

Oracle Access Management Bundle Patch Readme

This document describes Bundle Patch 12c Release (12.2.1.3.190609) for Oracle Access Management.

This document requires a base installation of Oracle Access Management 12c Patch Set 3 (12.2.1.3.0). This supersedes the documentation that accompanies Oracle Access Management 12c Patch Set 3 (12.2.1.3.0), it contains the following sections:

- [Understanding Bundle Patches](#)
- [Bundle Patch Requirements](#)
- [Applying the Bundle Patch](#)
- [Removing the Bundle Patch](#)
- [Resolved Issues](#)
- [Known Issues and Workarounds](#)

Understanding Bundle Patches

Describes Bundle Patches and explains differences between Bundle Patches, interim patches, and patch sets.

- [Bundle Patch](#)
- [Patch Set](#)

Bundle Patch

A bundle patch is an official Oracle patch for Oracle Fusion Middleware components on baseline platforms. In a bundle patch release string, the fifth digit indicated the bundle patch number. Effective November 2015, the version numbering format has changed. The new format replaces the numeric fifth digit of the bundle version with a release date in the form "YYMMDD" where:

- YY is the last 2 digits of the year

- MM is the numeric month (2 digits)
- DD is the numeric day of the month (2 digits)

Each bundle patch includes the libraries and files that have been rebuilt to implement one or more fixes. All of the fixes in the bundle patch have been tested and are certified to work with one another.

Each Bundle Patch is cumulative: the latest Bundle Patch includes all fixes in earlier Bundle Patches for the same release and platform. Fixes delivered in Bundle Patches are rolled into the next release.

Patch Set

A patch set is a mechanism for delivering fully tested and integrated product fixes that can be applied to installed components of the same release. Patch sets include all of the fixes available in previous Bundle Patches for the release. A patch set can also include new functionality.

Each patch set includes the libraries and files that have been rebuilt to implement bug fixes (and new functions, if any). However, a patch set might not be a complete software distribution and might not include packages for every component on every platform.

All of the fixes in the patch set have been tested and are certified to work with one another on the specified platforms.

Bundle Patch Requirements

To remain in an Oracle-supported state, apply the Bundle Patch to all installed components for which packages are provided. Oracle recommends that you:

1. Apply the latest Bundle Patch to all installed components in the bundle.
2. Keep OAM Server components at the same (or higher) Bundle Patch level as installed WebGates of the same release.

Applying the Bundle Patch

The following topics help you, as you prepare and install the Bundle Patch files (or as you remove a Bundle Patch should you need to revert to your original installation):

- [Using the Oracle Patch Mechanism \(Opatch\)](#)
- [Applying the OAM Bundle Patch](#)
- [Recovering From a Failed Bundle Patch Application](#)

 **Note:**

Oracle recommends that you always install the latest Bundle Patch.

Using the Oracle Patch Mechanism (Opatch)

The Oracle patch mechanism (Opatch) is a Java-based utility that runs on all supported operating systems. Opatch requires installation of the Oracle Universal Installer.

Note:

Oracle recommends that you have the latest version of Opatch (version 13.9.2.0.0+ or higher) from My Oracle Support. Opatch requires access to a valid Oracle Universal Installer (OUI) Inventory to apply patches.

Patching process uses both unzip and Opatch executables. After sourcing the ORACLE_HOME environment, Oracle recommends that you confirm that both of these exist before patching. Opatch is accessible at: `$ORACLE_HOME/OPatch/opatch`

When Opatch starts, it validates the patch to ensure there are no conflicts with the software already installed in your \$ORACLE_HOME:

- If you find conflicts with a patch already applied to the \$ORACLE_HOME, stop the patch installation and contact Oracle Support Services.
- If you find conflicts with a subset patch already applied to the \$ORACLE_HOME, continue Bundle Patch application. The subset patch is automatically rolled back before installation of the new patch begins. The latest Bundle Patch contains all fixes from the previous Bundle Patch in \$ORACLE_HOME.

This Bundle Patch is not -auto flag enabled. Without the -auto flag, no servers needs to be running. The Machine Name & Listen Address can be blank on a default install.

