1 Prepare to Install Oracle Clinical
  1.1 Check Installation Documentation ............................................................................................................... 1-1
     1.1.1 My Oracle Support Articles .................................................................................................................. 1-2
     1.1.2 User and Installation Documentation ................................................................................................. 1-2
  1.2 Architecture ................................................................................................................................................. 1-2
  1.3 Network Topology ......................................................................................................................................... 1-4
  1.4 Software Requirements ................................................................................................................................. 1-5
     1.4.1 Database Tier Operating System Requirements .................................................................................... 1-7
  1.5 Supported Configurations with Oracle Data Guard and RAC ....................................................................... 1-7
     1.5.1 Supported Configurations with Oracle Real Application Clusters (RAC) ............................................ 1-8
     1.5.2 Supported Configurations with Oracle Data Guard ............................................................................. 1-9
  1.6 Download the Software ................................................................................................................................ 1-10
     1.6.1 Create Staging Areas ............................................................................................................................... 1-10
     1.6.2 Download the Oracle Clinical 5.2.0.0.x Media Pack .......................................................................... 1-11
     1.6.3 Download Patches from My Oracle Support ......................................................................................... 1-11
     1.6.4 Download Oracle Java Development Kit ............................................................................................. 1-12
     1.6.5 Download the Java Runtime Environment ............................................................................................ 1-12
     1.6.6 Download Adobe Reader ....................................................................................................................... 1-12
     1.6.7 Download JSpell (Optional) .................................................................................................................. 1-13
  1.7 Use the Silent Installer (Optional) .................................................................................................................... 1-13
  1.8 Choose a Character Set ................................................................................................................................... 1-14
  1.9 Apply the Latest Oracle Clinical Patches ........................................................................................................ 1-15
  1.10 Integrating Oracle Clinical with Other Products and Options ..................................................................... 1-15
     1.10.1 Oracle Clinical Remote Data Capture Onsite ....................................................................................... 1-15
     1.10.2 Oracle Thesaurus Management System .............................................................................................. 1-15
     1.10.3 Oracle Life Sciences Data Hub ............................................................................................................ 1-16
     1.10.4 SAS ....................................................................................................................................................... 1-16
     1.10.5 Custom Applications for Oracle Clinical ............................................................................................. 1-16

Part I Database Tier
## 2 Install Oracle Database

2.1 Get the Oracle Database 12.1.0 Installation Guide ................................................................. 2-1
2.2 Download and Extract the Oracle Database 12.1.0 Software .............................................. 2-1
2.3 Performing Prerequisite Tasks for Installing Oracle Database ............................................. 2-1
  2.3.1 Create Owners, Groups, and Mount Points .................................................................... 2-2
  2.3.2 Configure Kernel Resources and Adjust Operating System Environment .................... 2-2
  2.3.3 Test the C Compiler Installation ...................................................................................... 2-2
  2.3.4 Install Latest Operating System Patches ....................................................................... 2-3
2.4 Install Oracle Database 12.1.0 ................................................................................................. 2-3
  2.4.1 Install and Configure Oracle Database .......................................................................... 2-3
  2.4.2 Modify the tnsnames.ora File on the Database Server .................................................. 2-6
  2.4.3 Create the oinstall User Group ..................................................................................... 2-6
  2.4.4 Check Required Tablespaces ....................................................................................... 2-6
  2.4.5 Performance Tuning Step for Pluggable Databases ...................................................... 2-7
2.5 Install Oracle Database 12c: Release 2 (12.1.0.2) Examples ............................................. 2-7
2.6 Install Oracle Critical Patch Update ....................................................................................... 2-7

## 3 Install Oracle Clinical Database Components on UNIX

3.1 Set Up the opapps User Account and oclsascr User Group ................................................... 3-1
  3.1.1 Create the oclsascr User Group for SAS ..................................................................... 3-1
  3.1.2 Create the opapps Account and Add It to Groups ......................................................... 3-2
3.2 Set Permissions ....................................................................................................................... 3-2
  3.2.1 Change Permissions for Running oraenv Script .......................................................... 3-2
  3.2.2 Grant Access to the ORACLE_HOME Directory ........................................................... 3-3
  3.2.3 Set Permissions for the Oracle Inventory Directory ..................................................... 3-3
3.3 Install the Oracle Clinical Database Server ............................................................................ 3-4
  3.3.1 Gather Required Information ...................................................................................... 3-4
  3.3.2 Prepare to Install the Oracle Clinical Database Server Software .................................. 3-4
  3.3.3 Install the Oracle Clinical Database Server Software .................................................. 3-5
  3.3.4 Save the Installation Information ................................................................................. 3-6
  3.3.5 Review the Installation Log Files .................................................................................. 3-6
  3.3.6 Oracle Clinical Database Server Directory Structure for UNIX .................................. 3-6
  3.3.7 Remove Group Privileges from this Session .................................................................. 3-7
3.4 Perform Server Post-Installation Tasks ................................................................................. 3-7
  3.4.1 Complete the Setup of the opapps Account ............................................................... 3-7
  3.4.2 Limit Permissions on the XMLTEMP Folder ............................................................... 3-8
  3.4.3 Review the opa_settings File ..................................................................................... 3-8
  3.4.4 Check for Oracle Clinical Databases on a UNIX Server ............................................. 3-8
3.5 Install Oracle Clinical Database Objects ................................................................................. 3-9
  3.5.1 Customize the Installation ............................................................................................. 3-9
  3.5.2 Check for an ORA-29548 Error ..................................................................................... 3-9
  3.5.3 Gather Required Information ...................................................................................... 3-10
  3.5.4 Start Installing the Oracle Clinical Database ............................................................... 3-11
  3.5.5 Remove Group Privileges from this Session .................................................................. 3-13
  3.5.6 Review the Installation Log Files .................................................................................. 3-13
3.6 Perform Database Post-Installation Tasks ............................................................................... 3-13
  3.6.1 Set the Database Time Zone .......................................................................................... 3-13
4 Install Oracle Clinical Database Components on Windows

4.1 Set Up the opapps User Account and the oclsascr User Group ........................................ 4-1
   4.1.1 Create the oclsascr User Group .............................................................................. 4-1
   4.1.2 Create the opapps Account and Add It to Groups ................................................. 4-2
4.2 Set Up Local Policy Security Options .............................................................................. 4-2
4.3 Install the Oracle Clinical Database Server ...................................................................... 4-2
   4.3.1 Gather Required Information ................................................................................ 4-3
   4.3.2 Install the Oracle Clinical 5.2 Database Server for Windows .................................. 4-3
   4.3.3 Save the Installation Information .......................................................................... 4-4
   4.3.4 Review the Installation Log Files .......................................................................... 4-4
   4.3.5 Oracle Clinical Database Server Directory Structure for Windows ...................... 4-4
4.4 Perform Server Post-Installation Tasks .......................................................................... 4-5
   4.4.1 Limit Permissions on the XMLTEMP Folder .......................................................... 4-5
   4.4.2 Review the opa_settings.bat File ......................................................................... 4-5
4.5 Install Oracle Clinical Database Objects .......................................................................... 4-6
   4.5.1 Customize the Installation .................................................................................... 4-6
   4.5.2 Check for an ORA-29548 Error ............................................................................ 4-6
   4.5.3 Gather Required Information ................................................................................ 4-7
   4.5.4 Start Installing the Oracle Clinical Database ......................................................... 4-8
   4.5.5 Review the Installation Log Files .......................................................................... 4-9
4.6 Perform Database Post-Installation Tasks ........................................................................ 4-9
   4.6.1 Set the Database Time Zone .................................................................................. 4-9
   4.6.2 Pin Database Packages ......................................................................................... 4-10
   4.6.3 Set Up Disconnected Replication (Optional) .......................................................... 4-10
   4.6.4 Consider Implementing Partitioning ...................................................................... 4-12
4.7 Set Up Parameterized Submissions .................................................................................. 4-12
   4.7.1 Create Directories and Enter Values in OCL_STATE Local Reference Codelist ....... 4-12
   4.7.2 Enable Users to Submit PSUB Jobs ...................................................................... 4-12
   4.7.3 Set Up Active Directory ....................................................................................... 4-13
   4.7.4 Start the PSUB Service ......................................................................................... 4-13
   4.7.5 Customize the PSUB Service (Optional) ............................................................... 4-14
   4.7.6 Test the PSUB Installation .................................................................................... 4-14

5 Integrate SAS (Optional)

5.1 Set Up SAS Data Extract ............................................................................................... 5-1
5.1.1 Give Users Access to the opapps Account .......................................................... 5-1
5.1.2 Add the opapps Account to the oclsascr User Group .................................... 5-1
5.1.3 Give opapps Access to the Directory Specified in the RXC_SAS_VIEW Environment Variable 5-2
5.1.4 Set Up SAS User Authentication and Set OCL_STATE Reference Codelist Values 5-2
5.2 Install SAS on a UNIX Computer ................................................................. 5-2
5.2.1 Modify SAS 9.4 and opa_settings on UNIX .................................................. 5-2
5.2.2 Install SAS on the Same UNIX Computer as Oracle Clinical .......................... 5-3
5.2.3 Install SAS on a Different UNIX Computer from Oracle Clinical .................. 5-4
5.3 Install SAS on a Windows Computer .............................................................. 5-8
5.3.1 Modify the oapsettings.bat file ................................................................... 5-8
5.3.2 Install SAS on the Same Windows Computer as Oracle Clinical ................. 5-8
5.3.3 Install SAS on a Different Windows Computer from Oracle Clinical ............ 5-10

Part II Application Tier

6 Install and Configure the Oracle Application Tier

6.1 Before You Start................................................................................................. 6-1
6.1.1 Identify a Single Account to Perform All Application Tier Installation Tasks .... 6-1
6.1.2 Get a CA Certificate for HTTPS .................................................................. 6-2
6.1.3 Shared Directory ......................................................................................... 6-2
6.1.4 Permanent IP Address .............................................................................. 6-2
6.2 Gather Required Information .......................................................................... 6-2
6.3 Install Adobe Reader ...................................................................................... 6-3
6.4 Install Oracle Java Development Kit ............................................................ 6-4
6.5 Install Oracle WebLogic Server 12.2.1.2 ....................................................... 6-4
6.6 Install the Oracle Fusion Middleware Infrastructure Software ...................... 6-5
6.7 Install the Oracle Forms and Reports Servers .............................................. 6-6
6.8 Create the Repository Creation Utility ......................................................... 6-6
6.9 Configure the FRDomain ............................................................................. 6-7
6.10 Enable SSL Between a Browser and Oracle HTTP Server ............................ 6-8
6.10.1 Enable SSL Between a Browser and Oracle HTTP Server Using a Certificate Authority 6-8
6.10.2 Enable SSL Between a Browser and Oracle HTTP Server With Self Signing .... 6-10
6.11 Apply Patches on the Application Server .................................................. 6-11
6.12 Modify the tnsnames.ora File on the Application Server ............................ 6-12
6.13 Configure Firewall on the Application Tier ............................................... 6-12
6.14 Test Connectivity to Databases for Forms and Reports Servers ................ 6-12
6.14.1 Test the Connection from the Application Servers to the Database ............. 6-12
6.14.2 Troubleshoot Network Connection Issues ............................................. 6-12
6.15 Restart the Computer ............................................................................... 6-13

7 Install the Oracle Clinical Front End

7.1 Gather Required Information ...................................................................... 7-1
7.2 Restart Computer and Start All Servers and Services .................................. 7-3
7.3 Install the Oracle Clinical Front End Components ....................................... 7-4
7.3.1 Review the Installation Log File ................................................................ 7-4
8 Install the Oracle Clinical Reports Server

8.1 Gather Required Information ................................................................. 8-1
8.2 Restart the Computer ........................................................................... 8-2
8.3 Start the WebLogic FRDomain Admin Server ..................................... 8-2
8.4 Install the Oracle Clinical Reports Server .......................................... 8-2
8.4.1 Review the Installation Log File ....................................................... 8-3
8.5 Apply Oracle Reports Developer Patch 22334822 ................................................................. 8-3
8.6 Restart the Computer .............................................................................................................. 8-4
8.7 Set Up Reports Server and Forms Server for Access and File Viewing ......................... 8-4
8.7.1 Create the Reports Server Root Directory ................................................................. 8-4
8.7.2 Share Each Reports Server Root Directory ............................................................... 8-4
8.7.3 Provide Oracle Clinical and RDC Users Access to the Root Directory ................. 8-5
8.7.4 Configure the Reports Server and Forms Server for DCI Form Generation .............. 8-5
8.7.5 Configure the Reports Server to Send Output to a Printer ........................................ 8-6
8.8 Add the Reports Server to the Database Reference Codelist ............................................ 8-6
8.9 Test the Reports Server Installation .................................................................................. 8-7
8.10 Set Up Automatic Startup of Services ............................................................................. 8-8

Part III Client Tier

9 Set Up Clients
9.1 Configure Personal Firewall ............................................................................................. 9-1
9.2 About Using Safari on an iPad ....................................................................................... 9-1
9.3 Set Internet Options for Microsoft Internet Explorer .................................................. 9-1
9.3.1 Set Up for Proxy Usage on Fully Qualified Application Tier Names ....................... 9-1
9.3.2 Allow More Connections .......................................................................................... 9-2
9.3.3 Turn Off Compatibility View in Internet Explorer .................................................. 9-2
9.4 Download Required Applications .................................................................................. 9-3
9.4.1 Download the Java Runtime Environment .............................................................. 9-3
9.4.2 Download the Oracle Clinical PDF Plug-in .............................................................. 9-3
9.4.3 Download Adobe Reader .......................................................................................... 9-4
9.5 Map Network Drive for Image Browsing (Optional) ......................................................... 9-4
9.6 Enable Report Generation from the Command Line (Optional) .................................. 9-4
9.7 How to Log In .................................................................................................................. 9-5
Audience

The audience for this installation guide is database administrators (DBAs) and system administrators. Installing Oracle Clinical requires the skills listed below. If you want assistance with your installation, engage Oracle Consulting.

Database Administrators
Installing Oracle Clinical requires a level of knowledge equivalent to having mastered the material in the Oracle Architecture and Administration course for DBAs. You must be able to read and edit SQL*Plus scripts, run SQL scripts, and review logs for Oracle errors. For ongoing administration, additional training as a DBA is essential.

System Administrators
Installing and maintaining an Oracle Clinical network requires expertise in the following skill areas:

- UNIX operating systems
  - Creating and managing user accounts and groups
  - Installing Oracle database software and patches
  - Identifying space on a file system for Oracle database tablespaces
  - Setting and using environment variables
- Microsoft Windows operating systems
  - Creating and managing user accounts and groups
  - Installing Oracle software
  - Managing settings through the Control Panel and Administrative Tools
  - Managing network printers
  - Creating services

User Documentation
The latest product documentation for Oracle Clinical and Oracle Clinical Remote Data Capture Onsite is available on the Oracle Help Center at

http://docs.oracle.com/health-sciences/oc-rdc-52/index.html
Documentation Accessibility

For information about Oracle’s commitment to accessibility, visit the Oracle Accessibility Program website at

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit
http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit
http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.
Prepare to Install Oracle Clinical

This chapter includes:

- Check Installation Documentation
- Architecture
- Network Topology
- Software Requirements
- Supported Configurations with Oracle Data Guard and RAC
- Download the Software
- Use the Silent Installer (Optional)
- Choose a Character Set
- Apply the Latest Oracle Clinical Patches
- Integrating Oracle Clinical with Other Products and Options

**Note:** During installation you see references to OLSA and OPA in the software (such as in directory names, file names, and screen text). They stand for earlier organization names Oracle Life Sciences Applications (OLSA) and Oracle Pharmaceutical Applications (OPA). Oracle Clinical and Oracle Clinical Remote Data Capture (RDC) are now part of the Oracle Health Sciences Global Business Unit (HSGBU).

**Note:** RDC and Oracle Clinical Licenses The installation of Oracle Clinical automatically includes the installation of Oracle Clinical Remote Data Capture Onsite (RDC). However, Oracle Clinical licenses do not cover entering data at remote sites. Separate Remote Data Capture Onsite licenses are required for remote site use. Your Oracle Clinical license includes a Restricted Use license for Remote Data Capture that permits the licensed Oracle Clinical user population to use Remote Data Capture at the sponsor’s or CRO’s location, but not at the clinical site.

### 1.1 Check Installation Documentation

Check these additional resources.
1.1.1 My Oracle Support Articles

Visit the My Oracle Support website at https://support.oracle.com for the most up-to-date installation information, including:

- Oracle Clinical 5.2 Release Notes (ID 2221824.1)
- OLSA Known Installation and Configuration Issues (ID 1572864.1)
- Oracle Health Sciences (Life Sciences/Pharmaceutical/Healthcare) Supported Technology Stacks (Article ID 180430.1)
- Oracle Clinical Summary of Patches Available (ID 121863.1)
- Oracle Clinical/RDC Product Information Center (ID 1331795.1): Check here for new notes and White Papers, including the performance White Paper and the Installation Verification Test, which are not available at the time of publication of this document.

1.1.2 User and Installation Documentation

The most current Oracle Clinical and Oracle Clinical Remote Data Capture (RDC) Onsite user documentation, including this guide and the Oracle Clinical, Oracle Clinical Remote Data Capture, and Oracle Thesaurus Management System Security Configuration Guide, is located at:

http://docs.oracle.com/health-sciences/oc-rdc-52/index.html

1.2 Architecture

The architecture for Oracle Clinical consists of three tiers: the database tier, the application tier, and the client tier.

Figure 1–1 illustrates the architecture and technology stack for Oracle Clinical.

Figure 1–1 Oracle Clinical and RDC Onsite Logical Architecture
The **database tier** in an Oracle Clinical environment includes Oracle Database, the Oracle Clinical database server, one or more Oracle Clinical databases, and the Oracle Clinical parameterized submission (PSUB) process, which is the batch processor for Oracle Clinical. Optionally, the database tier can include SAS. The database tier can run on UNIX or Windows. (However, a Real Application Clusters (RAC) installation is supported only on UNIX.)

The **application tier** must be installed on Windows. It has three parts:

- **Oracle Application Server**, which includes Oracle Forms Server and servlet, Oracle Reports Server and servlet, Oracle HTTP Server, and Oracle JVM (Java Virtual Machine) and supports the following Oracle Clinical components:
  - **Oracle Clinical Forms Server** — performs all forms processing, communicates the display changes to the client, and calls forms to query, update, select, and delete data from the database for the Oracle Forms-based applications: Oracle Clinical and the RDC Administration module.
  - **Oracle Clinical Reports Server** — runs most batch reports, schedules all jobs, including PSUB jobs, and runs job sets. In addition, it creates PDF output for Patient Data Reports, Blank Casebook Reports, and Audit Reports.
  - **Oracle Clinical Graphic Layout Editor** — supports creating CRF layouts from Oracle Clinical DCIs.
  - **Oracle Clinical Servlet** — supports file viewing
  - **DLLs** — used for data entry in both Oracle Clinical and RDC Onsite

- **Oracle WebLogic Server** and **Oracle Application Developer’s Runtime, also known as Oracle Application Developer’s Framework (ADF)** — support Oracle Clinical Remote Data Capture Onsite.

- **Oracle Business Intelligence (BI) Publisher** — runs the Patient Data Report and the Blank Casebook Report.

The **client tier** communicates users' input to the application tier. It must run on Windows through a browser, using native Oracle JVM. Both the RDC Onsite data entry Java script and the Oracle Clinical PDF Plug-In, which is required for graphic layout design, run on the client tier. See Section 7.5, "Make the Oracle Clinical PDF Plug-in Available to Users" for more information.

The Oracle HTTP Server (OHS) handles the communication between clients and the application tier.
1.3 Network Topology

Figure 1–2 Network Topology

Figure 1–2 shows how the Oracle Clinical and RDC Onsite components and technology stack are related and provides an example of how the product can be installed. The left side of the Application Tier—APPHOST1—is a standard installation, while the whole—with APPHOST2—shows a multi-node middle tier installation using Oracle Clusterware.
In the **client tier**, end users’ browsers communicate via HTTPS with the Oracle HTTP Server (OHS), which is located inside a firewall. When users log in, OHS detects the product they logged in to and consults formsweb.cfg to connect them to the appropriate application tier service.

The **application tier** comprises Oracle Application Server and Oracle WebLogic Server. The integrated tier has two domains:

- **FRDomain** includes the Oracle Forms runtime service and Forms Server, and the Oracle Reports Server and engine. It also includes the WebLogic Server Admin Server and Oracle Enterprise Manager.

  The Oracle Application Server domain must be named FRDomain and must use port number 7001.

- **OPADomain** includes the WebLogic Server Administration Console, WebLogic Server Java, and Managed Server of OPADomain, which are required to run RDC Onsite and, if you have Oracle Thesaurus Management System (TMS) installed, the TMS Browser and TMS reports. It also contains the database connections. Note that when you install the Oracle Enterprise Manager in the FRDomain, it serves for monitoring the OPADomain as well.

  The Oracle Clinical Installer automatically creates the OPADomain. OPADomain must use port number 7101.

You can distribute the application tier over multiple nodes in a network using Oracle Clusterware. The Admin Server is required only on the primary node.

In Oracle Clinical 5.2, there are two node managers: one for FRDomain and the other for OPADomain. Before installing Oracle Clinical, you must start the FRDomain Node Manager; see **Section 7.10.1, "Start the FRDomain Node Manager"**. The Installer will configure the OPADomain Node Manager.

The **database tier** includes Oracle Database with Oracle Clinical and (optionally) Oracle Thesaurus Management System. Remote Data Capture Onsite uses the Oracle Clinical database. The diagram shows a distributed installation using Oracle Real Application Clusters (RAC); this is one example of how it can be installed.

### 1.4 Software Requirements

- **Table 1–1, "Oracle Clinical Database Tier Technology Stack"**
- **Table 1–2, "Oracle Clinical and RDC Onsite Application Tier Technology Stack"**
- **Table 1–3, "Oracle Clinical and RDC Onsite Client Tier Technology Stack"**

For technology stack updates, see (ID 180430.1) on My Oracle Support. *Oracle Health Sciences (Life Sciences/ Pharmaceutical/ Healthcare) Supported Technology Stacks* (Article ID 180430.1).

1.4.1 Database Tier Operating System Requirements

To verify that your system fits the requirements listed in Table 1–1, "Oracle Clinical Database Tier Technology Stack" do the following in UNIX or Windows:

**UNIX** To verify UNIX operating system details, enter the following command:
```
uname -a
```
In addition, to verify the update version for Linux, enter the following command:
```
cat /etc/issue
```

**Windows** To verify Windows operating system details, navigate to the Control Panel, then System and Security, then System.

1.5 Supported Configurations with Oracle Data Guard and RAC

Oracle Clinical 5.2 supports a distributed environment over a network or within an Exadata machine without using Oracle Clinical replication.

This section contains:
- Supported Configurations with Oracle Real Application Clusters (RAC)
- Supported Configurations with Oracle Data Guard
1.5.1 Supported Configurations with Oracle Real Application Clusters (RAC)

Oracle Clinical was re-architected in Release 5.0 to support Oracle Real Application Clusters (RAC). The Parameterized Submission process (PSUB), which runs and schedules most jobs in Oracle Clinical, no longer uses DBMS pipes, which can only be used within a single database instance, for communication between the user session and the PSUB service. It now uses Oracle Advanced Queuing.

Because databases have traditionally been constrained to run only on a single server, customers have typically followed a hardware "scale-up" strategy for the database tier: Whenever the database server becomes a bottleneck to overall application performance, the server is replaced with a larger, faster machine. While this approach is well understood, it can be highly disruptive to ongoing business.

Oracle Real Application Clusters (RAC) provides an alternative approach for scaling database performance. It is designed to tolerate server failures with little impact to mission-critical applications and users. As workloads and user connections are increased, additional nodes (servers) can be easily added to the cluster. Each server runs against the same database simultaneously. This approach is less disruptive to ongoing business operations, more reliable, and less expensive to implement.

