Oracle8i

Installation Guide

Release 3 (8.1.7) for HP 9000 Series HP-UX

August 2000
Part No. A85470-01
The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee’s responsibility to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and Oracle Corporation disclaims liability for any damages caused by such use of the Programs.

The Programs (which include both the software and documentation) contain proprietary information of Oracle Corporation; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. Oracle Corporation does not warrant that this document is error free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose, without the express written permission of Oracle Corporation.

If the Programs are delivered to the U.S. Government or anyone licensing or using the Programs on behalf of the U.S. Government, the following notice is applicable:

Restricted Rights Notice Programs delivered subject to the DOD FAR Supplement are “commercial computer software” and use, duplication, and disclosure of the Programs, including documentation, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement. Otherwise, programs delivered subject to the Federal Acquisition Regulations are "restricted computer software" and use, duplication, and disclosure of the programs shall be subject to the restrictions in FAR 52.227-19, Commercial Computer Software - Restricted Rights (June, 1987). Oracle Corporation, 500 Oracle Parkway, Redwood City, CA 94065.

Oracle is a registered trademark, and ConText, Net8, Oracle Names, Oracle Objects, Oracle Spatial, Oracle7, Oracle8, Oracle8i, PL/SQL, Pro*C/C++, Pro*COBOL, Pro*FORTRAN, SQL*Loader, and SQL*Plus are trademarks or registered trademarks of Oracle Corporation. Other names mentioned may be trademarks of their respective owners.

Index
Oracle8/Installation Guide, Release 3 (8.1.7) for HP 9000 Series HP-UX
Part No.  A85470-01

Oracle Corporation welcomes your comments and suggestions on the quality and usefulness of this
publication. Your input is an important part of the information used for revision.

- Did you find any errors?
- Is the information clearly presented?
- Do you need more information? If so, where?
- Are the examples correct? Do you need more examples?
- What features did you like most about this manual?

If you find any errors or have any other suggestions for improvement, please indicate the chapter,
section, and page number (if available). You can send comments to us in the following ways:

- Email - osdwrite@us.oracle.com
- FAX - 650.506.7303 Attn: Tom Leah-Martin
- Postal service:
  Tom Leah-Martin
  Oracle Corporation
  500 Oracle Parkway, Mailstop 1op4
  Redwood Shores, CA 94065
  USA

If you would like a reply, please provide your name, address, and telephone number.
If you have problems with the software, please contact your local Oracle Support Services Center.
Preface

Purpose
This guide and the Oracle8i Administrator’s Reference Release 3 (8.1.7) for HP 9000 Series HP-UX provide instructions for installing and configuring Oracle8i Release 3 (8.1.7) on HP 9000 Series HP-UX systems. Product-specific documentation is in the Oracle8i Generic Documentation Set.

Audience
This document is intended for anyone responsible for installing Oracle8i Release 3 (8.1.7) on HP 9000 Series HP-UX systems.

Oracle8i and Oracle8i Enterprise Edition
Unless noted otherwise, features and functionality described in this document are common to both Oracle8i and Oracle8i Enterprise Edition.
**Typographic Conventions**

- **monospace** Monospace type indicates UNIX commands, directory names, usernames, pathnames, and filenames.

- **brackets [ ]** Words enclosed in brackets indicate key names (for example, Press [Return]). Note that brackets have a different meaning when used in command syntax.

- **italics** Italic type indicates a variable, including variable portions of filenames. It is also used for emphasis.

- **UPPERCASE** Uppercase letters indicate Structured Query Language (SQL) reserved words, initialization parameters, and environment variables.

**Command Syntax**

UNIX command syntax appears in monospace font and assumes the use of the Bourne shell. The "$" character at the beginning of UNIX command examples should not be entered at the prompt. Because UNIX is case-sensitive, conventions in this document may differ from those used in other Oracle documentation.

- **backslash \** A backslash indicates a command that is too long to fit on a single line. Enter the line as printed (with a backslash) or enter it as a single line without a backslash:

```
dd if=/dev/rdsk/c0t1d0s6 of=/dev/rst0 bs=10b \ count=10000
```

- **braces {}** Braces indicate required items: .DEFINE {macro1}

- **brackets [ ]** Brackets indicate optional items: cvtcr ... termname [outfile]

Note that brackets have a different meaning when used in regular text.

- **ellipses ...** Ellipses indicate an arbitrary number of similar items:

```
CHKVAL fieldname value1 value2 ... valueN
```

- **italics** Italic type indicates a variable. Substitute a value for the variable:

```
library_name
```

- **vertical line |** A vertical line indicates a choice within braces or brackets:

```
SIZE filesize [K|M]
```
Accessing Installed Documentation

Oracle8i for HP 9000 Series HP-UX documentation includes this guide and the Oracle8i Administrator’s Reference for HP 9000 Series HP-UX. You can install documentation in HTML and PDF (Adobe Portable Document Format, which requires Acrobat Reader) formats. HP-UX-specific documentation files are installed from the Oracle8i CD-ROM. Generic documentation files are installed from the Online Generic Documentation CD-ROM. The location of the documentation files is determined according to the following rules:

- If ORACLE_DOC is defined in the environment, the files are installed in that directory.
- If ORACLE_DOC is not defined but ORACLE_BASE is defined, the files are installed under the $ORACLE_BASE/doc directory.
- If neither ORACLE_DOC nor ORACLE_BASE are defined in the environment, the files are installed under the $ORACLE_HOME/doc directory.

To access the documentation, point your browser to either index.htm or products.htm (the latter does not require a frames-enabled browser). If you prefer paper documentation, you can print the PDF files.

Oracle Product Documentation

Oracle8i product documentation is on the Oracle8i Generic Documentation CD-ROM. Instructions for accessing and installing the documents on the CD-ROM are found in the README file on the top level directory of the CD-ROM.

Oracle Information Navigator

Oracle Information Navigator is a Java-based search and navigation utility provided with Oracle online documentation. If you are using a Java-enabled browser, Information Navigator is launched automatically when you open the index.htm file at the top level of the CD-ROM. Information Navigator can be used with Oracle documentation, whether you are reading from the CD-ROM or from installed files.

Related Documentation

If you are unfamiliar with the concepts or terminology associated with relational database management systems, read Chapter 1 in Oracle8i Concepts before beginning your installation.
Information about system administration and tuning for a production database system is provided in these documents:

- Oracle8i Administrator’s Reference for HP 9000 Series HP-UX
- Oracle8i System Administrator’s Guide
- Net8 Administrator’s Guide
- Oracle8i Designing and Tuning for Performance

Information about migrating or upgrading from a previous release of the Oracle Server is provided in Oracle8i Migration.

Information on installing Oracle Workflow is provided in Oracle Workflow Installation Supplement (Release 2.5.2).

Information on installing Oracle Internet Directory is provided in Oracle Internet Directory Installation Guide.

Oracle Services and Support

Oracle corporation offers a wide range of services to help facilitate corporate system solutions, including Oracle Education courses, Oracle Consulting services, and Oracle Worldwide Customer Support. Information about Oracle products and global services is available on the Internet, from:

http://www.oracle.com

The sections below provide URLs for selected services.

Oracle Support Services

Technical Support contact information worldwide is listed at:

http://www.oracle.com/support

Templates are provided to help you prepare information about your problem before you call. You will also need your CSI number (if applicable) or complete contact details, including any special project information.

Products and Documentation

For U.S.A. customers, Oracle Store is at:

http://store.oracle.com

Links to Stores in other countries are provided from this site.
Product documentation can be found at:
http://docs.oracle.com

**Customer Service**
Global Customer Service contacts are listed at:
http://www.oracle.com/support/

**Education and Training**
Training information and worldwide schedules are available from:
http://education.oracle.com

**Oracle Technology Network**
Register with the Oracle Technology Network (OTN) at:
http://technet.oracle.com

OTN delivers technical papers, code samples, product documentation, self-service developer support, and Oracle’s key developer products to enable rapid development and deployment of applications built on Oracle technology.

**Support for the Hearing-Impaired**
Oracle Corporation provides TTY access to Oracle Support Services within the United States of America at the following number:
1-800-446-2398
Completing a quick, successful installation depends on the local system satisfying the software dependencies and space requirements for Oracle software. This chapter describes the requirements for installing Oracle8i on HP 9000 Series HP-UX and any restrictions with this release. Before starting the installation, verify that your system meets the requirements described in this chapter:

- Installation Overview
- System Installation Requirements
- HP-UX and Installation-Specific Issues and Restrictions
Installation Overview

Installing Oracle8i involves the following steps:

1. **Satisfy Prerequisites:** Make sure the local system satisfies the hardware, software, memory, and disk space requirements for the products you want to install. These requirements and restrictions are described in this chapter.

2. **Pre-Installation:** Make sure the UNIX environment is properly set up and complete the pre-installation tasks for the products you want to install. See Chapter 2, "Pre-Installation".

3. **Install:** Use the Oracle Universal Installer provided on your software CD-ROM to install Oracle products. See Chapter 3, "Installation".

4. **Post-Installation:** Create database objects, establish the user environment, and configure the installed Oracle products for the local system. See Chapter 4, "Post-Installation".

5. **Client Installations:** If you want to install client tools, applications, and client interfaces not included with the Oracle8i Release 3 (8.1.7) CD-ROM, check the requirements and instructions in the documentation for those products.

Product Installation Categories and Installation Types

There are three categories of products included with Oracle8i Release 3 (8.1.7) for HP 9000 Series HP-UX.

- Oracle8i Enterprise Edition
- Oracle8i Management and Integration
- Oracle8i Client

Each category of products consists of multiple installation types. An overview of these product categories and types follows in Table 1–1, "Oracle8i Product Installation Categories and Types" on page 1-3. For descriptions and version numbers of individual software products included on the Oracle8i Release 3 (8.1.7) for HP 9000 Series HP-UX CD-ROM, refer to Appendix A, "Oracle8i Products".
### Table 1–1 Oracle8i Product Installation Categories and Types

<table>
<thead>
<tr>
<th>This Installation Category...</th>
<th>Consists of These Installation Types:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle8i Enterprise Edition</td>
<td><strong>Typical</strong>&lt;br&gt;Installs a preconfigured starter database, licensable Oracle options, networking services, Oracle utilities, Oracle Enterprise Manager Console (including enterprise management tools), and online documentation. This type of installation is recommended for users who want the set of products most commonly of use for standard database environments.</td>
</tr>
<tr>
<td></td>
<td><strong>Minimal</strong>&lt;br&gt;Gives you the option of installing a preconfigured starter database, networking services, Oracle Enterprise Manager Console (including enterprise management tools), and Oracle utilities. This type of installation is recommended for users who want a minimal database package.</td>
</tr>
<tr>
<td></td>
<td><strong>Custom</strong>&lt;br&gt;Lets you selectively install products from the above installation types and customize your database and networking configurations.</td>
</tr>
<tr>
<td>Oracle8i Management and Integration</td>
<td><strong>Oracle Management Server</strong>&lt;br&gt;Installs the Oracle Enterprise Manager Console (including enterprise management tools), networking services, utilities, basic client software, and online documentation.</td>
</tr>
<tr>
<td></td>
<td><strong>Oracle Internet Directory</strong>&lt;br&gt;Installs the Oracle Internet Directory Server, client tools, and the database schema required by Oracle Internet Directory.</td>
</tr>
<tr>
<td></td>
<td><strong>Oracle Integration Server</strong>&lt;br&gt;Installs XML-enabled components that integrate applications within and between enterprises. Components include Oracle Enterprise Manager, Oracle8i JVM, a workflow engine, directory services, advanced queuing, and Internet interconnection adapters.</td>
</tr>
<tr>
<td></td>
<td><strong>Custom</strong>&lt;br&gt;Lets you selectively install and customize products from the above installation types.</td>
</tr>
</tbody>
</table>
System Installation Requirements

Table 1-1  Oracle8i Product Installation Categories and Types

<table>
<thead>
<tr>
<th>This Installation Category...</th>
<th>Consists of These Installation Types:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle8i Client Administrator</td>
<td>Installs the Oracle Enterprise Manager Console (including enterprise management tools), networking services, utilities, basic client software, and online documentation.</td>
</tr>
<tr>
<td>Programmer</td>
<td>Installs development tools and interfaces for creating applications that access an Oracle8i database. This installation package includes precompilers, networking services, and documentation.</td>
</tr>
<tr>
<td>Application User</td>
<td>Provides networking services and support files that enable database application users to connect to and interact with an Oracle8i database.</td>
</tr>
<tr>
<td>Custom</td>
<td>Lets you selectively install products from the above installation types.</td>
</tr>
</tbody>
</table>

System Installation Requirements

Verify that your system meets the requirements described in the following sections before you install Oracle8i Release 3 (8.1.7) products.

*Note:* You will not be able to complete an installation if your system does not meet the minimum requirements for the Oracle products you select.

- Hardware Requirements
- Disk Space Requirements
- Operating System Software Requirements
- Online Documentation Requirements
- Additional Product-Specific Installation Requirements

Hardware Requirements

To install Oracle8i products included with this release, your HP 9000 Series HP-UX system must meet the minimum hardware requirements listed in Table 1–2.
To determine the amount of RAM memory installed on your system, use the HP-UX 11.0 performance monitor tool `glance`.

```bash
$ glance
```

To determine the bytes of swap space currently configured on your system, enter the following command:

```bash
$ swapinfo -a
```

### Disk Space Requirements

The Oracle Universal Installer allows you to choose your installation category and type as described in Table 1–1, "Oracle8i Product Installation Categories and Types" on page 1-3. Your choices will determine how much disk space you will need as shown in Table 1–3, Table 1–4, and Table 1–5. Disk space requirements do not account for the size of your database. A production Oracle database server supporting many users requires significantly greater disk space and memory.

**Note:** These are approximate values that might vary slightly at install time.

### Table 1–3  Disk Space Requirements for Oracle8i Enterprise Edition

<table>
<thead>
<tr>
<th>Installation Type</th>
<th>Required Disk Space</th>
</tr>
</thead>
<tbody>
<tr>
<td>Typical</td>
<td>1200 MB</td>
</tr>
<tr>
<td>Minimal</td>
<td>1090 MB</td>
</tr>
<tr>
<td>Custom</td>
<td>Up to a maximum of 1500 MB</td>
</tr>
</tbody>
</table>
Temporary Disk Space Required by the Oracle Universal Installer

The Oracle Universal Installer requires up to 75 MB of space in the /tmp directory. If you do not have enough space in /tmp, set the environment variable TMP_DIR to point to a directory with sufficient space.

Operating System Software Requirements

To install Oracle8i products included with this release, your HP 9000 Series HP-UX system must meet the operating system requirements listed in Table 1–6.

Table 1–6 Operating System Software Requirements

<table>
<thead>
<tr>
<th>OS Software</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating System</td>
<td>HP-UX 11.0.</td>
</tr>
<tr>
<td>Operating System Patch</td>
<td>See the Release Notes for Release 3 (8.1.7) for HP 9000 Series HP-UX for more information.</td>
</tr>
</tbody>
</table>
**Table 1-6 Operating System Software Requirements**

<table>
<thead>
<tr>
<th>OS Software</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Window Manager</td>
<td>X-windows must be installed on the system from where the Installer is run. Use any HP-UX 11.0-supported X-windows server. Character mode installs are not supported for Release 3 (8.1.7). See &quot;Character Mode&quot; on page 1-13.</td>
</tr>
<tr>
<td>Required Executables</td>
<td>The following executables must be present in the /usr/ccs/bin directory: make, ar, ld, nm, cc.</td>
</tr>
</tbody>
</table>
$ /usr/bin/which cc

Each command should point to the /usr/ccs/bin directory. If not, add /usr/ccs/bin to the beginning of the PATH environment variable in the current shell. See "PATH" on page 2-11 for instructions on setting the PATH variable.

Online Documentation Requirements

To view online documentation included with the Oracle8i CD-ROM, use a web browser such as Netscape Navigator 4.0 or higher running on a UNIX system. To view PDF documents, you need Adobe Acrobat Reader version 3.0 or higher.

Note: Online documentation included with Oracle8i Release 3 (8.1.7) for HP 9000 Series HP-UX can only be viewed on UNIX systems.

Additional Product-Specific Installation Requirements

This section provides product-specific information in addition to hardware and software requirements provided earlier in this chapter. For descriptions of these products, see Appendix A, "Oracle8i Products".

Oracle8i and Options

Table 1–7 Restrictions, Requirements, and Installation Tasks for Oracle8i and Options

<table>
<thead>
<tr>
<th>Product Name</th>
<th>Restrictions and Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apache Server</td>
<td>Requires JDK 1.2.2</td>
</tr>
<tr>
<td>Oracle Parallel Server, 8.1.7</td>
<td>MC/ServerGuard OPS Edition 11.09 or higher</td>
</tr>
<tr>
<td>Oracle interMedia, 8.1.7</td>
<td>You must have at least 10 MB of additional disk space available for the data dictionary.</td>
</tr>
</tbody>
</table>
Table 1–7 Restrictions, Requirements, and Installation Tasks for Oracle8i and Options

<table>
<thead>
<tr>
<th>Product Name</th>
<th>Restrictions and Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Visual Information Retrieval, 8.1.7</td>
<td>Requires Oracle interMedia, 8.1.7</td>
</tr>
<tr>
<td>Oracle Internet Directory, 2.1.1</td>
<td>Requires an installation of Oracle8i Enterprise Edition, Release 3 (8.1.7) with character set UTF8 and an instance dedicated to the Oracle Internet Directory. If this installation does not already exist, the Oracle Universal Installer will install it automatically. The database character set can be determined by the following SQL Command: select value from nls_database_parameters where parameter = 'NLS_CHARACTERSET';</td>
</tr>
<tr>
<td>Oracle Message Broker, 2.0.1</td>
<td>If Oracle Message Broker running on one system uses an Oracle8i database on another system, then the NLS_LANG environment variable should be set to the same value on each system, or to comparable values.</td>
</tr>
</tbody>
</table>

Tools and Precompilers

Table 1–8 Restrictions, Requirements, and Installation Tasks for Tools and Precompilers

<table>
<thead>
<tr>
<th>Product Name</th>
<th>Restrictions and Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Java Runtime Environment (JRE), 1.1.8.03</td>
<td>There are no restrictions.</td>
</tr>
<tr>
<td>Oracle Data Migration Assistant, 8.1.7</td>
<td>An Oracle7 database must be at least release 7.1.4 to be migrated. An Oracle8 database must be at least release 8.0.3 to be upgraded. An Oracle8i database must be at least version 8.1.5 to be upgraded.</td>
</tr>
<tr>
<td>Oracle8i JVM, 8.1.7 (includes Java Virtual Machine (JVM) and Java utilities)</td>
<td>See the Java README on the Oracle8i CD-ROM for restrictions and requirements</td>
</tr>
<tr>
<td>Pro*C/C++, 8.1.7</td>
<td>Requires HP ANSI C compiler Release A.11.01.20 or higher Requires HP aC++ A03.25.</td>
</tr>
<tr>
<td>Pro*COBOL, 1.8.52</td>
<td>Requires COBOL/UX Release 8.13.25 or MicroFocus COBOL 4.1 rev.10.</td>
</tr>
<tr>
<td>Pro*COBOL, 8.1.7</td>
<td>Requires COBOL/UX Release 8.13.25 or MicroFocus COBOL 4.1 rev. 10.</td>
</tr>
<tr>
<td>Pro*FORTRAN, 1.8.52</td>
<td>Requires HP FORTRAN/9000 B11.00.</td>
</tr>
</tbody>
</table>
Networking and System Management Products

All network products require the underlying software and operating system libraries for the supported network. The network software must be installed and running prior to installation of Net8 products. Refer to operating system and third-party vendor networking product documentation for more information. Net8 Release 8.1.7 products require Oracle8i Release 3 (8.1.7).

<table>
<thead>
<tr>
<th>Product Name</th>
<th>Restrictions and Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Advanced Security 8.1.7</td>
<td>See Table 1–10 for information about Oracle Advanced Security authentication support requirements.</td>
</tr>
<tr>
<td>Oracle Enterprise Manager</td>
<td>There are no restrictions.</td>
</tr>
<tr>
<td>Legato Storage Manager, Version 5.5</td>
<td>See Appendix B, &quot;Legato Storage Manager&quot; Note: Legato Storage Manager (LSM) can be installed either through the Installer or manually according to the instructions in the section &quot;Installing Legato Storage Manager&quot; in Appendix B.</td>
</tr>
<tr>
<td>Oracle TCP/IP with SSL Protocol Support, 8.1.7</td>
<td>SSL 3.0 or later.</td>
</tr>
<tr>
<td>Oracle LU6.2 Protocol Support, 8.1.7</td>
<td>SNAPlus2 R6.11.00.</td>
</tr>
</tbody>
</table>

**Oracle Advanced Security**

Oracle Advanced Security is an add-on product to the standard Net8 Server or Net8 Client. It must be purchased and installed on both the server and the client.

Table 1–10 describes requirements for authentication protocols supported by Oracle Advanced Security. See the Oracle Advanced Security Administrator’s Guide for additional information.

<table>
<thead>
<tr>
<th>Authentication Method</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Kerberos</td>
<td>MIT Kerberos Version 5, release 1.1 The Kerberos authentication server must be installed on a physically secure machine.</td>
</tr>
</tbody>
</table>
Table 1–10  Supported Authentication Methods and Requirements

<table>
<thead>
<tr>
<th>Authentication Method</th>
<th>Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>SecurID</td>
<td>ACE/Server release 3.3 or higher running on the authentication server.</td>
</tr>
<tr>
<td>Identix Biometric</td>
<td>Identix hardware and driver installed on each Biometric Manager station and client.</td>
</tr>
</tbody>
</table>
| RADIUS                | A RADIUS server that is compliant with the standards in the Internet Engineering Task Force (IETF) RFC #2138, Remote Authentication Dial In User Service (RADIUS) and RFC #2139, RADIUS Accounting  
                          To enable challenge-response authentication, you must run RADIUS on a platform that supports the Java Native Interface as specified in release 1.1 of the Java Development Kit from JavaSoft |
| Secure Socket Layer (SSL) | A wallet that is compatible with the Oracle Wallet Manager version 2.1. Wallets created in earlier releases of the Oracle Wallet Manager are not forward compatible. |

Note: No additional authentication protocol software is required to relink Oracle products. However, Oracle does not provide the third-party authentication servers (for example, Kerberos or RADIUS). The appropriate authentication server for these protocols must be installed and configured separately. Secure Socket Layer is provided and always installed with Oracle Advanced Security.

