This guide describes interoperability and compatibility considerations you should review when installing, upgrading, or patching Oracle Fusion Middleware.

This preface contains these topics:

- Audience
- Documentation Accessibility
- Related Documents
- Conventions

**Audience**

This document is intended for system administrators responsible for installations, upgrade planning, and patch set application.

**Documentation Accessibility**

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

**Access to Oracle Support**

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

**Related Documents**

For more information, see the following related documentation available in the Oracle Fusion Middleware 11g documentation library:

- Oracle Fusion Middleware Planning an Upgrade of Oracle Fusion Middleware
- Oracle Fusion Middleware Planning an Installation of Oracle Fusion Middleware
- Oracle Fusion Middleware Patching with OPatch
Conventions

The following text conventions are used in this document:

<table>
<thead>
<tr>
<th>Convention</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>boldface</strong></td>
<td>Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary.</td>
</tr>
<tr>
<td><em>italic</em></td>
<td>Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.</td>
</tr>
<tr>
<td>monospace</td>
<td>Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter.</td>
</tr>
</tbody>
</table>
Understanding Interoperability and Compatibility

This chapter provides an introduction to interoperability and compatibility, and it describes how to identify areas where compatibility and interoperability considerations may arise when you are upgrading Oracle Fusion Middleware components, applying patch sets, or installing new Oracle Fusion Middleware components.

This chapter contains the following sections:

- Section 1.2, "What Is Compatibility?"
- Section 1.1, "What Is Interoperability?"
- Section 1.3, "About Interoperability and Compatibility with Supported Databases"
- Section 1.4, "Identifying Potential Compatibility and Interoperability Issues"

1.1 What Is Interoperability?

For the purposes of this guide, interoperability is defined as the ability of two Oracle Fusion Middleware products or components of the same version (or release) to work together (interoperate) in a supported Oracle Fusion Middleware configuration. Specifically, interoperability applies when the first 4 digits of the release or version number are the same. For example, Oracle Fusion Middleware 12c (12.2.1) components are generally interoperable with other 12c (12.2.1) components.

In some cases there may be interoperability issues between Oracle Fusion Middleware software suites. For example, you may experience issues with the co-existence of domains between Oracle Fusion Middleware 11g products such as SOA and WebCenter.

1.2 What Is Compatibility?

For the purposes of this guide, compatibility is defined as the ability of two Oracle Fusion Middleware components of different versions (or releases) to interoperate. It is possible that you will have compatibility considerations when upgrading Oracle Fusion Middleware or when applying Oracle Fusion Middleware patches.

When upgrading, for example, you may need to know which components must be updated so that your existing integration points continue to work. When applying a patch you may want to know if the new products will work with other products of the same release or if they will continue to work with previous versions.

Compatibility can be further broken down into the following:
About Interoperability and Compatibility with Supported Databases

- Compatibility Between Oracle Fusion Middleware Software Suites
- Compatibility Within Oracle Fusion Middleware Software Suites

1.2.1 Compatibility Between Oracle Fusion Middleware Software Suites

When you are upgrading your Oracle Fusion Middleware 11g environment to Oracle Fusion Middleware 12c, you will likely update one area of your environment at a time.

For example, you can upgrade the middle tiers in one department to Oracle Fusion Middleware 12c in order to support new features. At the same time, you can leave your company-wide Oracle Identity Management components at Oracle Fusion Middleware 11g.

1.2.2 Compatibility Within Oracle Fusion Middleware Software Suites

When you are upgrading to Oracle Fusion Middleware 12c, you should also consider potential compatibility issues within a specific software suite.

In most cases, issues are temporary and occur only during the upgrade process. After you finish the complete procedure for upgrading the software suite, the issues are typically resolved. However, you should still be aware of these potential concerns, because they can influence your upgrade planning.

1.3 About Interoperability and Compatibility with Supported Databases

Each release of Oracle Fusion Middleware is certified against specific database versions. Specifically, you can use these certified databases to host the Oracle Fusion Middleware components schemas.