RAC nodes can be individual computers in a network or nodes on an Oracle Exadata machine. RAC shares the database internally among all nodes so that even if the node where the database was originally installed goes down, the other nodes can still access the database. You can configure RAC nodes as follows:

1.5.1.1 Node 1: Install and Set Up Everything Required for Oracle Clinical

- Oracle Real Application Clusters (RAC)—installed with Oracle Database
- Oracle Clinical database server code
- Oracle Clinical database(s)
- Run the Oracle Clinical PSUB service on this node (one per database)
- Create user-specific PSUB log file directories for randomization, batch data load, and labs batch jobs that require input files
- Enter PSUB-related values in local reference codelist OCL_STATE
- Install SAS 9.4 (Optional)

1.5.1.2 Node 2: Install the Minimum Required as a RAC Node

Install Oracle Database with Oracle Real Application Clusters (RAC).

You can have multiple nodes set up this way, each accessing the same database(s). Additional nodes set up this way improve database performance.

1.5.1.3 Node 3: Install Everything Required for Oracle Clinical as Backup

In case either the PSUB service or Node 1 itself fails, install all required software on another node so that you can start the PSUB service as quickly as possible to continue normal operation. PSUB can run on only one server at a time.

A node set up this way also improves performance but requires additional maintenance; any Oracle Clinical database server patches you install on the primary node (Node 1 in this example) must also be installed on this node.

- Install Oracle Real Application Clusters (RAC) and Oracle Database
- Install Oracle Clinical database server code (includes PSUB server code)
Create the same PSUB directory structure as on Node 1 so that the OCL_STATE reference codelist values on the middle tier still work. If you use NFS to share the files, users will still be able to access files for jobs performed on the other node unless the node itself fails. For more information, see Section 3.7, "Set Up Parameterized Submissions" for UNIX, and Section 4.7, "Set Up Parameterized Submissions" for Windows.

**Note:** You do not need to reinstall the Oracle Clinical database.

You can have multiple nodes set up this way, each accessing the same database(s).

### 1.5.1.3.1 Recommended Options for RAC

Oracle Clinical 5.2 is supported with an Oracle Real Applications Cluster (RAC) distributed database installation on UNIX. Oracle recommends:

- Configuring a Maximum Availability Architecture (MAA) in which you use Oracle RAC for both your primary and standby database, synchronized using Oracle Data Guard.
- Using the Single Client Access Name (SCAN) option. This RAC feature provides a single name for clients to access Oracle databases running in a cluster. The benefit is that the client’s connect information does not need to change if you add or remove nodes in the cluster. Having a single name to access the cluster allows clients to use the EZConnect client and the simple JDBC thin URL to access any database running in the cluster, independent of which server(s) in the cluster the database is active. SCAN provides load balancing and failover for client connections to the database. The SCAN works as a cluster alias for databases in the cluster.
- SCAN is configured during the installation of Oracle Grid Infrastructure that is distributed with Oracle Database. Oracle Grid Infrastructure is a single Oracle Home that contains Oracle Clusterware and Oracle Automatic Storage Management (ASM). You must install Oracle Grid Infrastructure first in order to use Oracle RAC.
- Oracle® Database 2 Day + Real Application Clusters Guide both at [http://docs.oracle.com/cd/E16655_01/nav/portal_16.htm](http://docs.oracle.com/cd/E16655_01/nav/portal_16.htm)
- Grid Infrastructure Single Client Access Name (SCAN) Explained (My Oracle Support Article ID 887522.1).
- Oracle Data Guard and other high availability documentation at [http://docs.oracle.com/database/121/nav/portal_14.htm](http://docs.oracle.com/database/121/nav/portal_14.htm)

### 1.5.2 Supported Configurations with Oracle Data Guard

The following Oracle Data Guard configurations are supported. All Oracle Clinical components (database server, database) must be installed on each node.

- Standalone server with Oracle Data Guard failover
- Oracle Clusterware for One Node with Oracle Data Guard failover
- Oracle RAC One Node with Oracle Data Guard failover
- Multi-node RAC with Oracle Data Guard failover

Oracle Data Guard is included in Oracle Database Enterprise Edition.
1.6 Download the Software

- Section 1.6.1, "Create Staging Areas"
- Section 1.6.2, "Download the Oracle Clinical 5.2.0.0.x Media Pack"
- Section 1.6.3, "Download Patches from My Oracle Support"
- Section 1.6.4, "Download Oracle Java Development Kit"
- Section 1.6.5, "Download the Java Runtime Environment"
- Section 1.6.6, "Download Adobe Reader"
- Section 1.6.7, "Download JSpell (Optional)"

1.6.1 Create Staging Areas

1. Create one staging area each on the database server and on the application server.
2. Create one directory, in each staging area, for each media pack disk, patch, or other software unit, and give the directory a logical name.

<table>
<thead>
<tr>
<th>Disk or Patch Name</th>
<th>Source</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Clinical Release 5.2</td>
<td></td>
</tr>
<tr>
<td>Oracle Database 12c Release 2 (12.1.0.2) — Linux x86-64</td>
<td>Media pack</td>
</tr>
<tr>
<td>Oracle Database 12c Release 2 (12.1.0.2) — Solaris Sparc 64</td>
<td>Media pack</td>

</tr>
</tbody>
</table>

**Note:** To receive a physical media pack with all the required DVDs, contact Oracle Support. To expedite your request you can either call Oracle Support directly or open a Service Request (SR) selecting problem category: Version Update Request.

To download the software:

1. Go to [https://edelivery.oracle.com](https://edelivery.oracle.com) and log in.
2. From the **Search by** list, select **Product**.
3. In the field next to the **Search by** list, type **Oracle Clinical**.
4. From the **Select Platform** list, select the checkbox for your operating system.
5. Click **Continue**.
6. Review the media packs you want to download, and click **Continue**.
7. Read the license agreement and select the checkbox to accept the license agreement.
8. Click **Continue**.
9. Download each disk into a recognizably named directory in the appropriate staging area.
10. Extract each `part_number.zip` file into a meaningfully named directory.
11. For the Oracle Clinical software, extract the appropriate `.zip` file for the server:
    - On the database server, extract `server_code_platform.zip`.
    - On the application server, extract `oc_middletier_installer.zip`.

1.6.3 Download Patches from My Oracle Support

To download a patch from My Oracle Support:

1. Go to My Oracle Support at [https://support.oracle.com](https://support.oracle.com) and sign in.
2. Click the **Patches & Updates** tab, then enter the patch number in the **Patch Name or Number** field and click **Search**.
3. Click the link for your operating system and download the patch file to a recognizably named directory in the appropriate staging area.
4. Extract the `.zip` file.
1.6.4 Download Oracle Java Development Kit

To download and install JDK:

2. In the Search Knowledge Base field in the upper right, enter: 1439822.1
   A page appears with a list of documents.
3. Click the link All Java SE Downloads on MOS [Article ID 1439822.1].
4. Scroll down the list of JDK versions to Oracle JDK 8 Update 111 (Patch 24359908).

Note: Check Oracle Clinical Summary of Patches Available (Article ID 121863.1) on My Oracle Support to see if a more recent version is supported.

5. Click the patch number link.
6. Select Microsoft Windows x64 (64-bit) and click ReadMe to read the release notes and Download to download the patch to the staging area in a recognizably named directory.

Installation instructions are in Section 6.4, "Install Oracle Java Development Kit".

1.6.5 Download the Java Runtime Environment

Oracle Clinical and the RDC Administration application require that Java Standard Edition (SE) Runtime Environment (JRE) 1.8.0.111—also known as JRE 8 Update 111—exist on the user’s computer.

The Launch page is configured to prompt users to install JRE if it does not exist on their computer. To make this work, you need to download JRE into the {OPA_HOME}/html directory and rename it; see Section 7.4, "Make the Java Runtime Environment Available for Download".

To download JRE:

1. On the application server, go to the following Oracle Web site:
2. Under Java SE 8u111, click the Download button for JRE.
3. Select the Windows x86 Offline version.

Note: This is the version for 32-bit browsers (not operating systems). The default browser for Windows machines is 32-bit, but Windows machines also come with a 64-bit version. To support the 64-bit version, you must either customize your Launch page to point to sunjpi64.exe or instruct users with 64-bit browsers to download the 64-bit version of JRE from the link in Step 1.

4. Download it to the staging area in a recognizably named directory.

1.6.6 Download Adobe Reader

Adobe Reader is required on the Reports Server and on client computers. At this time, no particular version is required.

1.6.7 Download JSpell (Optional)

The Oracle Clinical Graphic Layout Editor supports the JSpell Spell Checker SDK for Java J2EE for use in checking the spelling of text objects in graphic layouts.

The JSpell Spell Checker SDK is a third-party product from Page Scholar Inc. You must purchase the product separately.

1. Download JSpell SDK for Java J2EE from http://www.jspell.com/java-spell-checker.html to the staging area in a recognizably named directory.

2. Extract jspellsdk.zip.

Additional instructions are in Section 7.7, "Install and Configure JSpell Spell Checker SDK (Optional)".

1.7 Use the Silent Installer (Optional)

You can run any of the Oracle Universal Installers—including the Oracle Clinical Database Server, Database, Front End, or Reports Server Installers—in silent mode. This may be useful to promote uniform installations in multiple sites or computers.

Oracle Clinical ships with .rsp (response) files that include parameter prompts and sample parameter values for each component. They are located on the Oracle Clinical and Oracle Thesaurus Management System 5.2 media pack disk under Disk1\stage\Response in the .zip file for the application server or for the appropriate database operating system.

Table 1–6 lists each Oracle Clinical component, the response file name for each, and the section of this guide with information on the Installer parameters for each.

<table>
<thead>
<tr>
<th>Component Installed</th>
<th>Response File</th>
<th>Parameter Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Clinical Database Server for Linux</td>
<td>oracle.pharma.oc.server.unix.Complete.rsp</td>
<td>Section 3.3.1</td>
</tr>
<tr>
<td>Oracle Clinical Database Server for Solaris</td>
<td>oracle.pharma.oc.server.unix.Complete.rsp</td>
<td>Section 3.3.1</td>
</tr>
<tr>
<td>Oracle Clinical Database Server for HP</td>
<td>oracle.pharma.oc.server.unix.Complete.rsp</td>
<td>Section 3.3.1</td>
</tr>
<tr>
<td>Oracle Clinical Database Server for Windows</td>
<td>oracle.pharma.oc.server.windows.Complete.rsp</td>
<td>Section 4.3.1</td>
</tr>
<tr>
<td>Oracle Clinical Database—fresh installation</td>
<td>oracle.pharma.oc.db.install.Complete.rsp</td>
<td>Section 4.5.3</td>
</tr>
<tr>
<td>Oracle Clinical Database—upgrade and configure</td>
<td>oracle.pharma.db.upgrade.install_type_1.rsp</td>
<td>Section 4.5.3</td>
</tr>
<tr>
<td>Oracle Clinical Database—reruns all the re-createable object scripts (views, packages, functions etc) against the database</td>
<td>oracle.pharma.db.upgrade.install_type_2.rsp</td>
<td>Section 4.5.3</td>
</tr>
<tr>
<td>Oracle Clinical Front End</td>
<td>oracle.pharma.oc.frontend.Custom.rsp</td>
<td>Section 7.1</td>
</tr>
<tr>
<td>Oracle Clinical Reports Server</td>
<td>oracle.pharma.oc.reportserver.Complete.rsp</td>
<td>Section 8.1</td>
</tr>
</tbody>
</table>

1. Open the file in a text editor and enter values directly.

2. Run the file.

In UNIX:
1.8 Choose a Character Set

For Oracle Clinical and RDC, Oracle strongly recommends that you use the AL32UTF8 character set. However, these applications also support UTF8, US7ASCII, WE8ISO8859P1, or any single byte character set.

Oracle Clinical and RDC use the NLS_LANG environment variable in the opasettings/opasettings.bat file to control the language, territory, and character set used for database connections. The NLS_LANG variable concatenates the three components as LANGUAGE_TERRITORY.CHARSET.

Restrictions:

- You must use the same character set on the database tier and the application tier. Otherwise, Oracle Clinical may store some special characters incorrectly in the database.
- You must set the LANGUAGE_TERRITORY components of the NLS_LANG variable to american_america.
You must set the CHARSET component of the NLS_LANG variable to match the character set of the database. 

For more information, see Section 3.4.3, "Review the opa_settings File" for UNIX and Section 4.4.2, "Review the opa_settings.bat File" for Windows.

1.9 Apply the Latest Oracle Clinical Patches

1. Check My Oracle Support article Oracle Clinical Summary of Patches Available (Article ID 121863.1) for the latest patch set and patches and apply it/them.

1.10 Integrating Oracle Clinical with Other Products and Options

You can integrate Oracle Clinical with some other products and options and develop applications that read data from Oracle Clinical. Each product listed below must be purchased separately.

1.10.1 Oracle Clinical Remote Data Capture Onsite

Oracle Clinical Remote Data Capture Onsite (RDC Onsite) is an electronic data capture (EDC) Web application that works with studies that are defined and designed using Oracle Clinical. You can use RDC Onsite to collect, perform immediate validation on, review, verify, approve, and report clinical data collected during a patient visit in a clinical study. Patient data is stored in the Oracle Clinical database. You can use Oracle Clinical features including batch validation, discrepancy management, mass changes, and data extract with data collected using RDC Onsite.

Installing Oracle Clinical also installs Oracle Remote Data Capture (RDC) Onsite. For information about using RDC, see the Oracle Clinical Remote Data Capture Onsite User’s Guide. For license information, see RDC and Oracle Clinical Licenses.

1.10.2 Oracle Thesaurus Management System

Oracle Thesaurus Management System (TMS) allows you to code specified patient data to standard terminologies such as MedDRA and WHO-Drug so that the data can be accurately analyzed. When fully integrated with Oracle Clinical, TMS processes new and updated patient data during each Oracle Clinical batch validation and either automatically codes incoming data—those that match standard terms exactly or match previously manually coded terms exactly—or creates an omission that must be manually coded in TMS. TMS can return to Oracle Clinical related terms from one or more levels of the standard terminology—for example the preferred term and system organ class in MedDRA, or the preferred name and Anatomical-Therapeutic-Chemical Level 1 term in WHO-Drug—for each coded term, associated with the correct RDCI (collected CRF).

You can install TMS and Oracle Clinical on the same application tier or on different application tiers. You must install both products on the same database if you want integrate the two systems. Oracle recommends installing Oracle Clinical before TMS.

For more information, see the Oracle Thesaurus Management System Installation Guide and the Oracle Thesaurus Management System User’s Guide.
1.10.3 Oracle Life Sciences Data Hub

Oracle Life Sciences Data Hub (Oracle LSH) is a powerful data warehouse and transformation tool with built-in version control, data auditing, lifecycle management, and validation tools. Oracle LSH includes adapters specifically designed to load most metadata and patient data from Oracle Clinical into Oracle LSH. In Oracle LSH you can then, for example, create your own reports on study patient data, merge data from multiple trials and create reports on cross-study data, and view data using state-of-the-art visualization tools.

You can load Oracle Clinical metadata and Oracle LSH converts it to appropriate LSH objects, for example:

- Oracle LSH loads all Oracle Clinical Questions and converts them to Oracle LSH Variables.
- If a Question is associated with a Discrete Value Group (DVG) in Oracle Clinical, Oracle LSH converts the Question to a Parameter and converts its DVG values to a list of allowable values for the Parameter.
- Oracle LSH loads all Oracle Clinical Question Groups and converts them to Oracle LSH Table definitions with Columns based on the Variables corresponding to each Question in the Question Group.

Other Oracle Clinical adapters include:

- Oracle Clinical SAS and Oracle Data Extract Views—load patient data from views you create in Oracle Clinical
- Oracle Clinical Stable Interface—loads the metadata of all Oracle Clinical tables that are part of Oracle Clinical’s stable interface.
- Oracle Clinical Design and Definition—loads DCMs, DCIs, Procedures, Copy Groups, and Data Extract queries and templates.
- Oracle Clinical Labs—load lab reference ranges and associated information from Oracle Clinical Labs-related tables.
- Oracle Clinical Randomization—loads real or dummy treatment pattern information for Oracle Clinical studies.
- Oracle Clinical Study Data—loads study-specific non-patient data into LSH, including discrepancies, data clarification forms, patient status information, and page tracking information.

In addition, other non-Oracle Clinical-specific adapters allow you to load data from any Oracle table or view, text file, SAS data set, or SAS CPORT or XPORT file.

1.10.4 SAS

Oracle Clinical supports integration with the statistical software application SAS 9.4 for data extract.

1.10.5 Custom Applications for Oracle Clinical

You can build custom applications for Oracle Clinical:

- See the Oracle Clinical Stable Interface Technical Reference Manual for proprietary information about data access, internal tables, and APIs. The Oracle Clinical Stable Interface provides access to data and a smooth transition between Oracle Clinical versions. Contact Oracle Support to obtain a free electronic copy of the manual. You must be a licensed customer.
- See the *Oracle Clinical Application Programming Interface Guide* for information about using Oracle Clinical’s Data Capture API.
Part I contains the following chapters. Follow instructions for either UNIX or Windows.

- Install Oracle Database
- Install Oracle Clinical Database Components on UNIX
- Install Oracle Clinical Database Components on Windows
- Integrate SAS (Optional)
Install Oracle Database

If you are upgrading Oracle Clinical, see the Oracle Clinical Upgrade Guide. If you are using Oracle Real Application Clusters (RAC) or Oracle Data Guard, see Section 1.5, "Supported Configurations with Oracle Data Guard and RAC".

This chapter includes:

- Get the Oracle Database 12.1.0 Installation Guide
- Download and Extract the Oracle Database 12.1.0 Software
- Performing Prerequisite Tasks for Installing Oracle Database
- Install Oracle Database 12.1.0
- Install Oracle Database 12c Release 2 (12.1.0.2) Examples
- Install Oracle Critical Patch Update

2.1 Get the Oracle Database 12.1.0 Installation Guide

1. Open or download the installation guide for your operating system:
   - Linux: https://docs.oracle.com/database/121/LADBI/toc.htm
   - Solaris: https://docs.oracle.com/database/121/SSDBI/toc.htm
   - HP-UX Itanium: https://docs.oracle.com/database/121/HPDBI/toc.htm
   - Windows: https://docs.oracle.com/database/121/NTDBI/toc.htm

2.2 Download and Extract the Oracle Database 12.1.0 Software

To download and extract the Oracle Database 12.1.0 software:

1. Follow instructions in the Oracle Database Installation Guide.

Oracle Clinical requires Oracle Database Enterprise Edition.
Oracle Database Grid Infrastructure is optional.

2.3 Performing Prerequisite Tasks for Installing Oracle Database

To ensure that your platform meets the minimum requirements for installing Oracle Database 12c Release 2 (12.1.0.2), you must perform the following preparatory tasks:
2.3.1 Create Owners, Groups, and Mount Points

To create the software owner, required groups, and mount points:

1. Create the software owner and groups:
   - Create a UNIX user to own the Oracle software. Typically, the user name is `oracle`.
   - Create two groups: one is the Oracle Inventory group; the other is the operating system DBA group. Typically, the group names are `oinstall` and `dba`, respectively.

2. Create mount points owned by the oracle user:
   - Create a software mount point of at least 10 GB.
   - Create mount points to hold the database files, control files, and log files, respectively.

3. Test permissions. Ensure that the `oracle` user can write to the new mount points and all subdirectories.

2.3.2 Configure Kernel Resources and Adjust Operating System Environment

The performance of Oracle Database relies on proper tuning of operating system parameters. In addition, if you are creating several Oracle instances, you might have to increase the amount of shared memory and semaphores on the system by setting kernel parameters.

For details, see the "Configure Kernel Parameters" section of the Oracle Database 12c Release 2 Installation Guide for your operating system.

2.3.3 Test the C Compiler Installation

To test that the correct C compiler is installed and that it is accessible:

1. Log in to the database server as the `opapps` user.

2. Test for the C compiler type:
   ```bash
   ls -l `which cc`
   ```
   where the `` symbols that wrap the command are single back quotes.

3. Compare your results to the correct responses listed in Table 2–1.

   **Table 2–1 Responses to the `which cc` Command**

<table>
<thead>
<tr>
<th>Operating System</th>
<th>Response</th>
<th>Symbolically Links To</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Linux x86-64</td>
<td>/usr/bin/gcc</td>
<td>(Not applicable)</td>
</tr>
<tr>
<td>Oracle Solaris SPARC</td>
<td>/opt/SUNWspro/bin/cc</td>
<td>..../prod/bin/cc</td>
</tr>
</tbody>
</table>

4. Test that the `make` command is accessible:
   ```bash
   ls -l `which make`
   ```
   where the `` symbols that wrap the command are single back quotes.

5. Compare your results to the correct responses listed in Table 2–2.
2.3.4 Install Latest Operating System Patches

Download and install the latest operating system patches required for Oracle, if necessary. Review the latest platform-specific install bulletins for Oracle Database 12c Release 2 (12.1.0.2).

2.4 Install Oracle Database 12.1.0

To install Oracle Database 12.1.0:

1. Follow instructions in the Oracle Database Installation Guide, making selections appropriate for Oracle Clinical as noted in the following sections.

You can configure database(s) as part of the database software installation or after, using the Database Configuration Assistant (DBCA).

Oracle Clinical supports installation on either a Container Database (CDB) containing a Pluggable Database (PDB) or a non-CDB database.

Note:  For information on pluggable and container databases, see:

- Oracle® Database New Features Guide 12c Release 1 (12.1) at https://docs.oracle.com/database/121/NEWFT/toc.htm
- Oracle Database Concepts at https://docs.oracle.com/database/121/CNCPT/cdbovrvw.htm#CNCPT89234

For an explanation of which options require an additional license, see the Database Licensing Information User Manual at https://docs.oracle.com/database/121/DBLIC/toc.htm.

2.4.1 Install and Configure Oracle Database

Oracle recommends that you set up a new database instance so that neither Oracle Clinical nor its installation process interferes with other applications. However, you can install Oracle Clinical on an existing Oracle database.

When you configure the database, select the following options for Oracle Clinical:

- Character Set: See Section 1.8, "Choose a Character Set".
- Automatic Memory Management (recommended)
- Oracle JVM (required)
- Distributed Database Option and Advanced Replication Option (required only if you are using Oracle Clinical Distributed Study Conduct (Replication))
- Oracle Partitioning (recommended)
- Oracle Text (required for TMS only)
- Oracle XML DB (required)
- Oracle Database Examples (required)

**Note:** Oracle Text, Java Virtual Machine (JVM), and Oracle XML DB are configured automatically if you select a general purpose template.

- Accept connections as a service instead of a SID. Service name requirements for Oracle Clinical include:
  - The service name must be less than 15 characters long.
  - It must not include the domain.
  - It must be **all lowercase**.

**Note:** If you are installing the Oracle Clinical database on a pluggable Oracle 12.1.0.2 database (PDB), see My Oracle Support article ID 1910177.1, *How To Configure TNS / SQLNET using the local_listener parameter for Pluggable Database In Oracle 12c, Allowing a SQLNET Connection to the PDB.*

- Check that **required tablespaces** exist, have Autoextend on, and have the following minimum sizes:
  - SYSTEM: 900 mb
  - TEMP: 100 mb
  - UNDOTBS1: 700 mb
  - USERS: 500 mb
  - SYSAUX: 600 mb

- **Initialization Parameters.** Table 2–3 shows the required or recommended values for Oracle Clinical. For parameters that accept a value within a range, the minimum values are given.

  **Tip:** Parameters are listed in alphabetical order. In the Database Configuration Assistant, you can click the Parameter column to display the parameters in the same order. You may need to select Advanced Parameters to see all of them.

  **Note:** If you make any changes to the initialization parameters, restart the database for the new settings to take effect.

<table>

</table>
2.4.2 Modify the tnsnames.ora File on the Database Server

There is a tnsnames.ora file in at least two locations in the installation. Oracle recommends maintaining a master file and copying it to each location whenever you add a database. See Section 6.12, "Modify the tnsnames.ora File on the Application Server" for the application server locations.

