Impact: CacheProvider

BEA-2156400: The validation.xml file, located at {0}, does not conform to the JSR 303 specifications.

Cause: The file does not conform to the JSR 303 specification. This maybe because the file is intended to configure another validation framework or because of a typo in the file.

Action: JSR 303 specifies the location of the validator descriptor as either WEB-INF for web application or META-INF for all other cases. A validation.xml file at that location should only be used for the purpose of configuring javax.validation. If the purpose of the file is to configure another validation framework, consider using a different name or placing the file in a different location.

BEA-2165030: Resource Consumption Management Restart Message: Partition has been restarted the maximum number of times as a result of resource consumption management "restart" action, in the duration, as specified in the partition config. Partition can not be restarted anymore, and is being shutdown. Partition would have to be started manually.

Cause: There are many attempts to "restart" the partition in configured duration. In order to prevent restart action going in a loop, a "shutdown" action is executed.
Action: There are many attempts to "restart" the partition in configured duration. You can reconfigure max-restart-allowed and max-restart-allowed-interval with higher value if this is expected behaviour.

**BAM-00172: Attempt to specify the "unique" attribute for column "{}" of derived DataObject "{}". The "unique" attribute is only valid for base DataObject columns.**

**Cause:** The "unique" attribute was specified for a derived DataObject column. The "unique" attribute is only valid for base DataObject columns.

**Action:** Remove the "unique" attribute from the specified derived DataObject column or, if possible, move this column down into the associated base DataObject.

**Level:** 1

**Type:** ERROR
Impact: OTHER

BAM-00173: Attempt to specify the "unique" attribute for newly added column "[0]" of DataObject "[1]". The "unique" attribute cannot be specified for columns added to an existing DataObject.

Cause: The "unique" attribute was specified for a column being added to an existing DataObject. The "unique" attribute can only be specified for columns on initial creation of base DataObjects.

Action: Drop the specified DataObject and recreate it with the new column configured with the "unique" attribute.

Level: 1
Type: ERROR
Impact: OTHER

BAM-00174: Invalid attempt to add column "[0]" to DataObject "[1]" where this column does not allow null values and does not specify a non-null default value.

Cause: Added columns that do not allow null values must supply a non-null default value. BAM must set the value for this newly added column in any existing DataObject instances to this default value.

Action: Provide a non-null default value for the newly added column if it does not allow null values or change the newly added column to allow null values.

Level: 1
Type: ERROR
Impact: OTHER

BAM-00175: The column "[0]" in Data Object "[1]" is not valid for use in a Data Object (2,choice,0#insert operation | 1#update operation | 2#operation filter | 3#index).

Type: ERROR
Impact: OTHER

BAM-00195: Invalid attempt to add column "[0]" to DataObject "[1]" where this column does not allow null values, does not specify a non-null default value and the DataObject contains existing data.

Cause: Added columns that do not allow null values must supply a non-null default value or the DataObject must not contain any existing data. BAM must set the value for this newly added column in any existing DataObject rows to this default value so we need a default value or we need the DataObject to contain no existing rows.

Action: To make this addition provide a non-null default value for the newly added column or delete all the existing data from the DataObject or change the newly added column to allow null values.

Level: 1
Type: ERROR
Impact: OTHER

BAM-00196: Invalid attempt to modify column "[0]" in DataObject "[1]" to not allow null values when the DataObject already contains null values for this column.

Cause: Columns cannot be modified to not allow null values if the DataObject already contains null values for that column.

Action: To make this modification you would need to remove existing null values from the DataObject for the modified column.

Level: 1
Type: ERROR
Impact: OTHER

BAM-00197: An operation specifies the data type of column "[0].[1]" in DataObject "[2]" as "[3]" when it is defined as "[4]".

BAM-00220: The batch is full and BlockOnBatchFull is set to false.
Cause: An attempt was made to add a new operation to the batch when the batch was full and Block_On_Batch_Full is set to false.
Action: When Block_On_Batch_Full is set to false this exception will be thrown if an attempt is made to add a batch operation to a full batch. When Block_On_Batch_Full is set to true (the default) the caller's thread will block until the batch full condition is cleared and the operation is successfully added. The batch full condition will clear when pending batches are processed to the Oracle BAM Server freeing up space in the batch.

**CFGFWK-60338: Non supported distributed topic exists.**  
**Cause:** As part of JMS expansion JMS topics were converted to replicated distributed topics (RDTs) to preserve backward compatible behavior. The JMSServers targeted to dynamic clusters do not currently support RDT topics. The support is only available for partition distributed topics (PDT). Because PTD behavior is different from RTD an explicit property needs to be passed to the process to indicate that the conversion is intentional. Use system property 

```
-Dcie.jms.internal.temp.expansion.use.pdt=true
```

to generate partitioned distributed topic.  
**Action:** Use system property 

```
-Dcie.jms.internal.temp.expansion.use.pdt=true
```

to generate partitioned distributed topic as default is replicated distributed topic.

DMS-57002: Exception raised while attempting to reset WorkContextMap in order to resolve a previous exception raised when updating WorkContextMap.  
Cause:  
Action:
Level: 1
Type: WARNING
Impact: Other

DMS-57003: Failed to process the serialized DMS execution context {0} sent by {1} (user-agent: {2}) when requesting the resource {3}.

**Cause:** By scrutinizing the incoming HTTP request DMS has attempted to detect and, if appropriate, make use of a wrapped execution context. That process has failed. This should not affect the processing of the servlet handling the request, but the ability to correlate the processing of this request with others to which it may related will have been adversely affected. A DMS execution context is an object that contains context information about the piece of work being performed at a particular moment in time. The type of context information carried by the DMS execution context may include the URL of the http request, the unique correlation key (ECID) assigned to that piece of work, etc - information that is useful for tracking requests through the system. The execution context does not carry user names, passwords or general application parameters. The DMS execution context should not be confused with application specific context objects, such as ADF-context or Faces-context, which are vital to the accurate execution of the application concerned.

**Action:** Contact Oracle Support Services.

Level: 1
Type: WARNING
Impact: Other

DMS-57004: Failed to initialize the DMS trace to be associated with DMS execution context {0}, that itself is associated with a request of resource {1}.

**Cause:** A problem has occurred in the initialization of the trace system for this request. This should not affect the processing of the servlet handling the request but will be a problem if the trace (aggregate, debug or triggered) data was of value to the system’s administrator.

**Action:** If the trace of this request was important, and has been affected by this error, then contact Oracle Support Services

Level: 1
Type: WARNING
Impact: Other

DMS-57005: Failed to terminate the DMS trace associated with DMS execution context {0}, that itself is associated with a request of resource {1}.

**Cause:** A problem has occurred in the finalization of the trace system for this request. This should not affect the processing of the servlet handling the request but will be a problem if the trace (aggregate, debug or triggered) data was of value to the system’s administrator.

**Action:** If the trace of this request was important, and has been affected by this error, then contact Oracle Support Services

Level: 1
Type: WARNING
Impact: Other
DMS-57006: Failed to deactivate the DMS execution context, {0}, associated with a request of resource {1}.

**Cause:** A problem has occurred in the termination of the DMS execution context in place during the processing of the HTTP request. This should not affect the servlet handling the request, but may result in an invalid execution context being in place for the processing of future requests and possibly prevent accurate trace data from being gathered.

**Action:** Contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Other

DMS-57007: Failed to url-decode a serialized execution context ({0}) due to a problem in the decoding process itself: {1}

**Cause:** A problem has occurred while trying to url-decode a wrapped execution context found as a url-parameter. The consequence is that the execution context being passed from client to server can not be used. A failure in the DMS execution context feature does not generally result in a complete failure of the system or application making use of it, but it can result in misleading trace output or misleading correlation keys (ECID) in log messages: generally only the administrator will be aware of such changes in the behavior of an affected application.

**Action:** Determine if there is any code in the system that integrates with the Oracle DMS Context API (java package oracle.dms.context) but was not produced by Oracle. If there is no such code then contact Oracle Support Services. Otherwise scrutinize and test the non-Oracle code, and if necessary contact Oracle Support Services.

**Level:** 1

**Type:** WARNING

**Impact:** Other

DMS-57008: The execution context put in place at the start of the request, {0}, is not the execution context in place at the end of the request, {1}. The request is as follows: {2}

**Cause:** When enabled to do so DMS associates an execution context with the resources (typically a thread) assigned to process an incoming request. In this case the context that DMS assigned at the start of the processing is not the one in place at the end of the processing. At some point during the processing the context has been changed. This could result in the loss of the ability to correlate the work performed across the complete request lifecycle for this request. A failure in the DMS execution context feature does not generally result in a complete failure of the system or application making use of it, but it can result in misleading trace output or misleading correlation keys (ECID) in log messages: generally only the administrator will be aware of such changes in the behavior of an affected application.

**Action:** Determine if there is any code in the system that integrates with the Oracle DMS Context API (java package oracle.dms.context) but was not produced by Oracle. DMS-57009: An error prevented selection of an appropriate execution context implementation for this environment - the feature will be disabled.

Cause: At the point of initialization DMS needs to determine the environment in which it is operating in order to select the most appropriate implementation of the execution context feature. An unexpected error has occurred during that process. The DMS execution context feature will be disabled.

Action: Review the error to see if it can be resolved and then restart the server.

DMS-57018: Failed to fetch data required to complete current method - will proceed by assuming the data is null.

Cause: In order to respond to a request for data the current thread needed to acquire a (read) lock on the data being accessed. The current thread waited for a period of time in order to acquire the lock but ultimately the lock was not acquired. This can happen if there is high thread contention on the lock protecting access to the data concerned. Rather than block this thread from further progress it is preferable that it is allowed to continue without fetching the data of interest.

Action: No action is required.

DMS-58002: Could not create trace output directory \{0\} - Disabling \{1\} traces.

Cause: An attempt to create a file system directory, into which trace files were to be written, has failed. Consequently no trace information can be saved and
therefore, to save unnecessary burden on the system, trace information will not be collected.

Action: Check that the system user that owns the process has permissions to create such a directory. Check that the system has sufficient disk space to create a new directory.

DMS-58006: Problem encountered while removing old files from trace output directories.
Cause: DMS was attempting to remove old files from the trace output directories but for some reason (see base exception) has failed.
Action: The system is unlikely to fail as a consequence of this error, but disk space will be used that would otherwise have been released. Refer to the base exception to see if the problem can be addressed, and consider deleting unrequired files manually (DMS no longer needs these old files so any or all of them can be removed).

Level: 1
Type: WARNING
Impact: Files

DMS-58007: Problem encountered when closing file and associated streams.
Cause: As part of the termination of a normal read or write operation on a file the file could not be closed.
Action: If a file can not be properly closed then the operating system's file-handle associated with that file may not be properly released. An operating system can manage only a finite number of file-handles and if they are not released then new file-handles can not be created. One consequence of a depletion of file-handles is that file input/output on the machine concerned may be forced to come to a stop. It is more likely, however, that this is a one-off problem and that Java will tidy up the file-handle internally. This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). In order to understand the scale of the problem continue to monitor the system for similar or related issues. If necessary stop and start the product to fully reinitialize the JVM on which it runs.

DMS-58008: error writing trace data to disk

Cause: DMS has failed to create or use the objects required to write trace output to disk. The output intended to be written will be discarded.

Action: This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). In order to understand the scale of the problem continue to monitor the system for similar or related issues. If necessary stop and start the product to fully reinitialize the JVM on which it runs.

DMS-58013: Problem encountered aggregating trace: {0}.

Cause: DMS has failed to perform the aggregation process on the trace data collected during the handling of this particular task or servlet request. A DMS trace is composed of a series of DMS trace events that represent an operation performed within DMS. Examples of trace events are: a sensor update, the start and end of an HTTP request. An aggregate trace is the result of aggregating trace data for tasks (typically HTTP requests) associated with the same URI. Failure to perform the aggregation processing for this task will mean that the summary data for the URI concerned will not be accurate.

Action: Review exception details and the log for any seemingly related messages. If the problem has come from the JVM itself: This type of problem suggests a problem with either the JVM, the operating system or the state of the machine on which they are running. Review the base exception to see if the issue can be resolved (e.g. memory issues, disk space issues, file access issues, etc.). In order to understand the scale of the problem continue to monitor the system for similar or related issues. Otherwise the problem is with the code written to run on the JVM: Determine if there is any code in the system that that integrates with the Oracle DMS Trace API (java package oracle.dms.trace) but was not produced by Oracle. If there is no such code then contact Oracle Support Services. Otherwise scrutinize and test the non-Oracle code in order to isolate the problem.

DMS-58014: Failed to handle REQUEST_BEGIN for {0}. The trace will not be aggregated.

Cause: DMS did not find the trace event that marks the start of the series of trace events to be associated with an HTTP request. Without that particular trace event DMS can not be sure that the set of collected trace events will accurately represent the actions performed during that HTTP request and consequently will not process them further. Failure to perform the aggregation processing for this task will mean that the summary data for the URI concerned will not be accurate.

Action: Review exception details and the log for any seemingly related messages. FRM-91124: fatal error in runtime process: [0] specified for FORMS_DECIMAL_PREFIX. Should be zero or the empty string
Cause: An invalid value was specified for the environment variable FORMS_DECIMAL_PREFIX.
Action: Do one of the following: 1. Specify FORMS_DECIMAL_PREFIX as '0' to force a zero before a leading decimal point in any number displayed without a format mask in the application. 2. Specify FORMS_DECIMAL_PREFIX as '' (the empty string).

Level: 1
Type: ERROR
Impact: Configuration

FRM-91126: fatal error in runtime process: invalid value [0] specified for environment variable [1]
Cause: An invalid environment variable value was specified. An example would be an invalid timezone for an environment variable that specifies a timezone.
Action: Correct the environment variable value.
Level: 1
Type: ERROR
Impact: Configuration

FRM-91127: runtime process: invalid directory name specified for environment variable {0}
Cause: An invalid value was specified for an environment variable that represents the name of a directory. Specifically, the value is too long: either it is itself longer than a system-imposed maximum, or a subdirectory name that Forms needs to construct would be longer than the system-imposed maximum. Execution of the runtime process might have been terminated, or it might have continued. In the latter case, the functionality that required this environment variable was disabled.
Action: If this error message appears for DOMAIN_HOME or FORMS_INSTANCE_NAME, and the problem persists, contact Oracle Support Services. Otherwise, correct the environment variable value.

Level: 1
Type: ERROR
Impact: Configuration

FRM-91128: runtime process warning: invalid value {0} specified for environment variable {1}; using default {2}
Cause: An invalid environment variable value was specified. The indicated default value was used, and processing continued.
Action: Correct the environment variable value.

Level: 1
Type: WARNING
Impact: Configuration

FRM-91129: runtime process: no value specified for required environment variable {0}
Cause: A required environment variable was not set or was set to the empty string. Execution of the runtime process might have been terminated, or it might have continued. In the latter case, the functionality that required this environment variable was disabled.
Action: If this error message appears for DOMAIN_HOME or FORMS_INSTANCE_NAME, and the problem persists, contact Oracle Support Services. Otherwise, set the environment variable to a non-empty value.

Level: 1
Type: ERROR
Impact: Configuration

FRM-91132: fatal error in runtime process: invalid data in timezone file {0}
Cause: The timezone file (specified by the environment variable FORMS_TZFILE) was found to contain invalid data.
Action: Correct the FORMS_TZFILE environment variable value. It should specify $ORACLE_HOME/oracore/zoneinfo/timezone.dat or $ORACLE_HOME/oracore/zoneinfo/timezlig.dat.

Level: 1
Type: ERROR
Impact: Configuration

FRM-91134: fatal error in runtime process: NLS_LANG specifies unsupported character set
Cause: The NLS_LANG environment variable specified a character set which is not ASCII-based, e.g. fixed-width Unicode or an EBCDIC-based character set.
Action: Correct the NLS_LANG environment variable value.
Level: 1

Type: ERROR
Impact: Configuration

FRM-91135: fatal error in runtime process: message file {0} is missing
Cause: The specified message file was not found.
Action: Verify that the file has not been moved or deleted. If necessary, reinstall it.
Level: 1

Type: ERROR
Impact: Configuration

FRM-91137: runtime process: unable to open log file {0}
Cause: An invalid name was specified for a log file or a trace file. The name might be too long, or it might specify a non-existent or read-only directory. In the former case, the error message shows the name truncated at the maximum allowable length, followed by 3 dots. Execution of the runtime process might have been terminated, or it might have continued. In the latter case, messages that subsequently would have been written to the file were silently discarded.
Action: Correct the environment variable used to specify the directory (e.g. FORMS_TRACE_DIR), and/or the file name proper (which might have been specified e.g. by the value of the 'log' configuration parameter). If no environment variable or configuration parameter was set to specify the directory or the file name proper, and the problem persists, contact Oracle Support Services.

FRM-91144: internal error in runtime process: unable to parse user name
Cause: An unexpected error occurred while the runtime process was attempting to parse the user name.
Action: If the problem persists, contact Oracle Support Services.

Level: 1

Type: INCIDENT_ERROR

Impact: Process

FRM-91145: fatal error in runtime process: missing serverArgs parameter

Cause: If this error occurred when using the Forms Servlet, both the serverArgs configuration parameter and the serverArgs applet parameter (either of which can represent the command-line arguments that are passed to the frmweb executable) were either missing or had a blank value. If this error occurred for static HTML (HTML that's not generated by the Forms Servlet), the serverArgs applet parameter was either missing or had a blank value.

Action: If this error occurred for static HTML, add a serverArgs parameter to the applet. Otherwise, ensure that the Forms Servlet configuration file or the base HTML files correctly define a serverArgs parameter. [Note that the base HTML files that are shipped with the produce omit the serverArgs parameter, but the shipped Forms Servlet configuration file specifies a non-blank value.]

FRM-91157: internal error in runtime process: unable to redirect stderr to stdout

Cause: An unexpected error occurred while the runtime process was attempting to redirect stderr to stdout. This error should never occur at a customer site.

Action: If the problem persists, contact Oracle Support Services.

Level: 1
Type: INCIDENT_ERROR
Impact: Process

FRM-91170: runtime process: JVM exiting with code {0}

Cause: The runtime process had started a JVM (in order to run Oracle Reports or the Forms debugger, or to update a password in Oracle Internet Directory). That JVM started exiting.

Action: No action is required.

Level: 1
Type: NOTIFICATION
Impact: Process

FRM-91171: runtime process: JVM aborting

Cause: The runtime process had started a JVM (in order to run Oracle Reports or the Forms debugger, or to update a password in Oracle Internet Directory). That JVM started aborting.

Action: No action is required. However, if there appear to be problems running Oracle Reports or the Forms debugger, or updating a password in Oracle Internet Directory, this message may help to indicate the cause.

FRM-91180: fatal error in runtime process: error {0} ({1}) attempting to open temporary record buffer file

Cause: An attempt to open the temporary record buffer file encountered the indicated error. Both the error number (errno on Unix and GetLastError() on Windows) and the corresponding error string are given. The runtime process was terminated.

Action: Examine the error string, and take appropriate remedial action. Verify that the file system or directory in which the file resides exists and that the runtime process has permissions to read and write to the file system or directory.