In some cases, you might have to upgrade your database to a supported version before upgrading to a specific Oracle Fusion Middleware release. For more information on upgrading your Oracle Fusion Middleware components, see Oracle Fusion Middleware Planning an Upgrade of Oracle Fusion Middleware.

For the latest information about the databases supported by each Oracle Fusion Middleware release, refer to Oracle Fusion Middleware Supported System Configurations on the Oracle Technology Network.

From the Supported Configurations page, you can locate the specific Oracle Fusion Middleware release you are using, as well as the target Oracle Fusion Middleware release to which you want to upgrade. For each Oracle Fusion Middleware release, there is a corresponding spreadsheet that lists the certified configurations, including the supported databases.

1.4 Identifying Potential Compatibility and Interoperability Issues

This section describes how to identify and answer common compatibility and interoperability issues using information from this guide, the Oracle Technology Network (OTN), and other Oracle documents:

- Before You Begin
- Using Oracle Certification Matrices
- About the Compatibility Matrices in this Guide
- Collecting Your Component and Infrastructure Information
- Using Release Notes
### 1.4.1 Before You Begin

If you are installing a new product or updating an existing one (either to a new major version or a patch set), interoperability and compatibility issues may arise.

During a new product component installation, interoperability considerations relate to the capability of the new product to integrate with other Oracle Fusion Middleware components of the same release.

Compatibility considerations relate to the capability of the new product to integrate with previous versions of Oracle Fusion Middleware products which may have already been installed. During product updates, the question is mainly one of compatibility and you may need to consider the other components that need to be updated so that existing integration points continue to work.

Table 1–1 provides a list of tasks that will help you collect the information necessary to plan your Oracle Fusion Middleware upgrade and installation strategy.

<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
<th>Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Task 1 - Gather release and version information for your installed components and supporting infrastructure.</td>
<td>In order for you to identify potential interoperability and compatibility issues with your Oracle Fusion Middleware components, you must first collect the release and version information for each component or suite of components you have installed or plan to install or upgrade. In addition, you should also have version and release information for your operating system, database, JDKs, and third-party products.</td>
<td>See Section 1.4.4, &quot;Collecting Your Component and Infrastructure Information&quot;</td>
</tr>
</tbody>
</table>
Identifying Potential Compatibility and Interoperability Issues

1.4.2 Using Oracle Certification Matrices

The Oracle Fusion Middleware Certification matrices provide important compatibility and interoperability information such as supported system configurations, database versions, and third-party products. Refer to these documents to ensure that your current environment can support an upgrade or patch set.

Note: The information in this guide is meant to complement the information contained in the Oracle Fusion Middleware certification matrices. If there is a conflict of information between this guide and the certification matrices, then the information in the certification matrices should be considered the correct version as they are frequently updated.
Identifying Potential Compatibility and Interoperability Issues

1.4.3 About the Compatibility Matrices in this Guide

Interoperability and compatibility matrices are used throughout the book to identify potential issues and to provide links to additional information. When you use the interoperability and compatibility matrices in this guide, the level of support can be defined in one of the following ways:

<table>
<thead>
<tr>
<th>Status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Compatible or Interoperable</td>
<td>Integration between the components involved is expected to work with appropriate configuration. It is important to note, however, that compatibility is not a statement of certification. Certification information is located in the certification matrices described in Table 1–2.</td>
</tr>
<tr>
<td>Not Compatible or Interoperable</td>
<td>Integration between the components involved is not expected to work.</td>
</tr>
<tr>
<td>A reference to a specific guide or section</td>
<td>This reference is provided when an individual guide provides more detailed information about the compatibility requirements and considerations that you should review when upgrading, patching, or installing Oracle Fusion Middleware 12c.</td>
</tr>
<tr>
<td>N/A</td>
<td>Not Applicable.</td>
</tr>
</tbody>
</table>