1. Navigate to the tnsnames.ora file in the following directory on the database server:
   Oracle_Home/network/admin
2. Enter a connect string for each database that matches the database's service name.
3. If there are multiple Oracle homes, maintain tns entries for all databases in a central location; for example: /etc/tnsnames.ora.
4. If you are using disconnected replication, you must make additional edits to tnsnames.ora. See Section 3.6.3.2, "Create a Wallet Credential for the RXC_DISC_REP Database User" (UNIX) or Section 4.6.3.2, "Create a Wallet Credential for the RXC_DISC_REP Database User" (Windows).

2.4.3 Create the oinstall User Group

Use instructions in the Oracle Database 12.1.0.2 Installation Guide chapter "Configuring Users, Groups and Environments for Oracle Database."

1. Check if the oinstall user group exists.
2. If it does not exist, create it.

2.4.4 Check Required Tablespaces

Table 2–4 lists the tablespaces, along with their minimum size, required for Oracle Clinical. Make sure the database contains these tablespaces. The best practice is to create them with the Autoextend On option, to avoid running out of space.

In addition, you may need to increase the minimum sizes for your installation.

**Table 2–3 (Cont.) Required and Recommended Initialization Values in the init.ora File**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Value</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHARED_POOL_SIZE</td>
<td>150 MB (minimum)</td>
<td>Recommended value for 50 to 60 concurrent users. You can change the value of this parameter after installation.</td>
</tr>
<tr>
<td>UNDO_MANAGEMENT</td>
<td>AUTO</td>
<td>Specifies which undo space management mode the system uses. When set to AUTO, the instance starts in Automatic Undo Management (AUM) mode.</td>
</tr>
<tr>
<td>UTL_FILE_DIR</td>
<td>$opa_home\xmltemp</td>
<td>Specifies each directory you access. Required to support Oracle Clinical PDF layout generation and Oracle AERS. For Windows environments, samples of the valid syntax are as follows: UTL_FILE_DIR=c:\e2b\import UTL_FILE_DIR=c:\opapps\xmltemp In a UNIX environment, UTL_FILE_DIR requires an entry with two specified paths: one with and one without a trailing slash. Add these lines before any other UTL_FILE_DIR entries: UTL_FILE_DIR=/usr/opapps/oc/xmltemp/ UTL_FILE_DIR=/usr/opapps/oc/xmltemp</td>
</tr>
</tbody>
</table>

</tr>
</tbody>
</table>
### 2.4.5 Performance Tuning Step for Pluggable Databases

To prevent performance issues, specifically with accessing `dba_synonyms` view, take these steps. See My Oracle Support doc ID 2033658.1 for more information.

1. Run the following statement:
   ```sql
   alter system set "_common_data_view_enabled" = false scope=both;
   ```

2. Restart the database.

---

#### 2.5 Install Oracle Database 12c Release 2 (12.1.0.2) Examples

Oracle Database Examples includes the following items:

- Oracle JDBC Development Drivers (required)
- Oracle Database Examples (required)
- Oracle Product Demonstrations (optional)

**Note:** You do not need to install any of the sample schemas. They are not required for either Oracle Clinical or Oracle Thesaurus Management System. You can add them later if you change your mind.

To install Oracle Database Examples:

1. Extract the zip file containing Oracle Database Examples in the `examples` directory.
2. Start Oracle Universal Installer from the `examples` directory.
   ```bash
   ./runInstaller
   
   Or, if the database server has multiple Oracle Homes, then enter:
   ```
   ```bash
   ./runInstaller -invPtrLoc ORACLE_HOME/oraInst.loc
   ```

3. Accept all the default values during the installation.

   For more information, see the Oracle Database Examples Installation Guide at [http://docs.oracle.com/database/121/nav/portal_11.htm](http://docs.oracle.com/database/121/nav/portal_11.htm).

---

#### 2.6 Install Oracle Critical Patch Update

1. Check My Oracle Support article ID 180430.1, *Oracle Health Sciences (Life Sciences/Pharmaceutical/Healthcare) Applications Supported Technology Stacks*, for the

---

### Table 2-4 Required Tablespaces and Sizes

</table>
latest quarterly Oracle CPU patches tested with Oracle Health Sciences applications.

2. Install these patches on every computer with an Oracle Home.
This chapter describes how to install the Oracle Clinical database server on a UNIX computer.

This chapter includes:

- Set Up the opapps User Account and oclsascr User Group
- Set Permissions
- Install the Oracle Clinical Database Server
- Perform Server Post-Installation Tasks
- Install Oracle Clinical Database Objects
- Perform Database Post-Installation Tasks
- Set Up Parameterized Submissions

If you are upgrading Oracle Clinical, see the Oracle Clinical Upgrade Guide. If you are using Oracle Real Application Clusters (RAC) or Oracle Data Guard, see Section 1.5, “Supported Configurations with Oracle Data Guard and RAC”.

3.1 Set Up the opapps User Account and oclsascr User Group

Before you install Oracle Clinical database server, create the following user group and account:

- **oclsascr** — The group that controls access to the files Oracle Clinical generates for SAS
- **opapps** — The operating system account that owns Oracle Clinical and that runs the Parameterized Submission (PSUB) process.

3.1.1 Create the oclsascr User Group for SAS

If you use SAS integrated with Oracle Clinical, you must create the **oclsascr** user group, which controls access to the files Oracle Clinical generates on the database server for SAS. These include SAS data extract files, which contain patient data.

1. Create a user group named **oclsascr** by adding it to the `/etc/group` file.
2. The preferred method for group authentication is that all groups assigned to a user should become the user’s default group at login. If this method is acceptable, link the `/etc/logingroup` file to the `/etc/group` file.
If the /etc/logingroup file does not exist, create it as a symbolic link to the /etc/group file; changes in the /etc/group file automatically reflect in the /etc/logingroup file.

To create the symbolic link, enter these commands:

```bash
% su root
# cd /etc
# ln -s /etc/group /etc/logingroup
```

If the /etc/logingroup file already exists with entries, or if it is unacceptable to link it to the /etc/group file, you must change both the contents of /etc/logingroup and /etc/group each time you add a user to the oclsascr group.

### 3.1.2 Create the opapps Account and Add It to Groups

Create the opapps operating system account that owns Oracle Clinical. This account also has the privileges to run the parameterized submission (PSUB) service RXCPSDPS and the PSUB Launcher (PSLAUNCH). The opapps home directory on the database server, for example Drive:\opapps, is referred to as OPA_HOME in Oracle Clinical documentation.

1. Make a shell for this user. For example, make the default shell:

   `/bin/csh`

2. Make the opapps account a member of these user groups:

   - oclsascr
   - oinstall
   - dba

   Neither oclsascr nor oinstall group needs to be the primary group for the opapps account.

### 3.2 Set Permissions

After you install Oracle Database and before you install the Oracle Clinical component, you must:

- Change Permissions for Running oraenv Script
- Grant Access to the ORACLE_HOME Directory
- Set Permissions for the Oracle Inventory Directory

---

**Note:** You might have to perform these steps whenever you apply an HSGBU-approved Critical Patch Update, or any Oracle software that uses the Oracle Database ORACLE_HOME directory.

---

### 3.2.1 Change Permissions for Running oraenv Script

With the Bourne shell, you use the Oracle environment-setting script (oraenv) when granting write access to the ORACLE_HOME directory.

However, the oraenv script gives an error if run by a non-Oracle user. To avoid this error:
1. Set the following directory and file permissions:

   - `drwxrwxr-x 18 oracle oinstall 1024 Apr 11 19:11 inventory`
   - `drwxrwxr-x  3 oracle oinstall 1024 Apr 11 18:29 ContentsXML`
   - `-rwxrwxrwx   1 oracle oinstall   492 Apr 11 13:15 oraclehomeproperties.xml`

3.2.2 Grant Access to the **ORACLE_HOME** Directory

Because the Oracle Clinical Installer checks if the **ORACLE_HOME** directory exists and if it has write access, you must change the access settings for this directory before you install Oracle Clinical.

To grant write access to the **ORACLE_HOME** directory and its contents:

1. Log in to the server as the `oracle` user.
2. Find the Oracle environment-setting script to define **ORACLE_HOME**:
   - For C shell, use `coraenv`.
   - For Bourne shell, use `oraenv`.

   These shells are located under your Oracle Database 12c Release 2 (12.1.0.2) installation.

   Note that the `oraenv` script gives an error if run by a non-Oracle user. To avoid this error, see Section 3.2.1, "Change Permissions for Running oraenv Script".

3. Grant group users modification access to all files in the **ORACLE_HOME** directory:

   ```
   chmod -R g+rw $ORACLE_HOME
   ```

   If you receive any warning messages, you can ignore them.

3.2.3 Set Permissions for the Oracle Inventory Directory

To set the permissions for the Oracle Inventory (oraInventory) directory:

1. Log in to the server as the `oracle` user.
2. Locate the path for the oraInventory directory. The location is defined in the `inventory_loc` parameter in the `/var/opt/oracle/oraInst.loc` file.

   For example, suppose you enter:

   ```
   more /var/opt/oracle/oraInst.loc
   ```

   The system might return the oraInventory location as:

   ```
   inventory_loc=/u01/app/oraInventory
   ```

3. Give recursive read and write permission for the oraInventory directory to the group:

   ```
   chmod -R g+rw /oraInventory_location
   ```

   For example:

   ```
   chmod -R g+rw /u01/app/oraInventory
   ```

   If you receive any warning messages, you can ignore them.

4. Modify protections on the oraInventory directory to ensure that the group you set up as the oinstall group has write access:

   ```
   chmod -R g+w oraInventory
   ```
Use oinstall instead of dba because the dba group membership gives you access to databases, which is a security issue. The oinstall group gives you access to the Oracle Inventory.

3.3 Install the Oracle Clinical Database Server

3.3.1 Gather Required Information

Have the following information ready to enter in the Installer:

1. Home Details: The ORACLE_HOME location, which is where you installed Oracle Database 12c Release 2 (12.1.0.2); for example:
   
   root:app/oracle/product/12102/dbname

2. If you are installing in a RAC installation, the names of all RAC nodes where the same product(s) should be installed.

3. OPA Home: the directory where Oracle Clinical will be installed; Oracle recommends:
   
   /pharm/home/opapps

4. Owner of Oracle Clinical Server Code must be opapps

5. Location for files oratab, tnsnames; for example:
   
   ■ /etc
   ■ $ORACLE_HOME/network/admin

6. RXC_USER: Choose directory for RXC_USER; Oracle recommends:
   
   /pharm/home/opapps

7. Oracle Wallet location and password. The Installer uses these to create the database Wallet in the location you specify. If you are upgrading, you can enter the existing location and password.

The database Wallet stores the password for two accounts:

■ The OCPSUB proxy account, which is used for database access for parameterized submission (PSUB) jobs. If your installation includes multiple databases using either replication or RAC, each database needs an OCPSUB account. Its credentials are created in this Wallet by the Installer.

■ The RXC_DISC_REP account. If you use disconnected replication you must insert credentials for this account manually. See Section 3.6.3, "Set Up Disconnected Replication (Optional)".

3.3.2 Prepare to Install the Oracle Clinical Database Server Software

1. Log in to the database server as the opapps user.

2. Change the primary group of the opapps account to the group that owns the Oracle Inventory:

   Note: Make a note of the current group so that you can set it back after the installation.
newgrp inst_group

where inst_group is the name of the group that owns the Oracle Inventory. You specified the name during the Oracle Database installation. Typically, this user group is oinstall. See Section 3.1.2, "Create the opapps Account and Add It to Groups".

This temporary change is necessary so that the Installer can update the Oracle Home.

3. Set the X Window display output to the IP address of your local computer. Use the standard format for IP addresses.
   For example:
   setenv DISPLAY 123.45.67.89

4. Locate the Oracle Clinical software in the directory in the staging area on the database server where you downloaded it; see Section 1.6, "Download the Software".

5. Open the ldflags file at root: app/oracle/product/12.1.0.2/lib and add the following flag:
   -lnnz12

### 3.3.3 Install the Oracle Clinical Database Server Software

1. Log in to the server computer using the opapps account.

2. In the staging area, locate the directory where you downloaded Oracle Clinical (see Section 1.6, "Download the Software") and extract the .zip file if you have not already done so.

3. Navigate to this location:
   server_code_platform\Disk1\install

4. Change protections on all files to 755:
   chmod 755 *

5. Run one of the following commands, depending on whether or nor you are using Oracle Real Application Cluster (RAC):
   - For a non-RAC installation:
     ./runInstaller
     Or, if the database server has multiple Oracle Homes, then enter:
     ./runInstaller -invPtrLoc ORACLE_HOME/oraInst.loc
     For example:
     ./runInstaller -invPtrLoc /u01/app/oracle/product/121010_qa/oraInst.loc
   - For a RAC installation:
     ./runInstaller -local
     Or, if the database server has multiple Oracle Homes, then enter:
     ./runInstaller -local -invPtrLoc ORACLE_HOME/oraInst.loc
     For example:
Install the Oracle Clinical Database Server

Install the Oracle Clinical Database Server

```
./runInstaller -invPtrLoc /u01/app/oracle/product/121010_qa/oraInst.loc
```

This ensures that the installation is performed only on the local node.

---

**Note:** See "Use the Silent Installer (Optional)" on page 1-13 for instructions for running the Installer as a file with pre-entered parameter values.

---

**Note:** Although there is a button for deinstalling products on the Welcome screen, Oracle does not support using the Installer to deinstall Oracle Clinical or Oracle Clinical Remote Data Capture (RDC) Onsite.

---

6. In the Select a Product to Install page, select **OC Server for UNIX 5.2.0.0.x**.

7. Follow the instructions on the installation screens, providing the information you assembled in Section 3.3.1, "Gather Required Information".

8. You can review the progress of the installation:
   a. Open another terminal session as the `opapps` user.
   b. To review the relinking progress, run the following:
      ```
tail -f $OPA_HOME/oc/52/relink_rxc.log
      ```
   c. Open the `installActions.timestamp.log` in the `oraInventory/logs` directory.

### 3.3.4 Save the Installation Information

1. Save the following information displayed in the Installer. You need it for several post-installation tasks.
   - Location of the `OPA_HOME` directory
   - Location of the `OPA_HOME/bin` directory
   - Name of the code environment

### 3.3.5 Review the Installation Log Files

1. Review the generated installation log files located at:
   ```
   $ORACLE_BASE/oraInventory/logs
   
   For example:
   ```
   ```
   /u01/app/oraInventory/logs
   ```
   Work with Oracle Support, if necessary, to resolve any errors.

### 3.3.6 Oracle Clinical Database Server Directory Structure for UNIX

The Installer creates the following directory structure for an Oracle Clinical database server on UNIX:

```
OPA_HOME
  /bin
  /xmltemp
  /oc
```
3.3.7 Remove Group Privileges from this Session

Undo the temporary change you made in Section 3.3.2, "Prepare to Install the Oracle Clinical Database Server Software":

1. To reset the privileges for the opapps account, enter the following command:

   newgrp group

   where group is the name of your original primary group for the opapps account.

3.4 Perform Server Post-Installation Tasks

This section describes the following tasks that you perform to complete the installation of Oracle Clinical database server on a UNIX computer:

- Complete the Setup of the opapps Account
- Limit Permissions on the XMLTEMP Folder
- Review the opa_settings File
- Check for Oracle Clinical Databases on a UNIX Server

3.4.1 Complete the Setup of the opapps Account

1. Create the log directory for opapps in the following location:

   OPA_HOME/log

2. Define the environment variables for the opapps user:

   a. Open the .cshrc file. This file is located in the home directory after you log in as the opapps user. You can use the following command to view the hidden .cshrc file:

      ls -arl

   b. Add the following lines to the .cshrc file:

      set path=( $path ORACLE_HOME/bin ORACLE_HOME/lib )
      setenv RXC_LOG OPA_HOME/log
      source OPA_HOME/bin/copa_setup_alias

   where:
Perform Server Post-Installation Tasks.

`ORACLE_HOME` is the directory where you installed Oracle Database 12c Release 2 (12.1.0.2).

`OPA_HOME` is the directory where you installed Oracle Clinical database server.

c. Source the .cshrc file when you finish editing it:

```
source .cshrc
```

### 3.4.2 Limit Permissions on the XMLTEMP Folder

To reduce security risks, you should limit permissions on the XMLTEMP folder for all database server installations.

1. Log in as opapps.
2. Go to the `OPA_HOME` directory.
3. Enter:

```
chmod 777 <XMLTEMP>
```

### 3.4.3 Review the opa_settings File

The Installer creates the opa_setting file and enters all necessary entries and default values for the Oracle Clinical environment.

1. Review the opa_settings file in the following directory:

   `OPA_HOME/bin`

2. Adjust the default values for the Oracle Clinical environment, if necessary.

   See the *Oracle Clinical Administrator’s Guide* for a list of the environment variables and for information about changing, adding, and verifying values.

Note:

- The `db_env_setting` records in opa_settings define a default value for particular environment variables that are set when the application calls opa_setup. You can override the default values for all databases or for a particular database.
- See Section 1.8, “Choose a Character Set”.
- `NLS_DATE_FORMAT` must be set to DD-MON-RRRR. It is possible to override this setting for display in RDC Onsite, the Patient Data Report, and Oracle Clinical data entry, but the value in opa_settings must be DD-MON-RRRR.

### 3.4.4 Check for Oracle Clinical Databases on a UNIX Server

As part of the implementation of the PDR hyperlinks on superscripts, a new script post-processes DCI Form Version templates to insert hyperlink placeholders. This process can fail with error ORA-27369, when a database post-install step has not been completed. For example, for a database on HP-UX, refer to https://docs.oracle.com/cd/B28359_01/install.111/b32072/post_inst_task.htm#BJFEHEGG. You can also refer to My Oracle Support Article ID 391820.1, Scheduled Job Running Shell.
3.5 Install Oracle Clinical Database Objects

Follow the instructions in this section to add Oracle Clinical database objects to this database.

3.5.1 Customize the Installation

Before you install database objects, you may want to modify some of the default SQL scripts used by the Installer.

- **Edit the Tablespace Size Scripts**: The Installer creates several new tablespaces with default sizes. To create larger databases, you can edit two scripts. The default value is an autoextend of 1MB and an unlimited maximum size.

  To create larger databases in UNIX, edit the following scripts:

  - `OPA_HOME/oc/52/install/opadba2.sql`
  - `OPA_HOME/oc/52/install/rxcdba2.sql`

- **Edit the User Account Creation Script**: The Installer prompts to create accounts in this database. If you select Yes, the Installer runs a script that creates default guest accounts.

  Before running the Installer, edit the `rxcdba4.sql` script to customize the accounts that get created and their default settings:

  `OPA_HOME/oc/52/install/rxcdba4.sql`

  See the *Oracle Clinical Administrator’s Guide* for more information about enrolling users.

- **Create a Secret Store Directory**

  Create a directory that is accessible to the opapps user and different from the Oracle Wallet location.

  Example location: `/pharm/home/opapps/sec_store/db_name`

  The Installer fails if this directory is not created before running the Installer.

3.5.2 Check for an ORA-29548 Error

1. Log in to the UNIX server computer as the opapps user.

2. Set the UNIX environment:

   `opa_setup database_name code_environment`

3. Connect to SQL*Plus as the SYS user:

   `sqlplus sys/password`

4. Run the following command to check for the ORA-29548 error:

   `select dbms_java.get_jdk_version() from dual;`

   If no error appears and the command retrieves the JDK version, skip to Section 3.5.3, "Gather Required Information".

   If you see the following error, continue with the next step to fix it:

   ERROR at line 1:
   ORA-29548: Java system class reported: release of classes.bin in the database does not match that of the oracle executable
5. To correct the ORA-29548 error, run the following script:

```sql
start update_javavm_db.sql
```

### 3.5.3 Gather Required Information

Have the following information ready to enter in the Installer:

---

**Note:** You must install the Oracle Clinical database server before you install or upgrade the Oracle Clinical database.

1. The `ORACLE_HOME` location, which is where you installed Oracle Database 12.1.0.2; for example:
   ```shell
   root:app/oracle/product/12.1.0.2/dbhome
   ```

2. OPA Home: the directory where Oracle Clinical will be installed; Oracle recommends:
   ```shell
   Drive:\opapps
   ```

3. SAS View: the directory where Oracle Clinical will generate SAS views; Oracle recommends:
   - UNIX: `$OPA_HOME/\sas_view`
   - Windows: `%OPA_HOME%\sas_view`

   **Note:** The upgrade Installer does not prompt for this value.

4. Service name for the database to be installed

5. Know if you plan to use either Automatic Storage Management (ASM) or Real Application Clusters (RAC). This affects the Installer behavior for validating tablespaces.

6. Location for tablespace datafiles. You can change the default sizes by editing the script before running the Installer; see Section 3.5.1, "Customize the Installation".

7. Location and password for the Wallet created during Oracle Clinical database server installation to store credentials for OCPSUB and RXC_DISC_REP.

8. You will need to enter passwords for the following:
   - SYS
   - SYSTEM
   - RXC_MAA
   - RXC_PD
   - RXC_REP
   - RXC_DISC_REP
   - OPA
   - RXC
   - TMS
   - RXA_DES

---

Note: You must install the Oracle Clinical database server before you install or upgrade the Oracle Clinical database.

Note: The upgrade Installer does not prompt for this value.
- RXA_LR
- OCPSUB
- RXA_WS
- RDC_MIDTIER_PROXY

**Note:** When you upgrade a database, the Installer does not prompt for the following passwords. For new installations, it does prompt for the following passwords.

- RXA_READ
- RXA_RAND
- RXA_ACCESS
- OPS$OPAPPS

**Note:** For information on changing the passwords for these accounts on a regular basis to avoid expiration, see the Oracle Clinical Administrator’s Guide.

9. A database seed number between 1 and 99. Each database in an Oracle Clinical installation (or group of databases that are replicating with each other) must have a unique seed starting number.

10. Database host name and port number

11. Global library code. There can be only one Global Library location. If you have only one database, this value should be the same as the database host name. If you are using Oracle Clinical replication and have multiple databases, enter the host name for the database designated as the Global Library location.

12. Location of the secret store folder you created in Create a Secret Store Directory.

### 3.5.4 Start Installing the Oracle Clinical Database

**Note:** See "Use the Silent Installer (Optional)" on page 1-13 for instructions for running the Installer as a file with pre-entered parameter values.

**Note:** Although there is a button for deinstalling products on the Welcome screen, Oracle does not support using the Installer to deinstall Oracle Clinical or Oracle Clinical Remote Data Capture (RDC) Onsite.

#### 3.5.4.1 Start the Installer on a UNIX Server

To start installing the Oracle Clinical database:

1. Log in to the server computer as the opapps user.
2. Change the primary group of the opapps account to the group that owns the Oracle Inventory:

```
newgrp inst_group
```

where `inst_group` is the name of the group that owns the Oracle Inventory. You specified the name during the Oracle Database 12c Release 2 (12.1.0.2) installation. Typically, this user group is `oinstall`.

This temporary change is necessary so that the Installer can update the Oracle Inventory.

3. Set the X Window display output to the IP address of your local computer. Use the standard format for IP addresses. For example:

```
setenv DISPLAY 123.45.67.89
```

4. In the staging area, locate the directory where you downloaded Oracle Clinical (see Section 1.6, “Download the Software”) and extract the .zip file if you have not already done so.

5. Navigate to this location:

```
server_code_platform\Disk1\install
```

6. Change protections on files to 755.

```
chmod 755 *
```

7. Start the Installer:

   - Non-RAC Installation:
     
     ```
     ./runInstaller
     ```
     
     Or, if the database server has multiple Oracle Homes, then enter:
     
     ```
     ./runInstaller -invPtrLoc ORACLE_HOME/oraInst.loc
     ```
     
     For example:
     
     ```
     ./runInstaller -invPtrLoc /u01/app/oracle/product/121020_qa/oraInst.loc
     ```

   - RAC Installation:
     
     ```
     ./runInstaller -local
     ```
     
     Or, if the database server has multiple Oracle Homes, then enter:
     
     ```
     ./runInstaller -local -invPtrLoc ORACLE_HOME/oraInst.loc
     ```
     
     For example:
     
     ```
     ./runInstaller -invPtrLoc /u01/app/oracle/product/121010_qa/oraInst.loc
     ```

8. In the Select a Product to Install page, select **OC Database Install 5.2.0.0.x**.

9. Follow the instructions on the installation screens, providing the information you assembled in Section 3.5.3, “Gather Required Information”. 