See Also:

[Oracle Universal Installer and Opatch User's Guide](#)

Perform the steps in the following procedure to prepare your environment and download Opatch:

- Log in to My Oracle Support: <https://support.oracle.com/>
- Download the required Opatch version.
- Use `opatch -help` to check if your Opatch version is earlier than 13.9.2.0.0. If so, download the latest 13.9.2.0.0 version.
- Confirm if the required executables `opatch` and `unzip` are available in your system by running the following commands:

Run `which opatch`— to get path of `opatch`

Run `which unzip`— to get path of `unzip`

Check if the path of executables is in the environment variable "PATH" , if not add the paths to the system PATH.

- Verify the OUI Inventory using the following command:

```
opatch lsinventory
```

Windows 64-bit: `opatch lsinventory -jdk c:\jdk180`

If an error occurs, contact Oracle Support to validate and verify the inventory setup before proceeding. If the `ORACLE_HOME` does not appear, it might be missing from the Central Inventory, or the Central Inventory itself could be missing or corrupted.

- Review information in the next topic [Applying the OAM Bundle Patch](#)

Applying the OAM Bundle Patch

Use information and steps here to apply the Bundle Patch from any platform using Oracle patch (Opatch). While individual command syntax might differ depending on your platform, the overall procedure is platform agnostic.

The files in each Bundle Patch are installed into the destination `$ORACLE_HOME`. This enables you to remove (roll back) the Bundle Patch even if you have deleted the original Bundle Patch files from the temporary directory you created.

Note:

Oracle recommends that you back up the `$ORACLE_HOME` using your preferred method before any patch operation. You can use any method (zip, cp -r, tar, and cpio) to compress the `$ORACLE_HOME`.

Formatting constraints in this document might force some sample text lines to wrap around. These line wraps should be ignored.

To apply the OAM Bundle Patch

Opatch is accessible at `$ORACLE_HOME/OPatch/opatch`. Before beginning the procedure to apply the Bundle Patch be sure to:

- Set `ORACLE_HOME`

For example:

```
export ORACLE_HOME=/opt/oracle/mwhome
```

- Run `export PATH=<<Path of Opatch directory>>:$PATH` to ensure that the Opatch executables appear in the system PATH. For example:

```
export PATH=$Oracle_HOME/OPatch:$PATH
```

1. Download the OAM patch `p29887467_122130_Generic.zip`
2. Unzip the patch zip file into the `PATCH_TOP`.

```
$ unzip -d PATCH_TOP p29887467_122130_Generic.zip
```

 **Note:**

On Windows, the unzip command has a limitation of 256 characters in the path name. If you encounter this, use an alternate ZIP utility such as 7-Zip to unzip the patch.

For example: To unzip using 7-Zip, run the following command.

```
"c:\Program Files\7-Zip\7z.exe" x p29887467_122130_Generic.zip
```

3. Set your current directory to the directory where the patch is located.

```
$ cd PATCH_TOP/29887467
```

4. Log in as the same user who installed the base product and:

- Stop the AdminServer and all OAM Servers to which you will apply this Bundle Patch.

Any application that uses this OAM Server and any OAM-protected servers will not be accessible during this period.

- Back up your \$ORACLE_HOME: MW_HOME.
 - Move the backup directory to another location and record this so you can locate it later, if needed.
5. Run the appropriate Opatch command as an administrator to ensure the required permissions are granted to update the central inventory and apply the patch to your \$ORACLE_HOME. For example:

```
opatch apply
```

Windows 64-bit: `opatch apply -jdk c:\path\to\jdk180`

 **Note:**

Opatch operates on one instance at a time. If you have multiple instances, you must repeat these steps for each instance.

6. Start all Servers (AdminServer and all OAM Servers).

Recovering From a Failed Bundle Patch Application

If the AdminServer does not start successfully, the Bundle Patch application has failed.

To recover from a failed Bundle Patch application

1. Confirm that there are no configuration issues with your patch application.
2. Confirm that you can start the AdminServer successfully.

3. Shut down the AdminServer and roll back the patch as described in [Removing the Bundle Patch](#) then perform patch application again.