1.4.4 Collecting Your Component and Infrastructure Information

Oracle Fusion Middleware release and version information is available for each installed component on your system. This information is required before you can effectively identify and solve interoperability or compatibility issues. The certification matrices described in Section 1.4.2 provide certification and system requirements...
Identifying Potential Compatibility and Interoperability Issues

This section describes how to collect the following information:

- Locating Oracle Fusion Middleware Product Release Information
- Locating your database-specific version and release information:
  - Locating Your Oracle Database Release Information
  - Locating your Microsoft SQL Server Version Information
  - Locating your DB2 Version Information
- Locating JDK Version Information

1.4.4.1 Locating Oracle Fusion Middleware Product Release Information
To find specific release and version information for your Oracle Fusion Middleware components, see the installed product information using the Oracle Universal Installer (OUI). For more information, see Viewing Release Numbers in the Oracle Fusion Middleware Administering Oracle Fusion Middleware.

**Note:** You can also find version and release information in the installation log files located in the `oraInventory/logs` directory of your Oracle Home.

1.4.4.2 Locating Your Oracle Database Release Information
To determine the release information of your Oracle database:

- Start SQL*Plus from the Oracle home directory:
  ```
  sqlplus /nolog
  SQL> CONNECT / AS SYSDBA
  SQL> select * from v$version;
  ```

The command returns the release information, such as the following:

Oracle Database 11g Enterprise Edition Release 11.2.0.4.0 - 64bit Production
PL/SQL Release 11.2.0.4.0 - Production
CORE 11.2.0.4.0 Production
TNS for Linux: Version 11.2.0.4.0 - Production
NLSRTL Version 11.2.0.4.0 - Production

1.4.4.3 Locating your Microsoft SQL Server Version Information
To determine the release information of your Microsoft SQL database:

- From the command line, enter the following:
  ```
  exec xp_msver ProductVersion
  ```

The command returns the product version information, such as the following:

ProductVersion 589824 9.00.1399.06

1.4.4.4 Locating your DB2 Version Information
To determine the release information of DB2:

- From the Windows operating system command line, navigate to the following:
  ```
  \Program Files\IBM\SQLLIB\BIN>db2level
  ```
The command returns the database version and applicable fix pack information such as the following:

```
DB21085I Instance "DB2? uses "32? bits and DB2 code release "SQL09011? with level identifier "01020107?.
Informational tokens are "DB2 v9.1.100.129?, "s061104?, "WR21374?, and Fix Pack "1?.
Product is installed at 'D:\PROGRA~1\IBM\SQLLIB' with DB2 Copy Name 'DB2COPY1?.
```

- From UNIX operating system command line, type the following:

```
db2ls
```

This command shows the installation path, version level, fix pack information and installation date of the installed DB2 product. Output from this command goes to the console by default.

```
Install Path    Level    Fix Pack    Install Number    Install Date
------------------------------------------------------------------------
/opt/ibm/db2/V9.1  9.1.0.0  0          1    Fri Sep 3 10:26:33 2010 EDT
```

### 1.4.4.5 Locating JDK Version Information

Many Fusion Middleware Components are dependent on having a supported JDK installed and configured. The currently supported JDK version information is documented in the Oracle Fusion Middleware Supported System Configurations matrix as described in Section 1.4.2.

To locate your current JDK version, use the `java -version` command to display the current version of Java you are using. For example:

```
> java -version
java version "1.7.0_17"
Java(TM) SE Runtime Environment (build 1.7.0_17-b02)
Java HotSpot(TM) Client VM (build 23.7-b01, mixed mode, sharing)
```

Note that if you have more than one installation of Java on your system, then the `java` command uses the installation identified in the `JAVA_HOME` system variable.