---

**Note:** Make a note of the current group so that you can set it back after the installation.
3.5.5 Remove Group Privileges from this Session

Recall that before you started this installation on UNIX, you changed the primary group of the opapps account to the group that owns the Oracle Inventory (see Section 3.5.4, "Start Installing the Oracle Clinical Database"). This temporary change was necessary so that the Installer could update the Oracle Inventory.

1. To reset the privileges for the opapps account, enter the following command:
   
   ```sh
   newgrp group
   ```
   
   where `group` is the name of your original primary group for the opapps account.

3.5.6 Review the Installation Log Files

During the installation of an Oracle Health Sciences component, the Oracle Universal Installer generates a log file named `installActions.log`. Earlier files have a timestamp appended to the name.

1. Review the generated installation log files located at:
   
   ```bash
   $ORACLE_BASE/oraInventory/logs
   ```
   
   For example:
   
   ```bash
   /u01/app/oraInventory/logs
   ```

3.6 Perform Database Post-Installation Tasks

This section describes the following tasks for completing the installation of your Oracle Clinical database:

- Section 3.6.1, "Set the Database Time Zone"
- Section 3.6.2, "Pin Database Packages"
- Section 3.6.3, "Set Up Disconnected Replication (Optional)"
- Section 3.6.4, "Consider Implementing Partitioning"

3.6.1 Set the Database Time Zone

The Oracle Clinical Remote Data Capture Onsite (RDC Onsite) application uses the `dbtimezone` value for internal calculations when the **Display timestamps in local timezone** preference is set.

Oracle recommends setting time zone to a named location rather than a numeric offset so that standard and daylight time adjustments are made automatically.

You can find valid named location strings in the `V$TIMEZONE_NAMES` view. For example, to find a time zone in the United States, enter the following query:

```sql
SELECT distinct tzname
FROM V$TIMEZONE_NAMES
WHERE tzname like 'US/%'
```

To set the time zone in the database:

1. Connect to the database as any user that has ALTER DATABASE privileges.
2. Enter the following command:

   ```sql
   alter database set time_zone='tzname_value';
   ```

   For example:
alter database set time_zone='US/Eastern';

3.6.2 Pin Database Packages
To improve performance, some of Oracle Clinical's packages are pin-able packages. Pinning allocates a stable memory location so that a package cannot be subjected to being swapped out of memory. Oracle Clinical provides the `rxcdbinit.sql` script to pin the database packages.

To pin the database packages located on a UNIX server:

1. Log in to the UNIX server computer as the `opapps` user.
2. Set the UNIX environment:
   ```
   opa_setup database_name code_environment
   ```
3. Change to the RXC_INSTALL directory:
   ```
   cd $RXC_INSTALL
   ```
4. Connect to SQL*Plus as the `rxc` user:
   ```
   sqlplus rxc/password
   ```
5. Run the `rxcdbinit.sql` script:
   ```
   start rxcdbinit.sql
   ```
   The script pins the database packages and exits upon completion.

**Note:** You must rerun this script **each** time you restart the database. Consider creating an entry in the database startup script that runs `rxcdbinit.sql` automatically.

3.6.3 Set Up Disconnected Replication (Optional)
Do the following only if you plan to use disconnected replication.

3.6.3.1 Check the Tablespace Size
Installing Oracle Clinical creates the RXC_DISC_REP user account to manage disconnected replication. DISC_REP_DATA is the default tablespace for RXC_DISC_REP.

If you use disconnected replication:

1. Increase the size of the DISC_REP_DATA tablespace to fit the amount of replicated data.
   
   For more information about disconnected replication, see the *Oracle Clinical Administrator’s Guide*.

3.6.3.2 Create a Wallet Credential for the RXC_DISC_REP Database User
The system stores these credentials in the same Wallet as the one created for OCPSUB.

1. Log in as `opapps`.
2. Set environment variables:
   ```
   opa_setup database_name 52
   ```
3. Create an alias for the disconnected replication wallet alias in tnsnames.ora. The disconnected replication wallet alias is the name of the database appended with: _disc.

For example, if the database name is ny123x, the tnsnames entry would look something like:

ny123x, ny123x_disc, ny123x.world, ny123x.domain.com = (DESCRIPTION=(ADDRESS=(PROTOCOL=tcp)(HOST=example.us.company.com)(PORT=1124)) (CONNECT_DATA=(service=ny123x))

See Section 2.4.2, "Modify the tnsnames.ora File on the Database Server".

4. For the disconnected replication wallet alias, enter tnsping wallet_alias to test that it returns success. For example:

  tnsping ny123x_disc

5. Create the credentials for the disconnected replication wallet alias and account.

  mkstore -wrl /pharm/home/opapps/wallet52 -createCredential wallet_alias rxc_disc_rep rxc_disc_rep_password

3.6.3.3 Test Wallet Connection for RXC_DISC_REP

1. Set tns_admin:

   setenv TNS_ADMIN path_of_sqlnet.ora

2. For the disconnected replication wallet alias run sqlplus /@wallet_alias. For example:

   sqlplus /@ny123x_disc

   The connection should be a success.

3. Run show user

   This should display the rxc_disc_rep user.

3.6.3.4 Add Reference Codelist Value

In the OCL_STATE reference codelist:

1. Add a value called DISC_REP_WALLET. See the Oracle Clinical Administrator’s Guide for more information.

2. Enter the wallet_alias you just created as the long value.

3.6.4 Consider Implementing Partitioning

1. Partition the Oracle Clinical RESPONSES table, which contains all patient data entered for all studies in an Oracle Clinical installation.

   See the Oracle Clinical Administrator’s Guide for more information.

3.7 Set Up Parameterized Submissions

The Parameterized Submission process (PSUB) schedules and runs jobs, reports, and batch processing for Oracle Clinical. In order to support using Oracle Real Application
Clusters (RAC), the implementation of PSUB changed in Oracle Clinical 5.0. See the 5.0.1 Installation Guide for more information.

You must start one PSUB service for each Oracle Clinical database on the same server as the database.

- Section 3.7.1, "Create Directories and Enter Values in OCL_STATE Local Reference Codelist"
- Section 3.7.2, "Enable Users to Submit PSUB Jobs"
- Section 3.7.3, "Enable opapps to Use the at Command"
- Section 3.7.4, "Start the PSUB Service"
- Section 3.7.5, "Customize the PSUB Service (Optional)"
- Section 3.7.6, "Test the PSUB Installation"

### 3.7.1 Create Directories and Enter Values in OCL_STATE Local Reference Codelist

1. Create several directories on the PSUB server.
2. Enter paths of the new directories in the OCL_STATE local reference codelist, with a few related values.

See the "Setting Up Batch Job File Viewing" section of the "Setting Up File and Image Viewing" chapter of the Oracle Clinical Administrator’s Guide for more information.

---

**Note:** See Chapter 5, "Integrate SAS (Optional)" for information about new OCL_STATE settings related to SAS configuration.

### 3.7.2 Enable Users to Submit PSUB Jobs

Beginning in Release 5.0, PSUB users no longer need:

- their own OS account
- a user name beginning with OPSS
- their own directory for PSUB outputs

**New Users**

To add new users:

1. Use the ocl_add_user.sql script, indicating which new users need to run PSUB jobs.

   See the Oracle Clinical Administrator’s Guide for more information.

**Existing Users**

If you are upgrading from a pre-5.0 version of Oracle Clinical, to give users who need to run PSUB jobs access to the opapps account:

1. Use the migration script oclupg50migrateusers.sql.

   See the Oracle Clinical Administrator’s Guide for more information.

**PSUB Administrator User**

You can give a user the role RXC_VWJOBS (new in 5.0) to allow him or her to:
- View all users’ jobs
- View the output from those jobs.
- Stop any job.

The following scripts can grant this role to a user:
- ocl_add_user—Use this script for new users.
- ocl_grant_revoke_rxc_vwjobs.sql—Use this script for existing users. (This script can also be used to revoke the role.)

See the Oracle Clinical Administrator’s Guide for more information.

3.7.3 Enable opapps to Use the at Command

To use the at command to schedule jobs on behalf of another user, the owner’s user account must be listed in the at.allow file. The owner is opapps.

To edit the at.allow file:
1. Change to the appropriate directory location depending on your operating system and open the at.allow file:
   - Oracle Linux x86-64: /etc/at.allow
   - Oracle Solaris SPARC: /usr/lib/cron/at.allow
   - HP Itanium: /usr/lib/cron/at.allow
2. Add the following line to the at.allow file:
   opapps

3.7.4 Start the PSUB Service

The Installer automatically installs the PSUB service on the database server. You must start it using on set of instructions below.

Instructions for stopping PSUB manually are included in the Oracle Clinical Administrator’s Guide.

To start the PSUB service on UNIX:
1. Log in as the opapps user. By default, the opapps uses the C shell.
2. Set up the environment:
   opa_setup <database_name> <code_environment>
   For example, where prod is the database name:
   opa_setup prod 52
3. Go to the PSUB location:
   cd $RXC_PSUB
4. Start the PSUB service:
   start_psub database_name code_environment wallet_alias
   For PSUB, wallet_alias is the same as the database name. For example:
   start_psub prod 52 prod
where `prod` is the connect string for the database instance to which the PSUB service connects;
where `52` is the name of the code environment;
where `wallet_alias` is the name of the Wallet specified during installation. By default it is the same as the database name.

5. If there are any errors, check the following log files in the `$RXC_CENTRAL_LOG` directory:
   - `rxcpsd_instance_environment_1.log`
   - `rxcpsd_instance_environment_2.log`

### 3.7.5 Customize the PSUB Service (Optional)

1. Customize the PSUB service as follows:
   - **Automatic Startup** — By default, the PSUB service does not start automatically when you restart a server computer. However, you can configure the PSUB service to start automatically.
   - **Job Numbering** — You can change Oracle Clinical's default job numbering algorithm.

   For more information about managing and customizing the PSUB service, see the *Oracle Clinical Administrator's Guide*.

### 3.7.6 Test the PSUB Installation

To test your PSUB installation:

1. Open Oracle Clinical.
2. Submit a 3GL job such as Batch Validation or a PL/SQL job such as Study Unfreeze.
3. Verify that Oracle Clinical creates the log and output files by clicking on the **View log** and **View output** buttons.

If you encounter problems or errors, review the messages in the PSUB log files created in the following directory:

`$RXC_ROOT/log`
Install Oracle Clinical Database Components on Windows

This chapter describes how to install Oracle Database and the Oracle Clinical database server on Windows.

Note: Installing Oracle Clinical with Oracle Real Application Clusters (RAC) is not supported on Windows.

This chapter includes:

- Set Up the opapps User Account and the oclsascr User Group
- Set Up Local Policy Security Options
- Install the Oracle Clinical Database Server
- Perform Server Post-Installation Tasks
- Install Oracle Clinical Database Objects
- Perform Database Post-Installation Tasks
- Set Up Parameterized Submissions

If you are upgrading Oracle Clinical, see the Oracle Clinical Upgrade Guide.

Note: If you install the Oracle Clinical database on Windows and use SAS, you must also install SAS on Windows; see Chapter 5, "Integrate SAS (Optional)."

4.1 Set Up the opapps User Account and the oclsascr User Group

Before you install Oracle Clinical database server, create the following user group and account.

4.1.1 Create the oclsascr User Group

If you use SAS integrated with Oracle Clinical, you must create the oclsascr user group, which controls access to the files Oracle Clinical generates on the database server for SAS. These include SAS data extract files, which contain patient data.

1. Use Windows Administrative Tools to create a new Global Group in your Domain named oclsascr.
See the Oracle Database 12.1.0.2 Installation Guide for Windows chapter "Configuring Users, Groups and Environments for Oracle Database" at http://docs.oracle.com/database/121/NTDBI/user_grps.htm#CIHCAABC.

### 4.1.2 Create the opapps Account and Add It to Groups

Create the **opapps** operating system account that owns Oracle Clinical. This account also has the privileges to run the parameterized submission (PSUB) service RXCPSDPS and the PSUB Launcher (PSLAUNCH). The opapps home directory on the database server, for example Drive:\opapps, is referred to as **OPA_HOME** in Oracle Clinical documentation.

1. Create the **opapps** operating system account.
2. Using Windows administrative tools, assign opapps to the following user groups:
   - ORA_DBA
   - ORA_ASMDBA
   - OCLSASCR

---

**Note:** Beginning in Oracle Clinical 5.0, no other accounts need to be added to the oclsascr user group.

### 4.2 Set Up Local Policy Security Options

1. In the Start menu, navigate to Administrative Tools.
2. Open **Administrative Tools**, and then **Local Security Policy**.
3. Expand the Local Policies folder and then select Security Options.
4. Set the following values:
   - Set **Network security: Restrict NTLM: Outgoing NTLM traffic to remote servers** to **Allow All**.
   - Set **Network security: Restrict NTLM: Incoming NTLM traffic** to **Allow All**.
   - Set **Network Security:Allow Local System to use Computer identity for NTLM** to **Enabled**.
   - Set **Network Security:Allow Local System NULL session fallback** to **Enabled**.
5. Enforce the policy by opening a command prompt and entering: `gpupdate/force`

### 4.3 Install the Oracle Clinical Database Server

This section describes how to install and set up the Oracle Clinical database server. The Oracle Universal Installer performs the following operations:

- Creates the Oracle Clinical directory structure (see Section 4.3.5 for details).
- Installs the Oracle Clinical database server.
- Sets permissions on directories.
• Creates and modifies environment setup files.
• Creates an Oracle Wallet to store credentials for OCPSUB and RXC_DISC_REP.
• Creates a directory for storing the SAS files.

4.3.1 Gather Required Information

Have the following information ready to enter in the Installer:

1. **Home Details**: The ORACLE_HOME location, which is where you installed Oracle Database 12.1.0.2; for example:
   
   drive:\app\oracle\product\12.1.0.2\dbhome

2. **OPA Home**: The directory where Oracle Clinical will be installed. Oracle recommends:
   
   drive:\opapps

3. **SAS View**: The directory where Oracle Clinical will generate SAS views. Oracle recommends:
   
   drive:\opapps\sas_view

4. **Oracle Wallet location and password**: The Installer uses these to create the database Wallet in the location you specify. The database Wallet stores the password for two accounts:

   • The OCPSUB proxy account, which is used for database access for parameterized submission (PSUB) jobs. If your installation includes multiple databases using either replication or RAC, each database needs an OCPSUB account and its credentials are created in this Wallet on the database server during Oracle Clinical database installation.
   
   • The RXC_DISC_REP account. If you use disconnected replication you must insert credentials for this account manually. See Section 4.6.3, "Set Up Disconnected Replication (Optional)."

---

**Note:** If you have already created a Wallet through a previous installation of Oracle Clinical 5.0 or higher, you can continue using it instead of creating a new one by entering the location and password for the existing Wallet.

---

4.3.2 Install the Oracle Clinical 5.2 Database Server for Windows

1. Log in to the server computer using the opapps account.

2. In the staging area, locate the directory where you downloaded and extracted Oracle Clinical (see Section 1.6, "Download the Software").

3. Run the following file as an administrator:
   
   Disk1\install\setup.exe

   The Installer opens to the Welcome screen.

---

**Note:** See "Use the Silent Installer (Optional)" on page 1-13 for instructions for running the Installer as a file with pre-entered parameter values.
4. In the Select a Product to Install page, select OC Server for Windows 5.2.0.0.x.

5. Follow the instructions on the installation screens, providing the information you assembled in Section 4.3.1, "Gather Required Information".

4.3.3 Save the Installation Information

At the end of the installation, the installer screen displays the:

- Location of the OPA_HOME directory
- Location of the OPA_HOME\bin directory
- Name of the code environment

Make note of this information because you need it for several post-installation tasks.

4.3.4 Review the Installation Log Files

1. Review the generated installation log files located at:

   \Oracle\Inventory\logs

   For example:

   C:\Program Files\Oracle\Inventory\logs

   Work with Oracle Support, if necessary, to resolve any errors.

4.3.5 Oracle Clinical Database Server Directory Structure for Windows

The Installer creates the following directory structure:

```
OPA_HOME
  \bin
  \xmltemp
  \oc
  \52
    \bin   (Executables)
    \dcd   (Data Collection Definition)
    \des   (Design)
    \dm    (Data Management)
    \dx    (Data Extract)
    \glib  (Global Library)
    \install (Install and upgrade scripts)
    \log   (PSUB log files)
    \lr    (Lab Ranges)
    \patch (Patches to Oracle Clinical)
    \pd    (Procedure Definition)
    \psub  (Parameterized Submission process)
    \release (Server code release marker)
    \tools (Miscellaneous tools)
```

Note that OPA_HOME refers to the root installation directory of Oracle Clinical, RDC, and TMS, which were formerly known as Oracle Pharmaceutical Applications (OPA). You specify the root installation directory when you install the Oracle Clinical database server. Oracle recommends drive:\opapps.
4.4 Perform Server Post-Installation Tasks

This section describes the tasks you perform to complete the installation of Oracle Clinical database server on a Windows computer.

4.4.1 Limit Permissions on the XMLTEMP Folder

By default, a Windows installation grants read and write privileges to the XMLTEMP database folder to everyone. To reduce security risks, limit permissions on the XMLTEMP folder for all Windows database server installations.

1. Use Windows Explorer to locate the XMLTEMP folder in the OPA_HOME directory.
2. Right-click on the XMLTEMP folder, and then select Properties from the menu.
3. Click the Sharing tab, then click Advanced Sharing.
4. Select the Share this folder check box to enable sharing with other users on your network.
5. Click Permissions.
6. Give Read and Write (Change) permissions to user oracle.
7. Click OK to save your changes and close the Permissions dialog box.
8. Click OK to save your changes and close the Advanced Sharing dialog box.
9. Click Close to close the Properties dialog box.

4.4.2 Review the opa_settings.bat File

On Windows systems, configurations are defined in the opa_settings.bat file. This file contains the commands to set environment variables at startup and execution of the PSUB service.

1. Review the opa_settings.bat file in the following directory:
   Drive:opapps\bin
2. Adjust the default values, if necessary.

See the Oracle Clinical Administrator’s Guide for a list of the settings and for information about changing, adding, and verifying values.

Note:

- The db_env_setting records in opa_settings.bat define a default value for particular environment variables that are set when the application calls opa_setup. You can override the default values for all databases or for a particular database.
- See Section 1.8, "Choose a Character Set" for important information.
- NLS_DATE_FORMAT must be set to DD-MON-RRRR. It is possible to override this setting for display in RDC Onsite, the Patient Data Report, and Oracle Clinical data entry, but the value in opa_settings must be DD-MON-RRRR.
4.5 Install Oracle Clinical Database Objects

Follow the instructions in this section to add Oracle Clinical database objects to this database.

4.5.1 Customize the Installation

Before you install database objects, you may want to modify some of the default SQL scripts used by the Installer.

- **Edit the Tablespace Size Scripts**: The Installer creates several new tablespaces with default sizes. To create larger databases, you can edit two scripts. The default value is an autoextend of 1MB and an unlimited maximum size.

To create larger databases in Windows, edit the following scripts:

```
OPA_HOME\oc\52\install\opadba2.sql
OPA_HOME\oc\52\install\rxcdba2.sql
```

- **Edit the User Account Creation Script**: The Installer prompts to create accounts in this database. If you select Yes, the Installer runs a script that creates default guest accounts.

Before running the Installer, edit the rxcdba4.sql script to customize the accounts that get created and their default settings:

```
OPA_HOME/oc/52/install/rxcdba4.sql
```

See the *Oracle Clinical Administrator’s Guide* for more information about enrolling users.

- **Create a Secret Store Directory**

Create a directory that is accessible to the opapps user and different from the Oracle Wallet location.

Example location: `/pharm/home/opapps/sec_store/db_name`

The Installer fails if this directory is not created before running the Installer.

4.5.2 Check for an ORA-29548 Error

1. Log in to the server computer.
2. Set environment variables:
   
   ```
   set p1=database_name
   set p2=52
   opa_setup
   ```
3. Connect to SQL*Plus as the SYS user:
   
   ```
   sqlplus sys/password
   ```
4. Run the following command to check for the ORA-29548 error:
   
   ```
   select dbms_java.get_jdk_version() from dual;
   ```

   If no error appears and the command retrieves the JDK version, skip to Section 4.5.3, "Gather Required Information".

   If you see the following error, continue with the next step to fix it:

   ```
   ERROR at line 1:
   ```
ORA-29548: Java system class reported: release of classes.bin in the database does not match that of the oracle executable

5. To correct the ORA-29548 error, run the following script:

```
start update_javavm_db.sql
```

### 4.5.3 Gather Required Information

Have the following information ready to enter in the Installer.

**Note:** You must install the Oracle Clinical database server before you install or upgrade the Oracle Clinical database.

1. The ORACLE_HOME location, which is where you installed Oracle Database 12.1.0.2; for example:

```
Drive:\app\oracle\product\12102
```

2. OPA Home: the directory where Oracle Clinical will be installed; Oracle recommends:

```
/pharm/home/opapps
```

3. SAS View: the directory where Oracle Clinical will generate SAS views; Oracle recommends:

   - UNIX: $OPA_HOME/sas_view
   - Windows: %OPA_HOME%\sas_view

**Note:** The upgrade installer does not prompt for this value.

4. Service name for the database to be installed

5. Know if you plan to use either Automatic Storage Management (ASM) or Real Application Clusters (RAC). This affects the Installer behavior for validating tablespaces.

6. Location for tablespace datafiles. You can change the default sizes by editing the script before running the Installer; see Section 4.5.1, "Customize the Installation".

7. Location and password for the Wallet created during Oracle Clinical database server installation to store credentials for OCPSUB and RXC_DISC_REP.

8. You will need to enter passwords for the following:
   - SYS
   - SYSTEM
   - RXC_MAA
   - RXC_PD
   - RXC_REP
   - RXC_DISC_REP
   - OPA
   - RXC
Install Oracle Clinical Database Objects

- TMS
- RXA_DES
- RXA_LR
- OCPSUB
- RXA_WS
- RDC_MIDTIER_PROXY

**Note:** When you upgrade a database, the Installer does not prompt for the following passwords. For new installations, it does prompt for the following passwords.

- RXA_READ
- RXA_RAND
- RXA_ACCESS
- OPS$OPAPPS

**Note:** For information on changing the passwords for these accounts on a regular basis to avoid expiration, see the *Oracle Clinical Administrator’s Guide.*

9. A database seed number between 1 and 99. Each database in an Oracle Clinical installation (or group of databases that are replicating with each other) must have a unique seed starting number.

10. Database host name and port number

11. Global library code. There can be only one Global Library location. If you have only one database, this value should be the same as the database host name. If you are using Oracle Clinical replication and have multiple databases, enter the host name for the database designated as the Global Library location.

12. Location of the secret store folder you created in Create a Secret Store Directory.

4.5.4 Start Installing the Oracle Clinical Database

**Note:** See "Use the Silent Installer (Optional)" on page 1-13 for instructions for running the Installer as a file with pre-entered parameter values.

**Note:** Although there is a button for deinstalling products on the Welcome screen, Oracle does not support using the Installer to deinstall Oracle Clinical or Oracle Clinical Remote Data Capture (RDC) Onsite.

1. Log in to the server computer using the opapps account.
Perform Database Post-Installation Tasks

2. In the staging area, locate the directory where you downloaded and extracted Oracle Clinical (see Section 1.6, "Download the Software").

3. Run the following file as an administrator:
   
   Disk1\install\setup.exe
   
   The Installer opens to the Welcome screen.

   **Note:** See "Use the Silent Installer (Optional)" on page 1-13 for instructions for running the Installer as a file with pre-entered parameter values.

   **Note:** Although there is a button for deinstalling products on the Welcome screen, Oracle does not support using the Installer to deinstall Oracle Clinical or Oracle Clinical Remote Data Capture (RDC) Onsite.

