given order:

1. Oracle WebLogic Server 12c (12.2.1.4.0)
2. Oracle Forms 12c (12.2.1.4.0)
3. Oracle SQL Developer 18.2 (or higher)

**Note:**

An existing older version of SQL Developer is installed with the latest Forms release. You need to rename the `sqldeveloper` directory located in the `$ORACLE_HOME` directory before installing Oracle SQL Developer 18.2 (or higher) in the same `$ORACLE_HOME` directory.

## Configuring Forms Application Deployment Services

After you have completed the installation steps, you can start configuring Forms Application Deployment Services applications.

You have to perform the following FADS application configuration steps in a Fusion Middleware domain:

- Setting up RCU Schema
- Apply FADS Template

### Prerequisite

As a prerequisite, Repository Creation Utility Schemas must be set up for configuring Oracle Forms or FADS domain. Configuring FADS will require the Repository's User Messaging Service (UMS) and its dependencies. See Setting up RCU Schema.

### Setting up RCU Schema

Follow the instructions in this section to set up Repository Creation Utility (RCU) schemas for configuring Oracle Forms or FADS domain.

RCU is available with the Oracle Fusion Middleware Infrastructure distribution. After you install Oracle Fusion Middleware Infrastructure and create your Oracle home, you can start RCU from the `$ORACLE_HOME/oracle_common/bin` directory. Follow these instructions to set up schemas.

Run `$ORACLE_HOME/oracle_common/bin/rcu.sh`. Unless otherwise noted, click **Next** to continue to the next screen.

### Table 2-4  Schema Setup Steps

<table>
<thead>
<tr>
<th>Screen</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Welcome</td>
<td>This screen introduces you to RCU.</td>
</tr>
<tr>
<td>Create Repository</td>
<td>Select Create Repository, then select System Load and Product Load (default).</td>
</tr>
</tbody>
</table>
Table 2-4 (Cont.) Schema Setup Steps

<table>
<thead>
<tr>
<th>Screen</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Database Connection</td>
<td>Specify RCU database connection credentials. Click <strong>Next</strong> when you have specified your credentials. The Checking Prerequisites dialog window appears. It shows the progress of prerequisites checking. Click <strong>OK</strong>, when the database checking has passed without errors, to dismiss the dialog window, and go to the next screen.</td>
</tr>
</tbody>
</table>
| Select Components        | Select the **Create new prefix** radio button and provide a schema prefix (for example, FADS). You must remember the prefix and schema names for the components you are installing. It is recommended that you write down these values. Select the following components:  
  • **Oracle Platform Security Services**  
  • **User Messaging Service (UMS)**  
  • **Audit Services**  
  • **Audit Services Append**  
  • **Audit Services Viewer**                                                                                                                                 |
| Schema Passwords         | Leave the default **Use same passwords for all schemas** radio button selected, and enter the password in the **Password** field. You must remember the passwords you enter on this screen; you need this information during the configuration phase of product installation. It is recommended that you write down these values. |
| Map Tablespaces          | Use this screen to configure the desired tablespace mapping for the schemas that you want to setup. When you click **Next**, Repository Creation Utility dialog window appears, asking you to confirm that you want to create these tablespaces. Click **OK** to proceed and dismiss the dialog window.  
  A second dialog window, Creating Tablespaces appears showing the progress of tablespace creation. Click **OK**, after the tablespaces are created, to dismiss this window and go to the next screen. |
| Summary                  | Verify the information on this screen, then click **Create** to begin schema setup. A System Load progress dialog window appears, showing progress. The dialog window will disappear when complete. |
| Completion Summary       | Review the information on this screen to verify that the operation was completed successfully. Click **Close** to complete the schema setup and close RCU.                                                                 |
Apply FADS Template

You have to perform specific steps by using the Configuration Wizard to apply FADS template.

You can create a new domain by selecting the FADS template in the Configuration Wizard. When you select the FADS template, it will automatically select Forms template as dependency. This will configure Forms in the Domain along with the FADS Applications. Alternatively, you can also configure FADS in a Forms domain by applying the FADS template later.

The following topics are included:

• Creating a New Domain that Includes Both Forms and FADS
• Applying FADS Template to an Existing Forms Domain

Creating a New Domain that Includes Both Forms and FADS

Follow the steps in this topic to create a new domain by using the FADS template.

Use the Configuration Wizard to create the new domain.

Starting the Configuration Wizard

1. Change to the following directory:
   (UNIX) ORACLE_HOME/oracle_common/common/bin
   (Windows) ORACLE_HOME\oracle_common\common\bin
   where ORACLE_HOME is your 12c Oracle home.

2. Enter the following command:
   (UNIX) ./config.sh
   (Windows) config.cmd

Creating the Domain

In the Configuration Wizard, you have to perform the steps similar to Forms configuration, as described in Configuring Forms Using the Configuration Wizard, but there are a few exceptions.

The following tasks performed in the Configuration Wizard screens, are not similar to the Forms configuration steps:

• Templates screen: Select **Forms Application Deployment Services (FADS)** template check box, when selecting the domain template. The dependent templates, including **Oracle Forms** template, are automatically selected or included in the domain.
Figure 2-3   Templates Screen

- Advanced Configuration screen: Select the following categories: Administration Server, Topology, and System Components. For each category you select, the appropriate configuration screen is displayed to allow you to perform advanced configuration.
• Administration Server settings screen: Select WSMPM-MAN-SRV from the Server Groups drop-down list. The default Server Name is AdminServer.

Figure 2-5  Administration Server Screen
Writing Down Domain Home and Administration Server URL

The End of Configuration screen shows information about the domain just configured. Make a note of the following items as they are required later:

- Domain Location
- Administration Server URL

Domain location information is required for accessing scripts that start Administration Server, and URL for accessing the Administration Server.

