Oracle® Fusion Middleware
Repository Creation Utility User's Guide
11g Release 1 (11.1.1.9.0)
E14259-16

April 2015
Documentation for database and system administrators that describes how to create database schemas for Oracle Fusion Middleware products.
## Contents

Preface ................................................................................................................................................................ vii

- Intended Audience ................................................................................................................................. vii
- Documentation Accessibility ................................................................................................................ vii
- Related Documents .................................................................................................................................. vii
- Conventions .............................................................................................................................................. vii

1 Repository Creation Utility Overview

### 1.1 RCU System and Database Requirements ................................................................. 1-1

#### 1.1.1 Supported Platforms ............................................................................................... 1-1

#### 1.1.2 Finding a Certified Database .................................................................................... 1-1

#### 1.1.3 Configuring Your Database .......................................................................................... 1-1

#### 1.1.4 Important Information for IBM DB2 Databases .................................................. 1-2

#### 1.1.5 Granting Roles and System Privileges on Oracle Databases .................................. 1-2

### 1.2 RCU Features .................................................................................................................. 1-2

#### 1.2.1 Creating Custom Schemas and Tablespaces ....................................................... 1-2

##### 1.2.1.1 Creating Schemas in Multiple Databases ..................................................... 1-2

##### 1.2.1.2 Using Custom Prefixes .................................................................................... 1-3

##### 1.2.1.3 Using Custom Prefixes in IBM DB2 Databases ........................................... 1-3

##### 1.2.1.4 What Happens When a Schema is Created? ............................................. 1-3

#### 1.2.2 Creating Schemas in a Multi-Domain Environment ........................................... 1-4

#### 1.2.3 Launching RCU with a Variety of Methods ............................................................. 1-4

##### 1.2.3.1 Launching RCU Locally .................................................................................. 1-5

##### 1.2.3.2 Launching RCU Remotely ............................................................................... 1-5

##### 1.2.3.3 Launching RCU in Silent Mode (Using the CLI) .......................................... 1-5

#### 1.2.4 Checking Global and Component Level Prerequisites .......................................... 1-5

#### 1.2.5 Integrating Components Using Declarative XML .................................................. 1-5

### 1.3 Using RCU with Java Access Bridge (Windows Only) ................................................ 1-5

#### 1.3.1 Install Java Access Bridge ......................................................................................... 1-5

#### 1.3.2 Configure RCU to Use Java Access Bridge ............................................................ 1-6

2 Obtaining and Running Repository Creation Utility

### 2.1 Before You Begin ............................................................................................................. 2-1

### 2.2 Required Schemas and Dependencies ........................................................................... 2-1

#### 2.2.1 Oracle SOA Suite Schemas ...................................................................................... 2-2

#### 2.2.2 Oracle WebCenter Portal Schemas ......................................................................... 2-2
3  Extending Repository Creation Utility to Configure Custom Application Repositories

3.1  RCU Integration Options ................................................................. 3-1
3.1.1  RCU JDBC Engine Compliant SQL*Plus Scripts .................. 3-1
3.1.2  Pure JDBC Scripts ................................................................. 3-2
3.1.3  SQL*Plus Scripts ................................................................. 3-2
3.1.4  External Processes ............................................................... 3-3
3.1.5  Java Code Using JavaAction ............................................... 3-3
3.2  RCU Configuration Files .............................................................. 3-4
3.2.1  XML DTDs Defined by RCU ................................................. 3-4
3.2.2  Component Descriptor Configuration File ......................... 3-4
3.2.3  Repository Configuration File ............................................. 3-6
3.2.4  Master List of Supported Components ............................. 3-6
3.2.5  Storage Attributes Configuration File ............................... 3-7
3.2.6  Component Repository Configuration File ......................... 3-8
3.2.7  Component List Configuration File ................................... 3-14
3.2.8  Soft-Prerequisite Support .................................................. 3-26
3.2.9  Default Tablespaces Configuration File ......................... 3-27
3.3  RCU Script Writing Guidelines ............................................... 3-27
3.3.1  Guidelines for RCU JDBC Engine Compliant SQL*Plus Scripts 3-28
3.3.2  Guidelines for Pure JDBC Scripts .................................. 3-28
3.3.3  Guidelines for SQL*Plus Scripts .................................. 3-29
3.3.4  Guidelines for SQL Server-Based Scripts ..................... 3-29

4  Running Repository Creation Utility from the Command Line

4.1  Command Line Syntax and Parameters .................................. 4-1
4.2  Using the -silent Command .................................................... 4-3
4.3  Using the -interactive Command ......................................... 4-4
4.4  Creating a Repository from the Command Line .................... 4-6
4.5  Dropping a Repository from the Command Line .................. 4-7
4.6  RCU Environment Variables .................................................. 4-7
A Repository Creation Utility Screens

A.1 Welcome........................................................................................................................ A-2
A.2 Create Repository.............................................................................................................. A-3
A.3 Drop Repository ................................................................................................................ A-4
A.4 Database Connection Details.......................................................................................... A-5
A.4.1 Specifying Connection Credentials for Oracle Databases and Oracle Databases with Edition-Based Redefinition A-6
A.4.2 Specification Connection Credentials for MySQL Databases ........................................ A-6
A.4.3 Specifying Connection Credentials for Microsoft SQL Server Databases .................. A-7
A.4.4 Specifying Connection Credentials for IBM DB2 Databases ........................................ A-7
A.5 Select Components (for Create Operation) ........................................................................ A-7
A.5.1 Creating Database Users for IBM DB2 Databases.......................................................... A-8
A.5.2 Creating Prefixes ............................................................................................................ A-9
A.5.3 Selecting Components and Dependencies ..................................................................... A-9
A.5.4 Specifying Custom Schema Names ................................................................................ A-9
A.5.5 Checking Schema Prerequisites .................................................................................... A-10
A.6 Select Components (for Drop Operation) ......................................................................... A-10
A.7 Schema Passwords ............................................................................................................ A-12
A.8 Custom Variables ............................................................................................................. A-14
A.8.1 Specifying Custom Variables for Master and Work Repository (ODI) ......................... A-14
A.8.2 Specifying Custom Variables for Oracle WebCenter Portal’s Activity Graph and Analytics A-15
A.9 Map Tablespaces ................................................................................................................ A-16
A.9.1 Default Tablespace Mappings ........................................................................................ A-17
A.9.2 Changing Default and Temporary Tablespaces .......................................................... A-17
A.9.3 Viewing and Changing Additional Tablespaces .......................................................... A-17
A.9.4 Managing Tablespaces and Datafiles ........................................................................... A-18
A.9.4.1 Adding, Modifying, and Removing Tablespaces ...................................................... A-19
A.9.4.2 Adding, Modifying, and Removing Datafiles ............................................................ A-20
A.10 Summary (for Create Operation) .................................................................................... A-22
A.11 Summary (for Drop Operation) ..................................................................................... A-23
A.12 Completion Summary (for Create Operation) ................................................................. A-25
A.13 Completion Summary (for Drop Operation) ................................................................... A-26

B Repository Creation Utility Schemas, IDs, and Tablespaces

C Troubleshooting Repository Creation Utility

C.1 General Troubleshooting Tips .......................................................................................... C-1
C.2 RCU Log Files .................................................................................................................. C-2
C.3 Finding Schemas in the Database ..................................................................................... C-3
C.4 Database Prerequisite Issues and Solutions ..................................................................... C-3
C.4.1 Enabling Transparent Data Encryption for Oracle Privileged Account Manager ... C-4

C.5 Need More Help? ............................................................................................................. C-5
Preface

Intended Audience

This guide is intended for users who are installing Oracle Fusion Middleware 11g Release 1 (11.1.1) products for the first time and are comfortable running some system administration operations, such as creating users and groups, adding users to groups, and installing operating system patches on the computer where Oracle Fusion Middleware 11g Release 1 (11.1.1) products will be installed. Users on UNIX systems need root access to run some scripts.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Related Documents

For additional information, see the following manuals:

- Installation Planning Guide
- Administrator’s Guide
- High Availability Guide

Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>boldface</td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td>Convention</td>
<td>Meaning</td>
</tr>
<tr>
<td>------------</td>
<td>---------</td>
</tr>
<tr>
<td>italic</td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td>monospace</td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Many of the Oracle Fusion Middleware components require the existence of schemas in a database prior to installation. These schemas are created and loaded in your database using the Repository Creation Utility (RCU).

This chapter contains the following content:

- Section 1.1, "RCU System and Database Requirements"
- Section 1.2, "RCU Features"
- Section 1.3, "Using RCU with Java Access Bridge (Windows Only)"

### 1.1 RCU System and Database Requirements

This section contains links to important information about supported platforms for RCU, certified databases, and database configuration information. Read this information carefully before you obtain and run RCU.

#### 1.1.1 Supported Platforms

To see the platforms on which you can run RCU, review the "RCU Supported Platforms" section in the Oracle Fusion Middleware System Requirements and Specifications document.

#### 1.1.2 Finding a Certified Database

For a list of certified databases that can be used with RCU:

1. Go to the Oracle Fusion Middleware Supported System Configurations page.
2. In the table, find the System Requirements and Supported Platforms for Oracle Fusion Middleware 11gR1 document, which is in .xls format.
3. Open the document, and go to the FMW on WLS - DB tab, which contains the database certifications.

#### 1.1.3 Configuring Your Database

Before you begin using RCU, review the following sections in the Oracle Fusion Middleware System Requirements and Specifications document:

- "RCU Privileges for System Packages"

This section contains important information about the privileges required on your database system packages in order for RCU to run without errors.
1.1.4 Important Information for IBM DB2 Databases

In addition to the typical space and configuration database requirements, IBM DB2 databases also have the following special requirements:

- On IBM DB2 databases running on Linux operating systems, there is a limitation with regards to the length of the schema names.
- One database operating system user must be created for each schema that is created in an IBM DB2 database.

For more information, refer to the "RCU Prerequisites for IBM DB2 Databases" section in the Oracle Fusion Middleware System Requirements and Specifications document.

1.1.5 Granting Roles and System Privileges on Oracle Databases

Creating schemas on Oracle databases may require that elevated permissions and privileges are granted. Schemas are created with certain roles, which grants them certain privileges on the database.

To further understand these roles and grants and the repercussions of revoking certain roles, refer to "Using Database Roles/Grants for Oracle Identity Manager Database" in Oracle Fusion Middleware Administrator’s Guide for Oracle Identity Manager.

1.2 RCU Features

Repository Creation Utility is a graphical and CLI-based tool used to create and manage Oracle Fusion Middleware database schemas.

Some key features of RCU are listed below:

- Creating Custom Schemas and Tablespaces
- Launching RCU with a Variety of Methods
- Checking Global and Component Level Prerequisites
- Integrating Components Using Declarative XML

1.2.1 Creating Custom Schemas and Tablespaces

RCU provides the flexibility to create custom schemas and tablespaces. You can choose to rename schemas, or change the tablespace allocation so that components can share a single or multiple tablespaces. In addition, auxiliary schemas can be mapped to additional tablespaces.

1.2.1.1 Creating Schemas in Multiple Databases

You can choose to create all the schemas in a single database or distribute them throughout multiple databases.
1.2.1.2 Using Custom Prefixes

You can use RCU to create multiple schemas of each component using custom prefixes. In this way, the schema is used to group related schemas together, which is necessary when creating schemas in an environment with multiple domains (see Section 1.2.2, “Creating Schemas in a Multi-Domain Environment”).

The prefix is prepended to and separated from the schema name with an underscore (_) character, as shown below:

dev_test_mds

The default prefix used by RCU is `DEV`; if `DEV` has already been used, then RCU will default to `DEV1`, then `DEV2`, and so on. Prefixes are used to create and organize logical groups of schemas. For example, you may want to create a test version of the Metadata Services (schema name `MDS`) called `TEST_MDS`; then, when ready for your production version, you can create a second version of the schema called `PROD_MDS`. Both `TEST_MDS` and `PROD_MDS` may reside on the same or separate databases.

---

Note: The Oracle Internet Directory (ODS) component cannot be prepended with a custom prefix; there can only be one repository for this component per database.

---

You are only allowed to use a prefix once per schema within a single database. For example, if you had a version of the Metadata Services schema called `DEV_MDS`, then you can not use the `DEV` prefix again to create another version of the Metadata Services schema (for example, `DEV_MDS2`).

If you want to create another version of the schema using the same prefix, you must first drop the existing schema and then create the schema again.

The mapping between the prefixes and schemas is maintained in `schema_version_registry`.