4. In the Select a Product to Install page, select **OC Database Install 5.2.0.0.x**.

5. Follow the instructions on the installation screens, providing the information you assembled in Section 4.5.3, "Gather Required Information".

4.5.5 Review the Installation Log Files

During the installation of an Oracle Health Sciences component, the Oracle Universal Installer generates a log file named installActions.log. Earlier files have a timestamp appended to the name.

1. Review the generated installation log files located at:
   
   \Oracle\Inventory\logs
   
   For example:
   
   C:\Program Files\Oracle\Inventory\logs

4.6 Perform Database Post-Installation Tasks

This section describes the following tasks for completing the installation of your Oracle Clinical database:

- Section 4.6.1, "Set the Database Time Zone"
- Section 4.6.2, "Pin Database Packages"
- Section 4.6.3, "Set Up Disconnected Replication (Optional)"
- Section 4.6.4, "Consider Implementing Partitioning"

4.6.1 Set the Database Time Zone

The Oracle Clinical Remote Data Capture Onsite (RDC Onsite) application uses the dbtimezone value for internal calculations when the **Display timestamps in local timezone** preference is set.

Oracle recommends setting time zone to a named location rather than a numeric offset so that standard and daylight time adjustments are made automatically.
You can find valid named location strings in the V$TIMEZONE_NAMES view. For example, to find a time zone in the United States, enter the following query:

```sql
SELECT distinct tzname
FROM V$TIMEZONE_NAMES
WHERE tzname like 'US/%'
```

To set the time zone in the database:

1. Connect to the database as any user that has ALTER DATABASE privileges.
2. Enter the following command:
   ```sql
   alter database set time_zone='tzname_value';
   ```
   For example:
   ```sql
   alter database set time_zone='US/Eastern';
   ```

### 4.6.2 Pin Database Packages

To improve performance, some of Oracle Clinical's packages are pin-able packages. Pinning allocates a stable memory location so that a package cannot be subjected to being swapped out of memory. Oracle Clinical provides the `rxcdbinit.sql` script to pin the database packages.

To pin the database packages located on a Windows server:

1. Log in to the Windows server computer as an administrator.
2. Set the Windows environment:
   ```
   set p1=database
   set p2=52
   opa_setup
   ```
   where `database` is the name of this database instance, and 52 is the alias for the version of Oracle Clinical.
3. Change to the drive where Oracle Clinical is installed. For example:
   ```
   cd %RXC_INSTALL%
   ```
4. Start an SQL*Plus session, and connect to the database in the RXC account:
   ```
   sqlplus rxc/password
   ```
5. Run the `rxcdbinit.sql` script to pin the database packages:
   ```
   start rxcdbinit.sql
   ```

If you are continuing the installation, note that you perform the next task in this environment.

### 4.6.3 Set Up Disconnected Replication (Optional)

Do the following only if you plan to use disconnected replication.

#### 4.6.3.1 Check Tablespace Size

Installing Oracle Clinical creates the RXC_DISC_REP user account to manage disconnected replication. DISC_REP_DATA is the default tablespace for RXC_DISC_REP.

If you use disconnected replication:
1. Increase the size of the DISC_REP_DATA tablespace to fit the amount of replicated data.
   For more information about disconnected replication, see the Oracle Clinical Administrator’s Guide.

4.6.3.2 Create a Wallet Credential for the RXC_DISC_REP Database User

The system stores these credentials in the same Wallet as the one created for OCPSUB.

1. Log in as opapps.

2. Set environment variables.
   ```
   set p1=database_connect_string
   set p2=52
   opa_setup
   ```

3. Create an alias for the disconnected replication wallet alias in tnsnames.ora. The disconnected replication wallet alias is the name of the database appended with: _disc.
   For example, if the database name is ny123x, the tnsnames entry would look something like:
   ```
   ny123x, ny123x_disc, ny123x.world, ny123x.domain.com = (DESCRIPTION=
   (ADDRESS=(PROTOCOL=tcp)(HOST=example.us.company.com)(PORT=1124))
   (CONNECT_DATA=(service=ny123x))
   ```
   See Section 2.4.2, "Modify the tnsnames.ora File on the Database Server".

4. For the disconnected replication wallet alias, enter tnsping wallet_alias to test that it returns success. For example:
   ```
   tnsping ny123x_disc
   ```

5. Create the credentials for the disconnected replication wallet alias and account.
   ```
   mkstore -wrl %walletpath% -createCredential wallet_alias rxc_disc_rep rxc_disc_rep_password
   ```

4.6.3.3 Test Wallet Connection for RXC_DISC_REP

1. Set tns_admin:
   ```
   set TNS_ADMIN=%walletpath%
   ```

2. For the disconnected replication wallet alias run sqlplus /@wallet_alias. For example:
   ```
   sqlplus /@ny123x_disc
   ```
   The connection should be a success.

3. Run show user
   This should display the rxc_disc_rep user.

4.6.3.4 Add Reference Codelist Value

In the OCL_STATE reference codelist:
1. Add a value called DISC_REP_WALLET. See the Oracle Clinical Administrator’s Guide for more information.

2. Enter the wallet_alias you just created as the long value.

### 4.6.4 Consider Implementing Partitioning

1. Partition the Oracle Clinical RESPONSES table, which contains all patient data entered for all studies in an Oracle Clinical installation.

   See the Oracle Clinical Administrator’s Guide for more information.

### 4.7 Set Up Parameterized Submissions

The Parameterized Submission process (PSUB) schedules and runs jobs, reports, and batch processing for Oracle Clinical. In order to support using Oracle Real Application Clusters (RAC), the implementation of PSUB changed in Oracle Clinical 5.0. See the 5.0.1 Installation Guide for more information.

You must start one PSUB service for each Oracle Clinical database on the same server as the database.

- Section 4.7.1, “Create Directories and Enter Values in OCL_STATE Local Reference Codelist”
- Section 4.7.2, "Enable Users to Submit PSUB Jobs"
- Section 4.7.3, "Set Up Active Directory"
- Section 4.7.4, "Start the PSUB Service"
- Section 4.7.5, "Customize the PSUB Service (Optional)"
- Section 4.7.6, "Test the PSUB Installation"

#### 4.7.1 Create Directories and Enter Values in OCL_STATE Local Reference Codelist

1. Create several directories on the PSUB server.

2. Enter paths of the new directories in the OCL_STATE local reference codelist, with a few related values.

   See the “Setting Up Batch Job File Viewing” section of the “Setting Up File and Image Viewing” chapter of the Oracle Clinical Administrator’s Guide for more information.

   **Note:** See Chapter 5, "Integrate SAS (Optional)" for information about new OCL_STATE settings related to SAS configuration.

#### 4.7.2 Enable Users to Submit PSUB Jobs

Beginning in Release 5.0, PSUB users no longer need:

- their own OS account
- a user name beginning with OPS$
- their own directory for PSUB outputs

**New Users**

To add new users:
1. Use the ocl_add_user.sql script, indicating which new users need to run PSUB jobs.
   See the Oracle Clinical Administrator’s Guide for more information.

Existing Users
If you are upgrading from a pre-5.0 version of Oracle Clinical, to give users who need to run PSUB jobs access to the opapps account:
1. Use the migration script oclupg50migrateusers.sql.
   See the Oracle Clinical Administrator’s Guide for more information.

PSUB Administrator User
You can give a user the role RXC_VWJOBS (new in 5.0) to allow him or her to:
- View all users’ jobs
- View the output from those jobs.
- Stop any job.

The following scripts can grant this role to a user:
- ocl_add_user—Use this script for new users.
- ocl_grant_revoke_rxc_vwjobs.sql—Use this script for existing users. (This script can also be used to revoke the role.)

See the Oracle Clinical Administrator’s Guide for more information.

4.7.3 Set Up Active Directory
If you are running PSUB on a Windows server that is a primary domain controller running Active Directory:
1. Add the PSUB account (typically opapps) to the domain.
2. Reassign the following domain user privileges to the PSUB account, through the domain controller security policy and the domain security policy:
   - Load and unload device drivers
   - Act as part of operating system
   - Increase Quotas
   - Log on as a Service
   - Replace a process-level token

4.7.4 Start the PSUB Service
The Installer automatically installs the PSUB service on the database server. You must start it using the following instructions:

Instructions for stopping PSUB manually are included in the Oracle Clinical Administrator’s Guide.

To start the PSUB service manually on Windows:
1. Log in as opapps. (You set up the PSUB service to start as the opapps user, but in Windows you can start the service when logged on as another user.)
2. Set the PSUB service parameters:
a. In the Start menu, navigate to Administrative Tools, then Services.

b. From the list of services in the Services dialog box, double-click the name of the database for this service. It is in this form:

PSUB Service database

c. Enter values for the Log On parameters:

database code_environment [verbose | noverbose] value-of-RXC_ROOT
wallet_alias

For example: prod 52 verbose c:\opapps\oc\52 <wallet_alias>

where prod is the connect string for the database instance to which the PSUB service connects;

where 52 is the name of the code environment;

where wallet_alias is the name of the Wallet specified during installation.

---

3. Click Start.

4. Exit from the Services dialog box.

5. Check the PSUB service log file in <RXC_ROOT>\log for any warning or error messages.

4.7.5 Customize the PSUB Service (Optional)

1. Customize the PSUB service as follows:

   - **Automatic Startup** — By default, the PSUB service does not start automatically when you restart a server computer. However, you can configure the PSUB service to start automatically.

   - **Job Numbering** — You can change Oracle Clinical's default job numbering algorithm.

   For more information about managing and customizing the PSUB service, see the Oracle Clinical Administrator's Guide.

4.7.6 Test the PSUB Installation

To test your PSUB installation:

1. Open Oracle Clinical.

2. Submit a 3GL job such as Batch Validation or a PL/SQL job such as Study Unfreeze.

3. Verify that Oracle Clinical creates the log and output files by clicking on the View log and View output buttons.

   If you encounter problems or errors, review the messages in the PSUB log files created in the following directory:

   %RXC_ROOT%\log
This chapter includes:

- Set Up SAS Data Extract
- Install SAS on a UNIX Computer
- Install SAS on a Windows Computer

Oracle Clinical 5.2 supports the following configurations with SAS statistics application:

- SAS and Oracle Clinical database server on the same UNIX or Windows computer.
- SAS on a separate UNIX or Windows computer from Oracle Clinical within an intranet.

**Note:** If the Oracle Clinical database server is installed on Windows, SAS must also be installed on Windows, even if it is on a separate machine.

For SAS to function with Oracle Clinical Data Extract, you must install these SAS components:

- Base SAS
- SAS/ACCESS

The SAS/ACCESS interface to Oracle requires Oracle SQL*NET on the computer where SAS is installed.

### 5.1 Set Up SAS Data Extract

Users need access to the opapps account to run Oracle Clinical SAS Data Extract jobs.

#### 5.1.1 Give Users Access to the opapps Account

The same setup is required for SAS users in Oracle Clinical as for PSUB users; see Section 3.7.2, "Enable Users to Submit PSUB Jobs" for UNIX and Section 4.7.2, "Enable Users to Submit PSUB Jobs" for Windows.

#### 5.1.2 Add the opapps Account to the oclsascr User Group
5.1.3 Give opapps Access to the Directory Specified in the RXC_SAS_VIEW Environment Variable

See the Oracle Clinical Administrator’s Guide for information.

5.1.4 Set Up SAS User Authentication and Set OCL_STATE Reference Codelist Values

1. Choose one of the following user authentication methods:
   - Oracle Wallet
   - SAS password encryption with a proxy user
2. Indicate your choice in the OCL_STATE local reference codelist along with other SAS-related settings. By default the value is set to Oracle Wallet.

See the Oracle Clinical Administrator’s Guide for more information.

5.2 Install SAS on a UNIX Computer

This section contains:
- Section 5.2.1, "Modify SAS 9.4 and opa_settings on UNIX"
- Section 5.2.2, "Install SAS on the Same UNIX Computer as Oracle Clinical"
- Section 5.2.3, "Install SAS on a Different UNIX Computer from Oracle Clinical"

5.2.1 Modify SAS 9.4 and opa_settings on UNIX

Oracle Clinical supports SAS 9.4. You can validate your Oracle Clinical installation, and then upgrade to SAS 9.4 later. The SAS/ACCESS Interface to Oracle requires Oracle SQL*NET on the computer with the SAS software installation.

Follow these instructions on the SAS server—whether SAS is on the same computer or a different one from Oracle Clinical.

5.2.1.1 Prepare the SAS Template File

Make the following modifications to the SAS template file:
1. Copy the SAS template file from $OPA_HOME/oc/52/tools to $OPA_HOME/bin.
2. Open the SAS file in a text editor and find this text string:
   <path_to_SAS_executable>
3. Replace the string with the actual SAS executable path; for example:
   /root/SAS94/SASFoundation/9.4/sas $*
4. Save your work.

5.2.1.2 Additional Modifications for Oracle Solaris

This section describes Oracle Solaris-specific installation issues.
**LD_LIBRARY_PATH**

On Oracle Solaris, in previous releases of Oracle Clinical and versions of SAS before 8.2, you had to configure a script in OPA_HOME/bin that intercepted the SAS command to set some additional environment variables. The script then called the actual SAS executable. In Oracle Clinical, the SAS script file includes a step that points to the 32-bit libraries.

**SAS/ACCESS Error with Oracle Database 11g**

Using Oracle Database 11g may cause an error with SAS/ACCESS to Oracle. When using SAS/ACCESS to Oracle’s SQL Pass Through Facility or Libname engine, you may receive an error similar to this one:

```
error: ld.so.1 sas: fatal: libclntsh.so.9.0:
    open failed: no such file or directory
```

To work around this problem:

1. Create a link from libclntsh.so.11.0 to libclntsh.so.9.0.

   ```bash
   ln -s libclntsh.so.12.0 libclntsh.so.9.0
   ```

---

**5.2.2 Install SAS on the Same UNIX Computer as Oracle Clinical**

Oracle recommends installing SAS on the same server computer as the Oracle Clinical database server installation, following instructions in this section.

**5.2.2.1 Set REMOTE_OS_AUTHENT to FALSE**

1. Verify that the REMOTE_OS_AUTHENT initialization parameter is set to FALSE for the Oracle Clinical database instance in the init.ora file.

   ```ini
   REMOTE_OS_AUTHENT=FALSE
   ```

**5.2.2.2 Set Up a SAS Connection**

You can set up a SAS connection to the Oracle database in two ways—using Oracle Wallet or SAS encryption. The Oracle Clinical Installer sets the SAS_CONNECTION value in the OCL_STATE reference codelist to ORACLE_WALLET.

**5.2.2.2.1 Oracle Wallet**

This is the default option. The SAS connection is set up automatically.

**5.2.2.2.2 SAS Encryption**

Manually set SAS_ENCRYPTION as the SAS_CONNECTION long value in the OCL_STATE local reference codelist. In addition:

1. Log in to the database as system user and create the sas_proxy_user database account:

   ```sql
   create user sas_proxy_user identified by <password>;
   ```

2. Grant proxy connection for each database user account who needs to submit SAS Data Extract jobs:

   ```sql
   alter user <oc user> grant connection through sas_proxy_user
   ```

   OR
Run the script `ocl_grant_revoke_sas_proxy_user.sql` in the install directory to grant or revoke user connections through proxy account `sas_proxy_user`.

3. Log in to the PSUB server as `RXC_SAS_VIEW` owner and set the environment:
   - C shell:
     ```
     opa_setup database_name code_environment
     ```
   - Bourne shell:
     ```
     p1 = database_name
     p2 = code_environment
     . opa_setup
     ```

4. Run the command:
   ```
   cd $RXC_SAS_VIEW
   ```

5. Create a temporary SAS file named `pwd.sas` to contain the password for the `sas_proxy_user` account:
   ```
   filename pwfile 'sas_proxy_password_encoded_file';
   proc pwencode in='password' out=pwfile method=sas002;
   run;
   ```

6. Run the file created in Step 4 to encrypt the file. This creates the `sas_proxy_password_encoded_file` which stores the encrypted password of the `sas_proxy_user` db user (where `pwd.sas` is the name of the temporary file you created):
   - In UNIX:
     ```
     sas pwd.sas
     ```
   - In Windows:
     ```
     sas pwd.sas -sysin
     ```

7. Remove the file created in Step 4.

8. Run the SAS files.

### 5.2.3 Install SAS on a Different UNIX Computer from Oracle Clinical

Oracle recommends installing SAS on the same UNIX server computer as the Oracle Clinical database server installation.

If you choose to install SAS on a UNIX server computer **different from** that of the Oracle Clinical database server installation, it must be on the same intranet and you need to set up a connection to SAS.

#### 5.2.3.1 Establish the Connection to SAS on a Different Computer

To set up SAS on a different UNIX server computer:

---

**Note:** The following procedure uses secure shell (ssh) to establish the connection to SAS.

---

#### 5.2.3.1.1 NFS

---
1. Use Network File System (NFS) protocol to make the directory on the Oracle Clinical server pointed to by the $RXC_USER /sas_view visible to the SAS server.

2. Export this directory with write privileges because the SAS scripts generated by Oracle Clinical produce SAS view descriptors that are created in this directory tree.

---

**Note:** By default, the $RXC_USER environment variable is the opapps home directory.

---

### 5.2.3.1.2 Create opapps on the SAS Server

1. Create the opapps UNIX user account on the SAS server.

2. Create a group for opapps and put it in the group.

3. Link `/etc/group` with `/etc/logingroup` on the SAS server if it is not the primary group for opapps.

### 5.2.3.1.3 Check init.ora

1. Open the init.ora file.

2. Verify that the `REMOTE_OS_AUTHENT` initialization parameter is set to FALSE for the Oracle Clinical database instance in the init.ora file:

   ```
   REMOTE_OS_AUTHENT=FALSE
   ```

   See Table 2–3, "Required and Recommended Initialization Values in the init.ora File" for more information.

### 5.2.3.1.4 Create a Shell Script

Create a shell script that forces a "SAS" invocation on the Oracle Clinical database server to run as a remote shell on the SAS server that invokes the SAS engine, passing it the name of the SAS file:

1. Create the shell script on the Oracle Clinical database server in a publicly visible directory, such as opapps/bin.

2. Name the script `sas`.

3. Set the protection mode to 755.

4. Insert code lines into the SAS file.

   ```
   #!/bin/sh
   RXC_LOG1=log_path_on_the_SAS_server
   SASDIR=`dirname $3`
   FILENAME=`basename $2`
   LOGNAME=$RXC_LOG1$FILENAME
   ssh server_name /bin/sh -c ". .profile;setenv
   TNS_ADMIN $HOME ;setenv ORACLE_HOME
   oracle_home_on_sas_server ;cd $SASDIR ;
   path_to_sas_script_on_SAS_server -log $LOGNAME $3 $4 $5 $6 
   ```

   Where:
   - RXC_LOG1 is the path of the log directory in the SAS server
   - SASDIR is the directory RXC_SAS_VIEW where SAS view is created and folder is NFS mounted; comes as input
5.2.3.2 Set Up SAS Security on a Different Computer

You can set up a SAS connection to the Oracle database in two ways—using Oracle Wallet or SAS encryption. The Oracle Clinical Installer sets the SAS_CONNECTION value in the OCL_STATE reference codelist to ORACLE_WALLET.

5.2.3.2.1 Oracle Wallet

This is the default option. You do not need to change the OCL_STATE reference codelist SAS_CONNECTION value, but you must enter the SAS server as the REMOTE_SAS_SERV value in OCL_STATE. See the Oracle Clinical Administrator’s Guide for information.

And, on the SAS server:

1. Create an opapps account in the same way you did on database server with default shell C Shell. See Section 3.1.2, "Create the opapps Account and Add It to Groups".

2. Log on as opapps.

3. Set the environment variables in .cshrc so you can connect to the database using SQL*Plus.

4. Set up the Oracle Wallet on the SAS server. See Section 6.10.1.1, "Create an Oracle Wallet and Generate a Certificate Request" You may use the same Wallet password that you used during Oracle Clinical installation or a different one:

   mkstore -wl wallet_location -create -nologo

   Example wallet location: /home/opapps/wallet

5. Enter your password, then enter it again.

6. Add OCPSUB credentials:

   mkstore -wl wallet_location -createCredential db_connect_string OCPSUB

7. Enter information as follows at the prompts:

   ■ Enter your secret password: Enter the OCPSUB password.
   ■ Re-enter your secret password: Re-enter the OCPSUB password.
   ■ Enter wallet password: Enter the Wallet password created above.
8. Create sqlnet.ora in opapps home. Specify the Wallet path. For example:

```
WALLET_LOCATION=(SOURCE = (METHOD = FILE) (METHOD_DATA = (DIRECTORY = /pharm/home/opapps/520000/wallet)))
SQLNET.WALLET_OVERRIDE = TRUE
```

where /pharm/home/opapps/520000/wallet is the wallet path

9. In the opapps home, add the following in .cshrc:

```
setenv TNS_ADMIN $HOME
```

10. Test the Wallet connection:

   a. Open another telnet/putty session of SAS server and log in as opapps.
   b. Try connecting. It should not require specifying a password.

```
sqlplus /@db_connect_string
sql>
```

You should see the OCPSUB user.

5.2.3.2 SAS Encryption

To set up a SAS connection using SAS encryption, follow instructions in Section 5.2.2.2, "SAS Encryption".

5.2.3.3 Configure Private and Public Keys for Using SSH with SAS

If you are installing SAS on a different server on an intranet, do the following to establish an SSH connection from the PSUB server to the SAS server.

**Oracle Clinical DB Server**

Perform the following tasks on the Oracle Clinical UNIX database server computer:

1. Log in to the Oracle Clinical UNIX database server computer as the opapps user.

2. Use ssh-keygen to create a password-less set of identity keys:

```
ssh-keygen -t rsa -N ''
```

   The system prompts for the file into which you want to save the set of identity keys.

   a. Press Return to accept the default location. This process creates two files in the user’s home directory:

   - `~/.ssh/id_rsa` This file contains the private key that represents your identity on that particular machine. Note that the private key is neither world nor group readable. You should never transfer the private key from the machine or change its modes.
   - `~/.ssh/id_rsa.pub` This file contains the public key, which is world readable. The ssh program and other programs can use the public key to encrypt messages that only you can decrypt using the private key. The `-N ''` argument to the ssh-keygen command specifies that no passwords are associated with the public keys.

3. Transport the file id_rsa.pub to a location on the SAS Server (for example, `/tmp`) using a secure method as defined by the policies of your organization.

**SAS Server**
Perform the following tasks on the SAS Server computer:

1. Log in to the SAS Server computer as opapps.

2. In the home directory Create the .ssh directory if it does not exist, and set the permission to 700:
   
   mkdir .ssh
   chmod 700 .ssh
   cd ~/.ssh

3. Append the contents of the id_rsa.pub file in the /tmp directory to the authorized_keys file in the GUEST1_HOME/.ssh directory. For example:
   
   cat /tmp/id_rsa.pub >> authorized_keys

4. Change the permission of the authorized_keys file to 600:
   
   chmod 600 authorized_keys

Verify SSH
To test the ssh setup from the Oracle Clinical Database server:

1. Log in as opapps.

2. Enter:
   
   ssh sas_servername

   It should log you in to the Sas server without the password.

5.3 Install SAS on a Windows Computer
This section contains:

- Section 5.3.1, "Modify the opasettings.bat file"
- Section 5.3.2, "Install SAS on the Same Windows Computer as Oracle Clinical"
- Section 5.3.3, "Install SAS on a Different Windows Computer from Oracle Clinical"

5.3.1 Modify the opasettings.bat file
To use SAS 9.4 with Oracle Clinical on a Windows platform:

1. Navigate to the following directory:

   OPA_HOME\bin

2. Open the opa_settings.bat file.

3. Verify that the value of the SASORA environment variable is commented in opa_settings.bat (is preceded by REM).

   REM set SASORA=V9

5.3.2 Install SAS on the Same Windows Computer as Oracle Clinical
Oracle recommends installing SAS on the same Windows server computer as the Oracle Clinical database server installation.

