

Upgrading Oracle GoldenGate for HP NonStop

This document describes how to upgrade to a new release of the Oracle GoldenGate data replication software for HP NonStop (Guardian).

This topic contains the following section on [Upgrading Oracle GoldenGate](#).

Upgrading Oracle GoldenGate

Upgrading Oracle GoldenGate requires three phases: backup, installation, and migration.

- **Backup:** Perform a full backup of your Oracle GoldenGate environment before installing and migrating to the latest Oracle GoldenGate release.
- **Installation:** Install Oracle GoldenGate following the steps in the Installation Guide, *Installing for HP NonStop (Guardian)*. Ensure to specify a new subvolume for your upgraded Oracle GoldenGate instance.
- **Migration:** Once you have installed Oracle GoldenGate, you must migrate to the latest instance. Follow the steps in [Migrating from a Previous Release of Oracle GoldenGate](#) to complete the migration.

Migrating from a Previous Release of Oracle GoldenGate

Following are the steps to migrate from a previous release of Oracle GoldenGate:

1. Bring down your current Oracle GoldenGate instance:

```
TACL> RUN GGSCI
GGSCI> STOP SYNCFILE *
GGSCI> STOP REPLICAT *
GGSCI> STOP EXTRACT *
GGSCI> STOP MANAGER
GGSCI> EXIT
```

2. If you plan to `HOTSWAP` `LOGGER` process(s), then skip this step:

```
GGSCI> STOP LOGGER.
```

3. After you install Oracle GoldenGate, `GG SUNPAK` prompts you:

```
Would you like to Migrate information from another GGS environment (Y/N): Y
```

4. Enter your previous Oracle GoldenGate volume and subvolume:

Enter old OGG vol.subvol or X to quit: \$data01.tssoj06n

PID: \$Y2VX \THOR.\$SYSTEM.SYS21.FUP
STOPPED: \$Y2VX
CPU time: 0:00:00.004

$DATA03 TSSOJ06N 8>
$DATA03 TSSOJ06N 8>

```

5. If you have a running Logger process, then you are asked if you want to `HOTSWAP` the Logger object.

```

Logger was running during migrate
Do you want to HOWSWAP logger to the new ENV (Y?N)

```

If you answer yes, then the program will change to the Logger object running in the migration process installation location.

Caution:

You must coordinate `HOTSWAP` with any manual steps to upgrade `BASELIB` as part of the upgrade process.

6. DUP any Obey files you use in your current Oracle GoldenGate environment. This step is particularly critical if your Obey files contain table define names or startup/shutdown commands.
7. There are no changes to the supplied header files that require a recompile. However, with the removal of the TNS mode objects, User Exit not compiled Native must be recompiled as such. Then use `NLDEXIT` to link or use the new DLL method described in the reference manual.
8. Point your applications to the new release of `GGSLIB` for Non Audited Logger change capture.

```
GGSCI> BIND PROGRAMS, CHANGELIB
```

Enter the list of applications you want to bind.

Enter your new `GGSLIB` when prompted.

Enter `GO` to bind your new library to your applications.

```
GGSCI> LINK PROGRAMS, CHANGELIB
```

9. Restart your Oracle GoldenGate components in your new environment.
