Level: 1
Type: ERROR
Impact: Data
REP-01101: Group {0} has an invalid repeat direction.

**Cause:** An attempt was made to create a default layout, but the selected layout style requires a different repeat direction for one of the groups. Some layout styles place restrictions on the repeat directions that can be selected for groups.

**Level:** 1
**Type:** ERROR
**Impact:** Other

REP-01102: The default layout cannot fit onto page of size {0}.

**Cause:** Oracle Reports Builder tried to create the default layout selected but could not fit the entire layout on the page because the page is not wide enough.

**Level:** 1
**Type:** ERROR
**Impact:** Other

REP-01103: No column is selected in group {0}.

**Cause:** While trying to create a default layout, a column was not selected for a selected group. Consequently, Oracle Reports Builder cannot build a default layout because one or more of the dimensions of the layout have no value.

**Type:** ERROR
**Impact:** Other

REP-01106: no field is generated for column {0}.

**Cause:** When the default layout was created, a field was not generated for the column in the message. The most likely cause is that a summary was not placed in the data model correctly. For example, the source of a summary column may have been specified to be a column in a group above the summary’s group, which is not allowed.
Action: Debug the data model and redefault the layout.

Level: 1
Type: ERROR
Impact: Other

REP-01107: The across or down group in cross product group {0} is missing.
Cause: An attempt was made to create a default layout by selecting a Style of Matrix in the Report Wizard, but all of the dimension groups of the cross product group were assigned repeat directions of Down or Across. Each repeat direction should be assigned to the dimension groups in the cross product.
Action: Redisplay the Report Wizard and reassign the repeat directions of the dimension groups, making sure that each direction is assigned among the groups.

Level: 1
Type: ERROR
Impact: Other

REP-01108: The default layout cannot fit even in region extending to page boundaries.
Cause: An attempt was made to create a default layout that would be too large to fit within the defined height and width of a report page.
Action: Go back to the Report Wizard and reduce the values of default settings (for example, shorten some field widths). Alternatively, increase the size of a report page using the Report Property Inspector. Then re-create the default layout.

Level: 1
Type: ERROR
Impact: Other

REP-01109: Multiple group selection is incompatible with single group layout style.
Cause: More than one group was selected to add to the layout but the style selected only supports one group.

Level: 1
Type: ERROR
Impact: Other

REP-01111: The matrix down group in cross product group {0} is missing.
**Cause:** An attempt was made to create a default layout by selecting a Style of Matrix or Matrix with Group in the Report Wizard, but all of the dimension groups of the cross product group were assigned repeat directions of Across.

**Type:** ERROR  
**Impact:** Other

**REP-01113: No groups or reports level columns have been selected.**

**Action:** In the Report Wizard, select at least one report level column or a group to be defaulted.

**Level:** 1  
**Type:** ERROR  
**Impact:** Other

**REP-01114: A single group selection is incompatible with a multiple group layout style.**

**Cause:** A single group was selected to be defaulted but a defaulting style designed for a multiple groups was also selected.

**Level:** 1  
**Type:** ERROR  
**Impact:** Other

**REP-01115: The full template layout cannot be shown because it does not fit onto the page.**

**Cause:** The template layout could not be shown properly because it is too large to fit within the defined height and width of the report page. This does not mean that the template is invalid in any way.

**Action:** To show the template layout, temporarily enlarge the width and height of the report page. To do this, select the template in the Navigator and open the Property Inspector. Increase the Width and Height properties under the Report heading. Do not forget to reset the Width and Height properties before saving the template.

  **Cause:** An attempt was made to run a report with an anchor from a matrix object to another object, which is not allowed.
  
  **Action:** Delete the anchor.
REP-01211: Object [0] is larger than its enclosing object [1].

**Cause:** An object is larger than its enclosing object. The most likely cause is that an attempt was made to enclose a large object within a small, fixed frame.