If you choose to install SAS on a Windows server computer different from that of the Oracle Clinical database server installation, you must execute SAS jobs manually. However that configuration is also possible; see Section 5.3.3, "Install SAS on a
Different Windows Computer from Oracle Clinical”.

5.3.2.1 Set REMOTE_OS_AUTHENT to FALSE

1. Verify that the REMOTE_OS_AUTHENT initialization parameter is set to FALSE for the Oracle Clinical database instance in the init.ora file.

   See Section 2–3, "Required and Recommended Initialization Values in the init.ora File" for more information.

5.3.2.2 Set System Path

Ensure that the system path is updated with respect to SAS:

1. Log in to the Oracle Clinical database server as an administrator.
2. If the PSUB service is running, stop it.
3. In the command prompt, enter: `path`

   The system lists the set of directories in which the system will search for an executable file (in this case, the SAS executable). Among others, the following path must be present (in this example, SAS 9.4 is installed in C:\Program Files):

   ```
   C:\Program Files\SAS94\SharedFiles\Formats(32);C:\Program Files\SAS94\SASFoundation\9.4;
   ```

   If not present:
   a. Navigate to the Control Panel, then System and Security, then System.
   b. Select the Advanced tab, then Environment Variables.
   c. In the System Variable sections select PATH and click the Edit button.
   d. In the Variable Value box, append the correct value for your location, for example:

      ```
      ;C:\Program Files\SAS94\SharedFiles\Formats(32);C:\Program Files\SAS94\SASFoundation\9.4;
      ```

      to the existing value and click OK.
   e. Click OK in the Environment Variables dialog box.
   f. Click OK in the System Properties dialog box.
4. If PSUB should be running, start it.
5. Log out of the computer.

5.3.2.3 Edit the SAS Config File and Grant Permissions

To be able to run SAS on the SAS server of a Windows computer, the user must have full control directory permissions to the following folders located in the SAS software folder:

- SASWORK
- SASUSER

To accomplish this:
1. Log in to the Oracle Clinical database server as an administrator.
2. Using Windows Explorer, navigate to the following location (in this example SAS 9.4 is installed in C:\Program Files):
   C:\Program Files\SAS94\SASFoundation\9.4\nls\en

4. Comment the existing lines about -SASUSER and -WORK and add new ones, substituting any directory you choose for D:\sasuser and D:\sastemp, so that the section looks like this:

   /* Setup the default SAS System user profile folder */
   /*-SASUSER "?CSIDL_PERSONAL\My SAS Files\9.2"*/
   -SASUSER "D:\sasuser"

   /* Setup the default SAS System user work folder */
   /*-WORK "!TEMP\SAS Temporary Files"*/
   -WORK "D:\sastemp"

5. Save the file.

6. Create directories D:\sasuser and D:\sastemp or your preferred equivalents. (In Windows Explorer, right-click and then select New, then Folder.)

7. Give full control directory permissions on these directories to the oclsascr group.

5.3.3 Install SAS on a Different Windows Computer from Oracle Clinical

You can also install SAS on a computer other than the Oracle Clinical database. However, if you do you must execute SAS jobs manually after their generation from Oracle Clinical. See the Data Extract chapter in the Oracle Clinical Conducting a Study manual for more information.

5.3.3.1 Set REMOTE_OS_AUTHENT to TRUE

1. Verify that the REMOTE_OS_AUTHENT initialization parameter is set to TRUE for the Oracle Clinical database instance in the init.ora file. See Table 2–3, "Required and Recommended Initialization Values in the init.ora File" for more information.

5.3.3.2 Edit the SAS Config File and Grant Permissions

To be able to run SAS on the SAS server of a Windows computer, the user must have full control directory permissions to the following folders located in the SAS software folder:

- SASWORK
- SASUSER

To accomplish this:

1. Log in to the server as Administrator.

2. Using Windows Explorer, navigate to the following location (in this example SAS 9.4 is installed in C:\Program Files):
   C:\Program Files\SAS94\SASFoundation\9.4\nls\en

4. Comment the existing lines about -SASUSER and -WORK and add new ones, substituting any directory you choose for D:\sasuser and D:\sastemp, so that the section looks like this:

/* Setup the default SAS System user profile folder */
/*-SASUSER "?CSIDL_PERSONAL\My SAS Files\9.3"*/
-SASUSER "D:\sasuser"

/* Setup the default SAS System user work folder */
/*-WORK "!TEMP\SAS Temporary Files"*/
-WORK "D:\sastemp"

5. Save the file.

6. Create directories D:\sasuser and D:\sastemp or your preferred equivalents. (In Windows Explorer, right-click and then select New, then Folder.)

7. Give full control directory permissions on these directories to the oclsascr group.

5.3.3.3 Set Values in OCL_STATE Reference Codelist

1. Set the following values in the Oracle Clinical OCL_STATE reference codelist:
   - REMOTE_SASOUT
   - REMOTE_SAS_SERV
   - REMOTE_SAS_VIEW
Part II contains the following chapters. Follow instructions for either UNIX or Windows.

- Install and Configure the Oracle Application Tier
- Install the Oracle Clinical Front End
- Install the Oracle Clinical Reports Server
Install and Configure the Oracle Application Tier

This chapter describes how to install Oracle Application Server, which includes the Oracle Fusion Middleware Infrastructure Software, Oracle Forms Server and the Oracle Reports Server, and Oracle WebLogic Server.

This chapter includes:

- Before You Start
- Gather Required Information
- Install Adobe Reader
- Install Oracle Java Development Kit
- Install Oracle WebLogic Server 12.2.1.2
- Install the Oracle Fusion Middleware Infrastructure Software
- Install the Oracle Forms and Reports Servers
- Create the Repository Creation Utility
- Configure the FRDomain
- Enable SSL Between a Browser and Oracle HTTP Server
- Apply Patches on the Application Server
- Modify the tnsnames.ora File on the Application Server
- Configure Firewall on the Application Tier
- Test Connectivity to Databases for Forms and Reports Servers
- Restart the Computer

6.1 Before You Start

6.1.1 Identify a Single Account to Perform All Application Tier Installation Tasks

1. Install all application tier components using the same user account.

   The account must have administrator privileges on the server computer.
6.1.2 Get a CA Certificate for HTTPS

To support HTTPS:

1. Request a certificate from a Certificate Authority (CA) vendor, such as Thawte, Entrust, or Verisign.
   a. Generate an encoded plain text certificate request file. See Section 6.10.1.1, “Create an Oracle Wallet and Generate a Certificate Request” for more information.
   b. Email the certificate request file to the CA vendor.
      The vendor will sign the file, and send you a Trusted Certificate and a User Certificate. Allow some time for the certificates to be issued.
2. Import the certificate into the Oracle Wallet for the Oracle Application Server.

**Note:** If your intention is to install an environment that will never be taken into production, you can skip this step and create a self-signed demo certificate for testing purposes; see Section 6.10.2, "Enable SSL Between a Browser and Oracle HTTP Server With Self Signing".

6.1.3 Shared Directory

If you have multiple Oracle Clinical Forms and/or Reports Server computers:

1. Select a shared directory to be accessible from all servers for storing report output and logs.
2. Map the shared directory as a network drive of same name in all the servers.

6.1.4 Permanent IP Address

1. Make sure every computer on which either the Oracle Clinical Forms or Reports Server is installed has a permanent IP address.

6.2 Gather Required Information

Have the following information ready.

**Install the Oracle WebLogic Server**
- Home directory path; for example:
  
  C:\Oracle\Middleware\Oracle_Home
- Email address to receive security updates specific to your installation
- My Oracle Support password if you wish to receive the security updates through My Oracle Support

**Install the Oracle Fusion Middleware Infrastructure Software**
- Home directory path; for example:
  
  C:\Oracle\Middleware\Oracle_Home
- Email address to receive security updates specific to your installation
My Oracle Support password if you wish to receive the security updates through My Oracle Support

**Install the Oracle Forms and Reports Servers**
Home directory path; for example:
C:\Oracle\Middleware\Oracle_Home

**Create the Repository Creation Utility**
- Database details:
  - Server.Domain; for example:
    servername.your_company.com
  - Port number
  - Database service name
  - Database administrator username and password
- RCU Schema password

**Configure the FRDomain**
- Domain home path; for example:
  C:\Oracle\Middleware\user_projects\domains\FRDomain
- Application location; for example:
  C:\Oracle\Middleware\user_projects\applications\FRDomain
- WebLogic Domain administration username and password
- RCU Database connection:
  - DBMS/Service name
  - Server.Domain; for example:
    servername.your_company.com
  - Port number
  - Schema owner name and password
- Node Manager credentials: Username and password
- Oracle HTTP Server details:
  - Administrator host’s IP address
  - Administrator port number
  - Listen address
  - Listen port number
  - SSL listen port number
  - Server name

### 6.3 Install Adobe Reader
If you have not already downloaded Adobe Reader, following instructions in Section 1.6.6, "Download Adobe Reader", do so now.
1. Install Adobe Reader on the Reports Server and on client computers.

6.4 Install Oracle Java Development Kit

To install Oracle Java Development Kit (JDK):

1. If you have not already done so, follow instructions in Section 1.6.4, "Download Oracle Java Development Kit".

2. Follow instructions in the release notes to apply the patch.

---

**Note:** Do not use the default download location. By default, the download directory is `C:\Program Files\java\jdk`. "Program Files" includes a space, which can cause problems. Oracle recommends specifying a directory with no spaces in the name.

In addition, the directory name must have no more than 8 characters; for example, `C:\app\java\jdk`.

---

3. Make a note of the directory in which you install JDK. You will need it when you install WebLogic Server.

6.5 Install Oracle WebLogic Server 12.2.1.2

1. In the staging area where you downloaded the media pack (see Section 1.6, "Download the Software") locate the directory where you downloaded Oracle WebLogic Server 12.2.1.2 Generic and Coherence and extract the WebLogic Server .zip file (`PartNumber.zip`) if you have not already done so.

2. Log in as the user you selected in Section 6.1.1, "Identify a Single Account to Perform All Application Tier Installation Tasks".

3. Install Oracle WebLogic Server using a Generic Package installer—This type of installer is a .jar file; `fmw_12.2.1.2.0_wls.jar`.

   The complete documentation set for Oracle WebLogic Server 12.2.1.2 is available at: http://docs.oracle.com/middleware/12212/wls/index.html.

   You can accept most default values, with the exceptions noted below.

---

**Note:** You can change the default value of the `middleware_home` directory, which is `C:\Oracle\Middleware`, if you want, but some code examples in this guide use that value to make it easier to copy and paste, so remember to change these if you change the value.

You must NOT change the names for any of the middleware home’s subdirectories, including `wlserver` and `oracle_common`. 
Choose the "WebLogic Server" Install Type

1. Select WebLogic Server.

Security Updates

1. Specify whether you want to register the product installation with My Oracle Support.

   If you register, Oracle Support emails you immediately of any security updates that are specific to your installation.

2. Follow instructions on the screen to register or to reject the option.

Note: Even if you accept this option, you should check My Oracle Support for quarterly Oracle Critical Patch Update (CPU) security patches certified for use with Oracle Clinical.

Note: Continue to click Next until you are finished. After the Installation Summary, the processing may take a few minutes. Deselect the Automatically Launch Configuration Wizard check box and click Finish to complete the 12c WebLogic Server installation.

6.6 Install the Oracle Fusion Middleware Infrastructure Software

1. In the staging area where you downloaded the media pack (see Section 1.6, "Download the Software") locate the directory where you downloaded the Oracle Fusion Middleware Infrastructure Software and extract the .zip file (PartNumber.zip) if you have not already done so.

2. Log in as the user you selected in Section 6.1.1, "Identify a Single Account to Perform All Application Tier Installation Tasks".

3. Install the Oracle Fusion Middleware Infrastructure Software using a Generic Package installer—This type of installer is a .jar file; fmw_12.2.1.2.0_infrastructure.jar.

Note: Use the same install directory that you specified when you installed WebLogic Server in Section 6.5, "Install Oracle WebLogic Server 12.2.1.2".

Note: Make sure you have installed Visual C++ in Microsoft Visual Studio 2012 (x64 distributed). This is required for Oracle WebLogic Server 12c (12.2.1.2) and Oracle Forms and Reports 12c (12.2.1.2) Servers to invoke Data Capture API methods from custom clients.

Note: Even if you accept this option, you should check My Oracle Support for quarterly Oracle Critical Patch Update (CPU) security patches certified for use with Oracle Clinical.

Note: Even if you accept this option, you should check My Oracle Support for quarterly Oracle Critical Patch Update (CPU) security patches certified for use with Oracle Clinical.

Note: Even if you accept this option, you should check My Oracle Support for quarterly Oracle Critical Patch Update (CPU) security patches certified for use with Oracle Clinical.

Note: Even if you accept this option, you should check My Oracle Support for quarterly Oracle Critical Patch Update (CPU) security patches certified for use with Oracle Clinical.

Note: Even if you accept this option, you should check My Oracle Support for quarterly Oracle Critical Patch Update (CPU) security patches certified for use with Oracle Clinical.

Note: Even if you accept this option, you should check My Oracle Support for quarterly Oracle Critical Patch Update (CPU) security patches certified for use with Oracle Clinical.

Note: Even if you accept this option, you should check My Oracle Support for quarterly Oracle Critical Patch Update (CPU) security patches certified for use with Oracle Clinical.

For instructions, see Oracle® Fusion Middleware Installing and Configuring Oracle WebLogic Server and Coherence for Release 12.2.1.2, at https://docs.oracle.com/middleware/12212/lcm/WLSIG/GUID-2ACCSAA7-8904-4
6.7 Install the Oracle Forms and Reports Servers

1. In the staging area where you downloaded the media pack (see Section 1.6, "Download the Software") locate the directory where you downloaded Oracle Forms and Reports 12c (12.2.1.2) for Microsoft Windows (64-bit) and extract the .zip file (PartNumber.zip) if you have not already done so.

2. Log in as the user you selected in Section 6.1.1, "Identify a Single Account to Perform All Application Tier Installation Tasks".

3. Install the Oracle Forms and Reports 12c (12.2.1.2) using a Generic Package installer—This type of installer is an .exe file; setup_fmw_12.2.1.2.0_fr_win64.exe. When asked, to choose an installation type, select **Forms and Reports Deployment**.

   **Note:** Use the same install directory that you specified when you installed WebLogic Server in Section 6.5, "Install Oracle WebLogic Server 12.2.1.2".

6.8 Create the Repository Creation Utility

For this task, you need the following database server details:

- **Host name**
- **Port**
- **Service name**
- **Password for the SYS account**

For instructions, see Oracle® Fusion Middleware Installing Oracle Forms and Reports for Release 12.2.1.2, at https://docs.oracle.com/middleware/12212/formsandreports/install-fnr/GUID-EBBA8709-F563-469C-9D2F-F308AF4E60C5.htm#FRINS429. In this link, read the first step as "Run FMW_HOME/oracle_common/bin/rcu.bat."

You can accept most default values, with the exception noted below.

**Select Components**

1. Select the option **Oracle Platform Security Services**.

2. Enter the prefix name for the domains in the following format:

   `servernameFR`

**Schema Password**

1. Provide a schema password and make note of the schema name and password because they are required to configure the FRDomain.
6.9 Configure the FRDomain

Make sure you type FRDomain (case-sensitive) in the desired domain home path.

You can accept most default values, with the exception noted below.

Templates
1. Select the check box for the following templates:
   - Oracle Reports Server - 12.2.1
   - Oracle Reports Bridge - 12.2.1
   - Oracle Reports Application - 12.2.1
   - Oracle Reports Tools - 12.2.1
   - Oracle HTTP Server - Collacated - 12.2.1.2.0
   - Oracle Forms - 12.2.1.2.0
   - Oracle Enterprise Manager - 12.2.1.2.0

Add Administrator Account
1. Provide a password for the WebLogic user account and make note of this password because it is required to install Oracle Clinical.

Domain Mode and JDK
1. Select the Production option under Domain Mode.

Database Configuration Type
1. Provide the Repository Creation Utility schema name that you defined in Section 6.8, “Create the Repository Creation Utility” and add _STB to this name. For example, if the schema name you defined was OCRDCDEV, provide OCRDCDEV_STB.
2. Provide the schema password that you defined in Section 6.8, "Create the Repository Creation Utility”.
3. Click Get RCU Configuration to continue.

Advanced Configuration
1. Select all check boxes.

Administration Server
1. Select the Enable SSL check box.

Node Manager
1. Define the Node Manager username and password and make note of them because they are required to install Oracle Clinical.

Managed Servers
1. Select the Enable SSL check box for all managed servers.
Assign Servers to Machines
1. Move AdminServer from the Servers list to the Machines list.

System Components
1. Click Add to add the OHS component.
   a. For System Component, specify ohs1.
   b. For the Component Type, select OHS.

OHS Server
1. For Listen Address, specify the machine name, including the domain.
2. Change the Listen Port value to 80.
3. Change the SSL Listen Port value to 443.

Domain Frontend Host
1. Copy the URL from the Plain field and paste it in the SSL field.
2. In the SSL field, change http to https.
3. Select the SSL as the default option.

Assign System Components
1. Move ohs1 from the System Component list to the Machines list.

6.10 Enable SSL Between a Browser and Oracle HTTP Server

Create the following SSL (HTTP Secure Socket Layer) configuration: from users’ browsers, HTTPS to Oracle HTTP Server (Web proxy), then HTTP to Oracle WebLogic Server.

Follow instructions in one of the following sections:

- Section 6.10.1, "Enable SSL Between a Browser and Oracle HTTP Server Using a Certificate Authority"
- Section 6.10.2, "Enable SSL Between a Browser and Oracle HTTP Server With Self Signing"—This may be useful if you want to set up HTTPS with a demo certificate for internal testing purposes.

6.10.1 Enable SSL Between a Browser and Oracle HTTP Server Using a Certificate Authority

The following basic steps are required:

- Create an Oracle Wallet and Generate a Certificate Request
- Add the User Certificate and Trusted Certificate to an Oracle Wallet
- Edit the Oracle HTTP Server Configuration File

An Oracle Wallet is a container that stores your credentials, such as certificates, trusted certificates, certificate requests, and private keys.

The Oracle Clinical Installer automatically enables traffic from Oracle HTTP Server to Oracle WebLogic Server.
6.10.1.1 Create an Oracle Wallet and Generate a Certificate Request

To create an Oracle Wallet:

1. Create an Oracle Wallet:
   https://docs.oracle.com/middleware/12212/lcm/ASADM/GUID-2D2FEFFA-FF02-4ABA-B1A4-C7FCADCEE743.htm#ASADM10256

2. Generate a Certificate Request:
   https://docs.oracle.com/middleware/12212/lcm/ASADM/GUID-2D2FEFFA-FF02-4ABA-B1A4-C7FCADCEE743.htm#GUID-70174F92-035D-4829-9DB8-8118964BFA9D

6.10.1.2 Obtain Trusted Certificate and User Certificate from Certificate Authority

Note: Certificate signed using MD5 algorithm is no longer supported in Oracle HTTP Server (12.2.1.0.2). You must get the certificate signed using Secure Hashing Algorithm 2 (SHA-2).

1. Obtain the certificates from the Certificate Authority as described in Section 6.1.2, "Get a CA Certificate for HTTPS”.
   Depending on the Certificate Authority, you will need to send either the certificate request file generated in the previous section or you will need to copy and paste the text in that file.

6.10.1.3 Add the User Certificate and Trusted Certificate to an Oracle Wallet

For information, see
https://docs.oracle.com/middleware/12212/lcm/ASADM/GUID-2D2FEFFA-FF02-4ABA-B1A4-C7FCADCEE743.htm#GUID-70174F92-035D-4829-9DB8-8118964BFA9D

6.10.1.4 Edit the Oracle HTTP Server Configuration File

WebLogic Server installation creates a default, unsigned SSL wallet file for OHS. Its location is specified in the configuration file (ssl.conf) loaded at startup from the 

1. Make a backup copy of ssl.conf, which is located where Fusion Middleware is installed in %ORACLE_HOME%:

   %ORACLE_HOME%\user_projects\domains\FRDomain\config\fmwconfig\components\OHS\ohs1

   %ORACLE_HOME%\user_projects\domains\FRDomain\config\fmwconfig\components\OHS\instances\ohs1

2. Open ssl.conf in a text editor.

3. Find the string #Path to the wallet and comment out the default location that follows it.

   SSLWallet  $(ORACLE_INSTANCE)/config/$(COMPONENT_TYPE)/$(COMPONENT_NAME)/keystores/default
4. Replace the above string (in bold) with the path to the directory you created:

   SSLWallet %ORACLE_HOME%/user_projects/domains/FRDomain/config/fmwconfig/components/OHS/ohs1/keystores

5. Make sure the port for SSL is 443.
   To change the port to 443, change the following lines:

   Listen existing port
   <VirtualHost *:existing port>

   to:

   Listen 443
   <VirtualHost *:443>

6. Stop and start Oracle HTTP Server (OHS) to load the configuration change:
   a. To stop OHS:

      %ORACLE_HOME%/user/projects/domains/FRDomain/bin/stopComponent ohss1

   b. To start OHS:

      %ORACLE_HOME%/user_projects/domains/FRDomain/bin/startComponent ohss1

   Note: ohss1 is the name of OHS component provided while configuring FRDomain.
   %ORACLE_HOME% is the location of installed FMW.

7. Test that you can connect from a browser to your virtual host in HTTPS URL:

   https://host.your_company_domain

6.10.2 Enable SSL Between a Browser and Oracle HTTP Server With Self Signing

   For more information, see How To Configure SSL Between the Apache Web Server Proxy Plug-in And WebLogic Server Using Self Signed Wallets on My Oracle Support (Doc ID 1384737.1).

6.10.2.1 Edit the Oracle HTTP Server Configuration File

   WebLogic Server installation creates a default, unsigned SSL wallet file for OHS. Its location is specified in the configuration file (ssl.conf) loaded at startup from the oracle_instance\config\OHS\ohs1 directory.

   1. Make a backup copy of ssl.conf, which is located where Fusion Middleware is installed in %ORACLE_HOME%:

      %ORACLE_HOME%/user_projects/domains/FRDomain/config/fmwconfig/components/OHS/ohs1

      %ORACLE_HOME%/user_projects/domains/FRDomain/config/fmwconfig/components/OHS/instances/ohs1

   2. Open ssl.conf in a text editor.
3. Find the string #Path to the wallet and comment out the default location that follows it.

   `SSLWallet $(ORACLE_INSTANCE)/config/${COMPONENT_TYPE}/$({COMPONENT_NAME})/keystores/default`

4. Replace the above string (in bold) with the path to the directory you created:

   `SSLWallet %ORACLE_HOME%/user_projects/domains/FRDomain/config/fmwconfig/components/OHS/ohs1/keystores`

5. Make sure the port for SSL is 443.

   To change the port to 443, change the following lines:

   ```
   Listen existing port
   <VirtualHost *:existing port>
   
   to:
   
   Listen 443
   <VirtualHost *:443>
   ```

6. Stop and start Oracle HTTP Server (OHS) to load the configuration change:

   a. To stop OHS:

   ```
   %ORACLE_HOME%/user_projects/domains/FRDomain/bin/stopComponent ohss1
   ```

   b. To start OHS:

   ```
   %ORACLE_HOME%/user_projects/domains/FRDomain/bin/startComponent ohss1
   ```

   **Note:** `ohss1` is the name of OHS component provided while configuring FRDomain.

   `%ORACLE_HOME%` is the location of installed FMW.

7. Test that you can connect from a browser to your virtual host in HTTPS URL:

   `https://host.your_company_domain`

### 6.11 Apply Patches on the Application Server

Apply the following patches:

- Oracle Java Database Connectivity (patches 19028811 and 21043834)
- Oracle Reports Developer patch 22334822
- Oracle Forms patch 25143879
- Oracle Application Development Framework (ADF) bundle patch 12.2.1.2.170404 (patch 25495193). You must submit a Service Request (SR) for Oracle Clinical to request the password for this patch.