Click **Finish** to exit the Configuration Wizard.

Starting the Administration Server

Start the Administration Server, after configuration is complete, and then perform the post configuration task described in **Run FADS Post Configuration Steps**.

Applying FADS Template to an Existing Forms Domain

This topic describes how to use the Configuration Wizard to apply FADS extension template to an existing Forms domain.

Start the Configuration Wizard, to begin the update process, as described in **Creating a New Domain that Includes Both Forms and FADS**.

Perform the following actions in the Configuration Wizard screens for extending an existing Forms Domain:

1. Configuration Type screen: Select **Update an Existing Domain**. In the **Domain Location** field, Enter the full path for the Forms domain, or use the **Browse** button to navigate to the Forms domain. This field contains a drop-down list of the domains, if multiple domains exist in the Forms installation. Select the domain that you want to update from the drop-down list. Click **Next** to continue.
2. Templates screen: Select **Update Domain Using Product Templates**, and then select the **Forms Application Deployment Services (FADS)** check box to add to the domain. Click **Next** to continue.
3. Advanced Configuration screen: Select the **Deployments and Services** checkbox. For this category you would be performing advanced configuration tasks.

When extending a domain, you cannot change the Administration Server and Node Manager configurations. Therefore, these options are not available.

Click **Next** to continue.

![Advanced Configuration screen](image)

4. Deployments Targeting screen: Target applications for deployment on servers. This screen is displayed as you selected **Deployments and Services** on the Advanced Configuration screen.

- In the Deployment Targets list box, select **WSM-PM** application for the **AppDeployment** under the **AdminServer**.

- If **WSM-PM** application is not available in Deployment Targets list box, then select it under **AppDeployment** on the Deployments list box and then move it to **AppDeployments** under **AdminServer** in Deployment Targets list box, using the right arrow in the top-middle.
5. Configuration Summary screen: Review the detailed configuration settings of your domain before continuing. In the **Domain Summary** pane, select an item to display details about that item in the **Details** pane on the right. You can limit the items that are displayed in the **Domain Summary** pane by selecting a filter option from the Summary View drop-down list. Click **Back** to return to the appropriate screen, if you need to change the configuration.

Click **Update** to extend the domain, if the domain is configured as you want it.
6. Configuration Progress screen: Shows the progress of the domain update. Click Next, when the process completes.

Make a note of the following items because you need them later:
- Domain Location
- Administration Server URL

You need the domain location to access scripts that start Administration Server, and you need the URL to access the Administration Server. Click Finish to exit the Configuration Wizard.

Start the Administration Server, when you finish updating the Forms domain, and then perform the post configuration task described in Run FADS Post Configuration Steps.

Run FADS Post Configuration Steps

After creating or updating your Forms domain or after patching, you must perform few steps.

1. If you created or updated your Forms domain, start the Node Manager, and then the Administration Server.

2. Run one of the following sets of commands.
   • If you created or updated your Forms domain, run the following set of commands.
     $ORACLE_HOME/oracle_common/common/bin/wlst.sh $ORACLE_HOME/forms/fads/fads_config.py config
• If you applied a new Forms patch set or one-off, execute the FADS post configuration script with the `updateHostPort` arguments.

```
$ORACLE_HOME/oracle_common/common/bin/wlst.sh $ORACLE_HOME/forms/fads/fads_config.py config updateHostPort www.example.com 7001 $ORACLE_HOME/user_projects/applications/base_domain
```

3. Follow the prompts to complete the configuration.

4. Perform one of the following steps:

• If you created or updated your Forms domain, restart the Node Manager, then the Administration Server, and Forms Managed Servers.

• If you applied a new Forms patch set or one-off, complete other patching steps and then start the Administration Server, Node Manager and Forms Managed Servers.

Oracle Forms Accessibility Information

This topic provides information about accessibility features and related information for Oracle Forms.

Oracle Forms

Oracle Forms Builder 12c provides a range of features designed to support accessibility. While running Forms, you can configure your system and use features that support accessibility.

The Oracle Forms 12c runtime is accessible if coded based on the instructions provided in Accessibility Features and Tips for Oracle Forms. This link also provides information about the minimum requirement that assistive technology must meet to run with Oracle Forms.
Deinstalling Oracle Forms

Follow the instruction in this chapter to deinstall Oracle Forms. It is recommended that you always use the instructions provided in this chapter to remove the software. If you try to remove the software manually, you may encounter problems when you try to reinstall the software again at a later time. Following the procedures in this chapter will ensure that the software is properly removed. If you need to remove a particular product component, you must remove the entire domain containing the component. It is not possible to remove a single product from a domain containing multiple products.

The following topics are covered:

• Preparing to Deinstall Oracle Forms
• Dropping the Associated Repository
• Deinstalling the Software
• Removing the Oracle Home Directory Manually
• Removing the Program Shortcuts on Windows Operating Systems
• Removing the Domain and Application Data
• Reinstalling the Software

Preparing to Deinstall Oracle Forms

Before deinstalling Oracle Fusion Middleware software components, it is recommended that you stop all servers and processes associated with the Oracle home you are going to remove.

See Starting and Stopping Oracle Fusion Middleware in Administering Oracle Fusion Middleware.

Dropping the Associated Repository

If you do not need the repository and is not shared, you can drop the associated repository.

Before running the Oracle Forms, you should drop the repository by following the instructions as described in Dropping Schemas in Creating Schemas with the Repository Creation Utility.