Software Requirements for Legato Storage Manager

Legato Storage Manager is a restricted-functionality version of Legato NetWorker. For information on the software requirements for Legato Storage Manager, see Requirements for Legato Storage Manager, on page B-2

HP-UX and Installation-Specific Issues and Restrictions

The following issues and restrictions can affect the installation or use of Oracle8i on HP 9000 Series HP-UX. Check the Release Notes that accompany this release and the README files in the $ORACLE_HOME/relnotes directory before using Oracle8i. For Release 3 (8.1.7), the README files are uncompressed and linked to the top-level HTML file in the doc directory. README files for other products on the Oracle8i CD-ROM are in the doc or admin/doc directories for the respective products.
Using Hummingbird Exceed

If you are using Hummingbird’s Exceed X-windows emulator while installing and using Oracle8i, set the window manager to run in "Native" mode so that Microsoft windows functions as the window manager. See your Exceed documentation for instructions on configuring the window manager.

Re-Installing Release 3 (8.1.7)

If you re-install Oracle8i Server into an ORACLE_HOME where Oracle8i Server Release 3 (8.1.7) is already installed, you must also re-install any product options, such as Oracle Partitioning, that were enabled before you began the re-installation.

New ORACLE_HOME

Oracle Corporation recommends that you install Oracle8i Release 3 (8.1.7) into a new ORACLE_HOME. Do not install Oracle8i Release 3 (8.1.7) products into an ORACLE_HOME directory that already contains Oracle products.

If you must install Oracle8i Release 3 (8.1.7) into an ORACLE_HOME that contains 8.1.5 or 8.1.6 products, remove those products with Oracle Universal Installer.

Backing Up the root.sh Script

After the successful installation of Oracle8i, back up the root.sh script. If you install another product category (such as Oracle8i Management Infrastructure) into the same ORACLE_HOME, Oracle Universal Installer will delete the content of the root.sh script during the course of the installation. If you require the original root.sh script, you can recover it from the root.sh.save file.

Java Runtime Environment (JRE)

The JRE certified for use with Oracle8i is used by Oracle Java applications such as the Oracle Universal Installer and is the only one supported to run with these applications. Customers should not modify this JRE, unless it is done through a patch provided by Oracle Support Services.

The inventory can contain multiple versions of the JRE, each of which can be used by one or more products or releases. The Installer creates the oraInventory directory the first time it is run to keep an inventory of products that it installs on your system as well as other installation information. The location of oraInventory is defined in /var/opt/oracle/oraInst.loc.
Products in an ORACLE_HOME access the JRE through a symbolic link in $ORACLE_HOME/JRE to the actual location of a JRE within the inventory. Customers should not modify the symbolic link unless it is done through a patch provided by Oracle Support Services.

The HP-UX patches listed below are required or recommended for JRE 1.1.8.03 and can be obtained from:

http://www.hp.com/go/java

Character Mode

Installation can no longer be performed using character mode. However, you can configure the Oracle Universal Installer to perform a non-interactive installation of Oracle products. The Installer can be run in non-interactive mode directly from your system’s X-windows console or via an X-terminal or PC X-terminal on a remote system. For more information on the non-interactive installation of Oracle products, see "Non-Interactive ("Silent") Installation and Configuration" on page 3-29.

Upgrading and Migrating

If you are upgrading an existing system, there are issues that exceed the scope of this manual. See Oracle8i Migration for details on upgrade and migration procedures.

Note: The Migration Utility is available as a stand-alone product.

File Systems

Oracle8i Server must be able to verify that file writes have been made to disk. File systems that do not support this verification are not supported for use with Oracle database files, although Oracle software may be installed on them.

Optimal Flexible Architecture

Optimal Flexible Architecture (OFA), Oracle’s standard set of configuration guidelines for Oracle databases, is supported, but not enforced, by the Oracle Universal Installer. The starter database included with the Typical installation type of Oracle8i Enterprise Edition is created under a single mount point.
HP-UX 10.20

HP-UX 10.20 is not supported for use with Release 3 (8.1.7). See Table 1–6 for operating system details.

Very Large Files

Oracle8i includes native support for files greater than 2 GB in both 32-bit and 64-bit Oracle8i releases. HP-UX also supports large files; however, verify that your file system and volume manager do not impose file size limits. Some System V file systems have a 2 GB maximum.

You should also check your shell to determine whether it will impose a limit.

To check shell limits, use the following command:

$ ulimit -Sa

To check hard limits, use the following command:

$ ulimit -Ha

For example, if file (blocks) is set to 2097148, the maximum size of a file that you can create is 1 GB.

Large files is a technology that must be explicitly enabled. An HP 9000 system will not support large files simply because it has been updated to a release of HP that supports large files.

To create a large-files-enabled file system, use the mkfs or newfs command. The following example shows how to create a large-files file system:

/usr/sbin/mkfs -F hfs -o largefiles /dev/vg02/1vol1

HP also provides the ability to change a file system back and forth between large files and no large files. To convert file systems between large files and no large files, first unmount the file systems you wish to convert. Then, use the fsadm command to perform the conversion. The following example shows how to convert a no-large-files file system to a large-files file system:
After you have successfully completed any file system conversions, run `fsck` on the converted file systems.

For more information about large file systems on HP, contact your HP representative.

See Table 1–11, "Oracle File Size Limits" on page 1-15 for Oracle-specific file size limits. The `db_block_size` parameter is defined in the `$ORACLE_HOME/dbs/init<sid>.ora` file.

### Table 1–11  Oracle File Size Limits

<table>
<thead>
<tr>
<th>File Type</th>
<th>Maximum Size in Bytes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Datafiles where <code>db_block_size</code>=2048</td>
<td>8,589,932,544</td>
</tr>
<tr>
<td>Datafiles where <code>db_block_size</code>=4096</td>
<td>17,179,865,088</td>
</tr>
<tr>
<td>Datafiles where <code>db_block_size</code>=8192</td>
<td>34,359,730,176</td>
</tr>
<tr>
<td>Datafiles where <code>db_block_size</code>=16384</td>
<td>68,719,460,352</td>
</tr>
<tr>
<td>Import/Export file</td>
<td>2,147,483,647</td>
</tr>
<tr>
<td>SQL*Loader file</td>
<td>2,147,483,647</td>
</tr>
</tbody>
</table>

**Oracle Parallel Server Restriction**

Because all Oracle databases on a cluster linked in Parallel Server mode must match the word size of the Cluster Group Services executable, they must all run only a 32-bit executable. Mixing word sizes of parallel server executables, even across different databases, will not work in 8.1.x. This restriction does not apply to Oracle executables that are not linked in Parallel Server modes.
After you have verified that your system meets the requirements described in Chapter 1, "System Requirements", use this chapter to help you prepare your system for installing Oracle8i.

- UNIX System Configuration
- Understanding Setup Tasks
- Setup Tasks to Perform as the root User
- Setup Tasks to Perform as the oracle User
- Setup Tasks for Oracle Products
- Understanding Product Configuration Installation Window Dialogues
- Understanding Net8 Configuration
- Identifying Your Database Environment
UNIX System Configuration

Table 2–1 summarizes the requirements for installing Oracle8i on your HP-UX system. If your system fails to satisfy any listed requirement, perform the tasks listed on page 2-4 as necessary to configure your system to meet these requirements.

Table 2–1 UNIX System Configuration Summary

<table>
<thead>
<tr>
<th>System Factor</th>
<th>Requirement for Oracle8i</th>
</tr>
</thead>
<tbody>
<tr>
<td>UNIX Kernel Parameters:</td>
<td>Use the System Administrator’s Menu (SAM) to configure the HP-UX kernel with the minimum recommended values.</td>
</tr>
<tr>
<td>Shared Memory</td>
<td>SHMMAX 1 GB</td>
</tr>
<tr>
<td></td>
<td>This setting does not affect how much shared memory is needed or used by Oracle8i or the operating system. It is used only to indicate the maximum allowable size. This setting also does not impact operating system kernel resources.</td>
</tr>
<tr>
<td></td>
<td>SHMMIN 1</td>
</tr>
<tr>
<td></td>
<td>SHMMNI 100</td>
</tr>
<tr>
<td></td>
<td>SHMSEG 10</td>
</tr>
<tr>
<td>Semaphores</td>
<td>SEMMNI 70</td>
</tr>
<tr>
<td></td>
<td>Set the number of semaphore set identifiers in the system. SEMMNI determines the number of semaphore sets which can be created at any one time.</td>
</tr>
<tr>
<td></td>
<td>SEMMNS 200</td>
</tr>
<tr>
<td></td>
<td>Set the number of semaphores in the system to 200. The default value of SEMMNS is 128, which is, in most cases, too low for Oracle.</td>
</tr>
</tbody>
</table>

Oracle8i Installation Guide
Understanding Setup Tasks

The following pre-installation setup tasks configure your system, and set up accounts, groups, variables and permissions needed to run Oracle8i. If they are not

Table 2–1 UNIX System Configuration Summary

<table>
<thead>
<tr>
<th>System Factor</th>
<th>Requirement for Oracle8i</th>
</tr>
</thead>
<tbody>
<tr>
<td>Threads</td>
<td>MAX_THREAD_PROC  256 or more Set the maximum number of threads per process to 256 or more. The default value of MAX_THREAD_PROC is 64, which is, in most cases, too low for Oracle.</td>
</tr>
<tr>
<td>Mount Points (Storage Devices)</td>
<td>Oracle Universal Installer requires only two mount points: one for the software, and one for the database files. An Optimal Flexible Architecture (OFA)-compliant database requires at least four mount points, all at the same level of the directory structure. One is for the software, three are for database files. See the Oracle8i Administrator’s Reference for information on implementing OFA on UNIX.</td>
</tr>
<tr>
<td>UNIX Groups for Oracle Roles</td>
<td>A UNIX group is required for the OSDBA role. This book assumes that the group is named dba. The OSOPER role may belong to the same group as the OSDBA or to a different group.</td>
</tr>
<tr>
<td>Special UNIX Group to own the Oracle Universal Installer oraInventory</td>
<td>All users installing Oracle products in any ORACLE_HOME should have oinstall set as their primary UNIX group. The Installer’s inventory is shared by all ORACLE_HOMES on a system and is group-writable. Install Oracle products with oinstall set as the current group.</td>
</tr>
<tr>
<td>UNIX Accounts</td>
<td>A UNIX account that is dedicated solely to installing and upgrading Oracle products. The account should have the oinstall group as its primary group and the OSDBA group as a secondary group. This book assumes that the installer owner is called oinstall and the OSDBA account is called oracle.</td>
</tr>
<tr>
<td>Permissions for File Creation</td>
<td>Set umask to 022 for the oracle account.</td>
</tr>
<tr>
<td>ORACLE_BASE</td>
<td>Recommended as part of an OFA-compliant installation. See “ORACLE_BASE” on page 2-11 for further information.</td>
</tr>
</tbody>
</table>

Understanding Setup Tasks
Setup Tasks to Perform as the root User

performed prior to installation, you will be given the option during installation to become root and run orainstRoot.sh, a script program that will perform many of these setup tasks for you. However, running orainstRoot.sh may not provide a satisfactory environment for your system and needs. Oracle Corporation recommends that these steps be performed manually.

Setup Tasks to Perform as the root User

Log in as the root user and perform the following tasks to set up your environment for Oracle8i:

▌ Configure the UNIX Kernel for Oracle8i
▌ Create Mount Points
▌ Create UNIX Groups for Database Administrators
▌ Create a UNIX Group for the Oracle Universal Installer Inventory
▌ Create a UNIX Account to Own Oracle Software
▌ Create a UNIX Account to Own the Apache Server

---

**Note:** In addition to these setup tasks, you will need root privileges near the start of the installation if the file /var/opt/oracle/oraInst.loc does not exist. You will also need root privileges near the end of the installation to run the root.sh script.

---

**Configure the UNIX Kernel for Oracle8i**

Configure the UNIX kernel Interprocess Communication (IPC) parameters to accommodate the System Global Area (SGA) structure of Oracle8i. You will not be able to start up the database if the system does not have adequate shared memory to accommodate the SGA.

1. Use the `ipcs` command to obtain a list of the system’s current shared memory and semaphore segments, and their identification number and owner.

2. Set the kernel parameters corresponding to the:
   - maximum size of a shared memory segment (SHMMAX)
   - minimum size of shared memory segment (SHMMIN)
   - maximum number of shared memory identifiers in the system (SHMMNI)
- maximum number of shared memory segments a user process can attach (SHMSEG)
- maximum number of semaphore identifiers in the system (SEMMNI)
- maximum number of semaphores in the system (SEMMNS)

Table 2-1 on page 2-2 shows the required settings, which should be acceptable for most installations.

Setting parameters too high for the operating system can prevent the machine from booting up. On HP-UX 11.0, use System Administrator’s Menu (SAM) to modify kernel parameters.

3. Reboot the system if you have modified the kernel, shared memory, or semaphore parameters.

Create Mount Points

Oracle8i requires at least two mount points:
- one for the software
- at least one for the database files

It requires at least four mount points when creating an Optimal Flexible Architecture (OFA)-compliant installation:
- one for the software
- at least three for database files.

All software and database mount point names used for Oracle8i should match the pattern /pm, where p is a string constant and m is a fixed-length key to distinguish between mount points. Table 2-2, “Sample Mount Point Naming Scheme”, on page 2-5 shows a sample naming scheme.

Table 2-2 Sample Mount Point Naming Scheme

<table>
<thead>
<tr>
<th>Software Mount Point</th>
<th>Database Mount Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>/u01</td>
<td>/u02</td>
</tr>
<tr>
<td>/u02</td>
<td>/u03</td>
</tr>
<tr>
<td>/u03</td>
<td>/u04</td>
</tr>
</tbody>
</table>
See Also: Optimal Flexible Architecture is described in detail in Appendix A, "Optimal Flexible Architecture" of the Oracle8i Administrator's Reference for HP 9000 Series HP-UX.

Create UNIX Groups for Database Administrators
During installation, two Oracle roles are created:

- SYSDBA
- SYSOPER

Database administrators are granted these roles by virtue of their membership in corresponding UNIX groups. Oracle8i documentation refers to these UNIX groups as the osdba and osoper groups. Create the group(s) for these roles before you log in as the oracle user and start the Oracle Universal Installer. You may assign the roles to two separate UNIX groups, or to a single group.

On HP-UX 11.0, use the System Administrator’s Menu (SAM) utility to create a group named dba or another name of your choosing. If you plan to assign the SYSOPER role to a separate group, create that group also.

The Oracle Universal Installer gives both Oracle SYSDBA and SYSOPER privileges to members of the UNIX group dba by default. If you perform a Custom installation of Oracle8i, or if the oracle user is not a member of a group called dba, Oracle Universal Installer will prompt you to enter the group(s) you have created for these roles.

Create a UNIX Group for the Oracle Universal Installer Inventory
On HP-UX, use the System Administrator’s Menu (SAM) utility to create a group named oinstall. The oinstall group will own the Oracle Universal Installer’s oraInventory. The oracle user account that runs the installation should have the oinstall group as its primary group.

Create a UNIX Account to Own Oracle Software
The oracle account is the UNIX user account that owns the Oracle8i software after installation. Run Oracle Universal Installer with this user account.

On HP-UX 11.0, use the operating system administration utility SAM to create an oracle account with the following properties:
Sites with multiple ORACLE_HOMEs on one system may install Oracle Software with the same oracle account, or separate ones. Each oracle account must have oinstall as its primary group.

Create a UNIX Account to Own the Apache Server

The Apache account is a UNIX user account that owns the Apache server after installation. If you use a default Apache configuration (one that listens to ports lower than 1024, which are reserved to root), Oracle Corporation recommends, for security reasons, that a separate account owner be set up for Apache, and that the Apache server be configured to assign ownership of listener and module actions to that account. This is done by using the Apache configuration parameter user, which resets account ownership once the server is started.

The Apache account owner should have minimal user privileges, and should not be a member of any groups whose files are not intended to be visible to the outside world. The nobody account that many UNIX versions have may serve as a model for the Apache account.

Table 2–3 Properties of the oracle Account

<table>
<thead>
<tr>
<th>Login Name</th>
<th>Any name, but this document refers to it as the oracle account.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary GID</td>
<td>The oinstall group.</td>
</tr>
<tr>
<td>Secondary GID</td>
<td>The dba group.</td>
</tr>
<tr>
<td>Home Directory</td>
<td>Choose a home directory consistent with other user home directories. The home directory of the oracle account does not have to be the same as the ORACLE_HOME directory.</td>
</tr>
<tr>
<td>Login Shell</td>
<td>The default shell can be /usr/bin/sh, /usr/bin/csh, or /usr/bin/ksh, but the examples in this document assume the Bourne shell (/usr/bin/sh).</td>
</tr>
</tbody>
</table>

Note: Use the oracle account only for installing and maintaining Oracle software. Never use it for purposes unrelated to the Oracle8i Server. Do not log in to the database when using the oracle (UNIX) account. Do not use root as the oracle account.
Use the `useradd` utility to create an Apache account with the following properties:

**Table 2–4 Properties of the Apache Account**

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Login Name</td>
<td>Any name, but this document refers to it as the Apache account.</td>
</tr>
<tr>
<td>Primary GID</td>
<td>The primary group must be the same group that owns <code>oraInventory</code>. The location of <code>oraInventory</code> is defined in <code>/var/opt/oracle/oraInst.loc</code>. The default group name that has ownership of <code>oraInventory</code> is the <code>oinstall</code> group. For security reasons, this group ownership needs to be changed after installation. See Change Group Membership of the Apache Account.</td>
</tr>
<tr>
<td>Secondary GID</td>
<td>The secondary group should be one in which only the Apache account is a member.</td>
</tr>
<tr>
<td>Home Directory</td>
<td>Choose a home directory consistent with other user home directories.</td>
</tr>
</tbody>
</table>

Oracle Corporation recommends caution in adding servlet classes, modifying or upgrading to Apache modules not certified with this version of Oracle8i, or upgrading the Apache server to later versions than the one certified with this version of Oracle8i. Oracle-provided patches for and configurations of Apache will be supported, but it is possible for users to change Apache in ways that are difficult or impossible for Oracle to support.
See also: *Apache version 1.3 User’s Guide* for information and examples on configuring Apache.

**Setup Tasks to Perform as the oracle User**

Log in to the *oracle* account and perform the following tasks as necessary:

- Set Permissions for File Creation
- Set Environment Variables
- Update the Environment for Current Session

### Set Permissions for File Creation

Set umask to 022 for the *oracle* account to ensure group and other have read and execute permissions, but not write permission, on files installed.

1. Enter the `umask` command to check the current setting.
2. If the `umask` command does not return 022, set it in the `.profile` or `.login` file of the *oracle* account and execute the following command:

   ```
   $ umask 022
   ```

### Set Environment Variables

Before starting the Oracle Universal Installer, set the DISPLAY and PATH environment variables and any of the other variables as appropriate. Table 2–5, "Environment Variable Summary", provides a brief summary of the variables listed in this section. Refer to each variable’s entry in this section for instructions on setting the variable correctly.

**Note:** If an Oracle Server already exists on your system, its settings may have a bearing on the settings that you choose for the new environment.

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
<th>Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>DISPLAY</td>
<td>The name, server number, and screen number of the system where the Oracle Universal Installer will display.</td>
<td>Yes</td>
</tr>
<tr>
<td>PATH</td>
<td>Shell’s search path for executables.</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Setup Tasks to Perform as the oracle User

**DISPLAY**
On the system where you will run Oracle Universal Installer, set DISPLAY to the system name or IP address, X-server, and screen used by your workstation. Do not use the hostname or IP address of the system where the software is being installed unless you are performing the installation from that system’s X-windows console. Use the machine name or IP of your own workstation if you are installing from a remote system. If you are not sure what the X-server and screen should be set to, use 0 (zero) for both.

If you get an Xlib error similar to "Failed to connect to server", "Connection refused by server" or "Can’t open display" when starting the Installer, run the following Bourne/Korn shell or C shell commands on your X workstation.

**For the Bourne or Korn shells:**

On the server where the Oracle database will be installed, enter the following:

```bash
$ DISPLAY=workstation_name:0.0
$ export DISPLAY

In the session on your workstation:

$ xhost +server_name
```

**For the C shell:**

On the server where the Oracle database will be installed, enter the following:

```bash
% setenv DISPLAY workstation_name:0.0

In the session on your workstation:
```

---

**Table 2–5  Environment Variable Summary**

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
<th>Required?</th>
</tr>
</thead>
<tbody>
<tr>
<td>ORACLE_BASE</td>
<td>Directory at the top of the Oracle software and administrative file structure.</td>
<td>No</td>
</tr>
<tr>
<td>ORACLE_HOME</td>
<td>Directory containing Oracle software for a given release.</td>
<td>No</td>
</tr>
<tr>
<td>NLS_LANG</td>
<td>Language, territory and character set to use when installing.</td>
<td>No</td>
</tr>
<tr>
<td>ORA_NLS33</td>
<td>Location of National Language Support character set data.</td>
<td>No</td>
</tr>
<tr>
<td>ORACLE_SID</td>
<td>The Oracle server instance identifier to use during installation.</td>
<td>No</td>
</tr>
<tr>
<td>ORACLE_DOC</td>
<td>Directory where documentation will be installed.</td>
<td>No</td>
</tr>
</tbody>
</table>
Setup Tasks to Perform as the oracle User

Pre-Installation

% xhost +server_name

If you are using a PC X server, refer to your PC X server documentation for instructions on how to configure the PC X server to allow remote X clients to connect.

Check that the DISPLAY variable is correctly set as detailed above.

PATH
Set the shell’s search path to include the following:

- $ORACLE_HOME/bin, /usr/bin, /etc, /usr/ccs/bin
- the local bin directory, /usr/local/bin, if it exists

ORACLE_BASE
ORACLE_BASE specifies the directory at the top of the Oracle software and administrative file structure. The value recommended for an OFA configuration is software_mount_point/app/oracle. For example: /u01/app/oracle. If you are not using an OFA-compliant system, you do not have to set ORACLE_BASE, but it is highly recommended that you do set it.

ORACLE_HOME
ORACLE_HOME specifies the directory containing the Oracle software for a given release. The Optimal Flexible Architecture recommended value is:

$ORACLE_BASE/product/release. For example:
/u01/app/oracle/product/8.1.7.

Ensure that the value of ORACLE_HOME points to a directory that does not already contain any Oracle software prior to Oracle8i Release 1 (8.1.5) or Release 2 (8.1.6).

NLS_LANG
Set NLS_LANG if you will create a database that uses a character set other than US7ASCII (the default). If you will install Oracle Internet Directory, set NLS_LANG to UTF8.