On UNIX systems, you can often identify the location of the default Java software by using the `which` command. For example:

```
> which java
/usr/bin/java
```

### 1.4.5 Using Release Notes

Refer to the Oracle Fusion Middleware Release Notes for specific information about required patch sets that address specific interoperability and compatibility issues which may surface during upgrade or patching process. The release notes for each release are available on the Oracle Technology Network (OTN). To find the release notes for a specific release, go to the Oracle Fusion Middleware documentation page and choose the appropriate documentation library:

### 1.4.6 Using the Oracle Fusion Middleware Documentation Library

The Oracle Fusion Middleware documentation library provides access to information that may assist you when upgrading and patching your Oracle environment. You can
review component-specific administration, installation, and upgrade guides for Oracle Fusion Middleware 12c documentation at:

http://www.oracle.com/technology/documentation/middleware.html

The following guides provide information on installing, patching, and upgrading your Oracle Fusion Middleware environment:

- *Oracle Fusion Middleware Patching with OPatch*
- *Oracle Fusion Middleware Planning an Upgrade of Oracle Fusion Middleware*
- *Oracle Fusion Middleware Planning an Installation of Oracle Fusion Middleware*
This chapter summarizes the specific interoperability and compatibility considerations and issues for the Oracle Fusion Middleware 12c (12.2.1) release.

This chapter contains the following sections:

- Section 2.1, "Products and Features Available in Oracle Fusion Middleware 12c (12.2.1)"
- Section 2.2, "Oracle Fusion Middleware Compatibility with Previous Releases"
- Section 2.3, "Interoperability with Supported Databases"
- Section 2.4, "Interoperability with Oracle Identity Management Products"
- Section 2.5, "Oracle Web Services Interoperability"
- Section 2.6, "Oracle Home and Domain Extension Interoperability"
- Section 2.7, "Interoperability with Custom and Client Applications"
- Section 2.8, "Oracle Data Integration 12c (12.2.1) Interoperability with Other Fusion Middleware Products"
- Section 2.9, "Oracle Enterprise Data Quality 12c (12.2.1) Interoperability with Other Fusion Middleware Products"
- Section 2.10, "Oracle GoldenGate Studio Interoperability with Other Fusion Middleware Products"

2.1 Products and Features Available in Oracle Fusion Middleware 12c (12.2.1)

Oracle Fusion Middleware 12c (12.2.1) includes updates to the following products that were originally distributed in Oracle Fusion Middleware 12c (12.1.3):

- Oracle JDeveloper
- Oracle WebLogic Server and Coherence
- Oracle Fusion Middleware Infrastructure
- Oracle HTTP Server
- Oracle Data Integrator
- Oracle Data Service Integrator
- Oracle SOA Suite
Oracle Fusion Middleware Compatibility with Previous Releases

Oracle Business Process Management
Oracle Service Bus
Oracle Managed File Transfer
Oracle Event Processing (Oracle Stream Explorer)
Oracle Data Service Integrator

Oracle Fusion Middleware 12c (12.2.1) also includes the following Oracle Fusion Middleware products, which have been re-introduced and re-engineered for Oracle Fusion Middleware 12c:

Oracle WebCenter Content
Oracle WebCenter Portal
Oracle WebCenter Sites
Oracle Business Intelligence
Oracle Traffic Director
Oracle MapViewer

This is not a definitive list of products released with Oracle Fusion Middleware 12c (12.2.1). For information about all the Oracle Fusion Middleware 12c (12.2.1) products, refer to the Oracle Fusion Middleware Understanding Oracle Fusion Middleware.

2.2 Oracle Fusion Middleware Compatibility with Previous Releases

Refer to the following sections for information on Oracle Fusion Middleware 12c (12.2.1) compatibility with previous Oracle Fusion Middleware releases:

Section 2.2.1, "Compatibility with Oracle Fusion Middleware 11g"
Section 2.2.2, "Compatibility with Oracle Fusion Middleware 12c (12.1.3)"

2.2.1 Compatibility with Oracle Fusion Middleware 11g

If you are currently running Oracle WebLogic Server 11g products, then be aware of the following:

Do not install Oracle WebLogic Server 12c (12.2.1) in the same Middleware home or Oracle home as any previous Oracle Fusion Middleware 11g or Oracle WebLogic Server 11g products. This includes Oracle WebLogic Server 10.3.