Removing the Bundle Patch

If you want to rollback a Bundle Patch after it has been applied, perform the following steps. While individual command syntax might differ depending on your platform, the overall procedure is the same. After the Bundle Patch is removed, the system is restored to the state it was in immediately before patching.

Note:

Removing a Bundle Patch overrides any manual configuration changes that were made after applying the Bundle Patch. These changes must be re-applied manually after removing the patch.

Follow these instructions to remove the Bundle Patch on any system.

To remove a Bundle Patch on any system

1. Perform steps in [Applying the OAM Bundle Patch](#) to set environment variables, verify the inventory, and shut down any services running from the `ORACLE_HOME` or host machine.
2. Change to the directory where the patch was unzipped. For example:
`cd PATCH_TOP/29887467`
3. Back up the `ORACLE_HOME` directory that includes the Bundle Patch and move the backup to another location so you can locate it later.
4. Run `Opatch` to roll back the patch. For example:

```
opatch rollback -id 29887467
```

Note:

To rollback the patch completely, remove the below two entries from `oam-config.xml` file using the `config-utility` tool (Doc : 2310234.1):

- `<Setting Name="PolicyCacheComponent" Type="htf:map"> </Setting>`
- `<Setting Name="PolicyCacheManagementAPI" Type="htf:map"> </Setting>`

5. Start the servers (AdminServer and all OAM Servers) based on the mode you are using.

6. Re-apply the Bundle Patch, if needed, as described in [Applying the Bundle Patch](#).

Resolved Issues

This chapter describes resolved issues in this Bundle Patch.

This Bundle Patch provides the fixes described in the below section:

- [Resolved Issues in 12.2.1.3.190609](#)
- [Resolved Issues in 12.2.1.3.181213](#)
- [Resolved Issues in 12.2.1.3.180904](#)
- [Resolved Issues in 12.2.1.3.180706](#)
- [Resolved Issues in 12.2.1.3.180414](#)
- [Resolved Issues in 12.2.1.3.171121](#)

Resolved Issues in 12.2.1.3.190609

Applying this bundle patch resolves the issues listed in the following table:

Table 1-1 Resolved Issues in 12.2.1.3.190609

Base Bug Number	Description of the Problem
29639271	12C OAUTH - CUSTOM ATTRIBUTES NOT UPDATING IN CLIENT CONFIGURATION

Table 1-1 (Cont.) Resolved Issues in 12.2.1.3.190609

Base Bug Number	Description of the Problem
29715441	OAM: USERINFO REST CALL DOES NOT RETURN CORRECT VALUE OF TELEPHONENUMBER FOR LDAP PROVIDER OUD
	<div style="border-left: 2px solid #0070C0; border-right: 2px solid #0070C0; border-bottom: 2px solid #0070C0; padding: 10px; background-color: #E6F2FF;"> <p> Note:</p> <p>You can retrieve the telephone number by adding the following attribute to the oam-config.xml file under the configured OUD user identity store: <Setting Name="TELEPHONE_NUMBER_ATTRIBUTE" Type="xsd:string">telephone-number</Setting></p> </div>
29777410	"SYSTEM ERROR PAGE" CODE IS DISPLAYED DIRECTLY WHEN DCC TUNNELED RESOURCE WITH PASSWORD POLICY IS ACCESSED
29769613	OAM : REST API TO FETCH SESSION DETAILS USING UPDATETIME DOES NOT RETURN CORRECT VALUES
29717855	SAML LOGOUT NOT WORKING IF OLD FED SESSIONS EXIST IN DB
29482228	NEW ACCESS TOKEN FROM REFRESH TOKEN DOES NOT CONTAIN UPDATED USER ATTR VALUE
29425002	LOGIN ISSUE FOR USERS WITH LARGE NUMBER OF GROUP MEMBERSHIPS
29423470	STANDARD OUD PHONE ATTRIBUTE CANNOT BE RETRIEVED IN USERINFO
29305502	LONG NAME IN X509PLUGIN FAILED TO AUTHENTICATE
29244150	SSO BETWEEN TUNNELED DCC AND PLAIN DCC IS BROKEN WHEN APPLIED OAM BP'S 14,15 OR 16
29240849	NEED TO LOG ADDITIONAL AUTHENTICATION FAILURE FOR AUDIT LOG FROM CUSTOM PLUGIN