Oracle supports client/server environments where clients and servers use different character sets. The character set used by a client is defined by the value of the NLS_LANG parameter for the client session. The character set used by a server is its database character set. Data conversion is done automatically between these character sets if they are different.
Setup Tasks to Perform as the oracle User

**ORA_NLS33**
This environment variable specifies the directory under which Oracle’s *.nlb files are placed. The *.nlb files define languages, territories, character sets, and linguistic sorting orders. Setting this environment variable is necessary only if one ORACLE_HOME has multiple versions of directories under which *.nlb files will be placed.

See Also: For more information, see the *Oracle8i National Language Support Guide*.

**ORACLE_SID**
If you plan on creating a database during installation, you have the option of setting ORACLE_SID to the value of the Oracle server instance identifier (referred to in this installation guide as the *sid*). If you choose to create a database during installation, the Installer will prompt you to confirm this value.

**ORACLE_DOC**
ORACLE_DOC specifies the directory where online documentation will be installed. See "Accessing Installed Documentation" on page xi to determine where documentation is installed if you do not set ORACLE_DOC.

Update the Environment for Current Session
With a text editor, add the settings for the environment variables listed in "Set Environment Variables" to the .profile or .login file of the oracle account. Once you have finished editing these initialization files, you can quickly update the environment in the current shell session before beginning installation by using the appropriate shell command.

For the Bourne or Korn shell:
$ ../.profile

For the C shell:
% source .login

See Also: For more information about National Language Support features, refer to *Oracle8i Reference*. A complete list of valid character sets is available in the *Oracle8i National Language Support Guide*. 
Setup Tasks for Oracle Products

Before beginning your installation, complete the following tasks for products that you will install:

- Pre-Installation Steps for Oracle Options
- Tools and Precompilers
- Networking and System Management Products

Pre-Installation Steps for Oracle Options

Pre-Installation Steps for Oracle Parallel Server

These steps should be completed in conjunction with steps listed in the Oracle8i Parallel Server Setup and Configuration Guide.

Complete the following steps before installing the Parallel Server:

1. Create raw devices.

   All files associated with an Oracle Parallel Server database must reside on raw volumes so they can be accessed by all nodes in the cluster. Control and data files are shared by all instances. Each instance has its own log files, but all instances must have access to all log files during recovery.

   See Also: Oracle8i Administrator’s Reference for information on creating raw devices.

   Note: The following steps only apply if you are performing a Typical installation of Oracle8i. These steps are not required for the Custom installation type. See "Start Oracle Universal Installer (OUI)" on page 3-3 for more information.

2. On the node from which you will run Oracle Universal Installer, create an ASCII file with entries for each database object and the corresponding raw device file name. This file will be used by Oracle Database Configuration Assistant to configure the database for Oracle Parallel Server.
3. Set the environment variable DBCA_RAW_CONFIG to point to the ASCII mapping file. When Oracle Database Configuration Assistant creates the database, it looks for the environment variable, reads in the ASCII file, and uses the file names indicated to build the tablespaces.

**Steps to Perform as the root User**

1. Make sure you have a UNIX group defined in the `/etc/group` file on all nodes of the cluster that will serve as the OSDBA group. The OSDBA group name and number (and OSOPER group if you plan to designate one during installation) must be identical for all nodes of a UNIX cluster accessing a single database. The default UNIX group name for the OSDBA and OSOPER groups is `dba`. A separate group should be created to own the Oracle Universal Installer `oraInventory` file. This group is referred to as the `oinstall` group in Oracle documentation. It may be given another name of your choosing.

2. Create a UNIX account on each node of the cluster so that:
   - the account has the `oinstall` group as the primary group.
   - the account has the `dba` group as the secondary group.
   - the account is used only to install and update Oracle software.
   - the account has write permissions on remote directories.

3. Create a mount point directory on each node to serve as the top of your Oracle software directory structure so that:
   - the name of the mount point on each node is identical to that on the initial node.
   - the `oracle` account has read, write, and execute privileges.

   **See Also:** Recommended naming conventions for Oracle mount points are discussed in "Create Mount Points" on page 2-5.

4. Start MC/ServiceGuard:

   `$ /usr/sbin/cmruncl`
Setup Tasks for Oracle Products

See Also: See Configuring OPS Clusters with MC/ServiceGuard OPS Edition from Hewlett-Packard for more information.

5. On the node from which you will run Oracle Universal Installer, set up user equivalence by adding entries for all nodes in the cluster, including the local node, to either the .rhosts file of the oracle account or the /etc/hosts.equiv file.

6. Exit the root account when you are done.

Steps to Perform as the oracle User

1. Verify that the MC/ServiceGuard is running:
   
   ```
   $ /usr/sbin/cmviewcl
   ```

   If the MC/ServiceGuard is not active, repeat step 6 on page 2-15.

2. Check for user equivalence for the oracle account by performing a remote login (rlogin) to each node in the cluster. If you are prompted for a password, the oracle account has not been given the same attributes on all nodes. The Installer cannot use the rcp command to copy Oracle products to the remote directories without user equivalence.

   If you have not set up user equivalence, you must perform Step 5 in "Steps to Perform as the root User" above.

Tools and Precompilers

Complete the tasks for the following tools and precompilers before installing them.

Pre-Installation Steps for the Pro*COBOL Precompiler

1. Verify that the COBOL compiler executable is included in the PATH setting.

2. Verify that $COBLIB is included in the setting for SHLIB_PATH.

3. Set the COBDIR environment variable to the directory where the COBOL compiler is installed.
See Also: To determine the settings for COBDIR and COBLIB environment variables see your product specific COBOL documentation.

Pre-Installation Steps for the Pro*C/C++ Precompiler
Verify that the C compiler executable is included in the PATH setting. The HP C compiler is usually located in /usr/ccs/bin.

Pre-Installation Steps for Pro*FORTRAN Precompiler
Verify that the FORTRAN compiler executable is included in the PATH setting.

Pre-Installation Steps for Legato Storage Manager (LSM)
See Appendix, "Pre-Installation Steps for Legato Storage Manager (LSM)" for information on the pre-installation steps for Legato Storage Manager.

Networking and System Management Products

Configuring LDAP Services
Lightweight Directory Access Protocol (LDAP) Version 3 is the Internet open standard for directory access protocol. Some products included with Oracle8i Release 3 (8.1.7) can be configured to use the LDAP V3 directory service provided by Oracle Internet Directory. This directory service is included for use by the Oracle8i database to centralize the storage of database user, Net8 network connector, and database listener parameters.

If you plan to configure Oracle products to use LDAP directory services, Oracle Internet Directory should be available prior to installing and configuring those products. Install Oracle Internet Directory (OID) if it is not already installed on your system. For optimal directory performance, Oracle corporation recommends installing Oracle Internet Directory on a system separate from other Oracle software. See "Pre-Installation Steps for Oracle Internet Directory" and Chapter 3, "Installation" for directions on OID installation procedures. For information on LDAP and Oracle Internet Directory, refer to the Oracle Internet Directory Administrator’s Guide.

Pre-Installation Steps for Oracle Internet Directory
These steps should be completed in addition to those steps listed in the Oracle Internet Directory Administrator’s Guide.
If Oracle8i Release 3 (8.1.7) is already installed on your system, make sure that:

- Oracle8i Server is running
- you can connect to the database as user "internal" without a password; for example:
  
  $ sqlplus internal

  If you cannot connect as internal without a password, refer to the Oracle8i Administrator’s Guide for instructions on configuring the internal account to not require a password.

- the Net8 listener serving connections to the database is running; use the following command:
  
  $ lsnrctl status [listener_name]

  The listener_name field is required if the listener has a name other than the default, listener.

If Oracle8i Release 3 (8.1.7) is not already installed on your system, then Oracle Universal Installer will install it with Oracle Internet Directory.

### Net8 Server

If Net8 Server is already installed on your system, shut down all listeners before installing Net8. To determine if any listeners are running, enter:

$ lsnrctl status [listener_name]

The listener_name field is required if the listener has a name other than the default, listener.

Shut down a running listener with the following command:

$ lsnrctl stop listener_name

See "Understanding Net8 Configuration" on page 2-18 to determine how to install and configure Net8 on your system.

### Oracle Supported Protocols

Before installing any protocol, verify that the underlying network is functioning and configured properly.
TCP/IP
The TCP/IP protocol is installed automatically with all Oracle8i Server installations.
Verify that the network is functioning properly by transferring a test file using the ftp utility.

```
$ ftp remote_server_name
ftp> put test_filename
ftp> get test_filename
```

Understanding Product Configuration Installation Window Dialogues
You will be asked to make various choices about product configuration during the installation process. The following sections outline the choices you will be asked to make, and how they affect the configuration of Oracle8i. Review these product configuration outlines prior to installation to ensure that you make choices that best match your system and your requirements.

Understanding Net8 Configuration
Net8 Configuration Assistant is a graphical user interface (GUI) tool that enables you to configure your Oracle client/server network environment. Net8 Configuration Assistant is automatically started from within Oracle Universal Installer for all installation types. It can be manually started as a stand-alone tool.

Note: This chapter describes running Net8 Configuration Assistant from within Oracle Universal Installer. See the Net8 Administrator’s Guide or “Net8 Configuration Assistant” on page 4-15 for information on running Net8 Configuration Assistant in stand-alone mode.

Depending on the installation type selected, Net8 Configuration Assistant configures your network in one of two ways:
- automatically configures your network for standard database connection methods (user input is minimal)
- creates a customized network by prompting for extensive input
Configuration consists of creating and modifying network files located in the $ORACLE_HOME/network/admin directory.
Server Network Configuration

The type of network configuration created with the server installation types and the amount of user input required are described below. Review the options below and identify the network configuration that best matches your requirements and network configuration expertise.

<table>
<thead>
<tr>
<th>If You Select These Installation Types...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle8i Enterprise Edition or Oracle8i</td>
<td>Net8 Configuration Assistant creates a net service name to use in connecting to a database.</td>
</tr>
<tr>
<td>- Typical</td>
<td>Net8 Configuration Assistant then automatically creates your Net8 server environment by configuring the following files:</td>
</tr>
<tr>
<td>- Minimal</td>
<td>- listener.ora</td>
</tr>
<tr>
<td></td>
<td>Configures and starts a listener named listener with protocol addresses for both the Oracle8i database using your operating system’s preferred protocol (typically TCP/IP on port 1521) and for external procedures using the IPC protocol.</td>
</tr>
<tr>
<td></td>
<td>Configures services information for external procedures.</td>
</tr>
<tr>
<td></td>
<td>- sqlnet.ora</td>
</tr>
<tr>
<td></td>
<td>Configures the Net8 Naming Domain (most conveniently set to be the same as the network domain in which your computer is located). This domain is automatically appended to any unqualified net service name given in the connect string. An unqualified net service name does not contain a Net8 Naming domain.</td>
</tr>
<tr>
<td></td>
<td>If you have not defined a domain for the system in the Global Database Name field during installation, then the system domain setting will default to the null domain. In that case, Net8 will not define a new domain setting for the NAMES.DIRECTORY_PATH parameter in sqlnet.ora</td>
</tr>
<tr>
<td></td>
<td>- tnsnames.ora</td>
</tr>
<tr>
<td></td>
<td>Creates a net service name (EXTPROC_CONNECTION_DATA) in the tnsnames.ora file to use for external procedures.</td>
</tr>
<tr>
<td></td>
<td>Oracle Database Configuration Assistant configures additional Net8 Server information in the following files after successful creation of the Oracle8i database.</td>
</tr>
<tr>
<td></td>
<td>- listener.ora</td>
</tr>
<tr>
<td></td>
<td>Configures static service information for the Oracle8i database.</td>
</tr>
</tbody>
</table>

Note: You cannot configure access to an LDAP directory service through the Typical or Minimal installation types. LDAP directory configuration is available through the Custom installation type.
Understanding Net8 Configuration

If You Select These Installation Types... Then...

<table>
<thead>
<tr>
<th>Oracle8i Enterprise Edition or Oracle8i Custom (and then select Net8 Server and Net8 Client)</th>
<th>Net8 Configuration Assistant first prompts you to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>・ Complete directory service access configuration, including entering a directory server type and location and verifying the administrative context from which the server can look up, create, and modify net service names. You are prompted for this information if you have never configured this ORACLE_HOME for directory service access.</td>
<td></td>
</tr>
<tr>
<td>・ Create a listener(s) and select network protocols to use for database connections</td>
<td></td>
</tr>
<tr>
<td>・ Select the naming methods to use to connect to databases (for example, selecting the local naming method enables the tnsnames.ora file to be used). Depending on your selection, you are prompted for additional information (for selecting the local naming method, you are prompted to enter a net service name, database SID, and networking protocol to use).</td>
<td></td>
</tr>
</tbody>
</table>

Net8 Configuration Assistant then automatically creates your Net8 server environment by configuring the following files:

- **listener.ora**
  Configures a listener with a name and protocol address that you choose. A protocol address and static service information for external procedures is also configured.

- **sqlnet.ora**
  Configures the server's domain as the default domain (the domain in which your computer is located). This domain is automatically appended to any unqualified name.
  Configures the naming methods the server uses to resolve a name to a connect descriptor.

- **tnsnames.ora**
  Creates a net service name entry to use for external procedure connections.

- **ldap.ora**
  Configures directory service access by identifying the directory server type. It may also identify the location and the administrative context.

Oracle Database Configuration Assistant automatically configures additional Net8 server information in the following file during creation of the Oracle8i database:

- **listener.ora**
  Configures static service information

2-20 Oracle8i Installation Guide
Client Network Configuration

The type of network configurations created with the client installation types and the amount of user input required are described below. Review the selections below prior to starting Oracle Universal Installer. Identify the network configuration that best matches your network requirements and configuration expertise.

If You Select These Installation Types... Then...

Oracle8i Client
- Administrator
- Programmer
- Application User
- Custom (and then select Net8 Client)

Net8 Configuration Assistant first prompts you to select one of the following methods by which to configure access to your Oracle8i database:
- Local Naming
  Specify a net service name to resolve network addresses. This name is configured and stored in configuration files on each individual client.
- Directory Naming
  Specify an Oracle Names Server or third-party naming service to resolve service names and network addresses. This enables client connections to Oracle8i databases using information registered with the naming service when the databases were created.

Depending on what you select, you are prompted to provide additional information. Net8 Configuration Assistant then automatically creates your Net8 client environment by configuring the following files:
- tnsnames.ora
  Specifies a net service name (if Local naming was selected)
- ldap.ora
  Configures naming service access by identifying the directory server type (if Directory naming was selected). It may also identify the location and the administrative context.
Identifying Your Database Environment

Oracle Universal Installer enables you to configure your Oracle8i database to maximize its performance under the workload it will be given. To identify which type of database environment is appropriate for your needs, see Table 2–6, "Oracle8i Database Environment Descriptions":

<table>
<thead>
<tr>
<th>Environment</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Online Transaction Processing (OLTP)</td>
<td>Many users perform large numbers of concurrent transactions, where each transaction is a relatively simple operation processing a small amount of data. Billing databases, such as those commonly found on Internet commerce sites, are the most common example of this database type. Transactions consist of reading (SELECT statements), writing (INSERT and UPDATE statements), and deleting (DELETE statements) data in database tables.</td>
</tr>
</tbody>
</table>

If You Select These Installation Types...  Then...

- `sqlnet.ora`

  Configures the naming methods a client uses to resolve a name to a connect descriptor.

  Configures the client’s domain as the default domain (the domain in which your computer is located). This domain is automatically appended to any unqualified net service name given in the connect string. An unqualified net service name does not contain a network domain.

  If you have not defined a domain for the client in the Global Database Name field during installation, then the system domain setting will default to the null domain. In that case, Net8 will not define a new domain setting for the `NAMES.DIRECTORY_PATH` parameter in `sqlnet.ora`.

  For more information on installation, configuring service names, and client configuration, see the Net8 Administrator’s Guide.
Identifying Your Database Environment

Identifying Your Database Environment

Identification of the database environment selection affects the values for the following database settings:

- DB_BLOCK_BUFFERS initialization file parameter
- DB_BLOCK_SIZE initialization file parameter
- PROCESSES initialization file parameter
- SHARED_POOL_SIZE initialization file parameter
- Rollback tablespace information

See Also: Many Oracle documents provide more information about database environments, their effect on performance, and how they may be tuned to maximize performance. Use Oracle Information Navigator to search for information on areas in which you are interested. Oracle8i Concepts, Oracle8i Tuning, and Oracle Parallel Server Setup and Configuration Guide discuss in detail database environment issues.

Selecting a Database Creation Method

Oracle Database Configuration Assistant is a graphical user interface (GUI) tool that enables you to create an Oracle8i database for an OLTP, Warehousing, or Multipurpose environment. Oracle Database Configuration Assistant will be automatically started from within Oracle Universal Installer when you choose to create an Oracle8i database during installation. It can also be manually run as a stand-alone tool.

Table 2-6  Oracle8i Database Environment Descriptions

<table>
<thead>
<tr>
<th>Environment</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Warehousing, or Decision Support System (DSS)</td>
<td>Users perform very complex queries that access and process large volumes of data.</td>
</tr>
<tr>
<td></td>
<td>These queries (typically read-only) range from a simple query of a few records to numerous complex queries that sort thousands of records from many different tables. Historical databases are the most common example of this database type. Warehousing environments are also known as Decision Support System (DSS) environments.</td>
</tr>
<tr>
<td>Multipurpose</td>
<td>Both types of database use are given support with this database environment configuration. Select if average database use will be varied.</td>
</tr>
</tbody>
</table>
Each installation type of Oracle8i Enterprise Edition enables you to create an Oracle8i database. The types of databases (OLTP, Warehousing, and Multipurpose) created with the Typical, Minimal, and Custom installation types and the amount of user input required are described below. Review these selections and identify the database that best matches your database requirements and your database creation expertise.

**Note:** This chapter describes running Oracle Database Configuration Assistant from within Oracle Universal Installer. See "Oracle Database Configuration Assistant" on page 4-16 for information on running Oracle Database Configuration Assistant in stand-alone mode.

If You Perform These Steps... Then...

1. Select the **Typical** installation type.

   Oracle Database Configuration Assistant automatically starts at the end of Oracle8i installation and creates a pre-configured, ready-to-use multipurpose starter database with:
   - Default initialization parameters.
   - Automatic installation and configuration of Oracle options and interMedia\(^1\).
   - Advanced replication capabilities.
   - Database configuration of dedicated server mode\(^2\).
   - Archiving mode of NOARCHIVELOG.

   No user input is required other than the global database name and SID you are prompted to enter. Database character sets may be reset here. For more information on database character sets, see Oracle8i National Language Support Guide

---

\(^1\) Oracle Database Configuration Assistant configures options that were installed through Oracle Universal Installer.

\(^2\) See Chapter 5 of Oracle8i Administrator’s Guide for descriptions of dedicated server mode and multi-threaded server mode (also known as shared server mode).
<table>
<thead>
<tr>
<th>If You Perform These Steps...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Select the <em>Minimal</em> installation type.</td>
<td>Oracle Database Configuration Assistant automatically starts at the end of Oracle8i installation and creates the same Oracle8i database that you receive with <em>Typical</em>, with the following exceptions:</td>
</tr>
<tr>
<td>2. Select &quot;Yes&quot; when prompted to create a starter database.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Note:</strong> If you select &quot;No&quot;, all server products are installed, including the database software, but no database is created during installation. Oracle recommends that you allow the Installer to create a starter database to verify installation, and also to use as a model for understanding Oracle naming conventions, roles, and default users and their privileges. If you choose not to install the starter database, you can create your database later by manually running Oracle Database Configuration Assistant or with a SQL script. See the Oracle8i System Administrator's Guide for instructions.</td>
<td></td>
</tr>
<tr>
<td><strong>Note:</strong> A database is also installed through the Oracle Internet Directory installation type of Oracle8i Management Infrastructure. This database is only used for storing Oracle Internet Directory information.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>

If You Perform These Steps... Then...

1. Select the *Minimal* installation type.
2. Select "Yes" when prompted to create a starter database.

**Note:** If you select "No", all server products are installed, including the database software, but no database is created during installation. Oracle recommends that you allow the Installer to create a starter database to verify installation, and also to use as a model for understanding Oracle naming conventions, roles, and default users and their privileges. If you choose not to install the starter database, you can create your database later by manually running Oracle Database Configuration Assistant or with a SQL script. See the Oracle8i System Administrator's Guide for instructions.

**Note:** A database is also installed through the Oracle Internet Directory installation type of Oracle8i Management Infrastructure. This database is only used for storing Oracle Internet Directory information.
### If You Perform These Steps...

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Select the Custom installation type.</td>
</tr>
<tr>
<td>2.</td>
<td>Select Oracle Server and additional products in the Available Products window.</td>
</tr>
<tr>
<td>3.</td>
<td>Select “Yes” when prompted to create a starter database.</td>
</tr>
</tbody>
</table>

### Then...

If You Select the Custom database creation method...

Oracle Database Configuration Assistant guides you in the creation of a database fully customized to match your selected environment (OLTP, Warehousing, or Multipurpose) and database configuration mode (dedicated server or multi-threaded server). Options and interMedia components (if installed) and advanced replication (if selected) may be automatically or manually configured.

Select this option only if you are experienced with advanced database creation procedures, such as customizing:

- Data, control, and redo log file settings.
- Tablespace and extent sizes.
- Database memory parameters.
- Archiving modes, formats, and destinations.
- Trace file destinations.
- Character set values.
This chapter describes how to start the Oracle Universal Installer and install Oracle8i products on your system. Review and complete the tasks listed in Chapter 1, “System Requirements” and Chapter 2, “Pre-Installation” before beginning the installation.

- Oracle Universal Installer
- Non-Interactive (“Silent”) Installation and Configuration
Oracle Universal Installer

Complete these tasks to start Oracle Universal Installer:

- Mount the Oracle8i CD-ROM
- Start Oracle Universal Installer (OUI)

**Note:** Using the old Oracle Installer (installer shipped with releases 7.x and 8.0.x) to install components into a release 8.1 Oracle home directory is not supported. Likewise, you cannot install release 8.1.7 components into a release 7.x, 8.0.x, 8.1.3, or 8.1.4 Oracle home.

Mount the Oracle8i CD-ROM

The Oracle8i CD-ROMs are in ISO 9660 format with Rockridge extensions. There are two CD-ROM disks included with Oracle8i Release 3 (8.1.7). Use disk one to begin the installation. Mount disk two when prompted to do so.