Do not install any Oracle Fusion Middleware 11g products in the same Oracle home as Oracle Fusion Middleware 12c (12.2.1).

Similarly, you cannot extend an existing Oracle Fusion Middleware 11g or Oracle WebLogic Server 11g domain with Oracle WebLogic Server 12c (12.2.1).

2.2.2 Compatibility with Oracle Fusion Middleware 12c (12.1.3)

If you are currently running Oracle WebLogic Server 12c (12.1.3) products, then be aware of the following:

Do not install Oracle WebLogic Server 12c (12.2.1) in the same Oracle home used by Oracle Fusion Middleware 12c (12.1.3).

Do not install any Oracle Fusion Middleware 12c (12.1.3) products in the same Oracle home as Oracle Fusion Middleware 12c (12.2.1).
Similarly, you cannot extend an existing Oracle Fusion Middleware 12c (12.1.3) domain with Oracle WebLogic Server 12c (12.2.1).

2.3 Interoperability with Supported Databases

Oracle Fusion Middleware 12c (12.2.1) supports specific database versions for hosting the required Oracle Fusion Middleware product and component schemas and for other specific product features.

The certification information on the Oracle Technology Network (OTN) provides information about the specific database versions supported by Oracle Fusion Middleware. For more information on using the certification information, see Section 1.4.2, "Using Oracle Certification Matrices".

However, in some cases, an Oracle Fusion Middleware feature or component requires a more specific database version or a specific database feature that is available in a particular database release.

The following sections describes some of those specific features and database requirements:

- Oracle Database Interoperability Considerations
- Java DB Interoperability Considerations
- Additional Database Interoperability Considerations

2.3.1 Oracle Database Interoperability Considerations

In addition to the information available in the certification information on the Oracle Technology Network (OTN), Table 2–1 provides some additional considerations when using specific Oracle database features.

<table>
<thead>
<tr>
<th>Product or Feature</th>
<th>Database Requirement</th>
<th>Restrictions</th>
<th>More Information</th>
</tr>
</thead>
<tbody>
<tr>
<td>Using SCAN addresses with GridLink data</td>
<td>Oracle Database 11.2 or later, with Single Client Access</td>
<td>None</td>
<td>&quot;SCAN Addresses&quot; in Administering JDBC Data Sources for Oracle WebLogic Server</td>
</tr>
<tr>
<td>sources.</td>
<td>Name (SCAN) enabled</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Table 2–1  Database Version Requirements for Selected Products and Features
2.3.2 Java DB Interoperability Considerations

As described in the certification information, Oracle supports the use of Java DB as a repository for the required Oracle Fusion Middleware schemas in a limited set of Oracle WebLogic Server domain configurations.

Specifically, for evaluation or development purposes only, you can use Java DB to host the required schemas for an Oracle Fusion Middleware Infrastructure domain.

For example, you can install the required Oracle Fusion Middleware schemas in a Java DB database and reference the Java DB data sources during the configuration of an Oracle Fusion Middleware Infrastructure domain.

In addition, by default, the Oracle JDeveloper Integrated WebLogic Server, which is installed with the Oracle SOA Suite Quick Start and Oracle Business Process Management Quick Start installers, is configured to use a pre-configured instance of Java DB. For more information, see Installing SOA Suite and Business Process Management Suite Quick Start for Developers.

For more information about Java DB, refer to the Java DB documentation at the following URL:

http://docs.oracle.com/javadb

For more information on certified databases, see Section 1.4.2, "Using Oracle Certification Matrices".
2.3.3 Additional Database Interoperability Considerations

The certification matrices and My Oracle Support Certifications define the following terms to differentiate between types of database support:

- **Application Data Access**
- **Database Dependent Features**

2.3.3.1 Application Data Access

Application Data Access refers to those applications that use the database for data access only and do not take advantage of WebLogic Server features that are Database dependant. WebLogic Server support of databases used for application data access only are less restrictive than for database dependent features.

