

Oracle Identity Governance Bundle Patch Readme

This document is intended for users of Oracle Identity Management 12c (12.2.1.3.180413). It contains the following sections:

- [Understanding Bundle Patches](#)
- [Bundle Patch Requirements](#)
- [Prerequisites of Applying the Bundle Patch](#)
- [Applying the Bundle Patch to an Existing Instance](#)
- [Removing the Bundle Patch](#)
- [Applying the Bundle Patch to a New Instance](#)
- [Configuring Oracle Identity Governance-Oracle Access Manager Integration \(Optional\)](#)
- [Changes in Track Request Functionality](#)
- [IP Filter Related Updates](#)
- [Resolved Issues](#)
- [Known Issues and Workarounds](#)
- [Related Documents](#)
- [Documentation Accessibility](#)

Understanding Bundle Patches

This section describes bundle patches and explains differences between bundle patches, patch set exceptions (also known as one-offs), and patch sets.

- [Bundle Patch](#)
- [Patch Set Exception](#)
- [Patch Set](#)

Bundle Patch

A bundle patch is an official Oracle patch for an Oracle product. In a bundle patch release string, the fifth digit indicated the bundle patch number. Effective November 2015, the version numbering format has changed. The new format replaces the numeric fifth digit of the bundle version with a release date in the form "YYMMDD" where:

- YY is the last 2 digits of the year
- MM is the numeric month (2 digits)
- DD is the numeric day of the month (2 digits)

Each bundle patch includes the libraries and files that have been rebuilt to implement one or more fixes. All of the fixes in the bundle patch have been tested and are certified to work with one another. Regression testing has also been performed to ensure backward compatibility with all Oracle Mobile Security Suite components in the bundle patch.

Patch Set Exception

In contrast to a bundle patch, a patch set exception addressed only one issue for a single component. Although each patch set exception was an official Oracle patch, it was not a complete product distribution and did not include packages for every component. A patch set exception included only the libraries and files that had been rebuilt to implement a specific fix for a specific component.

Patch Set

A patch set is a mechanism for delivering fully tested and integrated product fixes. A patch set can include new functionality. Each patch set includes the libraries and files that have been rebuilt to implement bug fixes (and new functions, if any). However, a patch set might not be a complete software distribution and might not include packages for every component on every platform. All of the fixes in a patch set are tested and certified to work with one another on the specified platforms.

Bundle Patch Requirements

You must satisfy the following requirements before applying this bundle patch:

- Confirm you are applying this bundle patch to an Oracle Identity Governance 12.2.1.3.0 installation.

 **Note:**

When installing OPatch, you might find that interim or one off patches have already been installed.

- Download the latest version of OPatch. The OPatch version for this bundle patch is 12.2.1.3.0. However, Oracle recommends using the latest version of OPatch to all customers. To learn more about OPatch and how to download the latest version, refer to the following:

You can access My Oracle Support at <https://support.oracle.com>.

- Verify the OUI Inventory. To apply patches, OPatch requires access to a valid OUI Inventory. To verify the OUI Inventory, ensure that ORACLE_HOME/OPatch appears in your PATH for example:

```
export PATH=ORACLE_HOME/OPatch:$PATH
```

Then run the following command in OPatch inventory

```
opatch lsinventory
```

If the command returns an error or you cannot verify the OUI Inventory, contact Oracle Support. You must confirm the OUI Inventory is valid before applying this bundle patch.

- Confirm the opatch and unzip executables exist and appear in your system PATH, as both are needed to apply this bundle patch. Execute the following commands:

```
which opatch  
which unzip
```

Both executables must appear in the PATH before applying this bundle patch.

- Ensure that there are no pending JMS messages in Oracle Identity Governance server. You can monitor JMS messages with WebLogic console.

Prerequisites of Applying the Bundle Patch

Before applying the bundle patch, perform the following prerequisites:

- This patch process makes changes to Oracle Identity Governance database schema (such as adding/modifying data), Oracle Identity Governance Meta Data Store (MDS) database schema (such as adding/modifying data), domain configuration changes, and other binary changes in the file system under ORACLE_HOME on which Oracle Identity Governance is installed. It is mandatory to create a backup of the following:
 - Oracle Identity Governance, MDS, and Service-Oriented Architecture (SOA) database schemas. For example, the database schema can be DEV_OIM, DEV_MDS schemas used by Oracle Identity Governance. Simple export of the schemas is sufficient.
 - The ORACLE_HOME directory on which Oracle Identity Governance is installed, for example, /u01/Oracle/Middleware.