1.2.1.3 Using Custom Prefixes in IBM DB2 Databases

For important information regarding custom prefixes in IBM DB2 databases, refer to "Size Limit for Schema Prefixes" in the Oracle Fusion Middleware System Requirements and Specifications document.

1.2.1.4 What Happens When a Schema is Created?

The following sequence takes place when a schema is created with RCU:

1. Prior to the schema being created, RCU performs global and component level prerequisite checks to ensure that certain minimum requirements are met.
2. The schemas are created; the required tablespaces and data files are created.
3. The `schema_version_registry` table is updated so that the schema type is mapped to the actual schema name (for example, `TEST_MDS` might be mapped to the MDS Schema type).
4. The scripts for the various components are invoked; these scripts perform the following:
   a. Create the user and grant the required roles.
   b. Create the schema objects.
1.2.2 Creating Schemas in a Multi-Domain Environment

Schemas are grouped together using custom prefixes (see Section 1.2.1.2, "Using Custom Prefixes"). Each set of schemas can be used by a single domain only; in a multi-domain environment, you must create a separate set of schemas for each domain.

In Figure 1–1, two WebLogic domains are present with a single database. The servers configured in "WebLogic Domain 1" are for Oracle SOA Suite, and the corresponding schemas in the database have the "DEV1" prefix. The servers configured in "WebLogic Domain 2" are for Oracle WebCenter Spaces and the corresponding schemas in the database have the "DEV2" prefix.

Figure 1–1 Schema Creation on a single Database in a Multi-Domain Environment

It is also possible to create schemas on separate databases in a multi-domain environment, as shown in Figure 1–2.

Figure 1–2 Schema Creation on Multiple Databases in a Multi-Domain Environment

Note that in this case, both sets of schemas use the "DEV1" prefix, but because they are on separate machines there is no conflict.

1.2.3 Launching RCU with a Variety of Methods

RCU can be run locally (from the CD or download location) or remotely. In either case, both a graphical interface and command line (CLI) options are available.
1.2.3.1 Launching RCU Locally
In situations where the application administrator is not allowed to install components on the server, RCU can be started directly from the CD. The CD contains the extracted Oracle Client software and RCU uses SQLPLUS and other scripts and libraries from the CD to perform its operations.

When RCU is launched from the CD, log files are written to the user's TEMP directory.

If the administrator is allowed to install components, then RCU can be downloaded and the archive file can be extracted to a local directory.

1.2.3.2 Launching RCU Remotely
In situations where a database is not accessible locally for application administrators, RCU can be launched against a remote database. The SQLNET client is packaged with RCU to support this operation.

1.2.3.3 Launching RCU in Silent Mode (Using the CLI)
RCU provides a command line interface in situations where Xserver is not available or you have access to telnet terminals without display capabilities. The command line interface also allows you to embed RCU from command line scripts or with some Oracle Fusion Middleware components (for example, Enterprise Manager).

For more information using the CLI, see Chapter 4, "Running Repository Creation Utility from the Command Line".

1.2.4 Checking Global and Component Level Prerequisites
At runtime, RCU performs checks against both global and component level prerequisites. If a prerequisite is not met, RCU may issue a warning and allow the procedure to continue (soft stop), or will notify the user that a prerequisite must be met before the operation can continue (hard stop).

For more information about component level prerequisites see "Repository Creation Utility (RCU) Requirements" in the Oracle Fusion Middleware System Requirements and Specifications document.

1.2.5 Integrating Components Using Declarative XML
RCU provides extensibility with XML DTDs. Using these DTDs, component owners can integrate their components and prerequisites with RCU by providing a configuration file that adheres to the provided DTD.

For more information, refer to Chapter 3, "Extending Repository Creation Utility to Configure Custom Application Repositories".

1.3 Using RCU with Java Access Bridge (Windows Only)
Java Access Bridge enables assistive technologies, such as JAWS screen reader, to read Java applications running on the Windows platform. Assistive technologies can read Java-based interfaces, such as Oracle Universal Installer and Oracle Enterprise Manager.

1.3.1 Install Java Access Bridge
To install Java Access Bridge:

1. Download Java Access Bridge from the following URL:
2. Install Java Access Bridge.

3. Copy the `access-bridge.jar` and `jaccess-1_4.jar` from your installation location to the `jre\lib\ext` directory.

4. Copy the `WindowsAccessBridge.dll`, `JavaAccessBridge.dll`, and `JAWTAccessBridge.dll` files from your installation location to the `jre\bin` directory.

5. Copy the `accessibility.properties` file to the `jre\lib` directory.

### 1.3.2 Configure RCU to Use Java Access Bridge

To configure RCU to use Java Access Bridge after you complete the installation, set the system variable `ORACLE_OEM_CLASSPATH` to point to the installed Java Access Bridge files:

1. Display **System** in the Control Panel.

2. Select the **Advanced** tab.

3. Click the **New** button under the System Variable list. The New System Variable dialog appears.

4. In the Variable Name field, enter `ORACLE_OEM_CLASSPATH`.

5. In the Variable Value field, enter the full path to `access-bridge.jar` and `jaccess-1_4.jar`.

   Use a semicolon to separate the two paths. Do not use quotes or character spaces.

6. Click **OK**.
This chapter describes how obtain RCU, then run RCU to create and drop schemas using both the graphical interface and command line interface.

The following topics are covered:

- Section 2.1, "Before You Begin"
- Section 2.2, "Required Schemas and Dependencies"
- Section 2.3, "Obtaining RCU"
- Section 2.4, "Starting RCU"
- Section 2.5, "Creating Schemas"
- Section 2.6, "Dropping Schemas"
- Section 2.7, "Creating the Portal Demo Schema"

2.1 Before You Begin

Before you begin, make sure you have read Section 1.1, "RCU System and Database Requirements". You should have a properly configured certified database that is up and running before you continue.

2.2 Required Schemas and Dependencies

This section lists the required schemas and their dependencies for Oracle Fusion Middleware components. Before you run RCU, you should make a note of the schemas you will need to create.

- Oracle SOA Suite Schemas
- Oracle WebCenter Portal Schemas
- Oracle Application Developer Schema
- Oracle Identity Management Schemas
- Oracle Data Integrator Schema
- Oracle Business Intelligence Schemas
- Oracle Portal, Forms, Reports and Discoverer Schemas
- Oracle WebCenter Content Schemas
2.2.1 Oracle SOA Suite Schemas

Table 2–1 lists the required schemas and dependencies for Oracle SOA Suite products on Oracle and Microsoft SQL Server databases:

<table>
<thead>
<tr>
<th>Component</th>
<th>Schema Owner</th>
<th>Dependencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>SOA Infrastructure</td>
<td>prefix_SOAINFRA</td>
<td>prefix_MDS (Metadata Services)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>prefix_ORASDPM (User Messaging)</td>
</tr>
<tr>
<td>Business Activity Monitoring</td>
<td>prefix_ORABAM</td>
<td>prefix_MDS (Metadata Services)</td>
</tr>
<tr>
<td></td>
<td></td>
<td>prefix_ORASDPM (User Messaging)</td>
</tr>
<tr>
<td>User Messaging Service</td>
<td>prefix_ORASDPM</td>
<td>prefix_MDS (Metadata Services)</td>
</tr>
</tbody>
</table>

**Note:** On Oracle databases, if you create schemas with a database user other than SYS or SYSTEM, you must grant that user the following AQ roles and privileges to successfully load the prefix_SOAINFRA schema:

- GRANT ALL ON dbms_aqadm TO new_user WITH GRANT OPTION;
- GRANT ALL ON dbms_aq TO new_user WITH GRANT OPTION;
- GRANT aq_user_role TO new_user;
- GRANT EXECUTE ON dbms_aqin to new_user WITH GRANT OPTION;
- GRANT EXECUTE ON dbms_aqjms to new_user WITH GRANT OPTION;

Table 2–2 lists the required schemas and dependencies for Oracle SOA Suite products on IBM DB2 databases:

<table>
<thead>
<tr>
<th>Component</th>
<th>Schema Owner</th>
<th>Dependencies</th>
<th>Required Operating System Users</th>
</tr>
</thead>
<tbody>
<tr>
<td>SOA Infrastructure</td>
<td>prefix_SOA</td>
<td>prefix_MDS (Metadata Services)</td>
<td>prefix_soa</td>
</tr>
<tr>
<td></td>
<td></td>
<td>prefix_UIMS (User Messaging)</td>
<td>prefix_mds</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>prefix_ums</td>
</tr>
<tr>
<td>User Messaging Service</td>
<td>prefix_UIMS</td>
<td>prefix_MDS (Metadata Services)</td>
<td>prefix_ums</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>prefix_mds</td>
</tr>
</tbody>
</table>

2.2.2 Oracle WebCenter Portal Schemas

All of the Oracle WebCenter Portal schemas are supported on all certified databases.

Table 2–3 lists the required schemas and dependencies for Oracle WebCenter Portal products on Oracle and Microsoft SQL Server databases:
If you are an application developer and want to build WebCenter Portal applications, you must run RCU a second time to create a second version of the Spaces and Services (prefix_WEBCENTER on Oracle and Microsoft SQL Server databases or prefix_WC on IBM DB2 databases) schema. Note that this schema is separate from the Spaces and Services schema used by Oracle WebCenter Portal: Spaces, so you should make sure you use a different schema prefix. For information about the WebCenter services that require the WebCenter schema, see Table 5-1 in Installation Guide for Oracle WebCenter Portal.

### 2.2.3 Oracle Application Developer Schema

Oracle Application Developer includes Oracle WSM Policy Manager and Oracle WSM-PM Extension. These components require that the Metadata Services (MDS) schema exists in your database prior to installation.

On all databases, you must create the schema prefix_MDS. On IBM DB2 databases, you must also create the operating system user prefix_mds.

### 2.2.4 Oracle Identity Management Schemas

Oracle Identity Management schemas are not supported on Microsoft SQL Server or IBM DB2 databases.

Table 2-5 lists the required schemas and dependencies for Oracle Identity Management products on Oracle databases:

<table>
<thead>
<tr>
<th>Component</th>
<th>Schema Owner</th>
<th>Dependencies</th>
<th>Required Operating System Users</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Internet Directory</td>
<td>ODS</td>
<td>None.</td>
<td>prefix_ad</td>
</tr>
</tbody>
</table>
Oracle Data Integrator requires that the Oracle Data Integrator (prefix_ODI_REPO) schema exists in your Oracle or Microsoft SQL Server database prior to installation.

On IBM DB2 databases, the Oracle Data Integrator schema name is prefix_ODI, and you must also create the operating system user prefix_odi.
2.2.6 Oracle Business Intelligence Schemas

Oracle Business Intelligence requires that the Business Intelligence Platform (prefix_BIPLATFORM) schema exists in your Oracle or Microsoft SQL Server database prior to installation.

On IBM DB2 databases, the Business Intelligence Platform schema name is prefix_BI, and you must also create the operating system user prefix_bi.

2.2.7 Oracle Portal, Forms, Reports and Discoverer Schemas

Oracle Portal and Oracle Discoverer schemas are not supported on Microsoft SQL Server or IBM DB2 databases.

Table 2–6 lists the required schemas and dependencies for Oracle Portal and Oracle Discoverer on Oracle databases:

<table>
<thead>
<tr>
<th>Component</th>
<th>Schema Owner</th>
<th>Dependencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Portal</td>
<td>prefix_PORTAL</td>
<td>Oracle Portlet Producers (prefix_PORTLET)</td>
</tr>
<tr>
<td>Oracle Discoverer</td>
<td>prefix_DISCOVERER</td>
<td>None.</td>
</tr>
</tbody>
</table>

2.2.8 Oracle WebCenter Content Schemas

Table 2–7 lists the required schemas and dependencies for Oracle WebCenter Content on Oracle and Microsoft SQL Server databases:

<table>
<thead>
<tr>
<th>Component</th>
<th>Schema Owner</th>
<th>Dependencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Information Rights Management</td>
<td>prefix_ORAIRM</td>
<td>None.</td>
</tr>
<tr>
<td>Oracle WebCenter Content Server 11g - Complete</td>
<td>prefix_OCS</td>
<td>None.</td>
</tr>
<tr>
<td>Oracle WebCenter Content Server 11g - Search Only</td>
<td>prefix_OCSSEARCH</td>
<td>None.</td>
</tr>
<tr>
<td>Oracle WebCenter Content: Records</td>
<td>prefix_UMASERVER</td>
<td>None.</td>
</tr>
<tr>
<td>Oracle WebCenter Content: Imaging</td>
<td>prefix_IPM</td>
<td>None.</td>
</tr>
<tr>
<td>Oracle WebCenter Enterprise Capture</td>
<td>prefix_CAPTURE</td>
<td>prefix_MDS (Metadata Services)</td>
</tr>
</tbody>
</table>

Table 2–8 lists the required schemas for Oracle WebCenter Content components for IBM DB2 databases:

<table>
<thead>
<tr>
<th>Component</th>
<th>Schema Owner</th>
<th>Dependencies</th>
<th>Required Operating System Users</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Information Rights Management</td>
<td>prefixIRM</td>
<td>None.</td>
<td>prefix_irm</td>
</tr>
</tbody>
</table>
2.3 Obtaining RCU

To obtain the proper version of RCU for your release, go to the Oracle Fusion Middleware Download, Installation, and Configuration ReadMe Files page, which contains links and important information for obtaining Oracle Fusion Middleware software.