WebLogic Server provides support for application data access to databases using JDBC drivers that meet the following requirements:

- The driver must be thread safe.
- The driver must implement standard JDBC transactional calls, such as `setAutoCommit()` and `setTransactionIsolation()`, when used in transactional aware environments.

Note the following restrictions:

- JDBC drivers that do not implement serializable or remote interfaces cannot pass objects to an RMI client application.
- Simultaneous use of automatic database connection failover and load balancing and global transactions (XA) with a highly-available (HA) DBMS architecture is supported with Oracle DB RAC only, and only for the Oracle DB RAC versions indicated on the System worksheet. These HA capabilities are only supported by Active GridLink for RAC and Multi Data Sources with RAC. These HA capabilities are not supported on other Oracle DB RAC versions or with other HA DBMS technologies on other non-Oracle DB products. Multi Data Sources are supported on other Oracle DB versions, and with non-Oracle DB technologies, but not with simultaneous use of automatic failover and load balancing and global transactions.
- Application data access to databases meeting the restrictions articulated above is supported on other Oracle DB versions, in addition to those documented in the certification matrix.
- WebLogic Type 4 JDBC drivers also support the following databases. For these databases, WebLogic Server supports application data access only, and does not support WebLogic Server database dependent features:
  - DB2 V9.1 for z/OS, DB2 V10 for z/O
  - Informix 11.0, Informix 11.5, Informix 11.7

2.3.3.2 Database Dependent Features

When WebLogic Server features use a database for internal data storage, database support is more restrictive than for application data access. The following WebLogic Server features require internal data storage:

- Container Managed Persistence (CMP)
- Rowsets
- JMS/JDBC Persistence and use of a WebLogic JDBC Store
Interoperability with Oracle Identity Management Products

- JDBC Session Persistence
- RDBMS Security Providers
- Database Leasing (for singleton services and server migration)
- JTA Logging Last Resource optimization
- JDBC TLog

2.4 Interoperability with Oracle Identity Management Products

This section provides information about Oracle Identity Management Interoperability with Oracle Fusion Middleware 12c:

- Interoperability with Oracle Identity and Access Management
- Interoperability with Oracle Identity Management Directory Services

2.4.1 Interoperability with Oracle Identity and Access Management

Table 2–2 shows the interoperability of Oracle Fusion Middleware 12c (12.2.1) with the available versions of Oracle Identity and Access Management.

When reviewing the interoperability of Oracle Identity and Access Management and Oracle Fusion Middleware 12c, consider the following:

- In most cases, you can use currently available versions of Oracle Identity and Access Management with Oracle Fusion Middleware 12c because the Oracle Identity and Access Management products are installed in a separate Oracle home and configured in a separate Oracle WebLogic Server domain.

For more information, see Section 2.6, "Oracle Home and Domain Extension Interoperability".

- The information shown in Table 2–2 was accurate at the time this document was published. Always check the certification information on the Oracle Technology Network (OTN) for the latest certification information.

- Oracle HTTP Server 12c includes WebGate 12c, which can be used to integrate Oracle WebLogic Server or Oracle Fusion Middleware Infrastructure with Oracle Access Manager 11g (11.1.1.5.0) or later.

| Table 2–2 Oracle Identity and Access Management Interoperability with Oracle Fusion Middleware 12c |
|---------------------------------------------|-------------------------------------------------|-------------------------------------------------|
| Oracle Identity and Access Management Versions Before 11.1.1.5.0 | Oracle Identity and Access Management 11.1.1.5 or later | Oracle Identity and Access Management 11g Release 2 (11.1.2) |
| Oracle WebLogic Server and Coherence 12c (12.2.1) | ✗ | ✓ | ✓ |
| Oracle Fusion Middleware Infrastructure 12c (12.2.1) | ✗ | ✓ | ✓ |
2.4.2 Interoperability with Oracle Identity Management Directory Services

Table 2–2 shows the interoperability of Oracle Fusion Middleware 12c (12.2.1) with the available versions of Oracle Identity Management Directory Services.