- Oracle Identity Governance WebLogic Domain location, for example, /u01/Oracle/Middleware/user_projects/domains/IAMGovernanceDomain/.
- The UNIX user applying opatch must have read, write, and execute permissions on both ORACLE_HOME as well as WEBLOGIC_DOMAIN_HOME. You can verify this manually in the file system for DOMAIN_HOME and ORACLE_HOME.
- If you have customized the event handler file metadata/iam-features-configservice/event-definition/EventHandlers.xml in your setup, then perform the following steps to ensure that the upgrade does not override any customization done to this file:
 1. Export the metadata/iam-features-configservice/event-definition/EventHandlers.xml file from MDS, and create a backup of this file.
 2. After upgrading and running all the post install steps, export the new metadata/iam-features-configservice/event-definition/EventHandlers.xml file, merge your customization to this new file, and import it back to MDS.

 **Note:**

For more information on MDS Utilities, see [MDS Utilities and User Modifiable Metadata Files](#).

Applying the Bundle Patch to an Existing Instance

Applying Oracle Identity Governance Release 12.2.1.3.180413 patch is done in the following stages:

 **Note:**

Before performing the steps to apply the bundle patch, create a backup of the database, as stated in [Prerequisites of Applying the Bundle Patch](#) which will help you rollback to the previous release.

- [Stage 1: Patching the Oracle Binaries \(OPatch Stage\)](#)
- [Stage 2: Filling in the patch_oim_wls.profile File](#)
- [Stage 3: Patching the Oracle Identity Governance Managed Servers \(patch_oim_wls Stage\)](#)
- [Understanding the Process Sequence With an Example](#)

Stage 1: Patching the Oracle Binaries (OPatch Stage)

This section describes the process of applying the binary changes by copying files to the ORACLE_HOME directory, on which Oracle Identity Governance is installed. This

step must be executed for each ORACLE_HOME in the installation topology nodes irrespective of whether Oracle Identity Governance server is being run in the node or not.

Perform the following steps to apply the bundle patch to an existing Oracle Identity Governance instance:

1. Stop the Admin Server, all Oracle Identity Governance managed servers, and all SOA managed servers.
2. Create a directory for storing the unzipped bundle patch. This document refers to this directory as PATCH_TOP.
3. Unzip the patch zip file in to the PATCH_TOP directory you created in step 2 by using the following command:

```
unzip -d PATCH_TOP p27861122_122130_Generic.zip
```

 **Note:**

On Windows, the unzip command has a limitation of 256 characters in the path name. If you encounter this issue, use an alternate ZIP utility, for example 7-Zip to unzip the zip file.

Run the below command to unzip the file:

```
"c:\Program Files\7-Zip\7z.exe" x p27861122_122130_Generic.zip
```

4. Move to the directory where the patch is located. For example:

```
cd PATCH_TOP/27861122
```

5. Set the ORACLE_HOME directory in your system. For example:

```
setenv ORACLE_HOME /u01/Oracle/Middleware
```

6. Apply the bundle patch to the ORACLE_HOME using the following command for Oracle Identity Governance:

```
opatch apply
```

 **Note:**

- Ensure the OPatch executables appear in your system PATH.
- If OPatch fails with error code 104, cannot find a valid oraInst.loc file to locate Central Inventory, include the -invPtrLoc argument, as follows:

```
opatch apply -invPtrLoc ORACLE_HOME/oraInst.loc
```

When OPatch starts, it will validate the patch and ensure there are no conflicts with the software already installed in the ORACLE_HOME. OPatch categorizes two types of conflicts:

- Conflicts with a patch already applied to the ORACLE_HOME. In this case, stop the patch installation and contact Oracle Support.
- Conflicts with subset patch already applied to the ORACLE_HOME. In this case, continue the install, as the new patch contains all the fixes from the existing patch in the ORACLE_HOME. The subset patch will automatically be rolled back prior to the installation of the new patch.

 **Note:**

For clustered and multi-node installation of Oracle Identity Governance, this step must be run on all the ORACLE_HOME directories on which Oracle Identity Governance is installed.