Level: 1
Type: ERROR
Impact: Files

FRM-91181: runtime process: error {0} ({1}) attempting to write {2} bytes to offset {3} of temporary record buffer file {4}

Cause: The specified 'write' operation to the temporary record buffer file encountered the indicated error. Both the error number (errno on Unix and GetLastError() on Windows) and the corresponding error string are given. Execution continued, for the moment at least; however, an error other than "out of space" is likely to cause subsequent termination of the runtime process (message FRM-91195).

Action: Examine the error string, and take appropriate remedial action. Verify that the file system or directory in which the file resides exists, and that the runtime process has permissions to read and write to the file system or directory, and that the file system contains sufficient space.

Level: 1
Type: ERROR
Impact: Files

FRM-91182: runtime process: error {0} ({1}) attempting to read {2} bytes from offset {3} of temporary record buffer file {4}

Cause: The specified 'read' operation to the temporary record buffer file encountered the indicated error. Both the error number (errno on Unix and GetLastError() on Windows) and the corresponding error string are given. Execution continued, for the moment at least; however, the error is likely to cause subsequent termination of the runtime process (message FRM-91195).

Action: Examine the error string, and take appropriate remedial action.

Level: 1
Type: ERROR
Impact: Files

FRM-91183: runtime process: error {0} ({1}) attempting to allocate {2} bytes at offset {3} of temporary record buffer file {4}

Cause: The specified 'allocate' operation ('fallocate' on Linux and 'posix_fallocate' on other Unix platforms) to the temporary record buffer file encountered the indicated error. Both the error number (errno) and the corresponding error string are given. Execution continued, for the moment at least; however, an error other than "out of space" is likely to cause subsequent termination of the runtime process (message FRM-91195).
**Action:** Examine the error string, and take appropriate remedial action. Verify that the file system or directory in which the file resides exists, and that the runtime process has permissions to read and write to the file system or directory, and that the file system contains sufficient space.

**FRM-91184: runtime process: error \([0]\) \((1)\) attempting to truncate or extend temporary record buffer file \([2]\) to \([3]\) bytes**

**Cause:** The specified 'ftruncate' operation to the temporary record buffer file encountered the indicated error. Both the error number (errno) and the corresponding error string are given. Execution continued, for the moment at least; however, an error other than "out of space" is likely to cause subsequent termination of the runtime process (message FRM-91195).

**Action:** Examine the error string, and take appropriate remedial action. Verify that the file system or directory in which the file resides exists, and that the runtime process has permissions to read and write to the file system or directory, and that the file system contains sufficient space.

**Level:** 1

**Type:** ERROR

**Impact:** Files

**FRM-91185: runtime process: error \([0]\) \((1)\) attempting to close temporary record buffer file \([2]\)**

**Cause:** An attempt to close the temporary record buffer file encountered the indicated error. Both the error number (errno on Unix and GetLastError() on Windows) and the corresponding error string are given. Execution continued; however, it's possible that the temporary record buffer file was not deleted properly.

**Action:** Examine the error string, and take appropriate remedial action.

**Level:** 1

**Type:** ERROR

**Impact:** Memory

**FRM-91191: runtime process: unable to allocate \([0]\) bytes of memory; attempting to continue execution**

**Cause:** A memory allocation request failed. This may indicate insufficient swap space. Execution continued, but the current operation (e.g. the loading of a form)
failed. And a subsequent critical memory allocation may have failed, thereby terminating the runtime process.

**Action:** Increase the size of the swap space, or rerun the application when the system is less heavily loaded.

**Level:** 1  
**Type:** ERROR  
**Impact:** Memory

**FRM-91192:** fatal error in runtime process: unable to memory-map {0} bytes of memory  
**Cause:** A memory-map request failed. This probably indicates insufficient swap space. Execution of the runtime process was terminated.

**Action:** Increase the size of the swap space, or rerun the application when the system is less heavily loaded.

**Level:** 1  
**Type:** ERROR  
**Impact:** Memory

**FRM-91193:** runtime process: unable to memory-map {0} bytes of memory; attempting to continue execution  
**Cause:** A memory-map request failed. This probably indicates insufficient swap space. Execution continued, but the current operation (e.g. the loading of a form) failed. And a subsequent critical memory allocation may have failed, thereby terminating the runtime process.

**Action:** Increase the size of the swap space, or rerun the application when the system is less heavily loaded.

**Level:** 1  
**Type:** ERROR  
**Impact:** Memory

**FRM-91194:** fatal error in runtime process: unable to allocate memory for critical record manager operation  
**Cause:** A memory allocation failure (reported in a preceding FRM-91191 message) occurred while attempting a record manager operation, and the operation was subsequently deemed critical. Execution of the runtime process was terminated.

**Action:** Increase the size of the swap space, or rerun the application when the system is less heavily loaded.

**Level:** 1  
**Type:** ERROR  
**Impact:** Memory

**FRM-91195:** fatal error in runtime process: cannot recover from disk I/O error on temporary record buffer file  
**Cause:** A disk I/O error on the temporary record buffer file (reported in a preceding FRM-41839 message and in a FRM-91181 or FRM-91182 message preceding that) caused a critical operation to fail. Execution of the runtime process was terminated. Note that an “out of space” error on a write is “not” fatal.

**Action:** Examine the preceding FRM-91181 or FRM-91182 message.

Level: 1
Type: INCIDENT_ERROR
Impact: Process

FRM-91270: runtime process unable to allocate socket for protocol {0}: {1}
Cause: The runtime process was unable to allocate a socket for the indicated protocol (IPv4 or IPv6). The error message from the operating system is displayed. NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.
Action: If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91273: runtime process unable to enable local address reuse on socket for protocol {0}: {1}

Cause: The runtime process was unable to configure the socket that it allocated for the indicated protocol (IPv4 or IPv6), to enable local address reuse. The error message from the operating system is displayed. NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.

Action: If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Process

FRM-91274: runtime process unable to translate hostname ({0}) to an address for protocol {1}: {2}

Cause: The runtime process was unable to configure the socket that it allocated for the indicated protocol (IPv4 or IPv6) correctly, because the hostname could not be translated to an address. The error message from the operating system is displayed. NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.

Action: If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Process

FRM-91275: runtime process unable to bind socket address for port {0} to socket for protocol {1}: {2}

Cause: The runtime process was unable to configure the socket that it allocated for the indicated protocol (IPv4 or IPv6), to bind the socket address for the indicated port to it. The error message from the operating system is displayed. NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.
**Action:** If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1  
**Type:** INCIDENT_ERROR  
**Impact:** Process

**FRM-91278:** runtime process unable to listen for connections on socket for protocol \{0\}: \{1\}  
**Cause:** The runtime process was unable to configure the socket that it allocated for the indicated protocol (IPv4 or IPv6), to listen for connections. The error message from the operating system is displayed. NOTE: If this error was detected for an IPv4 socket, the runtime process continued execution (and subsequently attempted to configure an IPv6 socket). If this error was detected for an IPv6 socket and an IPv4 socket was not successfully configured, then the runtime process was terminated.  
**Action:** If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1  
**Type:** ERROR  
**Impact:** Process

**FRM-91279:** runtime process unable to restrict IPv6 socket to IPv6 only: \{0\}  
**Cause:** The runtime process was unable to configure the socket that it allocated for IPv6, to restrict its use to IPv6 only (as opposed both IPv6 and IPv4). The error message from the operating system is displayed. The runtime process attempted to continue execution, but a subsequent attempt to bind the socket might fail with the error "address already in use".
Action: If the error message from the operating system indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

FRM-91990: runtime process: A maximum of {0}K bytes were simultaneously allocated for archived record data.
Cause: The runtime process allocated the indicated amount of memory without reserving swap space or /tmp file space. The memory will be included in many reports of memory usage (such as the output of the Linux pmap command), but it will not consume system resources (real memory or disk) until it is actually used for archived record data. (See FRM-91992).
Action: No action is required.
Level: 1
Type: TRACE
Impact: Performance

FRM-91991: runtime process: A maximum of {0}K bytes were simultaneously allocated and reserved for archived record data.
**Cause:** The runtime process allocated the indicated amount of memory, and reserved swap space or /tmp file space for it.

**Action:** No action is required. However, if the number reported by this message is significantly larger than the number reported by FRM-91992 and you are using mapped-memory archiving (FORMS_RECMGR_ARCHIVE unset, or set to MAP_SWAP or MAP_TMPFILE), you may want to reduce the value of FORMS_RECMGR_BLOCK_SIZE (which defaults to 64K when memory is being reserved, but can be set as low as 32K). Better yet, don’t reserve memory that’s allocated for archived record data, if possible. (This can be accomplished in most Unix installations, by setting FORMS_RECMGR_RESERVE_SPACE to ‘0’).

**Level:** 1

**Type:** TRACE

**Impact:** Performance

**FRM-91992: runtime process: A maximum of \{0\}K bytes were simultaneously in use for archived record data.**

**Cause:** The runtime process used the indicated amount of memory for archived record data. Specifically, at time of maximum usage, it (the runtime process) had written data into the pages of memory, and the data was still needed at that point (because there was a possibility that the record might subsequently need to be activated). Note that when FORMS_RECMGR_ARCHIVE has been set to WRITE_TMPFILE, the runtime process has no way of notifying the file system when it no longer needs a page, and so the file system may retain an unneeded page in a real-memory buffer for a while. Thus, in this case the number reported by this message should be viewed as lower bound.

**Action:** No action is required. However, the numbers reported by this message for various applications may help to determine an appropriate value for FORMS_RECMGR_ARCHIVE_THRESHOLD.

**Level:** 1

**Type:** TRACE

**Impact:** Performance

**FRM-91994: runtime process: Record groups required \{0\}K bytes for archived record data, plus approximately \{1\}K additional bytes for active record data and record anchors. If FORMS_RECMGR_USED_FOR_RECGRPS were set to FALSE, a total of approximately \{2\}K bytes would instead have been required.**

**Cause:** At the point in time when total memory for archived record data was at its maximum (as reported by FRM-91992), the runtime process used the sum of the first two amounts for all data and anchors for all records in record groups, but would instead have used the third amount if FORMS_RECMGR_USED_FOR_RECGRPS had been set to FALSE.

**Action:** No action is required. However, the numbers reported by this message for various applications may help to determine the appropriate value for FORMS_RECMGR_USED_FOR_RECGRPS. [Bear in mind that TRUE (the default) requires more CPU than FALSE.]

**Level:** 1

**Impact:** Performance
FRM-91995: runtime process: The record manager is currently consuming the following for {0}: {1}

Cause: The Forms application issued a call to the GET_RECMGR_STATS built-in, which then issued this message. The parameter {1} in this message is a formatted report of the amount of various types of memory currently being consumed for record data of the type indicated by the parameter {0} in this message (which corresponds to the argument passed to GET_RECMGR_STATS: all_record_data, archived_record_data, active_record_data, or record_anchors). The formatted report lists Kbytes of memory for the following 6 types of memory: MALLOCED, MAPPED, MAPPED_IN_USE, MAPPED_RESERVED, WRITTEN, WRITTEN_IN_USE.

FRM-93121: Cannot find environment variable configuration file {0}.
Cause: One of the following occurred. (The first is by far the most likely.) Note that an envFile parameter may specify a relative path; if it was not found in the current directory, Forms will search for it in the directory that contains the Forms Servlet configuration file. 1. The envFile configuration parameter for this application specified a nonexistent file. A preceding FRM-93141 error message provides details. 2. The envFile configuration parameter for this application specified a file that existed when the Forms Servlet extracted the parameter, but the file subsequently disappeared. 3. No envFile configuration parameter that would apply to this application was specified, and the envFile servlet parameter specified a nonexistent file.
Action: Take action depending on the cause. 1. Take action indicated for the preceding FRM-93141 error message. 2. Re-create the file, or correct the envFile configuration parameter. 3. Verify that the envFile servlet parameter specifies the correct value. Create the file if necessary.

FRM-93153: New connections to this Forms Servlet are not being allowed. Attempting to redirect connection attempt to {0}.
Cause: The allowNewConnections configuration parameter was false, and a value was specified for the connectionDisallowedURL configuration parameter. Redirection will be attempted to that URL.
Action: No action is required.

Level: 1
Type: NOTIFICATION
Impact: Configuration

FRM-93154: The Forms Servlet is not allowing new connections.
Cause: The allowNewConnections configuration parameter was false, and either no value was specified for the connectionDisallowedURL configuration parameter, or else redirection to the specified URL failed.
Action: If a value is specified for the connectionDisallowedURL configuration parameter (as indicated in error message FRM-93153), check to see if the specified URL is malformed; if so, correct the URL. Otherwise, no action is required.

Level: 1
Type: NOTIFICATION
Impact: Configuration

FRM-93156: The Forms Servlet is unable to contact the Forms Load Balancing Server at {0}:{1}.
Cause: The Forms Servlet was unable to contact the indicated Forms Load Balancing Server, and the MetricsServerErrorURL configuration parameter was not specified.
Action: Do one or both of the following. 1. Determine why the server is unavailable, and correct the condition. 2. Specify a value for the MetricsServerErrorURL parameter in the Forms Servlet configuration file.

FRM-93196: Process list file {0} does not exist or is not writable; process list disabled.

Cause: When a runtime process was started or stopped, an attempt was made to write an updated list of runtime processes to the specified file, but it did not exist or was not writable. Note that the name of the process list file is obtained from the em_process_file parameter in the URL, the Forms Servlet configuration file, or the environment variable configuration file.

Action: Verify that the em_process_file parameter specifies the correct file. If necessary, create the file or make it writable, or both.

Type: ERROR
**Impact:** Configuration

**FRM-93211:** error decoding query string using [0] encoding. Spaces generated from "+" in the value of otherparams may be converted to "%20".

**Cause:** There was a mismatch between the way that the browser encoded multibyte characters and the way that the Forms Servlet decoded them. This could indicate an invalid value for the defaultcharset parameter in the configuration file, or possibly a problem in either the browser or Oracle software.

**Action:** If the site uses the otherparams parameter in any URLs, verify that the defaultcharset parameter in the configuration file is correct; if the defaultcharset parameter is correct, contact Oracle Support Services. Otherwise, no action is required.

**Level:** 1

**Type:** WARNING

**Impact:** Configuration

**FRM-93214:** internal buffer ([0] bytes) not big enough to read request content ([1] bytes)

**Cause:** An internal buffer was not big enough to read the content of a request from the Java client. The FRM-93214 error message provides supplemental detail for the FRM-93218 error message.

**Action:** If the problem persists, contact Oracle Support Services.

**Level:** 1

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93217:** unable to read whole request from client: expected [0], got [1]

**Cause:** A fatal error occurred while reading the content of a request from the Java client. The FRM-93217 error message provides supplemental detail for the FRM-93218 error message.

**Action:** Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

**Level:** 1

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93218:** fatal error reading client request content

**Cause:** A fatal error occurred while attempting to read the content of a request from the Java client. A preceding FRM-93214 or FRM-93217 error message might provide more detail.

**Action:** Check for problems on the network that connects the Forms Java Client with the Forms Listener Servlet.

**Level:** 1

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93228:** fatal error writing response to client

**Cause:** A fatal error occurred while writing a response to the Forms Java client.

**Type:** ERROR

**Impact:** Requests/Responses

**FRM-93240: Multiple Forms applications cannot share an HTTP session.**

**Cause:** A Forms application was launched in such a way that it attempted to share an HTTP session with an already running Forms application. This might result from one of the following:

1. The user selected File, then New, then Browser Window (or Ctrl+N) in Internet Explorer while the servlet session was being tracked using cookies (that is, session cookies were enabled). In this case Forms does not support creating a new session for the second window.
2. An application attempted to launch multiple Forms applications, and cookies were enabled in the Forms application.
3. An application attempted to launch multiple Forms applications using POST, cookies were disabled in the Forms application, and the launching application specified the same cookie name as did the Forms application.

**Action:** Take action depending on the cause.

1. No action is required.
2. Disable cookies in the Forms application.
3. Change the cookie name in the launching application or the Forms application. This can be accomplished via `<cookie-name>` under `<session-descriptor>` in the weblogic.xml deployment descriptor.

**Level:** 1

**Type:** NOTIFICATION

**Impact:** Session

**FRM-93242: serverURL applet parameter refers to an HTTP session that no longer exists.**

**Cause:** The serverURL applet parameter specified an encoding (e.g. jsessionid) for a non-existent HTTP session. This probably resulted from the user double-clicking on a downloaded JNLP file that was created for Java Web Start with SSO enabled.

**Action:** No action is required.

**Level:** 1

**Type:** ERROR

**Impact:** Session

**FRM-93243: Static HTML is not allowed.**

**Cause:** The serverURL applet parameter did not specify an ifcfs parameter and did not specify an encoding (e.g. jsessionid) for an HTTP session. The request for this URL was sent directly to the Forms Listener Servlet, but no HTTP session was associated with the request. This indicates that the HTML that defines the applet is "static", i.e. that it was not generated by the Forms Servlet. Static HTML is not allowed unless the envFile servlet initialization parameter for lservlet is set to a non-blank value.

**Action:** If you wish to allow static HTML, set the envFile servlet initialization parameter for lservlet to a non-blank value. This parameter specifies the full path of a file that defines values for environment variables (e.g. default.env). If you don’t need such a file for static HTML (e.g. because all necessary environment variables are set in the Windows registry or in the script that launches webLogic), then set the envFile servlet initialization parameter for lservlet to ".".
Level: 1
Type: ERROR
Impact: Session

FRM-93244: URL could not be rewritten for a Java Web Start application or an Oracle Forms Standalone application.

Cause: Oracle Forms was attempting to run a Java Web Start application or an Oracle Forms Standalone application. Either URL rewriting was disabled (url-rewriting-enabled set to false in weblogic.xml), or else SSO was enabled (for Java Web Start: SSO is not allowed for Oracle Forms Standalone applications) and cookies were enabled (cookies-enabled not set or set to true in weblogic.xml). The application was terminated.

Action: If you wish to support Java Web Start or Oracle Forms Standalone applications when SSO is not enabled, ensure that url-rewriting-enabled is not set or is set to true in weblogic.xml. If, in addition, you wish to support Java Web Start applications when SSO is enabled, then also ensure that cookies-enabled is set to false weblogic.xml.

FRM-93421: starting the timer for the runtime process pool for configuration section [0]

Cause: During runtime process pool initialization, a timer task was started for the indicated configuration section, because the configuration section specified a positive value for the prestartTimeOut parameter.

Action: No action is required.

Level: 1

Type: NOTIFICATION

Impact: Process

FRM-93423: adding [0] runtime processes to the runtime process pool for configuration section [1] because the pool has gone below the minimum

Cause: A prestarted runtime process was removed from the runtime process pool for the indicated configuration section, in order to start a new Forms application. This caused the number of prestarted runtime processes to fall below the value specified by the prestartMin parameter. As a result, the indicated number of prestarted runtime processes (derived from the prestartIncrement parameter) were added to the pool.

Action: No action is required.

