Cause: An ampersand (&) appears in the SELECT statement by itself. The possible causes of this error include the following: Case 1: A lexical reference either left out the name of the column or parameter altogether or there is a space between the ampersand and the name of the column or parameter. Case 2: An ampersand was accidentally typed in the SELECT statement.

Action: Take the following actions to correct this error: If Case 1: Verify that the column or parameter name immediately follows the ampersand with no spaces in between. If Case 2: Delete the ampersand.

Cause: An invalid lexical reference appears in the SELECT statement. Lexical references can only be made to parameters or columns containing character data. The possible causes of this error include the following: Case 1: The wrong column or parameter was referenced. Case 2: The reference should be a bind reference, not a lexical reference. Case 3: The parameter or column referenced was created with a non-character data type.
Action: Take the following actions to correct this error: If Case 1: Change the name that follows the ampersand (&) so it references a parameter or column with a data type of Character. Level: 1
Type: ERROR
Impact: Other

REP-00306: The name {0} is not a valid parameter name.
Cause: In making reference to a parameter, an attempt was made to create a parameter with an invalid name. For a bind reference, a parameter definition is automatically created using the name specified in the bind parameter. In this case, Oracle Reports Builder could not create the parameter because the name supplied was not a valid name.
Action: Check the naming conventions for data model objects and rules for parameter names. Rename the parameter and change the name in the bind reference.

Level: 1

Case 2: An attempt was made to pass the value of a column to Forms Runtime or Graphics Runtime as a parameter, but the column's data type (for example, LONG, LONG RAW, ROWID) is not supported for that operation.
Action: Do not attempt to display or pass this column's value.

Level: 1
Type: ERROR

REP-00309: The specified database cannot connect after three attempts. Access denied.
Cause: Case 1: Some part of the logon string entered was incorrect. After three failed attempts, Oracle Reports Builder displays a dialog box with this message. Case 2: The NLS_LANG environment variable value may be invalid.
Action: Case 1: Accept the dialog box. Confirm the logon information with the system administrator, if necessary. Go back into Oracle Reports Builder and try connecting to Oracle again. If the problem persists, the system administrator may need to create a new Oracle logon. Case 2: Verify the NLS_LANG value is valid.

REP-01301: The data link creates a sibling of group {0} within a cross product.
   Cause: A data link was defined that created a sibling of a dimension group within
   a cross product group. No siblings of dimension groups are allowed within the
cross product.
   Action: Delete the sibling of the dimension group.

REP-01302: The cross product has two or more child groups.
   Cause: A cross product group has more than one child group. Only one child is
   allowed per cross product group.
   Action: Remove all but one of the child groups to the cross product group.

REP-01306: Summary column {0} has an invalid source.

Cause: An invalid source was specified for the summary column. A summary column's source must be from the same group as the summary column, or from a group below the summary column.

Level: 1
Type: ERROR
Impact: Other

REP-01307: Summary column {0} has an invalid product order.

Cause: The possible causes of this error include: Case 1: A summary exists that is not a running summary (that is, its Reset At is not Report), but its Product Order is not a subset of the source column's product order. The source column of the summary must be at least as frequent as the summary, which means that the summary's Product Order should be some subset of the source column's Product Order. Case 2: A running summary (that is, its Reset At is Report) exists with a Product Order that is not a prefix of the source column's Product Order. For example, if the source column's Product Order were A,B,C, then the summary column's Product Order would have to be either A (by itself) or A,B. The summary's Product Order could not be B,A.

Action: Take the following actions to correct this error: If Case 1: Change the Product Order of the summary such that it is a subset of its source column's Product Order. If Case 2: Change the Product Order of the summary such that it is a prefix of the Source column's Product Order.

REP-01308: Placeholder column {0} is not supported in a cross product.

Type: ERROR
Impact: Other

REP-01309: Report level summary {0} cannot be a percent of total.

Cause: A summary was created at the report-level (that is, a summary outside of all the groups in the data model) with a Function of % of Total. This Function makes no sense for a report-level summary because it will always be 100%.

Action: Delete the summary or move it into a group where it will make sense.

REP-01310: Boilerplate [0] references &{1} which is not a field.

Cause: A boilerplate object has a reference to a field that does not exist. It could be that the field being referenced was deleted or renamed and so this reference in the boilerplate object is now invalid.

Action: Depending on circumstances, remove the reference, replace it with a reference to another field, or create the field that it references.

REP-01311: Object [0] with page-dependent references have been changed to fixed sizing.

Cause: A field or boilerplate object has a reference to a page calculation or a total number of pages variable. (This is known as a forward reference.) Such layout objects must be fixed in size both horizontally and vertically.

Action: The layout object's Horizontal and Vertical Elasticity have been set to Fixed by Oracle Reports Builder. Check the output to ensure that the values are not being truncated. If they are, enlarge the layout object so that it is large enough to contain the values.

REP-01319: Implicit anchoring algorithm cannot uniquely identify the anchoring object {0}. Arbitrarily choosing {1}.
    Cause: The specified object (object1) is in the "push path" of two objects and it is equidistant from both objects. As a result, Oracle Reports Builder cannot use its normal criteria (shortest distance) to determine the implicit anchor. In the absence of its normal criteria, Oracle Reports Builder randomly creates an implicit anchor to the specified object (object2). Note that the implicit anchor may vary between runs of the report.
Action: To avoid the random creation of an implicit anchor, explicitly anchor the specified object (object1) to another object.

REP-01320: Program unit {0} references a column with invalid ID {1}.
Cause: A report was run containing invalid PL/SQL (for example, PL/SQL that did not compile). The PL/SQL source included a column reference that cannot be resolved.

Cause: A Page Break After was activated on an object that has no other objects anchored to it (implicitly or explicitly). In this case, Page Break After has no effect and is invalid. Notice that this is a warning, not an error message.
Action: Deactivate Page Break After for the object.

REP-01323: Output columns in format trigger {0} are not allowed.
Cause: In the format trigger for the specified object, an attempt was made to set the value of an Oracle Reports Builder column parameter. For example, the value of a column called COUNT1 can be used in a condition (for example, IF :COUNT1=10), but its value cannot be directly set in an assignment statement (for example, COUNT1=10).

REP-01340: Passed-in columns do not match report definition [0].

Cause: Another component (for example, Oracle Forms) passed a query to Oracle Reports Builder and there is a mismatch between the columns passed and the columns expected by Oracle Reports Builder. Possible causes of this error include: Case 1: Oracle Reports Builder was expecting more or fewer columns than the number that was actually passed by the calling application. Case 2: The parameter list of the calling application described a column differently than what Oracle Reports Builder expected. For example, if the report’s query selects a character column and the calling application assigns that column a date data type, this error is raised.

Action: Take the following actions to correct this error: If Case 1: Ensure that the calling application is passing the same number of columns that Oracle Reports Builder expects.