**Note:** See the release notes for your platform for details on mounting disks for Oracle8i Release 3 (8.1.7).

You must have root privileges to mount or unmount the CD-ROM manually. Be sure to unmount the CD-ROM before removing it from the drive by using the umount command.

1. Use a system editor to add the following line to the /etc/pfs_fstab file.

   **Syntax**

   `<device_file> <mount_point> <filesystem_type> <translation_method>`

   The first entry is the CD-ROM device file; the second is the mount point. The third indicates that the CD-ROM to be mounted is in ISO 9660 format with RockRidge extensions.

   **Example**

   `/dev/dsk/c5t2d0 /SD_CDROM pfs-rrrip xlat=unix 1 0`

   **Attention:** Perform Steps 2 through 5 as the root user.

2. Enter the following command.
$ nohup /usr/sbin/pfs_mountd &

3. Enter the following command.
$ nohup /usr/sbin/pfsd &

4. Place the CD-ROM into the tray and run the following command to mount the CD-ROM:
$ /usr/sbin/pfs_mount /SD_CDROM

5. Log out of the root account.
# exit

6. Change directories to /SD_CDROM where you can see a lowercase listing of the directories and files on the CD-ROM. The mounted CD-ROM should appear as another read-only file system.

**Start Oracle Universal Installer (OUI)**

---

**Caution:** Do not run the Installer as the root user.

---

To start the Oracle Universal Installer:

1. Log in as the oracle user.

2. Go to the CD-ROM mount-point directory:
   
   cd cdrom_mount_point_directory

3. Start the Installer by entering ./runInstaller.
Once the Installer is started, the Welcome window appears.

4. Click [Next].

The File Locations window appears. Do not change the text in the Source field. This is the location of files for installation.

5. Enter the ORACLE_HOME directory path in which to install Oracle8i products in the Destination field. The default location is the ORACLE_HOME environment variable if you set it prior to starting the Installer.

If the destination directory you choose contains Oracle8i Release 1 (8.1.5) or release 2 (8.1.6) software, the older versions of the software will be upgraded to Release 3 (8.1.7). Oracle Corporation recommends that you install Release 3 (8.1.7) products into a new ORACLE_HOME.

---

**Note:** The Oracle Universal Installer is capable of running a non-interactive installation of Oracle products and can optionally be configured for “silent” mode which does not display anything on the screen. For instructions on using this feature of the Installer, see "Non-Interactive (“Silent”) Installation and Configuration” on page 3-29.

---

**Warning:** Oracle Universal Installer automatically installs Oracle’s version of the Java Runtime Environment (JRE). This version is required to run Oracle Universal Installer and several Oracle assistants. Do not modify the JRE, unless doing so with a patch provided by Oracle Support Services.

---

**Caution:** If you have an existing ORACLE_HOME created with a pre-8.1.x release, you must change the default installation location to a different location.

If you install Oracle8i into an ORACLE_HOME directory that already contains Oracle client software, the listener is not created. To create the listener, install Oracle8i in a different ORACLE_HOME.

6. Click [Next].
If this is the first time any Oracle8i products are installed on the current system, the *UNIX Group Name* window appears. Otherwise, go to Step 8.

In the *UNIX Group Name* field, specify the group that will have permission to update Oracle software on the system. This group typically should be the oinstall group created in "Create a UNIX Group for the Oracle Universal Installer Inventory" on page 2-6.

7. Click [Next].

If `/var/opt/oracle/` does not exist or is not writable by the `oracle` user, you will also be prompted in the window that appears to run `/tmp/OraInstall/orainstRoot.sh` in another terminal window as the root user. After you have done so, click Retry to continue the installation.

8. The *Available Products* window appears. Select the Oracle8i installation category you want to install, click [Next] and proceed to one of the following installation guide sections based on your selection.

<table>
<thead>
<tr>
<th>If You Selected...</th>
<th>See this Section...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle8i Enterprise Edition</td>
<td>&quot;Installing Oracle8i Enterprise Edition&quot; on page 3-5.</td>
</tr>
<tr>
<td>Oracle8i Client</td>
<td>&quot;Installing Oracle8i Client&quot; on page 3-14.</td>
</tr>
<tr>
<td>Oracle8i Management and Integration</td>
<td>&quot;Installing Oracle8i Management and Integration&quot; on page 3-18.</td>
</tr>
</tbody>
</table>

**See Also:** For a list of products installed with each installation type, see the appropriate product section in Appendix A, "Oracle8i Products".

See "Product Installation Categories and Installation Types" on page 1-2 for a description of each category.

**Installing Oracle8i Enterprise Edition**

After selecting Oracle8i Enterprise Edition from the *Available Products* window, the *Installation Types* window appears.

1. Select one of the types of installations and click [Next].
2. Proceed to one of the following sections based on the selection you made in step 1.

<table>
<thead>
<tr>
<th>If You Selected...</th>
<th>See this Section...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Typical</td>
<td>&quot;Oracle8i Enterprise Edition Typical Installation&quot; on page 3-6.</td>
</tr>
<tr>
<td>Custom</td>
<td>&quot;Oracle8i Enterprise Edition Custom Installation&quot; on page 3-12.</td>
</tr>
</tbody>
</table>

**Oracle8i Enterprise Edition Typical Installation**

1. If the oracle user is not a member of the dba group created in "Create UNIX Groups for Database Administrators" on page 2-6, or if there is a UNIX group with a name other than dba that serves as the OSDBA group, the Privileged Operating System Groups window appears. Enter the UNIX group name that will serve as the OSDBA group. If a separate UNIX group will server as the OSOPER group, specify it in this window as well.

2. Click [Next].

3. If Oracle Universal Installer detects an earlier version of an Oracle database on your system, you are prompted to upgrade your database with the Oracle Data Migration Assistant. Select the Upgrade or Migrate an Existing Database check box to have Oracle Data Migration Assistant start immediately after installation to migrate your database to an Oracle8i Release 3 (8.1.7) database.

   If you choose to migrate your database, go to step 8.

   **Note:** Do not upgrade an Oracle8i database configured for use with Oracle Internet Directory through this installation type. Oracle8i database and Oracle Internet Directory upgrades must be performed by following the procedures in "Oracle Internet Directory Installation" on page 3-18.

4. Click [Next].

5. Enter the Global Database Name and System Identifier (SID) in the fields provided:
6. Click [Next].

The Database File Location window appears.

7. In the Directory for Database Files field, enter the path of the database file mount point. You can also use the Browse... button to navigate to the path of the mount point.

8. Click [Next].

The Summary window appears.

9. Review the information to ensure that you have enough disk space and click [Install].

10. The Install window appears. Run the root.sh script when prompted.

    The Installer creates the root.sh script in the ORACLE_HOME directory and prompts you to run the script when it finishes installing Oracle products. Log in as the root user and run the script to set the necessary file permissions for Oracle products, and perform other root-related configuration activities.

    # cd $ORACLE_HOME
    # ./root.sh

---

<table>
<thead>
<tr>
<th>In this field...</th>
<th>Enter the...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Global Database Name</td>
<td>Full database name that uniquely distinguishes it from any other database in your network domain. For example: sales.acme.com where sales is the name you want to call your database and acme.com is the network domain in which the database is located.</td>
</tr>
<tr>
<td>SID</td>
<td>System Identifier, the database instance name that uniquely distinguishes it from any other database on your system. The SID field defaults to the database name portion of the Global Database Name (sales in the example above) until it reaches eight characters in length or you enter a period. You can accept or change the default value.</td>
</tr>
</tbody>
</table>

---

Note: Oracle Corporation recommends that database files and Oracle software files be installed on separate disks.
If you install Oracle Parallel Server, you must run the root.sh script on every node in the cluster.

The root.sh script prompts you to confirm the environment before it performs any actions. If you need to reset the environment, terminate the root.sh script. You do not need to run Oracle Universal Installer again. Click OK in the alert window after root.sh runs successfully to continue the installation.

Depending on the products you installed, messages are displayed to inform you of the progress of root.sh. You might also be prompted for user names and be given additional instructions.

You will be asked by the root.sh script to specify the local bin directory. If this directory does not already exist, root.sh creates it for you.

11. The Configuration Tools window appears at the end of installation depending on your selections above.

The configuration assistants help to create and configure your database and network environments.

### Table 3-1 Configuration Assistants

<table>
<thead>
<tr>
<th>This Assistant</th>
<th>Starts...</th>
<th>And does the following...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Net8 Configuration Assistant</td>
<td>In all cases</td>
<td>Automatically configures your Net8 server networking software. See &quot;Understanding Net8 Configuration&quot; on page 2-18 for a description of the configuration procedures performed.</td>
</tr>
<tr>
<td>Apache Web Server Configuration Assistant</td>
<td>In all cases</td>
<td>Starts the HTTP Listener in non-SSL mode on port 7777.</td>
</tr>
<tr>
<td>Oracle Database Configuration Assistant</td>
<td>If you selected not to upgrade or migrate an existing instance when prompted at step 1</td>
<td>Automatically creates an Oracle8i Release 8.1.7 database. See &quot;Identifying Your Database Environment&quot; on page 2-22.</td>
</tr>
<tr>
<td>Oracle Database Migration Assistant</td>
<td>If you selected to migrate or upgrade a database when prompted at step 3.</td>
<td>Migrates or upgrades the selected database to Oracle8i release 8.1.7.</td>
</tr>
</tbody>
</table>
If a configuration assistant fails to install one of your selections, the Configuration Tools window displays the results of running these assistants. Otherwise, the End of Installation window appears. Correct the cause of the failure and Click [Retry] to reattempt installation, or click [Next] to continue.

   See Also: "Reviewing a Log of an Installation Session" to view a log file summary of your installation session.

**Oracle8i Enterprise Edition Minimal Installation**

1. If the oracle user is not a member of the dba group created in “Create UNIX Groups for Database Administrators” on page 2-6, or if there is a UNIX group with a name other than dba that serves as the OSDBA group, the Privileged Operating System Groups window appears. Enter the UNIX group name that will serve as the OSDBA group. If a separate UNIX group will server as the OSOPER group, specify it in this window as well.

2. Click [Next].

3. If Oracle Universal Installer detects an earlier version of an Oracle database on your system, you are prompted to upgrade your database with the Oracle Data Migration Assistant. Select the Upgrade or Migrate an Existing Database check box to have Oracle Data Migration Assistant start immediately after installation to migrate your database to an Oracle8i Release 3 (8.1.7) database.

   If you choose to migrate your database, go to step 9.

4. Click [Next].

   The Select Starter Database window appears.

5. Select Yes to install an Oracle8i database. Selecting No installs all server products, but does not create a new database. You can create your database later by manually running Oracle Database Configuration Assistant or with a SQL script.

   The Database Identification window appears.

6. Enter the Global Database Name and System Identifier (SID) in the fields provided:
7. Click [Next].
   The Database File Location window appears.

8. In the Directory for Database Files field, enter the path of the database file mount point. You can also use the Browse... button to navigate to the path of the mount point.

9. Click [Next].
   The Summary window appears.

10. Review the information to ensure that you have enough disk space and click [Install].

11. The Install window appears. Run the root.sh script when prompted.

    The Installer creates the root.sh script in the ORACLE_HOME directory and prompts you to run the script when it finishes installing Oracle products. Log in as the root user and run the script to set the necessary file permissions for Oracle products, and perform other root-related configuration activities.

        # cd $ORACLE_HOME
        #$./root.sh

    If you install Oracle Parallel Server, you must run the root.sh script on every node in the cluster.

    The root.sh script prompts you to confirm the environment before it performs any actions. If you need to reset the environment, terminate the root.sh script. You do not need to run Oracle Universal Installer again. Click
OK in the alert window after `root.sh` runs successfully to continue the installation.

Depending on the products you installed, messages are displayed to inform you of the progress of `root.sh`. You might also be prompted for user names and be given additional instructions.

You will be asked by the `root.sh` script to specify the local `bin` directory. If this directory does not already exist, `root.sh` creates it for you.

12. The *Configuration Tools* window appears at the end of installation depending on your selections above.

The configuration assistants help to create and configure your database and network environments.

<table>
<thead>
<tr>
<th>Table 3–2 Configuration Assistants</th>
</tr>
</thead>
<tbody>
<tr>
<td>This Assistant...</td>
</tr>
<tr>
<td>Net8 Configuration Assistant</td>
</tr>
<tr>
<td>Apache Web Server Configuration Assistant</td>
</tr>
<tr>
<td>Oracle Database Configuration Assistant</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td>Oracle Database Migration Assistant</td>
</tr>
</tbody>
</table>

If a configuration assistant fails to install one of your selections, the *Configuration Tools* window displays the results of running these assistants. Otherwise, the *End of Installation* window appears. Correct the cause of the failure and Click [Retry] to reattempt installation, or click [Next] to continue.

_See Also:_ “Reviewing a Log of an Installation Session” to view a log file summary of your installation session.

**Oracle8i Enterprise Edition Custom Installation**

The *Available Products* window appears. It displays all products available for installation. A typical Custom install configuration is displayed by default.

1. Select products you want to install (or deselect products you do not want to install) and click [Next].

2. Provide responses to any window prompts that appear.

   The *Summary* window appears.

   If you do not have enough disk space to install the products you have selected, you will be notified of this by the Installer. If necessary, deselect products in order to select a configuration suitable for your system. If this is not necessary, Click [Install].

3. The *Install* window appears. Run the *root.sh* script when prompted.

   The Installer creates the *root.sh* script in the *ORACLE_HOME* directory and prompts you to run the script when it finishes installing Oracle products. Log in as the *root* user and run the script to set the necessary file permissions for Oracle products, and perform other *root*-related configuration activities.

   ```bash
   # cd $ORACLE_HOME
   # ./root.sh
   ```

   If you install Oracle Parallel Server, you must run the *root.sh* script on every node in the cluster.

   The *root.sh* script prompts you to confirm the environment before it performs any actions. If you need to reset the environment, terminate the *root.sh* script. You do not need to run Oracle Universal Installer again. Click OK in the alert window after *root.sh* runs successfully to continue the installation.

   Depending on the products you installed, messages are displayed to inform you of the progress of *root.sh*. You might also be prompted for user names and be given additional instructions.
You will be asked by the `root.sh` script to specify the local `bin` directory. If this directory does not already exist, `root.sh` creates it for you.

4. The *Configuration Tools* window may appear at the end of installation, depending on your selections above.

   The configuration assistants help to create and configure your database and network environments.

### Table 3–3 Configuration Assistants

<table>
<thead>
<tr>
<th>This Assistant...</th>
<th>Starts...</th>
<th>And does the following...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Net8 Configuration Assistant</td>
<td>If you selected any products that require network configuration</td>
<td>Automatically configures your Net8 server networking software. See &quot;Understanding Net8 Configuration&quot; on page 2-18 for a description of the configuration procedures performed.</td>
</tr>
<tr>
<td>Apache Web Server Configuration Assistant</td>
<td>If you selected the Oracle HTTP Server in the product selection screen</td>
<td>Starts the HTTP Listener in non-SSL mode on port 7777.</td>
</tr>
<tr>
<td>Oracle Database Configuration Assistant</td>
<td>If you selected:</td>
<td>Automatically creates an Oracle8i Release 8.1.7 database. See &quot;Identifying Your Database Environment&quot; on page 2-22.</td>
</tr>
<tr>
<td></td>
<td>- Oracle8i Server in the product selection screen AND</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- you chose not to upgrade/migrate when prompted AND</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- you answered [Yes] when prompted to install an Oracle8i database</td>
<td></td>
</tr>
<tr>
<td>Oracle Database Migration Assistant</td>
<td>If you selected to migrate or upgrade a database when prompted</td>
<td>Migrates or upgrades the selected database to Oracle8i release 8.1.7.</td>
</tr>
</tbody>
</table>
If a configuration assistant fails to install one of your selections, the Configuration Tools window displays the results of running these assistants. Otherwise, the End of Installation window appears. Correct the cause of the failure and Click [Retry] to reattempt installation, or click [Next] to continue.

See Also: "Reviewing a Log of an Installation Session" to view a log file summary of your installation session.

**Installing Oracle8i Client**

**Note:** For a list of products installed with each installation type, see the appropriate product section in Appendix A, "Oracle8i Products".

---

**Table 3–3 Configuration Assistants**

<table>
<thead>
<tr>
<th>This Assistant...</th>
<th>Starts...</th>
<th>And does the following...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Enterprise Manager Configuration Assistant</td>
<td>If you selected to install Oracle Management Server in the product selection screen</td>
<td>Allows you to use an existing Release 2.2 repository or configures a new Enterprise Manager repository. See step 4 of Oracle Management Server and refer to the Oracle Enterprise Manager Configuration Guide for instructions on how to use the assistant.</td>
</tr>
</tbody>
</table>

**Note:** If you use Custom installation to install Oracle Advanced Security into an existing ORACLE_HOME that already contains Oracle8i Enterprise Edition, you must install Oracle Advanced Security separately from any other product options, such as Oracle Partitioning. Unless you install additional products separately from Oracle Advanced Security, installation will fail.

If a configuration assistant fails to install one of your selections, the Configuration Tools window displays the results of running these assistants. Otherwise, the End of Installation window appears. Correct the cause of the failure and Click [Retry] to reattempt installation, or click [Next] to continue.
After selecting Oracle8i Client from the Available Products window, the Installation Types window appears.

1. Select the Oracle Client installation type you want to install and click [Next].

2. Proceed to one of the following sections based on the selection you made in step 1.

<table>
<thead>
<tr>
<th>If You Selected...</th>
<th>See this Section...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Administrator, Programmer, or Application User</td>
<td>&quot;Oracle8i Client Administrator, Programmer or Application User Installation&quot; on page 3-15.</td>
</tr>
<tr>
<td>Custom</td>
<td>&quot;Oracle8i Client Custom&quot; on page 3-16.</td>
</tr>
</tbody>
</table>

**Oracle8i Client Administrator, Programmer or Application User Installation**

1. After selecting “Client Administrator, Programmer or Application User Installation,” click [Next].

   The Summary window appears.

2. Review the information to ensure that you have enough disk space. You cannot make any product or space allocation changes once the installation begins.

3. Click [Install]. Wait until the selected products are installed.

4. The Install window appears. Run the root.sh script when prompted.

   The Installer creates the root.sh script in the ORACLE_HOME directory and prompts you to run the script when it finishes installing Oracle products. Log in as the root user and run the script to set the necessary file permissions for Oracle products, and perform other root-related configuration activities.

   ```
   # cd $ORACLE_HOME
   # ./root.sh
   ```

   The root.sh script prompts you to confirm the environment before it performs any actions. If you need to reset the environment, terminate the root.sh script. You do not need to run Oracle Universal Installer again. Click OK in the alert window after root.sh runs successfully to continue the installation.

   Depending on the products you installed, messages are displayed to inform you of the progress of root.sh. You might also be prompted for user names and be given additional instructions.
You will be asked by the root.sh script to specify the local bin directory. If this directory does not already exist, root.sh creates it for you.

5. The Configuration Tools window may appear at the end of installation, depending on your selections above.

<table>
<thead>
<tr>
<th>Table 3–4  Configuration Assistants</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>This Assistant...</strong></td>
</tr>
<tr>
<td>Net8 Configuration Assistant</td>
</tr>
</tbody>
</table>

6. The End of Installation window appears.

   **See Also:** "Reviewing a Log of an Installation Session" to view a log file summary of your installation session.

**Oracle8i Client Custom**

1. After selecting “Client Custom,” click [Next].

2. The Available Products window appears and displays all products available for installation.

3. Select products you want to install (or deselect products you do not want to install) and click [Next].

   The Summary window appears.

5. Review the information to ensure that you have enough disk space and click [Install].

6. The Install window appears. Run the root.sh Script when prompted.

   The Installer creates the root.sh script in the ORACLE_HOME directory and prompts you to run the script when it finishes installing Oracle products. Log in
as the root user and run the script to set the necessary file permissions for Oracle products, and perform other root-related configuration activities.

```
# cd $ORACLE_HOME
# ./root.sh
```

The root.sh script prompts you to confirm the environment before it performs any actions. If you need to reset the environment, terminate the root.sh script. You do not need to run Oracle Universal Installer again. Click OK in the alert window after root.sh runs successfully to continue the installation.

Depending on the products you installed, messages are displayed to inform you of the progress of root.sh. You might also be prompted for user names and be given additional instructions.

7. You will be asked by the root.sh script to specify the local bin directory. If this directory does not already exist, root.sh creates it for you.

8. The Configuration Tools window may appear at the end of installation, depending on your selections above.

**Table 3–5 Configuration Assistants**

<table>
<thead>
<tr>

<td>&quot;Oracle Integration Server Installation&quot; on page 3-26.</td>
</tr>
<tr>
<td>Oracle Management Server</td>
<td>&quot;Oracle Management Server Installation&quot; on page 3-23.</td>
</tr>
<tr>
<td>Custom</td>
<td>&quot;Oracle8i Management Infrastructure Custom Installation&quot; on page 3-25.</td>
</tr>
</tbody>
</table>

**Oracle Internet Directory Installation**

If an Oracle8i database Release 3 (8.1.7) is not currently installed, Oracle Universal Installer automatically installs one in the same ORACLE_HOME directory in which Oracle Internet Directory is installed.

If Oracle Universal Installer detects an existing Oracle8i database in this location, it does not install another one. However, for optimal results, Oracle Corporation recommends that you install Oracle Internet Directory on a system that does not currently have an Oracle8i database.

If you intend to upgrade an existing installation of Oracle Internet Directory and Oracle8i Enterprise Edition, and you initially installed Oracle Internet Directory
separately, then you should upgrade each program separately in order to ensure that all components of Oracle Internet Directory are upgraded.

Before upgrading Oracle Internet Directory, stop the following processes:

- Oracle listener server
- Oracle database server
- Oracle Internet Directory Server

---

**Note:** If an Oracle8i Release 3 (8.1.7) database is currently installed, ensure that the database and the listener are running, and that you can connect with the `internal` user account without being prompted for a password:

```
$ sqlplus internal
```

If you were prompted for a password, see Chapter 1 of the Oracle8i Administrator’s Guide for information on configuring the `internal` user account to log in without a password.