Level: 1

Impact: Process

FRM-93424: removing the prestarted runtime processes for configuration section [0]

Cause: The servlet was being shut down, or the prestarting of runtime processes timed out (as indicated by message FRM-93425). As a result, prestarted processes were removed from the pool.

Action: No action is required.

Level: 1

Type: NOTIFICATION

Impact: Process

FRM-93425: The prestarting of runtime processes for configuration section [0] has timed out.

Cause: The thread that was filling the runtime process pool for the indicated configuration section timed out, after running for the number of minutes specified by the prestartTimeOut parameter for the indicated configuration section. Any prestarted processes in the pool were subsequently removed.

Action: Determine why prestarting was taking an unexpectedly long time, or increase the value of the prestartTimeOut parameter.

Level: 1

Type: NOTIFICATION

Impact: Process

FRM-93426: The prestarting of runtime processes for configuration section [0] is terminated.

Impact: Process
FRM-93546: external message from runtime process: {0}

**Cause:** The runtime process wrote the specified message to stderr or stdout, but the message does not appear to have been written by the frmweb executable. It typically will be an O/S message identifying an error that occurred while attempting to load the executable. In such a case, this message will be followed immediately by FRM-93552.

**Action:** Examine the external message. If it identifies a fatal error, correct it, if possible. If the problem persists, contact Oracle Support Services.

Level: 1  
Type: ERROR  
Impact: Process

FRM-93548: Runtime process ID is {0}.

**Cause:** The newly created runtime process sent its process ID back to the Forms Listener Servlet.

**Action:** No action is required.

Level: 16  
Type: NOTIFICATION  
Impact: Process

FRM-93550: cannot connect to runtime process: no response from newly created runtime process

**Cause:** The Forms Listener Servlet waited several times (for a total of roughly 4 minutes) for the initial response from the newly created runtime process, but no response arrived.

**Action:** If the problem persists, contact Oracle Support Services.

Level: 1  
Type: ERROR  
Impact: Process

FRM-93552: cannot connect to runtime process: Newly created runtime process has terminated abnormally.

**Cause:** The Forms Listener Servlet created the runtime process, but the process terminated abnormally. The preceding error message provides more detail.

**Action:** Take the action indicated for the preceding error message.

Level: 1  
Type: ERROR  
Impact: Process

FRM-93553: cannot connect to runtime process: unable to establish a socket connection to newly created runtime process

**Cause:** The Forms Listener Servlet created the runtime process, but was unable to establish a socket connection to the process.

**Action:** If the problem persists, contact Oracle Support Services.

Level: 1  
Type: ERROR
Impact: Process

FRM-93558: cannot connect to runtime process: error reading data from newly created runtime process
Cause: The Forms Listener Servlet encountered an IOException while attempting to receive data from the newly created runtime process.
Action: Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.
Level: 1
Type: ERROR

Impact: Process

FRM-93566: unexpected error while attempting to stop runtime process
Cause: An unchecked Exception or Error was encountered while attempting to stop the runtime process. Processing continued. However, the runtime process might have been left in existence (thereby consuming resources), and messages from the runtime process might not have been written to the Oracle Diagnostic Log.
Action: Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.
Level: 1
Type: WARNING

Impact: Process

FRM-93572: error reading messages from runtime process
Cause: An I/O error occurred while reading the temporary file to which messages from the runtime process were written. Processing continued. However, messages from the runtime process were not written to the Oracle Diagnostic Log.
Action: Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.
Level: 1
Type: WARNING

Impact: Files

FRM-93574: Application server does not support Oracle character set [0].
Cause: The runtime process used the specified Oracle character set when it wrote messages for the Oracle Diagnostic Log, but the application server did not support that character set. Processing continued, using the ISO-8859-1 Java character set. However, some multibyte characters (those in variable arguments) in messages from the runtime process might have been displayed incorrectly in the Oracle Diagnostic Log.
Action: Verify that the environment variable configuration file specifies the correct value for NLS_LANG (specifically, the correct character set). If the problem persists, contact Oracle Support Services.
Level: 1
Type: WARNING
Impact: Configuration

FRM-93600: unexpected error while attempting to communicate with the client or the runtime process
Cause: An unchecked Exception or Error was encountered while attempting to communicate with the client or the runtime process. Typically, a communication error would cause a more specific message.
Action: Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Process

FRM-93614: invalid or absent Content-Length from runtime process
Cause: This message provides more detail for the following FRM-93618 error message.
Action: Refer to error message FRM-93618.

Level: 1
Type: ERROR
Impact: Process

FRM-93618: fatal error reading data from runtime process
Cause: The runtime process was still running, but the Forms Listener Servlet encountered an IOException while attempting to receive data from the process. A preceding message might provide more detail. The accompanying stack trace represents the state of the process when the previous detail message was logged.
Action: Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Process

FRM-93624: internal buffer ([0] bytes) not big enough to hold header ([1] bytes) for message from servlet to runtime process
Cause: An internal buffer was not big enough to hold the header for a message from the servlet to the runtime process. The FRM-93624 error message provides supplemental detail for the FRM-93628 error message.
Action: If the problem persists, contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Process

FRM-93625: internal buffer ([0] bytes) not big enough to generate initial message from servlet to runtime process
Cause: An internal buffer was not big enough to generate the initial message from the servlet to the runtime process. The FRM-93625 error message provides supplemental detail for the FRM-93628 error message.

Action: If the problem persists, contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Requests/Responses

FRM-93628: fatal error writing data to runtime process

Cause: The runtime process was still running, but the Forms Listener Servlet encountered a fatal error while attempting to write data to the process. A preceding FRM-93624 or FRM-93625 error message might provide more detail.

Action: Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Process

FRM-93652: The runtime process has terminated abnormally.

Cause: The Forms Listener Servlet attempted to communicate with the runtime process, but the process had terminated prematurely. The preceding error message provides more detail.

Action: Take the action indicated for the preceding error message.

Level: 1
Type: ERROR
Impact: Process

FRM-93654: Runtime process {0} is terminating due to external action.

Cause: The runtime process was running on a UNIX platform, and received a signal 9 (SIGKILL) or 15 (SIGTERM), or the runtime process was running on a Windows platform, and exited with exit code 1. Presumably the runtime process was terminated explicitly, either via the Enterprise Manager, or via a 'kill' command (UNIX) or the task manager (Windows). As a result, the runtime process terminated abnormally. This message provides more detail for a following FRM-93552 or FRM-93652 error message.

Action: No action is required.

Level: 1
Type: ERROR
Impact: Process

FRM-93656: Runtime process {0} is terminating due to signal {1}.

Cause: The runtime process was running on a UNIX platform, and received a signal other than 9 (SIGKILL) or 15 (SIGTERM). The signal caused the runtime process to terminate abnormally. This message provides more detail for a following FRM-93552 or FRM-93652 error message. If the FORMS_CATCHTERM environment variable was not set to a value that is equivalent to FALSE, there will typically be a stack trace. If the FORMS_C_STACK_TRACE_TO_FILE
environment variable was set to a value that is equivalent to FALSE, the stack trace will accompany this message; otherwise, the stack trace will appear in a file named frmweb_dump_<pid> in the Forms trace directory, where <pid> is the process ID. If the FORMS_CATCHTERM environment variable was set to a value that is equivalent to FALSE, there may be a core file that contains a stack trace.

**Action:** Examine the stack trace for the runtime process. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1  
**Type:** ERROR  
**Impact:** Process

**FRM-93657: Runtime process \{0\} is terminating due to exception \{1\}.**  
**Cause:** The runtime process was running on a Windows platform, and encountered an exception (which is displayed as 8 hexadecimal digits in the error message, in some cases followed by a descriptive phrase). The exception caused the runtime process to terminate abnormally. This message provides more detail for a following FRM-93552 or FRM-93652 error message. If the FORMS_CATCHTERM environment variable was not set to a value that is equivalent to FALSE, there will typically be a stack trace. If the FORMS_C_STACK_TRACE_TO_FILE environment variable was set to a value that is equivalent to FALSE, the stack trace will accompany this message; otherwise, the stack trace will appear in a file named frmweb_dump_<pid> in the Forms trace directory, where <pid> is the process ID.

**Action:** Examine the stack trace for the runtime process. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

**Level:** 1  
**Type:** ERROR  
**Impact:** Process

**FRM-93658: Stack trace for runtime process \{0\} is being written to file \{1\}.**  
**Cause:** The runtime process encountered a signal or an exception (identified by the preceding "FRM-93656" or "FRM-93657" message), and the FORMS_C_STACK_TRACE_TO_FILE environment variable was not set to a value that is equivalent to FALSE.

**Action:** No action is required.

**Level:** 1  
**Type:** NOTIFICATION  
**Impact:** Process

**FRM-93659: Stack trace for runtime process \{0\} cannot be written to file \{1\}.**  
**Cause:** The runtime process encountered a signal or an exception (identified by the preceding "FRM-93656" or "FRM-93657" message), and the FORMS_C_STACK_TRACE_TO_FILE environment variable was not set to a value that is equivalent to FALSE. However, the stack trace file could not be created.

**Action:** Ensure that the FORMS_TRACE_DIR environment variable (if set) and the ORACLE_INSTANCE environment variable each specify a valid directory with write permissions and adequate space.
Level: 1
Type: WARNING
Impact: Process

FRM-93660: unable to get the hostname, using localhost instead of hostname in the Forms DMS table
Cause: The runtime process was unable to read the hostname from the server.
Action: Examine the stack trace that accompanies this message. If the stack trace indicates a possible cause, correct it. If the problem persists, contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Process

FRM-93661: error writing JVM Controller pid file
Cause: The runtime process was unable to write the JVM Controller pid file to the disk.
Action: Ensure that ORACLE_INSTANCE/FRComponent/frcommon/tools/jvm/proc directory exists, the user running Weblogic server has write permissions to write to it and there is adequate disk space.

**JBO-25002:** Definition {1} of type {0} is not found.
**Cause:** A definition object with the given name could not be found.
**Action:** Provide a correct name for the business component definition (using the format 'packagename.objectname') and ensure that the definition is available on the classpath. This error can also occur if there is a case conflict, as when the database expects 'DEPTNO' and receives 'Deptno' instead.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-25003:** Object {1} of type {0} is not found.
**Cause:** A business component object with the given name could not be found in the application module.

**JBO-25006:** Value {2} passed as parameter {1} to method {0} is invalid: {3}.
**Cause:** An attempt was made to invoke a business components method with an invalid parameter value.
**Action:** Pass a correct value for the parameter. To determine the allowed values for a given parameter, check the Javadoc for the method that throws this exception. For example, Javadoc indicates that the
'DBTransactionImpl.executeCommand' method throws this exception when the 'command' parameter is empty.

Level: 1

Impact: Programmatic

**JBO-25007: The validation flag cannot be reset for a default iterator.**

**Cause:** An attempt was made to reset the row validation flag for the default iterator of a rowset or view object.

**Action:** Reset the row validation flag for the rowset or view object instead. This will create a secondary iterator to allow the rowset or view object to navigate to another row without validating.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-25008: Object {0} cannot be removed because it is referenced by object {1}.**

**Cause:** An attempt was made to remove a view object that is participating in a view link.

**Action:** Remove the view link before removing the view object.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-25009: Cannot create an object of type:{0} from type:{2} with value:{1}**

**Cause:** A domain object could not be created with the given value. Either a domain constructor that accepts the given value does not exist, or there is no conversion method in the domain object for the given value type, or the domain constructor threw an unexpected exception.

**Action:** Ensure that the value being passed is valid with respect to the domain type being created. For example, passing the string value 'one' to the 'oracle.jbo.domain.Number' constructor will throw this exception.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-25010: A validation failure has occurred while creating a domain with value {0}.**

**Cause:** Validation failed with the given value in a domain constructor. This exception is thrown in the domain type 'validate()' method.

**Action:** Provide a valid value for the domain type.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-25011: Rowset {0} is forward only.**
**Cause:** An attempt was made to invoke an invalid navigation method on a forward-only view object or rowset.

**Action:** Either remove the forward-only setting for the view object or rowset, or do not invoke navigation methods other than `next()` on the forward-only view object or rowset.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25012: View object [0] does not have entity [1] as its primary base.**

**Cause:** The client attempted to locate a view row that has the given entity row as its primary entity row. However, the entity row’s entity definition does not match the entity definition of the view object’s primary entity object base.

**Action:** Ensure that the entity row used to locate view rows is based on the same entity definition as the view object’s primary entity object base.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25013: Too many objects match the primary key [0].**

**Cause:** An attempt was made to add a newly fetched or created entity to the cache, but the new entity has the same primary key as an existing entity. The primary key must be unique for this entity type.

**Action:** Add more attributes to the key definition for the entity type, so that each row for this entity is uniquely identifiable. Or fix the primary key value so that this entity has a unique key identifier.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25014: Another user has changed the row with primary key [0].**

**Cause:** The database value does not match the cached value for this entity object. This could happen when another user or operation has committed modifications to the same entity row in the database. This exception can also be thrown if the 'equals' method on one of the domain type attributes in the entity fails.

**Action:** Choose from the following options: 1. Verify that another user or operation has not modified the same row in the database. If this entity has attributes of a domain type verify that the `<code>equals()></code>` method on these domains do not fail when comparing the existing cached value with the newly fetched value. 2. For any attributes/columns that are updated by the database, modify the entity attribute definition by selecting 'Refresh after update' on the Attribute Settings page of the Entity Object Wizard. 3. Use `view.executeQuery()` frequently, especially after any operations that result in data being changed.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic
JBO-25015: Query collection {0} is closed.
  
  **Cause:** An attempt was made to execute a query or access a row from a closed or removed view object or rowset.
  
  **Action:** Verify that the view object or rowset is not removed or closed.

  **Level:** 1
  **Type:** ERROR
  **Impact:** Programmatic

JBO-25016: View object {0} is read-only.

  **Cause:** An attempt was made to modify data for a view object which is declared to be read-only. This includes creating a new row for this view object, removing a row, or modifying attributes of a view row for this view object.

  **Action:** Create a view object with the read-only flag set to ‘false’ in order to modify data.

  **Level:** 1
  **Type:** ERROR
  **Impact:** Programmatic

JBO-25017: New entity row of type {0} cannot be created.

  **Cause:** An unexpected exception occurred while creating a new entity instance.

  **Action:** Ensure that the entity has a public default constructor. Fix the cause of the InstantiationException or IllegalAccessException that appears in the details of this exception.

  **Level:** 1
  **Type:** ERROR
  **Impact:** Programmatic

JBO-25018: New view row of type {0} cannot be created.

  **Cause:** An unexpected exception occurred while creating a new view row instance.

  **Action:** Ensure that the view row has a public default constructor. Fix the cause of the InstantiationException or IllegalAccessException that appears in the details of this exception.

  **Level:** 1
  **Type:** ERROR
  **Impact:** Programmatic

JBO-25019: Entity row with key {1} is not found in {0}.

  **Cause:** An attempt was made to lock a nonexistent row in the database. This could occur when the cache has an entity which was subsequently deleted from the database by another user or operation.

  **Action:** Remove the current entity from the entity cache by calling 'remove'. Or, synchronize the cache with the database by rolling back the current transaction or by committing the existing set of changes and then dropping the entity cache.

  **Level:** 1
  **Type:** ERROR
Impact: Programmatic

JBO-25020: View row with key {1} is not found in {0}.
Cause: An attempt to find a referenced entity in the view row failed due to a changed foreign key value.
Action: Provide a valid foreign key value or remove the current one.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25021: Domain object type {0} cannot be created.
Cause: A domain object could not be created with the given value. Either a domain constructor that accepts the given value does not exist, or there is no conversion method in the domain object for the given value type, or the domain constructor threw an unexpected exception.
Action: Ensure that the value being passed is valid with respect to the domain type being created. For example, passing the string value 'one' to the 'oracle.jbo.domain.Number' constructor will throw this exception.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25022: A view link {0} already exists between source view object {1} and destination view object {2}.
Cause: An attempt was made to set the master rowset for this rowset more than once.
Action: Do not invoke 'setMasterRowSetIterator' more than once on a rowset.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25023: Operation {0} on domain value {1} of class {2} cannot be performed.
Cause: An unexpected domain exception occurred.
Action: Contact Oracle Support Services.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25024: Method {0} is obsolete.
Cause: An attempt was made to use an obsolete type map constructor.
Action: Verify that the type map is compatible with this version of the framework. See example type maps in 'oracle.jbo.server.OracleTypeMapEntries'.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25025: Rowset with XML tag {0} cannot be loaded.
Cause: An error occurred while reading the XML data for a view object. This exception might contain other ReadXMLExceptions.
Action: Fix the contained row-level or attribute-level exceptions in the details for this exception.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25026: Row \{1\} with XML tag \{0\} cannot be loaded.
Cause: An error occurred while reading the XML data for a view row. This exception might contain other ReadXMLExceptions for contained rowsets or attributes.
Action: Fix the rowset-level or attribute-level exceptions in the details for this exception.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25027: Attribute \{1\} at index \{2\} with XML tag \{0\} cannot be loaded.
Cause: An error occurred while reading the XML data for an attribute of a view row. This exception might contain other JboExceptions thrown from the set method for this attribute.
Action: Fix the JboException in the details for this exception.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25028: Domain object type \{0\} cannot be created: \{1\}.
Cause: A domain object could not be created with the given value. Either a domain constructor that accepts the given value does not exist, or there is no conversion method in the domain object for the given value type, or the domain constructor threw an unexpected exception.
Action: Ensure that the value being passed is valid with respect to the domain type being created. For example, passing the string value 'one' to the oracle.jbo.domain.Number constructor will throw this exception.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25029: Domain class \{0\} is not found.
Cause: The named data class (typically a domain) could not be found.
Action: Ensure that the data class is accessible from the CLASSPATH and is a valid data class.
Level: 1
Type: ERROR
Impact: Programmatic
JBO-25030: Detail entity {0} with row key {1} cannot find or invalidate its owning entity.

**Cause:** No container entity was found for a detail entity in a composition association. This could occur if a nonexistent master key value was passed in during creation of a new detail entity instance, or if the foreign key value of this entity was modified so that it no longer matched any master entity.

**Action:** Pass a valid foreign key value to the 'create' method or 'setAttribute' method so that an appropriate master row is found for this entity.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

JBO-25031: View row for view object {0} is missing entity row for {1}.

**Cause:** The client attempted to access an attribute of a view which is mapped to an entity row, but the corresponding entity row is null. If the view object consists of multiple entity object bases and if the secondary entity object bases are reference-only, the entity rows could be null if the foreign key linking the primary entity to the secondary entity object is null.

**Action:** Do not try to access attributes of missing entity rows in this situation.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

JBO-25032: Passivation to target store {1} is unsuccessful.

**Cause:** A failure occurred while trying to passivate the application module or transaction state.

**Action:** Resolve the detail exception raised by the passivation target store (Database, File or Memory).

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

JBO-25033: Activating state with id {0} from target store {1} is unsuccessful.

**Cause:** A failure occurred while trying to activate the application module or transaction state.

**Action:** Resolve the detail exception raised by the passivation target store (Database, File or Memory) and ensure that the state snapshot ID exists in the target store.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

JBO-25034: Row with handle {1} is not found in rowset {0}.