Starting Repository Creation Utility (RCU)

You can start RCU, by navigating to the ORACLE_HOME/oracle_common/bin directory.
On UNIX operating systems:

```
cd ORACLE_HOME/oracle_common/bin
./rcu
```

On Windows operating systems:

```
cd ORACLE_HOME\oracle_common\bin
rcu.bat
```

Note:
Schemas should not be dropped if the associated domain will be used for other components. Only drop schemas when the domain is to be deleted. Dropping the repository schemas will also delete all data stored in them.

Deinstalling the Software

This section contains instructions to start the product deinstaller and remove Oracle Forms.

When you start the deinstaller from Oracle home, be sure that no system components are using the Oracle home you want to remove.

If you want to perform a silent (command-line) deinstallation, see Running the Oracle Universal Installer for Silent Deinstallation in *Installing Software with the Oracle Universal Installer*.

Starting the Deinstallation Program

Follow the instructions to start the Oracle Forms deinstaller.

The method you use to start the deinstallation program depends on your operating system: Windows or UNIX.

To start the deinstaller:

1. **On UNIX**
   
   On the command line, enter the following commands:

   ```
cd ORACLE_HOME/oui/bin
./deinstall.sh
```

2. **On Windows**
   
   Do one of the following:
   
   a. Use a file manager window to navigate to the `ORACLE_HOME\oui\bin` directory and double-click `deinstall.cmd`.  

b. Open a command prompt and enter the following commands:

```bash
cd %ORACLE_HOME%\oui\bin
deinstall.cmd
```

c. From the Start menu, select All Programs, then Oracle, then OracleHome, and then Uninstall Oracle Software, to open the Oracle Forms Deinstaller

Navigating the Deinstallation Screens

The deinstaller displays a series of screens to confirm the deinstallation of Oracle Forms.

If you need help on screens listed in the following table, click Help on the screen.

<table>
<thead>
<tr>
<th>Screen</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Welcome</td>
<td>Introduces you to the product deinstaller. The deinstallation Welcome screen contains a navigation pane on the left that summarizes the tasks the deinstaller will help you complete.</td>
</tr>
<tr>
<td>Deinstallation Summary</td>
<td>Shows the Oracle home directory and its contents that will be deinstalled. Verify that this is the correct directory. If you want to save these options to a response file, click Save Response File and enter the response file location and name. You can use the response file later during a silent deinstallation. See Running the Oracle Universal Installer for Silent Deinstallation in Installing Software with the Oracle Universal Installer. Click Deinstall, to begin removing the software.</td>
</tr>
<tr>
<td>Deinstallation Progress</td>
<td>Shows the deinstallation progress.</td>
</tr>
<tr>
<td>Deinstallation Complete</td>
<td>Appears when the deinstallation is complete. Review the information on this screen, then click Finish to close the deinstaller.</td>
</tr>
</tbody>
</table>

You should performs the steps in Starting the Deinstallation Program and this section, for Forms in the Oracle home.

Removing the Oracle Home Directory Manually

After you deinstall the software, you must manually remove your Oracle home directory and any existing subdirectories that the deinstaller did not remove.
For example, if your Oracle home directory is `/home/Oracle/product/ORACLE_HOME` on a UNIX operating system, enter the following commands:

```
cd /home/Oracle/product
rm -rf ORACLE_HOME
```

On a Windows operating system, if your Oracle home directory is `C:\Oracle\Product\ORACLE_HOME`, use a file manager window and navigate to the `C:\Oracle\Product` directory. Right-click the `ORACLE_HOME` folder and select **Delete**.

### Removing the Program Shortcuts on Windows Operating Systems

On Windows operating systems, you must also manually remove the program shortcuts from the `Start Menu\Programs` folder; the deinstaller does not remove them.

To remove the program shortcuts on Windows:

1. Go to the `C:\ProgramData\Microsoft\Windows\Start Menu\Programs\Oracle\ORACLE_HOME\Product` directory.
2. If you only have one product installed in your Oracle home, delete the `ORACLE_HOME` directory. If you have multiple products installed in your Oracle home, delete all products before you delete the `ORACLE_HOME` directory.

**Note:**

The program shortcuts and folder names on your system may be different; you have to remove them from `C:\ProgramData\Microsoft\Windows\Start Menu\Programs`.

### Rebooting Your System (Windows Operating Systems)

On Windows operating systems, you should reboot your computer after you have finished removing all your programs to ensure proper cleanup.

### Removing the Domain and Application Data

After you deinstall the software, you must manually remove your domain and application data.

To remove the domain and application data:

1. Remove your Domain home directory. Use your normal operating system commands to remove your Domain home directory, for example:

   On a UNIX operating system, if your Domain home directory is `/home/Oracle/config/domains/frs_domain`, enter the following command:

   ```
   cd /home/Oracle/config/domains
   rm -rf frs_domain
   ```
On a Windows operating system, if your Domain home directory is `C:\Oracle\Config\domains\frs_domain`, use a file manager window and navigate to the `C:\Oracle\Config\domains` directory. Right-click on the `frs_domain` folder and select **Delete**.

2. Remove your Application home directory. For example:

On a UNIX operating system, if your Application home directory is `/home/Oracle/config/applications/frs_domain`, enter the following commands:

```
cd /home/Oracle/config/applications
rm -rf frs_domain
```

On a Windows operating system, if your Application home directory is `C:\Oracle\Config\applications\frs_domain`, use a file manager window and navigate to the `C:\Oracle\Config\applications` directory. Right-click on the `frs_domain` folder and select **Delete**.

3. Back up the `domain_registry.xml` file in your Oracle home, then edit the file and remove the line associated with the domain that you are removing. For example, to remove the `frs_domain`, find the following line and remove it:

```
<domain location="/home/Oracle/config/domains/frs_domain"/>
```

Save and exit the file when you are finished.