For instructions on applying a patch, see the corresponding Readme in My Oracle Support.
6.12 Modify the tnsnames.ora File on the Application Server

1. Go to the following tnsnames.ora location on the application server:
   
middleware_home\user_projects\domains\FRDomain\config\fmwconfig
2. Make sure the tnsnames.ora file has an entry for each database that matches the
database’s service name.

6.13 Configure Firewall on the Application Tier

If you have a firewall in your environment:

1. Open the following ports:
   - HTTP: 80 (or listen from httpd.conf)
   - HTTPS: 443 (or listen from ssl.conf)
   - RDC Onsite: 7221
   - Oracle Forms: 9001
   - Oracle Reports: 9002
   - Forms Admin Server: 7001
   - OPADomain Admin Server: 7101

6.14 Test Connectivity to Databases for Forms and Reports Servers

The Oracle Clinical database must be able to communicate with the application
servers.

6.14.1 Test the Connection from the Application Servers to the Database

To ensure that you can connect to the database from each application server:

1. Open a Microsoft DOS command window.
2. Use SQL*Plus to verify that you can connect to the database:
   
   sqlplus system/password@dbname

6.14.2 Troubleshoot Network Connection Issues

If the system returns a connection error, you must resolve this problem before
continuing with the installation of Oracle Clinical.

Possible causes of errors include:

- The computer is not physically connected to the network.
- One of the databases does not exist.
- The network protocol software is not loaded on the computer. Try a remote login
to check.
- The database or SQL*Net listener process is not started on the server.
- An incorrect connect string (service name), user ID, or password was entered.
The tnsnames.ora file is not present in the correct directory or does not contain the correct entries.

### 6.15 Restart the Computer

To ensure that all configuration changes for the Oracle Application Server are initialized:

1. Restart the computer before you continue with the next task in the installation process.
7.1 Gather Required Information

Have the following information ready to enter in the Installer screens:

- Home Details: Enter the following:
  - Name: OPA_HOME
  - Path: c:\opapps52
- Java home is located in version JDK 1.8.0_111 or higher.
- Your Oracle Fusion Middleware home directory; for example:
Gather Required Information

- C:\Oracle\Middleware\Oracle_Home
- Your OPA home directory; by default:
  C:\opapps52
- Cluster Configuration:
  - For configuring the standalone server:
    Select the No option (default value) in the Cluster Configuration screen.
  - For configuring the primary node cluster:
    Select the Yes option in the Cluster Configuration screen.
    To install the primary node, select the Yes option in the Node Configuration screen, and enter the secondary node server details:
    SecondaryNodeServer.Domain:Port Number; for example:
    secondary_node_server_name.your_company.com:port_number
  - For configuring the secondary node cluster:
    Select the Yes option in the Cluster Configuration screen.
    To install the secondary node, select the No option in the Node Configuration screen, and enter the primary OPADomain Admin Server details in the Admin Server Configuration screen.
- WebLogic username: The account created when you installed the WebLogic Server.
- WebLogic Server Password: Enter a new password or use the password you created when installing WebLogic Server.
- Admin Server configuration details:
  - Listen address
  - Listen port number
  - SSL listen port number
  - WebLogic username
  - WebLogic Server password
- Node Manager configuration details:
  - Listen address
  - Listen port number
  - WebLogic username
  - WebLogic Server password
- Oracle HTTP Server (OHS) port information:
  - Oracle HTTP Server SSL Listen Port number
  - Oracle HTTP Server Non-SSL Listen Port number
  To get the port numbers, check the httpd.conf and ssl.conf files located at ORACLE_HOME\user_
  projects\domains\FRDomain\config\fmwconfig\components\OHS\instances\ohns1.
  To check, go to the URL https://host:port with each port.
7.2 Restart Computer and Start All Servers and Services

Restart the computer and then start all servers and services:

1. Restart the computer.

2. Navigate to ORACLE_HOME\user_projects\domains\FRDomain\bin and run startNodeManager.cmd to start the FRDomain Node Manager.

3. Navigate to ORACLE_HOME\user_projects\domains\FRDomain\bin and run startWebLogic.cmd to start the FRDomain Admin Server.

4. Open a DOS prompt, and navigate to ORACLE_HOME\user_projects\domains\FRDomain\bin.

5. To start the Reports server, enter:
   
   startManagedWebLogic.cmd WLS_REPORTS

6. To start the Forms server, enter:

   startManagedWebLogic.cmd WLS_FORMS

7. To start OHS, enter:

   startComponent ohs1
7.3 Install the Oracle Clinical Front End Components

To install the Oracle Clinical Front End components:

1. Log in as the user you selected in Section 6.1.1, "Identify a Single Account to Perform All Application Tier Installation Tasks".

2. In the staging area, locate the directory where you downloaded and extracted Oracle Clinical (see Section 1.6, "Download the Software").

3. Run the following file as an administrator:

   Disk1\install\setup.exe

   The Installer opens to the Welcome screen.

   **Note:** See "Use the Silent Installer (Optional)" on page 1-13 for instructions for running the Installer as a file with pre-entered parameter values.

   **Note:** Although there is a button for deinstalling products on the Welcome screen, Oracle does not support using the Installer to deinstall Oracle Clinical.

4. In the Select a Product to Install page, select Oracle Clinical Front End 5.2.0.0.x.

5. Follow instructions on the installation screens, providing the information you have gathered in Section 7.1, "Gather Required Information".

6. **Summary:** The Summary screen provides information about the global settings, languages, space requirements, and products for this installation.

   Review the installation details to verify that they are correct. To revisit earlier installation screens and make changes, click **Back**.

   When you are ready to continue, click **Install**.

7. **Install:** The Installer copies the files onto the server, completes the setup and configuration tasks, and generates a log file of this installation.

   In addition, the Install screen displays the **location of the log file** that records the results of the installation activities for this session. Make a note of this information so you can view the log file after the installation.

8. **End of Installation:** The End of Installation screen reports whether the installation was successful. In addition, this screen lists the URLs that you use to access the Oracle Clinical, RDC Onsite, and RDC Administration applications.

   The Installer saves the URL information in the following file:

   \opapps52\log\setup.txt

   When you have finished reviewing the installation information, click **Exit**.

7.3.1 Review the Installation Log File

1. Review the generated installation log file, installActiontimestamp.log, located at:
install the oracle clinical front end

7.3.2 Restart the Computer

To ensure that all configuration changes are initialized:

1. Restart the computer before you continue with the next task in the installation process or before you install Oracle Clinical Reports Server.

7.3.3 Add WebLogic Data Sources If Using Multiple Databases

When you run the Oracle Clinical Installer, it sets up two data source connections, one for OPA and one for RDC Onsite, from the WebLogic Server (WLS) to the database you specify in the Installer screens.

If you plan to use more than one database:

1. Create a WLS data source for RDC for each additional database.

If you also are using TMS on multiple databases:

1. Create additional data sources for OPA and the TMS Browser.

The OPA connection is used for running TMS reports.

Instructions are in the Oracle Clinical Remote Data Capture Onsite Administrator’s Guide and the Oracle Thesaurus Management System User’s Guide.

7.4 Make the Java Runtime Environment Available for Download

The Oracle Clinical and RDC Administration applications require that Java Standard Edition (SE) Runtime Environment (JRE) exist on the user’s computer.

The Oracle Clinical Launch page is configured to prompt users to install JRE if it does not exist on their computer. To make this work, you need to download JRE into the OPA_HOME/html directory and rename it.

1. If you have not already done so, download the software following instructions in Section 1.6.5, "Download the Java Runtime Environment".

   See that section if you are using the 64-bit version.

2. Copy the downloaded file from the staging area to OPA_HOME/html.

3. Rename the file to sunjpi.exe.

If your users need to have both JRE 6 or 7 installed together with JRE 8 to support different versions of Oracle Clinical, check My Oracle Support article 1570682.1 for guidance.

7.5 Make the Oracle Clinical PDF Plug-in Available to Users

Users who use the DCI Forms graphic layout system for annotated CRFs need the Oracle Clinical PDF Plug-in.
1. Download the PDF plug-in from the link on the Oracle Clinical launch page.

   The link on the launch page resolves to:
   https://machine/opas52/rdc/opapdf.exe.

2. To make the plug-in available from the launch page, follow the instructions in the readme file, located in the opa_home\html\rdc directory, to install the PDF plug-in on the Forms server.

### 7.6 Share the RDC Directory for Image Access

As part of the Forms Server setup, you need to:

- Share the directory that stores image files used by the Reports Server for the Patient Data Report and the Oracle Clinical Graphic Layout Editor for DCI Form generation and migration. Name the directory rdc. Its default location is opapps52\html\rdc. Make the directory readable by the account that is used to start up the OPADomain and FRDomain Servers.
- Enable image browsing by setting values in the Windows system registry

#### 7.6.1 Sharing the Directory Across Multiple Computers

To share the image directory across multiple machines:

1. Log in to the Forms Server computer as a user with system administrator privileges.

2. Select a directory to store the images. The default location is <OPA_HOME>\html\rdc\dcif_images (for example C:\opapps52\html\rdc\dcif_images) but you can select a different location.

3. Select a directory in that path that you will share. The default directory is <OPA_HOME>\html\rdc (opapps52\html\rdc).

4. Share that directory. The default share name is rdc.

5. Make the directory readable by the account that is used to start up the OPADomain and FRDomain Admin Servers that use the Graphic Layout Editor.

6. Set the related Windows registry settings under \HKEY_LOCAL_MACHINE\SOFTWARE\ORACLE\KEY_OHnumber:

   - **RDC_DCIF_IMAGES**: Enter the UNC for the images directory. If you used the above defaults, the value would be:
     \forms_server_machine_name\rdc\dcif_images.
   - **RDC_DCIF_IMAGES_URL**: Enter the URL for the same location; for example:
     https://server_name.domain/opa52/rdc\dcif_images
   - **RDC_DCIF_IMAGES_BROWSE**: Set to Y.

**Note:** There are two Oracle keys with randomly generated numbers. Only one of them contains these settings.
■ RDC_DCIF_IMAGES_VALIDATE: Set to Y to enable image browsing or N to disable image browsing.

7. Put the images that should be available for the Patient Data Report and graphic layouts in the image directory; by default, dcif_images.

### 7.6.2 Setting Up the Image Directory on a Single Computer

If you have a single Forms server:

1. Perform the setup in Section 7.6.1 except skip sharing the directory (Step 4 above) and set the RDC_DCIF_IMAGES registry entry to the full path; for example, `C:\opapps52\html\rdc\dcif_images`.

### 7.7 Install and Configure JSpell Spell Checker SDK (Optional)

JSpell Spell Checker SDK is a third-party product from Page Scholar Inc ([http://www.jspell.com/](http://www.jspell.com/)). You can use it to check the spelling of text objects in Oracle Clinical DCM and DCI graphic layouts. You must purchase the product separately.

#### 7.7.1 Install JSpell on Oracle Application Server

To install the JSpell on Oracle Application Server:

1. If you have not already done so, download and extract JSpell, following instructions in Section 1.6.7, "Download JSpell (Optional)".

2. Identify the following files in the download directory:
   ■ jspellsdks.jar
   ■ jspellsdkn.jar
   ■ jspellsdk.war

3. Copy the two .jar files to the following location on the Oracle Application Server: `middleware_home\Oracle_FRHome1\forms\java`; for example: `C:\app\oracle\middleware\Oracle_FRHome1\forms\java`.

#### 7.7.2 Install the JSpell WAR File on the WebLogic Server

To install the JSpell .war file on the WebLogic server:

1. Copy the jspellsdk.war file to any location on the WebLogic server:

2. Extract the contents of jspellsdk.war to a folder named jspellsdk:

   ![Local Disk (C:) ▼ Temp ▼ jspell ▼ jspellsdk ▼ war_file ▼ jspellsdk ▼](image)

   This screenshot shows the JSpell path as `C:\Temp\jspell\jspellsdk\war_file\jspellsdk`.

3. Copy the jspellsdk folder to default Admin Server upload location: `middleware_home\user_projects\domains\OPADomain\servers\AdminServer\upload`. 
4. Also copy the jspellsdk folder to the Target Server stage location. *(middleware_home\user_projects\domains\OPADomain\servers\Server.Domain_OPA_1\stage)*

**Note:** If the stage directory does not already exist, create it.

5. Log in to the OPADomain Admin Server console at: http://server_namedomain:7101/console

6. Click the Deployments tab.

7. Click the Install button.

8. Check the Current Location. If it does not show the upload directory under AdminServer shown in Step 3 above, navigate to that location.

9. Select **jspellsdk (open directory)** and click Next.

10. Select **Install this deployment as an application** and click Next.

11. Select the Target Server **Managed Server Name under OPADomain** and click Next.

12. Under General, **What do you want to name this deployment?** enter jspellsdk in the Name: field.

13. Click Finish. In a moment the summary screen appears.

14. Restart the Managed Server of OPADomain process; see Section 7.10.7, "Start the Managed Server of OPADomain".

15. In the Summary of Deployments page in the OPADomain Admin Server console, check that jspellsdk is listed as Active and its Health value is OK.

### 7.7.3 Update the mod_wl_ohs.conf File for JSpell

By default JSpell uses port 7221. To make this work with either HTTP port 8888 or HTTPS port 443, edit mod_wl_ohs.conf and restart OHS.

To update the mod_wl_ohs.conf file:

1. Navigate to the following directory:

   middleware_home\Oracle_Home_FR\user_projects\domains\FRdomain\config\fmwconfig\components\OHS\instances\ohs1\moduleconf

2. Open the **fmod_wl_ohs.conf** file.

3. Add the following entry:

   <Location /jspellsdk>
     setHandler weblogic-handler
     webLogicHost localhost
     webLogicPort 7221
   </Location>

### 7.7.4 Stop and Start Oracle HTTP Server (OHS)

To restart OHS:

1. Open a DOS prompt.

2. To stop OHS enter:
Install and Configure JSpell Spell Checker SDK (Optional)

3. To start OHS enter:
   drive:\Oracle\Middleware\Oracle_Home_FR\user_projects\domains\FRdomain\bin\startComponent.cmd ohs1

7.7.5 Test the JSpell Servlet
   To test the JSpell Servlet:
   1. Open an internet browser.
   2. Enter the following URL:
      If the status page opens without error, JSpell is installed properly.

7.7.6 Update the formsweb.cfg File for JSpell
   To update the formsweb.cfg file:
   1. Navigate to the following directory:
      middleware_home\user_projects\domains\FRDomain\config\fmwconfig\servers\WLS\FORMS\applications\formsapp_12.2.1\config
   2. Open the formsweb.cfg file.
   3. Find the [opa52] text section.
   4. Append the following text string to the end of the archive parameter value:
      jspellsdks.jar,jspellsdkn.jar

7.7.7 Update the Windows System Registry for JSpell
   Update the Windows System Registry:
   1. Open the Windows System Registry Editor.
   2. Navigate to the following key:
      \HKEY_LOCAL_MACHINE\SOFTWARE\ORACLE\KEYnumber where the Oracle Clinical and OPA registry settings are.
   3. Add the following keys to the registry:
      ■ OPA_SPELL_ENABLED=Y
      ■ OPA_SPELL_LANGUAGE=English (US)
      ■ OPA_SPELL_URL= http://server_name/jspellsdk/servlet/JSpellServlet

   **Note:** In the above registry value, use either HTTP or HTTPS, depending on how your system is configured.

7.7.8 Test JSpell in the Graphic Layout Editor
   If you already have a study set up that uses the Graphic Layout Editor:
1. In Oracle Clinical, navigate to a study DCM.
2. From the Special menu, select Graphic Layout, then Edit. The Graphic Layout Editor opens.
3. From the Edit menu, select Spell Check Current.
4. If you receive a warning that the application is unsigned, click Run. The system displays the first misspelled word it finds and suggests alternative spellings.
5. To find another misspelled work, select Find Next Misspelling from the Edit menu.

If you do not already have such a study set up, see Oracle Clinical Creating a Study.

7.8 Verify and Fix Environment Variables

Check values and correct them if required.

7.8.1 Check Values

To check variable values:

1. Open a DOS prompt window.
2. Run:
   
   middleware_home\user_projects\domains\OPADomain\bin\setDomainEnv.cmd

For example:

   c:\oracle\middleware\user_projects\domains\OPADomain\bin\setDomainEnv.cmd

The script should run with no errors.
3. Inspect the value of JAVA_HOME:
   
   a. At the DOS command prompt, type: set JAVA_HOME. You should see the location where you installed JDK following instructions in Section 6.4, "Install Oracle Java Development Kit".
   
   b. Enter: dir %java_home%. You should see the directory specified as your JAVA_HOME containing a file called src.zip and four subdirectories: jre, lib, bin, and include.

   If you do not see these things, you will need to add them as directed in Section 7.8.2, "Correct Values".

   If JAVA_HOME contains any spaces or if any of the directories in its path are greater than 8 characters, you will need to correct them as directed in Section 7.8.2, "Correct Values".

4. Inspect the value of JAVA_VM. At the command prompt, enter: set JAVA_VM. You should see something like JAVA_VM=-server. If not, correct as directed in Section 7.8.2, "Correct Values".

7.8.2 Correct Values

To correct any of the above problems:

1. Navigate to middleware_home\Oracle_Home_FR\oracle_common\common\bin.
2. Back up commEnv.cmd.
3. Open commEnv.cmd in a text editor.
4. The first set command in the file, before any other set command, must identify the JAVA_HOME value. For example:
   
   ```
   set JAVA_HOME=c:\app\java\jdk
   ```
5. Find:
   
   ```
   set JAVA_VM=-client
   ```
   change it to:
   
   ```
   set JAVA_VM=-server
   ```
6. Close the DOS window and open a new one, then repeat the steps in Section 7.8.1, "Check Values".

### 7.9 Set Up Automatic Startup

It is possible to configure any Windows service to restart itself upon failure. These are standard options available when configuring a Windows service in the context of Windows Services Manager.

However, it is important to understand that Windows Services Manager only monitors the service’s JVM process. If the JVM process fails (shuts down), then Windows Services Manager will attempt to restart it. But there are some scenarios where the WebLogic Admin Server or Managed Server may go into an unhealthy or failed state while the JVM is still running. The Windows Service Manager will not know to restart the process in these cases, whereas if the Admin Server and Managed Server had been started using the WebLogic Node Manager, Node Manager would recognize such a state and restart the process.

Oracle recommends starting the Admin and Managed Servers through the Node Manager using python scripts and then configuring the Windows server to execute the python scripts at startup.

To start servers manually, see Section 7.10, "Start Servers Manually".

#### 7.9.1 Create boot.properties

Check if the boot.properties file exists in `Oracle_Home\user_projects\domains\FRDomain\servers\AdminServer\security`. If not, create it as a plain text file with the following contents:

```
username = weblogic_user_name
password = weblogic_user_password
```

By default, the WebLogic user name is `weblogic`. This user name and password will get encrypted after all services are started.

#### 7.9.2 Increase the Delay for Auto Start OPADomain and FRDomain

For the OPADomain and FRDomain to start successfully, depending on the performance in your environment, you may want to increase the delay by which OPADomain and FRDomain start to allow time for Node Manager to start first.

1. Go to `OPA_HOME\config\opa_setup_scripts\` directory.
2. Open the autostartfrdomain.cmd and autostartopadomain.cmd files.
3. In each file, find the line `PING 127.0.0.1 -n 30`, and change the value from 30 to 60.

4. Save and close the files.

### 7.9.3 Set Up Scripts to Execute Automatically at Machine Startup

Set up the Task Scheduler to start the FRDomain and OPADomain at startup:

1. From **Start**, then **Control Panel**, then **Administrative Tools**, open **Task Scheduler**.
2. Select **Create Basic Task** on the right side of the Task Scheduler.
3. Enter the following values:
   - **Name**: Oracle FRDomainNM Autostart
   - **Trigger**: When the computer starts
   - **Action**: Start a program
   - **Select**: `opa_home\config\opa_setup_scripts\autostartfrdomainNM.cmd`

4. Click **Next** and then **Finish** to complete creation of the scheduled task.

5. Find the task **Oracle Domain Autostart** under the Task Scheduler Library list. Right-click on the task you just created and select **Properties**.
6. On the **General** tab, select **Run whether user is logged on or not**.
7. Click **OK**.

8. When prompted, enter the user name and password.

9. Repeat the above steps for OPADomain Node Manager, OPADomain, and FRDomain, except for step 3 enter:
   - **For OPADomain Node Manager**:
     - **Name**: Oracle OPADomainNM Autostart
     - **Select**: `opa_home\config\opa_setup_scripts\autostartopadomainNM.cmd`
   - **For OPADomain**:
     - **Name**: Oracle OPADomainMS Autostart
     - **Select**: `opa_home\config\opa_setup_scripts\autostartOPADomain.cmd`
   - **For FRDomain**:
     - **Name**: Oracle FRDomainMS Autostart
     - **Select**: `opa_home\config\opa_setup_scripts\autostartfrdomain.cmd`

### 7.9.4 Test Autostart

To test:

1. Restart the computer.

2. Allow some time for the services to start.

3. Verify that these URLs work and you can log into application:
   - Oracle Clinical: `https://server.domain/opa52/launch.htm`
   - RDC: `https://server.domain/rdcadfsrnd/faces/Login`

If the URLs do not work after several minutes, check files in `opa_home\log`:
7.10 Start Servers Manually

If you have not set up automatic startup, you can start the required servers manually using the instructions in this section.

For information about these servers, see Section 1.2, "Architecture" and Section 1.3, "Network Topology".

7.10.1 Start the FRDomain Node Manager

To start the FRDomain Node Manager:

1. Go to ORACLE_HOME\user_projects\domains\FRDomain\bin and run startNodeManager.cmd.

7.10.2 Start the FRDomain Admin Server

The Oracle FRDomain Admin Server is located on the WebLogic Server domain that must be named FRDomain and must use port number 7001. You must start the Admin Server before you can start either the Oracle Forms Server or the Oracle Reports Server.

At the DOS command prompt, do the following:

1. Go to ORACLE_HOME\user_projects\domains\FRDomain\bin and run the startWebLogic.cmd.

---

**Note:** You cannot start it from the Admin Console because if the server is not running, the FRDomain Admin Console is not available.

---

7.10.3 Start the Forms Server

The Oracle Forms Server is located on the WebLogic Server domain that must be named FRDomain. You must start the FRDomain Admin Server before the Forms Server.

To start the Forms Server:

1. Open a DOS prompt, and run the following:

   ORACLE_HOME\user_projects\domains\FRDomain\bin\startManagedWeblogic WLS_FORMS

7.10.4 Start the Reports Server

The Oracle Reports Server is located on the WebLogic Server domain that must be named FRDomain. You must start the FRDomain Admin Server before the Reports Server.

To start the Reports Server:

1. Open a DOS prompt, and run the following:

   ORACLE_HOME\user_projects\domains\FRDomain\bin\startManagedWeblogic WLS_REPORTS
7.10.5 Start the OPADomain Node Manager

To start the OPADomain Node Manager:
1. Go to ORACLE_HOME\user_projects\domains\OpADomain\bin and run startNodeManager.cmd.

7.10.6 Start the OPADomain Admin Server

The Oracle OPADomain Admin Server is located on the WebLogic Server domain that the Installer names OPADomain. You must start the Admin Server before you can start the Managed Server of OPADomain.

To start the OPADomain Admin Server:
1. Go to ORACLE_HOME\user_projects\domains\OpADomain\bin and run startWebLogic.cmd.

**Note:** You cannot start from the Admin Console because if the server is not running, the OPADomain Admin Console is not available.

7.10.7 Start the Managed Server of OPADomain

The Managed Server of OPADomain is located on the WebLogic Server domain named OPADomain, which must use port number 7101. The Managed Server of OPADomain runs on Oracle ADF and supports RDC ONSite, the TMS Browser, and TMS reports. It also contains the database connections.

You must start the OPADomain Admin Server before the Managed Server of OPADomain.

To start the Managed Server of OPADomain, use the Admin Console at either:
- http://host:7101/console
- https://host/opaconsole (if configured)

7.10.8 Start the OHS Server

To start the OHS Server:
1. Go to ORACLE_HOME\user_projects\domains\FRDomain\bin and run the startComponent.cmd for ohs1.