**Cause:** The client attempted to locate a row with a stale row handle. This error might be raised if the client tries to take a row out of one query collection and use its handle to find a row in another query collection. Note that if the client calls executeQuery on a rowset, it might receive a new query collection. Thus, this error might occur if the client retrieves a row from a rowset, takes its row handle, calls
executeQuery, and then tries to locate the row using the saved handle. This exception might also be raised if a row reference is used across transaction boundaries and the row handle has become stale and hence the corresponding row cannot be found.

**Action:** Make sure that the row handle is not stale. One approach is to find the row again using its primary key before attempting to act on the row.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25035: The application module passivation store is invalid.**

**Cause:** An application attempted to change an application module's passivation store after it had been initialized. The passivation store (Database, File or Memory) can only be initialized once. If the customer application logic has not specified a passivation store when the serialization framework is invoked, the passivation store is initialized by the framework.

**Action:** Check the client application logic for invocations of ApplicationModuleImpl.setStoreForPassiveState which are invoked after the application module passivation store has been initialized.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25036: An invalid object operation was invoked on type {0} with name {1}**

**Cause:** An application invoked an object operation that is not supported in the object's current state.

**Action:** Remove the invalid operation invocation or provide exception handling logic.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25037: Detail row set {0} is missing a master row set iterator for view link {1}, master view object {2}**

**Cause:** This row set is a detail in a master-detail relationship, but it is missing a master row set iterator. Most likely, this occurred because a master row set iterator was removed through a call to removeMasterRowSetIterator() and has not been replaced with an appropriate one.

**Action:** Call setMasterRowSetIterator() to provide a valid master row set iterator.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25038: Value {2} passed as parameter {1} to method {0} is invalid.**

**Cause:** An attempt was made to invoke a business components method with an invalid parameter value.

**Action:** Refer to the documentation of error message JBO-25006 (EXC_INVALID_PARAMETER) for more information. The difference between this error message
and EXC_INVALID_PARAMETER is that this version does not include an explanation. In general, Oracle recommends using JBO-25006 instead of JBO-25038.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25039: No current row in row set iterator {0}**  
**Cause:** The client attempted to work with the current row of a row set iterator, but the iterator has no current row.  
**Action:** Position the iterator to the correct row and perform the operation.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25040: Row should be locked before getting an output stream from an attribute.**  
**Cause:** The row containing a large object was not locked before attempting to call a method on the large object that could potentially change the data of the object.  
**Action:** Lock the row before attempting to get an output stream or write into a large object domain instance.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25041: Type map cannot convert data from {1} to {0} with operation {2}**.  
**Cause:** The TypeFactory class asked the TypeMapEntries class to convert data, but the TypeMapEntries class did not know how to perform the conversion. This is typically an issue with the TypeMapEntries implementation.  
**Action:** Contact Oracle Support Services.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25042: Row of trans post listener handle {0} not found in list.**  
**Cause:** Entity row of the given handle is not found in transaction post listener list. Most likely cause of this error is as follows: the user requests certain operation. The operation tries to get access to the row in database. This fails for whatever reason (this exception’s detail might have further information). The system tries to fix the problem at the entity level. It looks for the entity row in the transaction post listener list. The specified row is not found.  
**Action:** Look at the details and see if the cause can be determined from them. Check to see if concurrent updates to database could have caused the problem.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic
JBO-25043: Extraneous key [0] of index [1] (in key-value array) passed to findByKey for view object [2].

Cause: Extraneous key passed in to findByKey(). For example, suppose the View Object expects no more than a two-part key, but the key passed into findByKey is a three-part key. Then, this exception will be thrown.

Action: Provide a valid key.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25044: Application state snapshot is based on an older version of the application definition metadata.

Cause: An attempt was made to activate application module or transaction state based on an older metadata definition into an application module with a later metadata definition.

Action: Ensure that snapshots used for state activation were generated from the currently running version of the application definition metadata.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25045: Row set iterator [0] has detected an implicit synchronization attempt.

Cause: An attempt was made to implicitly synchronize an iterator in a 3-tier running environment. When the application module synchronization mode is set to SYNC_BATCH, iterator synchronization must be done explicitly.

Action: Remove code that attempts to synchronize the iterator implicitly.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25046: Requested row not available in row set iterator [0].

Cause: This exception is thrown when running in 3 tier SYNC_BATCH mode. The user requested a row, but that row is not available in the cache.

Action: Make appropriate API calls to bring the required row into cache. Then, try to get the row again.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25047: Attempt to make call to server detected for application module [0].

Cause: An attempt to make a call to server detected for an operation that is supposed to work only with client cache.

Action: Remove code/operation that attempts to call server.

Level: 1
Type: ERROR
Impact: Programmatic
JBO-25048: Operation {0} is invalid for a working set object.

**Cause:** This operation is invalid for this working set object. It might be because the operation doesn't make sense in batch mode, or because the batch communication mode (WSApplicationModuleImpl.getBatchCommMode()) does not allow this operation.

**Action:** Remove code/operation that calls the named method of set the batch communication mode to allow this operation.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

JBO-25049: Entity {0} cannot be set to batch mode because a key attribute is marked as refresh-on-insert or refresh-on-update.

**Cause:** An attempt was made to set batch mode on an entity that has a primary key marked as refresh-on-insert or refresh-on-update.

**Action:** Remove the refresh-on-insert or refresh-on-update setting of the primary key attribute.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

JBO-25050: Batch mode post operation failed. See Exception details for a list of failures.

**Cause:** Posting entities in batch mode failed with a set of exceptions

**Action:** Fix the cause for each of the exceptions in the details array.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

JBO-25051: Row of range index {1} is not found in RowSetIterator {0}.

**Cause:** The client has attempted to locate a row with a range index, but the Row Set Iterator's range does not have a row at the index. It might be that the range index is too big (>= the range size), or that the range is at the bottom and the range index is beyond the last row of the Row Set. Or, the Row Set might have been reset because of operations like rollback and clear-cache. Hence, the range is empty and no row is found

**Action:** Make sure that the row set iterator is open and has rows in its range. Also, make sure that the range index falls between the first and the last row of the range.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

JBO-25052: View object {0} with no key attributes cannot be activated.

**Cause:** A view object with no key attributes was configured to passivate one or more of its transient attributes. However, a view object without key attributes cannot participate in state passivation.

**Action:** Define one or more key attributes for this view object.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25053: Cannot navigate with unposted rows in a RangePaging RowSet.
Cause: An attempt has been made to navigate a rowset in Range Paging mode when the rowset has inserted/removed rows.
Action: Post this transaction before navigating.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25054: Cannot locate the specified stack snapshot id: {0}
Cause: An attempt has been made to activate a stack snapshot that does not exist. The specified snapshot might already have been activated or the stack might already have been cleared by a previous rollback/commit.
Action: Ensure that stack snapshot ids are maintained by the application across transaction boundaries.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25055: Snapshot {0} cannot be removed.
Cause: An attempt was made to remove a persistent snapshot that is referenced by the snapshot stack.
Action: Clear the snapshot stack before attempting to remove the referenced snapshot.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25056: Cannot call removeFromCollection() or removeAndRetain() on an Entity row: Entity name {0}
Cause: An attempt has been made to call removeFromCollection() on an Entity row. It is illegal to call removeFromCollection() on an Entity row.
Action: Remove code that calls removeFromCollection() on an Entity row.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25057: Entity row update operation did not find matching row: Entity name {0}, key {1}
Cause: In LOCK_OPTUPDATE locking mode, an attempt was made to update an Entity row. The update operation failed to update any row.
Action: Another user might have modified the row and committed the changes.

Level: 1
JBO-25058: Definition {1} of type {0} is not found in {2}.
  **Cause:** No business component definition found with the given name in the project classpath.
  **Action:** Provide a correct name for the business component definition and ensure the definition is available on the classpath. Names are of the format `<code>myProjectPackage.BusinessPackage.BusinessComponent</code>`. This error can also occur if there is a case conflict, as when the database expects 'DEPTNO' and receives 'Deptno' instead.

**Level:** 1
**Type:** ERROR
**Impact:** Programmatic

JBO-25059: View Object {0} has ManageRowsByKey turned on, but its key definition is empty
  **Cause:** This View Object is not Entity based, and its ManageRowsByKey flag is true. Yet, its key definition is empty. Restated, the user has asked for the View rows to be managed by keys, but the key definition is empty (which would produce empty keys for all rows).
  **Action:** In order to manage EO-less View Object by key, a meaningful (non-empty) key definition must be supplied.

**Level:** 1
**Type:** ERROR
**Impact:** Programmatic

JBO-25060: Unexpected error encountered while trying to retrieve the next row from JDBC ResultSet for collection {0}
  **Cause:** An unexpected exception was thrown while retrieving the next row from JDBC ResultSet.
  **Action:** Take a look at the detail exception for further information and fix underlying problems.

**Level:** 1
**Type:** ERROR
**Impact:** Programmatic

JBO-25061: Cannot enable passivation for internal ViewObjects and rowsets.
  **Cause:** ViewRowSetImpl.setPassivationEnabled called for internal rowset
  **Action:** Create a datamodel ViewObject instance and use rowsets from that ViewObject to make them passivation enabled.

**Level:** 1
**Type:** ERROR
**Impact:** Programmatic

JBO-25062: Cannot find a matching detail ViewObject. Link definition: {0}, master row set iterator {1}. 
**Cause:** An attempt was made to create detail rowset. However, no matching detail view object could be found.

**Action:** Ensure that a matching view object is present before attempting to create a detail rowset.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25063:** Operation [0] cannot be performed because the working set object is not bound.

**Cause:** This operation is invalid for this working set object because the working set object is not bound to actual implementation object.

**Action:** This action must be performed after the working set object is bound.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25064:** Variable [1] in RowSet [0] is not a where-clause parameter. It is of kind [2].

**Cause:** A call was made to define or set a named where-clause parameter value. However, the named variable’s 'kind’ is not 'where'. That is, the variable is not a where-clause parameter.

**Action:** Make sure that the variable name is correct and that the named variable is a where-clause parameter.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25065:** Named where-clause parameter [0] does not belong to ViewObject [1]. It belongs to an object of type [2].

**Cause:** An attempt was made to remove a named where-clause parameter. However, this where-clause parameter is owned by neither the RowSet nor the ViewObject. Therefore, the parameter cannot be removed.

**Action:** It is illegal to try to remove a named where-clause parameter that does not belong to either the RowSet or the ViewObject.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25066:** View Object [0] is based on an Entity built from Row Set. For such a View Object, cannot include QUERY_MODE_SCAN_DATABASE_TABLES in its query mode.

**Cause:** An attempt was made to include QUERY_MODE_SCAN_DATABASE_TABLES in the View Object's query mode (through a call to setQueryMode()). However, this View Object can perform query only through Entity Object. Hence, QUERY_MODE_SCAN_DATABASE_TABLES is inappropriate.

**Action:** The View Object is probably based on an Entity, which in turn is based on a RowSet (EntityDefOverRowSet). It is illegal to use QUERY_MODE_SCAN_
DATABASE_TABLES for a View Object built on top of an Entity which is built over a Row Set. Do not include QUERY_MODE_SCAN_DATABASE_TABLES in the setQueryMode() invocation.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25067: Entity {0} has a subclass EO {1} and no discriminator. Therefore this base Entity cannot be used to create an Entity Row.
Cause: An attempt was made to create a new instance of an Entity Row. However, this Entity Definition has a subclass Entity Definition with no discriminator. That is, this Entity Definition should really be abstract.
Action: Typically in this situation, the base class should not instantiate any row. Use the subclass Entity to create the row

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25068: Entity {0} has a base EO {1} with no discriminator, but base EO has rows in its cache. Cannot populate both caches.
Cause: An attempt was made to create a new instance of an Entity Row. However, this Entity Definition is a subclass Entity Definition with no discriminator, and a base EO has a row already instantiated. A conflict exists because nothing discriminates this Entity from the base Entity.
Action: Typically in this situation, the base class should not instantiate any row. Use the subclass Entity to create the row

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25069: Row definition {0} has two sibling subclasses defs, {1} and {2}, but no discriminator to distinguish them.
Cause: Two sibling subclasses of a Row Definition are found, but the Row Definition has no discriminator. This condition is disallowed because when a row is either retrieved or created, the framework cannot determine the correct row class. That is, the hierarchy forks without a discriminator. The only situation whether subclassing is allowed without discriminator is when the tree is straight lined and only one of the classes in the hierarchy line is used to instantiate rows.
Action: Either define discriminator attributes, or do not create siblings in the row class hierarchy.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25070: Where-clause param variable {0} needs ordinal index array.
Cause: This view object of entity is using Oracle number style binding (:1, :2, ... binding, not named binding) or JDBC style (? binding). A variable of
where-clause-param kind is found, but the extended int array that designates where the value should be bound is missing.

**Action:** When defining a variable for where-clause param in conjunction with a binding style which is not Oracle named binding, specify an int array that designates where the value should be bound.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25071:** Applying List binding {1} with given set of values leads to multiple matching rows for a row of type:{0}, key {2}  
**Cause:** ListBinding results in more than one matching row for the given set of mapping values. Only one matching row is expected.  
**Action:** Provide a new set of mapping values that will end up in a single matching row or adjust the StructureDef metadata to allow defaulting to the first matching row.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25072:** Applying List binding {1} with given set of values leads to no matching row for a row of type:{0}, key {2}  
**Cause:** ListBinding failed to find any matching row for the given set of mapping values.  
**Action:** Provide a new set of mapping values that will end up in a single matching row or adjust the StructureDef metadata to allow defaulting to the first matching row.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25073:** Definition {1} of type {0} is hidden  
**Cause:** Def object is hidden. An attempt was made to access a hidden def object.  
**Action:** This particular operation is disallowed on a hidden def object. Avoid this operation.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-25074:** Definition {1} of type {0} is hidden in {2}, operation: {3}  
**Cause:** Def object is hidden. An attempt was made to access a hidden def object in the specified container object.  
**Action:** This particular operation is disallowed on a hidden def object. Avoid this operation.

**Level:** 1  
**Type:** ERROR
Impact: Programmatic

JBO-25075: Definition {0} of type {1} is read-only. Cannot modify it
Cause: Attempting to modify or save data for a def object which is read-only.
Action: If the def object is shared, do not attempt to modify anything. If the def object is session scoped, do not modify it if there are running instances of that definition. If the def object is session scoped and is not being used by any running instance, mark it editable before modifying it.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25076: Expression validator does not allow setting a value to source attribute:{0}.
Cause: Expression validator does not allow direct assignment of a value to an attribute. This is to avoid possible cycle of assignments/validations.
Action: Remove direct assignments. If assignment is necessary, verify there is no cycle, and then use constructs like 'source.MyVar = ..'.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25077: Name {0} not found in the given object: {1}.
Cause: An invalid name was passed in an expression.
Action: Fix the expression by passing in a correct name for a property.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25078: Key attribute {1} for {0} not populated
Cause: While building the where-clause statement for an entity row operation (e.g., fault-in, delete, or update), the named key attribute value is not populated.
Action: This entity row operation requires the key attributes to be populated. Make sure that all key attributes have values in them.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25079: The list of discriminator attributes for subclass {0} is different from that of the base {1}
Cause: In a subclass hierarchy of RowDefs, found a subclass RowDef whose discr attr list has more attrs than the base class. It is disallowed for a subclass to change discr attr list in the subclass hierarchy.
Action: Make sure that subclass RowDefs have the same set of discr attributes as the base class.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25080: Definition name: {0} does not match the file in which it is loaded from: {1}
Cause: An attempt has been made to load a definition metadata file named differently from the name or id of the top level xml element in the file.
Action: The name should be a valid Java identifier with no spaces or punctuation. The name or id of the top level xml element in the file should match the file name.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25081: The new fetch size {0} passed into setFetchSize() for a view object {2} is invalid. It is smaller than the old value {1}.
Cause: The fetch size passed into <code>ViewObjectImpl.setFetchSize()</code> is smaller than the previous value. Fetch size of a view object cannot decrease.
Action: Specify a value which is bigger than the current value.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25082: Cannot change the access mode for the row set {0} because either the VO has more than one RS or the RS has more than one iterator.
Cause: An attempt has been made to change the row set's access mode from scrollable/forward-only to range-paging or vice versa. This is allowed only if the VO has one or no row set. Or, an attempt has been made to set the row set's access mode to forward-only, but this is allowed only if the row set has one or no iterator.
Action: Close other row sets or iterators before changing the access mode.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25083: Cannot create a secondary iterator on row set {0} because the access mode is forward-only or range-paging
Cause: An attempt has been made to create a new row set iterator on a row set whose access mode is either forward-only or range-paging.
Action: Creation of secondary row set iterator is allowed if the row set's access mode is scrollable.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25084: Cannot call last() on row set {0} because the access mode uses range-paging
Cause: An attempt has been made to jump to the last row on a row set whose access mode uses range-paging.
Action: Replace 'last' with 'setRangeStart' for the range-paging based access mode.
Level: 1
Type: ERROR
Impact: Programmatic

**JBO-25085: The value being set for attribute \{0\} does not match the value derived from list binding \{1\}**

**Cause:** An attribute value being set does not match the attribute value derived from a list binding. This typically happens in the following situations. First, suppose the user sets values for Deptno from 10 to 20 and Dname from ABC to DEF. If a list binding is triggered by Deptno and if it sets Dname to XYZ, the result is an inconsistent state where DEF does not match XYZ. In this situation, this exception is thrown. Second, suppose there is an EmpDept view object with Emp and Dept entity bases. Suppose Dept is reference and read-only and there is a list binding on Dept.Dname whose derived attribute is Emp.Deptno. If the user selects a new Dept through the dept name, a new Dept entity row is brought in (because a new Emp.Deptno is chosen). After this, the framework checks to make sure that the Dname coming from the new entity row matches the original selection from the list binding. If they do not match, this exception is thrown.

**Action:** Make sure the list binding definition and attribute set values end up in a consistent result (i.e., the derived values from the list binding match the row’s attribute values).

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-25086: Operation \{1\} cannot be performed until definition \{0\} is resolved.**

**Cause:** An attempt was made to use a def object before resolving it. The def object must be resolved first.

**Action:** Make sure resolveDefObject() is called before this operation.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-25087: Cannot call getRowCount() on row set \{0\} because the access mode uses range-paging**

**Cause:** An attempt has been made to get the row count of a row set whose access mode uses range-paging.

**Action:** Replace getRowCount() with getEstimatedRowCount() for range-paging based access mode.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-25088: Persdef \{0\} has no static definition set**

**Cause:** An attempt was made to perform an operation on a persdef that requires the static definition object, but the persdef has no static definition.