## Reinstalling the Software

You can reinstall your software into the same Oracle home as a previous installation only if you deinstalled the software according to the instructions in this chapter, including manually removing the Oracle home directory.

When you reinstall, you can then specify the same Oracle home as your previous installation.

Consider the following cases where the Oracle home is not empty:

- **Installing in an existing Oracle home that contains the same feature sets.**
  
  The installer warns you that the Oracle home that you specified during installation already contains the same software you are trying to install. Your options are to:
  
  1. Select a different installation type. In this case, only the feature sets that do not exist in the Oracle home directory are installed.
  2. Select a different Oracle home directory.

- **Installing in an existing, non-empty Oracle home.**
  
  For example, suppose you chose to create your Domain home or Application home somewhere inside your existing Oracle home. This data is not removed during the deinstallation process, so if you try to reinstall into the same Oracle home, the installer does not allow it. Your options are to:
  
  1. Deinstall your software from the Oracle home as described in this chapter and then remove the Oracle home directory. After you deinstall the software and remove the Oracle home directory, you can reinstall and reuse the same Oracle home location, using the instructions in *Installing and Configuring Oracle Forms*. Any domain or application data that was in the Oracle home must be re-created.
2. Select a different Oracle home directory.
Upgrading Oracle Forms

This chapter describes how to upgrade Oracle Forms from 11g or previous 12c version to the latest version. Regardless of the version currently in use, first create a backup of the existing installation and then proceed with installing the latest version in a new Oracle Home.

When upgrading from version 11.1.1 or older, you can follow one of the following methods:

• Follow the instructions and first upgrade to v11. Then, follow the steps provided in this section to upgrade to v12.
• Perform a fresh installation of v12 and manually configure the new environment, as required.

Upgrading Oracle Form from a previous release is an in-place upgrade performed by using the Upgrade Assistant.

Note:

Although Oracle Reports is included in this release, it has been deprecated. Refer to the 12.2.1.3.0 Documentation Library for upgrade information specific to Oracle Reports.

The following topics are covered:

• Planning an Upgrade of Oracle Forms
• Preparing to Upgrade Oracle Forms from 11g
• Create Copy of Oracle Forms Template Files
• Upgrading Oracle Forms from 11g to 12c
• Upgrading Oracle Forms from a Previous 12c Release
• Post-Upgrade Steps after Upgrading Oracle Forms

Planning an Upgrade of Oracle Forms

Upgrading Oracle Forms to 12c requires careful preparation, planning, and performing series of steps.

If you are running any of the following versions, follow the steps provided in this chapter to upgrade Oracle Forms:

• Oracle FMW 11.1.1.7 Forms to Oracle Forms 12c (12.2.1.4.0)
• Oracle FMW 11.1.2.2 Forms to Oracle Forms 12c (12.2.1.4.0)
• Oracle FMW 12c (12.2.1.0) Forms to Oracle Forms 12c (12.2.1.4.0)
Preparing to Upgrade Oracle Forms from 11g

Before you begin to upgrade to the current version from Oracle Forms 11g, you must run the Forms upgrade extension script on the remote Forms nodes to extract Forms configuration residing on the remote nodes.

Note: You are required to perform these steps only if you have any remote Forms nodes, which you may have added using extend domain or expand cluster scenario.

To run Forms upgrade extension on the remote Forms nodes:

1. Run the `forms-upgrade-ext.sh` (or `forms-upgrade-ext.bat`) script on each remote node and pass it `collect` option. It will extract and package Forms configuration files on that remote node.

   The `forms-upgrade-ext.sh` is installed in the following directory:

   `$ORACLE_HOME/forms/plugins/upgrade`

2. Copy the artifacts from all the remote nodes to the Admin Server node.

3. Run the `forms-upgrade-ext.sh` (or `forms-upgrade-ext.bat`) script on the Admin Server node and pass it the `apply` option. It will extract the Forms configuration from the remote node artifacts and apply it to the Domain.

Create Copy of Oracle Forms Template Files

Before you start an upgrade to the latest 12c release, it is recommended that you create copies of existing Forms template files.

This includes all files in the following directory: `ORACLE_HOME\user_projects\domains\base_domain\config\fmwconfig\components\FORMS\instances \<INSTANCE NAME>\server`. If you are upgrading from a previous 12c release to the latest release, the files are located in the same directory as mentioned in the previous line. If you are upgrading Oracle Forms from a release earlier than 12c (for example, 11g) to the latest 12c release, the files may be located in different directory.

The copy of template files will help you to restore user-specific customization in the new forms template files.

After you have completed the upgrade process, you should manually copy or merge user-specific customizations created in the earlier version to the new Forms template files.

Upgrading Oracle Forms from 11g to 12c

Before you begin the upgrade, it is important to make sure you have read the complete upgrade process so that your existing setup is not impacted during or after the upgrade.

The upgrade process for Oracle Forms from 11g to 12c includes two steps.
Reconfiguring the 11g Domain using the WLS Reconfiguration Wizard

You have to use the WLS 12c Reconfiguration Wizard for configuring the 11g Domain.

To reconfigure the 11g Domain:

1. Run the Reconfiguration Wizard from the following location:
   
   $ORACLE_HOME/oracle_common/common/bin/reconfig.sh

2. Provide the location of the 11g FMW Domain for upgrade.

3. Enter the RCU schema information.

4. Select only the Topology option in the Advanced Configuration in the Reconfiguration Wizard.

   Do not select the system components option. Those will be automatically configured/upgraded by the Upgrade Assistant.