Stage 2: Filling in the patch_oim_wls.profile File

Using a text editor, edit the file `patch_oim_wls.profile` located in the directory `ORACLE_HOME/server/bin/` directory and change the values in the file to match your environment. The `patch_oim_wls.profile` file contains sample values.

[Table 1-1](#) lists the information to be entered for the `patch_oim_wls.profile` file. This file is used in next stage of the bundle patch process.

Table 1-1 Parameters of the patch_oim_wls.profile File

Parameters of the patch_oim_wls.profile File		
Parameter	Description	Sample Value
ant_home	Location of the ANT installation. It is usually under MW_HOME.	For Linux: \$MW_HOME/oracle_common/modules/thirdparty/org.apache.ant/1.9.8.0.0/apache-ant-1.9.8/ For Windows: %MW_HOME%\oracle_common\modules\thirdparty\org.apache.ant\1.9.8.0.0\apache-ant-1.9.8\
java_home	Location of the JDK/JRE installation that is being used to run the Oracle Identity Governance domain.	For Linux: \$MW_HOME/oracle_common/jdk/ For Windows: %MW_HOME%\oracle_common\jdk\
mw_home	Location of the middleware home location on which Oracle Identity Governance is installed.	For Linux: /u01/Oracle/Middleware For Windows: C:\Oracle\MW_HOME\
oim_oracle_home	Location of the Oracle Identity Governance installation.	For Linux: \$MW_HOME/idm For Windows: %MW_HOME%\idm

Table 1-1 (Cont.) Parameters of the patch_oim_wls.profile File

Parameter	Description	Sample Value
oim_username	Oracle Identity Governance username.	System administrator username
oim_password	Oracle Identity Governance password. This is optional. If this is commented out, then you will be prompted for the password when the script is executed.	N/A
oim_serverurl	URL to navigate to Oracle Identity Governance.	t3://oimhost.example.com:14000
soa_home	Location of the SOA installation.	For Linux: \$MW_HOME/soa For Windows: %MW_HOME%\soa
weblogic.server.dir	Directory on which WebLogic server is installed.	For Linux: \$MW_HOME/wlserver For Windows: %MW_HOME%\wlserver
weblogic_user	Domain administrator user name. Normally it is weblogic, but could be different as well.	weblogic
weblogic_password	Domain admin user's password. If this line is commented out, then password will be prompted.	N/A
soa_host	Listen address of the SOA Managed Server, or the hostname on which the SOA Managed Server is listening. Note: If the SOA Managed Server is configured to use a virtual IP address, then the virtual host name must be supplied.	oimhost.example.com
soa_port	Listen port of the SOA Managed Server, or SOA Managed Server port number.	8001 Only Non-SSL Listen port must be provided.
operationsDB.user	Oracle Identity Governance database schema user.	DEV_OIM
OIM.DBPassword	Oracle Identity Governance database schema password. If this line is commented out, then the password will be prompted when the script is executed.	N/A
operationsDB.host	Host name of the Oracle Identity Governance database.	oimdbhost.example.com

Table 1-1 (Cont.) Parameters of the patch_oim_wls.profile File

Parameter	Description	Sample Value
operationsDB.serviceName	Database service name of the Oracle Identity Governance schema/database. This is not the hostname and it can be a different value as well.	oimdb.example.com
operationsDB.port	Database listener port number for the Oracle Identity Governance database.	1521
mdsDB.user	MDS schema user	DEV_MDS
mdsDB.password	MDS schema password. If this line is commented out, then password will be prompted.	N/A
mdsDB.host	MDS database host name	oimdbhost.example.com
mdsDB.port	MDS database/Listen port	1521
mdsDB.serviceName	MDS database service name	oimdb.example.com
wls_serverurl	URL to navigate to WLS Console	t3://wlshost.example.com:7001

 **Note:**

Updated the parameter value as per the setup used and then execute the `patch_oim_wls.sh` file.

Stage 3: Patching the Oracle Identity Governance Managed Servers (patch_oim_wls Stage)

Patching the Oracle Identity Governance managed servers is the process of copying the staged files in the previous steps (stage 1) to the correct locations, and running SQL scripts and importing event handlers and deploying SOA composite. For making MBean calls, the script automatically starts the Oracle Identity Governance Managed Server and SOA Managed Server specified in the `patch_oim_wls.profile` file.

