This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate failsafe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

JavaFX 2.2.5 System Requirements

This document provides information about hardware and software system requirements for JavaFX 2.2.5.

This page contains the following topics:

- [Operating Systems and Browsers](#)
- [Java Platform](#)
- [Graphics Support](#)
- [JavaFX Media](#)

Operating Systems and Browsers

See *JavaFX 2.0 and above Certified System Configurations* for a list of operating systems and browsers that are compatible with JavaFX 2.2.5.

Java Platform

JavaFX 2.2.5 libraries are installed with JDK 7u11 for all supported operating systems. Note that Apple's Java SE implementation is not supported with JavaFX.

JavaFX 2.2.5 applications should be run with JRE 7u11. Mixing JavaFX applications with earlier versions of JRE 7 is not supported.

If you plan to use JDK 6 on Windows with a standalone JavaFX 2.2.5 installation, use the latest security release, JDK 6u39. For more information about standalone JavaFX installations for JDK 6, see JavaFX 2.2.5 Installation for Windows.

Graphics Support

For JavaFX applications to take advantage of the new hardware acceleration pipeline provided by JavaFX, your system must feature one of a wide range of GPUs currently available in the market. [Table 1–1](#) lists the graphics cards that have been tested with JavaFX. If your system does not support hardware acceleration, then JavaFX uses the Java2D software pipeline.

Table 1–1 Graphics Cards Support

Graphics Card	Supported Graphics Processing Units (GPUs)
NVIDIA	Mobile GPUs: GeForce 8M and 100M series or higher, NVS 2100M series or higher, and Mobility Quadro FX 300M series or higher Desktop GPUs: GeForce 8 and 100 series or higher Workstation GPUs: Quadro FX 300 series or higher

Table 1–1 (Cont.) Graphics Cards Support

Graphics Card	Supported Graphics Processing Units (GPUs)
ATI	Mobile GPUs: Mobility Radeon HD 3000, 4000, and 5000 series Desktop GPUs: Radeon HD 2400, 3000, 4000, 5000, and 6000 series
Intel	Mobile GPUs: GMA 4500MHD and GMA HD Desktop GPUs: GMA 4500 and GMA HD

To avoid rendering issues on Windows platforms, upgrade the ATI driver to Catalyst 11.09 or later.

JavaFX supports graphic hardware acceleration on any certified Mac OS X system. See *JavaFX 2.0 and above Certified System Configurations*.

On Linux platforms, graphic hardware acceleration is only supported for Nvidia cards (proprietary drivers only).

JavaFX Media

For Windows XP and Windows Vista, JavaFX Media requires that one of the following external modules be installed (by order of preference) to play AAC audio and H.264/AVC video:

- MainConcept H.264/AVC Pro Decoder Pack
- DivX Plus Codec Pack
- MainConcept Showcase (includes demo version codecs)

Note: HTTP Live Streaming is not supported on Windows XP.

For Windows 7, the pre-installed Microsoft AAC and H.264 DirectShow decoder filters are used by default. However, if the MainConcept H.264/AVC Pro Decoder Pack is installed on your system, then the first available AAC or H.264 decoder from the following list is used:

1. MainConcept
2. Microsoft (Windows 7 only)
3. DivX Plus
4. MainConcept trial version (demo codecs from Showcase)

If none of these decoders is available, AAC and H.264 decoding will fail.

VP6 video support does not require any third party modules.

For Linux platform, install the following: libavcodec52 and libavformat52 on Ubuntu Linux 10.04, 10.10, 11.04 or equivalent, or libavcodec53 and libavformat53 on Ubuntu Linux 11.10, 12.04 or equivalent. (Encoding type: AAC audio, MP3 audio, H.264 video, and HTTP Live Streaming.) Note that installing libavformat automatically causes libavcodec to be installed.