5. Leave the default selections on the Node Manager screen. Enter user name and password if needed.

6. Select JRF-MAN-SVR and FORMS-MAN-SVR server groups for all the Forms managed servers, including the default Forms managed servers WLS_FORMS, WLS_FORMS1, etc., and any other Forms managed servers users that may have been added after the 11g installation.

7. Click **Next** until you get to the last screen of the Reconfiguration Wizard.

   **Note:**

   In 11g, Forms does not require the Repository Creation Utility (RCU) schemas, but starting with 12c all the WebLogic Server 12c domains require RCU schemas to be setup. Hence, before you perform these steps, ensure that you create the required schemas (see Configuring the Oracle Fusion Middleware Infrastructure Domain) in RCU before you run the WLS Reconfiguration Wizard.

Using the Upgrade Assistant

To complete the upgrade from 11g to 12c, you have to run the 12.2.1.4.0 Upgrade Assistant.

To upgrade:

1. Run the 12.2.1.4.0 Upgrade Assistant from the following location:

   $ORACLE_HOME/oracle_common/upgrade/bin/ua

2. Select the **All Configuration Used by the Domain** option.

3. Provide the location of the reconfigured 12c domain.

4. Select the prerequisite check boxes.
5. Click **Upgrade**.

### Upgrading Oracle Forms from a Previous 12c Release

This section describes the process to upgrade Oracle Forms to the latest 12c from a previous Oracle Forms 12c release.

The information in this section assumes that you have read and performed the required pre-upgrade tasks.

The following topics are included in this section:

- Upgrading to Oracle Forms 12c (12.2.1.4.0) from 12c (12.2.1)
- Upgrading to Oracle Forms 12c (12.2.1.4.0) from 12c (12.2.1.1.0)
- Upgrading to Oracle Forms 12c (12.2.1.4.0) from 12c (12.2.1.2.0)
- Upgrading to Oracle Forms 12c (12.2.1.4.0) from 12c (12.2.1.3.0)

#### Upgrading to Oracle Forms 12c (12.2.1.4.0) from 12c (12.2.1)

To upgrade Oracle Forms 12.2.1.4.0 from 12.2.1 you have to complete three main steps.

The steps are as follows:

- Running the Upgrade Assistant to upgrade the Domain Schema
- Reconfiguring the 12.2.1 Domain using the WLS Reconfiguration Wizard
- Running the Upgrade Assistant to Upgrade the Components Configuration

#### Note:

Running `forms-upgrade-ext.sh` on remote nodes is **not required** when upgrading from 12.2.1.

#### Running the Upgrade Assistant to upgrade the Domain Schema

Perform the following steps to upgrade the Domain Schema using the 12.2.1.4.0 upgrade assistant.

To upgrade the Domain Schema:

1. Run the 12.2.1.4.0 Upgrade Assistant from the following location:
   
   `$ORACLE_HOME/oracle_common/upgrade/bin/ua`

2. Select the **All Schemas Used by the Domain** option.
3. Select the Schema components to Upgrade.
4. Provide the location of the reconfigured 12c domain.
5. Select the prerequisite check boxes.
6. Provide the RCU Database connection information.
7. Click **Next**.

8. Click **Finish**.

Reconfiguring the 12.2.1 Domain using the WLS Reconfiguration Wizard

You have to reconfigure the 12.2.1 Domain using the WLS Reconfiguration Wizard.

To reconfigure the 12.2.1 Domain:

1. Run the Reconfiguration Wizard from the following location:
   
   `$ORACLE_HOME/oracle_common/common/bin/reconfig.sh`

2. Provide the location of the 12.2.1 FMW Domain for upgrade.

3. Enter the RCU schema information.

4. Select only the Topology option in the *Advanced Configuration* in the Reconfiguration Wizard.
   
   Do not select the System Components option. Those will be automatically configured/upgraded by the Upgrade Assistant.

5. Leave the default selections on the *Node Manager* screen. Enter user name and password if needed.

6. Click **Next** until you get to the last screen of the Reconfiguration Wizard.

Running the Upgrade Assistant to Upgrade the Components Configuration

To upgrade the Components configuration, complete a series of steps using the 12.2.1.4.0 Upgrade Assistant.

To upgrade the Components configuration:

1. Run the 12.2.1.4.0 Upgrade Assistant from the following location:
   
   `$ORACLE_HOME/oracle_common/upgrade/bin/ua`

2. Select the *All Configuration Used by the Domain* option.

3. Provide the location of the reconfigured 12c domain.

4. Select the prerequisite check boxes.

5. Click **Upgrade**.

Upgrading to Oracle Forms 12c (12.2.1.4.0) from 12c (12.2.1.1.0)

To upgrade Oracle Forms 12.2.1.4.0 from 12.2.1.1.0 you have to complete three steps.

The steps are as follows:

- Running the Upgrade Assistant to Upgrade the Domain Schema
- Reconfiguring the 12.2.1.1.0 Domain using the WLS Reconfiguration Wizard
- Running the Upgrade Assistant to Upgrade the Components Configuration
Running the Upgrade Assistant to Upgrade the Domain Schema

Perform the following steps to upgrade the Domain Schema using the 12.2.1.4.0 upgrade assistant.

To upgrade the Domain Schema:

1. Run the 12.2.1.4.0 Upgrade Assistant from the following location:
   
   $ORACLE_HOME/oracle_common/upgrade/bin/ua

2. Select the All Schemas Used by the Domain option.

3. Select the Schema components to Upgrade.

4. Provide the location of the reconfigured 12c domain.

5. Select the prerequisite check boxes.

6. Provide the RCU Database connection information.

7. Click **Next**.

8. Click **Finish**.

Reconfiguring the 12.2.1.1.0 Domain using the WLS Reconfiguration Wizard

You have to reconfigure the 12.2.1.1.0 Domain using the WLS Reconfiguration Wizard.