**Action:** Identify the object and the enclosing object and adjust their relative sizes and positions until the proper enclosure is achieved.

REP-01212: Object [0] is not fully enclosed by its enclosing object [1].

**Cause:** The possible causes of this error include the following: Case 1: An object is not fully enclosed by the page. That is, the object extends beyond the page boundary. Case 2: A repeating frame that forms a matrix is one or more layers above a repeating frame that it contains. In a matrix layout, repeating frames must be below repeating frames that they contain.

**Action:** Take the following actions to correct this error: If Case 1: Move or resize the object so that it does not extend outside the page boundary. Alternatively, increase the page size in the Report Property Inspector. If Case 2: Use Arrange>&gt;Send to Back, Arrange>&gt;Bring to Front, Arrange>&gt;Move Backward, and Arrange>&gt;Move Forward to arrange repeating frames such that, in terms of layers, the following is true: repeating frames are below repeating frames that they contain and down repeating frames are below across repeating frames.

REP-01213: Field [0] references column [1] at a frequency below its group.

**Cause:** The source column for the field is in a group below that of the repeating frame that encloses it.

**Action:** Move the field into a repeating frame whose source group is at or above the group that contains the field’s source column. Otherwise, move the field’s source column into the enclosing repeating frame’s group, if possible.

REP-01214: Repeating frame [0] is enclosed by a child repeating frame.

**Cause:** The enclosed repeating frame’s source group is above the enclosing repeating frame’s source group.

**Action:** In the editor, make the enclosed repeating frame the enclosing repeating frame. Alternatively, if possible, change the group hierarchy such that the enclosed object’s group is below the enclosing object’s group.
Type: ERROR
Impact: Other

REP-01216: Object {0} has an illegal print condition.
   Cause: The Print Condition for the specified object was invalid. For example, an attempt may have been made to set the Print Condition of a margin object.

   Level: 1

Type: ERROR
Impact: Other

REP-01218: Object {0} cannot page break before AND keep with parent.
   Cause: Page Break Before was set for an object as well as Keep with Anchoring Object. The anchoring object, however, precedes the object and therefore the two settings are in conflict.

   Level: 1

Type: ERROR
Impact: Other

REP-01220: Object {0} has Minimum Widow Records greater than Maximum Records per Page.
   Cause: Maximum Records per Page was set to a smaller value than Minimum Widow Records. This causes a conflict between the two settings and, in effect, indicates that no instances should be printed.
   Action: Decrease Minimum Widow Records or increase Maximum Records per Page.
   Level: 1

Type: ERROR
Impact: Other

REP-01222: The body size is invalid.
   Cause: A body page width or height was specified that is negative or out of range. This is most likely due to setting the page size to an invalid value using the PAGESIZE executable argument.

   Level: 1

Type: ERROR
REP-01223: The page size is invalid.
  Cause: A physical page width or height was specified that is negative or out of range. This is most likely due to setting the page size to an invalid value using the PAGESIZE executable argument.
  Action: Enter a valid value using the PAGESIZE executable argument, or change the physical page size setting in the Report Property Inspector.

REP-01307: Summary column {0} has an invalid product order.
**Cause:** The possible causes of this error include: Case 1: A summary exists that is not a running summary (that is, its Reset At is not Report), but its Product Order is not a subset of the source column’s product order. The source column of the summary must be at least as frequent as the summary, which means that the summary’s Product Order should be some subset of the source column’s Product Order. Case 2: A running summary (that is, its Reset At is Report) exists with a Product Order that is not a prefix of the source column’s Product Order. For example, if the source column’s Product Order were A,B,C, then the summary column’s Product Order would have to be either A (by itself) or A,B. The summary’s Product Order could not be B,A.

**Action:** Take the following actions to correct this error: If Case 1: Change the Product Order of the summary such that it is a subset of its source column’s Product Order. If Case 2: Change the Product Order of the summary such that it is a prefix of the Source column’s Product Order.