**Action:** Set the static definition object before attempting the operation.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25089: Too many matching records found. Specify additional criteria to limit the number of records.
Cause: The view object attempted to fetch rows beyond a global row limit.
Action: If in a search region narrow down the results by providing more search criteria otherwise contact your system administrator.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25090: Attribute value {3} leads to duplicate keys for this entity type {1}.
Cause: An attempt was made to set an attribute value that leads to addition of a newly fetched or created entity to the cache, but this value makes the entity key same as another existing entity. The primary key must be unique for this entity type.
Action: Add more attributes to the key definition for the entity type, so that each row for this entity is uniquely identifiable. Or fix the key value so that this entity has a unique key identifier.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25091: View object {0} has no primary entity
Cause: An attempt was made to get the primary post state of a view row that has no entity usages.
Action: Only call this method on a view row with one or more entity usages

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25092: Programmatically accessible view object definition {0} is not found.
Cause: An attempt has been made to find a view definition using a short name and no corresponding custom or standard object can be found.
Action: Use a shortname that corresponds to the name of a custom object in a registered custom object base package or else the name of a standard object that has been registered to be programmatically accessible.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25093: Attribute {0} is being modified, while it is being validated causing an infinite loop.
Cause: An attempt was made within an expression or validation rule to update an attribute while that attribute is being validated.
Action: Remove the call to set the erring attribute value
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25094: Row finder {0} found more than expected rows on rowset {1}.
Cause: The number of rows found by a row finder exceeded the expected maximum.
Action: Ensure no more than the specified number of rows exists.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25095: Invalid bind name value pairs passed into row finder {0} on rowset {1}.
Cause: An attempt was made to invoke RowFinder execute method with an invalid AttributeList.
Action: Pass the correct value for AttributeList.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25096: Accessor {0} was not correctly resolved in view def {1}. Locate the resolution error and address the issue.
Cause: An attempt was made to access a view link or view accessors which was not correctly resolved.
Action: At the time of view link or view accessor resolution, something failed. Most likely, that failure was reported, but the application decided to continue to work with the view def with the problem. Locate the error reported during the initial accessor resolution attempt and address the issue.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25097: Attempt to modify sealed comp oper {0}. This is not allowed.
Cause: An attempt was made to modify a comp oper object which has been sealed.
Action: It is illegal to attempt to modify sealed comp oper. Check the code that is attempting edit and avoid this.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25098: Programmatically accessible view criteria {0} is not found.
Cause: An attempt has been made to use a view criteria that does not exist or which has not been marked to allow untrusted script access.
Action: Use the name of a view criteria that exists and has been marked to allow untrusted script access.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25099: Programmatically accessible view variable [0] is not found.
  Cause: An attempt has been made to use a view variable that does not exist or which has not been marked to allow untrusted script access.
  Action: Use the name of a view variable that exists and has been marked to allow untrusted script access.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25100: The configured Row Finder parent is not supported.
  Cause: The RowFinder could not process this operation because it doesn’t have a valid parent.
  Action: The RowFinder instance must be constructed using a valid parent.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25101: View object [0] includes a non-row storage attribute [1] in its key. This is not allowed
  Cause: The view object’s key definition includes a non-row storage attribute. A view object’s key may only include row storage attributes.
  Action: Contact the view object owner to redefine its key.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25102: Requested change of ADF session options is rejected because of the root AM [0] of type [1] has pending changes in transaction.
  Cause: An attempt was made to modify ADF session options, but this change cannot be allowed because the transaction is dirty.
  Action: End (commit/rollback) the transaction before requesting change of ADF session options. Or, change may be requested with the 'force' switch, but that will automatically roll back the pending transaction.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25103: ADF session options should be changed with caution because the root AM [0] of type [1] has an object based on site/session definition: [2] of type [3].
  Cause: Change of ADF session options must be performed with care because the root AM has a component object, whose definition is either a session def or a site def.
Action: The user should be notified that the root AM will be cleaned out (components removed) when the ADF session options are changed.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25104: The XML document for def \{1\} of type \{0\} is found, but it is marked as EmptyDoc.
Cause: The XML document for the named def is found, but it is marked as EmptyDoc
Action: The XML document is found, but its EmptyDoc attribute is true. This typically means that the 'empty' base XML doc is present, but the customization doc for the current set of customization classes is not found. I.e., the empty base doc was created by another customization class. So, the current customization class proceed as if the def does not exist.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25105: Attribute \{0\} in \{1\} is marked for collection storage, but its Java type \{2\} does not implement java.io.Serializable
Cause: The attribute is marked as collection storage, but its Java type is not serializable. As collection storage attribute values are stored in the session, they must be serializable.
Action: Make sure that the attribute Java type implements java.io.Serializable. If not, the attribute may not be stored with 'collection storage'.

JBO-25150: The method \{1\} on class \{0\} is not permitted.
Cause: An attempt was made within an untrusted expression to call a method not on the list of allowed methods.
Action: Add the method to the list of allowed methods in adf-config.xml

Level: 1
Type: ERROR
Impact: Security

JBO-25151: Accessing the \{1\} property on class \{0\} is not permitted.
Cause: An attempt was made within an untrusted expression to access a property not allowed by methods on the list.
Action: Add the get and set methods corresponding to the property to the list of allowed methods in adf-config.xml

Level: 1
Type: ERROR
Impact: Security
JBO-25152: **Calling the constructor for class {0} is not permitted.**

**Cause:** An attempt was made within an untrusted expression to call a constructor not on the list of allowed constructors.

**Action:** Add the constructor to the list of allowed constructors in adf-config.xml.

**Level:** 1
**Type:** ERROR
**Impact:** Security

JBO-25153: **Calling the {1} method on class {0} is not permitted.**

**Cause:** An attempt was made within an untrusted expression to call a constructor not on the list of allowed constructors.

**Impact:** Security

JBO-25154: **Calling the {1} function is not permitted.**

**Cause:** An attempt was made within an untrusted expression to call a method which is on the list of blacklisted methods on scripts.

**Action:** Rename the method, or call it from a trusted context.

**Level:** 1
**Type:** ERROR
**Impact:** Security

JBO-25155: **Defining an additional method is not permitted.**

**Cause:** An attempt was made within an untrusted expression to define an additional method.

**Action:** Create the same logic without the use of an embedded method, or mark the script as trusted.

**Level:** 1
**Type:** ERROR
**Impact:** Security

JBO-25156: **Defining an additional class is not permitted.**

**Cause:** An attempt was made within an untrusted expression to define an additional class.

**Action:** Create the same logic without the use of an embedded class, or mark the script as trusted.

**Level:** 1
**Type:** ERROR
**Impact:** Security

JBO-25157: **Calling the {1} method on class {0} is not permitted when used in a static context.**

**Cause:** An attempt was made within an untrusted expression to call a method which is blacklisted when used in a static context.
Action: Instead use the method on an instance of the class.

Level: 1
Type: ERROR
Impact: Security

JBO-25158: Accessing the {1} property is not permitted.
Cause: An attempt was made within an untrusted expression to use a property on the list of blacklisted properties.
Action: Instead access the property with an allowed method.

Level: 1
Type: ERROR
Impact: Security

JBO-25159: Accessing the {1} property, when used in a static context on class {0}, is not permitted.
Cause: An attempt was made within an untrusted expression to use a property in a static context on the list of blacklisted properties.
Action: Instead access the property with an allowed method, or use in an instance context.

Level: 1
Type: ERROR
Impact: Security

JBO-25160: Defining a method pointer is not permitted.
Cause: An attempt was made within an untrusted expression to define a method pointer.
Action: Create the same logic without the use of a method pointer, or mark the script as trusted.

Level: 1
Type: ERROR
Impact: Security

JBO-25161: Calling the {1} function is not permitted.
Cause: An attempt was made within an untrusted expression to call a method which is not allowed on scripts.
Action: Rename the method, or call it from a trusted context.

Level: 1
Type: ERROR
Impact: Security

JBO-25162: Using the Java field operator (.@) is not permitted.
Cause: An attempt was made within an untrusted expression to directly access a Java field via '.@'.
Action: Create the same logic without the use of the '.@' operator, or mark the script as trusted.
Level: 1
Type: ERROR
Impact: Security

JBO-25170: Expression timed out.
Cause: An untrusted expression exceeded the maximum time allotted for a run.
Action: Break the task up into multiple tasks, increase the timeout value, or mark

JBO-25181: Exception in expression "0" recalc expression 1 : 2
Cause: An exception has occurred within a Recalc Expression.
Action: Examine the details to find the root cause, and modify the Expression to
avoid the root exception.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25182: Exception in expression "0" validation rule 1 : 2
Cause: An exception has occurred within a Validation Rule expression.
Action: Examine the details to find the root cause, and modify the expression to avoid the root exception.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25183: Exception in expression "(0)
trigger (1) : (2)
Cause: An exception has occurred within a Trigger expression.
Action: Examine the details to find the root cause, and modify the expression to avoid the root exception.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25184: Exception in expression "(0)
object function (1) : (2)
Cause: An exception has occurred within an Object Function.
Action: Examine the details to find the root cause, and modify the function to avoid the root exception.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25185: Exception in expression "(0)
global function (1) : (2)
Cause: An exception has occurred within an Object Function.
Action: Examine the details to find the root cause, and modify the function to avoid the root exception.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25186: Exception in expression "(0)
of unknown type (1) : (2)
Cause: An exception has occurred within an expression of unknown type.
Action: Examine the details to find the root cause, and modify the expression to avoid the root exception.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25187: Duplicate signature for method "(0)
when attempting to add to (1)
Cause: An attempt to add two methods of identical signature to an Object or Global Function.
Action: Change the method signatures to be different, and re-add the function.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25188: Exception in expression "{0}" property expression {1} : {2}
  Cause: An exception has occurred within a Property Expression.
  Action: Examine the details to find the root cause, and modify the expression to avoid the root exception.
  Level: 1
  Type: ERROR
  Impact: Programmatic

JBO-25189: Exception in expression "{0}" message parameter values expression {1} : {2}
  Cause: An exception has occurred within a MessageParameterValues Expression.
  Action: Examine the details to find the root cause, and modify the expression to avoid the root exception.
  Level: 1
  Type: ERROR
  Impact: Programmatic

JBO-25190: Exception in expression "{0}" default value {1} : {2}
  Cause: An exception has occurred within a Transient Default Value Expression.
  Action: Examine the details to find the root cause, and modify the expression to avoid the root exception.
  Level: 1
  Type: ERROR
  Impact: Programmatic

JBO-25200: Application module is not connected to a database.
  Cause: The application module is not connected to the database.
  Action: Provide a valid set of connection credentials to connect to a database.
  Level: 1
  Type: ERROR
  Impact: Programmatic

JBO-25201: A database connection already exists.
  Cause: An attempt was made to reestablish a database connection.
  Action: Disconnect the current database connection before trying to reestablish the JDBC connection.
  Level: 1
  Type: ERROR
  Impact: Programmatic

JBO-25221: Method {0} not supported
  Cause: Attempting to call a method that is either not implemented or not supported.
**Action:** This method is not available on the called object. E.g. `<code>setAttribute()</code>` in `<code>oracle.jbo.Key</code>` class is not implemented and will throw this exception.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25222: Unable to create application module.**

**Cause:** The application module was typically not created for one of the following reasons: 1. Business components deployed in local mode were not found on the classpath. 2. Unresolved classes existed on the server. 3. Java2 permissions were not granted. 4. Java pool size was too small.

**Action:** Depending on the cause, chose from the following actions: If business components are deployed in local mode, they might not be on the classpath. If this is the cause of the error, the exception will usually be followed by a different exception, JBO-25002: NoDefException. If this occurs, try the following: Make a library for the business components. Add the library to the client’s project properties. Include the library on the 'libraries' page when creating a deployment profile for the client (whether the client was a web application or a command-line application). Copy the library with the client to the target platform (whether the client was a web application or a command-line application). Include all the copied files (including the library) when setting the classpath on the target platform. There might be unresolved classes on the server. Try the following procedure to resolve any unresolved classes on the database. In the System Navigator, right-click the JDBC connection used to deploy the Business Components project. Choose Invoke SQLPlus from the context menu. Copy and paste the following SQLPlus script into the SQLPlus window. Set termout off set echo off set heading off set pagesize 2000 set feedback off select 'alter java class "'|| replace(dbms_java.longname(object_name),'/','.')||"' resolve;' from user_objects where object_type='JAVA CLASS' and status = 'INVALID' spool C:\temp\resolve.sql / spool off set echo on set termout on @C:\temp\resolve.sql There might be missing Java2 permissions. If this is the cause of the error, there will be permissions errors in the database trace file. To correct the problem, see the help topic 'Granting Permissions on a Business Components EJB' for information on granting Java2 permissions. Note: The location of the database trace file varies from installation to installation, but in a default Windows NT installation, the file will be in the directory ORACLE_HOME\admin\orcl\udump and will have the form orclnnnn.trc. The Java pool size might be too small Business Components for Java deployed as EJBs work best with a Java pool size of at least 50MB. Edit the init.ora file and check the `<code>java_pool_size</code>` parameter. If it is under 50MB, change it, restart the database, and try the connection again.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-25223: Cannot create multiple root application modules.**

**Cause:** When business components are running inside JServer, only one root application module can be created. This is because JServer (already) provides one transaction context.

**Action:** It is illegal to attempt to create multiple root transactions when running inside JServer.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-25224: Could not disconnect and retain application module state because database state exists for current connection.
Cause: Trying to retain the application module state during a transaction disconnect failed.
Action: The disconnect and retain application module state target requires that no database state exist before the transaction connection is closed. Examples of database state include open database cursors in non-forward only view objects, database locks, and uncommitted database changes. The client should clean up this state by fetching or resetting any open view objects and committing any uncommitted changes.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25226: Application module definition {0} contains recursive AM reference.
Cause: This application module definition contains recursive references to child application modules. For example, if application module definition appMod1 contains a child application module of appMod2, and appMod2 contains appMod1, this error will be raised.
Action: Remove recursive application module definition references.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25227: Recursive view links found. Master-detail chain: {0}.
Cause: The user has attempted to create a view link (in an application module) that will result in a recursive loop of view links. The error message should show a chain of recursive master-detail relationships.
Action: If a static view link is causing the recursion, remove the view link from the application module. If a dynamic view link is causing the recursion, remove the code that creates the recursive view link.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25228: Unable to register a database change notification request for {0} view object
Cause: The View Object that has auto refresh turned on failed to register an Oracle database change notification request.
Action: Ensure that the database user is granted CHANGE NOTIFICATION privilege. Look at the exception details for further troubleshooting.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25229: Unable to unregister a database change notification request for {0} view object
Cause: The View Object that has auto refresh turned on failed to unregister an Oracle database change notification request.
Action: Look at the exception details for further troubleshooting.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25230: XML document {0} has no stream to save
Cause: An attempt was made to save XML document, but the document has not been persisted (most likely saveXMLContents() is called without a call to writeXMLContents()).
Action: Call writeXMLContents() first.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25301: Application module {0} is not a root app module but has no parent
Cause: While traversing the parenthood chain for application modules, a child application module was found with no container (parent) application module.
Action: If this application has added custom business component classes, the application code might be attempting to access a child application module before it is fully initialized. If this is not the case, this error probably represents some internal error in the framework, in which case contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25302: Component object {0} has no parent
Cause: A business component is found without a container (parent) application module.
Action: If this application has added custom business component classes, the application code might be attempting to access a business component before it is fully initialized. If this is not the case, this error probably represents some internal error in the framework, in which case contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-25303: Cannot clear entity cache {0} because it has modified rows
Cause: A dirty entity cache cannot be cleared. The client asked to clear an entity cache but some rows in the entity cache have been modified. An entity cache with modified rows cannot be cleared.
Action: Do not attempt to clear an entity cache with modified rows in it.
JBO-25304: Cannot mark entity batchable when base entity: [0] is not.
Cause: An entity whose base type is not batchable cannot set BatchThreshold to a number greater than zero.
Action: Do not set BatchThreshold for the entity to a number greater than zero.

JBO-25306: Design-time attribute [0] of type [1] could not be persisted
Cause: Could not persist a design-time attribute into the XML file.
Action: Identify the offending design-time attribute and contact Oracle Support Services.

JBO-25307: XML file not open
Cause: XML file is not open.
Action: Contact Oracle Support Services.

JBO-25308: The primary key of an existing entity bean cannot be modified for entity facade [0].
Cause: An attempt was made to modify the primary key of an existing entity bean. This is disallowed by EJB.
Action: Do not modify primary key of an old (not-new) entity bean.

JBO-25309: The primary key of an entity bean cannot be null for entity facade [0].
Cause: The primary key of an entity bean is null. This is disallowed by EJB.
Action: Set the primary key to be not null.

JBO-26000: A Generic exception occurred during loading Customizations.
**Cause:** Metadata objects failed to load due to unexpected or corrupt data in the XML file.

**Action:** Verify that the XML metadata for various components is valid.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26001: XML File not found for the Container {0}**

**Cause:** Could not open the named XML file for reading.

**Action:** Try the following: Make sure that the file is present. In particular, if the file is to be found in a Zip/JAR file, make sure that the Zip/JAR file is included in the CLASSPATH. This error is also reported if the name of the XML file does not match the object Name specified in the XML file. If the file system supports case insensitive file names (e.g., Windows NT), make sure that the file name matches the object Name in the XML file in case-sensitive fashion. For a JPX file, this error is reported if the JPX file is missing the JboProject XML tag. Check the JPX file to make sure that the valid tag is in there. One XML file might be extending another XML file (specified by the Extends element in this XML file). This error is reported if the base XML file is not found. When loading the XML file for a package (JboPackage tag), this error is reported if some unexpected error occurs while loading a contained object. In all of the above cases, a more descriptive message might be printed on Diagnostic. To see these messages, run the application with Diagnostic turned on, as in 'java -Djbo.debugoutput=console ...', to see Diagnostic messages.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26002: Error Parsing the XML file "{0}".**

**Cause:** Some XML parsing exception (<code>oracle.xml.parser.v2.XMLParseException</code>) was thrown.

**Action:** The XMLParseException information is output to Diagnostic. To see diagnostic messages, run the application with diagnostic turned on, for example 'java -Djbo.debugoutput=console ...'

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26003: Mismatch in the attribute indices declared in Java versus the indices in the definition for entity {0}.**

**Cause:** An error occurred while loading entity object definitions. An attribute index in the Java class for this entity has a mismatch with the index in the definition, or an attribute index is missing in the Java class.

**Action:** Ensure that the indices of attributes in the definition for this entity match the indices defined in the Java class for this entity.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic
JBO-26004: A recursive base definition is found while attempting to set the base definition of {0} to {1}.

**Cause:** An attempt was made to set the base definition of another definition object, e.g., setting B's base definition to A (i.e., B Extends A). However, A already extends B. Setting a recursive (circular) subclassing relationship among definition objects is illegal.