After downloading the .zip file, extract the contents to a directory of your choice; this directory will be referred to as the RCU_HOME directory.

<table>
<thead>
<tr>
<th>Component</th>
<th>Schema Owner</th>
<th>Dependencies</th>
<th>Required Operating System Users</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Content Server 11g - Complete</td>
<td>prefix_OCS</td>
<td>None.</td>
<td>prefix_ocs</td>
</tr>
<tr>
<td>Oracle WebCenter Content: Records</td>
<td>prefix_URM</td>
<td>None.</td>
<td>prefix_urm</td>
</tr>
<tr>
<td>Oracle WebCenter Content: Imaging</td>
<td>prefix_IPM</td>
<td>None.</td>
<td>prefix_ipm</td>
</tr>
</tbody>
</table>

2.4 Starting RCU

Start RCU from the bin directory inside the RCU_HOME directory.

Note: If you are running RCU using a non-English database, set the following environment variables:

setenv LANG en_US.UTF8
setenv LC_ALL $LANG
setenv NLS_LANG american.america

On Linux operating systems:

cd RCU_HOME/bin
./rcu

On Windows operating systems:

cd RCU_HOME\bin
rcu.bat

If you are creating schemas in your database, go to Section 2.5, "Creating Schemas".

If you are dropping schemas from your database, go to Section 2.6, "Dropping Schemas".

2.5 Creating Schemas

Follow the instructions in Table 2–9 to create schemas.

Click on the screen name to see more detailed information for that screen. Unless otherwise noted, click Next to continue to the next screen.

Table 2–8 (Cont.) Required Schemas for WebCenter Content - IBM DB2 Databases

<table>
<thead>
<tr>
<th>Component</th>
<th>Schema Owner</th>
<th>Dependencies</th>
<th>Required Operating System Users</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Content Server 11g - Complete</td>
<td>prefix_OCS</td>
<td>None.</td>
<td>prefix_ocs</td>
</tr>
<tr>
<td>Oracle WebCenter Content: Records</td>
<td>prefix_URM</td>
<td>None.</td>
<td>prefix_urm</td>
</tr>
<tr>
<td>Oracle WebCenter Content: Imaging</td>
<td>prefix_IPM</td>
<td>None.</td>
<td>prefix_ipm</td>
</tr>
</tbody>
</table>
2.6 Dropping Schemas

To drop schemas from the database, start RCU (see Section 2.4, "Starting RCU"), then follow the instructions in Table 2–10.

Click on the screen name to see more detailed information for that screen. Unless otherwise noted, click Next to continue to the next screen.

### Table 2–9  RCU Screens and Descriptions for Creating Schemas

<table>
<thead>
<tr>

</table>
Creating the Portal Demo Schema

2.6.1 Dropping Shared Tablespaces

Tablespaces that are shared among multiple schemas will not be dropped. For example, if you created both the Audit Services (for example, DEV_IAU) and Metadata Services (for example, DEV_MDS) schemas, both schemas would use the temporary tablespace DEV_IAS_TEMP (see Section A.9.1, "Default Tablespace Mappings").

If you then drop the DEV_IAU schema, the DEV_IAS_TEMP tablespace would not be dropped since it is also being used by the DEV_MDS schema.

2.6.2 Dropping Schemas and Deleting Datafiles (Windows Only)

If your database is running on a Windows operating system, and you are using RCU to drop schemas from that database, some components datafiles are not dropped. These datafiles are located in the oradata directory in the database Oracle home.

For example, the following datafiles must be removed for Oracle Internet Directory (OID):

- ATTRS1_OID.DBF
- BATTRS1_OID.DBF
- GCATS1_OID.DBF
- GDEFAULT1_OID.DBF
- SVRMG1_OID.DBF
- IASTEMP.DBF

In the event you want to re-create the dropped schema, you must first manually delete the datafiles before re-creating the schema.

2.7 Creating the Portal Demo Schema

The Oracle Portal repository includes a demo schema (portal_schema_user_name_DEMO) that cannot be installed using RCU. If you want to install this schema for testing...
purposes, you must do so using the instdemo.sql script (located in the RCU_HOME/portal/admin/plsql/wwv directory):

```sql
> sqlplus /nolog
SQL> connect sys as sysdba
SQL> @$RCU_HOME/portal/admin/plsql/wwv/instdemo.sql
    portal_schema_user_name
    portal_schema_user_password
    default_tablespace
    temporary_table_space
    name_of_the_demo_schema_user
    password_of_the_demo_schema_user
    name_of_the_log_file
    database_connection_string
```

For example:

```sql
SQL> @$instdemo.sql portal portalpassword portal ias_temp portal_demo
portaldemopassword example_app.log (DESCRIPTION=(ADDRESS_LIST=(ADDRESS=(PROTOCOL=TCP)(HOST=db.example.com)(PORT=1521))(CONNECT_DATA=(SERVICE_NAME=orcl))))
```
3

Extending Repository Creation Utility to Configure Custom Application Repositories

RCU provides an XML-based framework for component owners to plug-in your schema creation and deletion scripts into RCU. This chapter provides some details of the configuration XML files and script-writing guidelines that are used to integrate your components with RCU.

The following topics are covered in this chapter:
- Section 3.1, "RCU Integration Options"
- Section 3.2, "RCU Configuration Files"
- Section 3.3, "RCU Script Writing Guidelines"

3.1 RCU Integration Options

RCU provides the following options for integrating component scripts:
- RCU JDBC Engine Compliant SQL*Plus Scripts
- Pure JDBC Scripts
- SQL*Plus Scripts
- External Processes
- Java Code Using JavaAction

RCU JDBC Engine Compliant SQL*Plus Scripts is the recommended option for integrating component scripts. SQL*Plus and External Processes are only intended for integrating Legacy/Classic components such as Oracle Portal 10g or Identity Management. Components that have a dependency on SQL*Plus scripts cannot be loaded with RCU when running from the installed Oracle Home. They can only be used when running RCU from CD.

3.1.1 RCU JDBC Engine Compliant SQL*Plus Scripts

The RCU JDBC Engine emulates a set of SQL*Plus features over JDBC. This set is broad enough to cover the requirements of schema creation. Your component teams can integrate existing SQL*Plus scripts with a few minor changes.

The RCU JDBC Engine parses the SQL*Plus script to get individual statements and then runs each statement over JDBC. Command line arguments to scripts and substitution using DEFINE variables are supported. Script can be nested (for example, one script can call other scripts). Component teams can specify list of expected errors.
and fatal errors to RCU through configuration files and RCU would interpret these when running the scripts.

These scripts are easy to maintain and use as they can be run in SQL*Plus in development environment. However, Oracle recommends that the RCU JDBCEngine tool is also used in your development environment to ensure that these scripts run properly when integrated with RCU.

3.1.2 Pure JDBC Scripts

This option is recommended for non-Oracle databases (for Oracle databases, RCU JDBC Engine Compliant SQL*Plus scripts should be used). Contents of the script file should be a valid PL/SQL block, which can be called with Connection.prepareCall() or Connection.createStatement(). Standard JDBC Bind variables with '?'. convention are supported.

Some disadvantages of this option are:

- No nested scripts, which can mean a larger number of scripts.
- May require a more significant re-work for component teams to re-write the scripts in this format.
- Difficult to maintain as every DDL statement has to be wrapped with in EXECUTE IMMEDIATE.
- Cannot be run using SQL*Plus in development environment.
- Less useful error support since the whole block would fail in case of any errors.

Below is an example:

```xml
<Action TYPE="JDBC" PERCENT_PROGRESS="20">
  <ValidIf DBTYPE="ORACLE" />
  <Command TYPE="INLINE">DROP USER %SCHEMA_USER% CASCADE</Command>
</Action>
```

And a second example:

```xml
<Action TYPE="Java" PERCENT_PROGRESS="100">
  <Command TYPE="METHOD">
  </Command>
  <Parameters>
    <Parameter TYPE="String">MDS</Parameter>
  </Parameters>
</Action>
```

3.1.3 SQL*Plus Scripts

This option is mainly for the consumption of legacy components that need to be loaded from RCU. This option is available only when running RCU from the CD or standalone shiphome. RCU will use Oracle client on the CD or database server. Any 11g component that is expected to be loaded by launching RCU from the Oracle Home should not use this option.

Example:

```xml
<Action TYPE="SQLPlus" PERCENT_PROGRESS="100">
  <Command TYPE="SCRIPT">%SCRIPT_HOME%/oid/scripts/seedldap.sql</Command>
  <IgnorableErrors>
    <Error Type="ORA-01918">user name does not exist</Error>
  </IgnorableErrors>
</Action>
```
3.1.4 External Processes

This option is provided only for those components that have their own configuration tool for schema creation, like OPCA (Oracle Portal 10g). This is not a recommended option for any new component, as this option cannot make use of RCU error handling framework.

Example:

```xml
<Action TYPE="HostCmd">
  <Command TYPE="SCRIPT">%RCU_HOME%/rcu/integration/cdb/config/bin/configure</Command>
  <Parameters>
    <Parameter TYPE="ProcessInput">%JDBC_CONNECT_STRING%</Parameter>
    <Parameter TYPE="ProcessInput">%DBADMIN_USER%</Parameter>
    <Parameter TYPE="ProcessInput">%DBADMIN_PASSWORD%</Parameter>
    <Parameter TYPE="ProcessInput">%PREFIX_NAME%</Parameter>
    <Parameter TYPE="ProcessInput">%SCHEMA_USER%</Parameter>
    <Parameter TYPE="ProcessInput">%SCHEMA_PASSWORD%</Parameter>
    <Parameter TYPE="ProcessInput">%DEFAULT_TABLESPACE%</Parameter>
    <Parameter TYPE="ProcessInput">%TEMPORARY_TABLESPACE%</Parameter>
  </Parameters>
</Action>
```

3.1.5 Java Code Using JavaAction

This option is provided to components that have Java code, which can accept a JDBC connection and execute SQL statements. This is generally used when huge amounts of data has to be seeded or LOBs need to be created.