**Cause:** TopLink is missing the class for indicator field value classFieldValue of type type. There was no class entry found in the inheritance policy for the indicator field value that was read from the database. It is likely that the method addClassIndicator(Class class, Object typeValue) was not called for the field value. TOP-04015: Synchronized UnitOfWork does not support the commitAndResume()

  Cause: A synchronized UnitOfWork does not support the commitAndResume
  operation. When the TopLink session is configured with an
  ExternalTransactionController, any unit of work requested by a client must operate
  within the context of a JTS external global transaction (see ). The JTS specification
  does not support the concept of check pointing a transaction—that is, committing
the work performed and then continuing to work within the same transaction context. JTS does not support nested transactions, either. As a result, if a client code invokes commitAndResume on a synchronized unit of work, this error is reported.

**Cause:** The object clone of class clone.getClass() with identity hash code (System.identityHashCode()) (System.identityHashCode(clone)) is not from this unit of work space, but from the parent session. The object was never registered in this unit of work, but read from the parent session and related to an object registered in the unit of work.

**TOP-06005: The object \{0\}, of class \{1\}, with identity hashcode \{2\}, is the original to a registered new object.** The UnitOfWork clones registered new objects, so you must ensure that an object is registered before it is referenced by another object. If you are still having problems, you can use the UnitOfWork.validateObjectSpace() method to help debug where the error occurred. For more information, see the manual or FAQ.

**Cause:** The object clone of class clone.getClass() with identity hash code (System.identityHashCode()) is the original to a registered new object. Because the unit of work clones new objects that are registered, ensure that an object is registered before it is referenced by another object. If you do not want the new object to be cloned, use the registerNewObject(Object) method of the UnitOfWork.

WLS-WSEE-CORE-00001: An unexpected error occurred: {0}

**Cause:** Unknown

**Action:** If this is caused by an external application, then fix the related code; otherwise, contact My Oracle Support.

**Level:** 1

**Type:** SEVERE

**Impact:** WebService

WLS-WSEE-CORE-00002: The service port {1} bound to https transport in service {0} is NOT available, the https address cannot be resolved because SSL is not enabled for the server. The service port definition will be removed from WSDL that is being accessed through {2}.

**Cause:** While a WSDL is being retrieved through http protocol, the server requires replacing the service port address in WSDL with the actual address for the server. For any web service which defines one or more service ports bound to https transport, if the domain does not enable SSL functionality then the service port address could not be replaced correctly because https address for the server cannot be resolved.

**Action:** Enable SSL functionality for the server.

**Type:** WARNING

**Impact:** WebService

WLS-WSEE-CORE-00006: Implicit/generated Client Identity {0} has been used in multiple calls to Service.getPort()/createDispatch() where these calls have used different services and/or sets of features. Monitoring statistics for this client will include all these different usages. Validation failures were: {1}

**Cause:** WebLogic JAX-WS web service clients are assigned a unique identity that is intended to represent the business purpose of that client. This identity can be specified directly using weblogic.jws.jaxws.client.ClientIdentityFeature or it can be allowed to be implicit. Implicit identity is generated automatically based on environmental information at the point where a Port/Dispatch instance is created. Your code has received an implicit client identity that is getting used (again implicitly) across multiple services or sets of features. All statistics gathered for a given client instance are rolled up under the client instance’s client identity. If client instances using different services and/or feature sets contribute statistics to
the same client identity, this can be confusing. It is even possible for clients to
behave incorrectly when more advanced web service features are used.

**Action:** Best practice is to create a specific client identity (with a name
representing a logical business purpose) for the client and denote this identity by
passing weblogic.jws.jaxws.client.ClientIdentityFeature to the call to
Service.getPort/createDispatch. Further, it is recommended that you pass a
single/global set of web service feature objects to that call (e.g. Create
WebServiceFeature instances as static class members or in a method annotated
with @PostConstruct for containers compatible with this annotation). The actual
call to Service.getPort()/createDispatch() should still be made in any way that
makes sense for your uses (e.g. calling getPort on demand in a web service
method, with Service created as a static class member).