This step is performed by running `patch_oim_wls.sh` (on UNIX) and `patch_oim_wls.bat` (on Microsoft Windows) script by using the inputs provided in the `patch_oim_wls.profile` file. As prerequisites, the WebLogic Admin Server, SOA Managed Servers, and Oracle Identity Governance Managed Server must be running.

To patch Oracle Identity Governance Managed Servers on WebLogic:

1. Make sure that the WebLogic Admin Server, SOA Managed Servers, and Oracle Identity Governance Managed Server are running.
2. Set the following environment variables:

For LINUX or Solaris:

```
setenv PATH $JAVA_HOME/bin:$PATH
```

For Microsoft Windows:

```
set JAVA_HOME=VALUE_OF_JAVA_HOME  
set ANT_HOME=\PATH_TO_ANT_DIRECTORY\ant  
set ORACLE_HOME=%MW_HOME%\idm
```

 **Note:**

Make sure to set the reference to JDK binaries in your PATH before running the patch_oim_wls.sh (on UNIX) or patch_oim_wls.bat (on Microsoft Windows) script. This JAVA_HOME must be of the same version that is being used to run the WebLogic servers. The JAVA_HOME version from /usr/bin/ or the default is usually old and must be avoided. You can verify the version by running the following command:

```
java -version
```

3. Execute patch_oim_wls.sh (on UNIX) or patch_oim_wls.bat (on Microsoft Windows) to apply the configuration changes to the Oracle Identity Governance server. On Linux systems, you must run the script in a shell environment using the following command:

```
sh patch_oim_wls.sh
```

 **Note:**

For EDG implementations, this script must be run against the mserver domain directory rather than the server domain directory.

4. Delete the following directory in domain home:
IAMGovernanceDomain/servers/oim_server1/tmp/_WL_user/
oracle.iam.console.identity.self-service.ear_V2.0
Here, oim_server1 is the weblogic managed server used for OIG.
5. To verify that the patch_oim_wls script has completed successfully, check the ORACLE_HOME/idm/server/bin/patch_oim_wls.log file.

 **Note:**

- On running the patch_oim_wls script, the \$DOMAIN_HOME/servers/MANAGED_SERVER/security/boot.properties file might be deleted. If you use a script to start the Managed Server and use the boot.properties file to eliminate the need of entering the password in the script, then create a new boot.properties file.

In an EDG environment, the boot.properties file is in MSERVER_HOME/servers/MANAGED_SERVER/security.

- Ignore the following exception traces in the patch_oim_wls.log file:

```
[java] Aug 11, 2015 3:45:28 AM oracle.jdbc.driver.OracleDriver
registerMBeans
    [java] WARNING: Error while registering Oracle JDBC
Diagnosability MBean.
    [java] java.security.AccessControlException: access denied
(javax.management.MBeanTrustPermission register)
    [java] at
java.security.AccessControlContext.checkPermission(AccessControlContext
.java:374)
```

6. Stop and start WebLogic Admin Server, SOA Servers, and Oracle Identity Governance Servers.
 - Shutting down Oracle Identity Governance server might take a long time if it is done with force=false option. It is recommended that you force shutdown Oracle Identity Governance server.
 - The patch_oim_wls script is re-entrant and can be run again if a failure occurs.

Understanding the Process Sequence With an Example

If you have ORACLE_HOME_A and ORACLE_HOME_B, and ORACLE_HOME_A is running WebLogic Admin Server, oim_server1, and soa_server1, and ORACLE_HOME_B is running oim_server2 and soa_server2, then the following is the process sequence to apply the bundle patch to the Oracle Identity Governance instance:

1. Shutdown the Oracle Identity Governance, and ensure that the WebLogic Admin Server and SOA managed servers are running.
2. Run 'Opatch apply' on ORACLE_HOME_A. See [Stage 1: Patching the Oracle Binaries \(OPatch Stage\)](#) for more information.
3. Run 'Opatch apply' on ORACLE_HOME_B. See [Stage 1: Patching the Oracle Binaries \(OPatch Stage\)](#) for more information.
4. Fill-in the patch_oim_wls.profile file and run patch_oim_wls on ORACLE_HOME_A or ORACLE_HOME_B.