---

One of the following windows appears if you selected Oracle Internet Directory at step 1 of “Installing Oracle8i Management and Integration” on page 18:

1. Follow the steps below based on the window that appears:

<table>
<thead>
<tr>
<th>If Oracle8i Database...</th>
<th>Then The...</th>
<th>Go To...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release 8.1.7 is already installed on the computer, but Oracle Internet Directory 2.1 is not installed</td>
<td>Using an existing instance window appears, you are prompted for the SID to use, and another Oracle8i database is not installed</td>
<td>Step 1 of “Installing Oracle Internet Directory for the First Time” on page 3-20</td>
</tr>
<tr>
<td>Releases 8.1.5, 8.1.6 and 8.1.7 and Oracle Internet Directory releases 2.0.4, 2.0.6 and 2.1 are not installed on the computer</td>
<td>Database Identification window appears and Oracle8i database release 8.1.7 is automatically installed in the same home with Oracle Internet Directory release 2.1</td>
<td>Step 3 of “Installing Oracle Internet Directory for the First Time” on page 3-20</td>
</tr>
<tr>
<td>Releases 8.1.5 or 8.1.6 and Oracle Internet Directory Release 2.0.4 or 2.0.6 are already installed on the computer</td>
<td>Upgrade OID window appears and prompts you to upgrade to Oracle8i database release 8.1.7 and Oracle Internet Directory release 2.1</td>
<td>“Upgrading Oracle Internet Directory” on page 3-22</td>
</tr>
</tbody>
</table>
Installing Oracle Internet Directory for the First Time

1. Select [Yes] to use the installed database with Oracle Internet Directory, and click [Next]. Otherwise, select [No] and click [Next] to use a different database with Oracle Internet Directory, and go to step 4.
   
   The Oracle SID window appears.

2. Enter the SID of the installed database.

3. Click [Next]. Go to step 5
   
   The Database Identification window appears.

4. Enter the Global Database Name and SID fields in the fields provided:

<table>
<thead>
<tr>
<th>In This Field...</th>
<th>Enter The...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Global Database Name</td>
<td>Full database name that uniquely distinguishes it from any other database in your network domain. For example: sales.us.acme.com where sales is the name you want to call your database, and us.acme.com is the network domain in which the database is located.</td>
</tr>
<tr>
<td>SID</td>
<td>Database instance name that uniquely distinguishes it from any other database on your computer. The SID automatically defaults to the database name portion of the global database name (sales in the example above) until you reach eight characters or enter a period. You can accept or change the default value.</td>
</tr>
</tbody>
</table>

5. Enter a directory location in which to install the Oracle Internet Directory database files. Oracle Corporation recommends installing database files and Oracle software on separate drives. These database files contain Oracle Internet Directory-specific tables and schema created during configuration.

   The Oracle Internet Directory Database File Location window appears.

6. Click [Next].
   
   The Summary window appears.

7. Review the information to ensure that you have enough disk space. You cannot make any product or space allocation changes once the installation begins

8. Click [Install]. Wait until the selected products are installed.

   The following information is automatically set during installation:
9. The Install window appears. Run the `root.sh` Script when prompted.

The Installer creates the `root.sh` script in the ORACLE_HOME directory and prompts you to run the script when it finishes installing Oracle products. Log in as the root user and run the script to set the necessary file permissions for Oracle products, and perform other root-related configuration activities.

```bash
# cd $ORACLE_HOME
# ./root.sh
```

If you install Oracle Parallel Server, you must run the `root.sh` script on every node in the cluster.

The `root.sh` script prompts you to confirm the environment before it performs any actions. If you need to reset the environment, terminate the `root.sh` script. You do not need to run Oracle Universal Installer again. Click OK in the alert window after `root.sh` runs successfully to continue the installation.

Depending on the products you installed, messages are displayed to inform you of the progress of `root.sh`. You might also be prompted for user names and be given additional instructions.

You will be asked by the `root.sh` script to specify the local `bin` directory. If this directory does not already exist, `root.sh` creates it for you.

10. The Configuration Tools window appears at the end of installation and automatically starts the following assistants to create and configure your network and Oracle Internet Directory environments:

<table>
<thead>
<tr>
<th>The...</th>
<th>Is Automatically Set to...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use of an Encrypted Password</td>
<td>Yes</td>
</tr>
<tr>
<td>Encryption Schema</td>
<td>MD4</td>
</tr>
<tr>
<td>Approximate number of...</td>
<td>Under 10,000 entries</td>
</tr>
<tr>
<td>directory entries to be stored in...</td>
<td></td>
</tr>
<tr>
<td>Oracle Internet Directory</td>
<td></td>
</tr>
<tr>
<td>Password of the Administrator</td>
<td>welcome</td>
</tr>
<tr>
<td>Distinguished Name</td>
<td></td>
</tr>
</tbody>
</table>
11. The End of Installation window appears.

   See Also: "Reviewing a Log of an Installation Session" to view a log file summary of your installation session.

Upgrading Oracle Internet Directory

The Upgrade OID window appears if you have a previously-installed version of Oracle Internet Directory on your system.

1. Select [Yes] to upgrade an existing Oracle8i database already configured for use with Oracle Internet Directory.

2. Click [Next].

   The Oracle SID window appears.

3. Enter the system identifier (SID) of the Oracle8i database to be upgraded.

   The OID Password window appears.

4. Enter the password for the Oracle Directory Server user (ODS by default) and Oracle Internet Directory administrator (WELCOME by default).
5. The Configuration Tools window appears and automatically starts the following assistants to upgrade your Oracle8i database and Oracle Internet Directory environments:

<table>
<thead>
<tr>
<th>This Assistant</th>
<th>Upgrades...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oracle Data Migration Assistant</td>
<td>Oracle8i database release 8.1.5 or 8.1.6 to 8.1.7.</td>
</tr>
<tr>
<td>OiD Upgrade Assistant</td>
<td>Oracle Internet Directory release 2.0.4 or 2.0.6 to release 2.1.</td>
</tr>
</tbody>
</table>

**Oracle Management Server Installation**

The Oracle Management Server Repository window appears.

1. Select the repository to use with the Oracle Management Server.

<table>
<thead>
<tr>
<th>Type</th>
<th>In this Situation...</th>
</tr>
</thead>
<tbody>
<tr>
<td>Existing repository</td>
<td>A Release 2.2 repository has already been created and configured for the environment to be managed and you want this management server to share the existing 2.2 repository, or you want to upgrade or migrate an existing repository from a previous 2.x Release.</td>
</tr>
<tr>
<td>New repository</td>
<td>A Release 2.2 repository has not been created and configured for the environment to be managed, or you want to migrate an existing Release 1.x repository.</td>
</tr>
</tbody>
</table>

The Summary window appears.

2. Review the information to ensure that you have enough disk space. You cannot make any product or space allocation changes once the installation begins.

3. The Install window appears. Run the root.sh Script

The Installer creates the root.sh script in the ORACLE_HOME directory and prompts you to run the script when it finishes installing Oracle products. Log in as the root user and run the script to set the necessary file permissions for Oracle products, and perform other root-related configuration activities.

```
# cd $ORACLE_HOME
# ./root.sh
```

The root.sh script prompts you to confirm the environment before it performs any actions. If you need to reset the environment, terminate the
root.sh script. You do not need to run Oracle Universal Installer again. Click OK in the alert window after root.sh runs successfully to continue the installation.

Depending on the products you installed, messages are displayed to inform you of the progress of root.sh. You might also be prompted for user names and be given additional instructions.

You will be asked by the root.sh script to specify the local bin directory. If this directory does not already exist, root.sh creates it for you.

4. Click [Install]. Wait until the selected products are installed.

Oracle Enterprise Manager Configuration Assistant starts at the end of installation.

5. Provide responses to Oracle Enterprise Manager Configuration Assistant (EMCA) based on the selection you made in step 1.

<table>
<thead>
<tr>
<th>If You Selected...</th>
<th>You are Prompted to...</th>
</tr>
</thead>
<tbody>
<tr>
<td>existing repository</td>
<td>Provide the following repository connection information:</td>
</tr>
<tr>
<td></td>
<td>• database user name and password for the existing repository.</td>
</tr>
<tr>
<td></td>
<td>• database service containing the existing repository, specified with:</td>
</tr>
<tr>
<td></td>
<td>hostname:port_number:SID</td>
</tr>
<tr>
<td></td>
<td>• verify new repository connection information.</td>
</tr>
<tr>
<td></td>
<td>If the existing repository is Release 1.x, you cannot migrate until a Release 2.2 repository exists. Do the following:</td>
</tr>
<tr>
<td></td>
<td>4. Cancel EMCA.</td>
</tr>
<tr>
<td></td>
<td>5. Exit the Installer</td>
</tr>
<tr>
<td></td>
<td>6. Launch EMCA standalone</td>
</tr>
<tr>
<td></td>
<td>7. Create a new Release 2.2 repository.</td>
</tr>
<tr>
<td></td>
<td>8. Launch EMCA</td>
</tr>
<tr>
<td></td>
<td>9. choose [new repository] to create a new repository, then exit</td>
</tr>
</tbody>
</table>

At this point you may use EMCA to migrate your Release 1.x repository to the new Release 2.2 repository. See the Oracle Enterprise Manager Configuration Guide for details on repository migration.
6. If you use Enterprise Manager Configuration Assistant, Click [Close] to exit. Otherwise, go to step 7.

7. The End of Installation window appears.

   **See Also:** "Reviewing a Log of an Installation Session" to view a log file summary of your installation session.

### Oracle8i Management Infrastructure Custom Installation

After selecting Oracle Management Infrastructure Custom from the Installation Types window, the Available Products window appears. It displays all products available for installation.

1. Select products you want to install and click [Next].

2. Provide responses to any window prompts that appear.

   **Note:** For a list of products installed with each installation type, see the appropriate product section in Appendix A, "Oracle8i Products".

The Summary window appears.
3. Review the information to ensure that you have enough disk space and click [Install].

4. The Install window appears. Run the root.sh Script when prompted.

   The Installer creates the root.sh script in the ORACLE_HOME directory and prompts you to run the script when it finishes installing Oracle products. Log in as the root user and run the script to set the necessary file permissions for Oracle products, and perform other root-related configuration activities.

   ```bash
   # cd $ORACLE_HOME
   # ./root.sh
   ```

   If you install Oracle Parallel Server, you must run the root.sh script on every node in the cluster.

   The root.sh script prompts you to confirm the environment before it performs any actions. If you need to reset the environment, terminate the root.sh script. You do not need to run Oracle Universal Installer again. Click OK in the alert window after root.sh runs successfully to continue the installation.

   Depending on the products you installed, messages are displayed to inform you of the progress of root.sh. You might also be prompted for user names and be given additional instructions.

   You will be asked by the root.sh script to specify the local bin directory. If this directory does not already exist, root.sh creates it for you.

5. The End of Installation window appears.

   **See Also:** "Reviewing a Log of an Installation Session" to view a log file summary of your installation session.

---

**Oracle Integration Server Installation**

After selecting Oracle Management Server from the Installation Types window, the Oracle Integration Server window appears.

1. Select either the Typical or Custom installation type and click [Next].

   If you select a Typical configuration, the following features will be installed:

   - Advanced Queueing
- Advanced Replication
- Advanced Security
- Oracle Application InterConnect
- Oracle8i JVM (with CORBA/ORB support)
- Oracle Message Broker
- Oracle Workflow
- Oracle8i Server
- Partitioning

If you select Custom installation, you are presented with a list of Oracle Integration Server components. Select the components that you require for your particular implementation.

Oracle Parallel Server Installation Notes

Creating Raw Devices
The size of the raw device that you create for the SYSTEM tablespace must be at least 275 MB. This requirement supersedes the corresponding file size requirement listed in the Oracle8i Parallel Server Setup and Configuration Guide. For more information on creating raw devices on HP 9000 Series HP-UX systems, see the Oracle8i Administrator’s Reference.

Oracle Parallel Server Installed Software Location
During installation, software products are installed on the node from which the Oracle Universal Installer is run and pushed to the other selected nodes in the cluster.

See Also: The Oracle 8i Parallel Server Setup and Configuration Guide, and Oracle8i Parallel Server Installation, Configuration, and Administration.

Re-Installing Oracle Parallel Server
If the installation fails before completion and you have to re-install, you must click the Yes button to all the Installer dialog boxes that ask "Do you want to re-install name of a product?". Otherwise the remote copy operation to the other nodes will miss the products for which you declined the re-install.
Reviewing a Log of an Installation Session

The Installer creates the `oraInventory` directory the first time it is run to keep an inventory of products that it installs on your system as well as other installation information. The location of `oraInventory` is defined in `/var/opt/oracle/oraInst.loc`.

The latest log file is `oraInventory_location/logs/installActions.log`. Log file names of previous installation sessions take the form `installActions_datetime.log`.

For example:
`installActions1999-07-14_09-00-56-am.log`

**Note:** Do not delete or manually alter the `oraInventory` directory or its contents. Doing so can prevent the Installer from locating products that you install on your system.

**Note:** The `make.log` file in `ORACLE_HOME/install` contains a log of every `make` action called for in the installation process. If there are any link errors during installation, they can be found there. Do not delete or alter the `make.log` file.

Cleaning Up After a Failed Installation

If an installation fails, you might need to remove files that the Installer created during the failed installation.

To clean up after a failed installation:

1. Start the Oracle Universal Installer.
2. Click the [De-install Products] button and select any products that were left after the failed installation.
3. Click the [Remove] button.

To complete the clean up, you might need to manually remove the `ORACLE_HOME` directory, as the Installer may have copied files to your system but failed to register them during the unsuccessful installation. This step is not required if deinstallation cleans up `ORACLE_HOME`, and if only insignificant files are left after deinstallation.
Non-Interactive ("Silent") Installation and Configuration

You can perform a non-interactive installation of Oracle8i products by supplying the Oracle Universal Installer with a response file. The Installer uses the variables and values contained in this text file to provide answers to some or all of the Installer’s user prompts. If you include responses for all of the Installer’s prompts in the response file, you can run a "silent" installation that displays no graphical output. You can also run Oracle Data Migration Assistant, Net8 Configuration Assistant, Oracle Database Configuration Assistant, and Oracle Enterprise Manager Configuration Assistant non-interactively by using response files.

Preparing the Response File

There are eight Oracle Universal Installer response files, one for each install category and type, and two configuration tool response files included on the Oracle8i Release 3 (8.1.7) CD-ROM. You will need to edit the response file to suit your environment. In particular, the custom response files need extensive editing before you can use them for a non-interactive session.

To use a response file, copy the response file from the Oracle8i CD-ROM to a drive mounted on your system. For example:

```
$ cd cdrom_mount_point_directory/response
$ cp svrtypical.rsp local_directory
```

Edit the response file with any text editor to include information specific to your system. Each file contains instructions for properly configuring the response file. Table 3–6 lists the response files included on the Oracle8i CD-ROM.

<table>
<thead>
<tr>
<th>File Name</th>
<th>Provides Responses for...</th>
</tr>
</thead>
<tbody>
<tr>
<td>svrtypical.rsp</td>
<td>Typical installation of Oracle8i Enterprise Edition</td>
</tr>
<tr>
<td>svrminimal.rsp</td>

</tr>
<tr>
<td>net8ca.rsp</td>
<td>Net8 Configuration Assistant</td>
</tr>
<tr>
<td>emca.rsp</td>
<td>Oracle Enterprise Manager Configuration Assistant</td>
</tr>
</tbody>
</table>

Specifying a Response File

To make the Installer use the response file at install time, follow the same steps as described in the section "Start Oracle Universal Installer (OUI)" on page 3-3, but specify the location of the response file that you wish to use as a parameter when starting the Installer.

```
$ ./runInstaller [-silent] -responseFile filename
```

To use a configuration assistant in silent mode, outside of an installation session, you need to make it use a response file. You may either have the Installer spawn the silent configuration assistant, or run the configuration assistant in standalone mode. Invoke the configuration assistant at the command line using the same mode and response file parameters.

To perform a completely silent installation or configuration session, use the -silent parameter. In silent mode, the DISPLAY environment variable must still be set as described in "DISPLAY" on page 2-10.

To run the Oracle Enterprise Manager Configuration Assistant in non-interactive mode, you must use both the -silent and -responseFile parameters.

The success or failure of the installation is logged in the silentInstall.log file. If an Oracle Inventory exists on your system, then the silentInstall.log file is created there. Otherwise, it is created in the oraInventory_location/logs/ directory. The detailed results of the non-interactive installation session are found in the oraInventory_location/logs/installActions.log file.
First time Installation in Silent Mode

If you will perform the first installation of Oracle products on a system with Oracle Universal Installer running in silent mode, you must manually create the `oraInst.loc` file. This file specifies the directory where the installer creates the inventory of Oracle products installed on the system. Before creating this file, read and complete the tasks detailed in Chapter 1 and Chapter 2.

To create the `oraInst.loc` file:

1. Log in as the root user.
   ```bash
   $ su
   ```

2. If it does not already exist on your system, you must create the `/var/opt/oracle` directory.
   ```bash
   # mkdir /var/opt/oracle
   ```

3. Change to the `/var/opt/oracle` directory.
   ```bash
   # cd /var/opt/oracle
   ```

4. Using a text editor, create a file called `oraInst.loc` with the following two lines of content:
   ```plaintext
   inventory_loc=inventory_directory
   inst_group=
   ```

   Oracle Corporation recommends that you set `inventory_loc` to `ORACLE_BASE/oraInventory`. For example, if `ORACLE_BASE` is `/u01/app/oracle`, then `inventory_directory` should be `/u01/app/oracle/oraInventory`. Include, but do not set, `inst_group=` on the second line.

See Also: For more information on silent install and installation using response files, see the Oracle Universal Installer Concepts Guide.
Running Oracle Enterprise Manager Configuration Assistant (EMCA) in Silent Mode

You can run Enterprise Manager Configuration Assistant in silent mode in one of two ways:

- standalone
- as part of a silent installation session.

In either case, you can only create a new repository; you cannot delete, upgrade or edit a repository using EMCA in silent mode.

The sections below describe how to run EMCA in silent mode under these two conditions.

Running Standalone EMCA in Silent Mode:

1. Complete pre-installation steps as described in Setup Tasks to Perform as the oracle User on page 2-9.

2. Verify that the Oracle Management Server is installed on the node where you intend to run EMCA silently.

3. Copy the response file `emca.rsp` to a local directory. Open it with a text viewer and edit it in accordance to the instructions in the response file.

   **Important:** Ensure that the repository user's USERNAME variable that you specify in the `emca.rsp` file is unique across your network.

   **Note:** All response files may be found in the `response` directory at the root of the Oracle8i CD-ROM.

4. Navigate to the `ORACLE_HOME/bin` directory and run `emca.rsp` by entering the following at the command prompt:

   ```
   % emca -responseFile <path>/emca.rsp -silent
   ```

   Where `<path>` is the path to where the response file is located. For example,

   ```
   % temp
Running EMCA in Silent Mode as Part of a Silent Installation Session:

1. Copy the "parent" installation response file to a local directory and edit it by following the instructions in that parent response file. Ensure that Oracle Management Server will be installed as part of the parent silent install.

   The Oracle Management Server is only available for installation in the following parent response files:
   
   svrtypical.rsp
   svrcustom.rsp
   omioms.rsp
   omicustom.rsp.

2. Edit the following variables in the oracle.sysman.oms_2.2.0.0.0 section of the parent response file to ensure that EMCA is properly launched in silent mode:

   emca
   ServerRepository_index
   EMCARspFileLocation

   Refer to the parent response file for detailed instructions.

3. Copy the response file emca.rsp to a local directory. Open it with a text viewer and edit it in accordance to the instructions in the response file.

   Important: Ensure that the repository user’s USERNAME variable that you specify in the emca.rsp file is unique across your network.

4. Navigate to the directory where the Oracle Universal Installer is installed. The parent response file will automatically spawn the EMCA response file when silent installation is complete. Run the parent response file with the following command:

   % setup.exe -responseFile <path><parent response file name> -silent

   The following is an example of the oracle.sysman.oms_2.2.0.0.0 in a parent response file:

   #--------------------------------------------------------------
   # Name          : emca
   # Datatype      : StringList
   # Description   : List of Optional Config tools to launch. Following are
Non-Interactive ("Silent") Installation and Configuration

# possible values.
# emca.bat: Enterprise Manager Configuration Assistant
# Example value : "emca.bat"
# Default value : "emca.bat"
#------------------------------------------------------------

OPTIONAL_CONFIG_TOOLS={"emca.bat"}
#------------------------------------------------------------

# Name : EMCArspFileLocation
# Datatype : String
# Description : Path to a customized copy of a response file for EMCA based on
# the emca.rsp provided with the release
# Valid values : Full path to any valid EMCA response file
# Example value : "/TEMP/EMCA.RSP"
# Default value : None
# Mandatory : Yes
#-----------------------------------------------------------

EMCARspFileLocation="/TEMP/EMCA.RSP"
#-----------------------------------------------------------

# Name : ServerRepository_index
# Datatype : Number
# Description : Set to "1" to create a new repository
# Valid value : "1"
# Example value : "1"
# Default value : "1"
# Mandatory : Yes
#-----------------------------------------------------------

ServerRepository_index=1

Error Handling

Values for variables that are of the wrong context, format, or type are treated as if no value were specified. Variables which are outside any section are ignored.

A non-interactive installation fails if no response file is specified or if you attempt a silent installation with an incorrect or incomplete response file. If you attempt a silent installation and the Installer encounters an error, such as insufficient disk space, the installation fails. The results of your non-interactive installation is recorded in the installation session's log file.
Non-Interactive ("Silent") Installation and Configuration

Validation of Values from Response File
The Installer or configuration assistant performs calculation and validation of the response file at run time. Failure of the validation process ends the installation or configuration.

Silent Installation and Net8 Configuration Assistant
If you perform a Minimal installation type of Oracle8i Enterprise Edition in silent mode, Net8 Configuration Assistant will fail to configure your system at the end of the installation. After the installation, complete Net8 configuration with the Net8 Configuration Assistant by executing netca from the ORACLE_HOME.

Note: You can start the Net8 Configuration Assistant after installation by entering the netca command. For more detailed configuration of Net8, use the Net8 Assistant by entering the netasst command. See the Net8 Administrator's Guide for more information on configuring Net8.

See Also: "Reviewing a Log of an Installation Session" to view a log file summary of your installation session.
Non-Interactive ("Silent") Installation and Configuration
After completing the Oracle Universal Installer session, you must perform certain post-installation steps and configure Oracle8i. This chapter describes the required steps, as well as some optional ones.

- User Passwords
- Configuration Tasks to Perform as the root User
- Configuration Tasks to Perform as the oracle User
- Post-Installation for Oracle Products
- Reviewing Installed Starter Database Contents
- De-installing Oracle Software

Note: This chapter describes basic configuration only. The more sophisticated configuration and tuning typically required for production systems is described in the Oracle8i Administrator’s Reference for HP 9000 Series HP-UX and in product administration and tuning guides.
**User Passwords**

Oracle Corporation recommends that you change the password for user names *immediately* after installation.

**To change a password:**

1. Start SQL*Plus:
   ```
   $ sqlplus
   ```
2. Connect with the user name and password that you want to change:
   ```
   Enter user-name: username/password
   ```
3. Change the password:
   ```
   SQL> ALTER USER USERNAME IDENTIFIED BY PASSWORD;
   ```

**See Also:** *Oracle Enterprise Manager Administrator’s Guide* for information on using Oracle Security Manager or Oracle DBA Studio to change the password.

**Configuration Tasks to Perform as the root User**

Log in as the root user and perform the following tasks:

- Create Additional UNIX Accounts
- Verify Database File Security
- Automate Database Startup and Shutdown (Optional)
- Change Group Membership of the Apache Account

**Create Additional UNIX Accounts**

If necessary, create additional UNIX accounts with a system administration utility such as the System Administrator’s Menu (SAM). Each DBA user on the system must be a member of the OSDBA group.

Query the data dictionary view using SQL*Plus to list the accounts in the default database. Accounts in the database are based upon the products chosen in the Installer.