**WLS-WSEE-00105:** Web services async/reliable invocations for service {0} are NOT available because the async/reliability queue was not found: {1}

**Cause:** You have deployed a Web service that indicates it can use async/reliable features, but the queue for async/reliable invocations (specified in WebservicesMBean, @Buffer or @ReliabilityBuffer annotations, or allowed to default) is not deployed to the local server. Therefore, async and reliable invocations will fail if attempted. Standard synchronous invocations will still work correctly despite this problem.

**Action:** Remove any async or reliable features from the Web service (e.g. @AsyncResponse, @Buffer, @ReliabilityBuffer annotations or @Policy annotations specifying reliable policy) or properly configure this server for async/reliable invocations. See the WebLogic Server online documentation in the 'Web Services->Get Started Using JAX-RPC' section for help on fixing this configuration problem. Cause: While a WSDL is being retrieved through http protocol, the server requires replacing the service port address in WSDL with the actual address for the server. For any web service which defines one or more service ports bound to https transport, if the domain does not enable SSL functionality then the service port address could not be replaced correctly because https address for the server cannot be resolved.

WLS-WSEE-00112: Implicit/generated Client Identity {0} has been used in multiple calls to Service.getPort()/createDispatch() where these calls have used different services and/or sets of features. Monitoring statistics for this client will include all these different usages. Validation failures were: {1}

Cause: WebLogic JAX-WS web service clients are assigned a unique identity that is intended to represent the business purpose of that client. This identity can be specified directly using weblogic.jws.jaxws.client.ClientIdentityFeature or it can be allowed to be implicit. Implicit identity is generated automatically based on environmental information at the point where a Port/Dispatch instance is created. Your code has received an implicit client identity that is getting used (again implicitly) across multiple services or sets of features. All statistics gathered for a given client instance are rolled up under the client instance's client identity. If client instances using different services and/or feature sets contribute statistics to the same client identity, this can be confusing. It is even possible for clients to behave incorrectly when more advanced web service features are used.

Action: Best practice is to create a specific client identity (with a name representing a logical business purpose) for the client and denote this identity by passing weblogic.jws.jaxws.client.ClientIdentityFeature to the call to Service.getPort/createDispatch. Further, it is recommended that you pass a single/global set of web service feature objects to that call (e.g. Create WebServiceFeature instances as static class members or in a method annotated with @PostConstruct for containers compatible with this annotation). The actual call to Service.getPort()/createDispatch() should still be made in any way that makes sense for your uses (e.g. calling getPort on demand in a web service method, with Service created as a static class member).

**WLS-WSEE-PERSIST-00007: Improper buffering queue type \[0\] with JNDI name \[1\] configured on logical store \[2\]. You must use Uniform Distributed Queues or simple Queues with web services.**

**Cause:** You configured an invalid type of queue for a logical store (via the RequestBufferingQueueJndiName or ResponseBufferingQueueJndiName properties). You must use Uniform Distributed Queues (recommended) or plain Queues. If you wish to take advantage of migration features of web services in a cluster, you must use Uniform Distributed Queues. Note, when using configuration wizard or WLST to apply the wls_webservice_jaxws.jar extension template, you must explicitly request the creation of Uniform Distributed Queues as described in the web services documentation. By default, the configuration wizard and WLST create Weighted Distributed Queues in a cluster.

**Action:** Configure a Uniform Distributed Queue (or Queue) and provide this queue's JNDI name to the logical store configuration (via the RequestBufferingQueueJndiName or ResponseBufferingQueueJndiName properties). Note, you can do this from the configuration wizard or WLST when applying the wls_webservice_jaxws.jar extension template, and the proper type and number of queues will be created automatically for you. See the web services documentation for more information on requesting Uniform Distributed Queues when using the template.