To reconfigure the 12.2.1.1.0 Domain:

1. Run the Reconfiguration Wizard from the following location:
   
   $ORACLE_HOME/oracle_common/common/bin/reconfig.sh

2. Provide the location of the 12.2.1.1.0 FMW Domain for upgrade.

3. Enter the RCU schema information.

4. Select only the Topology option in the Advanced Configuration in the Reconfiguration Wizard.
   
   Do not select the System Components option. Those will be automatically configured/upgraded by the Upgrade Assistant.

5. Leave the default selections on the Node Manager screen. Enter user name and password if needed.

6. Click **Next** until you get to the last screen of the Reconfiguration Wizard.

Running the Upgrade Assistant to Upgrade the Components Configuration

To upgrade the Components configuration, complete a series of steps using the 12.2.1.4.0 Upgrade Assistant.

To upgrade the Components configuration:

1. Run the 12.2.1.4.0 Upgrade Assistant from the following location:
   
   $ORACLE_HOME/oracle_common/upgrade/bin/ua

2. Select the All Configuration Used by the Domain option.
3. Provide the location of the reconfigured 12c domain.
4. Select the prerequisite check boxes.
5. Click *Upgrade*.

**Upgrading to Oracle Forms 12c (12.2.1.4.0) from 12c (12.2.1.2.0)**

To upgrade Oracle Forms 12.2.1.4.0 from 12.2.1.2.0 you have to complete three steps.

The steps are as follows:

- Running the Upgrade Assistant to Upgrade the Domain Schema
- Reconfiguring the 12.2.1.2.0 Domain using the WLS Reconfiguration Wizard
- Running the Upgrade Assistant to Upgrade the Components Configuration

**Running the Upgrade Assistant to Upgrade the Domain Schema**

Perform the following steps to upgrade the Domain Schema using the 12.2.1.4.0 upgrade assistant.

To upgrade the Domain Schema:
1. Run the 12.2.1.4.0 Upgrade Assistant from the following location:
   
   `$ORACLE_HOME/oracle_common/upgrade/bin/ua`
2. Select the *All Schemas Used by the Domain* option.
3. Select the Schema components to Upgrade.
4. Provide the location of the reconfigured 12c domain.
5. Select the prerequisite check boxes.
6. Provide the RCU Database connection information.
7. Click *Next*.
8. Click *Finish*.

**Reconfiguring the 12.2.1.2.0 Domain using the WLS Reconfiguration Wizard**

You have to reconfigure the 12.2.1.2.0 Domain using the WLS Reconfiguration Wizard.

To reconfigure the 12.2.1.2.0 Domain:
1. Run the Reconfiguration Wizard from the following location:
   
   `$ORACLE_HOME/oracle_common/common/bin/reconfig.sh`
2. Provide the location of the 12.2.1.2.0 FMW Domain for upgrade.
3. Enter the RCU schema information.
4. Select only the Topology option in the *Advanced Configuration* in the Reconfiguration Wizard.
   
   Do not select the System Components option. Those will be automatically configured/upgraded by the Upgrade Assistant.
5. Leave the default selections on the Node Manager screen. Enter user name and password if needed.

6. Click Next until you get to the last screen of the Reconfiguration Wizard.

Running the Upgrade Assistant to Upgrade the Components Configuration

To upgrade the Components configuration, complete a series of steps using the 12.2.1.4.0 Upgrade Assistant.

To upgrade the Components configuration:

1. Run the 12.2.1.4.0 Upgrade Assistant from the following location:
   
   $ORACLE_HOME/oracle_common/upgrade/bin/ua

2. Select the All Configuration Used by the Domain option.

3. Provide the location of the reconfigured 12c domain.

4. Select the prerequisite check boxes.

5. Click Upgrade.

Upgrading to Oracle Forms 12c (12.2.1.4.0) from 12c (12.2.1.3.0)

To upgrade to Oracle Forms 12.2.1.4.0 from 12.2.1.3.0 you can perform a Zero Downtime (ZDT) upgrade or a non-ZDT upgrade. After you upgrade, complete the applicable configuration steps.

ZDT or Zero Downtime Upgrade is intended for multi-node environments. It allows administrators to patch or upgrade multi-node environments with minimal to no downtime.

The steps are as follows:

- Performing a ZDT Upgrade from 12.2.1.3.0
- Performing Non-ZDT Upgrade from 12.2.1.3.0
- Complete Upgrade from 12.2.1.3.0

Performing a ZDT Upgrade from 12.2.1.3.0

To perform a ZDT upgrade from 12.2.1.3.0 to Oracle Forms 12.2.1.4.0, complete a series of steps.

When upgrading from the 12.2.1.3.0 version, we recommend that you use the ZDT upgrade when one the following conditions is met.

- For multi-node load balanced Forms deployment
- To install FMW 12.2.1.4.0 in same the Oracle Home path as FMW 12.2.1.3.0

Consider a two-node scenario for the scope of this procedure. A primary node, named node1, with Admin Server, Forms (managed Server WLS_FORMS and System component forms1) and OHS. A secondary node, named node2, with Forms Instance (managed Server WLS_FORMS and System component forms1).

1. Shutdown system components, including Admin Server and the managed servers on node 1.
2. Rename the 12.2.1.3 Oracle Home parent directory on node 1. For example, you can rename it to Oracle_Home_Old.

3. Install Oracle Forms version 12.2.1.4.0 on node 1 to the same Oracle Home path as used in 12.2.1.3.0 (before we renamed it in Step 2).