Example:

```xml
<Action TYPE="Java">

  <Parameters>
    <Parameter TYPE="Connection"></Parameter>
    <Parameter TYPE="String">%SCHEMA_USER%</Parameter>
  </Parameters>
</Action>
```

A second example:

```xml
<Action TYPE="Java">

  <Parameters>
    <Parameter TYPE="Connection"></Parameter>
    <Parameter TYPE="String">%SCHEMA_USER%</Parameter>
  </Parameters>
</Action>
```
3.2 RCU Configuration Files

RCU provides the following configuration files types for component integration:

- Section 3.2.1, "XML DTDs Defined by RCU"
- Section 3.2.2, "Component Repository Configuration File"
- Section 3.2.3, "Component List Configuration File"
- Section 3.2.4, "Soft-Prerequisite Support"
- Section 3.2.5, "Default Tablespaces Configuration File"

3.2.1 XML DTDs Defined by RCU

This section describes the XML DTDs defined by RCU:

- Component Descriptor Configuration File
- Repository Configuration File
- Master List of Supported Components
- Storage Attributes Configuration File

3.2.1.1 Component Descriptor Configuration File

Each component owner would provide a configuration file adhering to following DTD, which lists the pre-requisites and actions:

The Component Descriptor configuration file is called `ComponentInfo.dtd` and is located in the `RCU_HOME/rcu/config` (on UNIX operating systems) or `RCU_HOME\rcu\config` (on Windows operating systems) directory:

```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!ENTITY % commonDTD SYSTEM "RCUCommon.dtd">
%commonDTD;
<!ELEMENT ComponentInfo (Display, PrefixSettings, Component*, PrerequisiteDescriptor*, ExecutionDescriptor?, FatalErrors?, IgnorableErrors?)>
<!ATTLIST ComponentInfo
  VERSION CDATA #REQUIRED
  TYPE CDATA #REQUIRED
  RESOURCE_BUNDLE_PACKAGE CDATA #IMPLIED>
<!ELEMENT PrefixSettings (DetectQuery*)>
<!ATTLIST PrefixSettings
  USE_SCHEMA_PREFIX (TRUE|FALSE) "TRUE"
  USE_TABLESPACE_PREFIX (TRUE|FALSE) "TRUE">
<!ATTLIST Component
  ID CDATA #REQUIRED
```
PROGRESS_UNITS CDATA #IMPLIED
IS_GROUPING_COMPONENT (TRUE|FALSE) "FALSE"
DEFAULT_SELECTED (TRUE|FALSE) "FALSE"
CHILD_OF CDATA #IMPLIED
MANDATORY_SELECTED (TRUE|FALSE) "FALSE">
  <!ELEMENT Display (#PCDATA)>
  <!ATTLIST Display
    NLS_ID CDATA #IMPLIED>
  <!ELEMENT RepositoryConfigFile (#PCDATA)>
  <!ELEMENT DetectQuery (#PCDATA)>
  <!ATTLIST DetectQuery
    OPERATION (CREATE|DROP) 'CREATE'
    TYPE (ORACLE|SQLSERVER|IBMDB2|EBR|MYSQL) 'ORACLE'>
  <!ELEMENT SchemaVersion (#PCDATA)>
  <!ELEMENT SchemaUser (#PCDATA)>
  <!ATTLIST SchemaUser
    USER_EDITABLE (TRUE|FALSE) "TRUE"
    PREFIXABLE (TRUE|FALSE) "TRUE"
    IS_CREATED (TRUE|FALSE) "TRUE"
    MAX_LENGTH CDATA "30">
  <!ELEMENT AdditionalSchemaUser (#PCDATA)>
  <!ATTLIST AdditionalSchemaUser
    STARTS_WITH_SCHEMA_USER (TRUE|FALSE) "TRUE" >
  <!ELEMENT Dependents (Dependent*)>
  <!ATTLIST Dependent
    COMPONENT_ID CDATA #REQUIRED
    ALT_COMPONENT_ID CDATA #IMPLIED>
  <!ELEMENT DatabaseName (#PCDATA)>
  <!ELEMENT Tablespaces (Tablespace*)>
  <!ATTLIST Tablespace
    TYPE (DEFAULT_TABLESPACE|TEMPORARY_TABLESPACE|ADDITIONAL_TABLESPACE1|ADDITIONAL_TABLESPACE2|ADDITIONAL_TABLESPACE3|ADDITIONAL_TABLESPACE4|ADDITIONAL_TABLESPACE5|ADDITIONAL_TABLESPACE6|ADDITIONAL_TABLESPACE7|ADDITIONAL_TABLESPACE8|ADDITIONAL_TABLESPACE9|ADDITIONAL_TABLESPACE10|ADDITIONAL_TABLESPACE11|ADDITIONAL_TABLESPACE12|ADDITIONAL_TABLESPACE13|ADDITIONAL_TABLESPACE14|ADDITIONAL_TABLESPACE15|ADDITIONAL_TABLESPACE16|ADDITIONAL_TABLESPACE17|ADDITIONAL_TABLESPACE18|ADDITIONAL_TABLESPACE19|ADDITIONAL_TABLESPACE20|ADDITIONAL_TABLESPACE21|ADDITIONAL_TABLESPACE22|ADDITIONAL_TABLESPACE23|ADDITIONAL_TABLESPACE24|ADDITIONAL_TABLESPACE25|ADDITIONAL_TABLESPACE26|ADDITIONAL_TABLESPACE27|ADDITIONAL_TABLESPACE28|ADDITIONAL_TABLESPACE29|ADDITIONAL_TABLESPACE30|ADDITIONAL_TABLESPACE31) "DEFAULT_TABLESPACE">
  <!ELEMENT Tablespace (Prompt, TablespaceName)>
  <!ATTLIST Prompt
    NLS_ID CDATA #IMPLIED>
  <!ELEMENT TablespaceName (#PCDATA)>
  <!ELEMENT CustomVariables (Variable*)>
  <!ATTLIST Variable
    TYPE (STRING|NUMBER|PASSWORD|EXISTING_PASSWORD|FILE) "STRING"
    MAX_LENGTH CDATA "30"
    MIN_LENGTH CDATA "0"
    OPERATION (CREATE|DROP|BOTH) "BOTH"
    DEFAULT_VALUE CDATA "" >
  <!ELEMENT Variable (Name,Display)>
  <!ELEMENT Name (#PCDATA)>
3.2.1.2 Repository Configuration File

The Repository configuration file is called `RepositoryConfig.dtd` and is located in the `RCU_HOME/rcu/config` (on UNIX operating systems) or `RCU_HOME\rcu\config` (on Windows operating systems) directory:

```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!ENTITY % commonDTD SYSTEM "RCUCommon.dtd">
%commonDTD;
<!ELEMENT RepositoryConfig (PrerequisiteDescriptor*, ExecutionDescriptor, DeleteDescriptor?)>
<!ATTLIST RepositoryConfig
    COMP_ID CDATA #REQUIRED>
<!ELEMENT DeleteDescriptor (Action*)>
```

3.2.1.3 Master List of Supported Components

RCU maintains a master list of supported components, which contains entries for each supported component. Every time a new component is added, the master list of supported components is updated with the reference of the XML integration file provided by component owner.

This configuration file is called `RCUCommon.dtd` and is located in the `RCU_HOME/rcu/config` (on UNIX operating systems) or `RCU_HOME\rcu\config` (on Windows operating systems) directory:

```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!ELEMENT PrerequisiteDescriptor (DBPrerequisiteSet*, DBPrerequisite*)>
<!ATTLIST PrerequisiteDescriptor
    TYPE (CREATE|DROP|REGISTER|DEREGISTER) 'CREATE'>
<!ELEMENT DBPrerequisiteSet (ValidIfSet?, ValidIf?, PrereqSetErrorMsg?, DBPrerequisite*)>
<!ATTLIST DBPrerequisiteSet
    OPERATOR (OR|AND) "OR" 
    SOFT (TRUE|FALSE) "FALSE">
<!ELEMENT DBPrerequisite (ValidIfSet?, ValidIf?, PrereqIdentifier, PrereqValue, PrereqErrorMsg?)>
<!ATTLIST DBPrerequisite
    PREREQ_TYPE (InitParameter|DBOption|Java|DBComponent|DBVersion|DBObject|CustomSQL|TablespaceFreeMB) "CustomSQL"
    DATA_TYPE (STRING|NUMBER) "STRING"
    COMPARE_OPERATOR (EQ|GT|LT|NE|GE|LE|COMPARE_VERSION) "EQ"
    SOFT (TRUE|FALSE) "FALSE">
<!ELEMENT PrereqIdentifier (#PCDATA)> 
<!ELEMENT PrereqValue (#PCDATA)> 
<!ELEMENT PrereqSetErrorMsg (#PCDATA)> 
<!ATTLIST PrereqSetErrorMsg
    NLS_ID CDATA #IMPLIED>
<!ELEMENT PrereqErrorMsg (#PCDATA)> 
<!ATTLIST PrereqErrorMsg
    NLS_ID CDATA #IMPLIED>
<!ATTLIST PrereqValue
    UNIT (KB|MB|NoUnit) 'NoUnit'>
<!ELEMENT ExecutionDescriptor (Action*)>
<!ATTLIST ExecutionDescriptor
    TYPE (Load|PreLoad|PostLoad) 'Load'>
<!ELEMENT Action (ValidIfSet?, ValidIf?, Command, Parameters?, FatalErrors?, IgnorableErrors?)>
<!ATTLIST Action
    TYPE (JDBCSqlScript|JDBC|SQLPlus|HostCmd|Java) "JDBCSqlScript"
3.2.1.4 Storage Attributes Configuration File

RCU would maintain the list of tablespaces/datafiles and their attributes to be created. This way the tablespaces and datafiles attributes can be modified externally.

The Storage Attributes configuration file is called Storage.dtd and is located in the RCU_HOME/rcu/config (on UNIX operating systems) or RCU_HOME\rcu\config (on Windows operating systems) directory:

```xml
<?xml version="1.0" encoding="UTF-8" ?>
<!ELEMENT StorageAttributes (TablespaceAttributes*)>
<!ATTLIST TablespaceAttributes
  NAME CDATA #REQUIRED
  OMF (TRUE|FALSE) "FALSE">
<!ELEMENT ValidIfSet (ValidIf*)>
<!ATTLIST ValidIfSet
  DBTYPE CDATA #IMPLIED
  DBVERSION CDATA #IMPLIED
  OSTYPE CDATA #IMPLIED
  OPERATOR (OR|AND) "OR">
<!ELEMENT ValidIf
  DBTYPE CDATA #IMPLIED
  DBVERSION CDATA #IMPLIED
  OSTYPE CDATA #IMPLIED>
<!ATTLIST ValidIf
  DATA_TYPE (STRING|NUMBER) "STRING"
  COMPARE_OPERATOR (EQ|GT|LT|NE|GE|LE|COMPARE_VERSION) "EQ"
  VALUE CDATA #REQUIRED>
```

Extending Repository Creation Utility to Configure Custom Application Repositories  3-7
3.2.2 Component Repository Configuration File

A Component Repository Configuration File (<component>.xml) lists the pre-requisites and the list of scripts or actions that need to be performed to load or drop a schema. This file is provided and maintained by component owners. This configuration file is referenced from Component List Configuration File (ComponentInfo.xml).

Each <component>.xml file can be found in the RCU_HOME/rcu/integration/component/component.xml (on UNIX operating systems) or RCU_HOME\rcu\integration\component\component.xml (on Windows operating systems) file.

Component owners can use a set of predefined RCU parameters which will be substituted at runtime by RCU based on user input. Here is the list of predefined parameters:
Below is a sample Component Repository Configuration file for MDS (mds.xml), which lists the series of prerequisites and actions:

```xml
<?xml version='1.0' encoding='UTF-8' ?>
<!DOCTYPE RepositoryConfig SYSTEM
"file:///home/development/XML/latest/RepositoryConfig.dtd" -->
<!--
Table 3–1  Predefined RCU Parameters

<table>

3.2.3 Component List Configuration File

The Component List configuration file (ComponentInfo.xml) lists all the components, their respective configuration files and their default user and tablespace mappings. This file also lists the high-level prerequisite checks and high level actions (like creating schema_version_registry table) to be done globally for all the components. Also, a list of global Ignorable or Fatal errors can be specified.

This file can be found in the RCU_HOME/rcu/config (on UNIX operating systems) or RCU_HOME\rcu\config (on Windows operating systems) directory.