7.11 Verify the Application Tier Installation

- Verify that these URLs work and you can log into the application:
  - https://host/opa52/launch.htm
  - https://host/rdcadfsrnd/faces/Login
- The OPA_XMLTEMP_HTTP registry URL is used to communicate from the database server to the application server in order to retrieve the Patient Data Report PDF template created as part of DCI form generation. Ensure that this port is open on any firewall that exists between the application server and database server.
To confirm if the port is open:

1. Follow instructions in My Oracle Support Article ID 1942747.1, 24311: 100501: Non-ORACLE Exception Error When Performing DCI Form Generation.

7.12 Stop Servers

You can stop each server either in the appropriate WLS Admin Console or from the Windows Start menu. These instructions are provided for your information; you do not need to do them now.

7.12.1 Stop the Forms Server

The Oracle Forms Server is located on the WebLogic Server domain that must be named FRDomain and must use port number 7001.

To stop the Forms Server, do one of the following:

- Open a DOS prompt, and run the following:
  ```
  ORACLE_HOME\user_projects\domains\FRDomain\bin\stopManagedWeblogic WLS/forms
  ```
- Use the Admin Console at http://host:7001/console.

**Note:** The Admin Console is available only if the Admin Server is running.

7.12.2 Stop the Reports Server

The Oracle Reports Server is located on the WebLogic Server domain that must be named FRDomain and must use port number 7001.

To stop the Reports Server, use the Admin Console at http://host:7001/console.

**Note:** The Admin Console is available only if the Admin Server is running.

7.12.3 Stop the FRDomain Admin Server

The Oracle FRDomain Admin Server is located on the WebLogic Server domain that must be named FRDomain and must use port number 7001.

To stop the Admin Server, do the following:

1. Go to ORACLE_HOME\user_projects\domains\FRDomain\bin and run stopWebLogic.cmd.

7.12.4 Stop the OPADomain Admin Server

The Oracle OPADomain Admin Server is located on the WebLogic Server domain that the Installer names OPADomain, and which must use port number 7101.

To stop the Admin Server:

1. Go to ORACLE_HOME\user_projects\domains\Opadomain\bin and run the stopWebLogic.cmd.
7.12.5 Stop the Managed Server of OPADomain

The Managed Server of OPADomain is located on the WebLogic Server domain named OPADomain, which must use port number 7101.

To stop the Managed Server of OPADomain, use the Admin Console at either:

- http://host:7101/console
- https://host/opaconsole (if configured)

**Note:** The Admin Console is available only if the Admin Server is running.
This chapter includes:

- Gather Required Information
- Restart the Computer
- Start the WebLogic FRDomain Admin Server
- Install the Oracle Clinical Reports Server
- Apply Oracle Reports Developer Patch 22334822
- Restart the Computer
- Set Up Reports Server and Forms Server for Access and File Viewing
- Add the Reports Server to the Database Reference Codelist
- Test the Reports Server Installation
- Set Up Automatic Startup of Services

You can choose to install a standalone Reports Server on a computer that does not have a Forms Server installation. You can also set up and use more than one Reports Server on a subnet where they can access each other. If you have any standalone Report Servers, all Forms and Report Servers must map a drive (the same drive for each server) to the shared directory on whichever server you choose; see Section 8.7, "Set Up Reports Server and Forms Server for Access and File Viewing".

If you are installing the Reports Server on the same computer as the Forms Server, you must install the Oracle Application Server technology stack and Oracle Clinical Front End before you install the Oracle Clinical Reports Server.

If you are installing a standalone Reports Server, you must first install the Oracle Application Server technology stack on the same server.

### 8.1 Gather Required Information

Have the following information ready to enter in the Installer screens:

- **Home Details**: Enter the following:
  - Name: OPA_HOME
  - Path: c:\opapps52
- Your Oracle Fusion Middleware home directory; for example:
  C:\Oracle\Middleware\Oracle_Home
- Your OPA home directory; for example:
C:\opapps52

- WebLogic username and password
- Report Server name
- Report Server output directory
- Adobe Reader location; for example:
  C:\Program Files (x86)\Adobe\Reader 11.0\Reader\AcroRd32.exe
- If you select to store the DCIF images locally, you need the local DCIF images directory. Else, you need the location of the shared directory.

8.2 Restart the Computer

1. Restart the computer.

8.3 Start the WebLogic FRDomain Admin Server

The WebLogic FRDomain Admin Server must be running when you install the Reports Server.

1. At the DOS command prompt, do one of the following:
   - Go to ORACLE_HOME\user_projects\domains\FRDomain\bin and run the startWebLogic.cmd.
   - Go to C:\ProgramData\Microsoft\Windows\Start Menu\Programs\Oracle FMW 12c Domain-FRDomain - 12.2.1.2.0 and run startWeblogicAdminServer.cmd.

2. Go to ORACLE_HOME\user_projects\domains\FRDomain\bin and run startNodeManager.cmd.

8.4 Install the Oracle Clinical Reports Server

Follow these instructions to deploy the Oracle Clinical Reports Server onto the application tier installation.

Note: If you run Patient Data Reports from a Reports Server, install Acrobat Reader before installing the Oracle Clinical Reports Server. The Installer detects the Reader’s location and automatically configures the registry.

To install the Oracle Clinical Reports Server components:

1. Log in as a user with system administrator privileges.

2. Navigate to the location where you downloaded and extracted the software in Section 1.6, "Download the Software".

3. Run the following file as an administrator:
   Disk1\install\setup.exe
   The Installer opens to the Welcome screen.
4. Select a Product to Install: Select Oracle Clinical Report Server 5.2.0.0.x.

5. Follow instructions on the installation screens, providing the information you have gathered in Section 8.1, "Gather Required Information".

6. Summary: The Summary screen provides information about the global settings, languages, space requirements, and products for this installation.

   Review the installation details to verify that they are correct. To revisit earlier installation screens and make changes, click Back.

   When you are ready to continue, click Install.

7. Install: The Installer copies the files onto the server, completes the setup and configuration tasks, and generates a log file of this installation.

   In addition, the Install screen displays the location of the log file that records the results of the installation activities for this session. Make a note of this information so you can view the log file after the installation.

8. End of Installation: The End of Installation screen reports whether the installation was successful. Please check the install logs if any errors are displayed.

   When you have finished reviewing the installation information, click Exit.

### 8.4.1 Review the Installation Log File

1. Review the generated installation log file, `installActions_timestamp.log`, for errors.

   This is the name of the most current log file. Earlier files have a timestamp appended to the name.

   Location: \Oracle\Inventory\logs

   For example:

   C:\Program Files\Oracle\Inventory\logs

   Work with Oracle Support, if necessary, to resolve any errors.

### 8.5 Apply Oracle Reports Developer Patch 22334822

Note: If you have already installed the Oracle Reports Developer Patch 22334822, ignore instructions in this section.
1. Download the patch from My Oracle Support.
2. To apply the patch, follow instructions in the patch release notes.

8.6 Restart the Computer

To ensure that all configuration changes are initialized:
1. Restart the computer before you continue with the next task in the installation process.

8.7 Set Up Reports Server and Forms Server for Access and File Viewing

Perform these Reports Server file viewing tasks once for each Oracle Clinical location.

8.7.1 Create the Reports Server Root Directory

If your Oracle Clinical environment includes Forms, Reports, or standalone File Server, select a single server where you will locate your Reports Server root directory. Otherwise, you will locate the Reports Server root directory on the single computer comprising your entire Oracle Clinical installation.

1. Create the Reports Server Root directory, making sure it is accessible by the user that started up the auto process; see Section 8.10, "Set Up Automatic Startup of Services".

**Note:** (Optional) Either now or later you can create a separate subdirectory for each user. However, users do not require direct access to the directory, and when viewing reports and log files from the application, users can see only the files they generated.

8.7.2 Share Each Reports Server Root Directory

If your Oracle Clinical environment includes multiple servers, you must make your Report Server root directory shareable on every server (Forms Server and Reports Server). Otherwise, all of your Oracle Clinical components and your Report Server root directory reside on a single computer, and you can skip the following steps.

1. Share the Reports Server root directory:
   a. Log on to Windows with an administrator account.
   b. Use Windows Explorer to select the Reports Server root directory.
   c. Right-click on the folder and select Properties.
   d. Click the Sharing tab.
   e. Select Shared This Folder, and then enter a value in the Share Name field.
   f. Click OK to save your changes.

2. On each Forms and Reports Server, map a drive to the shared directory.
   - You must use the same drive letter in each server’s mapping, for example ‘t’.
     This allows for a unified specification of the output directory in Oracle Clinical.
   - Even if the root directory is local to the Report Server, you must map a drive to allow for unified specification.
If you have already completed the Oracle Clinical Report Server installation and did not specify the correct Report Server root directory path, you can correct this by editing the rwsrver.conf file, directly, as follows:

```
<folderAccess>
<read>%OPA_HOME%\oc;%OPA_HOME%\*;%REPORTS_LOG_DIR%*/
<write>%OPA_HOME%\oc;%OPA_HOME%\*;%REPORTS_LOG_DIR%*/
</folderAccess>
```

### 8.7.3 Provide Oracle Clinical and RDC Users Access to the Root Directory

The Report Server root directory you created in the previous steps is the directory to specify for each user in Oracle Clinical. See the *Oracle Clinical Administrator’s Guide* on setting up user accounts, sections "Running the Add User Script" and "Maintaining Oracle User and Group User Accounts."

Provide the Oracle Clinical and RDC user access to the root directory on the Forms server. If the directory is local to the Oracle Clinical Forms server, specify the full directory path, including the user directory name, if any. Otherwise, the specification will be the mapped directory path, optionally with a user-specific subdirectory, for example: \t\<user_name>

### 8.7.4 Configure the Reports Server and Forms Server for DCI Form Generation

Both the Reports Server and the Oracle Clinical application server must have read/write access to the directory (\\rdc\temp) on the application server used to write temporary files during the DCI form generation process.

If you have any standalone Reports Servers, they must also have access to this directory.

**On the Oracle Clinical (Forms) Server:**

1. Confirm that the OUI has the specified values for the registry settings OPA_XMLTEMP_UNC and OPA_XMLTEMP_HTTP. During the installation, if you correctly indicated that there is a standalone report server, the value of the key(s) is set to:

   - **OPA_XMLTEMP_UNC:**
     
     C:\opapps52\html\rdc\temp

   - **OPA_XMLTEMP_HTTP:**
     
     https://<servername>:port/opa52/rdc/temp

2. To provide access to the remote Report Server, share the directory with the share name "RDC", providing read/write privileges to the domain/account on the report server.

**On the Reports Server used in DCI Form Generation**

1. By default, OUI will have updated RWSERVER.conf, specifying a value of %OPA_HOME%\oc;%OPA_HOME%\*;%REPORTS_LOG_DIR%\* under folder access.

   For example:

   ```
   <folderAccess>
   <read>%OPA_HOME%\oc;%OPA_HOME%\*;%REPORTS_LOG_DIR%*/
   <write>%OPA_HOME%\oc;%OPA_HOME%\*;%REPORTS_LOG_DIR%*/
   </folderAccess>
   ```
2. Map a drive to the RDC share on the application server.
3. Update the registry values. For example:
   - **OPA_XMLTEMP_UNC:**
     
     \z\rdc\temp
     
     The Z drive is mapped to \SharedAPPSERVERNAME\OPA_HOME\html.
   - **OPA_XMLTEMP_HTTP:**
     
     https://servername(same as Z drive):port/opa52/rdc/temp

If the only report server that you use to generate DCI forms co-exists on the same computer with the application server, there is no need to share the xmltemp directory and the path specification can be a simple local directory name, such as,

\C:\opa_home\html\rdc\temp

### 8.7.5 Configure the Reports Server to Send Output to a Printer

If you run the PDR, and you send the output directly to a printer:

1. Set value for the RDC_PDF_PRINT_TOOL key.

   The value assigned to the RDC_PDF_PRINT_TOOL key determines the location of the Adobe Acrobat or Reader executable, which allows users to run PDF patient data reports with "PRINTER" specified as the output type. This value must be in the form:

   
   
   "<acrobat-reader_path>* /t

   Note that the double-quotiation marks around the path and the "/t" switch are required. A typical example of a value is:

   "C:\Program Files\Adobe\Acrobat 6.0\Acrobat\Acrobat.exe" /t

   In addition to setting this key correctly, ensure that the Adobe Acrobat or Reader application is running on the Reports Server prior to users initiating this type of report job, that is, a job that specifies the output type as "PRINTER".

### 8.8 Add the Reports Server to the Database Reference Codelist

For each Reports Server that you install, you must edit reference codelists in Oracle Clinical to specify the values for the Reports Server.

To set the Reports Server values:

1. Start Oracle Clinical.
2. Navigate to Admin, Reference Codelist, and then Local Codelist to open the Maintain Reference Codelists form.
3. Query for REPORT_SERVER in the Name field.
4. Complete the Short Value and Long Value fields as follows:
   - For each Short Value listed in Table 8–1, enter in the Long Value field the connection string of the Reports Server that you want to use as the default for the specified function.
For each additional, non-default Reports Servers, add a row to the reference
codelist. Specify a unique name in the Short Value field and the connection
string in the Long Value field.

<table>
<thead>
<tr>
<th>Table 8–1</th>
<th>REPORT_SERVER Local Reference Codelist Values</th>
</tr>
</thead>
<tbody>
<tr>
<td>Short Value</td>
<td>Enter in Long Value Field</td>
</tr>
<tr>
<td>REPORT_SERVER</td>
<td>The connection string for the Reports Server you want to use as the default for Oracle Reports.</td>
</tr>
<tr>
<td>JOB_SET_SERVER</td>
<td>The connection string for the Reports Server you want to use as the default for job sets.</td>
</tr>
<tr>
<td>PSUB_SCHEDULER</td>
<td>The connection string for the Reports Server you want to use as the default for PSUB jobs.</td>
</tr>
</tbody>
</table>

5. Click Save.

### 8.9 Test the Reports Server Installation

To test that the Reports Server can create printouts and files:

1. Start Oracle Clinical.

3. Click the Reference Codelist Name field, and enter OCL_STATE.

4. Print the report:
   a. Click the Job Details button.
   b. Change the Output Type to PRINTER.
   c. Examine the printer’s path to see if it is correct.
   d. Click Submit Job. You receive a status prompt. Close the prompt to return to the Submission screen.
   e. Click Job Status to check the progress of your print job. Look for the printout from your printer.

5. Print the report to file:
   b. Click the Reference Codelist Name field, and enter OCL_STATE.
   c. Click Job Details.
   d. Change the Output Type to FILE.
   e. Click Submit Job. The system displays a status prompt. Close the prompt to return to the Submission screen.
   f. Click Job Status.
   g. Check its status in the Execution Status field.
   h. Click View Output. The system displays a path location prompt.
   i. Click OK. The Report Server processes the file and converts it to the selected format. If successful, the file then opens in a separate window.
8.10 Set Up Automatic Startup of Services

Oracle recommends setting up the server so that the Node Manager automatically restarts services when necessary. If you are installing this on a machine with the Oracle Clinical Front End, you will have done this as part of executing Section 7.9, "Set Up Automatic Startup".

- If this is a standalone reports server, follow the same instructions except, in script autostartfrdomainscript.py located in opa_home\config, comment out the following line:

```python
start ('WLS_FORMS')
```

- If you are not installing TMS, also comment out the following line in script autostartopadomainscript.py located in opa_home\config:

```python
domainName='OPADomain' domainDir='your_middleware_home/USER_P~1/domains/OPADomain' nmConnect(userConfigFile=configfile, userKeyFile=keyfile, nmPort=port, domainName=domainName, domainDir=domainDir, nmType='ssl') nmStart('Admin Server')
connect(userConfigFile=configfile, userKeyFile=keyfile) nmStart('Server.Domain_OPA_1')
```
Part III contains the following chapter.

- Set Up Clients
This chapter describes how to set up client computers in your Oracle Clinical/RDC Onsite installation.

This chapter includes:

- Configure Personal Firewall
- About Using Safari on an iPad
- Set Internet Options for Microsoft Internet Explorer
- Download Required Applications
- Map Network Drive for Image Browsing (Optional)
- Enable Report Generation from the Command Line (Optional)
- How to Log In

For client technical requirements, see Section 1.4, "Software Requirements".

### 9.1 Configure Personal Firewall

If the client computer has a personal firewall:

1. Disable the firewall or configure it for RDC to function correctly.
   
   See your firewall documentation or ask your system administrator for assistance.

### 9.2 About Using Safari on an iPad

On an iPad, which is supported for RDC Onsite, some functionality available on a personal computer using a mouse is not available, including:

- Right-click and double-click options.
- Selecting multiple records using Ctrl+click

### 9.3 Set Internet Options for Microsoft Internet Explorer

This section describes how to configure Internet Explorer on a client computer so you can run the Oracle Clinical, RDC Onsite, and RDC Administration applications.

### 9.3.1 Set Up for Proxy Usage on Fully Qualified Application Tier Names

You must configure your client proxy settings if one of the following conditions is true for your installation:
■ You connect to the application tier with its fully qualified name
   \(server\_name.domain\_name\).

■ You use proxies.

To configure your client proxy settings:

1. Start Internet Explorer.
2. Open the Tools menu, and then select Internet Options.
3. Click the Connections tab.
4. Click LAN settings to open the Local Area Network (LAN) Settings dialog box.
5. Select Use a proxy server for your LAN, and then click Advanced.
6. Define the Exceptions at the bottom of the panel.

   In the Do not use proxy server for addresses beginning with field, use the following format to enter the fully qualified name of each application server:
   \(server\_name.domain\_name\)

   For example, if the server name is sys63 and the domain name is mycompany.com, then you enter:
   sys63.mycompany.com

   If you are connecting to more than one application server, enter the fully qualified name of each server. Use the semicolon (;) to separate your entries.

9.3.2 Allow More Connections

By default, Internet Explorer allows only two connections at a time to the same server. However, RDC Onsite users need more, both when they are working in RDC Onsite and in order to connect to the application initially, when up to 5 connections are created and then all but one released.

To allow additional connections:

1. Follow instructions from Microsoft at http://support.microsoft.com/kb/282402#fixit4me.

   The problem description is about being unable to download only two files at a time, but the fixes described work for this issue as well.

9.3.3 Turn Off Compatibility View in Internet Explorer

RDC Onsite does not support the Compatibility View available on Internet Explorer 11. If the setting is enabled in the browser, when a user tries to access the RDC Onsite, he or she sees the following message: “The current compatibility setting is not supported.” There are several places to turn off Compatibility View:

■ In the IE Tools menu, toggle between turning Compatibility View on or off by clicking Compatibility View.

■ The above setting is overridden by those found in the Tools menu under Compatibility View Settings. Uncheck both: Display intranet sites in Compatibility View and Display all websites in Compatibility View

■ The Compatibility View icon:
appears in the address bar when it is turned on for the current website. Click the icon to turn it off.

### 9.4 Download Required Applications

This section describes how to download and install the following applications:

- Java Runtime Environment (JRE)
- Oracle Clinical PDF Plug-in
- Adobe Reader

Instructions for setting up downloads from the Oracle Clinical Launch page are included in Section 7.4, "Make the Java Runtime Environment Available for Download" and Section 7.5, "Make the Oracle Clinical PDF Plug-in Available to Users".

#### 9.4.1 Download the Java Runtime Environment

Oracle Clinical and RDC Administration require the Java Runtime Environment (JRE) version 8 (1.8.0.111 or above).

If you have older versions of JRE and do not need them, uninstall these versions before installing the new version. By uninstalling old versions, you avoid receiving the following message when starting an Oracle Health Sciences application:

The Application requires an earlier version of JRE. Do you want to continue?

To download and install the JRE onto a client:

1. Open a browser and enter the URL to open the Launch page for the Oracle Clinical application. For example:
   
   `https://server.domain:port/opa52/launch.htm`

2. Click Install JRE Plug-in on the Launch page.

3. Follow the on-screen instructions to download and install the JRE.

   During the installation, you must accept all prompts to accept signed jar files.

   The system downloads the JRE from your Forms Server. When you set up the Forms Server, you installed the latest version of the JRE. See Section 7.4, "Make the Java Runtime Environment Available for Download" for more information.

#### 9.4.2 Download the Oracle Clinical PDF Plug-in

To be able to generate annotated layouts in Oracle Clinical, you must install the PDF plug-in onto the client.

Oracle Clinical has two layout systems supporting data entry:

- **Character-based layouts** support Oracle Clinical data entry.
- **Graphic-based layouts** support RDC Onsite (HTML) data entry. In addition, graphic-based layouts support annotated CRFs and Patient Data Reports. The PDF Plug-in is required for graphic layouts.

---

**Note:** The PDF plug-in is not required for RDC Onsite data entry.

---

To download and install the Oracle Clinical PDF plug-in onto the client:
1. Open your browser and enter the URL to open the Launch page for the Oracle Clinical application. For example:
   https://computer_name.domain:port/opa52/launch.htm

2. Click Download PDF Plug-in on the Launch page.

3. Follow the on-screen instructions to download and install the plug-in.

   The system downloads the plug-in from your Forms Server. When you set up the Forms Server, you installed the latest version of the PDF plug-in. See Section 7.5, "Make the Oracle Clinical PDF Plug-in Available to Users" for more information.

9.4.3 Download Adobe Reader

Oracle Clinical and RDC support Adobe Reader 7.x or later, English versions. However, this requirement may change during the life of this document. Check My Oracle Support for the latest requirements.

To download the free Adobe Reader:
1. Go to the Adobe Corporation Web site:
   https://get.adobe.com/reader/
2. Follow the on-screen instructions to download the latest version of the Adobe Reader.

9.5 Map Network Drive for Image Browsing (Optional)

If you intend to use this client to design graphic CRFs, you can enable an image browsing feature to simplify inserting graphic images in your layouts. Instead of entering the exact path and file name into the Insert Image field, you can use the standard Windows Browse button.

You must first set up the Forms Server where you store your images. See Section 7.6, "Share the RDC Directory for Image Access" for details.

To enable image browsing, you must permanently map the Forms Server’s drive to this client:
1. Open My Computer.
2. Open the Tools menu, and then select Map Network Drive.
3. Enter the drive letter that you want to assign to this connection.
4. Enter the path of the folder you want to be able to access. Alternatively, you can click Browse to select the folder location.
5. Click Finish.

9.6 Enable Report Generation from the Command Line (Optional)

In the RDC Onsite application, you can generate Patient Data Reports (PDRs) and Blank Casebook Reports from the Reports page if you have the necessary privileges.

In addition, you can:
1. Configure your desktop to generate these reports from the MS-DOS command line.

   For information about how to configure the Desktop PDR to generate reports from the command line, see the Oracle Clinical Remote Data Capture Onsite
Administrator’s Guide. The same guide has information on embedding additional fonts in patient data reports.

Generating reports from the command line can be useful when producing electronic submissions for new drug applications (NDAs). Adding the commands to a batch file lets you generate many Patient Data Reports at once.

### 9.7 How to Log In

To log in to the Oracle Clinical, RDC Onsite, or the RDC Administration application:

1. Start Internet Explorer.
2. Enter the appropriate URL:

<table>
<thead>
<tr>
<th>Application</th>
<th>URL</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Clinical</td>
<td>https://computer_name.domain/opa52/launch.htm</td>
</tr>
<tr>
<td>RDC Onsite</td>
<td>https://computer_name.domain/rdcadfsrnd/faces/Login?</td>
</tr>
<tr>
<td>RDC Administration</td>
<td>https://computer_name.domain/opa52/rdcadmin.htm</td>
</tr>
<tr>
<td>RDC Administration (in Test Mode)</td>
<td>https://computer_name.domain/opa52/rdcadmint.htm</td>
</tr>
</tbody>
</table>

   where:
   - `computer_name` is the network name for the application server
   - `domain` is the network domain name for your organization

3. Click Login.
4. Enter your user name, your password, and the database name.
5. Click Connect to start the session.

**Note:** If the JRE is not present on this client, Oracle Clinical automatically starts to download the JRE when you click Login. Follow the on-screen instructions to download and install the JRE to the default location.