4. Start system components, including Admin Server and the managed servers on node 1.

5. Shutdown system components and the managed servers on node 2.

6. Rename the 12.2.1.3 Oracle Home parent directory on node 2. For example, you can rename it to Oracle_Home_Old.

7. Install Oracle Forms version 12.2.1.4.0 on node 2 to the same Oracle Home path as used in 12.2.1.3.0 (before we renamed it in Step 6).

8. Start system components and the managed servers on node 2.

9. After completing the 12.2.1.4.0 installation and starting the servers correctly, delete the Oracle_Home_Old directories from node 1 and node 2. Before deleting, make sure you copy any custom files you need from the Oracle_Home_Old directory.

Performing Non-ZDT Upgrade from 12.2.1.3.0

To complete a non-ZDT upgrade from 12.2.1.3.0 to Oracle Forms 12.2.1.4.0, you have to complete two steps.

The steps are as follows:

- Reconfiguring the 12.2.1.2.0 Domain using the WLS Reconfiguration Wizard
- Running the Upgrade Assistant to Upgrade the Components Configuration

Reconfiguring the 12.2.1.3.0 Domain using the WLS Reconfiguration Wizard

You have to reconfigure the 12.2.1.3.0 Domain using the WLS Reconfiguration Wizard.

To reconfigure the 12.2.1.3.0 Domain:

1. Run the Reconfiguration Wizard from the following location:

   $ORACLE_HOME/oracle_common/common/bin/reconfig.sh

2. Provide the location of the 12.2.1.3.0 FMW Domain for upgrade.

3. Enter the RCU schema information.

4. Select only the Topology option in the Advanced Configuration in the Reconfiguration Wizard.

   Do not select the System Components option. Those will be automatically configured/upgraded by the Upgrade Assistant.

5. Leave the default selections on the Node Manager screen. Enter user name and password if needed.

6. Click Next until you get to the last screen of the Reconfiguration Wizard.
Running the Upgrade Assistant to Upgrade the Components Configuration

To upgrade the Components configuration, complete a series of steps using the 12.2.1.4.0 Upgrade Assistant.

To upgrade the Components configuration:

1. Run the 12.2.1.4.0 Upgrade Assistant from the following location:
   $ORACLE_HOME/oracle_common/upgrade/bin/ua
2. Select the *All Configuration Used by the Domain* option.
3. Provide the location of the reconfigured 12c domain.
4. Select the prerequisite check boxes.
5. Click **Upgrade**.

Complete Upgrade from 12.2.1.3.0

After you complete the steps to perform a ZDT or non-ZDT upgrade from 12.2.1.3.0 to Oracle Forms 12.2.1.4.0, perform these steps to complete the upgrade.

After completing the upgrade steps, perform these steps.

1. If FADS was configured in the 12.2.1.3.0 domain, complete these steps.
   a. Run the *fads_config.py* script with the upgrade option.
      ```
      ORACLE_HOME/oracle_common/common/bin/wlst.sh fads_config.py upgrade
      ```
   b. Complete the prompts.
2. After the FMW domain is upgraded from 12.2.1.3.0, complete the following steps to enable encryption for the *userid* parameter.

   **Note:**
   
   The *userid* parameter in *formsweb.cfg* file is encrypted by default when you create a new 12.2.1.4.0 domain.

   a. If you used the non-ZDT upgrade, set the *forms.userid.encryption.enabled* server parameter to true for the Admin Server and the Forms managed servers.
      
      Refer the *Customizing Domain Wide Server Parameters* section of the WebLogic documentation.
      
      Here is a sample of the *setUserOverridesLate.sh* file (use *setUserOverridesLate.cmd* for Windows), where the *forms.userid.encryption.enabled* parameter is enabled.

      ```
      echo ""
      echo "*****************************************************************************"
      echo "** Executing setUserOverridesLate.sh"
      echo "*****************************************************************************"
      ```
# specify additional java command line options for all servers

EXTRA_JAVA_PROPERTIES="\$\{EXTRA_JAVA_PROPERTIES\} -Dforms.userid.encryption.enabled=true"
export EXTRA_JAVA_PROPERTIES

echo "USER_MEM_ARGS="\$\{USER_MEM_ARGS\}""
echo "EXTRA_JAVA_PROPERTIES="\$\{EXTRA_JAVA_PROPERTIES\}""
echo ""
echo "*****************************************************************************"
echo "** End of setUserOverrideLate.sh""
echo "*****************************************************************************"
echo ""

b. For both ZDT and non-ZDT upgrades, run the following commands using WLST (online mode) to provide grants to the forms application or mbeans to access the Forms application keystore.

grantPermission(codeBaseURL="file:${common.components.home}/../forms/provision/forms-config-mbeans.jar", permClass="oracle.security.jps.service.keystore.KeyStoreAccessPermission", permTarget="stripeName=formsapp,keystoreName=formsks,alias=*, permActions="*")

grantPermission(codeBaseURL="file:${domain.home}/servers/${weblogic.Name}/tmp/_WL_user/formsapp_12.2.1/-", permClass="oracle.security.jps.service.keystore.KeyStoreAccessPermission", permTarget="stripeName=formsapp,keystoreName=formsks,alias=*, permActions="*")

c. For both ZDT and non-ZDT upgrades, restart the Admin Server and Forms managed servers.

Post-Upgrade Steps after Upgrading Oracle Forms

After using the Upgrade Assistant to upgrade Oracle Forms, perform a series of post-upgrade tasks.