Table 1-1 (Cont.) Resolved Issues in 12.2.1.3.190609

Base Bug Number	Description of the Problem
29233897	DIAG: NEED DETAILED DEBUG OUTPUT FOR NPE ON OAUTH CODE
29120924	AMRUNTIMEEXCEPTION:INVALID SETTINGS FOR FORWARD WHEN INTEGRATING DUO PLUGIN
29053141	OAM_REQ_ID COOKIE IS NOT INVALIDATED RESULTING ERROR - BAD REQUEST
29041992	OFUSIONMIDDLEWAREAUDIT->COMMONREPORTS->ACCOUNTMANAGEMENT->DASHBOARD THROW ERROR
29011613	12C:RSA:GETTING SYSTEM ERROR (LOADER CONSTRAINT VOILATION ERR)WHEN ACCESSING RSA RESOURCE
28861117	JAVASCRIPT ERROR THAT DISPLAYMSG() IS UNDEFINED
28855754	12.2.1.3 OUD PASSWORD POLICY ATTRIBUTE RESETPWD SET TO TRUE CAUSES AUTHN FAILURE

 **Note:**

You can allow authentication for Oracle Unified Directory password policy attribute RESETPWD=true by adding the following attribute to the oam-config.xml file under the configured user identity store: <Setting Name="checkPwdPolicyWarning" Type="xsd:boolean">false</Setting>

28833416	PASSWORD POLICY: UNABLE TO SET PASSWORD DICTIONARY FILE
----------	---

| 27573288        | <p>Fix for Bug 27573288</p> <p><b>Note:</b> This bug fix introduces changes to the following password policy features:</p> <ul style="list-style-type: none"> <li>• Password expiry warning period— This feature is supported only with OAM and OIM integrated scenarios. If there is no OIM integration then OAM authentication will fail during the warning period and the customer has to configure custom authentication plugins to show password expiry warning page and the required handling for the authentication flow.</li> </ul> <p>The limitation on authentication failure during the password expiry warning period is because of the difference in behavior of different LDAP servers(OID, OUD) when a user tries to authenticate with wrong password during expiry warning period.</p> <ul style="list-style-type: none"> <li>• Password grace login attempts - This configuration will work only if "Password expiry warning period " is not configured. In the first scenario, grace login is not required because user will be forced to change the password during the warning period or after expiry.</li> </ul> |

## Known Issues and Workarounds

Known issues and their workarounds in Oracle Access Management Release 12.2.1.3 are described in the Oracle Access Management chapter of the *Release Notes for Oracle Identity Management* document. You can access the Release Notes document in the Oracle Identity Management Documentation library at the following URL:

<https://docs.oracle.com/middleware/12213/idmsuite/IDMRN/toc.htm>

### Note:

Some known issues listed in the Release Notes for Oracle Identity Management may have been resolved by this Bundle Patch (Oracle Access Management 12.2.1.3.0). Compare the issues listed in [Resolved Issues](#) of this document when reviewing the *Release Notes for Oracle Identity Management*.

|----------------------------|-------------------------------|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 12.2.1.3.190609            | N/A                           | 29940526                 | <p>When you create the identity provider (IdP) or Service Provider (SP) partners using the Oracle Access Management Console, the following error message appears:</p> <p>"An internal error occurred while creating Identity Provider Partner. Check the logs for additional details."</p> <p>There is no impact to functionality, and no user action is needed.</p>                                                                                                                                                                                                                          |
| 12.2.1.3.190609            | N/A                           | N/A                      | <p>WebGate 12c is using the underscore ( _ ) for host and port separator in Authentication cookie names. For example, the OAMAuthnCookie name format OAMAuthnCookie_exam-ple.com:443 is now replaced as OAMAuthnCookie_exam-ple.com_443. This leads to SSO failure between the Detached Credential Collector (DCC) and DCC Tunneled resources as the server continues to use the older cookie name format. To resolve this issue, add UniqueCookieNames=legacy to the to the User-defined parameters of the DCC WebGate profile. This will allow Webgate to use older cookie name format.</p> |