See [Stage 2: Filling in the patch_oim_wls.profile File](#) for information on filling in the patch_oim_wls.profile.

See [Stage 3: Patching the Oracle Identity Governance Managed Servers \(patch_oim_wls Stage\)](#) for information about running patch_oim_wls.

5. Restart the managed servers on all the nodes.

Removing the Bundle Patch

If you must remove the bundle patch after it is applied, then perform the following steps:

Note:

For clustered installations, perform steps 1 through 3 on all nodes in the cluster.

1. Perform the same verification steps and requirement checks that you made before applying the bundle patch. For example, backup the XML files and import them to a different location, verify the OUI Inventory and stop all services running from the ORACLE_HOME.
2. Move to the directory where the bundle patch was unzipped. For example:

```
cd PATCH_TOP/27861122
```
3. Run OPatch as follows to remove the bundle patch:

```
opatch rollback -id 27861122
```
4. Restore ORACLE_HOME, the WebLogic domain home from the backup created before applying the patch.
5. Restore the Oracle Identity Governance database using the backup you created in Step 1 of [Applying the Bundle Patch to an Existing Instance](#).

Applying the Bundle Patch to a New Instance

Perform the following steps to apply the bundle patch to a new instance:

- [Installing a New Oracle Identity Governance Instance with Bundle Patch 12.2.1.3.180413](#)
- [Postinstallation Configuration](#)
- [Updating Oracle Identity Governance Web Applications](#)

Installing a New Oracle Identity Governance Instance with Bundle Patch 12.2.1.3.180413

Perform the following steps to apply the bundle patch to a new Oracle Identity Governance instance. You can perform the same steps for clustered deployments.

 **Note:**

For clustered deployments, perform the steps provided in this section on each node in the cluster.

1. Install Oracle WebLogic Server. See *Installing and Configuring Oracle Identity and Access Management* at the following URL:
<https://docs.oracle.com/middleware/12213/idmsuite/INOAM/toc.htm>
2. Create the Oracle Identity Governance database schema. See *Installing and Configuring Oracle Identity and Access Management*.
3. Install SOA and Oracle Identity Governance. See *Installing and Configuring Oracle Identity and Access Management*.
4. Apply patch using Opatch, as described in [Stage 1: Patching the Oracle Binaries \(OPatch Stage\)](#).

 **Note:**

If you are creating a new environment, then it is recommended that this step is performed before creating or extending the domain with Oracle Identity Governance.

5. Create domain by launching configuration wizard as specified in the *Installing and Configuring Oracle Identity and Access Management*.
6. Start the WebLogic Admin Server and SOA Server.

Before starting the WebLogic Admin Server and SOA Server on Microsoft Windows, edit the startWeblogic.cmd file, and replace:

```
call "%COMMON_ORACLE_HOME%\bin\wlst.cmd"  
%COMMON_ORACLE_HOME%\tools\configureSecurityStore.py -d  
%DOMAIN_HOME% -m validate
```

With the following:

```
call "FULL_PATH_TO_WLST_SCRIPT\wlst.cmd"  
%COMMON_ORACLE_HOME%\tools\configureSecurityStore.py -d  
%DOMAIN_HOME% -m validate
```

Here, an example for *FULL_PATH_TO_WLST_SCRIPT* can be *MW_HOME\oracle_common\common\bin*.

7. Use Oracle Universal Installer to configure Oracle Identity Governance by running config.sh.
8. Stop and restart the WebLogic Admin Server and SOA Server.

9. Fill in the `patch_oim_wls.profile` file by referring to [Stage 2: Filling in the patch_oim_wls.profile File](#).
10. Run `patch_oim_wls.sh` (on UNIX) and `patch_oim_wls.bat` (on Microsoft Windows) to complete patching the domain. This step must be run on the `ORACLE_HOME` directory of the Oracle Identity Governance Managed Server. For more information, see [Stage 3: Patching the Oracle Identity Governance Managed Servers \(patch_oim_wls Stage\)](#).

 **Note:**

Before running the `patch_oim_wls` script, make sure that WebLogic Admin server and SOA servers are in running state.