You have to complete the following tasks:

- When upgrading from 11g Forms, regenerate the Forms application files: fmx's, mmx's, and pIx's to run on Oracle Forms Services 12.2.1.4.0. This is not required when upgrading from Oracle Forms 12.2.1.3.0.

- If you deployed the Oracle Forms Services J2EE custom application ear file (formsapp.ear) file to override the context root or Forms servlet alias, you should perform similar steps in the 12.2.1.4.0 Oracle WebLogic Server domain, see Custom Deployment of Forms Java EE Application. For more information, see Oracle Forms Configuration Helper Script in the Working With Oracle Forms guide.

- Manually copy any customizations made to provided shell script to the new environment as necessary.
Oracle Fusion Middleware 12c (12.2.1.4.0) does not support Java Runtime Environment (JRE) 1.7 or older. If necessary, upgrade the client JRE to a certified version of Java 8. Refer to the Product Certification Matrix for a list of certified versions.
About Oracle Reports

Although included in this release, Oracle Reports has been deprecated as of Fusion Middleware 12c Release 2 (12.2.1.3.0). For more information on the deprecation, review the Release Notes for Oracle Forms.

Because no changes have been made to Oracle Reports in the 12.2.1.4.0 release, refer to the 12.2.1.3.0 Documentation Library for information on installing, configuring, and using Oracle Reports. Download and install the 12.2.1.4.0 version and refer to this section of the 12.2.1.3 Installation Guide. Ignore any suggestions of using the 12.2.1.3 software in the guide.

For Oracle Reports usage, administration, and report deployment information, refer to the Publish Reports to the Web with Oracle Reports Services book. Because no further enhancements are planned for Oracle Reports, Oracle recommends migrating from Oracle Report to BI-Publisher. For more information about Oracle BI-Publisher, see this page.
Troubleshooting

This appendix describes solutions to common problems that you might encounter when installing Oracle Forms.
The following sections are included:

• General Troubleshooting Tips
• Installation and Configuration Log Files

If this Troubleshooting appendix does not solve the problem you encountered, try looking for a solution on My Oracle Support, see https://support.oracle.com/ (formerly Oracle MetaLink). You can also raise a service request, if you are unable to find a solution for your problem.

General Troubleshooting Tips

You may encounter errors during installing and configuring Oracle Forms.

Follow the tips to resolve the errors:

• To complete the configuration, Windows DOS shells must be run with Administrator permissions and UNIX shells must be owned by the same user who performed the installation (for example, oracle). Failure to follow this instruction may result in the configuration failing silently.

• See Install and Configure in Release Notes for Oracle Fusion Middleware Infrastructure for the latest updates and issues related to Oracle Fusion Middleware product installation and configuration.

• Verify that your computer meets the requirements specified in the Oracle Fusion Middleware System Requirements and Specifications. Select the document that is applicable for your release.

• Verify that your environment meets the certification requirements for your release and platform, as specified on the Oracle Fusion Middleware Supported System Configurations page.

• To review the latest Oracle Fusion Middleware Release Notes for other products, see: http://www.oracle.com/technetwork/middleware/fusion-middleware/documentation/index.htm. Select the documentation library for your specific product release to view the release notes.

• If you entered incorrect information on one of the installation screens, return to previous screen by clicking Back until you see the specific screen, or by using the navigation pane on the left side of the screen.

• If encounter error while the installer is copying or linking files:
  1. Note the error and review the installation log files.
  2. Remove the failed installation.
  3. Correct the issue that caused the error.
  4. Restart the installation.
Installation and Configuration Log Files

Log files are created when running the Oracle Forms installer and configuration tool.

The following log files contain information that can help you to troubleshoot problems during installation or configuration:

- Installation Log Files
- Configuration Log Files

Installation Log Files

The log files generated during your installation help you determine whether any problems occurred during installation.

The installer writes logs files to the Oracle_Inventory_Location/log (on UNIX operating systems) or Oracle_Inventory_Location/logs (on Windows operating systems) directory. On UNIX operating systems, if you do not know the location of your Oracle Inventory directory, you can find it in the oraInst.loc file in the following directories (default locations):

- Linux: /etc/oraInst.loc
- HP-UX and Solaris: /var/opt/oracle/oraInst.loc

On Windows operating systems, the location for the inventory directory is C:\Program Files\Oracle\Inventory\logs.

The following install log files are written to the log directory:

- installdate-time-stamp.log
  This is the main log file.
- installdate-time-stamp.out
  This log file contains the output and error streams during the installation.
- installActionsdate-time-stamp.log
  This file is used by the installer GUI to keep track of internal information.
- installProfiledate-time-stamp.log
  This log file contains the overall statistics like time taken to complete the installation, also configuration, memory and CPU details.
- orainstdate-time-stamp.log
  This log file contains the output stream of the copy session.

If you start the installer with the -printtime parameter, the timeTakendate-time-stamp.log and timedate-time-stamp.log files are created in the same directory:

- timeTakendate-time-stamp.log
  This file contains information for the amount of time taken to move between screens (applicable for GUI installations only).
- timedate-time-stamp.log
This file contains time information for the copy session.

If you start the installer with the -printmemory parameter, the memorydate-time-stamp.log file is created. This file contains memory usage information for the copy session.

Configuration Log Files

To create a log file of your configuration session, start the configuration tool with the -log option.

For specific operating systems use the following -log option.

On UNIX operating systems:

% ./config.sh -log=log_filename

On Windows operating systems:

G:\ config.cmd -log=log_filename

If you specify an absolute path with your log_filename then your log file will be created there. If you only specify a file name with no path, then the log files are created in the ORACLE_HOME/common/bin (on UNIX operating systems) or ORACLE_HOME\common\bin (on Windows operating systems) directory.