```
SQL> SELECT username from dba_users;
```

You should delete accounts you do not need.
Verify Database File Security

If you configure Oracle8i in a way similar to a United States NCSC C2 or European ITSEC E3 security evaluation configuration, verify database file security to ensure the integrity of the Oracle software installation. This task is optional if security is not an issue.

Many files must be protected to prevent unauthorized access to secure data. The file privileges and recommended ownership are as follows:

- The oracle account should have read, write, and execute privileges for all files and directories in an Oracle installation.

- The oinstall group should have read, write, and execute privileges on the oraInventory directory, but should not have write permissions on anything else.

- No user outside the oracle account or the oinstall group should have write access on any files or directories in an Oracle installation.

- In order to be installed properly, the Apache server is granted oinstall group privilege as a pre-installation step. This privilege should be removed. See Change Group Membership of the Apache Account.

Table 4–1, "Access Permissions on Oracle Directories and Files", summarizes the directory and file permissions for different types of files.

---

**Note:** These permissions are the default values and should not be changed.

---

**Table 4–1 Access Permissions on Oracle Directories and Files**

<table>
<thead>
<tr>
<th>Directories/Files</th>
<th>Permissions</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>All database, redo log, and control files (extensions for these files are typically .dbf, .log, and .ctl)</td>
<td>640 rw-r----</td>
<td>To maintain discretionary access to data, all databases, redo logs, and control files must be readable only by the oracle account and oinstall group.</td>
</tr>
<tr>
<td>$ORACLE_HOME/bin/</td>
<td>751 rw-r-x---</td>
<td>Must be writable by the oracle software owner, and executable by all users.</td>
</tr>
</tbody>
</table>
### Table 4–1 Access Permissions on Oracle Directories and Files

<table>
<thead>
<tr>
<th>Directories/Files</th>
<th>Permissions</th>
<th>Comments</th>
</tr>
</thead>
<tbody>
<tr>
<td>The oracle executable, and the following network executables: $ORACLE_HOME/bin/oracle and $ORACLE_HOME/bin/dbsnmp</td>
<td>6751 rws-r--x</td>
<td>The 6 sets the setuid and the setgid bit so the executables run as the oracle user and DBA group, regardless of who executes them.</td>
</tr>
<tr>
<td>All other executables.</td>
<td>751 rwxr-x--x</td>
<td>Must be writable by the oracle account and executable by all users.</td>
</tr>
<tr>
<td>$ORACLE_HOME/lib/</td>
<td>755 rwxr-xr-x</td>
<td>The directory is readable, writable, and executable by the owner, readable and executable by all other users.</td>
</tr>
<tr>
<td>All files under $ORACLE_HOME/lib/</td>
<td>644 rw-r--r--</td>
<td>The files are readable and writable by the owner, read-only for all other users.</td>
</tr>
<tr>
<td>$ORACLE_HOME/rdbms/log</td>
<td>751 rwxr-x--x</td>
<td>Restricts access to files in the directory to the oracle account and oinstall group.</td>
</tr>
<tr>
<td>Product subdirectories such as $ORACLE_HOME/sqlplus or $ORACLE_HOME/rdbms</td>
<td>751 rwxr-x--x</td>
<td>Restricts access to log files to the oracle account and oinstall group.</td>
</tr>
<tr>
<td>Files in $ORACLE_HOME/sqlplus or $ORACLE_HOME/rdbms</td>
<td>644 rw-r--r--</td>
<td>The files are readable and writable by the owner, read-only for all other users.</td>
</tr>
<tr>
<td>$ORACLE_HOME/network/trace</td>
<td>777 rwxrwxrwx or 730 rwx--wx---</td>
<td>777 allows broad access to view and create trace files during development. Use 730 in a production environment to ensure that only the oracle account and members of the oinstall group have access to trace files.</td>
</tr>
<tr>
<td>All files under product admin directories, like $ORACLE_HOME/rdbms/admin and $ORACLE_HOME/sqlplus/admin</td>
<td>644 rw-r--r--</td>
<td>SQL scripts should typically be run as the SYS user.</td>
</tr>
</tbody>
</table>
Automate Database Startup and Shutdown (Optional)

You can configure your system to automatically start Oracle databases when your system starts up and to shut down Oracle databases when your system shuts down. Automating database startup is optional, but automatic shutdown is recommended because it guards against improper shutdown of the database.

The `dbstart` and `dbshut` scripts are located in the `$ORACLE_HOME/bin` directory and can be used to automate database startup and shutdown.

The `dbstart` and `dbshut` scripts reference the same entries in the `oratab` file, so the scripts must apply to the same set of databases. For example, you cannot have `dbstart` automatically start up databases `sid1`, `sid2`, and `sid3`, and `dbshut` shut down only databases `sid1` and `sid2`. You can, however, specify that `dbshut` shut down a set of databases while `dbstart` is not used at all. To do this, include the `dbshut` entry in the shutdown file but omit the `dbstart` entry from the system startup files.

**See Also:** For a description of system startup and shutdown procedures, check the `init` command in your HP 9000 Series HP-UX documentation.

This process must be completed for every new database that you want to configure for automated startup and shutdown. Perform the following tasks to set up the `dbstart` and `dbshut` scripts so that they are called at system startup:

1. Edit the `/etc/oratab` file.
   Database entries in the `oratab` file appear in the following format:
   
   ```
   ORACLE_SID:ORACLE_HOME:{Y|N}
   ```
   
   where Y or N specifies whether you want the `dbstart` and `dbshut` scripts to start up and shut down the database. Find the entries for all the databases that you want to start up. They are identified by the `sid` in the first field. Change the last field for each to Y.

2. Create a file named `dbora` in the `/sbin/init.d` directory (if it does not already exist).

3. Create entries similar to the following at the end of the `dbora` file (if they do not already exist). Be sure to give the full path of the `dbstart` utility.

   ```
   #!/bin/sh
   # Set ORA_HOME to be equivalent to the ORACLE_HOME
   # from which you wish to execute dbstart and
   ```
# dbshut
# set ORA_OWNER to the user id of the owner of the
# Oracle database in ORA_HOME
ORA_HOME=/u01/app/oracle/product/8.1.7
ORA_OWNER=oracle
if [! -f $ORA_HOME/bin/dbstart]
then
  echo "Oracle startup: cannot start"
  exit
fi
  case "$1" in
    start)
      # Start the Oracle databases:
      # The following command assumes that the oracle login will not prompt the
      # user for any values
      su - $ORA_OWNER -c $ORA_HOME/bin/dbstart &
      ;;
    stop)
      # Stop the Oracle databases:
      # The following command assumes that the oracle login will not prompt the
      # user for any values
      su - $ORA_OWNER -c $ORA_HOME/bin/dbshut &
      ;;
  esac

4. Link dbora by entering:
   # ln -s /sbin/init.d/dbora /sbin/rc0.d/K10dbora
   # ln -s /sbin/init.d/dbora /sbin/rc2.d/S99dbora

Change Group Membership of the Apache Account
After installing Oracle8i, the Apache account access to oraInventory needs to be
removed in order to protect database security. Perform the following tasks:
1. Create a new group to which no other group or user has access.
2. Assign ownership of this group to Apache.
3. Change the Apache account primary GID group from the one that has
   ownership of oraInventory (typically oinstall) to the new group name.
Configuration Tasks to Perform as the *oracle* User

Perform the following tasks as the *oracle* user.

- Update UNIX Account Startup Files
- Configuration Environment Variables
- Apply Any Required Oracle Patches
- Set Initialization Parameters

Update UNIX Account Startup Files

Update the startup files of the *oracle* account and the UNIX accounts of Oracle users.

Configuration Environment Variables

Set the following environment variables in the `.profile` or `.login` file of the *oracle* account before using Oracle8i products. Table 4–2, "Environment Variable Settings" shows the recommended settings. The settings that you use here should correspond to the settings you used during installation as described in "Set Environment Variables" on page 2-9. The syntax for setting environment variables is as follows.

For the Bourne or Korn shell:

```
variable_name=value; export variable_name
```

For the C shell:

```
setenv variable_name value
```

**Note:** You should not define environment variables with names that are identical to those used for Oracle processes, for example: CKPT, PMON, and DBWR.

<table>
<thead>
<tr>
<th>Environment Variable</th>
<th>Recommended Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>SHLIB_PATH</td>
<td>Set it to include $ORACLE_HOME/lib.</td>
</tr>
<tr>
<td>ORACLE_BASE</td>
<td>software_mount_point/app/oracle</td>
</tr>
</tbody>
</table>
SHLIB_PATH
Required when using Oracle products that use shared libraries. Set SHLIB_PATH to include $ORACLE_HOME/lib.

ORACLE_BASE
Specifies the directory at the top of the Oracle software and administrative file structure. The OFA-recommended value is:

software_mount_point/app/oracle.

For example:

/u01/app/oracle

ORACLE_HOME
Specifies the directory containing the Oracle software for a given release. The Optimal Flexible Architecture recommended value is:

software_mount_point/app/oracle/product/8.1.7

Table 4–2  Environment Variable Settings

<table>
<thead>
<tr>
<th>Environment Variable</th>
<th>Recommended Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>ORACLE_HOME</td>
<td>$ORACLE_BASE/product/8.1.7</td>
</tr>
<tr>
<td>ORACLE_SID</td>
<td>If you do not remember the value you entered when you were prompted by the Oracle Universal Installer, you can find it listed in the Installer log file located in oraInventory_location/logs/installActions.log. The oraInventory_location is defined in /var/opt/oracle/oraInst.loc.</td>
</tr>
<tr>
<td>PATH</td>
<td>Make sure the new $ORACLE_HOME/bin directory is included in the PATH setting. See Chapter 2, &quot;Pre-Installation&quot; for other PATH requirements.</td>
</tr>
<tr>
<td>CLASSPATH</td>
<td>CLASSPATH must include the following: JRE_Location, $ORACLE_HOME/jlib, $ORACLE_HOME/product/jlib. Note: JRE_Location is defined as $ORACLE_HOME/JRE.</td>
</tr>
<tr>
<td>TNS_ADMIN</td>
<td>Set it to the location of the Net8 configuration files. This variable only needs to be set if Net8 configuration files are not located in one of the default locations.</td>
</tr>
<tr>
<td>TWO_TASK</td>
<td>Set TWO_TASK to the Net8 connect string alias defined in tnsnames.ora which client software will use by default to connect to a server.</td>
</tr>
</tbody>
</table>
$ORACLE_BASE/product/release.

For example:
/u01/app/oracle/product/8.1.7.

**ORACLE_SID**

Specifies the Oracle System Identifier (SID) which is the name of the Oracle Server instance. Because the *sid* is incorporated into many file names, Oracle Corporation recommends restricting it to no more than four characters to avoid filename problems on different operating systems.

**PATH**

After installation of Oracle software, the search path should include all of the following:

- $ORACLE_HOME/bin, /bin, /usr/bin, and /usr/ccs/bin
- the local bin directory specified when the *root.sh* script was run, usually /usr/local/bin

**Note:** If you require /usr/ucb in your search path, make sure it comes after /usr/ccs/bin in the search order.

**CLASSPATH**

The CLASSPATH variable is used for Java functionality. CLASSPATH is different for various products. Refer to your product documentation for more information. In addition to any pre-existing settings, CLASSPATH must include the following JRE location(s):

$ORACLE_HOME/JRE/lib/rt.jar:$ORACLE_HOME/jlib<product jar file>:$ORACLE_HOME/product/jlib/<product jar file>

The variable *product* indicates any product directory in the ORACLE_HOME, such as rdbms or network, where a JRE or file required for Java functionality are located.

**TNS_ADMIN**

To place the Net8 configuration files in a location other than the default locations (/etc or $ORACLE_HOME/network/admin), set the TNS_ADMIN environment variable to the directory where Net8 configuration files are located. For example, if tnsnames.ora resides in the /tns directory, set TNS_ADMIN to /tns.
Oracle products will look for the tnsnames.ora file in the following order:

1. .tnsnames.ora file in the current user’s home directory (Note the dot before the file name).
2. $TNS_ADMIN/tnsnames.ora
3. /etc
4. $ORACLE_HOME/network/admin/

Check that a tnsnames.ora file exists in one of these locations; otherwise, you may be unable to connect to a database through Net8 using local naming.

**TWO_TASK**

If you have a Client/Server configuration, you can set TWO_TASK to the net service name of the database where client software will connect by default. When TWO_TASK is set, you do not have to specify the net service name of the database to connect to it with Oracle client software. See the Net8 Administrator’s Guide and the Oracle8i Administrator’s Reference for HP 9000 Series HP-UX for more information about net service names.

**Initialize the oraenv Script**

You have the option of using the oraenv script to set a common environment for oracle users. Follow the instructions below for a single-instance or multiple-instance configuration for the oraenv script.

**Note:** The C shell uses the coraenv command instead of the oraenv command.

**Single-Instance Machine**

On a single-instance machine, set the environment variable ORACLE_SID in the .profile or .login file of the oracle account followed by these commands to initialize the oraenv file at login.

For the Bourne or Korn shell:

```
ORAENV_ASK=NO
./usr/local/bin/oraenv
```

For the C shell:

```
set ORAENV_ASK = NO
source /usr/local/bin/coraenv
```
unset ORAENV_ASK

**Multiple-Instance Machine**

On a multiple-instance machine, include a list of instance names and the commands necessary to initialize the `oraenv` file at the end of the startup file of the `oracle` account.

For the Bourne or Korn shell:

```bash
#!/usr/bin/sh
echo "The SIDs on this machine are:"
cat /etc/oratab | awk -F: '{print $1}' | grep -v "#"
ORAENV_ASK="YES"
. /usr/local/bin/oraenv
```

For the C shell:

```bash
#!/usr/bin/csh
echo "The SIDs on this machine are:"
cat /etc/oratab | awk -F: '{print $1}' | grep -v "#"
set ORAENV_ASK="YES"
source /usr/local/bin/coraenv
```

**Update Other Oracle User Startup Files**

To create the same environment for all Oracle accounts, update each user startup file to include the following line at the end of the startup file:

- for `.profile` files used by the Bourne or Korn shells:
  ```
  . /usr/local/bin/oraenv
  ```

- for `.login` files used by the C shell:
  ```
  source /usr/local/bin/coraenv
  ```

- Settings for the ORACLE_BASE, ORACLE_HOME, and PATH environment variables as described in “Configuration Environment Variables” on page 4-7.

**Update the oratab File**

If you have created a database manually instead of using Oracle Database Configuration Assistant, you must ensure the system configuration is reflected in the `/etc/oratab` file.

Add an entry for each Server instance on the system in the following format:
Reviewing Installed Starter Database Contents

**ORACLE_SID:** ORACLE_HOME: {Y | N}

where Y or N indicates whether you want to activate the `dbstart` and `dbshut` scripts. Oracle Database Configuration Assistant automatically adds an entry for each database it creates.

**Apply Any Required Oracle Patches**

The Oracle8i release, which this manual accompanies, includes patches that must be applied to Oracle8i or other products. Patches can be found on the Oracle8i Release 3 (8.1.7) CD-ROM in the `cd_rom_mount_point/patch` directory. Review the README file included with each patch for installation instructions.

**Set Initialization Parameters**

You can change initialization parameters to configure and tune your system for optimal performance. The default `init<sid>.ora` file shipped with the distribution is located in the `$ORACLE_BASE/admin/sid/pfile` directory. A template `init.ora` file is also in `$ORACLE_HOME/dbs`. The file contains settings for small, medium, and large databases, with the settings for medium and large databases commented out. The size settings are relative to each other, but do not represent an empirical size of the database.

**Modify `init<sid>.ora` Parameters**

When you create a typical startup database using Oracle Database Configuration Assistant, your `init<sid>.ora` parameters are automatically set. You can manually modify the initialization parameters in the `init<sid>.ora` with a UNIX text editor. Activate the modified `init<sid>.ora` file by shutting down and restarting the database.

Do not use symbolic character representations such as question marks (?) for `ORACLE_HOME` in parameter files, as they may lead to startup errors.

To bring rollback segments online automatically with database startup, you must uncomment the `rollback_segments` in the `init<sid>.ora` file.

For example, change:

```
#rollback_segments = (r0, r1, r2, r3)
to:
rollback_segments = (r0, r1, r2, r3)
```
Reviewing Installed Starter Database Contents

**See Also:** *Oracle8i Administer's Reference for HP 9000 Series HP-UX* for information on init\(\text{sid}\).ora parameters, and for further information on tuning and configuring initialization parameters.

### Post-Installation for Oracle Products

Perform the product-specific steps as necessary for your installation. Not all products require post-installation setup.

To review online documentation before you configure your Oracle products, see "De-installing Oracle Software" on page 4-30. It is not necessary to read product documentation before completing the configuration tasks in this manual, but more sophisticated tuning requires information in the product documentation.

The following products have post-installation steps:

- Multi-Threaded Server
- Net8
- Oracle Configuration Assistants
- Oracle Enterprise Manager
- Oracle Internet Directory
- Oracle Options
- Oracle Parallel Server Management
- Oracle Precompilers
- Oracle SupportedProtocols
- Recovery Manager

### Multi-Threaded Server

Oracle servers configured with Multi-Threaded Server require a higher setting for the initialization parameter SHARED_POOL_SIZE or a custom configuration that uses LARGE_POOL_SIZE. If you installed your server with Oracle Universal Installer, the value of SHARED_POOL_SIZE is set for you automatically by Oracle Database Configuration Assistant. However, if you created a database manually you should raise SHARED_POOL_SIZE in the init\(\text{sid}\).ora file. Typically, you should add 1 KB for each anticipated concurrent user.
Net8

Basic configuration of Net8 is done by Net8 Configuration Assistant when it is
invoked by Oracle Universal Installer during installation of Net8. For an
explanation of how Net8 Configuration Assistant configures your installation, see
"Understanding Net8 Configuration" on page 2-18. For information on running
Net8 Configuration Assistant as a stand-alone tool, see "Net8 Configuration
Assistant" on page 4-15.

Verify and complete your initial configuration with the following steps:

1. Log in as root and reserve a port for the Net8 listener by making the following
   entry in the /etc/services file:

   listener_name 1521/tcp             #Net8 listener

   **Note:** 1521 is the default port. If you chose a different port when
   you configured the Net8 listener, specify that port in the
   /etc/services file.

2. Check the status of the listener following installation by using the command:

   $ lsnrctl status [listener_name]

   The **listener_name** field is required if the listener has a name other than the
default, listener.

   If the listener is not running, start it with the following command:

   $ lsnrctl start listener_name

3. Install and configure Oracle client software on a remote system, if necessary,
   then start SQL*Plus to test the connection to the server.

   $ sqlplus username/password@net_service_name

   If you can successfully connect to the server with SQL*Plus, you have established
   network connectivity over TCP/IP. For more advanced network configuration, refer
to the **Net8 Administrator’s Guide**.

**See Also:** *Oracle8i Designing and Tuning for Performance* for further
information on configuring Multi-Threaded Server.
See Also: Configuring a complete Oracle network is beyond the scope of this manual and is covered in detail in the Net8 Administrator’s Guide.

Oracle Configuration Assistants
The following Oracle configuration assistants are described in this section:

- Oracle Enterprise Manager Configuration Assistant
- Net8 Configuration Assistant
- Oracle Data Migration Assistant
- Oracle Database Configuration Assistant

These configuration assistants are usually run during an installation session, but can also be run in a stand-alone mode. Like Oracle Universal Installer, each of these assistants can also be run non-interactively using a response file. See "Non-Interactive (‘Silent’) Installation and Configuration" on page 3-29 for information on using response files with the product assistants.

Oracle Enterprise Manager Configuration Assistant
Oracle Enterprise Manager Configuration Assistant is a tool that enables you to create, configure, drop, or upgrade the Oracle Enterprise Manager repository.

See Also: For detailed information about the Oracle Enterprise Manager Configuration Assistant, see the Oracle Enterprise Manager Configuration Guide.

Net8 Configuration Assistant
When the Net8 Server or Net8 Client is installed, the Net8 Configuration Assistant is automatically launched by Oracle Universal Installer.

If you create a database using the Oracle Database Configuration Assistant during or after installation, it will automatically update the Net8 configuration with any configuration information necessary for the new database. Oracle Database Configuration Assistant either registers the database in a supported directory service so that clients can use the directory to connect to the database, or it will create an entry in the local naming file (tnsnames.ora) that can then be distributed to client machines to connect to the database.
If you choose to do a separate Oracle8i Client installation, the Net8 Configuration Assistant will automatically create a profile that is consistent with any selections you made during the installation. The Installer will automatically run the Net8 Configuration Assistant to set up a net service name in the Local Naming file found in the $ORACLE_HOME/network/admin directory of the client installation.

After installation is complete, more detailed configuration can be accomplished using the Net8 Configuration Assistant with the following command:

$ netasst

**See Also:** See "Understanding Net8 Configuration" on page 2-18 for a description of how Net8 Configuration Assistant configures your installation.

For information on the use and configuration of Net8, see the *Net8 Administrator's Guide*.

**Oracle Data Migration Assistant**

If you have installed Oracle8i to use with an existing database from a prior software release, and you did not choose to upgrade the database during the installation, you need to upgrade or migrate the database before mounting it.

**See Also:** The process of migrating a database exceeds the scope of this manual. See *Oracle8i Migration* for detailed instructions and information.

**Oracle Database Configuration Assistant**

Oracle Database Configuration Assistant can create a default or customized database or it can be used to configure an existing database to use Oracle options. The assistant can create the database or present a collection of shell and SQL scripts which you can inspect, modify, and run at a later time. See "Identifying Your Database Environment" on page 2-22 for information on the types of databases that you can install using Oracle Database Configuration Assistant.

Start Oracle Database Configuration Assistant with the following command:

$ dbassist

For help with the Oracle Database Configuration Assistant, use the -help or -h command line parameters with dbassist.

$ dbassist -help
Oracle Corporation recommends running the `UTLRP.SQL` script after creating, upgrading, or migrating a database. This script recompiles all PL/SQL modules that may be in an `INVALID` state, including packages, procedures, types, and so on. This step is optional, but recommended so that the cost of recompilation is incurred during the installation rather than in the future.

**Note:** There should be no other data definition language (DDL) statements running on the database while it is running, and packages `STANDARD` and `DBMS_STANDARD` must already be valid.

1. Start SQL*Plus:
   
   ```bash
   $ sqlplus
   ```

2. Connect to the database with the `SYS` account:
   
   ```sql
   SQL> CONNECT SYS/PASSWORD AS SYSDBA
   ```
   
   where `PASSWORD` is `CHANGE_ON_INSTALL` by default, unless it was changed after installation.

3. Start the database (if necessary):
   
   ```sql
   SQL> STARTUP
   ```

   Run the `UTLRP.SQL` script:
   
   ```sql
   SQL> @ORACLE_BASE/ORACLE_HOME/RDBMS/ADMIN/UTLRP.SQL
   ```

**Oracle Enterprise Manager**

If you installed Oracle Enterprise Manager Server through the Oracle8i Management Infrastructure, Custom installation, or Custom Management Infrastructure types, Oracle Enterprise Manager Configuration Assistant will automatically start at the end of the installation to guide you through repository configuration. If you installed Oracle Enterprise Manager through any other installation type, Oracle Enterprise Manager Configuration Assistant will not start automatically at the end of the installation.

Manually start Oracle Enterprise Manager Configuration Assistant after installation if a repository needs to be created configured, upgraded, or dropped. For information on running Oracle Enterprise Manager Configuration Assistant as a stand-alone tool, see "Oracle Enterprise Manager Configuration Assistant" on page 4-15.
Reviewing Installed Starter Database Contents

See Also: There are further post-installation steps for Oracle Enterprise Manager that exceed the scope of this manual and are discussed in detail in the Oracle Enterprise Manager Configuration Guide.

Oracle Internet Directory

Carry out the following task after installation:

1. Run cryptupgrd.sh immediately after installation. The script can be found in $ORACLE_HOME/ldap/bin.

   See Also: For more information, see the Oracle Internet Directory Installation Guide, and the Oracle Internet Directory Administrator’s Reference.

Oracle Options

Configuring the Database for Oracle Options

If you install additional Oracle Options after the initial installation, use Oracle Database Configuration Assistant to configure your database for the options you install.

1. Start up the Oracle Database Configuration Assistant by executing dbassist, which is located at:

   $ORACLE_HOME/bin/dbassist

2. Select [Modify Database].

3. Select the appropriate database SID from the list of those detected by the Oracle Database Configuration Assistant. The database that you want to modify must already be running.

4. Choose the options you wish to enable from the list and click the [Finish] button.

Execute privileges will be granted to PUBLIC for all of the options and packages.

Oracle interMedia

If you intend to install Oracle interMedia Text after your initial installation, ensure you have at least 10 MB of disk space for the data dictionary.
For interMedia Text, include $ORACLE_HOME/ctx/lib in the SHLIB_PATH environment variable.

Your database must include tablespaces specific to interMedia Text data. Verify that tablespaces exist to serve as default and temporary tablespaces for Oracle interMedia Text. Oracle interMedia Text uses the DRSYS tablespace for its default and temporary tablespaces. If tablespaces for Oracle interMedia Text do not exist or you do not want to use the DRSYS tablespace, create additional tablespaces before proceeding.

---

**Note:** There is no upgrade from previous releases of ConText Cartridge to Oracle interMedia Text 8.1. However, there is a migration that can be performed manually. See the Oracle8i ConText to interMedia Text Migration guide for documentation of this process.

---

**See Also:** Oracle8i SQL Reference for information on creating tablespaces.

### Oracle Parallel Server Management

1. To start the Oracle Parallel Server Communication Daemon automatically when the machine is rebooted, log in as the root user and add a line similar to the following in the system startup file:
   
   ```
   su - oracle -c "opsd log=/tmp/opsd.log"
   ```

   The above entry is optional. The default entry is:
   
   ```
   /tmp/opsdlog
   ```

   On HP-UX, the startup file is /usr/sbin/init.d/dbora.

   **Note:** The following two steps are not necessary if Oracle Database Configuration Assistant was used to create the database.

2. Determine the node numbers for all nodes of the cluster, by entering:
   
   ```
   $ORACLE_HOME/bin/lsnodes -n
   ```

3. Create the Oracle Parallel Server configuration file,
   
   `$ORACLE_HOME/ops/opsname.conf`, and install a copy on each node. This
file contains parameters describing the configuration of Oracle Parallel Server instances and related services.

**See Also:** The *Oracle Parallel Server Setup and Configuration Guide*.

**Oracle Precompilers**

**Note:** You cannot use Oracle Precompilers independently of Oracle8i to convert embedded PL/SQL.

**Precompiler Configuration File Location**

All precompiler configuration files are located in the following location:

```
$ORACLE_HOME/precomp/admin
```

**Pro*C/C++**

The configuration file `pcscfg.cfg` must be customized for your environment before using Pro*C/C++. This file is installed without content and may be configured with any text editor according to your site-specific requirements.

**See Also:** The *Programmer's Guide to the Pro*C/C++ Precompiler* for information on configuring the `pcscfg.cfg` file.

**Pro*COBOL**

The configuration file `pcbcfg.cfg` is installed without content and may be configured with any text editor according to your site-specific requirements.

**See Also:** The *Pro*COBOL Programmer's Guide for information on configuring the `pcscfg.cfg` file.

**Pro*FORTRAN**

The configuration file is `pccfor.cfg`. This file is installed without content and may be configured with any text editor according to your site-specific requirements. See your FORTRAN77 documentation to determine how to configure this file.

**Oracle Supported Protocols**

Perform the following steps after installing any protocol:
1. Verify that you have created and installed the necessary configuration files for the network.

   **Note:** This procedure fails if the TNS_ADMIN environment variable is not set or if listener.ora is not in one of the default locations (/var/opt/oracle or $ORACLE_HOME/network/admin).

2. To start the listener automatically when the machine is rebooted, log in as the root user and add a line similar to the following in the system startup file:

   ```
   su - oracle -c "lsnrctl start"
   ```

   On HP-UX, the startup file is /sbin/init.d/dbora.

3. If you have a client/server configuration, set the TWO_TASK environment variable on the client machines to the service name for the server (available from the tnsnames.ora file). See "Configuration Environment Variables" on page 4-7 for information on setting environment variables.

4. Start the listener on the server:

   ```
   $ lsnrctl start
   ```

5. Check the listener process:

   ```
   $ lsnrctl status
   ```

6. As the oracle user, start SQL*Plus, to test the connection:

   ```
   $ sqlplus username/password@service_name
   ```

### Recovery Manager

Recovery Manager is an automated recovery utility that is installed as part of Oracle8i. It stores information in a recovery catalog in a separate Oracle8i database.
This second Oracle8i database should be installed on a separate machine to provide maximum fault resistance.

**Note:** If the installation and maintenance of a second Oracle8i database is impractical, Recovery Manager can also be used in a restricted mode without a recovery catalog.

To create a recovery catalog, perform the following steps:

1. Install Oracle8i on a separate machine from any other Oracle8i system and create a database for the recovery catalog.
   
   If you do not to write a custom script to create the database, create a typical, preconfigured database with Oracle Database Configuration Assistant. The default database is adequate for the recovery catalog.

2. Create a user in the recovery catalog database to be the RECOVERY_CATALOG_OWNER.

3. As the RECOVERY_CATALOG_OWNER, run the createCatalog command at the Oracle Recovery Manager prompt.

   **See Also:** For more detail on Recovery Manager, see the Oracle8i Backup and Recovery Guide.

**Secure Socket Layer**

Once the Secure Socket Layer is installed, you must run Net8 Configuration Assistant to properly configure it for your system.

**See Also:** For more detail on Secure Socket Layer, refer to the installed documentation Configuring Secure Socket Layer Authentication in the Oracle Advanced Security Administrator’s Guide in the generic documentation set.

**Reviewing Installed Starter Database Contents**

**User Names and Passwords**

This section describes the user names and passwords included in the starter database. The SYS, SYSTEM, and DBSNMP user names and INTERNAL alias
passwords in the following table are automatically included in all databases created by Oracle Database Configuration Assistant.

<table>
<thead>
<tr>
<th>User Name</th>
<th>Password</th>
<th>Description</th>
<th>See Also</th>
</tr>
</thead>
<tbody>
<tr>
<td>CTXSYS</td>
<td>CTXSYS</td>
<td>CTXSYS is the Oracle interMedia Text user name with CONNECT, DBA, and RESOURCE database roles.</td>
<td>Oracle8i interMedia Text Reference</td>
</tr>
<tr>
<td>DBSNMP</td>
<td>DBSNMP</td>
<td>DBSNMP includes the CONNECT, RESOURCE, and SNMPAGENT database roles. Run <code>catnsnmp.sql</code> if you want to drop this role and user.</td>
<td>Oracle Intelligent Agent User’s Guide</td>
</tr>
<tr>
<td>INTERNAL</td>
<td>ORACLE</td>
<td>INTERNAL is used for performing database administration tasks, including starting up and shutting down a database. <strong>Note:</strong> INTERNAL is not a true user name; it is an alias for the SYS user name (see below) and SYSDBA privilege. The password is required only for users who did not install the Oracle8i database. The user who installed the Oracle8i database is not prompted to enter a password when connecting as INTERNAL.</td>
<td>Oracle8i Administrator’s Guide</td>
</tr>
<tr>
<td>MDSYS</td>
<td>MDSYS</td>
<td>MDSYS is the Oracle Spatial and interMedia Audio, Video, Locator, and Image administrator user name.</td>
<td>Oracle Spatial User’s Guide and Reference, Oracle8i interMedia Locator User’s Guide and Reference</td>
</tr>
<tr>
<td>MTSSYS</td>
<td>MTSSYS</td>
<td>MTSSYS is the user name under which the Oracle Service for MTS runs.</td>
<td>Using Microsoft Transaction Server With Oracle8</td>
</tr>
<tr>
<td>ORDPLUGINS</td>
<td>ORDPLUGINS</td>
<td>ORDPLUGINS is the Oracle interMedia Audio and Video user name with the CONNECT and RESOURCE roles. ORDPLUGINS allows non-native plug-in formats for one session.</td>
<td>Oracle8i interMedia Audio, Image, and Video User’s Guide and Reference</td>
</tr>
</tbody>
</table>

<tr>
<td>SYS</td>
<td>CHANGE_ON_INSTALL</td>
<td>SYS is used for performing database administration tasks. SYS includes the following database roles: AQ_ADMINISTRATOR_ROLE, AQ_USER_ROLE, CONNECT, CTXAPP, DBA, DELETE_CATALOG_ROLE, EXECUTE_CATALOG_ROLE, EXP_FULL_DATABASE, HS_ADMIN_ROLE, IMP_FULL_DATABASE, JAVA_ADMIN, JAVADEBUGPRIV, JAVAIDPRIV, JAVAUSERPRIV, OEM_MONITOR, RECOVERY_CATALOG_OWNER, RESOURCE, SELECT_CATALOG_ROLE, SNMPAGENT, TIMESERIES_DBA, TIMESERIES_DEVELOPER</td>
<td>Oracle8i Administrator’s Guide</td>
</tr>
<tr>
<td>SYSTEM</td>
<td>MANAGER</td>
<td>SYSTEM is used for performing database administration tasks. SYSTEM includes the AQ_ADMINISTRATOR_ROLE and DBA database roles.</td>
<td>Oracle8i Administrator’s Guide</td>
</tr>
</tbody>
</table>
Database Identification

The Oracle8i database is identified by its global database name, which consists of the database name and network domain in which the database is located. The global database name uniquely distinguishes a database from any other database in the same network domain. You create a global database name when prompted in the Database Identification window during Oracle8i database installation. The global database name takes the form:

database_name.database_domain

For example:

sales.us.acme.com

- sales: The name you give your database. The database name portion is a string of no more than 8 characters that can contain alpha, numeric, and additional characters. The database name is also assigned to the DB_NAME parameter in the init.ora file.

- us.acme.com: The network domain in which the database is located, making the global database name unique. The domain portion is a string of no more than 128 characters that can contain alpha, numeric, period (.), and additional characters. The domain name is also assigned to the DB_DOMAIN parameter in the init.ora file.

The DB_NAME parameter (value sales) and DB_DOMAIN name parameter (value us.acme.com) combine to create the global database name value assigned to the SERVICE_NAMES parameter (value sales.us.acme.com) in the init.ora file.

The System Identifier (SID) identifies a specific Oracle8i instance that references the database. The SID uniquely distinguishes a database from any other database on the same computer. Multiple Oracle homes enable you to have multiple, active Oracle databases on a single computer. Each database requires a unique SID and database name.

The SID name is taken from the value you entered for the database name in the Database Identification window, although you had the opportunity to change it. The SID can be up to 64 alphanumeric characters in length.

User Name | Password | Description | See Also
---|---|---|---
SCOTT | TIGER | SCOTT includes the CONNECT and RESOURCE database roles. | Oracle8i Administrator's Guide

<table>
<thead>
<tr>
<th>Where...</th>
<th>Is...</th>
</tr>
</thead>
<tbody>
<tr>
<td>sales</td>
<td>The name you give your database. The database name portion is a string of no more than 8 characters that can contain alpha, numeric, and additional characters. The database name is also assigned to the DB_NAME parameter in the init.ora file.</td>
</tr>
<tr>
<td>us.acme.com</td>
<td>The network domain in which the database is located, making the global database name unique. The domain portion is a string of no more than 128 characters that can contain alpha, numeric, period (.), and additional characters. The domain name is also assigned to the DB_DOMAIN parameter in the init.ora file.</td>
</tr>
</tbody>
</table>
For example, if the SID and database name for an Oracle database are ORCL, each database file is located in the ORACLE_BASE/oradata/ORCL directory and the initialization parameter file is located in the ORACLE_BASE/admin/ORCL/pfile directory. The directory ORCL is named after the DB_NAME parameter value.

**Tablespaces and Datafiles**

An Oracle8i database is divided into smaller logical areas of space known as tablespaces. Each tablespace corresponds to one or more physical datafiles. Datafiles contain the contents of logical database structures such as tables and indexes. A datafile can be associated with only one tablespace and database.

---

**Note:** Unless you specified different names with Oracle Database Configuration Assistant, the tablespaces and datafiles described in the following table are also automatically included in the Custom database.

The tablespaces in the Oracle8i database contain the following types of datafiles located in the $ORACLE_BASE/oradata/<db_name> directory:

<table>
<thead>
<tr>
<th>Tablespace</th>
<th>Datafile</th>
<th>Contains...</th>
</tr>
</thead>
<tbody>
<tr>
<td>SYSTEM</td>
<td>system01.dbf</td>
<td>The data dictionary, including definitions of tables, views, and stored procedures needed by the Oracle database. Information in this area is maintained automatically. The SYSTEM tablespace is present in all Oracle databases.</td>
</tr>
<tr>
<td>USERS</td>
<td>users01.dbf</td>
<td>Your application data. As you create and enter data into tables, you fill this space with your data.</td>
</tr>
<tr>
<td>TEMP</td>
<td>temp01.dbf</td>
<td>Temporary tables and/or indexes created during the processing of your SQL statement. You may need to expand this tablespace if you are executing a SQL statement that involves a lot of sorting, such as ANALYZE COMPUTE STATISTICS on a very large table, or the constructs GROUP BY, ORDER BY, or DISTINCT.</td>
</tr>
<tr>
<td>RBS</td>
<td>rbs01.dbf</td>
<td>Rolled back transactions that fail to complete normally. You may need to expand this tablespace if you have long-running or high-data-volume transactions.</td>
</tr>
</tbody>
</table>
Reviewing Installed Starter Database Contents

The starter database contains one database initialization parameter file located in the $ORACLE_BASE/admin/<db_name>/pfile directory:

<table>
<thead>
<tr>
<th>Tablespace</th>
<th>Datafile</th>
<th>Contains</th>
</tr>
</thead>
<tbody>
<tr>
<td>INDX</td>
<td>indx01.dbf</td>
<td>Indexes associated with the data in the USERS tablespace.</td>
</tr>
<tr>
<td>DRSYS</td>
<td>dr01.dbf</td>
<td>Oracle interMedia text-related schema objects.</td>
</tr>
<tr>
<td>TOOLS</td>
<td>tools01.dbf</td>
<td>Nothing. This datafile is created for use if the user wants to install any third-party or Oracle tools/products.</td>
</tr>
</tbody>
</table>

**Note:** If you choose to create a new repository and accept the default settings when running Oracle Enterprise Manager Configuration Assistant, a tablespace named `oem_repository.ora` and a datafile named `oem_repository.ora` are also created.

See Also: The "Tablespaces and Datafiles" chapter of Oracle8i Concepts and the "Managing Tablespaces" and "Managing Datafiles" chapters of the Oracle8i Administrator's Guide

**Initialization Parameter File**

The starter database contains one database initialization parameter file located in the $ORACLE_BASE/admin/<db_name>/pfile directory:

<table>
<thead>
<tr>
<th>Initialization Parameter File</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>init.ora</td>
<td>The parameter file init.ora must exist for an instance to start. A parameter file is a text file that contains a list of instance configuration parameters. The starter database init.ora file has preconfigured parameters. No edits are required to this file in order to use the starter database.</td>
</tr>
</tbody>
</table>

See Also: Oracle8i Administrator’s Guide and Oracle8i Reference for Oracle8i database-specific initialization parameters and their default values:
Redo Log Files

The starter database contains three redo log files located in the $ORACLE_BASE/oradata/<db_name> directory:

<table>
<thead>
<tr>
<th>Database Files</th>
<th>Disk Size</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>redo01.log</td>
<td>1 MB</td>
<td></td>
</tr>
<tr>
<td>redo02.log</td>
<td>1 MB</td>
<td></td>
</tr>
<tr>
<td>redo03.log</td>
<td>1 MB</td>
<td></td>
</tr>
</tbody>
</table>

Redo log files hold a record of all changes made to data in the database buffer cache. If an instance failure occurs, the redo log files are used to recover the modified data that was in memory. Redo log files are used in a cyclical fashion. For example, if three files constitute the online redo log, the first file is filled, then the second file, and then the third file. The first file is then re-used and filled, the second file is re-used and filled, and so on.

See Also: Oracle8i Backup and Recovery Guide

Control Files

The starter database contains three control files located in the $ORACLE_BASE/oradata/<db_name> directory:

<table>
<thead>
<tr>
<th>Control Files</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>control01.ctl</td>
<td>A control file is an administrative file required to start and run the database. The control file records the physical structure of the database. For example, a control file contains the database name, and the names and locations of the database’s datafiles and redo log files.</td>
</tr>
<tr>
<td>control02.ctl</td>
<td></td>
</tr>
<tr>
<td>control03.ctl</td>
<td></td>
</tr>
</tbody>
</table>
Rollback Segments

Rollback segments record the old values of data changed by each transaction (whether or not committed). Every database contains one or more rollback segments, which are portions of the database that record the actions of transactions in the event that a transaction is rolled back. Rollback segments are used to provide read consistency, to roll back transactions, and to recover the database.

The starter database contains the following rollback segments:

<table>
<thead>
<tr>
<th>Rollback Segment</th>
<th>Contained in this Tablespace...</th>
<th>Used by</th>
</tr>
</thead>
<tbody>
<tr>
<td>SYSTEM</td>
<td>SYSTEM</td>
<td>SYS</td>
</tr>
<tr>
<td>RB_TEMP</td>
<td>SYSTEM (private)</td>
<td>SYS</td>
</tr>
<tr>
<td>RB1 through RB16</td>
<td>RBS</td>
<td>PUBLIC (a pool of rollback segments that any instance requiring a rollback segment can use)</td>
</tr>
</tbody>
</table>

Note: The files control01.ctl, control02.ctl, and control03.ctl are also automatically included in the Custom database. Oracle Corporation recommends that you keep at least three control files (on separate physical drives) for each database and set the CONTROL_FILES initialization parameter to list each control file.

See Also: Oracle8i Administrator’s Guide for information on setting this initialization parameter value.

Data Dictionary

The data dictionary is a protected collection of tables and views containing reference information about the database, its structures, and its users. The data stored in the dictionary includes the following:

- Names of the Oracle database users
- Privileges and roles granted to each user
- Names and definitions of schema objects (including tables, views, snapshots, indexes, clusters, synonyms, sequences, procedures, functions, and packages)
Reviewing Installed Starter Database Contents

- Integrity constraints
- Space allocation for database objects
- Auditing information, such as who accessed or updated various objects

See Also: For more information on the data dictionary, see
Oracle8i Concepts and Oracle8i Reference.

De-installing Oracle Software

A complete de-installation of Oracle software requires you to remove any installed databases with the Oracle Database Configuration Assistant and de-configure Net8 with the Net8 Configuration Assistant. Both assistants must be run before you use the Installer to completely de-install Oracle software. The Oracle Internet Directory Control Utility and Oracle Internet Directory Monitor must be stopped before de-installation of Oracle Internet Directory. In addition, before beginning de-installation, the Apache account primary GID must be changed to the group that owns oraInventory. A partial de-installation of Oracle software does not necessarily require you to run either Oracle Database Configuration Assistant or Net8 Configuration Assistant.

Changing the Apache Account GID for De-Installation

1. log on as root.

2. Change the Apache account primary GID group from the Apache account group to the group that has ownership of oraInventory (typically oinstall).

3. log off as root.

De-installation of an Oracle Database with Oracle Database Configuration Assistant

1. Start the Oracle Database Configuration Assistant
   
   \$ dbassist

2. From the initial screen, select "Delete a Database."

3. Click [Next].

4. Select the instance for the database that you want to delete.
5. Click [Finish]. Verify that you want to delete the database in the windows that appear.

Because you can only delete one database at a time, you must repeat these steps for each database that you want to delete.

After you have run Oracle Database Configuration Assistant, run the Net8 Configuration Assistant in de-install mode by invoking it at the command line with the /deinst parameter:

$ netca /deinst

**De-installation of Oracle Internet Directory**

To deinstall Oracle Internet Directory Services:

1. Stop the Oracle Internet Directory Server:

   $ oidctl connect=<net_service_name> server=oidldapd 
   instance=<server_instance_number> stop

   where <net_service_name> is the network connection to the Oracle Internet Directory Server and <server_instance_number> is the instance number; this number appears in the Server List tab of Oracle Directory Manager.

2. Stop the Oracle Internet Directory Monitor

   $ oidmon stop

   Follow the procedures in "De-installation of an Oracle Database with Oracle Database Configuration Assistant" to remove the Oracle8i database configured with Oracle Internet Directory.

   **See Also:** For more information, see the Oracle Internet Directory Administrator’s Reference.

**De-installation of Oracle Software with Oracle Universal Installer**

1. Start the Installer as described in "Start Oracle Universal Installer (OUI)" on page 3-3.

2. Click the [De-install Products] button on the "Welcome" dialog box or the [Installed Products...] button available on any Installer screen. The "Inventory" dialog box appears, listing installed products.
3. In the "Inventory" dialog box, select any product(s) to be de-installed, then click the [Remove] button.
This appendix lists the products included with Oracle8i Release 3 (8.1.7):

- Oracle8i Enterprise Edition or Oracle8i Components
- Oracle8i Client Components
- Oracle8i Management and Integration Components
- Product Descriptions

**Note:** The Custom installation type is not listed for any of the above three top-level components since it allows you to install all components in the current top-level component category. Some components can only be installed through a Custom installation. Such components have an availability of "No" listed for other installation types in the tables in this appendix.
Oracle8i Enterprise Edition or Oracle8i Components

This table alphabetically lists the components available with each installation type of the Oracle8i Enterprise Edition or Oracle8i.

<table>
<thead>
<tr>

</tbody>
</table>

<sup>1</sup> Oracle Advanced Security, Oracle Partitioning, Oracle Spatial, Oracle Time Series, Oracle Visual Information Retrieval, and Oracle Visual Information Retrieval Client are available with Oracle8i Enterprise Edition but are not available with Oracle8i.

<sup>2</sup> Oracle Parallel Server is available with Oracle8i Enterprise Edition, but is not available with Oracle8i.
3 The type of Oracle8i Server depends upon the database type you purchased: Oracle8i Enterprise Edition or Oracle8i.

### Oracle8i Client Components

This table alphabetically lists the components available with each installation type of the Oracle8i Client top-level component.

<table>

Not applicable
### Generic Connectivity

8.1.7 Also known as Heterogeneous Services, this feature implements an extensibility framework for accessing non-Oracle systems. This feature integrates the core of Oracle’s gateway technology directly into the Oracle8i database server by extending the Oracle SQL engine to optimize and rewrite SQL for non-Oracle data stores.

### Legato Storage Manager (LSM)

5.5 If you are using Recovery Manager (RMAN) for Oracle database backups, a media management product such as LSM is required for backing up and restoring from tape storage. You can choose to install LSM from the Oracle8i CD-ROM, or use a third-party media management product that also complies with Oracle’s Backup Solutions Program. LSM is a scaled-down version of Legato NetWorker.