Below is a sample ComponentInfo.xml file:

```xml
<?xml version="1.0" encoding='UTF-8' ?>
<!DOCTYPE ComponentInfo SYSTEM "dtds/ComponentInfo.dtd" -->

  <Command TYPE="METHOD">oracle.ias.version.SchemaVersionUtil:utilCreateRegistryTable</Command>
  <Parameters>
    <Parameter TYPE="Connection"></Parameter>
  </Parameters>
</ValidIf>
3.2.4 Soft-Prerequisite Support

In the ComponentInfo.xml file, if a particular <DBPrerequisiteSet> or <DBPrerequisite> is not mandatory, then you can use the soft-prerequisite option by setting the SOFT attribute to TRUE. When a soft-prerequisite is not met, a pop-up dialog window with an error or warning message will appear; the user will have the option to ignore the message or abort the operation. You can define a soft-prerequisite at the <DBPrerequisiteSet> level, the <DBPrerequisite> level, or both; if both are defined, then <DBPrerequisiteSet> will take higher precedence.

Below is an example of setting a soft-prerequisite at the <DBPrerequisite> level:

```xml
<DBPrerequisiteSet>
  ...
  <DBPrerequisite PREREQ_TYPE='CustomSQL' DATA_TYPE='STRING' COMPARE_OPERATOR='EQ' SOFT='TRUE'>
    <PrereqIdentifier>select value from nls_database_parameters where parameter = 'NLS_CHARACTERSET'</PrereqIdentifier>
    <PrereqValue>AL32UTF8</PrereqValue>
    <PrereqErrorMsg>
      The database you are connecting is with non-AL32UTF8 character set. Oracle strongly recommends using AL32UTF8 as the database character set.
    </PrereqErrorMsg>
  </DBPrerequisite>
  ...
</DBPrerequisiteSet>
```
3.2.5 Default Tablespaces Configuration File

The default tablespaces configuration file (Storage.xml) lists the components for which tablespaces are created out-of-the-box. This file is located in the RCU_HOME/rcu/config (on UNIX operating systems) or RCU_HOME\rcu\config (on Windows operating systems) directory.

The actual tablespace configuration file for each component is located in the RCU_HOME/rcu/integration/component/component_Storage.xml (on UNIX operating systems) or RCU_HOME/rcu\integration\component\component_Storage.xml (on Windows operating systems) file. Each component has its own tablespaces configuration file.

Below is a sample soainfra_Storage.xml file:

```xml
<?xml version="1.0" encoding="UTF-8"?>
  <!-- SOAINFRA -->
  <TablespaceAttributes NAME="SOAINFRA">
    <DatafilesList>
      <DatafileAttributes ID="%DATAFILE_LOCATION%/soainfra.dbf">
        <Size UNIT="MB">200</Size>
        <Reuse>True</Reuse>
        <AutoExtend>True</AutoExtend>
        <Increment UNIT="MB">50</Increment>
        <Maxsize UNIT="GB">2</Maxsize>
      </DatafileAttributes>
    </DatafilesList>
  </TablespaceAttributes>
  <!-- End of SOAINFRA -->
```

3.3 RCU Script Writing Guidelines

Below are some common RCU script writing guidelines:

Schema user names and passwords should not be hard coded. They should be coded as substitutable variables.

- If schema user needs to be created, it should be created first using the parameters passed in by RCU.
- Tablespace and temporary tablespace references should not be hard coded; they should be coded as variables.
- Do not use CONNECT; instead, use "ALTER SESSION SET CURRENT_SCHEMA = <SCHEMA_OWNER>" after creating the schema user.
- The set of ignorable and fatal ORA errors (if any) should be listed in the RCU XML component configuration file.
- Avoid any "shutdown" or "startup" that would bounce the database instance.
SCHEMA_VERSION_REGISTRY should be updated before and after loading schema. This can be done using JavaAction as shown in Section 3.1.5, "Java Code Using JavaAction" or with in the component scripts using SCHEMA_VERSION PL/SQL package.

Block comments that contain line comments (/* -- comment */) are not supported.

3.3.1 Guidelines for RCU JDBC Engine Compliant SQL*Plus Scripts

Below are some guidelines for writing RCU JDBC Engine SQL*Plus scripts:

- All statements must be terminated with appropriate terminating chars. CREATE PACKAGE, TYPE needs to be terminated with ";" with "/" on the next line. All other statements (Create TABLE, VIEW, etc.) need to be terminated by ";" or " */" (only one of them, not both).
- EXECUTE calls should be replaced with "BEGIN/END blocks".
- DEFINE statements should be in one line, no comments in the same line and no ";" at the end.
- SET, SHOW, SPOOL, WHENEVER, BREAK, EXIT statements are simply ignored.
- VARIABLE command is not supported yet.
- VARIABLE and COL(UMN) are not supported.

Dynamically calling another SQL Script within a PL/SQL block using the following technique is not supported:

```sql
VARIABLE initfile VARCHAR2(32)
COLUMN :initfile NEW_VALUE init_file NOPRINT;
BEGIN
  IF (some condition) THEN
    :initfile := 'initcdc.sql';
  ELSE
    :initfile := 'nothing.sql';
  END IF;
END;
/
SELECT :initfile FROM DUAL;
@@&init_file
```

The work around is to have a separate Action with "ValidIf" tag to specify the condition.

3.3.2 Guidelines for Pure JDBC Scripts

Below are some guidelines for writing Pure JDBC scripts for RCU:

- Should not contain any SQL*Plus directives (like SET, WHENEVER, etc.).
- All DEFINES should be changed to PL/SQL variable declarations.
- All SQL statements should be wrapped in EXECUTE IMMEDIATE.
- PL/SQL style comments are allowed, But SQL*Plus style (REM) comments are not allowed.
- DROP statements preceding CREATE statements do not work. DROP should only be done after checking for the existence of the object. Ideally, all DROP statements
should put into different PL/SQL script and RCU can call this script before calling a CREATE script, if that is desired.
- Contents of the script file should be a valid PL/SQL block, which can be called within Connection.prepareCall().

3.3.3 Guidelines for SQL*Plus Scripts

Below are some guidelines for writing SQL*Plus scripts for RCU:
- Should not have any "exit" statements or "WHENEVER ERROR EXIT" directives. This would cause RCU SQL*Plus session to exit unexpectedly and may impact other component scripts to be executed later.
- Scripts should not have any spool commands. RCU would generate a spool log for each component.

3.3.4 Guidelines for SQL Server-Based Scripts

Below are some guidelines for writing SQL Server-based scripts for RCU:
- Support is a subset of what is supported in t-sql scripts that can be executed by sqlcmd.
- "ValidIf" tags should be added around all database-specific Actions and Prerequisites. For example:

```xml
<DBPrerequisite PREREQ_TYPE="TablespaceFreeMB" DATA_TYPE="NUMBER" COMPARE_OPERATOR="GT">
    <ValidIf DBTYPE="ORACLE" />
    <PrereqIdentifier>%DEFAULT_TABLESPACE%</PrereqIdentifier>
    <PrereqValue>50</PrereqValue>
</DBPrerequisite>
```
- RCU supports recursive variable definitions such as:

```sql
setvar var1 value1
setvar var2 $(var1)
```
- There should be a "go" statement to end blocks of statements. All statements preceding the "go" statement will be executed as a single statement over JDBC.
- The JDBC connection is created in the auto-commit "on" mode.
- Currently, begin transaction and commit transaction statements are not supported.
- Variables passed to scripts via the XML file will be passed as follows:

```sql
Script.sql -v v1=value1 v2=value2
```

This is only for scripts called using the XML files. If a script calls another script, you can use any other variable name.
This chapter describes how to use the Repository Creation Utility’s (RCU) command line interface (CLI). The CLI is necessary for integration with both the Oracle Fusion Middleware installer and Enterprise Manager during application deployment. Additionally, you can use the CLI in cases where Xserver is not configured or if you are using a telnet terminal that does not have proper display capabilities.

This chapter contains the following topics:

- Section 4.1, "Command Line Syntax and Parameters"
- Section 4.2, "Using the -silent Command"
- Section 4.3, "Using the -interactive Command"
- Section 4.4, "Creating a Repository from the Command Line"
- Section 4.5, "Dropping a Repository from the Command Line"
- Section 4.6, "RCU Environment Variables"

### 4.1 Command Line Syntax and Parameters

The syntax for the RCU command line interface is:

```
rcu [-silent | -interactive] [-createRepository | -dropRepository] {parameters}
```

Table 4–1 lists the CLI commands and their descriptions.

<table>
<thead>
<tr>
<th>Command</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-silent</td>
<td>Run RCU with minimal or no interaction from the command line.</td>
</tr>
<tr>
<td></td>
<td>For more information, see Section 4.2, &quot;Using the -silent Command&quot;.</td>
</tr>
</tbody>
</table>
Table 4–2 lists the various parameters and their descriptions.

Table 4–2  RCU CLI Parameters and Descriptions

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required?</th>
<th>Valid for Create or Drop?</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-compInfoXMLLocation</td>
<td>No</td>
<td>Both</td>
<td>Full path to the location of the ComponentInfo.xml file. The default location is RCU_HOME/rcu/config (on UNIX operating systems) or RCU_HOME\rcu\config (on Windows operating systems).</td>
</tr>
<tr>
<td>-storageXMLLocation</td>
<td>No</td>
<td>Both</td>
<td>Full path to the location of the Storage.xml file. The default location is RCU_HOME/rcu/config (on UNIX operating systems) or RCU_HOME\rcu\config (on Windows operating systems).</td>
</tr>
<tr>
<td>-databaseType</td>
<td>No</td>
<td>Both</td>
<td>Type of database to which you are connecting. Valid options are ORACLE, IBMDB2, SQLSERVER, EBR, or MYSQL.</td>
</tr>
<tr>
<td>-connectString</td>
<td>Yes</td>
<td>Both</td>
<td>Credentials for connecting to your database.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>■ Oracle or EBR-enabled databases: use the format host:port:sid.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>■ Microsoft SQL Server, IBM DB2, or MySQL databases: use the format server name or host:port:database name.</td>
</tr>
<tr>
<td>-edition</td>
<td>No</td>
<td>Both</td>
<td>Edition name. This is only valid if you specify databaseType=EBR.</td>
</tr>
<tr>
<td>-dbUser</td>
<td>Yes</td>
<td>Both</td>
<td>Database user name (for example, the default user name on Oracle databases is SYS).</td>
</tr>
<tr>
<td>-dbRole</td>
<td>No</td>
<td>Both</td>
<td>Database user role (for example, SYSDBA for the SYS user on Oracle databases).</td>
</tr>
<tr>
<td>-unicodeSupport</td>
<td>No</td>
<td>Both</td>
<td>Whether or not your database creates schemas that support encodings. Valid values are Yes or No. The default value is Yes. This parameter is valid for the SQLSERVER database type only.</td>
</tr>
<tr>
<td>-skipCleanupOnFailure</td>
<td>No</td>
<td>Create</td>
<td>Whether or not you want to skip the schema cleanup if schema creation fails. Valid values are Yes or No. The default is No.</td>
</tr>
</tbody>
</table>
Using the -silent Command

Specify -silent if you want to run RCU with minimal interaction once you have entered the command. You must specify all mandatory command line parameters in the command. For example:

rcu -silent -createRepository -connectString database_connect_string -dbUser -database_user -component component

Table 4–2 (Cont.) RCU CLI Parameters and Descriptions

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Required?</th>
<th>Valid for Create or Drop?</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>-useSamePasswordForAllSchemasUsers</td>
<td>No</td>
<td>Create</td>
<td>Whether or not you want to use the same password for all schemas. Valid values are true or false. The default is false.</td>
</tr>
<tr>
<td>-selectDependentsForComponents</td>
<td>No</td>
<td>Create</td>
<td>Whether or not you want to have RCU automatically select dependent schemas for your components. Valid values are true or false. The default is false.</td>
</tr>
<tr>
<td>-honorOMF</td>
<td>No</td>
<td>Create</td>
<td>Valid values are true or false. The default is false. If value is set to true, RCU creates datafiles using Oracle Managed Files (OMF) naming format.</td>
</tr>
<tr>
<td>-variables</td>
<td>No</td>
<td>Both</td>
<td>Comma separated variables in the format variblename=value. See Section 4.6, &quot;RCU Environment Variables&quot; for a list of RCU environment variables.</td>
</tr>
<tr>
<td>-schemaPrefix</td>
<td>No</td>
<td>Both</td>
<td>Prefix for your schemas. For more information about schema prefixes, refer to Section 1.2.1, &quot;Creating Custom Schemas and Tablespaces&quot; and Section A.5, &quot;Select Components (for Create Operation)&quot;.</td>
</tr>
</tbody>
</table>
| -component                          | Yes       | Both                      | ID of the component(s) you want to add or drop. To specify a single component, use the format:

   -component component_ID

To specify multiple components, use the format:

   -component component_ID -component component_ID

   For a list of valid component (schema) IDs, refer to Appendix B, "Repository Creation Utility Schemas, IDs, and Tablespaces". Multiple components are sometimes necessary because of dependencies; for example, you cannot create the Oracle Portal (PORTAL) schema if the Portlet Producers (PORTLET) schemas does not already exist. In this case, you must specify both schemas:

   -component PORTAL -component PORTLET

   For more information about schemas and their dependencies, see Appendix B, "Repository Creation Utility Schemas, IDs, and Tablespaces". |
| -tablespace                         | No        | Create                    | Tablespace name of the component. This tablespace must exist in the database if you are using this option. |
| -tempTablespace                     | No        | Create                    | TEMP tablespace name of the component. This tablespace must exist in the database if you are using this option. |
In this scenario, RCU will prompt you for the database and component schema passwords from the command line. If you specify multiple components, you will be prompted for the passwords in the order in which the components are specified.

If you want to avoid all interaction from the command line, you can create a text file containing all the necessary passwords (one password per line) and then use the \(-f\) option to pass this password file to RCU. For example, if you create a file called passwordfile.txt, you can use the command below:

\[\text{rcu -silent -createRepository -connectString} \text{database_connect_string} \text{-dbUser} \text{-database_user} \text{-component component1\_name} \text{-component component2\_name} -f < \text{passwordfile.txt}\]

The passwordfile.txt file would contain, in order:

\[\begin{align*}
\text{database\_password} \\
\text{component1\_schema\_password} \\
\text{component2\_schema\_password}
\end{align*}\]

It is important to make sure that the passwords in the file are specified in the same order as the components on the command line.

Once the installation is complete the password file must be removed. The passwords are maintained in cleartext format and therefore present a security risk if the password file is left in place after installation.

If you are creating the ODI Repository, RCU will present you with an additional screen; the Custom Variables. The values required for this screen can also be specified in a password file as follows:

\[\begin{align*}
\text{database\_user\_password} \\
\text{master\_repository\_password} \\
\text{master\_repository\_ID} \\
\text{supervisor\_password} \\
\text{work\_repository\_type} \\
\text{work\_repository\_ID} \\
\text{work\_repository\_name} \\
\text{work\_repository\_password}
\end{align*}\]

Below is an example:

\[\begin{align*}
\text{welcome1} \\
\text{welcome1} \\
001 \\
\text{welcome1} \\
D \\
001 \\
\text{WORKREP} \\
\text{welcome1}
\end{align*}\]

### 4.3 Using the -interactive Command

Specify \(-interactive\) to run the RCU graphical interface. This is the default if neither \(-silent\) nor \(-interactive\) is specified.

You can specify information from the command line that would be populated in the graphical interface to expedite your RCU operation. For example, if you run RCU with the following command:

\[\text{rcu}\]

The Database Connection Details page contains blank fields, as shown below:
But if you run RCU with a few parameters from the command line:

```
rcu -interactive -createRepository -connectString example_
    db.example.com:1521:example_sid -dbUser SYS -component MDS
```

The Database Connection Details page contains the information supplied from the command line:
4.4 Creating a Repository from the Command Line

The full syntax for the RCU command line interface to create a repository is shown below:

```bash
rcu [ -silent | -interactive] -createRepository
[-compInfoXMLLocation componentInfo.xml_file_location]
[-storageXMLLocation Storage.xml_file_location]
[-databaseType [ORACLE|SQLSERVER|IBMDB2|EBR|MYSQL]]
[-connectString database_connect_string]
[-edition edition_name]
[-dbUser database_username]
[-dbRole database_user_role]
[-unicodeSupport [Yes|No]]
[-skipCleanupOnFailure [Yes|No]]
[-useSamePasswordForAllSchemaUsers [true|false]]
[-selectDependentsForComponents [true|false]]
[-honorOMF [true|false]]
[-variables variablename=value]
[-schemaPrefix schema_prefix]
[-component component_ID]
[-tablespace component_tablespace_name]
[-tempTablespace component_temp_tablespace_name]
```

In order to work properly, make sure that the parameters are specified in the same order that they are listed. For example, do not specify the -component parameter before the -compInfoXMLLocation parameter.

When specifying the -component, you must use the correct component IDs, which are listed in Appendix B, "Repository Creation Utility Schemas, IDs, and Tablespaces".
Before you create any schemas, you must be aware of and specify all dependencies for
the component you are loading. For example, the SOAINFRA schema depends on the
MDS and ORASDPM schemas; if you try to load the SOAINFRA schema without specifying
both the MDS and ORASDPM schemas, or if the MDS and ORASDPM schemas do not already
exist in the database, RCU will stop before any loading takes place.

Below is a sample command to create the SOA Infrastructure schemas on a UNIX
operating system:

```
./rcu -silent -createRepository -databaseType ORACLE -connectString
test.examplehost.exampledomain.com:1521:exampleSID -dbUser sys -dbRole sysdba
-schemaPrefix TEST -component SOAINFRA -component MDS -component ORASDPM
```

### 4.5 Dropping a Repository from the Command Line

The full syntax for the RCU command line interface to drop a repository is shown
below:

```
rcu [-silent | -interactive] -dropRepository
[-compInfoXMLLocation ComponentInfo.xml_file_location]
[-storageXMLLocation Storage.xml_file_location]
[-databaseType [ORACLE|SQLSERVER|DB2|EBR|MYSQL]]
-connectString database_connect_string
[-edition edition_name]
-dbUser database_username
[-dbRole database_user_role]
[-unicodeSupport [Yes|No]]
[-variables variablename=value]
[-schemaPrefix schema_prefix]
-component component_ID
```

In order to work properly, make sure that the parameters are specified in the same
order that they are listed. For example, do not specify the -component parameter
before the -compInfoXMLLocation parameter.

You must also be aware of schema dependencies when dropping schemas (see
Appendix B, "Repository Creation Utility Schemas, IDs, and Tablespaces"). For
example, several schemas require the MDS schema to be present; if you choose to drop
the MDS schema, then all the schemas that require the MDS schema will stop working.

Below is a sample command to drop the WebCenter Spaces schemas on a UNIX
operating system:

```
./rcu -silent -dropRepository -databaseType ORACLE -connectString
test1.oracle.com:1521:orcl -dbUser sys -dbRole sysdba -schemaPrefix TEST
-component WEBCENTER
```

### 4.6 RCU Environment Variables

Table 4–3 shows the variables picked up by RCU from the environment. If the
environment variable is not set, then RCU uses the default value.
<table>
<thead>
<tr>
<th>Variable</th>
<th>Default</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RCU_LOG_LOCATION</td>
<td><code>RCU_HOME/rcu/log</code> (UNIX operating systems)</td>
<td>Location of the RCU log file.</td>
</tr>
<tr>
<td></td>
<td><code>RCU_HOME\rcu\log</code> (Windows operating systems)</td>
<td></td>
</tr>
<tr>
<td>RCU_TIMESTAMP_LOG_DIR</td>
<td>true</td>
<td>Determines whether or not a directory with the format <code>logdir.yyyy-dd_hh-mm</code> is created for the RCU log file. Set this variable to true or false.</td>
</tr>
<tr>
<td>RCU_LOG_NAME</td>
<td><code>rcu.log</code></td>
<td>Name of the RCU log file.</td>
</tr>
<tr>
<td>RCU_LOG_LEVEL</td>
<td><code>ERROR</code></td>
<td>Determines the RCU log level.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Set this variable to one of SEVERE, ERROR, NOTIFICATION, or TRACE.</td>
</tr>
</tbody>
</table>
This appendix contains screenshots and descriptions for all of the Repository Creation Utility screens.

- Welcome
- Create Repository
- Drop Repository
- Database Connection Details
- Select Components (for Create Operation)
- Select Components (for Drop Operation)
- Schema Passwords
- Custom Variables
- Map Tablespaces
- Summary (for Create Operation)
- Summary (for Drop Operation)
- Completion Summary (for Create Operation)
- Completion Summary (for Drop Operation)
A.1 Welcome

This is the first screen that appears when RCU is started. Note the navigation pane on the left that summarizes the tasks that RCU will help you complete. Each item in the navigation pane represents a specific screen that will prompt you for information required to create or drop your schemas.

Click **Skip This Page Next Time** if you do not want to see the Welcome screen the next time you start RCU.
A.2 Create Repository

Use this screen to select the action you want to perform:

- Select **Create** to create component schemas in the database.
- Select **Drop** to remove component schemas from the database.
A.3 Drop Repository

Use this screen to select the action you want to perform:

- Select **Create** to create component schemas in the database.
- Select **Drop** to remove component schemas from the database.
A.4 Database Connection Details

Use this screen to specify the connection credentials to the database in which you will be creating or dropping your schemas. Select one of the following depending on your database:

- Specifying Connection Credentials for Oracle Databases and Oracle Databases with Edition-Based Redefinition
- Specifying Connection Credentials for MySQL Databases
- Specifying Connection Credentials for Microsoft SQL Server Databases
- Specifying Connection Credentials for IBM DB2 Databases

Click Next when you are finished entering the connection credentials for your database. The following screen appears, indicating the progress of the installer establishing the connection with the specified database:

If an error occurs while the connection is being established, the error message(s) appear in the Messages field on the Database Connection Details screen.
Specific database requirements for the various schemas can be found in the *Oracle Fusion Middleware System Requirements and Specifications* document.

For certified database versions, see the *System Requirements and Supported Platforms for Oracle Fusion Middleware 11gR1* document, which is available on the Oracle Fusion Middleware Supported System Configurations page.

### A.4.1 Specifying Connection Credentials for Oracle Databases and Oracle Databases with Edition-Based Redefinition

For Oracle databases and Oracle databases with edition-based redefinition, specify the following connection credentials:

**Table A–1  Oracle Database Connection Credentials**

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Host Name</td>
<td>Enter the name of the server where your database is running. Use the following format: examplehost.exampledomain.com For Oracle RAC databases, specify the VIP name or one of the node names in this field.</td>
</tr>
<tr>
<td>Port</td>
<td>Enter the port number for your database. The default port number for Oracle databases is 1521.</td>
</tr>
<tr>
<td>Service Name</td>
<td>Specify the service name for the database. Typically, the service name is the same as the global database name. If you are unsure what the service name for your database is, you can obtain it from the SERVICE_NAMES parameter in the database’s initialization parameter file. If the initialization parameter file does not contain the SERVICE_NAMES parameter, then the service name is the same as the global database name, which is specified in the DB_NAME and DB_DOMAIN parameters. For Oracle RAC databases, specify the service name of one of the nodes in this field. For example: examplehost.exampledomain.com</td>
</tr>
<tr>
<td>Username</td>
<td>Enter the user name for your database. The default user name is SYS.</td>
</tr>
<tr>
<td>Password</td>
<td>Enter the password for your database user.</td>
</tr>
<tr>
<td>Role</td>
<td>Select the database user’s role from the drop-down list:</td>
</tr>
<tr>
<td></td>
<td>■ Normal</td>
</tr>
<tr>
<td></td>
<td>■ SYSDBA</td>
</tr>
</tbody>
</table>

All schemas installed on an Oracle database require the SYSDBA role. If you are creating schemas for Oracle Internet Directory (OID) or Oracle Identity Manager (OIM), you must use the user SYS and the SYSDBA role. See “Required Privileges for Oracle Databases” in the Oracle Fusion Middleware System Requirements and Specifications document for more information.

### A.4.2 Specifying Connection Credentials for MySQL Databases

For MySQL databases, specify the following connection credentials:
### A.4.3 Specifying Connection Credentials for Microsoft SQL Server Databases

For Microsoft SQL Server databases, specify the following connection credentials:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Host Name</td>
<td>Enter the host name, IP address, or complete server name in host\server format of the server where your database is running.</td>
</tr>
<tr>
<td>Port</td>
<td>Enter the port number for your database.</td>
</tr>
<tr>
<td>Database Name</td>
<td>Specify the name of your database.</td>
</tr>
<tr>
<td>Username</td>
<td>Specify the name of a user with DBA or SYSDBA privileges.</td>
</tr>
<tr>
<td>Password</td>
<td>Enter the password for your database user.</td>
</tr>
</tbody>
</table>

### Table A–3  Microsoft SQL Server Database Connection Credentials

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
</table>
| Unicode Support | Select Yes or No from the drop-down list.  
| NOTE: Oracle SOA Infrastructure schemas are created with Unicode support (database tables created with NVARCHAR) only, regardless of the option selected in this field. |
| Server Name | Enter the host name, IP address, or complete server name in host\server format of the server where your database is running. |
| Port | Enter the port number for your database.                                                        |
| Database Name | Specify the name of your database.                                                               |
| Username | Enter the user name for your database. The user must have SYSDBA or DBA privileges.             |
| Password | Enter the password for your database user.                                                       |

### A.4.4 Specifying Connection Credentials for IBM DB2 Databases

For IBM DB2 databases, specify the following connection credentials:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Server Name</td>
<td>Enter the host name, IP address, or complete server name in host\server format of the server where your database is running.</td>
</tr>
<tr>
<td>Port</td>
<td>Enter the port number for your database.</td>
</tr>
<tr>
<td>Database Name</td>
<td>Specify the name of your database.</td>
</tr>
<tr>
<td>Username</td>
<td>Specify the name of a user with DB Owner privileges. The default user name for IBM DB2 databases is db2admin.</td>
</tr>
<tr>
<td>Password</td>
<td>Enter the password for your database user.</td>
</tr>
</tbody>
</table>

### A.5 Select Components (for Create Operation)

Below is the Select Components screen if you selected Create on the Create Repository screen.
**Note:** RCU supports additional products not included with Oracle Fusion Middleware. The schemas for these products may appear in RCU but should not be selected if you are only configuring an Oracle Fusion Middleware environment.

Oracle Fusion Middleware schemas are listed in Appendix B, "Repository Creation Utility Schemas, IDs, and Tablespaces".

The following topics are covered in this section:

- Section A.5.1, "Creating Database Users for IBM DB2 Databases"
- Section A.5.2, "Creating Prefixes"
- Section A.5.3, "Selecting Components and Dependencies"
- Section A.5.4, "Specifying Custom Schema Names"
- Section A.5.5, "Checking Schema Prerequisites"

**Note:** You must remember the prefix and schema names for the components you are installing; you will need this information during the configuration phase of Fusion Middleware product installation. Oracle recommends that you write these values down.

### A.5.1 Creating Database Users for IBM DB2 Databases

IBM DB2 authenticates its database users using equivalent operating system users. Therefore, prior to running RCU, one operating system user must be created for each schema. The operating system user name must match the schema owner name and must contain only lowercase letters; no all-uppercase or mixed-case names are
allowed. For example, if you create a schema named `DEV_ODI` using RCU, then the operating system user must be named `dev_odi` (all lowercase letters).

### A.5.2 Creating Prefixes

Prefixes are used to create logical groupings of schemas in a database. For example, if you want to create two versions of the `MDS` schema in the database, you can use different prefixes to uniquely identify each one (for example, `TEST_MDS` and `PROD_MDS`). Note that the prefix name and schema name are separated by an underscore `_` character.

**Note:** The Oracle Internet Directory (ODS) component cannot be prepended with a custom prefix; there can only be one repository for this component per database.

If you want to create a new prefix for your schemas, select **Create a New Prefix** and specify a new prefix name in the field. The prefix name must be a minimum of one character in length and cannot exceed 12 alphanumeric characters (0-9, a-z, or A-Z) in length (not including the underscore character). prefixes should not start with a number. No whitespace or special characters are allowed.

**Note:** For IBM DB2 databases, prefixes are limited to four characters in length (not including the underscore character).

The default new prefix is `DEV`. If `DEV` already exists as a prefix, then `DEV1` is used; if `DEV1` exists, then `DEV2` is the default, and so on.

Use existing prefixes to add additional components to an existing repository in the database. To use an existing prefix, select **Select an Existing Prefix** and choose a prefix from the drop-down list.

### A.5.3 Selecting Components and Dependencies

When you select a component, any other components that may be required by the component you select are also selected. For example, if you select SOA and BPM Infrastructure, then all schemas in this category are selected along with the Metadata Services schema. The Metadata Services schema is required by each component in SOA and BPM Infrastructure.

If a component has a plus sign (+) next to its name, then there are sub components available. Click on the plus sign (+) to expand the category to view all sub components. If you want to select a component with all its subcomponents, click on the top-most box with the plus sign (+).

### A.5.4 Specifying Custom Schema Names

Click on the name of any schema in the "Schema Owner" column to change the name of the schema. Schema names can only contain alphanumeric characters (0-9, a-z, or A-Z) and are case-sensitive.

**Note:** The Oracle Internet Directory (ODS) component cannot be prepended with a custom prefix; there can only be one repository for this component per database.
A.5.5 Checking Schema Prerequisites

Click Next when you are finished specifying your prefix, schema names, and selecting components. The following screen appears, indicating the progress of component prerequisite checking before the schemas are created.

If an error occurs during the prerequisite checking, the error message(s) appear in the Messages field on the Select Components screen.

Click OK to dismiss this screen.

A.6 Select Components (for Drop Operation)

Below is the Select Components screen if you selected Drop on the Create Repository screen.
Select Components (for Drop Operation)

First, select the prefix associated with the schema(s) you want to drop. Then, select the component(s) whose schemas you want to drop. Click **Next** when you are finished. The following screen appears:

Click **OK** to continue. The following screen appears:
If an error occurs during the prerequisite checking, the error message(s) appear in the Messages field on the Select Components screen.

Click **OK** to dismiss this screen.

### A.7 Schema Passwords

Below is the Schema Passwords screen.
There are three ways to specify schema passwords on this screen; they are described in the following table:

### Table A–5  Options for Specifying Schema Passwords

<table>
<thead>
<tr>
<th>Option</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use same password for all schemas</td>
<td>Select this option if you want to use a single password for all schemas and their auxiliary schemas. In the Password field, enter your password. Enter your password again in the Confirm Password field.</td>
</tr>
<tr>
<td>Use main schema passwords for auxiliary schemas</td>
<td>Select this option if you want to specify different passwords for the main schemas, but still have the same password used for their respective auxiliary schemas. If you select this option, only the main schemas will be visible in the table. For each schema, you must enter each schema’s password in the Password column in the table, and enter the same password in the Confirm Password column.</td>
</tr>
<tr>
<td>Specify different passwords for all schemas</td>
<td>Select this option if you want to specify unique passwords for the main schemas and auxiliary schemas. If you select this option, all main schemas and auxiliary schemas will be visible in the table. For each schema and auxiliary schema, you must enter the password in the Password column in the table, and enter the same password in the Confirm Password column.</td>
</tr>
</tbody>
</table>

**Note:** You must remember the passwords you enter on this screen; you will need this information during the configuration phase of Fusion Middleware product installation. Oracle recommends that you write these values down.
A.8 Custom Variables

This page allows one or more components to specify additional configuration information required by the components during runtime.

This screen only appears if you selected a component on the Select Components (for Create Operation) that supports custom variables:

- Specifying Custom Variables for Master and Work Repository (ODI)
- Specifying Custom Variables for Oracle WebCenter Portal’s Activity Graph and Analytics

### A.8.1 Specifying Custom Variables for Master and Work Repository (ODI)

Specify the following for the Master and Work Repository Custom Variables:

<table>
<thead>
<tr>
<th>Table A–6 Master and Work Repository Custom Variables</th>
</tr>
</thead>
<tbody>
<tr>
<td>Variable</td>
</tr>
<tr>
<td>Master Repository ID</td>
</tr>
<tr>
<td>Supervisor Password</td>
</tr>
</tbody>
</table>
A.8.2 Specifying Custom Variables for Oracle WebCenter Portal’s Activity Graph and Analytics

Specify Y if you want to install Activity Graph and Analytics with database partitioning enabled, or N if you do not want to enable database partitioning.

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Work Repository Type</td>
<td>Specify how the Work Repository will be used:</td>
</tr>
<tr>
<td></td>
<td>■ Use Development (D) for creating a development repository. This type of</td>
</tr>
<tr>
<td></td>
<td>repository allows management of design-time objects such as data models</td>
</tr>
<tr>
<td></td>
<td>and projects (including interfaces, procedures, etc.) A development</td>
</tr>
<tr>
<td></td>
<td>repository also includes the run-time objects (scenarios and sessions).</td>
</tr>
<tr>
<td></td>
<td>This type of repository is suitable for development environments.</td>
</tr>
<tr>
<td></td>
<td>■ Use Execution (E) for creating an execution repository: This type of</td>
</tr>
<tr>
<td></td>
<td>repository only includes run-time objects (scenarios, schedules and</td>
</tr>
<tr>
<td></td>
<td>sessions). It allows launching and monitoring of data integration jobs in</td>
</tr>
<tr>
<td></td>
<td>Operator Navigator. Such a repository cannot contain any design-time</td>
</tr>
<tr>
<td></td>
<td>artifacts. Designer Navigator cannot be used with it. An execution</td>
</tr>
<tr>
<td></td>
<td>repository is suitable for production environments.</td>
</tr>
<tr>
<td>Work Repository ID</td>
<td>A specific ID for the new Work Repository. Default value is 001.</td>
</tr>
<tr>
<td>Work Repository Name</td>
<td>A unique name for the Work Repository (for example: DEVWORKREP1).</td>
</tr>
<tr>
<td>Work Repository Password</td>
<td>(Optional) - Provide a password for the Work Repository. If you provide a</td>
</tr>
<tr>
<td></td>
<td>password, you must confirm the password on the following line.</td>
</tr>
</tbody>
</table>
A.9 Map Tablespaces

This screen only appears if you selected the Create option on the Create Repository. The following topics are covered:

- Section A.9.1, "Default Tablespace Mappings"
- Section A.9.2, "Changing Default and Temporary Tablespaces"
- Section A.9.3, "Viewing and Changing Additional Tablespaces"
- Section A.9.4, "Managing Tablespaces and Datafiles"

Click Next when you are finished with your tablespace information. The following screen appears, asking you to confirm the creation of tablespaces for any new schemas.

Note: RCU only creates tablespaces for those components associated with RCU.
Click **OK** to continue. The following screen appears, indicating the progress of the tablespace creation.

![Repository Creation Utility - Creating Tablespaces](image)

Click **Stop** to cancel tablespace creation. When the tablespaces are created, click **OK** to dismiss this window.

### A.9.1 Default Tablespace Mappings

The default tablespace mapping for each component are shown in Appendix B, "Repository Creation Utility Schemas, IDs, and Tablespaces".

In the Default Tablespace and Temp tablespace columns, you can click on the tablespace cell to select from a list of available additional tablespace names.

---

**Note:** OID tablespace names cannot be user specified.

---

### A.9.2 Changing Default and Temporary Tablespaces

To change the default tablespace for a component, select the tablespace name in the "Default Tablespace" column, then select the tablespace name you want to use from the drop-down list. You can have your components use as many or as few tablespaces as desired to suit your configuration.

To change the temporary tablespace for a component, select the tablespace name in the "Temp Tablespace" column, then select the tablespace name you want to use from the drop-down list.

### A.9.3 Viewing and Changing Additional Tablespaces

Some components have additional tablespaces associated with their schemas. If this is the case, the **Additional Tablespaces** button will appear on this screen. If none of the selected components have additional tablespaces, then this button will not appear.

To view additional tablespaces associated with the selected components, click the **Additional Tablespaces** button. You will see a screen similar to the following:
Only those components with additional tablespaces as defined in the configuration files will appear on this screen.

To change the tablespace you want to use for a component, click in the "Tablespace Name" column and select the tablespace you want to use from the drop-down list. Click OK when you are finished.

A.9.4 Managing Tablespaces and Datafiles

To manage your tablespaces and datafiles, click the Manage Tablespaces button. You will see a screen similar to the following:
The following topics are covered in this section:

- Section A.9.4.1, "Adding, Modifying, and Removing Tablespaces"
- Section A.9.4.2, "Adding, Modifying, and Removing Datafiles"

### A.9.4.1 Adding, Modifying, and Removing Tablespaces

Only tablespaces that will be created by RCU can be modified or removed. Tablespaces that existed before RCU was launched are visible on this screen but are grayed out and cannot be modified or removed.

Only tablespaces that are used by a component are created. You can specify a new tablespace here, but unless it is actually used by a component it will not be created.

To modify a tablespace, select the tablespace name on the left-hand portion of the screen, and edit the fields as described in the following table:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Edit the tablespace name this field to change the name of your tablespace.</td>
</tr>
<tr>
<td>Type</td>
<td>Specify whether you want this tablespace to be a temporary tablespace or permanent tablespace.</td>
</tr>
<tr>
<td>Block Size (KB)</td>
<td>Specify the block size (in Kilobytes) to be used for data retrieval.</td>
</tr>
<tr>
<td>Storage Type</td>
<td>Select Use Bigfile Tablespace if you want to create a bigfile tablespace; this is typically used if you have single large files instead of multiple small files. Select Use Automatic Segment Space Management if you want to use bitmaps to manage the free space within segments.</td>
</tr>
</tbody>
</table>

To add a tablespace, click **Add** and specify the same details as above (for modifying a tablespace) for your new tablespace.

To remove a tablespace, select the tablespace name from the navigation tree, then click **Remove**. This tablespace will not get created.
A.9.4.2 Adding, Modifying, and Removing Datafiles

In the Datafiles section, specify the datafiles that make up the selected tablespace. Select one of the following for more information:

- Section A.9.4.2.1, "Adding a Datafile"
- Section A.9.4.2.2, "Modifying a Datafile"
- Section A.9.4.2.3, "Deleting a Datafile"

A.9.4.2.1 Adding a Datafile

To add a datafile, click the icon with the plus sign (+):

The Add Datafile screen appears:

![Add Datafile Screen]

Provide the information described in the following table:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>File Name</td>
<td>Specify the name of the datafile.</td>
</tr>
<tr>
<td></td>
<td>NOTE: Datafile names must be less than 30 characters in length, and names</td>
</tr>
<tr>
<td></td>
<td>with a dash or hyphen (-) character are not permitted.</td>
</tr>
<tr>
<td>File Directory</td>
<td>Specify the location where this datafile will reside.</td>
</tr>
<tr>
<td>Size</td>
<td>Specify the initial size of the datafile. Use the drop-down list to specify</td>
</tr>
<tr>
<td></td>
<td>the size in kilobytes (KB), megabytes (MB), or gigabytes (GB).</td>
</tr>
<tr>
<td>Automatically extend</td>
<td>Select Automatically extend datafile when full (AUTOEXTEND) if you want to</td>
</tr>
<tr>
<td>datafile when full</td>
<td>automatically extend the size of your datafile when it becomes full.</td>
</tr>
<tr>
<td>(AUTOEXTEND)</td>
<td>In the &quot;Increment&quot; field, specify the size by which your datafile should be</td>
</tr>
<tr>
<td></td>
<td>increased each time it becomes full. Use the drop-down list to specify the</td>
</tr>
<tr>
<td></td>
<td>size in kilobytes (KB), megabytes (MB), or gigabytes (GB).</td>
</tr>
<tr>
<td></td>
<td>If you want to limit maximum size of the datafile, specify this value in</td>
</tr>
<tr>
<td></td>
<td>the &quot;Maximum Size&quot; field.</td>
</tr>
</tbody>
</table>
A.9.4.2.2 Modifying a Datafile  To modify or edit a datafile, select the icon next to the datafile name you want to edit, then click the icon with the pencil:

The Edit Datafile screen appears:

![Edit Datafile Screen](image)

Provide the information described in the following table:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>File Name</td>
<td>Specify the name of the datafile.</td>
</tr>
<tr>
<td><strong>NOTE:</strong> Datafile names must be less than 30 characters in length, and names with a dash or hyphen (-) character are not permitted.</td>
<td></td>
</tr>
<tr>
<td>File Directory</td>
<td>Specify the location where this datafile resides.</td>
</tr>
<tr>
<td>Size</td>
<td>Specify the initial size of the datafile. Use the drop-down list to specify the size in kilobytes (KB), megabytes (MB), or gigabytes (GB).</td>
</tr>
<tr>
<td><strong>Automatically extend datafile when full (AUTOEXTEND)</strong></td>
<td>Select <strong>Automatically extend datafile when full (AUTOEXTEND)</strong> if you want to automatically extend the size of your datafile when it becomes full. In the &quot;Increment&quot; field, specify the size by which your datafile should be increased each time it becomes full. Use the drop-down list to specify the size in kilobytes (KB), megabytes (MB), or gigabytes (GB).</td>
</tr>
<tr>
<td>Maximum Size</td>
<td>If you want to limit maximum size of the datafile, specify this value in the &quot;Maximum Size&quot; field.</td>
</tr>
</tbody>
</table>

A.9.4.2.3 Deleting a Datafile  To delete a datafile, select the icon next to the datafile name you want to delete, then click the icon with the "X":

![Delete Datafile Icon](image)
A.10 Summary (for Create Operation)

Below is the Summary screen if you selected Create on the Create Repository screen.

Review the information on this screen, and click Create to begin schema creation. The operations summarized on this page will be performed when you click Create.

While the schemas are being created, you will see the following progress screen:
Click Stop if you want to stop creating the schemas.

A.11 Summary (for Drop Operation)

Below is the Summary screen if you selected Drop on the Create Repository screen.
Review the information on this screen, and click **Drop** to begin the operations summarized on this page.

While the schema(s) are being dropped, you will see the following progress screen:
Click **Stop** if you want to cancel the operation.

### A.12 Completion Summary (for Create Operation)

Below is the Completion Summary screen if you selected **Create** on the **Create Repository** screen.

Note the log file names for each component that are visible in the "Logfile" column.

The main RCU log and component log files are written to the following directory on UNIX operating systems:

\[ RCU\_HOME/rcu/log/logdir.date\_timestamp \]

On Windows operating systems:

\[ RCU\_HOME/rcu\log\logdir.date\_timestamp \]

If there were any problems encountered during schema creation, you can troubleshoot the issue using the log files. For more information, see Appendix C, "Troubleshooting Repository Creation Utility".

If errors are encountered during a Create operation, or if a Create operation fails for any component, the **Cleanup for failed components** checkbox appears on this page and is selected by default. If selected, RCU will perform cleanup operations for the component that failed during the Create operation. If you choose not to select this checkbox, you can cleanup the failed component at a later time by performing a Drop operation for the failed component(s).

Review the information on this screen, then click **Close** to dismiss this screen.
A.13 Completion Summary (for Drop Operation)

Below is the Completion Summary screen if you selected Drop on the Create Repository screen.

Note the log file names for each component that are visible in the "Logfile" column.

The main RCU log and component log files are written to the following directory on UNIX operating systems:

RCU_HOME/rcu/log/logdir.

On Windows operating systems:

RCU_HOME\rcu\log\logdir.date_timestamp

If there were any problems encountered during schema creation, you can troubleshoot the issue using the log files. For more information, see Appendix C, "Troubleshooting Repository Creation Utility".

Review the information on this screen, then click Close to dismiss this screen.
Repository Creation Utility Schemas, IDs, and Tablespaces

This appendix lists the available schemas that can be created using RCU, and also their component IDs and dependencies.

Table B–1 lists the schemas along with their component IDs, tablespace mappings, and dependencies.

The "Schema Owner" is the name of the schema that you will see in RCU and is also the name you must provide in the Fusion Middleware Configuration Wizard on the Configure JDBC Component Schema screen.

The "Component ID" is the value you must specify with the -component parameter when you are creating or dropping schemas using the command line.

Note: Not all schemas are supported on all database types. For more information, refer to "Repository Creation Utility (RCU) Requirements" in the Oracle Fusion Middleware System Requirements and Specifications document.

This appendix describes solutions to common problems that you might encounter when running Repository Creation Utility (RCU).

It contains the following sections:

- Section C.1, "General Troubleshooting Tips"
- Section C.2, "RCU Log Files"
- Section C.3, "Finding Schemas in the Database"
- Section C.4, "Database Prerequisite Issues and Solutions"
- Section C.5, "Need More Help?"

C.1 General Troubleshooting Tips

If you encounter an error during installation:

- Read the Oracle Fusion Middleware Release Notes for the latest updates. The most current version of the release notes is available on Oracle Technology Network the Oracle Fusion Middleware Documentation page.

Select the documentation library for your specific product release to view the release notes.

- Verify that your computer meets the requirements specified in the Oracle Fusion Middleware System Requirements and Specifications document.

Select the document that is applicable for your release.

- Verify that your environment meets the certification requirements as specified in the System Requirements and Supported Platforms for Oracle Fusion Middleware 11gR1 document, which can be found on the Oracle Fusion Middleware Supported System Configurations page.

- Make sure that your database is up and running.

- If you entered incorrect information on one of the screens, use the navigation pane on the left hand side of the graphical interface to return to that screen.

- If an error occurred while running RCU:

  1. Note the error and review the RCU log files (see Section C.2, "RCU Log Files").

  2. Correct the issue that caused the error. Depending on the type of error, you may either continue with your RCU operation, or be forced to restart RCU.

  3. Continue or restart RCU to complete your desired operation.
Make notes about the solution procedures you perform, symptoms you see, and data you collect while troubleshooting. If you cannot resolve the problem using the information in this appendix and you must log a service request, the notes you make will expedite the process of solving the problem.

After performing any of the solution procedures, immediately retry the failed task that led you to this troubleshooting information. If the task still fails when you retry it, perform a different solution procedure and then try the failed task again. Repeat this process until you resolve the problem.

C.2 RCU Log Files

The main RCU log file is written to the `RCU_HOME/rcu/log/logdir.date_timestamp/rcu.log` (on UNIX operating systems) or `RCU_HOME\rcu\log\logdir.date_timestamp\rcu.log` (on Windows operating systems) file. For example, on a UNIX operating system:

`RCU_HOME/rcu/log/logdir.2010-01-02_03-00/rcu.log`

In addition to this general log file, each component writes a log file of its own. All component log files are also written to the `RCU_HOME/rcu/log/logdir.date_timestamp` (on UNIX operating systems) or `RCU_HOME\rcu\log\logdir.date_timestamp` (on Windows operating systems) directory.

Table C-1 lists the component log file names in alphabetical order by log file name.

<table>

</tbody>
</table>
C.3 Finding Schemas in the Database

In situations where you need to find which schemas are already installed in your database, there are two methods for accomplishing this.

You can run RCU (Section 2.4, "Starting RCU") and select Drop on the Create Repository screen. After specifying your database credentials, you will be able to see the schemas available for your drop operation, which are the schemas installed on the database.

You can also connect to and query the database using the following SQL command:

```
SELECT OWNER, VERSION, STATUS FROM SCHEMA_VERSION_REGISTRY;
```

C.4 Database Prerequisite Issues and Solutions

During an Oracle Fusion Middleware installation, the Repository Creation Utility (RCU) performs checks against global and component-specific prerequisites to ensure that minimum requirements are met in the database prior to schema creation. If a prerequisite is not met, then RCU might issue a warning and allow you to continue, or will notify you with an error that a prerequisite must be met before the operation can continue. The following scenarios describe error and warning messages you might encounter during RCU prerequisite checking and what to do to resolve these issues.

- Enabling Transparent Data Encryption for Oracle Privileged Account Manager
- Setting Database Parameters

---

### Table C-1  (Cont.) RCU Component Log File Names

</tbody>
</table>

C.4.1 Enabling Transparent Data Encryption for Oracle Privileged Account Manager

During an Oracle Privileged Account Manager installation, RCU performs a prerequisite check to ensure that Transparent Data Encryption (TDE) has been enabled in the database for Oracle Privileged Account Manager.

**Symptom:** If Transparent Data Encryption has not been enabled in the database for Oracle Privileged Account Manager, then RCU issues the following warning:

Warning: Transparent Data Encryption (TDE) is not enabled in Database. Use of TDE is recommended.

**Cause:** This warning message was introduced in Oracle Identity and Access Management 11g Release 2 (11.1.2.3.0). If you continue with the installation without enabling TDE, then Oracle Privileged Account Manager will be installed in a less secure setup. For production deployments, Oracle recommends that you enable TDE on an Oracle Privileged Account Manager database because Oracle Privileged Account Manager relies on TDE for at-rest protection of sensitive information (such as passwords and other security-related data).

**Solution:** It is recommended that you stop RCU and enable TDE in the database before continuing.

For information about enabling TDE for Oracle Privileged Account Manager, refer to one of the following procedures, depending on the Oracle Database version you are using:

- To enable TDE in Oracle Database Release 11.2, refer to the "Enabling Transparent Data Encryption" topic in the *Oracle Database Advanced Security Administrator’s Guide*.
- To enable TDE in Oracle Database Release 12.1, refer to the "Configuring Transparent Data Encryption" topic in the *Oracle Database Advanced Security Guide*.

**OR**

You can ignore the RCU warning and configure Oracle Privileged Account Manager to run without a TDE enabled database. However, this is not recommended because the sensitive information stored by Oracle Privileged Account Manager will not be secured at rest.

**Note:** For more information about Transparent Data Encryption, see "Securing Stored Data Using Transparent Data Encryption" in *Oracle Database Advanced Security Administrator’s Guide*.

C.4.2 Setting Database Parameters

RCU performs a prerequisite check on Oracle databases to ensure that specific database initialization parameters are set high enough for the database to run properly and efficiently.

**Symptom:** If a database parameter is not set to the minimum required value, then RCU notifies you with an error, such as the following:

RCU-6107: DB Init Param Prerequisite failure for: OPEN_CURSORS. Current value is 300. It should be greater than or equal to 800.

---

C-4 Repository Creation Utility User's Guide
Cause: This error occurs because RCU detects that a database initialization parameter has not been set high enough and does not meet the minimum component requirement for the components you are installing.

It is important to set database parameters before an installation as some components within a product have different requirements. The required parameters must meet the minimum component requirements before you can continue. For more information about these requirements, see the "RCU Requirements for Oracle Databases" section in the Oracle Fusion Middleware System Requirements and Specifications document.

Solution: Make sure the database parameters that are required for your installation meet the minimum component requirements. For information on how to set the values of database parameters, see the "Changing Initialization Parameter Values" topic in the Oracle Database Administrator’s Guide.

For more information about basic initialization parameters, see
- "Specifying Initialization Parameters" in Oracle Database Administrator’s Guide
- "Initialization Parameters" in Oracle Database Performance Tuning Guide

C.5 Need More Help?

If this appendix does not solve the problem you encountered, try looking for a solution on My Oracle Support (formerly OracleMetaLink) to help resolve Oracle Fusion Middleware problems:

https://support.oracle.com/

My Oracle Support contains several useful troubleshooting resources, such as:
- Knowledge base articles
- Community forums and discussions
- Patches and upgrades
- Certification Information

If you are unable to find a solution for your problem, open a service request.