**Action:** Review the subclassing hierarchy of the definition objects and correct errors.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

JBO-26005: FetchMode must be either FETCH_AS_NEEDED, FETCH_ALL or FETCH_DEFAULT. View object {0}

**Cause:** The fetch mode specified in the view definition XML file is not valid.

**Action:** Check the content of the XML file for the view definition. Look for an XML element named 'FetchMode'. Make sure that the value for that element is valid. Valid values are: 'FETCH_AS_NEEDED', 'FETCH_ALL', and 'FETCH_DEFAULT'.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

JBO-26006: FetchSize must be a positive integer. View object {0}

**Cause:** The fetch size specified in the view definition XML file is not valid.

**Action:** Check the content of the XML file for the view definition. Look for an XML element named 'FetchSize'. Make sure that the value for the element is a positive integer.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

JBO-26007: MaxFetchSize should be MAX_FETCH_UNLIMITED, MAX_FETCH_DEFAULT or integer. View object {0}

**Cause:** The maximum fetch size specified in the view definition XML file is not valid.

**Action:** Check the content of the XML file for the view definition. Look for an XML element named 'MaxFetchSize'. Make sure that the value for the element is a non-negative integer, or 'MAX_FETCH_UNLIMITED', or 'MAX_FETCH_DEFAULT'. A MaxFetchSize of 0 is the same as MAX_FETCH_UNLIMITED.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

JBO-26008: Could not resolve reference to "{0}".

**Cause:** A problem is found in resolving a view link definition or an association. In case of a view link, this error might be caused by the fact that the source or destination view object cannot be found. Or, if the view link ends have attribute
names, this error might indicate that the named attributes cannot be found. Similarly, for an association, this error indicates that either source or destination entity object or attributes involved in the association cannot be found.

**Action:** Make sure the XML definition for the view link/association has correct view object/entity object/attribute names.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26009: Serialized file "[0]" is invalid. The root object is not a Business Component object.**

**Cause:** This error occurs if the application uses meta object serialization files (.ser files) instead of XML files. It indicates that after the .ser file was deserialized, the top level object returned from deserialization was not an instance of oracle.jbo.server.xml.JboElementImpl.

**Action:** Repair the corrupt .ser file.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26010: Invalid Entity Attribute Name "[1]" specified for the View Attribute "[0]"**

**Cause:** Entity attribute name in the view definition XML file is invalid or is not found.

**Action:** Make sure that the entity name is valid. Also, check to make sure that the named attribute does exist in the entity object. The entity object is identified by the EntityUsage element.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26011: SQLType not specified for the View Attribute "[0]"**

**Cause:** Attribute definition found in XML file is invalid. It is missing SQLType value.

**Action:** Correct the error in the XML file.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26012: Invalid View Link Definition "[0]". View Link must have two ViewLinkDefEnds.**

**Cause:** The view link definition in the XML file is missing either the source or destination view link end. For a view link XML file, two elements named ViewLinkDefEnd should be found.

**Action:** Correct the error in the XML file.

**Level:** 1  
**Type:** ERROR
Impact: Programmatic

**JBO-26013: Naming Exception occurred while looking up the object "{0}".**

**Cause:** Meta object name passed for lookup is invalid.

**Action:** Normally, the meta object name is a dot-separated name of the meta object. For an entity object named Emp in package1.example, the correct name would be `<code>package1.example.Emp</code>`. To correct, locate where the invalid name is coming from (could be meta object names mentioned in an XML file, or the name of the project, etc.) and change the name to a valid one.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26015: View object {0} does not include a discriminator column {2} of entity base {1}.**

**Cause:** A view definition does not include a discriminator column of an entity base. If an entity base has discriminator columns, it must include all of them in the view object's attribute mapping.

**Action:** Change the view definition to include discriminator column attributes.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26016: Cannot set user query to view "{0}" because it is a destination in a view link.**

**Cause:** An attempt was made to call 'setQuery()' on a detail view object in a master detail view link.

**Action:** Do not call setQuery() if the view object is a detail.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26017: Association or view link definition {0} has an invalid attribute list.**

**Cause:** The association or view link definition has a missing or invalid attribute list.

**Action:** Correct the error(s) in the XML file.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26018: Entity {0} cannot be posted to the database because it has no attributes set.**

**Cause:** An attempt was made to post a row with no attribute set. Some databases (Oracle Database in particular) do not allow an INSERT statement with no VALUE specified.

**Action:** Set some attributes on the row before attempting to insert it into the database.
Level: 1
Type: ERROR
Impact: Programmatic

**JBO-26019: Attempting to remove a parent entity without removing all children entities**

*Cause:* Attempting to remove a master which has detail entities. In the case of a composition, a master cannot be removed if it has details.

*Action:* Remove all the details of this master by accessing the details via an association and removing all of them.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-26020: Attempting to insert row with no matching EO base**

*Cause:* The application code tried to take a row from one row set (or view object) and insert it into another row set (view object). In response, the framework will make a copy of the row in the new row set. This new row will share references to the underlying entity objects. However, if the source and destination row sets do not share any entity object bases at all, this operation will fail as it does not find any entity rows to share.

*Action:* When attempting to take a row from one row set and insert into another, make sure that they share at least one entity object base.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-26021: NullPointerException while parsing XML file "[0]". Perhaps missing DTD file?**

*Cause:* A NullPointerException was thrown while parsing an XML file. A possible cause for this is that the DTD file is missing (oracle.jbo.dtd.jbo.dtd).

*Action:* Make sure the appropriate DTD file is present.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-26022: Custom class [0] cannot be found.**

*Cause:* A custom class could not be found and loaded. The custom class might be for a component (for example, view object), a definition (for example, view definition), or a row (for example, view row or entity row).

*Action:* Make sure that the named class is reachable from the CLASSPATH. The detail exception (if present) provides more specific reasons why the attempt to locate and load the custom class failed.

Level: 1
Type: ERROR
Impact: Programmatic
JBO-26023: Custom class [0] is not assignable to [1]

**Cause:** Custom class was found and loaded, but it is invalid in that it is not assignable to a framework (super) class.

**Action:** Make sure that the custom class subclasses the appropriate framework (super) class.

**Level:** 1
**Type:** ERROR
**Impact:** Programmatic

JBO-26024: An error occurred while creating InitialContext

**Cause:** An error occurred while creating initial context. This error usually carries a detail exception which will give further information on the cause of the error.

**Action:** When running inside JServer, make sure that the database user (schema) has the setContextClassLoader permission. To grant this, the database system administrator can invoke the following PL/SQL procedure: EXEC DBMS_JAVA.GRANT_PERMISSION('&&1', 'SYS:java.lang.RuntimePermission', 'setContextClassLoader', null);

**Level:** 1
**Type:** ERROR
**Impact:** Programmatic

JBO-26025: An error occurred while trying to get System properties

**Cause:** An error occurred while trying to get System properties. Specifically, System.getProperties() call failed.

**Action:** When running inside JServer, make sure that the database user (schema) has the proper property permission. To grant this, database system can invoke the following PL/SQL procedure: EXEC DBMS_JAVA.GRANT_PERMISSION('&&1', 'SYS:java.util.PropertyPermission', '', 'read');

**Level:** 1
**Type:** ERROR
**Impact:** Programmatic

JBO-26026: An error occurred while loading properties from a properties file [0]

**Cause:** An error occurred while trying to load properties.

**Action:** Check to see if the named properties file contains valid Java properties.

**Level:** 1
**Type:** ERROR
**Impact:** Programmatic

JBO-26027: Unable to find resource. [0]

**Cause:** Unable to find a resource

**Action:** Check to see if the resource exists and the framework code has adequate permissions to load the resource.

**Level:** 1
**Type:** ERROR
**Impact:** Programmatic
JBO-26028: View object [0] does not include a primary key attribute [2] of entity base [1].

Cause: A view definition does not include a primary key attribute of an entity base. When a view object uses an entity as one of its entity bases, it must include all primary key attributes of the underlying entity object.

Action: Change the view definition to include all primary key attributes.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26029: Could not find and load the type map class [0]

Cause: Custom type map class could not be found and loaded.

Action: Make sure that the named class is reachable from the CLASSPATH. If jbo.TypeMapEntries property is specified, make sure that the property value is correct. Also, though unlikely, this might be caused by an improper implementation of SQLBuilder where it is returning an incorrect value for type map class name. The detail exception (if present) will provide more specific reasons why the attempt to locate and load the custom class failed.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26030: Failed to lock the record, another user holds the lock.

Cause: This row has already been locked by another user or transaction.

Action: Try locking the row again and the operation should succeed after the other user or transaction has released the lock.

Level: 1
Type: ERROR
Impact: Programmatic

Cause: Problem in secondary entity base definition in view definition. The named entity base is supposed to use the named entity association end to join it with another entity base, but, when resolved with the association definition, the association end does not resolve to the same entity. For example, suppose one builds a view object with Dept and Emp. Emp is supposed to join with Dept using the EmpEnd of the DeptEmp association. For such a view definition, the framework verifies that EmpEnd indeed is from Emp entity. If EmpEnd was from another entity, say Person (or Dept), it would not be correct to use that association end to perform join.

Action: Most commonly, this is caused by incorrect information in the view object XML file. Make sure that the association end for the named entity usage is not pointing at the wrong end of association.

Level: 1
Type: ERROR
Impact: Programmatic
JBO-26032: Operation {0} is invalid for a ViewCriteria or ViewCriteriaRow.
Cause: The attempted operation is invalid for a ViewCriteria or ViewCriteriaRow.
Action: Remove code that attempts this operation.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26033: Cannot find Application Data Model with name :{0}
Cause: Cannot find application definition of the given name
Action: Fix the application definition name or make the appropriate .cpx file available in the classpath.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26034: Cannot find Configuration with name :{0}
Cause: Cannot find configuration information in the application definition file
Action: Fix the Configuration name or make the appropriate .cpx file available in the classpath.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26035: Secondary entity usage {0} is missing parts of association description.
Cause: A view definition is found with an entity usage definition where the secondary entity usage's association description is incomplete.
Action: Examine the view object's XML file. A secondary entity usage's association description should have the following elements: 'Association', 'AssociationEnd', and 'SourceUsage'. Check to see if any of these are missing.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26036: The configuration of meta object {0} causes recursive substitution.
Cause: An attempt was made to set up meta object substitution that leads to recursion. For example, consider a substitution where C substitutes B, and B substitutes A, and A substitutes C. This results in a recursive substitution and will cause this error.
Action: Review the meta object substitution and correct errors.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26037: Cannot find matching EO from discriminator columns for view object {0}, entity base {1}, discr value {2}.
**Cause:** While creating a new view row, the system found an entity object base with discriminator column attributes. However, the discriminator column values coming from the view row do not match any of the entity objects (the entity for the entity object base or any of its extended entities).

**Action:** Make sure that the view row discriminator column values match one and only one entity object.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26038:** Cannot find an entity usage for entity \{1\} in view link definition \{0\}, view link end \{2\}.

**Cause:** The view link definition is based on an entity association. One of its ends specifies the named entity definition, but the view definition for that view link end does not have an entity usage for that entity definition.

**Action:** Correct the error in the view link definition (XML file). In particular, check to see if the view link source and destination are not switched with those of the entity association.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26039:** View object \{0\} does not include an alternate key attribute \{2\} of entity base \{1\}, entity key \{3\}.

**Cause:** A view definition does not include an alternate key attribute of an entity base. When a view object uses an entity as one of its entity bases, and when it defines a view object level alternate key using one of the entity alternate keys, it must map the entity attributes that make up the alternate key.

**Action:** Change the view definition to include all necessary alternate key attributes.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26040:** Failed to post entity \{1\} to database during "\{0\}" : SQL Statement "\{2\}".

**Cause:** Some database error occurred while posting (writing) an entity to the database in JDBC batch mode. This error normally carries a detail exception from the database which will give further information about the database failure.

**Action:** Look at the details of the exception and address the database problem.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26041:** Failed to post data to database during "\{0\}": SQL Statement "\{1\}".

**Cause:** Some database error occurred while posting (writing) an entity to the database. This error normally carries a detail exception from the database which will give further information about the database failure.

**Action:** Look at the details of the exception and address the database problem.
JBO-26042: Failed to generate REF and OID on entity {0}.
  **Cause:** A database failure occurred while trying to generate an object ID (OID) and object reference (REF). When a new row is created on an entity which maps to an Oracle object table, an OID and REF for the new row are generated. This executes a SQL statement like select a.oid, make_ref(table-name, a.oid) ... Somehow, this statement is failing.
  **Action:** Ensure that: The Oracle database version is correct. The table in question is an object table. This error normally carries a detail exception from the database, which will give further information about the database failure. Take a look at the detail exception and address the database problem.

JBO-26043: REF and OID not supported by this SQLBuilder on entity {0}.
  **Cause:** An attempt was made to generate an object ID (OID) and/or a reference (REF) on a database system that does not support Oracle objects.
  **Action:** Do not try to create OID or REF on a database system that does not support Oracle objects.

JBO-26044: Error while getting estimated row count for view object {0}, statement {1}.
  **Cause:** The application tried to get an estimated row count (getEstimatedRowCount()) on a row set. While building the appropriate query statement, executing it, and retrieving the estimated count, an error occurred. This error is accompanied by the SQL statement that caused the error. Also, it normally carries a detail exception from database, which will give further information about the database failure.
  **Action:** Take a look at the SQL statement and the detail exception and address the database problem.

JBO-26045: Failed to generate PK-Based REF on entity {0}.
  **Cause:** A database error occurred while trying to generate an object ID (OID) from the primary key. This operation is valid only if the table in question is an object table and if the table specifies that the reference (REF) is PK based.
  **Action:** Ensure that: The Oracle database version is correct. The table in question is an object table. The object table uses a PK-based REF. This error normally carries a detail exception from database which will give further information about the
database failure. Take a look at the detail exception and address the database problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26046:** PK-Based REF not supported by this SQLBuilder on entity {0}.

**Cause:** An attempt was made to generate Oracle o8 object ref from a non-Oracle database SQLBuilder. This is not supported.

**Action:** Make sure that the correct SQLFlavor (i.e., SQLBuilder) is being used for the application and switch to the right one.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26047:** LOCK_OPTUPDATE mode update operation missing change indicator value: Entity {0}, key {1}.

**Cause:** An attempt was made to update a row in LOCK_OPTUPDATE mode and the change indicator attribute value is not present.

**Action:** Look at the attribute mapping of the View Object that read in this Entity row and make sure that the View Object includes the change indicator attribute. The LOCK_OPTUPDATE mode requires the value to be present.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26048:** Constraint "[2]" is violated during post operation "[0]" using SQL statement "[1]".

**Cause:** A constraint violation occurred in the database while posting (writing) an entity to the database. This error carries a detail exception from the database which will give further information about the database failure.

**Action:** Fix the cause for the constraint violation. Look at the details of the exception and address the database problem.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26049:** An error occurred during loading definition {0}.

**Cause:** Metadata objects failed to load due to unexpected or corrupt data in the XML file.

**Action:** Verify that the XML metadata for various components is valid.

**Level:** 1

**Type:** ERROR

**Impact:** Programmatic

**JBO-26050:** An error occurred while writing personalization definition {0}.
Cause: An I/O error occurred while writing personalization definition.
Action: Check the detail I/O exception and make necessary correction.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26051: Unrecognized XML element tag {1} found in meta object {0}.
Cause: The element tag of the XML file is not recognized.
Action: Examine the XML file and make sure that the element tag is one of the recognized ones.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26053: Invalid association or view link definition "(0)". Invalid unbound attribute list.
Cause: An association or view link definition end has an invalid unbound attribute list. This error is raised if the unbound attribute is not one of the association/view link end attributes.
Action: Correct the error(s) in the XML file.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26054: Invalid version number for (0). Require (1) or greater, but found (2).
Cause: The XML document is either missing the version number or has a version number which is lower than the required version number.
Action: Check to see if the XML document has gone through a proper migration process. If not, migrate the application.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26055: Failed to delete XML document (0).
Cause: An attempt was made to delete an XML document from disk, but this operation failed.
Action: When running with MDS, make sure that the metadata store supports the delete operation. Check the detail exception.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26056: Multiple occurrences of XML element {1} found in {0}. Only one expected.
Cause: Multiple occurrences of an element were found in the XML document when only one was expected.
**Action:** Examine the XML document and see which element shows up multiple times. If the issue looks like a problem in the framework's persistence code, report it.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26057:** Recursive entity references found in view def {0}. Entity refs: {1}  
**Cause:** An attempt was made to create a view definition whose entity references have a cycle in it. For example, a view definition contains two entity references E and F, where E's source reference is F, and F's is E.  
**Action:** Review your code that builds the view def. Make sure that entity references do not have a recursion in it.

**JBO-26058:** Cannot define view link {0} in application module {1}. The view object {2} is in application module {3} and the view link"s application module is not a child of the view object"s application module.  
**Cause:** An attempt was made to establish a data model view link in an application module, but either the master or the detail view object is in an AM which is not the same AM as the view link's, or is not a parent of the view link's AM.  
**Action:** When creating a data model VL, the VL's AM must be the same as the VO's, or must be a child (nested) AM of the VO (for both master and detail).

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26059:** Invalid View Link Usage "{0}". Either the source "{1}" or the destination "{2}" is not defined.  
**Cause:** The ViewLink Usage is not correctly defined.  
**Action:** Specify both source and destination for the ViewLink Usage.

JBO-26063: MetaObjectManager loadFromXML called with unknown object type {0}.
Cause: Metadata object manager cannot load XML for this document type.
Action: Check to see if MetaObjectManager::loadFromXML is being called for an unsupported object type.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-26064: Error while closing JDBC statement.
Cause: A SQLException occurred while trying to close a JDBC connection.
Action: Fix the underlying SQLException.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-26065: Error during commit.
Cause: A SQLException occurred during the commit phase of this transaction.
Action: Fix the underlying SQLException.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-26066: Error during rollback.
Cause: A SQLException occurred during the rollback phase of this transaction.
Action: Fix the underlying SQLException.
Level: 1
Type: ERROR
Impact: Programmatic
JBO-26067: Failed to add JDBC connection to the connection pool, connection pool is full.
   Cause: An exception occurred while adding a JDBC connection to a pool that was already full.
   Action: Modify the class that is using the pool to check the pool size before adding a new connection to the pool.

   Level: 1
   Type: ERROR
   Impact: Programmatic

JBO-26068: Failed to return JDBC connection to the connection pool, connection does not belong to the pool.
   Cause: The user attempted to return a connection to a pool that was not responsible for managing that connection.
   Action: Modify the class that is using the pool to ensure that the connection belongs to the pool before returning the connection to the pool.

   Level: 1
   Type: ERROR
   Impact: Programmatic

JBO-26069: Client request was timed out while waiting for a connection to be returned to the connection pool.
   Cause: A client request was timed out while waiting for a connection to be returned to the pool.
   Action: Increase the maximum pool size in order to accommodate 2x the maximum expected active request size.

   Level: 1
   Type: ERROR
   Impact: Programmatic

JBO-26070: Column definition retrieval from JDBC failed on view object {0}.
   Cause: A SQLException occurred while setting up metadata JDBC statement.
   Action: Fix the underlying SQLException. There might be a datatype mismatch between the attributes of the view object and columns in the SQL for it.

   Level: 1
   Type: ERROR
   Impact: Programmatic

JBO-26071: Access mode {1} is invalid. View object {0}
   Cause: The access mode specified in the view definition XML file is not valid.
   Action: Check the content of the XML file for the view definition. Look for an XML element named 'AccessMode'. Make sure that the value for that element is valid.

   Level: 1
   Type: ERROR
   Impact: Programmatic
JBO-26072: Another user changed the document {0}.

Cause: The client requested to write metaobject, but the metaobject document was updated by another user.