The Oracle Universal Installer prompts you to confirm whether or not you want to install LSM. When you confirm installation, LSM is installed automatically. To install LSM manually without using the installer, see Appendix B, "Legato Storage Manager". For more information on this product, call toll free (1) 888-8-LEGATO in the United States of America.

Table A–1  Product Descriptions

<table>
<thead>
<tr>
<th>Product</th>
<th>Release</th>
<th>Description</th>
<th>For more information, see...</th>
</tr>
</thead>
</table>
| Logical Unit Type 6.2 (LU6.2) protocol support | 8.1.7   | The LU6.2 protocol support enables an Oracle application on a PC to communicate with an Oracle database. This communication occurs over an SNA network with the Oracle database on a host system that supports APPC.  

An SNA network with the LU6.2 and Physical Unit Type 2.1 (PU2.1) protocols provides APPC. The LU6.2 protocol defines a session between two application programs; LU6.2 is a product-independent LU-type.  

The adapter is part of the IBM Advanced Program-to-Program Communication (APPC) architecture.  

APPC is the IBM peer-to-peer (program-to-program) protocol for a System Network Architecture (SNA) network. SNA is an IBM reference model similar to the Open Systems Interconnect (OSI) model of the International Standards Organization (ISO).  

APPC architecture lets the client and host communicate over an SNA network without forcing the client to emulate a terminal (as in terminal-to-host protocols).  

APPC architecture allows peer-to-peer communication; the client can initiate communication with the server. | Net8 Administrator’s Guide |
| Net8 Assistant (Installed with Net8 Client) | 8.1.7   | Used by network administrators and DBAs to configure Net8. | Net8 Administrator’s Guide |
| Net8 Client                                  | 8.1.7   | Provides products that enable client connections to databases across a network. A client-side application sends a request to Net8 to be transported across the network to the server.  

Net8 Client (and not Oracle Universal Installer) installs TCP/IP and Named Pipes. | Net8 Administrator’s Guide |
| Net8 Configuration Assistant (Installed with Net8 Client) | 8.1.7 | Automatically started during installation to configure directory service access and Net8 client and server components. Net8 Configuration Assistant can also be run in stand-alone mode to configure Net8 after its installation. | Net8 Administrator’s Guide |
Net8 Server

8.1.7 Provides products that allow the listener, through a protocol, to accept connections from client applications on the network.

**Note:** Net8 Server is not installable through any Oracle8i Client installation types.

Net8 clients communicate with Oracle servers through net service names. Net8 resolves net service names using the following naming methods:

- Host Names
- Local Names
- Oracle Names
- Directory Names

Object Type Translator

8.1.7 Used to create C-struct representations of Abstract Data Types (ADTs) that have been created and stored in an Oracle database. To take advantage of objects, run Object Type Translator against the database, and a header file is generated that includes the C-structs.

**Oracle Advanced Security**

8.1.7 Oracle Advanced Security provides the following comprehensive suite of security services for Oracle8i:

*This multicomponent product requires a separate license.*

1. **Authentication support**

8.1.7 Oracle Advanced Security provides strong authentication support through a variety of authentication modules.

2. **Authorization support**

8.1.7 Authorization solutions are provided with DCE, and with the enterprise role management functionality in Oracle Advanced Security.
3. **Encryption and Integrity support**

Oracle Advanced Security ensures data confidentiality during transmission using the encryption and data integrity types listed in the installable products tables above. It enables a variety of public-key solutions, including native encryption, Secure Sockets Layer (SSL), X.509 certificates, passwords, smartcards and biometrics.

*Note:* Recent changes in the United States Export Administration Regulations (EAR) have made it possible for Oracle Corporation to ship the one edition of Oracle Advanced Security worldwide. Oracle Advanced Security functionality includes strong encryption for protocols into the Oracle database that were previously available only to the U.S. and Canadian markets.

4. **Enterprise User Security support**

Oracle Advanced Security integrates with Lightweight Directory Access Protocol (LDAP) v3-compliant directory services, such as Oracle Internet Directory, for centralized enterprise user management, enterprise role management, and single sign-on.

5. **Single Sign On support**

Oracle Advanced Security provides single sign-on to multiple accounts and applications with a single password. Strong authentication occurs transparently in subsequent connections. Kerberos, CyberSafe, DCE, and SSL-based single sign-on are supported.

</tbody>
</table>
### Oracle8i Parallel Server Management

Oracle Parallel Server Manager is an extension to the Oracle Enterprise Manager Console, which enables administration of databases that use the Oracle Parallel Server Option. Once discovered, Parallel Server Databases appear in the Databases folder of the Console's navigator panel alongside single-instance databases. Parallel Servers behave similarly to single-instance databases, and the database administrator can start up, shut down, or check the status of Parallel Server databases.

<td>Oracle Parallel Server Management (installed with Oracle Enterprise Manager)</td>
<td>8.1.7</td>
<td>Oracle Parallel Server Manager is an extension to the Oracle Enterprise Manager Console, which enables administration of databases that use the Oracle Parallel Server Option. Once discovered, Parallel Server Databases appear in the Databases folder of the Console's navigator panel alongside single-instance databases. Parallel Servers behave similarly to single-instance databases, and the database administrator can start up, shut down, or check the status of Parallel Server databases.</td>
<td>Oracle8i Parallel Server Setup and Configuration</td>
</tr>
<tr>
<td>Oracle Parallel Server Manager (part of Oracle Enterprise Manager Integrated Applications)</td>
<td>2.2</td>
<td>Discovers and manages databases that use the Oracle Parallel Server option. An extension to the Oracle Enterprise Manager Console, Oracle Parallel Server Management lists all discovered parallel servers alongside single-instance databases in the Navigator’s Databases folder. Using property sheets, you can start up and shut down databases using the Parallel Server option, as well as check the status of instances, datafiles, in-doubt transactions, profiles, redo log groups, roles, rollback segments, schema objects, users, and tablespaces.</td>

</table>
| Oracle PL/SQL Embedded Gateway             | 8.1.7   | A Java module gateway that authenticates user roles and enables secured access to build and invoke PL/SQL procedures. These procedures can retrieve data from database tables and generate HTTP responses. It may be deployed in one of two ways:  
  - **mod_plsql**: This module runs as a servlet on the HTTP Server middle tier. It creates “stateless” sessions, meaning information about requests is not maintained between client sessions.
  - **mod_ose**: This module runs as a servlet within the database. By resetting the default database activation descriptor (DAD) from the default “stateless” to “stateful,” conventional database locking schemes are enabled and session states are maintained. | Oracle Internet Application Server Release: Using mod_plsql Oracle8i Administrator’s Reference Release 3 (8.1.7) |

### Oracle XML Developer’s Kit

This kit consists of a set of APIs for parsing and generating XML data. These interfaces have been written for Java, C, C++, and PL/SQL. This kit consists of the following components:

- XML Parser for Java
- XML Parser for C
- XML Parser for C++
- XML Parser for PL/SQL
- XML Class Generator for Java
- XML Class Generator for C++
- XML Transviewer Beans
- XSQL Servlet

### Oracle XML SQL Utility

This utility is a set of Java classes and PL/SQL wrappers that permit queries to return result sets or objects wrapped in XML.

### PL/SQL Embedded Gateway

Enables users to use their browsers to invoke PL/SQL procedures stored in an Oracle database. The stored procedures can retrieve data from tables in the database, and generate HTTP responses to return to client browsers. The PL/SQL Embedded Gateway also includes the PL/SQL Web Toolkit—a set of PL/SQL packages that enables users to retrieve information about the HTTP request, specify values for HTTP headers, set cookies, and generate HTML pages.

### Pro*C/C++

Takes SQL statements embedded in C and C++ programs and converts them to standard C code. When you precompile this code, the result is a C or C++ program that you can compile and use to build applications that access an Oracle database.

This product requires a separate license as a part of Oracle Programmer.

This appendix describes how to install, update, and remove Legato Storage Manager. It includes the following:

- Requirements for Legato Storage Manager
- Pre-Installation Steps for Legato Storage Manager (LSM)
- Installing Legato Storage Manager
- Updating Legato Storage Manager
- Removing Legato Storage Manager Version 5.5
- Post-Installation Steps for Legato Storage Manager
Requirements for Legato Storage Manager

Legato Storage Manager is a restricted-functionality version of Legato NetWorker, a backup product.

**Note:** If you have Legato NetWorker already installed on your system, you will not have the option of installing Legato Storage Manager. To install the version of Legato Storage Manager included with this release of Oracle8i, you must first de-install any present version of Legato NetWorker. See “Removing an Existing Legato Storage Manager Installation” on page B-2.

The software requirements in Table B–1 apply to a default installation of Legato Storage Manager, with no relocation of the software components.

<table>

<td>1 MB</td>
</tr>
</tbody>
</table>

Pre-Installation Steps for Legato Storage Manager (LSM)

The Legato Storage Manager installation script modifies the following system files during installation:

- /etc/rpc
- /etc/syslog.conf

Make copies of the original versions of these files before you install Legato Storage Manager.

Removing an Existing Legato Storage Manager Installation

If you want to install LSM from the Oracle8i distribution, but LSM is already on your system, you must first remove the installed version.
Removing an Existing Legato Storage Manager Installation

1. As root user, stop the Legato Storage Manager daemons by using the `nsr_shutdown` command:
   
   # nsr_shutdown

2. As root user, remove the Legato Storage Manager software using the following `swremove` command:
   
   # swremove

   When the Software Selection Window appears, perform the following steps:

   a. Highlight Legato Storage Manager in the Software Selection Window.
   b. Select Remove (analysis) from the Actions menu.
   c. When the Status field in the Remove Analysis window is Ready, click Logfile to check the log file. Correct any listed problems before proceeding.
   d. Click OK in the Remove Analysis window.
   e. Click Yes in the Confirmation dialog box.
   f. When the Status field in the Remove Window changes to Completed, click Logfile to check the log file. Correct any listed problems, then restart the removal from step 1 of this procedure.
   g. Click Done to exit the Remove Window.
   h. Select Exit from the File menu to exit the Software Selection Window.
   i. Verify that the /opt/networker directory has been removed. If required, remove the /opt/networker directory manually.

   **Note:** The `swremove` command does not remove the /nsr directory containing Legato Storage Manager client and media index files and resource configuration files.

3. To remove the Legato Storage Manager index and resource configuration files, remove the /nsr directory by running the following command as root user:
   
   # rm -rf /nsr/* /nsr

   If you remove the /nsr directory containing the index and configuration information, you will not be able to restore from the Legato Storage
Manager backups. If you later re-install Legato Storage Manager or install another Legato product, you will need to rebuild the configuration.

Installing Legato Storage Manager

You typically install Legato Storage Manager by using the Oracle Universal Installer, selecting the Custom installation of Oracle8i Enterprise Edition, and selecting Legato Storage Manager.

If you do not install Legato Storage Manager using Oracle Universal Installer, you can manually install it using the following steps:

**Note:** If you are updating Legato Storage Manager, be sure to perform a partial removal of Legato Storage Manager using the procedure in the section "Removing Legato Storage Manager Version 5.5". Be sure not to remove any existing Legato Storage Manager files in the /nsr directory. For more information on updating, refer to the section "Updating Legato Storage Manager".

Be sure no Legato Storage Manager or NetWorker software is installed on your system. If Legato software exists but is not detected by the following installation steps, both the existing Legato software and the Legato Storage Manager might not function properly.

1. From the Oracle8i Release 3 (8.1.7) CD-ROM mount point, go to the lsm directory:
   
   $ cd lsm

2. As root user, install the Legato Storage Manager software using the following lsminst command:
   
   # ./lsminst cd_rom_mount_point/stage/Components/lsm

For each prompt asking if you want to continue the installation, enter Yes.

When prompted for a directory to use for client and server information, you can accept the default or enter another directory name. To check that the directory used has sufficient disk space, see the "Legato Storage Manager Software Requirements" table.
When prompted for a device name, you can enter either a carriage return ([ENTER]) or a proper no-rewind, BSD-semantics tape device name. The device is used by Legato Storage Manager for backups after it has been properly configured in the Legato Storage Manager Administrator GUI.

**See Also:** For details on device configuration, see Chapter 3 in the Legato Storage Manager Administrator’s Guide.

For all other prompts displayed by `lsminst`, press [ENTER].

3. Update the MANPATH and PATH environment variables as required. MANPATH must include `/usr/share/man`, the pathname of the directory where the Legato Storage Manager man pages are installed. PATH must include `/usr/bin` and `/usr/sbin`, the pathnames of the directories where the Legato Storage Manager binaries are installed.

4. For each ORACLE_HOME to be enabled for Legato Storage Manager backups, follow these steps:

**Note:** If you later install another ORACLE_HOME on your system, you must follow these steps to enable Legato Storage Manager backups from that ORACLE_HOME.

If you are installing the 64-bit version of Oracle8i for Solaris 11.0, you need to perform the steps below in the `$ORACLE_HOME/lib64` directory.

- **a.** Log in as the `oracle` user.
- **b.** Copy `stage/Components/lsm/lib/liblsm.sl` from the Oracle8i CD-ROM to the file `$ORACLE_HOME/lib/liblsm.sl`:
  ```bash
  $ cp stage/Components/lsm/lib/liblsm.sl $ORACLE_HOME/lib/liblsm.sl
  ```
- **c.** Shut down all Oracle instances that use this ORACLE_HOME.
- **d.** Remove the symbolic link `$ORACLE_HOME/lib/libobk.sl` and create a symbolic link from `$ORACLE_HOME/lib/libobk.sl` to `$ORACLE_HOME/lib/liblsm.sl`:
  ```bash
  $ cd $ORACLE_HOME/lib
  $ rm libobk.sl
  $ ln -s liblsm.sl libobk.sl
  ```
Updating Legato Storage Manager

To update to the latest version of Legato Storage Manager, follow these steps:

1. Perform a partial removal of Legato Storage Manager using the procedure in the section "Removing an Existing Legato Storage Manager Installation". Do not remove any existing Legato Storage Manager files in the /nsr directory.

2. Install the updated version of Legato Storage Manager using the procedure in the section "Installing Legato Storage Manager".

Removing Legato Storage Manager Version 5.5

Note: You cannot remove Legato Storage Manager by using the Installer. Use the following steps to remove Legato Storage Manager version 5.5.

To remove Legato Storage Manager version 5.5, follow these steps:

1. For each ORACLE_HOME on your system enabled for backups, follow these steps to remove the Media Management API of Legato Storage Manager:

   a. Shut down all Oracle instances that use this ORACLE_HOME.

   Note: If you are installing the 64-bit version of Oracle8i for Solaris 11.0, you need to perform the steps below in the $ORACLE_HOME/lib64 directory.

   b. Remove $ORACLE_HOME/lib/liblsm.sl and create a symbolic link from $ORACLE_HOME/lib/libobk.sl to $ORACLE_HOME/lib/libdsbtsh8.sl:

      $ cd $ORACLE_HOME/lib
      $ rm libobk.sl
      $ rm liblsm.sl
      $ ln -s libdsbtsh8.sl libobk.sl

   c. Restart all Oracle instances that use this ORACLE_HOME.
2. As root user, stop the Legato Storage Manager daemons by using the `nsr_shutdown` command:
   
   ```
   # nsr_shutdown
   ```

3. As root user, remove the Legato Storage Manager software using the following `swremove` command:
   
   ```
   # swremove
   ```

   When the Software Selection Window appears, perform the following steps:
   
   a. Highlight LSM in the Software Selection Window.
   b. Select Remove (analysis) from the Actions menu.
   c. When the Status field in the Remove Analysis window is Ready, click Logfile to check the log file. Correct any listed problems before proceeding.
   d. Click OK in the Remove Analysis window.
   e. Click Yes in the Confirmation dialog box.
   f. When the Status field in the Remove Window changes to Completed, click Logfile to check the log file. Correct any listed problems, then restart the removal from step 1 of this procedure.
   g. Click Done to exit the Remove Window.
   h. Select Exit from the File menu to exit the Software Selection Window.
   i. Verify that the `/opt/networker` directory has been removed. If required, remove the `/opt/networker` directory manually.

   **Note:** The `swremove` command does not remove the `/nsr` directory containing Legato Storage Manager client and media index files and resource configuration files.

4. To remove the Legato Storage Manager index and resource configuration files, remove the `/nsr` directory by running the following command as root user:
   
   ```
   # rm -rf /nsr/* /nsr
   ```

   If you remove the `/nsr` directory containing the index and configuration information, you will not be able to restore from the Legato Storage
Manager backups. If you later re-install Legato Storage Manager or install another Legato product, you will need to rebuild the configuration.

Post-Installation Steps for Legato Storage Manager

You can install Legato Storage Manager with the Installer by running the `root.sh` script as described in "Oracle8i Enterprise Edition Custom Installation" on page 3-12. Instructions for manually installing Legato Storage Manager from the Oracle8i CD-ROM are described in "Installing Legato Storage Manager".

The session report, `backintsid.log`, is created after the first backup session using SAP R/3 integrated with Legato Storage Manager. The report, typically located in the directory `/nsr/logs`, is appended to after each backup, recover, or archive.

1. After the Legato Storage Manager installation has completed, verify that all the required packages were installed.

   ```
   # /usr/sbin/swlist | grep -i lsm
   LSM 5.5.lsm.Build.55 LSM for HP-UX 10.xx and 11.xx
   ```

2. Configure the driver software to provide support for Legato Storage Manager to back up data to the SCSI storage devices attached to the system.

   **See Also:** For more information, refer to the Legato Storage Manager Administrator’s Guide.

3. For more information, refer to the Legato Storage Manager Administrator’s Guide.

Integrating SAP R/3 with Legato Storage Manager

To perform archive, backup, and recover operations, Legato Storage Manager provides a means to integrate SAP R/3 and Oracle8i backup and recovery. The backup and recovery is initiated from SAPDBA along with the SAP `br-tools` (brbackup, brarchive, and brrestore) with the Legato Storage Manager server.

On the Oracle8i software CD-ROM, the directory containing the Legato Storage Manager software has a subdirectory named `SAP` with the following files for SAP R/3 on Oracle:
To set up and configure Legato Storage Manager with SAP R/3 on your system, perform the following tasks:

1. With SAP R/3 already installed, install Legato Storage Manager on your system. Follow the installation instructions in "Installing Legato Storage Manager".

2. Include the pathname of the directory containing the Legato Storage Manager executables (/usr/sbin) in the PATH environment variable for the oracle user.

3. Configure a client resource for the Oracle8i server in Legato Storage Manager, according to the instructions in Chapter 2 of the Legato Storage Manager Administrator’s Guide, which is included on the Oracle Online Generic Documentation CD-ROM.

4. From the subdirectory named SAP in the Legato Storage Manager directory on the Oracle8i CD-ROM, copy the backint program file into the directory where the SAP br-tools reside.

5. From the subdirectory named SAP in the Legato Storage Manager directory on the Oracle8i CD-ROM, copy the file init.utl into the directory where you installed Legato Storage Manager, /usr/sbin.

6. Instruct the SAP Database Administration program to use the backint program by setting the backup_dev_type parameter in the SAP initialization file, initsid.sap. In initsid.sap, set the parameter as follows:
   
   backup_dev_type = util_file

7. Instruct the SAP Database Administration program to use the file initsid.utl for backint-specific parameters by setting the util_par_file parameter in the SAP initialization file, initsid.sap.
In \texttt{init\_sid.sap}, set the parameter as follows:

\begin{verbatim}
util\_par\_file = \?/dbs/init\_sid.\_utl
\end{verbatim}