When reviewing the interoperability of Oracle Identity Management and Oracle Fusion Middleware 12c, consider the following:

- In most cases, you can use currently available versions of Oracle Identity and Access Management with Oracle Fusion Middleware 12c because the Oracle Identity and Access Management products are installed in a separate Oracle home and configured in a separate Oracle WebLogic Server domain.

For more information, see Section 2.6, "Oracle Home and Domain Extension Interoperability".

- The information shown in Table 2–3 was accurate at the time this document was published. Always check the certification information on the Oracle Technology Network (OTN) for the latest certification information.

Table 2–3 Oracle Identity Management Directory Services Interoperability with Oracle Fusion Middleware 12c

<table>
<thead>

2.5 Oracle Web Services Interoperability

Web services are Web-based applications that use open, XML-based standards and transport protocols to exchange data with clients. Web services are developed using Java Technology APIs and tools provided by an integrated Web services category.

Oracle supports several Web services categories, which are associated with specific Oracle Fusion Middleware products and components. For more information, see Understanding Web Services.

These Oracle Web services categories support a variety of Web services message formats, capabilities, and security features. While this support varies from one category to another, all the Oracle Web services categories support the following standard features in the communication messages they send and receive:

- Plain SOAP
- WS-Security, With SSL
- WS-Security, No SSL
As a result, if you develop Web services applications that support these types of Web services messages, then the services you create can be used Interoperability with any of the Oracle Web services security categories.

For a more information about the supported WS-Security scenarios between the categories and information on how to configure Web services endpoints, refer to Interoperability Solutions Guide for Oracle Web Services Manager.

### 2.6 Oracle Home and Domain Extension Interoperability

The following sections provide information about the interoperability of Oracle Fusion Middleware products when installing products in an Oracle home and when extending existing Oracle WebLogic Server domains:

- **Oracle Home Interoperability**
- **Domain Extension Interoperability**

#### 2.6.1 Oracle Home Interoperability

When installing Oracle Fusion Middleware products, be sure that each Oracle home you create contains only products that are at the same version or patch set. Each product has its own maintenance schedule, and it is possible that future interoperability issues could result.

For example, unless otherwise documented, you cannot install Oracle SOA Suite 11g Release 1 (11.1.1.9.0) into the same Oracle home with Oracle Fusion Middleware Infrastructure 12c.

This rule applies when installing new products, as well as when applying patches.

#### 2.6.2 Domain Extension Interoperability

You can extend an existing Oracle Fusion Middleware product domain to support another Oracle Fusion Middleware product, as long as they are the same version number or patch set.

For example, if you have an existing SOA Suite 11g Release 1 (11.1.1.7.0) domain, do not attempt to extend or patch that domain using Oracle Fusion Middleware 12c. To avoid potential interoperability issues, wait until both suites are available at equivalent versions.

---

**Exception to the Domain Extension Interoperability Rule:** Oracle does not support the configuration of Oracle Business Process Management 12c and Oracle SOA Suite for Healthcare Integration 12c in the same domain. If you plan to use both these Oracle Fusion Middleware products, be sure to configure them in separate domains.

---

### 2.7 Interoperability with Custom and Client Applications

When you upgrade to Oracle Fusion Middleware 12c, or if you apply any patches on an existing Oracle Fusion Middleware, you should consider the impact on your custom applications, such as:

- Applications written using JDeveloper
- Applications using any other IDE, but also using any of the Oracle Fusion Middleware public Java APIs.
Specifically, the information in this section applies in the following situations:

- If you have created custom applications that you have deployed on Oracle Application Server 10g or Oracle Fusion Middleware 11g.
- If you have created or if you maintain client applications that interact with applications you deployed on Oracle Application Server 10g or Oracle Fusion Middleware 11g.

Oracle attempts to support binary and source-level compatibility between the current version of Fusion Middleware and patch set updates applied to it. Where incompatibilities arise with public interfaces, they are documented in the related API reference guides. For more information, see "Reference and APIs" in the Oracle Fusion Middleware 12c (12.2.1) documentation library.