Action: This exception carries the most up to date def object. Resolve the differences and retry write.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26073: Document {0} has no MDS key.

Cause: The client requested to write metaobject, but the metaobject’s MDS key is null and so we cannot perform the consistency check.

Action: An existing definition object’s MDS key should not be null. Contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26074: MDS detected another user changed the document {0} since the mutable MO was obtained.

Cause: The client requested to write metaobject, but the metaobject document was updated by another user. The difference between this error and `<code>EXC_PERS_DOC_INCONSISTENT</code>` is that this error is detected by MDS between `<code>getMutableMO()</code>` and `<code>flushChanges()</code>`. `<code>EXC_PERS_DOC_INCONSISTENT</code>` is raised by an MOKey check.

Action: This exception carries the most up to date def object. Resolve the differences and retry write.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26075: Document {0} exists. Another user created the doc with same name. Cannot create it as new.

Cause: The client requested to create a new document. However, one of the following two problems are found; either before creating the doc, MDS finds that the doc is there, or while flushing the new doc, MDS throws a document-exists-exception. In either case, the problem is that the document was created by another user and the current user cannot create the document any more.

Action: Load the new document created by the other user and update it, instead of trying to create it as new.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26076: Merge for definition {0} failed for elem {1}. Inserted elem [{2} -> {3}] was deleted by another user.
**Cause:** During object merge, found a metadata element which was marked for insertion by the current user, but was deleted by another transaction committed or published by another user.

**Action:** Resolve this metadata merge conflict.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26077: Merge for definition {0} failed for elem {1}. Updated elem {2} -> {3} was deleted by another user.**

**Cause:** During object merge, found a metadata element which was marked for update by the current user, but was deleted by another transaction committed or published by another user.

**Action:** Resolve this metadata merge conflict.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26078: Merge for definition {0} failed for elem {1}. Inserted elem {2} -> {3} was inserted by another user.**

**Cause:** During object merge, found a metadata element which was marked for insertion by the current user, but was inserted by another transaction committed or published by another user.

**Action:** Resolve this metadata merge conflict.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26079: Merge for definition {0} failed for elem {1}. Updated elem {2} -> {3} was updated by another user.**

**Cause:** During object merge, found a metadata element which was marked for update by the current user, but was updated by another transaction committed or published by another user.

**Action:** Resolve this metadata merge conflict.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-26080: Error while selecting entity for {0}**

**Cause:** An unexpected exception occurred while executing the SQL to fetch data for an entity instance or lock it.

**Action:** Fix the cause for the SQLException in the details of this exception.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic
JBO-26081: Error while getting datum for attribute {1} in {0}
  Cause: A SQLException occurred when converting data from JDBC to
<code>oracle.jbo.domain.Struct</code> attributes.
  Action: Fix the conversion errors as suggested in SQLException.
  Level: 1
  Type: ERROR
  Impact: Programmatic

JBO-26083: Comparison operator {0} has a string code for its description, but the
message bundle class cannot be found.
  Cause: A comparison operator was specified with string code, but the message
bundle class could not be loaded. When specifying a string code for translatable
operator description, the framework first checks to see if the operator specification
includes a message bundle class name. If so, it attempts to find the string in that
message bundle. If not, then the framework tries to find the string in the owning
object’s (either view object or entity object) message bundle. If both fail, this error
is raised.
  Action: Make sure that the comparison operator specification is correct in the
XML file.
  Level: 1
  Type: ERROR
  Impact: Programmatic

JBO-26084: Invalid association definition "{0}". Association must have two
AssociationEnds.
  Cause: The association definition in the XML file is missing either the source or
destination association end. For an association XML file, two elements named
AssociationEnd should be found.
  Action: Correct the error in the XML file.
  Level: 1
  Type: ERROR
  Impact: Programmatic

JBO-26085: Missing association name in EO-exists validator {0} of {1}.
  Cause: The EO-exists validator is missing the association name in its definition.
  Action: Correct the error in the XML file.
  Level: 1
  Type: ERROR
  Impact: Programmatic

JBO-26086: Association attributes do not match the destination EO’s primary keys
in EO-exists validator {0} of {1}.
  Cause: The EO-exists validator’s source side attribute list does not match the
desination EO’s primary keys. For example, suppose there is a PurchaseOrder EO
which includes an EO-exists validator to Customer EO. PurchaseOrder EO is
using association CustToPurch to validate. In this case, the association attribute list
on the PurchaseOrder side match with Customer’s PK exactly (order does not
matter–they must equal as sets).
Action: Correct the error in the XML file.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26087: The master end accessor {0} of composition assoc {1} has an invalid attribute kind: {2}.
Cause: The composition association's master end has attribute kind of RowSetIterator (cardinality -1 or > 1), i.e., it returns an iterator, rather than a row.
Action: Master end in an association must return a single row. Thus, the attribute kind must be Row (cardinality = 1).

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26088: An attempt was made to edit property {1} of def object {0}, but this property may not be edited.
Cause: An attempt was made to edit a def object, but this property or object may not be edited.
Action: Do not try to edit this property. Instead, consider deleting and creating the def object.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26089: An attempt was made to edit def object {0} but another user edited and saved the def object. Orig version: {1}, tip version: {2}.
Cause: The client made a request to edit a def object. However, either the major version number or the minor version number do match between the original def object and the def object found on the tip of the MDS repository. This means another user has modified and saved the def object between the time when this client loaded the original def object.
Action: Reload the def object to refresh to the tip and request edit.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26091: An attempt was made to refresh def object {0} to tip, but another user made structural changes and saved. Orig major version: {1}, tip major version: {2}.
Cause: The def object from the tip of the repos shows that the object's major edit version number was incremented. This means that another user made structural changes to the def object and it may not be refreshed with the latest def object.
Action: The def object cache should be refreshed to the tip of the repos.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-26092: Failed to lock the record in table {0} with key {1}, another user holds the lock.
Cause: This row has already been locked by another user or transaction.
Action: Try locking the row again and the operation should succeed after the other user or transaction has released the lock.
Level: 1
Type: ERROR

Impact: Programmatic

JBO-26093: Definition {0} has unresolved merge conflicts.
Cause: Not all merge conflicts have been resolved. This exception is used to signal to MDS that some merge conflicts were not resolved, and another round of merge conflict resolution is necessary.
Action: Merge conflict resolution must be performed again.
Level: 1
Type: ERROR

Impact: Programmatic

JBO-26099: An instance of type {0} cannot be created from string {1}. The string value must be in format {2}.
Cause: A domain object could not be created with the given value. Either a domain constructor that accepts the given value does not exist, or there is no conversion method in the domain object for the given value type, or the type conversion threw an unexpected exception.
Action: Ensure that the value being passed is valid with respect to the domain type being created. For example, passing the string value 'one' to the 'oracle.jbo.domain.Number' constructor will throw this exception.
Level: 1
Type: ERROR

Impact: Programmatic

JBO-26100: An error occurred after commit was performed.
Cause: An exception occurred in the afterCommit notification phase of the transaction.
Action: Verify the exception in the details of this exception. Fix the failing afterCommit() overridden methods in the entities or transient TransactionListener objects registered with the transaction to listen into the commit/rollback cycle.
Level: 1
Type: ERROR

Impact: Programmatic

JBO-26101: An error occurred after posting was performed.
Cause: An exception occurred in the afterPost phase of the transaction.
Action: Verify the exception in the details of this exception. Fix the failing afterPost() overridden methods in the entities or transient TransactionPostListener objects registered with the transaction to listen into the post cycle.
Level: 1  
Type: ERROR  
Impact: Programmatic  

**JBO-26102: An error occurred after rollback was performed.**  
**Cause:** An exception occurred in afterRollback notification phase of the transaction.  
**Action:** Verify the exception in the details of this exception. Fix the failing afterRollback() overridden methods in the entities or transient TransactionListener objects registered with the transaction to listen into the commit/rollback cycle.

Level: 1  
Type: ERROR  
Impact: Programmatic

**JBO-27004: Attribute set for \{2\} in entity \{1\} failed**  
**Cause:** Attempting to modify a read-only entity-attribute.  
**Action:** Do not modify a read-only attribute value.

Level: 1  
Type: ERROR  
Impact: Programmatic

**JBO-27005: Validation of rows in application module \{0\} failed**
Cause: Modified or new entities within this application module or nested application module failed to validate.
Action: Fix the failing entities and then revalidate this application module.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-27006: Validation failed because attribute {2} is not found in {0} {1}
Cause: An attribute cannot be found by the given name during validation.
Action: Entity metadata could be corrupt as there is an attribute which is to be validated but no definition could be found for that attribute in the metadata.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-27007: Validation of a view row in view object {0} failed
Cause: Attempting to validate a ViewRow failed.
Action: Fix the failing entities or attributes as found in the details of this exception.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-27008: Attribute {2} in view object {1} cannot be set.
Cause: An attempt was made to modify a view row attribute that is read-only.

**JBO-27015: {0} contained entity/s still invalid**
- **Cause:** In validating a master, some child entities were found that could not be validated. This occurs only in the case when there is a composition association between the master and detail entities.
- **Action:** Fix the attribute values in the child entities so that they are valid when the child entities are validated by the master.
- **Level:** 1

Type: ERROR
Impact: Programmatic

**JBO-27016: Invalid attribute kind for column {0}.**
Cause: An unexpected attribute kind found in the definition for a view object.
Action: Fix the attribute kind information in the xml-metadata definition for attributes in this view object.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-27017: The primary key for Entity [0] could not be determined.
Cause: While loading the metadata definition for this entity, there was no attribute marked as the primary key.
Action: Set at least one attribute as the primary key for this entity type, so that entities of this type can be uniquely identified.

Level: 1
Type: ERROR
Impact: Programmatic

Cause: The type of attribute value provided as an argument to the set() method for this attribute is not an instance of the Java type that this attribute expects.
Action: Convert the argument to a proper Java type, such that it is an instance of the Java type that this attribute expects.

Level: 1
Type: ERROR
Impact: Programmatic

Cause: An unexpected exception occurred in the getAttribute method. Getter methods should throw a subclass of JboException so that custom exception messages are thrown/shown to the caller. This exception could also be thrown if the getter is not a public Java method.
Action: Do not throw any exception other than subclasses of JboException from any business logic code in the getter method for an attribute. Also verify that the getter method is a public Java method.

Level: 1
Type: ERROR
Impact: Programmatic

Cause: An unexpected exception occurred in the setAttribute method. Setter methods should throw a subclass of JboException so that custom exception messages are thrown/shown to the caller. This exception could also be thrown if the setter is not a public Java method.
Action: Do not throw any exception other than subclasses of JboException from any business logic code in the setter method for an attribute. Also verify that the setter method is a public Java method.

**JBO-28001: Cannot connect to database

*Cause:* An error occurred while attempting to get a JDBC connection for persistent collection management.

*Action:* Make sure that the database connection URL is correct. The detail to this exception will give further information on the problem.

*Level:* 1

*Type:* ERROR

**Impact:** Programmatic

**JBO-28002: Could not create persistence control table {0}

*Cause:* An error occurred while creating the persistent collection control table. Normally, the control table’s name is PCOLL_CONTROL.

*Action:* Check to make sure that the connection has appropriate authority to create a table. The detail to this exception will give further information on the problem.

*Level:* 1

*Type:* ERROR

**Impact:** Programmatic

**JBO-28003: Could not delete row in control table for table {0}

*Cause:* An unexpected error occurred while attempting to delete the persistent collection control row.

*Action:* Look at the details of this exception for further information on the problem and how to address it.
JBO-28004: Could not lock row in control table for table {0}
  Cause: An error occurred while trying to lock the persistent collection control row. This error is thrown in two situations: An unexpected database error occurred while attempting to lock the row. After the persistent collection manager committed changes to database, it tried to lock the control row. Between the time of commit and lock attempt, another user somehow managed to lock the row and not release it within a set time. In this case, the detail will be null.
  Action: In the first case, see the details of this exception for further information on the database problem. In the second case, make sure that no other user locks the control rows outside the Business Components framework.

JBO-28005: Could not update row in control table for table {0}
  Cause: An unexpected error occurred while attempting to update the persistent collection control row.
  Action: Look at the details of this exception for further information on the problem and how to address it.

JBO-28006: Could not create persistence table {0}
  Cause: An error occurred while attempting to create a database table to store persistent collection material.
  Action: Look at the details of this exception for further information on the problem and how to address it.

JBO-28007: Could not commit while working on persistence table {0}
  Cause: An unexpected error occurred while attempting to commit persistent collection changes
  Action: Look at the details of this exception for further information on the problem and how to address it.

JBO-28008: Could not create an index {0} on table {1} for persistent collection

Level: 1
Type: ERROR
Impact: Programmatic
Cause: An error occurred while attempting to create an index on a database table that stores persistent collection material.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28009: Error while getting current time from database
Cause: An unexpected error occurred while attempting to get the system date from the database. For the Oracle persistent manager, the SQL statement used for this would be 'select sysdate from dual'.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28010: Error while getting next sequence value for {0} from database
Cause: An error occurred while attempting to get the next value of a database sequence.
Action: Make sure that the sequence object exists in the database. Also look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28011: Error while querying for the next id from column {1} of table {0}, collection id {2}
Cause: An error occurred while attempting to query for the next id from a persistent table.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28012: Could not add key column {0} to table {1}
Cause: An error occurred while attempting to create a key column on a database table that stores persistent collection material.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic
JBO-28013: Could not create key info table {0}
Cause: An error occurred while attempting to create a database table to store key info for persistent collection material.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28020: Passivation error on collection {0}, collection id {1}, persistent id {2}
Cause: An unexpected error occurred while passivating objects into the persistent store. An exception might have been thrown during serialization.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28021: Activation error on collection {0}, collection id {1}, persistent id {2}
Cause: An unexpected error occurred while activating objects from the persistent store. An exception might have been thrown during deserialization.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28030: Could not insert row into table {0}, collection id {1}, persistent id {2}
Cause: An unexpected error occurred while inserting a passivation row into the persistent store table.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28031: Could not update row into table {0}, collection id {1}, persistent id {2}
Cause: An unexpected error occurred while updating a passivation row in the persistent store table.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28032: Could not delete row from table {0}, collection id {1}, persistent id {2}
Cause: An unexpected error occurred while deleting a passivation row from the persistent store table.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28033: Could not retrieve row from table {0}, collection id {1}, persistent id {2}
Cause: An unexpected error occurred while retrieving a passivation row from the persistent store table.
Action: Look at the details of this exception for further information on the problem and how to address it.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28034: Retrieval by id not supported for collection {0}, collection id {1}. Call enableAccessById()
Cause: The client attempted to retrieve a row in a persistent collection by an id, but the by-id access is not enabled on the persistent collection.
Action: Enable by-id access by calling PCollection.enableIdAccess.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28035: Persistent id {1} is invalid for a collection {0}, collection id {1}. It should be > 0
Cause: The client attempted to retrieve a row by an id, but the id value is invalid. The id must be greater than 0.
Action: Give a valid id.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-28036: Object of id {2} is already active in its parent {3} in a persistent collection {0}, collection id {1}
Cause: While attempting to activate an object of a given id, an internal integrity problem was found. In particular, a node which was thought to be passivated was found to be active.
Action: Contact Oracle Support Services.
Level: 1
Type: ERROR
Impact: Programmatic
JBO-28037: Object of id {2} not found in its parent {3} in a persistent collection {0}, collection id {1}

Cause: While attempting to activate an object of a given id, an internal integrity problem was found. In particular, a child node/element expected to be found in a node is missing.

Action: Contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28038: Could not delete all rows for collection of id {1} from table {0}

Cause: An unexpected error occurred while deleting all passivation rows from the persistent store table.

Action: Look at the details of this exception for further information on the problem and how to address it.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28039: Root node for collection {0} is invalid, collection id {1}, persistent id {2}

Cause: While attempting to activate an object of a given id, an internal integrity problem was found. In particular, the root node of the persistent collection is no good. It is either (1) <code>null</code>, (2) has younger or older sibling, or (3) has a parent node. None of these should apply to the root node.

Action: Contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28040: Could not retrieve ids of rows whose key id is {1} and hash is {2} from table {0}

Cause: An unexpected error occurred while retrieving an array of persistent ids of rows from the persistent store table of given key hash code at the given key index.

Action: Look at the details of this exception for further information on the problem and how to address it.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28041: Update found multiple rows or no matching row. Persistence table {0}, collection id {1}, persistent id {2}

Cause: The system tried to update a row in the persistence store table, but it found either no row or more than one matching row.

Action: Contact Oracle Support Services.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28100: The resource pool, {0}, failed to create a pooled resource instance.

Cause: Either the JDBC connection pool or the application pool were unable to create a new pooled JDBC connection or application module.

Action: If the exception details indicate that an exception occurred while creating a JDBC connection then check the JDBC connection description to ensure that it references a valid, live database instance. If the exception details indicate that an exception occurred while creating an application module then check the application module configuration to ensure that it references a valid, live application server and application application module class.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28101: An application attempted to set a pooled resource that might be in use as available.

Cause: The application attempted to mark a pooled resource which has already been available in the resource pool as available.

Action: Remove the application logic that invokes \{@link oracle.jbo.pool.ResourcePool#setAvailable(Object)\}, or move the application logic such that it occurs only once before the resource is made available.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28102: A request was timed out while waiting for a resource to be returned to the resource pool, {0}.

Cause: A client request timed out while waiting for a resource to be returned to the resource pool.

Action: Increase the maximum resource pool size in order to accommodate the maximum expected active request size. If the exception details indicate that the exception was thrown while waiting for an application module in the application pool then the maximum pool size can be increased with the property, jbo.ampool.maxpoolsize. If the exception details indicate that the exception was thrown while waiting for a JDBC connection in the JDBC connection pool then the maximum pool size can be increased with the property, jbo.maxpoolsize.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28103: A pool operation was specified for a pooled resource that does not belong to the resource pool.

Cause: A pool request was made for a resource that does not belong to the pool.

Action: Ensure that the pool request is accessing the same pool instance that was used to acquire the resource instance.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28200: Validation threshold limit reached. Invalid Entities still in cache

Cause: Invalid entities still found in the validation list of the transaction after attempting to validate all invalid entities for the VALIDATION_THRESHOLD 10 times (by default).

Action: Fix any logic that invalidates entity instances in the validation cycle (perhaps in overridden validateEntity() methods) such that all entities are valid before the VALIDATION_THRESHOLD limit is reached.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28201: Post threshold limit reached. Some entities yet to be posted.

Cause: There are invalid entities or entities in the post list of the transaction after trying to post all changes for the POST_THRESHOLD 10 times (by default).

Action: Fix any logic that places entities in the transaction's list of entities to be validated or posted in the post cycle, such that all entities get posted before the POST_THRESHOLD is reached.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28202: Entities invalidated in beforeCommit(). Need to revalidate and post.

Cause: Invalid entity instances found in the transaction in the beforeCommit phase.

Action: Fix any business logic that invalidates entity instances in postChanges() such that there are no more invalid entities after all changes are posted during the commit cycle.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28203: The updated row cannot be refreshed because its key values are unset or modified by database triggers.