11. Stop and restart the WebLogic Admin Server, SOA Server, and Oracle Identity Governance server.

Postinstallation Configuration

After installing a new Oracle Identity Governance instance with Bundle Patch 12.2.1.3.180413, perform the following post installation configuration steps:

- In Oracle Identity Governance deployment that is integrated with Oracle Access Manager (OAM), during user password change, the password change confirmation popup message is not displayed.

If you want to display this popup so that it is consistent with rest of the UI, then add a new system property with `OIM.PasswordRedirectEnabled` as the keyword by using the System Management, System Properties section of the Advanced Administration Console, and set its value to `FALSE`.

If this property is not present, then the value is defaulted to `TRUE`. If the value is `TRUE`, then the user is redirected to the Tasks page after the change password operation.

- Perform the following steps to seed the event handler for Application Onboarding:
 1. Go to, `MW_HOME/idm/server/apps/oim.ear/APP-INF/lib/`.
 2. Locate `BootStrapListener.jar`. Copy the `BootStrapListener.jar` file to a temporary folder, for example `temp_AoB`. Extract the jar files and locate `aob_adapters.xml` file in the `BootStrapListener.jar/scripts/` folder.

 **Note:**

The jar file can be extracted using compression tool such as Zip, 7-Zip or by using jar command `jar -xvf .`

3. Copy the `aob_adapters.xml` file to a local folder.

4. Using the Import option in Identity System Administration interface, import the `aob_adapters.xml` file into Oracle Identity Governance.

For detailed steps for importing objects into Oracle Identity Governance, see [Importing Deployments](#) in *Administering Oracle Identity Governance*.

5. Remove the temporary folder `temp_AoB`.

Updating Oracle Identity Governance Web Applications

The procedure described in this section is applicable only when installing bundle patches for Oracle Identity Governance and not for installing patch set updates.

For updating your web applications on Oracle WebLogic Server:

1. Stop Oracle Identity Governance Managed Server.
2. Login to WebLogic Administrative Console.
3. Click **Lock & Edit**.
4. Go to **Deployments**.
5. Select the **oracle.iam.ui.view** and **oracle.iam.ui.model** app, and click **Update**. Complete the steps of the wizard by clicking **Next**. Do not change anything.
6. Click **Apply Changes**.
7. Start Oracle Identity Governance Managed Server.

Configuring Oracle Identity Governance-Oracle Access Manager Integration (Optional)

This bundle patch release supports integration of Oracle Identity Governance (OIG) and Oracle Access Manager (OAM) using Connectors. For more information see, [Integrating Oracle Identity Governance and Oracle Access Manager Using LDAP Connectors](#) in *Integration Guide for Oracle Identity Management Suite*.

Changes in Track Request Functionality

Track Request functionality will change after this Bundle Patch is applied.

When a user performs a search in Self Service tab, Track Requests page, and in the search result table, applies Show list option as **For Reportees**, all the requests raised by or for the logged in user and user's direct and indirect reportee are displayed.

In the search result table, user has to select a Show list option and click **Search**. Oracle Identity Governance will not trigger a search action until user clicks on **Search**.

IP Filter Related Updates

IP Filter (IPF) related updates are not part of the Oracle Identity Governance bundle patch release. For instructions on how to download and applying the IPF one-off bundle patch, see [My Oracle Support document ID 2383246.1](#).

Resolved Issues

The following section lists the issues resolved in Release 12.2.1.3.180413:

- [Resolved Issues in Release 12.2.1.3.180413](#)
- [Resolved Issues in Release 12.2.1.3.180109](#)

Resolved Issues in Release 12.2.1.3.180413

Applying this bundle patch resolves the issues listed in [Table 1-2](#):

Table 1-2 Resolved Issues in Release 12.2.1.3.180413

Resolved Issues in Release 12.2.1.3.180413	
Bug Number	Description

Known Issues and Workarounds

Known issues and their workarounds in Oracle Identity Governance Release 12.2.1.3 are described in the Oracle Identity Governance chapter of the *Release Notes for Oracle Identity Management* document. You can access the Release Notes document in the Oracle Identity Management Documentation library at the following URL:

<https://docs.oracle.com/middleware/12213/idmsuite/IDMRN/toc.htm>

 **Note:**

Some known issues listed in the Release Notes for Oracle Identity Management may have been resolved by this Bundle Patch (Oracle Identity Governance Release 12.2.1.3.180413). Compare the issues listed in [Resolved Issues](#) of this document when reviewing the *Release Notes for Oracle Identity Management*.