Oracle recommends that you ensure the business applications adopting new versions or upgrades are tested through your normal release process to ensure there are no regressions.

In general, applying Oracle Fusion Middleware patch sets should require no additional changes to your custom or client applications. When upgrading, however, you should expect some changes.

For more information on WebLogic Server compatibility, see WebLogic Server 12.2.1 Compatibility with Previous Releases in Upgrading Oracle WebLogic Server.

### 2.8 Oracle Data Integration 12c (12.2.1) Interoperability with Other Fusion Middleware Products

Oracle Data Integrator is designed to be used with specific Oracle SOA Suite, Oracle Enterprise Data Quality (EDQ), and Oracle GoldenGate software releases. The following table shows which releases of these software products can be used with Oracle Data Integrator 12c (12.2.1).

The asterisk (*) indicates that the software is interoperable with releases later than one shown.

<table>
<thead>
<tr>
<th>Oracle Data Integrator 12c (12.2.1) Component</th>
<th>Can be used with...</th>
<th>Interoperability Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Data Integrator (Agent, Console, Studio)</td>
<td>Oracle Enterprise Data Quality 11.1.1.7.*</td>
<td>You can configure, launch, and monitor EDQ jobs from Oracle Data Integrator.</td>
</tr>
<tr>
<td>Oracle Data Integrator (Agent, Studio)</td>
<td>Oracle Enterprise Data Quality 12.*</td>
<td>You can launch and monitor EDQ jobs from Oracle Data Integrator.</td>
</tr>
<tr>
<td>Oracle Data Integrator (Agent, Console, Studio)</td>
<td>Oracle GoldenGate 11.2.1.*</td>
<td>You can configure, launch, and monitor GoldenGate jobs from Oracle Data Integrator.</td>
</tr>
<tr>
<td>Oracle Data Integrator (Agent, Console, Studio)</td>
<td>Oracle GoldenGate 12.*</td>
<td>You can configure, launch, and monitor GoldenGate jobs from Oracle Data Integrator.</td>
</tr>
<tr>
<td>Oracle Data Integrator Agent</td>
<td>Oracle SOA Suite 11.1.1.9.0 Oracle SOA Suite 12.1.3</td>
<td></td>
</tr>
</tbody>
</table>
### 2.9 Oracle Enterprise Data Quality 12c (12.2.1) Interoperability with Other Fusion Middleware Products

Oracle Enterprise Data Quality (EDQ) is designed to be used with specific releases of the EDQ Address Verification Server and EDQ Customer Data Services Pack. The following table shows which releases of these software products can be used with EDQ 12c (12.2.1).

The asterisk (*) indicates that the software is interoperable with releases later than one shown.

<table>
<thead>
<tr>
<th>Component</th>
<th>Can be used with...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Enterprise Data Quality</td>
<td>Oracle Enterprise Data Quality Address Verification Server 14.* and 15.*</td>
</tr>
<tr>
<td>Oracle Enterprise Data Quality Seibel Connector</td>
<td>Oracle Enterprise Data Quality Customer Data Services Pack 11.* and 12.*</td>
</tr>
</tbody>
</table>

### 2.10 Oracle GoldenGate Studio Interoperability with Other Fusion Middleware Products

Oracle GoldenGate Studio is designed to be used with specific releases of the GoldenGate software components. The following table shows which releases of these components can be used with GoldenGate Studio 12c (12.2.1).

The asterisk (*) indicates that the software is interoperable with releases later than one shown.

<table>
<thead>
<tr>
<th>Component</th>
<th>Can be used with...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle GoldenGate Studio</td>
<td>Oracle GoldenGate 12.2.0.1.*</td>
</tr>
<tr>
<td>Oracle GoldenGate Studio</td>
<td>Oracle GoldenGate Monitoring Jagent 12.2.1.0.*</td>
</tr>
</tbody>
</table>