Cause: The row could not be refreshed after update because the value of its primary or unique key was not set or unknown.

Action: Ensure values are set for at least one primary or unique key that can be used to fetch the row that is being updated. If that is not possible, use a custom SQLBuilder with doRefreshSQL() defined to refresh the row.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-28204: Too many objects match the alternate key {0} for entity {1}, key {2}.

Cause: Attempting to add a new entity to the cache with alternate key that is same as an existing entity. This exception is thrown when uniquing a newly fetched/created entity with the cached set of entities.
Action: Fix the named alternative value of the row. Or, the alternate key definition might have to be augmented with additional attributes.

Level: 1

JBO-29121: View criteria {0} has nested VC that uses variable {1} of type {2}, but variable {1} in view object {3} is of type {4}.
Cause: A correlated sub-query generated for an accessor view object uses a bind variable of the same name as the outer one but has a different type.
Action: Change the data type of the bind variable, or remove the nested view criteria.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-29122: Cannot copy variable {0} from {1} to view object {2} for view criteria {3} because a variable of same name is already copied from {4}.
Cause: Two correlated sub-queries generated for two accessor view objects use a bind variable of the same name.
Action: Redefine the bind variable on the root view object, or remove one or both nested view criteria.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-29123: View criteria {0} has nested VC on accessor VO {1} which uses bind variable(s). This cannot be applied on view object {2}.
Cause: A correlated sub-query generated for an accessor view object uses a bind variable but the outer view object is a composite view object.
Action: Remove the nested view criteria.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-29124: Filter view criteria cannot be applied to iterator {0} of viewobject {1} because it was created from a different viewobject {2}

Cause: An attempt was made to apply a filter view criteria on a viewobject that is not its parent.

Action: Ensure that the filter criteria is applied on the same view object it was created on.

Level: 1

JBO-30002: The pool signature for the cookie is invalid.
Cause: Deprecated.
Action: N/A

Level: 1
Type: ERROR
Impact: Programmatic

JBO-30003: Application pool {0} fails to check out an application module due to the following exception:
Cause: The pool failed to create an application module instance during checkout. Typically this exception occurs when the pool has been configured with an invalid application module name, EJB server, etc. or when an invalid JDBC username, password, URL, or datasource name has been specified.
Action: See the exception details for more information regarding the failure. Correct the application’s configuration properties appropriately.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-30004: An application module that was not checked out was checked into the pool, {0}
Cause: The application attempted to check in an application module that was not checked out from the pool.
Action: Remove redundant releaseApplicationModule() invocations from the application logic.

Level: 1
Type: ERROR
Impact: Programmatic
JBO-30005: A pool operation was specified for an application module instance that was not created by that pool.

*Cause:* The application attempted to invoke an application pool method with an application module that was not created by that application pool instance.

*Action:* Correct the application logic. Use the session cookie that was used to acquire the application module instance to acquire a reference to the application pool that created that application module instance.

*Level:* 1

*Type:* ERROR

*Impact:* Programmatic

---

JBO-30006: The cookie for session [0] and application [1] is not a valid handle for application pool, [2]. The cookie cannot be used to access this pool instance.

*Cause:* The application attempted to access the application pool with a session cookie that is not registered with that application pool.

*Action:* Correct the application logic. The application should not reference the application pool directly. Use the session cookie interface for all application pool interaction.

*Level:* 1

*Type:* ERROR

*Impact:* Programmatic

---

JBO-30009: A thread attempted to set as 'available' an application module that could already be in use. An application module's availability cannot be changed from outside of the pool once it has been made available.

*Cause:* The application attempted to modify the availability status of an application module that is already in active pool use.

*Action:* Remove the application logic that is updating the application module availability status.

*Level:* 1

*Type:* ERROR

*Impact:* Programmatic

---

JBO-30010: The cookie for session [0] and application [1] cannot be replicated with an active cookie instance.

*Cause:* The web server attempted to replicate a session cookie with an existing, active cookie.

*Level:* 1

*Type:* ERROR

*Impact:* Programmatic

---

JBO-30011: A null session cookie application id, session id, or application pool reference ([0], [1], [2]) was specified during cookie construction. The cookie could not be constructed.

*Cause:* The application attempted to create a session cookie with an invalid set of cookie parameters.
**Action:** Correct the application logic that creates the session cookie. Verify that the cookie session id, application id, and application pool reference are all not null.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-30012:** A cookie for session {0} and application {1} has already been registered with application pool {2}. The cookie must be removed first.  
**Cause:** The application attempted to create a session cookie in an application pool that already contains that session cookie.  
**Action:** Correct the application logic that creates the session cookie. Remove the existing session cookie before creating a new one in that pool.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-30013:** The cookie environment for session {0} and application {1} cannot be reset after the cookie has become active.  
**Cause:** The application attempted to change the session cookie environment after the session cookie became active.  
**Action:** Correct the application logic that sets the session cookie environment. Move all logic that changes the session cookie such that it occurs before the session cookie becomes active. A session cookie is active after it is first used to acquire an application module.

**Level:** 1  
**Type:** ERROR  
**Impact:** Configuration

**JBO-30014:** The cookie for session {0} and application {1} cannot be removed from the application pool while it has an application module checked out.  
**Cause:** Correct the application logic that sets the session cookie environment. Move all logic that changes the session cookie such that it occurs before the session cookie becomes active. A session cookie is active after it is first used to acquire an application module.  
**Action:** Correct the application logic that removes the session cookie from the application pool. Be sure to invoke SessionCookie.releaseApplicationModule() before invoking ApplicationPool.removeCookie(SessionCookie).

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-30015:** The cookie for session {0} and application {1} cannot be serialized while in use.  
**Cause:** The application attempted to serialize a session cookie while that cookie had an application module instance checked out or which the cookie was locked by a client request thread.
**Action:** Correct the serialization logic such that the session cookie is serialized after the session cookie application module has been released to the application pool and after all client requests have released their cookie locks.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-30016:** The request thread for session {0} and application {1} was timed out while waiting for an available application module in the pool, {2}.

**Cause:** The application request thread timed out while waiting for an available application module instance in the pool.

**Action:** Prevent wait timeouts by increasing the maximum pool size.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-30017:** The cookie for session {0} and application {1} cannot be reset while an ApplicationModule is reserved.

**Cause:** ApplicationModuleRef.resetState() was invoked while the ApplicationModuleRef was referencing a reserved ApplicationModule instance.

**Action:** Release the ApplicationModule with ApplicationModuleRef.releaseApplicationModule(true, boolean) before invoking resetState.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-30018:** The cookie configuration does not match the specified configuration. applicationId: {0}, sessionId: {1}, cookieConfig: {2}, specifiedConfig: {3}.

**Cause:** oracle.jbo.http.HttpContainer.findSessionCookie was invoked with a configName which was different than the configuration that was used to create the specified SessionCookie.

**Action:** Use a distinct applicationId to identify the cookie for each distinct Configuration.

**Level:** 1  
**Type:** ERROR  
**Impact:** Configuration

**JBO-30019:** An unavailable cookie state is detected while attempting to use a cookie from application {0}, session {1}.

**Cause:** An application pool method was invoked for a cookie that was not currently available. A cookie can be in an unavailable state if another thread is currently updating the cookie. For example, consider the following scenario: 1. cookie 1 releases an ApplicationModule with the managed state option 2. cookie 2 targets that ApplicationModule for recycling 3. Before cookie 2 has passivated the ApplicationModule state for cookie 1, cookie 1 requests another ApplicationModule. In this instance the ApplicationPool could throw an
unavailable exception. Note that most of the occurrences of this exception should be handled by the pooling framework.

**Action:** Report the exception to Oracle Support Services. Attempt the invalid operation again.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-30020:** An invalid SessionCookie release mode was specified. applicationId: {0}, sessionId: {1}.

**Cause:** oracle.jbo.common.ampool.SessionCookie.releaseApplicationModule was invoked with an unsupported releaseMode.

**Action:** Invoke releaseApplicationModule(int) with a valid releaseMode attribute. Valid releaseModes include: SessionCookie.SHARED_MANAGED_RELEASE_MODE SessionCookie.SHARED_UNMANAGED_RELEASE_MODE SessionCookie.RESERVED_MANAGEDRELEASE_MODE SessionCookie.RESERVED_UNMANAGED_RELEASE_MODE

**Level:** 1  
**Type:** ERROR

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-33003:** Connection name {0} is not defined.

**Cause:** The specified connection could not be found. Or an error occurred during processing of the specified connection.

**Action:** Make sure that the connection name is correct.

**Level:** 1  
**Type:** ERROR  
**Impact:** Programmatic

**JBO-33004:** Configuration file cannot be parsed.
Cause: An error occurred while parsing configuration file.
Action: Check to make sure that the configuration file is a valid XML file. See the
detail exception for further information.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-33005: Configuration {0} is not found.
Cause: The named configuration parameter was not found in the configuration.
Action: The system expects to find the named configuration parameter, but could
not. Check the configuration content to make sure that it contains the named
configuration parameter.

Action: For this SQLBuilder, do not use datasource.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-33007: Data source {0} is not found.
Cause: The specified datasource could not be found.
Action: Make sure that the datasource name is correct. See the detail exception for
further info.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-33020: Current time is not available from SQL statement "{0}".
Cause: An error occurred while getting the current time from the database.
Action: If there is a detail exception, it will give further information about what
went wrong. If no detail exception was provided, that means the SQL statement to
get the current time returned no result (no row). Check the SQL statement for
correctness.

Level: 1
Type: ERROR

JBO-33027: Value must be greater than {MinVal}
Cause: Input values failed the minimum validator test.
Action: Provide values that are greater than the minimum.
Level: 1
Type: ERROR
Impact: Programmatic

**JBO-33028: Value must be less than \{MaxVal\}**
Cause: Input values failed the maximum validator test.
Action: Provide values that are less than the maximum.
Level: 1
Type: ERROR
Impact: Programmatic

**JBO-33029: Value must have exactly \{MinLength\} characters**
Cause: Input values must be longer than minimum length.
Action: Provide values that are longer than the minimum length.
Level: 1
Type: ERROR
Impact: Programmatic

**JBO-33030: Value can have at most \{MaxLength\} characters**
Cause: Input values exceeded maximum length length.
Action: Provide values that are less than or equal to maximum length.
Level: 1
Type: ERROR
Impact: Programmatic

**JBO-33031: Value must have at least \{MinLength\} and at most \{MaxLength\} characters**
Cause: Value must have at least (minLen) and at most (maxLen) characters.
Action: Provide values that are between minimum and maximum length.
Level: 1
Type: ERROR
Impact: Programmatic

**JBO-33032: Value must have exactly \{MaxLength\} characters**
Cause: Value must be exactly (maxLen) characters.
Action: Provide values that is exactly the maximum length.

JBO-34001: Iterator binding \{0\} is not of the expected class \{1\}
Cause: The iterator binding is of the wrong Java class. Some controls expect to work with a JUIterRowBinding, while others with JUIterRangeBinding. This error indicates that the supplied iterator binding is not of the expected class.
Action: If the error is caused by some client code that supplies an iterator binding, correct the code to supply an iterator binding of the correct class. If the error is caused by framework code, contact Oracle Support Services with the stack trace.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-34002: The application \obj\ has already been set for form binding \{0\}. Cannot do it again
Cause: The form binding has already been registered with an application (JUAApplication) object. It is illegal to try to set the form binding’s application object again.
Action: This error typically means a program error. Contact Oracle Support Services with the stack trace.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-34003: No iterators bound with the given name :\{0\}
Cause: No iterator binding found with the given name.
Action: Fix the iterator binding name before attempting to change the iterator associated with it.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-34004: No matching row found for entered or selected item in the LOV iterator for a list-binding.
Cause: No matching row found for a selected value in a List binding.
Action: Enter/Select a valid item from the list so that the matching row in the LOV iterator can be found.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-34005: Exceptions occurred in synchronizing updates from this application. Click Details to see the complete list.
Cause: Exceptions occurred in synchronizing data from the client Application into the Business Components tier.
Action: Fix the exceptions displayed in the details list and then reapply the changes.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-34006: Method that creates the iterator for this object returns null.**

Causes: Collection to which this iterator is bound returns null.
Action: Fix the return value so that a valid collection is available for this iterator to bind to.

Impact: Programmatic

**JBO-34007: A value is not passed for mandatory parameter {0}.**

Causes: Mandatory Parameter was not set by the calling code either programmatically or by overriding it in a nested container usecase.
Action: Set the mandatory parameter value

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-34008: Final parameter {0} cannot be modified.**

Causes: Mandatory Parameter was not set by the calling code either programmatically or by overriding it in a nested container usecase.
Action: Set the mandatory parameter value

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-34009: ListBinding definition :{0} not found.**

Causes: Server side ListBinding could not be found with the given usage name.
Action: Fix the server side ListBinding usage name in List binding metadata

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-34010: The "{0}" descriptor appears in the application classpath more than once:**

- (1) - (2)

Causes: The cpx classpath name has already been found at a different source in the classpath. It is illegal to have the same relative cpx name in the classpath more than once.
Action: Refactor one of the indicated URLs in the message so it appears under a different relative package in the classpath.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-34011: Validator expression [0] did not result in a valid object for bindingContainer:[1]
Cause: Expression for custom validator does not resolve into a valid object that as a public method of name validateBindingContainer and that takes the bindingContainer as the only parameter.
Action: Provide a different expression or fix the expression so that an object whose class has a method with following signature: public validateBindingContainer(DCBindingContainer ctr)

Level: 1

Impact: Programmatic

JBO-34012: Attempting to register a Swing binding factory when Faces version is already installed.
Cause: Faces binding factory is already installed for ADF Model bindings. Attempt to install a Swing version will break the application due to binding class incompatibilities.
Action: Remove or replace references to juimodel in namespace attributes, in pagedef xml files in the application with:

Level: 1
Type: ERROR
Impact: Programmatic

JBO-34013: Enter a nonempty string and a string not equal to "%" in the list:[0] to filter the list of values.
Cause: Empty string or % was entered to filter list datasource for a list binding.
Action: Enter any other string to filter by in the list component bound to this list binding.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-34014: No matching child node found for row with key:[0] under parent node:[1]
Cause: No matching node in the current range of rows found for a row retrieved from the backend collection.
Action: Scroll the backend collection to the appropriate range where a node for this row will be found. If row keys are for rows outside of current range of rows in the RowIterator, use alternate client apis to access the row data avoiding calls into this node binding.

Level: 1

JBO-36000: An unexpected expression token is found.
Cause: Unexpected token found.
Action: Found an unexpected expression token. Make sure that the words are spelled correctly and that the expression makes sense.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-36001: Mismatching parentheses are found.
Cause: Mismatching parentheses.
Action: Examine the expression and ensure that open parentheses match up with closing parentheses.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-36002: The method call specification is invalid. ",", or ")" is expected.
Cause: Invalid method call. After a method parameter, ',' or ')' is expected, but neither was found.
Action: Examine the expression and correct method invocation.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-36003: An expression token is not found.
Cause: Expecting a token. The expression string was terminated unexpectedly.
Action: Examine the expression and ensure that the expression does not end unexpectedly.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-36004: Mismatching square brackets are found. An invalid array index is specified.
Cause: Mismatching square brackets.
Action: Examine the expression and ensure that open square brackets (for array index) match up with closing brackets.
Level: 1
Type: ERROR
Impact: Programmatic

JBO-36005: Variable {0} is not found.
Cause: Variable not found.
Action: Examine the expression and ensure that the variable name is correct.
Level: 1
Type: ERROR
Impact: Programmatic

**JBO-36006: cannot convert {0} into {1}**

**Cause:** Cannot convert data.

**Action:** Cannot convert data from one class to another. Examine the expression and ensure that the data assignment does not cause incompatible conversion of data.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-36007: Binary operation {0} is invalid for strings.**

**Cause:** An attempt was made to invoke an invalid binary operation on two strings.

**Action:** Examine the operation ID and correct the expression so that the invalid binary operation is not attempted on strings. The expression runtime only recognizes addition as a valid binary operation between two strings.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-36008: The AND separator for a BETWEEN operator cannot be found. Token {0} is found instead.**

**Cause:** A BETWEEN operator was found but no AND for the two comparison expressions.

**Action:** Take a look at the expression string. The correct syntax for BETWEEN is 'testVal BETWEEN value1 AND value2'. The expression parser could not find the AND keyword. Correct the expression.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-55001: A value of type {1} cannot be set to a value of type {0}.**

**Cause:** Unexpected type was provided to Variant utility.

**Action:** Provide an expected type as reported in the exception.

Level: 1
Type: ERROR
Impact: Programmatic

**JBO-55002: Variant type {0} is invalid.**

**Cause:** The data-type passed to the Variant utility from a Validation rule is invalid. This could be due to a corrupt XML-metadata definition in the component's XML file.

**Action:** Fix the component XML for the offending validation rule.
JBO-55003: Variant name {0} is invalid.
   Cause: The name of the variant type passed to the Variant utility from a Validation rule is invalid. This could be due to a corrupt XML meta data definition in the component’s XML file.
   Action: Fix the component XML for the offending validation rule.

JBO-56001: Row value is missing for data object {0}.
   Cause: The Row Value for a SDOValueStore is null.
   Action: Should not use SDOValueStore with a NULL row value.

JBO-56002: Operation {0} on object {1} is not supported.
   Cause: An attempt was made to invoke an invalid service operation.
   Action: Ensure that this service operation is defined at design time.

JBO-56003: Nonpersistent attribute {0} cannot be used in a database mode view criteria.
   Cause: A nonpersistent attribute is used for DB ViewCriteriaItem.
   Action: Make sure the attribute is persistent.

JBO-56004: Non-ViewLink accessor attribute {0} cannot be used for a view criteria item that has nested view criteria.
   Cause: A non-ViewLink accessor is used for DB ViewCriteriaItem that has nested ViewCriteria.
   Action: Make sure the attribute is a ViewLink accessor.

JBO-56005: SDO type is not found for ViewObject {0} with namespace {1} and name {2}.
Cause: SDO Type is not found for a ViewObject.
Action: Make sure the viewobject is SDO enabled.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-56006: ComplexType or DataType SDO property {0} has conflict values {1} vs. {2} for attribute {3}.
Cause: Conflict input values for ComplexType non-value properties.
Action: Make sure the payload has the same values for the same ComplexType non-value properties.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-56007: ViewObject not found for sdo dataobject {0} from base viewobject {1}.
Cause: Can't find corresponding ViewObject for one SDO Type.
Action: Make sure passing valid SDODataObject that maps to valid ViewObject.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-56008: Mapped value for name {0} not found in viewobject {1} attribute {2}.
Cause: Can't find mapped value for one given name.
Action: Add neccessary name/value to PropertySet.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-56009: Mapped name for value {0} not found in viewobject {1} attribute {2}.
Cause: Can't find mapped value for one given value.
Action: Add neccessary name/value to PropertySet.

Level: 1
Type: ERROR
Impact: Programmatic

JBO-56010: Comparision Operation {0} is invalid for ViewCriteriaItem of attribute {1}.
Cause: The attempted operation is invalid for a ViewCriteriaItem.
Action: Change the input value of this operation.