This section describes the issues and workarounds in this BP release of Oracle Identity Governance:

- [LDAP User Create and Update Reconciliation Job Fails in Integrated and Upgraded Environment](#)
- [IT Resource Password is Updated as Null](#)
- [Recommendations for Upgrade](#)
- [Oracle Identity Governance Server URL is Inaccessible After Rollback](#)

LDAP User Create and Update Reconciliation Job Fails in Integrated and Upgraded Environment

Issue

Impacted Releases: 12c Release (12.2.1.3.0)

When Oracle Identity Governance Release 11.1.2.3 deployment is integrated with Oracle Access Management, libOVD, and Oracle Unified Directory, and upgraded to Release 12c (12.2.1.3.0), the LDAP User Create and Update Reconciliation scheduled job run fails with the following error when a new user is created and its status is set to locked in the system:

```
[2017-06-05T23:39:53.833-07:00] [oim_server1] [ERROR] []
[oracle.iam.ldapsync.schedulertasks.user] [tid: OIMQuartzScheduler_Worker-8]
[userId: oiminternal] [ecid: b2fc7981-724e-474c-b009-8a5e2d915d52-000008e9,0]
[APP: oim] [partition-name: DOMAIN] [tenant-name: GLOBAL] An error occurred
while processing the data that is retrieved from LDAP to create a
reconciliation event.[]

```

Workaround

As a workaround to this issue, before running the LDAP User Create and Update Reconciliation scheduled job:

1. Login to My Oracle Support website at:
<https://support.oracle.com>
2. Search and download JDBC patch p26400304_122130_Generic.zip.
3. Apply the JDBC patch.
4. Run the LDAP User Create and Update Reconciliation scheduled job.

IT Resource Password is Updated as Null

Issue

Impacted Releases: 12c Release (12.2.1.3.0)

When Oracle Identity Governance is upgraded from Release 11g (11.1.2.3.0) to Release 12c (12.2.1.3.0), password of IT resources like Directory Server, Email Provider Definition - UMS, and OIA-ITRes are updated in Credential Store (CSF) as Null. This causes LDAP operations associated with these IT resources to fail.

Workaround

After upgrade, bring OIG Server up and immediately reset password for these IT resources types, Directory Server, Email Provider Definition - UMS, and OIA-ITRes.

To reset the IT resources password:

1. Login to Oracle Identity System Administration.
2. Locate the IT Resource for which you want to reset the password.
3. For Directory Server edit the **Admin Password** parameter value and for Email Provider Definition - UMS and OIA-ITRes edit the **Password** parameter value.

For detailed steps on how to search and modify IT Resources parameters, see [Managing IT Resources](#) in *Administering Oracle Identity Governance*.

Recommendations for Upgrade

Few upgrade bugs are resolved in this bundle patch release, 27113693, 27119830, 27145500, and 27168000. See [Resolved Issues in Release 12.2.1.3.180413](#).

Pre-upgrade report will be generated if any of the issue stated in above bugs exists in a Oracle Identity Manager 11gR2PS3 setup prior to upgrading it to Oracle Identity Governance 12.2.1.3.0 version. For automated fix of these upgrade bugs, please apply the Bundle Patch Release 12.2.1.3.180413 binaries on top of Oracle Identity Governance 12.2.1.3.0 binaries and then proceed with Oracle Identity Governance 12.2.1.3.0 upgrade process. Steps for manual fix are present in pre-upgrade reports.

Oracle Identity Governance Server URL is Inaccessible After Rollback

Issue

Impacted Releases: 12c Release (12.2.1.3.0)

When Oracle Identity Governance Bundle Patch is rolled back, the previous version of Oracle Identity Governance is restored. When you try to access the OIG Server URL it is inaccessible as the `/db/oim-config.xml` file is overwritten.

Workaround

Workaround for this problem is to restore the base version of the `/db/oim-config.xml` file. For example, if you want to rollback Oracle Identity Governance Bundle Patch 12.2.1.3.180111, then before rollback, import the Oracle Identity Governance 12.2.1.3.0 base version `/db/oim-config.xml` file from the backup created before applying the Oracle Identity Governance Bundle Patch 12.2.1.3.180111. Then rollback the bundle patch.
